St. Paul has told us he would rather speak five words with his understanding than possess the ability to voice ten thousand words which failed to teach, even though it proved his "gift of tongue." Viewed in the light that Corinth possessed a large mixed population of all nationalities to whom it might have been helpful to speak in their languages, his statement teaches us a much-needed lesson, viz., that if we understand (make a part of us) that which we would impart to others, it will always reach those who need the teaching. Locke gives us the definition of understanding thus: "The perception of the connection or repugnancy, agreement or disagreement, that is between any one of our ideas." Our Master said, "Let your communication be, Yea, yea; nay, nay: for whatsoever is more than these cometh of evil."

This, then, is the repugnancy or the agreement between the truth and the communication which is made to us, or which we make concerning any subject under discussion. How much trouble, how much suffering would be saved, if only we could remember to guard our words according to this model: Is this in agreement or disagreement with the highest understanding we have of Truth? Nine cases out of ten the conversation would probably come to an abrupt ending, but that would be of small moment. Our Leader has said that "if people would confine their talk to subjects that are profitable, that which St. John informs us took place once in heaven, would happen very frequently on earth,—silence for the space of half an hour" (Miscellaneous Writings, p. 339). Imagine the joy of that silence—a silence which speaks of victory, of the controlling of the worst enemy we have—our tongue: a little member, truly, yet capable of all evil,—malice, hatred, and all uncharitableness: these would die of inanition, if only we could dismiss them all with a stern "nay," casting them from us as being unknown to Truth.

How often error is voiced with an apology: "I know this is error," etc., or, "This is not scientific, but——"! Are we obedient followers of our Master when we thus consent to evil speaking? It needs an honest, loving, whole-hearted watchfulness; a being content, if need be, to be hated of the world. But surely this can make no difference to our steady adherence to the right, with our Leader's pure loving example before us. Is not this the keeping unspotted from the world? Christian Science demands absolute self-consecration, which includes likewise the consecration to Truth of every word which proceeds out of our mouth. Dare we, in the face of what it should mean to be called a student of Christian Science, wilfully disobey our Lord's command? This would necessarily entail the constant watchfulness over our thoughts.

A remark of this kind may often be heard: "I cannot think why I said so and so." Perhaps that which has been said has been an occasion of stumbling to a weaker brother,

Digitized by Google

a millstone which may cause us many bitter tears of penitence. Well, indeed, had it been if it had been consigned to the sea—"elementary, latent error" (Science and Health, p. 559)—to be destroyed by the power of Truth. Alas! we had in an unguarded moment allowed it admittance, neglecting the nay of refusal, though it bore upon it the stamp of the beast; and like the viper, it has stung the one who nourished it and gave it life. As we pursue our road, we learn to pray for that "inspiration of the Almighty" which giveth understanding. Unless we do this humbly, importunately, we are liable to give the stone of cold, meaningless words to the one asking for bread; but the hungry and heavy laden will turn away from our doors, if this is all we have to offer.

The neophyte in Christian Science inclines to many words, and at first in his anxiety to possess the letter, he will oftentimes try to learn passages from our text-book by heart. We shall never be heard for our much speaking: it is our mental attitude, the thoughts we think manifested in right action, which shall justify us or condemn. It is a good rule to be careful to check all talking which might degenerate into mere gossip, either about persons, church matters, or what not, and to watch that explanations are not mere words, human opinions. It is helpful at the close of the day to review mentally what we have said. Oftentimes we may find that had we been practically entirely silent we should have been true reflectors.

This uprooting of the error weeds in conversation is not done at once, but it is "here a little, and there a little." Loving watchfulness, self-abnegation, obedience,—these are the means by which we accomplish the work. Then one day our garden will be free from all that can defile the pure white blossoms of earnest endeavor, of holy converse, and we shall win the high commendation, "Well done, thou good and faithful servant."

BRIDLING THE TONGUE.

G. L. MCNEILL.

MANY wonderful inventions and discoveries in the material world have followed one another with such rapidity that what, not many years ago, would have been considered "miracles" are now accepted without special notice. The world is ready for the improvement which is being made in means of communication, transportation, and manufacture; hence is receiving them. Electricity has been harnessed, water-powers have been controlled, and the air is now being mastered.

All of these inventions and discoveries are of great importance to the world, but all of them combined are not equal to the discovery which is teaching mortals to bridle that which is referred to in the third chapter of James as "an unruly evil, full of deadly poison"—the tongue. We can realize to some extent the great importance to the world of this discovery, when we consider the disastrous results which have followed in all ages from the unguarded use of that "unruly evil." It has incited to bloody wars, has pitted nation against nation, brother against brother, and in the home it has been the cause of thousands and thousands of tragedies.

The Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, teaches that the tongue is to be bridled not simply by guarding our speech, but by correcting that which causes speech, viz., our thoughts. It is clear that if we do not think evil we shall not voice it; if we are unconscious of self-righteousness, envy, hatred, and jealousy, we shall not give expression to them. Christian Science brings to its faithful students a greater sense of love for their fellows than they had before. It emphasizes the value of kindly and helpful thoughts and words. It enables us to be more charitable, and to recognize the impersonal nature of evil, which may be manifested through some friend or acquaintance, showing us that while we condemn the sin, we shall know its nothingness and thus be ready to love and help our brother.

The influence of Truth is being felt more and more in the home, in the places where men are employed, and in public life. When its blessings are more generally recognized, we shall hear nothing but kindly, encouraging, and helpful words, so that no more will it be said that "out of the same mouth proceedeth blessing and cursing." And as the fountain or source of our expressed thought becomes spiritualized, we shall find that it does not send forth "at the same place sweet water and bitter," and learn that "the fruit of righteousness [right thinking] is sown in peace of them that make peace."

IN THE SIERRA NEVADA.

MARY BLANCHE WINSER.

THE steady gallop of hoofs, then two bare brown legs come into view, holding on with knee grip while the small boy eagerly scans the pages of our "daily" paper, *The Christian Science Monitor*, for his special interests.

"Mummie, may I have it as soon as I have unsaddled? There's a lot about 'wireless' and there's the big aviation meet, and I know what the puzzle is; see if you do, it's easy." Mother then turns to the page next to the last, but not to the puzzle, first. There is a message for her, a word of encouragement, counsel, cheer; then comes a glance over the general contents, where she finds many a hint that may help. There is a concert to attend, without moving; a picture gallery to be visited without any crush,—all amid the quiet of the mountains! Then "Dad" comes in, and sits down to enjoy a read,—the news of the world, political, agricultural, industrial. He says, "Did you see this account of the big water conservation scheme? Jack will be interested in that; we must send this number to England." A neighbor rides up and says, "Thank you for the paper you sent us. It's good, and we want to take it."

The day's work over, the sun is setting behind the hills, touching the peaks with glory, and out on the porch the paper is discussed; literary articles are read aloud, editorials appreciated, a helpful little poem lingered over, all with running comments,—"Here is a picture from dear old Surrey." "I am glad to have that account of Australian affairs; I never could get a grip of them before." "That's a useful summary of the business situation." So the talk goes on; there are items from "the whole round world," and though we are geographically "miles away from everywhere," we feel the unity of true brotherhood. Once more gratitude is expressed that at last we have a journal of "light and leading," every word of it good, every line fit to be seen by the clear bright eyes of our children, and every page of it containing things worth knowing.

Can we ever be thankful enough?

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be June 2, 1911. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 10, 1911.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 4, 1910, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

SELECTED ARTICLES.

[Alfred Farlow in *Nampa* (Idaho) *Herald*.]

While Mrs. Eddy denies that God is personal in a finite or corporeal sense, she declares that God is person in the infinite sense. She confirms the Scriptural teaching that man was made in God's own image, and declares that "spiritual perception . . . makes man the image of his Maker in deed and in truth" (Science and Health, p. 203).

Our critic says that "Christian Science teaches the impossibility of praying to God to deliver from sin for there is no sin, or from sickness for there is no sickness." The fact is this: Christian Science recognizes that sin and sickness exist as "beliefs—illusive errors" (*Ibid*, p. 343), and that they, therefore, must be grappled with and overcome in an intelligent and Christian manner, although it affirms that these errors have no divine authority and that, therefore, they have only a seeming existence. Christian Science attaches the word reality only to that which is of God and is eternal, adhering steadfastly to the Master's teaching concerning Satan and his offspring, sin, sickness, and death. Jesus declared, "When he [Satan] speaketh a lie, he speaketh of his own;" that is, that which is of Satan, his offspring, his own, is a lie, a falsity. Jesus spoke of the woman whose disease would possibly be diagnosed as rheumatism in this age, as one "whom Satan hath bound, lo, these eighteen years." He taught, "Ye shall know the truth, and the truth shall make you free;" thus expressing the fact that deliverance from all sorts of bondage is to be occasioned by a knowledge of the truth, and thus by implication he classified all human trouble as "error."

Our critic declares that "Christian Science has no place for prayer." To be more explicit, it should have been said that Christian Science does not advocate prayer to a corporeal God, since it does not believe that God is a corporeal being, but plants itself unreservedly on the Master's statement that "God is a Spirit," and must, therefore, be worshiped "in spirit and in truth." It is quite true that after he arose from the dead Jesus was still "in the flesh," but he soon after rose above the flesh, to use Mrs. Eddy's words, "in that change which has since been called the ascension" (*Ibid.*, p. 34).

Mrs. Eddy has devoted a chapter in her text-book on Christian Science to the subject of prayer. She advocates new and important ideas regarding prayer, and these ideas have to do with the efficacy of prayer as employed by Christian Scientists. Christian Scientists believe in prayer without ceasing. They believe that "the prayer of faith shall save the sick" as well as the sinner. Christian Science teaches that sickness and sin are overcome in the individual, not by the action of his mind upon his body, but by the direct power of God. It is quite true that prayer, which is the human aspiration of the Christian Scientist, as of all Christians, is a preliminary to the divine influence, but it is important to note that nothing short of the divine power can afford genuine and lasting results. Mention is made of Mrs. Eddy's reference to the dangers of audible prayer. Evidently our Master was not a strong advocate of audible prayer, for we read that he went off by himself to pray. He said, "But thou, when thou prayest, enter into thy closet, and when thou hast shut thy door, pray to thy Father which is in secret; and thy Father which seeth in secret shall reward thee openly."

[C. A. Newman in *Australian Christian World*, Sydney.]

If our critic were acquainted with Christian Science, and understood even in a degree its teachings and the method of applying its teachings to the uplifting of humanity, both physically and morally, he would not be so hasty in passing judgment upon it. Christian Science bases its claims to recognition solely upon its works. I say this in spite of the fact that a Christian Scientist recently failed to heal a case of disease.

Because the father relied upon Christian Science, the writer assumes there was "neglect to care properly for the child." That the father was convicted for neglecting to administer the medicine prescribed by the doctor would be nearer the facts. It is a matter of opinion as to whether the father properly cared for the child, and it is impossible to state definitely that the child would have recovered had a material remedy been administered. There are adherents of Christian Science in the community who sadly deplore the fact that they knew nothing of its teachings when the drug failed in a similar instance, and there are members of the denomination who can state that Christian Science treatment was successful in other cases, while neighbors who relied upon material means met with failure.

It is encouraging that the writer recognizes "just enough truth in Mrs. Eddy's doctrine to keep it from absolute corruption." Many critics are even less generous. Regarding the statement that "there is so great an amount of pure superstition founded on a misreading of Scripture, and so complete misunderstanding of the relations that ought to obtain between man and his Maker, that there is no wonder susceptible people go astray," I may say that Mrs. Eddy has given to the world an interpretation of the Bible which has been the means of uplifting thousands from sin and suffering and restoring them to health and happiness when all other means had failed. This interpretation, with abundant proofs to support it, is based upon the understanding of the relations that do "obtain between man and his Maker." Surely the statements that "God is a Spirit," and "God created man in his own image," cannot be regarded as a misreading of the Scripture; and if these statements are accepted, is not the following conclusion logically correct, that man is not material, but spiritual?

Do not these simple statements reveal the relations that do "obtain between man and his Maker"? Mrs. Eddy states on page 475 of "Science and Health with Key to the Scriptures": "Man is not matter; he is not made up of brain, blood, bones, and other material elements. The Scriptures inform us that man is made in the image and likeness of God. Matter is not that likeness. The likeness of Spirit cannot be so unlike Spirit. Man is spiritual and perfect; and because he is spiritual and perfect, he must be so understood in Christian Science."

The opponents of Christian Science appear to think that Christian Scientists endeavor by faith or prayer to restore a "material" man to health. Such is not the case. They endeavor, on the contrary, to realize clearly the relation that exists and always will exist between the "spiritual" or "real" man and his Maker, *viz.*, the relation of complete harmony; and in proportion as this is realized will the conditions of health and harmony be established in human experience.

Christian Scientists would probably not be considered orthodox in the matter of prayer. Their prayers are not petitions or appeals to God, but positive affirmations in accord with the above statements. They do not ask God to heal disease, because they have learned through Mrs. Eddy's interpretation of the Scriptures that God never sent it. A person who understands, even in a degree, the principle of any science is better equipped to handle a problem than one who has no such knowledge. Our Master said, "Ye shall know the truth, and the truth shall make you free." Prayer in Christian Science means abiding consciously in Truth, and such prayer always brings beneficial results. On page 248 of Science and Health Mrs. Eddy states: "Let unselfishness, goodness, mercy, justice, health, holiness, love —the kingdom of heaven—reign within us, and sin, disease, and death will diminish until they finally disappear."

[Charles K. Skinner in *Battle Creek* (Mich.) *Enquirer.*]

A recent article which states that it is "horrible heresy that there can be such a thing as purely spiritual religion," is amusing to those who have even a slight understanding of the subject. The gentleman freely admits the power of Christian Science to heal disease, but his persistent effort to divorce spirituality from it, and in fact from all religion, is decidedly inconsistent with one who doubtless accepts Christ's teaching as the truth. Christian Science accords with the Scripture which says that "faith without works is dead." In other words, that a man to show his spirituality and his trust in God's love and care for him and for all His children, must do so in his daily living, and not merely in long prayers and euphonious words. To say at one moment that God is omnipotent and in the next that He requires some material remedy with which to do His mighty works, is the height of absurdity.

Inasmuch as Mrs. Eddy's teaching is precisely along the line of that of Jesus, one must admit that it is spiritual, or take issue with the teaching of the Master. Jesus said very plainly, "It is the spirit that quickeneth; the flesh profiteth nothing." Jesus constantly strove to lead the people away from his personality to God, Spirit, as the Principle of his works. He said, "I speak not of myself: but the Father that dwelleth in me, he doeth the works." Again he said: "But the hour cometh, and now is, when the true worshipers shall worship the Father in spirit and in truth: for the Father seeketh such to worship him. God is a Spirit: and they that worship him must worship him in spirit and in truth."

There is certainly no concession to materialism in this teaching. Jesus' conception of sin, sickness, and death as expressed by mortals, was that of wrong thought externalized. It made no difference in his work of healing whether it was the result of sin, so-called heredity, or infection, or whether it was functional or organic. He saw the discord as something entirely foreign to man as created in the image and likeness of God, man given the birthright of dominion over all his environments, even the material body and its so-called laws.

In this connection the critic should see that his censure of Mrs. Eddy's statement, "In order to enter into the kingdom, the anchor of hope must be cast beyond the veil of matter into the Shekinah into which Jesus has passed before us" (Science and Health, p. 41), is not well taken, for she but emphasizes the teaching of the Master in the need of emerging from material laws into the spiritual. "Putting the anchor of hope in the primeval furrows of earth" and keeping it there, is precisely what has kept mankind in the chains of sin, sickness, and death in all the ages. It certainly has not been a success as a solace to the sorrowing or an inspiration to the heart-weary and discouraged. Jesus proved the truth of his teaching by demonstration, and he promised that all who understood and were obedient should do likewise. He showed that his religion was purely spiritual as well as successful

---

[James D. Sherwood in *Galveston* (Tex.) *News.*]

The time for invective is past, and people today are demanding more satisfying proof of one's profession. Christian Science is supplying a long-felt need. It heals the sick; it comforts the sorrowing; it reforms the sinner, and this it accomplishes in the way that Christ Jesus taught and exemplified and required as a proof of discipleship. Christian Science is willing to be judged by the good it does for suffering humanity, and when our critic is just enough to investigate it impartially he will come to know that its works of healing and reforming are wrought in strict accord with the rules of practical Christianity set forth in the Gospels.

The speaker lamented "the awful neglect of prayerful study of the Bible." In this connection it might be said of Christian Scientists that they are perhaps the greatest Bible students of any class of people on earth. They make a daily study of the sacred writings. Our critic is mistaken when declaring the teachings of the several creeds he mentioned as being "all the same." Christian Science is unique in itself, and differs from the others in doctrine and in demonstration. Christian Science is the rediscovery of the Science of being that Christ Jesus inaugurated, practised, and left for our guidance, but which became lost to the world when the healing power ceased to accompany the professions of Christianity. It is the practical results of Christian Science, seen and felt in the lives of its followers, that is adding numbers to its ranks. They seek Christian Science for the good it brings into their lives and daily experiences. Hundreds of thousands of men, women, and children have been healed of all manner of diseases through its benign influence, and these restored and happy people are gratefully testifying their thanks unto God for His unspeakable goodness.

Our critic compares Christian Science with gnosticism, whereas there is no possible point of similarity between them. Christian Science is pure Christianity, accompanied by works of healing. Gnosticism is said to have occupied a middle ground between paganism and Christianity, and its teachings have nothing in common with the teachings of Christian Science. Christian Science does not deny the divine Principle, but on the contrary declares that God is the divine Principle of man and the universe, and that God is infinite; that He is all, and there is naught besides Him. Christian Science teaches that punishment for sin will accompany the belief in sin as long as the practice of sin is indulged, and that the punishment for sin will cease when sinning ceases.

If our critics would honestly investigate the teachings of Christian Science, they would make a study of its textbook. Then they would find its teaching to be in strict accord with the teachings of the Master, as recorded in the New Testament.

[Lt.-Col. W. E. Fell in *Hull* (Eng.) *Mail.*]

Christ Jesus overcame the evidence of physical sense at every turn through his higher understanding of spiritual sense. This greatest of Scientists turned water into wine, healed the sick, walked on the water, raised the dead, in contravention of all evidence from physical sense. He nullified all material law (so called) through his understanding of spiritual law.

To us, as a Christian people, Christ Jesus is the way and the Wayshower, and what was possible for him, he declared to be possible for all his earnest followers, for "he that believeth on me," he said, "the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." There is but one law, God's law, and if we work in and by that law, we shall be able to do the same works that Jesus did. If we are sufficiently meek, patient, loving, and persevering, we shall assuredly some day be enabled to obey his commandment, "Be ye therefore perfect, even as your Father which is in heaven is perfect." Meanwhile we are answered by works in the exact ratio of our understanding of the spiritual law as demonstrated by Christ Jesus. The understanding and application of this law is Christian Science, or Christ knowledge.

[E. M. Ramsay in *Edinburgh* (Scot.) *Dispatch.*]

In answer to the letter of "Antæus," I should like to point out that as long as a child believes in ogres he suffers from this fear. He may lie awake at nights, have bad dreams, and be seriously affected in health by a thing which has no reality. When the time comes that the boy has risen to that point of mental development where he no longer believes in ogres, his fear of them is entirely cured, and the ills attendant on this fear disappear. In the same way,

Digitized by Google

as long as a man believes that each person has a mind of his own, he cannot help believing to some extent in the power of suggestion, and this belief, Christian Science teaches, acts injuriously on the system. As mesmeric treatment is not based upon the truth of being, but upon illusion, it would seem that all high-minded people would hesitate to place themselves under its influence, no matter who the operator might be. Christian Scientists are, however, convinced of the powerlessness of one human mind, so called, to control another.

The health which Christian Scientists enjoy is founded on the recognition of the nature of God as the source of life, omnipotent good, ever-present Love. The steps by which this position is gained are the steps pointed out by the Master,—purity, meekness, self-renunciation. As we cease believing in a will of our own, we cease believing in the wills of other people, and to that extent become conscious of the government of the divine Mind.

[Edward W. Dickey in *Los Angeles* (Cal.) *Express.*]

It sometimes happens that those who make a more or less cursory examination of Christian Science conclude that it is pantheistic. That this is far from the truth is seen by an examination of pantheism in the light of Christian Science. Pantheism, which is from the Greek *pan*, all, and *theos*, god, means that God and the material universe are identified. The word is defined in Webster's as follows: "The doctrine that the universe, taken or conceived of as a whole, is God; the doctrine that there is no God but the combined forces and laws which are manifested in the existing universe."

According to the encyclopedia, pantheism is the middle ground between atheism, which denies the existence of God, and theism, which teaches belief in God, or gods. Pantheism is inductive in that it goes from effect back to cause. Its reasoning is based upon the testimony of the material senses and makes matter a necessary outcome of God, and therefore includes sin and evil in the divine order. So-called "idealistic pantheism" is nature worship, and as wholly material as any other form of pantheism.

Christian Science is scientific Christianity. It is theistic, or more strictly speaking, monotheistic, declaring that there is one infinite God, who is Mind, Life, Truth, Love, Spirit. It also declares that He is good. It is deductive in its reasoning. It may be regarded as a syllogism with its major premise as the one given by Jesus to the woman at the well: "God is a Spirit," or as the Revised Version has it, "God is Spirit." The minor premise is that creation is "after his kind,"—is like God, therefore spiritual. The conclusion is that man and the universe is spiritual and not material. This is paraphrased in "Science and Health with Key to the Scriptures" by Mrs. Eddy, on page 468, as follows: "All is infinite Mind and its infinite manifestation, for God is All-in-all."

Christian Science also declares that God is omnipotent, omnipresent, and omniscient, and agrees with Paul, "For in him we live, and move, and have our being." Christian Science does not overlook sin or evil, nor does it teach that moral responsibility is nothing more than an "illusion." The allness of God, therefore, as taught in Christian Science, is spiritual and includes the conclusion that the man and universe which is the basis of pantheism is a counterfeit of the real spiritual man and universe. Pantheism is of the nature of inductive speculation. Christian Science is deductive, logical, and scientific. Pantheism is material belief. Christian Science is spiritual understanding.

Another conclusion from the fundamental basis of Christian Science is that which concerns the phenomena of evil. When one has grasped the meaning and significance of what Christian Science gives, it is readily seen that sin, disease, and death are not a part of God's creation and cannot possibly be, any more than light can proceed from darkness, or Christ have concord with Belial. Therefore Christian Science declares and proves evil to be unreal, without basis, foundation, or cause, and something to be cast out through a realization of the infinite power and presence of God.

The basis of Christian Science practice is the First Commandment, and the second, which is "like unto it." Its "fruits" are moral and physical harmony. It destroys evil thoughts of all sorts. It gives the joy of the spiritually-minded. It leads to deep and reverent love for God and His Christ. It opens the Scriptures and offers an incentive for their study. The practice of Christian Science results in honesty, love, kindness, and purity.

This brief statement suffices to show that Christian Science and pantheism are polar opposites. Christian Science is meeting the favorable expectancy of intelligent people all over the civilized world. Coming as it does, declaring itself to be the Comforter, even the "Spirit of truth" leading "into all truth," it rests for its approval not upon the acceptance of any formal statement, but upon the valid and binding rule announced by Jesus, "By their fruits ye shall know them."

[Blanche K. Corby in *Los Angeles* (Cal.) *Express.*]

In all her instruction, Mrs. Eddy has persistently turned thought away from personality to divine Principle, and her life and example have been consistent therewith. Christian Scientists revere and love her for her consecrated life and selfless example, and individually feel a great sense of gratitude for the benefits received. She never claimed to have discovered anything new, but only to have discovered the Principle by and through which Jesus accomplished his healing work. This Principle she made known to the world through the text-book of the denomination, "Science and Health with Key to the Scriptures." This book has multiplied the number of consecrated and devout students of the Bible, from which source she drew the inspiration for her great life-work.

Her sole ambition was to uplift humanity, and that her efforts were successful has been attested by the thousands upon thousands who have been redeemed from sin and all manner of disease. Her mission will live and speak for her always, and the world will never be able to pay the debt of gratitude it owes her for the corrected lives of countless men and women, which makes for a better humanity. Philosophies founded upon human hypotheses come and go, but a religion that is based upon the teachings of Christ Jesus, proving its ministry by its works, will stand forever, and Christian Science will continue in the future as in the past, to bless and heal mankind.

The century opens with strange innovations. The man who thinks is to the front in every line of work. There is no longer conservatism in the sense that was understood by the very respectable persons who, for the greater part of the nineteenth century, not only refused to apply reason to the conditions of life, but viewed with great disfavor any one who did. Today the man who allows his mind to be free from prejudice—who seeks the truth, who measures every condition and combination by the exercise of intellect—is taking charge in every vocation of life. To follow old methods means mediocrity. There is scarcely a man prominent in business life today who does not owe his advancement to his courage in breaking away from the old and his ability to reason out actual conditions regardless of accepted traditions. From hour to hour we hear the crash of edifices built upon the stupidity and pride of centuries. This is to be preeminently the century of innovation. The time has come when a real, virile, clean-cut idea is all powerful.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"THE TONGUE OF THE CRAFTY."

WE have been requested to sound again a note of warning to Christian Scientists, to be on their guard against impostors. This has been asked for the particular benefit and protection of those whose interest in Christian Science is comparatively recent, and who have therefore less reason to question the genuineness of the appeal for help that is so plausibly presented. Within the last few months the Publishing Society has been asked to assist in safeguarding other communities in several instances of this kind, and just recently word has come to us that our English friends are being called upon to face this problem. It seems well, therefore, to emphasize the need of investigating the genuineness of the call for aid when it is preferred by a stranger. No one who is really worthy of assistance will object to this precaution, and the sooner the other class is detected and exposed, the better it will be for the community at large.

The editorial which appeared under the above caption was published in the *Sentinel* of Feb. 13, 1909, after a series of impositions had come to light, and as it covers the ground sufficiently for the purpose, it is doubtless all that is needed to put our readers on guard against all such attempts to defraud. The editorial is as follows:

FROM time to time there come to us from readers of the *Sentinel* letters which tell us that the cities in which the writers reside have been visited by itinerant impostors who, upon the strength of such plausible tales of destitution as are best suited to their purpose, have succeeded in victimizing Christian Scientists by borrowing money from them.

Some years ago we used to publish these letters in the *Sentinel*, or by giving descriptions of the impostors and their particular modes of enlisting sympathy endeavor to warn Christian Scientists against them; but finding again and again that these efforts to save our readers from being imposed upon were largely ineffectual, the conclusion was reached that space in our crowded columns was too valuable to be thus wasted, and that some other method must be adopted if such fraudulent practices were to be stopped.

After mature reflection we now feel justified in advising the readers of the *Sentinel* to lose no time in turning these swindlers over to the local police authorities. Perhaps this advice may seem harsh to some of our friends, but when it is remembered that at least two of these frauds—the man whose horse (which he never possessed) has been stolen, and the man who asks for his railroad fare to another city where employment is waiting for him (but which he never seeks)—have for at least a decade been getting their living by imposing upon tender-hearted Christian Scientists, there will be little sympathy with more lenient methods. Mawkish sentimentality in such cases would simply perpetuate the swindle by leaving the trickster free to victimize others.

Christian Scientists should be and are ever ready with open purse and kindly deed to help their less fortunate fellows in time of necessity, but they should be watchful against allowing themselves to be imposed upon by professional confidence men such as we have described. To give indiscriminatingly and without investigation is not only to waste money but to do harm instead of good by encouraging the intentional swindler to continue in his evil-doing.

ARCHIBALD MCLELLAN.

LIGHT AFTER DARKNESS.

AMONG the many ineffaceable memories which the visitor to the Vatican galleries is destined to bring away with him is that of "The Sleeping Ariadne," an antique marble so exquisitely modeled, so instinct with glorious art, as to be universally regarded as the product of a master hand. It recalls the story of Theseus, and his escape from the famous Dædalian labyrinth, which he entered to slay the Minotaur, and in which he would have been hopelessly immured had it not been for the loving-kindness of this fair king's daughter, who supplied him the clew which he followed to freedom. To the Christian Scientist it cannot fail to bring remembrance also of his years of wandering in the labyrinth of material sense, whence he too has been extricated through the guidance of one who came to him bearing in her hands the glowing lamp of Truth.

With the hope of finding the freedom of an open sky, aspiring thought in all the years has been groping in the darkness of this belief and that, but there has been no satisfying demonstration of truth, and after a longer or shorter period of heroic "trying;" the seemingly inescapable aspects of the situation have, in many an instance, been accepted and a state of negative indifference or positive unbelief has been entered upon. In every Christian community there are not a few such saddened souls, who freely confess that their thought is confused and unsettled regarding even the essentials of faith. They may retain their church connection, but their spiritual enthusiasm has passed away.

Knowing from their own past experience the dissatisfaction and doubt which thus burden other noble hearts, Christian Scientists grow ever more grateful that where the way once seemed blurred and undefined, there is now clear vision. It is not possible to think that there is any self-contradiction in the realm of Truth. All things are open to Him with whom we have to do, hence the naturalness of the call of God, "Come now, and let us reason together;" hence the assurance and repose of the Master's thought; hence, too, the insistence of Christian Science that righteousness means right-mindedness, the thinking of God's thoughts after Him, the apprehension of divine Science.

The darkening confusions of religious thought have been focused in large part upon God. The injustice and wrong which pertain to what has been regarded His realm and rule, His apparent responsibility for conditions which He condemns,—these things have landed many a man in a labyrinth of doubt. In Science loyalty to God as infinite Spirit is seen to be possible only when we apprehend the unreality of the material universe and of evil. Light then breaks upon past confusions of thought respecting the divine manifestations and upon the contradictions attaching to the belief in man as formed from the dust of the ground. The distinction established and maintained in Christian Science between Jesus the Nazarene and the eternal Christ, between man in God's image, forever spiritual and perfect, and the man of human sense,—this comes like a sunrise to dispel the mists of a long night of mortal belief, the true and immovable foundations of Christian faith are revealed and unfettered thought mounts to an entirely new and altogether glorious plane of spiritual realization and joy.

Yet again, the teaching of Christian Science that all truth is one, that it is the manifestation of divine Mind and demonstrable to the full measure of our apprehension of its perfect law,—this replaces Christian theories or beliefs with the practically effective knowing of divine Principle and its eternal rule. Here Jesus' "Believe me for the very works' sake" becomes intelligible and Christian faith begins its conquest. The meaning of Christian Science to humanity's escape from the labyrinth of false sense has begun to dawn, and it heralds a blessed day.

GROWTH.

GROWTH has very fittingly been described as one of the elements of power, and in Science and Health (p. 520) we read that it is "the eternal mandate of Mind." All through the Scriptures we find the processes of growth set forth in the beautiful symbolism which seizes upon nature's wonderful pictures that forever invite dull pupils to come and behold the ceaseless operation of divine law. In the first chapter of Genesis there is first the appearing of light, then growth, forever growth, and this inseparable from the infinite good. The psalmist tells us that the one who delights in God's law is like a tree growing by the side of a river,—its leaves never withering, and bringing forth fruit in its season,—and of him it is said, "Whatsoever he doeth shall prosper." Again we read in Hosea of the healing of Israel, which is followed by unfoldment: "He shall grow as the lily, and cast forth his roots as Lebanon. . . . They that dwell under his shadow shall return; they shall revive as the corn, and grow as the vine."

It is very clear that growth is uninterrupted where the necessary conditions are complied with. The soil must be prepared, the sowing of good seed be intelligently done, and the watering receive due attention, then God gives the increase. The growth which most vitally concerns us all is the unfolding of the divine idea in the consciousness of each individual. It begins for us with an awakening to the truth, and from this we go on and "grow up into him in all things, which is the head, even Christ," the same law at work as in the experience of the Master. The climax is reached when we "all come in the unity of the faith, and of the knowledge of the Son of God, unto a perfect man, unto the measure of the stature of the fulness of Christ."

The student of Christian Science is wise who considers well the soil into which the seed of Truth is to be dropped, both in his own case and that of others. It must be that of an "honest and good heart," else there will be no harvest worth while. In too many cases the sick look to the practitioner for that which God alone can give, namely, "the increase." They, however, sometimes object to the work which Paul or Apollos thinks necessary, in connection with the planting and the watering, especially to the removal of obstructions from the soil; but if this is not done at one time it must be at another, for Truth cannot coexist with error, therefore all error must be uprooted, whether it be soon or late to mortal sense.

The beautiful thing is that the law of growth is forever at work, and the one who has laid hold upon the truth as his very Life, is progressing, did he but know it, even though the days may seem "cold, and dark, and dreary." In such case one needs truly to be "rooted and grounded in love,"—love for God and man,—and he who is will not only outstay the storm and stress, but will rise like a tree in stateliness and strength, giving shadow and shelter to the weary and faint. The thing that today seems difficult, perhaps impossible, will with added growth be easily accomplished, although in the mean time much digging, pruning, and watching may be needed. This does not mean that one may continue to indulge any habit which he knows to be wrong, hoping that later on he will be stronger to resist temptation. Truth never compromises with evil, but demands its unconditional surrender. Then comes the ability to meet and master the things which till then seemed too hard for the human sense to attempt. When one is honest enough to say in sincerity, "Neither man nor God shall father my fault" (Science and Health, p. 533), the soil is being cleared of the errors of false belief, and spiritual development will go on until no task shall seem difficult, but as each test comes he will meet it gladly and scientifically with the assurance, "I can do all things through Christ which strengtheneth me."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

VANCOUVER, B. C.

Entirely free from debt, First Church of Christ, Scientist, was dedicated on Communion Sunday, Jan. 8, 1911. The ceremony consisted simply of the announcement by the First Reader that all indebtedness had been paid off, and the reading of an address, which in part was as follows,—

It is fitting at this period to give a brief outline of the progress of Christian Science in this field from its inception. In the year 1807 two students came to Vancouver, and perceiving that the fields were "white unto the harvest," opened a Christian Science reading-room, and as one after another became interested through the reading of Science and Health and through cases of healing, services were held at their homes. The work progressed so rapidly that in September, 1898, a Christian Science society was formed, with a membership of fifteen. This society rented and furnished a hall for services and reading-rooms, and the first service was held Jan. 1, 1899. A few months later First Church of Christ, Scientist, Vancouver, was incorporated under the laws of British Columbia with sixteen charter members.

Through a steady growth in interest and attendance it became necessary in the year 1903 to move to larger quarters. Another hall was rented, which had been specially built and fitted for the accommodation of auditorium and reading-rooms. This second move was a very successful one and gave great impetus to the cause of Christian Science in our city. In August, 1906, a building fund was opened for the purpose of purchasing grounds and the building of a church home. In March of the following year the land on which this church stands was secured, and by October of the same year our present church building was completed. These, with subsequent additions and alterations, amounted to approximately thirteen thousand five hundred dollars. This amount has all been contributed as a grateful and loving tribute by those who realized that "divine Love always has met and always will meet every human need" (Science and Health, p. 494).

Correspondence.

NEW HAVEN, CONN.

An important change is taking place among the Christian Scientists in New Haven. Second Church of Christ, Scientist, has voted, for the sake of unity and the more rapid growth of Christian Science in this city and vicinity, to dissolve its organization and unite with First Church. It was quite a step for these people to take, for they dearly loved their church, but they felt that the time had come when Second Church had served its purpose, and the need of the hour was for all Christian Scientists to stand together as one body, and in an humble way demonstrate that they are of one mind.

Second Church will hold its last service on next Sunday evening [Feb. 12]. After that the whole body of members and friends will attend First Church, which has a beautiful edifice on the corner of Winthrop and Derby avenues. This act will also close up the reading-room in Warner Hall. When Second Church was organized, about five years ago, it held services in the Chase Building, but the growth was so rapid that within fifteen months it had to seek larger quarters, and moved into Warner Hall, where it has been ever since. The movement seems to be most pleasing to both churches, and they look forward to a much greater activity in their church and healing work, and expect that before long the church will be crowded.

THE LECTURES.

OTTAWA, KAN.

Frank H. Leonard lectured on Christian Science Jan. 12. He was introduced by Atty. Fred M. Harris, who said:—

I have often thought that the people who find the most fault with the new things of this life are those who know the least about them. Most of these, too, refuse to learn anything concerning these new things, because they then might find something of good in them. You will find that this exists in business as well as religious life, but it exists, perhaps, with greater strength in the latter. I am not a Christian Scientist, and I am sorry to say that I do not know much about its work or the fundamentals of its faith; but I wish to learn about them. I have long believed that the people who find the most fault with the church and its people, know nothing at all about the inner heart of the movement, and their hatred and bitterness arise more from ignorance than from any other cause.

Speaking as I do, as one outside of the church and one who does not understand it fully, it has always seemed a most wonderful thing to me. There must be something wonderful, and there is, in a faith which in the few years of its existence has drawn to it hundreds of thousands of earnest, intelligent people, who have forsaken the creeds and denominational beliefs that were born and bred within them, and who have made this new faith the foundation stone of their religious life. There must be something in a faith which impels its followers to erect the wonderful churches we see in every city, in which to teach the tenets of their religion, and which fills those churches with devoted followers at each meeting. There must be something in that faith which goes straight and deep and true into the hearts of its followers, and binds them closely together in the practice of its precepts. There must be something in it which makes possible all of the wonderful things which it has done. I do not know what it is, but even those outside of the church who will, may see that it is there; and seeing this, we must believe that all of the things which your detractors say are not true.

I trust that it is the purpose of the lecturer with us tonight to make light the dark places for those of us who do not understand the forces which brought into being this great organization and which causes it to grow with such wonderful and increasing rapidity with each advancing year.—*Correspondence.*

HELENA, MONT.

There was a large audience at the Helena Theater last night [Jan. 24] to hear Clarence C. Eaton of Tacoma, Wash., lecture on Christian Science. The lecturer was introduced by William C. Kaufman of Great Falls, state committee on publication for Montana, who spoke as follows:—

At the close of the Saviour's mission, wherein Jesus had taught his students by healing and preaching that Christ was the true state of mind or consciousness, he said, "I will pray the Father, and he shall give you another Comforter, that he may abide with you for ever; even the Spirit of truth; whom the world cannot receive, because it seeth him not, neither knoweth him: but ye know him; for he dwelleth with you, and shall be in you." These words of Jesus would indicate that the Comforter was a realization of the truth which he taught and practised.

There are evidences on every hand to show that Christian Science is preaching the gospel to the poor, healing the sick and broken-hearted, preaching deliverance to the captives and recovering of sight to the blind, and setting at liberty them that are bruised. May it not be possible that Mrs. Eddy is correct when she says in her book "Science and Health with Key to the Scriptures" (p. 55), "This Comforter I understand to be Divine Science." The world is suffering from the results of spiritual ignorance and gross materialism, and this is the reason for its mental and physical bondage. Naturally humanity is seeking to escape from this condition, which escape is found only in Christ, or the true understanding of God. After hearing this lecture you will know more about Christian Science and what it really teaches; you will have less fear, and know more about God and His Christ.—*Montana Record.*

WATERBURY, CONN.

William D. McCrackan, M.A., was the speaker at a meeting held in the Buckingham Music Hall last evening [Jan. 23], his subject being, "Christian Science: A Religion of Progress." In introducing him George A. Law of New Haven, member of the committee on publication, said,—

Two of the many questions frequently asked relative to Christian Science are, Why has this movement grown as it has, and why are so many people becoming interested in the subject? Possibly there are those present who desire that these same questions be answered this evening. The one important answer lies in the fact that Christian Science is the religion of Christ Jesus, whereby man today experiences peace, harmony, health, and happiness, to the exclusion of discord and disease, in the proportion that he understands and applies the teachings of our Master. Christian Science is giving to man that which he has so long sought after, and it is by reason of results that it commends itself to the earnest consideration of every one.

Waterbury American.

MANHATTAN, KAN.

A lecture on Christian Science by Bliss Knapp was given at Wareham's Opera House, Friday evening, Feb. 3. Mr. Knapp was introduced by Miss Katrine Krudop, who said in part,—

This lecture on the subject of Christian Science pertains to the highest need of man; namely, a better understanding of God, the divine Principle of the universe, including man. This understanding heals, and proves the allness and ever presence of "our Father which art in heaven," and thereby destroys all that is unlike God, all that worketh and maketh a lie; all that saveth good and doeth evil, the cause of sickness, sin, and death.

These lectures meet a need, and their message of Truth may help to loosen the mental bondage of prejudice and superstition by giving the right thought concerning God and Christian Science with its provable and exact laws applicable to the needs of humanity. That we may rejoice together in a better understanding of Christian Science and its teachings, which heal human want and woe, is the object of our presence here.—*Correspondence.*

ROCHDALE, ENGLAND.

The present age may be claimed to be an age of new religions, some of which originate in our own country, and others that are brought to us from across the seas. Boston is the recognized home of the Christian Science movement, a religion founded by Mrs. Eddy, and which has some firm adherents in Rochdale, where a branch of the church today exists. To say that disease is an error and something which does not exist, is indeed an assertion difficult to believe; but the Christian Scientist says so, and backs up his belief with testimonies of wonderful healing which appear to be little short of miracles.

That Christian Science creates curiosity among those outside its influence, was manifested on Sunday afternoon [Jan. 22], when a lecture was delivered at the Theater

Digitized by Google

Royal, Rochdale, by Bicknell Young of London. The building was crowded. The chair was occupied by Walter Wilding, M.R.C.P., of Manchester, who in his opening remarks recounted how the revelation of Christian Science came to him after he had spent many years of his life in medicine, and caused him to make a careful study, with the result that he found it was the answer to Pilate's question, "What is truth?" It caused him to give up his medical practice: and since doing so, nine years ago, his experience had confirmed his convictions.—*Rochdale Times.*

BROMLEY, ENGLAND.

There was a large audience in the Drill Hall, Bromley, on Tuesday evening [Jan. 24], to hear the lecture by Bicknell Young, under the auspices of First Church of Christ, Scientist. The chair was taken by Capt. J. G. H. Flint, who in introducing the lecturer said that Christian Science was a subject which was attracting very great attention and interest among thousands of men and women all over the world. The object of those lectures was not to proselytize, but to correct mistakes and misapprehensions in regard to Christian Science and its teaching. He should like to say that he had witnessed many wonderful healings through Christian Science, both in his own family and among his friends. Personally he was not a member of the Christian Science church, therefore it would be out of place for him to say anything to them on that subject.

Bromley and District Times.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Baltimore, Md. (First and Second Churches).—Bliss Knapp, The Lyric, 3:30 p.m., March 12.
Chanute, Kan. (Society).—Frank H. Leonard, Hetrick Theater, March 13.
Coffeyville, Kan.—Frank H. Leonard, Jefferson Theater, 2:30 p.m., March 12.
Gainesville, Tex.—Frank H. Leonard, City Hall, March 14.
Honolulu, Hawaii.—Lecture for March 26, cancelled.
Junction City, Kan.—Francis J. Fluno, M.D., Opera House, March 16.
Lawton, Okla.—Francis J. Fluno, M.D., Ramsey Opera House, March 9.
Lexington, Mass.—Willis F. Gross, Town Hall, 3:30 p.m., March 12.
Lyons, N. Y.—Rev. Arthur R. Vosburgh, Memorial Hall, 3 p.m., March 12.
Macon, Ga.—Bliss Knapp, Grand Opera House, 3:30 p.m., March 5.
Muncie, Ind. (First Church).—Hon. Clarence A. Buskirk, Wysor Grand Opera House, 3 p.m., March 12.
New Orleans, La. (First Church).—Bliss Knapp, Athenæum, March 3.
New York, N. Y. (First Church).—Rev. Arthur R. Vosburgh, Church Edifice, Central Park West and Ninety-sixth street, March 16.
Norman, Okla.—Francis J. Fluno, M.D., Franing Opera House, March 13.
Stuttgart, Ger.—Bicknell Young, Koenigsbau, March 21.
Vicksburg, Miss.—Frank H. Leonard, Walnut Street Theater, March 10.
Winona, Minn.—Prof. Hermann S. Hering, Masonic Temple, March 12.

By thine own soul's law learn to live:
And if men thwart thee, take no heed,
And if men hate thee, have no care—
Sing thou thy song and do thy deed:
Hope thou thy hope and pray thy prayer,
And claim no crown they will not give.

WHITTIER.

TESTIMONIES OF HEALING.

In sincere gratitude for what Christian Science has been to me thus far, I would like to relate an experience which I had over a year ago, and which decided me to study Christian Science. I had been suffering from a severe attack of an organic trouble which had become chronic. Some years ago I had experienced a severe attack of peritonitis, which lasted three months, so I knew that to ask aid of a physician would be of no avail, and I did not propose to spend another three months that way. Without any one else's knowledge, I began to read Science and Health. I did not know how I could possibly be cured by so doing, but thought I would at least see what benefit might be derived through reading the book, so commenced at the beginning.

At length I came to where Mrs. Eddy says, "Become conscious for a single moment that Life and intelligence are purely spiritual,—neither in nor of matter,—and the body will then utter no complaints. If suffering from a belief in sickness, you will find yourself suddenly well" (p. 14); and as I read these words they seemed most beautiful to me, though at first I could not fully comprehend them. I read and reread the passage, trying to realize its full meaning, and finally closed the book and meditated upon what I had been reading. In a few moments the full realization of its truth came to me like a light to one in darkness, and I found myself suddenly well, and decided at once that the right place for me was in the Christian Science church.

ANNA RACHEL TAYLOR, Minneapolis, Minn.

I can truly say that God has delivered me from the bondage of sickness, and I am glad to testify to my deliverance from the many ills with which I was beset. For over twenty years I had been under a doctor's care, having one sickness after another, until it seemed there could be nothing more for me to experience. For sixteen years I suffered from a severe stomach trouble, the result of a critical operation. Eleven years later I experienced another operation, but this only relieved me for a short time. During this time I hardly knew what a night's sleep was.

Two years ago one lung was said to be affected, my heart weakened, and my nervous system shattered. As the doctor advised, I spent the summer in the country and the following winter at a sanitarium, returning very much improved in health. Only a few weeks had elapsed, however, before all the old conditions returned. The doctor advised another winter at the sanitarium, saying that I would probably be obliged to go there for several winters. In despair, and in spite of my bitter prejudice, I then turned to Christian Science as a last resort, and asked a friend to take me to a practitioner to be healed. In the first treatment I was healed of the stomach trouble. I have also been perfectly healed of the lung trouble. When I began to take Christian Science treatment I was trying the outdoor cure, but in a short time I was able to sleep in the house with perfect freedom, and I also gained flesh. This healing came in the very locality where I thought I could not live. After several months of treatment I was also healed of a bowel disorder of years' standing, a disease of the feet, and backache, glasses worn constantly for sixteen years were laid aside, and today I am a normal, healthy woman, doing my own housework, which I had not done before for years.

Christian Science has healed me physically and mentally, and for all this healing I am very grateful to God, and to Mrs. Eddy, who through her loyalty to Principle has given us Science and Health, the book that is a constant source of blessing to me.

MRS. ALGER R. BROOKS, Medford, Mass.

Digitized by Google

In loving acknowledgment of the benefits received through Christian Science, I offer this testimony of my healing. About two years ago, while participating in a game of football, I met with a painful accident and was carried from the field to the office of a near-by physician, who pronounced the injury a broken collar-bone. The physician bandaged my arm and shoulder in the customary manner, declaring that it would be six weeks before the bandages could be removed. A short time before this occurred we had become interested in Christian Science, and had experienced several beautiful healings in our family. As soon as I reached home, my mother and I decided to telephone a practitioner and ask for assistance, which was lovingly granted. After seven days of absent treatment, I became convinced that the healing was complete and decided to remove the bandages. The physician was informed of my action and immediately called. He admitted that the bone appeared healed, but stated that it would not remain in correct position and that I would probably be deformed unless the bandages were replaced. The physician asked my mother for authority to replace the bandages, and she in turn left the decision entirely with me. Knowing that my healing was complete, I assured the physician that I should place my trust in God, declining to be fettered by material law. At the moment of my decision, I received great spiritual strength and absolute confidence in a God of love, and I then realized as never before why people express their gratitude for our beloved Leader, Mrs. Eddy. The same evening I dressed as usual, placing my suspender over my shoulder without the least inconvenience. The next day I used the shoulder and arm as freely as ever. From the instant Christian Science treatment began, there was absolutely no pain, and all discoloration and swelling disappeared.

Christian Science has been of great benefit to me in many ways. It has helped me in my studies and enabled me to read the Bible understandingly. I wish particularly to express my gratitude for the by-law of The Mother Church Manual which permits pupils to attend the Sunday School until the age of twenty years.

J. SEMER FARNSWORTH, Cincinnati, Ohio.

It affords me pleasure to endorse the above testimony of my son. About two years ago I was instantaneously healed through Christian Science treatment of an acute stomach disorder. I am deeply grateful for the many blessings which Christian Science has brought into my family.

F. W. FARNSWORTH, Cincinnati, Ohio.

It is with a heart full of gratitude that I offer my testimony in behalf of Christian Science, the potency of good and the all-power of God, divine Life, Truth, and Love. I had never been able to be religious, in the old sense of the term, but I found Christian Science so practical that it very soon became my daily helper, and since I have been a student of the Bible, together with our text-book, Science and Health, I have proved myself capable of accomplishing many things which heretofore would have seemed impossible. I wish to tell of some experiences which have come to me in the past three years. The demonstrations were clear-cut, and being young in Science, they meant much to me.

When about eight years old I had an attack of measles, and every precaution was taken to prevent the much-dreaded "after effects;" but after I had been up for a week or more, I completely lost my voice. After three days I partially regained it, but it was very weak. My parents hoped that it would change at the age of fourteen or fifteen and become stronger, but instead it grew much worse at this time. The doctors all said my vocal cords were affected and that my voice would never be any different. The irritation in trying to talk kept up a constant inflammation of the throat, for which a physician treated me steadily at great expense. All through high school I was seldom able to recite orally, and when I went to a practitioner for help in Christian Science my pencil and paper pad had become indispensable. By his help I was very soon able to speak, but my voice remained very weak. After about eleven months of treatment and study, something seemed to break and the register changed. Since then my voice has grown steadily stronger.

I have also found God to be the source of my supply and a very present help in time of need. Not long ago I was suddenly left with but four dollars in my possession, and no prospect of work. Having been all my life a student, I hardly knew how to seek employment; but I went to a Christian Science practitioner for help, and a way of financial betterment was speedily opened to me, and conditions have steadily improved. Through my understanding I have been enabled to rise above all sorts of temptations, and also to be happy in seemingly undesirable surroundings, by keeping close to Truth. For these and many other demonstrations I am most deeply grateful to God, and to our Leader, Mrs. Eddy, for the truth which has helped me so successfully over the seemingly hard places.

K. BERTRAM SITES, Boston, Mass.

[Translated from the German.]

It is with a feeling of deep gratitude to God, and with the hope of helping some fellow-man, that I wish to tell briefly of my experiences in Christian Science. I first had an opportunity to experience the efficacy of Christian Science during my schooldays. At that time I was afraid of getting poor marks at school in some branches, and was very much worried about it, but after applying to a Christian Science practitioner and having had a few treatments, there was such a change that at the end I brought good marks home. When, later on, the result of an examination seemed to be endangered on account of unfavorable influences, this inharmonious condition also was met through Christian Science.

On entering upon a business life my first step was attended by a blessing. Some one else was engaged for the first position which had been held out to me, but after having worked as a substitute and receiving some help in Christian Science, I got a permanent position. The efficacy of Christian Science has been made manifest in my work, when I had to suffer considerably from wrong mental surroundings, for I have been completely relieved of these errors.

I am grateful to God for all these proofs, and to Mrs. Eddy, who through her priceless book, "Science and Health with Key to the Scriptures," has shown to the world the way to divine Truth and Love.

HANS STRUSS, Hannover-Linden, Germany.

When my little girl was four years old she began to have throat trouble, and from that time until she was nine she was very often sick. The family doctor was always called, and finally he advised our having the tonsils removed. This was done, but in a short time she had the same trouble again. My husband had, however, been healed in Christian Science, so I called on the same practitioner to treat the child.

She was taken ill on Sunday, and on Monday morning my husband called on this lady and told her that we wished help in this case too. By Tuesday morning there was not any sign of the throat trouble, and my daughter has not suffered from it since that time, now over three years ago.

MRS. NELLIE HARRIS, Fruitvale, Cal.

One Friday evening there was an uncomfortable feeling in my thumb, and the pain increased so rapidly that it robbed me of my rest that night. Next morning I was so sick that it required an effort for me to leave my bed, and my thumb was badly swollen with what appeared to be a felon. By noon I called to see a Christian Science practi-

Digitized by Google

tioner and asked for help. Fear was conquered and I was able to return to the office. During the evening the pain subsided, and I had perfect rest that night. Sunday morning I attended the service with quite a degree of freedom, and by Monday afternoon the opening came without pain. The feeling of distress at my heart was overcome, and my arm became normal. This healing was accomplished with three treatments, and I was able to attend to my duties without losing a minute. Later a new and perfect nail appeared.

The spiritual blessing I received through the above trial brought gratitude to my heart, proving to me that "the hand of the Lord is not shortened, that it cannot save."

MARY R. LAUCKS, York, Pa.

It is with deep thankfulness that I add my testimony to many others, for I have had abundant proofs of God's healing power as taught in Christian Science, and my first experience with this healing truth was beautiful beyond words to express. After having suffered many things for a number of weeks, and medicine having proved of no avail, I at last decided to have Christian Science treatment.

Up to this time I had been afraid to read Science and Health, but now I was ready to read it, and asked for treatment. This was between four and five o'clock in the afternoon, and when the practitioner said that God is Love, and that He did not make me sick, it was the sweetest thing I had ever heard, and a deep peace came over me, such as I had never known before. The supper that night was the first good meal I had eaten for days, and instead of going to sleep sick and discouraged, I was well! The next morning I awoke a new creature; it seemed as though everything was changed, and a sense of joy was with me that I had not known before. Not only was I healed of pain and suffering, but I had found the truth, the "pearl of great price."

This happy condition lasted for some time, then trials seemed to come, and I found that I must study the textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and learn of the great Principle therein revealed that heals every ill. Not many months after this I had the privilege of proving that a little understanding, if faithfully used, will meet the need, even if it be great. One evening just at dusk, as I was leaving a house the surroundings of which were unfamiliar, I stumbled and fell heavily across the steps, striking my forehead on a sharp edge, and my neck received a severe wrench. I cried out, then I seemed to become unconscious, as the fear of death came upon me; but at that moment the thought came to me that I was God's child, and immediately I regained consciousness. I got up trembling, and did not go on the errand, but went back to the house, where I was invited to stay the night. After a while my forehead began to swell, and my friends wanted to send for a doctor; but I begged them to let me alone, and said that I would be all right. How glad I was when the time came to retire, so that I could be alone with God, for by this time my whole body was in pain. The spiritual interpretation of the Lord's Prayer as found in Science and Health (p. 16) had been committed to memory and this was the basis of my treatment. I repeated it many times and tried to realize somewhat of its meaning. About midnight I went to sleep, and when I awoke in the morning all the pain had left me except a little in my neck; but by declaring the truth this, too, yielded in a short time, although the swelling and very marked discoloration still remained. By faithful and persistent work, however, in a few days everything was entirely normal. This is only one of many proofs of the power of Truth which I have had. By my own understanding, with some help from a practitioner, I have been healed of many ills.

About a year and a half ago I went South, and there received class instruction from one of Mrs. Eddy's students, and for this step in Christian Science I am indeed grateful. Many seeming difficulties have since been overcome. I have never been so well and strong in all my life as I am now, and I am indeed grateful for my healing and the many good things that have come into my life since I have learned of this blessed truth. Far more precious than all else, however, is the spiritual uplifting and the understanding of God. I wish to say that I have loved our dear Leader, Mrs. Eddy, from the first time that I ever heard of her, especially for her wonderful book, "Science and Health with Key to the Scriptures," which grows clearer to me all the time.

MISS ANNA ROHR, Ottumwa, Ia.

In grateful acknowledgment of benefits received in Christian Science, I wish to give my testimony. I had occasion to use a strong acid, and not knowing anything about it, my hands were badly burned. I also got some of the acid in one of my eyes, but the bad effect was all overcome in less than an hour. This is only one of the many blessings which I have received in Christian Science. I feel I can never be too thankful to God for what He has done for me and is doing every day. I have learned that a declaration of the truth silences the disturbed senses and destroys all discord. I am truly thankful to God, also to Mrs. Eddy, for the truth which has helped us on our journey from sense to Soul.—MRS. CHRISTENA WITT, Knoxville, Tenn.

Words are inadequate to tell even a small part of the many blessings I have received in Christian Science, but they are sacred to me. One experience may be a help to some, and encourage them to study the Lesson-Sermons which are so carefully prepared for our benefit.

In the spring of 1907 I was studying the current Lesson on this subject, "Are sin, disease, and death real?" It was housecleaning time, and as I was working much harder than usual, a sense of weariness seemed almost to overpower me. At noon I studied the Lesson mentioned, not thinking of my own condition, but greatly desiring to get a better understanding of the truth for a class I was then teaching in Sunday School. After going over the Lesson, I had a few minutes of silent thought, and in less than an hour I was at work again and was very busy all the afternoon. About five o'clock I suddenly realized that I had been perfectly free from any sense of pain or weariness since I had studied the Lesson at noon.

This is only one of the many blessings that have come to me, and I am truly grateful to Mrs. Eddy for giving us "Science and Health with Key to the Scriptures" and her many other writings, also her loving help in endless ways. I am also grateful to those who assist in preparing these Lesson-Sermons and our periodicals, for these all help us to know the truth spoken of by Christ Jesus, who said, "Ye shall know the truth, and the truth shall make you free."

LOTTIE E. BURDICK, London, Ont.

When Christian Science was first presented to me, a number of years ago, through the healing of a friend, I accepted it as a little child might, on trust; but I soon found that I must study, if I would understand what I was relying on. Through the study of the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy, I came to know God as my only and sufficient reliance. I was healed of the need of wearing glasses, which I had used for eight years, and of several more or less serious troubles, and then followed the slower healing of a sense of bondage to personality, of a mistaken sense of duty.

For the past seven years I have not missed a meal or an hour of sleep on account of sickness, and for the past five years the way has been growing so much brighter that each week I feel like repeating in our testimony meeting that the week just past has brought me many fresh blessings.

Digitized by Google

The privilege of class instruction from one of Mrs. Eddy's students brought a great uplift. Each year brings me a fuller appreciation of our Leader's work, of her wisdom and foresight in each step she bids us take, and it is a pleasure to see the world at large coming to recognize its debt to her.

My own debt to Mrs. Eddy, and the loving help received when my steps were feeble, can only be paid as I pass on to others the understanding of God which the study of Christian Science has brought, and endeavor to follow the command laid down by our Master: "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven."

GRACE E. MAHLE, Ripley, N. Y.

It is with much love and gratitude for the blessings received through Christian Science that this testimony is given. This truth came to me when I was utterly in despair and cared for nothing; in fact, I could not see anything worth living for, although I seemingly had everything necessary for happiness, health, and all worldly comforts. But, after studying this truth, I soon found that it was my wrong mental attitude which needed changing. When I commenced to apply this Science to my daily living, I had many severe trials to meet; but I can truthfully say that I am thankful even for this, for it has proven more to me than anything that theoretical knowledge could impart, and I have gained a spiritual sense of happiness not dependent upon material surroundings, but grounded in consciousness. When clouds arise they are quickly dispelled, for I know that I am living in eternity now, and the sun is always shining.

I found that in the measure of my understanding of this healing truth the results come. As a family we have received many physical benefits from Christian Science, and it is especially helpful in the education of children. For this spiritual understanding I am very thankful, as there is nothing in the world to compare with it.

MRS. BLANCHE GRILLO, Washington, D. C.

[Translated from the German.]

I wish to give heartfelt thanks for the help received through Christian Science. Before coming to it I often felt very weak physically and depressed mentally, and at times could hardly fulfil my duties. Sorrow and worry took hold of me more and more, and I often did not know which way to turn. Christian Science found me a woman who had lost faith in God and could not see why she should continue life's hard struggle, but the concept of God which I heard elucidated for the first time at a Wednesday evening meeting, gave me new strength and courage. I was able to see immediately that it is not God's will that we should suffer, but rather that it is our erroneous concept of being which is responsible for all our misery.

After I sought comfort in Christian Science my family underwent even heavier trials. Formerly such sorrow would almost have crushed me, but the slight understanding of the Bible which I had gained, and the study of *Der Herold*, were a source of constant strength and help and made me persevere. When I did not seem to be able to lift the burden myself, I always found a practitioner willing to assist me, and it was proven in every instance that God is our refuge and strength, a very present help in trouble. Christian Science has proved in our experience a most effectual help in cases of sickness, and I have often been able to help myself in cases of minor ailments, though twice I did not seem to be able to demonstrate the power of Truth.

In the summer of 1909 I was obliged for the first time to ask for treatment, on account of pain and weakness in the feet and legs. Help was given most willingly, and after a couple of days the discomfort with which I had been struggling in vain for six weeks had entirely disappeared. In February, 1910, I again had to ask for help, on account of weakness of the heart and difficulty in breathing, which for five weeks I had vainly tried to meet, and this trouble was overcome in a couple of days.

I would also like to mention a beautiful instance of healing with my daughter. She was suddenly taken sick in the fall of 1909 with fever and headaches. I immediately declared the truth, apparently with good result, for she improved. The attacks of fever returned, however, and in attending the meeting one night I asked a practitioner to take up treatment for my daughter. When I returned home an acquaintance who met me was very much worried. She knew nothing of Christian Science, but had been to see my daughter and thought she was so ill that she took her temperature. She urged me to go to a physician, as the fever was so high, but I told her that I had provided for the best kind of help. On the following day this acquaintance was very much surprised to find that the fever had disappeared.

For all these proofs of the power of Truth I am filled with gratitude to God. I am also grateful for the selfless life of our dear Leader, which has brought rich blessings to waiting humanity.—TOSKA SEMMIG, Dresden, Germany.

I am truly grateful to God, and to Mrs. Eddy for the help of Christian Science, by which I was led into an understanding of the truth. I was entirely healed of a severe nervous trouble in just one week's treatment. This was five years ago, and since then her many helpful words in giving me the right thought have made it possible for me to demonstrate the healing power of Truth over sickness and error of nearly every kind.

MRS. ANNIE B. HAMILTON, DeKalb, Ill.

I did not come into Christian Science by the royal road of healing, but through the longer, more tortuous one of studying the world's philosophies and religions; until by weary elimination I found at last the true "world religion" which sets suffering humanity free from the law of sin, disease, and death; the gospel of love and mercy that our Master preached on the Galilean hills two thousand years ago; the revelation of Truth's healing power which Mrs. Eddy has manifested again to us. Many "signs and wonders" have been wrought in our home, and as truth is unfolded in our consciousness I feel like the old-time Englishman who taught his children to rise from each meal and say to their parents, "Thanks for a good dinner," for as each demonstration is made my heart goes out in gratitude to our Leader for her teaching and I realize that, laying aside the human sense of personality, hers must have been the most spiritually developed of the age, in that it was chosen as an instrument to voice the message of God to man.

I rejoice that Mrs. Eddy has interpreted to us the great laws of being so that "a wayfaring man though he be a fool shall not err therein;" that she has made the way so plain that little children can realize man's relation to God, and through this sense of "at-one-ment" overcome the errors that flesh is heir to. Only this week my cook's three-year-old boy was badly scalded. Having known the benefits of Christian Science for a year, his mother telephoned me, and I at once went to work for him. She then told him the truth as well as she knew, and soon his sobs ceased and he went about his play, free from pain. After a few days the evidences of the severe burn disappeared.

So day after day more of God's goodness is revealed in our lives, and day after day I grow more and more thankful for having been taught to look above personality to Principle, and to follow in the path of peace which Christ Jesus laid out and toward which our Leader has directed our weary, wandering feet. Truly of worthy Christian Scientists it may be said, "They shall not hunger nor thirst;

Digitized by Google

neither shall the heat nor sun smite them: for he that hath mercy upon them shall lead them, even by the springs of water shall he guide them. And I will make all my mountains a way, and my highways shall be exalted."

LOUISA COOKE DON-CARLOS, Lawrence, Kan.

About six years ago I was healed, through Christian Science, of a supposedly malignant growth on my forehead, which one of the leading surgeons here warned me about, as he was a friend of our family. He said nothing but an operation could stop the growth from spreading all over my forehead. The choice was given me of an operation or Christian Science treatment, and I chose the latter and asked a practitioner for help. In about six months the sore had entirely disappeared, and it left no scar. This seemed very wonderful to me, as for three years I had had constant trouble, and no material means helped it in the least. I have found Christian Science of benefit in many other ways since then, and have been able to overcome other seeming difficulties. I enjoy the *Sentinel*, *Journal*, and all the Science literature very much. It is a great comfort and help. I was over seventy-five when I first turned to Christian Science some years ago. I appreciate more and more Mrs. Eddy's life of self-denial, her great love for humanity, and her pure thought which made it possible for her to rediscover this healing truth for us.

MRS. ELIZABETH R. PIERCE, Melbourne, Australia.

I wish to say that I have been entirely cured of the rheumatism which afflicted me some time ago. I was first attended by a physician, and everything was done for me, but I was becoming worse instead of better. After I was confined to my bed I was advised to take up Christian Science, which I did, and began to receive its benefits in a short time.—J. E. MCCARTY, Berlin, N. H.

My husband was afflicted with a rheumatic trouble which caused him a great deal of suffering. He was for several weeks confined to the bed and not even able to move without help. He had the best doctor in our city, but instead of getting better he was getting worse every day, until I advised him to try Christian Science, as I had been healed a few years ago through its treatment. He consented, and in a very short time he was cured so that he was able to be out and he has been free from the disease ever since.

MRS. J. E. MCCARTY, Berlin, N. H.

[Written for the *Sentinel*.]

THOUGHT.

GERTRUDE RING HOMANS.

NOTHING but thought can scale the stars,
Though bird-men hover high,
To ravel the riddle why ruddy Mars
Should flare like a great red eye.

Nothing but thought as far can leap
As the nebulous milky way
To tell how the misty star-paths sweep
'Round the central orb of day.

Nothing but thought its poise can hold
In the track of the comet's rush,
Projected out of the ether cold
Through the blue empyrean hush.

And nothing but thought beyond can rise
With its own desire as wings
To the infinite Mind-cause, ever wise,
And voice what the cosmos sings.

FROM OUR EXCHANGES.

[Frank S. Dietrich in *Pacific Baptist*.]

There is a growing consciousness of human brotherhood, with a demand that mere platitudes of justice and mercy shall be translated into working principles of daily conduct, and that greater protection shall be given to the weak against the strong. Granting that this prevalent spirit of reform may in some of its activities have assumed and may in the future assume fantastic shapes, and that some of its demands are visionary and must fail of practical results, there is no probability that there will be a reversion to former conditions. The tide of emotion and sentiment which runs so strong today may be expected to ebb again, but it will not obliterate the impressions that have been made of certain fundamental and eternal truths which in our pride and self-sufficiency we were inclined to forget or to ignore. We are learning in fact what we already knew in theory, that all national stability and permanent social progress are primarily conditioned upon the integrity and the strength of personal character. From congratulating ourselves upon the wonderful advancement we have made in government and material wealth, and upon the freedom, the luxury, and the magnificence of our civilization, we are turning aside to inquire whether or not we are also producing such character as will meet the demands and endure the strain to which the individual is necessarily subjected in the complex environment of our free modern life. The realization is growing upon us that duty is more difficult today than it was a hundred years ago, and that morality is less simple; that freedom must guard against irreverence; that extreme individualism breeds selfishness; and that greed thrives as there is an abundance with which it is supplied. It is being observed that while new burdens are being laid upon the individual and the demands for moral intelligence and moral strength are upon the increase, there is no corresponding increase in the attention being paid to moral training.

[A correspondent in *Watchman*.]

To me the Bible is something far better than law and authority. It is a book of religious experience. It is the history of the spiritual development of a nation, and as such it is full of wisdom and truth. It shows how God reveals Himself in and through human life. It is replete with object-lessons; some of them object-lessons in virtue, and therefore to be copied; some of them object-lessons in vice, and therefore to be shunned. It contains the story of Jesus' life and teachings. It reveals him as "the way, the truth, and the life." Even the Old Testament Scriptures testify of Him, and the New Testament reveals his Spirit and shows me how I am to be good like him. It teaches me to yield myself to him as my Master and to his Spirit as my guide. And because I recognize the principle of progress in revelation, and believe I have a right to evaluate the various parts of the Bible according to their moral and religious quality, I do not feel obliged to explain away discrepancies, or harmonize the cosmogony of Genesis with the conclusions of modern science, or justify the slaughter of defenseless women and children, or throw a mantle over the sins of the heroes of the Old Testament.

[*Examiner*.]

No reasonable mind can fail to observe that the Bible, diligently studied, not in a critical but a devotional frame of mind, exercises a potent influence in molding the life of the student. Bad men have become good men, and good men better, as the result of such study of this book. To what quality shall this influence be ascribed? That it is pervaded by a spirit distinctly its own, a spirit that impresses and stimulates the spirit of man, is manifest to every unprejudiced beholder. In view of these things, is it unreasonable to believe that it is, in some way unknown to us,

Digitized by Google

an inspired book, imbued with the thoughs of God? As to the method of the inspiration, there may be honest differences of opinion: but as to the fact of its inspiration, the unique power it exerts, and the singular results it achieves, bear conclusive testimony to every candid mind.

[Rev. C. A. S. Dwight, Ph.D., in *Christian Intelligencer.*]

Religious religion is to know God, and Jesus Christ whom He has sent, to do justly, and to love mercy, and to walk humbly with one's God, to believe (as much as lieth in one) clearly, and to love purely; to be (we say it reverently) a modern incarnation of Christ, and to fill one's life with the acts, if not the miracles, of an apostle. "If this be religion," some man will say, "it is a hard thing!" Yes; for life was never meant to be easy, but grand. Religious religion is the only kind of faith worth holding, for it is the only sort that will stand. And religious religion is practically unattainable, save in close and conscious fellowship with the Saviour, Son of God. When all has been written and said, by philosophers or poets, professional theologians or lay students of ethnic faiths, religion—in the phrase of the master of Trinity College, Cambridge, quoted by Johnston Ross—is "Jesus in a man."

[Rev. Walter Leopold Bennett, M.A., in *Christian Work and Evangelist.*]

The only thorough method for the evangelical church to deal with its crisis is to undertake a radical revision of its creeds. In a sense the church has accepted the new thought. The preaching in many of the pulpits from Maine to California absolutely disregards every anachronistic doctrine, but no statement has as yet been made by the great communions. The clergy preach the new, at least some of them do, but they subscribe to the old. They are building modern houses on the old foundations. Who can blame the people for not trusting themselves more heartily to the protection which they offer? In fact, the main cause of the present crisis is to be found in the cowardice of the ministers.

[Harold Begbie in *Christian World.*]

I think it is infinitely more beautiful, more exalting, and more sublime to raise our eyes to Christ as the bringer of good news, as the radiant messenger from God, as the light of the world, and the Son of man breathing blessing and encouragement on humanity, than to regard him as a victim offered in expiation of our sins. I think there is an incomparable grandeur in the faith which cherishes the incarnation as God's love-message to the struggling hosts of the human race. I feel no loss of reverence in this attitude toward the Saviour, but a loss of perplexity and a great accession of wonder, worship, and devotion.

[*British Congregationalist.*]

"Come, let us to the Lord our God, with contrite hearts return." If we will love and master and interpret the Scriptures and hide our life with Christ in God, until God be all and in all, we shall prove the reality of the supernatural for ourselves and others. The dry bones will live when the Spirit of God breathes upon them. Nor is Christ far from his people. In all our churches he lives and works, and would fain work more mightily.

[Dr. Orchard in *Christian Commonwealth.*]

One thing is certain, Jesus did not regard his cures as miracles in the modern sense. He believed that his disciples could do them, and he placed no evidential value upon his own possession of this power. While the subject is still, therefore, very obscure, the general position seems to be open that we ought not to submit to pain and suffering as something inevitable.

[*Living Church.*]

Goodness in this world has need of patience. But there is this to say, though the individual life seems often to be sacrificed for the sake of the kingdom of God, it is of such sacrifice that the kingdom is triumphing.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel.*

ATTENTION IS CALLED to the new volume, "Poems by Mary Baker Eddy," now on sale. Specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

Attention is called to the following reprints printed in Swedish: "Hvad Ar Bön?" "Lagens Välde," "Det Ondas Natur," "Helvete och Himmel," "Människans Gemenskap Med Gud," "Verklighet," "Det Ar En Ström," "Förklaring Af Kristligt Helande," "Den Yppersta Egenskapen I Christian Science," "Underverken," "Det Ondas Ofvervinnande," "Var Väktare," "Riklig Tillgang," "Kristendom Och Vetenskap." Ten copies to one address, prepaid, 10 cents; one hundred copies to one address, 75 cents; five hundred copies to one address, $3.00; one thousand copies to one address, $5.00.

NEW MUSIC

Two of our Leader's poems, "Shepherd, show me how to go," and "Love," set to music by Frederic W. Root, are now on sale by the Society, and attention is called to the advertisement on the inside back cover page of this week's *Sentinel* for description and price.

NEW POST CARDS OF THE MOTHER CHURCH.

Post card photogravure, in sepia tint; an exact reproduction of the large photogravure of The Mother Church Buildings and Publishing House with parkway in foreground. Single copy, 5 cents; twenty-five copies, $1.15; one hundred copies, $4.25.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90; six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. XI indicates the year 1911 and XII, 1912. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

MISCELLANEOUS

BIBLES. Clarendon Brevier (01483 x), heavy faced, very distinct type, Turkey morocco, size, 6 1-2 x 4 3-8 inches, corresponding in size and binding to pocket edition of Science and Health. Price, $3.75.

Morocco cases, to hold pocket edition of Science and Health, *Quarterly*, and above Bible, may be had at $1.25.

Text Bible. (01561 x), pica square type, Alaska seal, size, 7 1-2 x 6 1-4 inches, 1 1-2 inches thick. Specially adapted for use of Second Readers. Price, $7.25.

"PERSONAL CONTAGION" AND "WHAT OUR LEADER SAYS." By Mary Baker Eddy. Printed in French old style type, silk sewed. Single copy, 10 cents; 12 copies, $1; 100 copies, $7.50.

CHRISTIAN SCIENCE AND LEGISLATION. Consisting of articles by EDWARD A. KIMBALL, JUDGE CLIFFORD P. SMITH, and JUDGE SEPTIMUS J. HANNA, together with testimonies of healing, editorial comments, etc. 128 pages. Single copy, 10 cents; 12 copies, ONE ADDRESS, $1; 25 copies, $1.85; 50 copies, $3.50.

PICTURE OF THE FIRST CHURCH OF CHRIST, SCIENTIST, in Boston, Mass., and the Publishing House of The Christian Science Publishing Society. Artist's proof with remarque on Japanese vellum. Size, 18 x 24. Each, $5; on India paper without remarque, each, $3. Ten per cent discount to Reading Rooms. Photogravure Post Cards, reproduction of the large picture of the Church and the Publishing House, each 5 cents; twenty five, $1.15; one hundred, $4.25.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. New Edition. A History of the Building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Illustrated; 107 pages. Single copy, $1.50; one dozen, $12; half doz n, $7.

QUARTERLY COVERS, in black morocco. Pocket size, 4 1-2 x 6 1-2, $1.15 each or $11 a dozen. With change pocket, $1.40 each or $14 a dozen.

THE CHRISTIAN SCIENCE HYMNAL. Revised and enlarged. Cloth, single copy, $1.15; one dozen, $9; half dozen, $5. Half morocco, single copy, $1.40; one dozen, $12; half dozen, $6.50. Full morocco, single copy, $2.50. Levant, single copy, $3.50. Pocket edition, size 4 5 8 x 6 5-8. Full morocco. Single copy, $3; one dozen, $30.

MUSIC. Poems written by MARY BAKER EDDY and used by special permission, have been set to music as follows:—

"THE MOTHER'S EVENING PRAYER." By William Lyman Johnson. Arrangement for high and low voice in same copy. Single copy, 75 cents; one dozen, $7.

"CHRIST MY REFUGE." By William Lyman Johnson. Arrangement for high and low voice in same copy. Single copy, 75 cents; one dozen, $7.

"LOVE." By Frederic W. Root. For soprano or mezzo soprano. Single copy, 40 cents; one dozen, $4.

"SHEPHERD, SHOW ME HOW TO GO." By Frederic W. Root. Soprano or mezzo soprano. Single copy, 27 cents; one dozen, $2.75.

COMMUNION HYMN.—"SAW YE MY SAVIOUR?" By William Lyman Johnson. Published in two keys for high and low voice. Single copy, 50 cents; one dozen, $5.

"BLEST CHRISTMAS MORN." By Frederic W. Root. Published in two keys, for high and low voice. Single copy, 27 cents; one dozen, $2.75.

"O'ER WAITING HARPSTRINGS OF THE MIND." By Frederic W. Root. Published in two keys for high and low voice. Single copy, 27 cents; one dozen, $2.75.

Please state when ordering any of the last three numbers, whether high or low key is desired.

Our latest catalogue, containing description and prices of above named literature and a selected list of Bibles, will be mailed free on application. Remittances should always accompany orders, and be made by check, money order, or exchange on Boston or New York. Currency or coin should not be sent by mail unless registered. Please send no money or business letters to the Editor or Editorial Department.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, JUNE, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.20. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the month, and include all issues for the month named as expiration date on the wrapper. XI indicates the year 1911; XII, 1912. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25—£0: 5 s.: 2d.;	Mk. 5.30;	F. 6.45
2.25— 0: 9 : 3 ;	9.50;	11.60
2.50— 0: 10 : 3 ;	10.60;	12.85
4.00— 0: 16 : 5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

A resolve of the Massachusetts Senate provides that the Governor, with the advice and consent of the council, shall appoint a commission of seven citizens of the commonwealth, to consider in what manner Massachusetts may best cooperate with the federal government in the construction of a ship canal—free and open to the commerce of the world and without toll for the passage of freight across the state, as now being surveyed by the engineers of the war department. The canal would be a link of the proposed intracoastal waterway between Boston and Rio Grande in Texas, and in harmony with the plan advocated by the Atlantic Deeper Waterways Association. The commission shall consider how best the commonwealth may cooperate with other states along the Atlantic seaboard in the development of inland waterways, and shall consider the value of such a canal to the state in the development of industries, the reduction in the cost of handling raw material and manufactured products, and the benefit to transportation generally along the Atlantic coast.

The number of federal office-holders amounts to 411,322. Of this number the President appoints, by and with the advice and consent of the Senate, only 9,846. There are under civil service rules 262,608, of which the post-office department has 147,727. The treasury department has 27,093, the war department, exclusive of officers and enlisted men of the army, 28,102; the department of justice, 5,700; the department of agriculture, 12,519; the department of the interior, 14,262; the department of commerce and labor, 14,797; the government printing office, 3,925; the interstate commerce commission, 614, and the Smithsonian Institution, 424. The President has 993 appointments which do not require the consent of the Senate, and 846 of them are in the department of justice.

The Senate committee on foreign relations reported favorably the Honduran financial treaty, which in brief throws the protection of the United States over a contract made between the Honduran government and the J. P. Morgan interests for the refunding of the enormous outstanding foreign debt of Honduras, on a basis of one to fifteen. This will be the opening wedge for a series of similar treaties between the United States and countries of Central and South America, and will remove any pretext for interference by European governments in the affairs of the American republics.

Attorney-General Wickersham is considering a proposition made by the Southern Pacific Railroad Company to return to the government thirty thousand acres of mineral land in Nevada, valued at approximately seventy-five million dollars, which was illegally patented twelve years ago, providing the government withdraws all suits it has against the company for land illegally patented. The company admits that part of the lands contain minerals, and is willing to relinquish them, providing the government allows the railroad to keep the remainder (forty thousand acres) which it says does not contain minerals.

Half the concrete work on the locks at Gatun is completed. The uppermost of the three pairs of locks is finished and awaits installation of the gate machinery. Work on the lowest pair has just started and the middle pair is well under way. The full height of the locks on the lower end will be seventy-nine feet, and before the end of the next rainy season, one year from now, the work will be done. Shipments for structural steel for the gates will arrive in five weeks. The locks are one thousand feet long. They are in effect giant monoliths.

The House passed the bill recommended by Secretary of the Treasury MacVeagh, providing that none of the two hundred and ninety million dollars of Panama Canal bonds authorized in the Payne tariff law shall be received as security for the issue of circulating notes. The purpose of the legislation, it is said, is to protect the seven hundred million dollars of two per cent United States bonds, now outstanding, from depreciation.

From a careful investigation it appears that it will require the expenditure in the next five years of $2,717,500 to put Central Park, New York city, in a condition in keeping with its reputation as one of the most beautiful parks possessed by any city in the world.

Governor Harmon of Ohio has signed the Reynolds non-partizan judiciary election bill, which provides for the election of all judges, from justice of the peace to members of the supreme court, on a separate ballot without party designation.

The interstate commerce commission has decided that the railways shall not be permitted to increase their freight rates, and the railroads have thus far accepted the decision.

By a vote of fifty-four to thirty-three, seven less than the necessary two thirds, the Senate refused to pass the Borah resolution for a constitutional amendment providing for the direct election of United States senators.

In a nine-days campaign New London, Conn., has raised an endowment fund of $104,225.05 for the Woman's College of Connecticut, which it is planned to establish there.

Senator Lorimer won last week by a vote of forty-six to forty, and will retain his seat in the United States Senate as the junior member from Illinois.

John Hays Hammond has been appointed to represent the United States at the coronation of King George.

International.

The second reading stage of the Lords veto bill opened in the House of Commons Feb. 27. Premier Asquith having formally moved the second reading of the measure, which is designed to restrict the authority of the upper chamber over legislation originating in the House of Commons, J. Austen Chamberlain moved a Unionist amendment to the effect that the House would welcome the introduction of a bill to reform the composition of the House of Lords while maintaining its independence as a second chamber, but declined to proceed with a measure which placed all effective legislative authority in the hands of a single chamber and offered no safeguard against grave changes made without the consent of the people.

Premier Aristide Briand, who succeeded Clemenceau as the head of the French cabinet on July 23, 1909, tendered the resignation of his ministry to President Fallières, Feb. 27. On Nov. 2 last Briand formally retired, but a few hours later he was restored to power and formed a new cabinet from which all elements not thoroughly in sympathy with his attitude toward labor had been eliminated. The situation at present is wholly different, and the premier had declared himself weary of the bickerings of Parliament and the intrigues of the groups nominally supporting him, and expressed the wish that he might be relieved of the responsibilities of government.

The Chinese government apparently has determined to contest the demands of the Russian government in the matter of extension of trade relations and the recognition of special privileges in the Province of Ili, northwestern China, and has addressed a note to the St. Petersburg foreign office in reply to the ultimatum, threatening a military demonstration in Turkestan. The note in substance is a sweeping denial of the charges made by the Russian government that China has violated the provisions of the treaty of 1881, so far as they relate to consular officers and the rights of Russian merchants in the northwestern provinces of China.

A scheme has been inaugurated by which three German engineering schools are to be founded in China, that is, one high school, or an institution of university rank, and two secondary schools. It is understood that it will be necessary to raise capital to the amount of about one million five hundred thousand or two million marks in order to carry out the scheme. Considerable sums have already been subscribed and several well-known persons are cooperating for the purpose of obtaining the remaining necessary capital.

Negotiations have been in progress for some little time between the French government and the Porte for the concession to France of contracts for the construction of railways in Albania and eastern Anatolia, and it is said that concessions already have been granted by Turkey to France for railways of a total of thirteen hundred and sixty-six miles.

The will of Baron de Rothschild, head of the Austrian branch of the Rothschild house, has been filed for probate, and bequeathed five hundred thousand dollars to charity. The value of the estate has been estimated as high as two hundred million dollars.

The Chinese census enumeration, which was carried on through the customs authorities, has, except in a few provinces, been completed, and according to its results the total number of the inhabitants of China is 439,214,000.

Industrial and Commercial.

A party of American and Jamaican planters have left Kingston, Jamaica, for Hayti to prospect for land for the cultivation of bananas to supply the American market and to investigate the possibilities for the construction of a railroad in that republic. Other Jamaican planters are arranging to follow, and indications are that Hayti may become a powerful competitor of Jamaica in the banana trade.

A bill is before the Massachusetts Legislature which calls for a standard apple barrel which shall have a length of stave not less than 28½ inches, diameter of head not less than 17⅛ inches, and circumference of bilge not less than 64 inches. Barrels of other dimensions must be marked "Not a standard Massachusetts barrel."

The outlay for veneer material, both domestic and imported woods, during the calendar year 1909 was $8,977,516. The number of establishments engaged in the manufacture of veneers during 1909 was six hundred and thirty-seven.

Tanbark and tanning extracts were consumed in the United States during the calendar year 1909 to the value of $21,904,927.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

HAS MAN A DUAL NATURE?

CLARENCE W. CHADWICK.

HUMAN belief says that man is both mortal and immortal, both human and divine, both evil and good. The highest ethical and moral teaching of the past has upheld the belief that man exists in a state of dualism. Popular theology has likewise done its part in bolstering up the supposition of a dual man. Back of all such contention lies a mistaken sense of God, and only as this mistaken sense gives place to the right idea of the creator, can the true nature of creation be discerned. The starting-point for all scientific and logical deductions is God. If one's concept of God proves to be erroneous, his concept of man must also be erroneous. Man being the image and likeness of his creator, if this creator is conceived to be possessed of a dual nature, so must man be. If good and evil blend in God, so must they blend in man.

Christian Science deals with this subject from the standpoint of demonstration. It accepts the Scriptural teaching that God is infinite Spirit, and from this premise it draws the only possible conclusion to be deduced, to wit, that man, to be God's image and likeness, must be just as spiritual as Spirit is. It does not stop here, but goes to work to prove its conclusion true. It reasons on this wise: Since Spirit is infinite, there can be but one Spirit, therefore Spirit is the only creator, power, or causation, and since Spirit is good and not evil, everything emanating from Spirit must be spiritual and good. This being true, whatever assumes to contradict this conclusion must be false.

The evidence before the physical senses contradicts both the premise and conclusion of Christian Science. These so-called senses declare that man is sick and a sinner. Such evidence being false, it must not and cannot be accepted or believed. He who reasons thus insists upon maintaining a correct mental attitude by refusing to accept false testimony, and the result is that the so-called evidence of disease and sin disappears. Physical and moral healing is thus proven to be the outcome of an all-good God, and man to be the spiritual image and likeness of this God. No other conclusion can be deduced from the evidence in hand, and thrice blessed and happy is he who reaches this point in demonstration of the omnipotence of Spirit and of the perfection of Spirit's creation. To him it is the crossing of the threshold of the kingdom of heaven on earth.

Quite recently the writer was told of the experience of a person who had gone to a Christian Science practitioner for consultation, after having been assured by *materia medica* that an immediate surgical operation would be necessary. In one or two treatments this person was healed of the belief in a popular malady which medicine is not supposed to reach, and is now well and happy. How was this healing accomplished? By knowing that man, being created in the image and likeness of Spirit, is wholly spiritual, and therefore not possessed of any dual nature. Thousands of such cases are daily being restored to health and strength through this normal, scientific, and practical understanding of God and man as presented to the world in Christian Science. Christian Scientists believe that such a demonstrable understanding of omnipotence is well worth working for, and that the salvation of the human race depends upon the application of its rules in daily living.

The prophet Isaiah has prescribed a rule which, if obeyed in the light of Christian Science, will lead the whole world out of darkness into the light of spiritual understanding and its application to human needs. He says, "Cease ye from man, whose breath is in his nostrils: for wherein is he to be accounted of?" This is precisely what Christian Science is calling upon the Christian world to do today, to cease "from man, whose breath is in his nostrils." How are they obeying the command? By learning the truth about man in divine Science,—that he is not a mortal sinner embodying an immortal soul, that he never had and never will have any dual nature, being conceived in the image and likeness of Spirit. The one who gains this correct concept of God and man, and adheres to it in thought and deed, will refuse to accept sense testimony concerning man, will refuse to believe that man is born of woman, will refuse to admit that the image and likeness of perfect Spirit has become marred through contact with evil or sin. He will cease to believe that which is untrue about God and His perfect man, and in doing so the sick will be healed, the sorrowing and depressed will be comforted, the fearful will be calmed, and the sinner will be reformed.

Had the prophet's admonition to cease believing in the so-called dust-man been intelligently obeyed by professing Christians, the healing works of Jesus' disciples would have been perpetuated, instead of being relegated to a dead past. They are reinstated today in Christian Science for no other reason than that the truth about God and man has been unearthed and made so plain to the world, through the unselfish labors of the revered Discoverer and Founder of Christian Science, that her followers have caught the true meaning of Jesus' spiritual teaching and have been enabled to apply it to every-day needs. In the light of reason and revelation they find no way of accounting for a man that bears no resemblance to his creator. They have accordingly ceased to think that man is a mere creature or worm of the dust, have ceased to dishonor God by admitting a marred image, and have begun to contemplate a perfect thought model as the only possible way of ever reaching the Science of being. They go to the bedside of the sick and dying, but they no longer judge "according to the appearance," no longer think thoughts of weakness, pain, fear, sorrow, and death; but they cease "from man, whose breath is in his nostrils," cease to acknowledge that man has any other than the nature of Spirit: and the result is something far more health-giving, joy-inspiring, and life-bestowing than was ever accomplished by looking long-faced and thinking thoughts which when believed send thousands upon thousands of innocent people to their graves.

It is indeed high time for professing Christians to awaken from the Adam-dream which forever presents a blending of good and evil; high time to cease thinking thoughts

Copyright, 1911, by The Christian Science Publishing Society.

Digitized by Google

that God never imparts to His image and likeness. Not until they learn to reject from consciousness what is untrue concerning God's spiritual image, can they obey the injunction, "Cease ye from man, whose breath is in his nostrils." All that one hears about the "denial" of disease and sin and the "handling" of error in Christian Science is summed up in this one thought of obedience to the command to cease to believe that man is endowed with qualities that are not spiritual and Godlike.

That God is infinite Spirit, and the author of good only, must be accepted, believed, and understood as a fundamental basis from which to think and reason rationally and scientifically concerning man and the universe. There is no other platform for a Christian to stand on if he would arrive at correct conclusions concerning created things or ideas. Through logical reasoning and demonstration the Christian Scientist proves beyond all cavil that God's man does not exist in a state of duality, but that he is now as spiritual and perfect as he ever was or ever can be. Humanity with this proof before them have but one thing to do, and that is to work out of and overcome all belief in a supposititious mortal or fleshly existence; in other words, they have but to put off the old or belief man, to find that the new or spiritual man, "created in righteousness and true holiness," is the only real man there is or ever can be.

LIFE SPIRITUALLY DISCERNED.

ELINOR F. EDWARDS.

WHO can estimate the importance of rightly understanding the words we use, especially the true significance of these two short words, life and death. Paul's definition is metaphysical and correct: "To be spiritually minded is life": "to be carnally minded is death." Life and death are, then, conditions of thought; and to the degree that thought is spiritual—that is, honest, unselfish, loving, and pure—it partakes of life; but if thought is dishonest, selfish, unloving, or impure, it presages death.

The expression is often heard, "I am tired to death," but the time must inevitably come when every one shall say, "I am tired of death;" in other words, "I am tired of my own selfishness, ingratitude, unlovingness, and inertia;" and to cry out with St. Paul, "Who shall deliver me from the body of this death?" When thought has even begun to turn in the direction of Life, and as the desire increases to show more love and consideration for others, the mortal is being put off and the immortal sense put on. Thus does one learn something of what the words life and death really mean.

If to be spiritually minded is life, then the most exuberant sense of physical life is not life, nor is the word death, as applied only to a material body, the correct use of that word, nor can humanity ever be delivered from dying by such a belief. Jesus said, "Fear not them which kill the body, but are not able to kill the soul: but rather fear him which is able to destroy both soul and body in hell." That is, we may well fear or shrink from moral death, deadness to the spiritual qualities of compassion, gratitude, purity, and unselfishness, and strongly resist the subtlety of inertia, destructive criticism, and the selfishness which would benumb or kill one's spiritual sense. Christ Jesus said, "This is life eternal, that they might know thee the only true God"—that they might exercise Godlike qualities of thought. To know God is to have the Mind which was in Christ Jesus, and in proportion to the daily activity of right thought, an individual is even now entering into life eternal, which is the only immortality there is or ever can be, since the qualities of thought which express God are free from change and decay.

Today there are countless thousands who through understanding in some degree the correct definition of life and death can say, "I was dead, but I am alive;" and they can never go back and be as dead as they were before. Over such "the second death" has no power. Mrs. Eddy, the Leader of that vast procession whose faces shine with the light of Life, over forty years ago reversed the sentence of death pronounced upon her, and then with a faith in the allness of Mind which grew with every passing hour, she showed the world that its ever-present savior is the love of righteousness and the practice of it. And there is no other way by which humanity can be saved from its unutterable woes, except through the individual choice and practice of good.

Our great Leader has taught us by precept and example what it means to rise with Christ, viz., to rise into greater faith in Spirit, in the power and allness of God, into more compassion, purity, and love, into a clearer understanding of the irresistible power of a purpose at one with God. She was inspired to write a text-book upon this subject, so that thousands who never saw her personality have had the sentence of death reversed for them by the study of this book. Many others have been raised from moral death or deadness into righteousness, purity, and peace. As she rose above the belief that life is in matter, to the understanding that Spirit is the only Life, she gained the true concept of God and His universe, which came to her as a revelation. This has raised and will continue to raise the dead of all nations, until there shall be no more death, but all the earth shall be filled with the understanding of Life, even as the waters cover the sea.

Mrs. Eddy's discovery of Christian Science was a saving necessity in an age lost in materialism, and it has broken the fetters of superstition, mystery, man-made creeds, and the belief in heredity; it has opened the prison doors for those who were bound physically, mentally, and morally; and to those who "through fear of death were all their lifetime subject to bondage," it has brought freedom and joy; it has thrown down the gates of brass, the bonds of inertia, poverty, despair, sickness, and misery of every name and nature. It has brought health to the body and peace incomparable to the mind diseased. They who were in graves of sloth and selfishness have heard the voice of the Son of God, and have come forth into active, joyful service of good. And whosoever will may "take the water of life freely;" whoever desires to understand the difference between life and death, and will make the effort to change thought and conduct, may have this true sense of life and have it more abundantly.

TRUE INDIVIDUALISM.

E. J. MARIA.

A PROPER sense of individualism is most requisite in a progressive community; more particularly in a democracy where common responsibility and common equality constitute the principal features which render individual uplift indispensable for democratic growth. Taken literally, the word individualism conveys a certain sense of egoism or self-interest, but in reality there is no selfishness in true individualism. On the contrary, true individualism includes generosity, manliness, kindness, self-respect, moral courage, and all the superior qualities that contribute to the building up of a genuinely fine character.

It is customary to regard the human will as a prominent factor in the development of individual character. Men of robust wills are generally considered the most capable of great achievement. Humanly speaking, this may be correct, so far as temporary and earthly things are concerned. Upon test, however, the human will proves hopelessly lacking in efficiency. History abounds in instances where self-determination has been an important factor in the accomplishment of great deeds; where a certain fearlessness has enabled persons to attain to those summits of power

Digitized by Google

which in due time crumble and fall. Napoleon's career, for instance, affords a splendid example of the acquirement of power through self-confidence or self-will. What a contrast, however, between his career and that of Lincoln, whose whole life was one of uninterrupted faith in and reliance upon the Almighty! Both of these men had a remarkable individuality; each in his own way. Both achieved greatness, and the career of both had a notable bearing on the physical and moral condition of the civilized world. The individualism expressed by these two men, however, was far from being on a par with respect to its basis and quality. If one was constructive and founded on love, the other was destructive, having for its aim self-glory and for its foundation the human will.

Strength of character based on spiritual realization characterizes true individualism. Moral independence is imperatively essential to the making of substantial individuality; spiritual accomplishment forms the basis of a truly progressive life. If a community is to be elevated, its standard of spirituality must be advanced. Ultraconservatism is as much of an impediment to spiritual growth as it is to everything else. Unless time-honored doctrines and systems of religion are disarmed of their dominating influence over human sense, there is little hope for advancement along religious lines. The same religious conventionalism that landed Jesus on the cross, two thousand years ago, is still at work, resisting vigorously all attempts toward expansion of thought; it is the tyrant which would hold within its grip the narrow-minded. In olden times, human laws, governed by prejudice, sanctioned the crucifixion of men, and mortal mind is no less tyrannical today.

The first stumbling-block to progress is ignorance; then comes that unwarranted contentment with supposed facts which leaves the mental soil barren of growth. To reject an idea without looking into it is as detrimental as not to look into it before adopting it. Grasping the verities of being is the one and only right way to gain individual progress. Unless we entertain right ideas about being we cannot hope to grow in true individuality. To try to realize the material or materialize the real gives no promise of yielding a true concept of being. Because a given belief satisfied the thought of our fathers is no binding reason why it should satisfy ours. If our fathers had to shift aimlessly in the darkness of their ignorance, are we to hold on to that ignorance, irrespective of the opportunities that we are having to outgrow it? Indeed, very few people are broad enough to behold the virtue in breadth of view.

Today a change has come. The advent of Christian Science marks the dawning of a new epoch in the annals of thought. As Mrs. Eddy says, "contentment with the past and the cold conventionality of materialism are crumbling away" (Science and Health, Pref., p. vii.). True individualism is asserting itself by ignoring the demands of conventionalism. Amid all the tendency in mortals to revolt against any attempt to invade established customs, there have radiated, from a nucleus of light, lustrous beams which are now illuminating the world. Not religion only, but society, as well as our political, economic, and domestic life, have received a new impetus, and are now speeding toward a higher goal. The world may not yet recognize the fundamental cause that is working such a remarkable change in the general status of mankind, but no careful, unprejudiced observer can fail to note how every department of human life is being pervaded by the "Spirit of truth" as revealed in Christian Science.

True individualism, as enhanced by Christian Science, is furnishing human life a new and progressive order, in general. Economically, business men are beginning to realize the groundlessness of fear, and this in itself is sufficient to implant confidence and stimulate activity in the world of trade. A greater sense of security is pervading the commercial atmosphere. Optimism is clearing the field of vision for thought to operate freely. Evil is much less dwelt upon, so that the human mind has now a better chance to work along legitimate lines. Business common sense is being developed in keeping with a high moral standard, and customs and practices which are not in conformity with it are being gradually discarded. Expansion is indispensable for growth in business, and anything that eliminates that which retards legitimate expansion will help further growth. Only reasonable conservatism can influence a business man who is well posted in the Science of being. His sense of discretion, uncontaminated by fear, will lead him to a safe and judicious course. Those who are actually leaning on divine guidance in the management of their affairs are never in danger of either overexpansion or ultraconservatism.

Socially, Christian Science is foremost among the forces working for the amelioration of modern society. Social formalism is no more a barrier to progress in true manners. It is a simple matter for love to impart grace and refinement to an individuality where vulgarity once prevailed. Morality is playing a principal part in determining what is consistent with culture, common sense, and decency. Manliness, generosity, politeness, modesty, gentleness, courtesy, etc., have found at last the proper foundation for growth. What is condemned morally is no more socially entertained, and morally sound acts, hitherto deemed improper from a social point of view, are no more looked upon with contempt.

It is domestically, perhaps, that the change is the most in evidence, for the reason that home life is the least conventional, and therefore offers the least resistance. There is always less selfishness in the home, whatever the error therein with which Truth has to come in conflict. Though for a time it may display signs of unusual strength and activity, it is generally quicker to surrender. The happiness of many a home has been actually redeemed through the introduction of Christian Science, and the misery of many others successfully averted. Rejoicing, which is nature's bequest to truth-seekers, is a valuable life asset of which no household can afford to lack. Congeniality is natural where truth and love abide. Where love is predominant, it requires no effort to cultivate peace. No such thing as involuntary, disagreeable concessions would be necessary with which to purchase harmony, where selfishness is left no room to breed its own discords.

NEEDFUL ACTION.

ALEXANDER P. ROBERTSON, M.D.

Mrs. Eddy tells us that "it is easier to desire Truth than to rid one's self of error. Mortals may seek the understanding of Christian Science, but they will not be able to glean from Christian Science the facts of being, without striving for them" (Science and Health, p. 322). She also says, "Divine Love always has met and always will meet every human need" (*Ibid.*, p. 494). Note carefully that Mrs. Eddy here uses the words "meet" and "met." She does not say that divine Love will come all the way to where we are idly sitting, waiting, moping, dozing, dreaming, wondering why the healing is so long in coming to us, but she does say that divine Love "always has met and always will meet;" and this implies motion, movement, action on our part, a rousing up, a getting up, a going toward divine Love. If we are willing to do our part, we have the positive statement of those who have tested it that every human need is met by divine Love.

In the story of the prodigal son we read, "I will arise and go to my father." Now this was a good resolution, but to become effective it required action, otherwise he would have remained to feed upon the husks. But he arose and came, and we read that while he was yet a long way off his father saw him and ran and met him. Action, always action! In Revelation we read, "Behold, I stand

Digitized by Google

at the door, and knock: if any man hear my voice, and open the door, I will come in to him." Again action is indicated —ever action on our part. We must wake up, hear the voice, get up and open the door. There is always some work for us to do, some act for us to perform.

We also have the promises to "him that overcometh." The use of this word overcome includes action, it implies that a struggle has preceded the mastery. It would not be used to express anything which might come to us while inactive; when we are in a mesmeric doze, nor when we are fearful or doubtful. But when with sincere desire, with earnest motive, with fervent hope, with confident trust, we strive for the mastery, then we overcome, and we become victors.

The Master said to the disciples, "What I say unto you I say unto all, Watch." We need to be ever alert, always active, never doubting, but striving earnestly to know, to understand that divine Love is ever ready to meet us on the way.

A PROBLEM AND ITS RESULTS.

DAVENPORT BROMFIELD.

SOME time ago the writer had an experience which brought home to him most vividly the faithfulness and devotion of the Discoverer of Christian Science, which enabled her to reveal God to a suffering world as the divine Principle of being. The writer, a civil engineer, had sent an assistant with a field party to make an exact survey of a road some three miles in length, using in the work a scientific instrument supposed to be in perfect adjustment. The survey, which necessitated the recording of many angles with mathematical accuracy, was completed and the notes of the same turned into the office. There being no other way of checking the work or proving its correctness, the writer accompanied his assistant to the field and resurveyed portions of the work, checking the angles at various points. The result tended to show that there was a constant error in the work, due not to the inefficiency of the assistant, but to the instrument being out of adjustment.

Having arrived at this conclusion, the engineer decided to spend an evening in the endeavor to find the amount of error in the instrumental work, and correct each angle in the work accordingly. After studying over the matter for several hours and trying many premises, the correct constant or rule was discovered, which when applied to each of the various angles taken in the survey rectified each, and therefore the whole survey. The whole evening had been spent in discovering the rule of right which when applied with mathematical precision to each of the innumerable errors, caused them all to disappear and produced harmony in the entire work. The remarkable part of this correction was that the whole process was mental, and the survey was made right without any further work in the field or even the mechanical adjustment of the instrument.

While pondering over this effort and its result with great satisfaction, the thought suddenly came, "This is just what Mrs. Eddy did in regard to the problem of mortal existence with all its claims of error, sin, sickness, and death." In her book "Retrospection and Introspection," speaking of her discovery of the Principle of Mind-healing, she says, "During twenty years prior to my discovery I had been trying to trace all physical effects to a mental cause; and in the latter part of 1866 I gained the scientific certainty that all causation is Mind, and every effect a mental phenomenon" (p. 24). Thus once more is brought home to us the wonderful steadfastness of purpose, the great yearning to discover Truth, and the love for her fellow-men manifested during all these years by the Discoverer of Christian Science.

OUTLINING.

PERCY TAYLOR.

IN working out the problems of daily life, one thing that seems to hinder the progress of many who are taking their first steps in Christian Science is a desire to outline or direct the way in which they desire the truth to act. If the problem is a financial one, they are prone to wish that a certain property might be sold, or that a certain debtor should pay a particular debt, or that money should come through some special channel; and they endeavor to work to that end. By doing this they fail to realize that they are encouraging a sense of limitation and that such thoughts tend to lead one away from the realization that God is the source of all supply. They forget that there are countless channels through which supply may come; and often find, when a need has been met, that the way in which the supply came was one which had been entirely overlooked. It is not necessary for us to consider how our supply should come, if we realize that divine Love supplies to man all that he needs and that there is no lack in divine Mind.

Again, we often plan far into the future, regardless of the probability that our views may be entirely changed before the time comes for their realization, and failing to see that holding to our plan may cause us to disregard other and perhaps better ones than that which we are entertaining. Christ Jesus said, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." If we are seeking God's kingdom, the reign of harmony, we are working out of our false sense of lack (for there is no lack in His creation) more surely, more fully, and more directly than by considering the situation from any human point of view.

In dealing with sickness, too, one is apt to think of the various symptoms, and in what order they should disappear, or we may be tempted to direct in some way the process of healing. This method has a tendency to hide from one's thought the knowledge that we have "a perfect Principle and idea,—perfect God and perfect man,—as the basis of thought and demonstration" (Science and Health, p. 259). Such methods would also encourage the belief that our work is to patch up the faulty mortal concept of man; whereas, our work is to realize the perfect man, who coexists with his creator and reflects only the good and beautiful.

If one but remembers that divine Mind never sees things from a material point of view, and does not need to consider worldly methods, he will find it true in his experience, as Mrs. Eddy tells us, that when he "blends his thoughts of existence with the spiritual and works only as God works, he will no longer grope in the dark and cling to earth because he has not tasted heaven" (*Ibid.*, p. 263).

[Written for the *Sentinel.*]

LOVE.

CHARLES JOHNSON.

IN error's darkness, not a ray of light;
I stumbled on and knew not where to go,
While phantom forms of fear's unholy show
Pursued and harassed me upon my flight:
Thou, Love, wast there, and not with earthly might
Destroyed these terrors—bade me stop and know
Thyself and Thine. I saw, and came the glow
Of heav'nly peace that stilled the fears of night.
At first, an angel whispering in my ear
It seemed to be; I turned, and thought to see
A loving face that spoke this kindly cheer
And stilled the tumult: knew not then 'twas Thee—
Love, tender, merciful, forever near—
That soothed my fears and gave sweet rest to me.

SELECTED ARTICLES.

[Frederick Dixon in *South London Observer and Camberwell Times.*]

Christian Science healing is effected through an understanding of spiritual law. This understanding of spiritual law is that knowledge of Truth, the grasp of which Christ Jesus declared would make the world free. "Jesus of Nazareth," Mrs. Eddy has written on page 313 of Science and Health, "was the most scientific man that ever trod the globe. He plunged beneath the material surface of things, and found the spiritual cause." It was because Jesus had grasped the fact of spiritual causation that he was able to demonstrate his knowledge in the miracles, for the Greek words translated miracle never have meant anything supernatural, but simply something wonderful, or something in the nature of proof.

Jesus asked whether it was easier to say a man's sins were forgiven, or to say, Arise and walk. It is perfectly manifest that by no possible process of suggestion could a man's sins be forgiven him, therefore it is perfectly certain that by no possible process of suggestion could any form of sickness, resulting from sin, be overcome. Only in proportion as the sin which was the cause of the sickness was overcome would the effect, or physical manifestation, disappear. Now the only way in which sin can be destroyed in the human consciousness is by repentance, and the Greek word translated repentance means a change of mind. As, therefore, a man gains the necessary change of mind, he puts off the carnal mind with its passions, and gains the Mind of Christ. In the exact proportion, consequently, in which he gains the Mind of Christ, he gains that scientific understanding of absolute Truth, or, as the epistles put it, of God, which constitutes the Mind that was in Christ Jesus. Thus, in the proportion he repents, in the true sense of repentance, he gains the knowledge of Truth, which frees him by destroying the cause that was producing the bad effect.

Turning to an entirely different phase of phenomena, we find it stated in the Bible that Jesus walked on the water, stilled the tempest, and raised the dead. It is obvious that none of these things could be accomplished by mental suggestion. No amount of mental suggestion would overcome the physical law of gravity, if that were an absolute law; no amount of mental suggestion would induce the winds and waves to moderate; no amount of mental suggestion would call back a dead man to life. The inference is inevitable, either that the Bible is an untrue record, or that these wonderful proofs, to use the word miracle in its proper sense, were the result of some scientific knowledge which the rest of the world had failed to assimilate. It is the teaching of Christian Science that, in the exact proportion in which a man gains the Mind of Christ, gains, that is to say, a scientific understanding of divine Principle, he discovers the spiritual or absolute law, and so is able to disregard the purely relative sense of physical law. Something of this nature was in the mind, no doubt, of the greatest of the medieval thinkers, when he declared that theology, or the word of God, was the only absolute science, and that all physical sciences were merely relative. This knowledge of spiritual law constitutes the absolute truth which one of the greatest of English scholars and churchmen has shown is separated in the fourth Gospel from the mere relative sense of truth by the use of the definite article in the Greek text.

For centuries men have believed certain conditions which are now everywhere recognized as normal to be impossible, simply because they were ignorant of the physical laws governing them. As these relative physical laws have become known to the human mind, such things as steamboats, electric trains, wireless telegraphy, and flying machines have become normal conditions. Gradually, as men gain the Mind of Christ, they will recognize that the only law is spiritual, and then conditions which seem to them supernatural or mythical today will become more normal than the steam engine or the Marconi system.

It will be seen from this that there is absolutely no resemblance between healing by mental suggestion and healing in Christian Science. Not only is there no resemblance, but the two things are absolutely antithetical. To admit that one human mind has power, by a process of mental suggestion, to impress thoughts of health on another human mind, is necessarily to admit that thoughts of evil can be impressed with the same ease. This is what Jesus alluded to as a house divided against a house; but, he continued, if he by the Spirit of God cast out devils, then the kingdom of God never came to any one by means of suggestion from a human mind believing in good and evil. The kingdom of God comes to men precisely in the ratio in which the carnal mind is put off, and instead men let that Mind be in them which was also in Christ Jesus.

[Alfred Farlow in *Boston* (Mass.) *Times.*]

The universe is real and is God's creation. What we need is to understand it as God made it and as it really is. Christian Science is destroying sin and its consequences by first giving its adherents a corrected view of God, man, and the universe, and then insisting that the deportment of the individual shall be in accordance therewith. In other words, Christian Science presents first a correct understanding of God. This constitutes an understanding of what the individual needs to do or be in order to be like God and thus win the harmony which belongs to God's children.

Science is correct knowledge, that which is true. We insist that the Master's declaration, "God is a Spirit," is true; that the deduction which Christian Science draws from this premise, namely, that the creation is spiritual, is also true. Therefore, these premises are scientific. They are Christian because they are the teaching of Christ Jesus. Hence the propriety of the term Christian Science. There is no authority for restricting the term science to materiality. There is something to know about God, and that something is true and scientific. While Christian Science affirms that sin, sickness, and death are no part of the "very good" things which the Scriptures declare were made by God, and since it is true, as the Scriptures teach, that there is nothing made that God did not make, we cannot escape the conclusion that these human evils have only a mythical existence. However, we do not hope to rid ourselves of these by merely ignoring them. On the contrary, they must be grappled with and overcome through divine power, and sin will never become unreal to the individual until he ceases to sin, ceases to depart himself according to his belief that sin is real. One does not do wrong because he believes there is nothing in it, but because he believes there is something in it. The sinner must be convinced that there is no pleasure or profit in evil, and then he will cease from sin.

We do not claim that Mrs. Eddy has added anything to the Bible, but that she has discovered the precious truths of God's Word which heretofore have apparently not been clearly understood. We do not rest this claim upon a mere *ipse dixit*. We point to the fruitage of Christian Science practice as the only reasonable proof of its divinity. If our critic will consider the teaching of Christian Science apart from supernaturalism, it will appear more rational to him. In keeping with the admonition to "render unto Cæsar the things which are Cæsar's," we must credit Mrs. Eddy with the discovery of the Science of Christianity, but the question with which we are most vitally concerned is the fact that Christian Science is a revelation or emanation of the divine Mind and not a mere human opinion. It is a "final revelation" because it is the clear, unveiled truth. The understanding that Spirit, God, is pure Mind, and His creation not a species of matter, rarefied or otherwise, can never be improved upon. It is final.

[E. M. Ramsay in *Edinburgh* (Scot.) *Dispatch*.]

Far from being in any way allied to witchcraft, Christian Science is the only system which knows how to raise men entirely above the fear of it. The belief in witchcraft has appeared again and again in history, because its opponents have never heretofore succeeded in explaining its nature and showing up its methods. Men have either made too much of it or too little; they have either been afraid of it or ignorant of its claims. It starts from the almost universally accepted error that each one of us has a private mind of his own with which he can influence and control, or be himself controlled by, the minds of others. That on the surface this appears to be a fact, no one would for a moment deny; but we believe that the time is not far distant when this view will be discarded by the majority of thinkers, and the Christian Science position be accepted in its stead.

Christian Science is no new religion; it is rather a return to primitive Christianity; it turns men's attention away from human theories and doctrines to the statements of truth recorded in the Bible. It points out that if, as the Scriptures aver, God is the only creator, is Father, Love, lawgiver, then He must also be Mind, intelligence. All Christians believe God to be infinite and ever present; then Mind, intelligence, must be infinite and ever present. God is infinite, ever-present intelligence. Whence, then, is man's mind, man's intelligence? Man is, in his essence, God's child, made in His image and likeness. All of truth which man knows he receives from God, since God is infinite intelligence, absolute Truth. Our Lord never spoke of having a mind of his own. He did the will of the Father. Christian Science teaches that there is but one Mind, God, and that the intelligence expressed by man is the reflection of that one Mind.

That this is not apparent is largely due to the extraordinary confusion which makes men believe that intelligence is something different from Truth and Life and Love; that we can separate intelligence and purity. In order to reflect more of this pure and infinite intelligence, the Christian Science student is daily striving to get rid of personal bias and pride, to cease exercising will-power, to renounce the tyranny of personal influence. Thus it will be plain that every step along the path of Christian Science is a step away from witchcraft and its more fashionable brethren hypnotism and mental suggestion.

Recently in your columns you quoted at length from an article on this subject by the Bishop of Bloemfontein. I confess to have read these paragraphs with deep regret. As one who was long a zealous member of the Scottish Episcopal church, I feel grieved to find men holding important positions in the Anglican church giving their support to any form of mesmeric treatment. While people may appear to be benefited by suggestion, I believe the remedy to be worse than the disease, and the practice to be injurious both to healer and to patient. Christian Science, however, shows the way by which men can be freed from the confusion of mental suggestion, and that is through the understanding that there is but one Mind, and that infinite, ever present, and good.

[George Shaw Cook in *Rockford* (Ill.) *Star*.]

"A. E. D." may not have been able to "detect any downright old-fashioned Christianity" in the Christian Science church services, but the difficulty may be that "A. E. D." has not gone back sufficiently far in seeking an example of "downright old-fashioned Christianity" with which to compare Christian Science methods. Let us go back to the primitive church of the early Christian era, and we find that the effect of "downright Christianity" in that time was to heal the sick as well as the sinning. If we go back to the record of Jesus' ministry, we find that, "as his custom was," he went into the synagogue on the Sabbath day and "stood up for to read." In the Christian Science church services Lesson-Sermons, consisting of citations from the Bible and from "Science and Health with Key to the Scriptures," are read in lieu of personal preaching. Silent prayer is offered, followed by the audible repetition of the Lord's Prayer. Hymns are sung by the congregation, as usual in Christian churches. It is definitely known that attendance at these services very often results in healing. May it not be possible, then, that Christian Science church services compare favorably with those of the "old-fashioned" Christianity of the time of Jesus and his early followers?

It is a mistake to think that Christian Scientists believe they can bring to pass anything they wish merely by "willing it to be so." On the contrary their teaching is in strict accord with the teaching of Jesus, who said, "Not my will, but thine, be done." If Christian Scientists are faithful to the teaching of Mrs. Eddy on this subject, they will be found striving to let God's will be manifested in their every experience. While some Christian Scientists were not previously affiliated with religious organizations of any kind, the great majority of them were formerly members of orthodox churches and many of them were earnest students of the Bible before taking up the study of Christian Science. No body of people can be found who are greater Bible students than are Christian Scientists as a class, and none will be found who derive more practical benefit from this study than they.

[Olcott Haskell in *San Jose* (Cal.) *Mercury*.]

Our critic, in his frank and fearless inquiry into the nature of prayer, correctly states the position of the Christian Scientists, who hold it to be the natural result of God's law for sickness as well as sin to disappear before the light of spiritual understanding. He shows that law to be law must be unchanging, and he points out that the effect of prayer is not to change God, but to change us to a clearer perception of the moral and spiritual facts.

Mrs. Eddy explains in "Science and Health with Key to the Scriptures" (p. 573) that "what the human mind terms matter and spirit indicates states and stages of consciousness;" and so it is that the healing of disease through Christian Science results from a clearer perception of God and of the perfection of His creation. The change is not in God, nor in His universe, but in our perception of that universe. Jesus illustrated the transforming power of prayer by healing the sick and reforming the sinful; and he explained this method to his disciples in the simple words: "Ye shall know the truth, and the truth shall make you free." Our critic reminds us that "God's unchangeableness is our security," and this is being proven today through a repetition of the same works as those recorded of Jesus and his disciples. One of the chief hindrances to a universal acceptance of these views seems to be a remnant of the hypothesis which conceived of God's universe as divided into two parts, with God in one and a material man in the other; but such a concept is fast fading, and men are awakening to the recognition of a universe wholly good, and of a God who is Principle—even divine Life, Truth, and Love.

Students of Christian Science are not encouraged to accept its teachings in blind faith, but they are taught to prove each statement for themselves, in accordance with the Scriptural injunction: "Prove all things; hold fast that which is good." It is this individual and practical "acknowledgment of the perfection of the infinite Unseen" which, as Mrs. Eddy says in "Unity of Good" (p. 7), "confers a power nothing else can."

[Editorial in *Philadelphia* (Pa.) *Inquirer*.]

A good many people will have read the remarks lately made on the microbe question by Dr. Alvah H. Doty, health officer of the port of New York, with a sense of lively satisfaction and some feeling of relief. Their tenor was

Digitized by Google

that the maleficent influence and activity of the omnipresent microbe as an agent for the destruction of health and life had been absurdly exaggerated, and that if people would think less and worry less upon this subject it would be a great deal better for them.

Dr. Doty expressed the opinion, and it is an opinion in which many will agree with him, that a large part of the agitation over microbes which has gone on within the past few years is to the last degree irrational and absurd. People have gone microbe crazy. They have read without clearly understanding the medical dissertations about the extent to which diseases of all kinds are occasioned by these microscopical organisms which get into our systems and become perniciously active there, and many of them live under a constant apprehension lest their own system be invaded by these invisible enemies at some time when they are momentarily off their guard.

And the trouble is that it is so difficult, that it is virtually impossible, to maintain a sufficiently vigilant and effective outlook for these innumerable and omnipresent invaders of the human frame. There are microbes everywhere. Nothing that we touch, taste, or handle is immune from their presence, so we are told, and there is never any telling how soon or at what moment any one of us may fall a victim to their destructive operations. That is the prevalent idea for which the little knowledge declared by Alexander Pope to be "a dangerous thing" must be held responsible, and it is the gratifying feature of Dr. Doty's deliverance that it tends to dissipate what has become a sort of national obsession. He says that there is a whole lot of humbug about this microbe business, and that the people who lie awake nights shivering lest a microbe should catch them are very foolish. How often have we been told that there was danger in handling a dirty bank-note because so many billions of deleterious germs are likely to be distributed over its surface. Probably not many have been deterred by this warning from handling all the bank-notes that came their way, and yet it is satisfactory to be assured that they may be handled, microbes and all, without the slightest risk.

It is the same with other things which have in a like manner been placed under the ban. The chances are that they are quite innocuous and that the danger which they are supposed to present is wholly imaginary, and it may be set down as a principle of universal application that to be so solicitous about keeping one's health, to be so anxiously apprehensive of the causes which threaten it, is a serious mistake. This is one of the respects in which Christian Science has been beneficial and one of the secrets of the amazing success which has attended its propaganda. Those who have accepted and are faithful to its doctrines are not constantly thinking about their bodily condition and fearing that they may fall sick. They have full faith that their good health will continue, and instead of worrying about eventualities entirely beyond their power to control, they take its continuance as a matter of course.

Our forefathers, knowing nothing about microbes, took no precautions against them, yet they enjoyed as good health as we do and lived as long. Let us set aside hysteria and be guided by the promptings of plain, ordinary common sense.

[James Phelps in *Green Bay* (Wis.) *Review.*]

Christian Science should not be confounded with the Emmanuel movement or Christian psychology, and it is not the exercise of one human mind over another human mind and body; it does not depend on the will-power of the practitioner or the patient. The success of the Christian Science practitioner depends upon his ability to subjugate the human to the divine will and bring his own and his patient's consciousness into union with Christ. It is a well-known axiom that the heterodoxy of one generation becomes the orthodoxy of the next.

The fact that Mrs. Eddy attracted approximately one million of intelligent and God-fearing men and women to her system of religion and therapeutics in the short space of forty years is ample evidence that her teachings are sound and practical. She made no claims as to her ability to prolong her physical life indefinitely; but we must not lose sight of the statement of our Master, that whosoever lived and believed in him should never die; or that he commanded all men to be perfect, even as the Father in heaven is perfect.

[C. Dilworth in *Rand Mail*, Johannesburg.]

Christian Science, like the basic law of mathematics or music, needs to be understood before it can be practised. It has been proven, over and over again, that Christian Science heals the sick, reforms the sinner, and sets the captive free.

Many cases of sickness are unsuccessfully treated by the medical profession, and sometimes doctors fail to heal by their medical knowledge, but such failures are not specially commented upon, nor are they taken as specific instances to prove the fallacy of medical treatment. There is therefore no apparent reason why Christian Scientists should be adversely criticized and ridiculed, when a practitioner fails to heal a case or when he has not fully understood the Principle of Christian Science. Its healing is not confined to adults, but is applicable to every individual in the universe; children are healed as successfully as adults and *vice versa*, since all mankind is controlled and governed by divine Principle. In a great percentage of the cases healed by Christian Science, other methods have been previously tried and failed to cure.

Our critic states, "If there were no money in it, we should hear very little of Mrs. Eddy's disciples." If there was no money in the world, we should still hear as much of Christian Science as we do today, but those who devote their time to humanity and who are instrumental in the healing of sin, sickness, and disease, are entitled to a return therefor just as are clergymen and doctors. Paul said, "If we have sown unto you spiritual things, is it a great thing if we shall reap your carnal things?" If all the time and energy that is used in denouncing Christian Science were used in trying to follow the teachings of Jesus in a practical way, the world would be greatly benefited, and critics would learn how to compare spiritual things with spiritual, instead of interpreting the teachings of Christian Science by their own material conceptions.

[Written for the *Sentinel.*]

LISTENING.

M. LENORE COREY.

WHAT, oh, what does Love impart?
Listen, listen, weary heart,
As it murmurs through the night,
Softly saying, God is light.

Is the darkness full of fears?
Are the dear eyes filled with tears?
Listen then, O troubled heart,
What, oh, what does Love impart?

Is it Love that gives thee sorrow?
Does Love teach to fear the morrow?
Did you listen, hungry heart,
What, oh, what does Love impart?

Neither darkness, hate, nor sorrow,
Neither troubles for the morrow,
Are of God. So, listening heart,
Hear the truth Love doth impart.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

A PRACTICAL RELIGION.

MUCH has been said and written by people quite outside the ranks of Christian Science, in commendation of the optimism and serenity of the followers of this teaching, as shown in their bearing and in their disposition; and to a large degree this commendation has been deserved, although Christian Scientists themselves have been more or less unconscious of the "outward appearance" which has attracted the attention of their friends. What has been more in their thought, and of more importance to them, has been the peace and joy which have come into their lives through better health and better morals: the definiteness of purpose and the effectiveness of effort which have taken the place of uncertainty and inefficiency in all lines of work, and the spiritual quickening and confidence which have supplanted the fear and doubt into which their former beliefs about religion and medicine had plunged them.

As Christian Scientists they have learned that only through patient and persistent effort can they reach that state of consciousness wherein they see the reality of good, and divest themselves of the belief of mind in matter which heretofore has seemed to them the great force of existence. But they are not satisfied with present achievement, no matter how great it may be, and they are still looking for a larger and more perfect understanding of God and of man's relation to Him. To them the vital question is, "How can I, through my study of Christian Science, most quickly attain the desired knowledge of God and His creation?"

On page 495 of Science and Health, Mrs. Eddy answers this question in a very few words, the pith of which is in the first sentence, namely, "Study thoroughly the letter and imbibe the spirit;" and in line with this is the statement on page 323, that "in order to apprehend more, we must put into practice what we already know. We must recollect that Truth is demonstrable when understood, and that good is not understood until demonstrated. If 'faithful over a few things,' we shall be made rulers over many; but the one unused talent decays and is lost."

We may well ponder these words, for they sound a note of encouragement to every Christian Scientist to make practical the religion which he professes; that is, to do the works which the Master said should "follow them that believe." They give new energy to those who for years have tried, more or less ineffectively, to be about their Father's business, and they point the way to those who are striving to seek their own in another's good.

We must note, however, that they do not say that those who thus endeavor to follow the Master in the way he commanded shall walk in a royal road to contentment and bliss. On the contrary, they indicate that it is ours to work, watch, and pray, "without ceasing," if we would see fulfilled the prayer, "Thy will be done in earth, as it is in heaven,"—the kingdom of God established in the hearts of men.

ARCHIBALD MCLELLAN.

AN ARTICLE OF FAITH.

IN that wonderful story of the healing of a blind man, given in the ninth chapter of John, Jesus asked the man, soon after his healing, "Dost thou believe on the Son of God?" To this the man responded, "Who is he, Lord, that I might believe on him?" The man had not then learned the great truth which is given by John in his first epistle, "He that believeth on the Son of God hath the witness in himself." The apostle who says this brings the very serious charge against mortals, that in refusing to believe what God has said about His Son, they make God a liar. He adds that "God hath given to us eternal life," and he goes on to explain that he who is born of God "cannot sin;" in other words, he is untouched by mortal infirmity, sin, disease, or death.

It is interesting to note how, in the eighth chapter of John, Christ Jesus deals with the problem of sin. He does not advocate punishment, but demands reformation, saying to the offender against moral purity, "Go, and sin no more;" but, knowing so well that the unenlightened human mind could never obey this mandate, he said, "He that followeth me shall not walk in darkness, but shall have the light of life." The one who sins is blind to the truth, even more so than the one who suffers from some physical disability, but the coming of the light of Truth heals both. The ninth chapter follows with its account of the healing of the blind man, and in the eleventh chapter we have the raising of Lazarus, these three cases offering convincing proof of the scientific value of the Master's teaching respecting man's relation to God, and supporting at every point Mrs. Eddy's declarations, given in all her writings, that the spiritual man as the likeness of God is the only real man.

We are not told that Jesus asked the Pharisees whether they believed on the Son of God; or, assuming that they did, what they believed about him. They had a strongly entrenched belief about sin and sinners. They wished to have sentence of death passed upon the woman who had sinned; they called the blind man a sinner; and they even said of Jesus, "We know that this man is a sinner." The man who was gaining the spiritual sense of sight could see farther than they, and he insisted that God does not hear sinners, but only those who do His will; in other words, that God knows and hears His own!

In Christian Science, the question asked the erstwhile blind man comes to us very often to be answered. We can reply in deepest reverence that we do believe on the Son of God; that this is a tenet of our church to which all members are required to subscribe (Science and Health, p. 497-6), nor are we left in ignorance as to what the Son of God must be as the divine likeness. As we read the inspired statements of our revered Leader respecting God's idea, man, we can readily understand how the one who was healed of his blindness and saw the vision of the Son of God, knelt before Christ Jesus in lowly adoration, fearing no longer the wrath of the rulers. Mrs. Eddy tells us that "a mortal sinner is not God's man;" then she adds, "In divine Science, God and the real man are inseparable as divine Principle and idea" (*Ibid.*, p. 475). To the Scientist, this truth is like the rod which Moses stretched out over the Red sea. It matters not what evil belief may present itself,—whether sin, disease, or death,—Christ, Truth, asks today, "Dost thou believe on the Son of God?" and the response which is based upon reason and revelation annuls all false evidence and reveals the son who is born, not "of the will of the flesh, nor of the will of man, but of God."

ANNIE M. KNOTT.

"THE POWER OF AN ENDLESS LIFE."

IN exalting the priesthood of Christ Jesus, the writer of the epistle to the Hebrews notes its superiority to every ecclesiastical or hereditary rank and authority, in that it manifests "the power of an endless life." Our Lord's startling self-assertions, as for instance when he said, "No man cometh unto the Father, but by me," etc., find their only explanation in his conscious manifestation of the Life that is eternal. It was because in humility he dared to be true to Truth, that he was not presumptuous. Here as elsewhere the teaching of Christian Science is identified with the teaching of the Master, for it insists that the spiritual

Digitized by Google

priesthood to which all believers are called is constituted and made effective in the clearness and continuity of spiritual identification with "an endless life."

The sense of life that is linked to materiality can but be hedged about with limitations. We recognize the supremacy of the power of thought, of conscious life over all material forces, for we see men bringing these forces into subjection. Standing upon the bridge of his huge vessel, the captain's conscious command over the steam and electricity generated below, enables him to face a gale of wind and a raging sea with calm assurance that, regardless of their fierce buffetings, he will reach his port at the scheduled time. And yet how brief is his sovereignty and how absolutely different from that of the Master when he spake to the waves and they obeyed him! One has exercised the authority of human knowledge, the other gave expression to "the power of an endless life." One has vantaged by the wisdom of this world, the other by "the wisdom that is from above."

Regardless of our Lord's explicit teaching of the at-one-ment of God and man, Christian believers have always drawn back at the suggestion of the possibility of doing the Master's works, as he did them; and the teaching of Christian Science is an offense to many today because it is thought to be blasphemously presumptuous, as indulging an utterly unwarranted egotism. This characteristic Christian reserve is both explicable and legitimate from the point of view of those who identify man with mortals, but when God's man is known for what he is,—wholly spiritual,—the naturalness of his Christlike priesthood, and of his utilization of the power of "the living and true God"—becomes apparent.

The practical significance of this teaching is beyond estimate. So long as one thinks of life in terms of materiality, he can but recognize and experience the limitations which pertain thereto. The sense of dependence upon material conditions for health and happiness will be uppermost and controlling. After the manner of men, he will be impelled to seek with microscope and test-tube for life's elixir, a healing and saving knowledge, and his sense of satisfaction and happiness will inevitably be linked to and determined by the unreliabilities of human circumstance and states. Let him, on the other hand, through the illumination and inspiration of Science, begin to think of life as the manifestation of that which is perfect and eternal, that which is unaffected by the changes and conditions of material sense; let him begin to know that he has indeed entered upon an undying, because eternally right, consciousness, the realization of man's inseparable union with God,—let this new vision and estimate of life be attained and its healing power demonstrated, and in so far he will no longer be subject to the fear of death or any other dictum of so-called material law. His happiness and peace will no longer flicker with the vacillations of mortal sense, but grow constant and abiding because they are consciously anchored to the eternal. He is beginning to prove "the power of an endless life."

JOHN B. WILLIS.

AMONG THE CHURCHES.

ROCKY FORD, COL.

The Christian Scientists held an impromptu testimonial meeting at their chapel, corner of Ninth and Walnut, Sunday morning [Feb. 4], in order to show Representative O. J. Baxter what Christian Science had done for people he knew. Mr. Baxter was the guest of the society at the meeting.

There are some twenty public health bills before the present Legislature, some of which the Scientists believe would have a tendency to restrict and abridge the rights of individuals to choose for themselves the system of healing they might prefer. Senator Crowley and Mr. Baxter had been visited by a committee of the local society and requested to attend the services. Senator Crowley had made a prior engagement, but Mr. Baxter gladly attended to hear the views of the Scientists. When the Reader had closed the service, it was announced that in order briefly and comprehensively to put before the visitor the position of Christian Scientists, an opportunity would be given those present to testify to the healing that had come to them through the practice of Christian Science.

Among the many testimonials given were those of the cure of pneumonia, typhoid fever, small-pox, deafness, catarrh, neuralgia, headaches, grippe, bone felons, and other diseases. After hearing these testimonials and many others like them, Mr. Baxter said he believed in one's individual rights and that he would oppose any bill tending to limit them.—*Rocky Ford Tribune.*

LEXINGTON, KY.

The financial arrangements have been completed and the detail plans are being made by the Christian Scientists of Lexington for the erection of a handsome new temple in which to hold their meetings. The organization has purchased a house and lot at 216 North Broadway, and will demolish the residence now there and erect the new temple in its place. The building contemplated will be of stone and concrete, and will occupy the entire width of the lot, which is fifty feet.

It is expected that work toward the construction of the new temple will be begun in a short time, and that the building will be completed and ready for occupancy before the end of next summer. When the new building is erected the Christian Scientists of Lexington will be one of the few bodies of the kind in the state who will have a temple used exclusively for the religious services of their faith.

Louisville Courier.

BAY CITY, MICH.

First Church of Christ, Scientist, of this city, has felt the need of a home of its own for many months. It has been meeting for several weeks in the Root Block, and before that in the Ridotto and other halls. The attendance has so increased that the congregation believes it is now justified in breaking ground for an edifice of its own. Accordingly, at a meeting held last night [Jan. 18] the deal was closed for the purchase of the southwest corner of Sixth and Van Buren streets, which is diagonally across from the First Congregational church, as a site for the new building. The arrangements for the commencement of operations are not yet all made, but probably will be within a short time.—*Bay City Times.*

KANSAS CITY, KAN.

The congregation of First Church of Christ, Scientist, in Kansas City, Kan., is planning to build a fifty-thousand-dollar church building in that city during the coming year. The location has not been agreed upon, but the new church probably will be built near Tenth street and Central avenue. At a special meeting of the congregation last night [Feb. 9] it was decided to sell their present lot, fronting on Washington boulevard at Eleventh street, and use the money in buying a lot more centrally located.

Kansas City Journal.

ONTARIO, CAL.

The Christian Science church of this city yesterday [Feb. 14] took out a permit to build a concrete church building to cost in the neighborhood of two thousand dollars. The structure will be built near the corner of B and Palm avenues, on the second lot east of Palm on the north side of B street. The Christian Science people have long desired a church building near the center of the city, and they propose to make their new structure one which they may be proud of.—*Republican.*

THE LECTURES.

BARTLESVILLE, OKLA.

Few lectures delivered in Bartlesville have aroused so much comment as did that of Frank Leonard, the Christian Scientist, at the Court House last night [Jan. 2]. This interest is the more intense, perhaps, because of the fact that the belief has been so bitterly attacked by other denominations, if indeed Christian Science can be called a "denomination." An evangelist who was here a year ago started the agitation by publicly denouncing the belief of the Scientists, though at that time there was no society here. He was especially severe in his arraignment of the doctrine taught by Mrs. Eddy, and since then other preachers have from time to time taken a "whack" at the teaching. It is believed that the bitter attacks of the so-called evangelist had much to do with arousing interest in the subject, and resulted in the formation here of a flourishing society. Mr. Leonard's address appears in full elsewhere in this issue, not because the *Enterprise* is ready to espouse the doctrine of this or any other religious teaching, but rather because it believes there are a large number of its readers who will be and are interested in the study of the teachings of a doctrine that has been so wofully misrepresented by those who should know of the truth or falsity of it, and for no other reason. It is not the first time this paper has been called upon to set the people right on religious and political questions.—*Bartlesville Enterprise.*

PLAINFIELD, N. J.

William D. McCrackan, M.A., delivered a lecture on Christian Science, Jan. 24, at the Hartridge Auditorium. He was introduced by Miss Corey, First Reader, who said in part,—

In inviting you to a lecture on Christian Science, we are inviting you to share our best possession,—namely, our point of view of Christian Science as an exact science, progressively unfolded to us, as we understand spiritual law. We hope that you believe with us that spiritual law did not disappear with Christ and his disciples, but belongs to the eternal order of things; that it exists now as it did when Jesus fed the multitudes, or Peter and John healed the lame man at the gate of the temple. We know that the Principle of this law is unchanging; hence it must be the human consciousness that changes, and when it rises high enough perceives the healing truth. There are some of us who believe that in the mathematics of Christianity two and two still make four, not five; and that whenever spiritual understanding is applied to human need the product now, as in Jesus' time, is a healed and comforted human being.—*Correspondence.*

GALVESTON, TEX.

"Christian Science: The Science of Salvation," was the topic treated ably and brilliantly at the Scottish Rite Cathedral Monday evening [Jan. 30] by Prof. Hermann S. Hering. The speaker of the evening was introduced by Donald J. MacGregor, who said:—

The audience this evening is an evidence of the increasing interest manifested in the teaching of Christian Science. It comes to the world with a message of hope and cheer, and a declaration and realization of the omnipotence, omnipresence, and omniscience of God. But while there are thousands testifying to its beneficent influence on their lives, there are many misconceptions and misapprehensions regarding its teaching. It is largely the purpose of this lecture to correct erroneous impressions and present the true concept of Christian Science.—*Galveston News.*

LOS ANGELES, CAL.

Four thousand five hundred people congregated to hear the address of Clarence C. Eaton at the Shrine Auditorium yesterday [Feb. 5], given under the auspices of Second Church. Senator-elect John D. Works presided, and introduced the speaker of the afternoon with the following remarks:—

We have gathered to listen to a lecture on Christian Science. These lectures are not controversial in their nature, they attack no man's religion or his motives. A Christian Scientist would regard such an attack as unchristian, as a relic of the ignorance, intolerance, and dogmatism of the dark ages. Our forefathers left their homes and friends and braved the hardships and dangers of a new and untried country to escape just such malicious persecution. Our government is founded on the principle of liberty and freedom of conscience; the Constitution of the United States guarantees to every citizen the right to serve God according to the dictates of his own conscience. Christian Scientists regard this right as sacred.

A Christian Science lecture is a message to the world of love, hope, and peace; an explanation and exemplification of a religion of Life, Truth, and Love; the religion taught and practised by the great Master; a religion of healing and regeneration, founded upon Jesus' injunction, "Love one another."—*Los Angeles Herald.*

MC ALESTER, OKLA.

The Hon. Clarence A. Buskirk delivered a lecture on Christian Science at the Busby Theater Sunday afternoon [Feb. 5], under the auspices of the local church. He was introduced by Harry T. Kyle, First Reader, who said in part,—

In every Christian Science church throughout the world, on Wednesday evening of each week, the members and adherents meet to exchange their experiences along the road of progress. This is done for a threefold purpose: First, that they may have the opportunity to make just acknowledgment of benefits received; second, that they may be mutually helpful to each other in imparting and acquiring knowledge concerning the truths they have proved for themselves; and lastly, and most important of all, that sincere inquirers may have an opportunity to learn regarding the truth which we have found good.

For similar purposes, the Christian Science organization has established its periodicals—quarterly, monthly, weekly, and daily. For similar purposes, also, reading-rooms have been established in connection with every Christian Science church. Besides this there has been established, in connection with The Mother Church, The First Church of Christ, Scientist, in Boston, an official board of lectureship. The speaker of the present occasion is a member of this board, and comes to us duly accredited. All of these various means of making public the facts of Christian Science have one specific purpose primarily in view; namely, that "whosoever will" may avail himself of the operative good (as distinguished from speculative good) which Christian Scientists have found in the Bible. All forms of proselyting are sedulously avoided. Every member of the church obtained his membership because he asked for it voluntarily, and retains it only because he wishes to do so.

McAlester News-Capital.

TORONTO, CANADA.

The Royal Alexandra Theater was well filled on the afternoon of Sunday, Feb. 19, with an audience which gave close attention to a lecture on Christian Science by Frank H. Leonard, and from time to time manifested its appreciation of the many excellent points made by the speaker.

Digitized by Google

The lecture was delivered under the auspices of First Church of Christ, Scientist, and the lecturer was introduced by the premier of the province of Ontario, the Hon. Sir James P. Whitney, who said:—

I am very glad indeed to be present today, being actuated by the same motive, I suppose, as the most of those I see in front of me, namely, a desire to acquire information, and that being so, it gives me great pleasure to introduce to you Frank H. Leonard, who will deliver this afternoon a lecture on Christian Science.—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Albuquerque, N. M.—Frank H. Leonard, Elks Opera House, 2:30 p.m., March 19.

Appleton, Wis.—Francis J. Fluno, M.D., Appleton Theater, March 23.

Boulder, Col.—Frank H. Leonard, Curran Opera House, March 21.

Chicago, Ill. (Seventh Church).—Francis J. Fluno, M.D., Church Edifice, 5318 Kenmore avenue, 3:30 p.m., March 19; 8 p.m., March 20.

Danville, Ill.—Bliss Knapp, Lyric Theater, 3 p.m., March 26.

Denver, Col. (Third Church).—William R. Rathvon, Women's Club Building, 1437 Glenarm Place, March 13 and 14.

Fargo, N. D.—William D. McCrackan, M.A., old Stone's Music Hall, March 23.

Greeley, Col.—Frank H. Leonard, Greeley Opera House, March 20.

Hartford, Conn. (Second Church).—William D. McCrackan, M. A., Parsons Theater, March 20.

Lafayette, Ind.—Bliss Knapp, Victoria Theater, March 21.

Lampasas, Tex.—Frank H. Leonard, Wetchen Opera House, 7:45 p.m., March 16.

Minneapolis, Minn. (Fifth Church).—Hon. Clarence A. Buskirk, Auditorium, 3:30 p.m., March 26.

Muncie, Ind. (First and Second Churches).—Hon. Clarence A. Buskirk, Wysor Grand Opera House, 3 p.m., March 12.

Newton, Kan.—Willis F. Gross, Masonic Hall, March 21.

North Platte, Neb.—Frank H. Leonard, Keith Theater, 8:30 p.m., March 24.

Oklahoma City, Okla.—Willis F. Gross, White Temple, March 23.

Orange, N. J.—William D. McCrackan, M.A., Masonic Lyceum Auditorium, East Orange, 3:30 p.m., March 19.

Scranton, Pa.—Bliss Knapp, Lyceum Theater, Penn avenue, 3 p.m., March 19.

Tulsa, Okla.—Willis F. Gross, Grand Opera House, 8:30 p.m., March 24.

Winona, Minn.—Prof. Hermann S. Hering, Masonic Temple, 3 p.m., March 12.

Zurich, Switzerland.—Bicknell Young, Zurich Musik Schule, March 24.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be June 2, 1911. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 10, 1911.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 4, 1910, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
Falmouth, Norway, and St. Paul streets, Boston, Mass.

TESTIMONIES OF HEALING.

It is with feelings of thankfulness to God for Christian Science that I write this testimony, stating the facts as briefly as possible. I had been a drinking man for nearly twenty-five years, though I took a so-called "cure" twice and was twice in an inebriates' home; but none of these things did me any good, and the lurking desire and intention to drink were ever with me. About the middle of October, 1909, I commenced to drink very heavily. I had a little money in a savings bank, and that all went; then I began to pawn things, and kept it up as long as I had anything left that I could raise any money on. The last thing that went was my artificial teeth, for which I got the price of about two drinks of whisky.

Some time before I started on this last terrible "spree" a young man who worked in the same place where I did and who knew something of my habits said to me, "Why don't you try Christian Science? It will cure you and make a man of you." I paid little attention to it at the time, but after I had lost my position, friends, and as I thought everything, I remembered his remark and where he had told me that I could find a Christian Science reading-room. I went there and was kindly treated and directed to a practitioner. I had never heard of a practitioner before, but I went there, and the man prayed for me and spoke to me in a new way. I was under the influence of liquor, but I was impressed. He noticed that I did not speak quite plainly, and I told him what I had done with my teeth. He said I must have them by all means, and gave me the money to get them; but when I left him I spent this money for the strongest milk-punches I could get made. I had been living on nothing else for weeks. I had taken no food, never sat down to a table. Next day I saw the practitioner and told him what I had done, but he did not even scold me. Instead he asked me where the teeth were, and when I told him he went over to Brooklyn and got them himself, and had them for me next morning.

I kept going to see this practitioner every day for several weeks, but I had to confess every day that I was still drinking. I went to the reading-room often, and read a good deal of that wonderful book, Science and Health; but I continued to drink. On the night of Dec. 21, 1909, I went to bed on a little cot in the "People's Hotel," near Brooklyn bridge, after drinking all the whisky I could get, and the next morning I awoke to find myself hungry. Other mornings, my first waking thoughts were how, where, and when I was going to get the next drink, but this morning I was hungry, and to my surprise I found I did not want a drink. I said to myself, "Maybe I am cured;" and I hurried into my clothes and went downstairs. The first person I met was a man with whom I had often drank, and he invited me to go with him and have a drink. I said, "If you want to spend a dime or so on me, take me to a restaurant and get me something to eat. I'm hungry;" but he would not do this, and I finally got rid of him and went round to see the practitioner. I met him just as he was going into his office, and reaching out my hand I said to him, "I'm cured. I know I'm cured. I never felt like this about it before." We had a long talk, and he told me I must go to the mid-week meeting of First Church of Christ, Scientist, and give my testimony. This was Wednesday morning, and I did not think I would have the courage to do what he asked; but I testified before the great congregation that night practically the same as I have written here.

Since that memorable morning of Dec. 22, 1909, I have recovered my position, my friends are coming back to me, and God is blessing me in every way. Ought I not to be thankful to God for Christian Science? Well, I am! I hope this testimony will reach the eye of many a drinking man, and if it does let him not despair. Drugs and so-called

Digitized by Google

will-power cannot cure him, but Christian Science can and will if he will lay hold of it.

I gave an anniversary testimony on the 21st day of last December, and since then have been giving my testimony in other Christian Science churches and societies every Wednesday evening, and intend to continue to do so until I have given it in all the Christian Science churches of Greater New York. My gratitude to God for Christian Science is prompting me to do this, and I have reason to believe that my testimony has been helpful to many people. This past year has been a wonderful year to me. It is the first in over twenty-five that I have not known what it was to want a drink of whisky or any other stimulant. Christian Science has been a blessing to me in many other ways, and I never close my eyes at night without thanking God for having led me to the truth, and asking His blessing upon the one who was instrumental in my healing, and upon the cause of Christian Science.

WALTER M. GAINES, New York, N. Y.

My first impression of Christian Science came nearly twelve years ago, through some copies of the *Christian Science Journal* that were loaned me by a friend who, though not a Scientist, had some faith that my sister might be helped by it. My sister at that time was in a condition of mental and physical breakdown, the result of a serious accident and the passing away of a friend. This condition neither the doctors nor medicine had been able to relieve. From the reading of those *Journals,* I felt that there must be some power in Christian Science which could help in this case. We also came in contact with a lady who told us of her own healing through Christian Science, and who greatly encouraged and strengthened our faith in it.

While reading the testimonies of healing, I had a great desire to read the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, which is so often referred to, and did not feel satisfied until a copy was loaned me. With the first words of the Preface, "To those leaning on the sustaining infinite, today is big with blessings," I instantly felt the conviction that here was a great truth which might help me, if I could only grasp it. I had not thought of Christian Science for myself until then, though I was in desperate need of healing. For about six years previous to that time I had been an invalid, from injuries received in childbirth, and other troubles, so that most of my time was spent upon my couch. Our two young children were frail and delicate and were nearly always in the care of the doctor; in fact, ours was a continuous history of sickness, doctors, nurses, and medicine. My husband tried to keep up his own courage, and mine too, but we were almost in despair of ever seeing a happy day in our home. We had been gradually losing the hope that there would ever be any way out of our troubles, for we had faithfully tried *materia medica,* hygiene, diet, rest-cure, without anything more than a temporary benefit.

At this time we were prepared to be led into Christian Science, and we soon found that it was indeed the way out of the darkness into light. My sister was healed in about two weeks by reading Science and Health, and is still rejoicing in the truth. Treatment was given me for a few weeks, and I began to have new hope. In three days I found the faith and courage to leave off glasses which I had worn several years and thought I would always have to wear, according to a specialist. Then I turned to the book, and with earnest study, day and night, and with a few treatments at intervals, the healing came, very slowly but surely. By my great necessity I was forced to search for the way out, through the Bible and Mrs. Eddy's writings, for all of which I am deeply grateful. I had been studying Christian Science a few weeks, earnestly seeking for the knowledge of God, when I had an experience which impressed me with an assurance and confidence in Christian Science that has never left me. I have since understood that Christian Science is the voice of Truth, that its spiritual power is impersonal, and sufficient to guide and lead all the way to the perfect knowledge of God.

My husband began to read Science and Health just to see what it was all about and how I got the help, and he was soon convinced of the truth and has been a faithful student ever since. He also was able to leave off glasses that he expected always to wear. I know that all the good, all the health and harmony we have in our home, we owe to Christian Science. It has never failed to meet our needs at any time or in any way. Our little son has never known any other way than Christian Science, and always calls for "the book" to be read to him to help him out of all his troubles.

When I joined the church here, I realized that The Mother Church in Boston, and its branch churches, is the highest type of church, "the structure of Truth and Love" (Science and Health, p. 583), so as I became interested and a member, and took part in its activities, my healing became more and more evident. It seemed that I was being made all over new, mentally and physically. The children were transformed from the little hothouse plants (so called by the doctors) into sturdy, hardy plants, as soon as the man-made laws of fear and limitation were lifted from them. It is a great joy and comfort to know that they, being "rooted and grounded" in the truth, are safely working out their own salvation, one in college and the other soon to enter.

When called to read in the church here, though in no way feeling worthy or fit for such a high calling, I found it the most blessed and strengthening experience in my life, and gratefully treasure the memory of it. I want to express my love and appreciation for the Lesson-Sermons provided for daily study and for our Sunday services. I have always found joy and inspiration in them, and healing many a time. This study of the Bible and our text-book is to me the most wonderful thing in the world. I often think of the wisdom of our inspired Leader, in instituting this impersonal sermon, identical in all the Christian Science churches of the world. How it meets both the individual and universal needs of every hour! I am bound to thank God for the "heavenly gift" of Christian Science, which has shown me the high and perfect ideal of Love, and I pray for more grace to reflect this Love to all with whom I may come in contact.—ESTELLE E. LINSLEY, New Haven, Conn.

It is now four years since I became interested in Christian Science, and it is with a heart overflowing with gratitude for what it has done and is doing for me that I send my testimony, trusting that some one may be led to investigate this grand truth, and find it all that is claimed for it. For thirty-three years I suffered from what was said to be an incurable stomach disease, from which my mother also suffered. When all else had failed, I sent for a practitioner, and was healed in one treatment. Thanks be to God, who "will heal the sick through man, whenever man is governed by God" (Science and Health, p. 495).

At the time of my healing I could neither read nor write English, being a native of Germany, but in four months I was reading the English Bible, Science and Health, and much of the Science literature. This I was enabled to do with the help of the German Bible, and by holding steadfastly to the thought that God is our intelligence, as I truly know that He is. I am very thankful for the better understanding of God as Life, and grateful to Mrs. Eddy for her patient labor in giving to the world her discovery of this saving truth.—MRS. CHAS. BEYER, Appleton, Wis.

I have a deep feeling of gratitude in my heart for Christian Science, and take this way of expressing it. When I first heard of Christian Science, I was a nervous woman

Digitized by Google

without hope or happiness, because I thought sickness more real than anything else. I had lived from childhood in a home where there was much sickness, and it was still there at the time when I began the study of Christian Science. I am, however, thankful today that sickness and sin do not seem as real to me as they once did, for I am learning of God as Life, Truth, and Love; old things are passing away, and all things are becoming new. Christian Science has enabled me to realize that God is ever present and meets all our needs; that He cleanses us from all sin and heals all our diseases.

I have passed through some severe troubles and sicknesses, but Truth has been my only support. One experience was in a case of premature birth. The symptoms were dangerous, but I passed through it without any bad effect whatever. I also wish to tell of the healing of our younger son. He was not considered strong from childhood, having had severe nervous trouble at two different times, and did not seem to grow normally. He was subject to sick spells, which were quite severe and kept him at a disadvantage in school. Two years ago he had Christian Science treatment, and he is now growing and is strong and healthy in every way. I am thankful to God, and also to Mrs. Eddy for the teachings which have helped me to understand Truth.—LILLIE IVENS, Decatur, Ill.

In seeing the beautiful life of two of its votaries, I was led to the investigation of Christian Science. A few years ago, while teaching school in Kansas, I was closely associated in my work with a teacher who impressed me as being quite different from any of the others. I had been told that she was a Christian Scientist, but that meant nothing to me except that Scientists did not believe in sickness. This lady did not talk her religion, but I know now that she lived it. I can see that it was her reflection of Life, Truth, and Love which made her different from the others.

After teaching there several years I returned to Indiana, and after a while Christian Science was again brought to my notice by a teacher. Our supervisor of music resigned and I was asked to help a friend to secure the place. This person failed to be elected, however, and it has since transpired that this was a blessing to me, for the one elected proved to be a Scientist. Not only did I at once recognize something about her and about her work which was different, but the other teachers also saw an indefinable something, and her success with the children was almost phenomenal. Still I did not know what it was until about a year and a half after, when I found she was a Christian Scientist, and I then determined to try to find out what this something was. I studied Science and Health and read the *Sentinel*, and finally attended the services. Through this reading I was enabled to lay off glasses that I had worn constantly for nine years. But while I began to see something of what Christian Science meant and did make many demonstrations, I did not grasp much of the true understanding until I experienced an instantaneous healing.

About two years ago I had a badly injured ankle, which I tried to treat myself, but I was not able to do so successfully. It would get better, but when I had to be on my feet it would get worse again. It was badly swollen and discolored, and the pain was very severe. Finally I was confined to the bed, as the swelling had extended to the hip. We then wrote to Chicago for treatment, and I was expecting relief as soon as the letter reached the practitioner. That time, however, passed with no relief, but suddenly, in the afternoon, the pain and swelling began to leave; and what a relief it was! In a very few minutes I was free, and got up and went to the kitchen to work. The discoloration was all gone in just a few days. Later I learned why relief had not come in the morning. The practitioner to whom we had written was too busy to take my case, so when he returned home at noon he turned the letter over to his wife. It was at the time of her treatment that I received the help, and the work was so thoroughly done that I have been a different person ever since. I was given the "cup of cold water in Christ's name" (Science and Health, p. 570), for which I had been thirsting, and from that time on I could see I was making progress.

I have been blessed with opportunity for class instruction, and I have been able since then to help myself and others, sometimes quickly and sometimes more gradually. Should we not be thankful to God for giving us through Mrs. Eddy this great Science which enables us to heal ourselves and others?—JEANETTE P. WOLFE, Frankfort, Ind.

It is with deepest gratitude that we write of what Christian Science has done for our dear Eldress Polly Lee. She is now ninety years of age, and previous to her knowledge of the healing power of divine Love had passed a long life of suffering. For the last seven years, Christian Science has been her only refuge, and many times has she been blessed through its ministry. During this time she has been helped through the efforts of several practitioners, as needs seemed to arise. An enumeration of the many demonstrations of victory over error that we have witnessed would fill a volume, and need not be attempted at this time; but we will bear testimony to some of the more recent and what might seem like the most remarkable instances of healing in her case.

About two years ago she was attacked with an eruptive disease. The usual symptoms were present, and the general appearance was alarming. In this emergency we telephoned to a Christian Science practitioner who had previously helped her, and absent treatment was given; relief immediately followed, the trouble was checked, and healing was soon accomplished. This was an instantaneous healing, and it was really wonderful to those about our dear one to witness the rapid change. Instead of the disease finishing "its course," as it certainly seemed fairly started to do, the alarming symptoms gave way and vanished.

Another and if possible more remarkable experience was that of one year ago, when Eldress Polly seemed to be prostrated with great weakness, and was suffering intensely with neuralgia, having little rest night or day, and none of the members of the household expected to see her up again. At this juncture help came once more through the efforts of the same practitioner, who with a confidence that amazed us declared the truth for her, and in spite of all evidence to the contrary, boldly and fearlessly upheld this declaration. Soon a change came, and steadily and surely strength returned. In a short time, instead of being lifted and carefully guarded, she was walking about and gaining strength every day. Another year of life and wonderful activity has been granted her; she goes all over the house, up and down stairs, and is out of doors nearly every day.

Some months after the experience noted above, it was made possible for her to enjoy an automobile ride from her home near Albany to the Shaker society at Mt. Lebanon, to visit her friends there. This seemed to her and to us all like quite an undertaking, but the practitioner assured her that it would be all right, and so it proved. The trip was a great pleasure and benefit to her, and she has never ceased to be glad that she had faith to make the effort required.

The foregoing testimony is written with the desire and the hope that it may be an encouragement to at least one who may be hesitating and in doubt as to what Christian Science has for the earnest seeker. It is also a tribute of gratitude for the help received in our household, and an acknowledgment of the power for good that Christian Science certainly is in the world. Mrs. Eddy gave her all for a noble cause, and her work will continue to bless and uplift mankind.

ELLA E. WINSHIP, North Family Shakers, Watervliet, N. Y.

Digitized by Google

My experience has been that our troubles seem to multiply in proportion to our growth in materialistic belief. Years of ignorance brought me much pain and suffering, while disease was uppermost in my mind. From boyhood on I had been troubled with a stomach disorder and rheumatism, colds were constant visitors, and it was believed that lung trouble would take me off before long. Nearly five years ago I was very ill, just dragging along all winter. Spring brought high fever and unbearable pain, which lasted for weeks, until finally I could just walk about the house.

In June I left home, going to the Shakers in Watervliet, N. Y., for recuperation, hoping that the change in air and food, combined with the kindly atmosphere in the Shaker family, would bring the greatly desired effect; but after being there two months, with no improvement, I became despondent and decided to return to Pittsfield. Just then a message of Truth and Love came to me. I was sitting under the pine-trees, worrying about my family and the future, when an old lady friend, an eldress of the Shakers, came to me and told me how she had been healed by Christian Science. Seating herself beside me, she told me in her simple, loving way about Christian Science and its cures. She led my thought from matter to Spirit in such an irresistible way that it did seem as if I had at last found something worth investigating. She gave me several copies of the *Christian Science Sentinel* and *Journal* to read, and while at first the teaching seemed strange, because it was so different from our modern teachings and also our daily practice, yet I caught glimpses and new meanings worthy of consideration; so I kept on reading until nearly morning. The clouds were lifted and the sunshine of hope was becoming more apparent. This dear friend also loaned me her copy of Science and Health, and what I read in this gave me positive assurance that our Redeemer liveth, to help us today. This truth gave me a loving God to whom I could go with my troubles. After eight days' reading I returned to Pittsfield, not as a broken-down, incurable man, but imbued with that feeling of hope and assurance so beautifully demonstrated by our beloved Leader in Science and Health. Two treatments in Christian Science gave me freedom and strength to resume my duties, after having been unable to work for five months.

Some time later, while in Franklin, Pa., the old cough and lung trouble became very annoying; but I had absent treatment (the practitioner being in Pittsfield, Mass.), and the trouble was promptly overcome. At the same time I was cured of rheumatic trouble, and also of the liquor and smoking habits, although I had been a smoker since boyhood days. The benefits derived from the application of Christian Science are surely great, results being in accordance with earnest efforts. The mental work to be done is pleasant, and while it is simplicity itself, yet it cannot be neglected for one moment. Christ Jesus told us that our Father worked and that he worked also, so it seems proper that we work in our Father's vineyard for our own good and for that of the world. I have found peace, health, and happiness through following the way pointed out in the Bible and in "Science and Health with Key to the Scriptures" by Mrs. Eddy.—G. VAN HOLTEN, Pittsfield, Mass.

When I recall the proofs that it has been my privilege to witness of God's power as demonstrated in Christian Science, my heart is filled with joy and hope. Six years ago, when overwhelmed with belief in the power of evil to bring sickness and sorrow upon God's children, I turned to Christian Science, applied to a practitioner for treatment, and was healed. At that time I had entered upon an educational course which I was very desirous of completing successfully, and long before the term expired my strength was renewed. I completed the course with joy, in spite of seeming obstacles which, had it not been for the help received in treatment and a small understanding of Christian Science, I would not even have tried to overcome. But in that time I learned a larger lesson. I learned to know the joyous meaning of a favorite poem:—

When the hopes that smile today,
With the morrow flee away;
When the flowers that pleasure weaves,
Fade and fall like autumn leaves;
Thou, my shield and strength divine,
Closer draw my love to thine.
"Rock of Ages, cleft for me,
Let me hide myself in thee."

Since that time Christian Science has been our faithful family physician, our most trusted friend and counselor. My children have been speedily healed of ills supposedly common to childhood, in far less time than was previously required when they were under the care of a medical doctor. In my immediate family, severe throat, ear, and stomach troubles have been almost instantaneously healed by the power of Truth as learned in Christian Science. Extending beyond my immediate family to those who have sincerely sought my help in some sickness or seemingly discordant condition, this healing power of Truth has never failed when faithfully and understandingly applied. To say that I am grateful for all this cannot express the richness of hope which the truth inspires. Brought up with the doctrine of "free will" a strong plank in my religious platform, I now find that free will means the will to be free from sin, disease, and death. Paul says, "For it is God which worketh in you both to will and to do of his good pleasure;" and it is indeed the truth that makes us free.

From my childhood I recall the words of a young preacher who has since become a bishop. He said, as I remember his words, "Jesus Christ matriculated at the school of omnipotence, graduated from the university of heaven, and received his diploma at the hand of God." Understood in the light of Christian Science, how wonderful is this thought! Our education in the Christ-teaching begins by attributing all power to good, carries us beyond ourselves to the perception of universal harmony, and sends us forth to our work sealed with the Father's name.

MARTHA L. H. CANDLER, New York, N. Y.

[Translated from the German.]

A few years ago I heard of Christian Science through dear friends, and saw that the truth works changes in every way; that whereas my friends used to suffer a great deal, they had become well; and this gave me hope that I too might be helped and brought nearer to God. I was richly rewarded for trusting Christian Science, and I thank God for this. The study of Jesus' teachings, and faithful effort to put into practice the truth understood, gave me a sense of God's nearness and loving-kindness. My thoughts became free, my views about many things were changed, and I feel that God will continue to sustain me and increase my faith in the fulfilment of His promises. Last summer the truth often enabled me to overcome trying conditions which asserted themselves and seemed very real. I would often be taken with spells of weakness such as I used to suffer, but I turned to God, fully trusting that I would always find help in Him if I but faithfully followed His commandments and reflected the true man as Jesus revealed him in his teaching and through his life. I clung firmly to God's word, that if we worship Him in spirit and in truth, we are helped; and I fulfilled my daily duties with God's help, every now and then overcoming the sense of weakness.

I would also like to express my gratitude for another beautiful proof of God's love and omnipresence. Before coming to Christian Science I went twice a year to the dentist's as my teeth needed much attention. For two years after my coming into Christian Science I went to

Digitized by Google

have my teeth examined, but to my great satisfaction there has never been any dental work required, much to the dentist's surprise. I am filled with gratitude to God for all these blessings, also to dear Mrs. Eddy for all the good which has come to me through her faithful labor. I have been especially helped by her admonition that we should constantly hold in thought the good and pure, for then do we become conscious that God is with us and that He worketh in us that which is enduring and perfect.

GABRIELE COLDITZ, Dresden, Germany.

About three years after coming into Christian Science, I had a convincing demonstration of Truth's power in the case of an injured ankle. One morning, on descending a flight of icy steps, I fell, and my foot turned under me; but I paid no attention to it until I got to the office, when it began to give me trouble and I experienced difficulty in walking. I applied my understanding of Christian Science as best I could while working, and afterward walked home, but with difficulty. While I was at supper the pain left me suddenly and I felt that the injury had been healed. I was able the same night to walk without any stiffness being apparent, although the flesh was discolored and swollen for nearly a week. I was also healed of a bowel disorder and have not suffered from this trouble for over sixteen years.

I have received many blessings from the understanding of Christian Science, the greatest of them being a true understanding of God and man, by which we are able to work out our salvation. I feel very thankful to Mrs. Eddy for giving to the world her many writings, including "Science and Health with Key to the Scriptures," also for the *Journal*, *Sentinel*, and *Monitor*, from all of which I obtain great spiritual help.

HARRY DEFOREST WHITE, Kansas City, Mo.

I have been in Christian Science now five years, and I would not take anything on earth for it. My sister began to study it, and was healed before I thought much about it. Though she had used glasses for eight years, now she does not need them at all. I was tired of everything, but now I have an understanding of the truth, something that I can go to in any kind of trouble or sickness. I have been cured of a tendency to very bad colds in my head. I am now quite free from it, and being a singer this is a very great blessing. Some time ago many of the pupils at the conservatory where I am studying had a very bad form of throat trouble; but I set to work in Christian Science to know the truth, and I was free from the illness, though they all thought it strange that I did not get sick with the rest. I am indeed thankful to God, and to our dear Leader, Mrs. Eddy, for giving us this truth.

HELEN MOORE SMITH, Philadelphia, Pa.

"Hear, O Israel: The Lord our God is one Lord." The little understanding which I have gained through the teachings of Christian Science of this great verity, that there is but one God, one Mind, has been my comfort and strength during a deep sorrow recently experienced. For this understanding I desire to give thanks to God, and my heart goes out in deepest gratitude and thanksgiving to the God of our salvation for that precious gift to this world, namely, the life of Mrs. Eddy. The wonder, beauty, and greatness of that life will continue to remain a purifying influence and force until that time when there shall be "no more sea."

J. L. VAN DER MERWE, Johannesburg, South Africa.

A man ought never to feel rich for riches, nor poor for poverty. The perfect man must always feel rich, because God is rich.—GEORGE MACDONALD.

FROM OUR EXCHANGES.

[Rev. Daniel Evans, D.D., as reported in *Boston Transcript*.]

In Germany there are various creeds in religion—just now all in the melting-pot—because of the existence of various kinds of schools, which are breaking up—the theology becoming more philosophical and the philosophy more theological. The religion of the people is more in the heart than in the church, the great mass not being in the church at all. Another thing is the presence of the Socialist-Democratic party, in which there are millions of intelligent, vigorous, determined men who want to reconstruct the government on more economic and liberal lines. They are not in the church because they have found that the church is against the working men getting a living. Therefore, the ominous peril of Germany is the great working class without religion. The great movements of the people of Europe are outside the church. The churches are not keeping in touch with them and have little hold upon them. The intellectual forces are outside all the churches of Germany. The rights of the people in Europe underlie all the turmoil, and the people are rising to demand what we have promised them, and which is their right. They want not charity, but justice. The external support of religion is gone. There was never so much thought on religion as now, but you cannot reach the man merely through thought; you must reach and touch the man.

[*Standard.*]

A witnessing church is a familiar phrase, and it is sometimes used with little thought, seemingly, as to its implications. Without entering upon any discussion of vexed questions, we may venture to suggest that the witness most needed is that which shall convince men of the real worth of the Christian religion. Does Christianity produce a superior type of character? Are the followers of Jesus better men and women than those who do not follow him? Do they have a strength for right living which others lack? Do they make larger contributions to the welfare of society than would be possible for them were they not disciples of Christ? Are they more unselfish, more brotherly, more forgiving, more loving than those who refuse to acknowledge Jesus as Lord? It is conviction at this point which is needed, and it is testimony congruous to this that the church must furnish if she is to win the world to the Son of God.

[*Watchman.*]

The complete mission of true religion in promoting the highest worship of God and the best welfare of man, appears in all the Old Testament pages. The same great mission of religion is found in the gospel of Christ, which summed up the whole duty of man in love to his God and love to his fellow-man. Religion is incomplete without either of these in its full expression. If religious men lose sight of their duties one to another, their religion becomes a mere sentimental experience, and the duties they neglect are taken up by others in the name of socialism. Socialism has largely prevailed in Europe because there is so much churchianity there and such inequality and injustice in traditional and medieval conditions of life that survive. In America religion has had more of the prophetic and popular character which has sought to remove the privileges of classes and the evils that are fostered by ambitious men.

[*Christian World.*]

Wherever it has been really tried, love has begotten love, trust has been met with answering trust. And our poor blundering world is at last waking up to that simple fact. The governments perhaps have not waked up to it; nor the vested interests, where enormous fortunes are built up by the exploiting of human hates and fears. All their energies,

Digitized by Google

we may confidently expect, will be exerted in the endeavor to blur and blind in these matters the national vision. But these efforts will be in vain. The light is broadening; the night is far spent, the day is at hand; the day when governments and policies shall reflect the conscience of the people, when the yawning gap between our private and our public morality shall be finally closed.

[A minister in *Western Christian Advocate.*]

I wish to express the conviction that our Methodist press ought to be fair and courteous even to heretics and heresy, and try to find whatever element of truth is in them that gives them power and currency. Many of our people, and some of our preachers, are more or less in sympathy with the things named, and a broad, candid, intelligent treatment of them would be helpful to our church and the common cause of our Master. Many have gone from us into Christian Science churches—some of them as good as any we have—because of the unsympathetic and un-Methodistic way with which they have been treated by Methodist preachers, who thought they were doing God's service in "driving away strange and erroneous doctrines."

[*Universalist Leader.*]

It is good to hear a confident note sounded today; there is altogether too much of timidity. Too many ministers are the apostles of doubt instead of being the heralds of faith. There are so many who do not want to commit themselves to anything today, because they are fearful that tomorrow they will know more and want to take it all back. Ministers should know something, without a shadow of doubt, and that is what they should preach. We glory in our optimistic faith, in a way, but few are filled with it so they cannot keep still. All hail to the man and minister today who knows what he knows and believes in it with all his might, the man who looks up and looks forward and is not afraid.

[*Examiner.*]

The man who said, "I have as much religion in my heart as any one, only I don't show it," was talking of something he did not understand. It is impossible to have true religion in the heart and not show it. It will shine in the face, flow through the lips, and express itself in the conduct. Christ in the heart will manifest himself in the daily life. Love for Jesus has a wonderful transforming power, physical as well as mental and spiritual. The lineaments of the countenance become softened and lit up, so that the homeliest features take on beauty. There is no cosmetic so effective as the love of God shed abroad in the heart.

[Frank S. Dietrich in *Pacific Baptist.*]

The church is being criticized, but in the very criticism there is hope; better by far the most savage criticism against its shortcomings and remediable defects than a complaisant assumption that it is only a sort of respectable depository for formal and innocuous piety. And not only is there hope in criticism, but there may be also help. The paramount demand upon the Christian religion today is for fruits of righteousness; for excellence of customs and of character. By such fruits is it being judged, both at home and in foreign lands.

[*Churchman.*]

The day will come when every society which now calls itself a church, ourselves included, will lose its distinctive character in the church, the holy city. Each will bring its own special honor and glory to contribute to the completeness of the whole by the methods and in the ways by which God will lead them into that unity which is organic. The fragments of our broken Christendom will gain their life by losing it.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel.*

ATTENTION IS CALLED to the new volume, "Poems by Mary Baker Eddy," now on sale. Specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

Attention is called to the following reprints printed in Swedish: "Hvad Ar Bön?" "Lagens Välde," "Det Ondas Natur," "Helvete och Himmel," "Människans Gemenskap Med Gud," "Verklighet," "Det Ar En Ström," "Förklaring Af Kristligt Helande," "Den Yppersta Egenskapen I Christian Science," "Underverken," "Det Ondas Ofvervinnande," "Var Väktare," "Riklig Tillgang," "Kristendom Och Vetenskap." Ten copies to one address, prepaid, 10 cents; one hundred copies to one address, 75 cents; five hundred copies to one address, $3.00; one thousand copies to one address, $5.00.

NEW MUSIC.

Two of our Leader's poems, "Shepherd, show me how to go," and "Love," set to music by Frederic W. Root, are now on sale by the Society, and attention is called to the advertisement on the inside back cover page of this week's *Sentinel* for description and price.

NEW POST CARDS OF THE MOTHER CHURCH.

Post card photogravure, in sepia tint; an exact reproduction of the large photogravure of The Mother Church Buildings and Publishing House with parkway in foreground. Single copy, 5 cents; twenty-five copies, $1.15; one hundred copies, $4.25.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF COOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

2.50 — 0: 10	:3 ;	10.60;	12.85
4.00 — 0: 16	:5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

With the world's records broken for low cost and rapidity of construction, the boring of the great five-mile Elizabeth tunnel, fourteen feet wide and eleven feet high, the most important features of the new twenty-six million-dollar municipal water project of Los Angeles, Cal., was completed Feb. 28. It pierces the crest of the Sierra Madre range, sixty-seven miles west of that city, and has been drilled through 26,789 feet of solid granite. Work began at both ends of the big bore on Oct. 5, 1907, and went on day and night. The work was finished a year ahead of time and $411,800 under the estimate. Two hundred and fifty miles to the north of Los Angeles, beyond the coast range of mountains and across the barren waste of the Mojave desert, is the Owens valley where Los Angeles is going for its water supply. According to the estimate, 59,658 lineal feet of the big task will be excavated and lined tunnels, 36,140 lineal feet excavated tunnels, and 195,842 feet excavated and lined conduit. Of the two hundred and twenty-six miles of conduit twenty-two miles will be an open unlined ditch through clay; twenty miles will be a covered ditch, lined with cement or rubble; one hundred and thirty-nine miles will be a covered conduit of cement, eighteen miles will be tunnel through rock, ten miles tunnel through earth, nine miles of steel siphons crossing canons and two miles of steel flumes crossing depressions. Eventually the conduit will be covered throughout its entire length.

Complete exoneration of the officers of the Philippine Islands government of all charges of irregularities or improprieties in connection with the administration, sales, or leases of public lands in the Philippines; yet on the other hand pointed criticisms of the inadequacy of the present laws to prevent monopolies in what are known as the "friar lands," are expressed in both the majority and minority reports of the House committee on insular affairs submitted to the House at its recent session. The majority report argues that as a practical expedient the "friar lands" should be disposed of in larger quantities to attract buyers, while the minority claim that the sale of the "friar lands" in large tracts may develop an obnoxious system of absentee landlordism. The latter also suggest that a friendly proceeding be begun in the courts by the officers of the Philippine government to determine the exact legal status of the "friar lands" with respect to public lands regulations. As to the acquisition of fifty-six thousand acres of the "friar lands" on behalf of alleged sugar trust interests, both reports declare the public officers involved were not culpable, being guided by the best available interpretations of the law.

Governor Hooper of Tennessee has a project to build a highway across the state from the extreme border in the mountains on the east to the Mississippi on the west, touching many of the leading cities and towns of the state and passing through the capital city. The road will be about six hundred miles in length. The plan is to build the highway in two days, the work being done by thousands of volunteers and the material, wagons, tools, and other things being donated. It is proposed, with a subscription raised in advance, to put in the bridges and culverts and macadam in two days next August set aside for the project. There are many miles of road over the route already built, and it will be only necessary to fill in the gaps and put the old roads in good condition.

In order to make the railway systems of the country pay full value to investors, Louis D. Brandeis of Boston, in an argument before the federal railroad securities commission, advocated a new government department, which should have power to regulate security issues in the mutual interests of the public, shipper, and railroad. He would establish a bureau of railroad costs and an experimental station in railroad economics. The work of this bureau would be published, as are agricultural reports at present, for the benefit of the railroad management. This would not only promote economy, in his opinion, but would bring to the front labor and protective inventions which cannot now be exploited because the inventors cannot dispose of their inventions.

Secretary of the Interior Ballinger has resigned his portfolio in the Cabinet, and Walter L. Fisher of Chicago has been appointed to the vacancy. He is a "Pinchot conservationist." The National Conservation League, of which Mr. Fisher was president, was merged with the National Conservation Association—the organized opposition of the Ballinger land policies. Mr. Fisher is now honorary vice-president of that organization, and Gifford Pinchot, former chief forester, is president.

The government has entered suit at Denver, Col., against a subsidiary of the American Smelting & Refining Company and against a British corporation to recover Colorado coal lands alleged to have been acquired fraudulently by means of dummy entrymen. The land consists of twelve hundred and eighty acres at Cokedale, said to be valued at five million dollars.

The electrical trust, against which petitions were filed by the government in Cleveland, will probably be dissolved before the case comes to trial, as the defendants have already indicated a disposition to conform to the requirements of the government and there is every prospect that they will break the combine of their own volition.

Government investigation into alleged Alaskan coal lands frauds, involving approximately forty-eight thousand acres of land valued at more than fifty million dollars, has resulted in the issuance of an indictment by the local federal grand jury, charging seven individuals with conspiracy against the United States.

Panama Canal bonds bearing three per cent interest will probably be issued by the treasury department to the amount of fifty million dollars before June 1. They cannot be used by banks as a basis for circulation and they will consequently have to find a market with private investors.

Justice Hughes of the United States supreme court and Lawrence Maxwell, former solicitor-general, were appointed by President Taft members of the commission to investigate postal rates. The third member will be a business man.

Maj.-Gen. Frederick D. Grant, at present commanding the department of the east, has been selected as military aid on the staff of John Hays Hammond, special ambassador to represent President Taft at the coronation of King George V.

Congress having failed to act upon the administration bill favoring reciprocity with Canada, President Taft has called a special session for April 4, to consider this measure.

International.

In an imperial rescript just published, Emperor Nicholas of Russia announces his intention of completing his grandfather's work for the emancipation of the serfs by transforming the peasants into not merely free but economically strong landowners. This may be achieved, the Emperor says, by affording the peasants facilities to leave their communes and by improvement in agricultural science. In August, 1907, he issued a ukase transferring four million five hundred thousand acres of the crown lands to the Peasants Bank for sale to peasants on easy terms, and in October following another ukase released them to a large extent from the restraints of the communal system.

Eugene Renaux flew in a biplane recently, with M. Senouque as a passenger, from the Paris suburb of St. Cloud to the highest peak of the Puy de Dome mountains, two hundred and fifty miles distant. He made the flight with only one stop in five hours and thirty minutes, thereby winning the Michelin prize of twenty thousand dollars, the terms of which required the flight to be made in six hours. The peak on which Renaux landed is 4,806 feet high. The landing place was only a few yards square and exceedingly rough. The machine alighted, however, without injury.

It is announced from Tokio that Admiral Togo and General Nogi have been nominated as members of the special mission which will accompany Prince Higashi Fushimi as the representatives of their country at the coronation at Westminster. Admiral Togo is known as one of the greatest sailors of modern times, while General Nogi is almost equally distinguished as a soldier.

The Austrian delegation and the Hungarian delegation at a plenary sitting adopted the naval estimates, including the extraordinary expenditure of eleven million dollars for battleship construction. The government program provides for the outlay in the succeeding six years of sixty-five million dollars for warships. The creation of a fleet of sixteen first-class battleships is contemplated.

Field Marshal Lord Kitchener will command all the troops at the coronation of King George.

Industrial and Commercial.

The guayule rubber manufacturers of Mexico are making extensive preparations for placing the industry on a permanent basis. It is found that the plant can be grown from slips and that it is of such a hardy nature that it requires practically no attention when it has once been placed in the ground. The Intercontinental Rubber Company and other large manufacturers of crude rubber in the Torreon district are converting hundreds of thousands of acres of desert lands in the states of Zacatecas, San Luis Potosi and Coahuila into guayule plantations.

One of the first railroad cases to come before the newly created United States court of commerce is that dealing with shipments of California lemons. The case is before the court on an appeal by the railroads from the decision rendered against them by the interstate commerce commission, which sustained the contention of the southern California citrus growers in resisting the attempt by the railroads to raise the shipping tariff from one dollar per one hundred pounds to one dollar and a half.

The federal minister of trade and customs says that the Australian commonwealth will spare no expense to "oppose sinister operations of the American meat trust in seeking to control the Australian trade."

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE NECESSITY FOR INDIVIDUAL WORK.

SAMUEL GREENWOOD.

THE desire to be good is the first essential to living a good life; but this desire alone does not bring that knowledge of God which overcomes the sense of evil. There must also be the willingness to give effect to desire, the readiness to work one's way out of error, to be what one desires to be, else the mortal will stagnate at that point, passively submissive to a false concept of being. Jesus preached the gospel of work as well as of faith and prayer, and at no time encouraged the hope that the kingdom of heaven could be won without striving for it. Even at the eleventh hour, according to the parable, the call comes to work. "The works that I do shall he do also," was Jesus' message to his followers in all ages.

The Master and his apostles taught the necessity of working out one's own salvation, but not since the early days of Christianity has this necessity been so urged upon the attention of mankind, nor the way thereof made so plain, as in the advent of Christian Science. Appeals for righteousness have not been wanting, and much good has resulted in restraining the evil impulses of mortals, but the doctrine that sin is pardoned without personal reformation has obscured the demand which divine Principle makes upon each individual to work out his own problem. The ignorance of God that holds mankind in the sense of sin and its effects can be removed only through a knowledge of God; and this knowledge is Science, and Science requires demonstration, and demonstration involves work. One may theoretically believe himself to be a son of God, without manifesting Godlike qualities; but a knowledge of this fact put into practice, and this alone, enables a Christian to follow his Master in deed as well as in doctrine.

Human doctrines and dogmas that tend to remove the responsibility for individual purification are not divinely authorized, in that they do not benefit mankind. It is true in spiritual as in temporal things, that what one would possess without effort on his own part is not prized like the good which he himself strives for. Undeserved blessings are seldom appreciated or retained, because no place has been prepared for them. To transport a sensuous mortal into the spiritual atmosphere and environment of heaven, even if this were possible, would not bring him joy, for only as thought grows spiritual is one ready for this translation. Evil is tormented at the very thought of good, hence the unrighteous could never be at peace in the presence of God. Harmonious conditions are realized as the individual becomes conscious of good, but only as the sense of evil is overcome and put out of thought can this consciousness be reached. All mortals have faith in good, in the sense of intellectual belief, but faith must crystallize into earnest activity, and be the mainspring of Christian service, in order to qualify one for heavenly experiences.

In his story "A Rough Shaking," George Macdonald writes: "[Men] are willing enough to be made noble; but that is very different from being willing to be noble: that takes trouble. How can any one become noble who desires it so little as not to fight for it?" So, while all mankind desire salvation from the effects of their belief in evil, comparatively few are willing to labor for it to the extent of overcoming this belief itself. They would accept salvation as a gift, if they might, but to struggle moment by moment, day in and day out, to have only that Mind which was in Christ Jesus, requires more than most mortals are willing to do. How, then, can they believe themselves fit for heaven, even if its doors were opened to them? For what do men know of harmony or righteousness or love outside the state of their own consciousness? What can any one know of God beyond the measure that good occupies his thought and activity?

The popular belief that heaven is an unknown locality leaves mankind without a clue to its whereabouts or the mode of reaching it; but the Master's teaching, that the kingdom of heaven is within one's own consciousness, reveals that the way thereto lies through right thinking and right living; and this is not accomplished by faith alone, but through overcoming. Heaven is not entered, here or hereafter, except as the Father's will is done; and the doing of this will, to the human sense, is the destruction of all evil works, the correction of the belief in a power opposed to God. The test of one's Christianity is not his faith but his work, not what he believes but what he does, not his church standing but his spiritual growth and demonstration; for the only value of a religious belief is the effect it produces. Since the material concept includes all sin and suffering, it is evident that heaven is not to be found in material sense, and can be reached only as human thought is spiritualized. Are Christians willing to begin this spiritual journey, to take up arms against the claims of material sense, to deny whatever would hinder the coming of the kingdom of heaven in their own consciousness? Are we ready to work as well as to pray for the good we desire?

In fulfilling his mission Jesus traversed through and out of the belief of life in matter, and declared that there is no other way by which we can go to the Father than that which he taught. The Christ-way is the way of triumph over the flesh, but the dense materialism that continued through successive ages, permeating every system of religion and medicine, obscured this spiritual way until it was discovered anew in Christian Science. Before this discovery it does not seem to have been clearly recognized, except by the Master and his disciples, that spiritualization of thought is the only door to heaven and immortality; nor was this process made scientifically demonstrable and brought within the mental compass and capacity of mortals until the publication of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Through this teaching, humanity is beginning to learn the meaning, purpose, and scope of Christianity, and the possibility of reaching, even here, a higher spiritual sense of life.

Until the desire for good is expressed in the effort to be Godlike, it is not an effective factor in the working out of human salvation. When one becomes willing to do that which God requires of him, at whatever cost, he is where

God can reach him with the wisdom and strength necessary for this work; but thought must free itself from the belief in matter to obey the call of Spirit. When the prodigal had sounded the emptiness of the material sense of existence, when he realized that it had nothing good to offer him, he said, "I will arise and go to my father;" and he arose and retraced his way until his father met and welcomed him. Had he remained idly content with believing in his father's goodness, or longing for the plenty of his house, the prodigal would not have found his way home. What was required of him is required of all mortals; namely, to arise and go to the Father, to put good desires into action in working out of the delusions of a false sense.

The necessity of work as well as of faith is emphasized in Christian Science. In "Pulpit and Press" (p. 10), Mrs. Eddy speaks of "the deadened conscience, paralyzed by inactive faith," and this conscience must be quickened to a sense of Christ's demands and of individual responsibility. A thorough study of the letter of Christian Science is requisite, but the student must walk in the way this Science points out if he would prove for himself its blessedness and power and rise above the fears and failures of erroneous belief. The true understanding of Christian Science leads to intelligent activity in the overcoming of both sin and sickness, and unless this activity is present the student has not grasped the vital purpose of this teaching.

Christian Science is operative Christianity, and is preeminently a religion of doing; it ever enjoins upon its students the necessity of being "doers of the word, and not hearers only." The awakening desire among Christian denominations for a broader practice of Christ's teachings, as well as a stronger faith, indicates the influence of Christian Science upon the religious thought of the age. Christian Scientists do not lack faith, but, as Mrs. Eddy writes in her "Messages to The Mother Church" (p. 57), "they have Science, understanding, and works as well." A special mission is theirs at this time, to prove the practical applicability of divine Truth to human needs, and to show in their own lives the saving power of Christian Science demonstrated.

INDIVIDUAL RESPONSIBILITY.

EDNA HUDSON HOSMER.

It is the splendid privilege of every man and woman to be a Christian Scientist; that is, to be a scientific Christian—one who proves that the teaching of Jesus the Christ is forever true and hence demonstrable today, even as it was nineteen hundred years ago. If we realize this, namely, that Christian Science is the Science of being—the truth about life—as taught by Jesus the Wayshower, and that it is based on a divine Principle (as the truth must ever be) to be demonstrated by the individual for and by himself; if we see clearly, furthermore, that to become a Christian Scientist must of necessity be an individual problem, we shall at the same time acknowledge that Christian Science itself is not to be justly judged by the unideal progress or the retrogression of Christian Scientists.

The possible spiritual success or defeat of any man means very much to the individual, but it does not affect the truth of Science. If one is honest with himself, and earnestly strives to work out his own life-practice according to the demands of Principle, he is very sure to discover when and where he has made a mistake, if so be. In the same way, when after faithful study and the patient application of a given rule he gets the right result, it is he who is most surely and intelligently satisfied. Paul wrote, in his epistle to the Philippians: "Work out your own salvation." Would it not be well for each one of us to remind ourselves of this very frequently, and when some professing Christian Scientist fails at a certain point in his career to practise what he has dared to preach, would it not be wise to recall these words of our Master, spoken to Peter, "What is that to thee? follow thou me"?

Could we have the reverence and loving respect we feel today for the disciples of Jesus, if they had turned away from his teaching in confusion because Judas, who had professed so great a devotion to the cause of Truth, failed in the crucial hour to prove his fidelity? Indeed, if they had perceived the full import of their Teacher's perfect example, they would not have paused in their work to condemn Judas, but would have realized at once that their only duty lay in proving themselves true beyond the possibility of being tempted in a like manner.

It is very easy and often more interesting to attend to the affairs of others than for one to apply himself wholly to the working out of his own salvation, but it is equally true that this attention to the problems of others "profiteth nothing." The old saying, "Live, and let live," cannot be too thoughtfully or too frequently considered by those who would like to increase the number of happy faces and loving thoughts in the world about them. Let us ask ourselves daily, Am I obeying the First Commandment? Am I learning to have only one God—learning that this God is eternally good and that there is no possible power apart from the power of His goodness? Am I learning and proving that Truth is omnipresent and omnipotent? Only as one is doing this, can he rightly call himself a Christian Scientist.

GIVING OUR TESTIMONIES.

ERNEST C. MOSES.

When Mrs. Eddy added Section 24 of Article VIII. to our Church Manual, in which the statement is made that "testimony in regard to the healing of the sick is highly important," she placed the seal of particular consequence on the voicing or writing of evidence concerning Christian Science practice. The giving of testimony at our Wednesday evening meetings is therefore an act worthy of careful consideration. It is clearly evident that the import of the by-law is to make every testimony a means of glorifying God, the Principle of Christian Science; an opportunity whereby to extend to both regular attendants and visitors a loving encouragement to know that all the ills of the human mind and the flesh can be dispelled by the light of Truth as presented in this Science.

Because this is the object of presenting testimonies at our mid-week meetings, every grateful beneficiary of Christian Science comes to the meeting with a heart overflowing with good will, and desiring to be instrumental in making the occasion a means of inspiration for every one present. The earnest student therefore brings to the assemblage a hospitable mentality, in meekness hoping above all else that omnipresent Love may accomplish its healing work then and there through reflection; and these desirable results should be accomplished spontaneously and naturally, without labored effort on the part of each conscientious student present. A constant realization of the presence and power of divine Love, with a tender, compassionate feeling for human needs, will surely do the work, and many will leave the meeting assured of God's goodness and the verity of Christian Science.

With due regard for the dignity of the occasion, the true Christian Scientist will carefully avoid the use of terms which, while they are necessary to the textual statements contained in Science and Health, are often misused when woven into the phrasing of a public testimony. For instance, the words "claim" and "belief" are used in the printed literature of Christian Science in many necessary connections wherein their significance is often explained. But in public speaking the use of these terms in connection with the name of a disease or discord is undesirable, because in a mixed audience such terms sound bizarre and

Digitized by Google

peculiar. Such unusual designations have a tendency to give the impression to visitors of all degrees of culture that Christian Scientists are erratic or "cranky" in their methods of speech.

The by-law very clearly states that the name of the disease of which the testifier was healed may be mentioned. In Science and Health Mrs. Eddy refers to "dyspepsia" six times, but to none of these references does she annex the word "claim" or "belief." Similarly, the testimonials published in our periodicals rarely include these words. If the giver of the testimony has had proof by a demonstration of Christian Science of the nothingness of this disease, the testimony will accomplish its work in the thought of any dyspeptic present, if it is presented in terms with which he is familiar.

In the mid-week meeting held in towns in which the Christian Science movement has been established but a short time, there may be a dearth of experiences to form the bases of testimonials of a personal character. In such meetings, therefore, it may be expedient for students to narrate the experiences of other beneficiaries which they know to be true. But the best impressions are made upon visitors if the persons who have experienced healing of their own individual mental or physical conditions tell in a simple, direct, and heartfelt manner of the benefits which they have received. No testimony carries more conviction than the one given by the man, woman, or child who has experienced healing or reformation in personal conditions, and who knows and declares that the improvement was wrought by God through a right understanding of His Christ, as presented in Christian Science.

In localities where the attendance at the Wednesday meeting may be small and among which the cases of well-established healing are quite limited, it may be necessary now and then for a grateful student to read a letter reciting some interesting case of healing accomplished by Christian Science with which the recipient of the letter is familiar; and similarly, it may be expedient in such meetings for a member to read some helpful extract from the Christian Science literature in connection with some remarks. But in assemblages of such limited possibilities, or in any Wednesday meeting, the reading or quoting from the works of miscellaneous writers whose views may be in some measure akin to the letter of Christian Science, is not permissible. Better indeed is it for the true success of the meeting if but a very few tell what they know of Christian Science by absolute proofs given to them (however simple may be the demonstrations), and let some of the waiting moments be passed in profitable silence in which the heart may go out in gratitude to God, than partially to fill up the time with readings or recitations of sentiments having no direct relation to Christian Science.

In the churches in the large centers, where the practice of this Science has brought out hundreds of cases of healing, there is little necessity for the reading of letters, compositions, or the recitation of verses by miscellaneous authors. The earnest student recognizes the fact that the Reader who conducts the service is appointed for the express purpose of reading from the Bible and from Science and Health, and it is not necessary therefore that others in the audience should attempt to supplement his work by reading selections, or by extensively quoting from our Leader's works or other Christian Science literature. Habitually to read or quote from our literature from the floor is likely to be interpreted as a hint that the Reader's work has not been well done. Such practices indicate an untutored zeal which would try to "steady the ark" according to human judgment, rather than to leave it to the calm direction of divine Mind.

Beginners who voice their gratitude in testimonies at the Wednesday meeting may not at first be able to present their statements without clothing them in some details which are really unnecessary to a proper declaration; but the student soon learns through "the hearing ear" that testimonies which omit references to conversations between people, minute descriptions of surroundings and personal opinions, make the best impression because of their convincing simplicity. It is well always to remember that the audience is not so much interested in mere personal details, or in profusely worded narration, as in the simple facts which illustrate the healing accomplished through Christian Science.

If the earnest student who lovingly desires to be obedient to the requirements of good testimony-giving will study the rule on "Testimonials" in Article VIII. of the Manual of The Mother Church, and the program for the "Wednesday meetings" as laid down in the section of the Manual devoted to "Order of Services," he cannot fail to increase the effectiveness of the personal evidence which he thus offers in public. Through a reasonable interpretation of the meaning of "experiences, testimonies, and remarks on Christian Science," he will be enabled to contribute those elements in testimonial work which encourage the visitor, dignify our cause, and glorify God.

The mere statement of our Leader which declares that testimony giving is "highly important" should stimulate all earnest Christian Scientists to study and strive for higher attainments in this special line of personal duty and privilege. Thousands who are today healthy, successful, and happy owe their present felicity to the light which came to them through pertinent, encouraging testimonies delivered at our Wednesday meetings. With a larger realization of the possibilities of this branch of our Christian work, should we not in loving humility and obedience make it a better and purer means whereby graciously to execute the command of the Master to "preach the gospel to every creature"?

FRIENDS AND FOES.

CLAYTON W. MOGG.

THESE words of Jesus, "A man's foes shall be they of his own household," as recorded in the tenth chapter of Matthew and quoted from the seventh chapter of Micah, literally interpreted, show the utter uselessness of any attempt to trust in or depend upon persons, even though they be one's closest and best friends. Moreover, these words most emphatically point by inference to Him in whom we may trust with perfect confidence. However important the lesson of this text when taken literally, it has a much deeper meaning when considered in the light which the study of Christian Science casts upon the sacred page. When studied metaphysically, two questions naturally arise: What constitutes our household? and What are our foes?

In arriving at an answer to the first question, we may dismiss matter from our calculations entirely, for even the most material mortal is simply embodied thought, and matter itself must be conceived, if at all, by means of thought. The business man who is supremely engrossed in the affairs of commerce is so because his business is constantly in his thought. The sensualist is what he is because he allows his thought to dwell upon the things of the senses, his belief that there is pleasure in and of matter. The truly religious man is what he is because his thought dwells more or less constantly upon high ideals and lofty aspirations. In every instant a mortal lives and moves and has his being, as it were, in the realm of his own thought; in fact, thought constitutes his whole being—is the man. This being so, our households are mental, and the inmates are our thoughts.

Respecting the next question, What are our foes? we may note what Mrs. Eddy says on page 8 of "Miscellaneous Writings": "Simply count your enemy to be that which defiles, defaces, and dethrones the Christ-image that you should reflect." Manifestly the one evil which tends to dethrone the Christ-image is the belief in a power opposed

Digitized by Google

to God, good. When this belief is accepted by the individual, in whatever form it may present itself, fear arises; and the belief of fear is one of the most active agencies which tend to deprive the individual of man's God-given dominion. The fear of lack of material necessities impels its victim to give full freedom to greed, selfishness, malice, and envy. Thus fear, when indulged, drives men to commit acts which they know are wrong, while fear of detection impels them to resort to further hypocrisy and self-justification. So, too, the fear of breaking so-called health laws renders one the more susceptible to the ills he would avoid.

These evil tendencies seem to exist in the form of universal beliefs, but they do not become our enemies until we adopt them, give them embodiment; in other words, until we admit them as members of our mental household. One may go into a drug-store and see all sorts of bottles filled with what are regarded as the most deadly poisons, but one is not therefore harmed by them. But let one swallow the contents, and suffering seems to result. In a similar manner, fear of lack, lust, malice, envy, hatred, revenge, hypocrisy, self-love,—all these become our "deadly enemies" in so far as we take them into our home circle.

Now these same evil beliefs and tendencies, if recognized and conquered, may present the occasion for good to come to us. Mrs. Eddy writes, "We have no enemies. Whatever envy, hatred, revenge,—the most remorseless motives that govern mortal mind—whatever these try to do, shall 'work together for good to them that love God'" (Miscellaneous Writings, p. 10). In whatever form an evil suggestion may present itself, it is for us to determine whether it shall become our enemy or whether in its destruction we shall advance spiritually. If we shut the door of our thought in its face and refuse it admittance, if we realize that evil has no power and cannot harm us, that which would have been our enemy, if admitted to our thought, has proved to be an opportunity for us to grow stronger and more alert by resisting it. In other words, we have demonstrated the powerlessness of evil and the all-power of good.

The remedy for every evil which tries to beset us is always at hand. "Agree with thine adversary quickly, whiles thou art in the way with him [refuse admittance to every suggestion when it first presents itself for adoption]; lest at any time the adversary deliver thee to the judge [lest the evil suggestion become an argument], and the judge deliver thee to the officer [lest the argument become a claim] and thou be cast into prison [become subservient to the claim]." "Verily I say unto thee, Thou shalt by no means come out thence, till thou hast paid the uttermost farthing [until the claim is completely destroyed and harmony restored]."

When we form the habit of thus agreeing with our adversary quickly, systematically, persistently, we have entered the path which leads to the house built without hands, "eternal in the heavens." We are beginning to dwell "in the secret place of the most High."

TRUE HAPPINESS.

EVELYN CAMPBELL.

SOME time ago I heard a little story which helped me very much. A friend of mine was walking on a golf course, and passed a man who was intently hunting through a clump of furze bushes. She had gone on for some ways when she noticed a golf ball lying on the turf, and going back told the man, who was still beating vigorously through the furze bushes. Yes, he had lost his ball, he said; but he would hardly go with her and look, as he felt certain it had fallen among the furze bushes and that he should find it there sooner or later. He went with her, however, and was very much surprised when he found that he had been mistaken, as the ball lying on the turf proved to be his. The man knew he had sent his ball somewhere, but he made the mistake of looking for it in the wrong place.

The little story helped me, because I was just then feeling very much discouraged, and it struck me that I was rather like that man. I was looking for happiness, but search as I might I never seemed quite able to reach it. Yet true happiness lay waiting for me all the time; I had only to stop looking for it in the tangle of material things—I had to raise my eyes above them; I had to be willing to hear, and I had also to give up my own sense of where true happiness lay. Mrs. Eddy says (Science and Health, p. 57), "Happiness is spiritual," and in those three words she goes to the root of the matter. These words of the psalmist often help me: "The lines are fallen unto me in pleasant places; yea, I have a goodly heritage." It is worth noting that the verse is not written in the future but in the present tense, and we should be ready to accept that goodly heritage which is waiting here and now for each one of God's children.

[Written for the *Sentinel*.]

THE WATERFALL.

BEN. HAWORTH-BOOTH.

My song among the hills I sing forever,
My liquid lute I pipe the livelong day,
In melancholy mood or glad endeavor,
A doleful dirge or rhythmic roundelay.
Who may interpret me? who may disclose
The riddle of the rock-girt fountain-glade,
The mystic cryptogram that no man knows,
The message of the mountain-born cascade?
My wreathed wraith, of shepherd's eye beholden,
Flits o'er the fell, a phantom of the spheres,
By rainbow belt or moon's white arc enfolden,
Then fades away in fancy, and in tears.
I know the ocean deep, the floating cloud,
The low'ring tempest, and the lisping rain:
With me the thunder's voice has raved aloud,
And hushed in consciousness of Truth again.
I knew the flood of Nöe, and I fell
Before his day upon the youthful earth,
To touch the tender lips of asphodel,
And give to lotus buds celestial birth.
I hold the starlight in my cold embrace;
The wind to me a sister's secret brings—
From far Euphrates*—of the coming grace,
Of happier hearts, and holier thoughts and things.
A type of cleansing, and a saving fount,
A well of healing waters, calm and deep,
I flow forever from the eternal mount,
Washing the tears away of them that weep.
Mine is a garb of purity and splendor,
The warp of sunbeam, and the woof of song,
Of tones ideal, silver-tongued, and tender,
Falling to earth, though they to heaven belong:
"Ho, every one that thirsteth"—Have ye heard
The harper's voice, the soft appealing call,
"Come to the waters"? 'Tis the sacred word,
And 'tis the murmur of the mountain fall.
Come, like the Syrian from the courts of pride,
Come to the crystal and abounding river:
And cleanse your leprous limbs in Jordan's tide,
The fountain-head of grace that flows forever.
Look to the source of loveliness and power;
Come to Siloam; let my message be
To bounden hearts and hands this gracious hour,
"Take of the living waters, and be free."

* See Science and Health, p. 585, line 16.

SELECTED ARTICLES.

[Alfred Farlow in *Boston* (Mass.) *Times*.]

Christian Scientists, especially those who have been closely associated with Mrs. Eddy, will miss her every-day counsel and guidance. Her going is indeed a matter of great moment to them, but the understanding of Truth which she had taught and demonstrated while with them has prepared them for the deprivations which are occasioned by her absence. She has left a well-defined course for her students. She has formulated her ideas into a text-book. She has recorded her experiences, outlined the proper application of Christian Science in every department of practical life, established a church with rules and regulations compatible with Christian Science, and therefore it may be said that Christian Science has been sufficiently taught and only remains to be demonstrated. Mrs. Eddy has clearly marked the way in Christian Science, and has therefore finished her work so far as this life is concerned. For this, Christian Scientists are truly grateful, and they will strive with greater earnestness and sincerity to follow the Christ-example which she in her teaching has illumined and made more practical.

The future of Christian Science depends upon the faithfulness of Christian Scientists. If Christian Scientists conduct themselves with unselfish devotion to the ideal which has been so faithfully taught and demonstrated by their Leader, the rapid progress of their movement will continue. The world at large has become used to Christian Science and understands it better than in former years. Its sweeping declarations of spiritual truth no longer startle, and intolerance has largely ceased. Christian Science has been in vogue for more than thirty-five years, during which time it has harmed nobody, but, on the contrary, has done much good. It has made the bad good and the good better. It deprives no one of any right and useful accomplishment or possession, but greatly improves the value and usefulness of everything. Even critics, almost to a man, mention virtues which Mrs. Eddy has revived or emphasized, and it is only a question of time when these same critics will enthusiastically endorse all that Christian Science teaches; for this Science is consistent, and the fact that any individual is now prepared to accept any one item in its teaching points unmistakably to the final acceptance of its entire teaching.

It is safe to say that no individual since the time of our Saviour has contributed more toward an elucidation of Biblical teaching than has Mrs. Eddy. We sincerely believe that the world at large breathes with us a prayer of gratitude to God for having given so useful a woman as Mrs. Eddy.

[Willard S. Marcox in *Los Angeles* (Cal.) *Examiner*.]

While Mrs. Eddy is no longer with us in the flesh, who shall deny that the gentle influence of her selfless life is a real and substantial presence in the world, working, as she always did in person, for the amelioration of sin and disease, comforting them that mourn and pointing the way to the kingdom of heaven.

When the question of Mrs. Eddy's demise has been debated by the public, those who knew her best declared that she would be succeeded by her writings, that she would have no personal successor as the head of the Christian Science church. The great spiritual movement embodied in the Christian Science church had its inception in Mrs. Eddy's thought. She organized the first Christian Science church and has faithfully, lovingly, and successfully guarded and guided each step of progress up to the present. Today Christian Science is an undeniable force for good in the world. Thousands bear grateful testimony to improved lives because of its ministrations. Those who understand Christian Science know that its real vitality, its power and authority, reside not in creed or ritualism, nor yet in the multitude of adherents, nor in elaborate organization, but rather in the divine Spirit which is exemplified in its healing works and which makes one on God's side a majority.

Mrs. Eddy said in one of her messages, "Follow your Leader only so far as she follows Christ" (Messages to The Mother Church, p. 78). Christian Scientists still have the impersonal Christ to guide them, and they will prove their devotion to Mrs. Eddy by a steady progression toward the goal of spiritual being which she constantly pointed out to them.

[C. L. Ramsay in *Dundee* (Scot.) *Telegraph*.]

As many people are inquiring what Christian Science is, and wherein it differs from faith-healing and mental suggestion, perhaps you will allow me space for a few remarks on the subject.

It is plain that most physicians of experience agree on one point at any rate: namely, that anything which can stimulate the mind of the patient to resist disease, and inspire him with confidence and hope, is a powerful aid to his recovery. The important question then is this: Where is this mental stimulus to be found? All agree that faith is a good thing, but on what foundation should it rest? In other words, on what is the patient to repose his faith? and how is the condition of mind called faith to be attained? Many might reply, "Oh, the patient must have faith in the doctor, faith in his remedies." Others would say, "Have faith in the recuperative power of nature." Is this sufficient? Others again would say, "Have faith in God, faith in prayer;" but many a sufferer has given up praying because he gets no answer to his prayer. Others again aver that through mental suggestion or hypnotism the necessary impetus can be conveyed; but many would tremble at the thought of resigning their mentality, their power of self-control, their freedom of thought to the domination of a fellow mortal. One learned professor from Oxford, writing lately in the *British Medical Journal*, while extolling faith as the "one great moving force which we can neither weigh in the balance nor test in the crucible," regards it as something "mysterious, indefinable, known only by its fruits." How, then, can we reach anything so vague and illusive? In the course of an article published in the same number of the journal, Dr. Clifford Allbutt, professor of physics in Cambridge, writes, "To put limits to what God can do were presumption indeed;" and further on he continues, "Probably no limb, no viscus is so far a vessel of dishonor as to be wholly outside the renewals of Spirit." Here for one moment the eminent physician and Christian Science come into touch.

For more than forty years Mrs. Eddy has patiently continued to declare, through good report and ill, that to be of any real use to him in sickness or in health a man's faith must be reposed on nothing less than omnipotent Spirit, the infinite Mind or intelligence which is the only creative regenerating power of the universe. And this faith must be not a mere blind belief or vague hope; still less should it partake of the nature of passion or emotional ecstasy; it must be the result of actual spiritual understanding—a reasonable and intelligent comprehension of the nature of God. Thus the Christian Science practitioner, understanding that God is supreme, being of "infinite power, wisdom, and goodness," as all Christian churches admit, begins by quieting his patient's fear with the comforting assurance that disease does not proceed from God, but is contrary to His nature, since evil cannot proceed from good nor find any place there. This fundamental truth that the supreme power of the universe is on the side of health and against disease inspires the patient with a courage and a confidence nothing else can give. He now has a reason for the faith that is in him, a solid foundation on which to build his hope of recovery, no less a foundation than the very nature of

Digitized by Google

God Himself. I think all will agree that such a conviction, if it can be gained, will lift a man entirely above the necessity or desire to depend on drugs, dieting, mental suggestion, or any lesser agency. That such an understanding can be gained, the rapid spread of Christian Science and the ever-increasing number of well authenticated cases of healing are the evidence.

In conclusion, I would advise those who wish to learn more of this subject to go to the fountain-head and read Mrs. Eddy's book, "Science and Health with Key to the Scriptures," which can be obtained at the Dundee free library, and at every Christian Science reading-room in the land.

[Frederick Dixon in *London* (Eng.) *Inquirer*.]

In your issue of the 22d inst., in an article under the heading "Medicine and Religion," the statement is made that Christian Scientists are "once again confusing the sphere of medicine and religion," and that they have "turned the more or less exact science of psychotherapeutics now into the basis of, and now into the buttress of, certain extraordinary additions to the already overburdened temple of all religions."

If this is the case, it can only be said that the confusion first took place, from a Christian point of view, in the teaching of the New Testament. The Founder of Christianity distinctly sent out his followers to preach the gospel and to heal the sick, and with equal certainty he declared, speaking of these followers, in all countries and at all times, that if they believed in him they would be able to heal the sick as he had healed them, and even to do greater things than these. From that time onward, the healing of the sick was looked upon as a natural and normal part of the Christian religion. We know from the works of the fathers that it continued, though in a decreasing ratio, down to the time of Constantine; and even after that it was considered a natural, even if an exceptional, occurrence that the sick could be healed by the power of God.

The medical teaching of the first century was certainly most remarkable. It was a mixture of idolatry and ignorance of the most extraordinary description. This is a fact which should be borne in mind by the people who are so fond of insisting that Luke was a physician. Luke, so far as we know, may have been a physician, but Luke if he ever was a physician certainly, in the words of so great a critic as Adolph Harnack, deserted the study of medicine because he hoped to find in Christianity a way, by quite other means, of healing the sick and casting out devils; and this other way Harnack describes as Christian Science.

In the time of Luke no one would have questioned that the healing of sickness was part of a Christian's duty, but little by little the separation of the healing of sin and the healing of sickness began to manifest itself, although Jesus had asked, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" The separation probably originated in the fact that, as time went on, men found what was called preaching the gospel very much easier than healing the sick. Yet, according to the teaching of Jesus, preaching without healing the sick could scarcely be called preaching the gospel. The consequence was that by the time the epistle of James was composed, that is to say, somewhere probably about the middle of the first century, the writer found it necessary to take exception to the gradual separation of works and faith in the often quoted sentence, "Faith without works is dead," and he showed quite clearly in another passage in the epistle that by works he included the healing of sickness.

It has been said quite frequently that the growth of Christianity can be traced in the foundations of the hospitals. It might be said with far greater truth that the temporary failure of Christianity could be traced in the foundations of the hospitals, for the foundations of those hospitals meant that, more and more, men were separating the command to heal the sick from the command to preach the gospel. Indeed, the fact that the hospital ward originally had its place within the walls of some religious institution is another of the proofs of how the healing of the sick gradually passed from the hands of the church into the hands of doctors, whose capacity as doctors was not measured in any way by religion, but who could be, and who constantly were, skeptics and unbelievers. Now, what Christian Science has done has been to insist that the two commands are inseparable, and that it is no more easy to say, Thy sins be forgiven thee, than to say, Arise and walk. This may be a departure from the orthodox practice, if we measure orthodoxy by the opinion of the hour, but it is certainly not a departure from orthodox practice if we measure orthodoxy by the teaching of the New Testament.

Neither can it be maintained in any way that Christian Science has used psychotherapeutics as a basis or a buttress of a new religion. Christian Science repudiates psychology as a factor in healing, and it does this because it realizes that Christian healing never has been, and never can be, effected through the action of the human mind, but is brought about in the exact proportion in which man gains the Mind of Christ. The so-called healing of the eastern wonder-workers, no matter by what name they called themselves, was effected by some system of mental suggestion and mental manipulation. This was so thoroughly understood, and the struggle of the occultists with the schools of the prophets was so well remembered in Jerusalem, that when the Pharisees wished for an argument by which to discountenance Jesus, they found it in the declaration that he cast out devils by Beelzebub, that is to say, by the means of the occult workers. Jesus' reply placed healing through the agency of the human mind outside the pale of Christianity forever. The human mind had eaten of the fruit of the tree of the knowledge of good and evil, and believed fully in good and evil as powers. This constituted a house divided against itself, and Jesus used that simile to silence the Pharisees and to show, once for all, that a house so divided could not stand. The claim that it is possible for one human mind to suggest health or to suggest good thoughts to another human mind, is inseparable from the claim that it is possible to suggest sickness or to suggest evil thoughts. Therefore, a mind believing in the reality and the power of evil is believing in the reality and power of the very thing it is undertaking to destroy. This constitutes a house divided against itself, which cannot stand.

Jesus, however, was never satisfied with a mere negation, he always gave the world the positive message which it required, and so he went on to say that if he by the Spirit of God cast out devils, then the kingdom of God was come unto men. The kingdom of God never came to any man by suggestion from a human mind believing in good and evil. The only healing such a mind is capable of effecting is a temporary diversion of human thought into another channel, capable of relapse at any moment. Christian healing is wrought by the destruction of any belief in the reality and power of evil, and is brought about exactly in the degree in which a man gains the Mind which was in Christ Jesus. Jesus himself knew perfectly well that evil was not real, and was not power. He knew, however, that it enjoyed a temporary sense of reality and power as long as it was believed in, just as he knew that any other lie enjoyed a power of deception as long as it was believed in. Personifying evil, in the manner of the time and country in which he lived, he spoke of it as the devil, and he declared that this devil abode not in the truth because there was no truth in him. Strip away the metaphor of the East, and reduce these words to the matter-of-fact language of western Europe today, and what do they mean but this, that, speaking absolutely, that is to say in reality, evil has never

Digitized by Google

existed, because it is simply a mere negation, a lie about something which is true. Evil is not real and is not power. The only reality to which it can ever pretend is the false sense of reality which is enjoyed by any lie as long as it is believed in, and the only power which it has ever exerted is the temporary sense of power which a lie appears to exert until it is exposed.

This is the teaching of Christian Science, and it is difficult to see in what way it confuses the relationship of the healing of sickness and the healing of sin, or in what way it buttresses itself by any process of psychotherapeutics.

[From *Denver* (Col.) *Post.*]

To a cure wrought by Christian Science nineteen years ago, Mrs. David Browne Graham owes the change of heart which has made her name conspicuous in the annals of Denver philanthropy. The three little girls who make their home with her in the comfortable house at 1348 Logan street would not be there if Mrs. Graham had not been really "born again," as the church people say, when her health was restored through the prayers of a Christian Science practitioner. Apropos of the remarks Dean Hart has been making concerning Christian Science, and the controversy which the death of Mrs. Eddy naturally has provoked, Mrs. Graham tells the story for the first time. It goes back to the time her husband, D. B. Graham, was on the bench in this city.

"I had a tumor on the spine," says Mrs. Graham, prefacing the story of her cure. "For three or four years I suffered with it until I was a nervous wreck. The physicians I consulted advised an operation, but I was too nervous even to consider it. The altitude bothered me, so I went abroad, thinking the change would do me good. In Rome I suffered an awful attack, and the medical men there told me that nothing but an immediate operation would save me. I started to return to America by way of Paris, and in that city again I was seized. The doctors there held a consultation and told me that I must start for home at once. I remember one who attempted to be facetious, saying, 'You had better go back where the doctors are so proficient in cutting people up and putting them together again.'

"At any rate, I came back determined to accept, with what grace I could, what fate had in store for me. I went to the very best surgeon in Denver for examination. He told me that if I deferred the operation longer I should be beyond need of it. I agreed that he should operate on me on Tuesday, and it was Thursday when we made the engagement. I cried, just as every woman does under those circumstances, and left his office with wet eyes. Outside I met a friend who inquired the cause of my grief. I told her. She suggested that instead of being operated on I go to a 'healer' on the floor above the one on which we lived in the hotel. She did not tell me what kind of a healer she had in mind, and in those days Christian Science was little known. When my husband came home to lunch I told him I had arranged for an operation for the following Tuesday. He told me that he was sorry I could not wait to allow time for my sister to come to me, but I said I was determined. He was so funereal over the prospect that, just to cheer him, I told him jokingly what my friend had suggested. He insisted that I visit this healer.

"After some persuasion I went upstairs and laid my case before him. He told me to sit down and read some magazines that were lying on his table. I did, and he went to a corner and seemed to be engaged in silent prayer. For forty minutes I sat there, mentally resolving that if I ever got out I'd not go back. I thought it an awful waste of time. I promised to go back the next morning at eleven, but did not intend doing it. All that afternoon and the next morning I was wondering how I could get out of going. At eleven o'clock next day I was taken with terrible pains, and asked a bell-boy to call the nearest doctor.

"Before he had turned to do it, I changed my mind and asked to be taken to the office of the healer upstairs. I was screaming with the pain. He demanded that I be quiet, and I thought I couldn't. Finally his manner became so authoritative that I did as he told me. Again he went into prayer, and of a sudden the tumor seemed to burn and then contract. Then the pain ceased. With its cessation there came a wonderful feeling over me. It was like I used to feel on a spring morning when I was young. I was happy and at peace with the world. I felt light as a feather and wanted to run. The healer turned to me and said, 'You need not come any more. You are healed. But go and do something besides whine about your ills. Do good where you can.' The tumor had grown so that it could be felt through my clothing. It was gone. I left the office and walked fifteen blocks that day. I had not been able to walk more than two blocks in two years.

"And I remembered what he said about doing good, so I went directly to the home of a girl I knew who had musical talent and no means to cultivate it. She worked and earned three dollars a week. I arranged to have her take two music lessons a week at three dollars a lesson, and today she is one of the foremost church singers in America. Her sister was another protegée of mine. I made up my mind that I would give up the pleasures that had seemed essential to my life and give that money to doing good."

[Willis D. McKinstry in *Lawrence* (Kan.) *World.*]

Christian Science and psychology are as opposite as darkness and light, nor is there any cooperation between them. The Principle of Christian Science is Spirit; its operation is divine; its teachings declare that God is infinite Mind; therefore, God being Mind, and infinite, there can be but one Mind. Christian Science recognizes no power, substance, intelligence, nor law, other than Spirit, because God, divine Mind, is All-in-all.

We agree with the professor that so-called incurable diseases have been healed—"positive cures effected"—through the application of the Christ-teaching, and this is true because it is the will of God that His sons and daughters should have perfect health. That which is reflected must necessarily be as perfect as that which it reflects; therefore God, divine Mind, being perfect, His image and likeness must be perfect; and in infinite good there is no element of discord to mar or destroy the truth of being.

An understanding of the Science of being as revealed through the teachings of Christian Science helps mankind in every way; it is that which one can take into his everyday life to meet his human needs; it is just as applicable in the transaction of business as it is in the healing of diseases or the destroying of sin. It is the application of the golden rule and the banishment of the human will. It is the knowing that the will of God, the law of good, attracts and controls, that God governs the affairs of men. To let "thy will be done in earth, as it is in heaven," supplies the human need.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be June 2, 1911. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 10, 1911.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 4, 1910, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
Falmouth, Norway, and St. Paul streets, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

THE SIMPLE GOSPEL.

THE record of the three years of Jesus' public ministry, as it is given in the four Gospels, is full of the accounts of his healing of the sick, and we get a glimpse of the real magnitude of his labors through John, who closes his account with the statement that if all the things which Jesus did should be written, "even the world itself could not contain the books." And yet, brief as the printed record is, so many are the instances chronicled where the Master in his loving compassion "healed them all," besides the multitude of specific cases, that the account as a whole must compel the attention of every thoughtful Christian to this characteristic phase of the Messiah's ministry.

It would seem, however, that the impression which these accounts of healing make upon the reader is largely determined by the previous training of the individual. To those whose concept of Christianity has been molded in the theological beliefs of what might be called the "old school," these wonderful manifestations of the power of God are regarded as miraculous occurrences, entirely outside of law and order, and possible only through some special grant to the individuals who lived in the time of the great Master. To a certain other class, who pride themselves upon their intellectual endowment and "hard-headed common sense," these marvelous works are no more than coincidental occurrences which were distorted by human credulity into so-called miracles, and possess no spiritual significance. To still another class, they present evidence of the very presence and power of God, a divine dispensation which they hope will be manifested again on earth in connection with the reappearing of Jesus in the flesh, but not possible except under such circumstances.

None of these concepts of Jesus' works, however, can be said to present a very helpful or a very cheering picture to the man who to human sense is desperately ill and has resorted to every material system of healing, only to find that his hope is vain. Facing a blank wall of despair, so far as earthly hopes are concerned, with a problematical future heaven as the only consolation his religious belief can offer, his case is desperate indeed. What such a man needs is not a future prospect, but a present help in overcoming the disease from which he is suffering. To tell such a one that God does not heal men at this time, although it is admitted that He did heal thousands of persons of "all manner of diseases" in the early years of Christianity; or to assert that the healing works of the Master were done by material means, although supposed by the Gospel writers to have been the result of spiritual power; that, therefore, if medicine or surgery cannot heal him it is plainly "the will of God,"—to pursue either of these courses in seeking to comfort one in dire extremity, would be much like giving a starving man a stone in answer to his appeal for bread.

Strange as it may seem, practically all of the existing antagonism to Christian Science comes because of its denial of these erroneous concepts of Jesus' healing work, and its insistence upon the power and willingness of God to "heal the sick through man, whenever man is governed by God" (Science and Health, p. 495). The very simplicity of the Christian Science gospel is the chief stumbling-block to these blinded ones who, professing belief in an omnipotent God, have nevertheless failed to take the Master at his word: "He that believeth on me, the works that I do shall he do also."

It is because the promised "signs" which Jesus declared should "follow them that believe" have been vouchsafed to them, that Christian Scientists, encouraged by the example and sublime faith of their Leader, have refused to be daunted by opposition, serene in the consciousness of the righteousness of their cause and the ultimate triumph of good and the destruction of all evil. Mrs. Eddy tells us that "we must have faith in all the sayings of the Master, though they are not included in the teachings of the schools, and are not understood generally by our ethical instructors" (*Ibid.*, p. 429). Those who, through the study and application of the teachings of Christian Science, have learned the truth of this simple gospel, who have experienced in their own lives its efficacy in healing the "incurably sick" and the despairing victims of depraved appetites,—these men and women do not doubt the present power of God or His willingness to save from suffering "them that believe."

ARCHIBALD MCLELLAN.

"AS NEWBORN BABES."

AMONG the most distinctive features of the little child are its innocency and its instinct. At a time when it makes irresistible appeal to the love that cannot give it the least instruction, it begins to evidence an astonishing capacity to do for itself far better than it could possibly be taught, and as one thinks of this fact he finds himself increasingly interested in St. Peter's counsel that "as newborn babes" we should "desire the sincere milk of the word, that [we] may grow thereby."

That the guilelessness which is so sweetly symbolized by the little nursling has everything to do with our receptivity to truth, is universally recognized, and yet in no way, perchance, are we more frequently deceived and defeated than in the matter of the sincerity of our asserted desires. No faithful Christian Scientist can ever forget Mrs. Eddy's pungent putting of the fact that no one word expresses the demands of Science more effectively than the word "genuineness," even as no word presents the weakness of Christian profession more pointedly than the word "pretense." (See Science and Health, pp. 8, 9.) Well may the warning "Watch!" be inscribed on every guide-post in the path of life, so multiplied and so subtle are the mesmeric seductions to insincerity.

There is yet another phase of the apostle's illustration which is helpfully illuminating. The child's instinctive desire for and appropriation of the food it needs, is suggestive of that spiritual intuition which is surely the richest endowment we can pray for. It is that satisfying right sense which reaches a clear conviction of truth quite apart from the reasoning process, and which for the individual often becomes as authoritative as a voice out of the sky. Humanly speaking, this capacity may be cultivated, so that the apostle's counsel becomes mandatory for those who have not consciously possessed "the instinct for good."

The typewriter whose fingers fly so fleetly and effectively over the keys once had to authorize each individual movement. Now her eyes are fixed on her notes and these are put into print by a well-nigh perfect automatic action. In a kindred way he who is persistently loyal to his highest sense of what is good and true, however slowly that sense may be reached, will find himself growing into a sensitiveness to the ideal, and acquiring the ability and habit of spontaneously selecting the noblest and best, which will prove of inestimable value.

Just here we need to remind ourselves that if we would acquire this spiritual sense which is symbolized by the instinct of the babe, we must be willing to give ourselves assiduously and intelligently to the endeavor. To guileless sincerity in seeking for Truth, there must be added thoughtful conformity to Truth's demands. Indeed every Christian Scientist is speedily led to see that without thoughtfulness

Digitized by Google

none can be saved. The redemptive process is educational, and to the teacher the stumbling of stupidity or indifference is the unpardonable sin.

Christian Science makes it clear, further, that in every department of thought and activity, in both the deed and the doing of it, the ideal is the normal and should therefore become the customary. Man's every instinct is for good, his intuitions are always right; they are always trustworthy and authoritative, since they express the will and wisdom of divine law. This man is appearing in the consciousness of all who are spiritually aspiring, who are attaining the Christ-mind, and to these the fulfilment of the apostle's injunction involves no insurmountable task. Naturally, "as newborn babes" they will surely come to desire the good, and the good alone.

JOHN B. WILLIS.

"LEARN OF ME."

A GREAT thinker has said that "few men know how to live," and although this is a self-evident truth, there are perhaps not many who would be willing to apply it to themselves. Christ Jesus said that "no man knoweth the Son, but the Father: neither knoweth any man the Father, save the Son, and he to whomsoever the Son will reveal him." Then follows the familiar but oft-forgotten invitation, "Learn of me; . . . and ye shall find rest unto your souls."

There are some people who object to Christian Science on the ground that it requires so much of them in the way of study, and they talk pathetically about the simple faith which calls for no mental exercise—only belief. Now it may be granted that belief of the right sort furnishes a starting-point, as it were, for spiritual unfoldment, but throughout the Scriptures we find a constant demand for the addition of many things that are needed in the rounding out of Christian character. In order to gain these, and to be "rich toward God," we must respond to the Master's loving invitation, "Learn of me;" which surely means that we must learn to think, speak, and act as did he. This requirement, however, is met by the objection that its fulfilment would be extremely difficult, and that the constant effort to live up to this high demand would become very irksome; which is a great mistake, for Christ Jesus said that in learning of him we should find rest.

As a matter of fact, thought is unceasingly active at all times, even when we seem to be asleep; but much of the mental activity of mortals is extremely wearying, because it carries a heavy burden of false belief, which is imposed by the materialistic systems that lead humanity away from Christ and his rest. Here we may remember our revered Leader's words, "The highest and sweetest rest, even from a human standpoint, is in holy work" (Science and Health, p. 519). Much of the learning to which Christ Jesus invites us, consists in unlearning the false beliefs that are such heavy burdens to poor mortals,—the so-called health laws which, to be more accurate, are really disease laws. The great Teacher annulled all such when he counseled us to take no thought for the body, but instead to strive after spiritual and moral purity, and that knowledge of the Father which is real power, the kind of knowledge which enabled him to do the works that may well awe the world even to its latest hour, and which he commanded his followers to repeat.

It sometimes happens that those who know only a little of Christian Science venture a good deal in the way of explaining the subtleties of sin to others, and thus they impose new burdens upon those who are seeking rest. The Master said that his burden was light, not heavy; but in order to realize this it is necessary to learn of Truth, and there must be no indolent shirking of the yoke which Truth imposes. We must refuse to carry the burdens of sinful, hateful, or diseased thoughts, it matters not whence they come. Then we are ready to serve with meekness and might, keenly alive to the great issues of the hour.

Among the wonderful lessons of Jesus' last days with his students, as reported by Matthew, Mark, and Luke, we find these admonitions,—"Take heed;" "When ye shall hear of wars and commotions, be not terrified;" "Look up, and lift up your heads, for your redemption draweth nigh;" "Watch ye therefore, and pray always." Can any Christian Scientist think it hard to learn these lessons and obey these commands, as illumined by Truth? In prompt obedience we find rest in ever-renewed strength, and can say, as did the writer of a familiar hymn,—

> I'll drop my burden at His feet,
> And bear a song away.

ANNIE M. KNOTT.

MUNSEY'S MAGAZINE.

Munsey's Magazine announces for its April number an article entitled "The Girlhood Letters of Mary Baker Eddy," together with a poem, hitherto unpublished, written by the great Leader in her school-days. These letters, which shed an entirely new and highly interesting light upon the early years of Mrs. Eddy, and reveal a tender spirituality, are published with the permission of the executor of Mrs. Eddy's estate, the Hon. Henry M. Baker. The article is illustrated with two photographs of Mrs. Eddy, never before printed.

AMONG THE CHURCHES.

LAKEWOOD, OHIO.

Greater Cleveland is to have a new Christian Science church. A transfer has been recorded whereby First Church of Christ, Scientist, of Lakewood has purchased, at Virginia and Detroit avenues N. W., a site for the new church. The property is a vacant lot, one hundred and thirty feet front with a depth of one hundred and seventy-five feet. The purchase price was five thousand eight hundred dollars.

At present the Christian Scientists of Lakewood are holding services in the McCaskey Building, Belle and Detroit avenues N. W. The quarters are too small, so that another place of worship must be sought before the new edifice is constructed. The new church will cost about ten thousand dollars and will be modeled after First Church of Christ, Scientist, Cleveland. Building operations probably will be started within a year.

The Christian Science doctrine has spread rapidly in Lakewood in the last year and the present membership in the Lakewood church is several hundred. By the time the new church is completed it is expected that another hundred will have been added.—*Cleveland Plain Dealer.*

LOS ANGELES, CAL.

Three beautifully situated lots at the northeast corner of Alvarado terrace and Alvarado boulevard, midway between the Pico and Sixteenth street car lines, have been purchased by First Church of Christ, Scientist. The transaction involved a consideration of $20,000. The property, which has a frontage on Alvarado terrace of one hundred and eighty-six feet and on Alvarado boulevard of one hundred and sixty feet, will be used as the site of a handsome new church edifice, to be erected at an early date. The congregation has entirely outgrown its present quarters on Seventeenth street, between Georgia and Figueroa streets, where services are held in a small frame church.

Although no plans for the new church have as yet been definitely settled upon, the congregation is strongly considering the idea of duplicating the beautiful Christian Science church of Pasadena. If this is not done, it is declared that a structure of equal magnificence will be erected.

THE LECTURES.

ST. LOUIS, MO.

William D. McCrackan, M.A., lectured on Christian Science in First Church Jan. 9. He was introduced by John Randall Dunn, who said:—

A week ago, the world resounded with the glad cry, "Happy new year!" A beautiful wish this, and uttered by many sincere and loving lips; but has it, in its millions of repetitions, ever shown a suffering brother or sister how to have a happy new year?

Have you not longed many times to depart from this stereotyped greeting, and to say to those bowed with care or racked with pain, "I do not wish you a happy new year —I am going to tell you how to have one"? That is precisely what Christian Science is saying to every one of us. It indulges in no vain wishes for future bliss, but sets forth, lucidly and positively, rules which, if followed, make for a new year teeming with hope, joyous in strength, and blessed with a peace of mind that passes earthly understanding. We have with us tonight one whose happy mission it is to tell us more of this healing and saving truth.

Correspondence.

SHELLMAN, GA.

A lecture on Christian Science was delivered by Prof. Hermann S. Hering Feb. 6 in Shellman Auditorium. He was introduced by John H. Jones, who said:—

Perhaps there are those among the audience tonight who, like myself, are comparatively ignorant concerning Christian Science and its teachings, and they do well in being present for the purpose of learning about so great a cause. We all know of the late Mrs. Eddy, who will long be remembered and most profoundly respected for having undertaken and accomplished a work which is positively astounding in its enormity. We are acquainted with others whose exemplary lives and great success in their chosen religious work could hardly be classed among the commonplace events of the day, and so we have come here craving knowledge concerning Christian Science.—*Correspondence.*

STOCKTON, CAL.

A lecture on Christian Science, on the evening of Feb. 9, attracted the largest audience that has assembled to hear a like discourse. The main auditorium of the Yosemite Theater was filled, and many persons were in the upper circles. The lecturer, Clarence C. Eaton of Tacoma, Wash., was introduced by the Hon. John A. Plummer, one of the judges of the superior court, who said:—

I am glad to welcome you here this evening—glad to welcome you as an additional evidence that all over this fair country of ours, from Maine to California, from the lakes to the gulf, there is an awakening and an upward movement. Mankind is asking for something better than has heretofore been usual. He wants relief from the countless perplexing problems which he somehow feels ought not to confront him, and he wants that relief right here and now—not tomorrow, not at some remote or distant date, but now. He is asking for something that will still the waves of fear and anxiety, just as the voice of authority spoke "Peace, be still," to the troubled waters of Galilee.

To this end we find a constantly increasing number studying causes rather than effects, dealing with thoughts and not merely with things. The motive back of the action is being analyzed. Is the motive right? Does it harmonize with the Principle of truth? Are we impelled by love or hate? Again, how to live just for today; how to burn all those sorry bridges before we come to them; how to find the right status of man, and his consequent freedom from the pain and penalties of envy, jealousy, and hate. These are the lessons for this age, and some of the questions for which thousands are seeking and finding answers. We have learned that health and happiness, peace and prosperity, are resultants of thought, and we want wisdom to meet the obstacles encountered day by day. We are now asking, Where and what is life, and what it means applied to the affairs of men. Where is the answer?

The discovery of the right way was made only a few short years ago, and already the good results are world-wide. That we may learn more of the right way of thinking and living, that we may have a little clearer vision of the long-concealed mysteries of life and what man is, the local Christian Scientists have invited the lecturer to come to Stockton to talk to us on the subject of Christian Science —not that he will be able to tell us all there is of Christian Science, but simply to talk to us on that subject.

Correspondence.

LOS ANGELES, CAL.

Under the auspices of First Church of Christ, Scientist, of Los Angeles, Francis J. Fluno, M.D., of Oakland, Cal., delivered a lecture on the subject of "Christian Science, and Christian Scientists" in Simpson Auditorium, Sunday afternoon, Jan. 15, to an audience of nineteen hundred people. In introducing the lecturer, the president of the local church, F. C. Ensign, said:—

It is now a little more than twenty years since my attention was first called to Christian Science. At that time my wife was a confirmed invalid, not being able to walk up a flight of stairs or to perform her household duties. A surgical operation was performed, but it left her in worse condition than before. Knowing this, a friend who had been benefited by Christian Science treatment, called at our home in San Jose, stating that a class in Christian Science was being organized, and requested her to join the class. This she decided to do, after we had talked the matter over and concluded that it could do her no harm if it did not do her any good. It was noticeable, soon after the beginning of the two-weeks course, that she was improving, and she informed me one evening, after taking half of the lessons, that she should notify her maid that she would not need her after her month was up. I tried to argue her out of this, thinking that it might be in the nature of a religious excitement, which would leave her in worse condition than before, after it had passed by; but she had found the "pearl of great price," the truth which sets men free. I wish to say that the teacher did not know of her physical condition when she entered the class. The result was that she came out of that class perfectly well and has remained so ever since.

It had been previously announced that the lecture would be repeated on the following Monday evening, and half an hour before the time for the lecture to begin every available seat had been taken. The audience was then informed that the building was full and many persons outside were waiting, whereupon those who had heard the lecture the day previous vacated their seats, which were immediately reoccupied; but several hundred were still unable to gain admission. On this occasion E. E. Sutherland introduced the lecturer, saying in part,—

There is not a person in this vast assembly, and I might say in all the world, who would not, if possessed of the wisdom, the power, the intelligence, give health and peace and happiness eternally to every man, woman, and child under the sun. The love that warms your breast will outlive all the fear, hate, malice, and envy of the world. Two thousand years ago a man wrote a letter to some friends in which he made this far-seeing statement: "Love never faileth: but whether there be prophecies, they shall fail; whether there be tongues, they shall cease; whether there

Digitized by Google

le knowledge, it shall vanish away." Since the apostle Paul wrote those words, languages have died, prophecies based on false logic have failed to come true, knowledge established on the shifting sands of material premises has changed, rechanged, and then vanished away. But to "love" these centuries have given a deeper meaning in the human mind and a firmer grasp on the human conscience; until Love, the ever present, has come to be recognized more and more as a power, a vital power, in all the affairs of men. Christ Jesus said, "A new commandment I give unto you, That ye love one another." Christian Science has come to teach you and to teach me how to obey this commandment in a better way than we have ever known before. It is the truth which is to free mankind from the bondage of sin, disease, and death.—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Belleville, Ill.—Willis F. Gross, Liederkranz Hall, March 30.
Brandon, Man.—William D. McCrackan, M.A., Opera Hall, 8:30 p.m., March 27.
Canton, Ohio (First Church).—Francis J. Fluno, M.D., Grand Opera House, 3 p.m., March 26.
Carthage, Mo.—Frank H. Leonard, High School Auditorium, 7:30 p.m., March 27.
Chicago, Ill. (First Church).—William R. Rathvon, Church Edifice, 4017 Drexel Boulevard, March 27 and 28.
Cleveland, Ohio. (Auspices First, Second, and Third Churches and First Church, Lakewood).—Clarence C. Eaton, Hippodrome, 3 p.m., March 26.
Dallas, Tex.—Willis F. Gross, Dallas Opera House, March 26.
Fort Worth, Tex.—Willis F. Gross, Byers Opera House, 3 p.m., March 26.
Grand Forks, No. Dak.—William D. McCrackan, M.A., Metropolitan Opera House, March 24.
Hoopeston, Ill.—Bliss Knapp, Church Edifice, March 27.
Independence, Kan.—Clarence C. Eaton, Beldorf Theater, March 21.
Lansing, Mich.—Bliss Knapp, Church Edifice, Allegan and Walnut streets, March 30.
Lewiston, Idaho.—William D. McCrackan, M.A., Church Edifice, Seventh avenue and Ninth street, March 31.
Marshalltown, Iowa.—Bliss Knapp, Odeon Theater, March 31.
Muskogee, Okla.—Willis F. Gross, Hinton Theater, March 28.
Paris, France.—Bicknell Young, Washington Palace, 14 rue Magellan, 9 p.m., April 13.
St. Joseph, Mo. (First Church).—Frank H. Leonard, Tootle Theater, 3 p.m., March 26.
The Hague, Holland.—Bicknell Young, Diligentia Zaal, April 11.
Trenton, N. J.—Frank H. Leonard, Taylor Opera House, 3:30 p.m., April 2.
Walla Walla, Wash.—William D. McCrackan, M.A., Keylor Grand Opera House, 3 p.m., April 2.
Winnipeg, Man.—William D. McCrackan, M.A., Orpheum Theater, 7:30 p.m., March 26.
Woburn, Mass.—Rev. William P. McKenzie, Lyceum Hall, 3 p.m., March 26.

A NEW PHOTOGRAVURE.

A new photogravure reproduction of The Mother Church edifices and the Publishing House, with the new parkway in the foreground, has just been made, and is now on sale. The size of the new picture, nine by fourteen inches inside of mat, which is about half that of the larger one, specially adapts it to framing for the home. Price, single copy $1.00, six copies $5.00, twelve copies $9.50.

TESTIMONIES OF HEALING.

In August, 1907, I first tried Christian Science for physical healing. My condition at that time was very critical, as I was suffering with a serious lung trouble and was daily using four different medicines for it besides external applications. I was troubled with rheumatism, for which I had taken a great deal of medicine and had been operated on several times without relief, the doctors telling me that it was of a chronic nature, but not necessarily fatal. I had also suffered from a bowel disorder for over three years. In addition to these physical ills, I was a heavy smoker and had a very bad temper.

The one who brought to me that which I now prize more than anything else was a Jew. I had mentioned to him that I was forced to leave the cottage I was then occupying, to live in the country, for the sake of my health, and he told me that God was no more in the country than in town, and that in God was our health and strength. How those words have clung to me from that time, and how true they have proved! I cannot express my gratitude for them. He then told me, to my surprise, that he knew a little body of Christian people in Cape Town who could heal all kinds of disease, and explained to me as well as he could what Christian Science Mind-healing is. He also told me some of the wonderful things that had been done by it and the great help his own son had received in a very short time; so I decided to see if it could do anything for me.

I have not used any medicine since that date. My recovery from the sciatica, bowel trouble, and tobacco habit was very rapid, for within a month they all left me, and up to the present time have not returned. With regard to the tobacco habit, it did not even require a resolution to make me give it up, for the desire left me one morning while I was at work, and when I went home at lunch-time I threw all my pipes and tobacco in the fire and have had no desire for them since. The lung trouble has left me and I am daily gaining in health, strength, and weight.

Christian Science has been an ever-present help to me and to my wife and family; not only in the overcoming of physical ailments, but in our daily life. It has overcome my bad temper and the awful sense of fear which I had, and has given me the Bible as my only guide to Life. Christianity has become sweet and lovely to me through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I used to think that God had seen fit to afflict me, but I have learned that God is Love and that He does not afflict. I only regret that I ever charged Him with my suffering. I can truthfully say that I was born again when Christian Science came to me in August, 1907, through an understanding of the truth, and I thank God for our dear Leader, through whose teachings I received all these blessings. I also thank God for blessing her with the courage to give to the world this truth and guidance in working for our salvation.

FRANK SMEDLEY, Cape Town, South Africa.

When I first heard about Christian Science I was told that it claimed to heal organic heart trouble, even when the patient was hundreds of miles away. In my so-called wisdom I ridiculed the statement, and devoted my time for the next four years to acquiring a medical education. From 1886 to 1901 I practised homeopathy in Chicago. At first I was an ardent enthusiast in the profession; but in later years I heard of many people being restored to health without the use of drugs, and while outwardly I scoffed at these statements, inwardly I declared I could not honestly blame any one for accepting this healing. I also began to have less faith and interest in medicine and to have an increased desire for a knowledge of the Bible. Gradually the medical literature became less attractive, but my Scrip-

Digitized by Google

tural study brought me no special comfort; instead there was physical weakness, with great mental depression, which only those who have experienced it can understand. I turned to the only God I knew of, but He apparently did not hear me.

In the spring of 1901 I stored my goods and left the city to stop with a friend who thought I needed a change of scene, and the second Sunday I with my friend attended a Christian Science service. As I entered the little hall, with less than a dozen people in it, I felt something come over me like life, hope,—the atmosphere seemed so calm and restful. I had never seen the text-book, Science and Health, and I did not know what the service would be, but I resolved to be on my guard and not let anything I heard cause me to be disloyal to my lifelong orthodox religion. I listened closely, and when I heard the Lord's Prayer with its spiritual interpretation it seemed as if heaven were revealed, so different was it from my old material sense of the prayer. The entire service was the sword of truth to me, and at its close I was ready to make a full surrender of my former prejudice and educated beliefs. From that day I forgot all about nervous exhaustion, so eager was I to read and find out something about Christian Science. I seemed to have entered upon a new life, but it was not an easy thing to do. I greatly desired to grasp this new revelation quickly, and I gave to it six months in which I did little else than study Science and Health. At times it seemed as if the old educated beliefs were so strongly implanted they must triumph, but the memory of the terrible mental unrest I had suffered drove me onward.

In the fall I went back to Chicago, and found that the warehouse in which my goods had been stored had burned down, and my earthly possessions consisted of one trunk, my Christian Science literature and a Bible. At first it seemed as if I had sustained a great loss from the fire, but later I was so grateful that I was spared from even looking upon that which would only bring mental pictures of scenes that I wanted to forget. Infinite Love was at that time and has been ever since my source of supply. At times I have asked myself why I did not in 1882 take the right path when the two were placed before me. The answer has been that I needed all I received in order to bring me out of Egypt into the land of promise.

I have spoken little about physical healing, as it seemed so small compared to the spiritual uplift and release from old educated beliefs,—theories which did not bring any relief from the mental depression. I have had perfect health and strength since the time I accepted the truth offered in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. The reading of this book really did unlock the Bible, and I found instead of historical accounts of ancient times and people, spiritual truths which were living realities for our use today, the same Christ-power which healed every kind of human trouble and discordant condition two thousand years ago. The "still small voice" of Truth is speaking now to each one who is willing to bear this message to suffering humanity.

I am most grateful that infinite Love brought me to see the true way of life as found in the teachings of Christian Science, and I wish to say with deep humility that the one whom God appointed to bring to humanity this healing truth has my sincerest gratitude and affection. Her wisdom, reflected in everything that pertains to the purity of our literature, is a constant source of encouragement to me, that by my faithfulness to her teachings and obedience to the by-laws of the Church Manual I can prove my loyalty to Truth and to our Leader.—SARA E. BACON, Elgin, Ill.

Words fail me when I attempt to express what Christian Science has done in our home. I will, however, try to tell some of the blessings which it has brought to us. About two years ago my little son had severe eye trouble and felt very sick. We tried many things to relieve him, but nothing seemed to be of any help; so at last we decided to try Christian Science. We sent for a practitioner, who gave him two treatments, and on the third day the child was perfectly well and has never been troubled with his eyes since.

Some time ago I scalded my hand very badly, but I realized the truth as soon as possible, and when I sat down to breakfast there was no sign of a burn left, or even any redness. For these and many other healings I am most grateful, and hope this may be of some benefit to others.

MRS. F. S. AYLESWORTH, Appleton, Wis.

I first heard of Christian Science through some *Sentinels* sent to me from England by my mother while I was on military service with Compton's Horse, during the late Boer war. I was impressed with the truths contained in these, and passed them on to my comrades, who I am pleased to say also appreciated them. About four years after peace had been proclaimed, I was stationed up country, and received a further batch of *Sentinels* from my mother, and these appealed to me so much that I resolved to forward them to some intimate friends in Johannesburg. On my return to that city, I found that they were already stanch students of Christian Science. When the beautiful teachings of Christian Science were explained to me by those dear friends who were more advanced than myself, I felt sure that the truth of being was to be found in Mrs. Eddy's logical interpretations of the Scriptures, and that I had found the spiritual "meat" which scholastic theology knows not of; but it remained for me further to learn and demonstrate the truth of Christ Jesus' saying, "The hour cometh, and now is, when the true worshipers shall worship the Father in spirit and in truth." Through an earnest study of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I have become possessed with a great desire to help others who have not yet heard of the great good that has been done in the world by the truths contained in this book, and have had the inestimable satisfaction of helping them to overcome many forms of disease. I was also healed in a few minutes of a fever contracted in Sumatra many years ago, and which in the old thought I had regarded as chronic. It also enabled me to overcome pain instantaneously, besides helping me financially.

I will relate a case of a serious accident that occurred some months ago while I was out walking. I was some fifteen miles away from civilization, on the borders of Swaziland and Barberton, when I stepped into the jaws of a powerful tiger trap, concealed from view. It closed with a snap and held me with a viselike grip, but I succeeded after a time in releasing my foot. In so doing, however, I got both my hands caught. The sharp teeth of the trap penetrated the fingers, causing intense agony, the blood also flowing freely the while. I called for help, but there was no one within hearing, although there was a native village about half a mile away. In my extremity I began to realize the presence of divine Mind, that "God is our refuge and strength, a very present help in trouble;" then the pain ceased at once. The thought then came to me to jump on the springs of the trap, which I did, and to my intense joy the jaws opened for a moment and I got my hands free! I had been fully twenty minutes in this dreadful predicament. My fingers had become discolored and were lacerated and sore, but by using the little understanding that I had gained through the study of Christian Science, the blood ceased to flow and the wounds were scarcely visible and had become almost healed within an hour. Feeling none the worse for this experience, I finished my long walk, and that same evening was able to do some writing. Next morning I did my usual office work.

For these manifestations of divine Love, and for all the good that has come into my life, I give thanks to God, and am most grateful for Christian Science.

EDWARD J. MULLINS, Johannesburg, Transvaal, South Africa.

I wish to express my gratitude for what Christian Science has done for me, spiritually and physically. It is more than three years since I became acquainted with a lady who kindly talked and read to me of Christian Science, which I had never understood in its true meaning, and I became very much interested. I gave up medical treatment, purchased a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and with the help of my new friend I commenced to improve.

I learned to hunger and thirst for Truth, for a perusal of the contents of that divinely inspired book which seems like a mine of wealth to me, and many are the blessings which divine Love has bestowed upon me. My health had failed; I suffered from rheumatism, and a difficulty pronounced by our family physician an abnormal growth. He said he could not do anything more for me until this growth was removed by a surgical operation. I had also bowel and spinal affections, and severe headache for days in succession. All these ills have disappeared, and I praise God continually.

MRS. ALMIRA E. GRAY, Montpelier, Vt.

[Translated from the German.]

It is two years since I came to Christian Science through a dear friend. I applied for treatment in Dresden, and I cannot describe the sense of well-being which I experienced after the first treatment from the kind practitioner. After a short time I was freed of a disease of years' standing, although previously I had given up all hope of getting better. One trouble after another soon vanished, and I now feel indescribably happy. I have not only improved physically, but mentally as well. My mother has also been healed of a severe case of gall-stones, thanks to Christian Science. Having lost my dear father shortly before, there seemed to be sufficient cause for me to be troubled about my mother's mental state. This trouble, however, was also overcome with God's help, and now she is in as excellent health as formerly, and a diligent, happy adherent of Christian Science. I thank God from the depths of my heart, and also our beloved Leader, Mrs. Eddy. The *Herold*, too, has become a dear friend, and is a great source of help to me.—FRAU MARIE SPERLICH, Zittau, i. S., Germany.

I have been benefited in many ways by Christian Science, and I feel that I should like to add my testimony to the long list of those who have been healed through the understanding of the truth as revealed to this age in "Science and Health with Key to the Scriptures" by Mrs. Eddy. From childhood, up to the time I heard of this truth, I suffered with catarrhal trouble, my head, throat, and stomach being badly affected. The suffering from the stomach was almost constant and very severe. I took cold easily, and my hearing was affected until it was almost impossible for me to hear an ordinary conversation. I consulted with the best eye and ear specialist at Ann Arbor, Mich., also a noted specialist for these troubles at Detroit, Mich., but they gave me practically no encouragement in regard to my hearing. The Detroit physician told me that in his opinion I would grow worse gradually and in time might lose my hearing entirely, and this seemed to be the case until Christian Science came to my relief.

I began the study of Christian Science in this condition, and through reading and studying faithfully the text-book I have been entirely healed of the stomach trouble, and the other catarrhal troubles have also disappeared. My hearing has so improved that at the present time I scarcely ever think of it. While *materia medica* claimed that I would gradually grow worse, the truth in Christian Science has made void that claim and I am constantly improving. I have almost no trouble now in understanding conversation and I also experience no difficulty in talking over the telephone. I am a teacher in the public schools here, and have no trouble in understanding my pupils in the class-room. Besides the physical healing, I have every other reason to be very thankful for the wonderful truths taught in Christian Science. What greater blessing could come to us than to learn that God is good, and that good is the only power. That all sickness and disease are being healed, and that sin is being destroyed in human consciousness through the understanding and application of the truth as taught in Christian Science, is daily being proved by the ever-increasing numbers who are seeking and finding the only real remedy for all these ills.

ISABEL CHALMERS, Grand Rapids, Mich.

Some six years ago I had occasion to test the efficacy of Christian Science Mind-healing in a case of eruption. My mother had been subject to frequent and alarming attacks of this disease for many years, so that there was the material belief of heredity to be overcome in my case. The appearance on my head and face was so distressing that I kept my room for a couple of days, but at the end of a week I was completely healed and have never experienced any return of the trouble. I have witnessed in my own family the healing of disease of the lungs in an advanced stage, a severe case of blood-poisoning, and acute lung trouble, as well as many minor ailments.

My gratitude to God for the priceless revelation of Truth to this age, and to Mrs. Eddy, through whose consecration and fidelity to Truth this light has been revealed to me and mine, is unbounded.

MRS. JOSEPHINE CUSHMAN, Detroit, Mich.

[Translated from the German.]

When I heard of Christian Science I was in hard bondage to error, but through the faithful help of a Christian Science practitioner, and the study of the text-book, evil gradually lost its seeming power, and I now see the way in which I have to walk in order to turn away from the unreal. I know that I would never have gained the sense of freedom which I now enjoy had my belief in the reality of evil not been destroyed. The putting off of the old man did not take place all at once, but gradually. After serious struggles I saw that God rewards us for all honest striving after truth, and that temptation becomes nothingness before God's omnipresence.

Formerly I thought I was living without any aim or purpose, but today I know that, no matter what our profession or work may be, we have to attend to it for the glory of God. My heart is full of deepest gratitude to God, through whose grace I have been shown the right way and enabled to accept the truth which maketh free. The following words of Paul have often comforted me in dark hours: "This one thing I do, forgetting those things which are behind, and reaching forth unto those things which are before, I press toward the mark for the prize of the high calling of God in Christ Jesus." Although I know that there is much in me that needs to be overcome, yet I rejoice beyond words in the thought that I need no more be afraid of error, as I know the unfailing source of help for every trouble.

GERTRUD SCHLIEPHACKE, Hannover, Germany.

I feel it a duty to express my gratitude for what Christian Science has done and is doing daily for me and my family. Through Christian Science my husband was healed over ten years ago of severe lung trouble, and he has been well of that dread disease, and working hard, ever since.

Digitized by Google

Our two sons, now young men, look to Christian Science for their health. They were healed of measles when children, through Christian Science treatment. I was for years a slave to medicine, and practically an invalid with numerous diseases; but now, after five years' study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and treatment at times from a practitioner, I enjoy better health and more freedom than for many years. I now know that evil or error is not power, and with my slight understanding of this most beautiful truth I can help myself in a very short time. Lately, I burned my hand severely, but I declared at once the truth, and shortly all the burning sensation had gone and the hand was not even red.

Besides the physical healing, I have found Christian Science applicable to financial affairs, and in some dark hours of seeming lack, by earnest study of the Bible and our text-book, the need has often been met in a way unlooked for by myself and husband. Daily I receive some inspiration that strengthens me to press on in this understanding of Truth. I can only thank God continually for sending to humanity our beloved Leader, Mrs. Eddy, to guide us into this healing truth. Words can never express my gratitude for the spiritual blessings received, and my effort shall be to gain more of meekness and love, to be obedient to God and faithful to Christian Science.

MRS. MARIE WILLIAMS, Lake Charles, La.

It is with pleasure that I testify to the wonderful power of Christian Science. I was suffering intensely with a severe throat trouble, being unable to swallow or to lie down, but I was healed in two treatments. I am studying Science and Health, and am happier than I have ever been before. Truth is showing me how to forsake sin, and I am overcoming evil with good. I also know of many other cases of healing through the power of divine Truth as revealed in Christian Science.

MRS. ADDIE B. CURTIS, Berlin, N. H.

I feel it a pleasure as well as a duty to testify to the wonderful power of Christian Science. Several years ago I had treatment to overcome my fear of thunder-storms. Up to the time I received this treatment I was terrified beyond measure during a storm, but after receiving one treatment the fear left me and I am thankful to say that it has never returned. I am at present a very interested reader of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and words are inadequate to express my gratitude to her for giving this truth to the world.

MISS MAYSEL E. CURTIS, Berlin, N. H.

I have long felt a desire to express my gratitude for Christian Science. It has helped me in respect to health, business, and in many other ways, but for one thing I am especially grateful. Before I came to understand Christian Science, my wife and myself were not of the same faith, and we held different opinions about God; we also used different Bibles, and at times went to separate churches. It is different now, for through the spiritual understanding gained in Christian Science we believe in one God; we read one Bible and attend the same church. We have been in Science only a short time, but attend Second Church here and are thankful for having had our eyes opened to this great truth.—ANTON KLEIN, San Francisco, Cal.

It is with deep gratitude that I testify to the blessings which I have received through Christian Science. For fifteen years I had a very serious affection of the nose and throat, which also affected my head and made me feel very sick and disagreeable. I had several operations, in Germany and Norway, and the last time, two and a half years ago, by a very clever specialist of New York city. The treatment was very severe, but I submitted to it in the hope that it might cure me; but nothing even helped, and in the end they always said that I would have to use medicine all my life and two or three times daily.

But what no doctor could do, God has done! Before I left Madison, N. J., I started to take treatment in Christian Science for this affliction. I knew that I could be healed by the truth. I felt better a couple of days afterward, and now I am perfectly healed. My nose and throat are in the best of condition. I can breathe and talk without feeling any pain, and I can eat anything without any trouble from my throat.

I have never felt so healthy and happy as I have done since I started in with Christian Science. The spiritual uplifting one gets through Christian Science is wonderful. It is everything to me now, and I am deeply grateful to God, who has led me toward this understanding of Truth and Love. I am also thankful to Mrs. Eddy, who through her book Science and Health has made it possible for human beings to live aright.

BORGHILD ERICHSEN, Christiania, Norway.

Some of our critics say that only ills which are purely imaginary can be healed by Christian Science methods. It is gratifying to know that this is not true. In my own case the services of a surgeon would have been required, had I not known of Christian Science, and I am sure that I escaped a term at the hospital. Eight years ago I was lame, owing to an accident which had twisted the lower part of my leg completely around. A large, hard lump appeared on the knee, but this disappeared in the healing process. While having treatment in Christian Science I walked with great difficulty, but a faithful practitioner worked for me and in six weeks I experienced complete healing. My joy was unbounded when again I was able to walk, skate, and dance as I had done before the accident.

Now, however, all material pleasures pale before the blessed privilege of learning to know God aright. There are no words in which to express my thankfulness to God for giving us this healing truth. As to Mrs. Eddy, who has labored so unselfishly in our behalf, I can only give thanks for Science and Health by striving to live a nobler, better life, knowing that God will bless the effort.

EMMA G. PERSON, Buffalo, N. Y.

I first heard of Christian Science in 1890. We had moved West, hoping a change of climate would improve my husband's health; but it was only a temporary relief, and friends suggested a trial of Christian Science. He was healed in what some would call a miraculous manner, for with the third day's treatment he said he felt like a new man; that the experience of health and strength was like light coming into a dark room. "Very well," I said, "if this is what Christian Science does, we will have no more medicine;" and neither of us has taken any since. The healing was from a severe form of rheumatism, kidney trouble, and a tobacco habit of forty-five years' standing. We began to read "Science and Health with Key to the Scriptures" by Mrs. Eddy, and to attend the Science services. About three weeks later I asked for treatment and was brought through a severe attack of fever. Since then I have been healed of other ailments, supposed to be hereditary. I am rapidly learning that when hatred, and a sense that I had been wronged, and many other mortal errors are eradicated from consciousness, I shall be free from all physical ills. I am trying more and more to see error as impersonal and no part of God's creation. I have a great sense of gratitude to the Giver of all good for revealing to us, through the Discoverer and Founder of Christian Science, this great truth.

MRS. ISABELLA B. KEYES, Washington, D. C.

Digitized by Google

On the first day of April, 1908, while residing at Waukesha, Wis., our little daughter, then four years old, was bitten by a dog, a beautiful St. Bernard, the child's almost constant companion, which seemed to love her dearly up to the time of the attack. After dinner on the date mentioned, the little one ran to play with the dog, as was her custom, and was standing in front of him when he suddenly snapped at her face, lacerating it dreadfully.

Her father picked her up and gave her to me, while an older daughter wrung a cloth out of water and laid it over her face. I held her in my arms, and though very much frightened, tried to comfort her as best I could by telling her that God, divine Love, was with us and would take care of us. My husband telephoned immediately to a Christian Science practitioner who lived twenty miles distant, and she at once took up treatment. In less than half an hour the little one was quiet and at play. She slept soundly and quietly all night. The next morning the little face was quite badly swollen and discolored, the left eye being entirely closed, but in ten days all traces of the accident had almost completely disappeared. This was to me a most wonderful manifestation of God's all-power. The treatments were all given absently, thus proving that God is ever with us, and that time and space are no barriers to the action of divine Mind.

The little one never seemed to realize that she was hurt after the first half hour. She slept, ate, and played as though she were, as indeed in Truth she was, every whit whole. Each morning, and as often as it seemed necessary, I gave her a cloth wrung from clear water, and she would wash her face, often asking why. There was no discharge nor any of the usual manifestations present during the healing process of such wounds, but simply a fading away and melting into its native nothingness of error. We have our little one with us, without a scratch or scar, as a positive proof of the power of Truth to heal, but in the evening of the same day on which the child was bitten, the dog bit a calf, and in ten days it died with rabies. Three days afterward we were obliged to have the dog killed.

For the healing of our child and other wonderful demonstrations of the efficacy of Christian Science, our hearts overflow with gratitude to Mrs. Eddy for giving us and the world Christian Science.

MR. and MRS. CHAS. C. PROVONCHE, Little Rock, Ark.

With a heart full of gratitude I give this testimony to the great benefits we have received in Christian Science. A few years ago one of my sisters was paralyzed in her face, her mouth being drawn so that she could not drink anything without spilling more than half of it. Many people said she would never be cured, but she was soon healed through Christian Science. About a year ago, she had a sudden attack of illness, but we telephoned to a practitioner, and she was healed instantly. For this healing and other great blessings we have received, we are truly thankful to God, and to our faithful Leader, Mrs. Eddy.

ANNIE WILLS, Chicago, Ill.

Through the study of Christian Science I have found such peace and harmony that I wish to write a few words that may help some one else. My first experience in the healing was the overcoming of homesickness. It was proven to me that "in him [God] we live, and move, and have our being," and that our real home is in God. This was in 1898. Since that time I have trusted in no other power but God, and He has never failed to help and comfort me in every time of need. There can be no richer blessing than to know God as Love, and I know and prove daily that the reflection of divine Love is a benefit to all mankind. I realize that the best expression of love and gratitude is to live the truth, and follow the teachings of our Leader, Mrs. Eddy.—MRS. M. E. ALBIN, Springfield, Ohio.

FROM OUR EXCHANGES.

[*Christian Work and Evangelist.*]

We need a new order of the saints in this twentieth century. We need a group in every church which will think Christ, speak Christ, act Christ only, in whose heart there are no lusts of the world whatever, who care nothing for that half of life which is equal in most Christians' hearts to the Christ life, but who with singleness of purpose devote themselves to the service of Jesus Christ alone. We are not ascetics, and are not pleading for any new monastic order; yet we are persuaded that the only way which Christianity can recover its commanding influence on men's lives is by groups of young men in the various churches pledging themselves to live again in the world the sacrificial life, the life which, to use an apostolic word, has for its motto "Jesus only." We wish that such bands of young men could be formed in our churches,—of young men who would agree to rid their hearts of the present paradox of Christianity, the double life of the world and Christ, the paradox which clings to pagan practices and Christian virtues equally; and who would vow to have nothing more to do with luxury, inordinate pleasure, self-gratification, worldly ambition, militarism in any form, temporizing politics or questionable business ethics, but would commit themselves, under the conditions of the twentieth century, as St. Francis did in the twelfth century, to the purpose of being again what Jesus was and doing what he did, and living by his word and teaching, following him, and him only, leaving all to love mankind with him. Should there be such a group in every church, of not more than five who renounce the lust of the world and dedicate themselves to know the Master of life only, a general revival of real religion would burst into flames that would kindle all the land.

[*Watchman.*]

There is a certain value in orderliness, and stress is laid upon it in all organized religious life, but the divine emphasis is primarily upon personal preparedness to receive heavenly grace. God's grace is as free and abundant as the atmosphere, and any human being can receive of the fulness of Christ anywhere and through any one. The grace of the gospel is not confined to any specific channel or rites or hands or places. It flows immediately from Christ himself to any soul that desires and seeks it of him. Those who claim the monopoly of the grace of God on the score of their so-called succession must be perplexed to see the vast grace that is bestowed freely and abundantly upon all those who love our Lord Jesus Christ, and must wonder how it escaped from their control. But this grace is the gift of Christ himself, who is not regulated or controlled by self-made monopolizers; and it goes out into all the world, like a stream that overflows all channels, breaks past all petty barriers, and is given to all who desire its fulness. Every man who receives or desires more of the spirit and power of Christ must, like Elisha, show that he has the faith, the patience, the prayer, and the fitness to receive the gift, and to cherish it as a precious divine possession.

[Rev. Oscar B. Hawes in *Christian Register.*]

The source of peace and rest is still open to the human soul; but it is found not in a being which demands surrender, but in a spirit that asks fulfilment; not in a reality that is merely an outward support, but one that is an inward and impelling power. The glory of this being is not only that of an ideal beauty and strength, but also that of eternal achievement and creation. In the world of the spirit, one enters into a realm not of spent deeds, but of doing. There is the rest of harmony with the eternal truth and beauty and the infinite satisfaction of a great purpose. In the midst of the turbulent events of our day, many a human soul is discovering that in a great purpose, in a great love and hope.

Digitized by Google

can be found the peace "that passeth all understanding." In the midst of all trial and trouble the soul can return unto its rest. But, as it seeks the eternal and universal, it finds self-fulfilment before it. There is no escape from responsibility. There is always the task of putting one's thought in harmony with the truth, making conscience express the moral law, and every hope and inspiration lead toward an ideal good that is for all mankind.

[*Christian Register.*]

In all branches of the Christian church today there are many who, whether they know it or not, have come to agreement in regard to the essential principles of Christianity. They believe in the fatherhood of God, the brotherhood of man, the certainties of the eternal life, the absolute authority of righteousness and love, and the mutual responsibility of all men for the welfare of the human race The time will come when, with one accord, all good men will seek for the agreements which should bind the scattered members of the church together and make more of them than they do of the disagreements which now separate them. We agree in our religion, while we differ in our theology. We sing the same hymns, but cannot recite the same creeds. Some day we shall know that the hymn-writers and poets are the truest theologians.

[Harold Begbie in *Christian World.*]

Break through an ignorant man's antipathy to churches, get behind a man-of-the-world's amused indifference to religion, press to the center of a philosopher's reasoned objection against Christianity, and you will find, if your searching is acute and your analysis without prejudice, that the antagonism in each case has one and the same origin And if you frequent the society of theologians you will as truly find, whether they admit it, whether they even recognize it themselves, that all their differences and disputations, all the difficulties they encounter in presenting Christianity before the world as a universal and persuasive truth, have their spring from the same identical cause. The fundamental question for mankind is the definition of sin.

[*Universalist Leader.*]

There are not very many real troubles for any of us, when we adjust our proportions fairly. We are very apt to laugh at the little troubles of the child who is all broken up with his disappointment, but our very real trouble is not more real to us than his little trouble is to him. From the height of our superior wisdom we look upon the whole situation which tries the child, and we can see that it will all be over in a few minutes, that it is nothing but an April shower. And on a different plane, and looked at from a different height, our own trouble is no more real; it will all be over in a few years, and the "few years" are no more to us than the few minutes are to the little child.

[*Zion's Herald.*]

The poverty and the weakness of life are due in a large measure to the fact that we do not give ourselves enough room in which to live. We cramp our activities within the narrow range of petty ideals and confine our interests to a barren province of selfish endeavor. What we need to do is to release life into the ampler reaches of wider sympathy and profounder love.

[*Outlook.*]

How shall the minister promote spirituality in the church? First, develop it in himself; then in the elect few who share his desire for it; then trust that it will communicate itself to others. Let your light shine, says Jesus. He does not say, Flash it. Have it; let it shine; and others will be attracted and inspired by the radiance.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel.*

ATTENTION IS CALLED to the new volume, "Poems by Mary Baker Eddy," now on sale. Specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

Attention is called to the following reprints printed in Swedish: "Hvad Ar Bön?" "Lagens Välde," "Det Ondas Natur," "Helvete och Himmel," "Människans Gemenskap Med Gud," "Verklighet," "Det Ar En Ström," "Förklaring Af Kristligt Helande," "Den Yppersta Egenskapen I Christian Science," "Underverken," "Det Ondas Ofvervinnande," "Var Väktare," "Riklig Tillgang," "Kristendom Och Vetenskap." Ten copies to one address, prepaid, 10 cents; one hundred copies to one address, 75 cents; five hundred copies to one address, $3.00; one thousand copies to one address, $5.00.

NEW MUSIC.

Two of our Leader's poems, "Shepherd, show me how to go," and "Love," set to music by Frederic W. Root, are now on sale by the Society, and attention is called to the advertisement on the inside back cover page of this week's *Sentinel* for description and price.

NEW POST CARDS OF THE MOTHER CHURCH.

Post card photogravure, in sepia tint; an exact reproduction of the large photogravure of The Mother Church Buildings and Publishing House with parkway in foreground. Single copy, 5 cents; twenty-five copies, $1.15; one hundred copies, $4.25.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90; six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. XI indicates the year 1911 and XII, 1912. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

ITEMS OF INTEREST.

National.

The Boy Scout movement is emphasized as an aid to conservation by Gifford Pinchot, former chief forester, who says of it: "There are very many reasons why I believe in the Boy Scouts; one of the first of them is that I do not see how it is possible for any good scout to grow up without becoming a good forester. I predict that not long from now we shall find the largest increase in the profession of forestry from the men who have been trained as Boy Scouts."

A bill for land value taxation in municipalities upon a referendum vote, introduced in the lower House of the New Jersey Legislature, provides that in such municipality thereafter all personal property and all buildings or other improvements upon land shall not be taxed, but the entire amount of the taxes to be raised in said community, other than excise taxes, shall be levied upon land alone, according to its value.

A gift of three hundred thousand dollars from Mrs. Russell Sage to Cornell University is announced. The money is given for a new dormitory for one hundred and seventy-five women students whose rooms are now scattered about in private houses owing to the limited capacity of Sage College, the women's department of the university. The new dormitory will be known as Prudence Risley Hall, in memory of Russell Sage's mother.

The gross area of the one hundred and fifty-two national forests, including the two in Alaska and one in Porto Rico, on Jan. 30, was 191,250,038 acres. California leads the list with the greatest number of forests as well as the largest area, twenty-one, having a total area of 27,073,083 acres; Alaska takes second place with two forests amounting to 26,748,826 acres; Idaho has twenty forests with a total area of 19,890,329 acres.

Strict government regulation of all industrial combinations by means of laws which are not the result of "half baked reforms and are not conceived in the minds of demagogues playing to the clamor of ignorant agitators and a misled minority of the people," was urged by Theodore Roosevelt in an address before the Southern Commercial Congress at its recent session.

To avert an annual unnecessary expense of sixty thousand dollars for fees paid to notaries public for affidavits for expense account and other documents, the secretary of the treasury has asked Congress to authorize certain officials in all branches of the government service to administer oaths to government employees relative to all accounts in which the government is interested.

The contract for the New York city post office has been awarded on a bid of $2,515,267. There were lower offers, but the successful bidder guaranteed to deliver the building to the treasury department in twenty-three months. The building will be situated west of the new Pennsylvania railroad station.

The corporation tax provisions of the Payne-Aldrich tariff act have recently been sustained as constitutional by the supreme court of the United States in a unanimous decision. A source of income of approximately twenty-five million dollars annually is thereby assured to the government.

The average salary paid to its officials by the city of Chicago is $1,193 a year and ranges from a few at a dollar a day to the mayor's salary of eighteen thousand dollars a year. The total amount paid is $26,166,609, of which all but $9,319,200 goes to civil service employees.

It is announced that Charles J. Bonaparte, secretary of the navy, and attorney-general in the Roosevelt Administration, will enter daily journalism as contributing editor to the *Baltimore Daily Sun*. He is president of the National Municipal League.

The Congresssional Library at Washington contains a collection of eighty-thousand volumes written in the Russian language, the largest collection of Russian books in the world outside of the Imperial Library at St. Petersburg.

As a result of detailed field examination by geologists and engineers of the United States geological survey, 2,267,046 acres of public lands were classified or withdrawn during January.

Fully five thousand Americans have visited the Panama Canal during the present season.

International.

The international peace bureau at Berne, Switzerland, of which the United States is a member, sent a circular letter on the 8th to the foreign ministries of all the powers concerning the question of the limitation of armaments as proposed in the resolution adopted by the American Congress, and which authorized President Taft to appoint a commission to study the subject. The bureau calls the attention of the governments addressed to the text of this resolution and quotes President Taft as saying, in his message to Congress of Dec. 6, that he had delayed nominating the members of this commission because he was awaiting the expression of foreign governments as to their willingness to cooperate with the United States in the appointment of similar commissions. Earl Grey, in the English House of Commons, gave a ringing speech in favor of such an arbitration treaty with the United States. It has been heartily echoed by press and public and is calling forth favorable comment in other continental powers.

On Feb. 15, at The Hague, before a tribunal of which the Swiss minister at Paris is president, began the arbitration of the dispute between Russia and Turkey regarding the payment of pecuniary claims to Russian subjects by Turkey, arising out of the war of 1877-8. Turkey has already paid more than one million dollars of these claims, but has refused to pay interest on the capital of the indemnities, as asked by Russia. The present arbitration is of the question of interest, both governments having agreed to leave it to The Hague.

According to the *Norddeutsche Allgemeine Zeitung*, the declarations of Sir Edward Grey, speaking on Anglo-German relations in the House of Commons on the subject of armaments, correspond closely with the German view-point and open a prospect of the further development of the relations between Great Britain and Germany. The Social Democrats have given notice that they will introduce a resolution in the Reichstag calling on the government to begin negotiations for a "naval peace" with England.

The Chinese government declares its intention of agreeing to both points at issue with Russia and is now drafting a reply to the recently received ultimatum along this line. The foreign board states that it is prepared to accept the establishment of Russian consulates in the places specified by Russia, and also promises to take measures regarding Chinese monopolies in Mongolia, which will permit Russian subjects freedom in trade in Chinese goods as well as in the goods of other countries.

In accordance with a bill passed in the French Senate Feb. 10, central European, or Greenwich, time became the legal time of France at midnight, March 10, the difference between Paris and Greenwich time being nine minutes and twenty-one seconds. France is now within the same time section as England, Belgium, Holland, and Spain.

A motion in the French Chamber of Deputies that the government be urged to make an effort to have the limitation of armaments placed on the program of the third Hague conference, was carried by a vote of four hundred and forty-seven to fifty-six.

Thirty-six members of the dreaded Camorra of Italy have been indicted for taking lives and are now on trial at Viterbo, Italy. So great is the public fear of the Camorra that there was great difficulty in securing a jury.

The government of Panama has published a call for the construction and financing of the proposed railroad from the City of Panama to David. The railroad is likely to become a link in the Pan-American railway.

The Portuguese foreign office has been notified that the British government has decided to recognize the existing government "subject to the election and assemblage of Parliament in April."

Industrial and Commercial.

Plans which have been under way for the last four years for the building of a huge industrial center on the South Boston, Mass., waterfront, to be financed by foreign capital, have been made known in the formation of the American Building Trust. An area of a million and a third square feet of land will be converted into a colony of thirty factories and warehouses with underground freight tubes, new fireproofing arrangements, and the largest docks in the world, the entire cost being estimated at twenty million dollars.

Application will be made on April 3 to the Governor of Pennsylvania for charters for about sixty electric companies. This will be the first public move in the fulfilment of the great power scheme of the Lehigh Coal & Navigation Company, which aims to electrify eastern Pennsylvania, affecting a territory with a population of two million five hundred thousand people, including Philadelphia.

Higher wages were paid to American farm laborers during 1910 than at any time in the last forty-five years, according to statistics just made public by the department of agriculture. The average wage for the country was $27.50 per month during 1910, while twenty years ago they were only $18.33.

The annual report of the North German Lloyd Steamship Company for 1910 shows gross profits 38,150,600 marks ($9,537,650), as compared with the 32,899,000 marks for the previous year. A dividend of three per cent was declared for the year, against no dividend the previous year.

Dealers in food stuffs in Washington, D. C., have banded themselves together to bring about a reduction of ten to thirty per cent in the retail price of groceries. Fifty-two of them have just formed the League of Consumers' Friends.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

GOD'S PROMISES FULFILLED.

JUDGE SEPTIMUS J. HANNA.

THE last chapter of Deuteronomy and the first two chapters of Joshua narrate an incident of that memorable journey of the Israelites to the promised land which will prove helpful and instructive and well repay careful study on the part of Christian Scientists. Joshua, we read, was Moses' minister, and as such became in a large sense the executor of the great trust which God had placed in Moses' hands; that is, God commanded this minister to go ahead and carry on the work which Moses had begun and which he had well established so far as he had gone. Moses had gotten, not into the promised land, but within sight of it.

From Pisgah's height the Lord showed to Moses "all the land of Gilead, unto Dan. And all Naphtali, and the land of Ephraim, and Manasseh, and all the land of Judah unto the utmost sea, and the south, and the plain of the valley of Jericho, the city of palm-trees, unto Zoar,"—the land which the Lord had sworn unto Abraham, unto Isaac, and unto Jacob, should be given to their seed. To Moses it was said: "I have caused thee to see it with thine eyes, but thou shalt not go over thither." The fulness of time for this final demonstration or achievement had not yet come. The conditions were not ready. There must be yet greater work done. There must be a higher understanding of the divine law or the divine purpose.

To Joshua, then, and to those who would accept his ministry and follow him, there was made this great promise: "Every place that the sole of your foot shall tread upon, that I have given unto you, as I said unto Moses. From the wilderness and this Lebanon even unto the great river, the river Euphrates, all the land of the Hittites, and unto the great sea toward the going down of the sun, shall be your coast. There shall not any man be able to stand before thee all the days of thy life: as I was with Moses, so I will be with thee: I will not fail thee, nor forsake thee."

Here was a definite and unqualified promise to fulfil to the utmost all that had been spoken to Moses and to his predecessors. The land to be inhabited was broad and almost unlimited; the work to be accomplished was unbounded. Then follows the loving admonition: "Be strong and of a good courage: for unto this people shalt thou divide for an inheritance the land, which I sware unto their fathers to give them." Again is the kindly admonition emphasized, with the inevitable condition attached: "Only be thou strong and very courageous, that thou mayest observe to do according to all the law, which Moses my servant commanded thee: turn not from it to the right hand or to the left, that thou mayest prosper whithersoever thou goest."

Their great leader had apparently gone from the children of Israel, but this, it was pointed out, was no cause for discouragement: the work would go on, and the promises would be fulfilled, none the less. The narrative shows that the followers of Moses were obedient to the commands of Joshua; they declared that as they had hearkened unto Moses so would they hearken unto Joshua. For the third time they were admonished to be strong and of a good courage, and we read of the result at the close of the second chapter of Joshua: "And they said unto Joshua, Truly the Lord hath delivered into our hands all the land; for even all the inhabitants of the country do faint because of us."

This Scripture is plain. The lesson is easily understood. The analogy is complete. We have but to apply our spiritual key, and the book opens to us with unmistakable clearness. The cause for which Moses stood, and to the forwarding of which he had devoted his lifetime, went bravely and uninterruptedly on. What is true of Moses is true in much greater measure of Jesus the Christ. Christianity did not fail or falter because of his departure, his ascension. It continued to spread and grow apace.

God's promises are being fulfilled very surely today. Our cause is established on a firm foundation, not only in the way of human organization and propaganda, but in the spiritual consciousness of many thousands. This consciousness is perpetual. It can never be destroyed. As well might we think of the one divine consciousness being annihilated. We have our splendid literature, our great church services, our educational system for the perpetuation of our tenets, and above all we have our mighty text-book and the other invaluable writings of our beloved teacher and Leader. We have every proper and necessary means of carrying on the great work. All this Mrs. Eddy provided with bounteous hand and far-seeing wisdom. We have our Joshua in the Manual of The Mother Church, with its wise and far-reaching provisions for the advancement of the cause of Christian Science through efficient administration and watchful care on the part of those on whom the responsibility has been placed.

The most effective means of perpetuating the work are at our command. It remains only for us individually—for Christian Scientists everywhere—to grasp and hold fast to the spiritual side; and in this sense we can and must all be Joshuas,—ministers in the highest sense of ministry. Even as the children of Israel were loyal and obedient, and went forward to find that the Lord had delivered into their hands all the land, so it is our high privilege to stand resolutely and loyally by our fellow-workers at headquarters, upholding and supporting them in every possible way, ever moving bravely forward toward the ultimate vanquishing of the last enemy. We have every possible encouragement to this end in the writings of our beloved Leader, and especially in our text-book, "Science and Health with Key to the Scriptures."

We have also the great Master's command to heal the sick and raise the dead, a command as vital in this age as it was two thousand years ago. We have his sweet assurance also that he will be with us alway, even unto the end; and we have no reason to doubt its fulfilment if, on our own part, we are but "strong and of a good courage," and "do according to all the law."

THE TYRO AND TACT.

W. FERGUSON.

MANY students of Christian Science have doubtless passed through that stage wherein, with hearts filled with gratitude to God for healing, and with wonder at the clear, forceful logic of Christian Science, they have found themselves, in the exuberance of their joy, casting about for a convenient hill-top from which to proclaim the glad tidings to the world; have felt, too, the disappointment which comes when one's message is received with incredulous smiles, if not open antagonism, by those whom they most desire to interest in this new-found truth which has done so much for themselves. Few more trying experiences come to the beginner in Science than this, and yet it is only through experience and enlightened understanding that he is led to temper his efforts with less of material ecstasy and more of consecrated thought and wiser intent.

The writer had occasion to study this situation when, in his business relations as a traveling salesman, he met, after his healing in Christian Science, so many people who, having known his previous desperate condition, were astounded at the remarkable change. Being at that time in the "hill-top" stage, he was led into many discussions of Christian Science which it were better to have avoided, although in some instances seed was sown that in due season brought forth good fruit. In looking over the ground, the writer has come to see wherein the Christian Scientist may take many helpful lessons from the business experiences of the salesman, the missionary of commerce, as he has been aptly called, and it may be profitable to consider briefly a few of these experiences and note their application.

The commercial traveler who is a Christian Scientist may also to a certain extent be a courier for Truth, and the first essential for usefulness is a right concept of God, which leads to right human relations. He will find it an advantage to be familiar with current events and leading topics of the day, and the perusal of a single copy of *The Christian Science Monitor* will prove to him that for this purpose no better source of information can be found than that splendid paper, which may well be considered indispensable, not only by the traveling fraternity, but by all who desire a clean, interesting, and thoroughly reliable newspaper. The salesman should be familiar with the goods which he handles, as this will enable him to place them before the trade intelligently and with confidence. In like manner, he will better represent the cause of Christian Science as he attains an understanding of its teachings through earnest and intelligent study of the Bible and the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

Strict adherence to the truth must ever be the salesman's motto, and the avoidance of random or exaggerated statements will save him from pitfalls which might trip him later on. It is generally conceded that the greatest nuisance on the road is the man who, not content with the legitimate exercise of his vocation, insists upon "talking shop" to his customers out of business hours, and the interest of the best firm and the best goods on the market is likely to be jeopardized by such methods. Is not this mistaken zeal somewhat typical of the student of Christian Science who is in the hill-top stage referred to above?

Do we not often meet the man of the world, satisfied with himself and his position in life, or the theologian, satisfied with his religion, sincere in his belief and striving to live consistently therewith? While the Christian Scientist may have demonstrated in his own life and by "signs following" that he has found the "better way," and is ever ready to give a reason for the hope that is in him,—eager to tell of the peace, joy, and "wholeness" he has found in the Christ Science,—should he not be equally considerate with those of other faiths over the good they have found in their beliefs? It is in the indiscriminate discussion of Christian Science with the utterly indifferent or with those who antagonize it through ignorance or misconception, that the too ardent, or rather the unwisely ardent, student finds the ever-protruding edges rubbed from his ecstatic enthusiasm, and learns that it is only the thirsty who appreciate the "cup of cold water" given in Christ's name.

Mrs. Eddy tells us in Science and Health (p. 201) that "the best sermon ever preached is Truth practised and demonstrated by the destruction of sin, sickness, and death." If our own life is ordered in accordance with this declaration, and the truth is presented to those about us with a due regard to the amenities which should govern all our relations with others, then will our efforts for the advancement of the kingdom of heaven on earth be blessed of the Father.

STEPS OF PROGRESS.

GRACE SQUIRES.

THE chastening influence of self-knowledge through which the loyal Scientist passes is a searching period, attended with surprising discoveries, bare-faced and humiliating. For the first time in his life he recognizes a fact for a fact, and ceases to juggle with it. His impurities, his quick resentments, his dominating selfishness over weaker members of his household, his envy of his neighbor's goods, and his emulating desire to amass much of the same, and the persistent subtlety of "self" which colors his every move,—all these rise to the surface of a consciousness made turbulent by Truth, there to find no hiding-place.

One by one he deals with these errors of mortal mind, gaining strength from each conflict and victory, and gaining equally the peace of God, which passeth all human understanding. His progression is sure and uplifting. His watchfulness becomes daily more absorbing and more strengthening from this inward field of labor, and his powers as a thought anatomist are expert.

Having traveled so far safely on his own mental journey, it becomes necessary for him in the inevitable law of progress to become instructed in certain reactionary effects of the so-called evil thoughts of others. He should realize from his own experience that the perception of any evil does not make that evil more operative, but distinctly less so, since our Leader instructs us that evil "found out, is two-thirds destroyed" (Miscellaneous Writings, p. 210); where, in his ignorance, he had three thirds to battle with, in his enlightenment he has not even one third, since, as Mrs. Eddy adds, this "kills itself."

But, through some error of mortal mind, this new knowledge is sometimes accepted with surprised disturbance, and all his own inharmonies suddenly become to him the property and directed effect of others' thoughts. His humble self-correction ceases, and with much of the quality that is exemplified throughout human life in the discovery of the distant mote instead of the self-evident beam, he is tempted to turn his thoughts to others, instead of to himself.

Disaster can but follow this course. His peace is gone. His sweet and uplifting faith seems a thing of the past. The more he loses it, the more he fears, till his fears become convictions, and the "great red dragon" is to him a mighty and indisputable reality. It absorbs all his mental efforts: the burden of evil in all its bewildering phases is charged to another, and his own healthful and corrective self-knowledge recedes to the vanishing-point. He forgets that if a man believes the earth is flat, that belief concerns him and not the earth. If he could see this, he should see with equal clearness that his present belief concerns himself, that it rests with him to maintain man's divinely bestowed right of "self-government" (Science and Health, p. 106), and doing this he need not fear the belief in evil perpetrators.

Digitized by Google

Mrs. Eddy tells us that we have but one enemy, and that enemy is our belief that we have one (*Ibid.*, p. 10), the human ignorance that accepts what it senses instead of reaching beyond itself into spiritual knowledge. That the senses say that the evil of one can be transferred to hurt another no more makes it so than to say that hate is true He who has exchanged his hate for love, disbelieves in the evidence of hate, and he must learn equally that love cannot manifest itself in any malicious purpose.

Starting from this clear and positive base, the young Scientist will no longer be deflected in his mental efforts to the exclusion of chastening self-probing, but will increasingly know that his ignorance is but a belief, and is to be handled as any other of his errors. He will give it neither more nor less attention than he has given other lies in his consciousness, but will handle it fearlessly and pass on to other defects in his mental household. No progress is made by one-sided effort, and self-knowledge is not thus attained, nor is it a primary grade from which one graduates at an early date. The necessity for patient self-knowledge lasts so long as mortal mind lasts, so long as one bubble of false belief remains to be pricked.

Realizing that his ability to oust any enemy depends absolutely on his reflection of spiritual power, since our weapons "are not carnal, but mighty through God," he will take daily pains to promote the unfoldment of good and to allow no hectic and confusing fears to deflect this view-point. This persistent detection and correction of his own faults, this steadfast determination to cast out all that is unlike the divine idea, cannot fail to harmonize his mental efforts and reinstate him in peace and progress. He will at the same time remember Paul's injunction: "Put on the whole armor of God, that ye may be able to stand against all the wiles of the devil."

NO SEPARATION IN TRUTH.

CAPT. J. C. SCOTT.

THOSE who have studied Christian Science know that as they recognize the Principle of its teachings the unreality of any form of discord becomes apparent. Whether discordant conditions appear in physical, moral, or mental forms, they are still in the light of Christian Science something to be overcome, for their very nature precludes them from having any part with God, whose being is infinite harmony and whose creation reflects Him. Now none of us would choose to be separated from those whom we love any more than we would choose to be ill. Both states are discordant, and if the truth can make us free from one form of discord, this truth can be successfully applied to any other form.

In the effort to overcome a sense of separation recently, the first encouraging beam of light that appeared to the writer was the fact that, being something discordant, it was consequently capable of being destroyed. It was evident that it was a sense of something which should be overcome, not accepted; and by recognizing it as discord it was *ipso facto*, understood to be powerless, for "evil is not power" (Science and Health, p. 192). Christ Jesus said, "Lo, I am with you alway." Now what did he mean by this when he shortly afterward disappeared, in other words was separated from his disciples? The significance of what our Master meant on this occasion appeared in the experience above referred to, and the truth about separation was revealed, on comparing his words with a statement by Mrs. Eddy. In Science and Health we read that the human, corporeal Jesus had a brief earthly career, whereas "the spiritual self, or Christ, continues to exist in the eternal order of divine Science" (p. 334).

This is surely the spiritual explanation of the Master's words, and as their meaning appeared in a brighter light than ever before, mortal mind and its suggestion of separation received such a blow that this sense testimony was driven effectually out of consciousness. Knowing that "we live, and move, and have our being" in God, the Christ, "the spiritual self," is with us always, taking away all belief in sin and discord, and removing from our consciousness all that tends to make us believe in any of the unrealities of mortal experience. Since it is impossible for the children of God to be separated from God, it is also impossible for them to be separated from each other, for we all in reality live in the same consciousness (kingdom), where distance and time are not known. These are suggestions of finity and are unknown to infinity.

No Christian Scientist, from the youngest student upward, believes in death as a reality, *i.e.*, a part of God's creation; and the belief that man is annihilated when he suffers death is not a popular theory with religionists. It is the sense of separation which causes grief when a friend passes through the belief of death. In Christian Science we know it to be true that in reality man never dies. Our Master's resurrection proved this. We have, therefore, no good reason for believing in the reality of death either as a separator or annihilator; neither have we any scientific reason for believing in the temporary separation on earth from others as a reality or a condition which cannot be overcome by Truth. Separation being one of the discordant forms of mortal belief, and being an accessory of death, we capitulate to the latter if we acknowledge any power to the former.

One other subtle claim which must be overcome to be free from the so-called law of separation, is the fear which suggests that those whom we love may meet with some mishap during our absence. Material sense suggests that our personal presence is essential to ensure the safety of those we love, but this receives a stern rebuke from Christ Jesus, who said, "I can of mine own self do nothing;" for he knew that human effort unguided by the Father—divine Principle—is utterly devoid of power. Whether, to mortal sense, we are in the near presence of those whom we love or thousands of miles away from them, it matters not, if we "go to the Father." There are no limits to His power, to infinite, ever-present Mind, and we can protect each other, wherever situated, by knowing that all of God's children are infinitely protected, for they cannot for one moment be outside the consciousness of omnipotent Love, their refuge and fortress. Then with Paul we can be "persuaded, that neither death, nor life, nor angels, nor principalities, nor powers, nor things present, nor things to come, nor height, nor depth, nor any other creature, shall be able to separate us from the love of God." If you and I are not separated from God, Truth and Love, we are together in Him, and the unreality of separation must become more apparent as we entertain this understanding of Truth.

CONSERVATION.

CHARLES G. BALDWIN.

ONE great source of wealth is exchange. One gardener may have two hoes and no spade, another two spades and no hoe. After they have met and exchanged a hoe for a spade, both are enriched and neither is impoverished. Their wealth has been increased.

One of the problems of poverty has been to bring together those who needed each the help of the other. Among the opportunities afforded by *The Christian Science Monitor* is that for the conservation of this vast source of wealth and its use so as to benefit its readers and advertisers, and at the same time carry to all a knowledge of Christian Science: thus aiding the great exchange whereby many may secure the pearl of great price. Therefore all Christian Scientists, even those who have given liberally to the cause and perhaps made sacrifices to distribute the literature, may profit from the injunction of our Leader and read the *Monitor*.

Digitized by Google

This would seem to include an examination of the advertisements, possibly with a view to benefiting ourselves while at the same time furthering the circulation of our literature by patronizing those who have advertised therein. The writer knows of an instance where a Christian Scientist wrote to several acquaintances, advising them of the special summer vacation number of the *Monitor*, and sending a copy to each, expressing the hope that it would aid them in planning for a pleasant summer vacation. He made his own plans, however, without reference to those many good friends who had advertised in this special number, and thought he did not even have time to read this large issue carefully. Had he acted on the good advice he gave others, he might have saved himself a sad experience during this summer's vacation.

Those who advertise in the *Monitor* are most often not Christian Scientists, but they are a very high class of advertisers and quite as reliable as those with whom we are apt to be dealing every day. They are seeking our patronage, and in most cases will prove valuable business friends through whom we may benefit. At the same time we are encouraging a splendid reform in journalism that has the approval of the thinking world, and opening the thought of mankind to read and ponder our other periodicals and our Leader's works.

Just as milk which is carefully guarded from impurities will keep sweet for a much longer time than if exposed, so clean journalism has a vitality and value long after the ordinary product has turned stale. Thus the value of the *Monitor* as an advertising medium is conserved, for it passes current from eye to eye long after the first day of its issue and is still fresh and sweet. We can therefore make friends for clean journalism and our advertisers by seeing that every copy possible is circulated and that each copy continues to circulate after we receive it.

The distinctive opportunity of this age is Christian healing, but for its fullest enjoyment the multitude must hear. Every modicum of our resources must be conserved to this end, else, as our Leader says, "unimproved opportunities will rebuke us" (Science and Health, p. 238); and this rebuke will continue so long as may be necessary, even perhaps until we learn that "man's extremity is God's opportunity." The manifold uses of *The Christian Science Monitor* all aid in the one great purpose of healing humanity of sickness and sin, and our opportunity to aid in its establishment and prosperity is among the great world opportunities afforded to mankind in this the greatest age of their human history.

PAINLESS PROGRESS.

C. VERRALL.

With the new birth that comes to us in Christian Science, there dawns a clearer vision and the ability to utilize past experiences which at the time seemed to have no permanent value. Anything in our past lives that points to Principle is a guide-post put up for the use of all who are traveling the same road on which we are journeying in our passage from sense to Soul.

One lovely summer day I went with a party of young people for a long walk to one of the highest points in the Sussex downs. It was very pleasant walking on the short turf, beautified by patches of purple heather and furze bushes. We were young, and happy with the sense of freedom which comes with an "out for the day." I cannot remember thinking much about the lovely view which was spread out all around us, till suddenly—as it seemed to me—we reached the high point to which we had been wending our way.

We had been gradually ascending all the way, but I have no recollection of any effort such as I have since experienced in climbing high hills, the ascent being so gradual that the sense of pleasure never flagged. And what of the view? Since that day, many years ago, I have been in many countries and have seen many wonderful sights, but I cannot remember seeing anything that to me was so wonderful as the panorama spread out before us on that summer day. We were looking down over several counties, and to my eyes the sense of vastness was bewildering, the sudden change of view was so unexpected and overwhelming.

In Science and Health we are told "there should be painless progress, attended by life and peace instead of discord and death" (p. 224). Our experiences should not and would not be attended by abnormal struggles, if we were to take each upward step as it comes, until we reach the mount of vision where it is seen that all is good and good is all. If we faithfully follow the path made plain by Christian Science, we shall meet with no insurmountable obstacles and there will be nothing to mar our happiness or bar our progress.

A BED OF VIOLETS.

BELLE A. MUNDY.

As a child I was very fond of roaming the woods. I remember that one bright afternoon in May I strayed farther than usual, a long way beyond the "mortal ken" that limited me to calling distance from the house, and entered a part of the woodlands I had never seen before. Childish curiosity prompted me to climb a ridge, and on reaching the top a glorious surprise awaited me. I had a passion for violets and thought I knew the haunts of this flower in all its varieties, from the dainty white of the marshland to the huge golden dog-tooth and regal purple specimens of the pastures, but as I came out in the sunshine on a plateau which formed the crest of this ridge, singing at the top of my voice for very joy of the spring, I looked upon a scene which hushed my spirit, for at my feet lay a most magnificent bed of violets. In solid beauty they covered the ground for many feet around, and they were the loveliest of their kind. A passing shower had bestowed its blessing upon them, and in each blue eye was a penitential tear. As they glittered in the sunlight, my child-thought instantly recognized them as the works of God; His hand had formed them, and no mortal eye had beheld their splendid beauty; they were sacred thoughts of the most High. My singing ceased and I crept away with an awed feeling of deep reverence, as if the place whereon I had stumbled was indeed "holy ground."

A few weeks ago an exquisite little verse on the Home Forum page of the *Monitor* brought this experience of childhood to my thought, and to it I am indebted for this sweet memory. It brought a smile and a tear simultaneously, as I read the simple words,—

A violet on a hill-side bare,
Within a shadow—touch it not;
To us it is a thing forgot,
To God—a creature in His care.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be June 2, 1911. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 10, 1911.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 4, 1910, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

SELECTED ARTICLES.

[Alfred Farlow in *New England Magazine.*]

Death is mentioned in the Scriptures as an "enemy," and the "last" to be overcome. An enemy does not mean necessarily a person or thing, but whatever militates against or is opposed to life. The Scripture teaches that "in him [God] we live, and move, and have our being." The life of man is thus identified with the being of God, and is therefore an eternal fact. Death is not a fact which is interchangeable with life; it is but the outcome of a false sense of life, and can do no more than dispute the fact of God-given and God-sustained life.

Death tends to obscure the truth of being, and seems to have been so apprehended by Solomon when he counseled, "Seek not death in the error of your life." There can never be error in divine Life and its manifestations, since God is forever true; hence death can be no more than a false belief which has nothing to do with ever-present life. The great Teacher of Christianity said of the damsel, "She is not dead, but sleepeth." This denial of death may be taken as equivalent to the statement that there is no death, and the Master's added words, "but sleepeth," point to the fact of his realization that she could be awakened by the power of God, the apprehension of the truth of being; and the process by which this was to be effected is clearly set forth in his declaration, "Ye shall know the truth, and the truth shall make you free."

In Science and Health, the text-book of Christian Science (p. 584), we find the following definition of death: "That which frets itself free from one belief only to be fettered by another, until every belief of life where Life is not yields to eternal Life." Death is the result of a false sense of existence, the climax of materiality wherein a mortal concept of life reaches the point of seeming self-destruction, and this may be repeated until a full consciousness of the unending spiritual life is attained. It is not a divine appointment, but an enemy which must eventually "be no more," although centuries may pass meanwhile. Successive generations will improve in thought, until the false material sense of life which ultimates in what is called death, gives place to the recognition and manifestation of Life divine. Since death is the result of a false sense of life, it follows that its disappearance will be brought about by increasing one's understanding of real Life, which is God; and the fact is emphasized by our Saviour's words, "And this is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." Permanency of being is to be established by a true knowledge of God who is Life, and a consequent knowledge of His "express image" as distinctive from mere opinion or false belief about cause and effect.

As a matter of course, one's deportment must be in keeping with spiritual understanding in order to insure progress. In divine Science, as in the science of music or any other science, one must practise his added knowledge in order to go forward sufficiently to attain more. One's ability to comprehend ideas which are in advance of him is increased by the spiritual strength acquired by his improvement. As one looks across the prairie he can see only so far. His vision is cut off by the horizon, but after advancing, he not only finds the horizon advanced by the forward movement, but he also finds the extent of his vision increased by development. Even though our present realization of the true life may not be sufficient as yet to banish this human experience, it is sufficient to remove all fear of it. As St. Paul has said, we know that "whether we live therefore, or die, we are the Lord's." Mortal experience can make no change in the facts of immortal being. As indicated by the Master's words, death refers to the dream of life which is ended by awakening to the truth about God and man.

The Scriptural illustration, "Where the tree falleth, there it shall be," makes this point. If it leans toward the east, its fall will constitute a forward movement in that direction. If it leans toward the west, its fall will be an advancement in that direction. The tendency of the individual consciousness is not at all affected by the experience nor is the opportunity to think and improve interrupted. The story of Dives and Lazarus illustrates the fact that whatever of spiritual advance one makes in this life lives beyond the grave and affords even increased comfort; while previous material gain affords no advantage, but on the contrary becomes a source of torment when one wakens to the consciousness of misspent time and effort. Christian Science does not teach that death is an advantage, and therefore a friend. It demonstrates the truth that God, Spirit, is ever present and all powerful; hence death has only a seeming significance, it neither interrupts nor hastens one's spiritual progress.

The Scriptures teach, "It is the spirit that quickeneth; the flesh profiteth nothing;" that which gives and sustains existence is God, Spirit, and since the real Life of the universe is God and hence eternal, it follows that life cannot end or be suspended. Those who pass through the transitional experience which is termed death are still conscious of individual existence and continue their spiritual advance. Death will probably make no more change than the crossing from one state of consciousness to another, save for what may be learned in the transition. Life is continuous, and the progress of the individual will continue beyond the grave until perfection is reached.

The Scriptures teach that it is "appointed unto men once to die, but after this the judgment." This, however, does not refer to death the enemy, but to the death or end of sin, as is indicated by the term judgment. In the ratio that one overcomes his wilful and ignorant mistakes, he is judged fit for promotion; and thus he continues, even unto the degree of perfection. St. Paul evidently had this in mind when he said, "I die daily." His mystical statement could not be explained in any other way. Even while alive he was putting off mortality and putting on immortality. To die in such a manner and thus fight a "good fight," removes in large measure the present fear of death and leads eventually into the full consciousness of Life that knows no death. On such as die in this manner the "second death" can have "no power." When the false sense of life is destroyed by an awakening to the reality of life, death is permanently overcome. It cannot come a second time.

[Editorial in *Out West*, Los Angeles, Cal.]

Our ministerial critic returned to the charge against the Christian Scientists and against Christian Science last Sunday evening. He justified all that he has said by reading letter after letter from people who think as he does. All of which is inconsequent, irrelevant, and immaterial, and not at all convincing. He forgets that it is entirely possible to find any number of people in this world who believe that the other fellow ought to be exterminated for being heterodox. Orthodoxy is built that way. Every man is orthodox—to himself—and the other fellow who does not agree is a perfectly dreadful creature, you know. If the effort were worth the time, we could find any number of people who would affirm that our critic ought to be exterminated, and that his teachings are error. John Calvin, of sainted memory, thought that way when he burned Michael Servetus for heresy.

Our critic is preaching from his pulpit and we from ours. We have the larger congregation. He preaches doctrine, and we humanity. Whereas he is certain that his sail and rudder are perfect and will guide him into a safe port, we preach the wider doctrine. He has his scheme of conversion all ready for sinners; we go farther, and say that we hope and believe that all mortals who are true to the teach-

Digitized by Google

ings and promptings of their own consciences will eventually get their reward of happiness, whether in this world or the next, about which we do not pretend to know anything.

Some years ago the Rev. T. De Witt Talmage, who was considerable of an acting pulpiteer, preached a sermon drawn from one of Paul's epistles, the text being, "And some on pieces of the ship." Paul, it will be remembered, tells the story of a shipwreck, and describes how every one on that ship was saved, "and some on pieces of the ship." Well, now, perhaps that is Universalism pure and simple, and perhaps we are encroaching on theological matters more closely than we care to do, but it is suggested, and in perfect good faith, that our critic get a file of Talmage's published sermons and read that particular one.

As far as the Christian Scientists are concerned, we fail to see wherein they are reprehensible. If they have turned from their old-time Protestant sects, is it not that they had found husks where they sought food? If they have improved in their attitude toward the world—and most of them have—is it not to be set down to the credit of Christian Science? If they accept Mrs. Eddy's Key to the Scriptures, is that not their business, and are they subject to abuse for making their choice elsewhere than in our critic's fold? If there are fanatics among them, are there not also fanatics among other sects and cults? If they obey the laws and are worthy and honest citizens, who gave our critic or any other man the license to abuse them or their faith?

This is the Christmas season, and it is a time for remembering the Christ. Did he ever preach anything else than toleration, than perfect love, than justice, than regard for others, than all that goes to make up perfect manhood and womanhood? Will some people ever learn to discriminate between theology and religion? Will they read the epistle of James and learn what religion is?

[John L. Rendall in *Marshalltown* (Ia.) *Herald.*]

The hundreds of thousands of people who have been immeasurably benefited because of the beneficent teachings of Christian Science stand unitedly in the consciousness that it has brought to them that peace "which passeth all understanding;" that it has not only healed them of their physical troubles, but it has given them a higher and better understanding of God and man's relation to God, whereby they are enabled not only to be better and live better themselves, but also to help and benefit their fellow-men. Those who are fully cognizant of this phase of Christian Science experience find it difficult,—from any standpoint of Christianity,—to account for the unfair, unjust, and altogether unwarranted criticisms of Christian Science which sometimes emanate from the pulpit.

Because of the intrinsic value of Christian Science, and because of its intensely practical results, nothing of this sort can permanently disturb, retard, or obstruct the stately course of this religious teaching, which, regardless of all opposition, moves on unswervingly to the accomplishment of its mission in the regeneration of sick and sinful humanity. A more comprehensive understanding of what Christian Science is and is doing will some time result in increased appreciation of its beneficent teachings, and also in the cessation of useless and unfair opposition upon the part of people who should, reasonably and logically, be working with it to the accomplishment of its purpose, which is the betterment of humanity.

[James D. Sherwood in *El Paso* (Tex.) *Herald.*]

It is the good that is seen and felt in Christian Science practice that is its chief attraction, and that is today drawing all men unto it. Truth is the most attractive thing on the earth. Our Master said, "Ye shall know the truth, and the truth shall make you free." Christian Science is daily making practical proof of that promise. Instead of decrying others, it would seem more graceful in our critic if he were found making proof of his discipleship by doing the works that Christ Jesus required of his followers. Hear his words: "These signs shall follow them that believe; In my name shall they cast out devils; . . . they shall lay hands on the sick, and they shall recover."

That Christian Science is scientific is readily seen and admitted by all who understand it sufficiently to heal by its means. They soon find that blind faith is insufficient and that mere belief in God must be superseded by a demonstrable understanding of the truth about God, in order to reap the benefits promised by the Master, who said: "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." That Christian Science is Christian is proved by its effects upon the sick and sinful. It reforms the sinner and it heals the sick, and this it does by the same method and in the way that was presented and practised by Christ Jesus and his disciples.

[John Ashcroft in *St. Louis* (Mo.) *Globe-Democrat.*]

The clergyman's somewhat contemptuous criticism of what he considers to be the teaching of Christian Science, as quoted in your columns, is scarcely in keeping with the gentle thought of the Master he claims to serve, who reproved his own disciples for forbidding the work of the one who cast out devils in his name "because he followeth not us." Neither is our reverend critic's statement of the said teaching quite accurate.

On page 460 of Science and Health, Mrs. Eddy declares: "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being." That Christian Scientists have attained some measure of this "right apprehension" is attested by the ever increasing number of those healed by their ministrations. Did space permit, it would be interesting to discuss the question of what constitutes reality; whether Jesus believed the germ theory of disease, and what his estimate was of the reality of the various diseases he healed. According to St. John, they were "the works of the devil," which he came to "destroy." To the Christian Scientist good alone is real; and his faith in this rests upon the logical conclusion that God, to be infinite good, could not be the author of evil, and that the latter, therefore, has not the reality, permanency, nor perpetuity of the former.

The theological world has nothing to gain by attacking Christian Science. The latter is here to stay; and, judging by the constantly increasing number of its adherents, it is evidently satisfying the aching heart of humanity with its interpretation of the Scriptures, and with its obedience to the injunction of the Master, "Heal the sick."

[Editorial in *Boston Republican.*]

The numerous efforts made to force medical or health legislation of a certain kind through the various legislatures have attracted very little popular attention. Thanks to the American disposition to look askance at efforts to obtain class legislation, those who have sought to place restrictive and repressive measures on the statutes to the injury of their fellow-citizens have almost invariably failed. But the efforts in this direction have been unremitting, and while the legislation sought has, as a rule, been refused, the interest demanding it has not been compelled to go away entirely empty-handed. Politicians strong enough to resist demands that they knew would, if granted, arouse public indignation, have been keen enough to recognize the influence of the applicants for this legislation and complaisant enough to give a sop where they have withheld a prize.

Digitized by Google

The giving and acceptance of many sops has increased, enlarged, and strengthened many health boards and bureaus, and assisted very materially in building up a powerful medico-political body within each of the several states. It is safe to say that the number of allopathic physicians occupying public positions in the entire United States, counting those in municipal, state, and national employment, would far exceed one hundred thousand. These and their brethren who are not as yet in public office dominate the public medical service of the nation.

Within the last three years they have broken loose from their old environments and have become more ambitious, more hungry for power. Through the agency of a great association they have succeeded in enlisting the attention and the sympathy of certain influential public men. What they propose now is that the government shall turn over to them exclusive authority in all matters relating to the health of the people. Through a bureau or department which they aim to create by act of Congress, they hope to become established and entrenched so securely in power that they will be able to dictate to the individual citizen just how he shall take care of his own health and of the health of those dependent upon him. And through the operation of federal law they expect to be able to exercise forcible authority over any person unwilling to accept their dictation, and to be able to send to jail anybody who has the temerity to practise medicine, or to attempt to heal the sick, in a manner, or after a method, objectionable to what they may call their ethics or their rules or their laws.

It strikes us that when it has reached this point—and it is not possible to overdraw the possibilities of federal health supervision—the matter has become too serious for light treatment. It seems to us that the time has come when right-minded citizens should notify their representatives and senators that all such attempts to institute espionage, repression, tyranny, benevolent or otherwise, should be brought to a halt. To the citizen worthy of the name personal freedom is more valuable than health, more valuable even than life itself. The federal regulators of all our affairs and dispensers of all our comforts are offering their favors upon terms that cannot be accepted by a free people.

[Frederick Dixon in *Islington* (Eng.) *Gazette*.]

Christian Science does not teach that disease and pain are unreal to the human senses, any more than natural science teaches that matter is unreal to them. "Sickness," writes Mrs. Eddy on page 460 of Science and Health, "is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being." Christian Scientists endeavor to give humanity this true sense of being, and exactly in proportion as they succeed in this, they succeed also in destroying sickness and pain. Our critic is simply guilty of the mistake which is being made by other critics of Christian Science every day, of confusing the absolute with the relative.

Now, if you are going to criticize the deductions of any thinker, you have got to recognize his definitions. If you were to start by assuming that Euclid defined a straight line as a circle, you could with complete ease reduce his reasoning to an absurdity. Now, what is meant by real in Christian Science is God and the spiritual universe. Consequently, when Christian Science explains that sickness is unreal it does not mean that sickness is not, relatively speaking, extremely real to the human consciousness; it simply means that it is not God-created, and so not eternal. As long, however, as the human senses are educated to believe in the reality of matter, disease and pain will continue to represent a reality to them, and man will never enter the kingdom of heaven. Jesus said, "Repent ye: for the kingdom of heaven is at hand." The word translated repent means literally to come to a conviction afterward, and so to change your mind. Consequently, when a man changes his mind from a belief that sin, disease, and death are God-sent or God-permitted—a case of distinction without a difference, if ever there was one—to some understanding of the fact that these things are, on the contrary, nothing but a negation of divine love, he touches the hem of the seamless garment of Christ's divine Science, and, to the extent of his knowledge, is "endued with the spirit and power of Christian healing" (Science and Health, p. 55).

[W. J. Tucker in *Roanoke* (Va.) *Times*.]

The term "sin" has a much broader signification than that of the voluntary commission of wrong acts alone, but according to Webster it includes "all evil thoughts." To hold, then, wrong concepts of God and His creation, together with the logical deductions which necessarily follow them, is to cherish evil thoughts, inasmuch as evil is the opposite of Truth. Mrs. Eddy, in common with all other mortals, was taught in her youth to accept that which has become grounded in human belief through thousands of years of materialistic education. After her discovery of Christian Science she learned that the rise from this condition of thought to the full comprehension of God as Spirit and His creation as spiritual, is a gradual process, of which the triumph over death is the last step, in accordance with the Scriptural statement, "The last enemy that shall be destroyed is death." She has never claimed to have gained the spiritual growth necessary for this greatest demonstration, but she has had sufficient to add nearly forty-five years to her earthly life, all filled with ceaseless labor for the redemption of mankind.

Christian Science does not teach that pain and disease are "imaginary," in the usual sense of this word, but that they do not exist in the spiritual, which is the only reality. While, as a rule, Scientists have broken bones set mechanically, many such cases have been handled by Christian Science treatment alone, with great success. It should be understood that the Principle of Christian Science is equal to any occasion, inasmuch as the healing power is God, and therefore there is no incurable disease known to it; but, as this healing is manifested through man, the success of the student of Christian Science, as in the case of the student of mathematics, is limited to the degree of understanding to which he has attained.

While to the beginner the statements of spiritual truth may seem puzzling, owing to the bias of education in the opposite direction, perseverance with an open mind will gradually unfold the right understanding.

[Written for the *Sentinel*.]

THE CALL.

ELIZABETH BLAKELY.

AWAKE! awake, my heart, and live!
How canst thou sleep? Come, give!
The hungry world holds out its arms for food
From stores unsought, the all-inclusive good.
A channel pure, thyself art meant to be,
And through thy gates may flow a stream so free
That it will freshen barren ground now dry,
And swell the streams of earth full high.
No time for slumber when thy work undone
Calls thee to waken with the rising sun!
Improve each hour until the day's decline
Leaves a sweet sense of peace with thee and thine.
A full reward for every kindly deed,
And God will give the increase for each seed.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

THE FRUIT OF RIGHT ENDEAVOR.

In the early experience of most Christian Scientists there comes a time when they are so wonderfully impressed with the healing work that is being done for them and for others,—when they awaken to the realization that the power of Truth to heal is available today as it was in the time of the Master and his disciples,—that they simply bubble over with enthusiasm in their happiness over this new-found faith, and are eager to right every seemingly wrong condition in health or in morals among their friends, believing that all there is to do in order to accomplish this is to tell them of what they have themselves seen and heard.

Sometimes the awakening is a rude one, and they are grieved at the repulse which their well-meant efforts have met, forgetting that not all are ready to give credence to the word of even a very dear friend, if what is said tends to upset a preconceived and cherished belief of the one who is addressed. Even as the husbandman does not cast his seed in the unprepared ground, so the young Scientist must wait until favoring conditions have opened the way for the seed of Truth, until his friends, roused to the inadequacy of their present belief when material means have failed them in their extremity, will welcome the truth that makes free from the bondage of sin and sickness.

Again, the enthusiast may find that objection is made to Christian Science on the ground that it demands too much of its adherents,—that they are expected literally to work out their own salvation. Then comes the temptation to make Christian Science so easy that it will be accepted in what might be termed a sugar-coated form. We do well if we firmly resist this temptation, which is one of the most subtle with which Christian Scientists have to deal. Christian Science controverts many of the most cherished beliefs of mankind, beliefs into which they have been educated by generations of thinking along materialistic lines instead of spiritual, and we forget that the process of sugar-coating Christian Science—modifying this or that condition—to make it acceptable to the person who seems wedded to such beliefs, is really an adulteration which, like most adulterations, does harm instead of good.

The best service we can render our friends is to let them see what Christian Science has done and will do for humanity, and especially what it is doing for us personally in making us better and healthier men and women, kinder to and more thoughtful for others, than we were before this influence came into our experience. In other phrasing, we shall plead our cause more eloquently if we modestly let our actions tell the story of the efficacy of this healing truth, rather than our words; not designedly so, but because our actions are the natural and normal outcome of our inward thinking, those with whom we come in contact cannot fail to see the change that has been wrought in us.

When they really wish to know the "reason of the hope" that is in us, then we can tell them what Christian Science is and what it is doing for the race, and in no such instance will our time and efforts be wasted. If, however, we try to arouse their interest by persistent and unsolicited talk about Christian Science, we are quite likely to defeat our purpose. Every man is entitled to his own views on or about both medicine and theology, and while we believe that we hold the right views on these subjects, this does not excuse our intruding them where they are not wanted and will not be accepted.

But when the proper time comes for us to bring the subject of Christian Science to the attention of others, we must be careful to present it in the same spirit in which Mrs. Eddy wrote Science and Health, and which she so concisely states in these words: "The author has not compromised conscience to suit the general drift of thought, but has bluntly and honestly given the text of Truth" (Science and Health, Pref., p. x.). Then our endeavors will no longer be barren, but even as the seed which "fell into good ground, and brought forth fruit, some an hundredfold, some sixtyfold, some thirtyfold."

ARCHIBALD MCLELLAN.

"TEACH US TO PRAY."

STUDENTS of Christian Science soon learn that in order to reach the highest results they must change their methods of thinking and doing. Very few, indeed, accept Christian Science until driven to it by sheer necessity, through suffering for which no material remedy avails. This may be their own experience or that of some dear one, but in either case they learn that God can and does heal the sick now, as in Jesus' time, without the intervention of material means. They then begin to think differently about God, and especially about man's relation to Him, and very soon they ask how they should approach God in prayer. It is indeed pathetic to read the published testimonies of those who prayed long, and as it seemed in vain, before they learned beyond all question in Christian Science that there is such a thing as "effectual" prayer.

There are some who readily grasp the spiritual ideal presented by Mrs. Eddy in the chapter on Prayer with which Science and Health opens. Again, there are those who think it difficult to comprehend, because it is so different from their former beliefs. They are apt to overlook the fact that if these beliefs had brought satisfactory results, they would not be investigating Christian Science. It is also important to remember in this connection that the great Teacher did not say much about prayer until he had uncovered the false concepts which he found prevalent; as, for instance, when he warned his listeners against public prayers and "vain repetitions." He taught that men's hearts must be purified from hatred and lust, and that their allegiance to God must leave no room for mammon worship, the loyalty demanded being so inclusive as to lift thought constantly from the material to the spiritual. He said, "Take no thought . . . for your body;" but, "seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you."

All this and much more is found in the sermon on the mount (as given in Matthew v. to vii. inclusive). Here also is given the Lord's Prayer, the prayer which, as Mrs. Eddy says, "covers all human needs" (Science and Health, p. 16). According to Luke, this prayer was not given until the disciples asked, "Lord, teach us to pray." They evidently did not see that every word which he gave them pointed to true prayer; that, if they understood "the everlasting Father" and knew what it meant to be His children, they would see the needlessness of besieging Him with requests. In the earthly home where right conditions prevail, the children do not need to clamor for bread, nor do "the lilies of the field" cry out for their clothing. Well might the Master say (John xvi. 23): "In that day [when all this is understood] ye shall ask me nothing;" but until then it was, "Ask, and ye shall receive, that your joy may be full;" and know that when you need bread, the Father will not give you a stone.

The great need, then, in prayer is to understand God well enough to love and trust Him absolutely—for health, for strength, for life, for all! Even with the first unfolding of this understanding we begin to pray somewhat as Jesus did. In his prayer at the grave of Lazarus he thanked God for the knowledge that God always heard his prayer; then, in that wonderful seventeenth chapter of John, we

Digitized by Google

have a prayer of affirmation which rises wholly above the material and thus calls down infinite blessings. Many such prayers are to be found in the Bible, one of the rarest being in Ephesians iii. 14-21. This is for "the whole family in heaven and earth." It lifts us far above mere petition, into the realm of spiritual demonstration, until we realize that we are "filled with all the fulness of God."

Such prayers need no human model, for as Christ Jesus said, "It shall be given unto you in that same hour." Christian Scientists bow in lowly reverence before the infinite Mind, and, divinely guided, offer the prayer that heals sickness and destroys sin; and this recalls the assurance, "Lo, I am with you alway." What more can they ask than to know this?

ANNIE M. KNOTT.

THE APPEAL TO REASON.

THE familiar saying that a given statement is reasonable may mean very much or very little. A proposition may appear reasonable to one simply because it is in keeping with his point of view. This point of view may be utterly erroneous, and yet when accepted as a basis of thought it warrants every conclusion logically drawn from it. The logic or reasoning is all right, though its outcome is all wrong. When thus identified with false thinking, reason is likely to fall into ill repute, and this explains the fact that by many reason is regarded as unreliable, as an enemy rather than a friend of faith. The reasoning process has been confused with erroneous belief, a false concept of things, and it suffers in public estimate thereby.

One of the earliest prophetic calls is voiced as the word of the Lord, saying, "Come now, and let us reason together:" and Jesus' entire ministry was an appeal to intelligent, discriminating judgment, to the wisdom of logical, well-grounded thought. In keeping with this, Mrs. Eddy declares that "God has endowed man with . . . reason, and conscience;" and that she won her way "to absolute conclusions through divine revelation, reason, and demonstration" (Science and Health, pp. 106, 109). Reason is thus given the rank of a divine attribute which appears in man, and the naturalness of this is seen when we remember that all right thinking is consistent, and that a logical process of thought is but a statement or projection of perception. The conclusion, which is always contained in the premises, has simply been seen; the truth has not been added to, it has been disclosed, apprehended.

This being understood, it is well to remember that "the wisdom of the world," as St. Paul declares, "is foolishness with God." In and of itself it has never been able to solve the human problem, or to effect in men the realization of their better selves. Undirected by spiritual perception, the exercise of the reasoning faculty can but lead one astray. The world is full of logical reasoners who are in bondage to error, and so-called common sense is largely constituted of their wrong conclusions. Hence the need of assuring ourselves not only of the correctness of our order of thought, but of the truth of our basis of thought.

All Christian teaching has declared for its own reasonableness, and yet the history of this teaching has been a record of violent contradictions, of continuous war among well-meaning reasoners. Christian Science is a distinct appeal to thinkers, and it emphasizes the fundamental requirements of right thought, namely, that the premises shall be true and the deductions therefrom logically drawn. Postulating the God whose nature is defined by Christ Jesus, and reasoning therefrom as to the nature of His universe, including man, Christian Science proves the verity of its postulated premise by the demonstration of its logical deductions therefrom, so that every healing work gives added ground for faith, even as Jesus declared when he plead with his people to believe for his "works' sake." However legitimate their process of thought, so long as men reason from a false basis, so long will the conclusions reached fail to subserve spiritual ends. The kingdom of heaven is built upon the rock of eternal Truth, and Christian Science is invulnerable in its demand that "perfect God and perfect man" shall be "the basis of thought and demonstration" (*Ibid.*, p. 259).

Truth is reasonable in its every appearing, and the true believer is he that is able to give an intelligent and provable explanation of his faith. He uses reason at every step of his advance, and it is made reliable and effective as a result of the fact, as Mrs. Eddy has said (Science and Health, p. 268), that "belief in a material basis [of reasoning] . . . is slowly yielding to the idea of a metaphysical basis, looking away from matter to Mind as the cause of every effect."

JOHN B. WILLIS.

AMONG THE CHURCHES.

LANSING, MICH.

The finishing touches are being placed on the interior of the new Christian Science church building at Allegan and Walnut streets, and it is planned to hold the first service in the new edifice on Sunday, March 5, or March 12 at the latest. After the custom of the denomination, the dedication will be deferred until the building is entirely paid for.

The new building, while not costly, is one of the most beautiful and artistic church edifices in the city, and the only one of its particular style. The architectural style is Grecian and is of the design used extensively for Christian Science churches today. The auditorium will seat four hundred and sixty-five, and the foyer at the rear, which will seat seventy-five more, can be thrown into the auditorium by the opening of windows.—*Lansing Journal-Republican.*

BLACKPOOL, ENGLAND.

There was a remarkable gathering on Wednesday night [Dec. 28] at First Church of Christ, Scientist, Egerton road, Blackpool. It took the form of a thanksgiving service, and the proceedings were on the lines of a Methodist "love-feast" or a Salvation Army "experience" meeting. There was a very large congregation, and the proceedings, which were timed to last one hour, included the usual opening and closing religious exercises, the reading of selected passages of Scripture, each passage being followed by correlative passages from Science and Health, the standard work by Mary Baker Eddy, the Founder of Christian Science. Following this came four-and-twenty spontaneous testimonies to the physical and spiritual benefits derived by adherents from their acceptance of the tenets of Christian Science.

Whatever view one may take of Christian Science, its Founder and its fundamentals, there could be no questioning the downright sincerity and simple faith of those who testified on Wednesday night to blessings and benefits experienced. Mrs. Eddy's followers in Blackpool are certainly earnest and sincere followers of "the light" as revealed to them, and there could be no questioning the reality, to them, of "the faith that is in them." Nor were the testifiers of the weak, hysterical, or uneducated class. Every testimony was the outpouring of a reasoned experience, based on logical deductions, and intelligently presented, and the speakers had all evidently made a close and friendly study of the writings of Christian Science teachers. One feature of the literature of the sect is that it leads its students to a closer acquaintance with the Scriptures. That it "explains" and "interprets" the Scripture in accordance with the tenets of its own faith is another matter. The fact that it promotes a study of the Scriptures must be counted in its favor.

THE LECTURES.

RICHMOND, ENGLAND.

Bicknell Young lectured on Friday last week [Feb. 10] to a crowded audience at the Castle Rooms, Richmond, on Christian Science.

Captain Baynes presided, and in introducing the lecturer referred to the late Mrs. Eddy, the Founder of Christian Science, who by the publication of her text-book, Science and Health, had helped many thousands of people in different parts of the world to understand its meaning. He thought they must agree with him that the world was far from what it might be if they could eliminate those causes which bound man to suffering and sin, and it was wise to discuss the way wherein mankind might be relieved from that suffering. Proof was not wanting that Christian Science had come to the rescue, and that its claims were supported by practical demonstration. If he had found much that was difficult in Mrs. Eddy's book, he felt that this was due to what was wrong in his own mind and not the fault of the book. He asked for Mr. Young a sympathetic hearing.—*Surrey Comet.*

CHAMPAIGN, ILL.

A well-attended lecture on Christian Science was given at Walker Opera House Sunday afternoon [Feb. 12], under the auspices of the Christian Science society of Champaign. The lecturer, Frank H. Leonard, was introduced by G. W. Carothers, who said in part,—

Ten years ago I was a very sick man. For fifteen years I had scarcely known what it was to be free from pain. A number of physicians, most of them grand men, had done all they could for me. I had gone to sanitariums, mineral springs, and had taken many kinds of patent medicine, and yet I continued to grow worse. In the year 1900, while traveling through Michigan, I met a friend who I knew had been very sick. He said to me, "I am well, and Christian Science has healed me." Four days later I secured a copy of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker Eddy. I began to read this book in the afternoon and continued to read most of the night. The following morning I realized that what I had read had done more toward healing me than all the medicine I had ever taken, and from that day to this Christian Science has met and destroyed every disease condition that has presented itself to me.—*Champaign News.*

SALT LAKE CITY, UTAH.

William D. McCrackan, M.A., member of the board of lectureship of The Mother Church in Boston, Mass., delivered an address on Christian Science, under the auspices of Second Church, before an audience that completely filled the Salt Lake Theater in this city last night [Feb. 12]. W. I. Snyder, a prominent member of the Christian Science church of this city, introduced the distinguished speaker to the audience, saying:—

There is perhaps no subject today upon which the general public talk so much and with as little accurate information as a foundation, as upon Christian Science. One of the purposes of this and similar meetings is to correct these erroneous impressions as to the fundamental basis of Christian Science. If we begin with a foundation upon which all can agree, and use this position as a premise, and if the argument proceeding therefrom is without fault as to sequence and is therefore logical, the conclusion reached should be equally self-assertive and harmonious.

I take it that all Christians, and many others who do not profess to be Christians, do not hesitate to acknowledge the existence of a "great First Cause," or, in other words, God. Christian Scientists not only share in this belief, but they go a little farther, in seeking to know God. Many religiously inclined persons, if asked in what form God exists, would either hesitate to hazard an answer, or, adopting the orthodox statement of the Bible that God created man in His own image, would say that the likeness must be equally reversible; therefore God is like a man.

Christian Scientists believe that God created man in His own image, but that it was the spiritual man who was so created, and that this has no reference whatever to the material body. All of us who had Christian mothers were told in our childhood a few things about God which, while clothing Him with man's likeness and consequently his attributes, it was impossible for us to understand. We were told that God is everywhere; that God is love; that He understands our innermost thoughts; that His all-seeing eye is constantly over our actions; but did we understand how this could be so? I for one did not.

Christian Science teaches us all these things, and also teaches us how to understand them. If, as we believe, God is divine Mind and divine Spirit, pervading, controlling, and directing every part of the universe, including man, then it becomes easy to understand that the spiritual man is the image and likeness of God, and that Principle, Life, Truth, Love, infinite goodness and power, which many regard as the attributes of God—are God Himself. Mrs. Eddy, our revered Leader, teaches us that a part of the work of Christian Scientists is to assist men to a better knowledge of God; likewise to follow the teachings of Jesus the Christ, the great Wayshower, and to heal the sick, sinning, and suffering of the world.

I believe that all Christians will agree with us that Christ healed all manner of sickness, besides reforming the sinful and comforting the sorrowing, but they say, and many believe, that this Christian healing practised by Jesus belonged exclusively to that age and not to this. Why should this be so? Why were the health, morals, and comfort of God's children any dearer to Him then than now? Christian Scientists believe that God is with us now just as He was then, and that by understanding God, believing in Him, we may accomplish here and now all the results which Jesus accomplished; for he said: "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."

If any of the claims made by Christian Scientists, including the words of the speaker who shall address you this evening, strike you as extreme, or too good to be true, please remember that Christian Science asks you to believe nothing—except what can be proved true. Paul's words may be safely followed: "Prove all things; hold fast that which is good."—*Herald-Republican.*

SANTA CRUZ, CAL.

That there is a wide-spread interest in Christian Science was demonstrated by the large and representative audience of the best people of the city at the Opera House last evening [Feb. 16] for the lecture by Bliss Knapp. Robert Fitch, a former Santa Cruzan, came down from San Francisco to introduce the speaker. His remarks were in part,—

In all open-mindedness, most of us will admit that any science, any religion, any belief which uplifts or tends to uplift humanity, or to make easier and finer the life of a single human being, is a thing decidedly worth consideration. Without going into the deeper religious aspects of this Science, let me tell you briefly what this movement which has been growing for nearly fifty years means. It teaches us, and guides us to what should be our ultimate aim, perfection. It is founded on broad fundamentals of right thinking, right living, of doing the day's work with the absolute belief in the ability, desire, and certain willingness of a divine Providence to guide and direct us to sure success. It teaches us that there can be no evil in the real

Digitized by Google

man, because man is made in the image of God, in whom there is no evil.

Christian Science does not attack other Christian beliefs. It does not deal in criticism of any existing practice or form of belief. It goes no farther than to teach right thinking and right living, trying to bring love rather than fear to the forefront, trying and many times succeeding in bringing happiness and joy of life to humanity. If it can do this for even a few, it has served a great purpose. At least it warrants serious consideration, and in the interest of the greatest good for the greatest number we should pull down the fence of intolerance, all sense of superiority or bigotry, and give this new idea, this new teaching, called Christian Science, the privilege of examination before open-minded, clear-headed, thinking people.—*Santa Cruz Surf.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Albion, Mich.—Clarence C. Eaton, W. C. T. U. Hall, April 6.

Astoria, Ore.—William D. McCrackan, M.A., Red Men's Hall, 9 p.m., April 8.

Bangor, Me.—Rev. Arthur R. Vosburgh, City Hall, April 6.

Cambridge, Mass.—Rev. William P. McKenzie, Scenic Temple, Temple street, near Central square, 3:30 p.m., April 2.

Chadron, Neb.—Bliss Knapp, Loomer Opera House, April 3.

Charleston, S. C.—Frank H. Leonard, Freundschafts Bund Hall, George and Meeting streets, 8:15 p.m., March 31.

Deadwood, S. D.—Bliss Knapp, Opera House, 3 p.m., April 2.

Evanston, Ill.—Clarence C. Eaton, Church Edifice, Chicago avenue and Grove street, April 4.

Florence, Col.—William R. Rathvon, Houston Opera House, 3 p.m., April 9.

Keokuk, Iowa.—Francis J. Fluno, M.D., Grand Opera House, April 6.

Laconia, N. H.—Rev. Arthur R. Vosburgh, First Unitarian Church, April 7.

Manchester, N. H.—Frank H. Leonard, Joliette Club House, April 3.

McGregor, Iowa.—Francis J. Fluno, M.D., Sullivan Opera House, April 4.

Muscatine, Iowa.—Francis J. Fluno, M.D., Grand Opera House, 3 p.m., April 2.

New York, N. Y. (Fifth Church).—Prof. Hermann S. Hering, Church Edifice, 228 W. 45th street, 3:30 p.m., March 26.

New York, N. Y.—(Society of the Bronx).—Prof. Hermann S. Hering, Bronx Masonic Temple, 1931 Washington avenue, 3:30 p.m., April 2.

Norwich, Conn.—Prof. Hermann S. Hering, Y. M. C. A. Building, April 3.

Paris, France.—Lecture announced for April 13, postponed.

Pendleton, Ore.—William D. McCrackan, M.A., Oregon Theater, 8:15 p.m., April 3.

Portland, Oregon (First and Second Churches).—William D. McCrackan, M.A., Heilig Theater, 2:30 p.m., April 9.

Quincy, Ill.—Francis J. Fluno, M.D., Empire Theater, April 7.

Reading, Mass.—Prof. Hermann S. Hering, Masonic Hall, April 4.

Santa Ana, Cal.—Willis F. Gross, Church Edifice, Sixth and Sycamore streets, April 7.

Sherman, Tex.—Willis F. Gross, Sherman Opera House, March 27.

St. Louis, Mo. (Joint lecture, all churches St. Louis field).—Willis F. Gross, The Odeon, 3 p.m., April 2.

Wellesley, Mass.—Frank H. Leonard, Union Hall, South Framingham, April 4.

TESTIMONIES OF HEALING.

It is with sincere gratitude for the many benefits which Christian Science has brought me that I give this testimony. When I first heard of it, about three years ago, my brother was taking treatment for lung trouble, and he was improving wonderfully. Whenever he would get me alone he would tell me how well he was and what Christian Science was doing for him. He would talk to me for hours, but I never thought that some day this truth would save my life and limbs. I used to wish that he would talk about something else, in fact I always tried to avoid him when alone; but since then I have learned to know that what he was trying to tell me was the truth. Not long after that, however, I had an experience which brought me out of darkness into the light that never fails.

During the month of May, 1909, while at work mixing metals in the Brooklyn navy yard foundry, I was tempering a pot of molten brass, and received a small scratch on one of my fingers. Not having time to attend to it then, I let my finger go until I could find time to clean the wound. In two days my finger started to swell and pain me, and the master molder said I should go at once to the doctor; that I had been poisoned. I went to the navy yard doctor, who dressed the wound and told me to call on him again that night before I went home. When my day's work was over I called on him again. He examined and dressed the finger and told me to report to him twice a day. When I reported to him the next morning he consulted another naval surgeon, and they opened the wound; but my hand was terribly swollen when I reported to him on the fourth day. He took my temperature, then told me I would have to go home and put myself under my family doctor's care, as I had the worst case of poisoning he had ever seen. He said they had done all they could for me, and he kindly offered to come and see me.

I cannot tell how I felt from this day on, to think that two of the best surgeons in the United States navy had told me they could do nothing more for me. I feared that I might lose my arm, and possibly my life. I went home, and called on my own doctor, one of the best in his line in the city of Brooklyn, and told him what the situation was. I watched him closely when he was looking at my wounded finger, and when I saw him shake his head I said to myself, "It's all over with me." For five or six weeks I did not get more than one hour's sleep in twenty-four hours, my finger getting worse every day. To make matters harder for me, my arm just below the shoulder became affected, and this puzzled the doctor. In one month I had lost a good deal in weight, and after I had visited this doctor thirty times he told me I would have to be operated upon. I told him to go ahead and cut away if it would save my life; as I had given up all hope of my arm being saved. The doctor made a deep incision on my upper arm, and watched it for a week, but the arm did not get any better. He said I would have to undergo another operation, which he performed. I had to go daily to have the wound cleaned and dressed, which was very hard to endure. The pain was very bad, and my finger and arm were getting worse every day.

I had never said a word about the accident to my brother, until one day he came to my house to see me. When I told him what the trouble was, he started to tell me what Christian Science had done for him, and he said it would do as much for me if I would listen to what he would tell me. I was then only too glad to take his advice. He said a prayer for me, and told me how to carry myself when I went up to see the doctor that night. He then left me, and I went to see the doctor, as I had been doing for two months. In two days I received a letter of introduction to a Christian Science practitioner in New York, and thanks to him who took me in this hopeless, discouraged condition, and led me from misery to health and happiness.

Digitized by Google

I never knew that people could be healed by listening to the truth, but I have since found it to be so. From the first day that the Scientist started to instruct me my finger and arm began to improve, the swelling slowly disappearing, and I was getting the much-needed rest at night. I had received these benefits in one week, and I was like a prisoner who had been set free. The practitioner gave me books, including a Bible, to read, and from then on I was coming to myself again. I regained all my weight, and one day when I saw my doctor he told me I could thank God for my cure. When I got so that I could report to the naval surgeons, they patted me on the arm and told me I was a very lucky young man to have my arm on my body. Thanks to God and to Christian Science for this!

Christian Science has not alone lifted me out of my grave, but it has helped me wonderfully in my daily work and in my home also. It gives me confidence in doing my work, and I have called on God to help me when I was up against it in making test metals, and He has always answered my prayer. I am today in first-class health (thank God), and I can carry a ladle of hot metal with the strongest men in our foundry, and all this came to pass in seven months. My only wish is to become a more worthy child of God, which I am trying to do by reading the Bible and Science and Health and attending the Christian Science services. I can be seen at the Brooklyn navy yard foundry any day but Sundays and holidays, to show proof of what I say in this testimony.

DAVID HENRY MCELROY, Brooklyn, N. Y.

I am happy to say that the testimony of my brother, David H. McElroy, is the absolute truth. Any one reading it can hardly imagine what a physical wreck he was at the time I asked him if he was ready to take up Christian Science; but I saw he was seeking the truth, and I presented it to him to the best of my ability. Christian Science has not only healed him physically, but also healed him of the desire for drink and the use of profane language. His home is today one of the happiest that any person could wish to visit.—GEORGE A. MCELROY, Summit, N. J.

I wish to express my heartfelt gratitude to God for my healing, and to Mrs. Eddy for showing us the way to be healed in Christian Science. Four years ago last March I took up the study of Christian Science for physical healing, having suffered for two years with a skin disease affecting the face. Two of the best physicians in this city were unable to help me, but I turned to Christian Science and in two treatments I was healed. I also had an abscess of the eye, and as I had experienced the same thing when I was fifteen years of age, and had suffered severely, having to stay in a darkened room for a number of weeks, I was somewhat alarmed. I however asked for help in Christian Science, and in two treatments I was perfectly healed and have remained so ever since.

We are a family of six, and we have all been greatly benefited through this study. It seems that we never knew how to live before, but we are all striving for that Mind to be in us which was also in Christ Jesus. We are truly grateful for Christian Science and the understanding which we have of it.—LIZZIE E. HOWARD, Lincoln, Neb.

Our Leader tells us in the Manual that "testimony in regard to the healing of the sick is highly important," so I send mine, hoping that it may be a help to some one. I was led to study Christian Science through the healing of our son. He was always delicate, and at an early age seemed to suffer from catarrhal and bronchial trouble. From this time on the family physician was a frequent visitor at our home. As the boy grew older he had a cough for several years. During his thirteenth year we took him to the best physicians in the state, but they gave us very little encouragement, and said that it was necessary to have two operations performed on him at once. This was done, and for several months after his return from the hospital he was better; then the old conditions reappeared, and it seemed that he could not live much longer.

At this time, when I was almost overcome with fear, a dear friend offered to give him Christian Science treatment, and as I had lost all faith in material remedies I was glad to grasp at anything that promised relief. He was given treatment and gradually brought back to health, and I know that he will gain even more as we both acquire a better understanding of the truth. He has also been healed of earache and of a partial deafness which had been a great hindrance to him in his school work for several years.

Since taking up this study, over three years ago, I have been greatly benefited both physically and spiritually, and for these great blessings I am thankful to God. I am also grateful to our dear Leader for Christian Science, which is leading mankind out of darkness into light.

MRS. ELLA MORGAN, Bowie, Tex.

A copy of Science and Health had been lent me, and though I could only keep it one day, I felt it did me much good. I took the first opportunity of attending a Thanksgiving service in this town, to see what Christian Science was, and I was much interested in the testimonies, but did not make up my mind to see a practitioner for three months. I was at that time suffering, and had been for twelve years, from catarrh in a very aggravated form. I had been under medical treatment without getting any relief whatever, and I then went to a specialist, whose medicine gave me temporary relief. It made me feel very ill, however, and the outward appearances of the ailment were very noticeable.

I finally went to see a Christian Science practitioner, had a talk with her, and came out of the room healed and with no sign of the ailment left. I felt very grateful, but beyond going to one or two services I took no further steps to learn more of Christian Science. In three weeks' time the ailment reappeared, and this time I went to the practitioner for treatment. In a fortnight I was cured, and have never had a return of the disease, although this is nearly three years ago.

The physical healing is small compared to the spiritual uplifting, and I am more than grateful to our beloved Leader for this great truth revealed to us in Christian Science.

EDITH DAVIES, Reading, Berkshire, England.

When reading the *Sentinel* week after week, the thought comes to me, Why are there not more testimonies from England? Then I realized that I was expecting more from others than I was doing myself. Others might well ask, Have you nothing to be grateful for? Are you hastening to thank God for all the benefits He has bestowed upon you through Christian Science? So I now, with shame for the long delay, send my testimony, hoping it may be of some help to others, or at any rate show that I am anxious not to be one of the nine lepers who returned not "to give glory to God."

It is about five years since I began to study Christian Science, though not at first for its healing; but before I had made many inquiries, a dear friend asked if she could help me. Not understanding what she meant, I said I would go on studying Science and Health, and if I should require anything explained I would come to her. She then told me what she meant, and I said I was thankful for being very much stronger than I had been, but that there were some internal troubles which I had suffered from since I was a child. She replied, "Why go on keeping a thing that does not belong to you?" and then she promised to help me if I would leave off all medicine for a week. I gave the promise very reluctantly, as I had had (or believed I had had) two strokes and had been told by the

Digitized by Google

doctors that another one might be fatal, and that one of the most important things was to avoid increasing the internal bowel trouble, for which I had taken medicine nearly every night for years. I gave the promise, however, and although I spent a week of fear and discomfort I was healed of this disorder and have never taken any drug or material remedy since.

I had worn glasses for over ten years, but I have been able to lay them aside, knowing that man's sight is spiritual; and I can now read, write, and sew by daylight and lamplight. I also suffered very severely from varicose veins, my leg feeling like a great weight to lift. This disease was healed and removed in less than thirty hours and has never returned. I had also a great fear of heart trouble, which I had been taught to believe might be inherited. I began to have some of the usual symptoms, and great fear caught hold of me, but I had treatment in Christian Science, and in a few days I was well. I now know that I can only suffer from my own wrong thinking, speaking, or acting, and from no one else's fear.

Twice I have had a sharp attack of lung affection, once before I knew about Christian Science. Then I was laid up with doctors and two hospital nurses for quite six weeks, besides being tortured by the severe remedies and half ruined by the expense. It was nearly three months before I could go about as usual. The second time, knowing well what was wrong, I wired for a practitioner to come to me, and she did her work so well that in three days I was out and attending a board meeting of our society. I had not stayed in bed, nor had I had a fire in my room, though it was a cold spring and the symptoms of this attack appeared quite as acute as in the former one. Many other things have I come out of through a better understanding of divine Love; but above all these physical blessings, for the uplifting and change in myself, words cannot express one half my gratitude. I must be far easier to live with now, since I am learning to set a watch upon my thoughts that I offend not with my tongue. I have proved over and over again that as we give out love to God and to our neighbor, so are we taking in a double supply, and also I have proved how true are these lines, written by a little Scientist,—

The power of love alone the world can sway,
Good must prevail;
If naught but love dwell in my heart this day,
Nothing I do can fail.

I do most deeply and with my whole heart thank God for His love and mercy in leading me into Christian Science, and I have the most loving and heartfelt gratitude to our brave Leader, who through untold opposition has by her steadfastness and love been the pioneer to Christian Science, helping and guiding her faithful students all over the world.

BLANCHE ROYDS, Havant, England.

Three years ago I heard about Christian Science, and it is with a heart filled with gratitude that I return thanks for what I have already received. I was never considered very strong, and all the money I could spare had to be spent on doctors and medicine. I was told that I would never be able to live in Kristiania. I then heard about Christian Science, and a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy was loaned me by a friend. It seemed quite wonderful what this book had to tell me, and I soon found that it was demonstrable truth. Science and Health told me that the healing Christ is here today, and also how to find Truth. I have never suffered since, and am perfectly healthy, able to work the whole day wherever and whenever my work is needed, and I have no sense of limitation any more.

Mrs. Eddy tells us that "action expresses more gratitude than speech" (Science and Health, p. 3), and I am striving each day to "go up higher," that my life shall prove my sincerity. I shall endeavor to show my gratitude by helping others as I have been helped.

MISS ANNA RASCH, Kristiania, Norway.

I am glad to tell what Christian Science has done for me, and I wish to express my gratitude for this wonderful truth and all the blessings it has brought me. Some time ago I fell on the icy street, and was seriously hurt internally, so that all so-called natural functions stopped. The same thing had happened to me many years ago, and I had to be under medical treatment for more than half a year. I felt very much alarmed and anxious, and the pain seemed very great. I did not send for a physician, but asked my daughter to help me in Christian Science. The next day I was much better and was able to take care of my house as usual, and after a week's treatment I was cured and did not feel any pain or experience any trouble at all.

I should like to tell at the same time, that I had suffered from an eruption on my neck and hands for more than two years, and had tried several remedies in vain. I asked for help in Christian Science, and after two treatments I was perfectly healed. For all this I am very thankful to God, and also to Mrs. Eddy for the new understanding of the Bible.—MRS. THEA RASCH, Kristiania, Norway.

I send this testimony in the hope that Christian Science will help some other, as it has done so much for me. I began to read "Science and Health with Key to the Scriptures" by Mrs. Eddy on the 25th of December, 1906, and consider it the most precious Christmas gift ever received by me, for I found through its teachings that God is Love, and is ever present; something which I had never realized before.

I had been afflicted for seventeen years with gall-stones, cramps, and an abscess in the region of the liver. I was operated on twice, but after the first operation my strength did not return, and after the second no better results followed, as the wound did not heal and the abscess kept forming. My physician informed me that neither he nor any other doctor could do any more for me, and that a third operation would mean death to me. Many times since then I have thanked that doctor, as his words caused me to look elsewhere for help. In coming home one evening, my husband was told by a friend who knew of my sufferings, of the Christian Science text-book, which had helped his wife and others whom he mentioned, and he advised him to get me to read it. I immediately got a copy from our library here, and such a relief was gained after I commenced to study it! Not only was I helped physically, but I received a spiritual uplifting as well. Where life was a burden before, it is now a joy. I certainly am grateful to God, and to our dear Leader for showing the way to God who heals all our diseases.

Some time ago I had a severe attack of illness which was met and destroyed within twenty-four hours, when under medical treatment I should have been kept in bed for weeks. Christian Science has taught me that God is All-in-all, that He is Truth, Life, and Love.

MRS. IDA J. HOLL, East St. Louis, Ill.

In grateful acknowledgment of the many benefits received from Christian Science, I gladly offer my testimony to the healing power of Truth. Some years ago my attention was directed to this teaching through the healing of my daughter, who "had suffered many things of many physicians, . . . and was nothing bettered." Although I gratefully witnessed her transformation from a condition of sickness and suffering to one of health and happiness, through the power of divine Love, I did not immediately turn to Christian Science for relief from my own difficulties.

Digitized by Google

Physicians had told me that an operation was necessary to relieve me of the trouble from which I had for several years been suffering, but to this I refused to submit, depending upon my own will-power to ward off the pain. This weak support failed me, and I then requested my daughter, who had become a practitioner, to declare the truth in my behalf. The pain ceased with the first treatment, and in one month the trouble had entirely disappeared. I had also been greatly troubled with rheumatism for several years, but this, together with several minor ailments, has yielded to Christian Science treatment. For the healing, and for many other blessings which have come to our home through Christian Science, I am deeply grateful.—Mrs. Ora M. Boorman, Oshkosh, Wis.

[Translated from the German.]

I feel impelled to testify to the healing of my sixteen-year-old daughter, who was treated for tubercular disease by the physicians in an infirmary. Four weeks after the operation the girl was placed in the room for incurable patients, and I felt I must have a talk with the physician. He told me, with a shrug of his shoulders and a doubting expression on his face, that she would not be able to take up her work for quite a while, that this disease was very stubborn and lingering and could not be cured completely anyway. While my daughter was in this condition, I took her home and had Christian Science treatment given her. To our surprise the journey home was effected without difficulty; she even walked for an hour on that day, whereas the physicians would not allow her to get up. She grew stronger with every day, and did the work in the house she was capable of. During the time she was having treatment some old conditions tried to manifest themselves, such as doubt, distrust, and weakness, but with the understanding gained through Christian Science everything became new; that is, I became convinced that Spirit has all power and can bring all things to pass; that God is All, and that He is good.

Our daughter now is well and strong, and in April of last year began to learn the dressmaker's trade. For the blessed help which I have received through Christian Science I am very grateful indeed, and am earnestly striving to live and work according to its teachings. Christian Science is indeed the only way to salvation whereby God heals all our diseases. I would also like to express my heartfelt gratitude to our beloved Leader, Mrs. Eddy, for all the good and the blessings which the members of my family have experienced.—Rudolf Widmer, Brugg, Ct. Aargau, Switzerland.

It is with sincere gratitude that I desire to speak of the great blessings that have come to me through Christian Science. About seven years ago I visited some dear relatives in a western city, and seeing the benefits they had derived from Christian Science, I returned home desirous of knowing what had accomplished such wonderful results. I purchased a copy of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and threw away the medicine I had always kept on hand for severe attacks of stomach trouble with which I was then suffering and which were accompanied with periodical attacks of headache. I had sought aid from both schools of physicians, who informed me that I must diet in order to get well.

I became discouraged, as all the material remedies tried had failed to heal me, and I sought aid of a Christian Science practitioner. I was helped immediately, but was not entirely healed until many months afterward. By the persistent effort and kind encouragement of the practitioner, I was led to see more and more of the truth that makes free, and now I can say, "Thanks be to God, which giveth us the victory through our Lord Jesus Christ." I can eat anything I desire without any sense of suffering. I have been healed of bowel and throat trouble, and have been able to lay aside glasses which I had worn for some time.

One day my mother was suffering intensely with an affection of the eyelids, and asked me if Christian Science could help her. A practitioner was called, and before giving her treatment he asked her if there was anything else she would like to mention. She informed him that she had suffered for thirty years with hemorrhoids. In less than one week both of these conditions were entirely overcome. My mother had been informed that there was no help for the latter except an operation, to which she would not consent. It is impossible to enumerate all the blessings which come to us daily. Christian Science not only brings freedom from physical conditions, but it teaches us how to weed out the undesirable traits of character, and in their stead to plant seeds of kindness, patience, and love, and thus "put off the old man with his deeds" and "put on the new man, which is renewed in knowledge after the image of him that created him."

I have found Christian Science a great help in the school-room. I cannot find words to express my gratitude for the understanding of the Bible that comes to me daily from the study of the Christian Science text-book. My heart is full of praise and gratitude to God, and to our Leader, who has revealed to us this wonderful truth. My earnest desire is to live Christian Science, and thereby help to make the world better.—Miss Maria Graybill, Dayton, Ohio.

For nearly three years I suffered from a form of paralysis and its attendant ills. During this time I was under the constant care of various medical systems, and left them only when word was passed that they held nothing further for me. Reduced greatly in weight, exhausted physically and mentally, without understanding, faith, or belief, but in sheer desperation, I came to Christian Science solely for physical help. One treatment practically healed me, although it took me about a week to realize the fact. Ever since this regeneration I have been trying to gain a knowledge of the saving healing Principle, and in this continued effort to grasp and prove the Christianly scientific verity that God's man, Mind's idea, His "image and likeness" is "thoroughly furnished unto all good works," or, as Christian Science restates it, God's man is "incapable of sin, sickness, and death" (Science and Health, p. 475), I have been able to gain some glimpses of man's unity with God and the unbroken harmony and eternality of the divine economy. The effort to efface self and render unto God His own, one's entire consciousness, is not without its struggles—error seems to die hard; but the right idea, the Christ-idea, is leading and will forever continue to lead us all to higher mental altitudes and to freedom—freedom from all fear, ignorance, sin, disease, death. For my physical healing and this knowledge, I give to God and His Science my thanks and my gratitude.

Charles T. Briggs, Detroit, Mich.

I was asked by a friend why I became interested in Christian Science, so I gave him the following reason: I was troubled with an eruption on my hands, neck, and face, which for over twenty years appeared every spring and lasted about six weeks. I tried every remedy I heard of, besides consulting several specialists, who all told me the same thing, that the disease was incurable; that they could give me something to drive it back, but that it would come out again the next spring.

I had been moving around to different states and climates, looking for health, till over three years ago I came to California. I then happened to get work with a Christian Scientist, and he told me the first that I ever heard of this teaching. I was not a believer in any religion.

Digitized by Google

but having tried everything else I thought I would give Christian Science a good fair trial. I believed that it was possible for God to heal anything if He wished to do so, and I called on a practitioner. By the third treatment the disease had entirely disappeared, and there has been no sign of it since; so that is why I am studying Christian Science.—M. HARRIS, Oakland, Cal.

My little boy had the measles when he was about four years old, which left him with abscesses in both of his ears. I took him to a doctor to be treated, but without success. I was advised to take him to a specialist, but a neighbor asked me to try Science, so I took him to a practitioner, and she treated him. He was listless and looked very sick, the bowels too were in a very bad condition; but in three or four treatments the discharge from his ears stopped, his hearing returned, and he was well and out to play.

MRS. MAE WELSPIEL, Oakland, Cal.

I was given up by the physicians nine years ago, from lung disease. I was confined to my bed, and the doctors said they could do no more than to give me easing medicine. We then applied for Christian Science treatment, and in one week from the time treatment was commenced I was able to go about my work as usual. I have also had help several times in my family, and have always been benefited thereby.—MRS. LILA CLARK, Columbus, Ind.

[Written for the *Sentinel*]

THE MASTER'S CALL.

MARY A. NEWMAN.

INTO a desert place come ye apart,
The loving Master said, and rest awhile:
For earthly hopes and joys have claimed thy heart
And human ways and means thy thoughts beguile.
Ye cannot hear me as ye pass along,
Lured by the pleasures of the busy mart;
My voice unheeded falls upon the throng:
Into a desert place come ye apart.

Have ye no leisure for the needed food,—
The grace and guidance for thy daily bread;
Into a quiet place of solitude
Come, rest awhile, the loving Master said.
This is thy call to me, O Saviour mine!
And gladly, thankfully, will I obey;
Will simply place my trembling hand in thine,
And trusting, follow where thou lead'st the way.

The way thou choosest is the path for me;
Amid the bracken, thorns, and rugged stone;
What sweeter benediction can there be
Than in a desert place with thee alone?
And in the sweet communion of that rest—
Learning anew the lesson, Peace, be still—
In meekness would I wait on thy behest,
In deepest joy thy loving word fulfil.

And as I tread the path where thou dost lead,
A fairer vision dawns upon my sight:
Blossoms are springing on the dewy mead,
And all around with peace divine is bright.
And now my prayer shall be for grace to live
With thee in closer conscious unity;
And from the fulness of that grace to give
A sympathy divine—reflecting thee.

FROM OUR EXCHANGES.

[Rev. F. Stanley Van Eps in *Christian Work and Evangelist.*]

God is worshiped in spirit and truth today as never before. This is not confined to a church building or to the services held in church. The home is more than the church, being the very ideal of the church. The real sanctuary of God is within man. Great as may be the help of the outward, the inward is of supreme importance. What Jesus told the woman at the well is today known with greater clearness far and near than ever before—that "God is a Spirit," and the true worship is "in spirit and in truth." The outward flows from the inward, as the voice expresses the inward worship. A heart full of praise has what naturally finds utterance in song and in speech and in action. Growing fulness of the spiritual life must find new forms of expression. In music the last composition has not been made; why should it be supposed that religion has found its final expression, that church attendance is the true test of real spiritual life, that the passing of old things of outward form in church matters means the decline and fall of the church? Are we to have no houses now that our forests are passing? Today the cement materials for construction have been brought to such perfection that we shall build houses proof against the hazards and the inconveniences of the wooden structures of the past. Our life is more secure and more comfortable and better than ever before. Religion is more secure and more according to the truth, and more satisfying and effective in practical living right here, and richer in its promise of eternity, than ever.

[Rev. Anson Phelps Stokes, Jr., in *Outlook.*]

The effect of the possible repeatability of the spiritual experience of Jesus is to exalt him, not to lower his dignity. It makes him more than ever the Saviour of humanity. Explorers may come afterward and develop the land of the spirit, but the discoverer of its possibilities will always remain a unique figure in the world's history, one who cannot properly be grouped with Moses and Luther, except as sharers of the same divine inheritance.

If Jesus is held up to us, as was the custom of old, as the very God Himself,—rather than as the most perfect manifestation of God,—if we preach that his purity is inimitable, that his feeling of unity with God cannot be repeated, then his temptations seem hollow, his prayers unnecessary. He becomes an unreal figure with little meaning for us. But if we feel, as frankly I feel, that the God to whom we pray is exactly the same God to whom he prayed, that Jesus is flesh of our flesh and blood of our blood, that there is no intimacy with the Father that he had which we cannot have, except always the profound difference between the discovery of a great secret and the repetition of the experience under the sure leadership of the discoverer; if we feel that he intended all humanity to realize perfect union with God, here or in the world beyond—then life becomes a thrilling opportunity for service.

[*Christian World.*]

When you voice your religion you expose it to every wind of objection. Put it into deeds and criticism is dumb. It is from his doing that we know what a man really believes. . . . The next great reformation in religion, we venture to predict, will be the application of this principle all along the line: it will mean a readjustment of emphasis, from words to deeds. We shall be charier of proclaiming our creed; more diligent in translating it into fact. And the power of religion will be looked for less and less in this business of verbal profession, less and less in chantings hymn-singing, and the whole round of observances with which the church hitherto has so much concerned itself;

Digitized by Google

more and more in the fruits of character, in being and doing. For religion, in these aspects of it, is always beautiful, always incontrovertible. You can no more refute it than you can refute a tree or a summer sunset. Its work is its own evidence.

[*Congregationalist and Christian World.*]

As for the individual, his life with God and Christ should become all the richer and more fruitful in these brightening years. Do you say: "But I do not see any particular trend to religion in my parish or neighborhood. People are just as cold and selfish and indifferent as they ever were." Whether you are right or wrong on that point, brother, the challenge comes anew to you to become one, even if the only one in the community, in whom the religion of our Lord and Saviour Jesus Christ is finding larger and more adequate expression day by day. Is the kingdom of God in your thought? Does the reality and sweep of it ever thrill your soul? Is it in your speech? Do you ever say anything to anybody that makes him or her think you believe with all your mind and heart in this kingdom? Is it in your prayers? Is it in your life, making you a little more friendly and self-controlled and patient today than you were yesterday?

[From *Republican-Sentinel*, Lamar, Mo.]

There was never an effect without a corresponding cause; if the pews of the church are vacant, there is a cause. The cause lies chiefly in the fact that the people desire the very things they fail to get. Whenever the church opens its door to the people, and it preaches and teaches and practises the religion of the early fathers of the church, there will be no empty seats. Simply because a man fails to attend church under present conditions, does not at all signify that he is an unbeliever. He wants a religion of help, one that strengthens and encourages him to nobler things, higher aims and more worthy acts. He believes that all men have a right to every blessing the church has in store for the people. Christianity teaches rationalism, common sense, and the true life.

[*Watchman.*]

The faith of Elijah reached that stage where it could move mountains and where nothing would seem impossible. This is the spiritual height to which our Lord pointed his disciples in telling them that if they had faith as a grain of mustard seed they could attain to it, and it is the standard which he has set for all believers in saying that whatsoever they ask in his name they shall receive, and if they ask anything it shall be done. There is a divine secret here which is discovered only by those who stand with God as Elijah did and gain his spiritual faith and power. It is such faith that brings impossible things to pass, not in an absurd or fortunate manner, but through a wonderful and revealing divine process.

[From a sermon by the Rt. Rev. Arthur F. Winnington Ingram, D.D., Bishop of London.]

He [Jesus] healed no one, as far as we know, by the art of medicine or of surgery, and though we are right in holding that he did it by the knowledge of some higher law than we know yet, and that all miracles will be seen some day to be like all other things in God's universe, "according to law," yet it was the very knowledge and the practical use of this higher law which among other things stamped him as more than man.

[*Examiner.*]

Jesus had no illusions with regard to the making of men better by improving their surroundings. He who knew the heart of man knew that the only way to make a man better was to purify his heart.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

ATTENTION IS CALLED to the new volume, "Poems by Mary Baker Eddy," now on sale. Specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

Attention is called to the following reprints printed in Swedish: "Hvad Ar Bön?" "Lagens Välde," "Det Ondas Natur," "Helvete och Himmel," "Människans Gemenskap Med Gud," "Verklighet," "Det Ar En Ström," "Förklaring Af Kristligt Helande," "Den Yppersta Egenskapen I Christian Science," "Underverken," "Det Ondas Ofvervinnande," "Var Väktare," "Riklig Tillgang," "Kristendom Och Vetenskap." Ten copies to one address, prepaid, 10 cents; one hundred copies to one address, 75 cents; five hundred copies to one address, $3.00; one thousand copies to one address, $5.00.

NEW MUSIC.

Two of our Leader's poems, "Shepherd, show me how to go," and "Love," set to music by Frederic W. Root, are now on sale by the Society, and attention is called to the advertisement on the inside back cover page of this week's *Sentinel* for description and price.

NEW POST CARDS OF THE MOTHER CHURCH.

Post card photogravure, in sepia tint; an exact reproduction of the large photogravure of The Mother Church Buildings and Publishing House with parkway in foreground. Single copy, 5 cents; twenty-five copies, $1.15; one hundred copies, $4.25.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist.—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE. June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.20. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the month, and include all issues for the month named as expiration date on the wrapper. XI indicates the year 1911; XII, 1912. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25	£0: 5 s.: 2d.;	Mk. 5.30;	F. 6.45
2.25	0: 9 : 3 ;	9.50;	11.60
2.50	0: 10 : 3 ;	10.60;	12.85
4.00	0: 16 : 5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The American section of the new world map, in which countries will be drawn on the same scale, that the relative size and characteristics of each may be shown, is progressing rapidly under the direction of the United States geological survey. Nine of the fifty-two sheets, each representing eighty-six thousand four hundred square miles, have been completed and surveyors and cartographers are working on the others, which, it is said, will be issued rapidly. The work is part of an international movement by nine of the more important governments, to each of which has been allotted a part of the world's surface for mapping. The scale of the map—one to one million—gives it its name—the international one-millionth map—and geographers say that it is the greatest step forward ever taken in their science and in cartography.

The corporation of Harvard College has voted that all Cambridge boys who come from high schools, and whose parents are unable to pay the tuition fee, are to be exempt from it during the freshman year; that, subject to the approval of the dean of the summer school, rates charged in the summer school shall be reduced for all Cambridge teachers; that all university athletic fields in Cambridge are to be offered as playgrounds to children in Cambridge during the summer, in so far as is practicable; that, upon request of the city, made to the president of the university, and with his approval, that expert advice on municipal affairs of the city, within reasonable limits, will be given gratuitously by members of the faculty.

Hundreds of billions of tons of coal, contained in the vast area of coal lands in the West, consisting of more than seventy million acres, are owned by the United States government according to an announcement of the United States geological survey. By a new method of selling this coal land on a coal tonnage basis the government will gain an enormous amount of money. The old way was to sell the coal lands regardless of value, at ten dollars an acre if more than fifteen miles from a railroad, or at twenty dollars if within the limit. As a result of the new method coal lands have been priced as high as four hundred dollars an acre, and in one tract at even six hundred dollars.

As the first direct result of the government's antitrust suit against the so-called electric lamp trust, the department of justice has received intimations that the prices of all electric light bulbs will be reduced 33 1-3 per cent all over the United States. By such a cut in present prices persons who buy the electric lamps will save more than six million dollars a year. The department continues to receive word that the various pools in the so-called trust are breaking up in anticipation of the suits which have been prepared.

The Roosevelt dam in the Salt Lake Valley, constructed for purposes of irrigation by the government at a cost of more than nine million dollars, was dedicated on the 18th of March by ex-President Roosevelt. It will irrigate over two hundred and forty thousand acres of land.

The federal automobile license bill provides a federal license, in addition to the local license, but exempts the automobile from the local licenses of other states through which it may pass. Provision also is made for the license of the automobile driver.

The joint resolution memorializing Congress to acquire the two famous groves of Calaveras big trees and conserve them in a national park, was adopted by the California Assembly recently and will be transmitted to the next Congress.

On April 10 and 11 the Massachusetts Institute of Technology will celebrate the semi-centennial of the granting of its charter.

The lower House of Congress has passed the Geran bill, which provides for sweeping election reforms in New Jersey.

International.

For the first time in centuries the baths of Diocletian of Rome, which originally covered a space a mile square, can once more be seen in all their majestic proportions. The baths, which were built in A.D. 305, fell into decay after the Gothic invasion of A.D. 410, and the halls which remained were gradually divided up and used as shops, coal stores, or stables. After innumerable changes of ownership the baths at length became the property of Signor Tittoni, the ex-minister for foreign affairs, from whom the government purchased the land and buildings last year in order to redeem the glorious ruins from destruction.

An extensive piece of reclamation work is to be done by the central division of the Canal Zone. The spot to be reclaimed does not lie within the central division, but it will serve as a place for disposing of the material taken from the Culebra cut. The area to be filled is the swamp lying between Ancon and Sosa Hills, and bounded on the north by the Panama railroad track, and is about sixty-eight acres in extent. The land will be brought up to the grade of the railroad tracks, which will require an average fill of between five and six feet.

The state premier has introduced a bill endowing and establishing a university in western Australia. It will be carried out on the lines laid down in a report of the royal commission. Although western Australia is richer in wealth, in population, and in state revenue than some of the other Australian states, yet many of these have already been for some time possessed of a university. The estimated cost of the university is thirteen thousand pounds a year, ten thousand pounds of which will be provided by the state.

Herr von Rath, a German diplomatist, is making experiments for the manufacture of briquettes from the sudd of the Nile, a weedy mass that constantly chokes that river. The sudd is first dried, then put through a disintegrator, from which it emerges in a powdery form, when it is converted into briquettes. The whole process occupies only a few minutes, and the heating value of the new fuel is said to be nearly two thirds that of coal. The cost of manufacture is very small.

A sum of two thousand pounds will be offered by the government in premiums to New Zealand architects for designs for the new Parliament buildings. The first prize will amount to one thousand pounds, the second to five hundred, the third to three hundred, and the fourth to two hundred. The competition will close at the end of July. The official specification provides for a chamber to seat at least one hundred members and a legislative council to seat at least sixty.

March 19 was observed as Peace Sunday in London. The archbishop of York preached at Sheffield, and from practically every pulpit in the kingdom the sermon was devoted to a eulogium of President Taft and Sir Edward Grey for their arbitration proposals. The free churches have arranged for a demonstration in support of the arbitration movement to be held in Albert Hall, April 1.

The United States representatives at the international opium conference at The Hague in July have been announced by the state department: Bishop Charles H. Brent of the Philippine islands, Dr. Hamilton Wright of Maine, and Henry J. Finger of Santa Barbara, Cal. Frederick L. Huidekoper of Washington has been appointed secretary.

Owing to the constantly increasing draft of merchant vessels and battleships, the charts of the world will have to be revised, as they chart rocks to a depth of only twenty-eight feet or less, while the draft of many modern ships is thirty-two feet.

The final provisional census returns give the population of India as three hundred and fifteen million. This is an increase of over twenty million as compared with 1901.

Industrial and Commercial.

In Maine the bill to create the Kennebec Dam & Reservoir Company, which has been called a water-power trust, has been referred to the next Legislature by the House. Powerful money interests and influences were behind the bill, and it had a bearing on many other bills that came up for consideration. Its indefinite postponement seems to indicate that the people of Maine are thoroughly awake to the necessity of protecting all of the state's natural resources for the benefit of the state.

The labor department of Canada is busy arranging for the third stage of the proceedings against the United Shoe Machinery Company of Canada, under the anticombine act which was passed last year by the Dominion Parliament. The first stage involved the lodging of a complaint, the second an inquiry to decide whether there was a *prima facie* case against the company, and the third the report to the labor department.

More than a million and a quarter of visitors and tourists yearly is the record attained by Berlin. In recent years the number of hotels has grown faster in proportion than the stream of visitors, and now an effort is being made to organize a hotel trust, in order to prevent too rapid construction and maintain prices at a remunerative level.

The Deutsche Bank of Berlin announces authoritatively that contracts for the extension of the Bagdad railway to Bagdad, for the branch line from Osmanich to Alexandretta and for the construction of harbor works at Alexandretta have been signed at Constantinople.

As the result of the fact that the state of Massachusetts issued last fall a list of farms for sale, numbering about five hundred, nearly one third have already changed hands, involving about a half million dollars in value.

The leading potato growers of Aroostook county, Maine, are contemplating the formation of a combination to govern the production and output, with especial attention given to the distillation of potato spirits.

Of thirty-eight states Massachusetts heads the list with thirteen per cent of the totals of quantity and value of the fisheries of the entire country.

The Pennsylvania railroad in 1910 carried one hundred and thirty-six million passengers without a single fatality.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE LOVING FATHER.

BLANCHE HERSEY HOGUE.

CHRISTIANS everywhere agree that God is a loving Father. Not so long ago His wrath was widely preached, but in the last two generations this fear has given way somewhat to a comforting belief that God may be trusted to care kindly for His children—even for those who err. A generous and forgiving God comes nearer to the heart of mortals than the image of a stern and relentless deity, and the evidences of human kindness alone are enough to persuade mankind that back of all scholastic interpretations God must be found in the end both loving and lovable.

Christian Science in its teaching and in its good works brings to light the loving-kindness of God. The allness of God is the foundation of Christian Science, and the presence and power of God understood and proved is the activity of Christian Science. To undo evil God must be made manifest, for nothing less than divine power can quench evil; and as the truth of being appears, sin and disease and all woe must in coincident measure disappear. This coming of Godlikeness, inasmuch as it puts away distress, is itself loving; and logically, the source from which such kindly power is put forth must be Love itself—that Love which the apostle John declares is God.

Mrs. Eddy in continuing John's use of the word Love for God, capitalizes it and uses it in the distinct sense of a synonym for God, in order that it may be distinguished from the human affections with their varying likes and dislikes. And perhaps the quality of loving-kindness,—that beneficence which shines apart from personal preferences and gleams impartially through every right desire, well expresses our highest grasp of the Love which is God as it appears among men. At all events, Christian Science is teaching us that God alone is Love; that this Love is continually going forth from its infinite source to sustain all its creation; that learning this Love and obeying it liberates us from the old fears of God; and that our divine inheritance provides matchless loving-kindnesses from God that will thoroughly and in all satisfying ways care for us in every hour of every day.

Students of Christian Science grant readily, so soon as they perceive the logic of divine law, that God must be Love, must be all good; and that evil, in the light of this ever-present divine good, has no power. Then our immediate work, after this conviction of Truth comes home to us, is to prove to what extent and in what way the understanding of Truth can rescue us right now from the supposed power of evil. By way of revelation we have in Christian Science the whole basic statement of what is true about God and man and the universe. As a matter of experience we have had to deal with a material sense of existence involving all the possibilities of evil. How this revealed truth is to alter and elevate the human experience, how it shall best lead each one of us out from error, is the problem Christian Scientists are solving. Individually we are to untangle ourselves from the mystery of evil and come into the knowledge of God. And in our endeavors we are never to forget that, because God is a loving Father, no place is too dark for His love to penetrate and no set of experiences is too complicated for His wisdom to make things right.

Suppose, then, that the victim of evil looks to the teaching of Christian Science for relief. He believes Christian Science to be true, has proved somewhat the goodness of God, and is honestly ready to obey the law of God so far as he sees it. Logically, anything that is not true can be proved untrue if we know enough of the truth. No ignorance, no mistake, no lie, can stand when that which is true concerning any matter appears. So, granting that Christian Science reveals the truth about all existence, this individual must come out from his mental assent to error in any given form and adopt in his thinking what he sees to be spiritually true. This changes the entire situation, including even bodily conditions, for what we cease to hold in thought we eventually cease to experience. And during this readjustment the Father's loving-kindness shows itself to us in a large measure of relief and comfort and healing, even though as yet we may not have cast out the whole of sin.

Concerning this latter point, divine Love does not wait until sin entirely disappears before it comes out to meet us, but, Lovelike, seeks us out and kindles, even while we may be yet in sin, the holy desire to be rid of sin. In exquisite tenderness Love goes in quest of that which needs it most; finds the feeblest stirring toward righteousness, and bears it to increasing victory. Manifestly we cannot as Christian Scientists grasp at once the whole of truth, nor can we by one effort abolish all that is fleshly. God is good, however, and since Christian Science reveals Him, it is practical. Thus the first touch of healing reaches to the deepest places of sin and pain; goes just where the most of us first need help. Christian Science must begin its work with us where it finds us—and will, if we are honest. Not the pride of human goodness in us, but eagerness to be rid of the error in and about us, opens the way for Christian healing. And neither the nature nor the amount of what we have called our sin can hold us from knowing better God's loving-kindness when we try genuinely to escape from at least some part of the sin we see today.

From this point of view, to be still under some material necessity does not disqualify us from disposing of the more aggressive errors that we do recognize. When the heart is honest in seeking good, evil that is exposed begins to lose its hold and the associated consequences of the evil begin to disappear with it. Christian Science, operating through divine Principle correctly applied to human affairs, is no readier to assist the saint than to assist the sinner who wants to overcome his sinning sense. So we need not be discouraged because we do not know all there is to be known about Truth; we are only to use the knowledge we have. And it is folly to postpone our trying because we feel that we are not good enough to merit God's care, since we cannot hope to be better until we obey in a straight, clean fashion what little we do know of His demands. Right endeavor, we are learning, is one with God, and must by

Digitized by Google

reason of its own righteous vitality, and because of the goodness of God, cancel whatever evil it is set against in any upward-tending human life; and in this commensurable daily reward for good effort, the Father's loving-kindness is truly manifest.

Of course it must be remembered that the divine tenderness which benefits human beings while yet they are transgressing in ways unseen to themselves the mighty demand of Love, is not in any sense condoning evil. Evil has no right to be comfortable, and under divine law it cannot be; but, so fast as evil is abandoned, God is found comforting His own,—this is the law of Love. When mortals cease to think evil, they cease to experience evil. When they stop thinking sickness, they stop being sick. Corrected modes of thought change definitely the outward phenomena, and we receive no more from God than we earn by casting out the opposite of God.

Yet, so strong is the human fear that we shall not be given even the good we earn, so active the tendency to prophesy evil, to accept failure,—to doubt, in a word, that God is good or that we are worth His care,—that Christian Science urges the constant remembrance of His infinite mercies. While from one point of view we can receive only the good for which we prepare a place, yet correlatively the loving-kindness of God must by its own law pour in upon us just as fast as its place is made ready. Experience may seem hard just because we fail to see this divine coincidence; but when the law of Love is understood and the oneness of right desire with its divine and eternal answer is perceived, no experience can be hard. All lessons then teach the same divine wonder,—that the dear Father of all is a loving Father, and that the welfare of every creature is His intimate and constant concern.

Christian Science, coming as it does to acquaint humanity better with God, has before it the task of clearing away all prevailing wrong notions about Him. It deals with systems and habits of thought, not with persons. It breaks down all theories which hold man to be in matter and so separated from God, and reveals man to be spiritual,—one with God,—as idea is held in the Mind wherein it originates. Under the influence of Christian Science its adherents are constantly lifting their thoughts to this spiritual manhood that is one with the Father; they see this understanding of God and man displace the material points of view which would declare man involved in the procession of sin, sickness, and death. As this spiritual outlook becomes daily more definite, the loving-kindness of God grows increasingly apparent, until from its shining presence the shapes of sin and disease will finally have fled away.

"For God so loved the world," wrote St. John, "that he gave his only begotten Son;" and, in truth, God so loves the world that Love is never absent from those who seek rightly its cleansing and all-satisfying offices.

THE BEGINNER AND THE BIBLE LESSONS.

WILLIAM TAYLOR STONE.

LAST winter the writer experienced the pleasure of seeing people skating on river and lake, and the evident joy and exhilaration of the skater proved so fascinating that it ended in the purchase of a pair of skates. The initial results were fairly satisfactory, but there was lacking that naturalness and ease conspicuous in more experienced skaters, so a kind-hearted stranger pointed out the way to overcome the difficulty, showing how ease and confidence might soon be acquired. The experience has not been forgotten, and has been recalled frequently when beginners in Christian Science have indicated that they did not realize the satisfaction they hoped for in the study of the Lesson-Sermon. After a little explanation as to how the writer studies it, or sometimes by going through a section with them, they have gone on their way rejoicing, the Lessons seeming to have a new interest for them.

It would be well if beginners knew the great gain in understanding which follows the thoughtful and systematic study of the Lesson-Sermons. It is helpful, when taking up this study, to pause for a few moments to recall the fact that the subjects have been chosen by our Leader and given to us that we may thereby gain a knowledge of the truth of being; that these subjects cover a wide area of religious thought and not one can be omitted, and that each one is of great value in helping us to gain an understanding of all the others. Take, for example, the subject "Atonement;" instead of asking oneself, What is my personal sense of it? one should rather ask, What does this subject mean to the world today? What is the effect of popular belief, as tending to a scientific knowledge of it? What is the metaphysical and scientific truth of atonement as it was exemplified by Christ Jesus? what the signification of its power and influence as taught in Christian Science? Then, when these questions have been mentally answered; and we remove from our thought preconceived opinions, traditional teaching, theological dogmas, we can in humility and with a loving joy draw near and take of the spiritual fruit which is there in abundance for each student.

If there is one thing for which students of Christian Science are grateful, it is for having been shown how to gain an understanding of the metaphysical truths or spiritual meaning of the Scriptures. It is of course very helpful to have a dictionary at hand, in order to get, not merely the commonly accepted meaning of a word, but its exact meaning. It is essential also to learn the metaphysical signification of words, as, for instance, the word "rock," which is described as a formation unlike sand or gravel, neither of which has adhesive or cohesive qualities. Thus, when we read, "The Lord is my rock," it at once suggests the immovableness of Principle. Then there are peoples and places,—such as the Canaanites, the Philistines, the Ammonites, Moabites, and so on; Canaan, Egypt, Sodom, Jerusalem, etc., all standing for conditions of thought, as we discover in studying the definitions found in the Glossary of Science and Health. Moses, for instance, is a mental type of morality, the enunciator of the moral law. Joshua and Abraham are types of fidelity and faithfulness. As we read of the latter we forget the man and see only the fidelity and faithfulness which is willing to sacrifice any personal issue, but never to waver or flinch before the most supreme ordeal. Science and Health says (p. 269), "Metaphysics resolves things into thoughts, and exchanges the objects of sense for the ideas of Soul."

It has been very helpful to the writer, when studying the Bible texts, to learn something of the thought underlying each passage by studying its surroundings as well as itself. Above all he has found wonderful help in studying the definitions given in the Glossary mentioned above. These are often given in the Lesson-Sermons, but one cannot be too familiar with them. As we gain a tolerably clear understanding of each text in the Lesson, the passages from Science and Health being read and studied prayerfully and carefully, its meaning and bearing with respect to the topic is seldom sought in vain. Happily there is no law or rule that one is expected to bring out any particular definition for the section, each one being left free to work this out for himself, the youngest student finding his need supplied as truly as the oldest. Having gained the fundamental thought, we can branch out and enlarge as well as apply it to our own personal problems in a practical way, for Truth heals every condition that needs healing, whether sickness or sin.

The Lessons are not given us as a puzzle to solve, but as a study of the given subjects in the light of Science. To the degree we imbibe the Christ-spirit we gain results that are of value, and the amount of prayerful thought and honest study put into each Lesson will be determined at the Sunday service with "signs following."

A HEALED NEWSPAPER.

HENRIETTA A. FIELD.

ONE morning the writer sat listening to the conversation of two gentlemen regarding *The Christian Science Monitor,* when these words fell on the ear: "The *Monitor,* you see, is a healed newspaper." Healed lives and limbs, healed hearts and homes were a common experience, but a healed newspaper was certainly a novel phase of Christian Science achievement. We had taken the *Monitor* from its first issue, had read it, recognized its great value, passed it on to others, and felt from the beginning that it was a wonderful demonstration; but those two words had given a strikingly new conception of its character and mission. With thought quickened and interest awakened, I watched during the following days of sojourn near its home for a fuller development of this idea.

A closer acquaintance soon revealed the strong similarity between a healed paper and a healed life, and as I followed the workings of truth through the every-day experiences of a newspaper office it became evident that "there are diversities of operations, but it is the same God which worketh all in all." The same spirit of love and wisdom which gave the Decalogue to Moses has its prohibitions for the man with quill and scissors, and the healing work begins with the elimination of a vast amount of material that the ordinary editor looks upon as his stock in trade. How carefully this eliminatory work is done, the reader, although a Christian Scientist, scarce can realize, nor will he appreciate how great a "manifestation of the Spirit" it may require to avoid the rehearsal of error in all its varied phases of crime, pestilence, and disaster, with their accompanying expressions of human pity, fear, and gloom.

To be sure, items regarding sickness, death, and trouble are noted, when of general interest and importance, but these must not become exaggerated mental pictures of sin or suffering. Crime in its multiplied forms is absolutely excluded, except as its mention may become a useful warning to the ignorant or thoughtless. On the other hand, the healed newspaper can have no "swept and garnished" but empty pages. With positive good must its columns be filled, and so whatsoever things are honest, just, pure, and of good report, the noble deeds, the legitimate activities, the healthful pleasures, the acts of virtue and of praise,—these are the fruits of Spirit garnered up for the eager throngs to "think on" day by day.

Steadfast adherence to Principle, and the uplifting of high ideals instead of the exaltation of party or personality, constitute its politics, giving freedom to thought and fearlessness to expression. Thus it goes forth on its pinions of freedom and purity, carrying healing in its wings to the weak and disheartened and protecting the unwary from the shadows of sin and shame. Is it any wonder that our Leader looked with such tender and hopeful eyes on this, the youngest child of her love and wisdom? Can we fathom the depths of her quiet joy over its growing success, and do we comprehend in any degree the marvelous possibilities of its glorious future?

The world is to be evangelized, truth and love from the divine Mind are to be poured into human minds. By what means can this be done so quickly and effectually as by the "still small voice" of the daily press, the greatest avenue of the ages for the dissemination of knowledge? Today everybody reads,—some for profit, some for pleasure, and some to "kill time" with its gnawing unrest. The spirit of the age and our compulsory education laws are creating an insatiable demand for the printed page, and the daily paper furnishes a supply most easily available; hence we find the newspaper in the hands of the working man and the millionaire, the bootblack and the President, the maid and the mistress.

The pulpit, the lecture-platform, and the religious periodical reach their thousands, but the newspaper its tens of thousands. The message to the church, "Behold, I have set before thee an open door, and no man can shut it," might well be the promise and prophecy for this child of Truth, this youthful pioneer of a pure journalism which is fulfilling the dream and ideal of generations past and present; this David of our day, whose pebbles of truth taken from the purified waters of human life are piercing the brow of sin's boastful claim that only the ungodly shall prosper, and whose quiet victories are proving to a waiting world that to the healing thoughts of good belong everlasting dominion and abiding success.

Many are the demonstrations of goodness that have already crowned the life of the *Monitor,* since Truth, with mighty hand and outstretched arm, brought about the successful preparations for its advent, its sturdy growth, and its beneficent operations; but there still remains a great work to be done by the Field in enlarging its borders and strengthening its stakes. The vital question for Christian Scientists is not, Do I need this paper? or Have I time to read it? but, Does the world need it? and, Is it willing to read it? To these latter questions the world is giving its own affirmative answer through an increasing demand for its issue.

Today, as of old, the hungering multitudes wait in city and village and beside the sea for the living bread "which cometh down from heaven, that a man may eat thereof, and not die," and again is heard the command of our risen Lord, "Feed my lambs," "Feed my sheep," "Give ye them to eat."

THE THIRD COMMANDMENT.

LAURA B. DOORLY.

SHOULD one question the man in the street as to the meaning of the commandment, "Thou shalt not take the name of the Lord thy God in vain," it is very likely that he would say it was a command to speak reverently of God, or not to speak lightly of holy things.

In the course of my Sunday School work I looked up the words "in vain," feeling sure that any study, in the light of Christian Science, would bring out a deeper comprehension of their meaning. The dictionary reminded me that "in vain" means "to no purpose." The command then ran, "Thou shalt not take the name of the Lord thy God [to no purpose]." Of what avail, indeed, to call ourselves the children of the ever-living God, and then proceed, illogically, to give power to anything that is not in line with the nature of our Father. I saw that the commandment is broken every time reality is given to discord, limitation, pain, hatred, or under whatever guise evil may come, and whether it appears to be attached to ourselves, our friends, the home or church, or even the world at large.

In Science and Health (p. 262), Mrs. Eddy gives a solution of the problems of human existence in one short sentence: "To begin rightly is to end rightly." Ours it is, then, to guard the entrance to consciousness, challenging each thought or condition that presents itself, discerning its origin and type, and consigning everything that does not begin rightly, or measure up to the standard of Principle, to the nothingness of falsity,—where it will disappear in the outer darkness of supposition,—"a liar, and the father of it."

Taking the commandment positively and affirmatively, it follows that to take God's name to some purpose, means to make practical use of the knowledge of Truth, to apply our understanding of Principle, of the allness of God, to every discordant condition; or, as Mrs. Eddy expresses it in "Miscellaneous Writings" (p. 69), "that man shall utilize the divine power;" proving that, as the apostle tells us, "now are we the sons of God," and that, therefore, if the

Digitized by Google

nature of our Father-Mother God is all-harmonious, we are taking God's name to some purpose when by our earnest prayer and consecration God's ideas are made manifest, and we are enabled to feel "the divine energy of Spirit, bringing us into newness of life and recognizing no mortal nor material power as able to destroy" (Science and Health, p. 249).

In thus keeping the commandments, the stature of the Christ-man will appear; no more will mankind groan in travail, waiting for the manifestation of the sons of God, for the kingdom is at hand; the day when, as the prophet Isaiah tells us, "the earth shall be filled with the knowledge of the glory of the Lord, as the waters cover the sea."

NEEDED LESSONS.

A. L. HITCHCOCK.

THOSE to whom the supply of food, clothing, and other necessaries of human existence has always come as naturally and abundantly as air and sunlight, have sometimes experienced a sudden rough wrenching away of these things,—a seeming loss of that abundant provision which had come to be accepted without question, almost as a right.

Perhaps one whom this sharp experience visits has learned something of the truths of Christian Science, and is endeavoring to solve his life-problems in accordance with its teachings. In the shock of sudden adversity he may feel bewildered, and ask, "Can it be the hand of Love that is depriving me of what seems so necessary to my welfare?" If the one so tried had entertained a clear sense that all his needs are spiritual and always met by divine Love, he could not have been deprived of anything which seems, on this plane of existence, to be essential to man's well-being. This seeming deprivation is, then, a summons to greater mental activity on his part.

Perchance he has acquired a sense of dependence upon some person or persons, or perhaps he has regarded the income from a certain property or financial enterprise as his source of supply, thus losing sight of the ultimate divine source of all good, and of man's unbroken connection with this never-failing fountain-head. This awakening, which has come with so rude a shock, forces him to immediate and vigorous mental effort to realize his dependence upon God alone, "who giveth us richly all things to enjoy." Browning has said,—

> Then welcome each rebuff
> That turns earth's smoothness rough,
> Each sting that bids nor sit nor stand, but go!

In working out this problem of supply, the individual, as he gradually discards reliance on persons or on any material possession as a source of income, will soon begin to see that hitherto unsuspected abilities and resources are being brought to light and developed in himself. Why? Because, in his faithful effort to think truly on this subject, he has constantly endeavored to know himself as God's child, His image, reflecting His power, His dominion. The result of the continued holding of this thought is sure to be made manifest in a quickening of all his faculties.

Moreover, as the meaning of his lesson dawns upon thought, gratitude for the seemingly afflictive experience replaces a sense of repining over the loss of the "flesh-pots:" he is indeed thankful that he was not allowed to drift on in physical ease and dangerous mental inactivity. As his thought thus becomes purified, the answer to his problem, though it be expressed in material form, seems to come direct from God and to be fraught with holy meaning.

After having made one or two demonstrations over lack of means, he is, perhaps, impatient if he finds himself confronted again and again with apparently the same problem. He should not murmur, however; this means simply that he is privileged to demonstrate again and again the nearness of God and His availability as an ever-present help. The pupil in mathematics must solve many problems under each rule, until both the rule and the process are so thoroughly understood that the solution is reached with perfect readiness. Let us not fear, then, that the divine Teacher will set us purposeless tasks.

Through lessons repeated as often as need be, the student of this Science of Life learns patience, obedience, perseverance, and to "rejoice always;" and knows, because he has proved the absolute truth of Mrs. Eddy's comforting words, that "the very circumstance which your suffering sense deems wrathful and afflictive, Love can make an angel entertained unawares" (Science and Health, p. 574). It is a necessity of our progress that we strive constantly after perfection, and this divine demand is indeed not "grievous," but "joyous," though this may not be at once apparent. There is, however, the strong assurance that "afterward" our faithful efforts will be rewarded by "the peaceable fruits of righteousness."

[Written for the *Sentinel.*]

MY BROKEN IDOL.

CASSIUS M. LOOMIS.

My days and nights to evil thoughts were closed;
I prayed to God aright, as I supposed;
As porter at my humble door I stood
That naught should find an entrance there but good.
And yet my friend, the healer, did not seem
To reach the stronghold of my troubled dream.
My ills and pains, despite his kindly zeal,
To mortal sense were still unmet and real.
At midnight long I pondered, quite alone.
Was there not some relief as yet unknown?
Whose fault was this? I longed anew to hear
Some word to lull my growing sense of fear.
Pluck out that idol by thy side! I heard
Distinctly spoken every measured word.
What idol? whence could come this strange behest?
Long, long I mused, the riddle still unguessed.

Day dawned; but, just before the east grew bright,
I fell to dreaming, and again 'twas night.
Beside my couch, with lips compressed, and still,
A figure stood; somehow I lacked the will
To speak. It was my counterpart; but, oh,
It was not I—its sphinxlike brow was low,
The deep-set lines of care were plainly seen
Upon its unresponsive, darkened mien.
Pluck out that idol by thy side!—just one
Tremendous lurch I gave—the deed was done,
And out upon the court my idol fell
A shattered mass; this broke the painful spell.
The truth I saw—my idol, sere and grim,
Was self; and in the morning shadows dim
Sweet chimes of joy rang out from yonder tower,
For I was born again this selfsame hour.
A peace I ne'er had known surrounded me;
My thanks went up that I at last was free
To love my neighbor as myself—yea, more,
For self destroyed, which claimed my love before,
Was gone—the more of love could I bestow
Upon my neighbor, were he friend or foe.
Once more awake, I faced the growing light;
My heaven at hand was shadowless and bright,
For all my ills, my every known distress
Had found at last its native nothingness.

SELECTED ARTICLES.

[Frederick Dixon in *Blackpool* (Eng.) *Gazette-News.*]

Our critic does not seem to have perceived that there is a great gulf stretched between the obvious and the literal meaning of a text. Nobody, for instance, imagines that when Paul advised the Ephesians to put on the whole armor of God he meant that they were to go in search of material armor such as Saul lent to David. On the other hand, surely nobody denies that when Jesus said those who believed on him would be able to do the works he did, he meant precisely what he said; the more so as on another occasion he declared that those who believed on him should lay hands on the sick and they should recover. The obvious meaning of these texts is that in one case the apostle was speaking of the spiritual understanding which would preserve man against all the attacks of evil, while in the other case Jesus was directing Christians in all future times and countries to prove their faith by the healing works he had accomplished. In the exact proportion in which a man puts on the whole armor of God,—acquires, that is to say, the spiritual understanding which enables him to defy evil and to prove the allness of good,—he acquires the faith which enables him, as Jesus said it would, to perform the works he had himself done during his ministry.

The day is going by when thinking people can any longer be induced to regard faith as the virtue of believing something one does not understand. Faith, the world is beginning to realize, has a more scientific basis than this, and that basis has been perfectly expressed by Mrs. Eddy, in a passage on page 297 of "Science and Health with Key to the Scriptures": "It is a chrysalis state of human thought, in which spiritual evidence, contradicting the testimony of material sense, begins to appear, and Truth, the ever-present, is becoming understood." Just as our knowledge of the multiplication table gives us faith in our ability to work out the problems of higher mathematics, so the Christian Scientist's perception of spiritual causation constitutes his faith in his ability to gain the understanding of divine Principle through which he whom Mrs. Eddy has described as "the most scientific man that ever trod the globe" (*Ibid.*, p. 313), demonstrated by means of the miracle or object-lesson the omnipotence of divine law.

The theories of Christian Scientists are no castles in the air or houses built upon the sand. Christian Science has come to rouse the inhabitants of a world of dreams out of the spell of the senses into spiritual watchfulness. Consequently, positively the most dangerous aspect of the heresy, as a London clergyman confided not long ago to his congregation from the pulpit, is "that those who have become Christian Scientists have also become much nicer people."

People often talk of Christian Science as if it were a sort of mammoth dispensary, whereas the truth probably is that the proportion of people coming to Christian Science merely for physical healing is decreasing every day. What actually is attracting people to Christian Science is the sight of an ever increasing army of men and women experiencing in their ordinary every-day lives a peace, joy, and contentment which it is impossible to attribute to anything less fundamental than a profound mental revolution. This revolution has been achieved by shifting their mental basis from a belief in physical, to a belief in spiritual causation; and so the change in the health of Christian Scientists, which so astonishes the doctors, and in their lives, which so amazes the clergy, is the result of their scientific grasp of spiritual truth, which is necessarily the most scientific knowledge a man can possess. Huxley once defined science as the answer a man makes to the question, "What do I know?" No Christian Scientist could accept Huxley's definition, but even from the point of view of that definition, a Christian Scientist's grasp of spiritual causation would constitute the answer he would make to the question, "What do I know?" What does he know, through the help of this new understanding of God, which was hidden from him before? He is beginning to understand what law really is, and so to comprehend for the first time that wonderful saying of the psalmist, "Great peace have they which love thy law: and nothing shall offend them."

For centuries the Bible was regarded throughout Christendom as a book which, though written in a strange metaphor and in a foreign tongue, was to be accepted in the literal sense of the languages into which it might be translated. As a consequence, numberless commentaries have been devised for the elucidation of the text. They are works of immense learning and often of intense interest, but not one of them has brought to mankind a repetition of the demonstrations of the Syrian carpenter, who taught the world, almost two thousand years ago, the practical import of the gift of God, dominion over all. The simple truth is that, in the words of St. Paul, spiritual things are spiritually discerned, and that is why at last there has come a commentary, "Science and Health with Key to the Scriptures" by Mrs. Eddy, which, approaching the subject from a purely spiritual standpoint, has made the divine law, traced in the Bible from Genesis to Revelation, so clear to many thousands of people as to enable them to fulfil, to the extent of their individual perception, the commands of the man who understood that law in its entirety.

[James D. Sherwood in *Marshall* (Tex.) *Messenger.*]

Our critic is mistaken in his supposition that Christian Science practice is autosuggestion. Hypnotism involves the arbitrary control of one human mind by another, and holds that such influence can be exerted by oral or mental suggestion. Evil intent may dominate the motive of the operator. In Christian Science practice it is understood that there is one Mind only, and that the infinite one, governing all,—"Hear, O Israel: The Lord our God is one Lord." The purpose of Christian Science is to bless mankind, and this it is doing continually. It can never injure any one, because its practice is the activity of divine Love which blesses all.

Christian Scientists who have spent many years in careful study and in daily practice of its teachings ought to be able to understand what Christian Science is. They know that autosuggestion and Christian Science practice are the very opposites in precept and in practice. Christian Science is the discovery and practice of pure Christianity, inaugurated by Christ Jesus and practised by him and his disciples. It teaches what was declared by Solomon, that as a man "thinketh in his heart, so is he." Impure thoughts ultimate in a sick body. Right thinking is manifested as health. It inculcates purity in the home life, in a man's relation with his fellows, and especially in his own manner of thinking. This mental purification purges out the old leaven and lifts one's standard higher than the merely material and animal sense of existence, into purer realms of thought; and the fruits of this mental activity are seen as peace, prosperity, health, and happiness. Christian Scientists have an unshaken faith in God as able and willing to answer prayer, and they prove their faith by their works.

Our critic says "religion should teach men how to bear the burdens of this material world by facing them, not by denying the existence of everything material, including their own bodies." Such a statement is very misleading, since Christian Science does not deny the existence of anything that is real. It does not deny the existence of the body. It brings to light the fact that a man is entitled to have a healthful body, and that he should never be satisfied with an inferior one. It teaches that reality is, and is the work of God; but it denies that God's works are material, since God is Spirit and is infinite; for that premise declares Spirit to be the only substance and all things to be spiritual. Christian Science never degrades creation, but exalts it.

[Ida Hodnett in *Birmingham* (Ala.) *Age-Herald.*]

While Mrs. Eddy's teachings always emphasize the spiritual facts of life, these teachings do not deny in the human consciousness "the physical experiences of life, especially those involving sickness and suffering," as the critic averred. The fundamental teachings of Christian Science are such as may be applied in every department of legitimate activity, and they are therefore eminently practical and full of common or good sense. They inculcate compassion and helpfulness in an efficacious way. The critic made the usual mistake of the adverse critic of Christian Science, in supposing that nothing is being done when the metaphysical or spiritual treatment of disease is employed. The fact is that more is being done than in any other method, and with this statement an ever increasing number of those who have had some experience in the relief given will agree. In this, however, as in the transmission of speech by telephone, we cannot expect those who know nothing of the experience to apprehend it.

Many eminent physicians in this country have recently stated in public that there is no known remedy for pneumonia. "The only thing that can be done for it is to keep the patient nourished as well as possible and take good care of him." Christian Scientists do not refuse to do anything along medicinal lines for the purpose of being fanatically loyal to a religious belief, but because they have a very remarkable substitute. They choose what they have demonstrated to be the "better part."

Upon what ground could any one affirm that a given case which is not healed in Christian Science treatment could be healed under medical treatment, since medical treatment fails continually in all kinds of cases? It is estimated that one hundred and forty thousand people die every day, mostly under medical treatment. Inasmuch as Christian Science has saved many cases which had failed to recover under medical treatment, is it not reasonable to assume that those who die under Christian Science treatment would have gone even sooner if they had not had Christian Science treatment, and that those who die under medical treatment might have lived longer or been saved entirely if they had had Christian Science treatment?

[Olcott Haskell in *Pacific.*]

Having read the letter published last week in the *Pacific* from a subscriber who asked for more light on certain points concerning Christian Science, I present the following reply:—

A more careful reading of the pages of Science and Health, from which this inquirer quotes, is all that is needed to supply a satisfactory answer. For example, to state that on page 329 of her book Mrs. Eddy says that "divine mercy never pardons," does not convey the meaning shown by the context. The statement in the 1906 edition of Science and Health (from which it would seem that this partial quotation was made) is: "Divine mercy destroys error, but never pardons it." The meaning is made still clearer in more recent editions through the statement: "The pardon of divine mercy is the destruction of error." Again, it is no more correct to refer to God as "a divine Principle" than it would be to refer to Him as "a divine Love." Mrs. Eddy never used such an expression. The statement referred to on page 465 of Science and Health is this: "God is incorporeal, divine, supreme, infinite Mind, Spirit, Soul, Principle, Life, Truth, Love." On the same page she further expressly states that there is only one God or Principle.

Christian Scientists have no desire to urge their conception of God upon the consideration of those not prepared to receive it; but it seems impossible to conceive of God as all-wise, all-powerful, and omnipresent divine Love, or Principle, and yet as less than the infinite Person. Christian Science teaches that man, as the image or idea of God, is spiritual. This is the opposite of the teaching of pantheism, which, as popularly understood, conceives of God and man as both spiritual and material.

Jesus taught that a knowledge of God would bring salvation from sin, sickness, and death. He refused to attempt miracle working to satisfy the desire of his critics for a "test," and we have no reason to suppose that he would have submitted to the processes of "laboratory experimentation" recommended by your inquirer; yet he continued to do "many mighty works," and to refer his followers to them as an example of what they should do through an understanding of his teachings. We have no record that any institution of learning in Jesus' day was willing to "stand sponsor" for his teaching; yet the history of the early church shows that Christians were possessed of a knowledge beyond that of the schools. This understanding of God transformed the lives of men, and enabled them to bear the "fruit" by which Jesus said the correctness of their teaching could be judged.

[E. M. Ramsay in *Aberdeen* (Scot.) *Journal.*]

The average Christian is content to admit that there was a time, long centuries ago, when men could be healed of their infirmities by the direct action of the Holy Spirit, and be guided in all the affairs of every-day life by that supreme wisdom which made the world and still sustains it, but he thinks that time has passed forever. It was given to Mary Baker Eddy, a devout woman of Puritan New England, reared in the bracing atmosphere of Congregationalism, to see that God's methods of dealing with His children have not changed, that His presence can go with the man of today, leading him over seas and continents unknown to the ancient world, as certainly as it led Israel over the desert sands; that our Lord's command to his followers to heal the sick by spiritual means is as binding now as of yore, and the promise of God's attendant blessing as sure.

Thousands of men and women, drawn from all classes of society and from many nations, have proved Mrs. Eddy's words true and enjoy better health and lead far purer and kindlier lives than before they studied Christian Science. Christian Science is no iconoclastic movement; its students have no wish to deter their neighbors from consulting doctors, have no desire to shut up the hospitals or to interfere with any form of lawful activity. They have none but kindly feelings for every honest attempt to relieve distress and suffering, and only ask for themselves that right of choice which they freely accord to others.

On the subject of death, Mrs. Eddy only reiterates the Bible teaching that death is an enemy, and that it will be eventually overcome. Since all reality is the expression of God and therefore partakes of His eternal indestructible nature, it is manifest that a thing which will one day be destroyed cannot be real in the absolute sense of the word. Far from claiming that she would not pass through the experience we name death, Mrs. Eddy wrote in "Unity of Good," "The achievement of this ultimatum of Science, complete triumph over death, requires time and immense spiritual growth. I have by no means spoken of myself. I *cannot* speak of myself as 'sufficient for these things.' I insist only upon the fact, as it exists in divine Science, that man dies not, and on the words of the Master in support of this verity,—words which can never 'pass away, till all be fulfilled'" (p. 43).

[Frank Bell in *Chester* (Pa.) *Times.*]

The clergyman would not find it easy to substantiate his assertion that the average life of Christian Scientists "is no longer and probably is a little shorter" than that of other persons. The individual experience of Christian Scientists, most of whom have been restored to health after having been given up to die by regular physicians, does not bear out what is apparently a mere assumption of our critic.

Digitized by Google

Well-informed persons nowadays, as a rule, know enough about Christian Science to know that its adherents are healthier than the average run of their neighbors, and certainly nothing is more essential to long life than good health.

Our clerical critic asserts profoundly that "all disease is a germ in the blood," though of course he is only taking the word of some one else concerning a question on which not even the medical profession itself is a unit. Despite his sweeping statement, we suspect he is not possessed of unquestionable evidence that a germ is actually the cause of disease and not a mere incident thereto. Certainly until he can show whence the germ has derived power and intelligent direction to go about its deadly work, he is in no position to heap scorn upon those who do not accept the germ theory as the last word on the cause of disease.

Mrs. Eddy was not an enemy of Pasteur, Jenner, or any of the other leaders in the development of modern bacteriological speculation. Though convinced that the germ theory will go the way of countless other theories of four thousand years of medical experimentation, Christian Scientists are glad that there is at least temporary relief for the sufferings and fears of their friends and fellow-beings who are not yet prepared to see as they see and to seek health on a better and more enduring basis than the fighting of infinitesimal vegetable or animal organisms.

The attempted likening of Mrs. Eddy to some one else is simply "calling names" in the absence of real arguments against Christian Science, and is unworthy of the pulpit.

[H. L. Conger in *Reporter*, Two Rivers, Wis.]

That Christian Science is a wholesome doctrine can be attested to by thousands upon thousands upon whom the door of hope had been closed, and before whom the open grave had yawned. Christian Science has brought to us a clearer realization of what the Master taught of the omnipotence, omniscience, omnipresence, and infinite love of the great Father, God, thus restoring victims of drink and drugs to lost homes, saving sinners to whom God was an illusion and salvation a myth, and restoring peace and plenty where formerly intemperance and debauchery reigned.

It is a great relief to Christian Scientists to know that relief from pain, strength to turn their back upon temptations, and ability to overcome the daily discordant thoughts are ever present, for "God is All." Man, made in God's image and likeness, inherits this power from Him who made everything and declared it "very good."

[H. Coulson Fairchild in *Newark* (N. J.) *Star.*]

God changes not; therefore such works as the Master did will be found possible today, when Christians unite in a practical faith in God. Christian Science does not count its strength numerically. The primitive Christians were few in numbers, yet their power for good is inestimable and is still at work in human consciousness. Christian Science is not a fad, and we venture to prophesy will not pass away as our critic thinks, neither will true Scientists be other than Christian Scientists, for if one catches a glimpse of the truth it would be just as hard for a Christian Scientist to leave Christian Science as it would be for a mathematician to declare the principle of mathematics null and void. Moreover, Christian Science is not dependent upon human opinion, but will stand because it is the Science of Truth and cannot pass away.

[From *San Francisco* (Cal.) *Bulletin.*]

Christian Science as a cure for the drink habit was recognized by Judge Graham today [Dec. 28] when he restored Robert P. Campbell to competency and gave him a $6,200 inheritance, on the strength of a showing that the former San Francisco hotel man has abstained since last May, as the result of Christian Science treatment by friends at Eureka.

For ten years Campbell had made repeated attempts to convince the San Francisco courts that he was not incompetent and was entitled to the money left in trust by his father, to be given him when he attained the age of forty, on condition that he abstain from liquor. Three years ago Campbell took the stand to testify to his sobriety, and before he had left it admitted that he was drunk at the time. Campbell's latest application was supported by the affidavit of a hotel owner at Eureka, who had befriended Campbell and given him employment as a clerk. Himself a Scientist, he told of inducing Campbell to take treatment, with the result that he was completely cured and had not taken a drink for eight months. Judge Graham reserved his decision, pending an investigation of the "cure." Today he rendered judgment declaring Campbell a competent and ordering the Union Trust Company to pay him the $6,200.

[Joseph B. Lovell in *Montreal* (Can.) *Gazette.*]

A large majority of the members of the Christian Science church have come to it on account of having received many benefits, and they are always willing to testify to the regeneration that has taken place in their lives through its practice and teaching. Mrs. Eddy's philosophy, said our critic, "was a kind of idealistic pantheism." The definition of God as given on page 465 of "Science and Health with Key to the Scriptures" is this: "God is incorporeal, divine, supreme, infinite Mind, Spirit, Soul, Principle, Life, Truth, Love." This understanding of God is not pantheism, and the cures effected thereby do prove to us that her philosophy is right, because the Master said: "Heal the sick" and "Ye shall know them by their fruits." Our critic is also reported to have said: "The trouble with Mrs. Eddy was that she overworked the truth." Did Jesus overwork the truth when he went about "healing all manner of sickness and all manner of disease among the people"? He said: "Ye shall know the truth, and the truth shall make you free."

[Edward W. Dickey in *Los Angeles* (Cal.) *News.*]

One of the fundamental rules of Christian Science practice is: "As ye would that men should do to you, do ye." In keeping with this is a rule never to give aid through Christian Science treatment unless the patient asks for help. There may be some exceptions to this, as in the case of accident when no other aid is near. Another exception may arise when members of the family, who believe in the efficacy of Christian Science Mind-healing, ask for aid for a stricken member when other means have failed and he is unable to ask for himself.

[Written for the *Sentinel.*]

LOVE'S RECOMPENSE.

ISABELLE W. PEMBROOK.

THINK not, faint heart, that thou canst lack
Thy heritage of love,
Since God Himself thy portion is,
Who giveth every child of His
Full measure from above.

Think, rather, that thy brother's need
May greater be than thine,
And that, with self-forgetful heart,
Thou may'st to him God's love impart,
And swell the chord divine.

So shall thine own heart know release
From pain; thy care shall flee.
The sower reapeth as he sows;
The love thou givest overflows
And comes again to thee!

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"THE SPIRIT THAT QUICKENETH."

HISTORY informs us that the blessed ministry of healing which our Master instituted when he sent forth his disciples with "the great commission," as it has so appropriately been called, continued to be an important part of the work of his followers in the first three centuries of the Christian era; and no good reason has so far been given for the failure of all who from that time to the present have called themselves Christians, to keep this essential feature of his work prominently in view. Indeed, it seems even more strange that this phase of his ministry could ever be forgotten, when we recall how much of his time was given to the healing work, and how strongly he emphasized its importance in empowering the disciples to cast out evils and to heal all manner of diseases.

Not that he failed to "preach the word; be instant in season, out of season; reprove, rebuke, exhort with all long-suffering and doctrine," but he made his preaching practical, made it something for every-day use and help, rather than an outward observance of the letter of the Mosaic law while the inner man was as a whited sepulcher, full of all uncleanness. Wherever he turned, multitudes of the sick and suffering ones of earth thronged about him or were laid at his feet by their friends, and Matthew tells us that "he was moved with compassion on them, because they fainted, and were scattered abroad, as sheep having no shepherd." They had received the "letter" in abundance, but their barren lives still lacked the potent touch of "the spirit that quickeneth."

Down through the generations these same conditions have been the unsolved problem, because mankind have failed to lay hold on the healing and saving truth that was ever close at hand. The word has been faithfully preached; but the "seamless robe" has been rent, and millions of despairing ones who based their hope of heaven on their belief that God saves from sin, have cried out in their anguish. "Is there no balm in Gilead; is there no physician there?" forgetting or ignoring the great Physician "who healeth all thy diseases," because they had been taught that "the day of miracles is past."

It was because in her own extremity she had experienced the power of God to heal in answer to the prayer of right desire, that Mrs. Eddy's heart was stirred to save the multitude of suffering ones enslaved by their own beliefs, and why, as she tells us, she "pressed on through faith in God, trusting Truth, the strong deliverer, to guide [her] into the land of Christian Science, where fetters fall and the rights of man are fully known and acknowledged" (Science and Health, p. 226). How faithfully she performed her self-imposed task, healing and teaching until the influence of this saving truth has compassed in ever widening circles the civilized world, has been freely acknowledged in the weeks just past.

And this work is still going on, for the seed has been faithfully sown, and today we are reaping the fruits of years of unceasing toil and faithful vigil on the part of our Leader. Every week new voices are testifying to the power of God to save from sickness, and that they have found Him "a very present help in trouble." The question it behooves every Christian Scientist to ask himself is this: Am I faithful to my trust? If our daily walk and conversation are telling to those about us the change that has been wrought in us through this healing, saving truth, if we are ready to give the "cup of cold water" and the "bread of life" to those who are thirsting and hungering for a present-day salvation from the ills of the flesh, then, and then only, can we honestly answer this question in the affirmative.

There is only one condition imposed. Mrs. Eddy tells us in Science and Health (p. 242): "The finger-posts of divine Science show the way our Master trod, and require of Christians the proof which he gave, instead of mere profession." There must be no division of the "seamless robe."

ARCHIBALD MCLELLAN.

THE MOUNTAIN AND THE MUSTARD SEED.

THE use of exaggeration for emphasis or rhetorical effect is very common to imaginative writers. It is a figure of speech in which, as Macaulay has said, we may make a statement that is not literally true, without any thought or possibility of deceiving any one. These forms of expression are very familiar, and as generally understood they may be said to be unobjectionable; nevertheless, they who think that Christ Jesus was aiming at such rhetorical effect when he made declarations of truth which to material sense may seem not only impossible but ridiculous, as for instance when he said: "If ye have faith as a grain of mustard seed, ye shall say unto this mountain, Remove hence to yonder place; and it shall remove," sadly fail to apprehend his teaching as understood in Christian Science.

In the light of Christian Science, this statement of the Master, together with many kindred ones, is seen to be a simple declaration of the truth and wholly free from hyperbole. It expresses nothing more or less than the provable sovereignty of spiritual truth, and it needs no advocate or apologist. Those who accept the proposition that matter and its conditions, disease and death, are real, the manifestation of the divine will and activity, and then assert their belief in the miracles of Christ Jesus, fail to realize the inconsistency of their position, and in fact unconsciously precipitate chaos so far as is possible. The miracles of Jesus can never be clearly understood save as one apprehends and is loyal to his teachings; and it is in its maintenance and demonstration of this assertion that the vantage of Christian Science inheres.

Few would question the teaching that "Mind and its formations can never be annihilated" (Science and Health, p. 245). But, if this be true, everything that Christ Jesus overcame by the word of Truth must be classified as of the nature of untruth; that is, error, unreality. Knowing this, and that Truth has dominion over error's every claim, Christ Jesus could speak "as one having authority," and knowing this, the true Christian Scientist can emulate his example "with signs following."

Thought of materially, the mountain referred to stands for a tremendous inertia. As a symbol of human conditions it stands for the persistent pressure of heredity and habit, the drift of the centuries of false belief, and constitutes a seemingly irresistible argument for the hopelessness of human redemption. In the light of Christian Science, however, it is found to be but a gigantic falsity, and thus apprehended, its nothingness in the presence of Truth is understood, and the possibility of removing it through the attainment of right consciousness is as manifest as is the possibility of dispelling darkness by the light of a taper.

A grain of Truth is more than a match for the mightiest, the most assertive error, and we can rejoice, therefore, though seemingly hedged in by the towering heights of assertive false sense, even as did Paul and Silas in prison. By the world they were adjudged undone, the hopeless victims of an impending doom, while in fact they were at the opening door of a stupendous opportunity. They had the spiritual perception to see this, and consequently their song was as spontaneous as the lark's.

Digitized by Google

The true believer is always buoyant. He knows that the seemings of sense count not at all with Truth, and the inspiration of this fact holds up his hands and gladdens his heart. Even the beginnings of faith are "mighty through God to the pulling down of strong holds; casting down imaginations, and every high thing that exalteth itself against the knowledge of God, and bringing into captivity every thought to the obedience of Christ." This the Master taught and proved, as did his disciples, and this is the supreme contention of Christian Science.

JOHN B. WILLIS.

SPIRITUALITY.

IN searching the dictionary for definitions of the word Spirit and its derivatives, the student of Christian Science cannot fail to observe that very few of these relate to the divine nature or its manifestation in man and the universe. This reminds them very forcibly of their indebtedness to their Leader, Mrs. Eddy, for her scientific discovery of the nature and qualities of Spirit, God, and her broad application of spiritual facts to human experiences. Here it may be well to give Webster's definition of the word spiritualize: "To refine intellectually or morally; to purify from the corrupting influences of the world; to give a spiritual character or tendency to." All of this is good, as far as it goes, but it stops short of the teaching of Christian Science, that in the true sense God alone is Spirit; hence, to spiritualize must mean to make Godlike.

The proposition admitted that God is Spirit, it follows that Spirit must be good and good only. Mrs. Eddy says, "There are evil beliefs, often called evil spirits; but these evils are not Spirit, for there is no evil in Spirit. Because God is Spirit, evil becomes more apparent and obnoxious proportionately as we advance spiritually, until it disappears from our lives" (Science and Health, p. 205). Spirit is thus seen to be symbolized by light, which reveals all things and is an unceasing demand for purity. Nor is this all, for Spirit is also synonymous with all that represents the divine nature,—with Mind, Soul, Life, Truth, Love, and intelligence.

Spirituality is, therefore, a life-giving quality, and not, as some suppose, a mental condition lacking in vital force and what is called physical strength: else would not the prophet have bidden us trust in the Lord forever, because that in Him is "everlasting strength." Happily, humanity is awakening to the fact that a man's strength is in proportion to his purity,—right thinking and right living,—and not to his muscular development. It is also finding out, through the teachings of Christian Science, that spirituality not only means goodness, but also intelligence, clearness of vision in all that makes for the progress of the race. The one who labors unselfishly and with pure motives for the good of others, is spiritually minded, whether this is generally admitted or not; and well is it for him and the cause for which he labors if his understanding of spirituality is based upon divine Principle, so that he may work somewhat as God works. It of course goes without saying that in Christian Science spirituality and health, moral and physical, are inseparable.

It has too long been believed that spirituality means what some one has called "other-worldliness,"—that is, a mental condition which expects to realize all good by passing to another sphere; but Christian Science teaches that here and now the kingdom of God is to be known and its laws obeyed, and in this attitude we find not only unnumbered opportunities to be good, but to be happy and successful as well. Normal, healthful thought makes the very most of each opportunity; it does not despise the most ordinary duties, but sees in all a way to unfold the latent capabilities of man, as divinely bestowed, and in performing each task strives to respond to the Christ demand for perfection.

It should never be forgotten that spirituality is not to be gained by dreaming, but by doing! Joseph's brethren called him a dreamer, but he was the most intensely practical man of his age, and Pharaoh witnessed to the reason for this when he said to his servants, "Can we find such a one as this is, a man in whom the Spirit of God is?" and to Joseph he said, "There is none so discreet and wise as thou art." A greater than Joseph stilled the tempest, fed the multitudes, healed the sick, and raised the dead, through his pure spirituality, his reflection of the divine nature. What are we, as his professed followers, doing toward this end?

ANNIE M. KNOTT.

AMONG THE CHURCHES.

MONTCLAIR, N. J.

Tomorrow morning [March 12] at eleven o'clock First Church of Christ, Scientist, will hold the first service in its own edifice, having acquired by purchase the property of the First Baptist church on South Fullerton avenue, near Bloomfield avenue. Almost immediately after the Baptists took possession of their new building early in February, the Christian Scientists began the renovation of their newly acquired church, and have in many respects altered the interior appearance of same by a change of color scheme and the addition of new furnishings.

The Christian Science movement was first established in upper Montclair about 1898, when meetings were held in private houses. In 1899 it was deemed advisable to hold the meetings in Montclair, because of its central location, and in 1900 Arcanum Hall was rented. The church was organized in October, 1901, with a membership of seven, and duly incorporated, Oct. 13, 1902; since which time it has had a steady growth in its membership and influence for good.—*Montclair Times.*

BIRMINGHAM, ALA.

Yesterday [March 13] at sunset the corner-stone for the new First Church of Christ, Scientist, of Birmingham, was laid with simple ceremony. Present were the Readers and officers of the church, the building committee, and two charter members, and they placed in position the copper box containing copies of the Bible, "Science and Health with Key to the Scriptures" by Mary Baker Eddy, and of all of the other publications of the Christian Science church.

The new structure will be located at the corner of Eleventh avenue, south, and Twenty-first street, where the church owns a very desirable lot one hundred and twenty-five feet by one hundred and fifty-seven feet in one of the choicest residence sections of the city. The design will be colonial. It will cost when completed between seven and eight thousand dollars, and is considered only a temporary structure to meet the present needs of the congregation.

Ag.-Herald.

MIAMI, OKLA.

The Christian Scientists of Miami have recently bought property on the corner of Second and Olive streets, with the intention of building a church home in the near future. The interest manifested in Christian Science during the past year has been greater than at any time since the church has been organized. They are at present using the Latter Day Saints church on Oak street.

Ottawa County Beacon.

NEW PAMPHLET.

A new pamphlet entitled "Christian Science: Its Divine Authority," a lecture by Bliss Knapp, has just been issued by The Christian Science Publishing Society, and is now on sale. Thirty-five pages. Price, single copy, five cents.

Digitized by Google

THE LECTURES.

GLASGOW, SCOTLAND.

Bicknell Young lectured on Christian Science at the Queen's Rooms, Feb. 13. The remarks by the chairman, A. H. Pettigrew, Esq., in introducing the lecturer, were in part as follows,—

These lectures on Christian Science are given for the purpose of endeavoring to leaven the thought of the community with a more accurate knowledge of Christian Science, and to offer testimony to facts regarding the life and work of its Discoverer and Founder, the Rev. Mary Baker Eddy. Now I wish to say that, so far as I myself am concerned, I am not a Christian Scientist. I am here, however, to listen, to learn, and I hope to profit. I am sure that if every man and woman here tonight has come with the same open mind, with the same receptive heart, I know sufficient about Christian Science to prophesy that they will go away much benefited.

I would like to say that the first time I came in contact with Christian Science was about four years ago. My attention was drawn to an extraordinary change that had taken place in a dear friend of ours. My wife and I, without collusion of thought, without comparison of impression, agreed that something wonderful had happened to her. While the same woman outwardly and visibly (except that her physical appearance had vastly improved), I should have said that mentally and spiritually she was a changed woman. A joy in living had evidently come to her; and we wanted to know the reason why. And I may tell you in a word that it turned out to be that she had been brought into close personal touch with Christian Science and had become a Scientist. This is not the only instance. I have met very many since then who to my personal knowledge have benefited not only in body,—for that is the last thing I should say even a Christian Scientist should seek,—but in heart and mind; and I make this confession, although as I said at the beginning I cannot claim to be a Christian Scientist, that I am ready to confess gratefully that I also have benefited from the little study I have been able to give to it.

For myself I may say that a new light has been thrown on the revelation that Christ has given to us of the Father, on that relationship which Christ has revealed to us as existing between God and His people. In every hymn we sing in church now, I seem to find a proclamation of the truths that Christian Science teaches. In almost every passage of the Bible, as in every sermon, I find the same revelation of Truth, a revelation, I confess, I was blind to before I learned the little I have of Christian Science. Beyond that I have not gone; but I am perfectly certain that if we—I or any one else—were to devote ourselves to the cultivation of the faith necessary to establish an absolute confidence in God,—and I am sure if we studied Christian Science this would be the outcome,—it would bring about a happiness of life and peace of mind and heart, and comfort and consequent health of body, which would go a long way toward elevating the race to that point of perfection of manhood and womanhood which I, for one, believe God means them to enjoy.—*Correspondence.*

REDLANDS, CAL.

Bliss Knapp spoke before a large audience at the Contemporary Club last evening [Feb. 14]. He was introduced by J. J. Suess, who said in part,—

No great religious movement of recent times has made such rapid progress as has Christian Science, and perhaps never in the history of the world has a religious movement drawn a more intellectual or higher class of people within its fold than has this movement. Personally, I have never heard a Christian Science lecture, have read but little of its literature, but I have been much impressed by the class of people who profess this belief, and more impressed by their lives and actions. We read in Holy Writ that "by their fruits ye shall know them," and as far as my experience goes, Christian Science can afford to stand by this test.

Some years ago I attended in Los Angeles one of the so-called weekly testimony meetings, and many people testified of the great benefit they had received in sickness and trouble. I knew some of those who testified, and the evidence to me was convincing. When I left the meeting, I felt that these people had something real that to them was a great blessing,—something that had made their lives brighter and richer. Whatever our beliefs or views may be, any movement that helps some suffering human being, that makes the lives of those believing it richer and happier (and I know some that it has), lifts the world to a higher level and is entitled to our respect. I am glad of the opportunity to hear a lecture on this subject.

Redlands Review.

SAN ANTONIO, TEX.

William D. McCrackan, M.A., delivered a most delightful lecture to the people of San Antonio yesterday afternoon, Feb. 19, at Beethoven Hall, on the subject "Christian Science: A Religion of Progress." There were fifteen hundred persons present. He was introduced by J. A. Eskridge, a young lawyer of this city, who said:—

In my opinion the greatest epoch-making moment in the nineteen centuries separating us from the birth of Jesus was that moment when what we now know as Christian Science was founded and its promulgation begun. I believe Christian Science to be the greatest active, vital, pulsating force today for the restoration of "on earth peace, good will toward men." This statement is not from an enthusiastic supporter of this religion, for I have not been able to grasp its teachings sufficiently to accept it in its entirety. With some of us it has long since become impossible to accept without question all of the dogmas of orthodoxy. Some of the constructions placed on parts of the Bible by the clergy of the past and present will not stand the searchlight of investigation, and yet our training has been such that it is difficult to break away and to accept Jesus at his word when he proclaims, "Take up thy bed, and walk." We have been accustomed so long to believe that the days of God's power in this regard are passed, that we find it extremely hard to believe that He any longer exercises His power.

But, my friends, we should congratulate ourselves that the world is growing more and more tolerant; that there is less of religious bigotry, that there is a well-defined and growing disposition to search for the truth, even though our search takes us outside of the beaten paths. Do you remember that only three centuries ago there was a learned gentleman going about from city to city, lecturing on religion and philosophy, and that because he made statements and drew conclusions not in accord with the established belief, he was thrown into prison, and finally burned at the stake? I am safe in assuring our friend that he is in no danger in San Antonio of suffering the fate meted out to Bruno.

Though I have upon my desk a copy of "Science and Health with Key to the Scriptures," though I have sat at the feet of lecturers and have engaged in many conversational discussions with reference thereto, still I know very little of the tenets of this religion. But of the results on the lives of those who have embraced it I am somewhat informed, and I am prepared to say that in my opinion not all the poetry written before and after Shakespeare, including that of the great master himself, can tell of the beauties

Digitized by Google

of this religion; not all the music written since time began, if executed in one soul-stirring strain, can equal the rhythm and harmony shown in the lives of those who are disciples of this faith; not all the softest shades and most delicate tints in the paintings before and after Rembrandt, including his own masterpieces, if blended upon one great canvas, can illustrate the beauty, the sweetness, and gentleness of character of her who founded this old, old religion anew.

Correspondence.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Alameda, Cal.—William D. McCrackan, M.A., Unitarian Church, Grand street, near Santa Clara avenue, 3 p.m., April 16.
Bellingham, Wash.—Bliss Knapp, Beck Theater, April 10.
Boise, Idaho.—Bliss Knapp, Breach's Hall, 8:30 p.m., April 7.
Cripple Creek, Col.—William R. Rathvon, April 7.
Denver, Col. (Second Church).—Willis F. Gross, Auditorium of First Church, 14th and Logan streets, April 4.
Eau Claire, Wis.—Prof. Hermann S. Hering, Church Parlors, Gray and Farwell streets, 8:15 p.m., April 13.
Eugene, Ore.—William D. McCrackan, M.A., W. O. W. Hall, Eighth and Lincoln streets, April 10.
Everett, Wash.—Bliss Knapp, Church Edifice, April 11.
Flint, Mich.—Prof. Hermann S. Hering, Stone's Opera House, April 11.
Fort Smith, Ark.—Francis J. Fluno, M.D., April 9.
Greensburg, Pa.—Prof. Hermann S. Hering, St. Clair Theater, 3 p.m., April 9.
Guernsey, Channel Islands, Eng.—Bicknell Young, St. Julian's Hall, 2:30 p.m., April 16.
Hartford, Conn.—Rev. Arthur R. Vosburgh, Parsons Theater, 3 p.m., April 9.
Herkimer, N. Y.—Frank H. Leonard, Grant Opera House, 4 p.m., April 9.
La Porte, Ind.—Clarence C. Eaton, Phœnix Theater, 3 p.m., April 9.
London, Eng. (First Church).—Bicknell Young, Fulham Town Hall, April 20.
Los Angeles, Cal. (Fourth Church).—Willis F. Gross, Simpson Auditorium, 3 p.m., April 9; 8 p.m., April 10 and 11.
Middletown, N. Y.—Rev. Arthur R. Vosburgh, Linden Hall, April 10.
Pasadena, Cal.—Willis F. Gross, Church Edifice, Oakland avenue, April 13.
Pine Bluff, Ark.—Francis J. Fluno, M.D., April 11.
Pocatello, Idaho.—Bliss Knapp, Auditorium, April 6.
Punxsutawney, Pa.—Frank H. Leonard, Jefferson Theater, 8:15 p.m., April 13.
Salamanca, N. Y.—Rev. Arthur R. Vosburgh, High School Auditorium, 3:15 p.m., April 2.
San Bernardino, Cal.—Willis F. Gross, Opera House, April 14.
San Francisco, Cal. (Second Church).—William D. McCrackan, M.A., Valencia Theater, Valencia street between 13th and 14th, April 13.
San Jose, Cal.—William D. McCrackan, M.A., Victory Theater, April 14.
San Rafael, Cal.—William D. McCrackan, M.A., Red Men's Hall, 803 Fourth street, April 16.
Santa Ana, Cal.—Willis F. Gross, Church Edifice, Sixth and Sycamore streets, April 14.
Seattle, Wash. (First Church).—Bliss Knapp, Moore Theater, 3 p.m., April 9.
St. Paul, Minn.—Prof. Hermann S. Hering, Auditorium, Sunday afternoon, April 16.

TESTIMONIES OF HEALING.

Early in the year 1903, my husband went with an acquaintance to hear (as the man said) "some new doctrine called Christian Science." My husband was impressed with what he heard at First Church, London, and told me he would like to go again. He did go again and again, for the more he heard of it the more he wanted to hear. I was sorry for this, as we were members of the Church of England, and I feared he was being attracted by one of the many new sects which come and go; but my faith in God comforted me, and I knew He would not let him go wrong.

At this time I was in a bad state of health and was going to a doctor for a stomach disorder with accompanying troubles, also visiting an oculist, as I had cataracts growing over both my eyes. The next time I was going to the doctor my husband asked me if he might give me a *Sentinel* to read, as I had a long wait and I always liked to have some reading with me, though I could only read large print, and in a very good light. Sometimes I could not manage to see even then, but I always held a paper as though reading, as it prevented people talking to me. I did not at all like to take the *Sentinel*, but I did not like to refuse either. The next time I went I had no objection to taking it, and next time I found myself quite interested in reading it.

This went on for two or three months, till late in May my condition became worse than it had been during the eight months I had been going to the doctor. I was indeed quite prostrated, and was compelled to give up work, which caused anxiety to both my husband and son, and they consulted as to what should be done. They wanted me to go away for a change; but as that was impossible in my condition, I consented to be taken out into the country by easy stages, to try what fresh air would do for me. So we started, my husband and I, by a tram car which passed our house, intending at the end of that journey to take another going farther out. I might mention that the conductor on this first car waited patiently while I got up, for it was slow work in my weak state.

My husband had taken along a good supply of *Sentinels*, and as soon as we had started I found myself enjoying the reading. A little later the thought came to me, "Well, it seems that God heals people now as He did in Jesus' time. I know that God is no respecter of persons and will heal me as He has many others." I resolved to ask my husband to take me to the church, that I might ascertain how to get healed, and at that moment I was healed of the weakness, for to my surprise I found myself getting down from the tram car quickly at the end of the journey, and I quite enjoyed a walk for about half an hour. I did not want to go any farther, but to return home, and on reaching there I found myself running up the stairs, then I bustled about and prepared tea.

All this time we had not spoken a word to each other about what had occurred, we were both so surprised; but as we were sitting over that memorable tea, my husband said, "It seems to me that you are healed." I answered, "It must be so, but I cannot make it out." He then wrote to a practitioner, who quickly made an appointment which I gladly kept, and with the resolution that, as God is the healer, I would take with me all my ill-health troubles. I recounted to the practitioner that for the previous thirteen years I had had, among other ills, rheumatism, one attack having confined me to my room for eight weeks and for a considerable part of the time I was unable even to turn myself in bed. The practitioner explained something of Christian Science to me, and commenced treatment, asking me to come again in a week. My husband bought a copy of Science and Health, which we read and studied together, and we also attended the Wednesday and Sunday meetings at First Church.

Digitized by Google

After the third or fourth treatment the practitioner gave me the book "Christian Healing," by Mrs. Eddy, and I opened it as soon as I was seated on the 'bus going home. To my dismay, I saw that some of the paragraphs were in very small print, and my first thought was to read the large print and leave the small; then I thought that if God was to heal my eyes I must be obedient, and He would help me. I began to read, and at once the pain in my head and eyes started. Still my thought of the need of obedience prompted me to continue, and after the pain had seemingly done its worst, it left me suddenly just before I reached the end of that journey. I found afterward that it was the end of the cataracts, for I did not again have a return of the pain, and since then have had no trouble with my eyes. Some time after I happened to come across a Bible which I had discarded some years before, as the print was too small; but I opened it and found that now I could read it.

In January, 1904, I had an attack of rheumatism, and after working to overcome it for about a week, I was healed instantaneously at the communion service Sunday evening. I went there in great pain, but came out free and have remained so ever since, and that is over six years. I found it took much longer to overcome influenza, and for some three or four years it continued to assail me; but each time it was mastered by Christian Science in about a day, where in all the former attacks I had been kept in bed for more than a week each time. During the seven years since my first healing Christian Science has been the physician in our family, and has met the need of healing in many forms. I am indeed thankful to God for giving us our revered Leader, Mrs. Eddy, who through her consecrated life has been able to lift me from the bondage of sickness and also to give me a better understanding of God as a very present help in every trouble.

MRS. SUSAN LOCKETT, London N., England.

I desire to tell to the world what Christian Science has done for me. About thirty years ago I was taken with a severe pain in my stomach, which gradually grew worse. It continued intermittently for months, but not until about five years from the first attack was I forced to give up eating any solid food whatever. I dieted rigidly, not being able to drink even cold water, as it caused terrible pain. I lived for three years in this way, during which time I had tried faithfully two home doctors, who gave me no permanent relief, and I was advised by them to go to Boston to a hospital. In Boston I first consulted a specialist, who informed me that I had a growth in the stomach which was likely to cause my death at any time; that I could not have an operation, and that there would come a time when I could not take even the diet on which I was then existing. In two weeks I went to the hospital to consult another specialist, but he gave me no encouragement. He, however, sent my doctor a prescription, which I tried for about two years, not knowing what it was. During this time my eyesight would leave me entirely at times for an instant, and I began to wonder what I was taking. When the doctor told me that it was a poisonous drug, I decided to leave it off; but I found, on making the attempt, that I could not.

At this time a Christian Science friend offered to treat me, that I might be able to leave off the drug, and in a short time I found that I forgot to take it, and that no bad effects were manifested. But the stomach trouble remained the same, and so I continued to follow the rigid diet for eight years, after which I became able to chew meats, but could not swallow any of the solid food. I continued in this way for five years longer, at the end of which time I was advised to try Christian Science, which I did, though without faith. After having treatment most of the time for two years, one of my daughters came home one day and said she wished me to eat a piece of pie. I did so, and no bad results were experienced. From then on I gradually commenced to eat ordinary food, and for some years have been able to eat anything I wished, as I found that my stomach had been healed through the realization of the truth.

Since the healing of the above ailment, eleven years ago, I have had many other proofs of the wonderful healing power of Truth. Some ills have seemed very stubborn, and others have yielded more readily; but I feel very grateful for Christian Science. I am now in my eightieth year, and am earnestly seeking for the light as revealed in Christian Science, and I hope that others whose troubles seem slow to yield will find courage in reading my testimony.—MRS. S. J. OSGOOD, Amesbury, Mass.

An overwhelming sense of gratitude prompts me to tell others of the glorious freedom which Christian Science bestows on all who seek its priceless gifts. Perhaps what I am able to say may bring hope to some poor suffering brother and help him to find the Christ-truth which sets us free, and with that the peace which goes far beyond ordinary mortal comprehension. Two years ago or thereabouts I first heard of Christian Science and in rather a curious way. A friend rang me up on the telephone one day and asked if I would care to give a seat in my office to a friend of his (I am an engineer and at that time my office was larger than I required). My friend said he would vouch for the integrity and so forth of the man he wished to introduce to me; the only thing he had against him was the fact that he was a Christian Scientist—would I mind that? Not knowing anything whatever of Christian Science, I fortunately was quite unprejudiced, and soon my new friend was comfortably installed.

Nothing out of the ordinary occurred for quite a long time, till one day, without knowing exactly why, I ventured to ask a little about Christian Science, and was astonished to hear of a church. I gradually became interested in what I heard, and finally went to a Wednesday evening meeting. My feelings of wonderment can only be understood by those who have passed through the same experience! It was either the work of the devil, as my friend of the telephone message called it, or else it must be absolute truth. So I borrowed "the book," and became still more interested. At this time I was in a very sinful and sorrowful state of mind, filled with fears and erroneous beliefs. How hope did rise in my heart, for I was in dire need of help! If only I could find some man to unburden myself to. And such a one I did find, or rather divine Love sent him to pay a passing call on the friend who shared my office. To that man's keen, clear understanding of Truth I owe more than I can ever tell; but he knows my gratitude, and with his patient help I am slowly learning to "trust Truth, and have no other trusts" (*Sentinel*, July 4, 1903).

I was instantaneously healed of a very evil habit which I had in vain endeavored to conquer in the old thought and I was saved from committing a grievous sin. I used to think that the verse, "Blessed are the pure in heart: for they shall see God," taken with the twenty-eighth verse of the same chapter of St. Matthew, dreadfully hard, and that purity was well-nigh impossible of attainment in this present existence. Yet for years I had longed to be pure-minded. I shall never forget how, while on a bicycling tour on the continent of Europe, I passed through the tunnel in the enclosing hills which at one point of the frontier forms the gate into beautiful Alsace. I emerged from the dark tunnel to view the most perfect scene imaginable, bathed in a glorious warm sunshine and bounded on the horizon by the lovely blue Alsacian mountains. I stood spellbound, and gazing at this landscape I seemed to realize a little of the beauty of purity, and was so overwhelmed with my own sense of impurity that my knees sank beneath me. Now I

Digitized by Google

know that "the law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death," and with the Father's help I can and will demonstrate this truth more and more, as He gives me better understanding.

Although in the first instance I did not come to Christian Science for physical healing, I have received not a few benefits in this way. A bowel disorder in a very aggravated form has been entirely healed. A skin disease which a leading physician told me was one of the worst cases he had ever seen, was gotten rid of in two or three treatments. A liver affection has yielded to treatment, and troubles me no more. Rheumatism has gone, and though it has tried to get a hearing once or twice, I have been able to turn my face from it. Formerly a very heavy smoker, I can honestly say that I have had no desire to smoke since about three weeks after I really became a student of Christian Science. Under treatment I have been able to leave off glasses which I had worn for certainly over twenty years, and nice thick pebbles they were; but I am fast being freed from the belief that my Father ever gave me anything but perfect sight.

For my regeneration—there is no other word for it—I am indeed deeply grateful, and it is glorious to feel that one can really show one's gratitude, not so much by words, which are so inadequate to express what is in one's inmost heart, but by striving to live the life, to demonstrate the oneness of man with God.

CHARLES LE MAISTRE, London, England.

About three years ago I was suffering greatly from boils, there being five well-developed ones in the pit of the left arm. At midnight a Christian Science practitioner was called upon for help, and at eight o'clock in the morning there was just one small red mark to be seen, and no soreness remaining. I have had many proofs of the power of divine Truth, as shown through the understanding of Christian Science, and I am exceedingly grateful to God, and to our Leader, Mrs. Eddy, for giving to us "Science and Health with Key to the Scriptures."

MILTON F. HARRIS, Chicago, Ill.

It would be impossible for me to tell of all the blessings which Christian Science has brought me in the past six years, for I have been healed of many ills. In January, 1908, I was healed of a very severe attack of illness. My little boy, who was then four months old, had the same trouble first, and one morning, as he seemed very low, we sent a telegram to a Christian Science practitioner. In half an hour he was resting quietly, and in a few days he was quite well again.

There are no other Scientists in our little town that we know of. My husband and I study the Lesson-Sermons through the week and Sundays, and we find them a great benefit to us, also the *Sentinel*, *Journal*, and *Monitor*. My heart goes out in gratitude to God for this blessed truth, and to Mrs. Eddy for being spiritual enough to grasp it and reveal it to the world.

MRS. EMMA BAILEY, Chadbourn, N. C.

It is with a deep sense of gratitude for what Christian Science has done for me that I give my testimony. It is a little over two years since Christian Science was brought to my attention. I needed it years before, but did not realize it then. I was instantly healed of a chronic stomach disorder, and while reading Science and Health my eyes were healed and glasses that I had worn for ten years were laid aside. The oculist had told me that I would always have to wear glasses, as I had strained my eyes very badly. The next ill to go was hay-fever, of long standing. I had suffered agonies with this trouble, and had tried many doctors, who held out absolutely no hope of my ever being free from it; but now I can say to other sufferers, Take courage, and not only believe but know that there is absolute help for you; that God is omnipotent good. Severe headaches, from which I had suffered since a small child, were slower in yielding because of fear, but it has been a long time since I have had one, which is a great blessing.

My little girl, three years old, was healed of acute lung trouble by absent treatment. She was to mortal sense a very sick child, and her healing seemed wonderful to me, as not one drop of medicine was used. She is now five years old and attends Sunday School. She loves to go, and often asks me to read Science and Health to her. Is it any wonder that we both love God, and that my heart feels the deepest gratitude to dear Mrs. Eddy for all the benefits and blessings received?

I am daily striving to overcome faults and thoughts that are not right, but I know that as I prove faithful, and as I hopefully take up my cross and realize more and more the presence of Christ, Truth, I shall indeed be free. The desire is very strong within me to help others and to spread this blessed truth broadcast. The *Sentinel* is a great help to me.

MRS. HELEN M. MILLS PORTER, Detroit, Mich.

I wish to acknowledge how much I have been benefited by Christian Science. I have been cured of bowel disorder, from which I suffered for thirty years, always being obliged to take medicine; but now I have no need of it. I am thankful for having been led into Christian Science by a loving friend, and grateful to Mrs. Eddy for showing us the way to understand God's promises. Above all, I am thankful to God for what He has done for me.

R. HYNES, Los Angeles, Cal.

I wish to testify in regard to the benefits which I have received in Christian Science, and the great help gained through its treatment. I was healed of appendicitis, as well as other ills, and am very thankful to God for my healing.

MRS. L. R. JOHNSTON, Los Angeles, Cal.

For three years I had stomach trouble and frequent fainting-spells, but on receiving Christian Science treatment I was immediately healed. I feel very grateful to God for Christian Science.

ELIZABETH JOHNSTON, Los Angeles, Cal.

I wish to give my testimony in regard to benefits derived from Christian Science treatment. I had a severe cold, affecting my lungs, which was relieved almost immediately and was entirely cured in two treatments. For this healing, and for many other blessings, I am indeed thankful to God.

LOIS CATHARINE JOHNSTON, Los Angeles, Cal.

The budding of a common flower elicits no special interest, unless it is seen as an expression of God. My experience in Christian Science has been so ordinary that to fulfil the office of a testimony it must be viewed in the light of the great "amen" of God's purpose. Deprived of home influences at an early age, my impressionable nature was fertile ground for the seeds of wild oats, which were sown and reaped. During all the years of husk-feeding, there was one place kept fresh in my heart,—the faith I had in prayer. Many times I turned in childlike faith and asked God for my desire, and received it.

I always felt that He had a particular care for me, and I have since learned that He has such care for all His children. When ambition in life began to appear, I found one bad habit a hindrance, and I stopped smoking. Then there came a sweet influence into my life. A woman offered me a book, which I took and read. The book was "Science and Health with Key to the Scriptures" by Mrs. Eddy.

Digitized by Google

It was very helpful reading, and it commenced to heal me at once, where I needed healing most,—the heart. In Mrs. Eddy's hymn, "Feed my Sheep" (Poems, p. 14), we read:—

Feed the hungry, heal the heart,
Till the morning's beam;
White as wool, ere they depart,
Shepherd, wash them clean.

A great change had come to me. I had turned to the Father and He was there,—the Lord of hosts, and the hosts of the Lord to help me on. Shortly after, I realized that I needed physical healing. Being in the South and taken with a fever, and not having then a demonstrable knowledge of Christian Science, I telegraphed to New York for treatment and was healed in a night. So the new birth goes on—the birth which "begins with moments, and goes on with years; moments of surrender to God, of childlike trust and joyful adoption of good" (Miscellaneous Writings, p. 15). I have found each surrender to God a sweet and honorable one. My gratitude is a song in my heart, finding expression in a better life. I thank the Father, who was always near, and I am grateful to our dear Leader, who has given to the world and to me the priceless text-book of Christian Science.—FRED C. HOUSE, New York, N. Y.

It is with a heart full of love and gratitude to God that I give my testimony, trusting it may help others. In 1905, my eyes were permanently healed through Christian Science treatment. This was a complete and most beautiful demonstration, for which I have always been very thankful; but above all else I am grateful for the spiritual awakening to a right understanding of God and man as His image and likeness.—MINNIE MARTZ, Tipton, Ind.

Our daughter, Minnie Martz, was about fifteen years of age when she was obliged from pain in her head to wear glasses, and they had to be changed every year or two until five years ago, when she was entirely healed in Christian Science.—MRS. N. S. MARTZ, Tipton, Ind.

I am very grateful to Mrs. Eddy for all the Christian Science literature. I read in the 1910 January *Journal* the poem, "As they went they were cleansed," and I feel it a duty and pleasure to say how thankful I am to God for my own cleansing and healing from rheumatism, biliousness, corns on my feet, and an affection of the ear. It is my desire to show my gratitude by trying to live nearer to God and by striving to overcome error for myself and others.

MISS M. J. JORDAN, Rolston, Yorkshire, England.

I wish to testify to the help that my family and myself have received through Christian Science. It is about seven years since we first got interested in this wonderful truth, and from that time on it has been our only remedy and has helped us in every way. I myself came out of what seemed to be blood-poisoning, in a very short time. I only lost three days' work through it, and two of my toe-nails fell off; but I was healed at once, and many other things were overcome in a very short time. When we first came into Science my daughter was troubled with severe headaches, which came once or twice a week, but now she only has slight attacks once in a great while, and she has never had a treatment, outside of what she has done for herself. She is now over thirteen years old. We are all very thankful to God, and to our Leader, Mrs. Eddy.

H. C. SHAAK, Pottsville, Pa.

Before I learned of Christian Science I was very miserable with female troubles, at times suffering terribly. I had taken almost all kinds of medicines that were recommended for these ailments, without any permanent relief; but, thanks to Christian Science, I did get relief without resorting to any material means. When Science and Health was loaned to me by a friend, I was ready for it. I never doubted its truth at all, and was soon healed of my ailments by reading it.

It is twelve years since I first knew about Christian Science. During that time it has not all been smooth sailing, but Truth has always conquered in the degree that I have clung to its teachings. I have had treatment several times, and the practitioner was very patient in trying to get me to see the right way. After having suffered so many years, I am indeed grateful, and wish to add that Christian Science has not only benefited me physically, but mentally as well. No one could help but feel better after reading "Science and Health with Key to the Scriptures" by Mrs. Eddy, and no money would buy my book if I could not get another copy. My mother also has been greatly helped by reading Christian Science literature. She is almost seventy-four years old and is in perfect health. I am grateful for all the help and encouragement I have had in many ways.

Words cannot express my gratitude to our dear Leader, Mrs. Eddy, through whose loving guidance the way has been made so plain. I can only show my deep gratitude by consecrating myself to God and striving each day to live nearer and follow closer the truth, and to let that Mind be in me which was also in Christ Jesus.

MARY ALICE MUIR, Freewater, Ore.

About nine years ago, when living in Wisconsin, I was asked to give a little reading at a social gathering, and chose for the entertainment of my friends an article by a well-known humorist, which had recently appeared in a magazine. How those present laughed and clapped their hands as I read the statements concerning Christian Science practitioners! Since then I have been only too glad to welcome into my home one of these practitioners, and have gladly taken a long journey to see one in her office.

It was when I was suffering from a stomach disorder, living on a very restricted diet, and taking medicine before and after meals, also at bedtime, that I first tried Science treatment, and in a few weeks was able to eat all kinds of food. The doctors said I had also an incurable disease of the kidneys which had come from a former illness, but this too was healed in Christian Science. In the spring of 1909, while in San Francisco on my way home, I was taken violently ill and had all the painful symptoms of acute lung trouble. I was at a hotel, and sent my son to enquire at the office for the Christian Science reading-rooms. The clerk kindly asked if I wanted Christian Science help, and in a few minutes a practitioner was reached by telephone. I was soon asleep, and a few hours later the practitioner came to see me. Although I then seemed to be a very sick woman, I was able next morning to start on my long journey back to Illinois. I spent that day in gratitude to God, knowing that if I had relied upon material remedies, as I had on a previous occasion before coming into Science, I would have spent weeks in the hospital with the customary heavy expense.

I have also learned that God governs all our plans for good. I have had a son who had been estranged, restored to his home and affection for me through Science. This truth has proved a great help to me in financial affairs. I used to wonder how people could talk so much about Mrs. Eddy, and now I think there is no Hall of Fame too great for her name to occupy an honored place therein. I send this with love and gratitude for all the help received.

MRS. MARY J. MILES, Pleasant Plains, Ill.

From early childhood I was in bondage to headaches and nervousness, and although many remedies were tried, there was no permanent relief. This condition rapidly grew worse, until in 1905, while in the sophomore class of the high school, a noted physician told me that I must give up

Digitized by Google

all hope for further education; that I must leave school at once, as a complete change and rest was necessary. I was suffering from violent headaches, frequent attacks of fainting, a throat trouble for which there had been two operations, and various other forms of ill health.

While visiting a friend whom I had not seen for some time, and who had been wonderfully helped by Christian Science, I witnessed the healing of her baby. This friend saw my need of help, and took me to a practitioner for treatment. I was greatly benefited by the first treatment, and was soon perfectly and completely healed. Today I am well and strong, have been enabled to continue my studies at school and later to take a business position, and I am more happy than I have ever been. In May, 1908, following a business panic, when I was well able and qualified to work, there seemed to be no place for me, but with help in Christian Science a business position was obtained. For these demonstrations of divine Love, as revealed in Christian Science, I am truly grateful.

MAYBELLE A. WALLIS, Boston, Mass.

Christian Science has done much for me, and I wish to express my gratitude to God, and to the woman who has given to the world this understanding of the Scriptures, which did not mean much to me before I became acquainted with this teaching. Christian Science is helping me to overcome some very grave faults, which I had always wanted to escape from, but did not know how to go about it. I am very grateful for the Wednesday evening and Sunday services.

I want to speak of a demonstration I made when first coming into Christian Science. I was eating lunch at a restaurant and a fish bone became lodged in my throat. It was very painful and I immediately began to think of several similar accidents of which I had heard. I also feared to cause a sensation around me. Then I realized that divine Love was with me, and that the bone had no power to hurt me. When my fear was overcome, the trouble vanished at once, and I cannot tell of the grateful feeling I had for even the little understanding I had at the time. I am truly thankful for living in an age in which we can learn more and more of God and spiritual law.

MABEL RIDGE, Chicago, Ill.

Christian Science came to me over four years ago, and I consider it a great privilege to tell of the good it has done me. I have been healed of headaches, the healing being instantaneous. The Bible is better understood and dearer to me today than ever before. Its revelations, when I study the Lesson-Sermons, are truly wonderful, and I feel like one treading on "holy ground." Each morning I thank God for another day in which to learn more of His allness and how to have no other god before Him. I am thankful to God, and grateful to that noble woman, Mrs. Eddy, whose writings have done so much good in the world.

MARGARET GOULDING REID, St. Charles, S. C.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be June 2, 1911. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 10, 1911.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 4, 1910, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM OUR EXCHANGES.

[*Christian Register.*]

That which gives the Bible unique value and distinction is the fact that, as no other book, it gives us a bird's-eye view of the religious history of the race. That which many liberal critics of narrow view deprecate and condemn in the Bible is one of the proofs of its value. There are in the early records historical errors, moral delinquencies, and immoral teachings which are now silently repudiated by even the most orthodox Jews and Christians. These things show what thousands of years ago men believed and how they behaved. The world in which the patriarchs lived was a world which fitted into the stage of human progress made up to that time. It was in advance of the other forms of religious belief and moral practices among the nations; but the world of the patriarchs transported into the twentieth century would be even more obnoxious to public sentiment than any institution which now exists. These facts honestly set forth in the Old Testament give us a starting-point from which to measure the progress made in the ages which lie between us and that early time.

[From the "Credo" of Rev. Charles Clark Pierce, D.D., Los Angeles, Cal.]

I believe in the changeless love and fatherhood of God, and in the brotherhood of all humanity; in the golden rule as the supreme law of society; in a heaven that begins here upon this earth; in a religion that values men more than money, and deeds more than creeds; in a gospel that has enough truth and love and life within it to unite all the people and all the nations of the world into one great fellowship, and which has power enough to bring health, happiness, and hope to all mankind; in a religion which is inspired with a divine enthusiasm for humanity, in a church which has courage enough to grapple with every human problem, and love enough to cast the devil of selfishness out of human hearts and human society; in the ideals which Jesus Christ held up before the world as the beginning and the end of all true progress; in love as the regnant force, service as the highest achievement, and God incarnate in human hearts and human institutions as the crowning ideal of the age.

[*Standard.*]

One of the tragedies of Christianity is found in the failure of Christians to be Christians. This is not said because we fail to reach perfection; because, ever and again, we come upon those who have been "overtaken in a fault." That is not the serious symptom in our common Christian life. Rather is it the utter and profound indifference shown by so many who bear the name of Christ to everything that has to do with Christ's cause. They show no love for that which Christ loves. They cannot be induced to give or to labor for the advancement of the kingdom of God. Their attitude furnishes no evidence that they care a whit whether or not this world is made over after the thought of God. They are distinctly less generous, less thoughtful, less helpful than are many who make no profession of discipleship and who stand outside the church. Is the church stronger because they are in it?

[*Universalist Leader.*]

The people do not want to be amused or entertained just now, they want something better. The people do not want to know anything about your doubts, brother minister, they want to know what you are sure of. The people do not want to hear a lot of schemes for the reclamation of the world by fiat, they want religion. The people do not want to hear you talk about the great leaders of the world; they want you to lead, and they will follow, if you show them

Digitized by Google

that the place where you are going is worth while. If you do not know where you are going, go into retirement and study the map until you do. Know something and affirm it; believe something and proclaim it; don't try to be a human newspaper, gossiping about current events, but speak the truth in love. If you do not know any truth to speak, then keep still! Put purpose and confidence into every message uttered.

[*Watchman.*]

These are days of the critical analysis of the Bible, wherein its composition is examined with microscopical care and the human features that appear in its pages are traced and described and catalogued. The tendency of scholarly attention to those features in the Bible is to make them so evident and prominent that one cannot read the Bible in any other mood than a critical one. It is doubtful if the Bible can be read thus in continuity with devout and receptive spirit such as will produce spiritual impression. One who has given attention to the results of modern criticism of the Bible has passed out of the stage of simple, humble, earnest acceptance of the truth. In such frame of mind one cannot read without note or comment. The Bible as a whole is taken out of his experience. He can take it in spots and draw lessons from its heights and depths, but the charm of the Bible as a religious book is gone. To him it has become literature, and as such has its own interests and lessons.

[Rev. Anson Phelps Stokes, Jr., in *Outlook*.]

The religious experience of Jesus Christ is repeatable. His life may be reproduced in its purity, its power, its divinity, for we are created "in God's image and after his likeness." The spark of divine life fanned into perfection in Jesus is latent in us. It needs merely the right understanding of the Master, and the earnest effort to follow him, to enable us to be among those "many brethren" of whom he was the "first" or the "first-born."

Jesus claimed no power which he did not mean us to share—that there is nothing inherent which separates us from him. We start with the same divine inheritance, the same possible relationship to the eternal Father, the same opportunity of service. The uniqueness of Jesus is not metaphysical. It is mainly the uniqueness of discovery, of self-realization, and of achievement. He was "the first-born among many brethren."

[*Christian World.*]

Until something has gone on within us that transcends words, and until something has come out of us which puts itself into something else than words, we cannot claim to be religious. Speech is never the final form of the spiritual life. And a great deal of what is today wrong with the church and society arises from our habit of putting speech, in its varied forms, at the top, instead of keeping it in its proper place. We are in need here of a great transformation of values, one feature of which will be a new estimate of inwardness, of stillness, of the soul's unexpressed operations, of the deed rather than of the word.

[*Living Church.*]

The expansion of Christian unity means the broadening of our individual and ecclesiastical visions. The limitation of Christian unity is that which we, by our feeble lack of vision, give to the subject. Christian unity will come tomorrow if Christians wake up tomorrow morning and see a big enough vision of it. It will be no nearer a thousand years from tomorrow, if you and I and the men that follow us are content to be partisans, governed by our prejudices. Which shall it be?

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

ATTENTION IS CALLED to the new volume, "Poems by Mary Baker Eddy," now on sale. Specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

Attention is called to the following reprints printed in Swedish: "Hvad Ar Bön?" "Lagens Välde," "Det Ondas Natur," "Helvete och Himmel," "Människans Gemenskap Med Gud," "Verklighet," "Det Ar En Ström," "Förklaring Af Kristligt Helande," "Den Yppersta Egenskapen I Christian Science," "Underverken," "Det Ondas Ofvervinnande," "Var Väktare," "Riklig Tillgang," "Kristendom Och Vetenskap." Ten copies to one address, prepaid, 10 cents; one hundred copies to one address, 75 cents; five hundred copies to one address, $3.00; one thousand copies to one address, $5.00.

NEW MUSIC.

Two of our Leader's poems, "Shepherd, show me how to go," and "Love," set to music by Frederic W. Root, are now on sale by the Society, and attention is called to the advertisement on the inside back cover page of this week's *Sentinel* for description and price.

A NEW PHOTOGRAVURE.

A new photogravure reproduction of The Mother Church edifices and the Publishing House, with the new parkway in the foreground, has just been made, and is now on sale. The size of the new picture, nine by fourteen inches inside of mat, which is about half that of the larger one, specially adapts it to framing for the home. Price, single copy $1.00, six copies $5.00, twelve copies $9.50.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

PAMPHLETS AND REPRINTS

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.20. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the month, and include all issues for the month named as expiration date on the wrapper. XI indicates the year 1911; XII, 1912. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25—	£0: 5 s.: 2d.;	Mk. 5.30;	F. 6.45
2.25—	0: 9 : 3 ;	9.50;	11.60
2.50—	0: 10 : 3 ;	10.60;	12.85
4.00—	0: 16 : 5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Harvard University has arranged an annual exchange of professors with four of the smaller western colleges—Colorado College of Colorado Springs, Col.; Grinnell College, formerly Iowa College, of Grinnell, Ia.; Knox College of Galesburg, Ill., and Beloit College of Beloit, Wis. Every year, until the arrangement is terminated, Harvard is to send a professor who will spend an equal portion of half an academic year with each of the four colleges, and during that time will give to the students of these institutions such regular instruction in their courses as may be arranged by their faculties. In return each of the four colleges will be expected to send every year one of its younger instructors to Cambridge, and during half of the academic year he will be appointed an assistant in some Harvard course. He will not be required to give more than one third of his time to teaching, and may devote the rest of it to graduate and research work in any of the departments of the university.

The drawing up of the proposed new arbitration treaty between the United States and Great Britain, to include all disputes between the two countries, has been begun by Secretary Knox of the state department. The diplomatic exchanges on the convention will be hastened as much as possible, with a view to submitting it to the Senate for ratification at the special session, which began on April 4. The treaty will be the first of its kind ever negotiated. The impetus given the proposal is the direct result of the speech of Sir Edward Grey, minister of foreign affairs of Great Britain in the House of Commons several weeks ago, in which he said that a proposal for the negotiation of such a convention would be welcomed by the British government. Under the proposed convention every dispute will be arbitrated without exception. This will render unnecessary the approval of the Senate to each question as it arises.

In a decision just handed down by the interstate commerce commission, involving the shipment of coal, it was held that rates restricted to the use of certain shippers and not open to all shippers alike are unlawful within the meaning of the interstate commerce act. The parties to the proceeding, which was initiated by the commission, included practically all of the coal producing railroads in the East and other railroads which do not originate their own fuel supply. The carriers are ordered to desist for a period of two years, from May 15 next, from their present practice of maintaining and using tariffs on coal, the rates in which are restricted to shipments of or for certain consigners or consignees, or when the coal transported is for a particular use.

A conference between Great Britain, Japan, Russia, and the United States for the negotiation of an international agreement for the protection and preservation of the fauna of the Pacific ocean, will be held in Washington in May. First consideration will be given the protection and preservation of fur seals, which are now threatened with extinction unless international restrictive measures are adopted. The conference will take up the question of the adoption of an international game law to protect sea otter and other mammals of the sea, and also plumage birds and their breeding grounds.

The postmaster-general, holding that the postal savings bank system is well past the experimental stage, has designated forty-five more branch banks, in as many states and territories, which will be opened as quickly as possible. It is his purpose to extend the system to places that now have not adequate banking facilities, and in selecting new points particular attention is paid to geographical locations, postal receipts, foreign money-order business, and the efficiency of postmasters. As nearly as possible, locations will be confined to industrial centers.

Judge Noyes of the United States circuit court has handed down a decision refusing to quash the second "cotton pool" indictment against James A. Patten, Eugene G. Scales, Frank B. Hayne, William P. Brown, and Col. Robert M. Thompson. He sustained certain technical contentions and dismissed others. The indictment charges conspiracy in restraint of interstate trade in cotton, on which the defendants must stand trial.

The department of agriculture issues notice that it is ready to begin the purchase of land for the national forest reserve in the White mountains authorized under the Weeks law. It will consider offers of lands in the White mountain region of New Hampshire and in a portion of Batchelder's grant in Oxford county, Maine.

It cost the firm of Duveen Bros., New York, importers of pictures, art goods, and antiques, one million two hundred and thirty thousand dollars to settle with the government, because of undervaluations of goods upon which duties were paid.

Appropriations at the last session of Congress aggregated $1,025,480,662, according to the statement issued by the chairman of the House appropriations committee.

International.

Premier Stolypin, who on March 20 sent in his resignation, agreed a few days later to remain in office, and thus the Russian cabinet crisis was averted. An imperial decree suspends M. Trepoff and M. Durnovo, members of the Council of Empire, from all sittings of the Council until January, 1912. M. Stolypin has insisted on the removal of these reactionary opponents of his policy as the price for his retaining office, on the ground that they with other members are responsible for the rejection by the Council of the essential features of his Zemstvo bill, which provided for self-government in the nine western provinces.

It is understood that the English government has abandoned its idea of getting the veto bill passed before the coronation and will adjourn Parliament in June, so that legislative contests will not interfere with the coronation festivities.

The Privy Council of Japan has ratified the treaty of commerce and navigation with the United States.

For the first time in its history British revenue for the year has exceeded one billion dollars total sum.

Industrial and Commercial.

Through the completion of the organization of the American Timber & Coal Company it has developed that for the past three years Cincinnati and St. Louis capital has been quietly securing control of one of the largest and richest coal and timber tracts in the country. The land acquired outright comprises five hundred and thirty thousand contiguous acres in the Cumberland plateau of Tennessee, in the northern part of that state. Various tracts in Kentucky, now being negotiated for, include over four hundred thousand acres. The Tennessee lands contain a total of fifteen feet of workable coal seams underlying the greater part of the property. An expert reported this contained not less than two hundred and fifty million tons of high grade coal, much of which is suitable for coke. There are also about two billion five hundred million feet of merchantable oak and other southern hardwood timbers on the tract.

The success attending the electrification of a portion of its suburban lines has resulted in a decision by the London, Brighton & South Coast Railway Company to electrify the whole system of 479 miles. The matter has been under consideration for some time. It is expected that the electric service will be in operation throughout the system by 1916. The cost of the project for the main line to Brighton alone, forty-five miles, is estimated at not less than seven million five hundred thousand dollars, and, it is said, will make Brighton virtually a suburb of London. About two years, it is thought, will be necessary for the preliminary surveys, and the actual completion of the work will require three more.

A scheme involving an expenditure of no less than seven million pounds is under consideration for the construction of new water works, including ten new reservoirs in the Thames valley. It is meeting with a great deal of opposition on the part of the inhabitants of the lower reaches of the Thames valley at Windsor, Eton, and elsewhere, owing to the belief that these huge basins, some of which are two square miles in extent, with embarkments rising from thirty-five to thirty-seven feet, will tend to hold up the flood water and result in damage being aggravated. Land owners are also objecting to the conduits, which will cut up miles of property.

Complete electrification of the entire Prussian state system of railways was practically made certain when the Legislature recently adopted the railway budget. Included in the appropriation is an item of ten million dollars for changing the steam railway line between Magdeburg and Leipsic to electric power. In all, three hundred and sixty miles of railway are affected, but it was made plain that this is only the first step in the plans of the government.

Application has been made by counsel for the United Shoe Machinery Company of Canada for a writ of prohibition to prevent a commission from proceeding to investigate under the combines investigation act, the workings of the company, and from rendering any judgment or order thereunder. It is contended by the company that the appointment of the board is illegal and should be declared null and void.

Contracts aggregating seventeen million dollars for new construction have just been awarded by the Grand Trunk Pacific railroad. They call for the construction of eight branches with a mileage of 619 miles—265 miles of main line and 200 miles of additional branch line grading, besides the construction of 140 station buildings and a number of hotel buildings.

A merger of twenty-two plow manufacturing companies into one corporation with a capitalization of fifty million dollars is announced. When the organization is perfected employees of all the concerns involved will have an opportunity to acquire stock. The main office will be at Moline, Ill.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

WHY GROW OLD?

W. R. RATHVON.

THE ancient Italian city of Ravenna, situated some miles from the Adriatic sea, was protected from invasion by a long stretch of shallow water, through which a channel was marked by posts projecting above the surface. When an enemy threatened from the sea, these posts were pulled out, and the city was thus saved from its foes, who could find no safe channel for approach.

Along the course of the human experiences of all of us are set the mile-posts of events and anniversaries whose recurrence marks the flight of time. These posts are not planted by time, but set by ourselves, ignorant or heedless of the fact that we are thus marking an open channel for the enemy we call age-limitation to enter from the sea of human beliefs. The passing of time is a mortal belief which lies wholly outside the realm of infinite Mind, wherein one day is as a thousand years. The trend of habit and custom is to admit and expect certain changes in physique and mentality with the passing of years. Up to a certain or uncertain point these changes are declared to be for the betterment of the individual, bringing strength and development of body and mind; but after maturity is reached, this laudable belief gradually gives way to the baneful one of deterioration and impairment.

The Christian Scientist can find no warrant in his religion for granting legitimacy or credence to any such beliefs. He knows that man, made in God's image and likeness, has no part in either accretion or decadence: that he has always stood at the point of perfection, and will always there remain. He knows that man, having all good, lacks nothing, and his heritage of good being eternal, he can never be deprived of any part of it, either by age or any other invention of the adversary. Man, in Christian Science, need therefore have no apprehension over advancing years, for while they should bring to him wisdom, they can take from him nothing that he would not voluntarily relinquish. But, because of the heedlessness or indifference of mortals to man's real relationship with God, they are continually driving new posts to mark the line of ingress for the enemy. They tick off each recurring birthday with more and more solemnity, and might often catch themselves looking backward and comparing what they think they cannot do now with what they once could do so well, and in other ways implanting marks of age where none belong.

It does not take much understanding of Christian Science to carry a man beyond the point of boasting of these things, or of mildly glorying in the empty distinction which seniority brings. Most of us have taken out of our vocabulary such mossgrown expressions as, "When I was younger I could do so and so," or, "Just wait until you are as old as I am and then see," and other similar impelitive expressions arising from self-justification and the like; but apart from these, we have a long line of posts to pull out if we would obliterate the channel marked out in our own consciousness in the days of our bondage to mortal belief. It is not enough that we no longer speak of our age, or talk of the profitless past, or openly bewail our lack of physical agility. It is of slight consequence to the individual how tightly he may muzzle his lips, if he gives free rein to his thought. The man who never speaks of age and its accompaniments, but neglects to rise above it in his thought, is much in the predicament of the amateur architect we read about, who built his house without a staircase. It looked all right from the outside, but when he wanted to go up higher he found he had neglected an absolute necessity.

There is one sure method of rising above the aggressive suggestions of age, and that is by keeping ever in consciousness man's true relationship with God. The psalmist says, after speaking of the mutations of mortal sense, "But thou art the same, and thy years shall have no end." To this he adds, "The children of thy servants shall continue, and their seed shall be established before thee." Man as God's reflection manifests only the qualities and attributes that are God-given. He has unfailing strength, permanent activity, unvarying sagacity. Our revered Leader says, "Man in Science is neither young nor old. He has neither birth nor death . . . Even Shakespeare's poetry pictures age as infancy, as helplessness and decadence, instead of assigning to man the everlasting grandeur and immortality of development, power, and prestige" (Science and Health, p. 244). The Christian Scientist finds it essential to his well-being to keep this continually in his thought and to assert incisively his heritage of man's spiritual faculties whenever contrary arguments and suggestions intrude themselves. Whatever sensible aids he may employ to this end are commendable. Hence he should cultivate cheerfulness in thought and expression, juvenescence in demeanor and vigor, sociability in association and inclination.

No one need retire to the chimney corner, no matter how many years may seemingly have passed over his head, for he is still God's image and likeness. Years should always bring sapience, but never decrepitude. Unresisting submission to the universal belief about the inevitable approach of senescence should never be regarded as a necessity, much less a virtue. The getting ready for it by withdrawal from usual occupations, changing one's customary attire, adopting the cane habit, retirement from blithesome fellowship, has been in times past regarded as a natural if not an admirable procedure; but such courses are to be shunned as the allies of age, the accessories of senility.

The achievements of so many of the world's greatest minds and keenest intellects after the riper seasons of longevity have been reached by them, should be a rebuke to those who interpret all changes after a certain age as sure evidence of decadence. Longfellow delivering his "*De Senectute*" on his seventieth birthday, Tennyson composing his immortal lines "Crossing the Bar" at eighty; Plato with pen in hand at eighty-one, Cato learning Greek at the same age, Humboldt completing his "Cosmos" in his ninetieth year, John Wesley at eighty-two in the midst of his activities saying, "It is twelve years now since I have felt any such sensation as fatigue," and our own Holmes lectur-

Digitized by Google

ing in foreign lands in his eighties, are all familiar instances which show clearly that age beliefs are neither compulsory nor legitimate. Such instances could be multiplied indefinitely, but the student in Christian Science may find them all overshadowed in the eventful record of the revered Founder of his religion, Mary Baker Eddy, who in her eighty-ninth year, with spiritual insight and bodily vigor, directed the policy and supervised the affairs of the most remarkable religious movement of modern times. Did not Christ Jesus say, "I am the living bread which came down from heaven: if any man eat of this bread, he shall live for ever"?

"THIS ONE THING I DO."

FRANCES MACK MANN.

It was during Paul's imprisonment in Rome that he wrote to the church at Philippi these memorable words, "This one thing I do." From previous verses we learn that this "one thing" consisted in knowing man's unity with God, in keeping his thought steadfastly on perfection, not that he had himself realized this state of mind, but he was making every effort to do so; in other words, he was obeying the command, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind."

Fortunately for us, Paul also recorded the method of thought by which he gained ground in attaining unto perfection. His first step was taken in "forgetting those things which are behind." That is, he saw that we must forget everything in the past; must cut off the association of beliefs which would drag one backward into the old mesmerism of thinking and acting. The wisdom of this step is apparent, for had he allowed himself to dwell on his persecutions of others as recorded in Acts xxvi., where he says, "And many of the saints did I shut up in prison, having received authority from the chief priests; and when they were put to death, I gave my voice against them," he would have been overcome with self-condemnation. He would doubtless have been swallowed up by vain regrets, while "the new man, which is renewed in knowledge after the image of him that created him," would have been lost to his consciousness.

There were other things for Paul to forget besides his persecutions of the saints, for he had been brought up at the feet of Gamaliel, and instructed in a strict manner according to the law of the Jews; therefore his mind had been filled with the old Jewish theology which exacted "an eye for an eye, and a tooth for a tooth." The false concepts of God, the blasphemy, the spirit of vengeance, and the anathema, all these must disappear before the risen Christ. Not only the theology which was written, but also the traditional theology which was oral, and which had been handed down from generation to generation, must be eradicated. To the church at Corinth he wrote, "Therefore if any man is in Christ, he is a new creature; old things are passed away; behold, all things are become new." After he stopped looking backward he was enabled to turn his whole attention to pressing forward. Christ, Truth, had called him, and had shown him the way to spiritual perfection.

Today the Christian Scientist finds himself in the same relation to the past that Paul found himself. He must do the "one thing," and turn unreservedly to the present work, if he would progress in Science. In the *Sentinel* of Sept. 3, 1910, Mrs. Eddy writes, "Christian Science is absolute; it is neither behind the point of perfection nor advancing toward it; it is at this point and must be practised therefrom." It requires constant watchfulness on the part of the Scientist not to go back into the ways of imperfection. It may be that under stress of circumstances he is tempted to forget the scientific fact that all physical discord is mental, not material, in causation, and thus be led to resort to the use of material means, and by so doing become darkened and stupefied. We should never forget our Leader's words in "Miscellaneous Writings," (p. 53): "You only weaken your power to heal through Mind, by any compromise with matter; which is virtually acknowledging that under difficulties the former is not equal to the latter. He that resorts to physics, seeks what is below the standard of metaphysics; showing his ignorance of the meaning of the term and of Christian Science."

If we would not slip backward, we must be steadfast every day in pursuing our studies, diligent in our duties, and patient under all circumstances. We know by experience that the worries of the day tend to make themselves real if we do not keep thought on the reality of the one Mind. So-called material wealth would make itself attractive if we were not alive to the true substance of Spirit, and the pleasures of the senses would so mesmerize us that we could not come into the joy of the spiritual attainment.

Like the motif in the symphony, we find the impelling thought, "This one thing I do," flowing through all of our revered Leader's earth life. It is touching to hear this note in the verses of her early childhood, in the great discovery of the Science of being in middle age, and in all the writings of her later years. History teaches us that where there is a high fixed purpose in the thought of a person, there is a corresponding activity in his life to accomplish that purpose. Mrs. Eddy's life has been one unceasing activity for the redemption of mankind from the thraldom of belief in evil,—sin, disease, death. Throughout her writings her teaching is always presented from the standpoint of obedience to the First Commandment, and the scientific government of nation, state, city, and individual is clearly discussed and defined. In the years to come this truth will be discerned and lived, until there will no longer be a need for arbitration between nations or persons, for every one will seek wisdom, not from others, but from God.

To come to the root of the whole matter, our former concept of God must be forgotten, and the new concept of God as a God of perfection must be gained. This perfect God has perfect ideas, or children, and as He knows all perfection He knows His children. It remains for the Christian Scientist to live in the realization of this scientific fact of being. Jesus commended this attitude of mind in Mary and declared that she had chosen the "one thing needful." He also condemned the opposite condition of mind in the rich young man, and declared, "One thing thou lackest." Even as Paul accomplished his great work in the establishment of the primitive church, and as Mrs. Eddy has reestablished primitive Christianity and given us a fuller revelation of God and man, so may we, forgetting the things that are past, and persistently holding to Paul's determination when he said, "This one thing I do," come into a knowledge of God sufficient to do the work to which we are called.

A ROBIN'S SONG.

GEORGIA E. MILLER.

It was a warm afternoon in midsummer. An excessive drought had continued during many weeks; the hillsides were yellow from the lack of moisture, and a dusty dryness hung over all vegetation. The only cooling sight in an otherwise sterile landscape was a little lake, near the shores of which sat a woman and a child. The woman had been pondering long on the incongruity of mortal situations: here indeed was an abundant supply of water, not a drop of which seemed to benefit the fast withering crops. Presently in a near-by maple a robin burst forth into song; clear, fresh, and happy were the notes which came from its little throat.

"Our robin is singing for rain," cried the child.

"True, indeed," replied the woman. "Singing for rain;

Digitized by Google

not complaining because of the drought, as the farmers all about are doing; but singing, rejoicing in a song of gladness and praise to his creator,—our creator, the creator of all that is good, beautiful, and harmonious; rejoicing because he feels sure his hymn (audible prayer) will be answered."

As the lesson came home to them both, they sat silent for some moments, until the child spoke.

"Then the robin believes it will rain, else he wouldn't be so happy, would he?"

"The robin knows it will rain," the woman answered. "And if all the neighboring folk maintained the same trust in the Father's loving care for all His little ones, always and under every circumstance; if we realized the wisdom of rejoicing in our hearts as we pray, because of the assurance that God answers all righteous prayer, the rain would fall—the error would be met. The psalmist says, 'I will be glad and rejoice in thee: I will sing praise to thy name, O thou most High;' and St. Paul writes to the Ephesians: 'Speaking to yourselves in psalms and hymns and spiritual songs, singing and making melody in your heart to the Lord.'"

"And that is what the robin is doing," observed the child. "Singing and making melody in his heart."

"And [God] gave us rain from heaven, and fruitful seasons, filling our hearts with food and gladness."

THE LOOM OF LIFE.

ORA S. DREWRY.

PERHAPS in no one thing is the line of demarcation between Christian Science and other religious teaching more clearly shown than in this, that in Christian Science understanding takes the place of blind belief, and the intelligent working out of one's salvation supersedes groping and helpless hope. The careful and faithful study of the Christian Science text-book, with the Bible, unfolds the way of this understanding and enables the student to grasp the unerring Principle and the scientific application of this new-old religion of Christ Jesus. This differentiation of Christian Science from other modes of thought was interestingly illustrated while watching the wonderful weaving of the marvelous Gobelin tapestries at the state manufactory in Paris.

From the time of Homer, who sang in his "Odyssey,"—

Fate has wove the thread of life with pain,

on down through the ages, the loom has been a favorite simile of life, in which each has woven his pattern as fate and circumstances might direct. Symbol and parable have ever been used as means of teaching truth, but the vision of truth must be clear in order that the symbol may carry to the human understanding a divine message. In looking at poor human lives, how broken the threads, how blurred the pattern, as fate and not Principle is thought to guide the helpless hands. Here and there, amid the unlovely patterns of material belief, the Christ-thought runs as in the dream of the poet, "a thread of gold."

In the patient, skilful, and painstaking weaving of these wonderful Gobelin tapestries, however, one may find a true symbol of "the loom of life," and learn much therefrom. The loom is high and the warp is vertical, the reverse of the ordinary loom, as is the whole process the reverse of ordinary weaving. The weaver sits behind and weaves from the reverse side of his warp. By his side is the painting or pattern to be copied, and for woof, a basket of wools of thousands of tones of every color and shade. The outline of the pattern to be produced is drawn on the front of the warp, and thus hidden from the weaver, but a little mirror is placed so that he can look into it and see the outlined pattern and his work reflected. As with infinite care he weaves the weft colors into the warp with his shuttle, he presses them firmly into place, and parts the threads of warp to look into the little mirror to see his reflected work that it is exactly done. The picture-pattern is studied unceasingly and each shading of tone and color is exquisitely reproduced, but he must constantly look into the little mirror and watch his work. The tapestries so woven are the admiration of the world, and are of priceless value.

Symbolically, the student of Christian Science works at his loom of life. The pattern to be reproduced, and always by his side, is the pattern shown "in the mount." The warp is made up of spiritual truths, the weft is of the thousand many-colored events of daily life. The little mirror is divine Science, into which the careful weaver constantly looks, thus watching each step of his reflected work to see that he faithfully follows the Christ-pattern. No careless nor indifferent nor haphazard weaving here, having neither pattern nor Principle, but faithful, patient, understanding work each day; and when the pattern is finished, instead of here and there a golden thread running through a life of material beliefs, there may be seen the more or less perfect reproduction of the divine idea.

FINDING A HOME.

M. FLORENCE EUSTIS.

IN the book of Proverbs we read: "Whoso hearkeneth unto me shall dwell safely," a message of reassurance which recalls a past experience. A few years ago I was teaching in a conservative New England city. In the part where I was obliged to live there were no regular boarding-houses, and no one who seemed to desire to accommodate a stranger. After many attempts I found a place for the first year, and another place for the second; but neither afforded the love and companionship which a home in its true sense implies.

Before starting on my vacation, at the close of the second year, I tried to find a place for the following year, but failing absolutely to do this, I left the matter in the hands of some friends who were to be in the city most of the summer. The last of July, however, they wrote that it was a hopeless case; that there was nothing to be found; that they really could not see what I was to do. On receiving this word, I straightway began to worry.

One night, as I lay awake, pondering this problem, a mental voice whispered: "You have given much time to what mortal mind says about this home; why not ask divine Mind about it?" It was dark, but I felt as if I must hide my face. There was, however, something better to do; namely, to get to work. So I began to seek earnestly for divine guidance, and strove to know the truth about this homeless condition. Instantly, came the answer in the words of Christ Jesus, "In my Father's house are many mansions: . . . I go to prepare a place for you." Then came such a glorious sense of peace, and I slept, awakening with a clear realization of freedom which enabled me to enjoy the remaining weeks of my vacation.

At last the morning came when I must start. As I took my train, fear began to growl a bit, but Science and Health was in my bag, and as soon as I was seated I began to study it diligently. My thought was not clear, but mortal mind could not influence me while I read the words of truth. When the journey was half finished, fear again presented itself, with the "common sense" argument which sometimes trips us up, suggesting that it would just be common sense to consider what I would do if I could not find a place. Where, for instance, would I sleep? In a moment I recognized this as error, and saw that my thought had wandered from the truth I had been reading, and was getting me into trouble. I turned to our text-book again, it was open at page 254, and my eye caught the last line, "Stranger, thou art the guest of God." I closed the book, and sat thinking, this time with a deep sense of peace, for if I was indeed a "guest of God," divine Love would meet me at the station and guide me to the home prepared for me. I sat there, rejoicing at the beauty of the truth until my station was reached.

Digitized by Google

As I stepped from the train, I felt led to a street which was not familiar to me, then to a house, and it is enough to say that in about twenty minutes from the time I left the train I was in a beautiful sunshiny room, unpacking my things and preparing to send my address to family and friends. The ten months that I lived in this house proved it to be indeed a home such as our Father provides, with love and companionship as His gifts.

WATCHFULNESS.

MARY THORN.

LIKE many other passages from the Scriptures, these words of Jesus, "What I say unto you I say unto all, Watch," had little significance to me, as applied to the every-day problems of life, until I studied Christian Science. A little experience which I had recently awoke me to a clearer realization of the meaning of this passage. The day following an outing with a party of friends, I awoke to find that I was suffering greatly from a sense of fatigue. Being the housekeeper at the time, I made a supreme effort to get the affairs of the house started for the day, then attempted to read the Lesson-Sermon. I read only part of it, however, before I gave up to a sense of weariness and lay down.

When I awoke a few hours later I found that my suffering had not lessened, and I began to work mentally to uncover the error which was holding me. While I was working, this thought came to me: "You do not need to know the error; you need to know the truth about error; namely, its nothingness." I then began to declare the power and presence of divine Love, and to realize that Truth is a law of destruction to every material belief and every form of fear. I was almost immediately relieved, so much so that I was able to get up and prepare lunch, and to eat something for the first time that day. After lunch, while continuing my mental work, the error that was holding me was uncovered.

The day before I had heard several friends relate experiences of fatigue. I had not realized at the time that I was giving any reality in thought to these experiences. It was not until a similar experience had turned me "to the arms of divine Love" (Science and Health, p. 322) that I awoke to this fact and knew for myself that there is no fatigue in divine Mind, nor in its manifestation; that weariness or exhaustion does not result from the operation of God's law, and therefore has no existence. Immediately following this uncovering, a sense of joy and strength came to me, and I was able to get up and go about my duties. The work which had been neglected in the morning was done quickly and easily, and before evening every trace of soreness and weakness had disappeared and I felt like a new creature. I then recalled the words of Paul to the Ephesians: "That ye put off concerning the former conversation the old man, which is corrupt according to the deceitful lusts; and be renewed in the spirit of your mind."

PEACE AND GOOD WILL.

JENNIE W. BACON.

WHILE engaged as press telegraph operator for that most interesting and far-reaching advocate, the newspaper, I often wished for a daily which, instead of crimes, disasters, and strife, would tell of the happenings of progress, of industrial and refining activities throughout the world, and when the time came that the *Monitor*, with its practical method of establishing fraternity, was announced in the *Sentinel*, it seemed as if the herald of old rang out again, "Glory to God . . . and on earth, peace." Many are the stories which could be told of barriers broken down among those who have not known that Christian Science is here to bless and not to harm any of earth's children, and one experience seems of sufficient interest to be related in detail.

I had been leaving occasional copies of the national edition for a retired bishop in our home, and was surprised one day when he requested me to preserve every copy carefully, as he was making files, clipping and classifying certain series of articles for reference in his writings, such as history, references to public characters, and questions of international concern. I then called his attention to the commercial page and what had been said of its reputation for reliable information among business men, and he replied that as it was of no special use along his line of work, he had skipped that page, but would look it over. A few days later he expressed much pleasure at the discovery that figures and finance could be made entertaining reading. He added, "When I read the *Monitor*, I feel as if I had improved my time and learned something substantial; I feel satisfied, like after eating a hearty meal."

Some months ago, a telegram brought news of the passing of an intimate friend, beloved as one of his own family. The shock and grief were overpowering, and he called twice to me to be sure and bring home the *Monitor*, saying, "I won't be able to sleep tonight, and the *Monitor* is the only thing that can keep my thoughts off my trouble. Don't forget it." It is needless to say that the paper was not forgotten; and after it was read through he fell asleep.

This same gentleman carries a copy to read while riding on steam and street cars, and was overheard to remark to a friend, "I don't see why they named it *Christian Science Monitor*. It is a paper which one with any kind of a belief could read and not hurt his religion." The articles bearing on Christian Science had only been glanced over, but a few weeks later he whispered to me, as he carried off some copies, "I am reading something inside the paper besides news. I never read such clear, simple explanations of the Bible. This is pure practical Christianity. If this is Christian Science, then I am a Christian Scientist."

That Christian Science shall be recognized for what it is, instead of the grotesque and distorted misrepresentations often met, is one of the unique missions of this unique messenger; and as it becomes better known, the *Monitor* will take its rightful place among the philanthropies of the world, to be accepted as a beautiful gift of love from the great heart of our Leader, telling of the Love unceasing that watches over earth's children.

[Written for the *Sentinel*.]

"SILOAM."

KATHARINE T. PORTER.

"Go wash!" That loving gentle presence leave, which woke
The only hope he e'er had known—whose actions spoke
Of power and peace, whose every tone made his heart yearn
To worship God in purity, from earth to turn
To heaven! His life had known no law—he turned away,
In unfamiliar stillness, to wash and to obey!
The strange new sense of partial sight perplexed him sore;
Lost was his certainty of touch, he knew no more
How gropingly his way to find—the past to him
Was dead, the present vague and filled with shadows dim.
He prayed to find this pool—to wash and to be whole:
No words can tell the mingled hope and chaos of his thought;
How, now in heaven, now in hell, he stumbling sought
Until, God-led, prone upon the brink he fell!
And then came peace; he prayed, his heart had found its rest.
E'en as a child he bathed his eyes, and rose up,—blessed.
"Go wash!"—we too must learn to turn and to obey
The patient promptings of our Father, God; nor say
We fear the carnal sense to lose; alone we must
In faith and love our dawning intuitions trust,
Till pure of heart at length we gain the heavenly goal,—
The radiant consciousness of Truth, the sight of Soul!

SELECTED ARTICLES.

["What Next" in *Fitchburg* (Mass.) *Sentinel.*]

A New York despatch in your paper presents the fact that a New York judge has given his opinion "that the treatment of disease by inaudible prayer is a violation of the laws of that state." The judge did not go far enough to explain whether Christians should be allowed to pray for anything else. Perhaps it is reasonable to assume that he would approve of prayers for some other purpose. I wonder what would have happened if Jesus and his disciples had made their advent in this age of the world instead of coming nineteen centuries ago. If they had practised in New York city they would surely have been arrested. I wonder what the next two thousand years will bring forth.

The judge further stated that a Christian "who carries and puts his belief into practice for hire exceeds his rights as an individual under the law." According to this opinion every clergyman in the state of New York is liable to arrest, for every one preaches and prays for his parishioners and receives a fee therefor. He may have a larger audience than the Christian Science practitioner, but the principle involved still remains the same. The judge did not venture to explain why the acceptance of a fee changed the situation. So far as we see, prayer is likely to have the same effect whether or not a fee is paid, and as "the laborer is worthy of his hire," that service for which the recipient pays is even more commendable than that which is received without pay.

The judge declares that "liberty of conscience . . . shall not justify practices inconsistent with the peace or safety of this state." Here he went outside of his jurisdiction, assuming that the practice of Christian Science is inconsistent with the peace and safety of the state, notwithstanding the fact that the testimony in the case showed that Christian Science had healed the sick and thereby brought peace and safety to the state. In short, the judge's opinion seemed to be based upon a preconceived and settled belief on his part that Christian Science was inconsistent with the peace and safety of the state and not upon anything that was brought out at the trial.

[Col. G. Napier in *Sunday Times*, London, England.]

I returned from a tour in Canada and the States on Wednesday last, and on Sunday saw the letters on Christian Science in your issue of that day. It was hard to believe that the letters of Prof. Hiram Maxim and the medical men who share his views could have been written seriously. May I suggest to them that it is too late to deny Christian Science. In every city and town of Canada and the United States of America of over, say, ten thousand inhabitants, there are churches and a growing community. To judge by their appearance, these congregations include all sorts—the hard-headed and the hard-handed—women and men, in fairly equal proportions. In every English-speaking country the same phenomenon is to be seen. Can it be doubted that the thought of vast and growing numbers of the world's leading race must have a decided and decisive effect on the direction of the world's affairs?

A present attitude of incredulity is unworthy of reasonable men. I remember that many years ago an Amir of Cabul, traveling for the first time by train, refused to believe that he was going forty miles an hour. After some time he asked the distance between telegraph posts and then, calculating, exclaimed, "Mashallah! It is true!" An aborigine of central China on my Cunard boat would see nothing of the Marconi—would not know that he was linked with the unseen continents—a message received would be still incomprehensible, but—a fact! Let M.D.'s and professors abandon their attitude of denial and incredulity for one of acceptance and investigation. When they see pain endured that they think material means might mitigate, let their feeling be one at least of sympathy and respect, and let them say with the Roman centurion, watching the sufferings of Christian martyrs, "These people must have something they value more than life."

[E. M. Ramsay in *Aberdeen* (Scot.) *Journal.*]

"Science and Health with Key to the Scriptures" is not in any sense a new Bible; it is simply a new interpretation of the one and only Bible; and there are no people who read the Scriptures more regularly or who accept the gospel teachings more whole-heartedly than do Mrs. Eddy's followers. All the Protestant churches agree in accepting the Bible as the source of their doctrines and the foundation of their faith, but they differ in the interpretations they attach to the Bible teaching. It is plain that while these various interpretations may all be false, only one of them can be correct, and the only proof that can be offered of the correctness of any interpretation lies in the effect it produces in the lives of its followers and in their willingness and ability to carry out the commands of the Saviour.

That the teachings of Christian Science have been received with abuse and derision is not surprising, as men have opposed or made merry over every discovery of note that has ever been made; it is too late in the day, however, to treat Christian Science as a mere theory. Its beneficiaries must be numbered by tens of thousands, and are to be found all over the world. One of the surest signs of the progress which Christian Science is making is the constant stream of literature directed against it. This literature emanates from many quarters and varies in its mode of attack. Some writers inveigh against the theology, but admit the healing. Others declare that it is doing little in the matter of cures, but admit the beauty of its teaching. On one point alone do all the critics agree—they admit their inability to understand the text-book. Thus it comes about that their attacks are directed simply against a Christian Science bogie of their own making.

Those Christians who find the Bible promises fulfilled in their lives, who find their infirmities healed, their steps guided, their aspirations satisfied by the growing sense of God's presence and power, need not ask for any fuller light on the Scriptures, but this is certainly not the experience of the majority of men. Those who are not satisfied with their present understanding of the Bible, those who desire to get a firmer hold on the things of God, may be interested to learn that Christian Science has an explanation of the gospel teaching to offer which enables the faithful student to prove to his own satisfaction the truth of the statements of our Saviour and the reality of the gospel record. Though the healing of disease is not the most important work of Christian Science, it is of great value, as is plain from the stress laid on it by the Master himself—"These signs shall follow them that believe; . . . they shall lay hands on the sick, and they shall recover." Many a man who had been unable to believe in God has been lifted out of unbelief through experiencing in his own person the healing efficacy of prayer.

The doctrine of the unreality of evil which follows inevitably the doctrine of the omnipotence of good is, we maintain, Scriptural, though it has through long centuries been hidden away from the thought of the world. Its truth is being proved daily in the power it confers to throw off and separate oneself from the sins of a lifetime. If those who take it upon themselves to decry Christian Science and warn people against it would be considerate enough to study our text-book for themselves, instead of accepting the random statements set afloat by ignorance and envy, we are convinced that there would be fewer critics of this Science.

It is plain that a system which maintains the unreality of matter cannot be charged with being pantheistic, since pantheism is the belief that God lives in matter, in the

Digitized by Google

material universe. Christian Science is further removed from spiritualism than is any other Christian church, since it does not believe at all in mediumship. It maintains that God, the First Cause of the universe, cannot be separated from His own creation, and that there is nothing in reality which He did not create. Finally, it is fundamentally opposed to every form of hypnotism or mesmerism, since it teaches that there is but one supreme governing intelligence called God, and that in proportion as mortals learn to obey and love God with their whole heart, are they freed from their belief in the control of other minds, other forces, and other powers. "Ye shall know the truth, and the truth shall make you free."

[William J. Bonnin in *Manchester* (Eng.) *Times.*]

In the extract from an article on "Witchcraft" there appears the statement that "Christian Science follows exactly in the footsteps of the witch." Of all the blundering guesses as to the nature of Christian Science, this particular one happens to be more than usually unfortunate. Occultism, necromancy, mesmerism, witchcraft, or whatever other name one cares to give to the nefarious machinations of the so-called human mind, can only be believed in and submitted to by subscribing to the parent belief that there exists a multiplicity of human minds, each one powerful enough to invade and influence others.

Now the very central teaching of Christian Science insists on the existence of one Mind and one Mind only, the divine; one intelligence, comprehending good and thinking only perfect thoughts. So that the understanding of this truth makes it simply impossible for any one ever to believe in such subjects as hypnotism or occultism in any form. Mrs. Eddy has written (Science and Health, p. 469), "With one Father, even God, the whole family of man would be brethren; and with one Mind and that God, or good, the brotherhood of man would consist of Love and Truth, and have unity of Principle and spiritual power which constitute divine Science."

[J. W. Pope in *Southern Pines* (N. C.) *Tourist.*]

Some three months ago, while in Philadelphia, I attended on a Sunday, for the first time in my life, a Christian Science church. It was a commodious church building and well filled with a congregation that in its general appearance would rank with any assemblage of religionists to be found in a city church on the Sabbath. The services consisted wholly of readings, either from the Scriptures or Mrs. Eddy's book, and singing. The whole routine of exercises was so simplified in its character that it could hardly be expected to interest or impress the superficial observer; but what attracted my attention most was the profound concern manifested by the hearers to catch every word that fell from the lips of the Readers.

What is the solution of it? This manifest interest in the simple service, each one of which is almost a facsimile of the other? It was the same old, old story that was preached two thousand years ago—love to God and love to man—only retold. Is it an unwarrantable assumption to say that these people may have delved deeper into spiritual truth and thus have come together in a spirit of reverence and gratitude to praise God that they are living in His sunlight? Is it an unreasonable supposition that they may have come in closer touch with a living reality, of which we know so little, and that they are abiding on a higher spiritual plane? This is the only church in all the ages that has been founded on love as the ruling principle in life. All others have been built on a system of beliefs. Not one has followed the teachings of Christ. Not one has stood the test of sincerity. Narrow souls and carping critics may criticize and oppose and seek to belittle the beliefs of Christian Scientists, but they should be judged by their words and deeds.

At this point in my disquisition it may be pertinent to ask if the human race is prepared to accept the preaching of a doctrine of love as taught by Christ. From a cursory view we might answer no; that history is to repeat itself, but we are not living in the sixteenth century. We are meeting a higher and ever-growing intelligence, that is more boldly expressing itself not only among our profound thinkers, but among those who have been held down by unjust and arbitrary power. Who does not know that there are millions of souls today who are sending up unuttered cries for the lifting of their burdens? The walls of our jails and prisons echo with the sad, plaintive appeals of thousands for a larger humanity—for a degree of mercy that shall be tempered with justice—and from our courts there rise grim wrongs that scourge alike the innocent and the guilty, a system without heart in it and that needs humanizing.

Go up a little higher into another stratum of human existence, the *bon tons* of society, and what sickening things are revealed to us! Probe the civic sins and evils in our municipalities, and it would seem as if hell were on its triumphal march. Wherein lies the panacea for these civil and moral evils that are corrupting in all their tendencies? Does it lie in the adoption of some system with an aim to both civilize and Christianize? A scheme that shall be educational in its process, revealing to our beclouded minds higher truths? Pilate once asked, "What is truth?" and even in his time it must have been realized what an elusive thing truth is.

Mary Baker Eddy is dead. The paramount thought now is, Shall the great central truth she taught survive? For, strange as it may seem, down through the long vista of time love as a part of Christianity has been left out. We read in Holy Writ that "love is the fulfilling of the law," and until the church and the world shall come *into* a practical recognition of this truth they will be pursuing phantoms. Oh, for a religion that casts sunbeams instead of shadows!

[James D. Sherwood in *Temple* (Tex.) *Telegram.*]

In Christian Science practice there is no compounding of mind and matter. On the contrary, Christian Science teaches that spirit and matter are opposites, hence do not combine or coalesce. Dependence on one will destroy confidence in the other, because they are opposites and produce opposite effects. The Christian Scientist depends solely upon the divine Mind, God the great Physician, for deliverance from sin and from disease. He is taught to have implicit faith in God, and to follow the teachings of Christ Jesus, who healed by spiritual means alone and who taught his followers to do likewise. He said: "Ye shall know the truth, and the truth shall make you free."

When it is known that a majority of those who appeal to Christian Science for healing do so after all material means have failed and they are in a state of mental and physical bankruptcy, and are without hope and without God in the world, and that a large percentage of such cases are healed, this fact alone should suffice to prove that Christian Science is the most efficacious healing remedy known among men. If such results are obtained today, what may we expect when all men speak well of Christian Science and the majority of them depend wholly upon its healing efficacy?

A professed Christian should be unwilling to make light of the very thing that gave such impetus to Christianity in the early Christian era. The truth uttered by Christ Jesus and his disciples has lost none of its healing power, and its presence is again recognized among the children of men, and is seen repeating the wonderful works of healing the sick and reforming the sinner. Because of the good it is accomplishing, Christian Science should not be resisted and throttled, but should be welcomed and encouraged.

Digitized by Google

The writer of the article mentioned manifests a kindly attitude toward "the truth that is to be found in Christian Science;" and for this we are grateful. A Christian Scientist does not claim to be the healer of the sick. He does not claim that it is his thought that heals. The Christian Scientist is engaged in demonstrating a proven Science of being which was introduced by Christ Jesus, hence which is centuries old. This healing art was established by the Master, but it became lost to the world and was discovered and reestablished by Mrs. Eddy. That it is being made practical all over the civilized earth is attested by the many cases of healing that are being accomplished daily in Christian Science practice.

Anciently St. Paul asked: "Why should it be thought a thing incredible with you, that God should raise the dead?" Today it might also be asked: "Why should it be thought a thing incredible with you that practical Christianity should heal the sick?"

Christian Science emphasizes the fact that is stated in the first chapter of Genesis and the first chapter of St. John's Gospel, that "God saw every thing that he had made, and, behold, it was very good;" and "without him was not any thing made that was made." There is no good in sickness and it is not mentioned among the works of the good God who made all that was made. On this basis Christian Science relegates sickness to its proper rank and classifies it as illusion, and heals it with the truth about God and man made in God's image and likeness. The remedy employed in Christian Science is always truth *versus* error; the real *versus* the unreal. This method of healing makes God's allness practical. It heals the sick and reforms the sinner by the same process, and that process is the truth which Christ Jesus declared and made practical in his day.

[Frederick Dixon in *Bath* (Eng.) *Daily Chronicle*.]

May I point out that if a sick man desires to be attended by a Christian Scientist in preference to an ordinary medical man, it would be absolute tyranny to attempt to prevent him. He knows perfectly well what he is doing, and has a perfect right to choose his own means. The attempt might just as well be made to settle what church he was to go to. Yet people do not seem to see that, in having overcome a theological tyranny, they are tending to drift under a medical tyranny. It is all very well to call a man a quack because his treatment is different to that employed by the ordinary medical doctor, but the ordinary doctor would have been called a quack fifty years ago. It is only necessary to point out that just the same attempt was made to stamp out homeopathy as is now being made to stamp out Christian Science, to substantiate this. The homeopathist was called every name under heaven, and dragged into the police courts, for no better reason than that certain people who did not like his treatment objected to the people who did like his treatment and utilized it.

Why the Christian Science practitioner should not be paid, it is rather impossible to say. A clergyman is paid for doing his duties, which include praying for the sick, and a doctor is paid for doing his duties, which are confined to the effort to heal the sick. The one person whom apparently it is wrong to pay is the Christian Scientist who, to the utmost of his ability, is attempting to fulfil the command of Christ Jesus to preach the gospel and to heal the sick.

[From an editorial in *Victoria* (B.C.) *Colonist*.]

Sir William Crookes made a speech the other day in which the following remarkable sentences occurred: "It seems that no law is more certain than the law of change. A bit of radium that would go into a thimble has suddenly shaken our belief in the conservation of substance, the stability of the chemical elements, the undulatory theory of light, and the nature of electricity. It has revived the dreams of all chemists and the preservation of perpetual youth, and has cast doubts on the very existence of matter itself. For physicists are beginning to say that, in all probability, there is no such thing as matter; that when we have caught and tamed the elusive atom, and have split it into seven hundred little bits, these residual particles will turn out to be nothing more than superimposed layers of positive and negative electricity."

All this serves to show the exquisite folly of those persons who two score years ago thought that Science had said the last word about the mystery of nature and that the mid-Victorian investigators had discovered the end of wisdom. Sir William's few remarks are as if one had lifted the edge of a curtain and given us a glimpse of an immeasurable and unknown arena of research. They suggest that we have yet to learn what things are and what we can do with them.

[Alfred Farlow in *Columbus* (Ohio) *Journal*.]

In a recent issue a critic is credited with saying that "the idea of Christian Science is all right, but as practised it is carried too far when the rules of hygiene are ignored and an effort is made to overcome the consequences." I am wondering if the writer has been misinformed concerning the practice of Christian Scientists. As a matter of fact they do believe in consistent hygienic practice. "Cleanliness is next to godliness," that is, it follows closely in the train of godliness.

It is impossible for one to become newly elevated to his ideals without being impressed with the importance of improving his surroundings. Christian Scientists provide for pure air and pure food, since the purest and best in the material most nearly approaches the spiritual. Thus it may be noted that, on the basis of this teaching, Christian Scientists take good care of themselves physically, knowing that even the proper conduct as to bodily conditions has its most rational basis in a correct understanding of the spiritual side of life. It is the extreme and unreasonable hygienic rules which cause thought to dwell too much upon the material and to forget God, that are deplored by Christian Scientists.

[James Phelps in *Milwaukee* (Wis.) *Sentinel*.]

Nothing could be farther from the truth than the claim that Christian Science is pantheism,—either materialistic or idealistic,—or that it denies nature. On the other hand, if our clerical critic will concede that God is infinite, and I believe he will, and that matter is real, he will have reduced his belief to the same pantheistic level as the stoic. One vital difference between "pantheistic idealism" and Christian Science is that this philosophy is based on the admission of the power of the human mind, which is distinctly "a house divided against itself," and which is as completely disowned in Christian Science as in the teachings of the New Testament. Suppose one were to read all the books ever written on pantheism, would the knowledge gained thereby enable him to heal a single case of malignant disease? Through the understanding gained by a study of the Christian Science text-book, many men and women bear grateful acknowledgment of having been healed of dreaded diseases which have been pronounced incurable by expert physicians.

A desire after complete holiness is the truest mark of being born again. It is a mark that God has made us meet for the inheritance of the saints in life. If a nobleman were to adopt a beggar boy, he would not only feed and clothe him, but educate him, and fit him to move in the sphere into which he was afterward to be brought; and if you saw this boy filled with a noble spirit, you would say he is meet.—McCHEYNE.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

LIVING THE TRUTH.

We who today are the beneficiaries of the tireless labors of the Discoverer and Founder of Christian Science, Mary Baker Eddy, too seldom stop to think of our own and the world's indebtedness to her. In the Preface to Science and Health (p. vii.) Mrs. Eddy says: "It is the task of the pioneer to hew the tall oak and to cut the rough granite. Future ages must declare what the pioneer has accomplished."

There is perhaps no one fact that so impresses the outsider as the wonderful spread of Christian Science in the not quite half century since its discovery, and yet this remarkable accretion of loyal followers resolves itself, after all, into a very simple matter; namely, the potent influence of a good example. It was because Mrs. Eddy lived the truth she taught, because she made Christianity practical and helpful, today and every day, and not simply a passport to a far-away heaven, that Christian Science has appealed to the world at large as a revival of the Christianity of the Master and his little band of disciples, of the "great Physician" whose loving heart yearned over those who so sorely needed to be made whole in mind and body.

It requires not only a sublime faith in the justice of one's cause, but courage of a rare degree as well, to become the pioneer in any radical departure from accepted beliefs, and time and patience and earnest effort are needed ere the path is cleared of the boulders of doubt and disbelief and the spreading branches and tangled roots of prejudice and pride. And yet, even as the "leaven, which a woman took, and hid in three measures of meal," leavened the whole lump, so must all antagonism to the truth yield to "the power of an endless life," to the power of a life which exemplifies the truth that makes men free.

So thoroughly did our dauntless Leader perform the task to which she had set her hand, so plain has she made the path in which we are to follow, that the Christian Scientist in any community today has only to live the truth taught by the Master, as interpreted by our text-book, Science and Health, to make himself a power for good. He needs no blare of trumpets, for the silent influence of a life attuned to the Christ-spirit will be farther reaching in its appeal to those with whom he comes in contact. If he is but true to his trust, if he is so imbued with faith in God that he is able to do the works which the Master declared those who believed in him should do, the good seed will be sown that shall bring forth an abundant harvest.

Today, as of old, we are known by our fruits, and the advancement of our cause depends on our ability to meet this test. All about us are those in need of the gospel of this healing truth, those who are waiting for the helping hand that shall lift them from the depths of sin and despair; and the call is to each one of us to do our part in lifting these burdens, in letting our works tell so plainly the gospel we profess that we shall make plain for others "the paths of righteousness." In this undertaking we are all pioneers, each in his own home circle, among his friends and business acquaintances, and the community of which he is a part. Each has his own peculiar difficulties to meet and obstacles to surmount, and each must work out his own salvation. The Master said, "I must work the works of him that sent me, while it is day," and the faithfulness with which we, too, "work the works" that Jesus demanded of all his followers, will determine as nothing else can how truly we have improved the opportunity that is ours today, to spread abroad this healing gospel which has been made plain to us through the life-work of one who counted not the cost of living the truth if thereby humanity might be benefited.

ARCHIBALD MCLELLAN.

THE PROSPERITY OF ZION.

Long ago the psalmist wrote: "Pray for the peace of Jerusalem: they shall prosper that love thee. Peace be within thy walls, and prosperity within thy palaces." All students of the Bible recognize the deep spiritual significance which attaches to the mention of Jerusalem, whose history is of such mighty import to Jew and Christian alike; the more so, that St. John, in telling us of the spiritual and permanent home of all God's children, calls it "new Jerusalem," and again, "the holy Jerusalem," that home of Soul in which is neither sickness, sin, nor death,—in other words, the ideal city, governed by God, divine Principle, and lighted by the glory of divine Truth and Love. It is said that when Jerusalem was taken from the Jebusites, in the reign of David, the twenty-fourth psalm was written to celebrate his triumphal entry to the stronghold on Mount Zion. Be this as it may, we cannot too often remind ourselves that he alone shall ascend into God's holy place and dwell there who has "clean hands, and a pure heart," and who has made God his refuge and his fortress for all time.

In the psalm first quoted the peace and prosperity of Zion are linked close to that of the citizens. At this point it is well to consider the definition of Zion as given in Science and Health (p. 599): "Spiritual foundation and superstructure; inspiration; spiritual strength. Emptiness; unfaithfulness; desolation." This may remind us of Paul's words: "To the one we are the savor of death unto death; and to the other the savor of life unto life." This aptly typifies the different mental conditions of those who approach the subject of Christian Science, and we can only rejoice that so many are finding it to be indeed "the savor of life unto life." It is clearly a matter of choice, on the part of each of us, which it shall be.

In the Manual of The Mother Church great emphasis is laid upon the study of the Lesson-Sermon, "a lesson on which," our Leader says, "the prosperity of Christian Science largely depends" (Art. III., Sect. 1); and this is followed by a demand for consecrated living on the part of the Readers, so that "the mental atmosphere they exhale shall promote health and holiness." While this applies specifically to the Readers in our churches, it certainly may be said to extend as a gracious invitation to all the members; indeed, to "whosoever will" that elect to worship God "in spirit and in truth."

Those who study diligently these Lesson-Sermons, and faithfully practise their teachings, not only advance the prosperity of our cause but are sharers in it, realizing the health, peace, strength, and happiness which Truth so surely bestows. As in the temple service of old, all the work must be done as unto God and the lowliest duty held sacred. No excuse can be made for careless or unintelligent preparation. All students of the Lesson should be so familiar with the instructions given in the "Note for Students of the Lessons," on the page opposite to the index for each quarter, that in case one were unexpectedly called to take the place of the regular Reader on Sunday there would be no uncertainty as to the beginning or ending of references, either from the Bible or from Science and Health.

In the Preface of our text-book we are told that "the time for thinkers has come" (p. vii.). With the world's great need pressing upon us, it is no time for us to be dreamers or dawdlers. The old material methods of thinking and doing have been found insufficient to meet our needs; therefore we must bestir ourselves and let the divine energies of Truth take entire possession of us, that we may prove, to

Digitized by Google

ourselves at least, how truly alive we are in working out our salvation. Today this includes the working out of our Lessons, their faithful and intelligent study, and their no less faithful demonstration, that peace and prosperity may be ours and our gift to all who are ready to share our blessings.

ANNIE M. KNOTT.

"SHAKE THYSELF FROM THE DUST."

THE effort to establish a habit of cleanliness, whether of person or of thought, is always rendered practically hopeless so long as dirt awakens no sense of repugnance. The cleaning-up process may be gone through with again and again, but apart from a distinct repulsion for the unideal, the results, as we all know, are too transient to be worth while. To secure any permanent gain there must always be an advance in self-estimate, a desire to be free from the belittling, a growing love for the highest and best. In a word, aspiration must precede all genuine self-improvement.

This fact gives peculiar and abiding significance to the emphasis which Christian Science lays upon the necessity for the recognition of God's man, the perfect unfallen selfhood, as the true initiative of all spiritual progress, the ground of impulsion to all effective ethical endeavor. Christian Science calls its every student to strive for the acquisition of this true self-asserting, self-respecting sense, by refusing to know any man "after the flesh." In this it is at-one with St. Paul when he enjoins the Corinthians that they "awake to righteousness," that they may "sin not;" also when he counsels the Colossians: "If ye then be risen with Christ, seek those things which are above." That is, the desire to attain companionship with Christ is, and must ever be, the basis and preliminary of spiritual attainment; it is that true growth in Christ which enables one to shake off the dust of materiality, to resist intelligently the impulses of selfishness and sensualism.

The phrasing of the statements of both Isaiah and St. Paul is thus seen to be entirely in keeping with the metaphysical facts. Though one be covered with dust, he never identifies himself with it. It is regarded as foreign and incongruous, and hence it is discarded without hesitation and without reserve. So likewise will a clear and constant separation in thought between man and materiality contribute to a more speedy escape from all that pertains to the flesh, all that the apostle referred to when he enjoined the Ephesians to "put off . . . the old man, which is corrupt according to the deceitful lusts;" and that they "put on the new man, which after God is created in righteousness and true holiness." Cleansed within, one's cleanliness without becomes a natural sequence which will grow to be both instinctive and habitual.

Most religious teaching has been handicapped at this point. It has insisted that the Christian must free himself from fleshliness, the dust of carnal sense, and yet it has clung to materiality as constituting a part of man, as pertaining to the divine order. Christian Science takes direct issue with this teaching in declaring that God's child is forever Godlike, and it is the glimpse we obtain of this true and altogether glorious self which renders the unseemliness of the "man of flesh" to which we have so largely consented, an impelling offense that is parted from with exceeding joy.

Cleanliness in its best sense is a matter of devotion to the divine ideal, a matter of insistent discrimination between the Christ-man and all that pertains to material sense, the bodily concept of selfhood, "which veil is done away," as the apostle says, "in Christ." It is when seen for what it is, wholly undivine, unfitting, and unworthy, that the dust of materiality becomes repellent, and it is to this true sense and its sequent possibility of spiritual assertiveness and spiritual gain, that we are awakened in Christian Science.

JOHN B. WILLIS.

AMONG THE CHURCHES.

SAN ANTONIO, TEX.

The members of First Church of Christ, Scientist, dedicated their church building, Fifth street and D avenue, during the regular Sunday night service last evening [Jan. 1]. The ceremonies, aside from the regular service, consisted chiefly of a historical sketch of the church in San Antonio, which was read by John W. Fraser, president of the church. The members of the church have been using the present building since 1903, but it received its formal dedication last night because it is a custom among Christian Scientists to defer the dedication until a building is fully paid for. The historical portion of Mr. Fraser's address was in part as follows.—

"It seems meet at this time to refer to a few of the stages of this church's progress, as gleaned from the pages of its history. In April, 1893, a number of loyal Christian Scientists met at 640 Soledad street in this city and organized a Christian Science society. Services were held there about one year, when a larger auditorium was needed, and the place of meeting was changed to 629 North Flores street. After two years' services at that place, the congregation was able to secure more convenient quarters down town, in the Chandler Building, at 104 East Crockett street. Services continued here until October, 1898, when this building was leased, and it has been the church home ever since. In the mean time, in April, 1898, the society was merged into First Church of Christ, Scientist, and a charter was secured from the state of Texas. On March 7, 1903, this building was purchased by the church, largely on time, and the last payment did not mature until next March, but the debt for the church as well as for the organ and seats and repairs has all been paid."—*San Antonio Express.*

LANSING, MICH.

An audience which filled every seat in the spacious auditorium and which overflowed into the foyer beyond, was present at the opening services in First Church of Christ, Scientist, Sunday morning [March 5]. The beautiful little edifice, which has been for several months in the course of construction, needed nothing to embellish it for the occasion. A few potted palms and ferns and one magnificent cluster of lilies were the only decorations, but the interior finishings of the church, beautiful in their rich simplicity, were the cynosure of all eyes.

One feature upon which the members of the church are congratulating themselves is the excellence of the acoustics. It is possible for the Readers to speak in a normal tone and still be heard in every portion of the church.

State Journal.

WICHITA, KAN.

First Church of Christ, Scientist, of this city closed negotiations today [Feb. 21] by which it comes into possession of lots in the eighth block on North Lawrence avenue. The site has a frontage on Lawrence avenue of one hundred and fifty-five feet. It will become the site of a new Christian Science church. The present building at the corner of Second street and Lawrence avenue has been outgrown. The consideration in the purchase of the property was eleven thousand dollars.—*Wichita Beacon.*

BALTIMORE, MD.

Competitive plans are being prepared by local architects for the handsome church structure for First Church of Christ, Scientist, to be erected on University parkway, and the determination of the building committee of the church will shortly be announced. The new edifice, in accordance with tentative plans, will be of stone construction and of attractive Gothic architecture. It will represent an outlay of about one hundred thousand dollars.—*Baltimore Star.*

THE LECTURES.

DES MOINES, IA.

A capacity house listened attentively to the lecture delivered last night [Jan. 19] by Frank H. Leonard, at the Auditorium. W. H. Harwood introduced the speaker and said in part,—

This splendid audience is abundant evidence of a widespread interest in the subject of Christian Science. It demonstrates the fact that there is an earnest desire among thinking people for more knowledge of its teachings. It proves that mankind is ever responsive to ennobling, refining, and uplifting influences, and not only willing but eager to be taught great truths.

Whether we are adherents of this particular church or not, we cannot escape the admission that many people have been greatly benefited both spiritually and physically by the teachings of Christian Science. Simply a casual or superficial consideration of the testimonies of Christian Scientists will convince the most skeptical that many remarkable cures have been effected, and what is even better, many have been freed from the bondage of sin and ruinous habits, and transformed from unhappy, envious, jealous, despairing creatures to happy, generous, unselfish, optimistic men and women, with courage to meet every emergency of life.—*Register and Leader.*

ALTRINCHAM, ENGLAND.

A lecture on Christian Science was delivered at the Literary Institute, Altrincham, on Tuesday evening [Feb. 7], by Bicknell Young, of the Christian Science board of lectureship of The Mother Church, The First Church of Christ, Scientist, Boston. A large audience assembled and considerable interest was taken in the views expressed by Mr. Young.

The chair was occupied by the Rev. Charles Mawdesley Shaw, who at the outset expressed his thankfulness to God for the fact that he had become converted to Christian Science, and said that it had brought home to him a deeper knowledge of God and a proper manifestation of His power to heal and to save. Christian Scientists, he added, had for years proved the faith which they believed in.

Altrincham and Hale Advertiser.

UNIVERSITY OF CALIFORNIA.

Under the auspices of the Christian Science society in the University of California, Berkeley, Cal., a lecture on Christian Science was delivered last Saturday evening [Feb. 18] before a large audience at the High School Auditorium, by Bliss Knapp. The lecturer was introduced by Henry H. Gutterson, instructor in architecture in the University of California, who said in part,—

In a center of academic and religious education theory may easily be overestimated—made to dominate the true purpose of all education, given in the words of Herbert Spencer as "a preparation for complete living." Doubtless we can all agree with the statement in the Christian Science text-book, "Science and Health with Key to the Scriptures" (p. 195): "Academics of the right sort are requisite." To have this right sort of academics, and at the same time an education attractive to all by reason of its practical value both for guidance and discipline, it is necessary to interpret education from the standpoint of truth. We believe that this interpretation is to be found in Christian Science.

Berkeley Gazette.

CITY OF MEXICO, MEXICO.

W. D. McCrackan, M.A., of Boston delivered an interesting address last night [Feb. 24] to a large audience in the Christian Science Hall on the subject of the belief of the followers of Mrs. Eddy. The speaker was introduced by A. L. Van Antwerp, who spoke in part as follows,—

"Ye shall know the truth, and the truth shall make you free." These sublime words uttered by the master Christian nineteen hundred years ago have come rolling down the centuries with gathering strength and power, for he spake as never man spake before. But what he said was not for his limited circle in far-off Palestine alone, but for all men and for all times. His hearers, as they had then, have now their work to do; we must make those words our own; we must clear our consciousness of all that would seem to prevent us from putting them to practical use. If we are wrapped in the serene infallibility of our own opinionated ignorance, we shall accomplish nothing.

We are all seekers after truth; we all long for the "glorious liberty of the children of God;" we all long to be freed from the bondage of our fears and our false beliefs; and we are struggling—struggling to free ourselves, and so by example our fellow-men—from the slavery of sin and the shackles of error. And the result is sure, the guerdon glorious. This struggle has gone on for ages; the way has been dark and few are the landmarks to guide the weary pilgrims and apostles of Principle. In these last days, however, there has stood "in the great history of the land" a woman who has shed a great white light on the way; who has given us a key whereby the Scriptures may be more clearly understood. To her, Mrs. Mary Baker Eddy, we owe an inestimable debt of gratitude. In our text-book, "Science and Health with Key to the Scriptures," we learn the way of deliverance from all that has seemed to bind us as slaves in the service of mortal mind, the slavery of sin and of sense; we learn that here and now we may experience the joys of Soul; we learn the immanence of Life, for there is no death; we learn the power of Love, for there is no hate; we learn the might of Truth, for there is no error.—*Mexican Herald.*

BROOKLYN, N. Y.

A large crowd gathered at the Academy of Music yesterday afternoon [Feb. 26] to listen to a lecture on Christian Science by Willis F. Gross of Boston. The speaker was introduced by Harvey M. Ferris, First Reader of First Church of Christ, Scientist, of Brooklyn, who said in part,—

At the present moment this borough is the scene of considerable religious activity, and Christian Scientists rejoice with the brethren of other denominations in their efforts to awaken thought to a fuller realization of God's omnipotence. The earnest Christian is always searching for a religion that will prove "a very present help in trouble," a religion that can be applied to every incident of daily life; in short, a demonstrable religion. Christian Science is ready to meet this desire, and give to the hungering heart an understanding of God which heals the sick, reforms the sinner, and meets every human need.

In Christian Science each one can find a way by which his individual problem can be improved; whether bad or good, a clearer realization of God's presence and true nature will lift it to higher achievements. Health, strength, and all good is the birthright of man, and because we are enjoying blessings hitherto unknown to us, we are giving this lecture, in the hope that some ray of the tender, compassionate, and omnipotent Love which Christian Science teaches may find its way into the consciousness of every one present, and afford a mental feast by the still waters of spiritual reasoning and discernment.

Brooklyn Standard Union.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Aberdeen, Wash.—Bliss Knapp, Grand Theater, 3 p.m., April 16.

Akron, Ohio.—Clarence C. Eaton, Colonial Theater, 3 p.m., April 16.

Berkeley, Cal.—William D. McCrackan, M.A., High School Auditorium, April 18.

Charles City, Iowa.—Hon. Clarence A. Buskirk, Hildreth Opera House, April 18.

Chicago, Ill. (Ninth Church).—Prof. Hermann S. Hering, Woodlawn Masonic Temple, April 17 and 18.

Chicago, Ill. (Second Church).—William R. Rathvon, Church Edifice, Wrightwood and Pine Grove avenues, April 20 and 21.

Edmonton, Alta.—Bliss Knapp, Bijou Theater, First street, 3 p.m., April 23.

Kansas City, Mo.—Miss Mary Brookins, First Church Edifice, 3 p.m., April 23: Second Church Edifice, April 24; Morton's Hall, April 25.

Little Rock, Ark.—Francis J. Fluno, M.D., Capital Theater, April 10.

Loveland, Col.—William R. Rathvon, Majestic Theater, 3:20 p.m., April 16.

Malone, N. Y.—Frank H. Leonard, Malone Opera House, April 17.

Mankato, Ill.—Prof. Hermann S. Hering, Mankato Opera House, April 14.

Mitchell, Iowa.—Hon. Clarence A. Buskirk, Bartle's Hall, April 17.

Oakland, Cal. (First Church).—Willis F. Gross, Macdonough Theater, April 24.

Oil City, Pa.—Frank H. Leonard, Carnegie Library Hall, 8:15 p.m., April 20.

Oneida, N. Y.—Frank H. Leonard, Park Theater, 3 p.m., April 16.

Pacific Grove, Cal.—Willis F. Gross, T. A. Work Hall, April 21.

Plymouth, Mass.—Clarence C. Eaton, First Universalist Church, April 17.

Potsdam, N. Y.—Frank H. Leonard, Town Hall, April 18.

Riverside, Cal. (Second Church).—Willis F. Gross, Loring Opera House, April 18.

Rock Valley, Iowa.—Hon Clarence A. Buskirk, Church Edifice, April 21.

San Francisco, Cal. (Third Church).—Willis F. Gross, Dreamland Rink, 3 p.m., April 23.

Santa Monica, Cal.—Willis F. Gross, Church Edifice, April 17.

Spencer, Iowa.—Hon. Clarence A. Buskirk, Grand Opera House, April 20.

St. Thomas, Ont.—Rev. William P. McKenzie, April 23.

Watsonville, Cal.—Willis F. Gross, I. O. O. F. Hall, April 20.

Wilmington, Del.—Frank H. Leonard, Avenue Theater, April 11.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be June 2, 1911. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 10, 1911.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 4, 1910, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

TESTIMONIES OF HEALING.

The psalmist has said, "Oh, that men would praise the Lord for his goodness, and for his wonderful works to the children of men!" and though it is my greatest joy to tell others of the blessings I have received through Christian Science, I feel I have too long delayed to acknowledge them through the wider medium of our periodicals. When I first heard of Christian Science, I had for three years been seeking health in different ways, but without success. A severe nervous breakdown, with internal trouble, acute neuralgia, and great weakness, had made life seem a burden to me, and necessitated several absences of three and four months from my occupation as a teacher, besides many shorter periods. During those three years I was unable to attend a service, lecture, concert, or meeting of any kind. If able to take up the management of my school at all, the work was done in pain and weariness, and every evening was spent on the couch, in preparation for the next day's duties.

I had exhausted all material remedies, with no permanent good results, when a cousin in Brisbane, Australia, sent me a *Sentinel*, and told me of the wonderful curative power of Christian Science; also how its teaching had "opened the very gates of heaven" to him, although he had previously been an earnest church worker for many years. At his suggestion I wrote to London for the loan of a copy of Science and Health, which, however, I eventually returned, with no conviction that it could help me. In spite of this, the *Sentinel* still continued to come from over the sea, with its message of hope and healing; and as I read the many beautiful testimonies, I became convinced at last that what had helped others could surely benefit me. We therefore wrote for a Christian Science practitioner, whom we ever remember with grateful love; for the week-end she spent with us formed an epoch in our lives, as we received immediate help and commenced the earnest study of Christian Science.

My mother was healed of several complaints, including heart trouble and acute rheumatism, while my own health began at once to improve. As my understanding grew, I became well and strong, and was soon fulfilling my duties with ease and pleasure; in addition to which I was enabled to lay aside glasses, defective eyesight being instantaneously healed through my realization of sight as spiritual. Here I should like to emphasize the far-reaching influence of the "word in season," as proved in this instance: for after the healing in our family, the little company of three, studying Christian Science, soon grew to six. Later, weekly services were commenced, which we had the great privilege of holding in our home for two years, these services being the origin of the Christian Science society in this city. Thus, with strong confidence we may send this gospel of healing far and wide, with the full assurance that it will bear fruit a hundredfold, even though it may be "after many days."

Though restoration to health was indeed a priceless blessing, my deepest gratitude is for the change of thought which an understanding of Christian Science brings; for its teaching has opened the way to a wider, truer knowledge of God, and has given me a stronger faith in His unfailing goodness and power, with a deeper reverence and love for Christ Jesus, who revealed this "Father of mercies and God of all comfort." The ability to forgive when seemingly wronged and misjudged, and the power to put away anxiety and fear, also give cause for great thankfulness. So, with a glad heart, I too praise God "for his goodness, and for his wonderful works to the children of men."

EDITH A. BURTON, Moseley, Birmingham, England.

While in Nome, Alaska, in 1904, Christian Science not only found me seeking gold, but also the truth. In talking with a friend about that Book of books, the Bible, I asked

Digitized by Google

him if he could tell me of a book that would interpret the Scriptures. He then told me of Science and Health and brought it to me, and after I had read a few pages I told him that it was what I had been looking for. I purchased a copy at the earliest opportunity, and was so delighted over it that I bought two more for friends, only to learn later that it did not appeal to them at that time. Through a study of this book I learned and was convinced that God, good, could not be directly or indirectly conscious of, be the author of, or be responsible for, sin or error in any form. I then repented, and turned from evil-doing and sinful thoughts, and was amazed to find that I had been healed of a stomach trouble of many years' standing, and for which *materia medica* could do nothing. I was also cured of the drinking and tobacco habits, and the use of profane language. Last, but not least, the habit of evil thinking was overcome, for I had learned that the foundation of every disease is mental, and that all evil can be destroyed by the law of divine Mind.

The day before Christmas, while picking holly I got poison oak over my hands and arms, and to mortal sense this was always severe with me. The following Sunday, though I took part in the service, I thought I should have to remain at home, as my hands and arms manifested the effects of the poison; but I used the declarations of the truth, as given in our text-book, and went to church. During that service, the subject being Christian Science, I experienced a sense of peace and harmony—of Love's presence—not known to me before, and found my healing to be instantaneous, for that afternoon I cut off the bandages and next morning could only see traces of where the ailment had been. I compared this to a similar attack which occurred to me prior to coming into Science, and which under medical treatment was not relieved for three weeks. About one year ago I was healed of neuralgia through attendance at a Wednesday evening meeting, and I am convinced that healing is to be realized at every Christian Science service. How good God is, how willing to be our physician when we call upon Him in sincerity!

Words are inadequate to express my love to God, who heals all our diseases, for giving us our Leader, who has worked so patiently and lovingly to elucidate the Bible through our text-book, "Science and Health with Key to the Scriptures."—J. R. Todd, Avalon, Catalina Island, Cal.

Shortly after the earthquake in San Francisco, my boy, nine years old, while coasting on the park panhandle, utterly unconscious of any danger, was run down by an automobile going at great speed. I had been obliged to cross the bay that day on business, and was to be gone until evening, leaving my daughter at home to attend to the various duties; but before the noon hour one of my boy's playmates came hurrying to our home with the news that he had been run over. He had been picked up unconscious and taken to an emergency hospital, but finding that the case was very serious, they had taken him to the city and county hospital, as they did not know who he was.

My daughter gave the boy the address of a practitioner, and asked him to tell her what had happened. She then took Science and Health with her, and went to the hospital. On arriving there she found that they were already operating on my boy's head, so all there was to do was to try and realize the ever-present Life for her dear brother. On my arrival home I was met by a lad, who inquired anxiously how my boy was. I had left him home a few hours before in perfect health and happiness—what could it mean! I never knew how I got up the stairs, but half way up a dear friend met me and told me what had happened. I went out to the hospital, and from that time we never left him, one relieving the other and taking word to the faithful practitioner three times a day, as we were not allowed to move him. Three or four doctors attended him every day, and were more than kind, but each made mortal-mind laws for him, giving little or no encouragement. Each day the practitioner was informed of their fears, and through her understanding that God's law of life is eternal and harmonious, our dear boy was freed from the belief in man-made laws. It was simply wonderful how every adverse symptom was met in a divinely natural way.

One day a famous army surgeon who had come from the East, and who had performed the surgical operation, spoke to my daughter and told her plainly just what he thought, and said he wanted the boy's mother told the truth: that there was very little hope. My daughter did not come home and tell me then, but told the practitioner the doctor's fears, and in a very short time that prediction of death was overcome, and in nine days I was able to bring my boy home. The stitches taken over the eyebrow the doctor said would cause the eyelid to droop, which it did at first; but this was overcome in a month or so, and the deep scars caused by the operation, which the doctor said the boy would always carry, have almost entirely disappeared. My son has been perfectly well ever since his recovery, and at the physical examination in his school he was pronounced perfectly sound. He is also well advanced in his studies, standing high in mathematics, showing that there was no mental impairment from the terrible injury to his head.

In our inspired book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, we read and try to know that perfection only is the infinite model. For this understanding, my son's healing, and many other blessings which we have received, we are most deeply grateful to Mrs. Eddy, who, standing alone, voiced to a sin-sick world such a wonderful blessing. God grant that I may be her worthy follower, is my earnest prayer.

Mrs. Georgeine E. Burgess, Berkeley, Cal.

I am glad to testify in regard to the healing work of Christian Science. At one time I was taken very sick, and my husband insisted upon calling a doctor, who made an examination and seemed to think there was small chance for my recovery. We then telegraphed to a Christian Science practitioner, who came a distance of two hundred and fifty miles and treated me, with the result that in four or five days I was up and attending to my regular duties. For more than six months the doctor would go out of his way to meet and speak to me. He told my sister-in-law that I was the most remarkable woman he had ever seen; that any other woman would have died. At another time my oldest daughter, thirteen years of age, had a severe case of blood-poisoning. We sent again for the practitioner, and after a week's treatment a piece of flesh sloughed off. In another week the cavity had filled up and the child was back in school.—Mrs. Robt. Gerry, Pasco, Wash.

With a heart filled with gratitude and love, I wish to acknowledge a few of the blessings which have come into my life through the study of Christian Science, in the hope that others may be helped along the way. Three and a half years ago a copy of Science and Health was secured from the public library, and I began to read it, more out of curiosity perhaps, at first, than with the expectation of finding hidden therein great treasure. I did not understand what it taught, but I continued to read with the ever recurring desire to read more and learn something about this Science which made people better. There was but little time each day to devote to the reading, but at the end of three months the realization of having lost a number of things dawned upon me, some of which were severe headaches, chronic stomach and liver trouble, a bowel disorder, and glasses, which had been worn for sixteen years. As I had expected to carry these burdens as long as I lived, the joy of losing them was great; but only as progress was

Digitized by Google

made, and little by little the truth came to my consciousness, did the real joy appear. I find that just in proportion as I put into practice the understanding which I have, adverse conditions are overcome.

Later, through the help of a faithful practitioner, a sense of grief was overcome, which brought the understanding that there is no separation in divine Love. It is my constant desire to follow ever more closely in the footsteps of Christ Jesus, and prove by my daily living that which is pure and good and true. I am very grateful for the opportunity afforded me of class instruction, for our Christian Science literature; grateful to God, and to our dear Leader, Mrs. Eddy, to whom was revealed the truth which enabled her to give to the world our text-book, "Science and Health with Key to the Scriptures."—ADELINE DONN, Chicago, Ill.

It is indeed with a thankful heart to God for Christian Science, that I write these few lines. In the fall of 1909 my little boy stepped on a nail which penetrated his shoe and went into his foot, making a very ugly wound. The first thing we did was to call in a doctor. After the wound had been washed out it seemed to heal nicely, until about two weeks after, when his foot began to swell and he suffered intensely. After having the physician attend him for two weeks, with no relief, I decided that it was time to make a change, and as two years before this I had been healed in Christian Science of stomach trouble, of years' standing, I called a practitioner to come and see him. She did so, and after two or three treatments the pain was all gone. This was on Thursday, and on the following Monday he went to school and soon was as well as ever.

I feel that if it had not been for Christian Science my boy would in all probability have been a cripple, as the injured limb was much smaller than the other one when he got so that he could use it. I am very thankful to God for Christian Science and for what it has done for us.

MRS. C. E. SANDERS, Muncie, Ind.

A little over five years ago a friend recommended Christian Science treatment to me for relief from an organic trouble with which I was suffering. I had consulted three doctors, none of whom gave me more than temporary relief, and each one recommended perfect rest for a year at least; so I decided to give up my work as music teacher and avoid any exertion whatever. This came as a great hardship to me, for I needed to keep on with my work, and I was very fond of walking, playing tennis, etc. I had worried along through three months in this way,—extremely nervous, sensitive, and a burden to myself and the household, when a friend wrote me that I need not give up my work, but that through Christian Science I could do it better than ever before. It seemed hard to believe this was possible, although I wanted to do so.

As soon as I could, I borrowed a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, stopped taking medicine, and began to investigate the subject. I believed that God could heal me, but I also believed that I did not know how to ask Him. From the very first day I became greatly interested, and so far forgot myself that when I again thought of my former ailments I found I had none—they had disappeared. I was healed simply by reading the book. Just at this time I secured work as music teacher in a private school, and entered upon the work immediately, without the least fear, riding on horseback each way twice a week. I also began to teach my two sisters, devoting three hours to this work every day. It was such joy to feel free, and be able to work again.

The following summer I had class instruction in Christian Science, for which I am more and more grateful every day. This wonderful truth has been my only remedy since the day I was healed, and never, when faithfully applied, has it failed to give immediate relief. I am in better health today than ever before in my life. The old trouble has never returned, and many former complaints have left me. As a little girl I had prayed to God to heal me, but when no healing came I grew discouraged, though I was unwilling to distrust Christ's promises. I felt sure that by waiting and watching I could some day learn how to obey his command to "heal the sick." Is it any wonder, then when the healing power of Christian Science was proven to me, that I at once recognized it as an answer to my lifelong prayer! I thank God that He has shown us the way through Mrs. Eddy, and that we can today rely upon Him in sickness and in health.

More than the physical healing, and sweeter than any joy I ever knew, is the wonderful peace—the gift of God's love—that has come into my life. This spiritual insight is best shown by living in hourly communion with the one God, that my outward life may testify to the inward calm and peace. At first I met with opposition from nearly every member of my family, but it is a source of daily rejoicing to me that six of them are now studying Science and Health. Each day I find more for which to be grateful to Mrs. Eddy. My heart is filled with thankfulness to God for her wonderful perseverance in living, and giving to the world, what she knew to be true. She has shown me the one God, the God who heals and saves even now from all sin and sorrow. For these and many other blessings I am thankful.—CLARA C. PETTIT, Palmyra, Va.

As I look forward eagerly from week to week for the coming of the *Sentinel*, I wish at this time to express my appreciation and gratitude for the help received, by making this offering with the hope that it may contain some helpful thought for another searcher—even a "cup of cold water" to the thirsty. Many a time have I sat down to read the *Sentinel*, feeling burdened with some care; but by the time I had finished its perusal, the burden had been lifted.

About four years ago I slipped on a frosty doorsill and received a bad fall. At this time I did not understand that merely to ignore an ill is not sufficient. I thought that by paying no attention to it, there would be no bad results. The next morning I was quite ill, with a high fever and pains and aches all through my body. I began to read Science and Health, but not being able to help myself, I called upon a friend for assistance. By the time she arrived, about two o'clock, I was no longer able to sit up, in spite of the strongest efforts of the human will; but in a very short time I felt the effect of her treatment, and inside of half an hour was perfectly well. This was convincing proof that Christian Science heals and heals quickly, the truth going "even to the joints and marrow," as the Bible teaches.

About a year after this we moved into another community, and the necessity of working out my own salvation, instead of depending upon my friends, was impressed upon me, and I began to study very earnestly. A short time after this I slipped on a wet mossy board, and had another bad fall, worse, if anything, than the other, as in trying to protect myself I instinctively put out my right hand, thus wrenching the wrist badly and straining more or less all the muscles involved in the arm and shoulder. My first thought was one of fear—What if I should again become ill, as before? I would certainly not be able to overcome it, and my friend was not at hand! My next thought was that I must not let it attack me, that I must grapple with the error before it got the upper hand. With this purpose in view, I began to declare vehemently, as Mrs. Eddy tells us to, that matter is not man, etc., following up the line of thought as given on page 475 of Science and Health in answer to the question, "What is man?" This was sufficient to overcome the enemy, for the happy result was that

Digitized by Google

there were absolutely no bad effects, not even a soreness of the muscles or any discoloration.

These two experiences taught me several lessons: First, that an attack of error cannot be ignored, but must be grappled with and destroyed; second, that the sooner the work of destruction is begun, the less work will be required, for by keeping the error out there is nothing more to do. Mrs. Eddy makes this very plain on pages 390 and 391 of Science and Health, and sums it up thus: "Then when thou art delivered to the judgment of Truth, Christ, the judge will say, 'Thou art whole!'" Christian Science has come to my rescue a number of times, and while I have only just made a beginning in this work of eternity, I am grateful for this beginning—thankful for having recognized the fact that Christian Science is, and is for all.

ANNA M. POYNTZ, Marshfield, Ore.

I have learned that I cannot better express my gratitude to God for what Christian Science has done for me than by trying to follow faithfully the teachings of our dear Leader, Mrs. Eddy. When this truth first came to me, it was as a beacon-light, for we were bound down to mortal sense with ailments that baffled the physicians. After taking up Christian Science we began to improve in health, so much so that we wanted every one to accept it, and we would try in our feeble way to explain our knowledge of the truth to some of our most intimate friends. We learned afterward that these friends would say among themselves that we were beside ourselves. Thank God, they too have accepted Christian Science and today are among its stanchest adherents. We thus see that a slight gleam of truth will never lose its power on those who are hungering for a full salvation, the truth which will save them from the dire effects of mortal belief.

What a blessing it is to know that one in this wide world of ours was spiritually minded enough to receive this God-given truth, and whose spiritual perception enabled her to present it to a sin-sick world in such a manner that we have been able to grasp its import, or at least to gain a sufficient understanding, through the study of Science and Health, to enable us to reflect a little of its healing power. The more we read Science and Health and ponder its teachings, the more we are impressed with the thought that the author must have been inspired to have written such a wonderful book. All the wealth of this world could not buy my copy of our text-book if I could not get another. Could we give up such a book, one whose teachings have raised us up from the grave to health and strength?

I am a veteran of the Civil War, and was healed of diseases contracted in the service,—rheumatism, bowel and heart trouble, the latter so bad that I would fall to the floor. I also received my eyesight after having worn glasses for fifteen years. I am able to work every day, and am seventy-five years old. The ailments mentioned were all healed by the thorough study of our text-book. I was also healed with one treatment of a complaint considered incurable by *materia medica*.—H. F. STRONG, Greenville, Mich.

Some twelve years ago, after suffering much pain and discomfort for a period of two or three weeks, with what the physician said was an abscess in my left ear, I found myself totally deaf in that ear. On consulting a well-known specialist, I was informed, after a thorough diagnosis of my trouble, that the deafness was caused by an abnormal growth, and he further stated that I would not be able to hear anything again in that ear until the growth had been removed. He described it as a bony substance, and said its removal would require a very delicate surgical operation.

As I could not then spare the time from my business, I went home with the intention of having the operation performed as soon as possible. The following day I related my experience with the doctor to a party of friends, among whom was a lady who was greatly interested in Christian Science. She strongly urged me to try this treatment, and as it offered at least a temporary escape from a painful operation, I finally consented to do so, although I had but faint hope that any help would be derived from it. Upon her advice I sought a practitioner, who treated me for two weeks with such success that my hearing was fully restored and I am happy to state that it has been perfect ever since.

For this manifestation of the power of divine Love, and the help received, I shall never cease to be thankful to God, and all honor, respect, and love is due to the noble and self-sacrificing woman who gave up so many years of her life that she might bring this beautiful and practical religion within our reach.

CHAS. B. LEWIS, Winthrop, Mass.

No words can be found to express my gratitude to God, and to our dear Leader, Mrs. Eddy, for the revelation of that grand truth which I have found in Christian Science, and I feel it my duty and privilege to testify of some of the many blessings which I have received and the great help I experience daily.

It is now about eight years ago that Christian Science became known in our land, but as soon as I heard about it I divined all at once that this must be the truth for which I had been looking for years, and by the study of its literature I found myself as one coming out of darkness into light. The Bible has become a new book to me, and the study of it, together with Mrs. Eddy's inspired book, "Science and Health with Key to the Scriptures," enabled me to understand its teachings, by which I can follow the "way" Jesus has pointed out, not alone to his disciples, but to every one who is ready to follow, to know God *aright;* that is, to know God as Love, who has nothing but good in store for all of His children, and who delivers us from sin, disease, and death. From childhood I was in delicate health, and later on there appeared a supposedly hereditary ailment, a throat affection, also continual coughs and colds. I tried every possible remedy, and had to take great care of myself, as the slightest draft gave me a bad attack. No doctor was able to cure me.

My healing in Christian Science has been slow; it took over two years, and oft I was ready to despair. My struggles were many, but I am now thankful for all this: it showed me that only when we are patient and seek God righteously does He direct our path. It is now over three years that I am healed, and I have not taken any medicine in that time. When any ailments appear they are soon destroyed by the truth. I can indeed enjoy life now, and am most happy in being able to do so much for others. My earnest desire is to gain more and more understanding, that I may prove to be a worthy follower of Truth.

JOHANNA CASTENDYK, Velp nr. Arnhem, Netherlands.

I wish to express my gratitude for what Christian Science has done and is doing for me. I became interested in it about ten years ago, and it would take a long time to tell of all the benefits I have received. Colds, neuralgia, and other discords have been overcome and proved powerless, by declaring the truth as taught in "Science and Health with Key to the Scriptures" by Mrs. Eddy.

I am very grateful for the physical benefits received, but more grateful for the spiritual uplifting,—for having been taught that God is Love. I am thankful for our Christian Science literature. The *Sentinel* is to me a white-winged messenger, bringing me peace and understanding. I am indeed grateful to God, and to our dear Leader, Mrs. Eddy, for Christian Science; and my desire is so to live as to be worthy to bear the name of Christian Scientist.

MRS. MARY OSBORN, Hamilton, Ill.

Digitized by Google

I write this testimony with the hope it will help some one who may be in bondage to fear as I was. I did not come to Christian Science for physical healing, but took up the study five years ago in the hope of finding God, of whom I was in great need. In all these years it has been an ever-present help. I had some difficult dental work done, when my knowledge of Christian Science enabled me to endure the ordeal without drugs. A little over a year ago I was taken with an almost overpowering sense of fear,—fear for my daughter's health, fear of poverty and almost everything else, and was on the verge of nervous collapse; but after two treatments in Christian Science I gladly testified at the Wednesday evening meeting, which I never had done before.

In about a week's treatment I was entirely healed, and realized that I had nothing to fear, that God was my source of supply. On my realization of this a pleasant position was opened to me immediately. Peace and contentment have come, and my daughter has regained her usual health and spirits. I thank God hourly for our dear, unselfish Leader, Mrs. Eddy.

MRS. NETTIE L. BEAL, Los Angeles, Cal.

I shall always remember with gratitude the instantaneous healing of my son, who had many times been troubled with a skin disease. This time, when it appeared on his face, I felt it could be mastered by Christian Science, as we were then seeking to understand this teaching. I tried to put in practice what little I knew, but the trouble seemed to grow worse, till one day I wrote to a practitioner, asking for treatment for him. He then went out, and on his return I saw that he was healed. I am happy to say that from this time he too became interested in Christian Science.

We are filled with loving gratitude for all the help we have received as a family, in those early days of seeking Truth. The truth must spread, and it is a privilege to be able to impart to others that which is so helpful to us.

MRS. S. LOCKETT, London, England.

I wish to express my gratitude for many benefits received through Christian Science. I was troubled with nervousness, and my eyes were very painful, besides which I had other ailments. The first-named ill has been healed and the others greatly relieved, and my general health is much better.—GRACE S. BAILEY, Los Angeles, Cal.

[Written for the *Sentinel*.]

A LESSON FROM A FLOWER.

MABEL DORYNS WEIL

WEARY and worn, with care and worry spent,
Into the deep and quiet wood I went
And lay me down to rest upon a mossy bank
Where purple violets in rich profusion grew,
And happy birdsong echoed all the woodland through.
My tired spirit of the song and perfume drank
Until I fell asleep and dreamed a violet
Looked up and spoke, its gentle face dew-wet:

"O man, of God's creation the most blest,
Why trust not you in Him, like all the rest?
I did not worry o'er the soil, or sun, or dew,
I knew the sun would shine and rain would fall,
I trusted in His loving care, who made it all,
And raised my face to heaven and smiled and grew."
I woke refreshed, and thankful for the lesson learned,
Back to my life and work I gladly turned.

FROM OUR EXCHANGES.

[Adolph Roeder in *New-Church Messenger*.]

The church is not a building built of stones and bricks. That is a house of worship, a temple, a synagogue, a tabernacle. The real church is in men's deeds and thoughts. It lives in the keeping of the commandments Sunday and every day of the week. The real church is built of things men do on Monday, of things men think on Tuesday, of things men love and wish on Wednesday. The church is a church of every day, not alone of Sunday. It is a grievous mistake to make, this mistake of the Syrian, that God is a God only inside a certain building and that the rest of the world belongs to the devil. The fact is the devil owns no property at all. All things are God's. "The earth is the Lord's, and the fulness thereof." There is no room for any one else in ownership. And God is a God of the hills, of the highest, and He is a God of the valleys, of the lowest. If you ascend into heaven He is there, and if you make your bed in hell, lo! He is there. Men must serve God on the hills, of course; but they must serve Him in the valleys, equally, of course. Make other mistakes, if you will, but do not make the mistake of the Syrian, that God is a God of the hills, and not of the valleys.

[*Christian Register*.]

Religious people are recovering from the fears excited by the idea that, if the Bible should be discredited as the revealed will of God, Christianity would go and with it religion and morality. There has come as a welcome surprise to many in our time, the knowledge of the self-evident fact that Christianity existed before the New Testament was written, and that religion was in the world when as yet not a book of the Old Testament had been composed. Abraham Lincoln lived his life before any one was moved to make a record of it. So before the first book of the Old Testament was written there had been men and women of glorious fame who had illustrated in their character and conduct the virtues which afterward made the record of them illustrious. It would be a dire misfortune if all these Biblical records were now swept away, but it is a mistake to suppose that, if they were lost, nothing of similar value would ever come into existence, or that the religion of which they are the imperfect records would perish.

[From the "Credo" of Rev. Charles Clark Pierce, D.D., Los Angeles, Cal.]

I believe that the Christianity of the future will be a life growing better, stronger, nobler, and more beautiful as the ages pass, and that most of the creeds, dogmas, and so-called religious forms of the present day will as certainly be laid aside as full-grown men discard the toys and playthings of their childhood. I believe that the world is getting better every day and every hour, and that the millennium is surely coming, not because of some spectacular performance which is going to take place up in the sky, but because of the triumph of the truth in emancipated human hearts: and finally, I believe that all the undying powers of the vast universe are slowly but surely responding to the prayer and realizing the vision of the world's greatest leader, "Thy kingdom come. Thy will be done in earth, as it is in heaven."

[*Universalist Leader*.]

If such a man, with such a message, should appear at our church doors today, and deal as frankly with our blunders as Jesus did with the blunders of Israel's teachers and religious leaders, we apprehend that many of the severest critics of these priests and scribes and elders would be the first to shut the door in the face of the Master, and bid him be gone in the name of their own conceits. History has dealt severely with those critics of Jesus, unfor-

Digitized by Google

tunately for them. Will it deal more kindly with some of us who in the name of authorities which are traditional and sacerdotal reject the one authority, that of the soul, when it pleads with us in the spirit of the new Christ that is being born among men?

[*Continent.*]

John Wesley said that two men who trusted God utterly and knew how to stick together could shake the world. Organization is not lacking today—more or less, men stick together. There is some trust in God. Yet the world does not shake. "Wonder and amazement" are the words which express the attitude of the world when the apostles spake. And we are speaking the same gospel and there is neither wonder nor amazement. There is scarcely even attention. It may be said, "Ah, but we do not work miracles." That remark strikes home. We ought to work miracles. Christ promised we should—"Greater works than these shall he do."

[*Watchman.*]

The unity of the Bible is discerned by those who read it in its revelation of truth. They must have discernment growing out of a personal experience of divine power. It is this that gives the believer his first and extraordinary interest in the Bible, and he quickly grasps the truths that are to him as the bread of life and the water of life. This discernment becomes keener and the word of divine truth opens to him in more fulness of meaning. He begins to put together the spiritual parts of the Bible, and finds from beginning to end the threads that run through the whole.

[*New Church Messenger.*]

The world at present does not see, though it will in time, that the states of injustice and cruelty out of which we hope the world is now passing are related to the church's cruel and irrational concept of the Lord as effects are to their causes. The church is ever the heart of society, and the ideals of society can by no possible means transcend the state of the church. The state receives its inspiration through the church, but the church cannot inspire with that which it has not itself.

[*British Congregationalist.*]

The essential principles that create the church lie back of the creed, back of the ecclesiastical orders, back of the form, in a fellowship with and allegiance to Christ which must express itself more or less fully and clearly through the consciousness and conduct of the individual member. If this be wanting, nothing else can create or perpetuate a church. If this be there, neither the acceptance nor the rejection of other things can destroy it.

[*Advance.*]

The plain fact about Christianity is that its foundation is right belief, its consummation right conduct, holy character. Jesus Christ was here not as the reformer of a day, but as a regenerator, planting seed truths, fixing fundamental beliefs, establishing right doctrine for all time, knowing that these beliefs would blossom into the beauty of a better life and bear fruit in an ever greatening humanity.

[*Christian Intelligencer.*]

Sectarianism is losing its grip and denominational walls are crumbling. The boundary lines between churches of different names that were once so distinctly drawn and formidable, are being obliterated, so that without scruple one can pass from one denomination to another, and yet devoutly worship and reverently serve his God. This is a characteristic of modern Protestantism.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

ATTENTION IS CALLED to the new volume, "Poems by Mary Baker Eddy," now on sale. Specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

Attention is called to the following reprints printed in Swedish: "Hvad Ar Bön?" "Lagens Välde," "Det Ondas Natur," "Helvete och Himmel," "Människans Gemenskap Med Gud," "Verklighet," "Det Ar En Ström," "Förklaring Af Kristligt Helande," "Den Yppersta Egenskapen I Christian Science," "Underverken," "Det Ondas Öfvervinnande," "Var Väktare," "Riklig Tillgang," "Kristendom Och Vetenskap." Ten copies to one address, prepaid, 10 cents; one hundred copies to one address, 75 cents; five hundred copies to one address, $3.00; one thousand copies to one address, $5.00.

NEW MUSIC.

Two of our Leader's poems, "Shepherd, show me how to go," and "Love," set to music by Frederic W. Root, are now on sale by the Society, and attention is called to the advertisement on the inside back cover page of this week's *Sentinel* for description and price.

A NEW PHOTOGRAVURE.

A new photogravure reproduction of The Mother Church edifices and the Publishing House, with the new parkway in the foreground, has just been made, and is now on sale. The size of the new picture, nine by fourteen inches inside of mat, which is about half that of the larger one, specially adapts it to framing for the home. Price, single copy $1.00, six copies $5.00, twelve copies $9.50.

FROM THE CLERK OF THE MOTHER CHURCH.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Chief Justice White of the United States supreme court, who announced the decision in the commodities clause of the Hepburn law regulating interstate commerce, said in summing up: "It must be held that, while the right of a railroad company as a stockholder to use its stock ownership for the purpose of a *bona fide* separate administration of the affairs of a corporation in which it has a stock interest may not be denied, the use of such stock ownership in substances for the purpose of destroying the entity of a producing, etc. corporation, and of commingling its affairs in administration with the affairs of the railroad company so as to make the two corporations virtually one, brings the railroad company so voluntarily acting as to such producing, etc. corporation within the prohibition of the commodities clause. In other words, that, by operation and effect of the commodities clause, there is a duty cast upon a railroad company purposing to carry in interstate commerce a product of the producing, etc. corporation in which it has a stock interest, not to abuse such power so as to do virtually by indirection that which the commodities clause prohibits—a duty which plainly would be violated by the unnecessary commingling of the affairs of the producing company with its own so as to cause them to be one and inseparable."

The attempt to put the ban on "cut rates" in proprietary medicines in this country has received the unqualified disapproval of the supreme court of the United States, which, in an opinion by Justice Hughes, declined to give its aid to such an attempt on the ground that it would afford the manufacturers of medicine an unlawful monopoly. He said that while the manufacturer of medicine under a secret formula had a right to a monopoly of manufacture until the formula was discovered by fair means, yet the courts could not insure him the "unnecessary monopoly" of controlling the price to the consumer.

Minnesota is preparing to try an entirely new plan in the sale of unimproved lands belonging to the state. The House of Representatives already has passed a bill which provides that ten separate forty-acre government subdivisions shall be selected by a reclamation board to be appointed by the Governor, and that half of these forty acres shall be cleared of stumps and otherwise improved, so that the twenty acres shall be ready for cultivation. The actual cost of this improvement is to be added to the appraised value of the land, and these farms will then be sold on the instalment plan.

James Bryce, English ambassador to Washington, and Secretary of State Knox are working out the form of the arbitration treaty proposed for the two countries. This is being done with great deliberation, as it is the first of its kind and will serve as a model for similar agreements, which it is hoped will be negotiated with other world powers in the near future. The completed form will probably be ready for presentation to Congress before the close of its present special session.

A bill which has the approval of Governor Tener, has been introduced in the Legislature of Pennsylvania, establishing a public service commission with power to regulate twenty-nine classes of public service and also corporations or persons engaged in quasi-public business, as well as holding companies. It is empowered to make physical valuations, and all applications for charters, franchise rights, increase in capital or indebtedness, and consolidations must first have its approval.

By agreement of counsel the indictment, brought at Seattle, Wash., charging conspiracy to defraud the United States in the location of Alaska coal lands, was quashed by United States Circuit Judge Hanford, and the defendants were discharged. An appeal was taken to the United States supreme court. The court's ruling left but one ground on which to base a prosecution, namely, that the entries were for the benefit of a foreign corporation, the Pacific Coal & Oil Company.

Since the passage of the Clapp act in June, 1906, it is alleged that two hundred and twenty thousand acres of lands on the White Earth Indian reservation of Minnesota, including valuable pine lands, have been sold, and that fully twelve hundred of these sales were illegally made by full-blooded Indians, who were induced to declare themselves as mixed bloods, or did personally so declare, to dispose legally of these lands.

Vigorous and immediate prosecution of several coal-carrying roads for alleged violation of the commodities clause of the Hepburn law will follow the supreme court's recent decision that the law is constitutional which prohibits railroads from transporting in interstate commerce any commodity produced by it or in which it might own or have any interest, with certain exceptions.

The Legislature of Maine has voted in favor of an amendment to the United States constitution empowering the government to impose an income tax. The vote now stands twenty-eight states for to eleven against, and the consent of seven more states is necessary to make the amendment a part of the constitution.

The city council of Chicago has decided that after Sept. 1 no building shall be erected in the future in that city of greater height than two hundred feet. The present building code limits the height to two hundred and sixty feet.

A resolution calling for another investigation of the charge that Senator Lorimer of Illinois was elected to the Senate by corrupt practices has been introduced in the Senate by Senator La Follette of Wisconsin.

The Massachusetts Institute of Technology will be represented by about two hundred of her students on the first excursion steamer to make the trip through the new Cape Cod canal, April 15.

The bill providing for the purchase and preservation of Crawford Notch, New Hampshire, has been passed by both houses of the state Legislature.

The unappropriated and unreserved public lands now amount to 711,986,409 acres.

International.

The largest dock in the world is said to be the new graving dock at Belfast, which has taken seven years to build, at a cost of three hundred and fifty thousand pounds. The length of the floor is 850 feet, extending with caissons to 886 feet, and it is so designed that with little difficulty it can be lengthened by one hundred feet, to provide accommodation for any mammoth ships of increased size which may be constructed in the future. The width on the coping level is 127 feet, and at the narrowest part of the floor one hundred feet. The dock can be filled in one hour and emptied of twenty-three million gallons of water in one hundred minutes, and the caisson gate can be opened and closed in from four to five minutes. The dock will be formally opened in July.

The final obstruction to the Loetschberg tunnel through the Alps has been pierced after five and a half years' work and the expenditure of twenty million dollars. The tunnel, which is the third longest in Europe, measures approximately nine miles. With the completion of this tunnel, which was planned to give the Simplon tunnel railway line a direct connection with the railways which traverse Switzerland from north to south, there will be a direct through route from Milan to Berne and thence to Calais and Bontagne. The distance from Milan to Calais by this route will be about six hundred and seventy-five miles, or nearly eighty miles less than the existing routes. The tunnel will be double tracked throughout.

The real work on the veto bill designed to restrict the powers over legislation of the House of Lords was begun on the 3d with the opening of the committee stage in the House of Commons. The scene in the House indicated the intensity of the public interest. Every available ticket of admission had been disposed of days before and many hundreds who had hoped to witness the proceedings were disappointed. The debate will be long and keen. Already over one thousand amendments, occupying seventy-four printed pages, have been prepared. It is the avowed intention of the government to send the measure to the upper chamber by the middle of May.

In the last fifteen months there have been sold out of the French navy, as non-effective, five battleships, one cruiser, four coasting vessels, six gunboats or dispatch boats, six transports, fifteen destroyers, a large number of hulks and floats, about fifty torpedo boats, and seven submarines of obsolete type. The total displacement of these vessels was one hundred and thirty thousand tons, and they originally cost twelve million pounds. Their sale produced four hundred thousand pounds.

A Swedish hero fund of three hundred and thirty thousand dollars, the gift of Andrew Carnegie, has been announced. This is the sixth of these funds established by Mr. Carnegie.

Industrial and Commercial.

The last spike completing the Copper River & Northwestern railroad of Alaska between Cordova on tidewater and Kenneicott, where the Lonanza copper mountain is situated, has been driven. Work on the railroad, which is one hundred and ninety-seven miles long and cost twenty million dollars, was begun Nov. 15, 1907. The railroad is owned by the syndicate popularly known as the Guggenheim-Morgan syndicate, which also owns the Alaska Steamship Company and copper mines. Construction of the road was one of the most remarkable engineering feats of modern times.

It is stated that a new company, to be known as the Autosales & Chocolate Company, is to merge some fifteen or twenty of the leading companies which now operate automatic vending machines for chewing gum and candies in the United States and Canada.

Vast deposits of white silica sand, capable of being used for the making of high grade glass, have been discovered on the Canadian shore of Lake Huron, twenty-eight miles east of Sault Ste. Marie.

DOING NOT SAYING.

CLARENCE W. CHADWICK.

PRACTICE alone can dignify profession. Profession counts for nothing unless sustained by good works. It is doing and not saying that makes genuine Christian Scientists. The time is already at hand when those calling themselves Christian Scientists must make valid such a high claim. Profession, however scientific it may appear in the letter, will not save them, nor will it save others. The letter of Science, devoid of the spirituality that blesses and heals, can do very little for the health and morals of men; indeed, it may even cause trouble when presented in an aggressive or intrusive way, for the reason that it antagonizes the very elements of mortal belief without correcting them by the truth which heals and saves.

It requires demonstration and not profession to make Christian Science valid to the world. Pulpit oratory and ritualism have failed to establish Jesus' teaching in the hearts of humanity. Intellectual theorizing about spiritual things which one does not clearly understand, does not dignify religion. An intellectual grasp of Christian Science minus the disposition to live its precepts may be compared to "the pride of life" which the apostle tells us "is not of the Father, but is of the world." Much of the world's criticism of what it calls Christian Science is incited by the unwise statements of those who profess belief in its teachings but who fail to make practical what they believe. The meek and humble worker, bereft of worldly pride and self-will, seldom says or does anything to lead another astray. The more he loves Christian Science, the less inclined is he to scatter the pearls of spiritual discernment before those who are but waiting to catch him in his speech. His love for Christian Science makes him honest, and honesty in religion demands works to uphold his profession. The only honest Christian Scientist is the one who practises what he preaches. If he is content to believe, but does not work to understand what he believes, he cannot be called a Christian Scientist. Mrs. Eddy says: "Nothing is more antagonistic to Christian Science than a blind belief without understanding, for such a belief hides Truth and builds on error" (Science and Health, p. 83).

If there is any danger in the path of the student of Science, it is the mental apathy of blind belief, which would lead one to think that, because he has stopped taking medicine, he has become a full-fledged disciple of Christian Science. Such an individual, however good his intentions may be, is not ready to unite with the Church of Christ, Scientist, much less to open an office as a Christian Science practitioner. On the other hand, if he will at once apply himself to the demonstration of what he professes to believe, he will soon be in a position to become a useful member and worker in the church. Every forward step in Christianity, individually and collectively, is one of demonstration. Had not the church lost sight of this fact, Christian healing would have continued uninterruptedly from the time of Jesus down to the present. The dark ages of unbelief were characterized by "I believe," while "I know" was deemed of no special merit. This continued until Christian Science reversed the dictum of the human mind and declared in positive and unmistakable terms the absolute necessity of knowing or understanding God instead of resting upon the uncertainty of human belief.

For this revelation of divine certainty and proof to the world Christian Science and Christian Scientists have been stoned by the devotees of the tree of knowledge of both good and evil. The indisputable fact that countless thousands have been healed of so-called inveterate disease and sin through an understanding of Christian Science, seems to count for nothing with those who having eyes see not, and having ears hear not. The great demonstrator of spiritual power evidently encountered this same stubborn unprogressiveness of the carnal mind when he said, "Woe unto thee, Chorazin! woe unto thee, Bethsaida! for if the mighty works, which were done in you, had been done in Tyre and Sidon, they would have repented long ago in sackcloth and ashes." It matters little what one believes about Christian Science, the fact remains that sooner or later, here or somewhere, he must understand what Christian Science teaches,—the omnipotence and omnipresence of God, good. And when he does understand it, the healing signs will follow to prove that "I know" has taken the place of "I believe."

The exchange of blind belief for enlightened understanding must take place in every individual consciousness before the kingdom of heaven can come on earth; and the best possible way of dealing with Christian Science on the part of those who imagine that they are satisfied with the unquickened consciousness of "I believe," is for them to demonstrate to the world a higher order of healing than Christian Science presents. The combined forces of human logic and oratory cannot discredit or invalidate one single demonstration of healing in Christian Science. What God has wrought will forever refute the most cherished of human opinions. Goodness, virtue, and charity, every kind act, has its matrix in divine Love and will survive the scoff and ridicule of the ages.

Let the advancing thought of the twentieth century determine the relative merits of a system that understands and demonstrates the meaning of omnipotence, and one that professes belief not alone in almighty God but likewise in the reality and power of evil. The strength and permanency manifested in the remarkable growth of the Christian Science movement ought to indicate to all thinking persons the trend of modern religious thought. The uniform and dignified expressions of sincere appreciation of the great life-work of the Discoverer and Founder of Christian Science, as recorded in the secular and religious press of the whole world in the past months, is proof positive that Christian Science is rapidly winning its way into the affections of mankind. We cannot too often recall the Master's words: "Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven; but he that doeth the will of my Father which is in heaven."

THE ATTITUDE OF JOYFULNESS.

EZRA W. PALMER.

THE student of the Bible is continually impressed with the spirit of praise, thankfulness, and joyousness manifested by the Scripture characters and which is breathed forth on almost every page of the inspired book. The Bible inculcates a spirit of optimism, of hope, rejoicing, and peace. Its fresh and uplifting joyousness is based on an illumined understanding that sees beyond the fleeting evidence of the material senses and discerns the permanence, safety, and beauty of the spiritual universe.

But the buoyant optimism of the Word has not always been discerned. The records of history show that for long ages the thoughts of men have been so darkened by a materialistic view of the nature of God and the universe, that austerity and formalism, fear of evil and dread of punishment, have largely influenced and controlled men in their thought of God. With the advent of Christian Science and the dissemination of its teachings of a God that is good, and a perfect, a spiritual man and universe, a great change has been wrought in this regard, not only among the adherents of Christian Science, but the leavening influence of its well-grounded happiness has sweetened and purified the thoughts of men even to the remotest bounds of the earth.

Men have puzzled a great deal over the seeming mystery of successive tides of optimism and pessimism which appear in the channels of human consciousness. Why, they argue, should a man be depressed and miserable today and tomorrow be lifted on a wave of sense exaltation, which is followed by a corresponding reaction? Or why should men gradually lose hope, faith, and joy and drift into a confirmed state of discouragement and depression for which the world of mortal sense furnishes no cure? With the ashes of past disappointments to gaze upon, many have been led to believe that the joyousness of the great Bible characters is impossible of attainment, but the exalted teachings of Christian Science solve for all earnest seekers this mystery. The reason for the spontaneous thankfulness of Miriam and Deborah, of Moses and David, the unmeasured faith and steadfast joy of Jesus—all this is made clear to the Christian Scientist, for he receives the gift of spiritual discernment by which he can, even now in a measure, pierce the veil of materiality that would hide God from man, and see the utter folly of being disturbed by the phantoms of mortal belief. As his grasp of the true nature of God's imperishable kingdom strengthens, he can at length exclaim with St. Paul, "For I reckon that the sufferings of this present time are not worthy to be compared with the glory which shall be revealed in us."

A subtle suggestion of evil which tries to rob Christian Scientists of the joy of thankfulness, is the false declaration that they have so little to be thankful for: that their trials are so severe, the demands of the workday life so great, that they have little inspiration left to praise God. It is at once apparent that this attitude of thought is based on an assumption that the evidence presented by the material senses is true, an assumption which is utterly false. No condition in life is possible where men should not lift up their thoughts to infinite divine Love. The more burdensome the false conditions surrounding one, the more earnestly he should turn to God for relief. Especially should Christian Scientists be ever turning thought to God, because the way upward has been made so clear for them through the writings of their beloved Leader and by her inspiring example, which show them the empty nothingness of any condition in life that is opposed to the divine nature. It is easy to give thanks after a wrong condition has been met. Then the heart's glad acclaim pours forth its gratitude freely. But the joyousness of the loyal Christian Scientist should as freely ascend amid the storms of sense, the "wreck of matter," and in the battle with the powers of this world, as when the sunlight of God's grace is clearly made manifest. Like the prophet of old, whose glorified vision beheld the angels of His presence round about, when beleaguered by an army bent upon his destruction, the true Christian under whatever stress of circumstances holds thought steadfast to the eternal verities.

Jesus gave us two never-to-be-forgotten lessons in returning thanks. He gave thanks when the mightiest tests of his divine sonship were about to be made. At the tomb of Lazarus, when he was to prove the deception of death to the scoffing and unbelieving, by raising Lazarus from the dead and to show forth the indestructible unity of man with God, he rejoiced. He said: "Father, I thank thee that thou hast heard me. And I knew that thou hearest me always." Again, at the last supper, he gave thanks. Mrs. Eddy in Science and Health (p. 32) says that this "was a mournful occasion, a sad supper taken at the close of day, in the twilight of a glorious career with shadows fast falling around." And yet the vision of divine Love and its spiritual universe was so clear to the thought of Jesus that no earthly terror could reach him, although he was in a few hours to meet and destroy the illusion of death as an incomparable example of inspiration to all mankind. The scorn and hatred of the world, the desertion of his disciples, the ignominy of a felon's death, the most cruel human hate could devise, were alike foreseen; yet these things deterred him not. Facing these bitter experiences, he could give thanks to the loving Father who careth even for the sparrow. Jesus' wonderful demonstrations are for the instruction and encouragement of all mankind, in proving the ever-presence of God.

The individual who thus preserves his unity with God experiences the only true happiness attainable. Furthermore, he is in that attitude of thought which enables him not only to demonstrate the healing power of divine Truth for himself, but he blesses and inspires all those with whom he comes in contact. He becomes a healer of the sick, and his reflection of the true light breaks the bonds of the wretched and sinful. He sees the true relation of God to His spiritual creation, and rests in the understanding that God supplies the needs of all His creatures. With his thought filled with the inspiration of divine Love, he leads men to see their true heritage, oneness with infinite Mind,—

> Resting in childlike trust upon His will,
> Who moves to His great ends unthwarted by the ill.

WATCH AND PRAY.

BEULAH HOOK MAZZA.

WE read that "the serpent was more subtil than any beast of the field:" and today the material cloud or error that hides spiritual realities from mortal sight is often so subtle that we are not only unconscious of its presence, but actually amazed when the error is uncovered. The tiniest cloud of self-righteousness may conceal a heinous sin. Each honest student of Christian Science prays unceasingly that the light of Truth and Love may illumine the deep and hidden recesses of thought, and such prayer is power. The search-light of God's glory and allness reveals and displaces the dark nothingness of material selfishness.

The error uncovered is not necessarily something we have done or are doing. It may be some pet scheme or belief in pleasure, long planned for the future. Christ Jesus, who overcame the world of mortal, material beliefs, was always about his Father's business, and can we today be less faithful? The subtlety of evil consists in its claim to offer good. Note how it was apparently good things which tempted Eve. Thus we read, "And when the woman saw that the tree was good for food, and that it was pleasant to the eyes, and a tree to be desired to make one wise, she took of the fruit thereof, and did eat." So it is with all sin; in the beginning only good and pleasant aspects appear

Digitized by Google

on the surface. Because sin appears good, it may long remain undetected unless we earnestly watch and pray.

Moreover, error continues to declare that good and evil go hand in hand. When spiritual consciousness, as gained in Christian Science, lifts one above some cherished mortal desire or condition which is food for worldliness, pleasant to the material senses, or which promises the wisdom that is foolishness with God, we not only renounce a treacherous mask, but all the evils hidden under it. The lie of material good and evil being unmasked, evils which would have resulted if the pleasant sin continued, die of starvation. The lie of material good and evil being detected and discarded, the spiritual consciousness of infinite good as supreme exalts and saves.

A most subtle sense of seeming good which would deceive us, is the desire for human love and approval. The beginner in Christian Science meets this in the temptation to pursue worldly pleasures because of the demands of friendship. But let him seek first the kingdom of God and His righteousness, and even these friendships shall be added unto him, renewed, purified, and far more precious than ever before, because to his consciousness all things are indeed new, *i.e.*, spiritual. Even in our Christian Science work, the faintest yearning after mortal praise, its "Well done," is a cloud that hides the spiritual. Discarding this error, we get a clearer understanding of the "infinite Principle, called Person, or God" (Science and Health, p. 302), and begin to apprehend as never before the oneness and allness of Deity, and thus more easily realize the nothingness of evil that lurks under this false sense of good. Human praise involves a belief in many minds, many gods; so does all sin and sickness. Christian Science is here to destroy all the beliefs of mortal mind, including the belief in animal magnetism. In thus yielding to the divine Mind, mortals give up an unreal sense, a counterfeit of good, unspeakable pain and evil, for infinite peace, eternal life, indestructible good, and all the glories of heaven here and now. Mrs. Eddy says, "To impersonalize scientifically the material sense of existence—rather than cling to personality—is the lesson of today" (Miscellaneous Writings, p. 310).

This lesson is found in all of Jesus' healing work. He said to one, "Why callest thou me good? there is none good but one, that is, God." When the people, seeing a great prophet, glorified God, they were healed; but when the Nazarenes saw and thought of Jesus' personality, they could not receive the healing Christ, and "he did not many mighty works there because of their unbelief" in the allness of God. Even St. John the divine was tempted to worship the angel which showed him the spiritual heaven and earth. We read, "And he said unto me, See thou do it not: . . . worship God." Even as the temptation to give praise and honor to other than the one God is recorded in the Bible, it is the one temptation which first and last Christian Scientists must strive to overcome. Then Spirit will indeed be recognized as All.

OBEDIENCE.

RUTH INGRAHAM.

It is sometimes remarked that much difficulty is experienced at this date in the government of children, and that Christian Scientists are not awake to their responsibilities in this particular; that parents do not teach their children to obey. They say, "Oh, Love will take care of them," and let it go at that. In consequence of this the child follows his own will, acquires an exalted estimate of his own judgment and capabilities, and has very little respect for authority, while his teachers in the public schools and elsewhere have to suffer for his parents' neglect. The writer, a teacher of long experience and a lover of children, while not conceding this to be a fault peculiar to Scientists, has nevertheless found it to be as frequently true in their case as in that of others, a fact which is greatly to their discredit.

In the days of our fathers, children were taught submission to their elders in thought, speech, and action, almost to the point of losing their individuality. Obedience was often brought about through fear of punishment, both at the hands of offended parents and through the wrath of a jealous and vengeful God. The old-fashioned orthodox parent, while quite certain of his integrity of purpose, not infrequently confused his personal preference or prejudice with the supposed will of God, to whom he attributed his own anger at an infraction of discipline. The child was made to feel a trifling offense against purely human and arbitrary rulings as equivalent to a sin against the statutes of omnipotence. He was not taught to distinguish between the human will and the divine, in matters of presumed authority, nor was he encouraged to inquire into the wherefore of given orders. Instant, unquestioning obedience was exacted, as many a grandfather or grandmother of the present day will testify.

Against the extreme severity and narrowness of this training, as we all know, there has been a very natural revolt. Human nature is apt to go from one extreme to the other in all things; its unreasoning impulse carrying it past a safe middle course before it stops to find its bearings. So in the present day and generation we witness the undignified spectacle of parents meekly submitting to the encouraged tyranny of even their young children.

While not holding for the rigid old-fashioned discipline, the writer is many times thankful that in her early training obedience was considered of paramount importance. The cruelty of not requiring a child to obey has been proven throughout history. It is a fatal flaw in his education, whatever the reasons or excuses. A child's first lesson, even before the medium of speech can be employed, must be one of obedience, for his own safety's sake and for the sake of all with whom he may come in contact in his later life. This is a widely established fact, and needs no argument to support it. How, then, shall we who are enlisted on the side of all law and order, we who realize that only by the strictest obedience to Principle and rule is any good to be gained, we who are admonished in the Bible and in our text-book to obey the divine law,—how shall we slight or ignore the sacred obligation to bring up our children to be obedient to Truth?

"Except ye be converted, and become as little children;" but not a wilful, disobedient child, who has lost the sweet amenability to discipline, the open heart to Truth which should characterize the little child; lost them through the negligence of those responsible for his early guidance and instruction. It is vain to say, "Love will take care of him," if we are making no effort to help him realize this sacred truth for himself. A casting aside of responsibility in this way is equivalent to declaring that there is no sin while we are indulging in sin, and our text-book deals very plainly with this error.

Respect for authority, together with a systematically developed ability to discriminate between the false authority and the true, should be the equipment of every child of Christian Science parents. In St. Paul's epistle to the Ephesians, sixth chapter, he counsels the children to obey their parents, "for this is right;" and the same admonition is given in the third chapter of Colossians. On page 62 of Science and Health we read, "The entire education of children should be such as to form habits of obedience to the moral and spiritual law." The untrained will which chafes, rebels, or mocks at authority does not make for true freedom, but for a brief license which ends in bitterness and tears, until the road is retraced and the steps learned anew that lead from sense to Soul.

A WHOLESOME INFLUENCE.

NAPOLEON ROSS.

A FEW months ago, as the writer entered a subway car in a large eastern city, he saw a little girl of perhaps eleven years reading in a newspaper of the ultrasensational type the demoralizing details of a trial that was then in progress in the criminal courts. The child had evidently been sent downtown to do some shopping, for she had some bundles tucked under her arm, and it seemed quite possible that she had been told to buy the paper also.

The incident impressed me greatly, for it carried with it an object-lesson which stamped upon my consciousness as never before the need of a higher order of daily newspaper. Here was a mere child reading and carrying into the home for others to read a form of literature which has for years been eating unseen at the very vitals of society; unseen, because in the guise and with the sanction of journalism it has wormed its way with serpentlike subtlety into the family circle, where parents and children alike have been beguiled into reading it. How ruthlessly evil pushes its propaganda amid such defenselessness need not be rehearsed here.

As I meditated, however, my thoughts turned from the pitiable sight in front of me to the words of our beloved Leader on page 96 of Science and Health, where she says, "During this final conflict, wicked minds will endeavor to find means by which to accomplish more evil; but those who discern Christian Science will hold crime in check. they will aid in the rejection of error." And I thanked God then and there for giving her the courage to go forward, heedless of the opposition which might arise, to crown her endeavors with the launching of a daily newspaper, whose one exalted aim is to benefit all who read it. Many are the gatherings about the evening lamp that are being blessed by this gift to a sin-burdened world, and countless thousands of fathers and mothers are offering up their prayers of thanksgiving for *The Christian Science Monitor!*

The work that our inspired Leader has begun, we must follow up. On page 7 of "Miscellaneous Writings," Mrs. Eddy says, "A great work already has been done, and a greater work yet remains to be done." We have merely entered upon a work that must be pushed throughout the length and breadth of the earth. The fields are ripe for the harvest; for all men love good, whether they know it or not. There is without doubt some one who would be pleased to receive our *Monitor* after we have read it, and we each can help to make the *Monitor* a valuable advertising medium. There are innumerable ways in which each Scientist can assist in spreading the influence of this new order of journalism. Humanity has, as it were, thrust its case upon us. Its defense rests with us, and our daily paper can be made one of the strongest arguments in the case. There can be no excuse for indifference or indolence. We know what to do and how to do it, and divine Love points the way!

TESTED TEXTS.

KATE G. POHL.

IN geometry there are certain fundamental statements recognized as always true, which are called axioms; for instance, "Two parallel lines are always equidistant." These axioms and logical deductions therefrom are used to prove every geometrical proposition, and when the problem is correctly solved Q. E. D. is written at the end, meaning, "Which was to be demonstrated." Christian Science tells its students that they must use the fundamental teachings of the Bible with the same mathematical accuracy, that they too must prove by practical application and results the value of these teachings; namely, the Ten Commandments and the logical deductions therefrom as given in Christ's sermon on the mount, and interpreted for this age in "Science and Health with Key to the Scriptures" by Mrs. Eddy.

What to the student in geometry is called a proposition may be likened in Christian Science to our every-day tasks and experiences as the followers of the Master,—the healing of sickness, the overcoming of faults, or the proving that God is the source of all supply. Each new thing to be done or to be left undone is a proposition to be proved according to scientific rule, after the way of Christ's appointing, if we would make our work successful. We can no more alter or tamper with God's law and bring about good results than we can change the axioms of geometry and correctly solve the problem. We are truly progressing when we admit this simple fact.

To illustrate: Jesus said, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." Recently there came into the writer's experience a need to do some spiritual work, while at the same time there seemed great need for merely material work. Repeatedly came the temptation to lay aside the spiritual and take up the material; yet the spiritual axiom demanded that I seek first the kingdom of God. Dared I trust this absolutely? The rule was worth testing. To be sure, this meant the reversal of ordinary methods, and common sense argued, "What will you do if it fails?" to which ridicule answered, "Be considered foolish." The text, however, in this instance was tested, and the result was far beyond what could have followed mere physical thought-taking, for, as the Bible more familiarly expresses it, "Eye hath not seen, nor ear heard, neither have entered into the heart of man, the things which God hath prepared for them that love him."

A beginner in the study of the practical value of Christian Science read this statement in Science and Health: "Only as we rise above all material sensuousness and sin, can we reach the heaven-born aspiration and spiritual consciousness, which is indicated in the Lord's Prayer and which instantaneously heals the sick" (p. 16). He had always been troubled with car-sickness, and shortly after noticing this sentence he had occasion to take a journey. As the effects of the moving train began to recall former experiences, he remembered the above passage, and began to apply it, and turning his thoughts away from his discomfort, he began to think about what this prayer meant. Before he had finished repeating thoughtfully the words, every symptom of the difficulty was gone; he could have written Q. E. D. at the end of that experience.

If a student were working over a geometrical proposition, he would have to think about the rules of his text-book and work according to them; so the Christian Science student must think of the rules as given in his text-book and apply them, if he would win the result he is striving for. These rules are contained in the Bible, and they are interpreted for all mankind today in Science and Health. Mrs. Eddy, who has successfully worked out many stupendous problems from a spiritual basis, has written for our encouragement on page 3 of "Miscellaneous Writings," "The lessons we learn in divine Science are applicable to all the needs of man."

[Written for the *Sentinel.*]

RESIGNATION.

WARWICK JAMES PRICE.

ONE doth misuse the word who fails to try
To rise,—stretched prone upon the muddy ground,
Tripped by the load which mortal sense has bound
Upon his back,—"I am resigned!" his cry.

Another, in the selfsame wretched plight,
Fights to his feet, knowing that Truth must win
The stubborn battle with disease and sin.
Resigned to God, he faces toward the light.

SELECTED ARTICLES.

[Alfred Farlow in *Springfield* (Mass.) *Republican.*]

The abstract statement "All is Mind and there is no matter" has been extensively elaborated in the Christian Science text-book, in order to make sure that the student understands the subject. It does not mean that creation is an illusion, but that everything from the least to the greatest which is real, exists as the creation of God, Spirit, partakes of His nature, and is therefore not what it seems to the unenlightened human mind, to that quality of understanding which does not comprehend it from a spiritual view-point. The simplest lesson of Christianity, "God is a Spirit," demands spiritual consideration. What our critic has denominated "consciousness" and the "testimony of man" must be set aside for the acceptance of this lesson. The senses declare: "I do not believe there is any such thing as Spirit; I do not see Spirit," but disregarding material testimony the Christian accepts the Scriptural teaching, "God is a Spirit." One needs only to be consistent with such an acceptance to endorse the entire teaching of Christian Science. In the consideration of this subject the gentleman has not only to deal with Christian Science, but with the opinions of modern scientists everywhere. Even physicists affirm that matter is simply "force," a "mode of energy." One of the greatest of modern scientists has declared his ability to demonstrate the absolute unreality of matter.

The critic declares, "Apart from its therapeutic claims, Christian Science would never have created a ripple in the social sea." To this we readily agree. If Christian Science were not demonstrable, if it did not make good its promises to destroy human woes, it would have no right to claim attention, for to this end was Christianity established primarily. Jesus said, "By their fruits ye shall know them." The value of any particular interpretation of the Scripture is dependent upon the good which it brings. Christian Science has been in vogue for about forty years, and no doubt our critic will admit that Christian Scientists are quite as clean both in body and mind as they were before they knew anything about Christian Science. Most persons are willing to go a step farther and admit that they are even cleaner both in body and mind than they were formerly; and this is unmistakable evidence that Christian Scientists do not ignore filth and sin, but destroy it. Mrs. Eddy herself was a striking example of this fact. It is the unreasonable hygienic methods which are repudiated by Christian Science, not necessary means of cleanliness. Pure air, pure food, purity of environment are entirely in keeping with Christian Science, for the purest and best in the material most nearly approaches the spiritual. It is entirely natural that those who become elevated in their ideals should seek the improvement of their material surroundings. Thus it may be noted that Christian Science stimulates improvement in every line. While it plants itself unreservedly upon the Scriptural teaching that Spirit, Mind, is the only creator, and that sin and disease, being no part of God's creation, have not an absolute but simply a relative existence, Christian Scientists do not ignore these, but realize that they must be dealt with intelligently and thereby destroyed.

Christian Scientists recognize that there is apparent discord in the imperfect human state of existence, but that this discord will be destroyed as mortals advance spiritually and thus manifest ideal manhood. Christian Scientists call sickness by the same name that is employed by others, although they differ from some in their understanding as to its nature and as to the proper remedy therefor. The Master of Christianity referred to a woman as having been "bound by Satan," and he described Satan as a "liar" and referred to his offspring as "a lie." Does our critic believe there is danger of becoming untruthful and vitiating one's character by following the example of the Master, by classifying all evil as the work of the adversary and further declaring, in accord with the Master's declaration, that it is simply "a lie" or a falsity? A Christian should have no compunction of conscience in classifying the discords of life as outlaws, according to the example of Christ Jesus, especially when by so doing he is more effectual in his efforts to overcome them. Humanly speaking, we may classify disease as germ or otherwise, but if through an understanding of Truth it is destroyed, we thereby establish the fact that it should be properly classified as error. No doubt when our critic becomes better acquainted with Christian Scientists he will discover that they are philanthropists in every sense of the word. While the new understanding of Truth which Christian Science affords may lift them in a large measure above the suffering which is usually occasioned by deprivation, they do not on this account lose their sympathy, and what they have gained should be considered commendable. If Christianity has any mission whatever, it is to overcome sin and distress.

[Capt. Geoffrey Wilkinson in *Telford* (Eng.) *Recorder.*]

Christian Science says that there is one first cause, or Principle, of all that really is, and that this first cause is infinite intelligence or Mind; in other words, Spirit, God. Perfect Mind expresses itself in perfect ideas, and thus creation is spiritual, ideal, harmonious in every detail. Matter, that which is apparent to the senses, is the negation of this, and is therefore a false, imperfect sense of God's spiritual, perfect creation, which, whatever the senses may testify, is still "at hand." Material objects are counterfeits of spiritual ideas, much as the distorted landscape seen through a bad pane of glass is a counterfeit of the landscape which it parodies. Finally, a sick, sinning, and dying mortal is nothing but a false, imperfect, finite sense of God's spiritual, perfect man, made in His image and likeness.

From the above short summary of the teaching of Christian Science, it will be seen that neither will-power nor the refusal to think about sin, sickness, and death can be expected to destroy these beliefs. What alone can destroy them is the knowledge of the truth about them, namely, that they are no part of God's perfect creation, and are therefore without any real origin or existence. Jesus of Nazareth, who said he had not come to destroy God's law, but rather to fulfil it, proved that these phenomena were not according to God's law by destroying them; and it was his understanding of the spiritual law which enabled him to say, "Ye shall know the truth, and the truth shall make you free," for the realization of God's law is the enforcement of God's law. It was, moreover, Jesus' understanding of the spiritual law, the law of "the spirit that quickeneth," which enabled him to overcome death, and it is on his overcoming of death, on his demonstration of the continuity of life, that Christian Science prefers to lay the greater emphasis.

From what has been said above, it will be understood that Christian Science classes sin as unreal, inasmuch as it is no part of God's perfect creation, the only creation there is; and it is the object of Christian Science to reveal to mortals the truth about God and man, so that their lives may conform, both in thought and deed, to this perfect model. The understanding of what God is, and what man in His image and likeness must be, is an ever-present rebuke to every species of wrong thinking, and Christian Scientists are helped in the overcoming of sin by the understanding that God, good, is the only real intelligence and power; hence evil has no activity, no dominion, at all. After all, the value of a teaching is seen in its results, and those who have gained some understanding of Christian Science have found that what are commonly known as grave moral disorders, escape from which seemed impossible so long as evil was held to be both real and powerful, have yielded to the realization of the scientific unreality of evil.

[Frederick Dixon in *London Sunday Times.*]

The critic takes exception to the Christian Science teaching on the subject of atonement, which he says is contrary to the teaching of the Bible and of orthodox theology. If he would tell me what the teaching of orthodox theology on the subject of the atonement is, I should be much obliged, only I am afraid that when he had told me it would only be his view. A little time ago the Rev. J. Hugh Beibitz, vice-principal of the Theological College at Lichfield, expressed his opinion that the world would not accept any doctrine of the atonement which contradicted its fundamental moral instincts, and that these moral instincts were outraged by the teaching that God could be "appeased or propitiated by the death of an innocent victim." "Our whole mind," he said, "revolts against the Miltonic view of the atonement," which, besides offending our moral sense, "logically and rapidly leads us to undiluted Arianism." It is to be distinctly feared that the vice-principal of the Theological College at Lichfield would regard the critic's theory as rank Arianism. Mr. Beibitz, however, goes farther than this; he goes on to give four modern views of the atonement, as a prelude to enunciating a fifth of his own. In these circumstances, I think I am justified in asking, *Quis custodiet ipse custodes* of orthodoxy.

The critic is very wise in admitting that I am probably right in breaking up atonement in at-one-ment. There is not a shadow of doubt but that I am right, and if he is in search of an orthodox authority on the subject, he will find one in so well-known a writer as the Rev. W. L. Walker, for Mr. Walker is of opinion that, in order to understand the atonement, we have got to get rid of the modern meaning of the word; "and yet," as has been said, "Mr. Walker is experimentally evangelical and a scholar." What Mr. Walker wants to know is how the word atonement has ever come to signify expiation. He thinks it is partly through the influence of Anselm and partly from a misunderstanding of the meaning of sacrifice in the Old Testament. He says that it is the mistranslation of the Hebrew word *kipper* which has led fundamentally to the whole misconception. *Kipper* means simply cover, and the idea of expiation, he says, has been imported without any justification whatever. The impossibility of the word atonement meaning expiation he declares is evident from the fact that atonement is always represented as proceeding from God. "All this," says a writer in the *Expository Times,* "is self-evident to some. It has yet to be made self-evident to the multitude." I do not know if the critic will mind being included in the multitude, but he must remember that it was an entirely orthodox publication which adopted the word to cover him and not a Christian Scientist.

It should be clear that Christian Science in no way does away with the sacrifice of the Saviour. "That he might liberally pour his dear-bought treasures into empty or sin-filled human storehouses," Mrs. Eddy writes, on page 54 of Science and Health, "was the inspiration of Jesus' intense human sacrifice. In witness of his divine commission he presented the proof that Life, Truth, and Love heal the sick and the sinning and triumph over death through Mind, not matter." Christian Science does not teach that God demanded the suffering and death of Jesus in expiation of the sins of the world; it teaches that Jesus overcame suffering and death in demonstration, to the world, of their impotency, and of the power of the Christ to heal and save the world. This power, he persistently declared, was available by all who believed on him, for he declared, "Lo, I am with you alway, even unto the end of the world."

So far from the lesson of the cross being lost in Christian Science, it is emphasized as it is emphasized nowhere else. It is woven through the entire warp of Christian Science teaching. The Greek word translated to deny, in the text, "If any man will come after me, let him deny himself, and take up his cross, and follow me," means to deny utterly, and only as a man cuts off his hand and plucks out his eye in the struggle to destroy his own sense of materiality does he begin to take up his cross and follow the Christ to Calvary. "The real cross," Mrs. Eddy writes, on page 50 of Science and Health, "which Jesus bore up the hill of grief, was the world's hatred of Truth and Love," and the victory which he proclaimed from its summit is contained in the marvelous saying, "Be of good cheer; I have overcome the world."

Jesus overcame the world in demonstration to the world of the fact that evil was not power and was not real. What he had done, he declared and demanded his followers could and should do: "He that believeth on me, the works that I do shall he do also." In those words he made the healing not merely of disease and pain, but of sin and sorrow, of want and despair; of all, in a word, that is unlike God, the test of a man's Christianity. Mrs. Eddy has accepted this test for the Christianity of Christian Science, and in the healing work of the Christian Science churches round the entire globe lies the justification of her teaching.

[James Phelps in *Northwestern,* Oshkosh, Wis.]

Because the teachings of Christian Science are contrary to human experience, is it wise to reject them? Now, as a matter of fact, theory generally precedes and is in advance of practice. It is always valuable to have a high ideal, even if one fails to realize it perfectly in practice. Surely there can be no harm in accepting the Biblical statements that man is made in God's image and likeness; that he has dominion over all the power of the enemy, and that nothing shall by any means harm him; that if he drinks any deadly thing, it shall not hurt him; that if he believes in Christ he shall never see death.

If God is Spirit, as the Scriptures aver, then surely His image and likeness is spiritual and is not subject to pain, disease, and death. Doubtless Jesus knew that his disciples would not realize perfection for some time, after he admonished them to be perfect even as their Father in heaven was perfect, but that did not hinder him from giving the command and expecting them to achieve perfection as rapidly as possible. In like manner, Mrs. Eddy, while teaching the unreality of matter, pain, disease, sin, and death, on the basis that God, Spirit, made everything that was made and pronounced it very good, never taught her followers to expect that she would not pass from mortal vision as other people do, or that for an indefinite time the belief in these ills would not afflict the human race. However, we may rejoice that as a result of Mrs. Eddy's teachings hundreds of thousands of intelligent men and women bear insistent testimony of relief from sin and disease, pain and fear, while many have been brought back from the very verge of the grave; agnostics have been reclaimed, families reunited, harmony in homes has been restored, consumption and cancer cured.

Did Jesus (whom Christian Scientists acknowledge as the Wayshower) speak and act as though he firmly believed sin and sickness to be real? He said of the woman, who had a spirit of infirmity eighteen years, "Satan hath bound her." At another place he said: "Ye are of your father the devil, and the lusts of your father ye will do. He was a murderer from the beginning, and abode not in the truth, because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it."

Now these passages, taken in connection with Jesus' own statement, that he came not to destroy, but to fulfil the law; and John's declaration that "the Son of God was manifested, that he might destroy the works of the devil," give ample justification for the conclusion that Jesus did not regard sin and sickness as real. Had Jesus regarded sin and sickness as real, he would have shared the beliefs of those about him and would, therefore, have been as help-

Digitized by Google

less as they were in the presence of leprosy, paralysis, blindness, etc. Had he believed in the reality of inharmony and matter, it would have been mockery for him to have said to his storm-tossed and fear-stricken students: "Why are ye fearful, O ye of little faith?" It would also, under these circumstances, have been impossible for him to pass through closed doors.

The New Testament, as I read it, is full of declarations of the unreality of death to the true Christian. I will refer to only a few: (John viii. 51) "If a man keep my saying, he shall never see death." (Rom. viii. 2) "For the law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." (I Cor. xv. 26) "The last enemy that shall be destroyed is death." (II Tim. i. 10) "Jesus Christ, who hath abolished death, and hath brought life and immortality to light through the gospel."

If Christian Science is the truth, it follows as a necessary consequent that anything which disagrees with it must be error. All Christian Scientists believe with other Christians that Christ Jesus taught the whole truth and that he knew more about God, man, and the universe, about causation, law, and effect, than any man or woman before or since; and that only in so far as the teachings of Christian Science agree with his teachings, will they be abiding and effective. Jesus likened the truth to leaven in meal. This leaven has been and is at work, and will continue to work till all erroneous concepts, all human errors, are destroyed, and the facts become apparent to all that God is All-in-all; that God is perfect and divine Mind, and all that really exists must be His manifestation. It is clear that the only manifestation Mind can have is thought; but thought is not intangible to the real man (spiritual consciousness), but tangible, real, harmonious, and eternal.

[Elizabeth T. Bell in *Charleston* (S. C.) *News and Courier.*]

Christian Scientists readily agree that "the purpose of science is to discover truth," but to agree that "the purpose of religion is to help us adapt ourselves to the facts of experience revealed to us through the senses from the world about us," is equivalent to saying that the five personal senses, absolutely unreliable witnesses of matter, are the avenues through which God, Spirit, is revealed to man. Spiritual things must be spiritually discerned. God, Spirit, is revealed through spiritual capacities; through purification of thought and life, and subjugation of matter, with its changing, false testimony.

Christian Science primarily and intentionally awakens humanity out of the nightmare of sin and disease to a realization that "now is the day of salvation" from every discordant experience. Whereas humanity, with material vision, sees only a host of enemies encompassing it, Christian Science, like the prophet Elisha, discerns the spiritual facts, and through its prayer the eyes of men are opened to the immediate availability of divine Love's protection and salvation. Christian Science is not "a strange compound," but one and indivisible—the revelation of the God who is Spirit, and to be worshiped "in spirit and in truth." It is demonstrable Science; therefore, beyond the point of argument. One who has proven its verity in the smallest degree knows that it is of God; and that its Discoverer and Founder, Mrs. Eddy, has well earned that gracious benediction: "Blessed are the pure in heart: for they shall see God."

[John Ashcroft in *St. Louis* (Mo.) *Globe-Democrat.*]

On page 460 of Science and Health, Mrs. Eddy declares: "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being." That Christian Scientists have attained some measure of this "right apprehension" is attested by the ever increasing number of those healed by their ministrations. To the Christian Scientist good alone is real; and his faith in this rests upon the logical conclusion that God, to be infinite good, could not be the author of evil; and that the latter, therefore, has not the reality, permanency, nor perpetuity of the former.

The theological world has nothing to gain by attacking Christian Science. The latter is here to stay; and, judging by the constantly increasing number of its adherents, it is evidently satisfying the aching heart of humanity with its interpretation of the Scriptures and with its obedience to the injunction of the Master, "Heal the sick."

[E. M. Ramsay in *Dundee* (Scot.) *Telegraph and Post.*]

I need hardly remind your readers of the fact that while all the evangelical churches take the Bible as the foundation of their doctrines, they differ very widely one from another in the interpretation which they give to various passages of Scripture. Our Saviour gave a simple test by which his followers might prove whether they understood his teachings aright: "These signs shall follow them that believe; . . . they shall lay hands on the sick, and they shall recover." Had the Christian church kept this commandment in the forefront of its teaching, and faithfully obeyed it, we should have fewer sects and less divergence of doctrine than is to be found today.

There are other Bible commandments and precepts which have been little regarded, and Christian Science is bringing these to the notice of the world, and is showing very plainly that it is just this neglect which prevents the Christian of the present day from walking in such close communion with God as did the Christian of the first century. We are told to rejoice evermore; to pray without ceasing. We are also told that it is by means of praise that we enter God's courts; that it is the meek who inherit the earth, and the child-heart which enters the kingdom.

Religion has been associated, unfortunately, with gloom and fear, and God has been regarded as a severe judge, surrounded in mystery and ruling by methods inscrutable to men. This view of God has alienated men from Him, and driven them into agnosticism. Christian Science, on the other hand, reminds men that he who best knew God's nature called Him by the endearing name of Father, and said to his followers, "My yoke is easy, and my burden is light." It reiterates the Master's declaration, "Ye shall know the truth, and the truth shall make you free," and further proceeds to show how we may attain to this knowledge of truth by a clear, scientific process of right reasoning wholly based on the nature of God and man as set forth in the Scripture.

One may hold communion with the Grand Cañon of the Colorado as with great music; with the monody of the ocean, or with any of those big primitive expressions of the force that moves the universe, whether through man in art or through what we call nature, as God made it. No better proof is needed of the existence of a dominant mind through all the universe than the consideration of how, on the one hand, the great passionate outbursts of the masters are art—great symphonies, great paintings, great messages to men, through words or symbols—and of how, on the other hand, the sights and sounds of stark, untamed nature rouse the human soul from its lethargy in the same miraculous fashion. The God that moves through "Lear" and "Lohengrin," is He who "plants his footsteps on the sea" and "rides upon the storm." The pilgrim to the cañon must not go as one who visits a peep-show or a freak of nature, but approach it as Moses came to the burning bush.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

JOY IN OBEDIENCE.

ONE of the strong impressions which the visitor to a Christian Science church usually carries away with him, is that of the almost universal expression of happiness on the countenances of these devout "hearers of the word," a happiness that bespeaks an inward peace for which he has an instinctive longing, yet knows not how to attain. Oftentimes the desire for a like serenity is the silken cord that gently draws him into the safe haven of absolute trust in the omnipotence of God to heal from sickness as well as to save from sin, the omnipotence of Him "who forgiveth all thine iniquities; who healeth all thy diseases."

Christian Scientists carry this atmosphere of radiant happiness with them into the world of every-day affairs; a serene confidence in Him who is their sure defender engenders that overflowing joy which brightens the day for all with whom they come in contact. They have learned that the secret of true happiness lies in obedience to the teachings of the Master, an obedience which lays hold on the promises of the Father and looks for their fulfilment; and they are finding that just in proportion as they give heed to the divine command to seek "first the kingdom of God, and his righteousness," the kingdom of heaven on earth, here and today, in that degree are health, happiness, and all good things added unto them.

Strangely enough, however, most of us wait for the goad of suffering to drive us to that which brings peace and content to body and mind, wait till we have learned for ourselves the utter worthlessness of all material dependences before we are willing to trust ourselves to Him who again and again has proved the power of Truth to save to the uttermost. We profess belief in God's promises, yet hesitate to put them to the test. We long for that fulness of joy which the Master declared should be with those who keep his commandments, who believe in him and strive to do the works that he did, yet we fear to cut the cables of material belief and "launch out into the deep" where the abundant riches of the Father's love are awaiting us.

It is when illness, grief, and lack seem to be our portion that we have greatest need to prove the truth of the apostle's words, "Casting all your care upon him; for he careth for you." It is not easy to be joyous when the way seems rough and toilsome, when healing is long delayed, when our earthly all is taken away, and yet this is just the time when we may most surely rest upon the "everlasting arms" that are ever round about and beneath us. When through obedience we have come out from the blackness of despair into the glorious light of God's goodness and love, then we know of our own knowledge the secret of true happiness, and "rejoice with them that do rejoice."

It is interesting to note in the book of Deuteronomy, which sets forth the parting counsel of Moses to the children of Israel while they were yet "on this side Jordan," how strong is the emphasis upon the necessity for strict obedience to the statutes and judgments that had been given them, if they would realize to the full the good things in the land which they were to possess. So long as they were obedient, it was promised that they should rejoice in everything to which they put their hand, and blessings were to be multiplied to them. The psalmist likewise was impressed with the joy attendant upon obedience when he declared, "Let all those that put their trust in thee rejoice: let them ever shout for joy, because thou defendest them: let them also that love thy name be joyful in thee."

There is good authority, therefore, for the joyous mien of Christian Scientists. They have in the Bible and their text-book Science and Health, together with the Manual of The Mother Church, provision for every need, every problem that may come to them in the journey from sense to Soul, and they have but to follow closely in the way again made plain through the life-work of her who was herself a loyal follower of the great Wayshower,—"a willing disciple at the heavenly gate, waiting for the Mind of Christ" (Science and Health, Pref., p. ix.),—to realize the joy and happiness that is their rightful heritage.

ARCHIBALD MCLELLAN.

UNCONSCIOUS MINISTRY.

THERE could be no holier, more beautiful aspiration than the desire that one's unconscious influence over others might become an unvaryingly helpful ministry to them. A knowingly exerted influence may witness simply to the significance of one's words or doings, it does not necessarily speak for one's real character; but the silent radiations of one's life,—these always witness to what he truly is, they are too pervasive, too entirely beyond his control, to be determined or qualified by him; and when in a given case they illuminate and strengthen others, when they count for good, God, then indeed is this world blessed with the presence of one of those of whom Christ Jesus said, "Blessed are the meek: for they shall inherit the earth."

There is a sweet story told of one who thus went about his daily duty, diffusing virtue as a star diffuses light, without being aware of it, one whose spirit of giving and forgiving was expressed in gentle words and kindly deeds. When, as the story goes, an angel visited him and pressed upon him the privilege of securing some special gift, as a reward of merit, he asked only that he might "do a great deal of good without ever knowing it." And so humility became his crown, his life a benediction. Such a life-consummation is by no means far-fetched and impossible: on the contrary, Christian Science calls its every representative to entertain no lesser an ideal as the goal of his thoughtful ambition.

Jesus once spoke to his disciples of the assured experience of the righteous; that to them it would in due time be said, "Come, ye blessed of my Father, inherit the kingdom prepared for you . . . for I was an hungred and ye gave me meat; . . . I was sick, and ye visited me." And that they in great wonderment and surprise would say, "Lord, when saw we thee an hungred, and fed thee? . . . or when saw we thee sick, . . . and came unto thee?" And it would be answered them: "Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me." These words tell not only of our doing for God when doing for our brother, but of that uncalculated and often quite unconscious ministry to which Jesus called his disciples in his counsel, "When thou doest alms, let not thy left hand know what thy right hand doeth."

Such a ministry postulates that abandon in good-being and good-doing which constitutes the reflection of divine Love, and it is manifest that no one can attain unto it who is regardful for personality, for place, or for worldly compensation. There must be that spontaneous living of the Christ-life, in which mortal purpose is replaced by divine impulse and God is permitted to work in us "to will and to do of his good pleasure." Christian Science not only points to this as an attainable ideal, but in turning thought away from mortal beliefs and limitations, and in demonstrating the present unmeasured efficiency of the truth which Christ Jesus taught and committed to his followers, it awakens a new and impelling sense of the possible freedom of the sons of God, and secures a credit for every humble and truly aspiring soul of all that unearned increment of good which attends and witnesses to the activities of Spirit in every life that is "hid with Christ in God."

Digitized by Google

Blessed indeed is he whose life has thus become a beacon-light in this dark world, who has entered into a realization of the larger meaning of Christian living, who knows that despite his faults and imperfections the redemptive truth is constantly being radiated to others in his love, and in the honesty, the sincerity, and the simplicity of his adherence to and declaration of the Christ-ideal. To such a one the sick and sorrowing, the discouraged and depressed will give the same welcome today that the needy have ever given the messengers of Truth.

JOHN B. WILLIS.

"CHILDREN OF THE RESURRECTION."

IN the brief period between the raising of Lazarus by Christ Jesus and his own crucifixion, he gave some of his most vital teachings, the truth of which had already been proved in his mighty works. We read in the Gospels that on three occasions he had challenged the mortal claim of death to destroy life, and on each occasion he had proved the supremacy of Life as spiritually understood. He had not hesitated to say that, "as the Father hath life in himself; so hath he given to the Son to have life in himself;" and again, "If a man keep my saying, he shall never see death." All this was so different from the materialistic beliefs to which the people were accustomed, that it called forth the most bitter opposition from the religious sects who united in opposing his teachings, and who sought to entangle him by some hitherto unexplained questions respecting life and death.

On one of these occasions, the Sadducees presented the hypothetical case of a woman who had been married successively to seven husbands, and after their decease the woman herself had died. The question propounded to Jesus was this, "In the resurrection whose wife of them is she?" In response, the great Teacher rebuked his questioners for their ignorance of the Scriptures (Matt. 22. 29), although no direct statement could be found therein dealing with this subject. He at once lifted thought above the mortal concept of life as bounded by materiality, to the "life that is life indeed," declaring that God "is not a God of the dead, but of the living: for all live unto him;" in other words, to God no one is ever dead. Then he went on to tell something of spiritual existence, when he said (Luke 20. 35, 36), "They which shall be accounted worthy to obtain that world, and the resurrection from the dead, neither marry, nor are given in marriage: neither can they die any more: for they are equal unto the angels; and are the children of God, being the children of the resurrection." To this some of the scribes responded, "Master, thou hast well said."

At this time, when so many are reading the story of the resurrection, it may be asked how many there are who strive to realize for themselves what is implied by "the children of the resurrection," the definition of which, as given by our revered Leader (Science and Health, p. 593), will be found very helpful to all sincere Christians in dealing with this subject, namely, "Spiritualization of thought; a new and higher idea of immortality, or spiritual existence; material belief yielding to spiritual understanding." All thinkers are agreed that religion loses its force through material modes of worship which tend to darken and degrade their votaries and which lead only to doubt and uncertainty.

There was never a note of uncertainty in the utterances of Christ Jesus, and this is especially true of all he had to say about life. In the face of the most terrible ordeal through which any one was ever called to pass, he assured his trembling followers of his certain victory over death and the grave; nor was this all, for he said as well, "Because I live, ye shall live also;" and it was by this vital truth that the early Christians lived, that Peter and John, Philip and Paul, healed the sick and even raised the dead, thus proving that they were at least striving to be "children of the resurrection;" their thought was being daily, hourly spiritualized, so that the dark shadows of mortal belief were pierced through and through by the rays of divine Truth.

Reverently do we thank God that again this light is dispelling the darkness of material sense, through the revelation of Christian Science; and though, like St. Paul, we must yet say, "Not as though I had already attained," we gladly seize the proffered privilege of divine sonship, receiving, not rejecting, the Christ-power by which we rise above earth and earthliness into the life eternal which is for every child of God.

ANNIE M. KNOTT.

AMONG THE CHURCHES.

DUBUQUE, IA.

Ground has been broken for the erection of the new church building for First Church of Christ, Scientist, on the northeast corner of Ninth and Bluff streets. This property was purchased about eight years ago, and the residence on the property was remodeled and used for church purposes until last fall, when it was torn down to make way for the new structure.

The new building, which is to be of gray pressed brick with white trimmings, will cover all of the lot excepting a small space on the east and west sides, which will be filled in with a grass plat. The total valuation of the property will be about thirty-five thousand dollars. The building will be two stories with a basement. The Sunday School room and large foyer will occupy the first floor, and the entire second floor will be used for the auditorium, which will seat about five hundred. The style of architecture will be that used generally throughout the country by churches of this denomination. It is expected that the structure will be completed by Sept. 1.—*Telegraph-Herald.*

PORT HURON, MICH.

First and Second Churches of Christ, Scientist, have united. Second Church, which was organized about four years ago, was invited last July to unite with First Church and to discontinue its services. Committees were appointed from each church to confer together about the best method of uniting, and it was finally agreed that Second Church members should be enrolled on the records of First Church at once, First Church to retain its charter. The reading-rooms now maintained by Second Church will be maintained by First Church, its own reading-rooms to be discontinued. After Communion Sunday in July, a reorganization will take place at the postponed annual election of officers of First Church, members of both churches then having equal rights in voting.—*Correspondence.*

BUTTE, MONT.

As the result of a general reorganization, Christian Science is now represented at Butte by a new First Church of Christ, Scientist, and a new Christian Science society. The new church was organized by members of the former First and Third Churches, Second Church having united with First two years ago. The new society is composed of members from the former First Church and others who were not members of either of the former churches. The newly organized church meets in the edifice formerly occupied by Third Church, at the corner of Montana and Quartz streets; the society holds its services in the Unitarian Auditorium, 301 West Granite street.

It is believed that these changes will make for unity and progress at Butte.—*Correspondence.*

THE LECTURES.

EDINBURGH, SCOTLAND.

Bicknell Young delivered a lecture on Christian Science Feb. 18. He was introduced by W. F. W. Wilding, M.R.C.S., L.R.C.P., who said in part,—

We may recall how on one memorable occasion Pilate asked Jesus the question, "What is truth?" and it is generally believed that it was asked contemptuously, as if it were unanswerable. In the search for the truth about healing, the history of four thousand years of medicine is a record of constantly changing theories and methods of treating disease. The history of religion reveals constantly varying beliefs in regard to spiritual truth. Nineteen centuries ago the man Jesus was wandering about the countryside in Palestine, telling a wondrous story, a story so startling that people in their thousands flocked to hear him. This story was the truth about God and man, and his knowledge of it set men free from sin and disease; in fact, Jesus showed that the healing of the body was the natural outcome of the knowledge of the truth.

The very works of Jesus proved the truth of his teaching. Furthermore, Jesus taught that all men could repeat those wonderful works; in fact, that all who believed could and should repeat them. For he said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." Now that was a declaration limited neither to that time nor to any time. It stands for all time, for all who believe; *i.e.*, understand. We now generally believe that Jesus had full knowledge of the truth, that he knew all there was to know about healing, and that he taught and practised the true method of healing, for it is recorded, "He healed all manner of diseases."

The realization of this fact came to me when I had spent many years of my life in medicine, having been in practice as a doctor for twelve years in Lancashire. This knowledge came to me through Christian Science. Under my personal observation Christian Science healed cases of organic disease which were beyond aid from any material power. This extraordinary healing was complete and in some cases instantaneous, so that to one trained along material lines in the treatment of disease it appeared miraculous. A careful study of the teaching of Christian Science revealed the method and law by which such healing is accomplished, and gradually I became convinced that it was the same method as that taught and practised by Jesus. Further study and examination of the healing works of Christian Science eventually led me to give up medical practice. Since taking this step, nine years ago, I have had ample opportunity of testing the healing power of Christian Science, with the result that I have year by year become more fully confirmed of the rightness of the step that was then taken.

These lectures were instituted by Mrs. Eddy to remove misunderstanding of Christian Science by an explanation of its teachings from authorized and fully competent lecturers. The speaker this evening is a member of the board of lectureship of The First Church of Christ, Scientist, Boston, Massachusetts, and he will now tell you more of this wonderful truth which today is again making men free.

Correspondence.

BAKERSFIELD, CAL.

The attendance at the lecture by Bliss Knapp, given at the Opera House, Feb. 20, was about fifty per cent larger than at any former lecture. Walter S. Dickey introduced the speaker, saying in part,—

Thought goes swiftly back to the deplorable condition in which Christian Science found me. I was in the very depths of misery, broken in health, and in despair as to which way I should turn. The very air seemed black with anguish. I had faith in neither God nor man, and was filled to overflowing with hatred and resentment. Life seemed a complete failure. Christian Science has taken me by the hand, and gently and intelligently led me step by step into brighter, healthier, and happier ways; hatred has been displaced by a better understanding of God as Love; faith and charity have driven out fear and resentment; life has taken on brighter and more hopeful hues, and there are other blessings far too numerous to mention. It is our hope and great desire that you too may know this precious truth that our Master said would "make you free,"—make you free from sin and disease, make you free from every want and woe that flesh is heir to.—*Correspondence.*

NEW YORK, N. Y.

Willis F. Gross delivered a lecture on "Christian Science: The Gospel of Salvation," Saturday evening, Feb. 25, for Fourth Church of Christ, Scientist. He was introduced by Harvey M. Ferris, First Reader of First Church of Christ, Scientist, Brooklyn, who said:—

During the past two weeks the newspapers have devoted considerable space to addresses by eminent speakers, who have extolled the virtues of two of the most illustrious characters in American history. These addresses were redolent with the breath of freedom; for freedom was the dominating thought in the lives of these persons whose memory we love to cherish.

It seems quite fitting, following so closely on these celebrations, that we should now listen to an address which *will* tell us something of another illustrious individual, whose consciousness was so spiritually attuned that she caught the harmonious tones of Truth, and gave them to the world in the form of a healing and demonstrable religion. Christian Science is the gospel of emancipation, and its liberating influence is not confined to one section of the country, but is recognized and felt throughout the whole civilized world, healing the sick, reforming the sinner, and uplifting thought into the purer atmosphere of Spirit.—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Adrian, Mich.—Rev. William P. McKenzie, Croswell Opera House, April 25.
Benton Harbor, Mich.—Francis J. Fluno, M.D., Bell Opera House, April 28.
Calgary, Alta.—Bliss Knapp, Shriners' Temple, April 24.
Champaign, Ill. (First Church).—Rev. William P. McKenzie, Church Edifice, Elm street and West University avenue, April 27.
Exeter, N. H.—Clarence C. Eaton, Town Hall, April 21.
Fostoria, Ohio.—Prof. Hermann S. Hering, Andes Opera House, April 27.
Fresno, Cal.—Willis F. Gross, Barton Opera House, 3:30 p.m., April 16.
Haverhill, Mass. (First Church).—Prof. Hermann S. Hering, Unitarian Church, Main and Crescent streets, April 21.
Janesville, Wis.—William D. McCrackan, M.A., Myers Opera House, 8:15 p.m., April 24.
Jersey, Channel Islands.—Bicknell Young, Odd Fellows Hall, April 18.
Kalamazoo, Mich.—Francis J. Fluno, M.D., Academy of Music, April 25.

CORRECTION.

In the list of "Lectures to be Delivered" printed in last week's *Sentinel*, it was erroneously announced that Miss Mary Brookins, C.S.D., would lecture in Kansas City, Mo., April 23, 24, and 25, this engagement having been made last September, prior to Miss Brookins' request to the Board of Directors of The Mother Church that she be relieved from her work as a lecturer, and canceled later. Miss Brookins' resignation was accepted Oct. 4, 1910.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be June 2, 1911. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 10, 1911.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 4, 1910, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

TESTIMONIES OF HEALING.

Many times, when laboring under a sense of discouragement, an article or testimony in our publications has dispelled the gloom, and I am now adding my testimony in the hope that it may help some other seeker for this glorious truth which makes men free. My attention was first called to Christian Science when a number of Scientists gathered at the capital of my native state to protest against the passage of a medical bill that was then pending before the Legislature. They failed to make any impression on me, except in a material way, because I associated them with a fanatical sect which had been circulating its literature throughout the state. My attention was next attracted by the instantaneous healing of my wife of several so-called "incurable diseases." We had been told by every physician we tried that she could live but a few years at most, and then only by going to a higher altitude. This we did, but she got no relief until Science found her.

I was away from home at the time she was healed, and when I returned I was willing to attend services, but still not grateful enough to acknowledge what this glorious truth had done for us. A few months after coming home, however, I was in a gas explosion, which was of such force that I was thrown about thirty feet. My face was dreadfully burned, even the inside of my ears being blistered. My hands were burned so badly that I had to take the receiver between my wrists when I telephoned my wife of my condition. This happened about four miles from home. A Christian Science practitioner from Boulder, Col., where we then resided, was notified, and treatment began at once. I did not suffer more than one and a half hours, and I am sure I would not have had any suffering at all if the appearance of my hands had not been so bad, for the pain seemed to be only in my hands. It was on Friday that I was injured, and on Tuesday morning I returned to work. I never lost any time or suffered any inconvenience from the injury afterward.

With this healing also came the overcoming of the smoking habit, to which I had been addicted for a number of years. I might add that I had been wearing glasses for about six years, but after one treatment I was able to lay them aside and have had no need of them since. Recently in making an ocean voyage I thanked God for my perfect sight every time I had occasion to look across the water. The last five years we have been in the tropics, and all this time through our understanding of Christian Science we have been kept in excellent health. I know the only way to express our gratitude to our dear Leader is by living daily what she has taught us. In the Bible we read: "For with thee is the fountain of life: in thy light shall we see light."—DAN ST. CLAIR, Gatun, Canal Zone.

[Translated from the Swedish.]

Christian Science has been almost unknown in Finland up to the present time. A year ago I heard about it from a friend, who urged me to seek help in Christian Science for my poor health. When quite young I was very nervous, the disease increasing with the years, and at times I was very ill. Although I had consulted several physicians at sanitariums and watering-places, I nevertheless got worse, and was sometimes obliged to be in bed for months at a hospital quite isolated. The doctor declared my illness to be incurable, and being so largely mental it caused me great suffering. At last it became quite clear to me that neither physicians nor medicine could help me; that if I ever became healthy, it must happen through a spiritual way. I had not then heard about Christian Science, but I felt a keen desire to know God, and I turned to Him with my whole heart. For a long time I had been seeking God according to the tenets of my church, but I never got any lasting peace or

Digitized by Google

strength to resist evil. My mentality was in confusion, and I could not find any real satisfaction in religion; nevertheless, I felt I could not live without it.

Hearing then about Christian Science, I was surprised when it offered me just what I needed. In the spring of 1910 I made up my mind to go to Sweden (Stockholm), in order to get further information of this teaching, though I did it with some hesitation, afraid of being deceived. My knowledge of Christian Science was very small, but I had committed myself to God's care, and knew that I was following His guidance. After five weeks' treatment in Christian Science I was healed, and returned home to Finland, healthy, glad, and happy. With this testimony I gratefully wish to acknowledge what Christian Science has done for me. I have gained a sense of peace and harmony, such as I have never had before. The sense of sorrow, grief, and disappointment has quite vanished, and I have experienced abundantly the love of God and His omnipresent help in all our needs. I am now feeling quite well, and I have in certain respects become a new woman. I study Science and Health with great pleasure and interest, and I also have had much help from the *Sentinel* and the *Journal*.

Through my knowledge of Christian Science I have sometimes been able to meet my own and other peoples' occasional indispositions. My keenest desire is to have more understanding of Truth, in order to be able to help my brethren in their struggle against sin and disease, and thus contribute to the establishment on earth of the kingdom of God.—Ilma Sumelius, Tammerfors, Finland.

It is with gratitude that I send this testimony of what Christian Science has done for me. In December, 1908, I came to the conclusion that I must overcome the drink habit, or I was lost. I had been drinking for thirty-five years,—the last year hardest,—so one Sunday morning I had my wife look up the address of a Christian Science practitioner in a copy of the *Journal* which had been sent me by a kind and loving sister who was a member of First Church, in Philadelphia, Pa., and had been sending me Christian Science literature for over two years, in the hope that it would appeal to me. My wife telephoned to a practitioner at nine o'clock in the morning, asking her if she would take my case. She did so, and gave me absent treatment immediately, also made an appointment to meet me at two o'clock that afternoon.

I had a long talk with her that afternoon, in which she pointed out the truth to me. I took a copy of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, home with me, and commenced to try, with God's help, to overcome the demon of drink. On Monday morning at ten o'clock, being in the city, I took my last drink, and have not touched intoxicants since, nor have I had any inclination to do so. I thank God that, although I have been where there were plenty of chances to be tempted, the appetite is gone! I had also chewed tobacco for thirty-five years and smoked for thirty-seven years, but in a month all desire for the weed was gone. This is not all. I was very profane, could not carry on ordinary conversation without using some oaths to emphasize it. That has all been dispensed with. I have joined the Christian Science church here, and am a regenerated man, morally, physically, and spiritually.

My hope and desire is that this testimony may be seen by some one similarly afflicted, for I know it was the power of Truth, and not will-power, that saved me and restored me to manhood. I thank God, and am grateful to our dear Leader for this wonderful teaching.

Geo. A. Lake, Dallas, Tex.

I am impelled to relate the splendid results of my stay last year in Stuttgart. The preceding winter, and especially in the early spring, I felt very weak and was also in a sad condition mentally. Two years ago the explanations of a Scientist had filled me with great confidence in Christian Science, and I had several experiences of help in my family and for myself. Unhappily, however, I again fell into much doubt. At last I became weak and miserable, and added to the debility was such pain in the back that walking became almost impossible. In this helpless condition I wrote to the before-mentioned Scientist, asking her to help me. She answered that I should come at once, which I did the next day in the company of a friend. The medical diagnosis of my case was that the pain was caused by an obstinate form of rheumatism, and that the debility could only be cured by a long rest and much sleep. I was then treated in Christian Science. Next day the pain had almost disappeared, and on the second day there was no trace of it left; while the weakness quickly gave way to mental and bodily vigor.

I had another joyful experience in Christian Science in the overcoming of a fear of dental operations that I had had for years. This time I took the dreaded step with full confidence in God's omnipotence, and with the comforting words, "Fear not, I am with thee." Fear was overcome by the thought of divine Love as ever present. During the operation the sense of the unreality of matter was so clear to me that nine teeth were extracted without the least fear or pain. But it is not these splendid results in regard to bodily healing which impels this grateful acknowledgment, I wish especially to lay stress on the fact that no other teaching shows so clearly and simply the way to the good and true, to joy and happiness, and finally to the high goal of becoming Christlike, as does Christian Science. I share with all my heart the tender gratitude of all Scientists toward Mrs. Eddy.

Frau Emma Vogel, Ludwigshafen, a. Rhein, Germany.

I came into Christian Science about two years ago, through the healing of our little girl, who was three years old at the time she became ill. We called in a medical practitioner, and he diagnosed the case as a very severe attack of throat affection. She had always been considered a very delicate child, and the first year I had hardly had her out of my arms day or night. We had given her medicine continually; in fact, up to this time. The medical doctor did all that he could do for her, and had a specialist to consult with him, but he gave no hope. Knowing no other way to do for her, they continued to administer a powerful drug which is considered most effective in such cases.

At this time my husband and I decided to let her die in peace, but my mother, who had been interested in Christian Science for some time, advised us that as no more could be done in medicine we should try this treatment. I talked with my husband about it, and we were agreed that she should not be tortured any longer, as to all appearance she was dying. We then learned the name of a Christian Science practitioner through a lady who lived near us, and the fact that this practitioner had been a medical doctor for twenty years seemed to give us courage. We thought that if a medical doctor could leave his profession and turn to Christian Science, there must be something in it. We had no particular faith that our baby would live, but it was the last hope and we grasped it, with the result that in two hours after the first treatment our baby was sleeping. She continued to sleep more peacefully as the night wore on, then she woke up and asked for milk and water and went back to sleep. She slept twenty-four hours, then got up and was dressed. She ate everything she wished the following day, was perfectly normal, and has been in good health ever since.

Through this experience we have learned that God is an ever-present help in trouble, and that Truth does, when applied understandingly, overcome error in whatever form it appears. We are all very grateful and happy for what

Digitized by Google

Truth and Love has done and is doing for us in our home. I hope this testimony will help some one else who is looking for a ray of light.—Mrs. James S. Shutes, Chicago, Ill.

As I look back over the years of human life, I remember the struggle to understand it,—the failures and achievements; the cloudy days, so sad and dreary, the golden days when the very air seemed laden with promises; the winters and summers of restless anxiety, and compassion mingled with disgust for my former self. My disposition had been deeply religious in early life, and my constant desire was to understand the Bible. I patiently studied it for years, joined the church, and with many failures and much dissatisfaction strove to walk in the footsteps of the Master.

A few years passed, and into our quiet neighborhood came a dignified, eloquent gentleman, a pastor from another church, and in the modest little schoolhouse held a "protracted meeting." In the long winter evenings, here gathered the weary, afflicted, and perplexed, to learn of God. My own interest was intense, and I believed this earnest gentleman could solve many of my problems. I was faithful in my attendance, and listened to the many beautiful utterances that fell from those eloquent lips, throwing new light on many incidents of the Bible. He spoke of the great Physician who healed the sin-sick soul, and at an invitation many arose to be prayed for. I was very happy, and felt sure I had learned enough to progress rapidly.

The kind gentleman left us and went back to his church in the city, and I went back to a more earnest study of the Bible. One winter afternoon, as I was turning over the leaves, my attention was drawn especially to these verses of Mark: "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." I believed, this religious gentleman believed, but we could not show our faith by our works. Then came the questions: Was Jesus an impostor? Was the gentleman misinformed? After all: did he understand as little as I? I turned faint and heart-sick as this fact dawned upon me. Then my soul cried out for the truth, and I abandoned the churches and without material symbols or human worship I sought God with the faith that works by love.

A sweeter sense, more peaceful, came to me, and I prayed silently and continuously that God would teach me all. Then Mrs. Eddy's book, Science and Health, came into my life, and it completed my education. I have come to Zion, where the angels whisper comforting hopes that will be realized by greater understanding. Mind and body are being disentangled from the toils of the serpent. I was almost instantly healed of a severe attack of throat trouble, and at another time of extreme depression. I have indeed proved the power of Truth many, many times. The light grows brighter every day, and with everlasting joy I press onward to complete victory.—Pauline Muir, Lexington, Ky.

I wish to express my gratitude for what Christian Science has done for me. I had an experience which has appealed to me more than all others that I have had. I was painting on the roof of a large building, and through the mistake of a fellow-employee in handling the ropes which secured my ladder, I fell to the ground, a distance of almost forty feet. When I realized my danger, instantly the thought came to me, "Divine Love always has met and always will meet every human need" (Science and Health, p. 494), and this was such a source of strength to me that I did not have any sense of fear nor did I feel the shock of the fall. I landed on one foot, then fell over on my elbow; but I immediately rose to my knees, then got upon my feet and commenced to walk about. All the while I clung steadfastly to the truth, knowing that God was my life. I then asked for assistance, and was helped home. Part of the way, a distance of over four blocks, I walked almost unaided. I then secured the services of a Christian Science practitioner.

The accident had happened about ten o'clock in the morning, and by noon that same day I was able to go to the dinner table and eat. The remainder of that day there was a sensation of soreness all over my body and I could hardly move, but I experienced no pain. The next day, however, I was able to walk up town with no support whatever, and from then on I gained steadily, so that in less than three weeks I was in good enough condition to go to work. I had received injuries to my ribs, also severe internal injuries, and besides this there were indications that a bone in my foot was affected.

In view of my complete restoration, I feel that I have very much to be thankful for, not only for the help here mentioned, but also for many other blessings. Christian Science appeals to me not only for the physical benefits received from it, but also for the spiritual uplifting. It carries with it a sense of security which is never wanting in time of trouble. I feel deep gratitude for what Mrs. Eddy has done in making known the divine Principle of healing, that we may live the truth every day.

Ed. P. Bergquist, Grand Island, Neb.

In September, 1908, my sister was healed from a number of afflictions, among which may be mentioned an organic trouble supposed to result from a nervous breakdown. Besides this she suffered from a spinal affection with which she had been continually burdened since she was three years of age. Her healing was wrought during a lecture on Christian Science, in which the truth of being was revealed to her, and from that moment she realized in her consciousness that she had touched the hem of Christ's garment and obtained a glimpse of heaven.

Even though a dear friend had mentioned Christian Science to me over fifteen years ago, I did not look into it until after my sister's healing, and the natural result was that I became very inquisitive regarding it. My own healing dates from June, 1909, and though according to physical or mortal sense I was considered to be in general good health, I was freed from the following ills through the knowledge gained from the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy, viz.: torpid liver, a skin disease, "tobacco heart" and tobacco habit, false taste for liquor, eye trouble, continual annoyance for over eight years from a hand that had been frozen, a weak ankle, profanity, conceit, agnosticism, and more—since the truth is daily uncovering and destroying wrong thoughts.

For all the benefits and blessings received in Christian Science, I am truly thankful to God. I am also grateful to Mrs. Eddy, who discovered and explained to us the truth about God and man,—the truth which is helping me along the rugged way, so that I too have been enabled to draw sufficiently close to the Master to touch the hem of his garment and thus experience heaven here below.

Johnathan E. Johnson, Chicago, Ill.

I wish to express my gratitude for what Christian Science has done for me. About fourteen years ago, I was a physical and mental wreck, as two years previous to that time I had undergone what *materia medica* pronounced a dangerous surgical operation, which left me in a very nervous state. I was located in a private sanitarium in New York city, where I had all the care I could wish for; but the treatment failed to heal me. I can truthfully say that I did not know what suffering was until I had gone through that operation; then seemingly every ill came to me. When I left the hospital the doctor told me that I would be one

Digitized by Google

of the strongest women in the land, but that I would not be able to walk much. I thought this was strange, for I felt that to be strong would also include the ability to walk. Since gaining the understanding of Christian Science, I have walked all I desired, although at times mortal sense rebelled.

I had been warned not to eat anything that would hurt me; so I was nearly starved, though I did not know I was suffering from hunger. At this time I came to Boston, with very little hope of getting well, but I prayed to God to show me a way that I might be healed, for I had already learned that only God could heal me, if only I could know the way to ask aright. I had been brought up by a devoted Christian mother, and saw that she relied upon God, both in sorrow and sickness, and never used any drugs, and I felt that I could do the same if I only knew how to trust Him.

At this time Christian Science was mentioned to me by a friend who was not then a Christian Scientist but has since become one. I went to a practitioner, and had treatment for three weeks; but I did not seem to receive the benefit I wanted, so I stopped the treatment. I bought the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and began to study it and attend the church service. As the understanding of Truth came to me, the ills gradually left me, and I found myself healed. I am indeed thankful to God for having been helped to press onward in the truth. I am grateful for our Publishing Society, and deeply grateful to our dear Leader, Mrs. Eddy, for the priceless gift of Science and Health. I thank God for my healing, and for the peace that has come into my life through this blessed truth.

MRS. NELLIE C. HELLBERG, Dorchester, Mass.

Four years ago, whooping-cough was prevalent in our neighborhood, and our little daughter played as usual with her companions who were suffering from it. The parents of these children declared that our child would take it too, and finally she did manifest the symptoms. I took her at once to a Christian Science practitioner, and in less than twenty-four hours every sign of the disease was destroyed, while the children about us, who were under medical treatment, continued to cough for the nine weeks outlined for them by *materia medica*.

BARBARA MCLAUCHLIN, Ottawa, Canada.

Four years ago this past January I had an acute attack of lung trouble, from which I had suffered several times before, always being confined to the bed and taking medicine. At this particular time, I would not listen to the taking of drugs. My father had just started a course in Christian Science treatment, and a copy of "Science and Health with Key to the Scriptures" was on the table near me. It was suggested to me to read it, but I said that I felt too ill to do so. Finally, however, I did so, and I think I am safe in stating that I had not read more than a dozen pages when I felt relieved; I seemed to rise out of it all, and from that day I have never had any return of the disease.

Another great blessing which I received was during March, 1909, when I was healed of a growth in my left nostril, of ten years' standing. I had suffered terribly from it, life being almost a burden to me. I was told that an operation would be my only relief. I had taken material treatment for many months, but I was unable, even on the very hottest summer night, to sit out of doors without having my head wrapped up, and I had a cold almost constantly, which at times was so severe that I could not lie down. It caused almost constant headache, also pain in the left eye and ear. The night this blessed truth was demonstrated to me, I had retired to my room when the growth dropped into my throat. I coughed and it was then ejected. It was disposed of without the slightest pain or any loss of blood.

I certainly am very thankful to God, and grateful to Mrs. Eddy for the blessings bestowed on me and mine,—not alone for the physical healing, but for the spiritual help that is ours every day, and also for the privilege of striving constantly to gain the right to be called a true Christian Scientist.—MRS. ROSE OPPERMANN, Indianapolis, Ind.

I wish to express my gratitude to God, and also to our dear Leader, Mrs. Eddy, for the benefits I have received in the study of Christian Science. I have been able to overcome most of the ills that have made their appearance in our home, also helped some neighbors; but the case of which I now wish to speak is the quick healing of a severe burn on my hand.

The first thought that came to me was our Leader's words, "Your remedy is at hand. Mind decides whether or not the flesh shall be discolored, painful, swollen, and inflamed" (Science and Health, p. 385). I kept my hand well out of sight, and worked in Science to the best of my understanding. In less than a half hour the pain had ceased. My hand did not get sore at all, and in less than a week the redness was all gone. This healing has seemed so wonderful to me that I want to express my gratitude for Christian Science.—MRS. E. A. CLARK, Elk City, Kan.

I became interested in Christian Science thirteen years ago, and accepted it eleven years ago. I was healed of many ills. While studying music in Milwaukee, Wis., I began to have brain trouble and could not advance in my studies; so I had to give them up and come home to Minnesota. I sought medical aid, but was soon losing all use of my faculties. I could not play the piano, and was also losing my voice. I was told that my spine and brain were a wreck, and I lingered on in this condition for two years. I then went to Minneapolis to see a specialist, but was sent to a Christian Science practitioner whose office was next door. I began to take treatment, and after spending six dollars I was able to work effectively for myself. I kept on studying, and took treatment occasionally, until I was restored. I am able to sing and can play the piano better than ever: in fact, everything has been supplied through the understanding of God gained from the Bible and Science and Health, that wonderful book which our beloved Leader, Mrs. Eddy, gave to the world.

I am thankful indeed to know of God's allness. I soon became a student of Christian Science, for I wished to know more of this spiritual healing work. All kinds of error have been overcome, such as felons, cough, catarrh, etc. I am truly grateful for my healing, and for knowing that God, Truth and Love, governs man.

MRS. EVELINA D. RUF, Dawson, Minn.

"God is omnipotent, supreme" (Science and Health, p. 17). These were the words which brought me out of darkness into light! For about fifteen months I had heard Christian Science argued for and against, and although I recognized it as a very beautiful doctrine, and Science and Health a book that all mankind would be better for reading, I put it aside, not feeling that I had any need of it, as I was satisfied with my own concept of God and the Bible. I took life as I found it, and was happy as a rule. I was, however, living with one who was not so happily constituted, and for the sake of this one I began to read the *Sentinel*, and finally wished I really could understand what this Christian Science healing was, for I could not help noticing what a difference it had made in the lives of two people from America who had been paying us a visit.

No sooner was the real desire there, than it was

Digitized by Google

answered. I went to bed one night wishing I could understand how physical ailments could be healed without medicine or doctors, and next morning on awakening it came to me like a flash of lightning that it is God who heals, and that He did not require anything to aid Him. I immediately knew that I need not take a cup of tea before rising in order to cure a headache from which I always suffered in the morning, and from that day to this—a little over three years ago—I have never resorted to drugs or medicine or material means of any kind for healing physical ailments.

I simply knew that "God is omnipotent, supreme," and this knowledge has enabled me to overcome all physical ailments. Headache, colds, inflammation of the eye, neuralgia, throat trouble,—all these came up one after the other, as if to tempt me; but the light had dawned, and with the study of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, all were quickly overcome. I am glad to say that headaches from which I had suffered all my life are now unknown to me. I used to suffer with neuralgia in almost every form, and at times the pain was so great that I could neither sit, stand, nor lie down, with any ease. Christian Science has quite healed me of this, and many other ailments have also been overcome, some instantaneously, others more slowly; but I have proved that Truth heals where drugs and other material means have failed.

I am very grateful to Mrs. Eddy for all that she has been enabled to reveal to us about God. I can now read the Bible understandingly, whereas without the explanations given in Science and Health, much of it was beyond my comprehension and seemed impracticable. Christian Science has also helped me to see my faults and how to overcome them as nothing else ever has done, and although there is yet much to overcome, I can see that by perseverance and study it is possible to gain dominion over all that is unlike God and to love one's neighbor as one's self. I have had great help from all the Christian Science publications, the Bible Lessons, church services, and Mrs. Eddy's wise regulations, and my great desire is so to carry out and obey them that I may become a Christian Scientist worthy of the name.

EMILY F. DE LACY, Sutton, Surrey, England.

[Written for the *Sentinel.*]

THE MIST DISPELLED.

JEANIE F. GIBB.

As creeps the mist o'er hill and glen
All silently, and shuts from sight
The sun that cheers the hearts of men
And makes all nature glad and bright,

So steals before our inner sight
At times the mist of mortal sense,
And gone is Truth's all-glorious light—
We stumble in the darkness dense.

Now is the time to work and pray,
With calm and joyful confidence
That Truth will chase the mist away—
That mist of false material sense.

Since God is All, naught else can be.
No sin, nor sorrow, death nor pain
May jar upon that harmony
Where Truth and Love forever reign.

Yes, God is Love and Truth and Life—
"I am the First and I the Last."
Since God is Love, there is no strife.—
The mist is gone, the darkness past.

FROM OUR EXCHANGES.

[*Congregationalist and Christian World.*]

Here, also, is our encouragement. Much of the complaint against the church arises from blind overlooking of accomplishment. There are many good men in the earth whose goodness never comes to recognition. "The healing of the world," said Bayard Taylor, "is in its nameless saints." There is not one church, we hope, in the whole land where a Christian challenged to produce a witness would not turn instinctively to some man or woman rich in love to God and man and trusted by all men in emergencies. We are wealthier than we know in such Christlike lives. They are the salt that keeps the age from corruption and the light that sheds the rays of the divine love and goodness through the darkness of the time.

Let the church, then, that laments the apparent decadence of its influence ask itself this question first: Are we attending to our own special business of producing Christlike characters? Is the fact of church-membership a guarantee, or even a presumption, of justice, charity, brotherly kindness, long-suffering patience and broad-mindedness? Would a man in distress of body, mind, or estate turn first to a neighbor for aid and counsel because he is a Christian? Are we so free from quarrels, jealousies, and complainings that we represent in any degree the character of Jesus? In facing these questions we shall be facing our own peculiar and special work.

[*Christian World.*]

The wrongness of our world lies in our lack of perception, in our gross blunders in interpretation. The life-material by which we are surrounded is good, is of the best. What we have been doing with it is the question. When society has purged its vision, and can see straight, we shall have some new arrangements of that material, quite new ways of handling it. If, as we have urged, wealth is no passport to life's best things, this does not mean that poverty is a passport. The extreme form of it which modern civilization has produced is a hindrance, which has to be removed. To have allowed it at all is the sign of our failure to deal properly with the world's resources. Here, on this earth, if we had sense to see it, is room for us all—aye, for a well-dowered all, where every man and woman of us may partake plentifully of the feast nature has provided, and know the full joy and splendor of living. We are as yet a long way from that consummation, from doing with our world as God means we should. We have today any number of sciences, some in an advanced stage. The one science we need, and which is yet in its first infancy, is the science of sane living.

[William Jennings Bryan in *Continent.*]

The Ten Commandments permeate all statute law—the eighth commandment, "Thou shalt not steal," being the most comprehensive of those which deal with man's duty to his fellow-men. One is more and more amazed as he grows older to find how far-reaching larceny is and in how many different forms it manifests itself. Direct stealing in violation of statute law is small and infrequent compared with the stealing that is indirect. The quickened conscience which is today stirring investigation and inciting reform is simply trying to give to that commandment a larger interpretation. Nearly every abuse of government is, in its last analysis, a violation of that commandment. Unnecessary taxation, injustice in the tax laws, inequity in the assessment and collection of taxes, tax-dodging—all these, in effect, take from the man overburdened and give to the man who evades or is excused from his just share. And if the laws are thus framed or administered at the instigation of those who reap the advantage, the beneficiaries cannot claim innocence.

[*Christian Commonwealth.*]

Much is being said just now about the decline in church-going. Is it possible that through this decline God is seeking to call the churches to some new forms of service, telling them that it is not right to demand two or three sermons a week from a minister to a people whose religious resources are very much the same as his own, and who know where to turn in time of trouble; while the minister and his people have, by reason of their church activities, little time to help a huge, despairing population with either the material or the spiritual aid which the churches could give them if organized for that purpose? Public worship is of immense importance, but it must issue in practical service.

[Rev. Addison Moore, D.D., in *Watchman.*]

To see the vision and to follow it is to walk with God. Do not doubt that both vision and task are essential to complete man's life. If one is allowed to be content with his vision and another is allowed to remain at a visionless task, antagonism will abide. This then has come to be the business of religion: To teach the visionary how to realize his vision in his daily task, and to inspire the workers with the vision of the life that abides. If the churches are anywhere deserted it must be because when men have stopped to look and to listen they have not heard this message nor seen the uplifted Christ whose message it is.

[*Universalist Leader.*]

We have yet to learn how great was the heart and how vast were the hopes which animated all the mean details of Israel's history. On the surface it was commonplace, and mean in spots. But at its heart there always stirred the mighty thoughts and divine ideals which make the ignoble holy when we discover them. The Book was born in this inner chamber of Israel's soul. There were treasured all the thoughts of God. And from there, ever and anon, when prophet, seer, or singer came, burst forth those divine utterances which have never lost their meaning to those who are seeking God.

[E. Umbach in *Standard.*]

The church has not always realized the power and depth of its own message. It has often been surprised by the spirits it has unfettered by its own teaching. The great social awakening in our country is so manifestly the result of a general adoption and application of Christian principles that it would be useless to say anything in proof of it. But the church has not always been willing to acknowledge its share in it and to take the responsibility involved in that. It has shrunk back from the consequences of its own teachings and only slowly and hesitatingly assumed its part in the great social work of our times.

[*Christian Register.*]

The dream of the prophet is always a dream of final victory and peace. That dream is now becoming the sober prophecy of the men of knowledge. He who in the future is anointed with the oil of gladness above his fellows will have for his great task the leading of a nobler race to such achievements of knowledge and virtue and happiness as now are the good fortune of the few, the selected, who represent the men and women that are to come and show us the pattern of human life.

[Prin. W. B. Selbie, M.A., in *British Congregationalist.*]

The very central position of Christianity is being assailed in these days, but we have nothing to fear. Christianity is not theology, it is not doctrine, it is not creed, it is not organization. It is the living experience of a living power, and it will live forever. "God may have other words for other worlds, but for this world the Word of God is Christ."

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel.*

ATTENTION IS CALLED to the new volume, "Poems by Mary Baker Eddy," now on sale. Specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

Attention is called to the following reprints printed in Swedish: "Hvad Ar Bön?" "Lagens Välde," "Det Ondas Natur," "Helvete och Himmel," "Människans Gemenskap Med Gud," "Verklighet," "Det Ar En Ström," "Förklaring Af Kristligt Helande," "Den Yppersta Egenskapen I Christian Science," "Underverken," "Det Ondas Ofvervinnande," "Var Väktare," "Riklig Tillgang," "Kristendom Och Vetenskap." Ten copies to one address, prepaid, 10 cents; one hundred copies to one address, 75 cents; five hundred copies to one address, $3.00; one thousand copies to one address, $5.00.

NEW MUSIC.

Two of our Leader's poems, "Shepherd, show me how to go," and "Love," set to music by Frederic W. Root, are now on sale by the Society, and attention is called to the advertisement on the inside back cover page of this week's *Sentinel* for description and price.

A NEW PHOTOGRAVURE.

A new photogravure reproduction of The Mother Church edifices and the Publishing House, with the new parkway in the foreground, has just been made, and is now on sale. The size of the new picture, nine by fourteen inches inside of mat, which is about half that of the larger one, specially adapts it to framing for the home. Price, single copy $1.00, six copies $5.00, twelve copies $9.50.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, healings, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the Monitor should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The international congress of chambers of commerce will hold its fifth conference in Boston in 1912. As a result of the London congress last year the Swiss government has decided to invite the world's governments to an international diplomatic conference on the reform of the calendar. At the London congress a resolution was passed declaring it desirable to establish a fixed international calendar and a fixed date for Easter. The international diplomatic conference held at the instance of the congress at The Hague, from June 23 to July 25 of last year, for the discussion of the unification of the laws on bills of exchange and promissory notes, has agreed on a preliminary draft of international convention and unification. Twenty-five governments were officially represented at the London congress, and the British government, for the first time represented, took a most active part in the deliberations. The Rt. Hon. Lord Desborough, president of the London Chamber of Commerce, said in his address of welcome: "It is evident that the governments of the civilized countries are more and more recognizing the value of conferences of business men to discuss business affairs."

Arrangements have been completed by the Smithsonian Institution with the revenue cutter service to take a party of five naturalists to the Aleutian islands next month, where they will put in the entire summer studying the bird life of those islands, as well as of the coast of the Alaskan mainland. The expedition is intended mainly to enable A. C. Bent, a naturalist of Taunton, Mass., who will head the party, to complete the "Life Histories of North American Birds," a work which the Smithsonian has had under preparation for a number of years and of which two volumes have been published.

"Competition between the great ports of the world has imposed upon all the necessity of modernizing their terminals. In conformity with this policy, it is apparent that New York must progressively municipalize, control, and develop its waterfront for public use," says Dock Commissioner Tomkins of New York. The time has arrived, he says, when great attention should be given to coordinating waterfront improvements and planning the port as a whole. There is urgent need for terminals intended for joint use by railroads, steamships, and other carriers, rather than for individual unrelated docks intended for semiprivate use.

The Museum of Fine Arts of Boston has secured for three years, as curator of the department of paintings, the services of M. Jean Guiffrey, assistant curator of the Louvre Museum, with which he has been connected for eighteen years. He will be allowed two hundred thousand dollars the first two years to spend in the purchase of new paintings and drawings.

New Mexico lands aggregating 1,576,064 acres have been withdrawn from all forms of disposition by President Taft, upon the recommendation of Secretary of the Interior Fisher, pending a field examination and classification as to their coal value. Facts already gathered by the geological survey indicate that these lands contain valuable coal deposits.

Henry A. Wise, United States district attorney, has served notice that the government appeals to the United States supreme court from the decision recently given by Judge Noyes of the circuit court, who held that running a cotton "corner" was not of itself a violation of the Sherman antitrust law.

A certified check for one million two hundred thousand dollars has been deposited with the subtreasurer of the United States by a New York firm of importers in settlement of unpaid and withheld duties on works of art which are the subject of civil suits brought against the firm by the government.

The customs court holds in effect that the so-called "favored nation" clause in the existing commercial treaties with England, France, and Germany does not restrict the United States in effecting the proposed reciprocity agreement with Canada.

It is the opinion of the secretary of the treasury that all concerns engaged in public business should take the public into their confidence to the extent of dealing frankly and fairly with their stockholders by revealing their true financial and physical conditions.

The nomination of former Gov. Curtis Guild of Massachusetts for ambassador to Russia has been sent to the Senate to succeed W. W. Rockhill, now ambassador at St. Petersburg, who is to be ambassador at Constantinople.

The gift of half a million dollars from a graduate of the class of 1862 for the further enlargement and strengthening of the teaching force of Dartmouth College has been announced.

In Santa Barbara county, Cal., more than one thousand acres of rich bottom land was washed into the sea by the Santa Maria river during a recent storm. The damage has been estimated at one million dollars.

A New Haven (Conn.) business man has offered to present to each child attending the public schools (about twenty thousand) a hardy catalpa tree to set on Arbor day.

The Indiana General Assembly has passed a bill which provides for labeling cold storage food stuffs. Similar bills are under consideration in other states.

P. B. Widener of Philadelphia has purchased Rembrandt's famous painting, "The Mill," the price of which is reported to have been five hundred thousand dollars.

The Congressional Library now ranks third, with the Bibliothèque Nationale and the British Museum holding first and second positions.

International.

Sir Joseph Ward, premier of New Zealand, now on his way to an imperial conference to be held in London in May, says that the inhabitants of New Zealand are the richest people in the world per head, the per capita wealth being three thousand dollars. He says they have solved the Chinese immigration question by imposing an annual poll tax of five hundred dollars on them, and in addition insisting on a strict educational qualification. The population is 98½ per cent British or of British origin. They are spending two million dollars annually in developing water-powers. In addition to the system of taxation of land values, which induces owners to sell the excess of their estates, the government purchases landed estates and cuts them up into farms of one hundred to one hundred and fifty acres. The policy of taxation has been in force since 1891. Of government lands no man can acquire more than four hundred acres of the first class, seven hundred of the second, and three thousand of the third. The system is planned with the object of giving men of small means the opportunity to get ahead.

The new department of agriculture in Egypt is already justifying its existence. Fourteen experimental farms have been established in various districts, in which the local farm products of the soil will be studied with a view to improving the crops. The department has now five inspectors as well as an experienced staff, some of whom have been transferred from the Khedivial Agricultural Society.

Pierre Prier, the aviator, starting in an aeroplane from Hendon, near London, at 1:37 p.m., April 12, crossed the English channel between Dover and Calais and reached Issy, near Paris, at 5:45 in a continuous flight. The distance is approximately two hundred and fifty miles.

A grant of seventy-five million dollars has been approved by the budget committee of the Russian Duma for the construction of warships and naval works for the Black sea.

During the past four weeks more than fifty thousand immigrants have entered western Canada as settlers.

Industrial and Commercial.

A three-span steel bridge, two hundred and ninety-four feet long and weighing over one thousand tons, replacing an old iron bridge spanning the Westfield river on the Boston & Albany railroad, was successfully rolled into place at Huntington, Mass., recently, the entire operation of taking away the old and placing the new structure requiring but forty-nine seconds. Half an hour later, with the rails connected, the new bridge was ready for service.

The total importation of pig tin in the eight months ending with February, 1911, was sixty-eight million pounds, against sixty-six million five hundred thousand in the same months of the preceding year, when a new high record was established, and the exports of tin and terne plates in the eight elapsed months of the current fiscal year aggregated twenty-four million pounds, against less than twelve million in the same months of 1908.

A merger of cotton mill interests that may reach a magnitude beyond anything yet undertaken in the South, is under way. At a recent meeting of those interested plans were discussed, and are now being matured, which will bring under one control in North and South Carolina mills that have more than half a million spindles and a capitalization of some ten million dollars.

Argentina, while only about one third the size of the United States, can produce abundantly all the agricultural products common to the latter country. It is already the greatest flax-raising country in the world, stands second in corn, cattle, and sheep, and third in wheat and horses.

The peanut crop of the United States for 1908 was valued at twelve million dollars, and the area of cultivation and the value of the product are steadily increasing.

In net profit the Calgary, Alberta, municipal railway system cleared $7,320.03 during March, an increase of $5,302.76 over March, 1910.

The coal mines of Indiana are credited with a production of 18,125,244 tons in 1910 at a cost of $15,527,390.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

A HOLY PURPOSE.

SUE H. MIMS.

THAT immortal poet of humanity, Shakespeare, has analyzed most wonderfully nearly every phase of mortal thought, to the praise and astonishment of the world. Ruskin said of him that "he had no heroes—only heroines." Was this prophetic of the most heroic woman of the centuries? None of his characters, however, have elicited deeper study and more tender sympathy than that of the melancholy Dane,—Hamlet, Prince of Denmark. Here we find a sensitive nature, a brilliant, accomplished man, burdened with a sorrow and a supposed duty of avenging it, a task quite beyond his strength and causing a perpetual struggle between purpose and vacillation; hence, a victim to his own indecision, swayed by contending emotions. With him

> the native hue of resolution
> Is sicklied o'er with the pale cast of thought,
> And enterprises of great pith and moment
> With this regard their currents turn awry,
> And lose the name of action.

Facing them he says,—

> The time is out of joint: O cursed spite,
> That ever I was born to set it right.

Today, to this generation, there has risen a prophetess in Israel, the Discoverer of the Science of God and man, a revelator of eternal Truth. Mrs. Eddy's absolutely unselfish love and consecration of purpose are best expressed in her own heroic words in "Miscellaneous Writings" (p. 207), where she calls to her followers: "Drink with me the living waters of the spirit of my life-purpose,—to impress humanity with the genuine recognition of practical, operative Christian Science." Here we behold the splendor of her holy purpose, and the sublime courage which inspired her to accomplish the divinely imposed task. Within the last few months the world has witnessed an almost universal recognition of the magnitude and wonder of her achievement. Jesus' words, "The kingdom of heaven is like unto leaven, which a woman took, and hid in three measures of meal, until the whole was leavened," were prophetic of her work. Her spiritual vision pierced the veil of personal sense, and perceived Jesus to be the type of universal manhood; not as God, nor as man isolated and unique, but as our elder brother, revealing in his life and works the possibilities of and for all men and all time. She planted deep in human consciousness the true spiritual idea of God and man and the universe, and their perfection in Science, reversing and correcting the limited finite sense of all things.

Mrs. Eddy has revolutionized human thought about life and death. Emphasizing the truth that God is our Life, she declares the continuity of life and the consequent nothingness of death, and this clear spiritual logic has so shorn death of its terrors that much of the pall and gloom accompanying the "last enemy" is fading from thought. By declaring the normality and naturalness of divine healing, that God as Mind is the savior of the body as well as of the soul, supreme on earth as in heaven, she is gradually changing the thought of the world, and the healing of sin and disease is being effected by the same Christly method. By demonstrating and declaring that God is the infinite eternal Love that sends no sin, disease, nor death on man or the universe, she is revolutionizing the theology of the age, awaking it partially to understand Jesus' words, "Whether is it easier to say . . . Thy sins be forgiven thee; or to say, Arise, and take up thy bed, and walk,"—Jesus' teaching that disease and sin are alike erroneous, and are to be destroyed by Truth and its eternal oneness.

By showing that sin and disease exist only in a false or physical sense of being, in the mortal or carnal mind, and that they are healed by immortal Mind alone, the Mind that was in Christ Jesus, she has substituted metaphysics for physics as a therapeutical agent; and it is easy for even an unimaginative person to perceive that it is only through mental regeneration that "the kingdoms of this world are become the kingdoms of our Lord." The spiritual idea, the divine leaven of Spirit, is changing even now "the whole of mortal thought, as yeast changes the chemical properties of meal" (Science and Health, p. 118). By proving and enabling others to prove the power of the right concept of God and man to be the truth that makes free, acting through spiritual law, she has changed science from a material to a spiritual basis, and established it on an eternal foundation as God's law operating in human consciousness.

It is surely clear that all great thinkers and doers have recognized in some measure the divine purpose to express through man and the universe the perfection which characterizes all of the divine activity. To this Paul refers in writing to the Ephesians of "the purpose of him who worketh all things after the counsel of his own will;" and again, "According to the eternal purpose which he purposed in Christ Jesus." This purpose was revealed throughout the entire life of our Lord, and it is again seen in the beneficent work of Christian Science, which aims to carry forward the divine purpose, and bestows upon men the inestimable privilege of being "coworkers" with God.

The Standard dictionary defines philosophy thus: "The love of wisdom as leading to the search for it; hence, the resulting knowledge of general principles—elements, powers, and laws—as explaining facts and existences." By revealing God as the one infinite Principle of all being, the Father of all, governing the one family or divine manifestation of this Principle, ruling by the changeless law of spiritual Love, and by teaching that man's salvation is in reflecting or acting in unity or oneness with this Principle, Mrs. Eddy has established in Christian Science the loftiest possible philosophic idealism, as practical as it is sublime, bringing heaven to earth in proportion as it is lived and demonstrated. Thus, through the leavening of thought, human consciousness is transformed, first in spiritual illumination of the Scriptures, then in the healing of sin and disease, the gradual removal of the veil of corporeal sense that would obscure the true science, theology, and medicine of divine Mind. Thus unfolded, behold the "rose of Sharon," the Christ-idea, sending out the fragrance of Spirit and filling earth with its celestial balm.

"HE THAT HATH NO MONEY."

LEON GREENBAUM.

How many of earth's multitudes, weary and heavy laden, are crying out for deliverance,—those who are bowed down with the belief of poverty, the belief of inability to pay for the help so greatly needed! Poverty is a disease whose phases are legion. It is the stone before the sepulcher in which many are buried, and which can only be rolled away by that disciple who robes himself in the shining garments of self-immolation and absolute consecration to divine Science. Every belief of inability to meet the demands of Principle, if analyzed, can be traced to personality as its source. The practitioner in Christian Science knows that "every good gift and every perfect gift is from above" and not from below, and with this thought he can heal the patient's belief of personal giving or receiving and the disease that has linked itself to this error, and demonstrate the divine source of supply. The belief of poverty is a misconception generated by a finite and limited view of everything.

In the estimation of the patient who is bound by poverty thoughts, everything must be weighed, measured, and paid for, including the sacred offices of a disciple of Christ, with the same material sense of value that envelops a transaction in dry goods or groceries. The practitioner destroys this mistaken belief by explaining to the patient that the Father's house is not "an house of merchandise;" that "doves" (spiritual ideas) cannot be bought or sold of the Father for money, but rather with a contrite heart; and the spirit of the practitioner is born of the understanding that the same power which heals the claim of poverty in the patient, elevates him above the sordid thought of monetary reward, so that in his consciousness the service of his Lord is indeed "without money and without price;" and he ascends higher in being and healing by demonstrating, if needs be, the command, "Freely ye have received, freely give."

The claim of poverty grows out of a mistaken sense of what constitutes riches. The belief in human need is due to the blindness of mortals to the reality of spiritual things. Mrs. Eddy says, "Things spiritual and eternal are substantial. Things material and temporal are insubstantial" (Science and Health, p. 335). When things spiritual are discerned by human consciousness, they take on an outward manifestation, and this is what is often called a demonstration of supply. Understanding this, Jesus said, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you."

Spiritual compensation is the product of hope and faith which rebukes the illusions of the fleshly mind. The belief that the unselfish ministrations of a practitioner can be adequately measured or paid for by any human standard, thus placing the reflection of God's thoughts on the same plane as any material mechanism, is a sad misconception of poverty that must be kindly but firmly rebuked through the understanding that "the Father which seeth in secret" knows all things and rewards according to the pure spirituality of our desire and aspiration.

The patient's belief of pride about accepting charity is one of the most subtle claims of evil, its purpose being to mesmerize the practitioner with this thought about the patient, or the patient with this thought about himself; it must be healed before anything else, and then it may be found that it was the only thing that needed to be healed. In the revised version of the New Testament the word "charity" has been translated "love," its original meaning. "Love thinketh no evil," neither does man in God's image and likeness think evil. God is Life, the universal reservoir that cries, "Ho, every one that thirsteth, come ye to the waters, and he that hath no money;" that is, in order to be healed one must be disrobed of his poverty thoughts before dipping into the healing waters.

That virtue is its own reward has been wonderfully proven in the life of our Leader, who writes, "The author never sought charitable support, but gave fully seven eighths of her time without remuneration, except the bliss of doing good" (Rudimental Divine Science, p. 14). The spirit which enabled her to do this before ascending in the scale of demonstration is explained in these words, "Giving does not impoverish us in the service of our Maker, neither does withholding enrich us" (Science and Health, p. 79). He who has spiritual things has much to give the world, and needs not to receive from it. Jesus had fasted and was hungry (had repudiated matter and was seeking spiritual reality), when the devil offered him his kingdom; but Jesus refused to fall down and worship him, recognize evil and its enticements of barter and exchange; and he followed this later by overthrowing the tables of the money-changers on the understanding that good is unpurchasable.

John said, "A man can receive nothing, except it be given him from heaven." Thus the gifts which come from our Father appeal not to the head but to the heart; they are not like the compensation doled out by a calculating sense, but resemble a spontaneous contribution to a great cause, of which the practitioner is a part. The fixed scale of charges for practitioners' services and the price-list on books and publications is not a regulation of the spiritual kingdom nor a divine statute, but a concession to present human conditions justifiable when spiritual good is the end to be attained. Our Leader has been guided by this method in placing the operations of the Christian Science church on a sound business basis, to accommodate and ultimately transform the sordid thought of a densely material age. In the divine economy, Spirit and spiritual ideas are the real measure of values and love is the medium of exchange.

SOWING IN TEARS.

A. B. FICHTER.

THE psalmist has written: "They that sow in tears shall reap in joy;" and who would not thus reap? All desire to do that surely; but the world has taken these words as meaning that tears are very essential to the gaining of joy. Consequently, until Christian Science was given to a weary world, mankind believed that tears were the natural condition of promise, without which a reaping of joy could never be realized. Men called life "a vale of tears," hoping to be compensated in a state of bliss in a remote and uncertain future. To many it was a comfort to believe that the more of tears they had occasion to shed here below, the greater would be their assurance of heavenly joys above. Sighing over and bemoaning one's present condition would not have become such a prevalent attitude, if in some inscrutable way it had not been considered meritorious.

But do these words really mean this? Let us see how much may be gained by emphasizing the word "sow." What do people usually sow when they are "in tears" or afflicted? Is it not complaints, doubts, self-pity, bitterness, apprehension, ingratitude, fear, accusations, self-condemnation, and self-justification? Jesus said, "The seed is the word of God." Do people in general sow the word of God, the word of Truth, of hope, of trust, of faith, of power, of gratitude, of love, in the time of trial? When in human affliction Jesus stood at the grave of Lazarus, "he lifted up his eyes;" he gained first the spiritual perception, lifted his thought to the eternal harmony, and then there welled up in his consciousness gratitude for his understanding of the ever-presence of omnipotent Life, and he said, "Father, I thank thee that thou hast heard me. And I knew that thou hearest me always." What a contrast to our usual way of meeting affliction!

Christian Science teaches that Jesus was the way; he showed us the way, and we are to do as he did if we would gain the same results. Trials cannot keep men from Love,

Digitized by Google

from right thinking; indeed, they often bring them face to face with Truth. If in the hour of affliction we allow no tares of discontent, ingratitude, self-seeking, or revenge to find root in our thought, but instead recall and declare the word of God, there can be no question as to the harvest of good and of ultimate joy we shall reap thereby. We have sown the seed of the Word, and we are assured that God will give the increase.

INNER MEANINGS.

FLORENCE K. WOEHLKE.

In the teachings of Christian Science no lesson is more insistent than that of exact and careful thinking, the girding up of the loins of the mind, to the end that all slovenly thinking may be done away with and one's progress in understanding made secure. It is for this purpose that the Lesson-Sermons are prepared with such care and study, leading us daily, step by step, to a fuller comprehension of spiritual realities. In this orderly procedure of thought no extraneous assistance is of more value than the dictionary, for in these Lessons we find that each word has its exact and particular meaning, and in a careful study of the derivation and history of a word much light may be shed upon the significance of many an otherwise obscure passage.

The great need of careful preparation was brought home recently through the mispronunciation of a word in the fifty-eighth chapter of Isaiah, eighth verse, "Then shall thy light break forth as the morning, and thine health shall spring forth speedily: and thy righteousness shall go before thee: the glory of the Lord shall be thy rereward." This beautiful verse, so full of comfort and promise, has appeared several times in our Lesson-Sermons, but only recently has a true sense of its meaning been revealed through the right pronunciation and definition of a word so commonly mispronounced as almost entirely to obliterate its message. The word referred to is the final word of the verse—"rereward."

Were this a mere error of pronunciation it would be less worthy of mention, but in this case the mispronunciation amounts to the actual change of a meaning which is too inspiring thus to be lost sight of. Not once only, but on several different occasions, this word has been pronounced re-reward, the meaning conveyed to the writer being merely an added reward, a strengthening or emphasis of the idea of reward. In this meaning, however, something seemed lacking; therefore, upon the reappearance of the verse in the Lesson "Are Sin, Disease, and Death Real," the dictionary was consulted and disclosed the following definition: "rereward—(rear-wârd) rear-guard." It certainly was an illumination, for on examining the verse in the light of this understanding an entirely new meaning is discovered.

"And thy righteousness shall go before thee: the glory of the Lord shall be thy rereward"—rear-guard. First: the glory of the eternal God, good, ever about us, before and after, guarding us on every side from the insidious, subtle temptations which creep upon us unaware, as well as from the more open foes which are before us, *i.e.*, of which we are conscious and watchful. Second: our righteousness, right thinking and knowing, going before, followed always as an inevitable conclusion by the glory of God or good, the revelation of the ever-presence of God and the eternal glory of infinite Mind.

Since then, several sources of information have been consulted, as well as the various occurrences of the word in the Bible, and both have been found of great interest. The word occurs five times in the Bible: Numbers x. 25; Jos. vi. 9, 13; I Sam. xxix. 2; Isaiah lii. 12; lviii. 8. The first reference makes the new meaning especially clear and unmistakable. The Century Dictionary and Cyclopedia gives the following definition: "Rereward—(1) A rearguard—A body or force guarding the rear. (2) At or to the rear . . . being or coming last." The derivation of the word is found in Scribner's Bible Dictionary: "Rereward—The word comes from old French *arerewarde, i.e., arere* (modern *arrière*) behind, from Latin *ad-retro*, and *warde*, a variety of old French *garde* (which came from old High German *warten*—to watch over)."

Of wonderful import is the new and deeper meaning revealed through the right understanding of just one little word; though it is not often we find the mispronunciation of a single word so fraught with possibilities in the way of discovering the true meaning.

"THAT PUBLISHETH PEACE."

CHARLES A. BLAKE.

Many and varied ways in which to serve the Christian Science cause through the medium of the *Monitor* constantly present themselves to those who are ready to grasp every opportunity for advancing this great truth which has done so much for us and which is reforming and regenerating the whole human family through the teaching and example of our beloved Leader, Mrs. Eddy, and through the demonstration of her faithful followers. Not long ago, the writer, being in need of some articles of "gentlemen's furnishings," consulted the haberdashers' advertisements which appeared in the "Guide to Shops of Quality" column of that day's issue. On entering the store selected, he told the salesman who served him that it was through the *Monitor* advertisement that he had been led to visit the store. He was surprised and pleased by the courtesy and tact with which he was served, for while the salesman seemed to be solicitous that every need should be supplied, there was no attempt to substitute or to urge upon him goods that he did not want.

After the purchase had been made, the salesman spoke in glowing terms of the work the *Monitor* was doing, and while admitting that at first he had been skeptical as to the advisability of advertising in it, as not being a believer in Christian Science he had been opposed to the paper on account of the name, he yet told the writer that the character of the *Monitor* had won his confidence, and results had proved that the advertisement placed in it had brought the best returns of any; in fact, he now considered that every dollar put into the *Monitor's* advertising columns was a sound investment.

Another incident in the writer's experience will show the great privilege which is ours in sending forth this beautiful messenger of help and peace. He had arranged to meet a friend at a certain place near the Boston Common, and having an hour to wait he sat down on a vacant bench on the Common and proceeded to read the *Monitor*. So engrossed in the paper did he become that he suddenly found he must hasten in order to meet the appointment. He noticed, however, that a man who had taken the seat beside him was eagerly reading the paper over his shoulder, and though without a moment to spare for conversation, he saw at a glance that the man was probably out of work, as indicated by the lines of care in his face and the shabby clothing which nevertheless bore evidences of an attempt at an orderly and respectable appearance. Offering the paper to the man, and telling him to look on the pages devoted to the "free want advertisements," the writer left him, feeling secure in the knowledge that the seed had been sown and God would give the increase.

On page ix. of the Preface of "Miscellaneous Writings," our Leader says: "A certain apothegm of a Talmudical philosopher suits my sense of doing good. It reads thus: 'The noblest charity is to prevent a man from accepting charity; and the best alms are to show and to enable a man to dispense with alms.'" Every day ought to offer us an opportunity to make use of the free employment department of the *Monitor*, with the result that it will prove to be truly

Digitized by Google

"the noblest charity." Again, if one inquires of us where to go for a certain article of merchandise, or to obtain a dwelling, whether it be a room or a house, to hire or to buy, how can we better serve him than to refer him to the advertising columns of the *Monitor?*

Another phase of this many-sided question of helpfulness to others presents itself in the newsboy who is lustily crying the *Monitor*. Can we afford to pass him by without buying one or more copies? Perhaps it has subjected the boy to no little ridicule to sell our paper; in fact, the writer knows of one such case. Anyway, it will encourage the little fellow who is unconsciously helping the cause, and will give us another opportunity to pass along a clean newspaper to the friend we meet, the paper "that bringeth good tidings, that publisheth peace!"

UPON THE MOUNTAIN-TOP.

F. W. S. BLOXHAM.

EXPERIENCES that come to one during holiday time are often of a unique kind. First of all there is the change of environment, and then—to the worker at least—there is the feeling of freedom in being able to do what he likes without being restricted as to time. Part of the writer's last holiday was spent in the Black Forest at an elevation of eight hundred and twelve meters above the sea. The spot chosen was a particularly sequestered one; no diligence, no mountain railway, and rather out of the tourist's beaten track,—in short, an ideal spot for those who wished to be "far from the madding crowd." The one thing needful, however, to the ordinary visitor, would seem to be fine weather, but there were days when everything was shrouded in a gray veil of mist and the beautiful view which was known to be there was completely hidden; so completely, indeed, that those ignorant of the locality might easily have assumed that there was no view at all,—no stretch of distant hills, no valley, no beyond! Then, again, the gray veil would lift, and, lo, there were the tall, straight forest trees standing like sentinels around the house; there, too, directly in front, the long sweep of grassy meadows stretching down into the valley. And when, at last, the sun did shine, everybody hailed it with delight, for the gray veil was rent asunder and hung in fragments and tatters till finally it disappeared.

To the Christian Scientist this parable of nature is so self-evident as hardly to need interpreting. The gray veil of mortal sense is ever ready to shut out a view of spiritual things, to hide from us the beautiful and the true which in reality are all around us. But the remedy for all this is at hand, for our understanding of the Principle of divine Science, promptly applied, will dispel "the mists of earth" and lay bare the deception. Even upon the mountain-top of spiritual longings, the clouds of sense may sometimes gather and temporarily obstruct the view, but the calm of a settled conviction of the ever-presence of God, good, in whom each spiritual idea lives and moves and has its being, will never forsake the faithful worker until the last shred of mortal sense vanishes in the full light of spiritual understanding.

THE MENTAL FOCUS.

HILDA W. HATCHARD.

ON page 8 of "Unity of Good," Mrs. Eddy says, "Everything is as real as you make it, and no more so." It behooves us, therefore, to study well our mental attitude toward all that comes within range of our consciousness, and "learn where our affections are placed and whom we acknowledge and obey as God" (Science and Health, p. 239).

The human mind has often been referred to as a lens through which we view the universe, and we know that in a camera the lens can be focused so that the particular object or scene we wish to have portrayed may stand out more clearly than any other part of the picture, the surroundings merely forming a background or frame for the main object. In sketching, too, a subject has first to be chosen, the principal idea the artist wishes to express, which usually occupies the center of the picture, and all the other forms depicted are more or less indistinct, and grouped in such a manner that the observer's attention is at once attracted to the main subject; and so the artist's thought is perceived and understood. So is it in life! Each of us is drawing a mental picture of the universe on the canvas of his individual consciousness, and the principal subject each one delineates is that phase of thought which most absorbs his attention.

Apart from Christian Science, each mortal has a different ideal or object that he is reproducing. One makes wealth his chief aim, another fame, another human affection, and so on. There are many different ideals and each is making the most of that particular expression of thought which seems to him to comprise the most good; and the artist is known by his picture. In Christian Science, however, there comes a change. We are taught to have but one object, and all who enlist in its ranks have the same object to portray, viz., good,—good in its every form, good which is the nature and essence of God,—and the highest and most important form of all good which is to be the center of each picture is Love. We must focus all our attention, all our thought-forces on divine Love; then we shall demonstrate before the world our highest ideal, the nature of Christ, Truth, a glorious picture.

Jesus was the greatest artist that ever lived, and wherever he went he left the impress of the divine Mind on human consciousness. Sin was erased, sickness corrected, and sorrow displaced by harmony and love; and wherever he trod there remained as an everlasting, living testimony repentance, humility, and gratitude,—a picture glowing with divine hues, and we know the secret of his success lay in the fact that the Master's mind was always focused upon the Father's boundless love.

[Written for the *Sentinel.*]

UNITY IMMORTAL.

ELIZABETH EARL JONES.

UNFOLD more fully to our sight,
O Love that holdeth all in one;
As separate rays converge in light,
Meet we in God, our central sun.

Meet we in omnipresent good
That knows no time, nor space, nor death;
A universal brotherhood,—
One heart, one hope, one life, one breath.

The love that brought together friends,
Will ne'er decrease, but greater grow;
Fulfilling more life's kindly ends,
We'll oftener meet and better know.

The tears of one are wiped by all;
The joy of one all hearts must share;
No straying little one can fall,
When we each other's burdens bear.

Creation still doth groan as one,—
But time nor space can Truth defy.
Dawns unity, immortal sun,
And Love that will not let us die!

[Frederick Dixon in *South London* (Eng.) *Press.*]

Our critic objects to the statement that to admit that sin and disease can originate in God would be equivalent to saying that God contained an element of self-destruction. He says that this contradicts the teaching of Genesis, that God allowed Eve a choice in taking His word or listening to the devil, and he adds that nothing delights the devil so much as people saying he is unreal. As a matter of fact, it would be truer to say that nothing delights the devil so much as the people who, like the critic, insist on his reality. These people present the devil with a pedigree traced back to God, since if the devil is real, and as the Bible says God created everything that was made, God either created the devil or created evil out of which the devil was evolved. There is no possible escape from this. It makes God responsible for sin, and for death, which Paul says proceeded from sin, and the devil and his angels become in turn the sons and daughters of God. Now if God created the devil, He certainly created evil, and if He created evil, did He not create an element of self-destruction? Furthermore, the Bible record declares that God made all things and described them as good; consequently, if the devil is real, God certainly made the devil and described the devil as good. The argument is irrefragible, and the critic's only way out of it is to admit that there are two creators, and that good and evil have different origins; therefore, that God is not infinite. The position, in a word, if he had only known it, is simply that which led to the adoption of Gnosticism in the primitive church.

The Gnostic saw evil all about him, yet he was asked to believe that all creation was the creation of God. To reconcile all this evil with the fact that the creator was entirely good, and also omnipotent, was the first problem the Gnostic set himself. The second was like unto it. God, the Bible told him, was Spirit, and this Spirit, men told him, was imprisoned in matter. This matter was subject to discord and decay, profited nothing, in the words of Jesus, and, in the words of Paul, could not please God, yet it had been created as a prison for Spirit by an omnipotent Deity who had given man eternal life, and who had declared that all that was created was good. This dilemma of the Gnostics is the dilemma of orthodox theology today.

Christian Science denies the very premises which led to Gnosticism, and therefore is not driven to the illogical position of what is called orthodox Christianity, nor to the methods by which the Gnostics strove to escape from it. In spite of this, it is orthodox, because its orthodoxy is based on the teaching of Jesus, and of the apostles in the days before Gnosticism became a problem in Christendom. Jesus taught that sin, disease, and death were unreal, that is to say, that they were no part of the creation of God. Had they been the creation of God, they could not have been destroyed, since you cannot blot out of omniscience the knowledge of something which actually exists. He was not, however, satisfied with merely asserting this, he proved it from one end of his ministry to the other, by what are known as the miracles. The miracle itself is not a supernatural occurrence; it is, as the Greek words translated miracle prove beyond question, merely something wonderful, or else a sign. To the Jewish people, believing in the reality of sin, disease, and death, the miracle was distinctly wonderful. None the less it was the sign or proof to them of the truth of the theology which denied the reality of the phenomena.

Jesus said, "Ye shall know the truth, and the truth shall make you free," and as man gains the spiritual perception of these things he gains the understanding of the gospel which Jesus taught, that is to say, of Jesus' theology, and gaining this understanding, is able to demonstrate his understanding, as Jesus declared it would be possible to demonstrate it, when he said, "He that believeth on me, the works that I do shall he do also." He who understands the truth which makes men free will be able to demonstrate his knowledge, however wonderful it may seem, by means of the signs or proofs which the application of this knowledge makes possible. This knowledge is the exact or scientific understanding of Truth and so of God, and it is expressed in a phrase in the epistles commonly translated knowledge of God, but which should of course be translated full, exact, or scientific knowledge of God, and so of Truth. "Evil," Mrs. Eddy writes on page 327 of Science and Health, "has in reality neither place nor power in the human or the divine economy." Orthodox theology quarrels with this statement, but when pressed it has not the courage of its convictions. Evil, it insists, is real, but God did not make it; He created man with a power of free will, and man fell away from grace and did evil in His sight.

Such teaching is not only centuries behind that of the pagan Epictetus, who wrote, "As a mark is not set up for the purpose of being missed, so the nature of evil has no existence in the universe," it is hopelessly illogical. If God created man with free will to follow good or to follow evil, He must have created the evil which it was possible for him to follow, or else, as has been previously said, that evil was created by another creator. Not only this, but if God is omniscient, He knew that man would do evil, and, therefore, He created him capable of doing evil in the full knowledge that the fall would be inevitable. Such a theory reduces divine Love, to use the phrase in which the apostle John defines God, to the level of some mythological pagan deity, pictured by man from the standpoint of his own belief in the power and reality of evil.

As a matter of fact, the supporters of the theory of the reality of evil are deceived by the evidence of their own material senses. They see sin, disease, and death, wherever they look, and they conclude that it would be the merest self-deception to deny its reality. They might as reasonably insist that the sun revolves round the earth because the physical evidence of this is so strong that Huxley himself declared that, though he knew scientifically that it was stationary, he had never been able to convince his senses of the fact. To the physical senses of the Christian Scientist, evil is extremely real, but he is proving its unreality scientifically every hour of his life. Every case of sickness healed, every case of sorrow vanquished, adds to the inductive evidence by which he is establishing his premises. So that, just as Galileo is said to have muttered in the chambers of the Inquisition, "It does move," he, when he listens to the arguments of the world in favor of the reality of evil, is able to reply in the words of St. Paul, "None of these things move me."

No one ever demonstrated the unreality of evil so completely as Jesus of Nazareth; and no one presumably supposes that if it had been real, that is, God-made, he would have been able to do this. He repudiated the reality of evil in the most unequivocal terms. Speaking after the manner of the age and country in which he taught, he personified it, called it devil and Satan, but he never gave it life. He was a liar, he said, and "abode not in the truth, because there is no truth in him." Some day the world will come to admit that those words mean literally, as well as metaphorically, in reality it never existed because there is no truth in it.

[Elizabeth T. Bell in *Charleston* (S.C.) *Post.*]

The central idea around which Christian Science works is the teaching of Christianity's Founder, God is Spirit. It does not rest, however, with the acceptance of this fact, but presses on to prove it by so educating and spiritualizing human thought that matter with its evils—sin and suffering—is gradually relegated to its rightful place in the realm

Digitized by Google

of illusion, and, lo! the sick man becomes a well man; the sinner is reformed. There is nothing "mystical" in this; nothing obscure. It is knowing the truth, and being free.

As to the "function" of Christian Science, the text-book speaks for itself. It says on page 150, "The mission of Christian Science now, as in the time of its earlier demonstration, is not primarily one of physical healing. Now, as then, signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin—to attest the reality of the higher mission of the Christ-power to "take away the sins of the world." Is a teaching "insignificant" that is daily accomplishing this work? Mrs. Eddy was no "mystery," except in the sense that every student of the deep things must withdraw from the world. She consistently applied her teaching to her own life: "Christian Science is not an exception to the general rule, that there is no excellence without labor in a direct line. One cannot scatter his fire, and at the same time hit the mark. To pursue other vocations and advance rapidly in the demonstration of this Science, is not possible" (Science and Health, p. 457). Unnumbered thousands of the present generation rise up and call her blessed.

[Louise Satterthwaite in *Philadelphia* (Pa.) *Telegraph*.]

A feature of Christian Science which separates it from nearly every other sect and denomination is the fact that it does not proselyte. From the many erroneous reports published about it, as well as the attacks leveled against it from the pulpit, one might judge it to be exceedingly active in seeking to rob various folds; but the fact is that no such thing is done; its members are early shown the advisability of not trying to lead or to persuade any one to espouse its teachings.

Speaking of this, a woman who was well and strong after many years of hopeless invalidism, said: "Of course, just as one friend will tell another of a remedy which has been very helpful, I would like to recommend it to any whom I know it would benefit; but notwithstanding what they have seen it do for me, they somehow believe I could have gotten well anyway. So now I hardly—I might say I never—speak of it, unless I am asked about it." Other Christian Scientists corroborated her words. They usually do not recommend it, even as a remedial agent, unless asked about it. Sometimes the one just healed is so full of joy because of his good fortune that he talks of it all the time; but his friends soon find ways to cool the outer edge of his warmth, and little by little he subsides into the quiet serenity which is characteristic of this people.

The natural question then is: "What is responsible for its steady and permanent growth?" The answer to this can be found only in the fact that it fulfils its promises of healing. It proves its faith by its works. Therein lies the reason for its success, and, as can readily be seen, it is quite the best reason in the world. Once in a while a report is published of a Christian Science "failure." Great indignation is expressed that this or that person "was allowed to die" under the treatment which to the uninformed mind seems to be little more than nothing, some sort of a magical incantation, perhaps. The person may have been and doubtless was in a moribund condition when Christian Science was appealed to; but that weighs nothing in the result, and there is a great to-do; yet on the same page of the paper and all around it may be reported scores of cases of death resulting under medical treatment. Would it not be just as logical to find fault with the doctor or surgeon who allowed his patient to slip away?

The certain percentage of death in medicine and surgery cannot be denied; were statistics kept, they might prove more than surprising; whereas in Christian Science, with cases which in the great majority have already been pronounced incurable by reputable medical physicians, the percentage of cures is high; so high, in fact, that one death now and then is cited as a great and extraordinary exception. The successes, however, under the treatment fill their churches with an ever increasing and remarkably joyous and healthy set of members.

Talk with any of them, and the conviction forces itself upon you that their abiding happiness in having found "the undivided garment, the seamless robe," is deep-seated and sincere. Their religion, it seems, is one of every-day use, their God one in whom the working man and woman finds a steadfast friend in every hour of the day and night. With this scientific knowledge of the Principle which is infinitely intelligent, they confidently assail every problem which comes before them, whether it be sin, sickness, poverty, business complexities—all the ups and downs of every-day life—and according to their ability work out the answer which will give them content and certain peace.

The free public lectures on Christian Science are informative and intended to do away with much false impression regarding it, and are not intended to be to any degree proselyting; for this system of religion is content to rest on the merit of its works to demonstrate its right to existence. It awaits those who seek it and welcomes warmly any who ask for it. Its helping hand is a kind one, and its support steadfast; and it is outstretched to all who reach for it. Its message to the hopeless and incurable is one of radiant hope. It bids them look up, it whispers that their chains may be stricken off, for in unnumbered instances it has proven that "man's extremity is God's opportunity."

[Willis D. McKinstry in *Fort Scott* (Kan.) *Tribune-Monitor*.]

One who could not demonstrate a problem in arithmetic would not be considered proficient to interpret the *principle* of numbers, and as these gentlemen [of a ministerial union] cannot demonstrate the teachings of Christian Science, they certainly are not qualified to sit in judgment upon those who can. The teachings and demonstration of Christian Science are purely spiritual; they are upon a divine basis and are wholly in accord with the teachings of Christ Jesus, who declared, "I am the way." Jesus' ministry was one of teaching and healing. As his teaching is accepted by Christendom as an example for mankind, so his work should also be accepted, for he said, "He that believeth on me, the works that I do shall he do also." And he further said, "What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them."

Biblical history teaches that all manner of disease, as well as sin, were cast out—healed—by Jesus without material aid. The therapeutics of Jesus were spiritual, and to those who doubted his Messiahship he said, "Though ye believe not me, believe the works." Yet it was said of him by the learned men of his day, "How knoweth this man letters, having never learned?" The words of Scripture declare that "faith without works is dead," and Jesus said of the barren fig tree, "Cut it down." It was this teacher and demonstrator of the Word of God who gave that sacred command to preach the gospel and heal the sick, and he also said, "If ye love me, keep my commandments."

The teachings of Christian Science impart the spiritual facts of being, and as mankind come to understand these scientific truths, they are able to do the works—to heal the sick—in obedience to the command of Jesus. These clerical critics need not go outside of their own cities to find many proofs of this work. The fact that omnipotent Love heals both sin and disease was recognized by Jesus when he said, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" Therefore, if it be necessary for the Christian Scientists to pass a medical examination to heal the sick through prayer, it must be equally necessary for the minister of the gospel to pass such an examination to heal the sinner by the same process. It is the

Digitized by Google

"prayer of faith" that heals the sick. And as Christian Scientists do not administer medicines, nor perform surgical operations, a medical examination would be of no benefit to them or to their patients. Christian Scientists do not claim at this time that they have reached the perfect understanding of God's law, nor do they claim to heal every case; but a large percentage of their patients are healed, many of whom had exhausted all medical aid or had been pronounced incurable by medical men before they turned to Christian Science for help.

Today, the very best and most eminent physicians, those who have been graduated from the best medical schools, lose patients. It is a matter of record that daily thousands die under the care of these skilled physicians. If Christian Scientists are to be stoned for the occasional loss of a patient, what of the physician? It should not be thought criminal for one to trust God in every time of need. It would be well, therefore, for our friends to recall the admonition of Gamaliel: "And now I say unto you, Refrain from these men, and let them alone: for if this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it: lest haply ye be found even to fight against God."

[Ezra W. Palmer in *Rocky Mountain News*, Denver, Col.]

The clergyman whose sermon on "The Lesson of Mrs. Eddy" was reported in your columns, acknowledged the great work she has accomplished, but he signally failed to find the vital reason for the growth of Christian Science. The clergyman finds there is "no close consecutive thinking in her writings, no forceful expression." As a matter of fact, Science and Health is one of the most absolutely logical books ever written. It is based entirely on the allness of Spirit and the all-power of God. Not a statement, not a premise or conclusion, strays in the slightest degree from this fundamental basis.

Our critic decries the healing of physical ills and decides that they are "not very impressive." If he would investigate, he would find the healing done by Christian Science is in the highest degree impressive. Literally, thousands of people have been saved from the grave through Christian Science, and these people would hardly agree that their healing was not impressive. The saving of a man's life is to him quite vital. The gentleman furthermore betrays his ignorance of the nature of Christian Science when he confuses it with mind-cure, and states that exponents of *materia medica* use it in part. Christian Science treatment is prayer to God and prayer to Him alone. Reliance on *materia medica* or on the control of one mind over another, in whole or in part, would defeat healing in Christian Science. God needs no aid to heal men who come to Him. Since the gentleman is not impressed with Christian Science healing, it may be wondered what impression the commands of Jesus have on him, when he gave his disciples "power . . . to heal all manner of sickness and all manner of disease," and commanded them to "heal the sick," a command Christian Scientists literally follow.

The final test of any religion is results. "By their fruits ye shall know them," said Jesus, and by this test Christian Science calmly stands. To heal according to the commands of Jesus, an understanding of the Science of being, such as Jesus possessed, is necessary. To her credit, Mrs. Eddy gave the world this scientific knowledge of Jesus' words and deeds, which heals and purifies. True spiritual healing is vastly more than physical healing, although that is important. It involves regeneration of the man, a change of view-point from the material to the spiritual. The healing of physical ills, the uplifting of man to see and know God, Christian Science accomplishes, and it accomplishes both by the same method. It measures up to the test of Jesus, which no half-grasp of truth or inflation of personal needs or opinions could ever accomplish.

[Olcott Haskell in *San Francisco* (Cal.) *News.*]

Your paper quotes a religious teacher in St. Louis as saying that Christian Science is "not Christian and not scientific;" yet the fact is that this Science is founded on an understanding of the law of life demonstrated by Jesus, and that except through such discernment and a practical following of the Christ there is no hope that men can ever be permanently free either from the liability to sickness or from sin.

The study of Christian Science has awakened many who before were careless and discouraged, and has given them not only the impulse but the understanding with which to attain to good and successful living. Its practical usefulness proves the correctness of its teaching, even in accordance with the test furnished by Jesus, who instructed his disciples to judge the tree by its fruit.

[*Kansas City* (Mo.) *Star.*]

The statute of California contains an act for the regulation of the practice of medicine, concluding with a proviso "that nothing herein shall be held to apply or to regulate any kind of treatment by prayer." In a recent case the validity of the statute is assailed on an assertion that the exemption quoted makes the whole act unconstitutional, because it gives to those who treat physical ills by prayer privileges and immunities not granted to all citizens. The court of appeals holds that, if this can be regarded an immunity, the act allows every person such immunity, for every one has the same privilege of practising such treatment, so the statute is not unconstitutional.

Quoting the court :"It has been said, 'More things are wrought by prayer than this world dreams of.' Those who believe in the teachings of Holy Writ attach great importance to the efficacy of prayer. Many examples of it are given in the New Testament. For instance, where Peter's wife's mother lay sick of a fever we are told that the Saviour 'touched her hand, and the fever left her: and she arose, and ministered unto them.' The proviso or exception was evidently put into the act to prevent any interference with the right of any one to pray for the sick and afflicted."

[H. L. Conger in *Fond du Lac* (Wis.) *Reporter.*]

The effort to live up to the high ideal as taught by Christ Jesus is the daily work of Christian Scientists who are striving to follow the commands of the Master. They believe that Jesus Christ is the Son of God, and are endeavoring to follow in his footsteps by healing the sick and saving the sinner. In overcoming the difficulties which they encounter they are made stronger, and in striving to manifest more of that Mind which was also in Christ Jesus they are enabled to do in a degree the works he commanded his followers to do.

As to being "untried and unproven," the beneficiaries of Christian Science can tell of the physical healing, moral reformation, and spiritual regeneration which come to them through its teachings and application, and surely their report should have more weight than the words of one who assails it. Mrs. Eddy tried and proved the system which she has taught her followers before she published her text-book, "Science and Health with Key to the Scriptures," by healing the sick and reforming the sinner; and if the healing and reformation brought about through the application of the teachings of Christian Science are products of any "human religious contraption," the world would be better for more of this kind of religion, which is truly the religion of God as taught by Christ Jesus.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

THE TEST OF ENDURANCE.

THAT there is a steady increase in the number of branch Churches of Christ, Scientist, and in the number of those who attend our services, is well exemplified in a press despatch from Chicago which we print in another column. It is also most gratifying to be able to state that this increase is not confined to any one city or locality, but is general and wide-spread. During the four months since December first of last year there has been an increase of 21 in the number of branch churches and societies holding regular Sunday services, as shown by the directory of such churches and societies, published in *The Christian Science Journal*, and it is also worthy of note that during the same time the number of applications for membership in The Mother Church received by the Clerk has been equal to any similar period in the history of the church.

Such unimpeachable facts should be and are a sufficient answer to those who have predicted the disintegration and downfall of the church and movement which Mrs. Eddy founded, forgetting or failing to realize that this great movement was not founded upon a basis of personality, but upon divine Principle, and that just to the extent that this Principle becomes known and is demonstrated, to that extent will there continue to be accessions to the Christian Science church. This demonstration of the healing power of Christian Science is within the reach of every Christian Scientist, and so long as this healing power is made manifest in the lives of those who have responded to the call of Truth, so long will we find new branch churches being formed and the roll of membership in The Mother Church largely increased.

Quite in line is the following statement from an editorial in a recent issue of the *Covington* (Ky.) *Post:* "The fate of Christian Science is ultimately to be determined not by the courts, but by the common sense of the public. It will stand or fall according as it squares or fails to square with the stern test of all physical, social, or moral reforms: Does it 'deliver the goods?'"

When the Jews refused to listen to his teachings, the Master cited the healing works he had wrought, and said, "Though ye believe not me, believe the works;" and that the healing work which he offered as proof of the divine origin of his mission, and which he commended to his followers for their emulation, is now being done through Christian Science, is apparent to all who take the trouble to investigate. As a remarkable example of this work we would call attention to the testimony of Thomas Pugsley, which appears on page 674 of this issue of the *Sentinel.* Through an injury to the spine Mr. Pugsley had become helpless, and was told by the doctors that he would never walk again. It was when he had ceased to hope for relief from material remedies, that Christian Science was brought to his attention,—the "cup of cold water" for which, as Mrs. Eddy tells us, "millions of unprejudiced minds—simple seekers for Truth, weary wanderers, athirst in the desert—are waiting and watching" (Science and Health, p. 570). He began to read the textbook, and gradually the light came and he was healed, so wonderfully that his neighbors thought a miracle had been wrought in their midst.

It is to such blessed ministry as this, the bringing to those in need the truth that the Christ-healing is available today as it was in the days of the apostles, that Christian Scientists, as professed followers of him who "went about, doing good," are called, and the faithfulness with which they fulfil their trust will measure as naught else can the permanency and effectualness of the truth so tirelessly taught and exemplified by our Leader.

ARCHIBALD MCLELLAN.

THE EVERLASTING COVENANT.

IN the fiftieth chapter of the prophecy of Jeremiah we read that in the latter days people would seek after God with their whole heart, and say, "Come, and let us join ourselves to the Lord in a perpetual covenant that shall not be forgotten." Throughout the Scriptures we find many references to God's covenant with His people, one being that which follows the account of the flood, where we are told that the "bow in the cloud" will be throughout the years a token or symbol of the changeless goodness of God. There would be no change on the part of the infinite Father,—His covenant would endure "to a thousand generations," as the psalmist poetically expresses it; the question was whether men would keep covenant with God, and so be spared the miseries which must ever follow the neglect of divine law or disobedience to it.

The student of Christian Science is often reminded of God's covenant as it was impressed upon the children of Israel by Moses, soon after their escape from the bondage of Egypt. It reads: "The Lord will take away from thee all sickness, and will put none of the evil diseases of Egypt, which thou knowest, upon thee." In another place we have a similar statement, coupled with the declaration, "I am the Lord that healeth thee." It is indeed strange that this covenant should have been forgotten by mankind, since it is of such vital importance to them at all times, and they have everything to gain and nothing to lose by a faithful observance of it. With health of mind and body men are equal to any effort, there is joy in living, and fresh strength comes with even the most toilsome tasks; but, alas, this condition is far from being universal. Not only are sickness and sin found in close association with poverty, but also with riches.

This was the case in the time of Christ Jesus, and it characterizes no less the civilization of the present time, because mortals look in every direction but the right one for the cause and cure of the ills which afflict them; in other words, they have forgotten "the everlasting covenant," although through all the ages of mortal and material belief, the covenant was unbroken on the divine side. God is never less than infinite in His purpose and power to bless, to save, and to heal; yet, strange to say, it was for declaring and demonstrating this great truth that Christ Jesus was hounded at every step by hatred, and finally nailed to the cross; but this only enabled him to prove more fully that every one who understands God's covenant well enough to keep it, is victor at every step of the way. This was the Master's teaching at the hour of his supreme triumph over death and the grave, when he said, "My Father and your Father; . . . my God, and your God."

At this day, thanks to Mrs. Eddy's discovery of Christian Science, there are unnumbered thousands who have looked up and seen the bow of promise, when threatened by a flood of miseries, and as the first step toward restoration to health and strength they have learned what this means, "Thou shalt have no other gods before me." Then they turn away from their fears, and from the material remedies which had failed to help them, and learn that allegiance to God includes entire trust in His power to heal. This was a demand made by Christ Jesus in his healing ministry, and God's law is changeless, while obedience to it "demonstrates health, holiness, and life eternal" (Science and Health, p. 340). Those who once were "strangers from the covenants of promise" become in the truth "fellow citizens with the saints, and of the household of God."

THE DIVINE NEARNESS.

We were visiting a normal school, and had observed here and there blackboard sketches which were illustrative of the varied topics of study, and which clearly betrayed the touch of an artist. It was with very great pleasure, therefore, that we came upon the clever craftsman in the midst of a talk to the juniors respecting methods of appeal to the child thought. Crayon in hand, he stood at the board and with a marvel of facility drew the objects and scenes pertaining to his topic,—a leaf, a bird, a mountain range,—glimpses of nature and of life so strikingly true and beautiful that it seemed a wasteful sacrilege when with a swift left-hand stroke he erased them all, save from our delighted remembrance, to make place for yet other exhibits of the richness and versatility of his creative thought.

The expert was disclosing to us the wondrous beauty of artistic conceptions which were wholly unlike and wholly separate from both blackboard and chalk, and we saw again and more clearly how true it is, as Mrs. Eddy has written, that "beauty is a thing of life, which dwells forever in the eternal Mind and reflects the charms of His goodness in expression, form, outline, and color" (Science and Health, p. 247).

Passing out of the schoolroom into the larger world-room whose blue dome was decorated that day with glorious masses of cumuli sketched in light grays and purple browns, we found that while the scene had been shifted, the theme and its appeal remained the same, though enlarged and exalted. It was springtime, and on every panel of vision there was projected some reminder of the one consummate Artist. Every square of earth and sky was speaking to us of that "glorious unseen" which is ever rending the veil of material sense and witnessing to the presence of the realities of Spirit. The apple trees whose daring buds were just blushing into bloom, the stretch of tinted hills that trembled in the exhalations of the warmed earth, the green sward goldened with dandelions, the birds flitting songfully from tree to tree on their home-making projects—on every side a new heaven and new earth were appearing, being discovered by an awakening sense of the immediate presence of Him who "expresses Science and art throughout His creation" (*Ibid.*, p. 507).

At many times and in many ways Christ Jesus sought to impress his disciples with this thought of the divine nearness, and Christian Science is repeating his endeavor. There was no subjection to material mesmerism in the Master's assurance that God clothes "the grass of the field," nor need there be in our thought of the rose as "the smile of God" (*Ibid.*, p. 175). Like the crayon sketch, all material symbols, being incident to imperfect sense, give place in Science to the truth and beauty expressed and to the thinker expressing them. The possible value of this higher spiritual interpretation of so-called "nature" is perceived when we remember how helpful to our realization of the availability of the divine Life is the abiding sense of its near presence, and this thought immediately relates itself to the fact that in the hour of trial the Master was wont to betake himself to "the wilderness," the unsettled country, and to the moonlit hills.

To know that He who fashions the dewdrop and floods it with light is our Father and friend, is to bring sensibly near to every lover of the morning's beauty his "refuge and strength;" and since in the measure of our consciousness of the divine nearness we are impelled to reach out the hand of need, the attainment of that spiritual vision which both perceives the beautiful and identifies it as a manifestation of the infinite Life, becomes a matter of such import as will give new meaning, these "nature-awakening days," to our Leader's luminous line, "Love never loses sight of loveliness" (*Ibid.*, p. 248).

JOHN B. WILLIS.

AMONG THE CHURCHES.

CHICAGO, ILL.

[Telegram.]

Chicago, Ill., April 11, 1911.

The First Church of Christ, Scientist, Boston, Mass.:—God has so blessed the cause of Christian Science in Chicago that the members of this church residing south of 53d street, foreseeing the need for more room, have petitioned for and been granted letters of dismissal by the directors of Fifth Church, for the purpose of forming Tenth Church of Christ, Scientist, of Chicago. Therefore we, the members of Tenth Church, in our first regular meeting assembled, take this opportunity of pledging our continued loyalty and support to The Mother Church, The First Church of Christ, Scientist, in Boston, giving thanks to God for the privilege of disseminating the healing truth and welcoming this opportunity for increased activity and spiritual growth, emulating so far as within us lies the noble, self-sacrificing woman whom we have been privileged to know and call our Leader.

G. S. MANN, *Clerk pro tem.*

The above telegram from the newly organized Tenth Church is of special interest in its confirmation of the following despatch from Chicago to the *Boston Herald:*

"The number of Christian Science churches in Chicago will soon be increased from nine to eleven," says George Shaw Cook, local spokesman for the denomination. Mr. Cook denied that the Chicago churches had been losing members and income through defection since the death of Mrs. Mary Baker Eddy.

"Last Sunday," he said, "the attendance at the churches here was over twelve thousand, while a year ago it was not over ten thousand. Attendance at each of the nine organized churches has largely increased in the last few months."

MINNEAPOLIS, MINN.

A fire in Second Church, Monday morning, April 3, starting apparently from electric wires, and confined largely to the engine-room and the front part of the vestry occupied as a Sunday School room, burned through into a portion of the auditorium, and will deprive us of the use of the church for about two weeks.

Immediately upon the first notice of the fire, a very kindly invitation was received from the Rev. Marion D. Shutter, pastor of the Church of the Redeemer, on behalf of their board of directors, extending to us the use of their church. We accepted their invitation, and held our Wednesday evening meeting in their church, which, by the way, is a Universalist church, and we hope to do likewise for next Wednesday. Our Sunday services will be held in the Shubert Theater.—*Correspondence.*

RED WING, MINN.

The Christian Science people held their Sunday services in their new quarters, corner West avenue and Third street, for the first time Sunday morning, April 2.

Red Wing Republican.

NOTICE.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy 50 cents; six or more copies to one address, 40 cents each. Address all orders to Allison V. Stewart, Falmouth and St. Paul streets, Boston, Massachusetts.

THE LECTURES.

DUBLIN, IRELAND.

Bicknell Young lectured for First Church of Christ, Scientist, on Tuesday evening, Feb. 28, in Rathmines Town Hall. He was introduced by Major Fisher, army service corps, who said:—

The stupendous importance of the subject of the lecture to which we are to have the pleasure of listening this evening merits the earnest attention, not only of every person in this room, but of every thinking man and woman the world over. I use the word "stupendous" advisedly, for how else can one fitly describe a religion which claims that the correct understanding and application of its teachings will eventually eradicate the troubles to which humanity is now in bondage. In proof of its statements, hundreds of thousands of people in every quarter of the globe are joyfully testifying to the spiritual and physical regeneration which they have already experienced as the result of Christian Science.

I myself am a living example of the power of Christian Science to heal. After having been twice invalided by a military board of doctors, once from South Africa after the war, and once subsequently from Ceylon, where I had gone to escape the cold of an English winter, I was healed of threatening consumption by a Christian Science practitioner here in this city of Dublin. That took place seven years ago, and since that date I have never been laid up for a single hour, though I have soldiered for nearly four years in the British Isles and three years in Hong Kong. I have never had recourse to a single drug or stimulant, and every ailment which has presented itself has been completely overcome by Christian Science. I have seen a severe attack of malarial fever entirely healed in an incredibly short space of time, a result which could not be produced by any other curative agency in the world.

In order to understand, however, how these things are possible, it is absolutely necessary to understand the basis on which Christian Science rests. A little while ago a man who is well known as a very intellectual man and a powerful public speaker, after condemning Christian Science as a bundle of hopeless contradictions, asked me how I could account for the fact that so few European statesmen had embraced Christian Science, if its claims were justified. "Well," I said, "let us begin at home. Have you ever read its text-book, Science and Health, by Mrs. Eddy?" "No," he replied, "I have never had time." "Now," said I, "you have answered your own question; that is why public statesmen are so slow to embrace Christian Science—they have never allowed themselves the time to take the first step, and read, let alone study its text-book." Now is this fair play or common sense? People of this stamp condemn Christian Science on evidence which they would not accept as reliable on any other subject in the world, and yet imagine that their opinions with regard to it are entitled to respect.

Correspondence.

MACON, GA.

On March 5 Bliss Knapp gave a lecture on Christian Science. He was introduced by Mrs. Sue H. Mims of Atlanta, Ga., who said in part,—

Phillips Brooks once uttered this truism, "All great truths are very simple," and St. Paul gave the warning that we should not lose the simplicity that is in Christ. May it not be that creeds and dogmas and speculative theories have in these preceding centuries lost sight of that simplicity and the healing and spiritualizing power that accompanies it? The aim of Mrs. Eddy and Christian Science is to revive that simplicity and the power to all Christians. Jesus so clearly defined and illustrated this truth of being that it would seem strange it could longer be hidden from the eyes of men.

What is that simplicity and power? Simply the revelation and utilization of Spirit, the ever-present and omnipotent God, to alleviate and destroy all human ills—sin, disease, and death. Jesus said simply, "Trust in God," and with the spoken word of God he demonstrated this power of Spirit to overcome all human discord, and said to his disciples: "He that believeth in [understands] me, the works that I do shall he do also." It therefore would seem as abnormal for a Christian to ignore this ever-present power of God to heal and save mankind, as it would be for us today to ignore the uses of electricity, which, though not a new factor, has been until late years an unused force in the world.

Humanity is being largely aroused to see that Mind is causation, and that not by physical laws or methods are we to be saved. To know God, and Jesus Christ, whom He hath sent, is eternal life; and that knowledge which saves may be had now and here and forever, and be efficacious in our human affairs. It is not matter, but thought, that is to be corrected. The germs of disease are in thought—not in material microbes, but in fear and false mental pictures of disease, and must be destroyed by the true thought of the divine government of Mind, the "Mind of Christ" which we are enjoined to have by grasping, as far as we may, the great declaration that "in him [God] we live, and move, and have our being;" that is, in the divine Mind, or divine consciousness, of the infinite presence and power of Love, "in whom is no variableness, neither shadow of turning," from whom cometh every good and perfect gift.

Jesus clearly defined in prophetic vision Mrs. Eddy's great work of restoration when he said: "The kingdom of heaven is like unto leaven which a woman took, and hid in three measures of meal, until the whole was leavened." It is impossible for the seeing eye and the open mind not to recognize how marvelously Mrs. Eddy's teachings are changing human thought in every department of life—science, theology, and medicine. This divine process will go on until the whole of mortal thought is changed and the reign of Spirit and the spiritual is established, and the earth reflects the dominion of Love as it is in heaven. Jesus said, "Ye shall know the truth, and the truth shall make you free," and Mrs. Eddy says that in the truth of being, "eternal harmony, perpetuity, and perfection, constitute the phenomena of being, governed by the immutable and eternal laws of God" (No and Yes, p. 10). To contemplate this unseen verity of being, let it dwell in consciousness until we awake out of the dream of materialism into the divine likeness or spiritual consciousness of being. This is our work out of the flesh into Mind.—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Abilene, Kan.—Prof. Hermann S. Hering, Seeleye Theater, May 1.

Bradford, Pa.—Clarence C. Eaton, Universalist Church, April 28.

Chandler, Okla.—Frank H. Leonard, Egbert Opera House, May 5.

Colorado Springs, Col.—William R. Rathvon, Church Edifice, Boulder street and North Cascade avenue, May 1.

Detroit, Mich. (First Church).—Clarence C. Eaton, Detroit Opera House, 3 p.m., April 30.

Edwardsville, Ill.—Hon. Clarence A. Buskirk, Wildey Theater, 3 p.m., April 30.

Englewood, N. J.—William D. McCrackan, M.A., Lyceum, 8:15 p.m., May 2.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be June 2, 1911. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 10, 1911.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 4, 1910, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

TESTIMONIES OF HEALING.

My attention was first called to Christian Science when by the advice of a dear friend I applied myself to gain an understanding of it, and was healed of a chronic illness of more than twenty years' standing. A severe attack of abdominal trouble had left me a physical wreck and a chronic sufferer from a recurrence of its painful symptoms. Whenever I attempted to walk even a short distance, the pain would confine me for days at a time to bed before I could regain any degree of comfort. I had consulted many good physicians in various cities through which I traveled, who told me that I could never be well again.

Just before my healing in Christian Science I was under the care of one of the best physicians in this city, being prepared to undergo what he said would probably be a fatal operation, but which he thought was absolutely necessary to prolong my life, if I could survive it, as in his opinion I could live only a few miserable weeks without it. To this I consented in sheer desperation, as I had decided that I had rather come to the end than to suffer any longer as I had up to that time. My husband, learning what Christian Science had done for others, urged me to try it, but I scoffed at the absurdity of its helping so hopeless a case as mine; yet I felt the cords of disease and despair tightening around me and dragging me nearer to the operating-table and to death. I was, however, so averse to Christian Science that I would not read the copy of Science and Health which my husband left in my room.

One day, after returning from my physician, who was toning me up for the ordeal of an operation, being unusually despondent, I was walking the floor in my room. Passing a table, I aimlessly picked up a book and seated myself at the window, and to my great surprise I found that I had the text-book of Christian Science in my hand. My first impulse was to toss it away, but on second thought I opened it, and the first thing that attracted me was the chapter on Prayer. I thought I would see what Christian Scientists believed about prayer, and the book held me from that time on. I read and read, till, hearing my husband's steps, I hastily replaced the book where he had left it; but nearly all night I thought of what I had read. I began to see that God was not angry at me, that He was not punishing me: that He could not. I wondered if I had found what I had longed for, oh, so long—a God of love. As soon as my husband left in the morning, I had the book again, and I read all day. I forgot my physician, and when my husband returned in the evening, I did not hide that precious book, I was ready to have him see me reading it. The next day was Sunday. I was at the book bright and early, and at four o'clock in the afternoon I experienced a sense of perfect healing. I turned to my husband and declared that I need never go to the physician's office again, for I was perfectly well.

This was four years ago, and I have been perfectly well ever since. I continued to read and study Science and Health and to drink in this new understanding of God and His goodness and love. I rapidly regained my lost strength, and found I could walk without pain; indeed, I now walk miles and miles, and delight in it. All the complications from which I suffered, such as severe bowel trouble, dreadful headaches, and poor eyesight, all gave way to health, and I realized that I was born again, and that the truth I knew had set me free. I have never been treated by a practitioner, nor even talked with other Scientists about how to be healed. Science and Health showed me how to approach God, and He lovingly heard my prayer, although I did not then know that any one had ever been healed by only reading the book.

I could not begin to tell of all the benefits that I have had come to me through this blessed truth. For all these blessings of health and contentment and happiness, I am

Digitized by Google

deeply grateful to God, and to our dear Leader, Mrs. Eddy, who has shown us so faithfully in Science and Health how to know God and His glorious truth rightly.

MRS. MARTHA KYLE BARDING, Buffalo, N. Y.

About fourteen years ago I was taken ill. I thought it was a strain, but the doctor told me it was rheumatism. I went on for several years, able to work sometimes and then laid by again. Finally I had the advice of another doctor, who told me that my spine had been hurt and that this was the cause of all my trouble. He advised me to wear a support, which I did for two years, but never was free from the pain. At last my legs gave way and I lost the use of them altogether, as I was paralyzed below my hips. The doctors got me into a hospital, but could not do me any good. I was there about seven weeks and was worse when I came home than when I went there. I had to lie in bed, I could not move my legs, and I had to be lifted from the bed to my chair. The doctor told my wife I would never walk again, and that she must prepare for more trouble yet, as he thought it would affect my head. The doctors said they could not do any more for me; but they were all very kind, and I feel sure that if they could have cured me they would have done so.

I had never heard of Christian Science, but as I was lying on my bed one evening a dear lady who is a Christian Scientist and was staying in this place, sent her maid, who is also a Scientist, to tell me about it. As they were going away the next morning, the maid asked whether the lady should write to me. The lady sent me a copy of Science and Health, which I began to read, and although at first I could not seem to grasp the truth, I read on and with the help of this kind lady I soon began to get better. At first I could just move one foot a little—only just a little—but every day I got a little stronger, and one day I tried to stand on my feet and found that I could just bear my own weight again. I soon began to try to walk, and I read in Science and Health where Mrs. Eddy calls our attention to the Scripture which says, "They that wait upon the Lord . . . shall run, and not be weary; and they shall walk, and not faint." She goes on, "When we wake to the truth of being, all disease, pain, weakness, weariness, sorrow, sin, death, will be unknown" (Science and Health, p. 218). I used these promises as my strength; and the first time the neighbors saw me walking they said it was a miracle. They never thought to see me walk again.

The healing was slow; but now I never feel anything of the disease, although I have a lot of wet weather to be out in when I am at my work as a fisherman; but I never think of being ill. Science and Health says (p. 495), "When the illusion of sickness or sin tempts you, cling steadfastly to God and His idea." I can walk miles and not feel anything the worse, now that I am healed through the understanding of the truth. I close with thanks to God, and to our Leader, Mrs. Eddy, the Founder of Christian Science, for Science and Health.

T. PUGSLEY, Porlock Weir, Somerset, England.

It will doubtless interest our readers to know that the practitioner in this fine case of healing was a lady between eighty and ninety years of age. This is surely a fulfilment of the prophecy of Joel, quoted by Peter, on the day of Pentecost, that the Spirit would be poured out upon young and old, and that whosoever should "call on the name of the Lord" should be saved. Confirming the permanency of this healing, a recent correspondent writes: "Thomas Pugsley has been, ever since his healing in 1905, a healthy, strong, and able fisherman. In the furious gale of last winter, when the sea overflowed many houses, he was for hours in the water, helping others."—EDITOR.

When I first heard of Christian Science I was in a very sad condition, both mentally and physically. I had lost a loved one, and was in the deepest grief that one could know; at least, so it seemed to me then. I talked only of my sorrow, and it seemed to me I could do nothing but weep day and night. I had been in this condition five years, never knowing a well day. I had a great many bodily ills, and was taking medicine regularly. I was a church-member, my father being a minister, and I prayed to God continually to take me to Him.

One day, a kind lady called on me, and after talking to me a while she said that Christian Science could cure me of my sorrow. I had never heard of Christian Science before; so I asked her what it was, and she said it was the teachings of Christ Jesus. I said I thought the Bible was that, and she said it was, but that Christian Science made the Bible plainer to one and would also cure me. I said, "No, I don't want my sorrow cured, for I think it would be a sin not to grieve for one so deserving." She then asked if I did not want to be healed of my diseases, and when I said that I would love to be well, she told me to read the 91st Psalm. I read the psalm, and when a few days later she brought me some tracts, I read them, but got nothing out of them. In a day or so she came again, and brought me Science and Health, by Mrs. Eddy. She told me of so many things I could find in reading the book, that I thought I would get them all at once, and that night I read a long time. My daughter was reading another book, and when I said I did not see one thing in Science and Health that the lady had told me about, my daughter said it was because I wasn't interested. But I said I was, for I was trying to find the things the practitioner had said were in the book.

I kept on reading every day, until I read it through, but still I had not found what I was seeking. Several days passed, and one night I said that the lady would be coming for the book and ask me about it, and I could not tell her one thing; so I got it down again and began to read. Well, before I had read fifty pages I had found the "pearl of great price," and I would not exchange it for all the gold on earth. I did not know then that I was healed, but I was! I began to tell what I had found, and how we did drink the true wine and eat of the living bread for days and days. One day my little daughter remarked that I had not been taking my medicine for several days. That was over ten years ago, and I have not taken any medicine since. The strangest of all was, that my sorrow was gone—turned into joy. My conversation changed completely. I have been telling the sweet old story ever since, and my loved one is no less dear than when I was weeping and mourning. I see it all now in such a sweet, helpful way, and I know that what God joins together neither death nor anything else can put asunder, for God is Love, and Love is ever present. I now see the spiritual idea, not man or woman in matter, flesh.

I have been and am still a sincere seeker. I have had many come to me to learn something of this beautiful truth and the healing, and all are well satisfied with the results. I have had some struggles on the way, but our dear Leader says that "the more difficult seems the material condition to be overcome by Spirit, the stronger should be our faith and the purer our love" (Science and Health, p. 410). I am glad to say that I have taken class instruction, am a member of The Mother Church in Boston, and am striving to help others know that "eye hath not seen, nor ear heard, . . . the things which God hath prepared for them that love him."

I am grateful to our dear Leader for her untiring love to suffering humanity. What a grand reward is hers! My desire is to please our Father and prove the truth of Mrs. Eddy's teachings. All I am and all I know of God I owe to Christian Science, and I learned it from the Bible

Digitized by Google

as illumined by "Science and Health with Key to the Scriptures," for this book opened the Scriptures to me. I hope this testimony will reach some one who needs help, for my heart overflows with love and gratitude to all who have helped me at any time.

RUTH SMITH WILLIAMS, Paducah, Ky.

I desire to acknowledge the many benefits received through Christian Science. Twelve years ago, after suffering over two years with a stomach disorder, I finally became so ill that I was confined to bed. I had not been able to eat solid food in a long time and suffered great distress, so that I finally could not swallow even liquids. I did not know which way to turn for relief, when my maid asked me to try Christian Science. (She had been healed by it in a few treatments.) I had never even heard of it before, but I grasped at it eagerly, for it sounded good to me and gave me hope. I used to ask these questions: To what and where do you raise your heart when in despair; and wished I could know what God really means, and my searching after Truth brought me to the threshold of Christian Science.

A practitioner was sent for, and I was relieved of pain in one treatment. I was told to eat what was set before me, as it could not distress me. I arose from bed and ate of a hearty meal with the rest of the family, and suffered no discomfort. I did not question the possibility that God was an ever-present help, and I then found the "pearl of great price." I had also suffered from inflamed eyes and could not see to read, but after one present and one absent treatment I was free from pain. We immediately sent for a copy of Science and Health, and oh, the joy when the book came and I could read! I continued to read and study the truth in this blessed book, and was so full of gratitude and peace that I could hardly believe it would last. Sleeplessness, heart trouble, extreme nervousness, all left me, also many other troubles were overcome.

Later I had what was to me another beautiful demonstration of Truth's power. One day I stepped on a large rusty nail, which penetrated my foot, as I wore a thin shoe. My fear became great, but I immediately sent for the practitioner, who came and treated me. When she left I retired, wishing to get some sleep. I was suffering terribly, and my limb was swollen and discolored. The week previous two persons had passed on in our city from a similar cause, but I clung to God and knew He would not desert me. Next morning I awoke refreshed, and found that the pain in my limb was gone and the swelling also. I then arose, and gave thanks to God for this wondrous work that had again been shown me, the power of Truth to overcome error.

I had to learn from experience that in proportion as we relinquish self-love, self-will, self-justification, and become meek and teachable as a little child, are we ready for the blessings God has provided for us. Mine have since come daily and hourly, and when we had to leave our old home in the eastern part of the state and remove to a small village, where there were no Scientists, and no advantages for my daughters, I did not rebel, but knew that God had some lesson for me to learn there, and I could say, "Thy will, not mine, be done." I tried to be obedient and faithful, and can now see the wisdom of His guidance. I learned many lessons there in patience and in overcoming, and had the opportunity to interest two widowed ladies who are now loyal Scientists and who have written me letters saying they had found in Christian Science the peace that "passeth all understanding."

After six years we moved from this place and now live in a city where I can attend church and can have the love and help of loyal Scientists. I have had the blessed privilege of class instruction, for which I am very grateful. My heart is filled with gratitude to Mrs. Eddy for her inspired book. Through the study of this book I have learned that the kingdom of heaven is within us, that we do not have to die to reach it. I have proven that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). My debt of gratitude to our Leader can only be paid in faithful and loving obedience to Truth. For the blessings of Christian Science I am truly thankful to God, "who forgiveth all thine iniquities; who healeth all thy diseases."

MRS. ERNEST WAGNER, Eau Claire, Wis.

In July, 1908, I was pronounced by some of the best surgeons in Boston to be beyond aid. From being a strong, healthy man, and only having been laid up a month before the operation, I had come out of the hospital greatly reduced. My leg had to be kept in a cast for six months, and I used crutches for a year. The trouble had come from a fall; I had been thrown heavily from a bicycle, the knee being seriously injured. The accident did not trouble me much at the time, but three years later my leg got very bad, and I went to a doctor. After a month's treatment, it became worse. He said that there was a tubercular condition of the bone, and advised an operation. I was in the hospital a month, and came out not only a wreck of my former self but afflicted with rectal and bladder trouble, and as weak as a child. After leaving the hospital I gained a little in weight, but was unable to do any work, and after two years my trouble came back and was much worse than the first time; the bone became porous, and the leg was greatly swollen. I again went to the hospital and had an X-ray examination. It was then the surgeons told me there was no hope; that my leg must be amputated above the knee, or my life would be forfeited.

I was very despondent and suffered terribly; I slept very little, and could hardly walk, my knee paining me so that I expressed the wish to a friend that I might die. My friend asked me why I did not try Christian Science; but I scorned the advice because of what I had read of it in the papers. He then asked me what I knew about it, and I was forced to admit that I knew nothing. My friend then told me that about a year before, after he had been given up by the doctors, as a last resort he had tried Christian Science, and in a short time was well. This interested me, and that afternoon I went to see the practitioner who had helped my friend.

I was relieved of the extreme suffering almost at once, and within four months the pain had almost all gone. The bone at my knee soon commenced to get back into place, and when, after less than a year's treatment, I was examined by one of the surgeons who had told me at the hospital that nothing more could be done for me, he said, "Your knee is all right; the trouble has entirely disappeared." Since then my other ailments have almost wholly been healed. Friends who had seen me, and had felt that I had not long to live, asked me what I had done to make such a change for the better. I told them, and many of them felt inclined to try it for some ills of their own. Of some thirty who have become interested in Science through my healing, almost all have been wonderfully helped at once, and many have been almost instantly healed of troubles of long standing.

I took up Christian Science for the physical healing, but I know that it has changed the whole current of my life, and I hope to become more worthy a place in the Master's kingdom. I am thankful to God, and feel a deep sense of gratitude for the encouragement given me many times when I would seem to have a relapse, and when I feared a return of the old trouble. At times I almost felt like giving up, but I was encouraged to hold on, and I thank God that I did so. My experience proves conclusively to me that attendance at the Wednesday evening testimony meeting is

Digitized by Google

beneficial. My practitioner had advised me to try to go, but it seemed that I did not feel able to do so. About the second month after commencing to take treatment, one Wednesday night I felt as if I could stand it, and I decided to go. I had always taken the cars, both going and coming, but after the meeting that night my knee was so much better that I walked home, and even walked several blocks farther with some friends. This encouraged me greatly, and after that I always went to church if it was a possible thing. Before this I had been obliged to walk very slowly and carefully; it would take me fifteen minutes to walk a short block with a cane, but I was soon able to walk without a cane, and my improvement has been slow but steady ever since.

I have proved that there is a fount of healing, that it is open to all, and to any who are sick and suffering and do not know of this wonderful life-giving stream, I hope that my testimonial will lead them to seek it.

CHARLES L. RAZOUX, Boston, Mass.

I have had many experiences of healing in Christian Science, some of them seeming wonderful to me and for which my gratitude has been inexpressible; but none have been so real to me and so clear as my first demonstration, perhaps because I had not known before that God really does heal the sick. I had been reading Christian Science literature only a short time, not with any thought of healing in connection with it, but because it satisfied me more than anything I had ever read, when I was given an opportunity to prove its efficiency.

While preparing the morning meal for the family I was taken suddenly ill. Thinking that if I could reach my room unaided I should be doing well, I had begun to grope blindly along when the thought occurred to me to apply the truth which I had been reading of late. Then there came to thought some Bible verses, together with the reasoning that God's child is never sick, and instantly I was healed! As I stood there in freedom from what but a moment before had seemed to affect every portion of my body, I indeed communed with God, and the proof of the discovery that God heals here and now was so unanswerable that it can never be eradicated from my consciousness.

To Mrs. Eddy I am most grateful, and although this truth has always been in existence, yet, as a brother has expressed it, "I fear I should never have been able to find it without her," as the instrument of its discovery and dissemination. I cannot conceive of what existence would be to me without this blessed understanding of God and man's relation to Him, and I am grateful many times over that I live in an age that has so far cleansed its window-panes of creeds and fears as to let the light of this spiritual concept of God, man, and the universe, as given us by Mrs. Eddy in Science and Health, shine through.

NELLIE L. JOHNSON, Peru, Neb.

I was brought into this truth through a desire to know more of God, and how to heal mankind as the Bible teaches. I had been an orthodox Christian for years, but seemed hedged in and not able to progress; and the Bible appeared contradictory and not easily understood. My first liberated thought came through a theory that taught healing, but had little to do with the Bible. I declared I would follow the truth wherever I should find it, and then I heard of Christian Science, and knew at once that it was what I was seeking, for it gave me a true sense of our Father-Mother God. I have been now seventeen years following the light of Truth. I have been healed of a throat affection and rheumatism that had troubled me at intervals from childhood, also a bowel disorder and hemorrhage from the head that seemed very alarming.

One evening an attack continued for about an hour, and next morning for an hour and a half. On telephoning to the practitioner that the conditions were no better, she sent an assuring message, and in a few minutes the flow stopped, much to the astonishment of the lady who was with me. I have had some minor ailments that came from time to time, like temptations, and have overcome the most of these alone with the truth. This makes me very happy, and I am now trying to make some return for what has been done for me by helping my fellow-men.

I am deeply grateful to our dear Leader for standing so firm against the whole world, upholding the banner of Christ, Truth, that she saw as the redeemer from sin and sickness.—GERTRUDE E. MERIAM, Atlanta, Ga.

I was suffering greatly with one of my fingers, and I was tempted to ask for treatment, but I knew the truth of this healing religion, and that God was with me just the same as with any other. I felt, too, that even if I asked for treatment, I should still have to realize God's allness for myself. In about twelve hours more I was entirely healed; that is, when I went to work in earnest, and stopped trying to decide as to what to name the error, or if I should have some one help me. I did my washing, and each time I felt a sense of pain I declared God to be omnipotent. I felt the power of Truth, for I was healed at once, although the finger looked as though it had been scalded after the demonstration was over.

I am truly grateful for having had this experience, as it taught me that I had divine authority for denying error and for declaring God's allness at any and all times. I was also thankful for being led to work out my own salvation. It was a hard struggle to let go of the material for the spiritual, but Truth was victorious. I felt uplifted after having been relieved of the pain, and I can truthfully say that the peace I experienced was that "which passeth all understanding."

Before I knew anything about Christian Science, I was living at the home of a friend who had a felon, and I can see now how I, and in fact every one who came, would tell of how they or some friend had had a similar ailment, and that in so doing we all added to her burden; but I knew no better at that time. Many times, however, while I was working on my own demonstration these "images" would come up to tempt me. This experience made me see and appreciate more fully what Christian Science is doing for those who put into practice what they already know. The ability to think rightly is more to me than any physical healing, for it is the healing of my wrong thoughts, through the Christ-Principle.

To be grateful to our Leader for the gospel she has given us through her text-book, "Science and Health with Key to the Scriptures," together with the *Journal*, *Sentinel*, and *Quarterly*, is to try to live what we know, and in so doing we are adding to the talents we have and fitting ourselves to be given more.

MRS. MAE SMITH, Fortuna, Cal.

I have long desired to express my gratitude for Christian Science. It was not illness that led me to read "Science and Health with Key to the Scriptures" by Mrs. Eddy, but rather a desire for the spiritual food those pages contained. This seemed more to me than the healing of disease, but in coming to an understanding of this truth I learned that Christian healing has never been lost. I have overcome what is called hay-fever, which had presented itself year after year. I also suffered from weakness of the heart, brought about by sorrow in my early life, having been left alone with two little children to support. Christian Science brought comfort to me in showing me that I was not alone; that, whatever the case may seem, there is always help for us in every need. I found great comfort in reading

Digitized by Google

page 266 of Science and Health. I have been familiar with sickness and disease from childhood, as my parents were also; and to be able to meet and overcome it in Christian Science is a joy. I have also often been called on to help others.

I have never heard a word from any pulpit that gave so clear an understanding of God, or of Christ Jesus' teaching, as that of our dear Leader in Science and Health and her other writings. For Christian healing I am very grateful, and still more so for the help I have gained in understanding the Bible. I would not part with the understanding of divine Love as revealed in Christian Science for anything that the world could offer. I am very grateful to our dear Leader.—Mrs. Addie E. Haven, Mankato, Minn.

Several years ago, after all material means had failed to relieve a seriously injured ankle, I turned to Christian Science with the same thought that I had given the other modes of cure—and no more, for to me it was nothing but a name; but having no prejudices and desiring to be healed, it was only reasonable that I should heed the advice of the practitioner just as carefully as I had followed the instructions of the various methods previously tried. The relief was immediate; the complete cure slow but permanent.

My mortal heritage had seemed to be weak lungs and throat, but by a persistent endeavor to realize the truth taught in Christian Science, namely, "When the illusion of sickness or sin tempts you, cling steadfastly to God and His idea, etc." (Science and Health, p. 495), these conditions gradually lessened in severity and frequency, and finally ceased; until from years of suffering and delicate health I have grown into robustness. I was greatly interested in Christian Science from my first knowledge of it, and was more than pleased when my practitioner told me I could learn it if I wished—that it was the open fount "which flows for all." Just eight months from the time of my first treatment I went through class, and joined The Mother Church. I also joined Second Church of Christ, Scientist, Chicago, immediately thereafter.

Because of a right knowledge of omnipotence, I am truly grateful; because of the certainty of reaping as we sow, I am never discouraged; because nothing has power but the good, I am never fearful.

Mrs. Ruth Cameron, Chicago, Ill.

[Written for the *Sentinel.*]

JUDAS.

ADA J. MILLER.

For thirty bits of silver stamped as coin
Our Master was betrayed by one who knew
And walked with him along the way;
But walked and talked as sleeper in a dream.
The words of Life, the light, the living Truth,
Came not to Judas till, too late, he saw
His Lord betrayed for dross of worldly gain.
And here today, where'er for lust or power
Or selfish aim the truth is sold
And honor bartered, Judas still betrays.

To one awake to Love and Love's demands,
The Judas thought comes not. It cannot face
The watchful angel guard with flaming sword
Which none can pass save those who ever wear
The garments white of chastity and love,
And walk with him who blessed the pure in heart
And said of them that they alone see God.

FROM OUR EXCHANGES.

[Rev. Anson Phelps Stokes, Jr., in *Outlook.*]

It is true that the man who approaches Jesus as the one eternal God is not likely to get any real grip on his complete humanity; but he who first thinks of him as a man who lived a human life in Palestine may get to see that he completely transcended the realm of the human as we know it, and will like to call him divine.

It is upon the last words of St. Paul's phrase that I wish to lay special emphasis. Jesus was the first-born "among many brethren." It is apparent, then, that Jesus believed that there would some day be many men sharing his view of life, his possibility of living in complete union with the Father—men whom he could call brothers, although realizing that it was only through his help that they could reach his level. And this encouraging verse is not an isolated statement. The Bible is full of the thought. The fourth Gospel says: "As many as received him, to them gave he power to become the sons of God." Paul writes, "We are the children of God; and if children, then heirs; heirs of God, and joint-heirs with Christ." And in another place we read: "Now are we the sons of God, and it doth not yet appear what we shall be: but we know that, when he shall appear, we shall be like him." Listen also to the words of Jesus: "Be ye therefore perfect;" and "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." These verses truly represent the view of the New Testament itself, that there was nothing in Jesus' power which men might not reproduce.

[*Congregationalist and Christian World.*]

Men who cannot read the signs of the times are always getting in the way; they are obstructionists. They plant themselves across the road; they never really halt anything, but they cause themselves and other people endless trouble. They champion lost causes, they debate questions which have already been decided; they cannot see that God fulfils Himself in many ways. If they are not obstructionists, they are at least useless; they do not know what to do. They are like men on shipboard; while the captain, reading the far horizons, is trimming his ship to meet not today's but tomorrow's weather, they stand idly by, perplexed by an activity whose meaning they do not understand.

Men who are reading the signs of the times are always going out to meet God's will. They are always utilizing forces and tendencies. They may not be working with the superficial currents, but they are always working with the deeper currents of things. They do not crucify Christ, they crown him. They do not hinder the kingdom, they serve it. Today does not always understand them, but tomorrow always vindicates them. We are needing just now men who can read the signs of the times. Evidences are not wanting that many things have changed of late and that permanently. Political and industrial attitudes and methods, which counted for much yesterday, are likely to be quite useless tomorrow.

[*Western Christian Advocate.*]

A superficial observation might seem to indicate that in this tumultuous, complex, and feverish age, oversupplied with masses of ephemeral and sensational writings, and seemingly too rushed and burdened for any serious reading whatever, the old Book was being pushed aside and neglected, but closer investigation disproves that view. In late years, particularly, both privately and in Bible schools, there has been witnessed an increasing enthusiasm for the broad and intelligent perusal and study of Sacred Writ, and that movement is still in its inception. As some one has pertinently said: "Scholars may quote Plato in their studies,

Digitized by Google

but the hearts of millions will quote the Bible at their daily toil, and draw strength from its inspiration as the meadow draws it from the rock." And the most consoling aspect of the matter is that the present enthusiasm for the Bible is for the Bible itself, and not for any theories about the Bible. It is a passion for the Word, and its truth, and its revelations of the purposes and attitude of God toward His children, and of "the mind of the Master."

[*Universalist Leader.*]

Suppose it possible to revive that state of mind and heart where we could walk and talk with God as Israel's prophets did. Would it not be worth while? Would it not be worth all the rest of the world to be able to feel Him near, know Him as a friend, and be conscious of His help every day? Now it is just this possibility that we do believe in. There will come a day when people shall hear His voice and His footfalls in the world, just as clearly as they did in the olden days. We speak spiritually, but none the less practically and vitally. The end of man's life-story is not yet. There will come an age of knowledge and of faith which will look upon ours as we look upon that old past. We shall appear more childish and crass in our denials of the reality of fellowship with God than are to us those who felt the presence of His spirit everywhere.

[J. Y. Montague in *Standard.*]

It needs to be seen with clearness that he who does God's work and bears God's message will find the satisfaction of his own highest needs, do his own best work for his own day and generation and make his largest contribution toward the establishment of God's kingdom. The unity for which Christ prayed and the apostles labored is not nominal nor ecclesiastical, but that unity of spirit and knowledge which worketh by that wisdom which is the fruit of intelligent love. The only infallible proof that one is making a real contribution toward healing the breach and hastening the unity of all God's people, is found in the spirit of loyalty to the truth he sees in Christ, and in the spirit of fraternal interest in all mankind.

[Rev. J. E. Rattenbury, M.A., in *British Congregationalist.*]

There are no limits whatever to God's giving of Himself, of His heart, of His love to the sons of men. He does not give his love to men because they deserve it, because they are moral, because they are churchmen, or for any of the reasons that we often assume. He gives His love to men, because He Himself is Love. The very church has failed to understand this, and I sometimes think that the church has dealt with God's grace like the landlord deals with the land—making a monopoly of it.

[*Watchman.*]

Jesus Christ was a man. He used two phrases to describe himself: "The Son of God" and "The Son of man." Of the first there is only one interpretation. By it our Lord meant that he came to earth to show men what God is. The explanation of the other phrase corresponds to this and is indicated by it. By calling himself, as he so often does, "the Son of man," Jesus meant to give us to understand that he came to earth to show us what man may be.

[Mary E. McDowell in *Continent.*]

If the Christian conception of a city were that of the Old Testament prophets—a family of God—and if modern Christians could find time to dream with the prophets of old, they would begin to build a holy city with "justice for a line and righteousness for a plummet," and the citizens would be priests of a righteous God.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel.*

ATTENTION IS CALLED to the new volume, "Poems by Mary Baker Eddy," now on sale. Specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The following reprints are published in Swedish: "Hvad Ar Bön?" "Lagens Välde," "Det Ondas Natur," "Helvete och Himmel," "Människans Gemenskap Med Gud," "Verklighet," "Det Ar En Ström," "Förklaring Af Kristligt Helande," "Den Yppersta Egenskapen I Christian Science," "Underverken," "Det Ondas Ofvervinnande," "Var Väktare," "Riklig Tillgang," "Kristendom Och Vetenskap." Ten copies to one address, prepaid, 10 cents; one hundred copies to one address, 75 cents; five hundred copies to one address, $3.00; one thousand copies to one address, $5.00.

NEW MUSIC.

Two of our Leaders poems, "Shepherd, show me how to go," and "Love," set to music by Frederic W. Root, are now on sale by the Society. For description and price see advertisement on the inside back cover page of this week's *Sentinel.*

A NEW PHOTOGRAVURE.

A new photogravure reproduction of The Mother Church edifices and the Publishing House, with the new parkway in the foreground, has just been made, and is now on sale. The size of the new picture, nine by fourteen inches inside of mat, which is about half that of the larger one, specially adapts it to framing for the home. Price, single copy $1.00, six copies $5.00, twelve copies $9.50.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $3.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00, six months, $1.20. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the month, and include all issues for the month named as expiration date on the wrapper. XI indicates the year 1911; XII, 1912. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25—	£0: 5 s.:	2d.;	Mk. 5.30;	F. 6.45
2.25—	0: 9 :	3 ;	9.50;	11.60
2.50—	0: 10 :	3 ;	10.60;	12.85
4.00—	0: 16 :	5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Steady progress is being made by the income tax amendment to the United States Constitution. States that were at one time unfriendly are showing an inclination to favor the amendment. Last year, for instance, Massachusetts rejected it, but there is now an even chance that it will adopt it this year. New York is showing a like intention. Arkansas has reconsidered its action of last year when the amendment was rejected and recently the state Senate voted to ratify the amendment. Florida is coming into line. Thirty states have now adopted joint resolutions to ratify, as follows: Alabama, Indiana, Georgia, North Dakota, Colorado, Washington, Illinois, Iowa, Oklahoma, California, Michigan, South Carolina, Wisconsin, Idaho, Arkansas, Maine, Maryland, Missouri, Kansas, Nevada, Ohio, North Carolina, South Dakota, Montana, Tennessee, Kentucky, Mississippi, Nebraska, Oregon, Texas.

Secretary Knox will soon renew his efforts to effect the ratification of the treaty between the United States and Honduras providing for a refund of the public debt of that republic. This treaty was signed several months ago and was submitted to the Senate for ratification several months before the expiration of Congress on March 4. It failed of ratification. The convention was intended to refund the public debt of Honduras and place that country on a firmer financial basis. The claims of foreign bondholders were to be paid by means of a ten-million-dollar loan to be furnished by a syndicate of American bankers. The loan was to be repaid by setting apart periodically a portion of the customs revenues of Honduras.

A "back to the farm" bureau will be opened in Boston May 1 and will be under the control of the New York, New Haven & Hartford, the Boston & Maine, and the Maine Central railroads, its title being the New England Lines Industrial Bureau. Its object will be to promote every form of industry, particularly farming, fruit culture, dairies, and factories.

A resolution has been adopted by the interstate commerce commission putting an end to the practice of railroad companies, for the sake of convenience, in selling passenger tickets, whenever possible, at a charge in multiples of five. By the order issued carriers are required to make the charge in odd cents, exacting the precise fare in every instance.

"At Cornell all university doors must remain open to all students, irrespective of race or color, creed or social standing, or pecuniary condition," is the answer of Cornell University to the petition signed by many girl students begging the authorities to refuse admission to the dormitories of Sage College to two negro students.

Rangers in the national forests are to be supplied with portable telephone sets with a special flexible wire which can be run along the ground to isolated places in the forests for the purpose of summoning help.

About half a million Russian mulberry trees were planted by Chicago school children in celebration of Arbor day. The trees were planted in front and back yards and on school premises and in small parks.

Governor Wilson has won a hard contest for popular government by the passage in the Republican Senate of the Geran election reform measure. The measure will revolutionize state elections.

The city ordinance recently enacted in New York prohibiting the sale of theater tickets on the sidewalks by speculators was sustained in a decision of the appellate division of the supreme court.

The resignation of David Jayne Hill as ambassador to Germany has been announced at the White House.

International.

Sir Donald Mann of the Canadian Northern railway expects a big year for immigration into Northwest Canada. Last year there were three hundred and sixty thousand settlers in the three northwest provinces, and the number will reach four hundred thousand and possibly five hundred thousand this year. "We let contracts last year for one hundred and forty miles on our main line," said he, "and we are advertising for tenders for another two hundred miles through British Columbia on the Pacific coast section of the road coming eastward. Going west our main line is built into the foothills beyond Edmonton. Into that northwest country are going many people from the older provinces, who sell their old lands to persons from Europe who prefer to settle on land that has been developed. We build the road as fast as we estimate we can pay the interest on the cost. We make our old lines pay the fixed charges on the new ones until the latter are able to pay their own charges and help on new lines. We put our surplus into new roads and do not pay dividends. The Canadian Northern proper has now about four thousand miles of track laid, of which about six hundred is new and not yet in operation. Then there are allied lines, disconnected links of the system, which we are working to join up. There are about two thousand miles of such lines and they will be absorbed by the Canadian Northern as soon as they are connected up. To do this will require the construction of some seventeen hundred miles more."

The Council of the Empire listened to Premier Stolypin's explanation with regard to the interpellation attacking the government, which the Council adopted in solemn session April 16, following a discussion devoted to criticism of the government's action in promulgating the Zemstvo bill by imperial prerogative during an artificially created recess of the Council and the Douma. The prime minister, in a forty-minute speech, denied the right of the legislative bodies to examine into the nature of the extraordinary circumstances which were the motive for the issuance of legislation by imperial prerogative in accordance with the fundamental laws of the empire. The determination of such circumstances, he declared, was subject to the sole competence of the monarch based on the representations of the cabinet. After Premier Stolypin had concluded his speech an order of the day declaring that the theses of the interpellation had not been shaken by the prime minister's explanation, was passed by a vote of ninety-nine to fifty-three. The vote just failed of a two thirds majority, which would have imposed submission of the matter to his majesty.

Industrial and Commercial.

Economy in cutting timber has been supplemented in Maine by the economy, equally important, of protection against forest fires. During the extremely wet season of 1907 the timber loss by fire was $14,567. During 1908, an extremely dry season, the loss was $618,816. The next year with improved arrangements for protection against fire the loss was $96,699, while last year with the system working more smoothly the loss was $2,841. In 1902 the first scientific forestry in Maine was begun by the United States for the Great Northern Paper Company. Three years later the field was entered by independent foresters, practising for private owners. No mean share of the missionary work was done by the Federation of Women's Clubs, which established a chair of forestry at the State University. Last year six hundred and thirty-seven million feet of timber was cut, which is about the average, though this amount is increasing. Maine is learning to raise her annual crop of timber as a farmer raises potatoes or corn.

With nearly $110,000,000 invested in timber holdings, plants and equipment, logging roads and offices of the Northwest, fully 200,000 persons are supported by the lumber industry of Washington, Oregon, Idaho, and Montana. Indications are that the cut this year will be equal if not larger than in 1910, when the output was 1,463,000,000 feet board measure, or about 60,000 cars. Fourteen million dollars was paid to mechanics, laborers in mills and camps, and $6,000,000 to railway companies in freight charges on lumber in 1910, when the value of the product at the mill was $21,000,000 in round numbers. The value of the stumpage cut was $3,000,000. The working capital required amounted to about $27,500,000.

Farmers of Cumberland and Cole counties, Ill., have, it is said, signed an agreement pledging themselves not to raise broom corn for five years unless the dealers will guarantee them a price to exceed one hundred and twenty dollars a ton in advance of planting. For twenty years the two counties have been the broom corn center of the country. More than fifteen hundred acres of non-irrigated lands in the Walla Walla valley, south of Spokane, and other parts of eastern Washington will be planted to broom corn this spring.

The option held by the United States Steel Corporation on the lands of the Michigan Land & Iron Company in upper Michigan for the past year, has been surrendered, and the entire area, aggregating more than three hundred thousand acres, has again been thrown open to the public in tracts of any size to suit the purchaser. The Steel Corporation retains its option on the mineral rights, surrendering only its option on the timber and surface rights.

The mileage of the United States is nearly 250,000. This mileage has an equipment of over 57,000 locomotives, 45,000 passenger cars and 2,000,000 freight cars. This mileage is sufficient to encircle the earth with a ten-track road, the freight cars would form five lines stretching across this country, the locomotives would reach in a continuous line nearly from Boston to Washington, and the passenger cars would reach over six hundred miles.

The peanut trade from South China to the United States is expected to be more satisfactory next season, as the Chinese merchants are learning the importance of proper sorting. In the season from September, 1909 to 1910, about 18,250 tons of nuts were sent from all China to Europe and America, the value being given as about seven hundred and eighty-one thousand dollars.

The complaints, which have been incessant of late, on account of the inadequacy of the rolling stock on French railways to meet the ever-increasing traffic, have at last roused the railway authorities to definite action. Orders for no less than four hundred locomotives have been placed with various companies.

A charter has been granted a company with a capital of ten million dollars for a shipbuilding plant on Sydney Harbor, Nova Scotia.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE NEED IN EVERY HOUR.

SAMUEL GREENWOOD.

THERE is no time in the history of Christian Science when its students do not need to bear in mind that this movement is founded upon divine Principle and not upon personality. If one's hope and faith rest upon human personality, he is building on sand, and his structure will not stand the storm and tempest. The records of Christendom show that the personality of even our great Master is not the true foundation of the church of Christ, and the failure of the past to accomplish the end of Christianity will be repeated until impersonal Truth, the ever-present Christ, becomes the basis and the inspiration of Christian endeavor. Christian Science builds on this stone which the builders of the ages have rejected, and the same is now becoming "the head of the corner." It was his knowledge of the incorporeal Christ that enabled Jesus to heal the sick and overcome the sense of mortality, and only by their fidelity to the same truth, as revealed through our Leader and taught by her in precept and example, can Christian Scientists heal the sick and ensure the success of their cause.

Error is always unscrupulous in its methods, and would make itself appear, if possible, as an angel of light, if by such means its ends could be subserved; hence Christian Scientists need continually to stand guard over their thoughts, lest evil enter in the guise of good. If error never made itself appear as truth, it could never pass for truth; therefore the injunction to "try the spirits whether they are of God" should be heeded. It was well said recently, in a newspaper editorial, that Mrs. Eddy was the most beloved woman in history, but this love must not be allowed to become a weapon in the hands of error, and so be made to strike at the cause it should faithfully safeguard. The love which Christian Scientists cherish for their Leader is that of gratitude and appreciation, not of deification, and if their loyalty to her teachings is commensurate with that love, the integrity of the movement is assured and mankind will be abundantly blessed. But that is not always love which calls itself such, and Jesus declared that the test of his disciples' love was obedience to his commandments. Neither is a student's professed love for Mrs. Eddy genuine if that student disobeys her teachings, turns from Principle to person, or in any way attempts to counteract the influence of her work.

It is certain that if our thoughts are occupied with personality, they are not dwelling upon the divine Principle toward which our Leader directed her students' attention; and to follow such a course is to violate both the letter and the spirit of her injunctions. She writes, "He that by reason of human love or hatred or any other cause clings to my material personality, greatly errs, stops his own progress, and loses the path to health, happiness, and heaven" (Miscellaneous Writings, p. 308). Whatever one may say or do from that standpoint is not in accord with true Christian Science, and can only be harmful to himself and to those who permit themselves to be influenced thereby. The same can be said of those who cling to the personality of Jesus to the neglect of the truth which he demonstrated for them. The way in Christian Science has been pointed out, the truth has been revealed, and it therefore remains for Christian Scientists to walk in that way and to practise that truth, for only by so doing can they leave the material for the spiritual, and outgrow a finite, personal sense of being.

It is the privilege of Christian Scientists to rise to the needs of each hour by putting aside every selfish motive or interest, and, standing as one in their adherence to Principle, demonstrate to the world the scientific basis of their religion. The welfare of mankind demands this. Human salvation is inseparable from entire obedience to the spiritual teachings of Christ Jesus, and God requires that those who discern this be unfaltering in their allegiance, being swayed neither to the right nor to the left by any personal suggestion. The serpent is a subtle belief of corporeal sense, and this belief puts forward the same insidious claim today as it did in the beginning. Personal appearance, disappearance, or reappearance belongs to human belief, not to Science. "The last appearance of Truth," writes Mrs. Eddy, "will be a wholly spiritual idea of God and of man, without the fetters of the flesh, or corporeality;" and again, "To impersonalize scientifically the material sense of existence—rather than cling to personality—is the lesson of today" (Miscellaneous Writings, pp. 165, 310).

The present is a fruitful hour for Christian Scientists, pregnant with opportunity, insistent in demand; and history will note how well they fulfil its obligations. But let us not forget that error continues to voice its falsities, and be wise enough not to close our eyes to its specious tactics. Error declares only what it would have mortals believe, but "stately Science passes not:" it "moves before [us], a pillar of cloud by day and of fire by night, leading to divine heights" (Science and Health, p. 566). He is a wise pilgrim who follows only this leading, who is guided solely by his textbook, "Science and Health with Key to the Scriptures," who is loyal to The Mother Church and its government, and who turns a deaf ear to every argument or suggestion that would divert his attention from the divine Principle of his work. There is no other safe course, for one cannot work successfully with both truth and error.

Christian Scientists are working out the problem of human salvation, and while human consciousness holds to the belief in both good and evil it is not strange that the latter should assert itself in various guises and disguises. It is not abnormal to the human sense that evil should appear, but it is abnormal to the true Christian thought that it should be accepted. Those who have discerned in Christian Science the allness of God, will not be disturbed over the claim of evil activity, nor the necessity of overcoming this claim. They will not fret themselves because of evildoers, nor because of those who may attempt to bring evil devices to pass, but they will deny every phase of error and not suffer themselves to be defrauded of the assurance of God's ever-presence. They will do their work through evil

Copyright, 1911, by The Christian Science Publishing Society.

report or through good report, through honor or dishonor, giving no offense in any thing," without personal ambition to gratify or self-interest to serve, and with the single eye that looks only to the honor and glory of God. The world has waited long for Christian Science, and now that it has been revealed and established on a divine basis, proving itself to be the Comforter leading into all truth and into all freedom, it is imperative that Christian Scientists preserve its purity, abide by its behests, demonstrate its saving power, and diverge not from its absolute Science and its absolute Christianity. This is the opportunity of the hour; this is the need of the hour.

Divine Science, not human wisdom, is the hope of the race, and divine Science includes only the spiritual sense of God and man. It is vain to look to personality for help and guidance. The good one receives through personal channels comes through the reflection of divine wisdom and understanding, and God alone is its source. In the Bible and Science and Health Christian Scientists have their teacher and guide, and no human hands are needed to steady this ark or to define its course. Human personality even at its best is a frail reed to rest upon, but when one relies wholly upon divine Principle, he allies himself with Truth and disowns that one evil which claims minds many, and life and individuality to be finite and material.

The tendency to follow person instead of Principle has been the fatal error of the ages, but this error can have no place in Christian Science, for its demonstration lifts human consciousness above the sensual plane to the spiritual understanding of man as God's likeness. The hour has struck for Christian Scientists to separate themselves from all that would hinder their spiritual growth and prosperity. They must fill up the measure of their privileges and duties, —healing the sick and loving their neighbor as themselves, rising to the demands of each hour and proving by their example that the Church of Christ, Scientist, is founded on divine Principle,—and history will evermore call them blessed.

THE GOOD OF TODAY.

GRACE POTTER.

"To those leaning on the sustaining infinite, today is big with blessings." So rings that mighty prelude in the glad song of salvation, the opening line in the introduction of "Science and Health with Key to the Scriptures." This brief sentence prescribes the divine remedy for a world of woe made up of yesterday's failures and tomorrow's fears. Thought is turned away from the whole mass of mortal belief to reliance on infinite good, which blesses man infinitely today. If one is only awake to catch this strain of immortal music, only willing to open wide his consciousness and let it in, he will be so filled with the blessing of today's good that he will find no room to entertain anything else.

What each one knows of infinite good today is enough to meet today's suggestions of evil. It is not today's evil which oppresses us, but our cumulative belief in what is past and what may come. If we do not dispose of today's evil, it has a way of accumulating; likewise, if we use today's good, it increases for us. We need not cling to yesterday's hoard of "better beliefs;" they can do nothing for us except to stand behind today's more enlightened understanding; nor need we reach forward to grasp what tomorrow may hold for us of progress and growth. Indeed, the use of today's understanding and opportunities is the only means by which we may expect to grow out of yesterday's limitations into larger tomorrows. Surely today is big enough in which to exercise our present conception of Deity, and inasmuch as we can never hope to find Him either in past or future, but only in the present, why search the future or the past?

The ancient belief in a God of tomorrow, of a far-off salvation and heaven which is always coming and never arriving, has too long hindered mankind from working for the present realizations of good. Such a belief, too, betrays human thinking into strange fallacies concerning the nature of God and His relationship to man. God is not the God of dead yesterdays but of living todays, and Christ demands that we let the dead bury its dead and follow him in today's doing. "Take the manna of today," sings the old familiar hymn; and from the time of the journey through the wilderness until now, this manna has never been known to fail, has always been sufficient to supply the need of all who have been ready to accept it humbly and trustingly.

The abundant proofs of the ever-present sufficiency of good might be remembered with profit by the Christian Scientist who is prone to cling to the articles which have been published in our periodicals. He saves them and rereads them, he spends much time in hunting for them or regretting their loss, time which might be more profitably devoted to the search for the truth set forth in Mrs. Eddy's writings or the practical every-day lessons in Christian thinking and living given in current contributions to our literature. He is too apt to forget that if he thoroughly reads and assimilates the truth thus expressed, he will find it sufficient both for his opportunities and for his needs. It is not that the old articles are not so good as the new, not that Truth or its expression can ever become old, not that we should be unappreciative of past blessings, nor that we should not occasionally refer to something which has been of help to us, when this can be done without too much effort. But the habit of grasping, hoarding, and depending upon certain expositions of Truth which have appealed to us in the past, surely will not quicken understanding as will the habit of daily drinking at the living waters of present inspiration.

Daily receiving should be matched by daily giving. We are living in today, and we need not hesitate to relinquish some of the good which is continually poured out for all. When we rise into that consciousness of ever-present good which is expressed in Barlow's lines, we shall dwell continuingly with the God of today and enjoy the fulness of His blessing:

Of all that was and is to come
The present holds the Mind and cause,
And God lives in eternal laws,
And here and now upholds His throne.

Then rise and greet the signs that prove
Unreal the ages' long lament.
The one far-off divine event
Is now, and that event is Love.

THE STONES OF THE FIELD.

HON. SUSAN HEBER PERCY.

How many of us have escaped the temptation to think and say that if only a certain difficulty in our outward circumstances were removed, we should get on so much better in Christian Science! Are not these the "stones" in our path which appear to make the journey hard, laborious, painful, and slow? A verse from the fifth chapter of Job which occurred in a recent Lesson-Sermon seemed most helpful in this respect. It reads, "For thou shalt be in league with the stones of the field: and the beasts of the field shall be at peace with thee." It seems as if we must make friends, not enemies, of these hard places in our earthly experience, by meeting them with scientific right thinking. Jacob certainly understood this when at Bethel he "took of the stones of the place, and put them for his pillow," and there followed for him the most wonderful vision, or realization, of the allness and ever-presence of God, and he beheld the angels, which Mrs. Eddy tells us are "God's thoughts passing to man" (Science and Health, p. 581).

Those who have honestly striven to follow our Leader's

Digitized by Google

instruction: "Rise in the strength of Spirit to resist all that is unlike good" (*Ibid.*, p. 393), have found that each honest effort has resulted in the discovery that the seeming obstructions have through the effort which they called forth become their best friends, providing an occasion for the effort and the victory; that with the victory comes a clearer vision of those angels which are always near us, though never seen so clearly as when we have been forced by outward circumstances to cling very closely to the Father's hand.

Moses traveled through the wilderness supported by Truth. In handling the serpent, error, under divine instruction, and proving its powerlessness, he found a staff on which to lean. So may we go forward with all courage, knowing that divine Love leadeth us "in the paths of righteousness" and that the seeming obstacles, the "stones," must of necessity, on our nearer approach, prove merely occasions for overcoming, or even resting-places where visions of glory may come to us.

"LIBERTY OR SERVITUDE."

HENRIETTA MARCUS.

ST. PAUL'S noted words, "For the law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death," may serve to remind us that of all the words which mortal mind has coined for our betrayal and confusion, "liberty" is perhaps the most alluring and most guileful. It looks innocent, it sounds honest, but as ordinarily interpreted it may be the merest sham, a figment pleasant to contemplate but unreal and unsatisfying. It is easy to see, in the history of all nations, how ambition, greed, and self-righteousness have masked themselves at times in the guise of freedom and have rallied round their standard that pure and noble with the enticing cry of liberty; it is not equally simple to perceive how often we deceive ourselves with the same device and turn away from the "still small voice" of Truth to seek the fallacy of our independence. On a material basis, freedom can only be conceived in a relative sense, for no such thing exists as an absolute fact in mortal consciousness; paradoxical as it may appear, the nearest approach to liberty, in the best form we can conceive of it, is found in subjection.

The sooner we realize this fact, the readier we shall be to demonstrate the perfect order and harmony of the universe. Humanly we appear to be governed by laws of all sorts, and often in our vain struggles to free ourselves from unjust conditions we call on the name of liberty, not recognizing that we are but exchanging one sort of bondage for another, toiling round in an endless circle of false beliefs, fear, and suffering. In the ordinary tasks of our daily life, in our words as in our deeds, we do well if we always pause to ask, "Am I in subjection to the one Mind, or am I being urged along by some deceptive conceit of mortal thought?" Mrs. Eddy says, "Error of thought is reflected in error of action" (Science and Health, p. 550), and with all humility we are compelled to own that many of our woes arise from the false sense of liberty (when judged from the spiritual standpoint) which education and custom have in the years nursed into a semblance of life and truth.

All history shows us the suffering entailed from mistaking a side issue for the ultimate truth. Most of the fighting has been done for the cause, not for the basic law involved; and this has arisen from the subtle working of mortal mind, deceiving and being deceived. Men strive for riches that they may be free from poverty, and immediately become the slaves of pride or greed; they pray for the sweet liberty of health, and when well are held in bondage by the fear of disease and methods for avoiding it; the righteousness they long for is rendered null and void because they are governed by hatred or envy, and life itself slips by in the stagnation of death when their days are wasted in selfishness and inactivity; and all through the misapprehension of their real existence, their ignorance as to the fact that they are the reflection of one eternal power.

Like foolish children we chase the will-o'-the-wisp of human will and aspiration, and, when depending on material remedies, the nobler our aims the more bitter our defeat. It is only in the recognition of one absolute unchanging law and in complete obedience to that law that we can ever gain the moral and mental freedom for which through countless ages humanity has thirsted; but it can only be attained by the constant practice of humility, meekness, and purity and the understanding of God as the only power. Jesus said, "As the Father gave me commandment, even so I do." He recognized God's dominion, and by perfect submission to that government he conquered all beliefs of the flesh. As Mrs. Eddy expresses it: "The spiritual man's consciousness and individuality are reflections of God. They are the emanations of Him who is Life, Truth, and Love" (Science and Health, p. 336). It is this Christ-consciousness that gives power over sin, sickness, and death, and it is to be gained only by the absolute subjugation of all human beliefs, desires, and appetites to the will of God.

It is quite certain that the word liberty never meant submission of any sort, until the logical teaching of Science and Health changed our views on the subject of freedom. Language is limited, so we must take the words already in use to express many different things. In course of time, through noble endeavor, we shall alter and enlarge the meaning of many terms, and the day may come when subjection to Truth and freedom will convey to us the same idea of nobility and dignity. When we know absolutely, incontrovertibly, that our freedom consists in control over discord, and that we are in subjection to good alone; then we shall cease to struggle for the accomplishment of our own will and find the fulfilment of our desires in obedience to God. In that day conformity to divine law will be recognized as the largest liberty. As Paul expresses it: "The creature itself also shall be delivered from the bondage of corruption into the glorious liberty of the children of God."

NATIONALITY AND RELIGION.

MOSES FABRICANT.

HAVING been born a Jew, and having reached Christian Science through the disappointments of atheism, the question, "Does the acceptance of Christian Science compel a Jew to deny his nationality?" has been presented to me in various ways by persons having knowledge of these facts. Before replying to this question, it is well to come to an understanding as to the meaning of the term Jew. Nationally, the Jew is defined as an individual belonging to the Jewish race, which had at one time an independent government in Asia Minor. Religiously, a Jew is defined as an individual who subscribes to the Mosaic Decalogue and the laws and customs which grew therefrom.

Failing to recognize this distinction, the governments of many countries have compelled the Jew to change his name and in some cases to join the Christian church in order to break up the national spirit. But recently a change has occurred, and Christian missionaries, when proselyting, have recognized this line of demarcation between the Jewish nationality and the Jewish religion, and have avoided any attempt to denationalize the Jew, thus implying that nationality has no bearing on the acceptance of Christianity. Their converts are called Jewish Christians. Thus, in spite of the old adage, "Once a Jew always a Jew," and the dictum of the Christian world that when a Jew accepts Christianity it is improper for him to retain his nationality, the terms Jewish Christian and Jewish Christian Scientist can only help to attract the Jewish nation to the Christian teachings set forth in Mrs. Eddy's writings.

Digitized by Google

As to the name, in considering whether, on accepting the teachings of Christian Science, it should be changed, let us see what the Bible and Science and Health have to say on this subject. Mrs. Eddy says: "The attributes of God are justice, mercy, wisdom, goodness, and so on" (Science and Health, p. 465). Paul says: "Your bodies are the members of Christ," and "the head of Christ is God." Now these members of Christ, God's attributes, are none other than the qualities of divine Mind made manifest in man. It follows, then, that as a name suggests a divine quality, as for example: Abraham—fidelity; Jacob—inspiration; Moses—moral courage (see Science and Health, pp. 579, 589, 592), so our names can suggest these or other scientific qualities, and it is not at all necessary to change them.

Remembering the apostolic teaching that "there is neither Jew nor Greek, there is neither bond nor free, there is neither male nor female: for ye are all one in Christ Jesus," and that names represent the qualities of divine Mind, we may say that any one who accepts the teachings of Christian Science is not less of a Christian Scientist, though he retains both his nationality and his name.

PRAYER.

WALTER SHAW.

THOSE students who have found the truth of Christian Science only after reaching mature age may (like the writer) sometimes discover their thought unconsciously reverting to their former concept of God in creedal theology. Christian people of all denominations have been so long accustomed to regard prayer more in the light of petition or supplication, rather than affirmation, that on coming into Christian Science they can only grow gradually into the truer sense of prayer. It is very important, however, to see positively the great distinction between our former concept of God and the teaching of Christian Science in relation to Deity as divine Principle. To the writer Mrs. Eddy's statements on page 167 of Science and Health appear to give the key-note to all successful treatment or prayer. Sometimes we may wonder why our success is so limited, even when our faith includes the certainty of God's power to heal. May not this be through our lack of understanding rather than desire? We may be honestly striving, and yet fail to grasp the scientific attitude of thought essential to the demonstration of truth upon a given problem. Belief and faith are not in themselves sufficient; clear, emphatic understanding of the divine Principle that heals, is also needed.

The writer well remembers a student, more advanced than himself, who once said to him, "Mind that you are not mesmerized into believing in the reality of that case." The full force of the remark was not quite apprehended at the time, although it was felt that the advice was kindly given. Since then, however, he has clearly realized how futile it is to expect to overcome an evil condition while mentally admitting its reality. Our text-book is clear and decisive on this point, but it takes years of study with most of us really to assimilate even a tithe of the vast truth this book contains. The page mentioned has recently become illuminated by the search-light of demonstration, and it is in the hope of helping some fellow-worker that these lines are penned.

When conditions arise where the help of divine Science is claimed, our first step should be to realize that good alone exists, and that all evil is false, because it is evil. Evil has nothing to do with the man that God made, and in reality there is no other; therefore we need not "implore a corporeal God to heal the sick" (*Ibid.*, p. 167); but we have to understand clearly divine Principle, and this teaches us that the perfect man of God's creation is the only one that truly exists. The mortal counterfeit is but our false sense of the real man, and this false sense of man will disappear in proportion as we know the truth of being to be true; that is, let "Soul-existence in the place of sense-existence" become an actuality in our present consciousness.

LACK OF UNDERSTANDING.

CALEB H. CUSHING.

OCCASIONALLY we hear some one remark, "I have studied quite a little, but I can't seem to understand Christian Science." Mrs. Eddy declares that "the sermon on the mount is the essence of this Science" (Science and Health, p. 271), and it would be well, therefore, for such a one to study earnestly this sermon as found in the Gospel of Matthew, to see wherein he has failed to grasp the fundamentals of scientific Christianity. For instance, where Jesus says, "Blessed are the pure in heart: for they shall see God," the student is reminded of the many admonitions and explanations in Science and Health and the other writings of Mrs. Eddy, respecting the necessity for absolute obedience to this requirement of our Master in the daily and hourly striving to be "pure in heart" (thought), in order to "see God" (be conscious of good). The student also realizes that this means constant endeavor to hold pure, healthy, and loving thoughts in place of impure, sickly, and hateful ones, to purify thought in accordance with Christ's teachings as exemplified in Christian Science.

Very soon it dawns upon him that he understands far more of Christian Science than he puts into practice, and that his difficulty was not so much a lack of understanding as the failure to make this understanding practical. When one has reached this point, and is ready and willing to apply his present understanding of our Master's teachings Christianly and scientifically, he finds that he can here and now begin to cope successfully with the problems of humanity and heal its sickness and sin. Improving the talents we have, fits us to receive more; and, according to Christ's precious promises, by doing our very best today, we pave the way for that advanced understanding which leads to all happiness and bliss.

With the discovery and recent perfection of the new ultra-violet light microscope, and the companion apparatus, the micro-photographic camera, with rapidly moving sensitive films, it seems that the extreme limit of vision of the human eye has been reached. Inorganic and organic particles have been seen, and these so minute that [the smallest] objects visible in the most powerful old-style instruments are as huge chunks in comparison. An entire microscopic universe as wonderful as the sidereal universe, the stellar structure, has been revealed. This complexity actually exists; but exploration has scarcely commenced. Within a hundred years, devoted to this research, the micro-universe may be partially understood. Laws of micro-movements may be detected and published in text-books like those of the gigantic universe of suns and their concentric planets and moons.

I cannot look into these minute moving and living deeps without instantly believing that they are mental—ever motion is controlled by mind. The longer I look at the amazing things the deeper is this conviction. This micro-universe is rooted and grounded in a mental base. Positively, and without hope of overthrow, this assertion is made—the flying particles know where to go. Coarse particles, those visible in old-time microscopes, when suspended in liquids, were observed to be in rapid motion, darting to all geometrical directions with high speed. But the ultra-microscope reveals moving trillions of far smaller bodies, and these rush on geometric lines and cut out angles with the most incredible speed, specific for each kind and type.

SELECTED ARTICLES.

[*Collier's Weekly.*]

One of the best newspapers, in our opinion, in the United States is *The Christian Science Monitor*. It prints the important news and leaves out the dismal shocks which make up such a large part of journalism. The *Monitor* is guided by a great and fertile principle. It has purpose, but it realizes that men are influenced toward the good when the good is enthusiastically shown, more than they are when evil is exhibited and condemned. The positive in the world always counts more than the negative. The best lesson is conveyed by the best example.

[*Thompsonville* (Conn.) *Press.*]

The request that a court shall define Christian Science is a move that may have far-reaching consequences. Heretofore lay judges were called upon to decide questions that revolved around the external appurtenances of faiths, such as the right and limitation of property-titles. The inner character of a creed was not considered to come within the scope of a lay court's jurisdiction. If secular judges are now given the power, by this precedent, to determine what is and what is not contained in any church's deposit of faith, the way is being paved for unending dispute and the state is being urged toward a goal which wisely it has shunned. The introduction of Erastian policy is not without peril to a nation which has thrived on absolute separation of church and state.

[Frederick Dixon in *Bournemouth* (Eng.) *Guardian.*]

It appears from the lecture delivered at Bournemouth by the Rev. ———, reported in a recent issue, that that gentleman has been making a tour of America, and that among the places which he visited was Boston, where he was much struck by the Christian Science church. This building, which is really a very beautiful one, seems to have started him moralizing, and his own moralizing has, I am afraid, rather run to seed, just as he urbanely says the intellectualism of Boston has in adopting the credulity born of Christian Science.

Now it is a very dangerous position to take up, that those who differ from you are, *ipso facto*, credulous. The Christian Science movement numbers in its ranks thousands upon thousands of educated and cultivated men and women, many of whom have obtained the highest ranks in their professions and businesses. Yet, because these people have adopted a religion from which this clergyman dissents, he dismisses them as credulous. It is very simple as an argument, but not particularly convincing.

Christian Science is at once the simplest and the sanest form of teaching that the world could possibly be asked to accept. It is so simple that the children in the Sunday School are able to understand it and apply it in their lives, and yet it is so sane that no man is asked to accept it as a mere blind belief, but only as a result of his own observation and demonstration. The key-note of Jesus' teaching was that those who believed in him would be able to do the works he did. In this way he made what has been termed the miracle, the object-lesson or test of a man's understanding of Christianity. The Christian Science church has accepted the test demanded by Jesus. It requires that its followers should not be satisfied with theories, but should take the next step and prove those theories by demonstration. There does not appear to be anything particularly credulous in this. It seems to Christian Scientists to be rather less credulous than the famous definition of faith by St. Gregory, that there is no quality of faith in accepting anything the truth of which has been demonstrated. The writer of the epistle of James distinctly states that faith without works is dead, and Christian Science teaching demands that a man should prove his faith in the twentieth century just as much as in the first century by preaching the gospel with signs following.

[E. M. Ramsay in *Dundee* (Scot.) *People's Journal.*]

I have been a keen church-goer and student of the Bible since childhood, and I am convinced that the teachings of Christian Science are wholly Scriptural and give a man greater power to resist evil and manifest good than any other method known on earth today. All Christians acknowledge that God is the only cause and creator, and accept the New Testament statements that He is good, that He is Love, Life, Truth, Spirit. If this be true, then His creation must also be in its essential nature the effect, outcome, expression of good, of Love, of Life, of Truth, of Spirit; and anything which is not the expression of God's nature cannot have Him as cause, and since He is the only cause, can have no real cause, and therefore must be simply a delusion.

The more we think this over the more clearly we see that its logic is unassailable, and yet so contrary is it to our experience, and so surprising, as at first to seem impossible of belief. He who would put this theory to the test must daily follow the apostle's advice, and strive to think of the things which are true, honest, just, pure, lovely, of good report, virtuous, worthy of praise, and constantly maintain that sin, sorrow, and disease do not proceed from God, and form, therefore, no part of man.

The experience of an ever increasing number of people, drawn from all classes of society and from many nations, testifies to the purifying effect of this process. It seems hardly necessary to deny the preposterous assertion that Mrs. Eddy offered to exempt people from their sins. She pointed all men to the one Saviour, Christ Jesus, and showed that more than mere belief in him is required in a Christian; it is necessary so to understand the Master's teachings that it is possible to keep his commandments,—to return good for evil, to reform the sinner, and to heal the sick.

[John M. Dean in *Commercial Appeal*, Memphis, Tenn.]

The only teaching of Christian Science regarding animal magnetism in any of its assumed forms is that it is a false belief and as such is neither to be believed nor feared. It is a gross form of superstition, and on page 83 in Science and Health, Mrs. Eddy says: "Between Christian Science and all forms of superstition a great gulf is fixed, as impassable as that between Dives and Lazarus." An entire chapter of this work, entitled "Animal Magnetism Unmasked," is devoted to its exposure and contains a brief history of the modern form of mesmerism or animal magnetism.

It seems that in 1784, Mesmer caused quite a furore in Paris by his pretended discovery of a new mental force which was called after him, mesmerism. In order to ascertain the truth of his assertions the French government appointed a commission with power to make a thorough investigation of the matter. This commission, of which Benjamin Franklin was a member, reported as follows: "In regard to the existence and utility of animal magnetism, we have come to the unanimous conclusion that there is no proof of the existence of the animal magnetic fluid; that the violent efforts which are observed in the public practice of magnetism are due to impressions made upon the senses; and that there is one more fact to be recorded in the history of the errors of the human mind, and an important experiment upon the power of the imagination." Mrs. Eddy quotes this report with unqualified approval in Science and Health, and adds on pages 101 and 102: "In no instance is the effect of animal magnetism, recently called hypnotism, other than the effect of illusion. . . . Its basis being a belief and this belief animal, in Science animal magnetism, mesmerism, or hypnotism is a mere negation, possessing neither intelligence, power, nor reality, and in sense it is an unreal concept of the so-called mortal mind."

Digitized by Google

The writer has been a student of Christian Science for more than twelve years, and in all that time he has never read a line from Mrs. Eddy's pen nor heard a word uttered by any person instructed in Christian Science that gave power or reality to anything savoring of such a "hoodoo" as animal magnetism. It is passing strange how some critics airily brush aside all first-hand evidence regarding Christian Science, and then out of the fulness of their ignorance presume to enlighten a benighted world concerning a subject of which such critics have, at best, only a superficial and hearsay knowledge.

The attempted use of such a thing as animal magnetism by a professed Christian Scientist has always met and will always meet with condemnation and firm discipline, but to charge Mrs. Eddy with being the author of a teaching that she abhors is to endeavor to befoul the stream and then to accuse its pure and limpid source of causing the resulting turbulence of the water. Christian Scientists are warned against errors of every kind, just as school children are warned against ignorance, and Christian Science dispels the one just as education dispels the other. In neither case is there the slightest indorsement of the thing to be overcome, and by letting in the light both are dissolved into their native nothingness.

[Alfred Farlow in *Brockton* (Mass.) *Enterprise*.]

A critic declares that "Christian Science denies the existence of matter;" then adds, "The Bible says God created the earth, and man's body out of dust." Christian Science accords exactly with the teaching of the Scripture, that "in the beginning God created the heavens and the earth," although it disagrees with the materialist as to the constituency of the heavens and the earth which God created. It plants itself unreservedly upon the Scriptural teaching that the creator and only cause is Spirit, and is wholly consistent with the scientific proposition that "like begets like," that the creation of Spirit is spiritual, and man was made in God's own image and likeness.

The gentleman declares that "to the Christian Scientist filth is as healthy as roses." I am wondering if he holds an acquaintanceship with any Christian Scientists and if he has found them less cleanly than the rest of his neighbors. If not, then he has the evidence that he has misjudged concerning their belief, for one naturally practises according to his belief. Christian Science does not undertake to insist that filth is cleanliness or that evil is good. It draws the line emphatically between the pure and the impure, and insists that one's life must be purged from the impure. Thus it may be noted that on the basis of Christian Science every Christian Scientist is strongly in favor of reasonable sanitary methods, pure air, pure food, because the purest and best on the human plane most nearly approach the spiritual, and he believes in the old adage, "Cleanliness is next to godliness;" that is, cleanliness follows closely in the train of godliness.

The gentleman declares that "Christian Scientists deny the Bible in denying the reality of Jesus Christ." Christian Science indorses everything that the Bible teaches concerning Christ Jesus—that he was manifested in the flesh and rose to the full consciousness of his spiritual individuality and passed beyond human perception, thus proving certain facts concerning the Science of being which were necessary for mortals to understand in order to follow his example.

He declares that "Christian Science opposes the Bible in denying the reality of sin," and "that it teaches that sin cannot be forgiven." Christian Scientists recognize that sin exists as an evil sense which must be detected and abandoned in order that man may be really man and thus win the harmony which belongs to the real man. Christian Science advocates that sort of forgiveness which destroys sin. Christian Science advocates prayer without ceasing, and we think it is safe to point to the results of Christian Science prayer as convincing evidence that Christian Scientists do pray and that they pray according to the way outlined in the Scriptures.

He declares that "the cures of Christian Science are overestimated." As a matter of fact, only a small percentage of Christian Science cures are ever mentioned to the public. He says "persons are killed by being kept away from physicians' care," and he adds, "our cities are full of people who have turned to Christian Science and then have gone to the physicians too late." He forgot to mention that these same persons had been under the physicians' care previous to having applied to Christian Science, and that, therefore, they had taken up Christian Science "too late." What shall we say of the fifty millions of persons who die every year under medical treatment, many of whom never even heard of Christian Science? Were they "killed" by physicians? Again, since from seventy-five per cent to ninety per cent of those who turn to Christian Science for help have already failed to receive relief from medicine, would it not be proper to say that they were already dead to all intents and purposes before they turned to Christian Science, and that they had been "killed" by medicine, if, indeed, we are to accept the gentleman's logic. From the mere fact that some people fail to recover under Christian Science treatment, is it proper to state, in the language of the gentleman, that "Christian Scientists neglect dying women, and let babies die in pain"? If so, what shall be said of the hundred and forty thousand men, women, and children who die daily under medical treatment?

While the gentleman is on the subject, he should consider the failures of medical practice as well. What the people want is to know the comparative results of Christian Science practice. The gentleman says that "Christian Scientists let appendicitis go to septic peritonitis." I happen to know of a case of appendicitis that had gone to "septic peritonitis" under medical treatment. The doctors had planned to perform an operation, but concluded that it was too late, reporting that the patient was already in a dying condition. As a last resort she turned to Christian Science and was healed. On the other hand, one of my nearest neighbors, a healthy, robust man, was taken with appendicitis and died in a Boston hospital as the result of an operation.

Christian Science does not profess to "make its followers rich." It does not teach that riches are essential. It lays its stress upon the importance of spiritual advancement, although it holds that whatever is needed in the material will follow, even as bodily health follows the spiritual regeneration of the Christian Scientist.

[Nellie M. Johnson in *Omaha* (Neb.) *Bee*.]

No one can correctly analyze a problem in mathematics without a practical knowledge of its fundamentals; likewise, no one is competent to judge Christian Science unless he possesses sufficient understanding to demonstrate, in a degree, its teaching. From the view-point of demonstration seeming "vagaries" disappear and adverse criticism yields to scientific reasoning. By the passing on of Mrs. Eddy the Christian Science church has lost a wise counselor, but it is in no danger of disintegrating, for the organization is the outgrowth not of her personality, but of her teaching, which remains intact to guide Christian Scientists individually and collectively.

Christian Science is not an "American" invention, but the discovery of the availability of God's law in every age and its adaptability to the needs of all mankind. It restores the function of physical healing to religion through the understanding that theology and medicine are one and inseparable in essence and action, overcoming both sin and sickness. Operating as spiritual law, it is in no way allied to suggestive therapeutics, which acts through a belief in sentient matter. Christian Scientists, content with a de-

Digitized by Google

monstrable knowledge of good, have not in the past practised mental suggestion, nor will they in the future adopt its methods, but will pursue their own course, undisturbed by conflicting opinions.

[A. L. Worthen in *Miami* (Okla.) *Record-Herald.*]

Our critic says that we do not believe in the reality of sin or disease. The writer has been studying authoritative works on Christian Science for a number of years, and has yet to find the statement that either sin or disease does not seem real to the average mortal man. Christian Science does teach, however, that neither sin nor disease is real in the sense that God is real, for to be so they would necessarily be eternal and there would be little hope of our ever being free from them. While Christian Science differs from some other theories in respect to the nature of sin and disease, it recognizes that they exist in erring mortal experience and must therefore be grappled with and overcome by divine power.

As to the assertion that Christian Scientists do nothing for the sick but to tell them that they are not sick, that there is nothing the matter with them, that they just think they are sick, and let it go at that, it would be difficult for one to make a statement farther from the truth than such a one as that, as any one who has taken the pains to investigate Christian Science knows. It seems that, irrespective of what our clerical critic may think of Christian Science, it continues on its mission of healing both sickness and sin. Any student of the Bible should be familiar with the method of treatment employed by Christian Scientists, for it is certainly made plain by that book from beginning to end.

It seems to offend our critic's sense of what is decent and proper for one who is at least trying to do the work laid out for those who would be followers of the Master to call themselves Christians. It seems to be customary for one who is proficient in music to be called a musician, and those who are able to demonstrate mathematics are sometimes called mathematicians, and I ask him in all fairness why he objects to those who are doing, in a degree at least, the work laid out by the master Christian calling themselves Christians.

[W. C. Williams in *Baltimore* (Md.) *American.*]

Christian Scientists do not give much power to faith without works. It is in good works and in endeavoring to work toward and live up to their highest ideals of the truth, that they come nearer to God and the understanding of His law, and it is the demonstration of this understanding that heals the sick. Faith in a power apart from God is not reason, and the mental and bodily condition of the majority of mankind today proves it. Christian Science is an absolute statement of the true man and his relationship to God, and Christian Scientists are growing toward the realization of these statements and daily proving their growth; but they do not claim that they have entirely discarded "the old man" and put on the new, or approximated the full manifestation of the power of Truth. Our friend is right, accident has no more place in God's law than has disease.

"Realist" states that "the great commission of the Master was: 'Go, teach all nations to observe whatsoever I have commanded you.' The church had better stick to that—the intellect, the heart, the conscience, the will—and leave to the medical fraternity the healing of the body." Now this seems to be the trouble with our critic as well as with "all nations;" they have not "observed." Jesus did not compromise with a power apart from God, but demonstrated God's all-power in healing the sick in body and mind, and one of the commandments that he requested to be observed by those who believed on him was to preach the gospel, to heal the sick, raise the dead, and cast out demons.

We do not suppose other denominations have statistics of the death rate of their members any more than have Christian Scientists, and such comparisons would be, at best, of little value. As the majority of Christian Scientists are those who turned to it when all else had failed, that alone would seem to answer the question, but the *Broadway Magazine*, to satisfy itself and its readers, investigated a large number of cases of healing through Christian Science some time ago, and perhaps the following quotations from its editor will more fully answer the question of "Realist":—

"These records [on file in office of Christian Science committee on publication, Metropolitan Building, New York city] give specific and complete details of thirteen thousand eight hundred and seventy-six cases treated by Christian Science in the state of New York. Of this number eleven thousand two hundred and forty-four patients acknowledge definitely that they were either completely cured or permanently benefited by Christian Science. Four thousand eight hundred and ninety-five of these patients were either given up by physicians or had despaired of receiving relief from medical treatment. The two thousand six hundred and thirty-two remaining cases were still under treatment, incomplete reports being made for statistical purposes. Of the total number fifty-eight died.

"The records cover practically every well-known human disease or ailment. Many of the cures date back over twenty years; the great majority go back more than five years. No testimony is given so closely following a cure that there could be any doubt of too hasty judgment on the part of the patient.

"The authenticity and validity of these records are above question."

[Charles K. Skinner in *Bay City* (Mich.) *Times.*]

The cause of Christian Science was founded so entirely on the Scriptures and the teachings and works of Jesus Christ, with the understanding that God is its divine Principle, that no earnest student or seeker can be disturbed concerning its future. They know that upon themselves devolves the duty of living up to the teachings of its Founder, Mrs. Eddy, as laid down in "Science and Health with Key to the Scriptures." As every statement therein has been proved true by repeated demonstration, they are sure that if their faithfulness is equal to their understanding, the religion they have espoused will not only stand against the assaults of misapprehension and disbelief, but through its ministrations of peace and comfort it will continue to enlarge its borders as it has in the past.

The whole matter summed up is this, that those who have no moral or material interest in the growth of Christian Science, but rather who are opposed to what they think Christian Science is, are the persons who are the most active in their prognostications. It is said that the wish is father to the thought. Sometimes it is.

[Written for the *Sentinel.*]

MAN'S DWELLING-PLACE.

HELEN WARD BANKS.

WHY do we let our thoughts run to and fro
O'er the low levels of this restless earth?
Giving our smiles to what we miscall mirth,
Dropping sad tears for that we name our woe,
While all the spreading hills above us show
Our Father's many mansions standing wide,
Where joyous thought forever may abide,
Comrade to Truth, and free from mortal foe.
Oh, let us cease to be content to go
Aimless and homeless! Let us live with God!
His child is born of Spirit, not of clod,
And shall the heights of all His mansions know.
We shall not visit them with random flight,
But dwell therein serenely, day and night.

Digitized by Google

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

THE ORGANIZATION OF BRANCH CHURCHES.

PRIMARILY a Church of Christ, Scientist, stands for the promulgation of Christ's Christianity,—the preaching of the Word, and the healing of the sick through the demonstration of the teachings of the Master, whose "great commission" to his disciples is the authority and the standard for his followers in all ages. The Church of Christ, Scientist, likewise stands for the manifestation of divine Love in the affairs of men, and for that unity of action and harmony of purpose which always accompanies consecrated effort to do the will of the Father, even as it was done by Christ Jesus.

It is self-evident that in the forming of such a church as this, all animosity, all self-will, all exaltation of personality, all strife and emulative ambition should be put aside, and that there can be but one legitimate reason for its institution in a city wherein there are already one or more branch churches; namely, the actual need of providing for the many that the older organizations are unable to accommodate for lack of room. Only under such conditions as these is there any occasion for the establishment of another church.

In last week's issue of the *Sentinel* the organization of Tenth Church of Christ, Scientist, of Chicago, was noted, and we have since been informed that this church has held its initiatory public service and has taken its rightful place in the Master's vineyard as a vigorous branch of The Mother Church. The particular reason for again referring to this newest branch church is that it is a case in point. It was found that the congregation of Fifth Church had so increased in numbers that the church edifice was no longer adequate to the demands on its capacity. After due consideration of the situation, it was decided that a hundred or more members should withdraw and form a new church in a neighborhood which seemed to be most desirable, and it is significant that, although there were about four hundred in attendance at the first Sunday service of Tenth Church, the congregation of Fifth Church was not appreciably diminished.

All this is as it should be, and the sturdy growth of a church thus organized can but tend to the increase and prosperity of the cause of Christian Science. Unfortunately, however, the reverse of these conditions has obtained in some instances, and as a consequence churches which had not yet reached the fulness of their growth and usefulness were depleted and weakened, in order that some few persons might have the satisfaction of attending a church which was more conveniently situated for them, or more to their liking in some other personal way. The net result of such action could be nothing more than two struggling churches with increased aggregate expenses, instead of one strong and prosperous church which at the proper time would expand into two churches, each vigorous and well able to meet whatever problems might present themselves.

As Christian Scientists we have need to remember that in the organization of churches, as well as in all other matters pertaining to the advancement of Christian Science, divine Principle, not personality, must guide all our actions. It is incumbent, therefore, on every Christian Scientist to give his best efforts to the upbuilding of the branch church of which he is a member, to the end that it may amply fulfil its mission. Have we not, indeed, a right to look for such loyal and unselfish conduct as this on the part of all who have declared themselves to be the followers of Christ Jesus, and who have before them the inspiring example of one who let no personal considerations turn her from the task to which she had been called. How this call was obeyed, Mrs. Eddy tells us on page 226 of Science and Health, and there is no shrinking from the conflict in this triumphant declaration of her confidence in omnipotent good: "I pressed on through faith in God; trusting Truth, the strong deliverer, to guide me into the land of Christian Science, where fetters fall and the rights of man are fully known and acknowledged." Surely we can do no less than follow so dauntless a Leader!

ARCHIBALD MCLELLAN.

"THE EXACTIONS OF SCIENCE."

THERE is nothing so uncompromising as the truth, which never sways in the slightest degree from the standard of its own integrity. It is therefore absolutely intolerant of error, which fact explains the meaning of the Scripture phrase, "The anger of the Lord," the declaration that "it is a fearful thing to fall into the hands of the living God." Christian Science, because it is science, necessarily expresses the unyielding demands of divine law. To those who, while coveting physical betterment, have no interest in the spiritual life, these demands seem exacting, and they are in the sense that the individual must be conformed to the eternal right, but not in the sense that he is required to sacrifice any good thing. Of this Mrs. Eddy has said, "The petty intellect is alarmed by constant appeals to Mind" (Science and Health, p. 130). This inertia of false sense was brought into prominence by Christ Jesus when he looked upon the city of his fathers and exclaimed, "O Jerusalem, Jerusalem, . . . how often would I have gathered thy children together, even as a hen gathereth her chickens under her wings, and ye would not!"

Truth demands lawfulness, but it is not responsible for the drudgery and discomfiture of human experience: these are the incidents of ignorance and moral obliquity. Loyalty to divine law is the key to all the possibilities of spiritual privilege. Experimenting with unfamiliar elements, the chemist may be utterly confused with the way they demean themselves when brought into contact. Let him but chance, however, upon a ratio of combination which proves invariable, and immediately he begins to rejoice. He has found a law of chemical affinity, and at once rises from the plane of experimentation to that of command. The exactions of Truth are but the reflex of its supreme reliability, and it imparts its own authority and efficiency to all who accept its leadership; hence Jesus could say, "My yoke is easy, and my burden is light."

Much criticism has been passed upon Christian Science because of its demand that we ignore the testimony of material sense and recognize the reality of the invisible; and yet a very little thought will make it apparent how superficial this objection is. All intelligent people will acknowledge that many of their most important possessions cannot be seen; for instance, they themselves. Each knows himself in experience as something entirely different from matter. He knows that he is not subject to special measurement, that his selfhood is neither thick nor thin, neither long nor short. He is aware too that even so important a person as his mother has never been seen by him, the material appearance being only the seeming vesture of her real selfhood. In common thought and conversation we identify reality with spatial projections, but we all know well that behind all sense phenomena there is an invisible reality which gives them their meaning. The requirement of Christian Science that we look beyond the veil of sense into the realm of Spirit if we would find the real, is not a far-fetched and impossible thing. Indeed it is the only logical thing any believer in God as Spirit can do.

Christian Science is further decried by the critics, because it counsels us to look to prayer, spiritual realization, alone,

Digitized by Google

for the healing of physical ills. To one who believes in the reality of matter, and its disarrangement, or disease, this seems quite ridiculous, and so it is. When, however, we perceive in Christian Science that sickness, like all other so-called material facts, is purely phenomenal, and that causation pertains to the realm of mentality alone, then the demands of Science become simple and rational. That aught but Truth can cast out error is simply unthinkable. St. John was right, God's commandments "are not grievous." Understood in their true import, the demands of Science become both righteous and reasonable.

JOHN B. WILLIS.

"THE POWER, AND THE GLORY."

ALL religious teaching has emphasized the power of God, even to the extent of what has been termed "special intervention" in the affairs of men, but it remained for the Discoverer of Christian Science to make the startling statement that there is in reality no other power than the divine, and that this power is absolutely good. This declaration was based upon Mrs. Eddy's deductions from the Scriptures, especially the Gospel accounts of Christ Jesus' words and works, and her own demonstrations along the line of spiritual law. Here it should be noted that students of Christian Science are constantly urged to ponder deeply these accounts, and to put their understanding of spiritual law to the fullest proof, always abiding by the fundamental truth that "there is no power apart from God," and that "to acknowledge any other power is to dishonor God" (Science and Health, p. 228).

The Christian Scientist usually begins to test the truth of the statement that "there is no power apart from God" in the healing of disease. Until this spiritual fact was brought to his attention he had, unconsciously perhaps, accepted the generally held belief that disease has very great power, that it can kill a man; and this, too, in spite of the unqualified statement of the great Teacher, "If a man keep my saying, he shall never see death." It is very startling to be told in Christian Science that good and good alone can proceed from God; so startling, indeed, that thousands have been arrested on their way to the grave and made to face toward the sunrise, and to catch for the first time the meaning of the psalmist's words, "He that is our God is the God of salvation; and unto God the Lord belong the issues from death."

In many cases the recognition of the all-power of God has brought instantaneous healing from the most dreaded diseases, but it cannot be denied that in every case the healing is dependent upon the scientific clearness with which patient and practitioner realize this eternal fact and cling to it tenaciously in the face of all evidence to the contrary. Nor is this vital truth confined to the realm of so-called physical healing. Reference is made in the Bible to the divine power as applied to all human conditions, in hundreds of texts which deal either directly or inferentially with this question. From these we learn that the application of the great truth of the divine all-power enables those who scientifically understand it to meet fearlessly any and every human problem, whether of men or nations. Without this understanding on the part of Moses the children of Israel would have turned back at the Red sea to worse bondage than they had ever known; but because they understood God's power, they walked triumphantly through the parted waters and sang: "Thy right hand, O Lord, is become glorious in power," a truth which has again and again been proved in human history, especially when Christ Jesus walked among men and demonstrated the power of divine Truth over sin, disease, and death. He said, moreover, "I give unto you power to tread on serpents and scorpions, and over all the [asserted] power of the enemy."

What if Babylon, with all that its name implies, should defy divine justice and seek to crush out human rights? That will be the time to remember that God is supreme, that His "is the kingdom, and the power, and the glory for ever"! It is well to remember this whenever error seeks to assert a power opposed to God, and to recall Job's words, "How hast thou helped him that is without power? how savest thou the arm that hath no strength? . . . Lo, these are parts of his ways: . . . but the thunder of his power who can understand?"

ANNIE M. KNOTT.

AMONG THE CHURCHES.

NEW YORK.

[The following resolution, which was adopted at a meeting of representatives of the branch churches in Greater New York, held April 14, is indicative of the spirit of unity and brotherliness which prevails in the New York field, and augurs well for the growth of our cause there. —EDITOR.]

Whereas, there exists in the hearts of all Christian Scientists of Greater New York a warm love for and sense of unity with all other Christian Scientists, which they are at all times desirous of expressing; and

Whereas, First Church of Christ, Scientist, of Brooklyn, is engaged in the erection of a handsome church edifice, and has already raised more than one half of its cost;

Therefore, the committees in conference recommend that the various churches and societies of Greater New York take advantage of this opportunity to prove their oneness in thought and purpose by taking up a special collection on Sunday, May 14, for the building fund of First Church of Christ, Scientist, of Brooklyn.

WEST PALM BEACH, FLA.

Within the next eighteen months and perhaps within a year, there will be a pretty little church edifice erected at the northwest corner of Poinsetta street and Hibiscus avenue, on the property there which has just been acquired by First Church of Christ, Scientist, of West Palm Beach. While the house of worship will be eventually erected there, according to present plans nothing definite can be given out as to the design or plan of the edifice, but it will be well arranged and planned and will be erected quite in harmony with the needs of the congregation at the time the church is built and for accommodations for the growth of the church-membership.

The sale of the property has just been completed this week and the deeds are being made out and will be filed with the clerk of the county court. The membership of First Church of Christ, of West Palm Beach, is steadily growing, the meetings being held in the Masonic Temple on Clematis avenue, where also is located the reading-room, which is daily open to the public.—*Tropical Sun.*

WINNIPEG, CAN.

First Church of Christ, Scientist, will commence holding regular services in its new building at the corner of River avenue and Nassau street tomorrow morning [March 26] at eleven o'clock. For some time past the services of this church have been conducted in the Liberal Club Hall on Notre Dame avenue, and although only the ground floor of the new building is completed, this will be used until the completion of the main auditorium, which will seat about a thousand people. Work on the structure commenced about ten months ago.

The Christian Scientists in Winnipeg have been organized for about fourteen years, during which time their membership has been greatly increased.—*Winnipeg Telegram.*

THE LECTURES.

BOSTON, MASS.

The semiannual lecture on Christian Science under the auspices of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., was given Thursday evening [April 20] at 8 o'clock by Clarence C. Eaton, in the church edifice, Falmouth, Norway, and St. Paul streets. The usual large audience was in attendance when the First Reader, Judge Clifford P. Smith, introduced the lecturer. Judge Smith said:—

It is a pleasure to welcome you here tonight, for I am sure that the present occasion will be a profitable one. No subject can be more important or more practical than Christian Science. It is needed in working out our daily problems and our ultimate problems; it pertains to our usefulness, our happiness, and our salvation. The speaker whom you have come to hear is well qualified to speak on this great subject, and it is hoped the lecture will at least show what Christian Science is capable of doing for humanity and lead to a more intimate knowledge of it.

CHELTENHAM, ENGLAND.

The Cheltenham Christian Science society had a lecture on the subject of Christian Science in the Town Hall on March 4. The audience was large and most attentive. The lecturer, Bicknell Young, was introduced by Mayor the Hon. William Rowley, who said in part,—

I should like first of all to welcome in the name of the Cheltenham Christian Science society all those who have come today to hear the lecture. Christian Science is a much discussed topic at the present time, and we hear of it wherever we go. We who have been benefited by its teachings in the past are only too anxious that others should derive the help we have from it, and to this end we are all interested that the good news of Christian Science should be spread abroad. There are many ways of doing this, and the system of lectures given by lecturers appointed by the Board of Directors of The First Church of Christ, Scientist, Boston, is one of the best ways.—*Correspondence.*

UNIVERSITY OF MINNESOTA.

Prof. Hermann S. Hering delivered a lecture on Christian Science in the University Chapel, Saturday evening, March 11, under the auspices of the Christian Science society of the University of Minnesota. He was introduced by William Edwards Brewster, president of the society, who said in part,—

During past years many students in this university have been benefited by Christian Science. Desiring to have their student friends know more about this healing truth, several of those who had been helped met together last May and organized the Christian Science society of the University of Minnesota. This society is similar in form and purpose to Christian Science organizations at Harvard, Illinois, California, and other universities. Meetings, which are open to all members of the university, are held on the first and third Friday evenings of each month during the college year. At these meetings experiences and testimonies are given which show how Christian Science helps the student to meet the various problems of college life.

Correspondence.

COFFEYVILLE, KAN.

The Jefferson Theater was well filled Sunday afternoon [March 12] to hear Frank H. Leonard of Brooklyn, N. Y., lecture on "Christian Science: The Comforter of Promise." I. H. Patton introduced the speaker, saying in part,—

Christian Science bears the distinction of being the only religion ever founded by a woman, and its Founder, Mary Baker Eddy, occupies an enviable position among the world's most famous women.

Christian Science bears the further distinction of having had the most phenomenal growth of any religious movement. In forty years this great movement has encircled the globe, and today Christian Science services are being held in every country on this globe. With the Bible in one hand and the Christian Science text-book in the other it has gone about the "Father's business" and followed the great Master's command "to preach the gospel and to heal the sick;" it has taken into its fold the sick, the sinning, and the dying, and made them better, healthier, and happier men and women.—*Coffeyville Journal.*

DENVER, COL.

William R. Rathvon delivered a lecture on Christian Science under the auspices of Third Church at the Woman's Club Building on the evenings of March 13 and 14. He was introduced the first evening by John R. Smith, who said in part,—

It is alike a pleasure and a privilege to introduce a Christian Science lecturer. Custom seems to allow that when the introduction is by a friendly outsider, as I am, some point of view of an outsider may be very briefly stated of the Christian Science religion as a religious force. Its wonderful growth has without doubt been largely contributed to by the willingness of its advanced thinkers to submit fully to the receptive mind of the American people the basis of truth upon which it rests, and to discuss freely every question involved in the fundamentals of its teachings.

Correspondence.

NEWTON, KAN.

Willis F. Gross of Boston gave a lecture on Christian Science last night [March 21] in Masonic Hall which was well attended. The introductory remarks were made by S. V. Shelp, who said in part,—

We are passing through the greatest period of progress and prosperity of the age. We no longer criticize the optimism of our great inventors when they picture greater things to come. Wonders of the recent years have taught the world to be less skeptical and more tolerant. The ignorance and intolerance that persecuted our forefathers and drove them to a strange land has been greatly changed by their perseverance in demonstrating the courage of their convictions that there is a better way.

The progress of today is not confined to the material. The inquiring mind is reaching out to know more about the spiritual, more about its relation to the universe and how to effect more harmony, peace, and health for mankind. Thousands are testifying daily to Christian Science, —this new-old religion—by the regeneration of their lives from sickness, distress, and sorrow to health and happiness.

Kansan-Republican.

APPLETON, WIS.

Francis J. Fluno, M.D., delivered a lecture on Christian Science at the Appleton Theater, March 23. He was introduced by Walter Ferguson, a trustee of the local church, who said in part,—

Christian Science is in the world with a message, a message of regeneration and redemption for the sinful, of hope, health, and good cheer for the sick and the sorrowing; and when the world understands what Christian Science really is, and what it teaches, misrepresentation and unjust criticism will cease, while the mistaken and even absurd statements that are made regarding its teachings will no longer find expression. It is for the purpose of

Digitized by Google

revealing the truth concerning this sublime Science that this board of lectureship has been instituted; for this purpose the Christian Science church of this city has provided this lecture to which the public has been cordially invited.

Correspondence.

MINNEAPOLIS, MINN.

Introduced by Governor Eberhart, the Hon. Clarence A. Buskirk, speaking for Fifth Church, addressed a Christian Science gathering at 3:30 p.m., in the Auditorium [March 26]. The Governor spoke of his pleasure in presenting the speaker, and called attention to religion's not being today exactly what it has been in the past.

"Remember the Puritan," he said, "with scorn in his heart, going to worship and back to his home without a smile for any one; and yet no one condemned him. Our times are different. The world has much suffering and distress, and the men and women who are devoting their lives and fortunes and efforts for the relief of this distress and suffering are the greatest gift of Providence to the human race."—*Minneapolis Journal.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Anderson, Ind.—William R. Rathvon, Grand Opera House, 3 p.m., May 7.
Batavia, Ill.—Francis J. Fluno, M.D., Music Hall, May 5.
Batavia, N. Y.—Frank H. Leonard, Opera House, May 12.
Braintree, Mass.—William D. McCrackan, M.A., Post-office Block, 3:30 p.m., April 30.
Cincinnati, Ohio (First Church).—Bliss Knapp, Church Edifice, Park avenue, 3 p.m., May 7; 8:15 p.m., May 8.
Elkhart, Ind.—Francis J. Fluno, M.D., Bucklen Theater, 3 p.m., May 7.
El Reno, Okla.—Prof. Hermann S. Hering, Opera House, 3 p.m., May 7.
Hagerstown, Ind. (auspices Richmond, Ind.).—Frank H. Leonard, I. O. O. F. Hall, May 8.
Kansas City, Mo. (Third Church).—Bicknell Young, Second Church Edifice, Thirty-first street and Troost avenue, May 1. (Note change of place from previous announcement.)
Lincoln, Ill.—Frank H. Leonard, Opera House, 2:30 p.m., May 7.
Lincoln, Neb.—Willis F. Gross, Oliver Theater, May 11.
Madison, N. J.—William D. McCrackan, M.A., James Building, 8:15 p.m., May 4.
Nashville, Tenn.—Prof. Hermann S. Hering, Church Edifice, Seventh avenue and Commerce street, May 9.
New York, N. Y. (Second Church).—William D. McCrackan, M.A., Church Edifice, Central Park West and Sixty-eighth street, May 9.
Pittsburg, Kan.—William R. Rathvon, City Hall Auditorium, May 9.
Pomona, Cal.—Bicknell Young, Fraternal Aid Opera House, May 13.
Richmond, Ky.—Frank H. Leonard, Court House, Main street, May 9.
Salt Lake City, Utah (First and Second Churches).—Bicknell Young, Salt Lake Theater, May 7.
San Diego, Cal.—Bicknell Young, May 11.
Seattle, Wash. (Second Church).—Willis F. Gross, Junction Hall, Ballard Station, May 4.
Toronto, Can. (Third Church).—Francis J. Fluno, M.D., Church Edifice, College and Elizabeth streets, May 9.
Vancouver, B. C. (First and Second Churches).—Willis F. Gross, Vancouver Opera House, 3:30 p.m., May 7.
Vancouver, Wash.—Willis F. Gross, Congregationalist Church, May 2.
Victor, Col.—Hon. Clarence A. Buskirk, Church Edifice, 117 South 4th street, May 12.
Winchester, Ky.—Prof. Hermann S. Hering, May 11.

TESTIMONIES OF HEALING.

In the summer of 1905 I had a very severe attack of whooping-cough, which necessitated the services of a trained nurse and three physicians, and the disease left me much reduced in flesh and very weak. The distinctive cough continued late into the fall, and with cold weather bronchial and throat trouble from which I had suffered since childhood appeared. These left me with a chronic cough and an abnormal condition of the throat, which pursued me for two years. During this time I tried medicines prescribed by my regular physician, besides electric and other treatments; but in spite of all these efforts the condition continued unchanged, and a throat specialist recommended several operations on the nose as the only way of gaining possible relief. At this time I was forced to diet, because of other troubles, and was also taking large quantities of nutritive food, hoping to gain in strength and weight. Each winter I had several attacks of bronchitis, and each winter I went South to find relief through change of climate.

In May, 1907, after spending two months in the South, I went north to Chicago with my sister. No sooner had I left the South than the cough began again, growing a little worse each day. I knew that upon my arrival home in Syracuse I must have the operations on my nose, and that even these might not alleviate the trouble. With this before me, I decided to try Christian Science, and I was given the names of several practitioners. On the morning of June 3 I took the first treatment. I had no understanding of Science and told the practitioner I had no faith, but she said my willingness to come and ask for help was enough. I was with her about an hour and returned home. The weather was bad, with cold rain and lake winds, and my trouble had been growing steadily worse for two weeks, but I left my windows high up, as my physicians had taught me, expecting to cough during the night as usual. I did not, however, awaken until the next morning, when I sat up with a start, for the distressing sensation I had had for two years had left me. I could not remember coughing during the night, and I had then no desire to cough.

When I went for my treatment that day, I was told I need diet no longer for acidity. I resolved to test this and bought some fruit and candy, but neither had any effect on me; there was no effect on any of the secretions, and the body remained perfectly normal, although I took no medicines of any kind. Up to this time acids would cause trouble in the throat within two hours after eating, and the whole body suffered from the same conditions. I then tried giving up my special diet, expecting to lose weight, but at the end of one week I found I had gained instead of lost. This satisfied me, and I continued the treatment for about three weeks before returning East, and improved in health and strength continually.

In the time which has elapsed since then I have not taken any medicine, and Christian Science has been my only physician. My weight has increased greatly. I eat what is set before me and am perfectly well and strong. I have never again had bronchitis or throat trouble. An intestinal disorder from which I had suffered for ten years has also disappeared, and I have been able to work for nearly two years on a newspaper without missing a single day's work because of illness.

Besides all these physical benefits, I have found in Christian Science a mental peace which I had been seeking for years. I have found clear logical answers to questions which heretofore were unanswered either in the teachings of my church or in my college text-books. I am finding that God's law as understood and demonstrated in Christian Science heals sickness and sin, and I am truly most grateful to God for leading me to seek the truth which has set me free, and to Mrs. Eddy for her untiring work in finding this truth and its basic laws and giving them to the world.

GRACE J. SAWYER, Syracuse, N. Y.

Digitized by Google

I was healed in 1900 through Christian Science, and it is with the hope that some other sufferer may be led to try it that I wish to give an account of the benefit I have received. Years ago, while harvesting wheat in Iowa, I had what was called a case of sunstroke, which caused me great suffering. After recovering from the first effects, there was intense distress whenever I was exposed to the sun. I had treatment from physicians of the different schools, but received no benefit, nearly all of them advising me to keep in the shade. Then I tried change of climate, hot springs, and salt water bathing, which seemed to bring temporary relief, but my condition did not improve.

About this time I moved to Montana, thinking the summers would at least be shorter, but I found the sun too hot for me here and had to carry an umbrella for nearly fourteen years. I suffered in this way until ten years ago, when I took a trip East. At this time my wife had been studying Christian Science about two years, but I had not thought of asking help for this trouble, although I saw the healing work being done every day. On my return from the East I stopped at St. Louis. This was in April and the sun was very warm. I called at the office of a friend who was a Christian Science practitioner, and on our way to his home the sun shining through the car window made me feel very ill. My friend asked me what was the trouble, and when I told him he said that the sun could only do me good; but I had my own opinion about that.

During my call, he and his wife talked a great deal about Christian Science and explained the truth, telling what wonderful things it was doing for those who would try it. I did not ask for treatment, but the spoken truth did the work and I came home healed, although I did not yet know it. On my return my wife asked me where my umbrella was, and I then realized that I had forgotten it, and had not needed it. She said at once that I would never need it again. She treated me during that summer for my fear of the sun, and I am happy to say I have never carried an umbrella for protection, and have never suffered from the sun since that car ride in St. Louis. When the fear was destroyed I knew I was once more a free man, and was deeply grateful for my release. There are other things from which I have been delivered, one of which I will mention. For about two years I was annoyed by an unpleasant sensation in my head, especially when lying down. My healing from this was slower, but it was complete. Before I was healed my weight was much reduced, but now it indicates the best of health.

Christian Science has given me a different view of life altogether, and free from pain and worry I can now go about my business with more ease and confidence than ever before. For this great blessing that has come to me I am indeed thankful.—J. M. Bulen, Bozeman, Mont.

I have long wished to declare the gratitude I feel for the benefits received through Christian Science, as it has helped me very much, mentally, morally, and physically; it has given me hope, and is helping me to be less selfish. I suffered from childhood with headaches, neuralgia, and internal trouble; was nearly always tired and seldom without pain; besides many distressing mental and moral symptoms. The doctors said I was incurably ill. At times the world seemed nothing but a howling wilderness of misery and pain. The orthodox teachings never appealed to me or helped me in any way, and I looked for the truth in other directions, from which I received a good deal of comfort and the desire to be better. But in a moment of desperation, having been feeling especially bad physically and morally for many months, I decided to take treatment from a hypnotist, one who called himself a mental scientist and magnetic healer. My last state was certainly worse than the first. I seemed to be losing my individuality; my thoughts seemed to change suddenly and against my will; I had horrifying dreams and psychic experiences; finally I felt my memory going, and I was in most intense fear.

In this state, after many fervent prayers, Christian Science found me. I got the text-book, Science and Health, and began to read. Though for many weeks I had not had enough concentration to read and take in one whole page of ordinary literature, I read through three whole chapters of Science and Health without realizing how much I had read. Then I found that my exhausted brain had cleared wonderfully; it seemed as if some terrible tension had snapped. When I saw the heading of the next chapter, "Christian Science versus Spiritualism," and again the one following, "Animal Magnetism Unmasked," I could scarcely believe my eyes. I knew it was going to be the truth about them. I had heard many opinions on these subjects and had had a great deal more practical experience than I cared for; but I was satisfied that the writer of this book knew! I saw how hopelessly deluded a poor mortal can be; I saw the illusion within illusion, the wheels within wheels, as plainly as possible; but after a few hours the fear returned, so that I was not able to go on reading.

However, I felt happier and more hopeful than I had done for some time, until friends began to dispute the teachings of Christian Science, and I was again plunged into "outer darkness." My mind seemed so sore and sensitive that wherever I went or whoever I spoke to I feared they would begin to talk about Christian Science, and I felt too helplessly weak and powerless to defend it. I applied for help to a Christian Science practitioner, and shall not forget the kind sympathy, wonderful patience, and generosity she showed. It was uphill work for her, as the old illusions and the morbid suffering were persistent. I have received much help at times through Science, and have been able to help others a little, and my health has slowly improved in nearly every way. I received the same kindness and generosity from two other practitioners to whom I applied. I know I have only myself to thank, if at times I feel that I am not entirely out of the wood; some of the trees in the wood look very attractive to me at times, and I give them power to keep me from getting into broad daylight and sunshine.

To me one of the most beautiful things about Christian Science is that it includes all. Many religions seem to forget that the "whole creation groaneth and travaileth in pain together," so it was with a feeling of great joy that I read an article in the *Journal* entitled "Love Includes All." It drew me more closely to Christian Science, for it showed me that Christian Science is broad and deep—quite enough so to be true.

Hilda Hewitt, Prestwich, Manchester, England.

One of the strongest attractions which Christian Science had for me when it first came under my notice, was the thought that God is a God of love, always the refuge and strength of His children. This truth was demonstrated for me at first by kind Christian Scientists, and later I was able to demonstrate it in a measure for myself. I experienced that spiritual uplifting which fills one with perfect peace and gives a glimpse of heaven on earth. One evening, very soon after I began the study of Christian Science, I burned my hand quite severely. To mortal sense the pain was very great, but by knowing the truth and holding fast to it, with the help of a kind friend who was present, the trouble was overcome in less than ten minutes, and the hand did not even blister. As I have grown in the understanding of Christian Science, I have realized more and more that "where the Spirit of the Lord is, there is liberty." I wish to express my gratitude to Mrs. Eddy for her great efforts in behalf of Christianity, and to God, who is ever-present intelligence and Life.

Mrs. Jeannette Petty, Lincoln, Neb.

Digitized by Google

My eyes had been pronounced incurable by an eminent physician, but after a Christian Science practitioner came to us and told us that with God all things are possible, and explained the truth to us, the pain left my head. In about two weeks I visited the practitioner and went to church with her, and as I did not seem to need my glasses, which I had worn constantly for nearly six years, I took them off. I had been told that I would always have to wear glasses, and even with them had suffered much pain. This happened about six years ago, and I have never needed to use glasses since. I did bookkeeping for quite a large store for about a year, which gave my eyes some severe tests. Even smoke, which I could not stand before I was healed, has not the effect on me which it formerly had.

MRS. WALTER LUTHER, West Falls, N. Y.

I gladly write a brief testimony, trusting that those who read it may accept the truth without hesitancy, for it was the reading of others' testimonies that gave me courage. Some time ago we sold our home, and were compelled to move within a few days. As I had been unable to go about the house without suffering terribly, I was pretty well disheartened at the prospect; but a friend who called suggested Christian Science. I sent for a practitioner, and it seemed nothing short of miraculous to find myself running up and down stairs in twenty-four hours. We moved in two days, and I never felt better in my life. A short time after, I called up the same practitioner (whom I did not meet until four months after she began to treat me), and was healed of earache, from which I had suffered at times for more than three years. Two treatments (absent) sufficed in both cases. I am truly thankful to God for showing me the way through Christian Science.—MILLIE I. APFEL, Chicago, Ill.

Three years ago I fell from the porch, striking on my back and injuring my head severely upon the stone pavement. Two young men ran and helped me to my feet, and I went up the stairs unassisted. The family wanted to get a Scientist to treat me, but I told them they need not, that God was with us, and that He would help me. We took Science and Health and began to read, continuing to work until late in the night. I walked out the following Sunday to the Science services and never missed a meeting. It was for some time hard for me to comb my hair, because of the injury to my head, but since then I have had no trouble; but without Christian Science, I do not like to think what might have happened.

A year ago I had severe pain in my legs, until it was hard for me to walk. Still I always went to the church at every meeting, and the ailment was finally conquered in Christian Science. Colds, coughs, etc., have all been overcome by this glorious truth, as made plain to us by Mrs. Eddy. Why, indeed, should we not love and revere her, for all she has done for suffering humanity? We should be very ungrateful if we did not.

MRS. C. H. GOLDING, Los Angeles, Cal.

When Christian Science found me I was the anxious, discouraged mother of six young children, and it is the realization of how foreign the above mental qualities are to me today that impels me to "praise God from whom all blessings flow," and to tell about it, in the hope that it may interest some other mother who seems heartsick and weary, as I used to be.

We were an exceptionally healthy family, and my greatest need was a spiritual one. I wanted to follow the teachings of my youth, but it was as if I kept crying for bread and was given a stone. My ideal of motherhood was of one who knew naught of anger or impatience, and breathed only love and compassion amid all the seeming trials incident to the care of small children; but my understanding of God then, together with my daily pleadings, did not seem to destroy one atom of impatience, nor add aught of love, and each year seemed to leave me more fearful and doubtful than it found me.

I now know that I had never in all those years called on "the only living and true God," and that was why my prayers remained unanswered. So-called mental science buoyed me up for a short time, but left me almost hopeless of ever being able to attain in ever so small a degree to my ideal, which through the darkest hours ever stood out in such contrast to my daily life. I was a sore disappointment to myself, and felt that as these dear little ones grew up, I would also be to them; and this thought at times seemed to crush me.

We changed our place of residence, and among my callers was a Christian Scientist. In the course of conversation my great need became apparent to her, and she kindly assured me that I would find my every need supplied in Christian Science. I hardly believed it, but kept pondering over some things she had said, and by the time a lecture was given in a neighboring town I had curiosity enough to attend. In the mean time there had arisen a physical need. Our eight-year-old boy, who had been operated on three times for abnormal growths in the nose and enlarged tonsils, had a return of the same, and we were about to go through the trying ordeal again when I attended the Christian Science lecture.

While listening to it I felt I had at last found the Father's hand, and at the conclusion of it knew that I would never have to let it go. New hope was born, and I put the boy into a practitioner's care that day. I was ignorant and wilful, and thought that God ought to heal the child in my way. The practitioner worked patiently and faithfully for eleven weeks, calming my fears and explaining away my doubts; and this, together with the study of Science and Health and the help of my Science friend, resulted in my experiencing the new birth, so that "all things have become new." The growths have entirely disappeared and my own spiritual healing has continued and is daily going on.

I had been reading Science and Health but a few days, and had completely forgotten my old burden, when one day I heard the children remark among themselves, "Mama seems so happy these days, and she doesn't scold us any more." Was there ever a breath of freedom so free as that which I took when I heard those words! I sat motionless, dumb with amazement and awe, when I realized God's omnipotence and how the truth had made me free indeed. After all my vain struggling,—the fierce battles with self and the sickening defeats; the self-condemnation and misery, when I learned how to become as a little child, humble and teachable,—I entered into the kingdom of heaven, harmony here and now, and it seems that my cup overflows with joy and gladness. There were dark hours because of the antagonism of loved ones to what they believed Christian Science to be, but through it all I heard, "Lo, I am with you alway." I was enabled to trust till the waves were calm, and harmony, peace, and joy replaced discord and sorrow. Ah, patient, merciful Father!

In these four years the great Physician alone has ministered unto us. The children accept the truth naturally and are learning to go to God themselves in time of need. The simplicity and purity of their faith is often a rebuke and an inspiration to me. The Bible as explained in Science and Health has become my daily manna indeed, and every day I am thankful that there was one in this age pure enough and strong enough to draw back the dark curtain of materialism and show us God as Spirit and man as spiritual. She has ever pointed us away from personality to God.

I wish also to speak of how divine Love met my human need in yet another way. I had always done all my housework and always expected to, but I had only taken the first

Digitized by Google

step toward Truth when, without any effort on my part, help was supplied, and Truth has enabled me to keep this same very efficient help nearly four years in perfect harmony, thereby giving me the necessary time for study. So, to tired, discouraged mothers I would say, Take heart. The great deliverer is here. Learn in Christian Science all about your Father-Mother God. He will give you rest and joy. At one time I could not have believed that life held such happiness, and the daily assurance of the possibility of attaining my ideal of motherhood, through which we glorify Him. This truth is indeed the "pearl of great price," and meets wonderfully a mother's need. I am truly thankful for all that led me to find it.

MARGARET WILSON, Chesterton, Ind.

[Translated from the German.]

About four years ago I first heard of Christian Science after I had sustained a serious injury to my arm through a fall. After two physicians were unable to help me and a third gave me no hope of recovery because of my advanced age, I was in a state of despair. A dear friend then told me of Christian Science and gave me some of the literature to read. I saw at once that this was the only help for me, and applied to a Christian Science practitioner in Dresden. She took up treatment, and I soon was able to use my arm again. Later on it caused me some trouble and I had to ask for treatment once more, and was then completely healed.

Two years later I had a severe attack of illness, with great difficulty in breathing, from which I used to suffer at times; but before long these troubles disappeared through treatment and I regained my normal condition. I used to be depressed greatly through cares in my work and through the loss of dear relatives, but through Christian Science I now know that there is really no loss, and although the cares come up now and then, they soon disappear. God gives His children all they need; they lack nothing. I am not separated from the dear ones who have departed; we are united in spirit, for nothing can ever separate us from the love of God.

I am grateful to God with all my heart for having shown me the way to Truth, and I am grateful for our faithful Leader, who has illumined the way to eternal life and has made it clear through her teaching. My wish is to grow more firm in the truth and that my life may bear fruit, so that I may prove my gratitude thereby.

HEDWIG VOGELGESANG, Bautzen, i. S., Germany.

Feeling it to be a privilege as well as duty to bear witness to the healing power of Truth as revealed to the world through the teachings of Christian Science, I gladly send this testimony. I had made a very unsuccessful struggle against the belief in heredity, a liver trouble especially. I had entirely outgrown *materia medica*, not having an iota of faith in it. I was indeed helpless unless I could find something beyond human power to give me aid. I had reached the point where I said to myself that the struggle was not worth while, that I would not make another effort to get well.

Then like a flash came a "still small voice," saying, "You will be perfectly well and your life lies all before you." The impression was so clear that I involuntarily looked around; it was as though some one had spoken, though I knew I should not see any person. From that time on I felt I would be healed, although I could not see where my help would come from. I never had been able to accept the teachings of the orthodox church, and had wondered what was wrong with me; it never occurred to me that the teachings could be wrong. I finally came to the conclusion that reason and revelation could not be reconciled in these teachings. My father had always been a devout Christian, and with a child's faith I had considered his opinions infallible; but when I was forced to see that they were not consistent, I felt that I had no support, nothing to lean upon.

It was at this point that I was directed to Christian Science. My healing was slow but complete, and it involved the unwinding of many tangles. This meant much, as the belief in an asserted law of heredity was very strong. Christian Science reconciled reason and revelation and gave me a God at hand, available as a present help, and not a God afar off. I have had many proofs of the power of Truth, as taught in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy,—to heal sickness and sin and restore harmony.

I wish to express my thankfulness to God, and my gratitude for our Leader's sublime courage in standing against the whole world, even when her motives and work were not understood. I am also grateful to all who are laboring to establish in the human consciousness the Science of health. I realize that our deeds express more gratitude than mere words, and I am seeking daily to gain a more comprehensive understanding of divine law, which renders null and void all false beliefs concerning law.

MRS. NELLIE WILSON, Seattle, Wash.

Five years ago I was healed in Christian Science of a chronic illness, and since then have had many blessings, besides the spiritual uplifting. I was healed of a female trouble, when the doctors could do no more for me except to operate. To stop the pain they gave me an opiate, but I turned to Christian Science and was healed. I was also healed of hemorrhage of the head, suffering during childbirth, headaches, and fear of death. Besides all this, a growth on the eye was removed by Christian Science treatment.

For all these healings I am very thankful, but the spiritual uplifting is more to me than the physical help. Christian Science has shown me my true self, and my relation to God. In the raising of my two children this truth is my only help. It has indeed been ever present in time of trouble. In every experience the ailments have been overcome; Truth has never failed me. I am also thankful to be able to help others besides myself.

I am truly thankful to God, who uplifted me, and to Mrs. Eddy, who has pointed out the way.

MRS. MAMIE ARNER, Fairbury, Neb.

Having in the past few years received so many benefits through the study and application of Christian Science, I long to tell something of the help I have received, in the hope that my words may reach some one who is in need. When a young child I had a very severe illness, and when, after an almost hopeless fight, I recovered, I was left with terrible headaches, which lasted steadily for several years. As I grew older I became freer, but any and every unusual occurrence brought on a severe attack; in fact, for any reason and for no reason at all, I had a headache. In those days I was put to bed in a darkened room and kept perfectly quiet, while various remedies were taken or applied, but without the desired result.

At length I was drawn to Christian Science for quite another trouble, and in seeking help for one ill I found freedom from many. I began to read Science and Health and other Science literature, and as I read I realized that many changes were taking place, and particularly that I had fewer and fewer headaches, until I felt quite free. If ever that ailment presents itself I can always overcome it with the understanding gained by my study of Christian Science. Could any one be too thankful for such freedom, for the knowledge of God's ever-present help and His love for us; or too grateful to our beloved Leader, Mrs. Eddy,

Digitized by Google

for her beautiful life-work in directing us to the guidance of divine Love? I could never express in words what I feel, but I try each day to show by my life that I am thankful, and thus proving my gratitude.

LIZZIE S. PETERS, San Francisco, Cal.

Words are inadequate to express my gratitude for what Christian Science has done for me. In August, 1909, I was taken up from my bed of pain by Christian Science, after having spent nearly four months in suffering, and the last six weeks under the constant care of a trained nurse. The night the practitioner was sent to me, I was utterly without hope of ever recovering and had been steadily growing worse from day to day. The next morning I was up and dressed, and since then I have steadily gained in strength and understanding. I had some days of discouragement, but have always risen out of them with renewed vigor and hope, and can now see that they were caused by my clinging to some old material belief.

Since my own healing in Science two of my loved ones have been helped and brought in also. I am thankful to God for my healing, and to Mrs. Eddy for showing us the way to Truth. I am also grateful to our Publishing Society for the literature, which is so great a help in my daily life.

M. B. HOLMAN, Chicago, Ill.

I wish to offer my tribute to the ever flowing stream of divine Love. In 1907 I received benefit from Christian Science, though this was not the first that I had known of it, but I now think very differently of this teaching than twenty years ago. Two dear friends gave me some literature to read and in one package was a copy of "Science and Health with Key to the Scriptures." I thank God that this book was placed in my hand, for I began to read it with interest and soon found that the severe headaches with which I had been troubled had disappeared into their native nothingness. I then received treatment for other ailments, which also quickly disappeared. I was then treated for a severe cough, which was soon overcome. I had suffered from catarrh for over forty-five years, and this cough troubled me a great deal, but it quickly passed away, and to my great joy I received the hearing of my right ear, through which I had not heard for all these years. I had been told by doctors that I would never hear, as the inner ear was affected, but I find that man's extremity is God's opportunity.

I have indeed much to be thankful for to God, and for what our dear Leader has done for all who believe. I am also thankful for the spiritual enlightenment which opens up the Bible and helps one to understand Christian Science.

ADA G. FRENCH, Petoskey, Mich.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be June 2, 1911. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 10, 1911.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 4, 1910, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM OUR EXCHANGES.

[*Outlook.*]

To us the resurrection of Christ seems the most wonderful event in history; a sudden vision of a great peak rising into perpetual sunshine, seen once by the eyes of men when, for a moment, the clouds parted. To us it is a miraculous occurrence which stands out solitary in the long record of time. To the heavenly guardians of the tomb it was only the manifestation to men of an event as universal as birth. To the Christ it was a passing incident for which he made preparation as quietly as for a night of sleep; to him the morning which shines for us with a glory beyond the reach of speech came as normally as other mornings have come since the beginning of time, and he rose and laid aside the garments in which he had slept as quietly as we put aside the clothes of the night and go forth to the work and joy of the day.

His whole life and teaching had predicted the issue of that experience with death; the inexhaustible tide of life which poured in upon the world with his coming could no more have been arrested by the change we call death than the sea rushing landward in a fathomless flood of many waters can be held back by a wall of sand. That tide swept through and past the barrier with the tremendous sweep of an elemental power for which obstacles do not exist. Concerned with the giving of life, charging the very borders of his garments with vitality, healing with a touch, calling back the dead with a word, death was for the Christ but a passing shadow on the landscape of the world. To men it was a dense and awful mystery; to him it was a momentary clouding of the sun, powerless to destroy or even to obscure. When he spoke of it, his voice had no deeper note than when he spoke of the toils and sorrows of the human state; his tones were far less grave than when he spoke of the sins that imperiled the soul. Being what he was, his resurrection was inevitable; every word and deed predicted it.

[*Zion's Herald.*]

We have given the Master so often the title, the "man of sorrows," that we have come to think of him as the suffering Saviour only. He deserves another title. He is the man for all sorrowing souls, he is the man for sorrows. We flee to some source of help in all our distresses; we seek to bring relief to others in their troubles. There is one supreme helper for us all; it is the living Christ. Jesus is the man for those who suffer now, because he went through the whole depth and range of sorrow during the sinless years that he lived on earth. There is no experience that can come to us that did not in some way come to him. Therefore he can bring us his comfort. He, too, has passed along our sorrowful way. Thus through his sorrows he became the perfect consoler. It is thus, also, that we are made ready for the ministry of consolation. Only when we have gone the Master's way can we help others with the Master's comfort. This is a hidden grace and a reserved benefit in all suffering. Comforted in our affliction, we know how to comfort those that are in sorrow by the very help that came to us. Jesus makes all his disciples also men for sorrow, ready with comfort.

[Rev. Edward S. Lewis is *Western Christian Advocate.*]

God chose His people Israel and inspired them. Out of their providential history came the record of the progressive manifestations of God to them and to the world. Rudimentary at first, and complicated with human ignorance and folly, it shone brighter and brighter through prophets and sages and warriors and poets and psalmists and patriots and martyrs, until it culminated in the supreme revelation, which was Christ himself, the Son of God and the light of the world; for him and in him and by him were all the pre-

Digitized by Google

ceding revelations. The traditions fade in his light. Literalism is shunned as poison, for "the letter killeth, but the Spirit giveth life." The crudities of the earlier religious expression become clear as they are subordinated to the Master's perfect precepts. The frank recognition of the human element in the Bible renders the divine element luminous and resistless. When Christ is thus honored the theology that bears his name bears his character also. "No other honor could the witnessing Scriptures ask than this, that they be permitted to point to him who was born, that he might bear witness to the truth, and say, 'Hear ye him.'"

[*Congregationalist and Christian World.*]

There are not wanting tokens that business is to be less a matter of getting rich than of social service; that men who merely try to get money will not be in good repute tomorrow; that new standards of honesty and equity are being advanced and that business is to be transformed by sacrificial suggestions. There are sound reasons for believing that people are growing tired of living and thinking simply in terms of matter and force: the life of the spirit is coming into its own again; faith is assuming anew an empire which it had never really lost; attitudes of mind which are in reality deeply religious, characterize the best and most searching thought of the time. There are many signs that the world is beginning to weary of the sheer and crushing weight of armament; that we are beginning to count the cost of hostility; that policies of national exclusiveness are being discredited; that there is some day to be a truer fellowship of the nations; that suspicion and envy and isolation are not to be finally supreme, as between nations, any more than they are to be supreme as between individuals.

[*Universalist Leader.*]

We may say with absolute certainty that no sinful, evil-minded person was ever truly happy. We may also say with equal certainty that no pure-hearted, holy person was ever really unhappy. Hell itself could not engulf one single saint, nor heaven absorb a single soul of devilish desire. We speak in a figure, but the truth is final. The appeal of Christendom is still largely a mass of false promises and illusions. Certain things cannot be. He who promises another soul that joy and peace and happiness and heaven are to be had in any other way than by holiness of heart, is more than a blunderer. He is also a false prophet who will leave in outer darkness and doubt and distress those who follow him.

[J. Y. Montague in *Standard.*]

The right motive is found in a willingness to do God's will and to know His doctrines. This presupposes an open-mindedness to do and to be the thing required by the truth when it is discovered. Not simply one who hears and gives intellectual assent, but one who gives the truth new birth in thought and word and deed of godliness in character,—"eternal plasticity to the touch of God." Only in proportion as there is an intellectual grasp, as well as heart appreciation of basal truths, will the most precious and durable materials be used in building the superstructure of character.

[*Christian Register.*]

Instead of something fixed eternally, instead of truth revealed in its totality, truth is ever unfolding, and it is allowed that it ever will unfold for the upward looker. It is an essentially new fundamental principle. It is growth, and that every one has got to come to if he would save his soul. Salvation no longer consists in being transferred from one world to another, from a work world to a world of shiftless rest, without responsibility or care, but consists in a will to do the right and obey the true.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS have been published as pocket and library editions in new bindings. Description and prices will be found on the outside cover page of *Sentinel.*

The new volume, "Poems by Mary Baker Eddy," is now on sale. Specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herald,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The following reprints are published in Swedish: "Hvad Ar Bön?" "Lagens Välde," "Det Ondas Natur," "Helvete och Himmel," "Människans Gemenskap Med Gud," "Verklighet," "Det Ar En Ström," "Förklaring Af Kristligt Helande," "Den Yppersta Egenskapen I Christian Science," "Underverken," "Det Ondas Ofvervinnande," "Var Väktare," "Riklig Tillgang," "Kristendom Och Vetenskap." Ten copies to one address, prepaid, 10 cents; one hundred copies to one address, 75 cents; five hundred copies to one address, $3.00; one thousand copies to one address, $5.00.

Two of our Leader's poems, "Shepherd, show me how to go," and "Love," set to music by Frederic W. Root, are now on sale by the Society. For description and price see advertisement on inside back cover page of *Sentinel.*

A new photogravure reproduction of The Mother Church edifices and the Publishing House, with the new parkway in the foreground, has just been made, and is now on sale. The size of the new picture, nine by fourteen inches inside of mat, which is about half that of the larger one, specially adapts it to framing for the home. Price, single copy $1.00, six copies $5.00, twelve copies $9.50.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Federal Judge Charles F. Wolverton has decided that the Southern Pacific and the Oregon & California Railway companies must forfeit to the United States government about two hundred thousand acres of land, which is valued at from forty to seventy-five million dollars. The case will probably be appealed. The court held that Congress intended that this should be sold to *bona fide* settlers in tracts of not more than one hundred and sixty acres to one individual and at a price not exceeding two dollars and fifty cents an acre. Although he decided in favor of the government, Judge Wolverton decided against the five thousand individual interveners in the case. He held that they had acquired no right whatever, either by settling on the land or by tendering the maximum sums specified by the law. The effect of this portion of the decision is that the lands cannot be procured by any individual until the President or Congress again opens them to entry.

Two years ago the government discovered that American phosphate lands were being largely exploited for the benefit of foreign users of this product, over half of the American production being exported; also that the public phosphate lands were rapidly passing into the hands of private owners. Large areas of lands underlain by phosphate rock in the recently discovered fields in the public-land states were immediately withdrawn, with a view to securing legislation which would prevent the exportation of the phosphate. Since then, through geologic investigations, new deposits of phosphate have been discovered. The area now standing withdrawn is over two and a half million acres, containing an aggregate of many hundred million tons of phosphate rock and having a very great potential value to the farming industry.

The New York subway deadlock has been broken by a formal offer of the Brooklyn Transit Company to build a five-borough rapid transit system. The offer submitted to the public service commission guarantees a competitive rapid transit system in Manhattan, the Bronx, Queens, and a part of Brooklyn. The total cost of building this system is estimated at one hundred and fifty-eight million five hundred thousand dollars, of which the city would be required to furnish eighty-three million five hundred thousand dollars and the Brooklyn Rapid seventy-five million dollars. The Brooklyn Rapid Transit offers to operate these lines in connection with its own on a basis under which both city and company are to deduct interest and sinking fund charges, after which the balance is to be divided, share and share alike.

Attorney-General Wickersham will appeal to the United States supreme court to sustain the so-called "cotton corner" counts in the government's indictment of James A. Patten, Eugene C. Scales, Frank B. Hayne, William P. Brown and Robert M. Thompson, charged with leading the May corner of 1910 on the New York Cotton Exchange. Judge Noyes in the circuit court for the southern district of New York sustained all the counts of the indictment except those charging a corner to fix the price of raw cotton. He condemned the practice unreservedly, but held that it did not come within the meaning of the law on which the indictments were based. The attorney-general's appeal is from that part of the decision.

The New York Senate has passed the Frawley Lill incorporating the Carnegie Corporation of New York, which is to engage in educational and charitable work, using the funds transferred by Andrew Carnegie. No official statement has been made as to which of Mr. Carnegie's many benefactions will come under this incorporation. As far as is known, the principal amounts which he has so far distributed reach a total of one hundred and eighty-three million two hundred and thirty-five thousand dollars.

The New York state statute giving an action for damages for the unauthorized use of a photograph of a citizen is a valid enactment so far as the supreme court of the United States is concerned, the court having halted the arguments in progress in a recent case because no federal question was involved. The case involved the constitutionality of the statute. The validity of the law had been upheld by the supreme court of New York and affirmed by the court of appeals.

With the resignation of Edward C Finney as chief law officer of the reclamation service, in effect May 1, and the succession of Philip P. Wells, counsel for the national conservation commission, practically all the officials of the interior department whose names figured prominently during the Ballinger-Pinchot investigation, now have severed their connection with the government service.

A resolution by Senator LaFollette, which passed the Senate, calls upon the secretary of the interior for information regarding coal lands in Alaska, and it is said to be designed to discover if favoritism has been shown to the Guggenheim interests in the territory.

During May and June the department of commerce and labor will prepare for enforcing the law which requires passenger-carrying vessels of the United States to be equipped with wireless, on and after July 1.

International.

The appointment of American delegates to the proposed opium conference at The Hague on July 1, has been communicated to the foreign office, but Great Britain has not yet made preparations for the conference, the government awaiting a reply to their acceptance of the invitation, which acceptance contained the condition that the governments participating should prepare for presentation at that time full data in respect to the production, consumption, and export in their respective countries of opium, cocaine, and morphine. Meantime the Anglo-Chinese negotiation for the immediate reduction and final extinction of the exportation of Indian opium to China are continuing at Pekin with good prospects of an early conclusion.

The fifty-million-dollar loan to China by a group of American financiers, negotiations for which have been going on for some time, was signed at Pekin on the 15th. Fifty million dollars in gold five per cent bonds will be issued to the banks at ninety-five. The major portion of the proceeds will be used for the establishment of a uniform currency system along the general lines of the scheme already formulated by the Chinese currency commission. Six months will be given to the banks to consider and approve the scheme before the bonds are issued. Some portion of the proceeds will go to the industrial development of Manchuria.

Some of the finest scenery of the Alps has just been closed to the automobile by the emphatic decision of the voters of the Grisons, the well-known canton in Switzerland. The attempts to gain full admission to the Grisons met with defeat on two previous occasions, in 1906 and 1910, but last month the result was absolute prohibition. This popular vote was really called up by the attempt to give authority to the federal council to regulate the traffic in the confederation, which was in fact a plan for securing the free admission of the automobile to all the cantons.

The German government has laid before the Diet a bill appropriating $65,750,000 for building secondary railways, double-tracking some of the existing roads, continuing the electrification of the lines between Magdeburg, Halle, and Leipsic, beginning the electrification of the lines in the Silesian mountains, and providing new rolling stock.

Prof. Ernst Sellin, the Austrian Egyptologist, reports the discovery of the ancient palace of Herod the Great on the plain of the lower Jordan, near the road from Jerusalem to Jericho. The foundations are in a complete state of preservation, and Professor Sellin says the palace might easily be reconstructed after the original architecture.

Two important questions have just been submitted to the judgment of the Australian people. The commonwealth government is asking for an extension of powers, in order that it may be in a position to control monopolies, regulate trade and commerce, and exercise jurisdiction over the whole domain of industry.

The decree of separation of church and state in Portugal, which was published April 21, was received in general quietly. It is estimated that confiscation will bring to the government more than thirty million dollars.

Industrial and Commercial.

Immense catches of shad along the Atlantic coast this year are attributed by the bureau of fisheries to the fact that in the past few years the bureau has planted between one hundred and one hundred and twenty-five million shad eggs yearly in the coast waters. Ten years ago the shad had been so depleted that it was feared there never again would be any big catches like those of the "old days."

Shipment of apples from the United States to Europe for the season of 1910–1911 has ceased. The total number of barrels of apples sent from Boston to various European ports since last August was 493,806, and the total from Atlantic ports, including New York, Boston, Portland, Montreal, Halifax, and St John, was 1,639,125 barrels.

The forest acreage in the United States is placed at 545,000,000 acres, or 29 per cent of a total land area of 1,903,423,360 acres. The unreserved and private-owned acreage is 442,000,000, or 81.1 per cent; national forest reserves, 100,000,000 acres, or 18.35 per cent; state-owned, 3,000,000 acres, or .055 per cent.

The world owes the United States four hundred and forty-one million dollars for food, clothing, and raw materials sold abroad. Only once has the balance of trade been higher in favor of this country, according to government figures. That was in 1908, when it was more than five hundred and fifty million dollars.

Passing from the management of the New York Central railroad, to which it is leased, on July 1, the Boston & Albany will be operated thereafter in connection with the New York, New Haven & Hartford system.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE MINISTRY OF HEALING.

ROBERT NALL.

WHAT are the qualifications required for healing the sick? This is a perennial question, one that every student of Christian Science has asked at some time or other, and it will not be difficult to answer if considered from the only true view-point. In nothing was Mrs. Eddy more emphatic than in teaching that here personal sense must be lost sight of. Study the whole chapter, for instance, on Christian Science Practice in Science and Health. It is, to use the author's own words, "aflame with divine Love" (p. 367), which heals. Among the first things that she herself learned was that her own prayers failed to heal her, and it was not, as she relates, until the spiritual sense was discerned that she found relief. This is the A. B. C. of Christian Science healing—this apprehension of the all-important fact that it is not human might nor human power that can accomplish the task, but the "living, palpitating presence of Christ, Truth" (*Ibid.*, p. 351). This is part of the great lesson which needs to be learned. Every beneficiary of Christian Science wants to engage in this ministry of healing. It is divine work. It appeals to us because of its intrinsic worth, because it is the reflection of Love which enriches the giver and receiver alike. And it is the high privilege of all to engage in it.

If we see difficulties in the way, they are self-created: therefore they can be overcome by a greater fidelity to Truth. We know, as we have grown in the knowledge of the faith that we hold, that all truth must have its source in the one infinite intelligence, and that it is this truth alone which heals. When we are unable to apprehend this, we may be letting material concepts, the beliefs in the physical, obstruct the entrance of spiritual light. We may be raising self-constructed barriers, thus hindering our progress toward that condition of emancipation from erroneous thought without which we cannot be channels for divine Love to do its work. We are to know ourselves as spiritual; to know that the basis of all healing is spiritual; that Mind is All.

Mankind owe a wealth of gratitude to Mrs. Eddy for the magnificent optimism, based upon her clear spiritual understanding, which enabled her to declare that "Mind transcends all other power, and will ultimately supersede all other means in healing" (*Ibid.*, p. 483). Jesus knew this, and healed accordingly. He taught his immediate followers, and they did the work that he did, never permitting doubt or fear to overshadow their strong faith in God as the healer. Thought goes back with a sigh of profound regret that this primitive faith, which has been restored to us now, was not retained in the earlier days, but we are learning a lesson from the errors of the past. In a recently published volume, forming one of a foreign missionary series, the author, referring to the early days of Christianity, says, "These passing years saw the gradual disappearance of the miraculous gifts which the church formerly enjoyed. She exchanged power with God for power with men. It is by no means certain that the ministry of healing would not have persisted along with the ministry of preaching, had the church remained loyal to her first love and allowed nothing whatever to come between her and her Lord."

Christian Science teaches us to have no doubt whatever on this matter. The power to heal has always been the same. The "mighty works" done in the time of Jesus might have been done all down the centuries. It is impossible to postulate as an absent God the God revealed in the Scriptures and known to every earnest seeking heart. It is our God, the one infinite Mind, present always and everywhere, that is the power which now heals and purifies and regenerates. Our privilege is to bring ourselves into harmony with this power. Is this supernatural? Is it not a gift possessed by all who, while seeking to exercise and overcome the sense of self-righteousness, are reflecting in a measure the divine nature?

To be successful, we must reverse what the historic church did; we must exchange the so-called power with men for power with God. We must seek daily to increase our treasure of spirituality. In proportion as we are spiritually enriched, we shall be able to help others; but we need to strip ourselves of much that is now an encumbrance, weights that hinder, before we can see our fellow-man as perfect,—as the immortal idea of God. On that basis alone can we help ourselves and others. In what are we trusting? On what do we rest our faith? What is our conception of God? How far are we seeking to measure up to the perfect standard set before us by Christ Jesus in the Gospels? How far have we set ourselves to think spiritually?

We all hear much about "thinking imperially"—letting the vision be broadened so that it will embrace humanity as a whole, and thus sow the seeds of that bond of brotherhood which is to encircle the world. But there is a wider, deeper, more exalting vision than this, one that is the inherent right of every child of God. It is the vision that sees the power that is "nearer than hands or feet," a vision that is not blurred or obscured, but that sees truth in the purest light and knows the illusoriness of all that comes under the category of error. The very simplicity of the knowledge given in the statements of Christian Science is sometimes overlooked. The childlike faith accepts without demur the premises upon which this knowledge is based, and thereby grows more rapidly in the power to live and serve aright. In this respect human opinions obstruct. They are powerless. Our faith must rise above the fleeting, transitory speculations of mortal mind. When we are relying upon the one Mind only, conscious that to trust in matter is to fail, we shall find that our ministry has entered upon that spiritual avenue along which alone it will achieve success.

The preparation for that ministry is as sacred as the ministry itself, and this sacredness involves many calls. There is gratitude for blessings received, the outpouring of praise for redemption from an entirely erroneous concept of God and His universe, including man, and for the joy and gladness of experiencing what it means to manifest the beauty of holiness. We are called upon to rejoice that we are privileged to dwell in the spirit of gratitude. There is the hungering and thirsting after righteousness, that har-

Digitized by Google

mony of thought and rectitude of deed which find their most beautiful expression in trying to live up to the standard of the golden rule. There is the daily task—how delightful it is!—of studying the words of Life and penetrating deeper and deeper into the mine of wealth embedded there and extracting the precious spiritual ore; thereby we so familiarize ourselves with the verities of being, so grow in the capacity to discern truth, that the unreality and the errors of mortal sense, sin, sickness, and death, will be easily detected.

Jesus "went about doing good;" therefore the great modern philosopher who declared that the ideal of Christian morality was negative rather than positive, passive rather than active, entirely misread the Master's life and teaching. His three commands, to be perfect, to preach the gospel, and to heal the sick, are as imperative today as when given. Does not sonship as defined by St. John, "Beloved, now are we the sons of God," mean loyal service? And does not service involve obedience? And obedience will cause us to cultivate the "seeing eye and the hearing ear," the constant looking for our true birthright in the spiritual, the cultivation of that deep sense of responsibility which should be a divine impulsion toward all that is good, and which will more and more fit us to manifest truth in healing works.

All this means that there is no special endowment of the healing gift. Nor is it miraculous; it is the operation of divine Principle. And every Christian Scientist has the opportunity of being a coworker with Christ, Truth, in the highest of all service, the purifying, uplifting, and regenerating of mankind. When we are intelligent enough to live in unison with the thought that proceeds from the divine Mind, we shall know that man's true vocation is to let his light shine with the brightness of the Father's image seeking to do the works that our Master did, and therefore fulfilling the will of God.

INDIVIDUAL APPROPRIATION.

VIOLET KER SEYMER.

THE injunction in Hebrews, that we "lay hold upon the hope set before us," implies the necessity for mentally grasping, appropriating, and applying those blessings which the one Spirit is constantly revealing to the pure in heart and to the needy. While revelation itself is divine, the appropriation of it must needs be humanly individual and constantly progressive. In the early centuries of the Christian era, wonders were wrought in the name of God through His enlightened witnesses. Later on, notwithstanding the fact that Truth had lost none of its potency, the works diminished because the individual appropriation of spiritual facts had practically given way to materialism and ecclesiasticism. The reason and the remedy for this falling-off is indicated in the experience of Christian Scientists, who one and all find, sooner or later, that each must work out his own salvation and exchange an attitude of passive acceptance of the truth for one of active and earnest demonstration.

Divine Mind is ceaselessly imparting blessings, and humanity is waking up to receive them in proportion as it takes to heart Mrs. Eddy's statement that "the Scriptures require more than a simple admission and feeble acceptance of the truths they present" (Miscellaneous Writings, p. 197). Suppose a person were struggling in the midst of turbulent waters and a life-belt with a rope attached were thrown out: the drowning man could not be hauled ashore unless he did his part in tenaciously keeping hold of the belt. He would gain nothing by arguing that the waves were very big, or the land a long way off. So, too, the one to whom the ministrations of Christian Science are offered must cease to argue against his own interests, and hold faithfully to the truth, or as much as he apprehends of it, in order that progressive demonstrations may be made and his individual heaven attained.

In his interpretation of the vision Daniel exposes the supposititious boast of error which claims to "speak great words against the most High" which "shall wear out the saints of the most High." Evil is but an argument, whereas true thoughts are substance, having divine Mind as their authority. Seeming threats, masquerading as medical laws, hereditary traits, and other forms of discordant beliefs, are vain falsities, fit only to be disbelieved. On the other hand, every divine promise is sustained by the one Mind whence emanates it. Possibly the forty days in the wilderness may have seemed long to Jesus, yet one after the other every false argument was silenced, and finally "angels came and ministered unto him." These divine thoughts were present all the time; indeed, they alone were truly present from first to last, since God is All-in-all. Truth imparts to each faithful witness its own vigorous tenacity, and therefore persistence and scientific perseverance on the human side are bound to win the day. Since Truth cannot possibly give way to delusion, then delusion must give way before Truth and to that individual who is trusting to his declaration of Truth.

Christian Science shows its students how to be God's witnesses and how to silence every thought and supposititious argument that does not bear the stamp of Truth, or bring with it a sense of peace and security. Since spiritual sense, our link with the invisible, emanates from the one infinite Spirit, it is divinely sustained and can know neither weariness, sorrow, nor discouragement. It is by remembering to "lay hold on eternal life" as tenaciously as Peter clung to his Saviour when he felt himself sinking, that every man will find himself healed, regenerated, and fitted for the active, spiritual ministry which is the preliminary to heaven. All who do their share in turning again and again from the seeming darkness to the eternal light will find that "man then appropriates those things which eye hath not seen, nor ear heard" (Science and Health, p. 459), and in this spiritual endeavor it will always be found that vigorous appropriation leads to practical demonstration. Genuine prayer is aptly described by Richard Chenevix Trench in these words:—

> That man is praying who doth press with might
> Out of his darkness into God's own light.

THE DIVINE PRESENCE.

HENRY LEIGHTON UPTON.

THE writer's boyhood days were passed on an island, and one of his amusements was to go to the seashore to watch the little fishes as they darted to and fro in the pools that were left by the outgoing tide. The water was their native element; it was around, about, and above them. Its presence determined their very existence, and on the nutriment obtained from it they seemed to subsist. Try as hard as they could, it was impossible for them to escape from the presence of the water. To them it was everywhere. Recently I witnessed the flight of an aviator as he was trying for altitude at the close of a clear autumnal day, just as the sun was sinking to rest. His biplane was bathed in the golden sunlight at a height of nearly a mile, and he seemed but a speck against the clear blue sky. The cool air of the fast-approaching evening surrounded him entirely, and supported and sustained him in his flight. He could not sail out of the atmosphere even if he so desired, for it was boundless, endless, unlimited.

The foregoing brought vividly to consciousness the vital truth, taught in Christian Science, that God, divine Love, is everywhere present and the only real presence. As the fishes were inclosed on all sides by the water, or the aviator encompassed by the air, so man lives forever in the presence of divine Love. The Scriptures are full of proofs that the

Digitized by Google

upright shall dwell in His presence. When Moses was commanded by God to bring up the children of Israel out of the house of bondage, he felt his own human weakness, and looked outside of himself for help. To his inquiry of the Lord whom He would send with him, the Almighty replied, "My presence shall go with thee, and I will give thee rest." The assurance of this governing, sustaining, guiding, and guarding influence of the divine presence gave Moses the strength, ability, and courage to lead his people out of Egypt and into the promised land.

The same divine presence that was with Moses accompanied Jacob on his journey toward Haran, and when he "awaked out of his sleep," he realized this presence and exclaimed, "Surely the Lord is in this place; and I knew it not." David in his conflict with the Goliath of materiality must have had a clear sense of the unseen divine presence, for "the sweet singer of Israel" voices the omnipresence of divine power throughout the psalms. He declares that there is no place where God is not, that it is impossible to get out of His presence, whether one be in heaven or in hell, "in the uttermost parts of the sea" or in darkness. The Hebrew captives were saved from the fiery furnace, and Daniel was delivered from the lions' den, by their confidence in God as all powerful and ever present.

The consciousness of God "as the All-in-all, forever near" (Science and Health, p. 596), which Jesus had, was his support during the temptation in the wilderness, his stay in the ordeals of Gethsemane and on Calvary; it enabled him to raise his own body from the grave, and finally to overcome every phase of error and ascend to his Father. In his ministry on earth his understanding of the all-presence of God and the utter nothingness of everything unlike Him, was the only agency which he used to heal the sick, reform the sinner, and raise the dead. Paul expressed the idea of a God at hand when he said that "in him [God] we live, and move, and have our being;" and he proved this truth by saving himself and those with him from the shipwrecked vessel at Melita, and later, after he had reached the shore, by annulling the sting of a poisonous viper. At another time, Paul and Silas were in prison, and as they prayed and sang praises unto God there came such an influx of the divine presence into their consciousness that the very foundations of error were shaken "and every one's bands were loosed;" for even the keeper of the prison awoke out of his sleep and called for light, that he too might be saved. St. John saw so clearly that God is the only presence, that he rose above material sense and beheld a new heaven and a new earth, in which there was no sin, disease, or death, but only the consciousness of infinite good.

For nearly half a century Mrs. Eddy, the Discoverer and Founder of Christian Science, has declared to a sin-sick and suffering humanity that the promises in the Bible which tell us that God is a God at hand are applicable and available for man's every need, now and forever, here and everywhere. She does not "limit in any direction of thought the omnipresence and omnipotence of God" (*Ibid.*, p. 445). She adds that all evil beliefs are "cast out by the divine Mind which heals disease." What is it that seems to shut out material man from the presence of God? The false testimony of a false material sense. But false testimony is no testimony, and the material senses can take no cognizance of God or spiritual man. No matter what the evidence is before the corporeal senses, the fact remains in Science that man, the real man, the only man, "reflects the beatific presence, illuming the universe with light" (*Ibid.*, p. 266). That Christian Scientists are able to grasp and to prove this eternal fact is evident by the sick that are healed and the sinners that are reformed. The happy, contented, and fruitful lives of genuine Christian Scientists show that they have realized, in a measure, what is meant by the Scripture: "Thou wilt show me the path of life: in thy presence is fulness of joy; at thy right hand there are pleasures for evermore."

"REMEMBER THE SABBATH DAY."

BESSIE BYRNE.

A STUDY of the fourth commandment shows the necessity for something more than a literal interpretation of the Decalogue. If we seek no deeper meaning, the fourth commandment is merely a law to be observed every seventh day, instead of what every Christian Scientist knows it to be, the word of Truth that directs each step of the way out of the house of bondage into the promised land.

The difference between the literal and the spiritual interpretation of this commandment hinges upon the distinction between a material and a scientific sense of time. Mrs. Eddy tells us that "Mind measures time according to the good that is unfolded. This unfolding is God's day" (Science and Health, p. 584). In the light of this spiritual interpretation, we see that each brighter realization of Truth is the dawning of a new day in our consciousness, a clearer demonstration of the Sabbath day, God's perfect day. This divine state of consciousness has been freely given by God, but it is our place to "keep it holy," with unselfishness consecrating it to divine Mind, with unceasing watchfulness keeping it clear from worldly aims and the false testimony of the physical senses. When we realize that God's commands not only can be obeyed, but that they cannot be disobeyed, by God's child, the power of this commandment reveals the falsity of every sense of discord, sin, or sickness that would seek to desecrate this holy place, the spiritual idea that God has blessed and hallowed.

If we but let it, the inspiration of this commandment becomes a guardian angel of the time set aside for Christian Science study and work. The material day may be full of duties and plans that try to intrude, trifles distracting and people annoying, but Christian Science study brings us into God's day, wherein "thou shalt not do any work" and all the surrounding conditions shall be in harmony with the truth that is being unfolded. "Shall," according to Webster, "indicates a duty or necessity whose obligation is derived from the person speaking," and in this case, since the speaker is the infinite, omnipotent God, from whom comes the necessity of man's obeying, that obedience must be absolute and inevitable. Realizing this brings a certain sense of His power with us and His peace round about us. This angel will protect us from incidental disturbances, and bear us up lest we dash our feet against the stones of impatience and irritation when interruptions seem necessary.

If the Christian Scientist is obeying this commandment, he is also obeying our dear Leader's counsel "to defend himself daily against aggressive mental suggestion, and not be made to forget nor to neglect his duty to God, to his Leader, and to mankind" (Manual, Art. VIII, Sec. 6). The one who is remembering to keep holy his highest sense of Truth, is always controlled by Truth. He knows there is no other motive to govern his action, no other thought to form his being, than that motive and that thought which divine Mind has inspired in him. This realization so completely and positively fills his consciousness that there is no opportunity for the negative sense of forgetfulness or neglect to mislead him. This active remembering keeps him always on the right side, alert and prepared, and accomplishes those works by which he shall be judged and justified.

The Sabbath day is to be kept holy—whole and complete. This sense of wholeness brings with it the idea of parts joined harmoniously, making a perfect whole. To keep each revelation of Truth intact, then, it is necessary for each part of that revelation to have its accomplishment in our lives. What these parts are and how indispensable they are to each other, is shown by Mrs. Eddy when she says, "Immortal and divine Mind presents the idea of God: *first*, in light; *second*, in reflection; *third*, in spiritual and immortal forms of beauty and goodness" (Science and Health, p. 503). Each divine idea must pass through these

Digitized by Google

three stages of unfoldment before it is completely realized. In this making of the holy day, man's place is clearly defined. He has the blessed assurance that God has eternally declared light. This is no part of man's work. Nothing he might do could change or affect it; it is the gift of God. There is no doubt that this gift is always bestowed on everybody. It is for man to be loving enough and pure enough and faithful enough to reflect this heavenly glory, and, lo! the things of God are revealed all about him; Love is manifested, Truth is established, Life is eternal,—the kingdom of God is come.

When the individual sees in any true sense the mighty work that Christian Science is doing, and the splendor of the spiritual ideas it is revealing close at hand, he awakes to the reality of being and strives to reflect in his own life this light divine. Every Christian Scientist knows it is the purpose of God to illumine His works in the sight of all His children, and so, as we are guided by the divine Mind, we have the power to praise God truly in showing forth His marvelous works.

NO GOOD THING WITHHELD.

ABBIE CRANDALL BACHMANN.

Not long ago, in trying to become conscious of the oneness and allness of God and the nothingness of the claim of error for a friend, my eyes rested on this sentence in Science and Health (p. 481): "The forbidden fruit of knowledge, against which wisdom warns man, is the testimony of error, declaring existence to be at the mercy of death." The thought immediately came to me that this testimony of error was simply our declaration of the physical pains and pleasures as something; the voicing of our discords, while wisdom commands us to voice the truth, and the truth makes us free. In the beginning of our journey from sense to Soul our first lessons teach us how to "silence the witness" (*Ibid.*, p. 417), and this destroys the evidence. This seems hard to do at first, for we seem to enjoy voicing our pains; yet every time we indulge this false sense we are partaking of the knowledge which is forbidden.

My experience with this forbidden fruit was truly a fulfilment of Scripture, for everything material to which I clung fell to pieces. I have been learning that as the understanding of Truth has unfolded in my consciousness, no good thing is denied God's idea, and we do reap the fruits of right thinking; a scientific knowledge does produce its own fruits, which are health, happiness, contentment, and harmonious action. There is nothing to forbid the knowledge of right understanding, which brings us abundant fruit in every walk in life. We find that much which we have learned in material ways only leads into bondage. Those of us who are honestly and earnestly striving to press toward the mark are willing to let go of false beliefs and to stop voicing false testimony, for we have learned that we reap as we sow.

No right doing is without its sure reward; and we find in the knowledge and understanding of Truth there is no forbidden fruit. It may be well to state right here some of the fruits which the understanding of Truth has given me. A daughter eighteen years of age has been restored to me, of whom I had not had the care since she was two years old and whom I had not been permitted to see for over eight years. Through the right application of this understanding, she was led to Christian Science without my knowledge, until she had been a regular attendant at the Sunday School for over a year. The footsteps which led up to our reunion are unexplainable.

This is only one of the many tangles which the truth as taught in our dear text-book has unraveled in my life, and I cannot help loving our dear Leader, whose teachings have enabled me to realize more of good than I ever dared to hope for. As we grow in Christian Science, we begin to realize that sense testimony has no time, no place, no way to express its false claims, for the Christ-idea cannot recognize or even take any cognizance of false suggestions. These are strangers to immortal Mind; but by persistent declaration of the allness of good we reach and enjoy the true fruit, which is not forbidden, the fruit of Spirit with its "love, joy, and peace."

THE TRUTH UNVEILED.

J. LOUISE CARTER.

One of the benefits which come to us through the understanding of Christian Science is the removal of the veil which in former times seemed to be over the Scriptures. A striking illustration of this is seen in regard to the Revelation of St. John. Before the spiritual meaning of this Scripture was unfolded in Science and Health, by Mrs. Eddy, it was seldom discussed or even read by most Christian people, while it was often remarked that no one pretended to understand St. John's vision; but today, through the spiritual interpretation gained in the study and demonstration of Christian Science, it is becoming one of the most helpful books of the Bible.

Some time ago, these words from Revelation arrested the writer's attention: "And I beheld, and lo a black horse: and he that sat on him had a pair of balances in his hand. And I heard a voice in the midst of the four beasts say, A measure of wheat for a penny, and three measures of barley for a penny; and see thou hurt not the oil and the wine." At first this passage seemed difficult to understand, but closer study and reflection brought out its spiritual signification. The balances which were to measure so much wheat for a penny, and so much barley for a penny, clearly indicated divine justice, but what did the oil and wine signify? In the parable of the good Samaritan, oil was poured on the wounds of him who had fallen among thieves, even as Mary Magdalene, in gratitude, poured oil upon the Master's feet.

Our revered Leader writes in Science and Health (p. 367) of the "oil of gladness," and further defines it as "consecration; charity; gentleness" (p. 592). She also writes of wine as symbolizing the "inspiration of Love" (*Ibid.*, p. 35). Clearly, then, one lesson to be gained from this reference is, that in our efforts to be just, we must not forget to be kind and loving.

[Written for the *Sentinel*.]

BY LOVE ALONE.

WARWICK JAMES PRICE.

Crouched in the roadside dust, which powdered white
The sorry rags that witnessed to his want,
The mendicant mouthed prayers for passing alms.
One, piteous, dropped an anna on his palm,
And, "Winds blow soft on thee!" the beggar whined.
Another, scornful in self-righteous pride,
Drew close his garment as he glided by,
Then, two steps off, he felt the snarling shot:
"No jungle yields to satisfied content."

The West learns of the East, e'en since the time
The Master trod the lanes of Galilee;
And we today, in that pariah's words,
May learn a truth. For charity
Still tempers the harsh winds of worldly woe,
While that dark tangle, woven close by sense,
Where sin breeds sickness, with death's seal o'er all,
Was never conquered yet by mortal might,
Though melting like the snow beneath the sun
Before the patient power which is of God.

SELECTED ARTICLES.

[From *McCall's Magazine.*]

Christian Science accepts statements and makes declarations concerning God which are accepted and made by every other Christian religion, among which are the following: that God is the only creator; that God is Spirit; that God made man in His image and likeness; that God pronounced all that He made good; that God is all-power—omnipotence; that God is everywhere—omnipresence; that God is all-knowledge—omniscience.

Christian Science further says that the declaration that God is Mind, infinite and supreme—divine—is a necessary corollary to the statement of His omniscience, and that being all-knowledge and all-power, God is necessarily changeless; being Spirit, His creation is necessarily spiritual, hence man, made in His image and likeness, is spiritual, and that which is spiritual must be eternal. Christian Scientists quote what Jesus said, "And this is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent;" and from this they reason that the most important thing in the world, therefore, is to know God, and to know Him through the Christ.

It is claimed by Christian Scientists that their religion is without doctrine or dogma. It has but six religious tenets, the sixth being: "And we solemnly promise to watch, and pray for that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us: and to be merciful, just, and pure" (Science and Health, p. 497). To the extent, therefore, that this tenet is carried out, and one has that Mind in him which was also in Christ Jesus—the divine Mind—he has a provable knowledge of God. Jesus laid the foundation of Christianity through his works, proving every statement that he made: and thus Christian Scientists believe that what are commonly referred to as the miracles of Jesus were, as a matter of fact, but the results of the application by him of his knowledge of the law of man's real being. In Science and Health Mrs. Eddy says (p. 476), "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick. Thus Jesus taught that the kingdom of God is intact, universal, and that man is pure and holy."

They claim it to be obvious that this true concept of man and his relation to God dispels the idea that God created sin and sickness, and inflicted them upon His creatures, or that the all-powerful ruler of the universe could form a partnership with or employ such evil agents to help Him govern His universe. This does not mean that Christian Scientists simply ignore evils by closing their eyes to them, or attempt to dissipate them by the exercise of human will-power. Neither of such methods could, in their opinion, be efficacious. Christian Scientists believe in the unreality of sin and of its powerlessness, and this they think has the same effect upon the individual as has the truth about ghosts upon the superstitious. The believer in ghosts, passing a graveyard at night, does so with quaking limbs and crawling flesh. The next week, having learned the truth, he walks calmly on undismayed, and no longer makes his delusion real to himself, nor shivers with fear at it. The argument is that, in the same manner, one who cultivates in himself the Mind of Christ, thinks righteous thoughts, and the opportunity for sinful thoughts decreases as right ones take their place. In the proportion that he does this, envy, jealousy, anger, fear, hatred, malice, and revenge disappear from his consciousness.

Thus it is that Christian Science is for the individual, each one obeying the Scriptural injunction and working out his own salvation. In this lies, I think, the wonderful simplicity of the religion founded by Mrs. Eddy. Each loyal adherent being busily occupied in being and doing good himself, he has no time to criticize his neighbor or to preach or proselyte; "deeds not words" being the universal motto.

[William J. Bonnin in *Liverpool* (Eng.) *Courier.*]

Christian Science teaches us to strive to lift our vision above the evidence of the material senses out into the wide infinity of absolute truth, out from the narrow, relative view where evil seems so real, and so much would seem to contradict the omnipresence of love and good, into the understanding of God as All-in-all, and the consequent recognition of the unreality of anything unlike Him. And it is this knowledge of God which Christian Science shows to be the healing Christ, redeeming us from sin and saving us from evil; not, as our clerical critic would have his hearers believe, exempting one from the responsibility for wrong-doing on the ground that evil has no reality, but destroying all the seeming power and attractiveness of evil by the comprehension of the omnipotence of good.

It is the teaching of Christian Science to rely to the very utmost on God, and that evil only appears in human experience in the absence of such reliance. Our critic asserts that the teaching of absolute reliance on God is a source of grave danger. When this charge of "absolute and exclusive reliance on God" is considered in connection with the immediately preceding statement that "many of the alleged cures could only be explained on the supposition that the powers of darkness had been exerted," there ceases to be any need for criticism. The answer that the great healer gave to those who accused him of casting out devils through Beelzebub is the answer to the same charge given today by those who are humbly trying to carry out his express command to heal the sick in the manner he meant that healing to be done.

By its fruits Christian Science is to be judged. Where it is so judged there is never any doubt as to the verdict, for those who have honestly applied its teaching are able to say that they have found a practicable and provable religion, one that has taught them to know; not merely to believe or to think, but to know that their Redeemer liveth.

[John L. Rendall in *Creston* (Ia.) *American.*]

A clergyman in your city took occasion recently to deliver a sermon under the title, "Jesus *versus* Spiritualism and Christian Science." Just why he associated these two distinct and opposite teachings is not clear to Christian Scientists, and just why he assumed that Christian Science is opposed to the teachings of Jesus is equally obscure. As a matter of fact, there is no religious body which in its precepts and practice more nearly follows the exact teachings of our Master than do those known as Christian Scientists.

There are certain clearly defined precepts in the Christian religion as taught by Jesus Christ which are unmistakable. His whole mission during his brief experience as a preacher, teacher, and healer was to present to humanity the true gospel of salvation from sin, sickness, and death. Careful reading of the Scripture relating to Jesus' mission and as recording the works of his disciples and apostles, reveals the fact in a conclusive way that the necessity for overcoming disease and death was recognized as of equal importance with the necessity for overcoming sin. Thus we find recorded innumerable examples of this healing and saving ministry.

It is therefore somewhat inconsistent for a minister to take the arbitrary and unjustifiable position that a body of people who are endeavoring to follow in Jesus' footsteps are in any degree opposed to his essential and fundamental teachings. Nowhere is it recorded that Jesus established or defined any particular system of religious belief, any

Digitized by Google

creed or dogma. When he sent his disciples out into the world, he said, "Go ye into all the world, and preach the gospel;" "Heal the sick." This command has never been changed, and there is no Scriptural warrant for the prevalent belief that this healing work was simply for Jesus' immediate time. As a matter of fact and of history, this healing ministry continued as a fundamental part of the Christian religion for three hundred years after Jesus' time.

Christian Scientists recognize the necessity for complete compliance with Jesus' teachings and example, and thus they are found healing the sick, reforming the sinner, comforting the sorrowing, establishing peace and harmony where opposite conditions seem to prevail, and in every way lending their thought and influence toward the complete uplifting of humanity and toward the establishment of higher and better conditions in human thought and experience. It is no new thing that these efforts for good should be met by misconception, misunderstanding, and opposition, even from those who should properly be found in complete sympathy and accord with the effort. One needs only to read the Scriptures, especially those parts which record Jesus' experience and that of his disciples and apostles, to find the prototype of this sort of thing. The book of Acts especially sets forth the fact that the scribes, Pharisees, Sadducees, the high priests and those in ecclesiastical authority condemned and vilified, some to the extent of trying to kill, those who were preaching and practising the Christian religion.

Christian Scientists recognize but one healing Principle, which is God, and that all real healing emanates from Him. This gentleman makes the point that Christian Science teaches, "There is no such thing as sin, there is no such thing as sickness, there is no such thing as disease, etc." He, however, fails to make the distinction and the qualifying statements, made by Christian Scientists, that to the material sense of things these things are real. Christian Science displaces this material sense with a higher and better sense, and states, "That only is real which reflects God" (Science and Health, p. 478).

The essential mission of Christian Science is to reform those who have labored under the bondage of sin, to heal those who have been harassed and oppressed by sickness, to eliminate from human consciousness all that which makes for and sustains sin, sickness, diseased appetites, selfishness, sensuality, etc. As the prophet Isaiah states, "Is not this the fast that I have chosen? to loose the bands of wickedness, to undo the heavy burdens, and to let the oppressed go free, and that ye break every yoke?" Christian Science is complying with this injunction, and is in every way following the teachings of our Master, and thus aiding in the uplifting of humanity.

[R. Stanhope Easterday in *Richmond* (Ind.) *Item.*]

Christian Scientists prove their views about Christ and about the supposed powers of evil to be correct, as did the early Christians, by positive "proof," by "signs following," such as Jesus affirmed should in all ages be the reasonable evidences of loyal, genuine discipleship. For forty years Christian Science, as outlined in "Science and Health with Key to the Scriptures" by Mrs. Eddy, has been healing the sick and reforming sinners, through its interpretation of the words and works of Jesus. Our Lord's own reasonable argument is conclusive in this connection also, "If Satan cast out Satan, he is divided against himself."

The people of Jesus' time, so grossly material as to be unable to differentiate between the miserable sham of evil attempting to parade as good and the wholesome, convincing evidences of the Christ as demonstrated by Jesus and his followers in early centuries, were ruthlessly rebuked by our Lord in the words, "If I by Beelzebub cast out devils, by whom do your sons cast them out?" It behooves modern critics also to be extremely careful in the use of the term "false religion," lest, to use the words of the wise Gamaliel, they "be found even to fight against God." In the face of an ever increasing volume of incontestable evidence in the form of physical healings and moral regenerations, accredited to Christian Science, the people will not readily accept a supercilious declaration from any source to the effect that Christian Science is not supremely Christian in origin and nature.

Your readers may be interested to know something of the Christian Science concept of evil. In the first place, Christian Scientists are not able to agree with our critic in his deduction that Paul was afraid of evil, because a chief buttress of their faith in good is that sturdy apostle's unequivocal assurance, "God hath not given us the spirit of fear; but of power, and of love, and of a sound mind." Coupled with this assurance, moreover, the Christian Scientists have faith in the promise of Jesus, "Behold, I give unto you power . . . over all the power of the enemy: and nothing shall by any means hurt you;" and, "Fear not, little flock; for it is your Father's good pleasure to give you the kingdom."

Christian Scientists find in the Scriptures all needed information about good and all needed inspiration to do good, but they find little stress laid therein upon evil. Indeed, they find in the Scriptures ample justification for their concept of evil as in the last analysis neither personal, real, nor potent, but the almost indefinable and unstable absence of positive, potent good. Evil in this light is in evidence and is fearable only so long as good is absent from consciousness, and is effectually and without fail dissipated by communion with God or by thinking good.

[E. M. Ramsay in *Dundee* (Scot.) *Courier.*]

That Christian Science should appear an absurdity to people who do not understand its teachings need cause no surprise; the discoveries of natural science met at first with equal derision.

Christian Science is no new religion; it is an earnest attempt to put into daily practice the teachings of the Saviour. It maintains that what was the will of God in the apostolic age must still be His will; that if an understanding of the truth could free men from sin and illness nineteen hundred years ago, it can do so today, and it points out that if faith has ceased to move mountains of trouble it is not because God's nature or God's methods have changed, but because there is something lacking in the faith. Christian Science is a particularly vigorous form of Protestantism, full of energy, love, and good works. Mrs. Eddy's teachings are drawing together men widely divided by nationality, class, and education, freeing them from the bondage of fashion, prejudice, poverty, sickness and sin, and showing plainly that the brotherhood of man can only be founded on the recognition of the fatherhood of God.

It is universally admitted that drink and impurity are the cause of most of the disease in the country, that worry, fear, and disappointment are accountable for much bodily suffering. Christian Science declares that in order to improve our health we must begin by improving our thoughts, and the Christian Science text-book, Science and Health, explains the Bible method whereby this may be accomplished.

[Edward W. Dickey in *San Diego* (Cal.) *Union.*]

An unprejudiced study of Christian Science would convince any one that it is the religion and gospel of Jesus Christ. It is in every sense of the word Christian, and abides by all the precepts as well as the practices laid down by the Master. It is in every sense of the word, therefore, a religion; and while Christian Science is a philosophy, it is a distinctly religious philosophy. Christian Science builds upon the corner-stone that God is the only Mind; Life,

Digitized by Google

Truth, Love, the sole cause and creator of the universe. It rationally deduces all its conclusions from this major premise, and its minor premise, which is that creation is "after his kind." It is to be noted, then, that Christian Science is the Science of being, and in no wise contingent upon the coming or the going of any human personality. The demonstration of its truth must be upon a strictly impersonal basis, and the spread of Christian Science, which even its critics admit is phenomenal, has been attained solely upon its merits, and not by reason of any personality. True, Mrs. Eddy's was the guiding thought in founding the church activities, but she steadfastly adhered to the statement: "Follow your Leader, only so far as she follows Christ" (Messages to The Mother Church, p. 78).

Our critic states that what he regards as "modern substitutes" for the old gospel "never attack this great problem of sin." With all due respect for his opinion, permit me to say that, so far as the gospel of Christian Science is concerned, nothing could be farther from the truth. The emphatic purpose of Christian Science is the destruction of sin. In speaking of this, the Christian Science text-book says: "Today the healing power of Truth is widely demonstrated as an immanent, eternal Science, instead of a phenomenal exhibition. Its appearing is the coming anew of the gospel of 'on earth peace, good will toward men.' This coming, as was promised by the Master, is for its establishment as a permanent dispensation among men; but the mission of Christian Science now, as in the time of its earlier demonstration, is not primarily one of physical healing. Now, as then, signs and wonders are wrought in the metaphysical healing of physical diseases; but these signs are only to demonstrate its divine origin,—to attest the reality of the higher mission of the Christ-power to take away the sins of the world" (Science and Health, p. 150). The ranks of Christian Science number thousands who have been redeemed from dire distress and reclaimed from the many phases of evil.

Its students with one accord proclaim the wonderful spiritual benefit that has come to them, how that God seems more and more "a very present help in trouble." The Bible is a clearer book, and religion itself is something for their every-day use. No reformation since the dawn of the Christian era so attacks the problem of sin and stays its so-called activities as does the pure Christ-gospel of Christian Science.

[Henry Deutsch in *Dawson* (Minn.) *Sentinel.*]

Mrs. Eddy believed in God, and she believed that what Jesus said of Him was true. She believed that He had the power to heal all our diseases, as the Scripture says, and she attempted to give the world the benefit of her revelation. Those who have been humble and modest enough to acknowledge that their opinions on the subject of religion were not the final and exclusive judgment on that matter, have been able to catch glimpses of the revelation that came to Mrs. Eddy, and so today from all parts of the civilized world come the thousands upon thousands of grateful and indubitable testimonies of the force, efficacy, and power of the truth that she taught, not only to heal sickness, but to save from sin and misery.

Your correspondent's statements are entirely unwarranted, without foundation, and show a woful ignorance of the subject on which he writes. Nobody has ever been duped by Christian Science, nobody has ever been influenced to try it against his will or judgment, and it is a far cry from the proper definition of the term to call those people dupes who by the thousands gratefully acknowledge that they have received from Christian Science, in their very limited experience, more than they had ever gotten in all the preceding years from all other systems of the world, religious, philosophical, or medical.

It is true that the world likes to comment upon the fact that at times Mrs. Eddy received pay for what work she did, and at the same time to ignore utterly the tremendous sacrifice and the many unselfish hours that she spent for the uplift of humanity, for which there can be no worldly compensation. But, granted that she did receive pay for her work—is that any more reprehensible than it is for a minister to have a salary for preaching the gospel or for a newspaper man to be compensated for his services to the public? And what has the question of pay to do with the consideration of whether a religious system is true or false? The proof of the Principle is in the results obtained. There is no other standard or test for determining the truth.

If your correspondent will apply to his consideration of Christian Science the same unbiased and unprejudiced investigation and test that he would apply to the study of any other scientific subject, I am satisfied, if he is fair, that he will entirely reverse his conclusions. The evidence is at hand, and is readily obtainable by any person who desires it; and it is not confined to the testimony of a gullible public, but is represented by men and women of the highest intelligence, who in a large number of instances have turned to Christian Science for the cure of disease pronounced incurable and which did not yield to the best courses of medical and surgical treatment.

[H. Coulson Fairchild in *Jersey City* (N. J.) *Journal.*]

Christian Science does not depend upon the human mind or will-power to effect the cure of sin or disease. It depends upon the divine Mind alone to effect its cures. Jesus said, "The Father that dwelleth in me, he doeth the works." He further said to his followers, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." One of the conditions necessary to a full understanding of this Science is that Christians should reflect the same Mind "which was also in Christ Jesus." It must be clear to all that the great difference between the so-called finite mind and the Mind "which was also in Christ Jesus" is this: To God all things are possible; to the finite mind all things are not possible. It is possible for God to do the greatest things as quickly and readily as it is possible for Him to do the easiest thing, from our finite standpoint. Herein lies the healing power of Christian Science, in that we understand that all things are possible with God.

[George Shaw Cook in *Waukegan* (Ill.) *Sun.*]

Mrs. Eddy, although taking issue with popular belief on the subject of medicine, was not an enemy to any form of human progress, and in emphasizing the superiority of the spiritual over the material she has contributed greatly to the world's progress and has lifted the thought of the age to higher aims and achievements. It is impossible at this time to estimate the good which Mrs. Eddy has accomplished, but the value of her teachings is attested in the vast army of people who have been healed of sickness, redeemed from sin, and restored to normal, useful lives.

The crimes of the tongue are words of unkindness, of anger, of malice, of envy, of bitterness, of harsh criticism, gossip, lying, and scandal. Theft and murder are awful crimes, yet in any single year the aggregate sorrow, pain, and suffering they cause in a nation is microscopic when compared with the sorrows that come from the crimes of the tongue. Place in one of the scale-pans of justice the evils resulting from the acts of criminals, and in the other the grief and tears and suffering resulting from the crimes of respectability, and you will start back in amazement as you see the scale you thought the heavier shoot high in air.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

THE KINGDOM WITHIN.

ONE cannot progress very far in the investigation and study of Christian Science without perceiving how closely it adheres in its teaching and demonstration to the truth the Master sought to convey to the self-seeking Pharisees, when they demanded of him the time the "kingdom of God" of which he had spoken should come. "The kingdom of God cometh not with observation,"—that is, with outward show,—was his answer; and then followed the declaration which Christian Scientists are daily endeavoring to prove: "For, behold, the kingdom of God is within you."

That the Master was seeking to remove the veil of materiality from the eyes of his worldly and self-righteous questioners is plainly evidenced in this answer. They were looking for the pomp and show of an earthly kingdom, in keeping with their own arrogance; and he who, as we so often read, "knew their thoughts," promptly rebuked this desire of outward glory, and bade them consider instead the true kingdom, that which Peter called "the hidden man of the heart, in that which is not corruptible, even the ornament of a meek and quiet spirit, which is in the sight of God of great price."

Mrs. Eddy, on page 590 of Science and Health, defines the kingdom of heaven as "the reign of harmony in divine Science; the realm of unerring, eternal, and omnipotent Mind; the atmosphere of Spirit, where Soul is supreme." It should be noted that this definition does not contemplate a partial reign of harmony, or a realm wherein omnipotent Mind partially reigns (if such a thing were possible), but it does call for the presence of only that which is good. In other words, if it is our supreme desire, as it should be, that we may attain to the kingdom of heaven, it is necessary that we should have within us that realm where all is harmony, that we should have as our goal the elimination of all evil,—of all malice, hatred, lust, envy, and every other belief which would divert us from the narrow path of righteousness.

In the eighteenth chapter of Ezekiel we read: "When the wicked man turneth away from his wickedness that he hath committed, and doeth that which is lawful and right, he shall save his soul alive. Because he considereth, and turneth away from all his transgressions that he hath committed, he shall surely live, he shall not die." In this, as in all other promises of Scripture, we find the kingdom of heaven is not to be won by a half-hearted acceptance of any theory or dogma, but only through the active and actual doing of good and the rejection or abandonment of all that is unlike God, good. "Because he considereth, and turneth away from all his transgressions," is the reason given for the salvation of the wicked man; and this, too, is the teaching of Christian Science.

We must not, however, lose sight of the important condition of this salvation; namely, that the evil must be forsaken and the good prevail. Not only must one "cease to do evil," but he must also "learn to do well." Mrs. Eddy emphasizes this when she says: "Sorrow for wrong-doing is but one step toward reform and the very easiest step. The next and great step required by wisdom is the test of our sincerity,—namely, reformation" (Science and Health, p. 5). In other words, the sinner is saved in the working out of his salvation.

The healing of both sickness and sin was the proof which Jesus gave of the truth and efficacy of his ministry; and so must it be with the present-day ministry of Christian Science by those who would follow in his footsteps. There may be those who will scoff at our profession, but there can be no gainsaying its verity if we also can declare, as did the great Teacher, "Go and tell . . . what ye have seen and heard," and we shall have done our part toward the bringing in of that kingdom which is "at hand" even today.

ARCHIBALD MCLELLAN.

THE DERELICT.

WE had passed the doldrums with their characteristic rain and fog and fluffy winds, and had entered the southeast trades, a region of sunny seas and steady sails, well named "The Sailor's Delight." Lying in a hammock swung above the quarter-deck, the solitary passenger was dividing his attention between the pages of a book and the airy ventures of unnumbered flying-fish, startled out of their native element by the coming of this monster ship-leviathan, or by their better known enemy, the fierce bonitas, when a cry from the outlook, "Wreck to starboard!" centered all eyes upon the horizon named. The binoculars speedily disclosed that the object was nothing less than the hull of a vessel, a dangerous derelict indeed in this much traveled highway of the sea. As we bore down upon it, in obedience to the captain's crisp orders, we found the burned-out body of a fine steel bark, once the fleet mistress of the waves, but now their prey and destined perchance to be crushed to pieces upon the not distant ledges of Cape St. Roque.

It was a pathetically interesting object, for one could but think of the possible fate of its crew, of the contrast between the brave ship's promise and this its sad end, and how fittingly it symbolized that multitude of mortals who because of their physical or moral breakdown are found adrift, the sport of those so-called laws of degeneracy which in common thought rob their future of every gleam of hope. One is constantly meeting with men and women in homes and hospitals and asylums who in the fierce heat of pain or passion have thus been burned out, despoiled of all strength of body or of character, and left to think of themselves, perchance, as but derelicts upon life's sea, a burden or a menace to others. This aspect of the world-tragedy seems quite overwhelming sometimes, and unless one has a grasp of faith that is full and firm upon the significance of Jesus' words, "I am come that they might have life," he cannot escape the temptation to despair of the solution of so vast a problem.

What have the Master's followers to say today respecting these so-called "incurables"? Many words of kindness, surely, some few of hope, but where are they who with the inspiring consciousness of the present demonstrability of the saving power of Truth can say and prove again this word of their Lord: "I am come that they might have life"? This possibility of power is the simple and abiding test of true discipleship, and in imposing it Christ Jesus paid his followers the supreme honor of associating them with himself in their calling, their capacity, and their command. What are we doing to prove ourselves worthy of the trust thus reposed?

Christian Science has startled the religious complacency of the centuries with its insistence that those who bear the name Christian, have no warrant for consenting to the incurability of any abnormality or disease, and that it is both their privilege and their duty to address themselves to such a following of their Lord as will enable them to continue his ministry. More than this, through its immediate works of healing, and its adherence to the logic of the Master's teaching, Christian Science is begetting in the entire Christian world a renewed conviction that Christ, Truth, is now and forevermore able to save "to the uttermost." The discouragement incident to the thought that the diseased or depraved man is the real man, and to the endeavor to make over this real bad into a real good, is giving place to the inspiring realization that all imperfection is but

Digitized by Google

the phenomena of falsity which may be dissipated by Truth as is darkness by light. To this new attitude of thought all the world is awakening, and in the long-time darkened sky of the sick and sinning there is appearing the dawn of a sweet new day.

JOHN B. WILLIS.

PLENITUDE VS. POVERTY.

A CAREFUL study of the Bible reveals a widely different concept of poverty and riches than that popularly entertained, a truly metaphysical sense of these terms and others related to them, indicating mental rather than material conditions. In some cases, where the material is considered, the mental cause is carefully explained, as, for instance, where the wise man says, "Poverty and shame shall be to him that refuseth instruction:" also, "Love not sleep, lest thou come to poverty; open thine eyes, and thou shalt be satisfied with bread;" and again, "He that followeth after vain persons shall have poverty enough." Christ Jesus made a fine distinction between the true and the false concept, when he spoke of those who had great material possessions but who were not "rich toward God." In Christian Science we would take this to mean that one would be poor indeed if he did not realize the possession of man's God-given dominion, and of the mental and spiritual qualities which cannot be ignored if we would claim Godlikeness.

There are those who in some way have gotten very incorrect views of the teaching of Christian Science respecting the question here considered. They seem to think that what they term "supply" is to be gained in quite a different way from that indicated by the great Teacher, who insisted that if we sought "first" the things of God, all our real needs would be supplied by the divine bounty. He, however, urged his hearers to "search the Scriptures," for well he knew that thus each would gain the wisdom required in working out every human problem. One man might have to guard against avarice and penuriousness, and another against prodigality and improvidence, while all should remember, above all else, that the moral demand for justice must never be forgotten: "Thou shalt not defraud thy neighbor. . . . the wages of him that is hired shall not abide with thee all night until the morning."

The entire teaching of our beloved Leader is an insistent demand for righteousness as the true basis for riches, and in the Manual of The Mother Church she makes this statement: "God requires wisdom, economy, and brotherly love to characterize all the proceedings of the members of The Mother Church" (Art. XXIV., Sect. 5). A wonderful lesson may here be gained from the story of Jesus' feeling of the multitude. Although he was able to prove the infinite source of supply by meeting the need of five thousand men, besides women and children, yet he gave us a never-to-be-forgotten lesson of thrift when he commanded his disciples to "gather up the fragments that remain, that nothing be lost." Following this example, it should truly be said of us, "As poor, yet making many rich: as having nothing, yet possessing all things."

We should never forget that self-denial on the material side leads to expansion on the spiritual side. In Science and Health (p. 58) we find a clear-cut warning against "vulgar extravagance or stupid ease," these indicating a mental poverty which needs to be healed by a quickened sense of Truth's demands. Honesty and industry are rare gems which call forth admiration without exciting envy, and students of Christian Science do not need to be reminded that all good, wholesome mental qualities indicaté health, for they prove the reflection of the one perfect Mind. In a wonderful word-picture Paul tells us of the churches of Macedonia, how that in a time of great trial "the abundance of their joy and their deep poverty abounded unto the riches of their liberality," and his words to them may well be heeded by us today: "See that ye abound in this grace also"!

ANNIE M. KNOTT.

AMONG THE CHURCHES.

HAMILTON, MONT.

The Christian Scientists are building a church at the corner of Fifth and Bedford streets. The building will be of frame and the dimensions will be thirty-two by forty-eight feet. The estimated cost of the building will be two thousand dollars. The Christian Science church started six years ago. It then consisted of two families and met at a private home. The following year it secured rooms on Main street, where services were held until last year, when meetings were held at Odd Fellows' Hall.—*Rovalli Republican.*

EDMONTON, ALTA.

At a meeting open to all Christian Scientists in Edmonton and district, held on March 23, a new organization was formed by the amalgamation of First Church of Christ, Scientist, and the Christian Science society, Edmonton. The new organization, whose officers were appointed at this meeting, is known as First Church of Christ, Scientist, Edmonton, Alta. The hall and reading-room are in the Bijou Theater Block, First street.—*Correspondence.*

MEXICO, MO.

First Church of Christ, Scientist, of this city, has purchased the Gibbs property on East Promenade street, across from the Pasqueth home. They intend to build a church on it in the future. The site is an excellent one for such a building, being close to the center of the city. Plans for building have not materialized at this time, though the members hope to be in a position in the near future to start work on a modern structure.—*Mexico Ledger.*

CALGARY, ALTA.

The two Christian Science organizations of this city which recently united under the name of First Church of Christ, Scientist, Calgary, are planning to build a larger edifice, the one they are at present occupying not being large enough to hold the rapidly growing congregation. Lots for this purpose have been secured in the best residential part of the city, and it is expected that building will be commenced at an early date.—*Correspondence.*

POCATELLO, IDAHO.

Ground for another church has been purchased by First Church of Christ, Scientist, for $1,025. The property is located near the corner of East Center street and North Fourth avenue. It is understood to be the intention of the Christian Science church, which has a large membership in Pocatello, to commence the erection of a church edifice at an early date this spring.—*Pocatello Tribune.*

QUINCY, MASS.

We welcome the removal of the Christian Science church from Braintree to Quincy. The forces of good in this city will be materially strengthened. We do not understand its theology, nor the processes of its healing, but we do know something about the results it has achieved. "By their fruits ye shall know them."—*Quincy Telegram.*

NEW PAMPHLETS.

Two new pamphlets, "Fulfilling the Law" and "The Providence of Good," have just been issued by The Christian Science Publishing Society, and are now on sale. These pamphlets include articles from our periodicals for which requests have recently been made. Price, single copy, five cents.

THE LECTURES.

SWANSEA, WALES.

The service room in the new Christian Science buildings, Uplands, was filled to overflowing on March 6, on the occasion of a lecture by Bicknell Young. The audience was very attentive and the interest was well maintained. The lecturer was introduced by Henry Benner, formerly of Swansea and now First Reader of Brixton, London, Christian Science society, who said in part,—

It is my privilege to offer you, on behalf of the Swansea Christian Science society, a most cordial welcome in their new hall to the first lecture on Christian Science delivered in Wales by an authorized lecturer of the organization. Christian Science at the present time is claiming the attention and occupying the thought of thinking people throughout Christendom. Humanity had always been asking, What is life? Where does it come from? Whither does it go? The answer to the latter could be found when they knew the answer to the first, What is life?

On the arch above my head you may read the words: "I am come that they might have life, and that they might have it more abundantly." Those words were uttered by the great Teacher, the Saviour, Jesus Christ. The explanation in Christian Science of this utterance is contained in the extract from the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, which will also be observed on the wall of this building, "Divine Love always has met and always will meet every human need."

It is not my province to speak of what Christian Science is, but I may be permitted to strike a personal note just here. It was in Swansea that Christian Science came to me and my family, and the result has been that our eyes have been opened and our understanding quickened to behold truth, with the natural result that physical health has been restored and preserved. Over forty years ago a woman in New England sought and found the light. She stood alone and fearlessly proclaimed the full gospel which Jesus taught and proved by his works. His commission included teaching and healing, and he gave the authority and the power to all his followers, with the promise, "Lo, I am with you alway." In forty years the message has encircled the globe, and today there are over twelve hundred organized churches and societies.—*Correspondence.*

CANTON, OHIO.

Christian Science as a demonstrable reality was the subject of an address delivered in the Grand Opera House Sunday afternoon [March 26] by Francis J. Fluno, M.D. He was introduced by John C. Harmony, who said in part,—

Standing here today as I do, "with malice toward none and with charity for all," I hope that I am not transgressing the proprieties of this occasion when I speak of these things, for I take this to be grandly true, that religious forbearance must be acquired on earth before it can be practised in heaven. From what I know of you and the faith which is yours, I am sure that you will agree with me, for you have patiently suffered and endured not only intolerance, but vituperation and vilification—if not persecution sometimes—possibly for the reason that you are not understood.

But what of your religion, creed, or dogma, whichever you may be pleased to call it? Let me say to you of this religion, whatever you may think of the truth or falsity of it, the work is here to speak for itself. It was not born in the midst of mental darkness, nor has it been nourished in the cradle of superstition. It has withstood the attacks of its enemies, and triumphed over ridicule, envy, jealousy, and hate. Unnumbered people, among the most intelligent of the earth, have found in it the peace of mind and health of body they were able to find nowhere else. And who is there to say that these people are either conscious or unconscious deceivers of themselves?

Of the Founder of this religion, Mary Baker Eddy, let me say that she was one of the most noble, the most beautiful, and the most remarkable characters that the world has ever seen. Others may have equaled or excelled her in intellectual power, but for might of personality, for moral and spiritual influence, where in the long past of human history shall we find one who has accomplished so great and so noble a life-work?—*News-Democrat.*

ALBUQUERQUE, NEW MEXICO.

A goodly gathering of Christian Scientists and those interested in the doctrines of Christian Science as laid down by Mary Baker Eddy were present at Elks' Theater yesterday afternoon [March 19] to hear the lecture of Frank H. Leonard. He was introduced by Pres. F. B. Schwentker of the Albuquerque Commercial Club, who said:—

Christian Science is today attracting the attention of the thinking people of the civilized world. In all ages and from the beginning of time men have been striving to secure that which they believed would bring them happiness. We are all striving for happiness; some are endeavoring to accumulate wealth, believing that riches will bring them happiness; some are seeking for fame, believing that glory and honor will bring them happiness; and so each, in his own way, is seeking for happiness.

I am sure you will agree with me that if such a state as perfect happiness is attainable, it must be a condition into which fear does not and cannot enter. Christian Science opens the way to freedom from fear through a right understanding of God and our relationship to Him. This right understanding of God is not grasped in a moment, but, like the harmony of music or the science of mathematics, is gradually unfolded by careful study and application.

Journal.

INDEPENDENCE, KAN.

Clarence C. Eaton lectured on Christian Science at the Beldorf Tuesday night [March 21] before a full house. Ex-Senator W. S. Fitzpatrick introduced the speaker as follows:—

I have been requested to thank you for your presence here. This is one of the ways Christian Scientists have of becoming acquainted with those who do not attend their church services and are unacquainted with their teachings and practices. We have with us this evening a member of the board of lectureship of The Mother Church, The First Church of Christ, Scientist, of Boston, Massachusetts, who will address you. We hope and expect that the lecture will be both entertaining and instructive; that it may lead and help you to the further investigation of Christian Science, resulting in your greater respect for the institution, its practice, and its teachings.—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Aurora, Ill. (Society).—Bliss Knapp, People's Church, Main street and Lincoln avenue, May 19.

Clarksburg, W. Va.—Francis J. Fluno, M.D., May 15.

Des Moines, Iowa.—Willis F. Gross, Church Edifice, May 12.

Duluth, Minn. (First Church).—Rev. William P. McKenzie, Lyceum Theater, May 15.

East St. Louis, Ill.—Bliss Knapp, Church Edifice, Washington place and Summit avenue, May 9.

Erie, Pa.—Prof. Hermann S. Hering, Masonic Temple, May 16.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be June 2, 1911. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 15, 1911.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 4, 1910, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

TESTIMONIES OF HEALING.

I wish to express my deep gratitude to God, also to Mrs. Eddy, for what Christian Science has done for me. For several years I had been ailing, and was never well for long together, one complaint after another attacking me until I seemed quite an invalid. In November, 1907, I was obliged to take to my bed with acute lung trouble. The doctor was called in, but instead of getting better, I grew rapidly worse. My husband was most anxious about me, and asked the doctor what was really wrong,—if it was chronic lung trouble. He replied that it was worse than that; he feared it might quickly reach a fatal termination, but that he would do his very best for me.

I had heard of Christian Science from my mother and a sister, and had seen what a difference it had made in their lives, so one day I said I would like to try it. A practitioner was sent for and I gave up all medicine. After the first treatment I was able to sit up for a short time, a thing I had not been able to do for over a fortnight. On the fourth day I was able to leave my bedroom. The doctor had previously told my husband that I would not be able to leave my room for at least a month. In about eight days I was perfectly well and strong, able to take my place in the business, working longer hours and with greater freedom than I had done for several years.

I cannot express in words the gratitude I felt to be able to take up my work again, and to know that God is my strength, for, as the Bible says, "in him we live, and move, and have our being." For nearly four years I had suffered with an internal complaint which caused me great pain when I walked any distance, and it was not until I took my first walk, after the healing of my lungs, that I realized this ailment had entirely gone. Since then I can take long walks, cycle, and am perfectly free from pain. From the time of my healing, my husband, children, and myself have relied entirely on divine Love for our healing, in whatever sickness or trouble may confront us. We try to realize that to God's child there can be no sickness or sorrow, and to know that, whatever be the problem, divine Love is an ever-present reality, meeting every need.

We have had many beautiful demonstrations of healing in our home; for which we are very grateful. I am very thankful for the better understanding of God I have through the study of Christian Science, and am striving each day to know more of Him and to reflect His love to all around.

MRS. M. MEADER, Pokesdown, Bournemouth, England.

For a long time my wife and I had given up the orthodox religion as unsatisfactory both to heart and reason, and although we very seldom spoke of religion, we were hungering after the truth both for ourselves and our children. One evening my wife returned home after paying a call, and I jokingly asked her, "Well, what is the latest scandal?" "We were not talking scandal," she answered; "but I have been hearing a good deal about Christian Scientists. It seems they are all so happy and that such wonderful cures have been effected by them." "Are they the people who don't believe in doctors, and who tell you you can't have a headache because you haven't a head?" I asked. "Never mind," she replied; "but let us go and judge for ourselves."

On Sunday we set off to see the "hysterical women and anemic young men" of whom we thought the congregation would be composed, and on reaching our destination a genial usher conducted us to a front seat and supplied us with books. The service was very different from what we had ever known, reverent and simple, and every one joined heartily in the singing. The women looked bright and healthy, and the young men were well built and would not have been easy customers in an attack. After the service

Digitized by Google

was over one of the members asked us how we liked it, and after talking to us a little, finished by saying, "If you ask for bread, God will not give you a stone." When we came home it was with much food for reflection. On first reading Mrs. Eddy's book, "Science and Health with Key to the Scriptures," it seemed hard to understand and impossible to live up to, but little by little darkness gave way and the dawn broke. It seemed as if we had been walking in a valley dark with the mists of error; but now, although the darkness sometimes gathers again, we see the light of Truth illuminating our horizon.

A stumbling-block to many is the fact that this truth has come to us through a woman; but the lecture, "Christian Science: Its Compassionate Appeal," wipes out this false thought. The personal God of our youth no longer appeals to us; but we realize a God who, instead of giving us the desire to sin and then punishing us for it, is an ever-present help in trouble, our Father-Mother God to go with us on life's journey. To understand this opens up a new field for our activities, and we must regard everything spiritually and not materially. Christian Scientists do not insist upon one's giving up old habits, but they tell you, and truly, that these habits will leave you of their own accord. The reason that they remained with us so long was because of our ignorance, but in the light of Truth discord gives way to harmony, and the tempest-tossed seeker finds peace and joy.

Some two or three years ago, I was informed by a medical man that I was suffering from an enlarged vein, and I had to remain in bed therefrom for six weeks. When I returned to business I limped, and suffered always more or less in the affected limb. For a whole year I limped, and then the ailment threatened to return. Again I called in a doctor, and he prescribed; however, although I was a walking chemist's shop, things did not improve at all. Finally my wife suggested that I try Christian Science treatment, and a practitioner was called in. The improvement in my whole condition soon became very apparent, and since the first day I received treatment I have not touched a drug in any form. I now feel as fit as possible.

I would conclude by offering my heartfelt gratitude to God for Christian Science and for the life and work of Mrs. Eddy.—A. E. MURRAY, Edinburgh, Scotland.

For the last eleven years our family of four has relied upon Christian Science for help, mental, physical, and spiritual. Very often I have had an overwhelming desire to express my gratitude, and I now feel that I must at least make an attempt to do so. When I took up Christian Science, I was obliged to study the English language, being a native of Germany and having been in this country only a short time; but I grasped from the very first the fact that there is but one intelligence, one Mind governing man, and with this Mind to guide and lead me, I caught some very beautiful glimpses of Truth from the beginning, enough to realize that my first work must be to think, talk, live differently; that the kingdom of heaven is within, and if within, then everywhere.

It has been proven to me in all these years that Christian Science is the best physician in every case of physical disease, for I have tried other methods. I should like to relate one of our experiences, which was afterward a source of great strength to me. Prior to coming into Christian Science we lost a little boy from poisoning and a little girl from another accident. These experiences left me with a great fear and without hope, and life did not seem very bright to me when I came to this truth; but man's extremity proved to be God's opportunity. I was healed at the first testimonial meeting I ever attended, of this heavy heart. After living in Science for a few years, one of our children got hold of some poison which had been set out for vermin, and he drank a quantity of it. I will not attempt to describe what we went through for one hour. The child experienced all the stages of poisoning, but at the end of an hour he was healed and asked for something to eat. This proof brought to me a new realization of the omnipotence of God, and the nearness and love of God toward those that trust in Him.

I am always grateful for any physical healing, for it means to me "God with us;" but I experience a far greater joy and peace when I see sin conquered. This truth has been to me an educator, a physician, a comforter for many years, so it is no wonder that I am grateful to our Leader, Mrs. Eddy, for showing us the way to happiness. Her writings and the example of her life have been a great light to my path, and I know will lead me nearer to God and everlasting harmony.

MRS. MARGUERITE SEEKER, Spokane, Wash.

I am inexpressibly thankful to God for Christian Science, and grateful to its Discoverer, Mrs. Eddy, both for what it is and for what it has done for me. For years I suffered intensely from gall-stones, but through the clear realization of omnipresent Love by a Christian Science practitioner, I was absolutely healed, in the fall of 1902. The most of my treatments were given absently. I find Christian Science to be a very practical religion; it has given me a better understanding of the Bible, and of God as infinite good, divine Love.

MRS. SARAH ALVIRA WICKHAM, Cedar Rapids, Iowa.

A little over two years ago, and shortly after I began the study of Science and Health, our little boy, nine years of age, was taken ill with a fever. A practitioner was telephoned to the next morning, and in the evening the child seemed about the same. The practitioner then came, and after giving him treatment said that it would be necessary to notify the board of health. A physician was sent to diagnose the case, and pronounced it a serious throat disease; consequently we were quarantined. The child had only Christian Science treatment; he was, however, kept in bed nearly a week, but he did not seem to mind the confinement.

This healing to me was very beautiful, as before this we had relied on drugs for healing, my husband having been a graduate of a medical college, also having been in the drug business. None of our family of four have needed drugs since studying Christian Science, and although we know only a part of this truth that heals, we are progressing daily, as thought gradually changes. I have often desired to testify to the blessings received, and am glad to have this opportunity to do so. I am indeed thankful to God for the illumination of the Scriptures since I began this study. I am also grateful to Mrs. Eddy for giving the world what God gave her.—MRS. ELLA WOLTZE, Chicago, Ill.

I wish to acknowledge some of the blessings which I have received since coming to Christian Science. I did not come for the physical healing, although I needed it. I had long been seeking for a religion in harmony with the teaching of the New Testament; and when I first read "Science and Health with Key to the Scriptures" by Mrs. Eddy, I knew it was the true religion. I also saw that I did not have to die to find God. This glorious revelation destroyed the awful sense of fear of death and future suffering which I had.

Christian Science has been our only physician, and in the past twelve years the children have been healed of croup, fever, and many other ailments. I have been healed of a throat affection from which I had suffered since I was about six years old, also of internal hemorrhages, toothache, etc. I was healed in one treatment of a rectal trouble from which I had suffered since childhood. I was also healed of poisoning in about three weeks, through the study

Digitized by Google

of Science and Health. I had one treatment at first, the pain being so great that I could not help myself. The treatment relieved me so much that I was then able to read and study. A friend who saw my hand said that if Christian Science could heal that hand she would believe in it. I have seen the power of divine Science demonstrated almost instantly in the healing of burns and other injuries.

I wish to express my gratitude to God for all the faithful work done in our church, also to all those who are laboring for the advancement of the cause throughout the world. I am truly thankful for the Wednesday evening meetings; constantly do I say in my heart, Thank God for Christian Science and for our Leader.

MRS. KATE JOHNSON, Denver, Col.

[Translated from the German.]

A feeling of deep gratitude impels me to tell of the sense of peace and the blessings which I have experienced through Christian Science. For two years I suffered with a throat trouble and constant colds, and although I consulted two physicians, the condition grew worse. It was difficult for me to talk on account of the great pain, and people could hardly understand what I said. Besides this, my stomach was so weak that I could take but little nourishment. While in this condition I heard of Christian Science, and a practitioner kindly took up treatment for me. My healing was slow, yet there was daily progress, and through patient work, combined with deepfelt gratitude, I began to discern the truth which makes us free.

I have had to do my share of the work during those two years of treatment, but my thought has been greatly changed thereby; it was a change from darkness to light. I have learned that the only true light is God, infinite Truth and Love, in whom we live; that Spirit is the sole reality, and that God is good,—All-in-all. Since treading these paths I have felt more happy and contented than ever before, and I thank our heavenly Father for this understanding of life, and our beloved Leader, Mrs. Eddy, for the revelation of the truth.—ALWINE FLÜGGE, Hannover, Germany.

It is with a deep sense of gratitude that I give the following testimony for the help I have received through Christian Science. About two years ago I received an injury from a fall. I was in the employ of a telephone company, and I fell from a cable at a height of twenty-five feet. I was picked up unconscious and taken to a hospital. A physician's diagnosis was that I had received internal injuries, and I remained under medical treatment six months, being unable to walk without pain.

During this time my attention was called to Christian Science, and as I was not improving under medical treatment, I began to read Science and Health, which a friend had loaned me. As I read I began to feel that there was help for me, and decided to put my case in the hands of a practitioner, which I did soon after. From the first treatment I began to improve, and the day after I commenced to take treatment I went to work again, although I could not walk without the use of a cane. In ten days, however, I was walking with ease, and have not lost a day from work since. A friend of mine who had a similar experience has been in the hospital for the past eight months, and has not yet recovered. The healing efficacy of Christian Science has certainly been proven, in my case, to be superior to any material means, for it healed me quickly and wholly after medical treatment had failed and the doctors had made a law that I would always be a cripple.

I am truly grateful for the physical freedom, but more so for the spiritual healing, and the little knowledge of the truth which I have gained through my study of Science and Health, which frees us not only from disease but from the beliefs which cause it.

LEWIS C. TERRELL, Richmond, Ky.

It is with love and gratitude to God, and to our beloved Leader, Mrs. Eddy, that I offer this testimony of the healing of my little son. He had what seemed a severe attack of whooping-cough, with vomiting and extreme paroxysms of coughing, especially at night. The third night I felt that we must call for help, and a Christian Science practitioner answered our call, reflecting such perfect love, in our need, that after several hours the paroxysms of coughing were lessened, and in twenty-four hours the disease was entirely overcome.

My heart overflowed with gratitude for this beautiful demonstration, which helped me to realize more of the value of the perfect way of understanding God which is given to us in "Science and Health with Key to the Scriptures."

MRS. JAMES A. ORR, Muncie, Ind.

It is now over two years since I became interested in Christian Science, and I wish to express my gratitude for the many demonstrations made for both myself and little son by a faithful worker. I had been advised by a friend, four years before, while ill, to try Christian Science, but, being a physician's daughter, I paid little attention to the advice. It was not until arrangements were being made for an operation, which I feared I could not survive, that I turned to Truth as a last resort, hoping to be spared this ordeal.

And I did not hope in vain, for in a few months even friends remarked on my improved health. A chronic bowel difficulty, spinal injury, acute lung trouble, and other ills have been overcome for me, while my little boy, then three years of age, was healed of stomach and intestinal disorders which had resulted from a serious illness two years before. He was healed in June, and was for the first summer of his life well, hearty, and playful. He was treated two years ago for small-pox, and healed in one week so perfectly that not a scar remains.

For this and for the many other ailments which have been so effectively met I am deeply grateful to God. I am studying the Lesson-Sermons, taking the *Sentinel*, and striving to have no other consciousness but good.

MRS. W. C. LELAND, Greenville, S. C.

I have long wished to express my gratitude for the many benefits received through Christian Science. It is nearly three and a half years since I began the study of the textbook, Science and Health, and in that time many discordant conditions have been overcome. My understanding is still very slight, but as fast as I learn to apply this great truth, all problems are solved. Sometimes I find myself wandering among the dark mazes of material beliefs, but as soon as I realize it and turn away from the shadows, I find the light still shining, and seemingly brighter than ever before. Myself and husband have been healed of many ailments, some of them considered chronic. We have a little girl who knows no other physician than Truth. Many times I should have been completely engulfed with fear for our little one had I not known that I could turn to God and there find peace and love.

I feel deeply thankful for the Christian Science periodicals, and for the Lesson-Sermons. It is impossible to be too grateful to Mrs. Eddy for her life of purity and devotion, which has enabled her to reveal to others this saving truth.—MRS. MARY E. TRUITT, Kansas City, Mo.

I am very glad to testify to what Christian Science has done for me. About four years ago I became interested in it through a friend. At that time I was suffering with my feet and asked her for treatment, as a friend of mine had been helped so quickly in a similar case. I had suffered a great deal with my feet for a number of years, the result of their having been frozen when I was a child. I also had

Digitized by Google

a corn on each little toe which a chiropodist had pronounced incurable. After a few days' treatment in Christian Science I was very much better and my feet felt comfortable, for which I am very thankful. This experience of the power of divine healing, the dawning of the spiritual sense, was the turning-point of my life. I gladly bought a copy of Science and Health and other literature by Mrs. Eddy, which have become very dear to me and in our home.

A little girl who was living at our home for a while was taken very ill with acute lung trouble, and I called a practitioner to treat her. She was helped very quickly, and in about two weeks was completely restored to health, besides having a much better disposition. My son injured his ankle in a football game, and the doctor bandaged it and told him he would not be able to stand on the foot for six weeks. He came home at once and took Christian Science treatment, with the result that in three days he went back to school, and in three weeks played football again. He was also healed of catarrh while being treated for the injured foot. Many other ailments have been cured in our family,—cold, headaches, fevers, toothache, etc.

I am more grateful than I can express for this blessed truth, and for the understanding which proves that "Love is the liberator" (Science and Health, p. 225). Lately a friend of my son was brought to our home whom the doctors had ordered sent to the hospital. He was suffering from a serious condition of the throat and chest, and had slept but very little for five nights; but he read some in Science and Health that day, and said he thought he would like to have Christian Science treatment. A practitioner was called, and in three days he was healed. After the first treatment he had thirteen hours of restful sleep. He has bought and is studying a copy of Science and Health, and his face shows that he has also received the spiritual healing and upliftment. Words fail to express my love and thankfulness to God, and my gratitude to our beloved Leader for this most precious truth.

MRS. LAURA A. MOHR, Spokane, Wash.

It is with the deepest gratitude that I send this testimony to what Christian Science has done for me in making life happy and harmonious. From childhood I had suffered a great deal from my eyes. It was necessary to have my glasses changed very often, and at these times, as well as on the occasions when I was so unfortunate as to break them, I suffered the most intense pain. I had been told that I must never expect to be able to go without glasses, and indeed I had no desire to do so, as my experiences in that direction had been so dearly bought. But in spite of the oculist's encouragement, that with constant care my eyes might become no worse, I found that as my school work grew more taxing my eyes were more troublesome.

In August, 1908, I asked aid from a Christian Science practitioner, hoping to be healed of a nervous trouble of long standing, said to have been caused by an acute attack of spinal disease at the age of five. I had little thought of my eyes at the time, although the practitioner told me that they, too, could be healed. Great was my joy, after the third treatment, to be able to go without my glasses for a few minutes at a time without suffering any pain. Soon I could go without them for an hour, to the great wonder of my friends. So it went on! First an hour, then two, and three; until at the end of my two weeks of treatment I had come to know that my eyes were whole, because God makes nothing that is imperfect; and that for the first time in thirteen long years I could wholly dispense with glasses.

The story of my healing is one common enough in Christian Science, but to me, as it must be to all who have received like proof, it is a very beautiful demonstration of the allness of God, good. For this healing and for many other demonstrations, I am very grateful to our dear Leader, Mrs. Eddy; also for Christian Science, and for the understanding of the divine Principle of its teaching, which has done so much for me. I send my testimony with the earnest hope that it may be of help to those who need the truth as I did.—EMMA A. EDDY, Newport, R. I.

Many years before I would even test the benefits of Christian Science, I was turned from it by misrepresentation of its teachings, made not by malice but by a misunderstanding of the truth; but God was watching over me and preparing the soil of my thought, that the seed might again be sown and bring forth fruit for the harvest. The day I accepted this healing truth it was but kindly spoken of, and although the dear friend knew I had been suffering for some time, she said nothing of its healing power. When alone with my pain the thought came that if there was anything in Christian Science, I was going to know it, and from that moment I began to be healed, and, along with my household and other friends, am growing stronger spiritually, mentally, and physically.

I would like to tell of the healing of my son. Three of our best doctors had diagnosed his case as heart weakness, forbidding him to indulge in exercise of any kind. Shortly after taking one week's treatment he was playing football, getting up at half past three every morning and running the folder of a newspaper, going to school, studying hard, and enjoying himself at anything he wished, and he graduated the same year. A few months later one of his physicians made an examination and passed him for insurance, finding the heart normal.

Of course we have not grown without study and work for an understanding of spiritual law, and we are very grateful for Christian Science and for our Leader, Mrs. Eddy, who has shown us the way.

MRS. CHRISTINA FLEMING, Cheyenne, Wyo.

With sincere thankfulness to God for all the blessings bestowed upon me, and for guiding me to Christian Science, this new yet very old view of life eternal, I send my testimony to the Field. I was led to investigate Christian Science by a dear friend. Curiosity first took me to a Wednesday evening meeting with her, but after I had borrowed Science and Health from the reading-room at First Church, London, and read it almost through, I found that I wanted to know more about it; so I attended a little service held in this town. I also read other Christian Science literature and asked a great many questions, which were very kindly answered by a dear Science friend, who told me all I could at that time grasp.

Soon after this I had my usual winter cold, and after wrestling with it myself for a week, I went to my friend, who was a practitioner, and after a week's treatment was freed not only of the cold, but also of catarrh which had for over six years always been the accompaniment of a cold, however slight. Any one who has suffered from this disease will understand how delighted I was to be freed from it. This was three years ago, and I have had no return of it, and even if I get a cold it soon disappears. Headaches to which I had been subject nearly all my life, not being able to go anywhere on either business or pleasure without suffering severely, have practically gone.

I could tell of numerous other ways in which I have been helped. I was troubled with an enlarged sinew on my wrist, which our doctor told me must be operated upon or I would always have it; but it went during the study of Christian Science. The freedom which Truth gives is delightful, but above all the spiritual uplifting is the greatest, and we cannot too highly appreciate Mrs. Eddy in view of all she so courageously passed through to help her fellowmen to walk in the way our Saviour pointed out, thus continuing the work our Master commanded to be done in his name.—ADA HISCOX, Putney, London, England.

It is with the deepest gratitude for the help that I have received through Christian Science that I tell of my healing. In August, 1909, while visiting in Iowa, I had a terrible attack of rheumatism. For almost three weeks I suffered greatly, as my limbs were swollen and at times the pain was very severe. Although I tried to treat myself with what little knowledge I had of Christian Science, I did not seem to meet my case. Finally I wrote home to my husband, telling him how I was suffering. He at once telephoned to a practitioner, and in less than forty-eight hours all pain, swelling, and discoloration had disappeared. I have also been healed of a skin disease and some minor troubles.

I feel very thankful to God, not only for the physical healings, but for the many other blessings which I and my family have received since I first learned the truth through reading the Christian Science text-book, by Mrs. Eddy.

MARGARET ROBINSON, Butte, Mont.

[Translated from the German.]

It is with a heart filled with gratitude that I wish to tell of what Christian Science has done for me. For thirty years I suffered with rheumatism and severe headaches, as well as a stomach disorder to which extreme nervousness was added, besides which I had two ruptures. My life had become a burden to me and I longed for death, which I believed would deliver me from my ills. When the suffering had become almost unbearable, I learned that this was God's opportunity, for I was led to Christian Science, of which I had never heard before, and here I found help. I applied to a practitioner, who kindly took up treatment, and I immediately experienced relief. After a while I was able to lay aside the double truss which I had worn for thirteen years, and I did so without ill effects.

I was gradually healed of all my diseases; my trust in God was renewed thereby, and I have come to see that God makes all things work together for good. I am now able to do better work than ten years ago, and besides I am a calm and contented woman. I do not seem to be able to express in words my gratitude as I would like to do, but I am thankful to God with all my heart for these blessings, and also to our faithful Leader, Mrs. Eddy, who has shown us the way to Truth.—ANNA WEIDL, Hannover, Germany.

[Written for the *Sentinel*.]

UNITY.

LAURA GERAHTY.

It is not just because our eyes are meeting
In daily converse, that we claim a friend;
It is not e'en because our hearts are beating
So near each other that our pulses blend.

One hand may clasp another, and the distance
Of arctic tides be flowing where they meet;
The courteous bend can tender more resistance
Than marble column, while we seem to greet.

Some eastern sun may shine in splendid glory
On ice-bound hearts still freezing 'neath its glow;
And yet love's tender breath reveals the story
Which melts a pathway in a world of snow.

Science of Christ! Man's perfect union sealing—
O tenderest Love, that knows nor hate nor fear—
Wisdom's great strength, that binds all hearts, revealing
The perfect oneness of God's children dear.

Thus, far or near, no sense of separation,
No pride or prejudice that seems to be,
Can hinder us in love's great demonstration,
Or rob God's children of their unity.

FROM OUR EXCHANGES.

[*Christian World.*]

If we believe that certain things happened in New Testament times because similar things happen now, it is evident that their miraculous character in the old sense is gone. If something done by a Christian Scientist helps us to believe that a similar thing was done by Jesus, it is evident that the latter does not prove the supernatural character of Jesus, any more than the former proves the supernatural character of the Christian Scientist.

Nothing is happening in the world of scientific discovery to rehabilitate the old idea of miracle, but much is happening to widen our knowledge of what is possible within the order of nature, and a good deal to confirm the faith that that order is spiritual and that nature is not mechanical but vital. In this wider view of nature we may find room for many New Testament stories which were once rejected, but they take their place, not as miracles, but as natural facts. We are coming to realize that the spiritual is as natural as the material, and much more so. The spiritual is in the ascendant in the faith of our time.

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth*.]

What Paul says concerning the church is the simple and literal truth about humanity as a whole; we are individually members of the body of this Christ and of one another; to see it is to find life, to miss it is to abide in death. Christ rises in every man who has caught this vision and given himself to it, and through these minor resurrections—if I may so put it—the grand and glorious resurrection of the race as a whole is being accomplished; the buried Christ is leaving the tomb to return to the Father; the divinity that from the foundation of the world has "slept in the stone, dreamed in the animal, wakened in man," is resuming the glory that it had before the world was, but with a fuller grandeur and a wondrous gain. Has this nothing to do with religion? Can this be divorced from life? Can the two be kept apart? Why, there is nothing, however trivial, that does not bear some immediate relation to it.

[*Universalist Leader*.]

Consciously or unconsciously you are writing by your daily life a gospel; what you think of Christ. And other people are reading what you write. In the hurly-burly of the street, when you are tried and irritated almost beyond endurance with the stupidity and carelessness of others, you are writing so others will read what you think about the brotherhood of man. When your own heart is broken with sorrow or embittered with disappointment, or bowed beneath the weight of responsibility and obligation, you are writing what you think of the fatherhood of God. Every step you take, every motion of your hand, every glance of your eye, every word from your tongue is a word in the gospel you are writing, which in some way or other is going to influence and shape the world in which you live. It is good to carry the gospel according to Matthew or John in your hand and give it to as many as you can, but more important so far as you are concerned, is the gospel according to you.

[*Outlook*.]

He rose on the third day, "as he said," but the prediction was not made in words only or chiefly; it was not the promise but the revelation of the nature of the soul, not the promise of a great experience to come but of a life that now is. His whole life was prophetic; again and again the clouds parted and the immortality he was shone in the eyes of men; he shed the light of that immortality on every home he entered, on every path he walked. Through the midst of mortal fears and sickness and anguish and death he moved, touched with all sorrow, weighted with the awful

Digitized by Google

sense of sin around him, tender and compassionate at every tomb; and yet serene, immovable, undismayed; wearing his immortality like an invisible garment until he stood revealed in it that first Easter morning.

[*Watchman.*]

The assumptions of men are a constant obstacle to the service of God. All the advances of the kingdom of truth have been made over the barriers of human reasonings. There would be no objection to human reasonings if they were characterized by a proper humility such as characterizes men who know that they know very little of the laws and mysteries of life. The reasoning that bars the way to obedience is filled with prejudice and pride. Men assume that they "know it all," and they also have such an estimate of themselves that it seems humiliating to do things that are simple, obedient, and without merit.

[*Congregationalist and Christian World.*]

Christ is working in the world as our judge, but also as our Saviour. There need be no element of fear in our expectation of the immortal life, if only we begin it now as his disciples. For his life is ours, and we are not to wait for death to live as citizens of the eternal kingdom. Hold up your heads! ye Christians. Already you are heirs and owners of immortality. Judgment may work out its needful purpose in your body, but the spirit shall live the happy life of the sons of God. "Behold, what manner of love the Father hath bestowed upon us, that we should be called the sons of God;" and we are!

[Canon Plumptre in *Churchman.*]

That system is most divine which is most effective and which is most in accord with the spirit of Christ. Not that church which makes the loudest and most boastful claims, but that which follows most closely in the Master's steps of humble, self-sacrificing service, is the church with true apostolic succession. Let us beware lest we magnify our methods and our machinery above the purpose for which they were created. We have our treasure in earthen vessels. Life is more precious and more permanent than the organism that contains it.

[*Boston Times.*]

Faith without works continues dead, being alone. And just so, preaching without doing doesn't do overmuch to help the man that's down or pick him up. If more of our clean-living, high-thinking men and women would roll up their coat sleeves and forget their willow plumes and knuckle down to work, Boston would see reform in action, and something along the line of Boston's real reform would be begun. All talk and no do proves one of the least of the public influences for good.

[E. Umbach in *Standard.*]

If humanity shall not lose its faith in the church, the latter must not only preach and teach but also be ready to assist any attempt to incorporate its teachings in the laws and the institutions of the land in a tangible form. If it only preaches but can in no wise be persuaded to express its views and exercise its influence in any concrete movement for the betterment of human conditions, how can it be expected that the world in general shall have confidence in the church?

[*Independent.*]

Will we, by our optimism, hasten the day of good, declaring that nothing is too grand for the future to accomplish, nothing too holy for the race to attain; that to limit yourself is to close doors that might otherwise open to strength, and that to limit the future is to limit God?

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS have been published as pocket and library editions in new bindings. Description and prices will be found on the outside cover page of *Sentinel.*

The new volume, "Poems by Mary Baker Eddy," is now on sale. Specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The following reprints are published in Swedish: "Hvad Ar Bön?" "Lagens Välde," "Det Ondas Natur," "Helvete och Himmel," "Människans Gemenskap Med Gud," "Verklighet," "Det Ar En Ström," "Förklaring Af Kristligt Helande," "Den Yppersta Egenskapen I Christian Science," "Underverken," "Det Ondas Ofvervinnande," "Var Väktare," "Riklig Tillgang," "Kristendom Och Vetenskap." Ten copies to one address, prepaid, 10 cents; one hundred copies to one address, 75 cents; five hundred copies to one address, $3.00; one thousand copies to one address, $5.00.

Two of our Leader's poems, "Shepherd, show me how to go," and "Love," set to music by Frederic W. Root, are now on sale by the Society. For description and price see advertisement on inside back cover page of *Sentinel.*

A new photogravure reproduction of The Mother Church edifices and the Publishing House, with the new parkway in the foreground, has just been made, and is now on sale. The size of the new picture, nine by fourteen inches inside of mat, which is about half that of the larger one, specially adapts it to framing for the home. Price, single copy $1.00, six copies $5.00, twelve copies $9.50.

FROM THE CLERK OF THE MOTHER CHURCH.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00: twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents: six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The Democrats of the House will investigate the entire sugar industry in the United States, according to a decision reached last week by the committee on rules, which was called together to consider the resolution introduced by Representative Hardwick of Georgia, calling for an investigation of the American Sugar Refining Company. A resolution has also been introduced to investigate the American Woolen Company of Boston. It calls for a special committee of five and for a sweeping inquiry into the relations of the company with a long list of mills and to ascertain if the company has endeavored to control the price of raw wool and the sale and output of woolen goods. A resolution of Representative Stanley also calls for a sweeping investigation of the United States Steel Corporation. The steel resolution, as amended, provides for the election of a committee of nine members of the House to do the investigating. They were directed to ascertain whether there have been any violations of the interstate commerce laws, the anti-trust laws, or the national banking laws. If any such violations have not been prosecuted by the department of justice a particular report is required. The United Shoe Machinery Company will probably be investigated.

Agents of the forest service have already begun the work of buying up from their private owners the lands included in the Appalachian-White mountain reserve. Although comparatively few offers of tracts of great size have been made to the government, the gradual process of examining, appraising, and negotiating for purchase is reported as being satisfactorily under way. According to recent statements it appears that the southern section of the reserve created by the Weeks bill is responding more promptly to the call. Among the purchases of considerable area in New Hampshire, however, now under consideration, may be mentioned the Bean purchase offered south of Shelbourne and the Thomson and Meserve purchase, which includes Mt. Madison and Mt. Jefferson and lies just below Mt. Washington. Various tracts of much smaller size have reached a more definite stage in the course of changing ownership.

The executive council of the American Bankers Association, which held its session at Nashville, Tenn., unanimously indorsed the Aldrich plan for monetary legislation, with a few revisions in matters of detail. Ninety per cent of the members of the executive council were present. The resolution in full was as follows: "That the executive council of the American Bankers Association heartily approves the plan for monetary legislation suggested by the Hon. Nelson W. Aldrich, as modified by the currency commission of the American bankers committee of the currency commission, for extending the benefits of the plan to state banks and trust companies. We firmly believe that it is thoroughly practical, fundamentally sound and comprehensive, and that if enacted into law it will correct all the principal defects of our present banking and currency system."

The government suit against the Anaconda Copper Mining Company has been compromised by an agreement between the company and the department of justice. The company agrees that its smelters at Butte, Anaconda, and Great Falls shall be equipped to prevent the emission of gases which the government claims have done great damage to the national forests. It was claimed that the poisonous gases from the smelters not only ruined the national forests in the vicinity, but also the farmers' land. The farmers have a separate suit against the company which is not affected by the compromise of the government's case.

More than a quarter of a million dollars' worth of books were sold in one day at the auction-sale of the Hoe collection in New York on May 1, a record sale. The highest price, $42,800, was paid for a single volume, Sir Thomas Malory's "Morte d'Arthur," printed by Caxton, the only perfect copy known. The librarian for J. Pierpont Morgan bought this after a spirited competition, the bidding starting at five thousand dollars. At one session fifty thousand dollars was paid by Henry E. Huntington for the Hoe copy of the Gutenberg Latin Bible.

A defense of "dollar diplomacy" as a policy, which by causing prosperity meant ultimately the "substitution of dollars for bullets," was made before the third national peace congress at Baltimore by Huntington Wilson, assistant secretary of state, who presided at a morning session. "The question of immediate importance before the country today," said Senator Burton of Ohio, "is the proposed arbitration treaty with Great Britain. Let this once be adopted, and the greatest benefit in the cause of peace will have been gained which has been accomplished for many decades."

President Taft has authorized the tariff board to submit to an investigation at the hands of a committee of business men connected with the National Tariff Commission Association. This is another step on the part of the advocates of permanent tariff commission to popularize the work of the present board and to pave the way, if possible, for the creation of a permanent tariff commission.

The time is not far distant when strikes will be the exception and mediation the rule in labor disputes, says Charles P. Neill, United States commissioner of labor, who, as one of the mediators authorized under the Erdman law, has served in more than fifty disputes between employers and employees.

Another warning to the fraternity men at Cornell University to do better work in their class rooms is sounded in President Schurman's report on the comparative scholastic standing of the fraternity and non-fraternity men for 1911.

Governor Osborne of Michigan has signed the bill prohibiting fraternities in the high schools of the state.

International.

At the Guildhall peace meeting in London, April 28, a resolution was presented in favor of President Taft's peace treaty, and it was unanimously adopted. It was as follows: "That this meeting of citizens of London cordially welcomes the proposal of the President of the United States in favor of a general treaty of arbitration between that country and the British empire and pledges its support to the principles of such a treaty as serving the highest interests of the two nations and as tending to promote the peace of the world." King George has expressed himself as gratified with the resolutions adopted at the peace meeting. Through his secretary, in reply to the lord mayor's letter communicating to him the terms of the resolutions favoring a general treaty of arbitration between the United States and the British empire, the King writes: "His majesty is gratified to receive these records of opinions unanimously expressed upon a question of such supreme and far-reaching importance by an assemblage so representative of various lines of thought in our religious, political, and social life."

A notable banquet was given May 1 at Tokio by the Association of Friends of America in Japan in celebration of the conclusion of the Japanese-American commercial treaty. The guests, numbering sixty, included Ambassador O'Brien, Marquis Komura, the foreign minister, Prince Tokugawa, president of the House of Peers, Baron Takahashi, Mayor Ozaki, former Governor Fort of New Jersey, and prominent Americans of Tokio and Yokohama. Viscount Kaneko, who presided, scored what he termed "the criminal breeding of mischief between two nations whose manifest destiny is together to guard the control of the Pacific." Remarks in a similar vein were made by Komura, Tokugawa, Takahashi, and Ozaki, and they were replied to in kind by Ambassador O'Brien, Mr. Fort, and E. W. Frazar. A reference to the possibility of a Japanese-American complete arbitration treaty won great applause.

The international exhibition of industries and labor, the biggest affair of the kind ever attempted in Italy, was opened auspiciously April 29 at Turin. There is a friendly rivalry between Turin and Rome, where the art exposition, the other great feature of the jubilee celebration of Italian unity, is in progress, and the result has been intense popular interest in both undertakings. The Turin exhibition occupies twelve million square feet, extending on either side of the river Po, the two parts being joined by four bridges, two built especially for this occasion. The American pavilion comprises the largest exhibit ever made abroad by that government. In all there were fifteen thousand exhibitors, representing the European countries, North and South America, Japan, Persia, Siam, Turkey, Tunis, and the British colonies.

Industrial and Commercial.

Contracts have been awarded to nurseries to set out two million apple and other fruit trees in eastern Washington and north and central Idaho this season. Of these more than four hundred thousand will be planted in Spokane county, which already has one million five hundred thousand growing trees. Fifty thousand trees are being planted near Lewiston, Ida., while twenty miles north of McArthur, Ida., fifteen hundred acres are being prepared for apple culture. Another company is clearing eleven hundred acres two miles north of Kootenai, Ida. These lands will be devoted to orchards. The Arcadia Company is clearing and planting a tract of seventeen thousand acres in the northern part of Spokane and southern Stevens counties. This land was a forest until a few years ago. It is expected that not less than two million acres of logged-off lands in eastern Washington and Oregon, northern Idaho and western Montana will be cleared during the next five years and devoted to general farming, dairying, and orchards.

Until within the last few years the principal sources of rubber were Peru, Brazil, and Bolivia, and the Congo and eastern Africa. New countries which have entered the market, competing formidably with South American rubber, are Java, Sumatra, Borneo, Malasia, and the Straits.

It is believed that the gold output this year from the Klondyke region, Alaska, will be the largest in years, early estimates placing the yield in excess of five million dollars. Last year's output was four million dollars.

Production of refined lead in the United States in 1910 was 470,380 tons.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

CROSSROADS.

W. D. MCCRACKAN, M.A.

As students of Christian Science travel along the road from sense to Soul, they are constantly coming upon crossroads. The sign-posts may not be very clear. Sometimes their inscriptions are quite illegible. Sometimes mischievous persons have purposely defaced them or twisted them about. Sometimes the choice is complicated because several roads radiate from the same point. The traveler may stop in bewilderment, feeling the importance of choosing the right way, and dreading the possibility of being led astray. At such times the student will find it particularly necessary to guard against fear, as this tends to produce confusion and to prevent him from hearing the "still small voice" which declares, "This is the way, walk ye in it." As soon as the mesmeric suggestions of fear are quieted, the traveler will find the sign-posts less perplexing, and under divine guidance can more readily choose the right direction. In "Miscellaneous Writings" (p. 347) Mrs. Eddy tells how we may gain divine guidance, whatever the seeming difficulties which present themselves, and with this guidance she says that the path "may be smooth, or it may be rugged; but it is always straight and narrow; and if it be up-hill all the way, the ascent is easy and the summit can be gained."

But suppose one is inexperienced in finding his way, is perhaps fatigued by a long day's journey, and yet feels that his very existence depends upon his choice of the right way at this particular time. Will not his position be dangerous? No, the pilgrim on the upward way need never be discouraged if his motive is right, even though experienced travelers on earthly journeys make mistakes under the stress of blinding storm or mental distress or optical illusion. More important, however, than the choice of the right road at any particular juncture, is the motive which impels the traveler. Let him still his fears and look to his motive. If the latter is right, then the end of his journey will be assured. He may mistake the direction many times, at many confusing crossroads; but if his purpose is good, he will quickly recognize his mistake, retrace his steps, and again take the right road.

It is comforting to recognize that he whose motive is right is always safe. He may suffer for his ignorance, but the correction of his mistakes acts as a valuable lesson. He is never deceived for any length of time. He travels securely through the hostile country of material sense, growing stronger and sturdier in spiritual understanding, keener in spiritual perception, protected by that Love which clarifies his vision, settles all doubts, and casts out all fear. Mrs. Eddy writes: "Love inspires, illumines, designates, and leads the way. Right motives give pinions to thought, and strength and freedom to speech and action" (Science and Health, p. 454). Right motives will cause every road to bring the traveler in the end to the shelter of the Almighty, and will make every crossroad a welcome test of his growth in grace.

Practitioners of Christian Science are frequently besieged by frightened patients to tell them what direction to take at some apparently crucial crossroad. "By such and such a day," the harassed one will perhaps say, "I must make a momentous decision." Then it is that the practical Christian Scientist can reassure the perplexed one, still the waves of fear by a few simple explanations, and when the hour of decision arrives it will find the traveler calm and collected, ready to make his choice according to his highest sense of good. Nor can such a one ever be made to regret a decision based on right motive.

"OUR DAILY BREAD."

CHARLES HENRY PHILIPS.

OUR dear Leader tells us that "desire is prayer; and no loss can occur from trusting God with our desires, that they may be molded and exalted before they take form in words" (Science and Health, p. 1). But can the mere repetition of the words, "Give us this day our daily bread," give us more than we (as God's ideas) already have of that which we need? Can simply asking for this bread bring to us a more abundant supply, or satisfy our craving? Can we expect or even hope to be fed and nourished by the divine bounty simply by petitioning that bread be given us?

What is our concept of this bread? Is it that we may be kept from lacking the material? Is it that we may not know an unsatisfied sense of hunger? Is it only that we may have each hour enough and to spare for our finite needs? In a word, are we engaged in the hopeless endeavor of materially outlining a spiritual aspiration? If so, then our thought and asking are amiss. If, however, this concept of bread is the recognition of spiritual reality, if it is to know the will of good only and do it, if the sense of hunger is for greater humility, if it is being prayerfully intent in our obedience to divine Principle, if it is a scientific striving for the fulfilling of God's law, then indeed is our prayer, "Give us this day our daily bread," in the unction of Spirit and with power, and this mental attitude is with understanding.

As man is made in the image and likeness of good, and as there is no conceivable thought in omnipotent and omnipresent Mind that is not wholly good, man, His reflection, desires only the activity of good, the very essence of this bread that we ask to be given us daily. Thus, to know more of God and His Christ, to feel the divine influence in thought, to have a fuller, sweeter, and more confiding sense of Love, to experience more of the healing energy of Truth, is to hunger for this bread "that a man may eat thereof, and not die." In Amos we read: "Behold, the days come, saith the Lord God, that I will send a famine in the land, not a famine of bread, nor a thirst for water, but of hearing the words of the Lord." Surely when we affirm, "Give us this day our daily bread," it means as our beloved Leader says, "Feed the famished affections" (Science and Health, p. 17), nourish our impoverished mentality, quicken us to an intenser consecration of thought

and purpose, remove from us that which is not "according to the pattern shewed to thee in the mount," build us up in a most holy faith, purify our seeing, clarify our hearing, intensify our feeling, until through the constant renewing of the inner man we apprehend as we are apprehended, and the fruits of the Spirit bear witness to Immanuel, "God with us," in demonstration.

But of this grace, only as our will is subordinated to the divine, as we test our every thought not by our imperfect concept of what seems right, but by Love's impartial standard; as we are obedient and faithful, will we be given in the measure of our unselfed discipleship. Each impulse of kindness, each helpful and uplifting desire, the compassionate tenderness which forgives, soothes, and comforts, the joy that is fullest and sweetest in doing for others, the love which bears all, gives all, and hopes for nothing in return,—these are the mediators through which thought ascends to the Father's infinite storehouse, to partake of this bread for whom it is prepared. To come into a scientific understanding of this fact enables one to comprehend Jesus' words, "I am the bread of life;" and the equally imperative and significant declaration, "No man cometh unto the Father, but by me."

"PERFECT LOVE CASTETH OUT FEAR."

CATHERINE CRABBE.

ONE frequently hears the remark: "I am very grateful indeed for what Christian Science has done for me, but I am afraid I shall never have the courage to stand up and give a testimony." And just so long as we encourage the mental laziness which allows this fear to be our master, just so long we shall remain slaves to that fear. As St. Paul says: "To whom ye yield yourselves servants to obey, his servants ye are to whom ye obey."

In withholding our testimonies we are hindering our progress in many ways. We are ungrateful, and must class ourselves with the lepers who went their way and did not return to give thanks to God. We are disobedient, for if we profess to be Christian Scientists, the least we can do is to obey our Leader's wishes, and we know that the Wednesday evening meetings were instituted by her that we might publicly tell of the blessings which Christian Science has brought to us, and thus help and encourage the stranger and the beginner. So long as we allow fear to hold us in bondage, our love is not perfect. St. John says: "Perfect love casteth out fear: . . . he that feareth is not made perfect in love." However great this fear seems to be, it can be overcome, and perhaps the writer's experience in this matter may be a little help and encouragement to others.

Before I heard of Christian Science I was intensely nervous, so much so that it amounted to a disease. When I had been reading Science and Health for a few weeks, I awoke to the fact that numerous complaints from which I had been suffering nearly all my life had entirely disappeared, and that from being practically an invalid I was perfectly well and strong. A little while after this, at one of the Wednesday meetings, the thought came to me that I ought to give a testimony. I was immediately filled with such an abject sense of terror (there is no other word to express it) at the thought of speaking in public, that I felt I would rather give up Christian Science altogether than go through such an ordeal, as it seemed to me impossible to attend the services regularly, and get all the good I was receiving from them, and yet not obey our Leader's wishes and speak. Though I felt my duty very keenly, I tried in every possible way to shirk it, making all sorts of excuses to myself; in fact, I was willing to do anything but the one thing required of me.

Then followed a severe struggle; and for four months the Wednesday evening meetings became a dread to me, because I went to each meeting with the intention of speaking and left without doing so. At the end of four months I seemed no nearer solving the problem than I was at the beginning; in fact, if anything, I felt weaker and more helpless. I knew I had come to a point where I should make no further progress in Christian Science until I had rid myself of this burden and broken away from this bondage of fear.

Then it was that I realized for the first time the meaning of St. Paul's words: "When I am weak, then am I strong." When I knew that this thing had to be done, and yet that I could not do it, I saw that the one and only way was to leave it entirely to God. And when I came to this conclusion, the sense of relief was so great that I saw where I had been wrong all those four months, and why I had been in bondage to such needless fear. It was because I had been struggling to do this thing in my own strength, which was impossible. I began to see that if I would only be willing to stand up, realizing that I was nothing but an instrument in God's hands to do His work, then He would do the rest.

On the following Wednesday afternoon I was pondering this question, and while studying the Lesson-Sermon I came across the passage: "Be strong and of a good courage; be not afraid, neither be thou dismayed; for the Lord thy God is with thee whithersoever thou goest." These words helped me through the evening, and directly the meeting was open for testimonies I found myself on my feet, and I spoke quite easily. When I went home and told my people (none of whom were Christian Scientists) that I had spoken, they could scarcely believe it. Indeed, to any one who knew what my sense of fear had been, the giving of that testimony was a convincing proof of the power of Christian Science.

Since then I have been able to give numerous testimonies, both in my own town and elsewhere, and in overcoming this one overpowering fear, other fears have been overcome too, though I did not realize it at the time. One was the fear of lack of money. Any one who has ever suffered from this disease (for such it is) will know what I went through. It limited me in every direction. Whatever I wanted to do, there was always the thought that I could not afford it; and even if I had the money I feared to spend it, feeling I ought to save it for the future. This fear of the future used to disturb me greatly, but it entirely left me after I gave my first testimony. Although since then, I have been tested and tried on this question, the fear has never come back.

Things seemed to reach a climax some months ago. I was suddenly, without any warning, left alone, with a great sorrow to meet, a house on my hands and no income whatever. But even then fear had no power over me. I knew, for the moment, I could do nothing; therefore my needs would be supplied. And they were in a marvelous manner. Then I looked the problem in the face. I prayed for guidance, and when I saw what seemed the wisest move, I went straight forward; and from that moment I have had no sense of lack and no fear whatsoever. I am sure that this is the direct result of my absolute surrender to God in the matter of giving my first testimony.

I have learned this lesson: that we have nothing to fear for next week, next month, next year, or even for to-morrow; all that concerns us is the passing moment. If we are doing God's will, and our needs for this moment are being supplied, why should we fear that they will not be supplied tomorrow? What we need is childlike trust, that "perfect love" which "casteth out fear." We must obey the Master's command, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." If we really are seeking first that kingdom, then we know that God will supply all our need. And

through the understanding of God (our Father-Mother) as taught in Christian Science, we gain a sense of peace and rest and security and freedom from fear, such as cannot be gained from any other source.

"GOD WITH US."

FLORA R. TSCHOPIK.

In Christian Science one soon learns that harmony is dependent upon one's realization of God's presence with men. Consequently, the more earnestly the kingdom of heaven is sought, the clearer one's consciousness is to the spiritual facts of being and the less effort is required to repel the attacks of error, material beliefs. God's work is done; His universe is complete and perfect, free from all disturbing elements. It is obvious that a perfect universe can contain no element of discord, whether it be sin, sickness, or death. Spiritual perfection is the reality, and Christ Jesus opened the way for others to come into an understanding of this great truth. He made clear the way to at-one-ment with God, Spirit. He blazed the path of salvation for mortals, and Mrs. Eddy, following the trail, has again brought to the attention of mankind his plan of emergence from matter into Spirit.

It is now the province of humanity to come into conscious unity with God, to awake to the fact of God's forever presence. All the years of darkened belief have not altered the fact that divine Mind has been for all time the only power of the universe. While mankind has been wandering in a wilderness of falsity, self-deprived of the divine presence, God has never been absent. God was, is, and always will be the only creator and governor of the world. The false belief of a material creation is all that has obstructed from human view the ever-present heavenly Father. Through the irradiance of Christian Science, the darkness of mortal opinions is being dispelled and the world is beginning to emerge from the black chaos caused by an imaginary separation from God, the evanescent so-called pleasures of the world being more than counterbalanced by its iniquities, strifes, and suffering. The light of truth which has been forever shining is now being known as the all-encompassing illumination.

To God there is no material universe, no error; the spiritual universe, perfect and intact, has remained uncontaminated by mankind's erroneous beliefs. Mortals have accepted the lie for the fact; they have believed error to be the truth of being, and it is only as they abandon their false beliefs that the reality enters consciousness and men become alive to God's presence as the only power, perceive that all sin, sickness, and fear have been self-imposed through the erroneous belief that there was another power than God. When Hagar was in the wilderness with Ishmael, though her needed supply was at hand, she endured a needless period of distress. When the world seems a place of pleasure, mortals have, seemingly, no need for spiritual understanding, the wellspring of Life. It is when the drought of pain, loss, and fear arise, that they seem to stand helpless, unaware that their torturing beliefs are self-inflicted, unconscious meanwhile that God, divine Mind, in whom are health, abundance, and strength, is right at hand; not appearing and disappearing, but the ever-present source of all good. It is only as Christ, Truth, penetrates the mist of materiality, and the revealed radiance illumines the erstwhile darkened consciousness, that the joyous spiritual light springs forth. The psalmist says, "Lord, thou hast been our dwelling place in all generations. Before the mountains were brought forth, or ever thou hadst formed the earth and the world, even from everlasting to everlasting, thou art God."

Christ, Truth, has always been present, but Truth cannot be discerned by means of materiality. So long as mankind accept error for Truth, so long as mankind accept matter as substance, there will be sin and suffering. The simple proof that matter must be a false sense of things is the utter impossibility of obeying the commands of God and meeting the demands of matter or asserted material law at the same time. On the other hand, as we deny sense testimony, start from the basis that Life is God, and law spiritual, then compliance with God's law is immediately possible. Mrs. Eddy asks, "From a material standpoint, 'Canst thou by searching find out God?'" (Science and Health, p. 551). She further says, "The notion of a material universe is utterly opposed to the theory of man as evolved from Mind. Such fundamental errors send falsity into all human doctrines and conclusions, and do not accord infinity to Deity" (*Ibid.*, p. 545).

When the corporeal senses are presenting seemingly irrefutable evidences of discord, one should hold unshakenly to the facts of harmonious spiritual being and claim man's God-given dominion, then rely upon ever-present divine Love to bring forth triumphantly the proof of Truth's allness, the demonstration of "God with us."

God has given to man in abundance health, harmony, happiness, dominion. These gifts are man's possessions now. There is no power that can controvert God's order. As humanity come into a perception of this fact, and forsake servitude to matter and its accompanying minions, they will come into God-given freedom, the freedom of Spirit. As mankind relinquish the pains and pleasures of material sense for the joys of holiness gained by reflecting God, there will be a cessation of suffering: peace will replace discord, love will supplant hate, the Christ-power will be understood in all its glory, and God's kingdom come "in earth, as it is in heaven."

Universal love is one of the most powerful means of accomplishing this desired result,—a sense of love, free, uncriticizing, compassionate; love refusing to recognize finite limitations, striving to rise above the mere love of personality, endeavoring at all times to be aware of the universal brotherhood. This culminates in the sweet sense of the presence of God, divine Love, an inspiration, "a divine influence ever present in human consciousness" (Science and Health, Pref., p. xi.). The psalmist says, "The Lord reigneth; let the earth rejoice"!

OBSTACLE OR OPPORTUNITY, WHICH?

WARWICK JAMES PRICE.

Every one who has been present at field day sports will recall the "obstacle race" which usually appears on the program. Across the course, at various intervals, are set brush hedges, through which the contestants must push their way; barrels, hung dangling from an overhead beam, through which they must clamber; high board fences, tilted back toward the starting-line, over which one must somehow climb; broad strips of canvas, fastened down at the ends, beneath which one must wriggle, and a half dozen other devices seemingly to hinder the runners, but actually only to test their quickness of thought and agility. It is always an event to set the grand stands laughing, and some of the spectators may see in the cause of their amusement a close parallel to every-day life and its pointed lesson. The man who wins that race is not always the fellow who jumps to the front at the crack of the starter's pistol, but he is one who knows how to turn what are called obstacles into opportunities. As La Rochefoucauld once said: "Many a man, when chance seems to oppose him, finds only an opportunity to make himself known to others, and, most of all, to himself."

The successful men, of all time, have urged the necessity of being on the watch for opportunity, and the young men of today, planning brilliant futures, long for Dame Opportunity's knock at their doors. The knock comes, surely; but they look from the window and see only

Digitized by Google

Mistress Obstacle waiting on the step, and discouraged, or "resigned" (as they may say), they go back to the hearth-side to wait a while longer. Books of synonyms do not give "obstacle" and "opportunity" as meaning much the same thing, while the dictionaries speak of one as that which opposes progress and of the other as that which helps; but the fact remains that to get the better of what seems to stand in the way of advance is to make of it an opportunity for advance. Was there not some such thought in the mind of Shakespeare, when he put into the mouth of his banished duke the much-quoted lines,—

> Sweet are the uses of adversity,
> Which like the toad, ugly and venomous,
> Wears yet a precious jewel in his head.

The selfsame obstacle which does indeed hinder the faint-hearted, actually helps his more courageous fellow, who uses it to develop latent energies or to exercise some skill or craft learned long before for this very occasion. Indeed, no one is worth much to the world till he has proved his ability to meet and master difficulties: never to be opposed is to win the contest by default, and that is, after all, quite the same thing as saying that there has been neither contest nor victory.

The competitors in any obstacle race know there are to be obstacles, though exactly what they are to be is not announced. Similarly, the Christian Scientist, enrolling himself as ready to run, not with patience only but with resourcefulness as well, that far greater race "which is set before us," may be equally as certain that he will have to meet what Mrs. Eddy refers to as "the obstacle which the serpent, sin, would impose between man and his creator" (Science and Health, p. 338). The athlete, with numerous tests of cleverness and strength interposed between him and his goal, is not dismayed at the prospect; rather he welcomes it, confident of his capacity to convert these very things into helps to his success. Equipped with a knowledge of the truth of being, how much more should those who have enlisted to battle with the ills to which human sense declares mortal flesh is heir, welcome the chances set ready to their hands! No matter what the sort or seeming of that which claims to be an impediment to our advance, we have it on the authority of one who proved her words, that "it is certain that the divine Mind can remove any obstacle" (*Ibid.*, p. 424).

For one reason and another we have turned to Christian Science as the one sure means by which we may accomplish our course. We have studied its fundamentals and rules and striven to put them into practice; we may have done all that we knew how to do to make ourselves proficient in the understanding and demonstration of divine metaphysics. What then? Having so schooled ourselves, are we to regret the opportunities of exercising our knowledge? Are we to draw back from the track, because the disabilities of material belief and ignorant misconception have been thrown across it? Or are we to hesitate to undertake the solution of the problems that offer themselves, merely because they come to us in some guise not wholly expected? The hunter, trained for months to fence jumping, is not locked up in a comfortable box stall as soon as he has become really skilled in his work; nor does he hesitate, once in the open country, because it is a ditch he is called upon to clear and not a five-barred gate. Again: the bricklayer learns his trade not that he may ever after avoid brick and mortar, nor will he be troubled if asked to handle a kind of brick wholly new to him, and which is to be laid according to an entirely unaccustomed pattern.

There is but one right way for a man to walk, and that is forward. He should think of and aim at just one thing, what Paul calls "the prize of the high calling." Such thought and such earnest striving mean progress of a sort which does not postpone the victory to some future time, but which brings it daily and hourly as each obstacle is converted into an opportunity. This is progress indeed, the progress which frees us from "the law of sin and death," and what higher aim, what nobler goal could any right-minded laborer in any field of endeavor set before him? The "open sesame" to this progress, the guide to this goal, is contained in that summary of Mrs. Eddy's advice to us: "Work—work—work—watch and pray" (Messages to The Mother Church, p. 20). Let us not be blinded, therefore, by what an unseeing world has called "the dust of difficulty," but rather recognize in it the golden haze of that very opportunity to meet which we have trained ourselves and for whose coming we have so long been waiting.

THE VALUE OF PERSISTENCE.

S. A. PFUHL.

ST. PAUL wrote to the Galatians: "Let us not be weary in well doing: for in due season we shall reap, if we faint not." So long as we interpret happiness in terms of materiality, these words do not seem true to us. While happiness means for us an abundance of worldly possessions, worldly pleasures and honors, the heroic lives of prophet and apostle, of Socrates, Spinoza, and even that of Christ Jesus, will seem to have failed of their reward. There comes a time, however, in the lives of all of us when the emptiness of the things of material sense is made clear to us; a time when material things are weighed in the balance and found wanting. There is then only one way out of despair, and that is to turn to spiritual reality for our happiness,—even to that world shown to us so scientifically in "Science and Health with Key to the Scriptures" by Mrs. Eddy.

When once we have learned to look for a spiritual reward for our "well doing," the words of St. Paul appear to us in a new light. We now feel, no doubt, that all *who persist* in well doing (and well doing to the Christian Scientist means, of course, that he loves God, Spirit, first and his neighbor as himself) must obtain the highest and only real reward that can be given. Christian Scientists may not always gain riches, material pleasures, and material comforts, but all sincere seekers after Truth must receive from day to day more of the gifts of God, such as courage, strength, hope, peace,—all the fruits of overcoming, including the "joy that comes of sense resigned." The followers of Christ may be misunderstood, scorned, and even persecuted by their blind fellow-men, but if only they faint not, they must reach that spiritual height which enabled St. Paul to say, "None of these things move me."

[Written for the *Sentinel.*]

LOVE KNOWS THE TRUTH.

EDITH C. CARTER.

Love knows the truth! No sudden shaft of light,
Cleaving the darkness of a sleeping world,
Speeds with a swifter, surer, gladder flight
To wake the sweetness in soft petals furled
Than wings Love's thought of truth. Mid haunting fear,
Mid sorrow, anger, selfishness, disdain,
When mortal thought sinks cowering o'er the bier
Of earthly hopes, while matter tries in vain
To give man peace, Love's ever steadfast eyes,
Serene and clear, see all the perfect view
Of God's creation, see the cloudless skies
Of selfless joy giving to man anew
His splendid birthright, everlasting good.
Love sees dark mists of doubt in Truth's warm glow
Lose their fantastic shapes, while faith is wooed
From wistful hope to heights whence man can know
Life's changeless peace—the radiant golden day
Of Truth revealed through Love's illuming ray.

SELECTED ARTICLES.

[Frederick Dixon in *East Berks* (Wokingham, Eng.) *Gazette.*]

In the Preface to "Science and Health with Key to the Scriptures," on page xi, Mrs. Eddy writes of the healing works of Christian Science as "the sign of Immanuel, or 'God with us,'—a divine influence ever present in human consciousness and repeating itself;" while on page 150 she says, "Now as then, signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin,—to attest the reality of the higher mission of the Christ-power to take away the sins of the world," and this argument is repeated from one end of the book to the other. Christian Science healing certainly makes men healthier, but it does this in the only way possible in Christian healing, by making them better at the same time.

Any one who objects to the place occupied by physical healing in Christian Science will inevitably be driven to take exception to the teaching of the New Testament. The Gospels are filled with stories of physical healing, and it was on these acts of physical healing that Jesus relied when the disciples of John were sent to demand of him whether he was the Christ. He came preaching the gospel of repentance, with its ringing declaration, "Repent: for the kingdom of heaven is at hand," and when the deadened spiritual sense of the people failed to understand that this repentance meant the changing of their whole outlook from a material to a spiritual standpoint, he healed the sick, telling those who were present if they could not believe for the words' sake, they must believe for the very works' sake. This was the way in which, according to your correspondent, he "for ever dignified pain and sorrow." Pain and sorrow are things to be borne with dignity while they endure in the consciousness, but Jesus showed the world not how to submit to them but how to overcome them, as a prelude to the overcoming of death itself, "the last enemy that shall be destroyed."

Christ Jesus never taught men to submit to sorrow and sickness any more than to submit to sin. As that great scholar Matthew Arnold has truly pointed out, Jesus saw the intimate connection between sin and sickness, and for this reason his pathology was spiritual. He said, "Repent: for the kingdom of heaven is at hand." Now the Greek word translated repent means simply a change of mind. When, therefore, a man changes his mind from the belief that pain and disease are physical to the understanding that they are mental, he learns in what the cause of pain and disease, equally with the cause of sin, lies. When, in addition to this, he changes his mind from a belief that the image and likeness of God is a sick and sinning human being, to the understanding that the image and likeness of God is spiritual and perfect, he begins to acquire an understanding of his true selfhood, and in learning how to banish the belief in the power and reality of evil from his mind, finds that the kingdom of God is indeed at hand, for "the kingdom of God is within you."

The Christian religion is summed up in the attempt to walk in the footsteps of Christ, and when Jesus the Christ came across what your correspondent terms "a faulty human being" with a "twisted limb or a high temperature" he healed them, not by the application of a surgical appliance or a dose of quinine, but by the understanding of spiritual pathology. It was Jesus the Christ who declared that such things could be healed by faith, and who therefore made it legitimate for the Christian Scientist to say so today. Any one who will take a concordance to the Bible and look up the word faith in the Gospels, will think twice before he commits himself to the support of your correspondent. To take a single instance, when Jesus healed the two blind men he said, "According to your faith be it unto you," and the healing he practised upon this occasion he practised whether he was dealing with twisted limbs or fevers. Those, he declared, who believed on him, consequently who had faith in him, would be able to do his works, and so it was he, and none other than he, who made the power in some measure to do those works the proof of a man's faith, and so of his Christianity; "He that believeth on me, the works that I do shall he do also."

It was the Mind of Christ which healed the sick and sinning in the first century, and it is the Mind of Christ which will heal them in the twentieth century, whenever men, instead of endeavoring to explain away his teaching, strive to let that Mind be in them "which was also in Christ Jesus." Christian Scientists, no matter what their shortcomings may be, have fearlessly accepted the teaching of Jesus, "He that believeth on me, the works that I do shall he do also." And just because they have accepted this, they are proving Christian Science to be a lamp to their feet, a lamp which is teaching them to regard death not as something to be bowed to, but as an enemy which is to be destroyed. "I am come," Jesus said, "that they might have life, and that they might have it more abundantly." This life is spiritual and eternal, and spiritual life is no more material than eternal life is entered upon through the portal of death.

[James D. Sherwood in *Christian Advocate,* Dallas, Tex.]

Mrs. Eddy rightly claimed to be a follower of Christ Jesus. She comprehended his teachings sufficiently to make the proof of healing by spiritual means alone, and she reduced to writing what is revealed of the Science of being in the Christian Science text-book, "Science and Health with Key to the Scriptures." She did not claim the cures wrought through Christian Science were miraculous, but that they were "supremely natural" (Pref., p. xi). These cures seem miraculous to the uninformed materialist, but not so to the well-instructed Christian Scientist. Any one who has a correct knowledge of God and the spiritual man can heal the sick. Every professed Christian should be able to make proof of his discipleship. The Master said: "Heal the sick," and, "These signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

Christian Science teaches that there is a distinction between man made in the image of God and the mortal man who is of the race of Adam. Christian Scientists are natural; they eat food, they wear clothing, they live in houses, etc. The difference between a Christian Scientist and his former sense of self is in growth of understanding. It is in putting off the old man with his deeds and becoming transformed by the renewing of his mind, that he may prove "what is that good and acceptable and perfect will of God," spoken of by St. Paul in his epistle to the Romans. A Christian Scientist has the ultimate goal always in view. He loves God supremely, obeys the leadings of truth, and endeavors to follow as nearly as possible in the footsteps of the Master. The Christian Scientist is not a false accuser; he wars not with his brother; he respects individual rights, and permits others to worship God according to the dictates of their conscience, and all that he asks is to be permitted to enjoy the same privilege.

[Olcott Haskell in *Fresno* (Cal.) *Republican.*]

Christian Scientists regard the work of Jesus and the early Christians as divinely natural. It was not accomplished through breaking the divine law, but through fulfilling this law, which forever holds God's universe in harmony. The mathematician does not put a "mild and meaningless interpretation" upon erroneous statements when he rejects them from his work as unreal; and a review of

Digitized by Google

Jesus' life and teachings will show that he maintained a like attitude of repudiation toward evil. He rejected it as having no real part in the man of God's creating, and through this recognition he destroyed sickness and sin, while at the same time he explained to his disciples how they might follow his example, saying, "Ye shall know the truth, and the truth shall make you free."

The very nature of Jesus' method was such that material medicine would have been useless to those carrying out his instructions; nor is there any record that his disciples ever resorted to material means for the cure of the sick. The Bible in some cases refers to oil, wine, and other remedies as symbols of healing, yet it records the case of King Asa, how "in his disease he sought not to the Lord, but to the physicians . . . and died." The Bible also cites other instances where the use of material remedies was of no benefit. There is not the slightest record to show that Luke, who is referred to as having previously been a physician, ever sought to employ other than spiritual means after learning the way illustrated by Jesus.

The terms "repentance," "regeneration," "atonement," "forgiveness," etc., are by no means foreign either to the teachings of Christian Science or to the experience of its followers, although the theological dogmas which men have attached to these terms are not retained. One of the tenets accepted by Christian Scientists is expressed in these words from their text-book, "We acknowledge God's forgiveness of sin in the destruction of sin and the spiritual understanding that casts out evil as unreal. But the belief in sin is punished so long as the belief lasts" (Science and Health, p. 497). Certainly any man in whose life this "destruction of sin" is being accomplished need not fear to be judged by the test which Jesus gave to his disciples when he said, "Ye shall know them by their fruits."

[W. C. Williams in *Baltimore* (Md.) *American.*]

The philosophy and theology of Christian Science are that man is, as the Bible states, the child of God, made in His image and likeness. God is Spirit, therefore His likeness, man, must be spiritual. Christian Scientists contend then that the spiritual man is the real man, that "it is the spirit that quickeneth; the flesh profiteth nothing;" and in the sense that only that which God created is real, is matter considered unreal, and not in the ordinary sense.

Paul said, "We know that all things work together for good to them that love God." We know that Jesus said: "In the world ye shall have tribulation," but he also said: "Be of good cheer; I have overcome the world," and again: "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do." His commands were unceasing that all should overcome the world, the flesh, and the devil, and in overcoming them they would overcome tribulation, disease, and the "last enemy," death. Christian Scientists believe that disease and death are realities as the world sees them, but from the spiritual standpoint they believe what Jesus said: "If a man keep my saying, he shall never see death."

Mrs. Eddy's definition of the Holy Ghost is Jesus' definition in John: "And I will pray the Father, and he shall give you another Comforter, that he may abide with you for ever; even the Spirit of truth; whom the world cannot receive, because it seeth him not, neither knoweth him: but ye know him; for he dwelleth with you, and shall be in you." "If ye love me, keep my commandments." And his command was to heal the sick as well as to preach the gospel. All cures in Christian Science are made through the understanding that God is the only power; therefore, the healing is not accomplished with the aid of anything else, and the authentic cases of healing through Christian Science are too numerous and too well known to be lightly cast aside. Christian Science accomplishes even more in overcoming sin, but these cases are not given the publicity of those which record the healing of disease.

The marvelous spread of Christian Science is due to the fact that its investigators have proved its claims to be true, and its adherents include many very intelligent people.

[Howard A. Kelly, M.D., Johns Hopkins University, as reported in [*Philadelphia* (Pa.) *Press.*]

I wish my voice could reach every doctor in the land when I urge them to take the Bible and study it. Don't be afraid of the "higher criticisms." I used to have theories in regard to the Bible, but I have none now. I simply know, as I know that food nourishes my body, that the Bible is meat and drink for the spirit.

Great as have been the marvelous advances in medicine and science, greater during our lifetime than in thousands of years before, we are on the eve of still greater things. I firmly believe we are soon to learn the cure for that awful disease—cancer. Don't let the intoxication of the wonderful progress in material things and the hustle and hurry of this age lead you into forgetting the things of the spirit and the example and religion of Jesus Christ. True religion and the Bible is the only philosophy of life that always works. The really successful physician is the one who recognizes the spiritual element as the one vitally necessary thing in his life and profession.

After an active experience and practice of thirty years, I unhesitatingly declare to you that the example and religion of Jesus Christ is the one thing that ennobles and purifies; that gives a man a broad outlook and a broad love for his fellow-men.

[William S. Campbell in *Washington* (D. C.) *Times.*]

The Standard Dictionary gives this definition of Christian Science: "A system of healing disease, founded by Mary Baker Eddy in 1866, based on belief of perfect salvation from sin, disease, and death, by a complete spiritual understanding of the teachings of Christ." It should be a matter of general interest to know if this definition can be verified, and the fact that there are Christian Science churches throughout the civilized world gives ample opportunity for investigation.

In the sermon in question the pastor is quoted as saying that the statements of Christian Science are confusing. In the science of astronomy we discredit the physical senses and say that the earth moves and that the sun relatively stands still, and then we speak of the rising and setting of the sun; yet this is not considered confusing, because we understand what is meant; and in the same way Christian Science need not be confusing.

The pastor makes the statement that the Christian Science text-book is not a key to the Scriptures, and cannot be understood. This is equivalent to saying that he does not understand it, and that therefore nobody does. This position is hardly logical, and does not agree with my experience. In ten years I have gained more practical knowledge of the Bible through the text-book than I gained in the twenty years preceding as a member of the Congregational church, and this experience is not exceptional.

[C. R. Munro in *Port Hope* (Ont.) *Times.*]

In a recent sermon a clergyman is reported as saying that Christian Science is "a rival religion to the Christian religion," and that it is "opposed to the New Testament record of the teachings of Jesus." A careful study of Christian Science will show that its teachings are based wholly upon the Bible and the life and teachings of our Master. The Bible teaches that God is Spirit and that God is All-in-all, and every statement in the Christian Science text-book is a logical deduction from these premises. Christian Scientists, perhaps more than any other body of

Digitized by Google

Christians, accept unreservedly all of Jesus' commands, and believe these commands were meant for his followers in all time. They not only believe his words, but they go farther, and actually rely upon God for their salvation from all ills, physical as well as mental. Is it establishing a rival religion to that of Jesus for a man to make Jesus' religion the standard of his life and conduct? Christian Scientists, by their work in healing the sick and sinful in the way that Jesus taught, are offering the very best proof that can be given that their religion is the very religion our Master taught and practised, and left for our guide.

The first tenet subscribed to by all who join the Christian Science church is as follows: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life" (Science and Health, p. 497), and one of the greatest changes made in the life of all Christian Scientists is the greater love they have for the Bible. They find, through the light thrown on the Scriptures by the teachings of Christian Science, that the Bible becomes a new book to them, and is made more practical, so that they understand its truths better than they ever did before. Is it a "dangerous" thing to create in men an increased desire to read and study the Bible and to endeavor to put its teachings into practice in their daily lives? Is it "dangerous" to teach the allness of God, the omnipotence and omnipresence of infinite Love, and the powerlessness of all that is opposed to God's law or that would attempt to usurp His power? Is it "dangerous" to rely upon God, infinite Love, for all our needs? Then the more we have of such "dangerous" doctrine the better the world would be.

Is it possible that Jesus meant his teachings to apply only to his immediate followers, and are we to discard his teachings because we have been taught that they were never meant to apply to us in this age? Where do we find in the Bible any authority to pick out certain commands as being meant for us, and arbitrarily set aside other commands equally as imperative and say they were not intended for this age? Is it reasonable to think that a large part of the Master's life-work was intended only for his own disciples? Jesus never intimated, either by word or deed, any such interpretation of his words. He said definitely and plainly: "He that believeth on me, the works that I do shall he do also;" and he also said, "These signs shall follow them that believe," the signs mentioned including the healing of the sick. The words are unmistakable and the meaning is clear, and he would be a bold man who would presume to distort Jesus' command to preach the gospel and heal the sick, into the entirely different command to preach the gospel and let the doctor heal the sick.

The healing work of Christian Science is now so well known as to require but little comment. The critic must remember that this Science has been established only about forty years, and he must not expect its students to reach the full understanding of its possibilities immediately. Without wishing to make comparisons, it might be pointed out that the practice of medicine, after four thousand years' growth, has never yet got beyond the experimental stage. Contrary to what our critic has said, it is the occasional failure of a Christian Scientist that is heralded abroad, while nothing is known of the many thousands that are constantly being healed of all manner of diseases, including what have been called incurable organic diseases. While its success in physical healing has been remarkable, it is only secondary to the more important work accomplished in the healing of sin. Men and women are daily being reclaimed from infidelity to a knowledge of God and His Word. Evil habits and passsions are overcome, and the slavery to drug and liquor habits, often more hopeless than the worst disease, are being destroyed; and those who adopt its teachings into their lives are made happier and better, and their lives made more useful to their families and the community. To condemn Christian Science for an occasional failure, and to pass over without comment the many thousands of cases lost under medical treatment, is neither Christian nor fair.

To state that Christian Science is akin to mesmerism, hypnotism, and the practices of oriental wizards and magicians, is to show that one does not understand in the least the teachings of Mrs. Eddy, as given in the text-book of Christian Science, "Science and Health with Key to the Scriptures." Christian Science is as different from the systems referred to as day is different from night, for while these other systems one and all use as their basis the supposed power of the human mind or will, Christian Science absolutely repudiates all such methods, and relies wholly upon an understanding of God, the divine Mind, as the only healing power, and man as His spiritual image and likeness. It is only as his human will is subjected to the divine will that the Christian Scientist is able to bring about the healing work. Christian Science healing, being purely spiritual, makes men better morally as well as physically, and in this it also differs from the methods referred to above, which do not even claim to benefit a man spiritually.

Christian Scientists will heartily agree with our critic that "what we all need is more faith in prayer—more faith in His [God's] word and promises." Christian healing is the result of the prayer of faith; not the "dead" faith spoken of by the apostle, but the faith which is accompanied by "works," the faith that enables us to rely absolutely upon God, divine Love, for all our needs, at all times and under all circumstances.

[Ezra W. Palmer in *Rocky Mountain News*, Denver, Col.]

Mental suggestion is entirely foreign to Christian Science. The two are as far apart as the poles. Christian Science healing is accomplished through prayer to God, prayer in which God is recognized as infinite Spirit; "of purer eyes than to behold evil," as the prophet declares, and man is seen as the perfect child of God, pure, sinless, unfallen. The patient is led to see his God-given right to health and harmony, and that when he is governed by divine Mind, wholesomeness of mind and body inevitably follows. In this work mental suggestion has no part.

Mental suggestion, as the name implies, is the attempted control of the thoughts of one person by another, the subjection of one will to another, in other words, hypnotism. Since the human mind may be governed by evil as well as good motives, the effect of mental suggestion may be as conducive to evil as to good. In fact, experience has shown that its continued use is disastrous both to the operator and to the patient. So fully awake are Christian Scientists to the evil of mental suggestion, that not only do they not employ it, but its use is prohibited by the Manual of The Mother Church in Boston.

Christian Science teaches that God is personal, but not anthropomorphic; that He is not corporeal, but infinite personality—all-inclusive Mind. Christian Science does not teach that God is impersonal. The existence of evil in the material world Christian Science recognizes, but it denies that evil is a part of the kingdom of heaven. Sin, disease, and death are the evanescent, transient phenomena of mortal existence, not the eternal things of God's spiritual universe.

'Tis night! and as I lay me down to sleep,
I fain would pray thee, Lord, my thoughts to keep.
O gentle Shepherd, take me in Thine arms,
Help, heal, and keep from me whate'er alarms.
Let me but rest my head upon Thy breast,
For sleep is sweet indeed where Love gives rest.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

READERS OF BRANCH CHURCHES.

THERE is a question of "supply" which seems to confront many branch churches when it comes to the choice of those who shall fill the important office of Readers, and within the last few weeks there have come to us from various parts of the field requests to "say something in the *Sentinel*" on this particular phase of the problem. Inasmuch as these requests have their origin in an earnest desire to be loyal to the teachings of Christian Science, we venture to repeat, at the risk of wearying some of our readers who are fortunate enough to be exempt from this particular difficulty, an editorial dealing with this question that first appeared in these columns several years ago, but which is equally applicable today. It is as follows:—

"We are informed that some of the smaller churches, when electing new Readers, have been impressed with a lack of available material within their own ranks, and have felt compelled to draw upon other fields, a condition that should not exist after three years of active public work. The principal lesson to be drawn from this seeming lack of material is that there is need of more specific as well as more general preparation for every branch of Christian Science work. While the healing of the sick is the most important and convincing evidence of the truth of Christian Science, there is other work which must be performed by those who have the welfare of our cause at heart.

"Christian Scientists, in these early days of denominational growth and expansion, should realize that the call, 'Follow me, and I will make you fishers of men,' may come to them at any moment, and they should be prepared for it. No matter how small in membership a church may be, nor how limited the experience of its members in public affairs, it should have within itself material for all its needs. For the same reason that Christian Scientists should be ever ready to heal the sick, they should be ever ready to preach the gospel. Neither can be properly done without earnest preparation and diligent study. Those without training for public work of this character, should know that it is never too late to acquire the necessary preparation.

"Another phase of the question, which must be carefully considered, is the danger of creating within our ranks a certain class who would, in time, come to be looked upon as professional Readers. It does not seem that the establishment of such a class could be conducive to the growth of those comprising it, nor to the growth of the individuals who would be relieved thereby of the necessity of qualifying themselves for this work within their own field."

The key to this problem of a proper choice of Readers, as well as to all others that come to the Christian Scientist who is striving to be faithful to his sense of duty, is found in the answer which Mrs. Eddy gives in Science and Health (p. 495) to the question, "How can I progress most rapidly in the understanding of Christian Science?" Her answer, while brief, is full of food for reflection, especially the concrete statements at the beginning and close of the first paragraph; namely, "Study thoroughly the letter and imbibe the spirit. . . . You will learn that in Christian Science the first duty is to obey God, to have one Mind, and to love another as yourself."

It will be noted that Mrs. Eddy has not told us to be guided by the will or theory of some material personage, but that she rather turns us to Principle and points the way to the demonstration of the Principle and rule of Christian Science. In the clear and forceful statements here quoted is a summing up of what is iterated and reiterated on every page of Science and Health, the rule of life which she always practised and to which she invariably turned for the solution of every problem that came to her in her individual work.

ARCHIBALD MCLELLAN.

A SOLEMN OBLIGATION.

IT is required of the teachers in our Christian Science Sunday Schools to teach all the pupils under their care the Ten Commandments, the Lord's Prayer with its spiritual interpretation as found in Science and Health (p. 16), and the beatitudes from the sermon on the mount. This instruction is not merely theoretical, it aims to bring out in the children a loving obedience to God's law, that they may thus be fitted for the duties of citizenship as well as for those which make the home both happy and sacred. It should not be forgotten, however, that even more solemn obligations rest upon the parents than upon the teachers, and these obligations cannot be evaded without the most disastrous results in the future lives of the children. Following close upon the giving of the Decalogue is this command respecting the divine statutes: "Thou shalt teach them diligently unto thy children, and shalt talk of them when thou sittest in thine house, . . . thou shalt bind them for a sign upon thine hand, and they shall be as frontlets between thine eyes."

When we come to the teachings of Christ Jesus, we find the most stringent demand for obedience to the divine law as given by Moses and the prophets, but the Master went farther than they had done in his insistence that obedience must extend to every thought before one could rightly be called a citizen of God's kingdom. He did not hesitate when the need so required to tear away the veil which sought to cover moral deformity, that he might expose and rebuke it for those who had not learned to love God's law enough to abhor the evil which it condemns. It is here that in instructing their children parents need to pattern more closely after our great Exemplar, which may mean the taking up of serpents,—the subtle sins which would hide from the light of Truth; but the one who understands Christian Science is surely well prepared for this holy task in knowing that "evil is not power" (Science and Health, p. 192). The Christian Science parent or guardian must not forget that "ever since the foundation of the world . . . evil has tried to slay the Lamb" (*Ibid.*, p. 568), and that upon each one rests the responsibility of proving evil powerless.

St. Paul said to the Ephesians that it was "a shame even to speak" of evil things, nevertheless he did this himself when it was necessary to uncover error for its destruction. To young and old alike St. John says, "Love not the world, neither the things that are in the world:" and he specifies its illusive lusts that are not of the Father but belong to the unreal world of material belief, which offers fleeting pleasure and gives ofttimes long-lasting pain. Above all its shadows, however, there shines high and fair the rainbow of promise, inscribed with these glorious words, "Whosoever abideth in him [the Christ] sinneth not."

Till this consummation is reached we have a significant warning from our revered Leader, who says, "The baneful effect of evil associates is less seen than felt. The inoculation of evil human thoughts ought to be understood and guarded against" (*Ibid.*, p. 449). Parents will not shrink from the holy task of teaching their children all the demands of God's law, if they themselves are truly striving after the Christ-purity; and with clean hands and pure hearts they will instruct the child thought, parent and child meeting as friends, and each rejoicing to know that wisdom's "ways are ways of pleasantness, and all her paths are peace;" that "length of days is in her right hand; and in her left hand riches and honor."

THE LEAVENING OF THOUGHT.

HISTORY witnesses that in so far as professed Christians have been inhospitable to merited rebuke, indisposed to consider the manifest inadequacy of views for which they stand, in so far thought has not honored the Christ-ideal and their influence for good has been diminished. Those who look over the religious press today, however, will have noted the very frequent appearance of articles in which the frankest recognition is given to the value of criticism and rebuke. The unworthiness of any profession of faith which has been found to have no vital efficiency is constantly being declared, and the responsibility of the church for prevailing religious indifference correspondingly conceded. (See the excerpt from the pen of the Rev. Richard Roberts in the exchange columns of this issue.)

While the criticism of today is less sarcastic than was that of Voltaire, less rabid than that of Shelley, it is a thousand times more plentiful, and distinctly more pronounced at the hands of the commoner, than ever before, and this in large part because of the tensity of the economic struggle now going on in all the world, and the claims of those who demand a more equitable division of the profits of labor, that many of the chief enemies of their cause are found in the church's influential pews. Certain it is that the healing of the body politic, the securing for every man of a fair chance as the only worthy and consistent aim of a Christian brotherhood, is being insisted upon as never before. The world's demand of professed Christians, that they be just, unselfish, and brother-loving, is growing more exacting, and to this fact Christian people are waking up; they are facing the issue and perceiving that self-complacency is wholly unbecoming, and that the only way to escape just criticism is to live above it.

It is here that the reinauguration of spiritual healing as taught by Mrs. Eddy is found to be causally related to that larger redemptive ministry of the right idea which is to effect the solution of every problem, the righting of every wrong. Having lost faith in the possibility of spiritual healing for the individual, it naturally followed that the church should lose faith in the possibility of bettering communal conditions otherwise than through the "worldly-wise" methods which have so generally succumbed to the selfishness of men. The remanding of the administration of justice to the ethical sense of mortals has proved no less lamentable than the remanding of the cure of disease to their material sense, and in calling men back to the divinely appointed way of healing sickness, Christian Science is showing them the higher, more effective means of bringing about the reign of right in every human relation.

It is apparent that whatever the nature of the wrong afflicting the community or the state, it is the outcome of some falsity of belief, and it calls no less surely than does a physical malady for spiritual diagnosis and for that healing which is gained in the casting out of error through Truth. The dependence of Christian people upon political parties for the putting away of communal ills by the enactment of corrective law, has proved a sorry thing for the reputation of the church in the estimate of those who are the victims of oppression, and yet not so sorry as is the inconsistency of its unfaith in the possibility of eradicating these ills through the healing power of Truth.

The confidence which Christian Science establishes regarding the achievement of good through spiritual means is begetting a new courage, upon every plane of human need and among the representatives of every Christian faith, to undertake for God and His Christ. While heartily contributing to the advance of every improved belief, every undertaking which promises present betterment, the true Christian knows through whom alone the right is to win. The humility of his reliance upon God is the sinew of his strength, and the consistency of his endeavor, as well as the glory of his ideal, can but commend him to the approval of all fair-minded men.

JOHN B. WILLIS.

AMONG THE CHURCHES.

SANTA BARBARA, CAL.

A Christian Science society was organized in Santa Barbara in November, 1892. This society first met in the home of one of its members, but in 1895 it was necessary to procure larger quarters and Channel City Hall was rented until 1897, when Music Hall on Anapamu street was secured. This room was used until 1900, when the society having been incorporated as a church the building formerly used by the Unitarian society, at State and Victoria streets, was purchased, which was occupied until 1906, when it was remodeled so as to seat about two hundred. This building proved sufficient until the summer of 1910, when a large lot was purchased at the corner of Anacapa and Micheltorena streets, the church building removed thereto and enlarged to its present proportions. In its new location, the edifice of First Church of Christ, Scientist, has been occupied since Thanksgiving day, 1910. The auditorium is a pleasant, well-lighted room and has a seating capacity of over three hundred, which it is possible to increase to about four hundred by the addition of more chairs.—*Santa Barbara Press.*

SWANSEA, WALES.

The new rooms of the Christian Science society, Swansea, were opened on Sunday, March 5. The site on which they are built became the freehold property of the society about a year ago. It is prominently situated on a main road in one of the best parts of the town, and sufficient land remains on which to build a church when needed. The design of the building is Georgian in character, and compares favorably with the best architecture of the town. The service room is capable of seating three hundred people.

Correspondence.

MEXICO, MO.

Carpenters are making the old Gibbs home, on Promenade street, into a handsome little church building for the Christian Scientists of this city. Although they have been working on it but a short time, it has already begun to show what it will look like when completed. The auditorium will be thirty-five by thirty-nine feet. The transformation already accomplished is surprising, when one considers that the structure was an old-fashioned brick house.

Mexico Ledger.

RICH HILL, MO.

The Christian Science people have completed paying for their church building and will dedicate it on Easter Sunday, April 16. This building was purchased in 1907, five years ago, from the Episcopal church trustees. Our Christian Science friends have remodeled, painted, and otherwise improved the building, and are to be congratulated on having now fully paid every obligation outstanding against it.

Rich Hill Review.

NEWARK, N. J.

Second Church of Christ, Scientist, which has its home now in Clinton avenue, near Bergen street, is soon to build at the southeast corner of Second avenue and Garside street. It is understood that the plot, which is made up of three parcels, brought between eight and ten thousand dollars.

Newark Star.

AUSTIN, MINN.

The members of First Church of Christ, Scientist, of Austin, Minn., are planning to dedicate their church edifice May 21 at 10:30 a.m. The usual order of services will be observed, supplemented by a short historical address.—*Correspondence.*

THE LECTURES.

LEEDS, ENGLAND.

Bicknell Young lectured on Christian Science in Leeds to a crowded audience in the Albert Hall on Tuesday, March 7. Col. W. E. Fell was the chairman. His introductory remarks were as follows:—

The most momentous words that were ever spoken to this or any other generation were those uttered by Jesus when he said, "Ye shall know the truth, and the truth shall make you free." A sick and sorrowful world replies: "Yes, he said that; but what is truth? Some say, Look here; and others, Look there. And we look, but we are not healed, we are not made free."

Pontius Pilate asked Jesus, "What is truth?" and he answered not a word; but the embodiment of truth stood before Pilate. And why should Jesus answer such a question at such a time, when the whole countryside was ringing with the mighty works that he had done in proof of what truth is. Pilate could have ascertained the truth; but Pilate did not want the truth, he was busy sitting in judgment on the truth. John the Baptist, wiser than Pilate, but with doubt in his heart, sent his disciples to ask Jesus, "Art thou he that should come? or look we for another?" Jesus answered not a word, but in that hour he did many mighty works, and turning to John's disciples he said: "Go your way, and tell John what things ye have seen and heard; how that the blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised;" and he added, "Blessed is he, whosoever shall not be offended in me,"—in me, the healing Christ.

Today the world-aged question still goes up, "What is truth?" but today there is a note of expectancy in the voice, for the world knows that the answer is at hand. And Christian Science replies as Jesus replied to the disciples of John, and points to the countless number of people who have been healed of all manner of diseases, of all manner of sins, and of every kind of intemperance, through its ministration in the name or understanding of Christ, the truth.

Correspondence.

FARGO, N. D.

A lecture on Christian Science was delivered at the Orpheum March 23, by William D. McCrackan, M.A. He was introduced by Mayor Lovell, who said:—

I want to thank the committee of the local Christian Science organization for the opportunity to be present at a meeting held under its auspices, and to listen to a discourse upon the doctrines of Christian Science. The doctrine of Christian Science, I take it, is allied to the doctrine of Christianity itself. Nearly two thousand years ago, "in the beauty of the lilies Christ was born across the sea." "Out from the garden of Gethsemane, out from the riven tomb, he of the thorned crown has been walking adown the troubled centuries, lifting from bruised and staggering humanity the burden of its woes." The doctrines he enunciated are the strongest active agent and impelling force for good in all the world today.

I have recently seen it stated that the growth and development of Christianity reveals a succession of fallacies abandoned. I prefer to believe, and I regard it as a more accurate statement of fact, that the growth and development of Christianity reveals a succession of new truths discovered and adopted. For the growth of Christianity has not been unlike the growth and development of mankind itself, and of the sciences, arts, and inventions. It is the eternal rule of the universe that growth is conditioned on change. All progression has followed the principle of evolution and has been based upon the law that the fittest shall survive. The rule obtains in the world of mind as well as in the world of matter; therefore I do not shrink with apprehension from a theory or doctrine because it is new. There is no virtue in adhering to a teaching because it is old, there is no discredit in accepting a doctrine because it has never before been advanced. Every theory which is today of general acceptation was first tested and tried in the crucible of popular criticism. Progressive intelligence pleads always for the receptive mind, the mind open to conviction, because only through that mental attitude can humanity approach the mountain-top of perfection.

No observing man or woman can fail to have been impressed with the high standard of intelligence manifested by those who have been attracted to Christian Science. This to me means one of two things: either there is something worth while about Christian Science, or my Christian Science acquaintances are losing their mental grasp. I see no loss of mental acumen among them in other respects, so I am forced to the conclusion that there is something worth while about Christian Science. What it is I do not know, but I am not unwilling to learn.—*Correspondence.*

SHERMAN, TEX.

On last Monday night [March 27], at the Sherman Opera House, Willis F. Gross of Boston delivered a lecture on Christian Science to a representative, thinking audience of about two hundred people, mostly of Sherman and Denison, though there were people present from Paris and other points. The lecturer was introduced by R. C. Groesbeck, professor of mathematics in the Sherman high school. In his introductory remarks Mr. Groesbeck said:—

It is a privilege and a pleasure to introduce the speaker of the evening. The purpose of the Christian Science board of lectureship is to give to honest and earnest inquirers reliable information concerning the teachings of Christian Science. Christian Scientists do not proselyte. It is written, "Ye shall know the truth, and the truth shall make you free." As I understand the meaning attached to these words by Christian Scientists, know is taken to mean realize, acknowledge; truth is synonymous with divine light, Love, and Life. The expression, then, might well be worded, "Recognize and realize that God is Life, Truth, Love, —then shall you be free from the errors of all that is unlike God,—free from hatred, envy, jealousy, intolerance; in short, from all inharmonies of mind and body."

Christian Science does not offer a religious short-cut. Its demands upon him who would claim adherence are most severe, in that absolute sincerity, a simple reliance on God's word, and a life carefully consistent with his faith are emphasized above all things else. The worshiper of form can find no place in Christian Science. Formality is almost entirely eliminated. In communities all over this and other lands may be found thousands upon thousands of healthy and happy people who testify that they owe their life and usefulness to Christian Science. That intelligent people should ask for further information concerning the means and methods that have wrought such beneficent results is not surprising, and is evidenced by your presence here this evening.—*Texas Advertiser.*

DANVILLE, ILL.

A lecture on Christian Science was delivered by Bliss Knapp Sunday afternoon, March 26, at the Lyric Theater. He was introduced by Frank Lindley, whose remarks were in part,—

Your church organization is the only one that was organized by a woman, and that should endear it to the entire human family, for women have a higher ideal, and come nearer to living up to that ideal, than do men in human life. Mrs. Eddy took for the foundation for your church simply Christ, and all power that she claimed to have was by keeping close to the spirit and teachings of the Saviour. The one who thus comes closest to Jesus Christ, gets

Digitized by Google

nearest to the Christ-power. It is the Christian character in men and women that makes them truly honorable, and it is the Christian character in city, county, state, and nation that keeps them from decay.—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Alliance, Ohio. — William R. Rathvon, Columbia Opera House, 3:15 p.m., May 21.

Anamosa, Ia.—Frank H. Leonard, Opera House, 8:10 p.m., May 25.

Atlantic City, N. J. (First Church).—Frank H. Leonard, Steel Pier, 8:15 p.m., May 16.

Auburn, Me.—Willis F. Gross, Odd Fellows Hall, 100 Pleasant street, May 25.

Aztec, N. M.—Francis J. Fluno, M.D., Green Hall, May 26.

Bath, Me.—Prof. Hermann S. Hering, Universalist Church, May 22.

Buffalo, N. Y. (First Church).—Frank H. Leonard, Convention Hall, 4 p.m., May 21.

Calais, Me.—Prof. Hermann S. Hering, St. Croix Opera House, 3 p.m., May 21.

Charleston, W. Va. — Bliss Knapp, Burlew Opera House, 3:30 p.m., May 21.

Cleveland, Ohio (First Church).—William D. McCrackan, M.A., Keith's Hippodrome, 3 p.m., May 21.

Dayton, Ohio (First and Second Churches).—Willis F. Gross, Memorial Hall, 3 p.m., May 21.

Denver, Col. (Fourth Church).—Francis J. Fluno, M.D., Woodman Hall, Clay street and Dunkeld place, 3 p.m., May 21; First Church Edifice, 14th and Logan avenue, May 22.

Dover, N. H.—Prof. Hermann S. Hering, City Opera House, Central square, May 18.

Durango, Col.—Francis J. Fluno, M.D., Christian Church, 8:15 p.m., May 25.

Goldfield, Nev.—Hon. Clarence A. Buskirk, Carpenters' Hall, May 19.

Hamilton, Ohio.—William R. Rathvon, Smith's Theater, May 18.

Jackson, Mich.—Willis F. Gross, Athenaeum, May 18.

Lexington, Ky.—Bliss Knapp, Auditorium, May 23.

Lockport, Ill.—William R. Rathvon, Alexander Building, Ninth street, May 25.

Lorain, Ohio.—Willis F. Gross, Majestic Theater, May 22.

Milwaukee, Wis. (First Church).—William R. Rathvon, Church Edifice, Prospect avenue and Keene street, 8:15 p.m., May 22 and 23.

Minneapolis, Minn. (Sixth Church).—Frank H. Leonard, Auditorium, 3:30 p.m., May 28.

Muskegon, Mich. — Frank H. Leonard, Woman's Club Building, May 22.

Newburyport, Mass.—Prof. Hermann S. Hering, Griffin Hall, May 19.

Norwalk, Ohio.—Frank H. Leonard, Universalist Church, May 19.

Nyack, N. Y.—Prof. Hermann S. Hering, Church Edifice, Broadway, near Cedar Hill avenue, May 25.

Ottawa, Ill.—William D. McCrackan, M.A., Church Edifice, May 22.

Owosso, Mich.—Willis F. Gross, May 19.

Port Huron, Mich,—William R. Rathvon, Society Hall, White Building, 7:30 p.m., May 19.

Springfield, Ill.—Bliss Knapp, State Arsenal, 2d and Capitol avenue, May 26.

Traverse City, Mich. — Frank H. Leonard, City Opera House, May 23.

Washington, Ia.—William D. McCrackan, M.A., Opera House, May 23.

Williamsport, Pa. — Prof. Hermann S. Hering, Church Edifice, Maynard and Third streets, 8:15 p.m., May 26.

TESTIMONIES OF HEALING.

On the 19th of August, 1910, I accompanied my husband, who with two assistants left our home in Wallace, Idaho, to visit a placer mining property, the last thirty miles of our journey being made with a pack-train over steep mountain trails. Our destination was reached the following evening about seven o'clock, the pack-train starting immediately on its return trip. There were great fires in the forests, but we were advised that there were none nearer than twenty miles, and as there was very little wind we thought we would be safe. As the evening came on, however, the sky became red in the distance, and on the following day the smoke grew so thick that we could not see each other without a light. This blackness continued until about five o'clock in the afternoon, when the sky became lurid in all directions. Four men were at the camp when we arrived, and all said that there was no danger; but we thought there was something to meet, and accordingly went to our tent and read the Lesson-Sermon. We also read many times the Ninety-first Psalm, and other chapters of the Bible which appealed to us as especially helpful. We knew that God was there with us, and that we could not be separated from Him even for an instant.

By five o'clock the wind had increased to a gale and ashes were falling fast; shortly the wind became very hot and we could hear a tremendous roaring and crashing as the fire and wind felled the trees. Some of the men came to us and said we had not a moment to lose, and the two prospectors who had already gone to bed were awakened. They dressed hastily, and we all started up the steep mountain, choosing the side with the least timber on it, for it grew very abundantly over this region. One of the men had told us of a flat about a mile and a half up the mountain, and it was our aim to reach this if possible. We left everything except a Navajo blanket, thinking it might be needed on the summit, where we expected we would be obliged to stay until morning. By this time the wind was a hurricane; the trees were crashing in every direction, many being uprooted before burning. Aside from ourselves only one of the party knew anything of Christian Science; his parents were loyal Scientists and he had been helped many times. I spoke to him, telling him to remember that God is our Life, and that divine Love would surely take care of us. The fear that came over me as we started up the mountain was indescribable. I could scarcely breathe and seemed to lose all strength, but I kept declaring that God was there and that He was omnipotent; therefore evil was powerless. A great fear that I might be a burden to the others seized me, and then I declared that God's children could not burden each other, that we were all made in His image and therefore I had as much strength as the others. I began to grow stronger at once, and then came clearly to my thought the promise, "My presence shall go with thee." That was the last of the fear, and there came a wonderful quietness and sense of peace.

We were obliged almost to bury our faces in the earth every few minutes to get a breath, and this with the great wind hindered our progress very much. When about one third of the way up the mountain the fire rushed up the gulch where our camp was located and leaped like lightning up the mountain on either side, coming up like a great wall behind us and on the other side of the gulch. It seemed as though the whole world was on fire. We started to run up the mountain, but had gone only a little way when we saw the flames leap over from the summit and start down, oh, so fast! Then there came a great shower of fire, of twigs, bark, and moss all ablaze, and in an instant everything around us that could burn was ablaze. Both of us had been working vigorously though silently, but now we fairly shouted the truth above the roar of the flames, declaring that as God is Spirit His children are spiritual;

Digitized by Google

that we lived and had our being in God, and therefore God must be consumed before His children could be; that the mountains were His, and that because God is, evil is not.

We shouted the story of the men in the fiery furnace to those with us, telling them that the same God was with us and that He would save us. We told them of Moses and the Red sea, and that God could roll back the flames as He did the sea; told them many of the beautiful promises in the Bible and that God never failed. Our thoughts were so clear that we neither trembled nor felt afraid; the confusion was all without. We were running here and there wherever the flames seemed the least, beating out the fire on our clothing and never ceasing for an instant our declaration of the truth. We clung to divine Love with all our strength, and shouted the words of our Leader's hymn,—

Shepherd, show me how to go,
O'er the hillside steep,—

and although we could not see the answer we knew God knew the way, which was all that was necessary. At last we were where to mortal sense it was only a question of a moment and we could not go any farther except into a blazing wall. We then declared that we did not need to go anywhere, that God could save us right there as well as He could anywhere. I shouted to my husband that no matter what seemed to happen, we would be faithful to the last breath to the truth we knew, and he shouted in return that we surely would.

Then we dropped down again to get a breath, and instantly there was a cool breeze enfolding us all. The men began to thank God for it, and we told them that God had answered our prayer and was giving us strength. The fire closed in on us again and we jumped to our feet, and right back down the mountain through the fire we both saw a narrow path about a hundred feet long, and we ran down it with the others close behind. We then found ourselves in a little green spot, and as we dropped down again for a breath the same cool breeze came to strengthen us. In a moment the fire again came upon us, and again we saw the little path and ran as before, and found another little green place and the same cool breeze. It was as if some one was bathing us in pure cool water, till again the fire drove us on; but this time the little path led us into a large place untouched by the fire, which is still to be seen on the mountain. We were safe here. When we had reached this place one of those with us said, "It was your prayer that saved us," and his statement was immediately confirmed by the others. Right there, in this place encircled by fire, we had a testimonial meeting, for I told them where we had learned to pray, that Mrs. Eddy had taught us through the Christian Science text-book, and how we had learned that God is not in a far-off heaven but always at hand, the ever-present Life, Truth, and Love.

All of our party except one reached this place of safety. Just before the worst of the fire struck us, this one had insisted on rushing on ahead toward the flat, though we all begged him to keep with us; he was found about a hundred feet from where he left us. The heat had been so intense that candles melted in our pockets. We lay down here on the mountain-side, it being after eleven o'clock (the fire had overtaken us about a quarter to eight), and waited for daylight, which came about half past four in the morning, when we started down the mountain, guessing as near as we could the direction of our burned camp, and arriving there about six o'clock. Everything had been destroyed, only ashes remaining, but we had a delicious drink of water from the little stream and started on our long walk to find food and shelter. The trail had been almost obliterated by the fire, and walking was extremely difficult owing to the fallen timber, much of which was still burning, and to the ashes, which were still hot. We walked fifteen miles, going over a summit of several thousand feet altitude, and at half past seven that evening we arrived at a placer mining camp, where we were cared for in the best possible manner. We stayed there all night and the next day were driven to the railroad. Although badly burned and our eyes much swollen and inflamed (my husband was unable to open his eyes until about three hours before reaching this camp), yet there was no pain except now and then from the eyes, and by bedtime we could both see well. We had inhaled great quantities of smoke and fine ashes, and this affected the throat and lungs so that we coughed a great deal for several days, but with the help of a dear Christian Science friend this was entirely overcome in a few days and we have had no after effects from our trying experience. The others were not scorched as badly, as they kept their coats over their heads most of the time.

To say that we were thankful for this great proof of God's love and care for those who trust Him, does not in any way express our gratitude, for we know that had it not been for the understanding of the Bible which we had gained through our regular daily study of the Christian Science text-book, there would have been eight instead of one found on the mountain-side after the fire had passed over it. We were not tired at all that night when we arrived at this camp,—just filled with joy, because we had proved that "God is a very present help in trouble." I remember, when we were struggling up the mountain, how these words of Mrs. Eddy helped me, "Divine Love always has met and always will meet every human need" (Science and Health, p. 494), and I thought of the many proofs we had had of the truth of this statement. Since God was with us, we could trust Him to do everything for us. Our part was to stand firmly in the good we knew and never to waver for an instant. This testimony is given with the hope that some one who reads it may thereby gain courage to stand firm in God's strength in time of need, for there is no power apart from God.

ISABEL M. PATTISON, Wallace, *Idaho.*

Christian Science has been to me "good tidings of good," and it has made me absolutely well. From early years I was never strong, and under the weight of close study, both in high school and in college, I suffered from repeated illnesses, so that for eight or ten years I was almost continually under the care of physicians, being now sick and again well. About five years ago, after another year of semiinvalidism, I underwent an operation; but instead of improved health I daily grew weaker, and the doctor told my people that there seemed little hope for me. At that time I was largely confined to my chair, through lack of strength. Meeting a lady who had been wonderfully healed through Christian Science, she spoke to me of it and loaned me a copy of Science and Health, telling me to read the "scientific statement of being" (p. 468). I read as she directed, and must have received instantaneous healing, for I found myself well and strong almost immediately; but not then understanding the Principle that heals, in fact not really knowing that God, Truth, had healed me, I gave up reading Science and Health after a few months, returning to the orthodox belief of former years, though I had never known such excellent health as during those few months.

The result which soon followed was a return, worse than before, to my former sicknesses. In the midst of heavy teaching classes, I suffered from a complete collapse. Severe weakness in heart conditions came on, so that in a few weeks I was worse than formerly. Getting little relief, I went to a lower altitude, but returned no better. My stomach had troubled me for years, and now I was on a strict diet that availed little. It was almost a year that I had again been continually sick, when I was attacked with a severe case of rheumatism. When I had come out of this so that I could sit up a little, I began to see the nothingness of matter as my help. During the long hours of intense suffering I rebelled against the God I had tried to serve so faithfully for so many years, and I began to know that I

Digitized by Google

must seek a new faith or a new understanding. I realize now that I needed both the new-old faith and the new understanding. .

During all this time I had never once thought of Christian Science, strange as this may seem, but I saw that I must seek help there alone, for the doctors had given me up the second time. I began to read "Science and Health with Key to the Scriptures" by Mrs. Eddy, and the reading of this wonderful book healed me. When I started to read it, in May, 1908, I was scarcely able to sit up and could not walk without help. I had tried the physicians, and I now gave Christian Science a fair and absolute trial. Death was my sentence, so I cast all on Science as my last chance. I dismissed the doctor, threw away all medicine, and read each day for six and eight hours. The power of Truth was shortly seen in its effects on my body. I gave up dieting, and was soon eating whatever I wanted, and have since done so, nor have I suffered at any time from it. Strength returned rapidly, so that I was up and out, walking as I liked. My heart soon lost all erratic action, as I came into the understanding of the action of divine Mind, which is all harmony. I had come to Colorado on account of illness, but this too faded away in the atmosphere of Love wherein the true man lives and breathes.

For fourteen years I had worn glasses for defective vision, but the August following my taking up of Christian Science, just three months, as I put on my glasses one morning, I realized that I could lay them aside. I did so, and have never needed them since. My eyes are normal now, whereas before there was constant worry from them. My chest was greatly sunken on the right side, a result of illness when I was three years of age, but this, too, has become normal and I now breathe fully in all parts of my lungs, a thing I had never done before. When it was necessary last summer to have a health certificate for the position I now hold, I went to the last physician who had treated me in my illness, for examination. He wrote, "I find Mr. Welker absolutely well." I am busy as I can be, and happy in the strength of Mind. All who knew me before tell me that I am a striking example of the power of Christian Science to heal. My healing is indeed absolute. My gratitude to our beloved Leader, Mrs. Eddy, can be expressed only in service for good.

L. WILL WELKER, Denver, Col.

The thought has come to me of late that for all the blessings received since I came into Christian Science, I have not been truly grateful. It is now about four years since I decided to try Christian Science for various physical ills. When I was told by the practitioner not to take any medicine, but to read Science and Health by Mrs. Eddy, I wondered how I could possibly get on without the material remedies which I was in the habit of using. I was, however, healed of a chronic bowel disorder, also of liver trouble, overaction of other organs, and an internal growth for which I had undergone an operation without getting any relief. When told by the doctors (who tried their best to help me) that a second operation would be necessary, I decided to get on as best I could rather than submit to it. I became a slave to laws of hygiene and medicine.

I had been considered very delicate from childhood, never strong enough to do much, and the coming of winter always filled me with dread because of the tendency to take cold. The last four years I have not taken any medicine, and am now stronger and in better health than at any time before that. For the physical help I am very thankful, but what means more to me than tongue can tell is the spiritual understanding I have gained in reading and studying Science and Health, which is indeed a "Key to the Scriptures." The Bible, which was always a closed book to me, I can now read and understand—in part at least—its teachings.

I am very grateful for having overcome the sense of lack and limitation under which I had always lived, and for knowing that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). I have also learned a great lesson in patience. When I first started to read Science and Health it seemed as though I must know it all at once, and I was often very much discouraged and impatient. My healing was very slow, and sometimes the temptation was very strong to try some material remedy. At such times I found it best to ask for help from a practitioner, and for the help which I received thereby I am also very grateful. Lately I have had the privilege of class instruction, which has been a great help to me, and I sincerely hope to be of assistance to others. I have also received much help and encouragement from all the Christian Science literature.

For all these blessings I am thankful to God, and grateful to dear Mrs. Eddy for giving us Science and Health and her unselfed love to mankind.

MINNA BERNDS, Chicago, Ill.

[Translated from the German.]

For a number of years I had been suffering with rheumatism, a stomach and heart trouble, sleeplessness and general weakness, as well as loss of flesh. I had been treated for a long while by various physicians without success, when I heard of Christian Science. I was inspired with confidence immediately, began to read the Christian Science periodicals, and attended the meetings. After a short while my condition improved so much that I did not need treatment any longer. I can see more and more the nothingness of matter, and have been able to attend to my usual work since last spring [1910].

I feel firm in the knowledge that God blesses a strong faith and genuine trust in Him, and I hope to discern more and more of the truth. My gratitude goes out to God, and to our beloved Leader, Mrs. Eddy. May the blessings which God sends to humanity through Christian Science be more and more seen and acknowledged.

FRAU JOHANNE ARMBRECHT, Einbeck, Germany.

It gives me great pleasure to express my gratitude for Christian Science and the blessing that has come to me through its teachings. I have been healed of the drink habit in its worst form, after taking treatment in Christian Science. I have no desire for stimulants, and feel better both physically and mentally. I am also better morally, and have worked steadily for over a year, for all of which I am truly thankful.

PLEASANT O. HACKLEMAN, Spokane, Wash.

About two years ago I came to Christian Science for physical healing, and I now wish to express my gratitude for the benefit I have derived from it. At that time my only thought was to obtain relief from suffering, but I soon found that it was everything to me. My younger boy had always been troubled with a severe cough, and for four years my husband and I had not had a good night's rest. Soon after coming into Christian Science the child was healed, and he has slept soundly at night, so that we have not been deprived of our rest. Before coming to Christian Science he underwent an operation for the trouble, but it did him no good.

Our older boy also was healed of a severe attack of fever, and was perfectly well afterward, instead of being left with disagreeable effects. Later I experienced instantaneous healing through absent treatment in a case of a throat trouble, which used to put me in bed for about three weeks. Many ailments have been met and overcome in the last year, for which I am very grateful to God, and also to Mrs. Eddy.

MRS. W. J. SHELDON, Oak Park, Ill.

Digitized by Google

I am very glad to testify to what Christian Science has done for me. I became interested in it through the healing of my little girl. I was in trouble and in great distress of mind and body. I took treatment, and was soon helped and healed of severe headache, backache, and despondency. I was also lifted out of many conditions that seemed very serious at that time. The Scientist treated my little girl for what seemed to be blood-poisoning, and the disease was overcome in about two weeks. She has also treated my children for colds and measles, etc., and in these as well as other troubles Christian Science has never failed us. All of the old ailments have disappeared and I am perfectly well. For this I am very grateful, but I am most thankful for the spiritual understanding that Science and Health gives in its teaching of God and man's relation to Him.

I often think what would become of me or how I could ever get along without this blessed truth. Thanks be to God for it, and to dear Mrs. Eddy for giving us Science and Health, which teaches us the way that leads to perfect day.—MRS. LOUISA M. HUNZ, Spokane, Wash.

I wish to add my few words of testimony, hoping that in some way it may reach some poor suffering heart with as good results as did the first ones that I read. When Christian Science was first mentioned to me, I had been a sufferer for years with stomach trouble and other ailments that go with it. I scoffed at the idea that anything like Christian Science could do me any good, and remarked at the time that it might be all right for some poor weak-minded person, but certainly not for me in the condition I was then in. So I kept on with my material remedies, trying first one thing and then another,—different climates, hot and cold baths, open-air exercises, doctors of all kinds, everything in fact that was recommended in the material way of relief; but all of this proved of no benefit, and I found myself in much worse condition than when I first commenced treatment. Then the sense of discouragement came over me, till at last I felt that there was nothing else for me to do but give up and say goodby to all the dear ones who had done all in their power for me. I lived on a strict diet for a long time, as the doctors had forbidden me to eat anything of a solid nature whatever. Finally I was so reduced that my friends all condemned me to death.

At last the time came when I knew that I must do something decisive, and while I was debating what it should be, a friend, who was not a Christian Scientist but a kind believer in it, mentioned that he would like to see me try Christian Science. After talking it over with him and getting the name of a practitioner, I decided that I might give it a trial, just as I had other means. While doubting very much if it would help me, yet feeling sure that it could do me no harm, I called on the practitioner mentioned, and after talking with her a while, she asked me if I was ready to give up my material remedies and have her help me; but as I did not feel quite right about it, she gave me a few copies of the *Sentinel* and told me to take them home and read them; then, when I felt ready to come back, she would do what she could, assuring me that she of her own self could do nothing, but that God could and would heal the sick and the suffering. So I went home and sat down in my room and read the *Sentinels,* and found that the testimonies appealed to me more than all else, as I came across several cases similar to my own. The next morning I went back for my first treatment, and that was a day I shall never forget, as I began to feel the power of Truth right from the start. As I kept on having help, and also to study for myself, the ailments that had been with me for years began to disappear one by one, and the fear of food, which was as large as a mountain to me, left me entirely. When I found that food had no power to harm me, I could then sit down and enjoy a meal as well as any one, much to the astonishment of my friends.

This was seven years ago, and I am thankful to say that I have never taken, or had any desire to take, any medicine from that day to this. I am now back to my normal condition and enjoy life in a very different way than I ever did before. Through the understanding and help I have had in Science I can truly say that it has made me anew, bringing me from the very lowest depths of sickness and despair to the realization of being a freeborn man.

Science has not only helped me to become a man of business; it has helped me financially, physically, spiritually, and mentally, and I can truthfully say that I do indeed owe my life and all I have to Christian Science, and to our dear Leader, Mrs. Eddy. It is becoming clearer to me every day that it is nothing but the simple word of Truth which leads us to the understanding that God is All-in-all, if we will only accept of it.—DANIEL E. CLARK, Cheyenne, Wyo.

Christian Science came to me through a lecture about five years ago. Up to that time I had only heard of it from persons who criticized or ridiculed it, but I was convinced at the close of this lecture that it was the truth. Soon after, I purchased a copy of Science and Health and began to read it; also took two treatments of a practitioner. In about three weeks the truth came to my consciousness so that I was healed of catarrh with which I had been afflicted for over twenty years, also stomach and liver trouble, besides other complaints; in fact, I could not truthfully say that I had ever known a well day until I was healed in Christian Science.

Not a day passes in which I do not recognize some good that comes to me through the knowledge I have gained of divine Science. To me the spiritual uplifting is more wonderful than the physical healing. I thank God for *all the* good that has come to me; it was always mine, *but I could* not receive it until it was explained to me through "Science and Health with Key to the Scriptures." I am indeed thankful to Mrs. Eddy for having shown us the way to receive this healing truth.

STEWART M. POUDER, Chicago, Ill.

Words are inadequate to express my gratitude for Christian Science, with its many benefits which have been proven to me. I wish to tell of a case of instantaneous healing of biliousness with severe headaches. One day, during September, 1907, when I was suffering as thus indicated, I attempted to read "Science and Health with Key to the Scriptures" by Mrs. Eddy, but the headache was so severe as almost to blind me. I was unable to distinguish one word from another, but I managed to reach the telephone and ask a practitioner to help me. Immediately after the treatment I was able to read Science and Health, and in half an hour my headache had gone and I was completely healed of it.

I am truly grateful to God, and to our beloved Leader, Mrs. Eddy, for the truth which has always helped me.

MRS. ELSA M. BALDAUF, Muskogee, Okla.

While playing on a football team last season, I received very serious injuries of the leg and ankle. Having tried Christian Science before in a serious throat trouble and received relief within a few hours, I decided to have my ankle treated in the same manner. At first I did not know the extent of the injury, and had some pain the first day and night, but that was all. The second day after the accident, while moving around the house, I felt a pricking of the flesh, and on examining the place where it seemed to be I could feel where the bone was split. When the practitioner arrived I told her of this, and she said I could have a doctor if I wished, but I thought it best to trust to God alone. About four days later, poisoning set in, and I could not put my foot to the floor; but in a few days this trouble

Digitized by Google

all disappeared. About sixteen days from the date of the accident I was able to walk, but not rapidly. I went out of town for two days, getting on and off cars, going and returning, and was back to business in just three weeks. I can now walk and run as formerly, and have had no trouble worth speaking of since. I am very thankful for Christian Science and the help it has given me, also for the faith in God which this teaching gave me, enabling me to rely on Him.

FLOYD BAILEY, West New Brighton, S. I., N. Y.

It has been proved to me that Christian Science is neither a fad nor a fallacy. Many years ago I came to Colorado for rest and change, expecting to return to my duties as teacher after the climate had effected a cure. I heard of Christian Science, and began to read the text-book purely out of curiosity. I became deeply interested in it as a religion, but I did not give it much thought as a remedy for worn-out nerves, irritability, and despondency. I however kept on reading the book, and forgot what I came to Colorado for; but in after years I made a great mistake. Whenever discord of any kind came up, I would call on a practitioner to do my work for me, until I fell into a chronic state of mental laziness, and as a result the old despondency returned and I was if possible more wretched than before I heard of Christian Science. I then, however, came to myself when I was pushed out of the nest, so to speak, and made to use my own wings, which was the greatest help that could possibly have been given me.

After I began to put into practice what I had learned, the light began to dawn and I realized that God is an ever-present help and the only power. My life-purpose now is to help suffering humanity out of their wretchedness into peace and happiness,—the millennial age, when the whole world will rise up and call our Leader blessed for her sublime discovery.—EVA H. TOLMAN, Denver, Col.

In the fall of 1909 I took Christian Science treatment for a painful and very annoying female trouble. I had doctored for years with physicians, but they did not cure me. After taking the treatments in Christian Science I was healed in less than a week. One night soon after I was so troubled with rheumatism that I was unable to sleep. The next day I called upon the same practitioner for help, and after one treatment was much better. I continued to improve until now I am not troubled at all. I have also been healed of a bowel disorder of many years' standing by reading "Science and Health with Key to the Scriptures" by Mrs. Eddy. I am indeed grateful for Christian Science, and for the many blessings it has already brought me.

MRS. DORA CLARK, Aberdeen, S. D.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be June 2, 1911. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 15, 1911.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 4, 1910, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM OUR EXCHANGES.

[Rev. Richard Roberts in *British Congregationalist.*]

A third element in the problem of "the church and its cross" is to be found in the disrespect into which Christianity has fallen in England today. The churches are empty or emptying. The bulk of the people are not going to attend church unless they cannot help it, unless the church compels them to come in. It is no use to chide people because they do not go to church. They do not go because they do not feel that the church matters to them. They will go as soon as they know that the church has something vital and real and intimate to say to them; and whether we like it or not, we have to confess that the church is not saying anything in that way just now. It is of no use putting it down in a general way to prevalent unbelief. The unbelief that really matters is that which is based on the conviction that Christianity does not matter and does not work; and if Christianity is not working and does not matter today, it is because we are not making it work or making it matter.

The doctrine of evolution has come to stay. Criticism has come to stay. There is a difference today, and we must not ignore it. Part of the impotence of the church today is due to the wide-spread feeling that the church is shirking in its dealings with present-day affairs, that there is a lack of candor. It is due to the way in which the man with the big pocket is allowed to rule the roost: to the way in which we have let men who are not straight in business hold prominent positions in our churches and exploit them for their own ends; to the way in which the church has been silent, or has hedged and compromised about great moral issues and issues of righteousness.

[*Christian Work and Evangelist.*]

Jesus wrote no book, he propounded no theology, he organized no church, he framed no creed or litany, he gave no order of worship, he built no temple, he reformed no intrenched evil. What Jesus did do was to give life to the world, and all of these things began immediately to follow as the expression of that life. His life was the absolute and perfect fulfilment of his avowed purpose, "I am come that they might have life." Easter was the natural climax of such a life. It was so abundant, so full, that even death could not constrain it. It poured forth from him as light from suns or heat from glowing fires. Even to touch his garment gave one a healing touch, so radiant this life. It made all men and all things new. The ultimate effect of Jesus upon the disciples was not the impartation of a doctrine, but of a life. So Jesus poured this new life into the effete community, and then, out of this abundant, freely imparted life all these varied institutions arose as the expression of the one new life. It touched Luke and Matthew, Mark and John, and they wrote books embodying the teachings of Jesus and the deeds he did. These books, varied as they are, are the expression of the one new life.

[*Missionary Voice.*]

As the divine Author and Founder of our religion, the record of the ministry of Jesus Christ is deeply suggestive and instructive. We do well to consider every feature of that ministry in the light of present-day needs and present-day opportunities. Of all the recorded miracles of Christ, twenty-three, or two thirds, of the whole number, were miracles of healing. We do not conclude from this that physical healing was regarded as meeting the greatest need that presented itself; but sometimes, as in the case of the paralytic, the miracle of physical healing was professedly wrought to convince a doubting multitude that he held the greater power to restore the spiritual life. In the end, lest after all the disciples should fail to catch the import of one of the great lessons of his life, our divine Teacher reiterated it in definite directions: "And he sent them to preach the kingdom of God, and to *heal the sick.*"

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth.*]

The great mistake made by many devout and earnest Christians is that of supposing that Christianity stands or falls by belief in an empty tomb. It does nothing of the sort, and to say so is indeed to seek the living among the dead. Christianity stands or falls by faith in the living Christ, the indwelling Christ, the life of God in the soul of man. Beside this nothing else matters; given this cardinal principle, the religion of Jesus is perpetually renewing its youth. The true resurrection, the resurrection to newness of life, is the rising of the Christ in human nature and human society into higher, fuller, and richer modes of expression. That resurrection is continually going on, and its correlative is the ascension of human consciousness into perfect oneness with the all-embracing mind of God in the sacred fellowship of Love.

[*Christian Register.*]

The complaint is made that in our time no one can become familiar with the results of Biblical criticism and thereafter read the Bible with the old devout appreciation. The complaint is well founded, but not important. It is an excellent thing to have come to an understanding of the Bible which frees the mind and the conscience of the reader from any attempt to read with devout feeling parts of the Bible which, taken as of divine origin, outrage every tender sentiment of humanity. When one has put the book of Judges in its proper place in the history of the world, and is released from any obligation to pay honor and deference to men and deeds which were brutal and barbarous, he may come back to the heroic stories of the ancient time with a glow of enthusiasm which the old-fashioned reader could not feel.

[Rev. Arthur W. Grose, D.D., in *Universalist Leader.*]

In any world where God rules, the only heaven worth caring anything about is the heaven of a Godlike character. Pearly gates and harps and golden streets do not make heaven. Love makes heaven. Fill any life full of love and you fill it full of heaven, because you fill it full of God. Righteousness makes heaven. To know that one is right in the sense that one sincerely and honestly tries to do what he thinks God wants him to do, is to be on the road to heaven. Wherever kindness and courage and faith, high aspiration and noble achievement are sown, the harvest of the heavenly life is reaped. He that soweth to the spirit, of the spirit shall reap the life everlasting.

[*Congregationalist and Christian World.*]

Voices most powerful among men are calling the nations to unite in a league of peace. The people are everywhere responding. The time is opportune for the churches to proclaim with fresh vigor the gospel of peace. The active interest of all people in promoting peace will be sustained only by the stimulus of cogent argument and reasonable hope. Pastors have a special mission at this time to proclaim this new gospel of peace. It is Christ's own message to mankind. This is a testing-time for churches. Never have they been called to leadership in a cause more peculiarly their own. They may realize unity in carrying it to a triumphant conclusion.

[*Zion's Herald.*]

There are those who ever listen for, and these ever hear, a voice silent to others; it is heard in the passing crowd, above the noise of the world's traffic, in the silence of the midnight, in the quiet of the dawn. To these it is not what the world can give, but what it cannot take away, that seems precious. To them nothing but the best is really worth while. These live in the Easter spirit through the whole round year; to them it is only the spirit life that is full of event.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS have been published as pocket and library editions in new bindings. Description and prices will be found on the outside cover page of *Sentinel.*

The new volume, "Poems by Mary Baker Eddy," is now on sale. Specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The following reprints are published in Swedish: "Hvad Ar Bön?" "Lagens Välde," "Det Ondas Natur," "Helvete och Himmel," "Människans Gemenskap Med Gud," "Verklighet," "Det Ar En Ström," "Förklaring Af Kristligt Helande," "Den Yppersta Egenskapen I Christian Science," "Underverken," "Det Ondas Ofvervinnande," "Var Väktare," "Riklig Tillgang," "Kristendom Och Vetenskap." Ten copies to one address, prepaid, 10 cents; one hundred copies to one address, 75 cents; five hundred copies to one address, $3.00; one thousand copies to one address, $5.00.

Two of our Leader's poems, "Shepherd, show me how to go," and "Love," set to music by Frederic W. Root, are now on sale by the Society. For description and price see advertisement on inside back cover page of *Sentinel.*

A new photogravure reproduction of The Mother Church edifices and the Publishing House, with the new parkway in the foreground, has just been made, and is now on sale. The size of the new picture, nine by fourteen inches inside of mat, which is about half that of the larger one, specially adapts it to framing for the home. Price, single copy $1.00, six copies $5.00, twelve copies $9.50.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.20. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the month, and include all issues for the month named as expiration date on the wrapper. XI indicates the year 1911; XII, 1912. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25—	£0: 5 s.: 2d.;	Mk. 5.30;	F. 6.45
2.25—	0: 9 : 3 ;	9.50;	11.60
2.50—	0: 10 : 3 ;	10.60;	12.85
4.00—	0: 16 : 5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The contest over probably the richest coal lands in the world was transferred to the supreme court of the United States when the government docketed an appeal from the order of the federal court of Washington quashing the so-called "Stracey group" indictment. Judge Hanford quashed the indictment on the ground that under his interpretation of the coal land laws applicable to Alaska the indictment had not stated an offense. The appeal from the decision will bring before the supreme court the determination of the law under which Alaskan coal land may be entered and sold.

Too much stress laid upon the pride of display in war and too little upon its cost was given as the reason for the continuance of international conflict, in the address by Edwin Ginn of Boston before the third national peace congress which met this year at Baltimore, Md. He proposed that an international army be organized, similar to that which put down the Boxer uprising in China. Such an army, with individual national armies abolished, would result in an enormous saving of property, he declared.

The special inland waterways commission, appointed by the Massachusetts Legislature, turns down the project for a free ship canal to connect Boston harbor with Narragansett bay by way of Hingham or Plymouth, but suggests that it may be needed in the future. This canal was to have been built by the United States government as the northern link of the intracoastal waterways system extending nearly the length of the Atlantic coast. It is believed that the Cape Cod canal now building will amply satisfy needs.

The charge has been brought before the interstate commerce commission that the United States Steel Corporation practically dominates the railroads of the country and that, because of its powerful influence in the railroad directorates, it has enabled its subsidiary, the Universal Portland Cement Company, to obtain freight rates far lower than its chief competitor, the Alpha Portland Cement Company of Manheim, W. Va.

A curb on the leasing at high prices of patented machinery by the manufacturers thereof has been proposed by Senator Gore of Oklahoma in a resolution and a bill introduced in the Senate. The resolution provides for an investigation into the methods of leasing, selling, and controlling patented articles in the United States, and the bill provides for a compulsory leasing of machinery without discrimination.

Owing to the bursting of one section of the completed cofferdam which had been built around the battleship Maine in the harbor of Havana, the pumping out of the water, which had been set for May 25 will have to be postponed about two weeks.

The second international congress on child welfare received with applause at a recent session the declaration that the comic supplement was a "child perverter," uttered by Edith K. Kern, who spoke on "The Purity of the Press."

The $2.50 gold piece, long a favored coin for watch charms and Christmas gifts, but not for circulation, may soon become obsolete, as Secretary MacVeagh contemplates asking Congress for authority to stop its coinage.

The loss of property by the recent fire in Bangor, Me., is estimated by the state insurance commissioner at three million dollars, with insurance covering about half that amount.

Every railroad in the country was notified May 5 by the postoffice department that after July 1 cars used by railway mail clerks must be equipped with steel underframes.

The first Democratic tariff bill, placing on the free list agricultural implements, meats, and many other articles, has passed the House by a vote of 236 to 109.

High school fraternities and sororities in the public schools have been banished by vote of the school board of Chicago.

International.

Sir Eldon Gorst, the British agent and consul-general in Egypt, in his report on Egyptian affairs, acknowledges that the efforts made to develop self-government have been disappointing. The Executive Council and the General Assembly, he says, have become "mere instruments of Nationalist agitation against the occupation." They seek to render the business of the government impossible. "The conclusion to be drawn," says Sir Eldon, "is that the policy of ruling this country in cooperation with native ministers at the present time is incompatible with that of encouraging so-called representative institutions."

In the building of a new bridge across the Thames at London, artists and architects strongly favor a northern terminus that will bring it in line with the dome of St. Paul's and give a splendid view of the cathedral, which would be, to quote Prof. Beresford Pite, "a vision unequaled by the atrium of St. Peter's at Rome, and surpassing even Wren's great imagination." This plan, however, is not favored by the bridge house estate commission, which is "not disposed to build a new bridge simply to get a finer view of St. Paul's."

With the substitution of a cabinet composed of Prince Ching and the heads of the ten executive departments for the old grand council of five persons, a long step toward the establishment of a true constitutional government in China has been taken, it is believed. It is a part of the plan to make cabinet ministers' tenure depend upon the will of a majority in the constituent assembly. This was one of the principal demands of the Liberal element.

The opium agreement between the Chinese and British governments, which was signed May 8, becomes operative immediately. It provides that China shall continue to diminish annually its production of opium proportionately with the Indian export, until its extinction in 1917. Great Britain agrees that the importation of Indian opium into China shall cease earlier, if the native production in that country ceases.

The Institute of International Law is meeting in Madrid, this being the twenty-sixth session since its foundation in 1873. This institute is composed of sixty associates and sixty members, persons who "have rendered services to international law in the domain of theory or practice." It is strictly international in character, no one country being entitled to more than one fifth of the total number of representatives.

Subscriptions to the five-million-dollar loan which Japan has made to the Chinese government, through the Yokohama specie bank, aggregate eight million four hundred and fifty thousand dollars. The loan was quietly negotiated and came as a surprise to the representatives of foreign financial interests. The loan will be used to meet a deficit of the railway board, and China gives in security five per cent railway bonds.

Revolutionary disturbances in Kwangtung province, China, consequent upon an interdiction against gambling, have been quieted. Agitation against gambling is wide-spread throughout China, though gambling monopolists supply enormous revenue to the province. It is estimated that there are ten thousand gambling houses in Canton, employing fifty thousand men.

An imperial edict authorizes the conclusion of the Hukwang loan of thirty million dollars for railroad construction in central China. The loan was signed a year ago this month by groups of financiers representing the United States, France, Great Britain, and Germany, and the four groups of bankers will participate.

Industrial and Commercial.

The plans for the new cantilever bridge over the St. Lawrence river at Quebec, which have just been adopted by the Dominion government, and which, it is estimated, will cost twelve million dollars, will make this great structure one of the wonders of the world. The bridge is on the line of the new Transcontinental railway system where it crosses the St. Lawrence river near the city of Quebec, and it will be the largest cantilever bridge in the world, the suspension span being the longest single truss span ever designed. It is expected to be ready for traffic by 1915. The length of the center span is to be 1,800 feet. The total length of the structure is 3,228 feet. The bridge will be 150 feet above high water.

Considerable progress has been made in recent years in the methods of utilizing bituminous slack, anthracite culm, coke breeze, lignite, and peat for fuel purposes by making these otherwise waste products into briquettes. In the year 1908 the world production of briquetted fuel was 28,600,000 short tons, of which Germany produced seventy-three per cent. In the same time the United States produced only 90,358 short tons, valued at the plant at $323,057. In 1909 the United States produced in sixteen plants 139,661 short tons, valued at $452,697.

The New York, New Haven & Hartford railroad is planning to spend over a million dollars in reducing grades, straightening curves, strengthening bridges and eliminating grade crossings on its Air Line division between New Haven and Willimantic, a section of the shortest rail route between New York and Boston.

Three hundred and five thousand seals, valued at four hundred and ninety-three thousand dollars, were secured by the eighteen vessels of the Newfoundland sealing fleet during the season just closed. Last year the fleet reported a catch of three hundred and thirty thousand with a value of six hundred and twelve thousand dollars.

The United States Steel Corporation has come into possession of the Risdon Iron Works at San Francisco, Cal., half a mile of waterfront and fourteen blocks adjoining. The price paid was two million five hundred thousand dollars.

Two thirds of the lumber that is estimated to be cut at Duluth, Minn., this season is sold to go forward. The cut for the year 1911 is estimated to be two hundred and forty million feet.

The Grand Trunk railway has won its contest for a right of way to a tide-water terminal in Providence, R. I., for its subsidiary, the Southern New England rai' ay.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE CONDITIONS OF FREEDOM.

JUDGE SEPTIMUS J. HANNA.

THE eighth chapter of John is one of the most remarkable chapters of the four Gospels. In it the great Teacher, speaking from the mount of Olives, declared himself to be the light of the world, and said that those who followed him should have the light of life. He further said: "When ye have lifted up the Son of man, then shall ye know that I am he, and that I do nothing of myself; but as my Father hath taught me, I speak these things. And he that sent me is with me: the Father hath not left me alone; for I do always those things that please him." He was talking to the Jews, and it is recorded that many believed on him.

The part of this chapter thus briefly reviewed leads up to that wonderful saying of the Master's which of late years has been so often quoted, and which is one of the favorite texts of Christian Scientists: "Ye shall know the truth, and the truth shall make you free." It has become almost a fixed habit to segregate this saying from its context and treat it as if it were a complete statement of itself. In one sense it may be said to be complete, but there is danger of losing its real meaning if it be treated as an independent declaration. Thus used it might imply that all shall know the truth and be made free by it, regardless of anything the individual might or might not do. In other words, the danger lies in supposing that no matter what the individual thinks or does, he will somehow be made free by the truth. It would be pleasant to mortal sense to have it so. It would be an easy and convenient method of salvation or of attaining to freedom. But what of the context? What is the condition attached to this freedom? Let us consider the whole statement: "Then said Jesus to those Jews which believed on him, If ye continue in my word, then are ye my disciples indeed; and ye shall know the truth, and the truth shall make you free."

There is a vast difference between studying a part of the text and studying the whole of it. To accept or believe a part of it only is misleading. Nor is it sufficient merely to believe. There must be a continuing in his word. And what is it to continue in his word? Nothing less than full and absolute obedience to the Christ-teaching,—all of it, not merely a part. To continue in his word is to study his word, understand his word, and do his word. Thus only can men become his disciples indeed, and thus only can they be made free.

Analogous to this saying of the Master is that declaration of the Christian Science text-book, "Science and Health with Key to the Scriptures," which we so love to quote: "Divine Love always has met and always will meet every human need" (Science and Health, p. 494). This is often treated as if it, too, were complete in itself. In one sense it is, but the fulness of its meaning can be understood only by taking it in connection with the whole teaching of the text-book. Thus reading it we find that there is the same relative meaning attached to it that characterizes the saying of the Master above referred to. Divine Love meets all human needs, provided always that the necessary conditions to such meeting are complied with.

As was well said in an article recently published in the *Sentinel*, there must be a meeting of divine Love and the human need. There must be a mutuality, a cooperation. The Scriptures say that the Lord loveth an even balance. A one-sided sense of Love would be partial and uneven. The sane farmer would not expect a crop of wheat if he failed to prepare the soil and sow the seed. No more should we expect our human needs to be met unless we do our part toward bringing about the meeting. The Scripture again aptly asks, "Can two walk together, except they be agreed?"

We have much to think of and much to do in connection with these familiar and much-loved sayings. When we are tempted to complain or repine because of seeming failure, we shall do well to study carefully these sayings, with their context and correlatives.

GOD'S ONENESS.

ELIZABETH EARL JONES.

CHRISTIAN SCIENCE strongly emphasizes the great Scriptural truths; *i.e.*, that there is but one creator, God, and that man in His image reflects the one creative Mind. To be logical and consistent with this fundamental truth of being, we must also recognize that there are not creators many, that man is not himself a creator, cannot multiply himself, but in increasing degree must ever unfold in the image, the power, splendor, and perfection of his Maker.

In harmony and in scientific agreement with the acceptance of but one creator, we must acknowledge but one law or instinct of self-preservation, the instinct and law of the one self, one Ego,—God, who is ever preserving His own harmony, divinity, and spiritual reflection in man and the universe. If we sift discords among brethren,—and by the word brethren we mean all mankind,—if we trace lawsuits, strifes, frictions, dishonest business competitions, wars, religious schisms, etc., to the bottom, we shall find that in almost every case the instigator of all the trouble is a false sense of self-preservation based upon the belief of selves many, minds many, gods many; instead of the great truth of all the ages, that there is but one Ego, one Mind, one God, and that all men reflect this one.

As there is but one creator, there can be but one kind of law, God's law. It therefore becomes obvious that man is not a law maker, nor even a law interpreter; he simply reflects God's law and the one divine interpretation thereof. We are all familiar with this hope-filled saying, "Progress is the law of God" (Science and Health, p. 233). Man's only reflection of law and its interpretation is, must be, eternally progressive, with never a return to positions outgrown. In like manner we acknowledge but one will,—the divine will, the will which Jesus acknowledged and bowed to in absolute surrender of any belief in a will apart from God. This divine will is the will of each and all of God's children alike, seeing that all reflect the one God. More-

Copyright, 1911, by The Christian Science Publishing Society.

Digitized by Google

over, it is the only will of man, the only will of the universe, and it is expressed in benevolence, justice, mercy, and peace, since it is the will of divine Love.

When man acts in obedience to the divine will, his own will becomes, by reflection, divine, eternal, unimpeachable, unbreakable, incontestable, and final. The divine law and will of God should not only govern the deeds of mankind, but be the only instigator and governor of their thoughts, desires, and motives. The same all-Love and wisdom and might which would prevent an unjust, unmerciful deed from being enacted, does in like manner prevent it from being planned or conceived.

As Christian Scientists we need to awake to a clearer, calmer, more steadfast acceptance of these great truths and all logical deductions therefrom. We need to strive more to let the one Mind, one will, one law, one self reign supreme in our hearts and lives; then the atmosphere of earth will be clarified, wars will end, lawsuits will cease, unjust and tyrannical legislation will be impossible and obsolete, health and harmony and prosperity will be universal, Love supreme, and we shall have a spiritualized mental climate in which saints may live until they have finished their course, like Enoch who "walked with God: and he was not; for God took him."

Thus the divine law of self-preservation will continue to operate in human experience, until naught is left but the image of the divine, and God's kingdom will have come, "in earth, as it is in heaven."

"OUT OF THE MOUTH OF BABES."

STOKES ANTHONY BENNETT.

THE writer is so indebted to little children for the helpful lessons they daily teach him, that he loves to tell of his experiences in which they play the leading part. Words are at best poor things to picture the spiritual good that is deeply inherent in children, and that again and again renews the strength of older people. The natural desire for righteousness and the constant effort in its behalf, the expectancy of naught but good at all times and in all places, and the exemplification of genuine freedom and dominion in their own little spheres have rendered children stimulatingly interesting in the eyes of considerate and thinking men and women everywhere, and have stood forth as beacon-lights for many a struggling and weary heart. The radiant smile of the good child, his cheer, purity, innocence, humility, loving-kindness, unselfishness, and simplicity, are the things that must have been uppermost in the mind of the Master when he said, "Of such is the kingdom of heaven."

Not long ago, when called upon to solve a seemingly hard problem and feeling the need of a clearer realization of the ever-presence and all-power of Truth, the child came again to my rescue, supplying me with sufficient strength to win a great victory. It was on Wednesday evening, and I was sitting in church listening to most impressive testimonies from those who had been redeemed through Christian Science. Each and every word that had been spoken was encouraging and uplifting, as I prayed for light to dispel the darkness within; but still something was lacking. Finally, as the hour of service came almost to its close, a woman with a happy face arose and said, "I want to express my gratitude for the understanding of Truth which little children have."

That sentence came like a benediction from heaven, promising sweet relief, for I now felt that just what I needed and had earnestly longed for was at hand. Continuing, the woman said: "I have a little daughter eight years old who goes three and a half miles to school. Like other children she sometimes gets sick and has to come to me for help. The last time she was ill the trouble seemed more severe and stubborn than ever before, and so I said to her, as she was about to leave the house, 'Wouldn't you like to stay home with mama today and have present treatment?' With a confidence and an assurance that awakened me to the oneness and entireness of God, good, she looked up into my face and replied, 'No, mama; there is just as much of Truth at school and on the way as here at home, and it will be with me and keep me safe wherever I am.'" The mother went on to say that this remark from her little one at once put away the fear that was striving to overpower her, and caused her to consign her child to the tender and loving care of omnipotent Truth. She declared that the anxiety which had possessed her during the early morning was calmed, and that she took up her work for the day with no further fear for her daughter's welfare. In the evening the little one returned, saying she had been perfectly healed shortly after starting for school, and that the subsequent hours had brought her many good things.

As the mother sat down, I said in my heart, Yes, Truth is ever-present, and there is no other real presence or power, for all space is filled with Truth. Then the light I had prayed for flooded my consciousness, and I saw the nothingness of the mortal discord that had threatened to defeat me, saw it disappear completely before the allness of Truth's immortal harmony. My problem was solved, and I was free. The hand of "a little child" had led me into the light.

CHRISTIAN SCIENCE A PREVENTIVE.

BRIGMAN C. ODOM.

A CORRECT knowledge and right understanding of Christian Science shows that it fortifies one against the wiles of the evil one,—forestalls or prevents troubles, such as protracted illness, vexing business problems, fits of anger, etc. In Science and Health, (p. 390), Mrs. Eddy says, "Meet the incipient stages of disease with as powerful *mental* opposition as a legislator would employ to defeat the passage of an inhuman law."

In the old school of thought one agrees with the evidence of the physical senses, believing the trouble, whatever its nature, to be real, and furthermore conceding to it its course, while the student of Christian Science obeys the Scriptural injunction to resist the devil; he endeavors to dwell "in the secret place of the most High;" he tries to pray without ceasing; he does not wait to get into trouble and then work to get out. In this attitude of thought he is clothed with an impervious armor. He is putting into practical demonstration St. Paul's admonition, "Take unto you the whole armor of God, that ye may be able to withstand in the evil day, and having done all, to stand."

Many striking examples are given in the Bible of protection or deliverance from what would seem from a human view-point impending danger or destruction. When the Egyptians had overtaken the Hebrews at the Red sea, it would seem from all the circumstances that nothing but destruction awaited them, but through the courage and confidence of Moses,—his faith and trust in God,—a way of escape was provided. Daniel knew the power and value of right thinking; he understood God as ever-present Love. He knew that God made nothing which did not reflect the qualities and characteristics of the divine Mind; hence he felt secure and safe even in the presence of what seemed imminent danger.

As seen through the lens of Spirit, so-called matter has neither activity nor permanency. This was clear to the three Jews whom King Nebuchadnezzar had condemned to perish in a burning fiery furnace because of their refusal to worship his gods and the golden image which he had set up. They were established in the thought of one infinite God, good, whom they served, and a burning fiery furnace and the threats of a mortal man had no terror for them. So these men passed through the seeming extreme heat without experiencing any loss or hurt to themselves, and even the mind of the cruel king was so changed by this inci-

Digitized by Google

dent that he was able to see "four men loose, walking in the midst of the fire," without hurt; "and the form of the fourth" was "like the Son of God."

Thus it is the privilege of every one to know that there is a place of refuge now from the "burning heats by day" and "the terror by night." This true thought-process and inspiration to righteousness, this refuge or place of security, is easily accessible to all who will stretch forth the hand of right desire and sincerely seek the good gift and the perfect gift that "is from above." Ignorance, superstition, procrastination, mental laziness, these are the curse on mortals; while knowledge, understanding, purity, activity are the wings wherewith they fly to heaven. The consciousness that man is "the full representation of Mind" (Science and Health, p. 591), and that Mind is the ever-present God, shuts out the images of mortal thought,—sin, disease, and death,—leaving man free to enter into the spiritual holy place, where he may commune with God, Spirit, and know that as God's reflection no evil can befall him, for his defense is the infinite Mind that governs man and the universe.

"AND THERE WAS NO MORE SEA."

AMY RUTH WENZEL.

IN St. John's vision of the new heaven and the new earth, "there was no more sea." This statement has sometimes brought a suggestion of loss to those who love the sea, but it is a material sense of the sea, coupled with a dread of monotony, even though it be the monotony of goodness, that depresses thought. It is this same dread which to many makes heaven seem a rather dull and not wholly desirable place or condition. For material sense, based on the fluctuating and uncertain, dreading yet ever desiring change, can make no clear distinction between permanence and monotony. Indeed, contradictory as it may seem, the only sense of permanency that mortals have is the certainty of change.

Yet it is this certainty of change that constitutes most of the sadness of mortal existence. Could the mother feel sure that her little one would keep his childish purity through the unfolding years, how heavy a weight of foreboding would be lifted from her brooding heart. Could the young people, happily preparing their new home, be positive that their happiness, though growing daily richer and more varied, would ever be the same happiness, with how much larger joy would they set about their preparations. Could all who are working for their own improvement and the world's betterment be assured that no flood-tide of achievement can ever turn, with how much greater zest would they press on. But, weighted and shackled by the belief that "nothing is sure but mutability," hope falters and achievement fails.

We read in the text-book of Christian Science that the sea in St. John's vision is "a symbol of tempest-tossed human concepts advancing and receding" (Science and Health, p. 536). It is, therefore, only the belief in the law of mutability that passes away, leaving thought with a true basis of permanence for its infinite and eternal unfoldment. Thus, when properly understood, St. John's statement brings a sense of incalculable gain and of peace that passes understanding. God, who is infinite good, never takes from us anything that is really good. All the charm and inspiration of the sea is ours forever. And as the material sense is gradually exchanged for the spiritual and real sense, it will be found that this charm and inspiration is the indestructible reality of the sea.

Mrs. Eddy tells us that "every object in material thought will be destroyed, but the spiritual idea, whose substance is in Mind, is eternal" (*Ibid.*, p. 266). The simple and most direct way of gaining the true sense of permanency is, therefore, to learn what is the spiritual idea, which is of God's creating and which has no taint of materiality. This knowledge can be gained by the study and faithful practice of the teachings of Christian Science. Here is offered to every one a plain way by which to escape from the corroding influence of the belief in chance and change. There is another way by which this knowledge may be gained in part. It is the way of suffering, and through ignorance or prejudice most mortals take this way.

Every mortal must at some time in his experience gain an understanding of the truth of existence, must find a firm basis from which to think and love. There are but the two ways offered, the way of Science and the way of suffering. If one choose the former, he has the promise that "none of his steps shall slide;" and the promises of God are never broken. Seasons of trial and stress will come, no doubt, but such seasons will be a "light affliction, which is but for a moment," and will work for the learner an "exceeding and eternal weight of glory," here and now. The storms which sweep his heart, like those which sweep the sea, will be only on the surface; beneath will lie the depths of an everlasting calm. Steadily, according to an ever operative spiritual law, his way will open before him, and order and beauty attend his advancement.

He who refuses or rejects the way of Science chooses, albeit unwittingly, the way of suffering. He is as one who sets sail in a shallop to cross an unknown sea. When storms arise, his frail craft, his mistaken notion of life, is tossed to and fro as a straw on waves of sorrow and disaster which threaten every moment to overwhelm him. But the way of suffering, thank God, is limited. The sufferer will either be tossed ashore, shipwrecked and despairing, thence to rise and be lovingly helped to the true way; or he will awake to the shallowness of that which seemed a mighty deep, and, ceasing to fear, will soon find a landing-place.

They who have chosen the way of Science and yet seem tossed and buffeted by the winds of adversity, do well to remember that these trying experiences may be so met and mastered that they will be made to contribute to a more speedy passage from sense to Soul. In order to keep in the right way, mortals must pay a price. It is sometimes the unwillingness to pay this price that causes suffering and hinders advancement. The students of Christian Science who have found the wonderful peace that fills the hearts of those who faithfully adhere to its teachings, stand ready and eager to help their brothers to this peace. The blessings which they enjoy are for all mankind, there are no favored few who possess a private road to prosperity and happiness. The only requisite is the payment of the price. Those who advance do so because they are meeting this condition. Those who falter and look back, do so because they are not willing to pay. And the price is this, "Thou shalt have no other gods before me."

The truth that is involved in the First Commandment is the basis of permanence. When all have learned to begin their every thought with God, the vision of St. John will have become the vision of the whole world. Each individual who has learned or is learning this lesson, is hastening the blessed consummation. It is the privilege of every one to help bring the world forward to this, and the tender message of Christian Science, voiced through its literature and the daily walk of its faithful adherents, is patiently telling the world how to escape now from needless suffering into eternal peace.

CHRISTIAN SCIENCE AND THE CHILDREN.

C. A. Q. NORTON.

ONE of the would-be arguments frequently used against the practice of Christian Science is the statement that "adults have the right, if they choose, to employ Christian Science treatments; but to force children to submit to the practice is inhuman, and should be prevented by law." There would be greater weight to this supposed argument

Digitized by Google

if the evidence was not wholly against it, and if the fallacy was not advanced by those who have no understanding or experience in Christian Science.

Few of the experiences that enter into the activities of a Christian Science practitioner's work afford a greater sense of satisfaction than the treatment of children. It is a fact, often commented upon by those not directly interested in Science, that children in families where Christian Science is practised are less liable to the so-called diseases incident to childhood. It is not uncommon in Christian Science families for the children wholly to escape the ills supposed to be common in the early years of a child's life. In cases where the little ones do come under the physical manifestations of sickness, the disease is almost always of a mild form and quickly disappears, not running its supposed course, but terminating without leaving any so-called ill results. The plastic mind of a child soon learns to confide in the thought atmosphere about it. If there is an absence of all fear in the parents, the little one reflects their trusting thought and soon learns to regard as false the unreal conditions; therefore it has nothing to fear. This calm mental state of the child robs disease of its most potent element of supposed power, for without fear disease becomes merely a misunderstanding of the law that governs the natural functions, which become normal through right understanding.

Love engenders confidence, so that the child quickly responds to the loving plea of Science treatment. The depressing suggestion that something very serious is the trouble is not forced upon the tender consciousness of the little patient. No grave nurse stands by the bed, watch in hand, solemnly counting the fluttering pulse-beats. The anxious face, whose professional gaze betrays the presence of doubt and fear, is not bending over the loved one, for mother is there with her strong assurances of the protecting care of divine Love. There are no suggestions of nauseous drugs, no herding with hot-water bottles, and no smothering blankets that imprison the child from its play; instead, the little one asks for Science help as naturally as it asks for food, or, as is often the case, the child has been taught to defend and help itself, and this it often does with perfect success. Children in Christian Science families have been so thoroughly taught that "obedience is the offspring of Love" (Miscellaneous Writings, p. 117), that the affectionate wish of the parent is all the instruction needed to bring compliance with the laws of Truth which the child has come to know will make it free.

Twenty years' practice as a physician, and another twenty years as a Christian Science practitioner, has given ample opportunity for observation, and the statement is fearlessly made, and with every confidence the assertion will be fully sustained by those who have proven its truthfulness, that, aside from any claim of Christian Science as a religion, but basing conclusions wholly on therapeutic deduction, the evidence is conclusive and absolutely in favor of Christian Science treatment in every form of so-called children's diseases. So strongly are those who have had experience in Science convinced of this, that it would be hard for them to resist the conviction that it would be altogether indefensible not to employ Christian Science treatment for children. No loving father or mother would withhold from their child that which they have proven to be safest and best.

[Written for the *Sentinel.*]

TWO ROSES.

LOUISE KNIGHT WHEATLEY.

A ROSEBUD fair in a garden grew,
Tiny and pale and shy.
The sun shone out of a sky of blue,
And the soft winds floated by,
But it wrapped itself in its petals cold,
And seemed to say, "I will not unfold."

A woman came in the sunset light—
"O shy little rose," she cried,
"Why don't you open your eyes, and smile?
Is it laziness, temper, or pride?
The spring is here, and the world is glad,
Why do you look so pale and sad?"

A day went by, and the rose still hid
Its face in its veil of green—
"You poor little thing!" she said to herself,
"It is very plain to be seen
That you never can grow to be big and strong,
Unless I help the work along."

With trembling hands and in eager haste
She opened one by one
The fragile leaves. "It is all very well
To wait for the wind and sun,
But gentle methods are often slow—
My way is a better one, I know.

"Don't think me meddlesome—it's because
I love you so, you see.
I cannot trust in the wind and sun—
It all depends on me!"
And she forced each delicate leaf apart
Till she reached its glowing, golden heart.

As the stars came out she stole away
Through the garden's fragrant gloom.
"It won't be long," she gaily cried,
"Till my rose will be in bloom.
And then how happy it will be
To think it had a friend like me!"

But when she chanced that way again,
Instead of her rose she found
A poor stiff thing whose withered leaves
Were strewing the muddy ground.
A storm had beaten, the wind had blown,
And the calyx stood on its stem alone.

She bowed her head. "Will I never learn!"
She whispered. "Dear patient One!
I pray for wisdom, another time,
To wait for the wind and sun—
To trust that the power which made the rose
Will see that it lives and thrives and grows!"

Another rose in the garden grew,
Tiny and pale and cold.
"It is love," she said, "and not self-will,
That will help my rose unfold.
Have I not courage, God above,
To do what is best for the thing I love?"

Humbly she knelt, and with gentle hands
Loosened the earth at its feet;
She carried water to quench its thirst;
She whispered, "O rosebud sweet,
We know not when God's time may be,
But I can do my part, you see."

Silently, sweetly, hour by hour,
In God's own way it grew—
How it warmed at the touch of the summer sun!
How it laughed when the soft winds blew!
"Help me," she whispered, "Love divine,
To know it was Thine before it was mine."

Then the moment came when she saw the last
Of the shy pink leaves unfold,
And the air was filled with a perfume rare,
Straight from its heart of gold.
And it seemed to say, "O tried and true,
I am glad I had a friend like you!"

SELECTED ARTICLES.

[Editorial in *St. Louis* (Mo.) *Post-Dispatch.*]

Notwithstanding the comprehensive legislation of the past few years for the regulating of the practice of medicine and surgery in this state, every session of the General Assembly brings a new crop of bills. The principal object of these measures seems to be not so much the regulating of the practice of medicine and surgery as the limiting of the practice of healing to particular schools of medicine.

The qualifications for the practice of medicine and surgery should be high, and the regulations with regard to it strict, for the protection of the public from quackery and incompetence in the use of drugs and the knife. The incompetent doctor and surgeon and the medical fraud are menaces to the public. On the other hand, the greatest freedom should be permitted the people in the choice of methods of healing and of treatment of disease. This is a fundamental of personal liberty and is essential to progress. There is no menace to the public in the practice of healing methods without the use of drugs or surgical instruments, so long as there is no resort to fraud or deception and no violation of sanitary regulations. To forbid methods of this kind is tyranny and an invasion of personal rights. It would cut off valuable discoveries and advances in curative methods.

Medical science and art must stand upon their merits. Their exponents are never justified in resorting to compulsion nor should the power of the state be abused to enforce the practice of any school or group of schools. Medical compulsion is as intolerable as religious compulsion.

[Editorial in *Grand Rapids* (Mich.) *Chronicle.*]

At a meeting held in the board of trade rooms, in the interests of the local branch of the National League for Medical Freedom, Dr. Ross, in the course of an earnest address in opposition to the formation of a medical trust, suggested that the Constitution of the United States might well be amended, to provide for medical freedom as it now does for religious and political freedom. The doctor's contention was that the sick had a right to select their own method of treatment, without the interference of any organization or law. If it is desired to try out a bottle of patent medicine or to call in the services of an allopath, homeopath, osteopath, chiropractic, or Christian Scientist, he has a perfect right to do so. It is his affair, and none should assume to dictate to him what kind of service he may employ or upon what terms it shall be secured.

The doctor's suggestion is a good one, and while to amend the national Constitution is a slow procedure, if this sudden agitation which has sprung up, and the assaults that are being made upon "medical freedom" are to be continued, something along the line of that suggested by Dr. Ross will be necessary for self-protection. If legislation is to be passed defining the nature of the treatment one must receive when sick, then there should be legislation to combat this new form of medical bigotry and selfishness. The agitation that is now taking place and the effort that is making to induce the passing of legislation by states and nation, depriving men of the right to select their own doctor when sick, is proof of the waning faith in old forms of medical practice and of a growing inclination to break away to try something else. Now it is proposed to force the sick to take the medicine prescribed for them by one school of practitioners, regardless of personal inclination: but the proposition will not be successful. The abridgment of personal freedom, whether in religion, politics, or treatment of the sick, will not be tolerated in a nation boasting of equal rights for all its people, with special privileges for none.

[From an editorial in *Memphis* (Tenn.) *News Scimitar.*]

It is the tendency of men, however sincere, to exalt the importance of their own calling and to be unconsciously influenced by the pursuits and activities and studies and tastes of their own lives. Some of our medical friends are not exempt from this limitation when it comes to passing on the interests and lives of others. Some one has introduced in the present session of the Tennessee Legislature a bill to extend the authority of the board of health over the school children, and we think extend it too far. The material sciences are too far experimental for the world to admit too great dependence upon any one of these sciences. If we are correct, some years ago vaccination was accepted universally by the medical profession. Now there is a growing dissent from its efficacy among the members of the established schools of that profession. This is only one instance of many. The established schools have filled history with their insistence on errors they afterward forsook.

Give us not too many laws and give us more room for play of our own ability to take care of ourselves. Without room to exercise our free will and native qualities, they atrophy. We are taught to be afraid of too many things, and daily the press is heralding some new discovery by the physical scientists for us to fear. This doctrine of fear is apt to be complemented with an insistence on our feeling an absolute reliance on some body of men for our preservation and life. The world has spent blood and treasure to emancipate itself from crafts of various kinds. Let us not fall into bondage to doctorcraft. There are too many great and good and useful physicians and surgeons for them to allow their profession to be discredited by the overzeal and overconfidence of a little learning on the part of some of them. Nothing is so hurtful to a good cause as to make it contemptible or ridiculous by asking, demanding, or claiming too much.

Don't make us afraid or fearful by law; too much dependent on other men. We are amply tending that way naturally.

[Frederick Dixon in *East Berks* (Eng.) *Gazette.*]

On that winter's day on which Christ Jesus made his historic declaration to the Jews, as he walked in Solomon's porch, "I and the Father [not 'my Father'] are one" (Rev. Ver.), he laid claim for all men to their true spiritual sonship. It is this claim which forms the sustained thread of the sermon on the mount, and it is the exposure of selfishness in the opposite contention which is breathed through its alternate denunciations. This is the reason why the sermon on the mount has so often been described as transcendental and impractical. It is impractical to the man who believes that the image and likeness of God is a human being subject to sin, disease, and death; but the possibility of beginning to make it practical dawns on the human consciousness as it slowly realizes the distinction which Mrs. Eddy has drawn, on page 269 of Science and Health, between the human philosophy which has made God manlike, and Christian Science which makes man Godlike.

Christian Science, in making man Godlike, shows that the image and likeness of God is the spiritual man to whom Christ Jesus referred when he said, "I and the Father are one." It explains, therefore, what Christ Jesus himself meant by the command, "Be ye therefore perfect, even as your Father which is in heaven is perfect," as well as Paul's admonition to the Philippians, "Let this mind be in you, which was also in Christ Jesus." It is through the acquirement of spiritual knowledge, the knowledge of God, that man attains the Mind of Christ, and with it the understanding of his true relationship to God. Human philosophy, on the other hand, in making God manlike, would endow God with all the passions of a man. The inevitable result of this is the representation of a human being with

Digitized by Google

a self apart from God, and governed by all the selfish passions which result from such a belief. It is precisely when a man realizes the distinction between the image and likeness of God and the Adamic race, that he begins to be unselfish; that is to say, to deny himself utterly, and so to take up his cross and follow Christ.

This knowledge is the knowledge of the truth, the knowledge of that which absolutely is. As man, consequently, gains this knowledge, he gains that absolute or scientific knowledge of God, and so of Truth, which is referred to in the New Testament, in the epistles of Peter and of Paul, in a phrase translated knowledge of God, but which should, of course, be translated full, exact, and so scientific, knowledge of God, and therefore of Truth. It is this knowledge which makes man free from all that is unlike God, for, in the exact proportion in which he acquires it, he surrenders his material selfhood, and begins to learn how to become perfect as his Father which is in heaven. It is the pursuit of this knowledge which constitutes the greatest love which a man can show for humanity. The apostle John has declared that "perfect love casteth out fear." Humanity is very conscious of its fear for those whom in its human, passionate way it loves, because it realizes that flesh and blood cannot enter the kingdom of heaven; because it realizes that flesh and blood can sin, suffer, and be sick. When it exchanges its human love for a true understanding of Love, it sees man no longer as a sinning, suffering human being, but as the image and likeness of God. In grasping this, it grasps something of the truth which makes men free, because it has acquired something of the perfect love which casts out fear. "Jesus," Mrs. Eddy writes, on page 476 of Science and Health, "beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick."

Your readers may begin to grasp from this the difference between what I said, and what your anonymous contributor would like to impute to me, and it shows the disadvantage of substituting your own words for another person's when you are professing to quote that person's statement.

[E. M. Ramsay in *Edinburgh* (Scot.) *News*.]

Far from being founded upon "the principle of ignoring" disease, the whole aim of Christian Science teaching is so to instruct the mortal that he may learn to recognize the first approach of sick and evil thoughts, and so bar his consciousness against their admission. This Science is based on the recognition of God as cause, as Love, infinite and eternal Truth. The unassailable logic of Christian Science shows us that evil cannot proceed from omnipotent good, and that there can be nothing outside of infinity. Thus we must either surrender the definition of God as eternal, infinite, and good, or admit that evil is not real in the absolute sense of the word. As the grand fact of the allness of good rises above the horizon of consciousness, sin, disease, evil of all sorts, are seen—not as entities, but as a supposed absence of good, as mental darkness; then, as this perception deepens into conviction, the student of Christian Science finds his faith in good increasing, his fear of sin and love of sin decreasing; he manifests more purity, moral courage, and compassion, grows stronger in health, and meets with greater success in his daily occupations. The change of thought thus indicated constitutes, no doubt, a new reformation, a mental revolution, but it need cause no man fear. Whatever is true in any form of religion or philosophy, in any branch of learning, will endure, can never be destroyed, since truth is in its very essence eternal.

[C. R. Munro in *Hamilton* (Ont.) *Spectator*.]

The statement is made that Christian Science denies the atoning work of Christ. Had our critic studied the chapter on the atonement in Mrs. Eddy's book, Science and Health, he would see that, while differing from some theologians on the interpretation of the "sacrament," she consistently holds to the Scriptural teachings as she understands them, the results of her teachings being indisputable proof of their spiritual source. The personal Jesus was the human manifestation of the spiritual, eternal Christ, and in the flesh he demonstrated the perfect life, being the perfect example for us and showing what the divine power can accomplish; while Christian Science, by showing how Jesus did his work, enables his followers, in so far as they understand it, to do likewise. Jesus' sacrifice, as well as proving his great love for mankind, also demonstrates and makes clear certain facts concerning truth and the Science of Christianity that were necessary for man to understand before he could attain to the perfect spiritual life by working out his own salvation.

Christian Science teaches that sin is no part of God's creation or plan, and therefore has no real or permanent existence. Nothing is real and eternal that God did not create, and if it were real it could never be destroyed. The fact that it can be destroyed or overcome proves its unreality. This teaching we believe to be wholly in accord with Scripture.

[Alfred Farlow in *Washington* (D.C.) *Post*.]

This is an age of scientific development, and why not scientific religion? Mrs. Eddy has discovered the Science of the Master's teachings; she has proved the word of God to be demonstrable. She has stated the Principle and rule of divine Science, and thus related its saving truth to the lives of mortals. Skepticism and infidelity are due mainly to the generally prevailing effort to retain religious beliefs which are undemonstrable, and which in large measure are in conflict with physical science. Christian Science harmonizes religion and physical science by correcting the erroneous view of both.

It is freely admitted that the teaching of Christ Jesus which Mrs. Eddy has emphasized is not in accord with material testimony, but the question of science is not a question as to what seems to be, rather as to what is. Even modern physicists have demonstrated the unreliability of material seemings, and some have discredited them altogether. Moreover, if we are correctly informed, most if not all religionists agree with Mrs. Eddy's premise that "God is Spirit," though perhaps without noting that they do so in contravention of material sense. Hence, they need only to be consistent to indorse all that Mrs. Eddy teaches, since her entire system of thought is wholly consistent with her premises. The premises of Christian Science are Scriptural, and the distinctive feature of Mrs. Eddy's work is her formulation of a system of consistent deductions from these premises, the acceptance of which is making religion more practically significant to present needs, as in the healing of the sick.

Christian Science is not, however, merely an improved system of therapeutics. It inculcates that spiritual regeneration and religious practice which enables mankind to rise superior to bodily ills. It is here seen that Christian Science is not a form of or related to mysticism or occultism. It may be as easily understood and demonstrated as a mathematical proposition, but as in the study of mathematics one cannot gain a certain understanding of the rule while skipping the "examples for practice," so one cannot be sure of his knowledge of Christian Science and neglect its proofs. One cannot gain a working knowledge of Christian Science without using it. Furthermore, the student must be content to have the first lesson first, the second lesson second, and so on, and each successive lesson must be practised in order that sufficient advancement may be made for an understanding of the next.

A Christian Scientist's faith and trust in God supplants his former beliefs, for the simple reason that he has ac-

Digitized by Google

quired a clearer and more definite knowledge of God. In the ratio of his increased understanding he loses his finite sense of Spirit and spiritual things. Thus God becomes greater to him and his troubles become proportionately less. As he realizes the infinitude and hence the allness of God, he realizes the nothingness of the error and disease which erroneously appear to share the infinite power and substance. This liberates him mentally, and bodily improvement follows as a consequence on the scientific basis of the Scriptural statement, "Ye shall know the truth, and the truth shall make you free."

St. Paul describes the practice of this spiritual Science as a putting off of the old man with his deeds and a putting on of the new man "which is renewed in knowledge after the image of him that created him." In this explanation the apostle clearly teaches that we must first possess a knowledge of God's image, which fundamentally means a knowledge of God, in order to put off the unideal and un-Christlike and to put on that which is essential to true manhood. Who shall say that such knowledge is not scientific and Christian? The contention that the use of the term "science" should be restricted to matter or to that which is cognized by the material senses, is equivalent to the assertion that there is nothing to know beyond the material, an assertion that no one but an atheist or an absolute materialist could consistently make.

There is nothing in Christian Science that is in conflict with any well-founded Christian doctrine; on the contrary, it affords such an enlarged and definite knowledge of God, the Principle of all good ideas, as will greatly add to the satisfaction of Biblical research and knowledge. Indeed, the student of Christian Science finds that his new and clearer understanding of the only cause and creator improves proportionately his sense of all things. Christian Science furnishes a safe and satisfying anchorage for those who have long been subject to the ebbing and flowing of the tides of human belief, as well as a means of relief to those who are suffering from bodily ills. It satisfies because it teaches demonstrable truth.

[James D. Sherwood in *Temple* (Tex.) *Telegram.*]

Christian Science teaches that sin, disease, and death are unreal in the sense that they are not the works of God. The Scriptures declare there is none beside Him; that He made all that was made, "for of him, and through him, and to him, are all things;" and that "God saw every thing that he had made, and, behold, it was very good." When sin, disease, and death are considered in Christian Science, they are classified in their due rank, of that which seemeth to be but is not. To say there is no sin and then to commit what is commonly known as sin, is an unpardonable offense, and it will produce certain and unavoidable punishment. A Christian Scientist, probably more than any other individual, understands there is no escape from punishment for sin, if he indulges in the practice of sinning; and he learns how to overcome the claim of sin by proving his mastery over sin, thus making it unreal in his experience. When he has finally overcome all sin, he has proved the unreality of sin; and when all men in like manner overcome sin, then sin will be without a victim, without a witness, and sin will be lost to consciousness, will become unreal. This achievement is possible; it is the ultimate goal. Each individual must work out his own salvation, each must master temptation to sin, get the mastery over sin and thus demolish it. When this is finally accomplished, it will then be seen and acknowledged that all that is unlike God, all that is carnal, sinful, transient, and finite, is illusive phenomena.

In declaring the unreality of matter, it is well to know that Christian Science does not teach that creation is unreal, nor that the beauties of nature are illusive. It does not teach that what is useful and good is unreal; but it teaches that all reality is spiritual and not material. Mortal men see everything as matter; they do not see things as they are. This is due to their immature condition and belief in something apart from God. All that really exists is Spirit and Spirit's manifestation; nothing really is material, since what is called matter is but a subjective state of erring mortal consciousness. The unreality of matter is now becoming more generally acknowledged by physicists than formerly, and their discoveries along this line confirm the statement made by Mrs. Eddy as early as 1866. In her book entitled "Retrospection and Introspection" (p. 24), she writes: "During twenty years prior to my discovery I had been trying to trace all physical effects to a mental cause; and in the latter part of 1866 I gained the scientific certainty that all causation is Mind, and every effect a mental phenomenon."

[Eugene R. Cox in *New York* (N. Y.) *Journal.*]

Musicians do not master harmony from the study of discord; artists do not learn of symmetry by the study of deformity, and bankers do not learn good money by studying counterfeits; but harmony, symmetry, and good money are recognized as real and true, while discords, deformities, and counterfeits are abnormal, wrong, and erroneous. Christian Scientists, recognizing God as the only and omnipotent creator, know that health is the heritage of all, and any other condition is erroneous. A discord may not jar the uneducated ear. A deformity may not appear hideous to the unenlightened eye, and a counterfeit may seem real to the ignorant until the truth is known concerning each; and when it is known the erroneous beliefs of banker, artist, and musician disappear.

In like manner the belief in disease is dissipated and overcome by the declaration of truth concerning man and his relationship to his creator. Dr. Parkhurst is right in saying that a Christian Science practitioner does not claim to do anything but pray for the patient. This prayer, however, is not a vain repetition of words, but is a conscious realization of the true man made in the image and likeness of God. The function of the Christian Science practitioner has been well likened to that of the lamplighter, or of him who turns on an electric light in a dark room. The darkness disappears; the lamplighter is not himself the light, nor does he dispel the darkness. Again, the relationship of patient and practitioner may be compared to that of the child who has not grown sufficiently to reach the button and asks some one of more mature stature to push the button and turn on the light.

Throughout Mrs. Eddy's writings purity, spirituality, and compassion are declared to be essential to the doing of the works which Jesus did and enjoined upon his followers. We read in the New Testament that those who sowed spiritual things reaped a material reward, and no one questions the propriety thereof. In this day money has been made a convenient measure and medium of exchange, and is the normal and natural equivalent for services rendered, and a Christian Science practitioner should no more be censured for accepting a money payment than should St. Paul for accepting board and raiment.

Selfishness is one great cause of loneliness. If a man builds walls around himself, so that he may keep all that he has to himself, he soon finds that he has built walls around himself which shut out all that might come in to him from others. So the cure of loneliness may be the overcoming of selfishness. The medicine for this disease of loneliness is potions of generosity, of thoughtfulness for others, of self-sacrifice, taken in large doses. Even when the loneliness comes from the bitterness of loss and sorrow, forgetting self, going out of self and doing for others, is the only cure that God has given on earth for its healing.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"HE THAT SEEKETH FINDETH."

A FEW days ago one of the workers at headquarters in Boston received a letter from a friend which propounded a question pertaining to the conducting of the services in branch churches. A day or two later there came another letter from the same friend, from which we take the liberty to quote this pertinent sentence: "Had I been studying our Manual as I ought, there would have been no necessity for my letter of Monday regarding the Bible selections." This second letter was received before the answer to the first letter had reached the writer, consequently the value of its sentiment is enhanced by its spontaneity. It confirms what many other thoughtful Christian Scientists have found to be true in their own experience; namely, that the Manual of The Mother Church is sufficient authority for the guidance of church-members in all their relations to the Christian Science movement and to each other.

Mrs. Eddy epitomizes her answer to the question, "How can I progress most rapidly in the understanding of Christian Science?" in one terse sentence: "Study thoroughly the letter and imbibe the spirit" (Science and Health, p. 495), and this rule may safely be assumed to apply to the Church Manual as well as to her other writings; but most of all, it must be applied to the effort to "imbibe the spirit" of Christian Science which pervades all her writings. Every Christian Scientist will agree upon the truth of the statement, "Divine Love always has met and always will meet every human need" (*Ibid.*, p. 494), and we believe they will also agree that these needs are met through the understanding which comes by faithful study and application of our Leader's teachings. Experience has shown, as in the instance above cited, that a very large proportion if not all of the questions which are asked by the field could have been answered by those who propounded them had they first carefully sought the answer in Science and Health and the Manual. In other words, these questions are simply asking how Christian Science is to be made operative in daily living, and no better rules can be given for this purpose than are laid down in these two books.

Our Leader foresaw the need for guidance and orderly procedure in the conduct of this great movement, and we know full well the years of her devoted service,—"how much time and toil" were required, as she has told us, "to establish the stately operations of Christian Science" (*Ibid.*, p. 464),—to the end that its object should be fulfilled, till the divine will should be done "in earth, as it is in heaven." She realized, as only one could to whom wide experience had been given, the many devices with which error would seek to lure the unwary from the narrow path of duty, and throughout her writings we find the same loving thoughtfulness and wise provision for every possible need that could arise.

In the Manual of The Mother Church this provision for our welfare is specially emphasized. In a prefatory note Mrs. Eddy tells us that its rules and by-laws "sprang from necessity, the logic of events,—from the immediate demand for them as a help that must be supplied to maintain the dignity and defense of our cause; hence their simple, scientific basis, and detail so requisite to demonstrate genuine Christian Science, and which will do for the race what absolute doctrines destined for future generations might not accomplish."

It is to these rules and by-laws, then, that we are to turn when questions of procedure present themselves, and it is the experience of those accustomed to dealing with large affairs that there is no problem so intricate, no detail so small, that its proper administration is not covered in either the letter or the spirit of the Manual. It could not be otherwise when we remember that "the sermon on the mount is the essence of this Science" (*Ibid.*, p. 271), and that as Christian Scientists we are to reflect "the sweet amenities of Love, in rebuking sin, in true brotherliness, charitableness, and forgiveness" (Manual, Article VIII, section 1); that we must in all things be obedient to the divine command which bids us not only to love God with all our heart, mind, and strength, but our neighbor as ourself. If our daily walk and conversation are ordered in consonance with the spirit of the "great commandment," whatever the problem that may come to us, seeking aright we shall find its solution.

ARCHIBALD MCLELLAN.

THE TRUE WORSHIP.

THE fourth chapter of John's Gospel contains a remarkably full account of an incident in Jesus' ministry which deals with the vital facts of religious experience in a way that cannot be ignored or forgotten by the thoughtful reader. We are told that Jesus was on his way from Jerusalem, back to Galilee, and that he was "wearied with his journey."

It is possible that Jesus was, to human sense, discouraged with the almost unvarying opposition to Truth which he had encountered in Judea from those in authority, for we read that he said to Nicodemus, to whom he had presented the inspiring idea of the new birth, "We speak that we do know, and testify that we have seen; and ye receive not our witness." He had reminded Nicodemus that as "a master of Israel" he ought to have comprehended the spiritual realities which explained the "miracles" that Nicodemus had come to inquire after. The interview with the Samaritan woman began with the simple request on the part of Jesus for a drink of water, to which the woman responded by a tacit refusal, based on racial and religious prejudice, and it continued until all this was triumphantly swept aside by the great Teacher's declarations of the truth of being, and at the close the woman, who invited her fellow-citizens to come and listen to the wonderful teaching, said, "Is not this the Christ?"

Here it may be asked why the authorities should have rejected the words and works of Christ Jesus, and why Jews and Samaritans alike held so tenaciously to their own materialistic concepts of religion, although they were unable to offer any proof of the correctness of their views. The woman plunged at once into the question as to whether the worship offered in Jerusalem was more acceptable to God than that offered from mount Gerizim. To this Jesus responded by going with searching directness to the very heart of the question, and his reply is of no less vital significance to all mankind today than it was when he sat by Jacob's well, for his few words embody the essence of all true theology. He said, "The hour cometh, and now is, when the true worshipers shall worship the Father in spirit and in truth: for the Father seeketh such to worship him." This was followed by the oft-quoted declaration: "God is a Spirit: and they that worship him must worship him in spirit and in truth."

When the disciples returned and begged him to eat, the Master told them that his meat was to do the Father's will and to finish His work; and anon we read of the wonderful healing of the nobleman's son. This work we understand to be part of the spiritual worship which Christ Jesus commanded and taught, and if any one questions the consistency of this statement, let him try to read the Gospels, leaving out of them all accounts of the healing work and the Master's commands relating thereto, and see what a lifeless skeleton would remain! Then let him apply this same

Digitized by Google

method to the book of Acts, and he would find it impossible to account for the establishment and rapid spread of Christianity at that early day. There are perhaps few outside of Christian Science who recognize the vital relation of this healing work to true religion, but in the twenty-first chapter of Revelation we witness its glorious fulfilment of all human hope and faith, in the complete overcoming of sin, disease, and death.

Christian Scientists are such because, with few exceptions, they have hungered for a more spiritual and practical concept of worship than that taught in the churches. They longed to draw near to God, and to know "our Father" as revealed by Christ Jesus in his healing work, and this they have been enabled to do through Mrs. Eddy's wonderful discovery of the Principle and rule underlying his demonstrations which she has given us in "Science and Health with Key to the Scriptures." As proof has followed proof, they can say as did the Samaritans to their countrywoman, "Now we believe, not because of thy saying," but because we can daily prove that the ever-present Christ is "the Saviour of the world;" and thus they are enabled to worship God, not with outward ceremonial, but "in spirit and in truth."

ANNIE M. KNOTT.

IN THE UNITY OF THE SPIRIT.

THE keynote of that royal fourth chapter of Paul's letter to the Ephesians is found in the word "unity,"—unity in the thought of God, in the knowledge of His Son, in the faith that relies wholly upon Truth, in the love that blossoms in brotherhood, in the purity that is blameless, in the humility that is childlike, in the manly living that is tender-hearted and compassionate,—such is the compass of a concept whose circle is so complete that though the rest of "the world's best book" were lost, this epitome of right thought and deed would supply the aspiring and obedient with everything essential to their triumph. Elsewhere, in a brilliant of sententious speech which glows with the fact and philosophy of human redemption, the apostle expresses the relation of Spirit to our human life when he says, "The spirit giveth life."

The identity of Christian Science teaching with this concept is declared in a remarkable passage in Science and Health, where Mrs. Eddy says, "One infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scripture, 'Love thy neighbor as thyself;' annihilates pagan and Christian idolatry,—whatever is wrong in social, civil, criminal, political, and religious codes; equalizes the sexes; annuls the curse on man, and leaves nothing that can sin, suffer, be punished or destroyed" (p. 340). Whenever Christian men have become confused, estranged from their Father, it has been because some symbol, some personal embodiment of the spiritual, as they may have been led to think, has been allowed practically to usurp "the throne of the creative divine Principle," and to insist "on the might of matter, . . . the insignificance of spirit" (*Ibid*, p. 317).

A pertinent illustration of this tendency of men to become materially obsessed is found in the attitude of both Jews and Christians toward the Messiah. It would seem that no one could read the Messianic prophecies, especially those of Isaiah and Malachi, without reaching the conviction that the thought of these sages was quickened by their common realization that the Messiah was to be a divine idea, the manifestation of Spirit, and that the redemptive rule which he was to establish was to be in the consciousness, the heart of mankind. Zion, in their wording, is to be the habitation of Jehovah; the Redeemer of Israel is to be a fountain for the cleansing of sin and uncleanness, he is to purge the sons of Levi "like a refiner's fire."

Despite all this, however, the thought of the Jews came to be fixed on a human personality who was to become their earthly hero and ruler, and when this false sense of the Messiah's nature and work is corrected, and he is recognized as the redemptive fact and law of the divine appearing in human consciousness, then the traditional prejudices against the Nazarene can but fall away, and that the sons of Israel are finding the fruition of their Messianic hope through the coming of Christian Science is thus fully explained.

The attitude of Christian theology toward Jesus illustrates the same lapse from Spirit and the spiritual, though expressed in an entirely different way. Failing to perceive that the reign of the Messiah must be spiritual, the Pharisees condemned him who came to fulfil the promise of their most revered prophets. Failing in a kindred way to identify the Christ, scholastic theology has taught that the physical suffering and death of Jesus were demanded of him in satisfaction of a law of infinite Love! and to the escape from this belief as entirely discreditable to God, Christian Science is very largely contributing in its teaching that the forever coming of the Christ is the divine appearing in human experience. The world's supreme mistake has been in sacrificing the spiritual upon the altar of the material, in turning away from and forgetting the divine idea to exalt human personality.

JOHN B. WILLIS.

AMONG THE CHURCHES.

QUINCY, MASS.

At a recent meeting of the members of First Church of Christ, Scientist, Braintree, Mass., it was agreed with practical unanimity that the work in this vicinity would be facilitated by transferring the center of the church activities to Quincy. It was voted accordingly that this church be known thereafter as First Church of Christ, Scientist, Quincy, Mass. Alpha Hall, Cottage avenue, corner of Hancock street, was secured for the Sunday services and Wednesday evening meetings, together with a smaller hall in the same building for the Sunday School and a reading-room adjoining. The first meeting at the new location was held Wednesday, May 3.

The entry into a field of larger possibilities has been made possible through the consecrated endeavor of the members of the church, since its organization in 1902, to subordinate local and personal considerations to the larger interests of the cause. At a meeting held last December this branch church declared by a unanimous vote its loyalty to the teachings of Mrs. Eddy, and pledged its hearty support to the Board of Directors of The Mother Church.

Correspondence.

SPOKANE, WASH.

Second Church of Christ, Scientist, has just bought, or rather contracted to buy, two good lots on which to build a church edifice. The location is at the northwest corner of Spofford avenue and Post street, and the size of the two lots is one hundred by one hundred and twenty feet, affording ample space for a suitable building. The price, including assessments for street improvements, is only slightly over five thousand dollars, which is very reasonable, as the location is high and sightly and within easy walking distance of several street-car lines.

A very pleasing part of the bright prospects for the future is the active good will manifested by First Church, in the wish to help to pay for the new church home. We hope to hold our services in our own basement very soon, which will not only give us a better location, but enable us to have a Sunday morning service. We are now using the Pilgrim Congregational church at the corner of Indiana avenue and Ledgerwood street. Our relations with these people have been most harmonious.—*Correspondence.*

THE LECTURES.

PATERSON, N. J.

Orpheus Hall was taxed to its capacity last night [March 3] when Frank H. Leonard of the Christian Science board of lectureship delivered a lecture on the tenets of this religion. Former Congressman Henry Allen introduced the speaker in the following words:—

Christian Science is no longer a mere theory, not even in the minds of the thousands who were at first inclined to consider it so. It has become an established fact, and established in the only way in which a fact can be established, and that is, by proofs and works. The time was, and not so very long ago, when I considered the followers of Christian Science, and believers in it, somewhat in the light of fanatics, and it was not until the time that I was driven into a corner physically, and denied all possibility of escape therefrom through all other sources, that I turned to Christian Science, and there found the truth and the relief which its followers claimed it offered.—*Paterson Call.*

STUTTGART, GERMANY.

Bicknell Young delivered a lecture on Christian Science at the Königsbau on March 21. The attendance showed that a larger hall might with advantage have been taken. The lecturer was introduced by Edgar Gerst of Frankfurt-am-Main, who said:—

There is no nobler work in the world than that of bringing God's message to mankind. This Christian Science is doing, and therefore you will understand how deep is my appreciation of the honor of introducing to you the gentleman who has been spreading abroad this message of Love for a great many years. Since Christian Scientists do not go about preaching their religion or making propaganda, The Mother Church, The First Church of Christ, Scientist, in Boston, has established these lectures as one of the chief means of presenting Christian Science and at the same time of correcting any wrong impression both as to what Christian Science is and what it is not. The gentleman who will talk to us this evening is one of a given number of lecturers who are appointed to deliver lectures on Christian Science all over the world where people are ready to hear some exact statements about this teaching.

With a feeling of deep gratitude for the many benefits received through the study of Christian Science, I would like to tell you of but one. All my life up to a few years ago I was tormented with a defect in speech. Christian Science alone healed me, and I leave it to your judgment to say how well I was healed.—*Correspondence.*

GRAND FORKS, N. D.

Christian Science was given thorough treatment in a lecture delivered at the Metropolitan Theater Friday evening [March 24] by William D. McCrackan, M.A. The speaker of the evening was introduced by Prof. L. E. Birdzell of the University of North Dakota college of law, and in making the introduction he said:—

We are all ready to concede that we do not know all of the truth. If anything is characteristic of our age it is the liberal attitude toward the search for truth. There is no new doctrine promulgated in the realms of physical, political, and social science but what is met with a willingness to test it by its application in every-day life. If the demonstrations are clear and satisfying, we are ready to accept the doctrines as true, no matter how unaccustomed we are to observe the truth in its new forms. Christian Science is a religious doctrine whose advocates desire to see it tested in the every-day life of the individual. It is presented as a practical religion and we are asked to test it by its results. Truth flourishes where great teachers are free to discuss their doctrines and where there is a liberal attitude toward the reception of truth. During the last half century the world has been blessed with the presence of one of the greatest religious teachers of the Christian era, and the marvelous achievements of her life bear eloquent testimony to the beauty and strength of the doctrine which she taught. There are few of us but have seen the beneficent results of the practice of Christian Science, but there are many of us who are not sufficiently familiar with the underlying philosophy to claim a complete understanding of it. We have, however, observed its manifestations sufficiently that it commands our attention. There is no thoughtful person who is not impressed with what he has seen.

We are fortunate in having with us this evening one from whom we can learn much.—*Times.*

CHICAGO, ILL.

On the evenings of March 27 and 28, William R. Rathvon delivered lectures on the subject of Christian Science in the auditorium of First Church. The first evening he was introduced by John C. Ryan, a director, who said in part,—

It is cause for gratification when we are aware of the many arguments being put forth to the effect that we are having too many Christian Science lectures in Chicago. But why should it seem remarkable that so many people are desirous of hearing the lectures given during the year in the nine Christian Science churches of our city, confronted as we are with the sick, suffering, and sorrowful thousands unable to secure release from their distresses through any of the material methods known to mortals? The Church of Christ, Scientist, stands preeminently for the religion *of Jesus* which heals the sick and reclaims the sinner; *it* stands for a pure and lofty idealism which may be attained by all who follow the teachings of the Master, which have been so clearly elucidated to this age by the Discoverer and Founder of Christian Science, Mrs. Eddy.

When this church was dedicated in November, 1897, it marked an important event in our progress, and four services were necessary to accommodate the more than six thousand people who attended from all parts of the country. It was a joyous occasion, and many of us in our overflowing zeal perhaps overlooked the real significance of the event and what a Christian Science church really means to a community; but our readers upon that occasion did realize what the future possibilities of the church were, as was shown by their addresses. Our then first reader, Edward A. Kimball, besides his own address, read one prepared by our revered Leader, Mrs. Eddy, and a few days after the dedication he sent her the following note:

"I have heard of a case of severe illness on the part of a visitor at our church, which was completely healed during the reading of your address at the dedication of First Church of Christ, Scientist, Chicago, on the 14th instant."

He knew, as did our beloved Leader, that we had builded in vain if the church was not fulfilling its mission in this particular.

The second evening the lecturer was introduced by M. H. Lincicome, first reader, who said in part,—

This church, built upon the foundation of which the Christ-healing is the chief corner-stone, has invited you here to listen to a lecture on Christian Science, which has come to this age in humble guise, a royal messenger, bringing to the meek and lowly the message of gospel healing and salvation. It has not been heralded by priest or king, by civil or religious potentate; and, possibly because of its childlike simplicity, it is the least appreciated and most criticized by the superficially educated and worldly wise of any religion ever promulgated. Notwithstanding this, many of the best and brightest men and women of the world,

Digitized by Google

having become as little children, trustful and obedient to our Father-Mother God, have heard and accepted its sweet message of promise and fulfilment as the greatest blessing that has ever come to the Christian world. Christian Science is saying, in the words of our blessed Master, "Come unto me, all ye that labor and are heavy laden, and I will give you rest."

That the earnest, thoughtful, intelligent men and women of this community are interested in and inclined to investigate the claims of Christian Science, is shown by this vast audience; and it was with the purpose of giving to such investigators a correct and authentic statement of the simple yet profound truths of its teachings, as well as to correct the erroneous impressions concerning it which have obtained through ignorant misrepresentation, that Mrs. Eddy caused to be established the Christian Science board of lectureship. We have with us tonight a member of that board, one who because of his wide experience in the demonstration of the truths he comes to present, and the educational advantages which he has enjoyed, is eminently qualified to speak to us on the subject.—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Anamosa, Iowa.—Lecture for May 25 postponed.
Ashtabula, Ohio.—Bliss Knapp, Lyceum Theater, May 29.
Barre, Vt.—Willis F. Gross, Howland Hall, May 26.
Bloomington, Ill.—Prof. Hermann S. Hering, Church Edifice, Monroe and Prairie streets, May 29.
Chicago, Ill. (Fifth Church).—Prof. Hermann S. Hering, Church Edifice, 4840 Madison avenue, May 30, June 1 and 2.
Colville, Wash.—Hon. Clarence A. Buskirk, First Baptist Church, June 1.
Davenport, Iowa.—Bicknell Young, Grand Opera House, June 1.
Elyria, Ohio.—Clarence C. Eaton, Elyria Opera House, 3 p.m., May 28.
Goshen, Ind.—Frank H. Leonard, Jefferson Theater, June 2.
Grand Rapids, Mich.—Bicknell Young, Powers Theater, June 2.
Indianapolis, Ind. (Second Church).—Bliss Knapp, Murat Theater, New Jersey and Michigan streets, 3 and 8 p.m., May 28.
Jamestown, N. Y.—Willis F. Gross, Unitarian Church, June 2.
Johnstown, Pa.—Prof. Hermann S. Hering, Majestic Theater, 3 p.m., May 28.
Malden, Mass.—Willis F. Gross, Malden Auditorium, 7:45 p.m., May 28.
Marion, Ohio.—Clarence C. Eaton, Court House, June 1.
Marlboro, Mass.—Willis F. Gross, Universalist Church, May 29.
Oswego, N. Y.—William R. Rathvon, Church Building, 172 West Second street, June 1.
Paterson, N. J.—William D. McCrackan, M.A., Orpheus Hall, 8:15 p.m., June 1.
Rochester, Ind.—Frank H. Leonard, Fulton County Court House, June 1.
Rockland, Mass.—Clarence C. Eaton, Grand Army Hall, 7:45 p.m., May 26.
Seattle Wash. (Fourth Church).—Hon. Clarence A. Buskirk, Moore Theater, 3 p.m., June 4.
Skowhegan, Me.—Bliss Knapp, Opera House, June 2.
Spokane, Wash. (Second Church).—Hon. Clarence A. Buskirk, Auditorium, June 2.
Watertown, N. Y.—William R. Rathvon, City Opera House, 3 p.m., May 28.
West Chester, Pa.—William D. McCrackan, M.A., Church Edifice, North High street, near Washington, June 2.

TESTIMONIES OF HEALING.

Gratitude may be defined as the conscious capacity to give thanks. Once the capacity is realized, its expression increases by arithmetical progression; for to possess that which once we knew not, is to give heed to the voice of Love, and to give hourly and daily heed to the voice of divine Love is to take on some understanding of the infinite. The Master said, "Out of the abundance of the heart the mouth speaketh," and so I would speak of my own personal gratitude.

For sixteen years I was a slave to the use of liquor, and as such I endured all the hideous dreams of an awful servitude. One of the dreams that deceived me was the thought that whisky was a necessity to my existence, that it added virility to my work (that of a newspaper man), stimulus to my energy, and life to my nerves, overwrought by what I then thought was labor. Indeed, the bottle was the panacea for all fancied ills, and in the end stole my intellect, my time, my manhood, my friends, and worst of all, my self-respect. At last the time came when the lie could deceive no longer. I had reached the ultimate. My means were gone, regular employment was an impossibility, for no one would trust me, and my noble wife was suffering untold agony, wavering between loyalty to her husband and duty to herself. I was tottering on the brink of the gutter, the future bearing no hope, the present naught but damnation, the past unutterable.

About two weeks before the climax came, I met an acquaintance of my youth who I knew had been formerly a drinker. He was sober, prosperous, and his countenance was one of peace and content. If my own case was a characteristic one,—and I have every reason to believe that it was, for whisky tells the same lies to each of its victims,—I had long had an ambition to be a sober man, but could never accomplish the first step toward the attainment of that ambition. I reasoned, Surely if he has found a way to rid himself of whisky, why may not I? At any rate he told me, and gave me the name of his practitioner, and somehow or other the expression "Christian Science" did not then seem to be laden with the repugnance it once had.

One afternoon I found myself in a saloon after a debauch of the worst kind I had ever indulged. I cogitated: "*Quid nunc?*" I was down to my last two nickels in money, but I hastened to a telephone and called up the practitioner whose name I had been given; told him who and what I was; why and how I happened to call him, and asked him if I might not go out to his house, it being after his office hours. "Why not wait until tomorrow?" he asked. "I can't," I said. "If I should, I might change my mind." When I walked down the front steps of his house, entered forty minutes before, my head was high, my breast was full of a lightness I never before had known, my heart was singing a song, the whole world looked as if it had been washed clean of the unsightly, and existence was one of freedom, fearlessness, goodness, truth, and love. In those few minutes God had revealed Himself, the Christ had whispered, and, behold! a prodigal whose belly had been sated with the husks had been given new raiment, his sense supplied with fulness, and he had been vouchsafed an heritage greater than that of prince or potentate. Truly the heavenly dove had descended! Since that time I have had no desire other than so to live that each instant shall be one of gratitude; that each step shall be one more upward; that each thought shall be one purer; that each heart-beat shall be one more of love.

Gratitude? If all the words within the vocabulary of every tongue used by mortals expressed the thought of gratitude, and each were intensified a thousandfold, all would be poor to express my feelings. To have been released from a thraldom such as was mine, and given a life eternal, with its joy, its faith, its hope, its truth, is surely

Digitized by Google

quite sufficient ground for one to feel an infinitude of gratitude. Hand in hand my wife and I are daily growing and learning to live. Once more I am at regular work in a responsible editorial position; my eyes are bright, my speech is clear; my friends are many, and the daily demonstrations of the gentle might of Love are sometimes startling but always sublimely beautiful—beautifully sublime. To God I tender a heart overflowing with gratitude; upon the Christ I keep my eyes; to the world I give my daily life; and last, but far from least, I give tenderest veneration to the handmaid of His choice and thanks for her inestimable book, "Science and Health with Key to the Scriptures," for the Lord hath surely lifted the light of His countenance upon our Leader, who has enabled us to see the truth which is a light unto our feet. Again, all glory and praise and thanks be unto God.—CLARKE MCCUE, Kansas City, Mo.

[Translated from the German.]

Some four years ago my attention was drawn to Christian Science by a dear friend, but I declined her invitation to attend a service, as we were just then going on a journey. Three weeks later we returned, and on the following Sunday I attended the church. The congregation was just singing the hymn which begins, "Commit thy way unto the Lord; trust also in Him." This wonderful hymn brought me inward peace, and I attended the meeting on the following Wednesday. Beautiful testimonies were given by those who had been restored to health, and the story of a gentleman who stood near me especially appealed to me. He said that he had been healed several years before of a rupture; and as I listened intently to his words, the thought came to me that an abdominal complaint was not unlike his former trouble, and that I too might be healed. I read the *Herold*, and found what I was looking for, namely, the testimony of a woman who had been healed of the same ailment as mine. I attended the meetings for several weeks, in order to get the right understanding, and one Sunday I asked for help. Treatment was immediately given me by a kind Scientist, with the result that the ailment which I had carried with me for the long period of twenty years, and which often kept me from working, disappeared within a week.

I shall never forget the day when I went home with gratitude and joy in my heart, and the firm thought that I was now well and able to work. I have been free from this disability ever since. Although some ill would manifest itself now and then, I had learned enough of this glorious truth to know that with God's help it could be overcome through earnest prayer. This shows that we should pray daily and hourly that we may gain a higher understanding of this glorious truth. I cannot be grateful enough to God, and to our beloved Leader, Mrs. Eddy, and to all who have helped me to find the way to divine Truth.

FRAU BERTHA PAULSEN, Berlin, Germany.

I thank God for Christian Science, for it has made a new woman of me. I was told by two doctors that I had not long to live, as I had a malignant growth on the stomach and liver and that it could not be removed. They said that I might live a year or two, if I ate nothing but a prepared food, but that I would never be any better. I did as I was told for a year and three months; then they examined me again and told my oldest daughter that conditions were worse, and that I should not be here long. I felt that I was growing weaker every day.

It was about this time that a friend came to see how I was, and asked why I did not try Christian Science. I said if it was a religion that healed, I should like to know more about it. A few days later I had to go to bed, as I had taken a bad cold and the doctor said my lungs must be poulticed. I was in bed when the same friend sent his sister and another lady to see me, and what they told me of Christian Science seemed to be just what I had been wanting all my life. They sent me some *Sentinels*, and from what I read I felt that God would heal me, that He did not mean me to die; so I stopped the poulticing and was up when the doctor came. He said I was not fit to be up, but I said I felt much better. I also stopped taking medicine.

One of the ladies came to see me again, just a week from seeing me before, and she was quite surprised when I opened the door myself. She said she would send me a copy of Science and Health. I got it Thursday night, and read it all day on Friday. At night I turned to the beginning again, and while reading the chapter on Prayer (I had only got to the second page) I felt that I was healed. For the first time in many years I felt hungry, but I was afraid to eat, for the doctor had said if I ever ate solid food again it would kill me. I had promised to attend the Christian Science service on Sunday morning if possible; and I did. I had a talk with a practitioner, and she told me, among other things, that I could eat whatever I liked and it would not harm me. I did so, but my family did not know of it until afterward.

Besides being healed of this ailment, many other ills were overcome. I had for over twenty years suffered from headaches, also a bowel trouble from girlhood, and the doctor had been a well-nigh constant attendant at our house for over eight years, till I was healed three years ago. I was well for a few months, then people began to talk about me, and to say I was not healed. Then the minister came and had a long talk with me, which upset me very much, with the result that I began to be very sick, and one night my children thought I was dying, so they sent for the doctor. He said it was the old trouble; but when he had examined me he said it was not that, for it had almost gone and would never trouble me again. He said he could not understand it. It was a grand thing for me to hear him say that the growth was gone. I told him that God had *healed me* through Christian Science. He examined me again in a few weeks, as we could not overcome the pain, and he said there was another growth in quite a different place, and that I could never be healed of it. I told him I was not afraid of it, for God who could heal one could heal two. I told him I was having help in Christian Science, and he was very kind about it. He said I could have any help I liked, but that nothing would cure me.

The healing was very slow this time, but I kept on holding to Truth. Mrs. Eddy says in Science and Health (p. 22). "Love is not hasty to deliver us from temptation, for Love means that we shall be tried and purified." It has taught me to seek more and study the Bible and Science and Health more than I might have done if my healing had been quicker. I often used to read the Bible before coming into Christian Science, but put it down many times because I could not understand it. Since having our Leader's "Key to the Scriptures," however, there is not much now that I do not understand. It is now nearly two years since the second growth was overcome, and I have never had any trouble from it since. I have never had the slightest return of any of the other ailments since my first healing. I can never be thankful enough to God, and to our dear Leader for bringing this truth to us and making it so plain. I thank God with all my heart that ever I heard of Christian Science.

MRS. H. A. LAW, Littleborough, near Rochdale, England.

It is with a great sense of joy that I testify to my healing through Christian Science. I had suffered terribly with my back and head for months, when God sent a dear friend to my house. She took up my case, and in a short time I was healed, for which I am very thankful to God, and also to our dear Leader. I am trying to work out my own salvation, and Christian Science has been a great help to me ever since this experience in overcoming sorrow and suffering in my home.

MRS. CARRIE MOOCHELL, Chenoa, Ill.

Digitized by Google

I send this testimony hoping to encourage some one who may be in need of the healing power of Truth. Since I have been old enough to speak, I have been constantly troubled with my throat. Each winter I looked forward to two or three weeks of suffering. While living in Panama the doctors advised me to have my tonsils removed. I did so, and a week after this I could not speak or eat, and besides the operation left me with more trouble than before.

Not long after I had an attack of diphtheria. My throat was in a dreadful condition, and the fever was getting high. I then called for a Christian Science practitioner and asked for help. It was given me, and I was healed in a very short time. I was also healed of a terrible eye disease. Christian Science has not only overcome sickness for me, but has been a great help to me in my work and in my studies. I am very thankful to God, and also to our dear Leader, Mrs. Eddy, who has brought to this world the light which was greatly needed. I am only a young girl, but I intend to study and live Christian Science.

EDITH TORREY, Excelsior Springs, Mo.

About four years ago I submitted to a serious operation, and in June, 1909, had another severe one, following which I did not gain strength as I should. The doctors said there was a malignant condition present which would necessitate another operation, and without which I could never get well. The knife and medicine had not helped me, so my husband and I called upon a Christian Science practitioner of this city and made arrangements with her for treatment. At that time I was much reduced, but am now in good health and feel that it has certainly been a remarkable cure. I also had very severe headaches, for which I had taken medical treatment for years, having had three different doctors here and one at another place, without permanent relief. The pain was so severe at times that I would faint repeatedly, doing so eight times one morning before getting relief, and then it was given by injections of morphine. These attacks have been almost entirely overcome, and I can now eat anything without fear.

I know of other remarkable cures, and shall never cease to be thankful for what Christian Science has done for me, and for the good it is doing here. With God's help we hope to start a society very soon.

MRS. GEO. D. CARTER, Alva, Okla.

It is over three years since I came to understand anything of Christian Science, and in that time I have had many demonstrations, both for myself and family, two of which I wish to speak about particularly. One was an acute case of rheumatism in the knee-joint, which was badly swollen and very painful. As I was obliged to take a forty-mile ride over very rough roads, I applied to a practitioner for treatment. The next day I was able to walk, and the third day I stopped treatment, as I was well.

In the spring of 1909 my seven-year-old son was thrown from a wagon to the hard pavement, receiving very severe injuries. He had hemorrhages accompanied with a high fever, pains in the head, and was delirious. A Christian Science practitioner was immediately called, and the injury to the stomach was overcome in twenty-four hours. At the end of three days he was able to be up. This was on a Thursday, and the following Monday he was back in school, well!

Christian Science has done much for me in overcoming fear for myself and children. I am very thankful to God, and to Mrs. Eddy for the benefits received through the teaching of Christian Science.

MRS. MARGARET SUDDEN, San Mateo, Cal.

I write to express my gratitude for Christian Science, as I have much to be thankful for. I had been suffering about nine years from an internal complaint, for which I had to wear a support, three doctors having told me I would have to undergo an operation before I could be made well; but as the doctors had also said I had a very weak heart, I was very much afraid to take an anesthetic. This fear led me to put off the operation, especially as my husband expressed the desire that I put it off as long as I possibly could; but I was getting tired of suffering, and was about resolved to end it or remedy it when I heard of Christian Science through reading in the newspaper an account of the service held in the Christian Science church at Victoria Park, Manchester. In the account the people and their belief were ridiculed, but it mentioned how harmoniously the service was gone through; so, after making some inquiries, I paid a visit to the above church on the Wednesday evening following. I shall never forget how lovely everything seemed to me, as I felt quite at home from the first hour I spent with Christian Scientists—I went for harmony, and I got healing. I sought out a practitioner the following week, and I was cured of my weakness in just two weeks. I dispensed with the support at the end of two weeks, and I have been supported by the truth ever since.

This all happened about three years ago, and I am still enjoying health. I can now see how divine Love led me and saved me from the operation until I should be able to hear of the truth which has made me free from my bondage of suffering. I am very thankful to God, and to our dear Leader, who has given us this great understanding of God, good. I had resided in Philadelphia, Pa., for about ten years, but did not meet with any Christian Scientists, and had to come back to England to hear of this healing truth. I hope some of my friends in America will see this testimony, and thus learn of the good that has come to me.

MRS. MARY STRINGER, Oldham, Lancashire, England.

I feel ashamed that I have so long neglected to express my gratitude to God for the understanding of Christian Science which through our Leader has been given to mankind and has proven to all who seek "in spirit and in truth" that God is a present help in time of trouble. I am by occupation a railroad conductor in freight service. On July 25, 1907, in an accident, I met with severe injuries to my arm, also dislocation of the left ankle, in addition to very serious injuries of the foot. The three physicians who immediately attended me pronounced my ankle to be in a bad condition, and bound it up very tight in order that it could grow together again. I had as soon as possible after the accident wired a Christian Science practitioner to treat me, and I did not suffer any of the pain that usually follows such accidents, but ate a hearty supper and slept well all night. In six weeks I attended a wedding one hundred and fifty miles away, and in three months was back on the road again. I am now on a local freight, a run that requires a very active and strong man, but I suffer no inconvenience whatever.

I did not at any time during my confinement to my room suffer from the effects of the broken bones, and had none of the fever or inflammation which usually follows such accidents, nor did I take or use in any way material remedies of any kind. I slept well every night, and was always ready for my meals. For this and many other manifestations of God's love, as explained to us through the teachings of Christian Science, I am truly grateful.

JOHN H. FRAZIER, Mooresville, N. C.

I gladly contribute a mite of my gratitude for what the understanding of Christian Science has done for me. It has taught me what Life is; how I can come into communion with our Father-Mother God, and with this understanding and application of God's remedy I have been freed from various forms of error. During the summer of 1909 I was stricken with an acute stomach disorder, in a very violent form. I immediately applied my understanding of

Digitized by Google

the truth; but because my cure was not instantaneous, fear became prevalent in the home and a physician was called who from the symptoms pronounced my illness gall-stone. As I did not improve under his treatment, my husband wired for a Christian Science practitioner, and upon her arrival I began to improve. I had, however, a severe attack a few hours later, but as she declared aloud the truth, the pain instantly left me. I immediately got up, dressed myself, and ate some fruit with a relish and without any ill effects. Through Christian Science I was set free from the disease and am in a perfect condition of health. A volume would not express my gratitude to God and to our dear Leader. Each child of God should strive to demonstrate that God is All-in-all.

MRS. HARRIET H. FRAZIER, Mooresville, N. C.

Christian Science has brought me many blessings, and deep gratitude prompts me to give to others the result of one healing in particular. My little daughter, who is now over ten years old, had from babyhood suffered from a severe bowel trouble, but this has been entirely healed by the glorious truth taught by our beloved Leader in "Science and Health with Key to the Scriptures," and through the loving help of a practitioner. I am indeed thankful to God, also to Mrs. Eddy for the truth which has helped me all the way, and which is teaching me daily the unreality of all error and the ever-presence of divine Love.

FLOSS K. ANTHONY, Englewood, N. J.

While I always enjoy the testimonies in our periodicals, I have been careless about contributing my own experience for the benefit of others; but in talking recently with a friend I related the following case of healing, which occurred in my own home, and she advised me to write it for the *Sentinel*, thus letting others know of the healing power of Truth. One Saturday night my son came home very ill. On Sunday he ate nothing, and was unable to rest or sleep. We had no telephone in the house, and I was unable to leave him as he was in a very high fever and in great distress. A friend came in who had a telephone, and she immediately went home and called up a Christian Science practitioner, asking for help. The practitioner at once responded, and by the time my friend had returned from her home my son was better. I knew by the changed expression in his face that the truth had been declared and its healing power realized by him. The high fever almost immediately subsided and he expressed a desire for something to eat. I prepared something for him, and he partook of it heartily. This is only one of the many instances we have had of the remedial power of Christian Science, Truth having been our only physician for about ten years.

MRS. S. MAINPRIZE, Toronto, Ont.

I feel it a duty to tell what Christian Science has done for me. When it found me I was one of the most discouraged and despondent persons living; I did not know what it was to be cheerful and happy. I had been in this condition for several years, when I was advised to try Christian Science. I did so, and I soon saw that it was just what I needed. This was about nine years ago, and since that time I have depended entirely upon it for healing. It has taught me what God is, also man's relation to Him, and this has made me happy and free. I was enabled to take up school work again, after being so wonderfully helped by Christian Science, and am now holding a position as bookkeeper and stenographer. Each day I enjoy my work, all of which is due to Christian Science.

I should like very much to tell of another very beautiful demonstration, about five years ago. One evening in getting supper I scalded myself very severely. The first thought which came to me was that God is our life, and that no accidents can happen in the divine Mind. With this thought I proceeded with my work. My sister, who had heard the noise, came to ask what was the matter (a can of boiling water had exploded, making a noise like that of a gun). I replied by asking her to know and declare the truth. Soon after, when the other members of the family learned what had happened, a burning sensation began to be felt; but I tried to realize its nothingness, and then I asked my sister to read the Lesson-Sermon with me. We had gone over one section of the Thanksgiving Lesson when instantly all pain disappeared, and I slept as peacefully as a child that night. On awakening in the morning, however, my face was badly swollen, but I was free from pain. Keeping the thoughts of truth constantly before me, I went about my usual work, feeling perfectly well, but watching carefully that only good thoughts should come to me. The third day a sense of fear came over me, and in a short time my mother came to me and said she thought I had better have a practitioner to help me. I said I was willing to trust God; but as she insisted, I sent word to a practitioner at once, and in a very short time the fear was gone. Gradually the swelling began to go down, and a week from the evening that the accident happened my face was perfectly healed, without a scar.

For these demonstrations of the truth, and many other blessings, I am more than thankful to God, also to our Leader for my understanding of this great truth.

MISS IDA WENIGER, Lincoln, Neb.

I wish to speak of what Christian Science has done for me. In August, 1909, I was taken very ill and was under the care of a doctor every day for three months, but was getting no better. At last I was confined to my bed with a most serious brain trouble for several weeks, and at the end of this time a friend suggested Christian Science to me. We called a practitioner, and after one treatment I was so much better that I could sit up, and after a few treatments I was entirely healed.

I cannot express my gratitude to God for the benefits I have received, and to Mrs. Eddy for giving us this wonderful book which points the way to Truth. I feel that to know what God is, and to know His power to heal, is worth more than all else to me. Christian Science has changed my whole life and also blessed my family. For all this I am truly grateful, and my prayer is that I may know more each day of this healing truth.

MRS. LE ROY J. CAREY, Indianapolis, Ind.

The testimonies given in the *Sentinel* are so encouraging and helpful to me that I wish to give mine, hoping that some one may be glad to know how quickly and perfectly God answers the prayer of understanding. In August, 1907, while doing some very heavy and unusual work, I experienced an abdominal injury. I lay in bed with great pain from Friday until Monday, and then consented to my wife's calling a Christian Science practitioner, feeling that we could not meet the trouble ourselves. She also telephoned for a doctor to make an examination for accident insurance. The doctor came first, and seemed much disturbed at the symptoms, saying the temperature was alarming. When he left he said he could not do any more for me, but to get the practitioner as soon as possible and to tell him that he (the doctor) said that I should stay in bed till that fever went down and the pain was gone. I was unable to lie still on account of the pain, neither could I sit up.

The Scientist came shortly, and after about thirty minutes I was lying perfectly quiet, without pain, and the fever almost gone. With one week's treatment I was entirely well, and have never felt the slightest return of the trouble. My gratitude is great, and I am humbly thankful for Christian Science and its Discoverer.

PERRY H. OWEN, Topeka, Kan.

Digitized by Google

In August, 1883, while working at my trade of carpentering, I was taken with a severe attack of pain in the bowels, which became so acute that it was with difficulty I reached home. The following morning I returned to work, feeling weak, but anticipating no further trouble. A few days later there was a return of the same condition, and these attacks grew in severity, each followed by a seeming paralysis of the bowels, until the winter of 1908.

I was treated by one physician after another, then tried other material methods; but, receiving no permanent help, I yielded to friends, and on Nov. 16, 1908, called upon a Christian Science practitioner. After a short talk, and I must say with little hope, I commenced treatment. For six weeks my condition was little changed, if any; but the practitioner advised me to continue the study of Science and Health, in which I had become intensely interested, and also to continue the treatment. At the end of nine weeks I was well, and have continued in perfect health up to the present time. I am indeed thankful to God for my cure from those severe attacks, and grateful to our Leader for the understanding which made it possible.

ALFRED KNITTLE, Denver, Col.

[Translated from the German.]

I consider it a duty publicly to acknowledge the great benefits I have received through Christian Science. I came to Christian Science because I took an interest in the subject, and although I had been suffering for over twenty years with severe stomach and liver complaints, attended by headaches, and there was no cure for me, according to the physician's statement, I paid little attention to these troubles and never allowed them to interfere with the strict routine of my regular work. When, however, I applied to a Christian Science practitioner for treatment, I was healed in a very short time. Even with my small understanding I am able to overcome quickly any manifestation, or rather indication, of these ailments. I am deeply grateful therefor to the Almighty, and also to that noble woman, Mrs. Eddy, who has shown us the way to health and happiness.

LOUISE WEBER, Zurich, Switzerland.

[Written for the *Sentinel.*]

HEAVEN.

VENI MC DONALD PORGES.

'TIS not afar in distant skies
The shining hills of heaven rise.
In loving hearts lies Paradise,
And loving words are keys that ope
The portals to that land of hope.

O planning hearts, that droop and sigh
To watch the bitter days go by,
Heaven itself is very nigh!
Though all about us angels go,
We fail to see them—do not know.

For hearts that throb with loving thought,
And lips that whisper, heaven taught,—
These are the angels Love hath wrought
And these the shining feet that go,
Making sweet music here below.

'Tis not afar in distant skies,
But close at hand the blessing lies—
In loving hearts lies Paradise!
Look up, sad souls, the world is fair,
And Love and heaven are everywhere!

FROM OUR EXCHANGES.

[*Christian Register.*]

The theological unrest of our time, the occasion of deep anxiety to many, is not without genial prophecy to ourselves. It may mean, it does mean to us, the breaking up of a winter incident upon the coming of a warmer sun. Men are not tired of religion. The soul is as it was: old hopes enkindle it, old dreads appall it, old raptures thrill it. They want, as they have ever wanted, a closer walk with God. Nor are they tired of theology. Man is by instinct a theologian: its themes hold him, entrance him, as none other. They are tired, however, of the old temper and the old method. The old method built a house for the soul, but gave the soul no voice in its structure. In this edifice, reared for you, it said in effect, abide and be content. That is to say, the traditional theology is dogmatic, not spiritual, in its spring. The "building intellect" was ingenious, but it was not spiritually directed. The unrest of which we are so sensible springs from the spirit's discontent with its conditions. It wants another temple whose structure shall express its own monitions. The unrest pleases rather than disturbs us, for we see in it the prophecy of a spiritual theology.

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth.*]

Can it be true that this earth-life is our real beginning, a beginning which will never have an end? My text [Job xxxviii. 4, 7] suggests something different. It suggests a mode of existence which transcends all beginnings and endings, and in which we are somehow included. If this be true, then our being here is not the full expression of what we are even now—far from it. It is a sort of kenosis or emptying out of our full selfhood, a dulling or suppression of some eternal self-awareness which is ours in God, a limitation of powers and faculties whose pedigree is older than this material scene of their present hampered exercise. . . . The vilest sinner you have ever met is a son of God disguised even from himself, ignorant of his own powers, heritage, and destiny. Never forget it; try to see it even when appearances are most against it and you are battling your hardest to resist the evil he seeks to do. Let it teach you compassion, and something more than compassion: let it teach you reverence for the possibilities in poor, sinning, suffering humankind.

[*Outlook.*]

Throughout the whole range of the experience of men in contact with God, of which the Old and New Testaments are matchless records, the infinite always reveals Himself in silence. In the most impressive manifestations of power it was the "still small voice" that spoke with final authority; out of the tumult of action the prophet, who went before the Christ and for many centuries foreshadowed his coming, went into the lonely place to meet God and be born again into the knowledge of his purposes. The desert and solitary place are not more sacred than the city square or the crowded street; but they are symbols of the solitude in which the tumult of the senses and of the activities have died into a silence in which the divine voice becomes audible, and a man comes into such possession of himself that he can surrender himself to God.

[Simon L. Patten, LL.D., in *Independent.*]

Through inspiration we can all be supermen and see the promised land into which the race will enter. To be first over the border and to return with a message of cheer to those of good intent but of less courage is an ambition every one should foster. First service, then justice, and then inspiration; this is the gospel of religion. Why should we stop with culture, goodness, and morality, when a nobler goal is plainly in sight? The difficulties and opposition it evokes are worth the sacrifice. The superman is coming,

Digitized by Google

but he will appear as the embodiment of service and not as a self-satisfied exploiter. He who would save his life must lose it.

[M. Rhodes, D.D., in *Lutheran Observer.*]

Whoever lives for the higher, always putting it first, is sure to get the good that is in the lower. He becomes the possessor of all that is beautiful and true. Whoever lives wholly for the lower, as multitudes are doing today, all the time foolishly persuading themselves that they at least are independent and are having a good time without God, these as surely lose all that is higher. This is inevitable. As we sow we reap. In the end everything will serve the good man. The way sometimes may impose trial, but trial in doing right, in serving God instead of the world, is unspeakable joy compared with the misery of those who have no God hereafter. "Mark the perfect man, and behold the upright, for the end of that man is peace."

[Rev. C. A. S. Dwight, Ph.D., in *New York Observer.*]

Still the broad way of life is crowded with the clamoring multitude, while the narrow way of circumspection and conviction has on it but "here and there a traveler." It becomes our particular task to disengage, as God gives us to see the good, the truth of revelation amid the happenings of history, and the beauty of life from its trappings and its accessories. We are thankful that we have been given in the Scriptures that sure Word of supreme revelation which will make the way of life plain before the simplest and the most childlike, so that a man while he reads the record may run on the errands of human service, and spend his spare breath not in shouting down facts, but in talking up the verities of the Christian religion.

[Rev. Clarence R. Skinner in *Universalist Leader.*]

The existence of a highly developed militarism in a nation which professes allegiance to the Christian religion, is one of the glaring anomalies of our modern civilization. A people can be military or they can be Christian. They cannot be both. Christianity and militarism are irreconcilable and mutually exclusive. If we believe in the religion of Jesus, then we perforce disbelieve in the use of arms. If Christianity is right, then the whole fabric of war is wrong, and it should be destroyed. On the other hand, if war, or preparations for war, are right, then the New Testament promulgates a pernicious doctrine and its promulgation should cease.

[*Congregationalist and Christian Work.*]

Many a community presents today the painful spectacle of being overchurched and at the same time underchristianized. It is trying in a desultory and unsatisfactory way to maintain half a dozen churches where two or three would be more effective, or a dozen where six would better serve the kingdom of God. If in these same communities business concerns had multiplied until the supply had outstripped the demand, some would have to choose between migration or bankruptcy. If the public schools were run on a non-cooperative basis, outcries would be heard against extravagance and waste.

[*Haverhill* (Mass.) *Gazette.*]

Parents are conscientious and energetic in looking after Tom's teeth and eyes, and Mary's hair, tonsils, and nasal passages, but seem utterly unconscious that mental rickets and curvature of the soul are far more deforming than crooked teeth and adenoids. If these children were protected from a vicious environment and educated into habits of a pure, clean, sensible life, there would need be much less anxiety concerning crooked teeth and nasal passages. What education needs to make itself worth while is a conflict with the vulgarizing influence outside the home and the schoolroom.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS have been published as pocket and library editions in new bindings. Description and prices will be found on the outside cover page of *Sentinel.*

The new volume, "Poems by Mary Baker Eddy," is now on sale. Specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The following reprints are published in Swedish: "Hvad Ar Bön?" "Lagens Välde," "Det Ondas Natur," "Helvete och Himmel," "Människans Gemenskap Med Gud," "Verklighet," "Det Ar En Ström," "Förklaring Af Kristligt Helande," "Den Yppersta Egenskapen I Christian Science," "Underverken," "Det Ondas Ofvervinnande," "Var Väktare," "Riklig Tillgang," "Kristendom Och Vetenskap." Ten copies to one address, prepaid, 10 cents; one hundred copies to one address, 75 cents; five hundred copies to one address, $3.00; one thousand copies to one address, $5.00.

Two of our Leader's poems, "Shepherd, show me how to go," and "Love," set to music by Frederic W. Root, are now on sale by the Society. For description and price see advertisement on inside back cover page of *Sentinel.*

A new photogravure reproduction of The Mother Church edifices and the Publishing House, with the new parkway in the foreground, has just been made, and is now on sale. The size of the new picture, nine by fourteen inches inside of mat, which is about half that of the larger one, specially adapts it to framing for the home. Price, single copy $1.00, six copies $5.00, twelve copies $9.50.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10x7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental ideas. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.20. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the month, and include all issues for the month named as expiration date on the wrapper. XI indicates the year 1911; XII, 1912. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25—	£0: 5 s.: 2d.;	Mk. 5.30;	F. 6.45
2.25—	0: 9 : 3 ;	9.50;	11.60
2.50—	0: 10 : 3 ;	10.60;	12.85
4.00—	0: 16 : 5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

To conserve the snows of the Blue mountains in the Wenaha forest reserve in Washington, the government forestry bureau is planning to "treat" thousands of acres with cover shrubbery and trees this summer and develop dormant springs. Camps are being established where forces of government rangers and assistants will be quartered this summer to do the work. More water has been demanded by irrigation of lands in the valleys through which the Walla Walla river, Mill creek, Touchet river, and other streams flow. There will be double the water supply in the summer, it is believed, when the treatment of the mountain forests and watersheds is completed. The snows of the winter, instead of melting with a rush in the early spring, will be protected during that period and the water saved until midsummer, when it really is needed.

Secretary of the Treasury MacVeagh announces the offer of fifty million dollars of Panama three per cent canal bonds. These are the first federal bonds issued since the national banking system was established which do not carry the circulation privilege. They are exempted as the result of legislation enacted at the last session of Congress. The government expects that the sale of these bonds will give a good idea of the real measure of the credit of the United States government. These are to be marketed as a partial reimbursement to the treasury for moneys expended on account of the construction of the Panama canal.

The government has asked the supreme court of the United States to advance for hearing next October the "Alaska coal land case," involving the indictment of Charles F. Munday and Archie W. Shields, in connection with the so-called Stracey claims; also, the cases in which Frederick A. Hyde and J. H. Schneider were found guilty of conspiracy to defraud the government out of public lands on the Pacific slope, and that involving the validity of the indictment under the Sherman antitrust law of James A. Patten and others on charges of "cornering" the cotton market.

The interstate commerce commission states as a principle that "a carrier may not properly look beyond the transportation to the ownership of the shipment as a basis for determining the applicability of its rates." The ruling was announced because many carriers have regulations in their freight tariffs providing that "the names of individual consignors and final consignees" shall be given before the goods are accepted for shipment. The commission directs that all such regulations shall be stricken from the tariffs by June 1, 1911.

An investigation of the cotton industry, with a particular view to disclosing speculative market conditions, is proposed by a resolution introduced in the House by Mr. Edwards of Georgia. The resolution provides that the secretary of commerce and labor institute an investigation of the combination of cotton speculators in the United States organized to control prices, with a view to prosecuting criminally combinations to control and manipulate the cotton market and the prices of raw cotton.

The supreme court of the United States reversed the decision of the supreme court of the District of Columbia sentencing Samuel Gompers, John Mitchell, and Frank K. Morrison, officers of the American Federation of Labor, to jail for contempt of court in connection with the injunction suit of the Bucks Stove and Range Company, and dismissed the whole case without prejudice. The decision was that the case was one purely of civil contempt and only punishable by fines.

Massachusetts received $1,050,232 in inheritance tax payments in the four months prior to April 1, compared with $146,544 in the corresponding period a year ago. Since the first legacy tax law was passed in Massachusetts, nineteen years ago, there has been paid into the state treasury nearly thirteen million dollars on account of both the collateral legacy and direct inheritance tax.

The board of estimate of New York city has voted eight million six hundred and ninety thousand dollars for the completion of the eastern basin of the Jerome park reservoir and the installation there of a filtration plant for the water from the Croton system. When this money is expended, the reservoir will have cost the city more than eighteen million dollars.

The demurrers of the Chicago packers in the "beef trust" case were overruled by Judge Carpenter in the United States district court. In his ruling, Judge Carpenter declared that the Sherman antitrust law, which had been attacked by the packers, is constitutional. He also held that the indictment charging the packers with violating its provisions, is valid.

The contest between Minnesota and the railroads over the two-cent passenger law and maximum freight laws of Minnesota has been transferred to the supreme court of the United States. An appeal from the federal court decision, holding the laws void, because confiscatory, was docketed, and an early hearing has been asked by both sides.

The interstate commerce commission holds that, "as between subscribers to a telephone service who are similarly situated, nothing but a difference in the service rendered or facilities furnished can justify a difference in the charges exacted."

The supreme court of the United States last week rendered a unanimous opinion that the Standard Oil Company was a combination in unreasonable "restraint of trade" and ordered the company to dissolve within six months.

Rhode Island has passed legislation adopting the curfew law, which will require all minors under sixteen to be in their homes after nine o'clock unless accompanied by an adult.

A sweeping investigation of the United States Steel Corporation was ordered when Representative Stanley's resolution passed the House unanimously.

The Illinois House has passed a bill prohibiting the publication of a detailed statement of executions, murders, or attempted murders.

Senator McLean of Connecticut has introduced a bill to protect migratory birds in all states between Jan. 10 and Aug. 15.

International.

The Marconi company has so far refused to allow vessels fitted with the Marconi system of wireless telegraphy to communicate while at sea with other vessels fitted with wireless systems other than Marconi. The same regulation has also applied to the exchange of messages between vessels and certain stations on shore. The French minister of public works, M. Dumont, has now, however, signed an agreement with the various companies interested in the Marconi Company's wireless telegraphy whereby these regulations are canceled.

The Japanese government has issued an edict to Japanese tea growers that hereafter the manufacture of artificially colored teas in Japan is prohibited. This action follows the ruling made by the United States treasury department that on and after May 1 of this year teas shipped to the United States must be free from any coloring or facing matter whatsoever, and must be in their natural colors.

The House of Commons has passed the Parliament bill for the curtailment of the powers of the House of Lords. An amendment moving the rejection of the whole bill was defeated on May 15 by a vote of 363 to 243, and a motion for the adoption of the bill on its third reading was carried, 362 to 241. The bill will shortly go before the House of Lords.

The Chinese government has announced that it will relieve the provinces of control of all trunk line projects, because the provinces have shown their inability to construct these, and also that it will immediately construct trunk lines throughout the empire. For this purpose the government intends to employ foreign loans and foreign engineers.

Industrial and Commercial.

In July, 1913, there will be completed the greatest engineering project now in process of construction on American soil, with the single exception of the Panama canal. This is the mile-long dam which will stem the waters of the Mississippi at Keokuk, Ia., says the *World Today*. When the waters, guided by engineering craft, pass through thirty turbines they will generate two hundred and fifty thousand horse-power, enough to light every private and public lamp, run every street car and turn every factory wheel in practically every Mississippi valley city. The dam is to be the largest in the world, with the single exception of the Assouan irrigating dam across the Nile in Egypt; the water-power plant will be the largest in the world without exception, unless two or more of the Niagara plants are combined for the purpose of comparison. The completed dam will be fifty-eight hundred feet in length, of reinforced concrete, thirty-seven feet high, and of the same width. The dam will result in the formation of an immense lake from three to five miles wide and forty miles long above Keokuk, changing the Des Moines rapids into a placid lake.

At the local shops of the Santa Fé railroad at Topeka, Kan., the largest locomotive in the world has been completed. Fifty of these engines have been ordered for this road, all on the same principle as this one, which is known as the Mallet type. The larger among them cost nearly fifty thousand dollars each. They can haul ordinary trains up steep mountain grades where under other circumstances the train would have to be shortened or the assistance of another locomotive procured. This new locomotive is nearly 122 feet long and weighs 375 tons with its tender. It has ten pairs of driving wheels in two sets of five pairs each.

For the last ten years the Connecticut state forestry bureau has accomplished splendid things, and Connecticut is now saving her tree growth by proper thinnings and intensive cultivation, careful cutting and extensive planting. There are four state forest plantations where experimental work is carried on.

The wages of the trainmen in the United States and Canada have been increased thirty-seven million dollars in a year.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"AS HAVING NOTHING, AND YET POSSESSING ALL THINGS."

SAMUEL GREENWOOD.

PERHAPS the sweetest note to human ears in the message of Christian Science is its unfailing hope. It admits of no incurable ills, no incorrectible errors, even the uttermost of human distress and despair is not considered beyond the redemptive reach of infinite Love. In Christian Science all may find encouragement to be unwearied in well-doing, since, because of the infinite nature of God, good, evil must eventually yield up its baseless claim in human consciousness. Hence the achievement of every good aim is only a question of persistent work in the right direction. Although, to the present sense of things, the fact of man's divine sonship does not fully appear, the Master's benediction still rests upon those who do not see and yet believe.

So-called life in matter has no relation to Spirit; therefore it has no consciousness of spiritual being, or of man's spiritual possessions and endowments. Its highest attainments are but dreams of the materially unattainable. Limited to this material sense, stung by its disappointments and denials, its hopes deferred and its mockery of their highest aspirations, mankind have turned baffled and despairing from its failures and its limitations, its misery and its mystery. Into this darkened sense Christian Science comes as a "great light," revealing not only the shadowy and false nature of materiality, but the real man's spiritual liberty and perfection. In the words of Mrs. Eddy, it says to mortals, "The illusion of material sense, not divine law, has bound you, entangled your free limbs, crippled your capacities, enfeebled your body, and defaced the tablet of your being" (Science and Health, p. 227).

The material concept blinds humanity to the capacity for good and the right to dominion which belong to God's children, and in the spiritual enlightenment it brings, in showing the true relation between God and man, is seen the redemptive power of Christian Science. Although as appreciative of love and joy and beauty as the more favored, countless victims of environment, of education, or the accident of birth, the handicap of seemingly insurmountable disadvantages, supposedly inherited weakness, or the unceasing demand to toil for daily bread, are denied everything but the freedom to work and suffer. Not one of all these but would gladly escape from this bondage did he but know the way, not one whose outlook would not begin to brighten and his environment become less rigid, if he discerned even a little of the truth that man is the son of God and is subject only to good. Through Christian Science even the most abject victim of adverse circumstances may begin to rise to a more spiritual concept of being, and thus find his way out into a larger and truer sense of things.

In Christian Science no one is denied the opportunity to work out his salvation. In this teaching relief may be had from all abnormal states of thought and experience, and each individual may find the way to the attainment of all that is good and true and beautiful. Every student may prove, in some degree, the spiritual reality of his being, all that is worth while, but the first step in this upward progress is to wean thought from its belief in matter to the recognition that divine Mind alone is the substance and truth of creation. The human sense of lack or limitation is not divinely true, for it disappears as man's spiritual origin and relation to God is discerned and understood. It is not conceivable that a single idea or reflection of God should be devoid of the capacity to manifest His glory and perfection, hence it is only a false belief that would deprive humanity of the knowledge of man's spiritual birthright and divine sonship; and through the correction of this belief, Christian Science is bringing to mankind the freedom for which they have longed and prayed.

God will withhold no good thing from them that walk uprightly, says the Scripture. Harmony, goodness, joy, beauty, and all forms of blessedness, are the natural heritage of the sons of God, not unmerited gifts or rewards. They inhere in man as God's image, and are inseparable from His creation. Between divine Principle and idea there can be no sense of lack to be made up, no loss to be restored, no working for reward. These pertain alone to the mortal material sense of things. By virtue of reflection, man possesses all that belongs to the Father, his divine Principle, and if man in God's image and likeness is our ideal, we know that all good things are ours now as surely as they ever will be. It is only when one would see this truth materially that it seems infinitely distant and unattainable. But between the material and spiritual sense of good there is ever an impassable gulf, for the former is "like a shadow that declineth," while the latter is the treasury of eternal substance "that fadeth not away."

Let mortals lift their thought Spiritward until they catch and retain a glimpse of the truth, taught in the Scripture and in Christian Science, that man is never other than the son of God, never other than spiritual and harmonious, and however unfortunately they may be circumstanced they have begun by that much to rise heavenward. This is not poetic fancy, but plain fact. Christian Scientists have found that when their thought turned, even a little, from the material to the spiritual, the beneficent effect was felt in all their experience. This improvement may seem almost imperceptible at first, but it is there. There is a moment when the beam of day first strikes the night, and to one not intently watching the change might pass unnoticed; but the change is there, and increases moment by moment until the darkness passes and light reigns. Likewise, in one's spiritual experience, the first faint gleam of truth might not be appreciable, but if given the opportunity it will increase and glow until one's whole outlook takes on a brighter aspect, and he feels that the dungeon doors of sense are swinging open to light and freedom.

It is as true that whatever is right and good is at hand for all to realize, as it is that God is omnipresent. What the heart divinely hopes for will be found already supplied as the veil of materiality is put aside. The glory and the beauty and the freedom of spiritual being await the recog-

Digitized by Google

nition of humanity, though it may be in the sense that the gold awaits the possession of the miner; that is, we may have to work patiently and long for their conscious possession. Every man who thinks right and does right has a right to the things which God provides, and He, being no respecter of persons, has provided all good for all men. Whatever is lacking in our sense of good will be realized as the belief in evil is relinquished and perfection in and of God is recognized as the sole truth of man's being.

Christian Scientists know that they are working on the winning side, despite occasional seeming failure, and this assurance is a source of joy which the worldly sense neither understands nor can take away. Every honest effort to reform, to enthrone good in consciousness, to love unselfishly, is fruitful and successful and is the prayer one can offer at all times. Though the way out of material sense may seem difficult and slow, it is incomparably preferable to feel that one is awakening to even a dim perception of spiritual reality, than to remain engulfed in mortal illusions. If we keep our "gaze on the realities supernal" (Science and Health, p. 26), each day's faithful work will forward our realization of man's divine heritage, and we shall, as our Leader assures us, "rise to the spiritual consciousness of being."

THE CIRCLE OF LIFE.

MYRTLE H. SMITH.

THE gospels show that Jesus began to prove life to be unending by knowing that life does not begin, and without this knowledge his demonstrations would have been impossible. No teaching of our Master is more emphatic than that concerning his sonship to God, and the fact that this relation had always existed.

The first recorded utterance of Jesus shows that even as a boy of twelve he had pondered these things and knew that he must resist the thought of human parentage and birth which would give to his life a beginning. At this time he separated himself from his parents and tarried behind in the temple. When sought and reprimanded, he gave this answer not only as a reason for his act but as a key to his future thought and conduct, "Wist ye not that I must be about my Father's business?" This answer might be regarded as evidencing only that he had been educated with a knowledge of the immaculate conception and did not recognize the fatherhood of Joseph. This view is disproved, however, since the same thought is expressed in our next account of him at the marriage feast of Cana, when Mary in the ardor of motherhood urged him to do a wondrous work. He turned to her with the question, "Woman, what have I to do with thee?" In this he was not guilty of any disrespect, but evidently resisted the thought of all mortal parentage, asserting, recognizing, claiming God alone as his Father-Mother.

In proof of his consciousness that this loving bond had always existed, and that it would continue eternally, we find him saying, after he had impressed his sonship on his hearers, "Before Abraham was, I am." No word was oftener on his lips than "Father," no teaching more insistent than that God is the Father, not only of Jesus the Christ, but of all men. In his message sent by Mary Magdalene to the disciples after the resurrection, he said, "I ascend unto my Father, and your Father." Thus man becomes the rich inheritor of the blessings which Jesus enjoyed, and which each will share as soon as he establishes in his own consciousness a clear sense of the ever-existing parentage of God.

This universal and individual fatherhood of God is one of the truths which enter into the Scriptures with the appearing of Christ Jesus, for up to that time God was sometimes referred to as the Father of the race, but seldom if ever as the Father of the individual. When about to make his supreme demonstration over the power of death, Jesus seemed to be deeply conscious that life never had a beginning, since he prayed for a continuance of that relationship between himself and his Father which had existed "before the world was." Respecting this, Mrs. Eddy says, "If life ever had any beginning, it must also have an ending" (Science and Health, p. 429). Denying that man begins at material birth and asserting that he was and is forever with the Father, we see that he is spiritual and perfect; and thus one of the roots from which springs all human discord is weeded out and the time of greater accomplishment in Christian Science is brought nigh.

It may be thought that the overcoming of death can be postponed until sin and disease have been overcome in greater measure; but as the question of material existence, with its beginning and end, enters into every presentment of evil, we must lay hold of the right consciousness here and now. Every belief in disease is a belief of disease in a material body or mind, and in disproving the inception of the material body, the belief in a kingdom wherein disease can reign is destroyed. That this recognition of man's independence of all ties but those which bind him to God does not make him less loving to those who are ours in the human sense of existence, is revealed by an incident in the life of the Wayshower.

When on the cross, at a time of great mental stress, he turned to Mary and said of John, "Woman, behold thy son!" and to the beloved disciple he said, "Behold thy mother!" In Paul's epistle to the Corinthians we read that though we may understand all mysteries and all knowledge, if we have not love we are nothing. So, if called where death argues its reality, our vessels must be filled with the oil of preparedness, not only of understanding, but of love. A life of love is necessary, for this is the time for sure quick work, and our Leader says: "If the Scientist reaches his patient through divine Love, the healing work will be accomplished at one visit" (*Ibid.*, p. 365). Then what to others would seem a trying emergency will become to the Scientist an opportunity to prove "the power of an endless life."

THE HEAVENLY VISION.

DR. EDMUND F. BURTON.

IN his endeavor to investigate and control his own thought processes, the truth-seeker sometimes experiences a sense of confusion and even of inability to follow the advice to "hold fast that which is good," for the reason that he is uncertain as to what that good is to which he should and fain would hold fast. To the ear accustomed to listening to mortal mind suggestion, the voice of Truth may seem so very weak and indefinite that there is a sense of uncertainty as to its utterances. While there is an honest purpose and desire to emulate the Master, who said, "As the Father gave me commandment, even so I do," there seems to be difficulty in apprehending the commandment.

A demand for light and guidance in our . s is not unreasonable, and in fact it is granted before it is made. The teachings of Christian Science lay emphasis upon the truth that God is "not afar off," but is "the Father that dwelleth within." They declare that nothing but a false sense of life and of its values keeps us from the full realization of the harmony in which we really "live, and move, and have our being," and through these teachings we are furnished with an infallible test whereby we may distinguish between the true voice and the false. They make practical the truths whose statement is familiar to all Christendom; namely, that God is Mind, that God is supreme, that God is good; hence, that all true thought is good, Godlike; that the highest thought is the best, the highest good perceived by the human mind,—its present conception of the revelation of God, the perfect Mind.

The vision that speaks of better being is the voice of God speaking to man, and there is never a time when it is not

Digitized by Google

possible to decide what is the highest conception or aspiration in consciousness. If there seems to be a doubt in this regard, such doubt is due to the mortal mind habit of accepting less than the highest, and the simple questions addressed to our own consciousness, "Is this the highest, most desirable, most nearly perfect condition which I can possibly perceive?" and "Do I want anything less than that which is the best?" will reveal unmistakably the most awakened vision as yet seen by us, and will elicit that upward desire toward Godlike being which is the expression of Mind voiced by the true man. Nothing is real or even possible which is less than the best that can come to one's thought, for anything less than the best is lower than absolute good, the only Truth. To deny this is to assert that the human mind can rise higher than that of the creator, and can grasp ideas above the conceptions of the Mind that is supreme good itself.

The very fact that we can desire a condition of being better than that which seems to be actual speaks for the possibility of attaining it. The condition thus desired and perceived to be desirable may still be an imperfect vision of Truth, but being a better belief, a higher conception of being than another, we may know that it is nearer the truth of being than the one replaced by it, and also that it may be brought into experience and made, in turn, a stepping-stone in our path toward the realization of absolute Truth. Moreover, that which seems to assert that man does or can desire a condition lower than the best which he can comprehend, may instantly be recognized as an ungodly voice, coming not from intelligent Mind, but "from beneath," and can never sway the one who knows the truth, since man is an intelligent being, and it is not intelligent to choose evil when good is always available.

Any suggestion that the highest thought is unpractical, unattainable, or chimerical may be effectually exposed as a fallacy and silenced by the knowledge that the highest thought is always the most powerful. God is omnipotent, the source of all ideas, and "is not separate from the wisdom He bestows" (Science and Health, p. 6). The highest thought, being the most Godlike, therefore comes clothed with the power of divine Mind to enforce itself in consciousness, and we need only let it do its perfect and perfecting work in our experience, knowing that whatever demand may be involved in the acceptance and realization of the vision can always be accepted, and that the difficulties which may appear to stand in the way are but a mist, which will fade into nothingness as the vision is obeyed, for there is no law operative in man lower than the highest,—omnipotence.

We should therefore be ever obedient to the heavenly vision, even though it may seem at first to be no more than a vague dream of seemingly unattainable good, and through obedience the habit will be gained of listening to the voice of aspiring thought and of identifying oneself with the man who hears it and obeys the call of Truth. The man that perceives the revelation is the real man, the only man, the son of the Father, and that which seems to be present to deny the power or possibility thereof is the carnal mind,—not an entity, not a thing which has existence, but only a pretension of enmity against that which is, God and His idea. That which would add a doubting "but" to a glimpse of the still unattained and inexperienced, that which would have us be resigned to anything lower, is non-intelligent inertia, powerless and neutral; it is not the male and female of God's creating. The true man never fears to assert and know the reality of the highest. He cannot wish for more or better being than that which is already true and eternally his, since the perfect Mind is the source of all that comprises perfect being. Gradually will this voice of God come to be heard always and above all the din of matter, and thus will the identification of the individual with his true self become complete, so that the acknowledgment of the perfection of the only character will be spontaneous and constant, free from all denial of the highest, and the supreme Mind will be ever recognized and manifested.

Moreover, the exercise of true mentality, in the contemplation and acceptance of Godlike thought as our own, brings us the mental power of concentration. Lack of concentration implies a belief in some other time than a good-filled present, of conditions more or less uncertain which have affected or may affect our well-being, and which therefore obtrude themselves as needing or tempting our personal attention and management. True concentration is the simple and poised state of a mind free from fear of evil, because free from doubt of the infinite reality of good, and it possesses that singleness of vision which allows the whole being to be filled with the consciousness of the presence of God.

The theory of evolution is simply the material version of the truth that the real man always chooses that which is good and rejects the less good or evil; and the recognition, in addition, that individual experience is typical of that of the race, will indicate the fallacy of the belief which would retain as true and as a remembrance that which claims to be evil in a past experience, but which, having been found to be false, is known to be non-existent. In the history of the race a generation may be looked upon as typifying any moment in the personal history of a mortal. It is evident that to one generation there is no reality or existence to that which, having been abandoned by preceding generations, has passed out of experience, out of all except so-called racial memory,—a concept as false as that of material heredity or personal memory, which claims to be a collection or recollection of things which were once true but have ceased to be so. Time is no part of eternity, and mortal man, either as a person or a race, has no past, no history or memory, since he exists not in eternity. There exists only that which is present Truth, supreme good, and this has neither past nor future, but remains ever the whole of the eternal now.

There has never been nor can there ever be anything "too good to be true." In fact, never has there entered into human mind anything good enough to be wholly true, since perfection only is true, and "no man hath seen God at any time." It is, therefore, one of the beneficent results of the legitimate application of Christian Science teaching to our daily thinking and living, that we are privileged to bring into our experience as individuals and as a people the highest and most glorious visions that have ever come to the human mind; and not only this, but also to know that there is ever more to follow, since, with minds ever open to the expanding, enlightening, and uplifting truth that there is no other reality than good, we realize that "eye hath not seen, nor ear heard, neither have entered into the heart of man, the things which God hath prepared for them that love him."

OUR RESURRECTION.

LOUISE DELISLE RADZINSKI.

THE ingenuity of mortal mind in finding causes of fear wherewith to torment mankind is nowhere more evident than in the common beliefs concerning the resurrection of the dead. That Christians should base their beliefs upon the teachings of Jesus the Christ would seem the only rational and loyal exercise of their faith; but the sinuosities of error have led mortal man from the positive and pure teachings of the Christ, Truth, into the consuming terrors caused by the misunderstanding of grandly poetic passages of the Apocalypse which have been accepted as expressing judgment and condemnation of man: whereas Christian Science shows these penalties as directed to the erroneous beliefs of mortal mind, through which mankind has been led from one state of suffering to another.

Thus for centuries human beings have been turned from

Digitized by Google

the promises and declarations of Christ Jesus to shudder in fear and despair at the picture of the resurrection and final judgment as presented in Revelation xx. 11-15. This conjunction of the resurrection and the judgment is the root of the fear which has darkened the lives and destroyed the joy of life of so many who sought in fear and trembling to work out their salvation. The annals of religious history are full of the names of saintly men and women who wore out lives of penance and suffering, seeking some way of escape from the dread judgment for which they should rise from their graves. That these fears are chimerical, that they are absolutely without foundation in truth, the words of Christ Jesus clearly prove: "I am the resurrection, and the life: he that believeth in me, though he were dead, yet shall he live: and whosoever liveth and believeth in me shall never die."

And that they who believe in him shall be one with him in the resurrection is plainly told in John xvii., where he says, "And the glory which thou gavest me I have given them; that they may be one, even as we are one: I in them, and thou in me, that they may be made perfect in one;" and Paul, to whom such dazzling spiritual illumination had been granted that his material sense of being had never recovered its former erroneous belief of perfection, understood the resurrection and judgment aright when he declared that "there is therefore now no condemnation to them which are in Christ Jesus, who walk not after the flesh, but after the Spirit. For the law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." After nearly two thousand years, during which these words have rung like trumpet-calls to arouse bewildered and benumbed mankind to make an effort to reach the plane of understanding that will enable them to grasp the regenerating power of these declarations of Truth, God sent His servant, our beloved Leader, to make plain to the dulled mentality of the age the message of divine Love that the spiritually hungry had yearned for so long.

This inspired woman has given mankind the key to the seemingly hidden treasures of the sacred Scriptures, for men have searched the Scriptures for centuries, believing that in them they would find eternal life because they testify of him who declared himself the resurrection and the life, and through whom we attain to the resurrection which is life. In Science and Health (p. 593) we find a definition of resurrection that destroys all the old and fearsome beliefs concerning that dreaded experience; namely, "spiritualization of thought; a new and higher idea of immortality, or spiritual existence; material belief yielding to spiritual understanding."

This wonderful summary of the three great steps out of the grave of mortal beliefs, fears, and sufferings, into the heaven of spiritual understanding, the heaven of oneness with God, through the love which God bears to those who believe on Him, is the gate of the way of life; of that Life which is divine, made known to us in Christian Science as divine Principle, Mind, Spirit. We enter into the true consciousness of Life as we become one with Christ, Truth, that oneness which is the true at-one-ment and which Jesus continually sought to demonstrate as existing between himself and his Father, that mankind might know the way to life; that is, the realization of the life eternal.

When thought shall have been sufficiently spiritualized to enable mankind to understand that all forms of belief of life and intelligence in matter are judged and condemned (not man, who cannot be condemned, for he is of God, spiritual and perfect), that dreaded passage in Revelation xx. will have lost its terrors, and many who hitherto have feared death, the resurrection, and the last judgment, will waken to the truth that there is no death, no resurrection, no judgment to be feared. They will find, in the place of these beliefs, a way to life eternal, life purely spiritual; that the hourly judgment and casting off of erroneous beliefs, as they have faithfully followed Christ in their daily lives, has made them free from the law of sin and death, and that Life as God is the only reality.

This thought of constant purification from error; of hourly development into the freedom from fear (the consciousness of evil, of sin); that as sin is cognized and denied it is destroyed and has no more power,—this thought will bring mankind into the new heaven and the new earth, the realm of Mind, in which man shall find himself one with God.

IMMORTALITY VERSUS MORTALITY.

MARY JEAN MILLER.

MORTAL means "subject to death," while immortal signifies the "never fading, never failing, deathless, eternal." Could two words be more opposite, even antagonistic, in meaning and import! Yet the apostle Paul affirms "this mortal must put on immortality." In Science and Health (p. 164), Mrs. Eddy indicates that immortality is divine Science, the Word of God, in which we find that man was made in God's image, hence sinless and deathless.

St. Paul writes that the mortal sense must "put on" immortality, "the new man," and Christian Science interprets the "new man," immortality, by giving us a clearer sense of "the way, the truth, and the life" in Christ Jesus, who illustrated the passing or putting off of the mortal appearance and the attainment or putting on of the immortal reality. The "Word was made flesh, and dwelt among us." A word is the sign of an idea, and the Word which was made flesh was the manifestation of the spiritual idea, the eternal Christ, Truth, which "comes to the flesh to destroy incarnate error" (*Ibid.*, p. 583). The "former conversation" which Paul says is to be "put off" consists of *mortal* beliefs which never can become a part of anything, *for they* are illusions. He desires us to exchange these, as one would a worthless garment, for the immortal reality, the seamless robe of divine Science which he says we "put on" as we are "renewed in the spirit of [our] mind." Renewing the spirit of our mind means more than simply noticing again the spiritual fact of being: it requires a clear, continuous realization that man is now, always has been, and shall always be God's likeness in reflection, and expression of word and deed.

Christian Scientists have a glorious mission to perform in working out the greater works of their salvation. Jesus was human and "was in all points tempted like as we are, yet without sin." In form and appearance he seemed mortal, while at the same time he was demonstrating the Christ, eternal Truth. There is but a step, a turn of thinking to the right, between humanity facing the light, "symbol of Truth; revelation and progress" (*Ibid.*, p. 591), in Christian Science, and the mortal musing in the midst of the illusive shadow of its own false, fallen Adam-beliefs. It is inevitable that mortals must turn. The mortal claim of not needing to is its own destruction; while the turning away leads to wider vision, broader views and light.

We who through Christian Science have gained some understanding of the truth about God, man, and the universe, are to be in the world, but not of it. If the Christ be "lifted up" in us, our conversation and manner of life is so filled with spiritual good, and we so reflect and transmit Life, Truth, Love, that while mortals turn to us as to other mortals, they find instead of the shadow of death the health, harmony, and healing of the one Mind, even the eternal Principle.

The duty we perform perforce,
The graciousness and deed divorce;
But what Love quickens us to do,
Its grace suffuses through and through.

SELECTED ARTICLES.

[Editorial in *Los Angeles* (Cal.) *Express.*]

Los Angeles is opposed to the system of medical tyranny over the public schools designed to be established by Senate bill No. 733 and Assembly bill No. 964. The fathers and mothers of this city will not deliver their children over to the doctors' trust which those measures would create. If the price of education at the public schools is to be the surrender of all attending scholars to the arbitrary authority of state physicians who will prescribe in bigoted obedience to the requirements of a would-be medical monopoly, Los Angeles will not pay that price. As the parents of southern California would resist to the uttermost the introduction into the schools of a group of sectarians who should exercise exclusive control over the religious teaching of their children, so will they resist the proposed surrender of their children to a medical trust. As the public schools, attended by children of all religious creeds, must be kept free from the dominating influence of any single creed, so must they be kept free from the dominating influence of any single school of medicine.

We are of the race that during these centuries has won liberty of conscience and freedom of belief. As no state would now dare direct how the children in its schools should worship God, so should no state dare attempt to compel such children to submission to the tenets of some particular school of medicine. If, in opposition to the beliefs and convictions of parents, their children are to be treated and prescribed for by state practitioners exercising arbitrary authority in aid of the establishment of a medical monopoly, it will not be long before state clergymen, representing some state creed, will be given exclusive control over their religious beliefs.

Let the Legislature make no mistake in its judgment of public sentiment as to this proposal. All else that it has done, important as its work has been, sinks into insignificance beside this act that is proposed. If the Legislature aids the doctors' trust to this attempted seizure of the public schools, it will become infamous. If it attempts to compel the boys and girls of California to submit themselves to the arbitrary control of monopolistic medical arrogance, it will become odious and hateful. No legislation of this character should receive an instant's consideration. It were suitable to the period in which men were burned at the stake because they chose to worship God in accordance with their consciences, but it has no place in this century of freedom and enlightenment.

The *Express* attacks no school of medicine, but no school of medicine shall attack the liberties of the people. California is free from medical tyranny. Let it remain so. It has no state religion. Let it not establish a state system of medicine. Should physicians of any school be given power to examine and prescribe for children because they are scholars, presently they would be given authority to examine and prescribe for men and women because they are citizens. The schools now are free and they must be kept free. Neither sectarianism nor medical slavery shall be allowed to overwhelm and destroy them.

[Frederick Dixon in *Cheltenham* (Eng.) *Examiner.*]

In the course of her explanation of the scientific teaching of Jesus, Mrs. Eddy had to deal with that storm-center of theology, the origin of evil. No one has ever yet discovered the origin of evil, and no one ever will succeed in doing so, for the simple reason that if the origin of evil could be discovered, evil would *ipso facto* be proved real, and the fruit of the tree of the knowledge of good and evil would be revealed as the truth. Mrs. Eddy, following the teaching of Jesus, declares that evil is an illusion.

The Christian religion maintains that God created all things that were created, and created them good. It is this most absolute statement of the unreality of evil which has been a thorn in the flesh of the orthodox churches for centuries, and which drove some of the early Christians into Gnosticism. This absolute statement is either true or it is not true. If it is true, then nothing which is not good was ever created by God, and if it was not created by God, what was it that created it, and where, if its creator was not created, did the creation come from? The Bible says that God created man in His own image and likeness. Now, God is Spirit, therefore the image and likeness of God is spiritual and not material. This is the exact statement which Mrs. Eddy has made, on page 468 of Science and Health, where she says that "all is infinite Mind and its infinite manifestation," and that, therefore, "man is not material; he is spiritual." Now, if evil is not God-created, it can only exist as an illusion, and the only way it is possible to fathom the nothingness of that illusion is by learning to understand the allness of God.

No man can prove a negative. The only way in which it is possible to comprehend a negative is by mastering the positive. In the exact proportion in which a man begins to understand the positive, he begins to learn the nothingness of the negation. The only way in which it is possible to realize the nothingness of the illusion of evil is by learning the allness of God. This knowledge of God is the knowledge of the truth which Jesus declared would free the world—from what but the belief in the reality and power of evil? "Ye shall know the truth," he said, "and the truth shall make you free." In similar language, the epistles speak, as has been shown, of the absolute or scientific knowledge of God, that is of Truth; and so, in the same way, according to one of the greatest of our bishop-scholars, the Greek text of the fourth gospel separates the absolute from relative truth by a particular use of the definite article, showing that Jesus sometimes spoke of the absolute truth, the fact of the allness of God, and sometimes of the relative, human sense of truth, which teaches a belief in sorrow and sickness and sin. "Sickness," Mrs. Eddy writes on page 460 of Science and Health, "is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being."

It was to show the world what the absolute truth of being is, that Science and Health was given to the public, and instead of trying to dismiss that teaching with a casual *obiter dictum*, without an attempt at substantiation, it would be wiser to remember that Jesus taught that the truth was absolute, and that because it was absolute, it could be demonstrated when understood. This demonstration is the real secret of the miracle. Jesus came preaching his gospel, or good news, to a people who were far from prepared to accept it, and when they doubted, he made use of the miracle, or object-lesson, to show that the truth he taught was, as the writers of the epistles declared later on, scientific and so demonstrable. "He that believeth in me," he said, he that understands my teaching, "the works that I do shall he do also;" that is, he will be able to demonstrate that teaching as I have demonstrated it. In this way Christ Jesus, and none other than he, made the healing of sorrow and sickness and sin the proof of the amount of knowledge his followers had acquired of the truth which was to make the world free.

[William J. Bonnin in *Birkenhead and Cheshire* (Eng.) *Advertiser.*]

Christian Science stands for knowledge of God, and it declares that such knowledge is the only true knowledge or science; and, further, that it is a demonstrable science. As soon as one lays hold of the hem of the raiment of this Christ-knowledge, an insight into the meaning of life is gained beyond all the biological research of the ages. And what was it but this knowledge that the Founder of Chris-

Digitized by Google

tianity sought to instil into his followers? "This," he said, in perhaps the most sublime chapter in the whole Bible, "is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." What was it but this knowledge of true life that enabled him to heal all manner of disease? What but this knowledge constituted the mind that was in Christ Jesus which Paul enjoined the Christians at Philippi to strive for? And what but this knowledge could have been referred to by Christ Jesus when he instituted once and forever the test of the true follower of his teaching, "He that believeth on me, the works that I do shall he do also"?

Christian Science declares that the only true or scientific healing is the healing that Jesus practised and commanded his followers to practise. It is the healing of sin and sickness and all that is unlike God by the knowledge of the truth that the omnipresent God is good; it is the fulfilling of the promise, "Ye shall know the truth, and the truth shall make you free." It is idle, almost childish, for any scoffing critic to ask a Christian Scientist to perform some wonder to order; such a person is in danger of being numbered of that generation which asks for a sign. And it is similarly idle to attempt to scare people by a lurid picturing of the peril awaiting mankind when deprived of iodides and bromides and amyl nitrites. These things were not yesterday, and will not be tomorrow. They represent merely the constantly shifting human attempt to find power and salvation in matter instead of in Spirit, and their only efficacy is derived from the supposed power that human belief can invest them with.

Christian Science has come to prove that evil has no power or real existence, since all is good. However hard this may be for the unsympathetic to accept, its reasonableness and certainty unfold themselves to the honest student of Christian Science in a joyous revelation, and he begins to prove for himself the truth of the teaching by a gradual or immediate release from the bondage of evil. The number of people in all parts of the world that have thus proved for themselves the truth of Christian Science is increasing day by day, and they are the people who can speak with authority on the subject, and who, week by week, testify in their thousands to its healing and uplifting power.

[William E. Brown in *Los Angeles* (Cal.) *Express.*]

Mrs. Eddy did not establish a new religion nor evolve a new sect. She simply called the world's attention to the vital fact that primitive Christianity had lost none of its efficacy to heal the sick and sinful, and that it is just as available today to meet the needs of mortals as it was in Jesus' time. In other words, Christian Science is practical Christianity—no more, no less. Consequently, to assume that Christian Science will wane is to conclude that Christianity will do likewise, for they are identical. This statement does not rest on mere assertion, but is substantiated by proof of the most practical kind, namely, the healing of all manner of diseases and the transforming of sinners into consecrated followers of Christ. This is the measure of proof established by the Master, who said, "He that believeth on me, the works that I do shall he do also."

Christian Science, or, as its name indicates, an exact knowledge of Christianity, is not dependent upon personality in this age any more than it has ever been. Prophets and disciples have passed away, but the prophecy of Jesus has been fulfilled: "Heaven and earth shall pass away; but my words shall not pass away."

The discovery, growth, and accomplishments of Christian Science seem almost impossible, but unmistakably prove its divine origin. In 1866 there was only one Christian Scientist on earth, a lone New England woman, who consecrated herself to the task of imparting to suffering humanity that which, if practised, would free the race from sin and sickness. Firm in her selfless toil and struggle against abuse, ridicule, and persecution, she persevered, sustained by the Mind of Christ, until today the Christian Science movement is without parallel in religious history.

This mighty work for the salvation of the race from all that is abnormal, mentally, morally, and physically, will go on until the prophecy of Isaiah be realized: "And the inhabitant shall not say I am sick: the people that dwell therein shall be forgiven their iniquity."

[Ezra W. Palmer in *Montrose* (Col.) *Press.*]

People become interested in Christian Science because they find in it health, strength, peace, and happiness, a right understanding of God and man which, despite their most earnest endeavors, they were unable to find elsewhere. They find through the study of Christian Science that God is a God at hand, and not afar off, and through this right relation to God the sick are healed, poverty is abolished, sin and evil destroyed. Because Christian Science does these things for those who earnestly seek its ministrations, they who have proved its beneficial effects rely on it confidently, to the exclusion of all other healing agencies.

Christian Science teaches, as does the Bible, that God is Spirit, and that the universe is spiritual,—"an house not made with hands, eternal in the heavens." St. John in Revelation saw this spiritual universe,—a new heaven and a new earth, in which there was no pain, sorrow, weeping, or death. Pain, sin, disease, evil are unreal in the sense that they are not a part of the spiritual universe, and will disappear as man comes to understand God aright. Jesus never let any one needlessly suffer who came meekly desiring to know God. He healed the sick of all manner of diseases, and nowhere does he teach that pain, sickness, or evil are needful in order to gain the kingdom of heaven. His ministry was to turn men to God and away from the carnal, mortal, and material, and in proportion as men make this separation between the false and the true do they gain the peace that Jesus promises as the rightful heritage of his followers, a peace in which pain is entirely eliminated.

[From a sermon by the Rev. Loomis O. Black, as reported in *Boone* (Ia.) *News-Republican.*]

The greatest woman of modern times, probably of all time, was Mary Baker Eddy. Her system of religion was different from Tolstoi's; but they had this similarity, they both believed absolutely in the teachings of Jesus and in God. They both understood the unhappiness of men and believed that God would have all of His children really glad. They both were dissatisfied with the results obtained by the other religious institutions and appealed to people to accept the teachings of Jesus.

Mary Baker Eddy was a comparatively unknown woman when she was fifty years of age. At the time when most women consider their real work finished, she began. And during the past thirty or forty years, when most churches have been losing ground, she gained a million followers. In that number will be found all kinds and conditions of people. The wise, the rich, the ignorant, and the poor have become acquainted with Christian Science and have been helped. In a generation when we have said that men were not religious, this sect, which bases all its claims on the relations which exist between God and men, has grown and become powerful. I believe the principal reasons for the remarkable growth of Christian Science are that it teaches that God is good and all-powerful, and that men, being made "in the image of God," are therefore good. When Mrs. Eddy began teaching, most of the churches were attempting to show that men were evil and that God was largely far removed from their needs and was full of hate and revenge. The churches were quarreling among themselves. Not having peace, they had none to give to individuals. People

Digitized by Google

were starving spiritually while each denomination was attempting to prove its individual superiority. In the race for a "following" the churches forgot their real mission, to develop the relation existing between God and men.

Mrs. Eddy had been ill. Being naturally deeply religious, she thought long and often of God, and came to believe that God was really good, that He had created all things and that He had not made a mistake. She discovered that all the forces, outside those of men, were working together harmoniously and perfectly, and became certain that God intended that man should join with Him. She began to teach [illegible] and happy, that in the goodness of God and know that men were made in His image; let us obey the higher impulses and become more and more "in tune with the infinite."

The greatness of Mrs. Eddy rests not upon the fact that a million people gathered around her, but upon the real help she has given that people. It is truly a great work to show unhappy men that there is a good God and that He would have them happy and to make them understand and obey. Our lesser plans may be broken, but what matters that, when we understand that the divine plan is best and cannot be broken or changed? Let us be glad that this woman lived and made plainer the relationship between God and men.

[C. R. Munro in *Wiarton* (Ont.) *Canadian*.]

It is stated by a self-appointed critic that Christian Science contains much that is "neither true nor wholesome." Mrs. Eddy's teachings are based wholly upon the Scriptural declarations that God is Spirit, and God is All-in-all, and every statement in the Christian Science text-book is in full accord with these premises. Jesus said, "By their fruits ye shall know them." During the past forty years many thousands of persons have been healed of so-called incurable diseases, including many cases of organic disease, diagnosed by competent physicians as hopeless. Many others have been freed from the bondage of slavery to the worst forms of vice and sin, including drug and liquor habits of many years' standing. Homes have been happier, and men and women have been benefited physically and spiritually through the ministrations of this Science. These results are practical and convincing proof that Christian Science is one of the greatest blessings that have come to mankind since the days of our great Master.

[H. Coulson Fairchild in *Passaic* (N. J.) *News*.]

Archbishop Jenvey admits there is a wide difference between saying, "Thy sins be forgiven thee," and "Take up thy bed and walk." He remarks, "It is easy for God to say both, but it is hard for the ministry to say either." Jesus proved to the Pharisees that they might know that the Son of God hath power on earth to forgive sin. He said to the sick of the palsy, "Arise, take up thy bed, and go unto thine house." Christ Jesus instructed his followers, saying plainly, "The works that I do shall he do also; and greater works than these shall he do."

Christian Science claims the command of Jesus and the word of God to be just as effective today as it was in the time of Christ. We cannot conceive of any time limit being set upon the power of God to heal the sick. It is upon this basis that Christian Scientists claim the healing power is present today, and have proved this premise in the healing of thousands of so-called organic and functional diseases. It is not claimed that the healing power of Christian Science resides in or emanates from the practitioner. It is the action of Principle that heals.

All that Christian Science asks is to be judged by its fruits as a whole. There is plenty of evidence to show that Christian Science is doing a great deal of good in the world today, regardless of the false concepts which are sometimes entertained regarding this Science.

I pray that Love may guide my secret thoughts,
That though I speak no words, Truth yet shines clear.
Or, if they pass my lips, they may be fraught
With comfort, love, and peace to those who hear.
Thus shall I serve God well in differing ways,
My silence or my speech still yield Him praise!

CLARA A. COWLING.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"COME UNTO ME."

JESUS' saying, "Come unto me, all ye that labor and are heavy laden, and I will give you rest," has furnished the text for many a sermon, and its strong assurance that there is indeed a rest for the wearied ones whose daily burdens seem greater than they can bear, has brought comfort to thousands who had otherwise succumbed to discouragement and dismay in the face of what seemed to be both material and spiritual defeat. It will be noted, however, that like almost all of the other promises and exhortations of the Master, there is a condition prescribed, upon the fulfilment of which the reward to be enjoyed is dependent.

In this instance the condition, "Come unto me," is so simply stated that many would say it was not of great importance; that the words convey more of an invitation than they do of a condition; but this failure to sense the real import of Jesus' teaching in this saying is precisely where its value is minimized. If we understand these words to have any lesser meaning than that we are to give up all belief in materiality, then we have missed the full meaning of the lesson and the encouragement which it should convey to us. Mrs. Eddy has said, "Rest assured you can never lack God's outstretched arm so long as you are in His service" (Messages to The Mother Church, p. 37), and this assurance of the Father's loving care for His children, and the condition upon which we must be willing to receive it, is precisely what we find in Jesus' saying. "Come unto me" does not, however, mean that we shall have some ecstatic and emotional concept of the Saviour, but that we shall know and understand God, Spirit, as the Principle of all being, that we shall see Him as omnipotent, omniscient, and omnipresent; know that "he that keepeth Israel shall neither slumber nor sleep," that "the Lord's hand is not shortened, that it cannot save; neither his ear heavy, that it cannot hear."

There is another issue attaching to this condition that must not be lost sight of, namely, the action implied in the command "Come unto me," if the promised boon is to be received; not a passive acceptance, but a diligent seeking, a going after that which we so earnestly long for. The same sense of activity on the part of the recipient of the bounty is conveyed in the Master's precept: "Ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you: for every one that asketh receiveth; and he that seeketh findeth; and to him that knocketh it shall be opened." The note of assurance in this declaration rings true. There will be no failure on the part of the giver of "every good gift and every perfect gift;" the essential thing is that we shall do our part in the asking, seeking, or knocking.

The testimonies which are given in our churches on Wednesday evenings, and those which appear in the *Sentinel* and *Journal* each week and month, prove that the true understanding of God does give rest to those who diligently seek Him, and in this way the promise of the Master is being fulfilled in our midst, just as the reward which is to follow the observance of the other command, "Seek ye first the kingdom of God, and his righteousness," is bestowed upon, or in other words comes as a natural consequent to, those who place the seeking of the kingdom first and highest in their endeavors because it is the right thing to do,—that it is to such "all these things" are to be added, rather than to those who seek the kingdom because of the appertaining loaves and fishes.

The command which the disciples received to preach the gospel and to heal the sick pointed the way to the taking of the kingdom, not by violence, but by the righteousness of Christian service. Christian Science as discovered and taught by Mrs. Eddy means the salvation of humanity from all the mistaken beliefs of an anthropomorphic God, of mind in matter, soul in body. It posits God as Spirit and man as spiritual. When we have demonstrated the allness of God on this basis, we have "come unto" the Father and can claim that rest which He alone can give.

ARCHIBALD MCLELLAN.

Digitized by Google

"The issues of pain or pleasure must come through mind, and like a watchman forsaking his post, we admit the intruding belief, forgetting that through divine help we can forbid this entrance." To this she adds, "Mind is the master of the corporeal senses, and can conquer sickness, sin, and death. Exercise this God-given authority"! This we can do if we remember at all times who it is that we should obey. Jesus said, "One is your Master, even Christ."

ANNIE M. KNOTT.

"THE MASTER OF THE HOUSE."

IT is simply astonishing to note the quickness with which the spiritual sense of the Scriptures comes to students of Christian Science. Here it should be said, however, that they never attempt to force upon others their changed views, though they are glad to share their discoveries along Scriptural lines with those who are seeking help in this way. There are many sayings of Christ Jesus which in the old thought were regarded as references to death, which in the light of Christian Science point unmistakably to the coming of a fuller sense of Life, with its high spiritual demands. Thus we find several passages in the gospels which tell of the coming of the Christ-idea to the individual consciousness, or to that of the race, as, for instance, in Mark xiii and Luke xiii, where "the master of the house" is mentioned; but at one time we were accustomed to think of these beautiful passages as gloomy warnings of the approach of death, even as we once thought of the prophet's call, "Prepare to meet thy God."

In Mark's gospel we have a comprehensive picture of the upheaval of mortal belief at the coming of Truth, and these words of Christ Jesus are wonderfully inspiring when understood in Christian Science: "Watch ye therefore: for ye know not when the master of the house cometh, at even, or at midnight, or at the cockcrowing, or in the morning: lest coming suddenly he find you sleeping." The one who is struggling with a belief in sickness or suffering of any kind certainly lacks the recognition of the divine rule in his mental abode, and he may be wondering why Truth tarries so long instead of coming at once to his rescue. The gathering shadows of evening may portend to him a long and dreary night, and even the dawn may be gray with forebodings, but to the one who keeps ever before him the command to watch and pray, the master of the house may come suddenly to "put down all [asserted] rule and all authority and power." Who would not keep awake to give loving and joyous welcome to the healing and saving Christ?

In Luke we have a reference to the master of the house which is somewhat different from the other, but it is no less cheering to the student of Christian Science. Here the divine idea is spoken of as within the house (or consciousness) and as the guardian of those who have a right to dwell therein, while he denies admittance to all intruders, which may mean beliefs of disease or of sin, or falsehoods masquerading as the ideas of Truth. Though these errors may knock persistently for entrance, Christ, Truth, as the master thought, bids them all depart and says, "I know you not." The all-important thing is for us to know our master and know what true service means. It will never do to parley with doubt and fear, which first question and then deny the authority of Truth and Love, even though to material sense the master of the house may seem to be far away, for to each faithful servant has been given his work and, what is more, he has been given "authority" to do it and to repel every invader with the master's own words, "I know you not."

Our revered Leader says (Science and Health, p. 392),

AMONG THE CHURCHES.

CINCINNATI, O.

Another link in the chain of Christian Science churches which have attracted attention by their simplicity and beauty, will be added tomorrow morning [April 23] when First Church of Christ, Scientist, holds initial services in its new edifice in Park avenue, near Francis lane, Walnut Hills. No special exercises will mark the opening of the structure. The only sign of the event will be the extra service at three o'clock in the afternoon, a duplication of the morning service.

The structure into which the Christian Science congregation moves from Rockdale avenue and Reading road, where it has worshiped for half a dozen years, is the first to be built in the vicinity of Cincinnati expressly for the denomination. The cost of the property has been about one hundred and fifteen thousand dollars, of which seventeen thousand dollars went into the lot.

Cincinnati Enquirer.

MALDEN, MASS.

In October, 1898, a few Christian Scientists began to hold services in Bailey's Hall, and on Nov. 25 organized as First Church of Christ, Scientist, of Malden, holding their first service Dec. 11, 1898, in U. V. U. Hall. About Feb. 1, Marcus Hall in the Browne Building was engaged, and in April, 1900, this church became the first occupant of Assembly Hall, Auditorium Building, which was engaged for the Sunday and Wednesday evening services. The church outgrew this hall, and moved to another in the same building in March, 1908, where it still holds services, with an attendance of between three and four hundred. In December, 1907, the church purchased as a site for an edifice the estate on the corner of Main and Spring streets, known as the Thomas Sargent estate, and has completed payment for the property.—*Daily News.*

EDITORIAL COMMENTS ON THE LIFE AND WORK OF MARY BAKER EDDY.

Following the world-wide publication of editorials and articles relative to the life and work of Mary Baker Eddy, and especially the excerpts from the editorials which appeared in the *Sentinel* from Dec. 17, 1910, to Feb. 18, 1911, requests came to the Publishing Society from all over the field that these articles might be preserved in a form that would be practicable for wide distribution, convenient for ready reference, and suitable for private and public libraries. The field will undoubtedly be gratified to learn, therefore, that a book (132 pages with index) containing the "Excerpts from Editorial Comments," also the special editorial tributes in our own publications, and the *Outlook* article by Frederick Dixon, is now on sale, published in two styles of binding.

Prices for paper covered edition: Single copy, prepaid, 15 cents; twelve copies to one address, $1.50; fifty copies, $5.75; one hundred copies, $10.00. Cloth binding: Single copy, 75 cents; by mail, 85 cents; six copies, prepaid, $4.00; twelve copies, prepaid, $7.50.

THE LECTURES.

ZURICH, SWITZERLAND.

A lecture on Christian Science was delivered by Bicknell Young March 24 in Saal des Konservatoriums, about five hundred people being present. Mr. Young was introduced by Henry Siegler of Lucerne, who spoke as follows:—

We are assembled here this evening to listen to a discourse on Christian Science. It is forty years and more since Mrs. Eddy discovered this Science and brought it to the notice of the world. Those who have taken any interest in matters religious know of the enormous difficulties she had to conquer, owing to prejudice, ignorance, and hatred. Happily things have altered; this new-found, old religion has grown so wonderfully and rapidly all over the world that thinking people, this side of the Atlantic, have for fifteen years taken a great interest in the movement, and therefore an exposition on the subject, coming from an authorized and well-known speaker, may be welcomed by many and lay the foundation of future understanding for others.

It must be understood that Christian Scientists avoid proselyting, and that the main purpose of a lecture is to correct false opinions and statements, all of which can be done only by an authority. There are many people who believe, and I dare say they are right, that Mrs. Eddy's discovery and her courageous and unassailable defense of it has given the impulse to the increasing movement in religious matters for freedom from dogmas and fetters, in England, Germany, France, and even in this country; and it cannot be denied that she has worked to show to the world the way to perfect freedom.—*Correspondence.*

CARTHAGE, MO.

The High School Auditorium was well filled last night [March 27] for the lecture by Frank H. Leonard on the subject of "Christian Science." Attorney Allen McReynolds served as chairman of the evening and introduced the lecturer, saying in part,—

To you of the audience who come as I do with little knowledge of the subject, I would say this, that any religion which in fifty years can enlist under its banner more than a million souls, which can take credit for the healing of as many more, whose churches number more than a thousand and are to be found wherever God's sun shines, does not need any other justification for its existence. Anything which lightens the load which humanity has to carry, which softens the rigors of each day's duty, cures the ills of the flesh and sweetens each day's life, needs no praise from my lips and deserves only sympathy from yours. Of that religion many of us know but little. We have one with us, however, who comes from The Mother Church, who speaks with the voice of authority, and whose message, I am sure, is one of hope and cheer.—*Carthage Press.*

HOOPESTON, ILL.

A lecture on Christian Science was delivered by Bliss Knapp, at the church edifice, corner Third and Washington streets, last night [March 27]. He was introduced by A. B. Cooper, who said in part,—

Truth is the most attractive thing on the earth. Our great Teacher, Jesus the Christ, said, "Ye shall know the truth, and the truth shall make you free," proving his knowledge and demonstrating his teachings by walking on the water, feeding the multitude, healing the sick, raising the dead. He further said, "He that believeth on me, . . . greater works than these shall he do; because I go unto my Father."

[illegible] a lecture on Christian Science to a large audience at Liederkranz Hall on March 30. The speaker was introduced by O. P. Begole, who said in part,—

When Christian Science was brought to my attention, and before investigating and striving to understand, I was very much opposed to it because I misunderstood it. I venture to say that my position at that time, assumed by me without proper study and thought, is the position occupied by many others. It is to correct the error under which those who entertain wrong opinions of Christian Science may be laboring, that these lectures are given.

Humanity has had, and today has to a greater degree, a sincere desire for a practical, demonstrable, every-day religion. Christian Science fills these needs and fills them full to overflowing, for it is a religion based absolutely upon the teachings of Jesus. It supplies every need, it solves every problem. It is a possession worth striving for and winning. It removes the hunger for blessings by furnishing them, and teaches mankind its true relationship to God. I am sure we are all in heartiest sympathy with any work that will bring about the betterment of mankind, and this is the sole mission of Christian Science. It heals the sick, and brings to the suffering surcease of all wants and woes: it has come, in the words of Isaiah, "to give unto them beauty for ashes, the oil of joy for mourning, the garment of praise for the spirit of heaviness."

Correspondence.

GRANGEVILLE, IDAHO.

William D. McCrackan delivered a lecture on Christian Science March 30 to a large and appreciative audience. He was introduced by Attorney E. M. Griffith, whose remarks were in part as follows,—

The world has long since become weary and sick of imitations and shams. It is alike restive of pompous authority and a tinsel ecclesiasticism. It wants the truth, reality, as well as religion: but such a religion as will demonstrate the eternal Christ, Truth, and become a vital force in life to the extent that it will meet and cover every human need. Christian Science is not something new in the sense that it is a discovery of something that has never existed before, but it is the resurrection and reestablishment of early teachings or the Christ-idea as given to the world by Jesus over nineteen hundred years ago.

Christian Scientists contend that when Christ commanded his disciples to go forth and preach the gospel, heal the sick, etc., that it was not intended solely to demonstrate the divinity of his existence and power to heal, but to make it known to all mankind that they may do likewise; and the countless thousands who have been healed through Christian Science demonstrate the correctness of their position.

Correspondence.

NEW YORK, N. Y.

The large hall of the Masonic Temple at 1931 Washington avenue was crowded at 3:30 o'clock on Sunday afternoon [April 2], upon the occasion of an address on

Digitized by Google

"Christian Science," by Prof. Hermann S. Hering. Eugene R. Cox, who, on behalf of the Christian Science society of the Bronx, welcomed all to the meeting, said:—

There are so many earnest inquiries as to what Christian Science really is, that it is the pleasure of this society, as well as of all Christian Science churches and societies throughout the world, to give a lecture by one who is competent to discuss the subject; and that it is very wide-spread and is extending throughout different fields of activity of the world is exemplified by the fact that a couple of weeks ago in Washington a United States senator from one of our western states was talking to the surgeon-general of the United States, and in their conversation declared himself a Christian Scientist.

After the talk was over, a gentleman sitting in the hotel lobby said to the senator: "I do not know who you are, but I heard what you said and I believe in medical freedom. I am a practising physician in New York city, and I want to say that Christian Science does more than any one gives it credit for, and we must recognize it. I have a brother physician who was unable to cure one of his family who was afterward cured by Christian Science. I know a minister who reads Science and Health and makes better sermons because of it."—*North Side News.*

CRIPPLE CREEK, COL.

William R. Rathvon lectured on Christian Science at the Lyric Theater, April 7, to a very good audience. He was introduced by Fred W. Crosby, who said:—

No force in modern times has done more to instil optimism in the minds of people and to make them happier and better than has Christian Science. If nothing more than this had been accomplished by Mrs. Eddy in giving to us this creed, we should be grateful indeed; but how much more should we be grateful to her when we learn that this is but a small part of the blessings which this one woman has been instrumental in giving to the world.

There is probably no subject more widely discussed today than is Christian Science, and unless one has made an especial study of this subject under the teachings of those who are qualified to teach it as Mrs. Eddy taught it, these discussions are apt to be widely at variance with the true concept of Christian Science. Although I am not a member of the Christian Science church, I have spent considerable time during the past year reading Christian Science literature, and many erroneous beliefs which I had, in common with other people not students of Christian Science, have been wholly disproven. It is for the purpose of giving to the people the true concept of Christian Science that Mrs. Eddy in her wisdom established a board of lectureship, composed of men and women educated under her teachings to spread this truth among the people. One of these is with us tonight.—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Bethlehem, Pa.—Frank H. Leonard, Grand Opera House. Wyandotte street, South Bethlehem, 3 p.m., June 4.

Chicago, Ill. (Tenth Church).—Bliss Knapp, Rosalie Hall, 5704 Rosalie court, May 25 and 27.

Delavan, Ill.—Francis J. Fluno, M.D., Armory Hall, 3 p.m., June 4.

Ithaca, N. Y.—Prof. Hermann S. Hering, Unitarian Church, 3 p.m., June 4.

Mystic, Conn.—Clarence C. Eaton, Lyceum Theater, 3:30 p.m., June 4.

Rochester, N. Y.—Willis F. Gross, Lyceum Theater, 3 p.m., June 4.

Saginaw, Mich.—Bicknell Young, Masonic Temple, Washington and Johnson streets, 8:15 p.m, June 3.

TESTIMONIES OF HEALING.

[Translated from the German.]

In February, 1906, I was taken ill with severe inflammation of the throat and lungs, and had hardly recovered when three weeks later rheumatism set in. The physician told my wife that my condition was a very serious one, but though he was very kind and tried to relieve me, he was unable to do so, and I was suffering terribly day and night. Several years before this we had heard of Christian Science, but when my wife now asked me if I wished to try that mode of treatment, I replied that I would rather wait. Soon after, however, the action of the heart grew very weak, and the physician told my wife that stimulants were needed for the action of the heart. She then asked me again whether we should not rather try Christian Science. This time I said I would, and we applied to a Christian Scientist for treatment. That evening my wife lay down peacefully, and I too had a good night's rest, and was sound asleep during the forenoon of the following day. This was the first refreshing sleep in a long while, and I had longed for it. On the second day I was able to tell a relative who inquired as to my condition, that I felt better. On the fourth day the practitioner called, and the next day I got up in the forenoon. I improved so rapidly that at the end of eleven days I was able to drive to the practitioner's from our home in one of the suburbs of Berlin. After two months I made a trip into the mountains and joined others on some tours, even up to a mountain about five thousand feet high. Five weeks later I returned in order to resume my office work.

For this wonderful healing I thank God from the depths of my heart, and I also thank our revered Leader, Mrs. Eddy, for giving to us the truth which kept me from being separated from my wife and child. I read the *Herold* with a sense of gratitude and joy and attend the services and meetings, for which I am very grateful.

WILHELM ZINGLER, Berlin-Wilmersdorf, Germany.

I feel that the time has come for me to add my testimony, with the hope that it may help some other sufferer. I was taken ill, and my mother, who resides with me, feared the worst, as so many of our people had passed on with lung trouble: in fact, this thought had been held over me since childhood. We lived a long distance from a Christian Science practitioner, so I felt some fear on that account. I could not lie on either side, could not speak aloud, was unable to take any solid food, and to the material thought of those about me I was in a serious condition. I had, however, some of the household read to me from Science and Health, until my fear began to disappear. Then I managed to write to a practitioner, and after the letter reached her I began to feel easier. I soon got up and dressed myself and went to the table and had dinner with the family, eating the same as they did. That was over three years ago, and I have been well and happy ever since. I thank God daily for the many blessings that have come to me and mine through our dear Leader, and for the kindness which has always been shown to me.

MRS. R. H. SMALL, Kingsburg, Cal.

I wish to express my deep gratitude to God for all the blessings that have come to me through Christian Science,—the spiritual uplifting, joy, and happiness. When first I heard of it, I was in a state of despair; I had just realized that *materia medica* could do nothing for me: in fact, I seemed to be getting worse. I gave every method a good trial, as I believed then that medicine could heal me, and I had previously been through a hospital training.

For about three years I had been under doctors and specialists for heart trouble, sleeplessness, stomach and

Digitized by Google

bowel disorders, and other ills. I had headaches which were very painful, and was told by an oculist these were caused by the condition of my eyes and that I should wear glasses continually. I could only walk very short distances, and often for days I had to keep in bed. A heart specialist put me into a nursing-home for treatment for seven weeks, but nothing seemed to help me, although I received the greatest kindness always from the medical profession.

When I was first told of Christian Science and what it could do, I knew it was going to help me, and I prayed that I might realize something of this great truth. I found a practitioner who was most kind, and after the first treatment I left off my glasses, walked miles without fatigue, and ate anything, though I had been doomed to the strictest diet till the end of my days. I felt so happy and well and experienced such peace in realizing God's allness! I have had perfect health ever since. I had been told never to ride my bicycle again, but now I think nothing of riding forty miles. I feel truly grateful to our Leader for all she has done in pointing out this great truth for us. I pray that I may show my gratitude to God for Christian Science, and to her, by trying each day to become a better Scientist, to be a purer channel for the truth which heals.

MISS MAY JOHNSON, Soham, Cambridgeshire, England.

I am indeed grateful for what Christian Science has done for me in the past two years. I was treated for one week, in August, 1909, by a Christian Science practitioner, and was completely healed of a severe pain in my left lung of three years' standing. I was never free from pain, and had been under the care of doctors for one year without any relief. I am also grateful for the spiritual quickening that has come to me through the study of "Science and Health with Key to the Scriptures" by our Leader.

MRS. WM. THOMPSON, Cumberland, Md.

I feel that I have not been doing right in withholding a public acknowledgment of what Christian Science has done for me and mine, although I cannot tell the half. The most of my life I have not been well. When a young girl my health gave way entirely; for fourteen years I was sick all the time, steadily growing worse, until I was taken to a hospital, there undergoing an operation. I was there for nine weeks, and for several years following I had fairly good health, but could not do heavy work. In the fall of 1905 I was taken sick again, suffering terribly from rheumatism and neuralgia; followed by extreme weakness and nervousness and with a very distressing heart weakness. I was in despair, for my physicians, two of the best in our country, who were very kind and did everything they could for me, said that if I could get my strength I might get well, but that I was too weak to expect this.

Those were indeed miserable, dark, despairing days. Although I had tried to live a Christian life, and had been a church-member since I was eight years old, I felt as though I had made a miserable failure of my life. A dear friend then brought me to Christian Science. I had always been afraid of being led into something wrong, and it did not sound as good to me as the old teaching. I hesitated a while, but was desperate, and having great confidence in my friend I accepted her help. In August, 1907, I took my last dose of medicine: the fifth day I put on my clothes, on the seventh I cleaned up my room, and have worked hard ever since. I do all kinds of housework and sewing, and have never been in bed a whole day at a time since then. I have had many things to overcome, but I have found that although some seem to yield slowly, I am glad even of this, for I had so much wrong thinking to do away with that I am glad of the clearing out of evil thoughts, and I want them all to go.

I am truly thankful to Mrs. Eddy for her brave, loving work in showing us what divine Love is and what it can do for us. My great desire is to be able to help others as I have been helped.

I wish to add that my mother and one sister depend entirely on Christian Science for help. Others of our family are interested, but still we have had a hard time in meeting the opposition of friends. My mother and I read the Lesson through every Sunday and study it through the week. We love to think that we are reading our Lessons about the time of the church services all over the country.

LUCY MIGHT, Wilkesville, Ohio.

[Translated from the German.]

In June, 1910, the occasion presented itself for me to prove the truth of our Leader's words on page 402 of Science and Health, that "Christian Science always is the most skilful surgeon." While driving home from church, a bolt connected with the shaft became loose, and the horses were startled so that the wagon was thrown with full force against a tree, and all the inmates were more or less injured. I sustained an injury over the right eye, so that the bone became visible, and my arm was badly hurt. Christian Science was resorted to at once, and in three weeks' time my arm had improved sufficiently for me to be able to do light housework and to attend church on the third Sunday. My daughter had arranged a bandage over my eye and put my arm in a sling. The bandage was removed on the following day, and the sling in three weeks' time. This was the more remarkable because I am in my sixty-eighth year. I have been completely restored, and that without any medical aid whatsoever. For this healing I am very grateful to God, and also to our beloved Leader, Mrs. Eddy.—SOPHIE BUSCH, Avoca, Neb.

I had been a member of an orthodox church and a faithful Bible student for ten years, seeking diligently for the full salvation our Master taught and demonstrated. During these years of "ups and downs," I managed to give up much of self and lean upon God—upon what I then supposed Him to be. As I looked more deeply into the doctrines taught, I began to see that there was something wrong in the views of the atonement, foreordination, etc., and when listening to our pastor's discourses on these subjects I used to say to myself that some time I should know the truth.

That time came, all unexpectedly and in a manner quite foreign to my anticipations. I was in the country, seeking hourly for a deeper religious experience, when it became very clear to me that I needed Christian Science. I did not know what that was or how obtained, but I had heard of a person who was said to be a Christian Scientist, so I wrote to her and asked what literature I needed. She sent me some pamphlets, also a *Sentinel* and a *Journal*, which I read and reread, and they were truly the most satisfying spiritual food I had ever had. In a few days I had a copy of Science and Health. I took it, unopened, in my hand, and there came to me a realization that there were in it things hard to accept, but I vowed then and there to receive its teachings, feeling assured that I would always study it, always love it. Then, with thought turned to God with all the yearning of a hungry soul, asking for divine guidance, I opened this book and began to read. As I read the spiritual uplift was wonderful, and I cannot describe the rapture I experienced as Truth touched the waiting thought and began to unfold to my benighted understanding; nor is this unfoldment of the new heaven and the new earth a thing of the past; it continues to grow brighter and brighter as I strive daily to put off the old and realize the new.

I have been reading less than three years and have had many beautiful demonstrations. I have been healed of liver and spinal troubles, loss of memory, and many other ailments, physical, mental, and moral, among which I might mention worry, despondency, and dark forebodings. I am

Digitized by Google

thankful to our Leader, Mrs. Eddy, for her life of purity and labor of love, and to the faithful workers standing on the watch-towers of Zion, to whose vigilance and effective declarations of Truth I am greatly indebted.

MRS. EDITH MORRISON, Alma, Mich.

It is about nine years since I accepted Christian Science, and I am truly thankful to our heavenly Father for the wisdom and understanding contained in Science and Health. I am also deeply grateful to our dear Leader, Mrs. Eddy, who was found worthy to be a messenger of this truth that does heal all our diseases. I suffered for five years with heart trouble, also a malignant growth of the breast, headache, and rheumatism. I have been healed of all these ills, and Christian Science has been my refuge and my stay. My daily prayer is that I may so live as to be counted worthy of the name Christian Scientist.

MRS. ANGELINA DE FRIES, Ft. Worth, Tex.

It is with a grateful heart that I try to tell what Christian Science has done for me. In February, 1908, I became ill and consulted a physician, who informed me that I had a kidney disease and that I must submit to an operation. I went to a hospital in April and was operated upon, and after remaining there four weeks left in a greatly weakened condition. After I came home I gradually grew worse; and although I was treated by the leading physicians of the city, I did not seem to improve. I had two consultations of doctors, the last one in July, when they stated that my whole system was tubercular and that I had only a few days longer to live.

My parents were then advised to try Christian Science, although they knew nothing about it at that time. They called for a Christian Science practitioner, who came to the house one evening and gave me a treatment. As a result, sleep, which I had not known for many weeks, returned. I had many problems to meet, one of them being a stomach trouble, on account of which I was unable to retain nourishment of any kind, and was greatly wasted; but every mortal law was finally broken. My recovery was not rapid, as it took more than a year to restore fully my health, but I am glad that it was so, as I have thus gained a clearer understanding of the truth. I feel I have reason to be very grateful to God for the many blessings I have received in Christian Science, and I am thankful to our beloved Leader, Mrs. Eddy, for giving us this truth.

MISS BERNICE A. HOVEY, Pittsfield, Mass.

In the light of Christian Science the Bible is for me a wonderful treasure-house. I used to read it from a sense of duty and in the vain endeavor to find something satisfying and practical, but it seemed full of inexplicable contradictions. I now see why we are told to "search the Scriptures" and to seek until we find, and I thank God for the noble woman whose purity and spirituality enabled her to find again the treasure which Christ Jesus gave to the world so long ago and which seemed lost for a while. Christian Science has given me a satisfying and truly scientific explanation of our creator and of our relation to Him; it explains the seeming discords and mysteries of this life, and proves to me that a correct knowledge of God will overcome every difficulty.

In my own experience I have seen many problems solved through the application of the rules our dear Leader gives us in our text-book. I will tell of one of these experiences. My first baby, when but sixteen days old, died of what the doctors called an inherited disease; so when I was again to become a mother I was exceedingly anxious. I wrote to a practitioner in Buenos Aires, asking for treatment. She began at once, after which a painful ailment disappeared altogether, also all fear and worry, and I looked with happiness to the future. I went to Buenos Aires, and had a few present treatments; the birth was painless, and I experienced very little discomfort after it. My baby is a bright, healthy child, and she has never had any sort of medicine.

I owe a great debt of love and gratitude to Mrs. Eddy, our Leader. I am also grateful for the untiring patience with which I was helped along this road that leads to happiness and usefulness. It will be my endeavor so to think and act as to help the cause so dear to our Leader, the cause of Christ.—M. A. HUDSON, Rufino, Argentine Republic.

Words are inadequate to express the gratitude I feel toward God for giving to us through Mrs. Eddy an understanding whereby we may help to lift the burden of sin, sickness, and discord from our fellow-mortals, in the way Christ Jesus taught us. Many are the times that we can apply the divine Principle to our daily needs, and I wish to tell of one instance of the good that I have received through Christian Science. About two years ago I was stricken with what the doctor called erysipelas. My friends had gathered around me, looking for my death at any time, but one of them sent for a Christian Scientist, who came to my aid, and she sent for a practitioner to treat me. I was the only one in town who was interested in Christian Science, and the only one in my family, so there was much antagonism to meet; but I was healed, and am well today and can do any kind of work that belongs to a woman of my age, which is sixty-eight years. I give God through Christian Science the praise for the good I received.

MRS. JANE UMBARGER, Melvin, Ill.

I was the nurse in Mrs. Umbarger's case, and can scarcely find words to express the conditions, as they seemed to me. The patient's appearance was most alarming, the features being very badly swollen, and the swelling continued to spread until it had enveloped the whole body, passing down to the limbs. The disease, however, was met and overcome so quickly in Christian Science that it disappeared much faster than it had come. The first night the odor was so bad that it seemed I could not endure it, and there was a partial paralysis of the body which added greatly to the difficulty. I have often thought of how serious was the condition and how quickly it was overcome, for after my stay of only twelve days it was nearly all healed, and the patient was up and walking about.—MRS. M. Y. MCELWAIN.

[Translated from the German.]

The pleasant duty has devolved upon me of expressing publicly my gratitude for all the benefits which have come to me and mine through Christian Science. We have been in Science for the past three years, and it would take too much space to tell of all the instances in which it has brought us spiritual and physical help. I will therefore confine myself to a brief statement of our healing experience. My daughter was the first to experience help. She had been suffering for years with very severe headaches, but thanks be to God, they disappeared with three treatments in Christian Science and have never returned. Next came my wife, who for eight to ten years had been suffering with gout and rheumatism, and had had medical treatment for years without getting relief. Three years ago the pain grew so severe that she could not raise herself alone in bed, but with a few treatments in Christian Science she was free from all pain and she has never had a return of this trouble. My second daughter was so unfortunate as to fall, striking the back of her head on a hard floor, while taking gymnastic exercises, so that she became unconscious. As she complained of severe pain after regaining consciousness, I asked a Christian Scientist for help. With two treatments the pain left, and she was able to resume her occupation on the third day.

Digitized by Google

In September, 1907, my third daughter was suddenly taken ill, and the physician for whom I had to send in order to comply with the law, pronounced it a case of fever. He thought it would be necessary to operate on the throat, but to this I would not consent. I did not give her any medicine, either, but committed her to the charge of a Christian Scientist, and in a week's time this illness was overcome. A few days later she was again taken ill, this time with rheumatism and severe pain in the knees and feet. The physician said we could not expect her to recover in less than three months; but with eight treatments in Christian Science she was free from pain. In three weeks' times she was completely healed of both troubles, and has been well and able to do all her work till this day. She was helped by absent treatment.

In April, 1907, I was taken with an illness which left me with severe pain in the chest and back. Although I stayed in bed, the condition grew steadily worse, and as the physician whom I again had to consult in order to get a certificate could not relieve me, I asked a Christian Scientist to help me, with the result that after the fifth treatment I was free from pain and able to sleep. I wish to say here that it always afforded me joy to go to see the Scientist, that I might hear more of the truth and of divine Love, and I would get into a quiet and joyful mood. I was always greeted with words of comfort and told not to be afraid, but to have faith in God. Through the explanations of the truth the sense of fear has also disappeared, and our hearts are filled with love and gratitude to God, and to our beloved Leader, who has given us Christian Science, which reveals God as omnipotence and Love and which shows us that man is created in His image and likeness.

G. BOLLE, Berlin, Germany.

I feel it is time that I expressed my gratitude for Christian Science. A little more than two years ago my dear husband passed most suddenly away. The shock at the time was very great; but the comforting, uplifting words of my daughter, of a kind practitioner, and other Scientists who came to see me, gave me such strength, hope, and inspiration that very soon I felt happy and well, being able to realize that death is no part of man's being and that life is continuous. The little understanding I have gained of this beautiful teaching has enabled me to overcome severe colds and bilious attacks to which I used to be subject. I feel very grateful to God, also to our dear Leader for her labor of love in bringing this truth to mankind.

FANNY A. BRICHTA, Edinburgh, Scotland.

What is it that inspires all these testimonies that appear in the Christian Science periodicals? Is it not the unerring Principle, divine Love, whose nature it is to pour out blessings? It is this which urges me to express my gratitude for the showers of blessings received through the Comforter, divine Science. I also feel deep gratitude toward Mrs. Eddy, who through her unselfed love has enabled us to understand Jesus' life and teachings. I was in utter despair over the problem of life, yet in a constant struggle for light. This resulted in a form of paralysis of my left arm and hand. Some faithful friends convinced me that I should abandon my plans and arrangements for an operation and try Christian Science. The healing was accomplished within six weeks. The rejoicing for this, and my gratitude, were at once noticeable in regeneration, and the joy was almost overwhelming. It seemed to land me on the top of the mountain, where I would fain make my abode. It however became necessary for me to descend very humbly into the valley, and I had to learn to take the steps patiently, one by one, and to retrace all those not taken rightly. While with the sudden effulgence of the dawning light of Truth there appeared a sense of freedom, now in the valley there came a sense of darkness, of utter unworthiness. Yet this latter state has proven to be the beginning of "the preparation of the heart" which Truth demands.—SOPHIE FERNOW, New York, N. Y.

[Translated from the German.]

I give this testimony from a heart filled with gratitude for the blessings which Christian Science has brought to me and mine. For twenty years my head caused me terrible suffering, and I consulted many physicians, but was not relieved. I also suffered from rheumatism and from a severe throat trouble on account of which the physicians said I should not smoke; but I was an inveterate smoker and could not leave off. I have been in Science for a year, and I was healed of all these troubles with a few treatments and within a short time. I no longer suffer from headaches or violent and acute pain, and do not smoke any more. My wife and our eleven-year-old daughter were completely healed through Christian Science treatment,—my wife of great nervousness and pain in the feet, and the child of a serious throat trouble.

For all these blessings, and for the help which we have experienced through Christian Science, I thank God with all my heart, and am deeply grateful to our beloved Leader, Mrs. Eddy.—PAUL BUCHWALD, Berlin, Germany.

I wish to add my testimony of thanks to God, out of a truly grateful heart, for what Christian Science has done and is daily doing for me. A little over two years ago I was very much of an invalid. I had a severe nervous trouble, and later an abdominal growth. This latter became so oppressive that it seemed necessary to have a surgical operation. I put the operation off as long as possible, fearing the result on account of other conditions.

Having always been of a religious nature, I *prayed* earnestly to God for healing, and at one time was anointed with oil, but found no permanent relief. At last I consented to the operation, but it was not a success, as the growth was said to be so attached to the organs that it could not be removed. My physician advised my trying to build up for a second operation, but the first had taxed me so severely that I felt I could not live through another. Very soon a second growth was discovered near my arm, which became inflamed and gave me considerable uneasiness. I was indeed in the depths of despair.

In this condition a Christian Science practitioner found me, and told me that I could soon be well. It seemed to me such a beautiful ray of hope, but how could I believe it? Nevertheless, I found myself holding to the thought of being well and happy. The first treatment relieved me of pain, and I was gently and patiently led into the truth, my erroneous views of God and man changed, and I was given a perfect Principle to depend upon. As my thoughts were turned from things material to things spiritual, I found myself growing stronger day by day. My healing was slow, but built on a firm foundation. I have gradually grown away from thoughts of sickness to thoughts of health, until from being only able to get about a little each day, and that with great pain, I am able to work all day, and do what my hands find to do.

Christian Science is truly a wonderful revelation of man's relation to his Maker, its truth proven many years ago by Jesus and given back to us in this age through Mrs. Eddy's book, "Science and Health with Key to the Scriptures." I pray God that I may prove my gratitude to Him, and to His messenger, by daily learning to know the truth for myself, and in some small way be of use to others.

MARGARET E. CHRISTIE, Roxbury, Mass.

During the winter of 1899 a lady gave my sister several copies of the *Journal*. She had curvature of the spine, and the lady hoped Christian Science would help her, as nothing else had brought her any hope of being better. It

Digitized by Google

was the first time I had heard of Christian Science, and I was very much interested in it, so the lady lent me a copy of Science and Health. I found it to be pure and good teaching, regenerating and uplifting. I felt at once that it was the truth, and I was determined to look more into it. I did so, and became more and more convinced that I was seeking aright. Before I had studied the book a month I was healed of three ills, the fear of death, of poverty, and of disease. I had for many years been nursing in *materia medica,* and felt that the suffering which I saw would some day be mine. The following spring I joined First Church of Christ, Scientist, in London. I gave up the nursing under *materia medica* and for five years nursed cases for Christian Science practitioners who were giving treatment to patients, and many were the opportunities I had of proving the power of Truth as taught in Science and Health. I cannot express how thankful I used to be to see patients lifted out of sin, sorrow, and suffering!

My sister went to a spinal hospital in London, and they applied the X-rays and said there was both curvature and caries of the spine. She was, however, healed in Christian Science, and is now quite well and strong. That Christian Science is the religion taught by Christ Jesus I have not a shadow of doubt. It is in grateful acknowledgment of Truth that I write this testimony.

MISS MINNIE LADE, Tunbridge Wells, England.

I am glad to testify to my healing through Christian Science as taught in the Bible and in Science and Health, and these books are a constant comfort to me. I was healed almost instantly of pain caused by a badly injured ankle. Through treatment given by the same practitioner, my husband was also relieved at once of a serious condition of the bowels and of a sore limb of long standing. We thank God for these blessings, and also our beloved Leader, Mrs. Eddy, who through God has brought this healing power of Truth to suffering humanity.

MRS. MARTHA GIBSON, Chenoa, Ill.

Three years ago I was healed of a supposed enlargement of the heart through Christian Science. I am very grateful for this healing, as the disease was said to be inherited and the doctor had stated that I would probably have to take medicine for it the rest of my life. Now I am free from its torture, and my hope is that this testimony may lead some sufferer to try Christian Science, as I did.

MRS. A. N. TAYLOR, Dungeness, Wash.

I was healed through Christian Science of a severe attack of quinsy in October, 1908.

JUSTINE ENGLE, Dungeness, Wash.

[Written for the *Sentinel.*]

COMFORT.

BELLE A. MUNDY.

O FLEDGLING, on a cold world thrust,
Fly thou to God, since fly thou must!
For He shall cover thee with His wings,
And 'neath His feathers thou shalt trust.

O orphaned one, thy God is just!
Shed thou glad tears, if weep thou must!
His angels over thee have charge,
And 'neath His feathers thou shalt trust.

O widowed one, rise from the dust!
Love is thy mate, rejoice thou must!
For Truth shall be thy sure defense,
And 'neath His feathers thou shalt trust.

FROM OUR EXCHANGES.

[*Universalist Leader.*]

When the Christian world returns to reality in its theology, it will find that our spiritual liberty is guaranteed in the consciousness of its Prophet. It is only as we find him that we understand what he taught. His life is the true commentary on his words. The gospel is not an abstract formula. It is a living experience. It is incarnate truth. It is personality saturated with a consciousness of divine things. In him we live and move and have our being as Christians. When we say in the light of what he was that we will obey him and have no other Master, we have swept into the waste-basket of theology everything which sensible men desire to get rid of in their demand for spiritual liberty. The culture and the cosmopolitanism of the Christian world must humble themselves enough to understand that it is Christ's spirit that gives life to all his thoughts. It is the sweet fragrance of his character, the tender glow of his human sympathy, the divine pathos of his yearning love, the splendid joy of his great consecration, the perfect peace of his fellowship with God, which are the spiritual dynamic and propelling energy of his gospel. In him the life is the truth and the truth is life.

[*Standard.*]

There seems to be some ground for believing that in the much desired and altogether worthy effort made in recent years toward unification and better cooperation of the religious forces in the church, the church has suffered somewhat from an overplus of zeal to secure big things. This has been the characteristic of all denominational activities as well as the activities of all denominations. We are, unquestionably, in the current of a peculiar religious trend. Religion, like society, is affected by certain moods which set the fashion of the day. The church has always believed in the efficacy of organized life, but it has seldom given so much attention to getting its organization linked up to practical service as in the past few years. More recently its chief aim has been toward the coordination of its forces and a more harmonious adjustment of interdenominational relations. All of these things are highly desirable, but in their working out we seem to have allowed our organizing abilities to run largely into conventionalizing activities.

[*Continent.*]

Two lines from a letter written by a woman long out of reach of church association, who on a visit attended a church, tell a striking story: "Heard a semireligious address on Paul at Athens—mostly Athens—from the pulpit. Came home along the beach, and enjoyed the sermon preached by the surf."

Matter worth pondering there. Oh, no, not in the sermon, but in the comment. A woman with a hungry heart, after years of yearning for a crumb of the bread of life, finds herself in the great congregation on the Sabbath day, and lifts an eager face to catch the words that shall tell her of the life, love, and joy still gliding through God's holy city and watering His divine abode. She hears—what? That "the healing of the seamless dress is by our beds of pain"? No. That if "we touch him in life's throng and press" we shall be whole again? No. She hears that Paul was once at Athens—"mostly Athens." And the hungry heart cries out, "I sought bread and I have found a stone."

[*Outlook.*]

Forget your faults and failures. Or remember them only to learn the lesson they have to teach, the frailty or folly or wickedness of spirit which they should disclose to you—the vanity that weakens, the pride that hardens, the greed that corrupts. Let your past be not a ball and chain tied to your ankle to keep you back, but a journal to tell

Digitized by Google

you what road you have traveled. Then, looking back only long enough to see where you are and what your course should be, forget the things that are behind and press forward.

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth.*]

The Christ who came to the impotent man as he lay by the pool of Bethesda is coming still to the sinful, weary world, but not in a form external to your own. You need no ecclesiastical system to put you in touch with him, no waters of blessing you are too weak to reach unaided. "For as the Father hath life in himself; so hath he given to the Son to have life in himself." You need not go far to find the Son, no farther than your own spirit, for there is he. The Christ is that in you which bids you seek him, though the world may fail to see him.

[*Christian Work and Evangelist.*]

All our worship, our church-going, our sermons, our hymns, our religious literature, are based upon the assumption that the kingdom of heaven in the soul is the one great possession, the "pearl of great price." Outwardly organized Christianity is a testimony to this effect. And then we have this exceeding strange paradox presented to us, that the great mass of Christians, while confessing that the kingdom of heaven is the great possession, do not seek it with half the enthusiasm they seek the things of the world.

[E. J. Blekkink, D.D., in *Christian Work and Evangelist.*]

The sovereign remedy for the cure of religious doubt is the performance of known duty. Experience shatters unbelief. A touch of Christ so opens the spiritual eyes of a man that he knows that, whereas once he was blind, now he sees. The best advice that can be given the doubter is that of Philip to Nathanael when, in reply to questioning unbelief, "Can any good thing come out of Nazareth?" he said, "Come and see."

[Rev. Edward Niles in *Christian Intelligencer.*]

Sadly prevalent is the notion that to commune with Christ we must be in church, on our knees, reading the Bible or other pious book. This distorted perversion of truth prevents many from taking out their naturalization papers in the kingdom of God, encourages the blasphemy that the commands of Christ are only practicable for women, children, and gentlemen of leisure.

[*British Congregationalist.*]

Equally on every Christian rests a responsibility of judgment that cannot be abdicated. Intellectually we have to value the facts of our faith, and make it our own, a living conviction which makes the gospel for each one of us our gospel, a distinct and inalienable possession. Morally, we have to value the facts of life, and make our character and conduct intimate, convinced things with the stamp of personal decision upon them.

[*Zion's Herald.*]

The apostle James was not by any means a well-balanced and comprehensive theologian, but his chief credit lies in the fact that he was tremendously right and earnest in insisting that "faith without works is dead." That type of preaching is especially needed in these days of conventional and (so largely) fruitless Christianity.

[*Universalist Leader.*]

Our prosperous churches are those which are expressing themselves in service to and through others. Some are helping in the uplift of their own communities, others are helping to uplift other communities, but those which have any hope of increase of life must have some purpose outside of themselves.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS have been published as pocket and library editions in new bindings. Description and prices will be found on the outside cover page of *Sentinel.*

The new volume, "Poems by Mary Baker Eddy," is now on sale. Specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The following reprints are published in Swedish: "Hvad Ar Bön?" "Lagens Välde," "Det Ondas Natur," "Helvete och Himmel," "Människans Gemenskap Med Gud," "Verklighet," "Det Ar En Ström," "Förklaring Af Kristligt Helande," "Den Yppersta Egenskapen I Christian Science," "Underverken," "Det Ondas Ofvervinnande," "Var Väktare," "Riklig Tillgang," "Kristendom Och Vetenskap." Ten copies to one address, prepaid, 10 cents; one hundred copies to one address, 75 cents; five hundred copies to one address, $3.00; one thousand copies to one address, $5.00.

Two of our Leader's poems, "Shepherd, show me how to go," and "Love," set to music by Frederic W. Root, are now on sale by the Society. For description and price see advertisement on inside back cover page of *Sentinel.*

A new photogravure reproduction of The Mother Church edifices and the Publishing House, with the new parkway in the foreground, has just been made, and is now on sale. The size of the new picture, nine by fourteen inches inside of mat, which is about half that of the larger one, specially adapts it to framing for the home. Price, single copy $1.00, six copies $5.00, twelve copies $9.50.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist.—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE. June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 29 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.20. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the month, and include all issues for the month named as expiration date on the wrapper. XI indicates the year 1911; XII, 1912. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25—	£0: 5 s.: 2d.;	Mk. 5.30;	F. 6.45
2.25—	0: 9 : 3 ;	9.50;	11.60
2.50—	0: 10 : 3 ;	10.60;	12.85
4.00—	0: 16 : 5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

At Lake Mohonk, N. Y., scholars, diplomatists, business men, and labor representatives met last week for the seventeenth annual conference on international arbitration inaugurated by Albert K. Smiley in 1895. The hundreds of guests who have accepted Mr. Smiley's hospitality meet this time under conditions which promise great things for the peace movement throughout the world. A comparison of the programs of 1895 and 1911 shows clearly that the arbitration movement has now enlisted the services of many who once felt disinclined to take the cause seriously. As education has advanced, as business has expanded at home and abroad, as American industrialism has risen to a height not dreamed of some years ago, financiers and workingmen realize more and more that wars must be made to cease if prosperity is to continue.

The new public library building, the cornerstone of which was laid nine years ago, was dedicated in New York May 23. The building is said to be without an equal in the world among those dedicated to the convenience and instruction of the public, for size and cost. It holds shelf room for 3,500,000 volumes: it has floor space of 375,000 feet, as against 326,000 feet in the Congressional Library at Washington, and it has cost for erection more than ten million dollars, a figure which, when all details have been attended to, may rise to twelve million dollars. The land on which it stands—fronting two blocks on Fifth Avenue, between Fortieth and Forty-second streets—was last valued at twenty million dollars.

The Wisconsin Legislature has passed a law having for its purpose the abolition of "log-rolling," or vote swapping, in the enactment of state laws. The law provides that any member who agrees to support the bill of another member on condition of receiving help for his own bill, will be guilty of a felony and subject to imprisonment or fine. A penalty is also provided for a member of the Legislature who agrees to support or oppose a bill on condition that the Governor approve or veto any particular measure, or that the Governor shall appoint or remove any person from public office.

The German government has been made aware by the United States that the same general arbitration proposition submitted to Great Britain and France is open to Germany if that country is interested. The tentative draft now in the hands of Great Britain and France constitutes a basis upon which this country is prepared to enter into negotiations with any power desiring to do so. There have been informal discussions between the United States and Japan on the new arbitration proposition, but Japan has not yet definitely made known her intentions in the matter.

The advance guard of a Yale expedition that expects to find the ruins of Vilcabanca, the last stronghold of the Incas of Peru, sailed for Colon last week. The other members of the party, which includes several Yale professors, will leave next week. The expedition will start from Cusco, terminus of the railroad in Peru, and spend five months in the mountains. About three hundred miles of untrodden territory will be explored.

The Massachusetts Institute of Technology has selected a site for a summer engineering camp on the east shore of Gardner lake, Me., near Machias, containing more than a square mile of land. It is the intention of the faculty of the institute to replace a portion of the surveying work, a large part of the out of door practice, that is now pursued in Boston only under disadvantages, by courses at the summer camp.

The interesting thing about the government's suit to dissolve the so-called lumber trust is that the persons charged with maintaining a trust are not the men "higher up," but men close to the people. In other words, if the government's contention is correct, it is not the owners of standing timber, the mill men, or the wholesalers that are offending against the Sherman antitrust law, but the retail dealers.

A resolution declaring that all the personal defendants in the Standard Oil case are subject to criminal prosecution under the decision of the supreme court of the United States has been adopted in the United States Senate. It instructs the attorney-general to report whether criminal proceedings "have been or will be started against them."

A concurrent resolution of the Senate and House of Hawaii, asking Congress to pass an enabling act for the constitutional convention and to admit the territory to statehood, was laid before the House of Representatives last week by Speaker Clark.

A sweeping and immediate investigation of the renewed charges that Senator Lorimer of Illinois is not entitled to his seat is provided for in two resolutions introduced by Senators Dillingham and La Follette.

Postmaster-General Hitchcock is so well pleased with the eagerness of communities to have postal savings banks opened at the local postoffices, that he has decided to raise the number of weekly openings from fifty to one hundred.

The battleship Idaho last week proceeded up the Mississippi river as far as Vicksburg. The five-hundred-mile river trip will end when she steams into the waters of the Gulf of Mexico, on June 6 or 7, *en route* to Pensacola.

If Congress does not order otherwise, all that remains of the battleship Maine after it has been raised from Havana harbor and stripped of parts of value, will be towed out to sea and sunk in deep water.

The topographic survey for levee work along the Brazos, Little, and Trinity rivers, Texas, contemplates the reclamation of one hundred and sixty-seven thousand acres of land.

The fifteen hundred thousand-dollar concrete and steel causeway to connect Galveston with the mainland is expected to be completed on contract time in October.

Since June 1, 1910, nearly twenty-two million dollars has been given or announced to be given to seven of the largest educational institutions of the country.

Only one fourth of the great task of excavation at the Panama canal remains to be done.

International.

Provisional figures returned by the census officers give the population of England and Wales this year as 36,075,269, compared with 32,527,843 in 1901. While most of the cities and counties show an increase, there are many cases, particularly in Wales, where there has been a decrease. Greater London's population has increased to 7,252,963 from 6,581,402 in 1901. This increase is entirely in what is known as the outer ring, showing that the people are moving from the more crowded centers. In fact many of the old metropolitan boroughs and the city of London proper have lost their population to the suburbs. The county of London, including the city of London and the boroughs immediately about it, shows a decrease.

"We believe that the day will come of an alliance of all lands springing from England's loins, insuring the peace of the world forever," declared Sir Wilfrid Laurier, Canadian premier, at the dinner of the Pilgrims Society in honor of the prime ministers of Greater Britain, who are assembled at London for the imperial conference. The premier aroused enthusiasm when he declared that Canada and the United States proposed to continue to show to the world two nations with the longest boundary extending from ocean to ocean, living in peace and mutual respect, without a fortress, a soldier, or a gun on either side of that boundary.

The Russian Douma has authorized the expenditure of one hundred and fifty million dollars for a reorganization of the fleet. The program includes four dreadnoughts and six submarines for the Black sea and four dreadnoughts for the Baltic, in addition to four battleships which will be launched in July. A small island at the mouth of the river Neva is to be transferred to the admiralty for a new dock yard.

On May 25 President Diaz of Mexico, after serving continuously for thirty years as President, offered his resignation in the Chamber of Deputies. His years of service have been marked by a wonderful commercial development of Mexico, the establishment of a stable government and of national credit at home and abroad.

By a big majority the Mexican Chamber of Deputies passed the bill providing amnesty to political prisoners. It became effective immediately.

Industrial and Commercial.

The feature of the opening session of the American Cotton Manufacturers Association at Richmond, Va., was a prolonged debate between President Marsh of the New York Cotton Exchange and Chairman Parker of the committee on relations with cotton exchanges. Mr. Parker's assertion that the New York Cotton Exchange caters to speculators rather than to the needs of legitimate business, and that the prices of cotton have been manipulated by members of the exchange, to the great detriment of both spinners and producers, was cheered to the echo by the convention.

Competition in the steel trade is on in earnest. The Carnegie Steel Company announces that it has met the cut made by the Republic Iron & Steel Company on steel bars and is accepting orders at $1.25 a hundred pounds, Pittsburg, a reduction of three dollars a ton. All of the other independent companies are expected to take similar action.

A remarkable record has been made this past winter by the revenue cutter Acushnet, whose range of action has been from Great Point, Nantucket, to Watch Hill, and which is credited with having saved seven vessels, seventy-one persons, and property valued at $328,900.

A bill for a state appropriation of nine million dollars for developing Boston harbor has been submitted to the Massachusetts committee on metropolitan affairs.

It is estimated that more than four thousand cars will be required to market this year's two million-dollar peach crop.

Cotton men of New Orleans are said to be planning to spend several million dollars on a gigantic warehouse project.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

DISCOURAGEMENT OVERCOME.

M. G. KAINS, M.S.

Is any mental state more universally accepted by mortals as genuine than discouragement? Is there any human being who has not experienced it? Has any one ever benefited directly or indirectly by yielding to it? and what is discouragement, after all, that any one should yield to it if it is, as its derivation declares, lack of courage?

This negative condition of mind has gained such a hold that humanity never thinks of its opposite, positive state as couragement; at least the English language has no such word, if the Standard dictionary be taken as authority. Nevertheless, this word, if its coinage may be allowed, expresses a positive, more active, desirable state of mind than the legitimate word encouragement. Discouragement and encouragement too often imply the influence of outside forces, the one of depression, the other of elation; couragement on the other hand would imply standing and holding one's own ground through strength from within. Discouragement and encouragement suggest the influence of foes and friends respectively, an influence usually transitory and ephemeral; couragement suggests that condition of mind characterized by Paul's expression, "I can do all things through Christ which strengtheneth me."

If there is one thing more than another for which beneficiaries of Christian Science have to be thankful, it is the attitude of mind that this purposely coined word, couragement, defines. Whether it be the hopeless invalid, the disheartened business man, the physical wreck, or the hardened wretch, Christian Science reverses, eliminates the *dis* and gives the sufferer courage to take the necessary steps toward improvement. What is courage but implicit faith? What can faith not do when moved by love?

When one grasps the significance of the statements, God is Love, and "Love never faileth," he needs only the opportunity to prove them true. Opportunities flood us, however seldom we seize them. It is easy enough and perhaps natural enough to consider as proofs what we may perchance designate as benefits to ourselves; but it is not so easy to recognize those even more remarkable opportunities to prove that God never fails because He is Love, when apparent limitations, deprivations, and seeming losses characterize our self-steered human courses. If our vessel becomes entangled in a snag or grounded on a sand-bar, do we sit down with folded hands to bemoan our fate, or do we consult our chart and work ourselves clear and then steer more carefully? And when we strike a mental snag, what then? Does not this afford us an opportunity to prove that God is working in us "both to will and to do of his good pleasure," if only we will trust and dare? Perhaps the main difficulty is that we fail to perceive the fault as our own. We fail to see that we are loaded up with discouragement due solely to the acceptance of wrong thinking, originating apparently with others, but usually with ourselves through some mistake or series of mistakes. We lend power to discouragement, and thus bind ourselves with mental chains, forgetting that to whom we yield ourselves servants to obey, his servants we are; forgetting, too, the promise to those who obey God's law, namely, "Ye have your fruit unto holiness, and the end everlasting life."

What is to be done? The first thing is to eliminate one by one the fears that crowd one another for standing-room in the human mind. The next is mentally to establish the real basis of existence, regardless of the testimony thrust upon us by our physical senses. The third is to recognize and realize one's own rights, not as a citizen of the world, but as a citizen of heaven here and now. And lastly it is essential that we hold our ground in spite of the recurrence of false testimony. It is essential for us to know that "there is no power apart from God. Omnipotence has all-power, and to acknowledge any other power is to dishonor God" (Science and Health, p. 228). Mere assent to this statement counts for little. We must prove our faith by our works. With every little item of proof our faith will grow, and with each strengthening of faith our proofs will increase. At all stages of our progress we should fill our minds with rejoicing and gratitude. First we should be grateful for the blessings we already have, and count as the greatest the fact that instead of having to face our difficulties unarmed we have learned how to use the "whole armor of God" through that complete manual of arms, the Christian Science text-book, for which we are inestimably indebted to our Leader, Mrs. Eddy.

SUNDAY SCHOOL WORK.

FRANCES MACK MANN.

It is a sacred privilege to be appointed as a teacher in a Christian Science Sunday school, for the right education of our children in Science is an important factor toward the final establishment on earth of the truth revealed to us through our Leader. It becomes necessary, therefore, for the teacher to have an intelligent preparation in both the letter and the spirit before he can be used to the best advantage for this work. In the *Sentinel* of Nov. 19, 1904, Mrs. Eddy writes: "It is a joy to know that they who are faithful over foundational trusts such as the Christian education of the dear children,—reap the reward of rightness, rise in the scale of being, and realize at last their Master's promise, 'And they shall all be taught of God.'"

Though the teacher does not wait for class time to bring forth a special inspiration for the day, but carefully does his work each day of the week, parents should understand that the Sunday school in no manner supplants the home training. If the parents are in name Christian Scientists, but do not themselves live up to its rules, their child may not be as ready to listen to the truth as would one from a home where Science was unknown. Long ago Solomon said, "Train up a child in the way he should go: and when he is old, he will not depart from it." There is then a sure, all-inclusive, unchangeable way to teach the child, which he will never forsake, and it is our duty to search out this way. When Thomas asked Jesus, "How can we know the way?" Jesus answered, "I am the way, the truth, and the life: no man cometh unto the Father, but by me," and in

Copyright, 1911, by The Christian Science Publishing Society.

Digitized by Google

Science and Health we read, "Jesus was 'the way;' that is, he marked the way for all men" (p. 46). Clearly, then, what Jesus taught respecting the truth underlying our manner of living is the "way" we should teach our children.

The substance of this teaching is stated in the Manual; namely, the Ten Commandments, the Lord's Prayer, and its spiritual interpretation as given in the Christian Science text-book, the sermon on the mount, and questions and answers from the *Quarterly* Lesson. These directions are explicit, and do not include anything foreign to the Principle and rule of Christian Science. Our time is limited in the Sunday school, and not one moment can be spared from systematic work if our pupils are to gain a clear concept of the truth of being which is to become the operative law for their life-work.

No teacher can expect more of his pupils than he is willing to practise. If there is inattention, the teacher may not be doing his work scientifically, and there should be more careful preparation of the lesson and the heart. Confusion of any kind is not scientific and produces discord instead of harmony in the children's thoughts. If Christian Science emphasizes anything, it is order, promptness, and propriety at all times. In "Unity of Good" (p. 6), Mrs. Eddy has said: "No wise mother, though a graduate of Wellesley College, will talk to her babe about the problems of Euclid." Also in the Scriptures it is recorded that on the day of resurrection Jesus drew near to two of his disciples as they walked to Emmaus, and went with them. In like manner we find it essential to draw near to the children, that is, to teach them in a manner that is adapted to their needs and present apprehension. The child thought is interested when the subject is linked to his everyday life. He may thus be taught how he can apply "the word" even in his play, by kindness to his playmates and thoughtfulness for others, by obedience to his parents, and by attention to his studies. In Proverbs we read, "Even a child is known by his doings," and inasmuch as Science is the Christ-love lived, there have been many instances where a child's words and doings have brought others to Christian Science.

Mrs. Eddy's writings constantly refer to the Bible for illustration and emphasis. It is instructive to learn how Jesus, in the synagogues and by the seaside, for several months after he commenced his public ministry, imparted the word to his hearers, only to find it received with scorn, unbelief, and hardness of heart. Later he began to preach in parables,—similitudes taken from natural things to instruct in things spiritual. In like manner the eastern sages, the learned men, and the prophets, had made use of the parable to make a stronger impression on the people. Thus Nathan reproved David under the parable of a rich man that had taken away and killed the lamb of a poor man. Bible stories, as they appear in the Lesson-Sermon, help to illustrate spiritual truth, even as the parables were used by the Master. Thus the children will gain the spiritual significance of the Scriptures.

The disciples were astonished when the Master changed his manner of teaching, for we read: "And the disciples came and said unto him, Why speakest thou unto them in parables?" Jesus explained to them that he had chosen this form of teaching because the people were spiritually blind and deaf. "Therefore speak I to them in parables: because they seeing see not; and hearing they hear not, neither do they understand." Indeed, if the disciples had themselves understood the spiritual meaning of the first parable, that of the sower, they would have known why he was forced to teach in this manner. But the question was just what the Master wanted, for this method of teaching brought forth questions. All children, whether little or big, when interested in the subject which is being taught, are likely to ask questions, and this shows that they have commenced to grasp the meaning of our words. In Christian Science the seeker after Truth is thus revealed. Sincere questions betray an absence of pride and self-righteousness, a desire to follow, not to lead. The children ask, and will not rest until the teacher explains understandingly the truth, and by these questions the teacher finds out how far the pupil has come in his understanding of Science.

By following carefully the directions given in our Manual the true concept of God and of our relationship to Him may be conveyed to the children and become a shaping factor of their thought. The child should be taught to know that as God's child he is pure, perfect, immortal. This knowledge of God uncovers to thought what he must overcome of mortal and material tendencies, and the understanding of Science gives him spiritual strength to accomplish this work. Realizing this perfect concept, he can see all men aright and God's spiritual universe as here and now.

SPEAK THE TRUTH.

COL. W. E. FELL.

BEFORE the writer of this article espoused Christian Science he consoled himself with the comforting reflection that whatever kind of a sinner he might be in other respects, he was at least a man of honor and truthful withal. Today he has a vivid recollection of the rude awakening he experienced on beginning the study of Christian Science, to find that he had been neither the one nor the other. Christian Science most effectually awakens mortal man from the mesmeric belief in an honesty which he does not possess, for day by day it is teaching its students to "speak every man truth with his neighbor."

At the time when the writer first heard of Christian Science, he was conversing with a lady whose position took her much into society. This person declared that it was impossible, as society is at present constituted, to go through a whole day without giving utterance to "white lies" as she called them, in self-defense. A Christian Scientist well knows that the utterance of error is no defense against error, but merely places us in the hands of the enemy. To pile Pelion upon Ossa is not the way to remove mountains. Only by living, acting, and speaking the truth can we enter the house of defense and be saved from error.

To depart from accurate statement is to draw the veil between ourselves and the healing Christ. The Saviour of mankind, according to his own declaration, is "the truth," and our Leader tells us that Truth is reflected "in truthfulness" (Science and Health, p. 516). All prevarication is the result of cowardice, and is only overcome through the understanding that we have nothing to fear so long as we adhere strictly to the truth. If we lower our guard over thought, in an instant error seems quick to seize the opportunity, and the little "white lie" slips out to poison and pervert. Let the voluble talker beware of that little unruly member the tongue, for it is obvious that the more we talk and gossip the more likelihood there is of something being said which is not strictly true. It may be urged that the whole of material existence is a condition of falsity. Precisely so, and therefore the only way we can win out of this condition is by living the truth. If Truth is reflected "in truthfulness," truthfulness can make no reservations, but thinks, speaks, and acts the truth. In what other way can mortality be swallowed up of Life?

It is very noticeable that the personal element is ever productive of falsehood. The mortal sense of personality would seem to require lies to support its false claims, and how could this be otherwise, since material personality in its essence and claim to being is the great lie. Truth comes to us when we lay off this false sense and cease to regard our own personality or that of others, steadfastly clinging to Principle as All-in-all. How grateful should we be to our revered Leader for so persistently pointing us away from her own personality to man in the image and likeness of God, Spirit. To those obedient to this teaching there

Digitized by Google

has come no loss, no sense of separation, for no change comes where all is permanent, eternal, and immortal. That which fruitlessly claims to come and go is not man, but a mortal, material concept of man, a false sense of existence to be swallowed up of spiritual being.

He is the true Christian Scientist who at all times looks steadfastly beyond the veil of the flesh, who is not deceived by the shadows seen darkly through a glass, but who declares for the Christ-man and says with the apostle, "Henceforth know we no man after the flesh." In this view there is no coming, no going, therefore no disappointment, no loss, no separation, no untruth. Speaking in terms of the absolute, while knowing that thereby we may deceive our neighbor, is sin against Truth. Whatever we would attain of heaven must be reflected by us here and now, at all times and under all circumstances. "White lies"—there are none; all lies are blackness and darkness. We should never forget that Christ Jesus commanded, "Let your communication be Yea, yea; Nay, nay: for whatsoever is more than these cometh of evil."

BALANCING THE ACCOUNT.

CHARLOTTE PAULSEN.

UNDERLYING all activity there is a law of cause and effect. Students of biology trace all material phenomena to certain physical conditions or causes. A student of psychology explains that all physical activities result from varying mental conditions, while the student of Christian Science is learning more and more to recognize that one infallible law governs all things, whether it be apparent to human sense or not, and that this law proceeds from the one cause, God, and that it effects the boundless and unceasing activity of good. Mrs. Eddy has defined God to be divine Principle, and as such we know Him to be the only cause. Just as the basic law of mathematics when applied to a problem becomes related to its solution, so divine Principle is found to be causally related to the right solution of every human problem, and it brings things to pass, thereto, in a logical and orderly way. All this our Leader has explained to us so clearly in the chapter One Cause and Effect, in "Miscellaneous Writings," that any further statement would be mere repetition; but the following simple illustrations helped to illume, in one consciousness, the operation of this law of cause and effect.

A party of Christian Scientists were waiting their turn to purchase tickets for a concert. When the seats were reached it was found that owing to the crowd and confusion only two tickets had been received though four were paid for. The purchaser stepped back to the window, explained the mistake, and secured two more tickets, with the understanding that if at the close of the concert receipts showed a mistake to have been made, the money was to be refunded. Each friend realized clearly the operation of but one Mind and the impossibility of the existence of any error to claim power. After the concert the person who had purchased the tickets stepped to the window, and without a word the ticket-seller handed over the refund. In the discussion of this experience as an interesting evidence of the way in which Truth works, in contrast to past experiences under similar conditions, another experience was related which also showed that the nature of the cause always determines the nature of the effect. The lady who related her experience had for several mornings been overlooked by the conductor on her ride to school, and the temptation came to see just how often this might occur—the cheating of a corporation seeming to be a very harmless and impersonal act. In that week her accounts refused to balance, and the depleted purse started a search for cause. She looked into her own consciousness for the explanatory wrong thought, and determined to be entirely honest with the street-car company. As a result there was a return of normal financial conditions and she recognized the balance between doing right and having what is right.

This interesting narrative seemed obscure in logic to the writer, then young in Science, until some time later, when the opportunity came to test it for herself. A music bill had been presented which seemed unjust. Music had been mailed on approval by a publishing house and lost in the return mail, and indignation and self-righteous protest were the only response made to the bill. Peculiarly enough, at that time pupils were carelessly leaving statements unpaid, and the condition required some analysis. The friend's street-car story kept coming to her thought, until by the application of its lesson the cause was discovered in the withholding of payment for the overdue music bill, and results were readily seen in the condition created by remiss and negligent pupils. The error lay in returning music by mail against the caution to purchasers, and the fact that the publishing house violated its own rule had nothing to do with the problem, though it had tried to lead her to justify the indignant protest awakened by the bill. When the bill was paid and the fault acknowledged, her pupils began to make remittances, and the demonstration was complete.

An error in the premise is bound to beget an error in the conclusion. For every act and thought we have an account to keep with God. He gives us all, and we must render all to Him if we wish to balance our account. In this accounting the sum of all error will never appear other than as a cipher, for we know it to be what it is—nothing. Every lack is but the outward sign of some lack of love in our own thought. Where there is love there is sure to be confidence and good fellowship. The heart that knows these three need never lack for the friends who help or the opportunity to do, for in the measure that we mete it is measured unto us again. Observing the law which makes the cause (God) and the result (good), we can balance our account as worthy followers of Christ. As one of our hymns reads,—

For we must share, if we would keep
That blessing from above;
Ceasing to give, we cease to have,
Such is the law of love.

ILLUMINATION.

JOHN ASHCROFT.

IN Science and Health (p. 454) we read: "Love inspires, illumines, designates, and leads the way;" and in no one thing is the truth of the above statement made more apparent than in our study of the Bible. While studying a Lesson-Sermon the thought presented itself that even if there were no healing of inharmonious physical conditions in Christian Science, its illumination of the Scriptures would still make it "worth while;" but a moment's reflection showed that one could not appreciate this illumination without experiencing something of the healing power of this truth.

The brief, graphic narrative of Jesus' walk to Emmaus with two of his disciples, culminating in his disappearance from their sight, formerly conveyed to me no more than the suggestion that the Master used some mysterious power which he possessed to remove himself from their view; as when at Nazareth we read that "he passing through the midst of them [his enemies] went his way." But, as we learn to discern spiritual things spiritually, we see that Jesus was exercising the dominion which God gave man in the beginning, and which He has never taken away, and we perceive, if but faintly, that the bread which he brake and gave unto them was the truth, opening their eyes that they might indeed know him and lose their finite sense of his personality.

In the Love-illumined thought which we bring to the study of the sacred records, we are enabled to realize in some measure that in the final scene near Bethany, when

Digitized by Google

the great Teacher had opened their understanding "that they might understand the Scriptures,"—even as the loving thought of another has opened ours,—the blessing he gave was the illumined consciousness, from which their material sense of him vanished in their spiritualized perception of the Son of God.

TO SING AND TO PRAISE.

CHARLES A. GRIFFITH.

In both sacred and secular history we find almost innumerable accounts of people coming together to sing praises to God for benefits bestowed, for victories won; and this is well, for of all mortal shortcomings few are more unworthy than ingratitude. It is well to know and acknowledge that it is God "from whom all blessings flow," and to be grateful for those blessings.

It is not so frequently, however, that we find any record of people coming together to sing and to praise God for blessings not as yet made manifest, victories not yet won. Communities, states, and nations, in anticipation of impending calamity, sometimes seek the Lord in prayer, imploring Him, the unchangeable God, to change His plans and avert their doom; but at a time when complete annihilation seems inevitable, to sing and to praise would seem to many no doubt like the very height of folly. It is true, nevertheless, that such events have happened, and in them there was no semblance of folly.

During the reign of King Jehoshaphat the Moabites and the Ammonites and others joined in an effort to drive the Israelites out of the promised land. In numbers as well as military strength the heathen hordes had every advantage; apparently the Israelites were completely outclassed. To add to the seeming hopelessness of their case, the inhabitants of Mount Seir also appeared against them. The prayer of Jehoshaphat at this time, as recorded in the twentieth chapter of II Chronicles, when to human wisdom escape seemed impossible, is worthy the most careful study. We may well note its simplicity and observe the absolute dependence upon God, as indicated by the closing words: "For we have no might against this great company that cometh against us; neither know we what to do: but our eyes are upon thee."

Then upon Jahaziel, the son of Zechariah, "came the Spirit of the Lord" and he commanded what to do. He said: "Be not afraid nor dismayed by reason of this great multitude; for the battle is not yours, but God's. . . . Ye shall not need to fight in this battle: set yourselves, stand ye still, and see the salvation of the Lord." Then Jehoshaphat, after consultation with his people, "appointed singers unto the Lord, and that should praise the beauty of holiness." We then read that when they began to sing and to praise, the Moabites, the Ammonites, and the inhabitants of Mount Seir began to fight among themselves and with one another, until all were destroyed. The spiritual significance of this historic event is clear. In our effort to make our demonstration do we not sometimes overlook this part of our work and fail to "praise the beauty of holiness"? Mrs. Eddy says in Science and Health (p. 249): "Let us rejoice that we are subject to the divine 'powers that be.'" There is no suggestion here that we wait until our demonstration is made manifest before we rejoice. Jesus set us a most worthy example when at the grave of Lazarus he gave utterance to that wonderful prayer of thanksgiving, "Father, I thank thee that thou hast heard me."

Just here it may be well to add a word of caution as to what actually constitutes true praise. The perfect rendering of a beautiful anthem by a trained choir may be, as it is commonly called, praise; then again it may not. It may be simply an effort on the part of the individual members of the choir to do their part or to elicit the praise of the congregation for their own musical ability. The only real praise or worship is the endeavor to understand and to do the will of Truth. Such praise will manifest itself in countless ways of helpfulness and beauty. When fear and doubt are completely overcome, then praise is natural, spontaneous, and genuine, and we may with assurance leave the results in the keeping of divine Love, remembering that the battle is not ours, but God's; that we have but to stand still "and see the salvation of the Lord."

LOOKING FOR GOOD.

AUREL BEACH.

When living on our farm near town, children from different Sunday schools would come to our place for picnics, and gather hazelnuts and walnuts to carry home. One afternoon, when quite a large crowd was there, I went to the pasture, where much shouting and merrymaking were going on, but the first child I saw was a little fellow who was peering under the bushes and around the stumps, carrying a little empty basket. "Why, Donald," I said, "what are you looking for?" "My mama told me to look out for snakes," he replied. "Well, you can't find them if you do look for them," I said, "but look up and see these nice hazelnuts; aren't these what you came for?" Under this new inspiration he quickly forgot all about any possible snakes, and we soon had his basket full of nuts.

Now I knew the mother of this little boy to be a Christian woman who meant always to advise her child for his highest good, but her parting injunction as he left home that morning would have spoiled his whole day with fear, if that fear had not been destroyed. His search for enemies kept him away from those who were looking for good things, even though he like the rest desired to get good. This incident taught me many lessons in Christian Science.

Our dear Leader's constant injunction to all her students is to look for good, and she emphasizes this teaching by pointing out to us over and over again in her writings that good is the only reality which we can look for or expect to find. To follow her teaching brings out in sharp contrast the folly of "looking for snakes," in the guise of ill health, bad morals, financial troubles, and many other things that poor mortal mind thinks are realities, but which leave the seekers only empty baskets and unsatisfied lives.

Because of a mistaken sense I used to read God's word in the Bible with my thought so full of fear of Him that I could not apply His promises of present good here and now. This fear seemed so real, in the form of sickness and pain, that my basket had no good in it. Then Christian Science came into my life, and destroyed my fear, and consciousness was soon filled with health, joy, peace, happiness, and such a love to God as I had never known before. So, as I think of the contrast between then and now, I want my gratitude to God, and to our Leader, to find expression in ways that will bring the same blessings to others.

What if there are "snakes"? The first chapter in Genesis teaches that God made all that was made; that He saw everything He had made, and that it was very good. He also gave man dominion over every creeping thing that creepeth on the earth. This accords with Mrs. Eddy's statement in Science and Health (p. 514): "All of God's creatures, moving in the harmony of Science, are harmless, useful, indestructible." This teaching will eliminate fear, and give freedom from harm. It will also help us to see the good in human character to the exclusion of the false and untrue. We must all some time learn to stop looking for evil under any guise and look only for good.

The best portion of a good man's life,—
His little, nameless, unremembered acts
Of kindness and love.

WORDSWORTH.

Digitized by Google

SELECTED ARTICLES.

[Frederick Dixon in *Egyptian Observer*, Cairo.]

The writer of the article on Christian Science, in a recent issue, has embarked on a criticism of Christian Science teaching which is dependent entirely on an understanding of the meaning to be applied to the word faith. Huxley once declared that it was probably impossible to agree to an acceptable definition of the word religion, on the ground that no two people hardly would agree to each other's definitions. It is not too much to say that the word faith is almost as elusive, when it comes to a definition, as the word religion. To one man faith means believing something of which there is no proof, while to another, faith is based on at least some degree of evidence. Among the former may be classed St. Gregory, with his famous declaration that there is no faith in accepting a conclusion of which satisfactory evidence has been given; among the latter, St. Paul, with his even more famous declaration that faith is the substance of things hoped for, the evidence of things not seen.

It is, however, this very absence of any scientific terminology that has made religion such a hopeless battleground of sects. Yet, religion, if it is anything at all, is the expression of man's belief in the absolute, and so religious controversy should be as capable of being conducted on scientific lines as any controversy over the deductions of natural science. It was this very point which was so evident to Mrs. Eddy, and it led to her use of the term, Christian Science, a term which can be easily justified out of the pages of the New Testament, since in those pages we have the phrase translated "knowledge of God" which should admittedly be translated "full, exact, or scientific knowledge" of God, and so of Truth.

The question, therefore, naturally arises as to whether the word faith has not a definite meaning in the Bible. It becomes important, consequently, to learn exactly what significance the word, as used by Jesus, would have had to the crowds to whom he preached, and it so happens that we have in the writings of Philo, himself a Jew of the first century, and a contemporary of Jesus, some means of forming an opinion. One of the ablest of modern commentators on the Johannine writings has pointed out the inadequacy of the Greek language to convey the moral significance of the Hebrew verb to trust, using as an example the well-known passage in Isaiah, "If ye will not believe, surely ye shall not be established," which more literally means, "If ye be not firm, ye shall not be made firm."

This is exactly what Mrs. Eddy has pointed out, on page 23 of Science and Health, where she says, "The Hebrew verb *to believe* means also *to be firm* or *to be constant*." That this firmness meant something much more to the Jews than the mere blind faith of St. Gregory is perfectly certain. That they made use of the characters and stories of the Old Testament as symbols for the conveyance of spiritual truths is undeniable, and so Philo works out the Jewish view of faith by just these means. "Abraham," says Philo, "saw the unfixedness and unsettledness of material being when he recognized the unfaltering stability that attends true being, to which stability he is said to have completely trusted;" and from this he goes on to explain that there is "nothing so difficult or so righteous as to anchor oneself firmly and unchangeably upon true being alone," which, in its essence, of course, is the grasp of spiritual causation. Further on he says that "the only good thing that is void of falsehood and stable is the faith toward God or the faith toward true being," and this faith he calls knowledge. "Wherefore," he continues, "Abraham is said to have been the first to have trusted God, since he was the first to have an unaltering and stable conception how that there exists one cause, the highest, providing for the world and all things therein."

On page 579 of Science and Health Mrs. Eddy defines Abraham as "fidelity; faith in the divine Life and in the eternal Principle of being. This patriarch illustrated the purpose of Love to create trust in good, and showed the life-preserving power of spiritual understanding." Faith, it follows from this, as understood by Philo and as explained by Mrs. Eddy, is the perception of spiritual causation, or, to return to the writer of the Hebrews, "the substance of things hoped for, the evidence of things not seen."

"Until belief becomes faith," Mrs. Eddy writes, on page 297 of Science and Health, "and faith becomes spiritual understanding, human thought has little relation to the actual or divine." It will be seen, therefore, that in Christian Science faith is the connecting link between belief and spiritual understanding. In the famous eighth chapter of John, the evangelist explains, though the distinction is unfortunately lost in the translation, the difference of merely believing his words (believing him), and having faith in his statements (believing on him). Discipleship, it is here shown, begins in belief, broadens into faith, and finally develops in spiritual understanding. Faith, then, is something more than mere belief, something verging on understanding.

When Jesus first called his disciples they believed him, but after the performance of the first miracle they believed on him, or had faith in his teaching. The mere act of believing had been deepened by his teaching, and by the performance of the miracles, which were themselves the object-lessons or demonstrations of the truth of his teaching, into a faith in his and their ability to work the greater miracles. The beginner in any study first accepts the theory as a reasonable working hypothesis. As he further develops his inquiries, and makes his first demonstrations, his belief changes into a faith in the possibilities of the study before him, until, as his understanding of the subject grows deeper and deeper, he includes in his demonstration more and more convincing proofs that what he once accepted as a theory is an actual fact. Then he knows. "Ye shall know the truth," Jesus said, "and the truth shall make you free."

[Edward W. Dickey in *Los Angeles* (Cal.) *Express*.]

It cannot be too emphatically stated that Christian Science is based upon the one infinite divine Principle, Love. It is in no sense founded upon human personality and in no wise contingent upon personality for its perpetuity. Jesus once said: "Heaven and earth shall pass away: but my words shall not pass away." The same may be said of Christian Science, as it is only a scientific statement of Christianity itself. Mrs. Eddy but discovered this infinite truth of being and formulated her discovery in "Science and Health with Key to the Scriptures" for all the world to learn and demonstrate.

Christian Science has already accomplished the healing of all known organic and functional disorders of mankind, including drug habits and various forms of sin. It is because of this good work that it has met the favorable expectancy of the world at large, and it is solely upon the basis of this work that it has spread to all parts of the world.

The continuing moral influence of Christian Science will add to its growth, and will make it a power for good throughout all ages. It has been criticized and examined from every possible human view-point, and still it continues to do its good work of healing the sick and reforming the sinner. Mrs. Eddy has organized one of the greatest religious movements of history. The direct results of her life labors is seen in the hundreds of thousands of men and women who are healthier than they were, who are better than they were, and who are active, consecrated students of the Scriptures. Everything Mrs. Eddy has written turns one instinctively to the Scriptures for the sweet and sacred sense of God's ever presence.

Digitized by Google

Any one who has made but a cursory examination of her writings will understand that Christian Science will continue in its established activities for righteousness, despite the passing of its revered and beloved Leader. We all love Mrs. Eddy for her devotion to right, for her unswerving and loving example of the Christ-spirit, and as Christian Scientists we shall endeavor to show our love for her memory by striving for the highest and fullest sense of the sacred and pure teaching she has given to the world.

As it is stated in the sixth tenet of the church: "We solemnly promise to watch, and pray for that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us; and to be merciful, just, and pure" (Science and Health, p. 497). Posterity will call the writer of these words blessed because of what she has done for this generation and the rich spiritual legacy she has left to succeeding generations.

[E. M. Ramsay in *Kilmacolm* (Scot.) *Advertiser*.]

There is no word which has been more misused than the word "love;" even honorable and religious-minded people have, generally speaking, little understanding of it, and are often taken in by a sentimental and emotional substitute. In order to be really the love of God, love must be active, intelligent, bright, for God is Mind; it must be pure, steady, serene, devoid of the taint of ecstasy or excitement, since God is Spirit, law; it must be natural, simple, bracing, strong, the reflection of Life, of the eternal, unchanging—"I am that I am;" it must be gentle, light-hearted, and gay, if it is to have the lamb nature, the child quality,—"for of such is the kingdom of God." Finally, since God is infinite, omnipotent, ever-present, love must express the nature of the infinite, omnipotent, ever-present.

The Christian Science student dwells on such thoughts as these till he feels the warm sense of heavenly love flooding his consciousness, revealing to him God and his own true nature as God's child, made in God's image and likeness. At such a moment as this what has become of the critical, unkind thoughts he once entertained? Whither have they gone? What is hatred? It is a belief in a vacuum, a belief that somewhere in ever-present and omnipotent, eternal love there is a spot where love is not. Hatred then must be regarded not as a thing, an entity, a reality, but as the supposed absence of love. Thus as love enters hatred goes out, even as with the coming of the dawn the shadows of night vanish.

This learning to love does not come easily to any one; indeed, it is only by degrees that through increasing watchfulness and constant prayer mankind parts sufficiently with sin to feel the active warmth of God's presence, but, once he has begun to feel it, he cannot help desiring it more than all else, and gradually this attraction becomes the motive power of his life. As one goes forth bearing with him this consciousness of the invincible power of active love, he finds the world wearing a new aspect; he perceives that sin is ignorance, and that the sinner must be healed of his love of sin. He also finds, to his surprise, how great a change is produced in those around him by his own change of thought. One unacquainted with Christian Science might think that this man was now exercising a good influence on his fellows, that the love and healthy-mindedness he now expressed were acting on their minds and bodies, as his former critical and unkind thoughts had done. The Christian Scientist knows that this is not the explanation. He is convinced that there is but one Mind, the infinite, divine intelligence, and he is daily striving to free himself from the belief in minds many, acting and reacting upon one another, and to let that Mind be in him "which was also in Christ Jesus." Thus, by ceasing to tyrannize, he himself escapes from tyranny, and so helps his brethren to become more conscious of God's government and of their freedom as the sons of God.

[George A. Law in *Waterbury* (Conn.) *Republican*.]

Christian Science does not teach that sin, sickness, and death are not a part of the experience of this mortal existence, and no one knows better than a Christian Scientist how real pain and suffering are to the one afflicted. As most Christian Scientists have been healed of such conditions and restored to health and usefulness, they know whereof they speak. The teaching of Christian Science is that sin, disease, and death do not emanate from God, are not in the divine order of things, and are therefore to be contended with and gotten rid of. Thus they are not permanent, immortal, as are the things of God—God's creation—but are fleeting, temporal, abnormal; and it is in this sense that in Christian Science they are regarded as unreal. Paul says, "Therefore seeing we have this ministry, as we have received mercy, we faint not; . . . while we look not at the things which are seen, but at the things which are not seen: for the things which are seen are temporal; but the things which are not seen are eternal."

If sin, sickness, and death are of God's creating, they would exist under the infinite spiritual law. Then it would be impossible to destroy or eliminate them, and man would face a condition impossible to cope with. Indeed, Jesus' own works of healing would not have been possible of accomplishment. But Jesus taught how to obtain freedom from these disturbers of the God-given peace and happiness of man. He declared death an enemy to be overcome, the "last enemy" to be overcome, as Paul puts it. And Jesus overcame death, thus proving man to be immortal, the "image and glory of God," with "dominion over all."

Mrs. Eddy has never claimed that this age would witness the demonstration over death. In referring to death in the work entitled "Unity of Good" Mrs. Eddy says (*p. 40*): "To say that you and I, as mortals, will not enter this dark shadow of material sense, called *death*, is to assert what we have not proved; but man in Science never dies. Material sense, or the belief of life in matter, must perish, in order to prove man deathless. . . . This generation seems too material for any strong demonstration over death, and hence cannot bring out the infinite reality of Life,—namely, that there is no death, but only Life. The present mortal sense of being is too finite for anchorage in infinite good, God, because mortals now believe in the possibility that Life can be evil. The achievement of this ultimatum of Science, complete triumph over death, requires time and immense spiritual growth."

In healing the sick and in teaching his followers this spiritual healing, Jesus took no account of material conditions. He never inquired the name of a disease, whether it was organic or not, and used no drugs; still we read that he "healed all manner of sickness." He said, "The works that I do shall he do also; and greater works." If God had intended that drugs were to be employed to heal, Jesus undoubtedly would have used them, for Jesus was the Way-shower who instructed man in the way of life and taught him how to obtain freedom from the ills of the flesh. He also taught that the knowledge of God and the knowledge of man, the truth about God and the truth regarding man, brought relief from all abnormal conditions. To show how material knowledge was regarded by Paul, I quote from the Twentieth Century New Testament version of the second chapter of I Corinthians, to wit: "For my own part, brothers, when I came to you, it was with no display of eloquence or philosophy that I came to tell the hidden purpose of God; for I had determined that, while with you, I would know nothing but Jesus Christ—and him crucified! Indeed, when I came among you, I was weak, and full of fears, and in great anxiety. My message and my proclamation were not delivered in the persuasive language of philosophy, but were accompanied by the manifestation of spiritual power, so that your faith should be based, not on

Digitized by Google

the philosophy of man, but on the power of God." The reason for this may be found in the apostle's words, "That no flesh should glory in his presence."

That Jesus' healing works were not the result of will-power, suggestion, or the action of the human, mortal mind, is proven by his statement when he said, "The words that I speak unto you I speak not of myself: but the Father that dwelleth in me, he doeth the works;" also, "It is the spirit that quickeneth; the flesh profiteth nothing: the words that I speak unto you, they are spirit, and they are life." Jesus healed all diseases. He did not send the one suffering from an organic complaint to the doctor, saying that God could not heal him; but he healed all, irrespective of their complaints. However, he did find localities where "because of their unbelief" the "mighty works" were not accomplished, and there he tarried not.

In regard to the statement that there is some uncertainty as to whether or not Christian Science successfully treats organic disease, I would call attention to a book by B. O. Flower, which can be found in the public libraries, entitled, "Christian Science as a Religious Belief and Therapeutic Agency." This book contains the history of many cases of organic disease, giving the names of well-known physicians who had these cases, their diagnosis and treatment, the sworn statements of nurses, friends, and relatives as to the condition of the patient prior to receiving Christian Science treatment as well as after being restored to health through Christian Science.

[E. J. Simpson in *Ardmoreite*, Ardmore, Okla.]

In the "scientific statement of being," which will be found in Science and Health on page 468, we read as follows: "Spirit is immortal Truth; matter is mortal error. Spirit is the real and eternal; matter is the unreal and temporal." There is certainly no ambiguity in this declaration. On the contrary, the statement as made by Mrs. Eddy is so positively divorced from the complex verbiage commonly employed by philosophical writers, that no one should mistake the meaning. Paul in writing to the Corinthians was not more explicit in drawing a line of demarcation between the temporal (the material) and the eternal (the spiritual). We read: "For we know that if our earthly house of this tabernacle were dissolved, we have a building of God, an house not made with hands, eternal in the heavens." Again, we read: "While we look not at the things which are seen, but at the things which are not seen: for the things which are seen are temporal; but the things which are not seen are eternal." Now where could any more perfect correlative be found to Scripture reading than is found in the declaration made by Mrs. Eddy?

Our critic is mistaken when he thinks that Christian Science teaches that sin and transgression are not recognized as something to be overcome. On page 240 of Science and Health we read: "If at present satisfied with wrong-doing, we must learn to loathe it," and again, "Remember that mankind must sooner or later, either by suffering or by Science, be convinced of the error that is to be overcome." In the tenets of Christian Science, which may be found on page 497 of Science and Health, we find in section three these words: "We acknowledge God's forgiveness of sin in the destruction of sin and the spiritual understanding that casts out evil as unreal. But the belief in sin is punished so long as the belief lasts."

Christian Scientists do not believe in the reality of sin or of discords of any kind, because God did not make them and because they are not eternal. As God's children, His spiritual image and likeness, it is man's prerogative to manifest God-bestowed dominion and rise above the erring beliefs of sin, sickness, and death; his privilege to know that God is Love; his right to strive for that Mind "which was also in Christ Jesus," and by right living, right thinking, and right doing to manifest in gentleness and tenderness the Christ-spirit. Christian Science is a demonstrable religion, based on love; a religion which helps mankind to see there is something better than wrong-doing, something far more harmonious than the discords of human envy, malice, and unkindness.

[W. C. Williams in *Frederick* (Md.) *News*.]

The philosophy and theology of Christian Science are that man is, as the Bible states, the child of God, made in His image and likeness (and I think our critic would agree that this could not be possible of man's outward expression). God is Spirit, therefore His likeness, man, must be spiritual. Christian Scientists believe that disease and death are realities as the world sees them, but from the spiritual standpoint they believe what Jesus said, "If a man keep my saying, he shall never see death."

All cures in Christian Science are made through the understanding that God is the only power; therefore the healing is not accomplished with the aid of anything else, and the authentic cases of healing through Christian Science are too numerous and too well known to be lightly cast aside. Christian Science accomplishes even more in overcoming sin, but such cases are not given the publicity of those of the healing of disease. Contrary to the opinion of our critic, the marvelous spread of Christian Science is due to the fact that its investigators have proved its claims to be true, and its adherents include many very intelligent people.

[Henry Deutsch in *North Star*, Cambridge, Minn.]

I note in a recent issue of your paper the question as to how the followers of Mrs. Eddy explain the fact of her passing out, and beg to say that it requires no special explanation, any more than it is necessary to explain why, with all the churches, ministers, and denominations of the world, apparently sin still continues and men still require salvation. The explanation is that none of us have yet attained to the fulness of that realization of God and man's unity with Him that lifts us to that spiritual altitude in which we shall be able to redeem the promise that "the last enemy" shall be overcome.

Mrs. Eddy never claimed that she, herself, or that her followers in this or the next succeeding generation, would be able to make the ultimate demonstration, but she did claim, and has proven, that the first steps can be taken now; that, beginning here and now, we become possessed of better health, better morals, and of a better view and comprehension of the spiritual life and turn our steps in that direction; and that, as it goes on from these small beginnings, the human race will progress, until the goal is finally attained and we reach that sense which came in the view of St. John when he said, "I saw a new heaven and a new earth: for the first heaven and the first earth were passed away." Christian Scientists are not so much interested in asking why death is not overcome, as they are in healing the sick and saving the sinner, and from the lessons thus acquired obtain a sure sense that eventually the full attainment will be realized.

[Written for the *Sentinel*.]

THE PUBLICAN.

AGNES FLORIDA CHALMERS.

Is there some one who comes to you today
  Whom you have thought unworthy and untrue—
Some one the world has judged a castaway?—
  Remember he may come to waken you;
May come to bring you healing from the sin
  Of praying, "Lord, I thank Thee that my life
Is better than this man's." There is within
  Each troubled heart, a longing, calm and still,
To know no other than the Father's will.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

A MEMORIAL TO MRS. EDDY.

It has been truly said of our beloved Leader, Mrs. Eddy, that "the works she has done will remain as her monument;" also that she is one of those "who need no monument, for their names are graven on many hearts." Nevertheless, it is the desire of Christian Scientists to erect in Mt. Auburn cemetery a memorial which shall be a fitting and dignified tribute to Mrs. Eddy, and through which they may evidence something of their love for her and of the gratitude they feel for the priceless blessings that have come into their lives through her Christian and self-sacrificing labors as the Discoverer and Founder of Christian Science.

Because of the many letters which have been received by the Board of Directors of The Mother Church, expressing a desire to contribute toward the erection of a suitable memorial, it seems fitting that an opportunity should be given to all who wish to be represented; therefore the Board has arranged to have the treasurer of The Mother Church also act as treasurer of a fund for this purpose, which has already begun to accumulate. Remittances may be made to Stephen A. Chase, P. O. Box 56, Fall River, Mass., and it should be definitely stated that they are intended for this special purpose.

THE CHRISTIAN SCIENCE BOARD OF DIRECTORS.

Boston, Mass., May 31, 1911.

THE STUDY OF THE LESSON-SERMON.

CHRISTIAN SCIENTISTS have found that regular and systematic study of the Bible and Science and Health is essential to the understanding and consequent demonstration of Christian Science, and as an aid to this study the Lesson-Sermons have proved to be of great value. A question which seems to puzzle many students, however, is just how much time should be given each day to this search for "the deep things of God." Some have felt that they got more out of the Lesson by the thorough study of one section each day, others are equally sure that a daily study of the entire Lesson is more profitable.

We have frequently been pressed to give an opinion of these views through the *Sentinel*, as to which is right, and we frankly say that to our thinking this is a question on which an arbitrary ruling cannot and in fact should not be made, as it is so clearly an individual problem. Perhaps the best solution that can be offered is to advise each student to decide for himself whether he will study one sixth or one half or all of the Lesson each day, assuming that he will soon learn from experience how much he can take in and assimilate in the time at his disposal.

We have only to look back to our schooldays to recall how some pupils learned their lessons quite easily, while others found the same lessons very difficult; and again that some seemed able substantially to understand a lesson at one reading, and others failed to grasp its intent until they had given it the most earnest study. Would it be reasonable, under such conditions, to lay down the rule that each of these scholars should study the lesson in exactly the same way and devote exactly the same time to it? Would it not be much more sensible to allow each one to pursue the method which he had found best adapted to his needs? The same line of reasoning may well be applied to the study of the Lesson-Sermon.

Mrs. Eddy writes in Science and Health (p. 147): "Although this volume contains the complete Science of Mind-healing, never believe that you can absorb the whole meaning of the Science by a simple *perusal* of this book. The book needs to be *studied*." These words of our Leader are our best possible guide in the endeavor to acquire an understanding of the text-book, and may we not construe them to mean that each of us is to give to the Lesson-Sermon such study as is necessary to obtain an understanding of it; also that the method of this study and the amount of time devoted to it are immaterial, provided the desired result is obtained.

Recalling the words of Paul to the church at Corinth, "The letter killeth, but the spirit giveth life," our problem resolves itself into a simple matter, after all, for we may safely assume that it is what we are able to gain in the way of spiritual uplift and help that makes our study profitable, and whether this shall be much or little each must determine for himself.

ARCHIBALD MCLELLAN.

THE GOLDEN RULE.

No one who has tried to practise the golden rule would deny that it is universal in its scope, and includes practically everything within the range of human experience. Christian Science, however, broadens and deepens our sense of its requirements, so that it is no longer confined to the duty of doing unto others as we would have them do unto us, but means that we should think and speak of others as we would have them think and speak of us.

It is however possible that very few take this rule into account in the giving of their testimonies at the Wednesday evening meetings; they do not stop to consider what would have been the effect of such statements as we occasionally hear upon themselves when they were beginning to investigate Christian Science. It might be well for Christian Scientists to ask themselves if they would not have been repelled and disappointed, instead of being attracted and encouraged, had they listened to statements of prolonged and uncertain struggles; of the cure of slight cuts, burns, or bruises, or relief from the unpleasant pressure of a pair of new shoes. It is true that all Christian Scientists are expected to take part in these meetings, but if they "live in the spirit," and "walk in the spirit," as St. Paul counseled, they will not lack for real inspiration when their opportunity comes, for the promise will be fulfilled, "It shall be given unto you in that same hour what ye shall speak;" and that which God gives cannot lack in strength, directness, clearness, or dignity of appeal.

People sometimes take too much thought as to the mere "form" of their sentences, while the real thing, the essence, the spiritual fact, is overlooked. It is our business to give bread to the hungry and living water to the thirsty, not idle words that are largely an outgoing of personal sense. One night a testimony was given in The Mother Church by a man who said he was a worker in a meat market, and that he had met with a serious injury from the slipping of a knife which he was using. He told of suggestions that he use material remedies, but these were not heeded because of his reliance upon the one and only power, that of Spirit, God. Then he told of a brief struggle, followed by sure and satisfying results, namely, perfect healing; but even this was forgotten in the greater result, the drawing near to God, taking the Father's hand and knowing, absolutely knowing, that divine Love is "never far from any one of us" and is ready to heal and bless, whatever be our need. Then there was the gratitude, the heartfelt thanks to God, and a tender remembrance of the one who in our day had brought Him so near to all "the suffering human race." When the simple fervent words were ended, one listener at least thanked God anew for Christian Science, and rejoiced that she had been present at that meeting.

In "Miscellaneous Writings" (p. 149) our revered Leader counsels Christian Scientists to bring to these weekly meet-

Digitized by Google

ings "what they possess of love and light, and to discourse and distribute what God has given [each one] of experience, hope, faith, and understanding." No experience is inconsequential if its relation to the spiritual fact is felt and shown, and the giving of it be inspirational. If our desire really is to help and strengthen others, the sense of self will be subordinated to this true desire, the faltering tongue will grow eloquent in telling of the goodness of God and the power of Truth, and thus will the word "have free course, and be glorified," even as in apostolic times. The cause we love deserves of us the giving of our best at all times, and the seekers after Truth need our best, therefore we should give it in loving and intelligent obedience to the golden rule.

ANNIE M. KNOTT.

THE SIN OF UNWISDOM.

THOSE who have followed the plow in the "happy hunting-grounds" of the great West do not forget the days when their polished share brought to the surface many a relic of America's first citizens. Stone mallets, pestles, pony-hobbles, tomahawks, etc.,—each and all added something to the story of the life of that picturesque people. The most numerous reminders, however, of these children of the forest were the arrow-heads which in the chances of the chase were scattered far and wide, and he would have little imagination who could pick one up from the fragrant furrow and not find himself dreaming of the fleet bow-armed hunters of the long ago.

As one notes with what exactness and manifestly patient care the hardest of flints has been fashioned and finely balanced, he perceives that with all their native simplicity these red men had well learned the fact that an effective instrument must always have form and point, as well as impulsion. This is a truth which is of the greatest moment, for, other things being equal, the intelligence of one's adjustment of means to end has directly to do with his usefulness and success, and indifference to this fact is great unwisdom.

In describing the effectiveness of "the word of God," the writer of the epistle to the Hebrews speaks of it as "sharper than any twoedged sword, piercing even to the dividing asunder of soul and spirit;" and it is apparent that every least reflection of Truth must exhibit this incisive error-destroying power. Nevertheless Jesus said, "Be ye therefore wise," and this call for thoughtfulness, regard for just what is said, and for the mental maturity and receptivity of those to whom it is said, is imperative today in voicing the truths of Christian Science. The world will never be saved by the voluble expression of ill-digested thought, however saving the truths of which the speaker has but an indefinite apprehension: but he who has learned carefully to weigh his statements, to see that they are logical, clear, intelligible to those addressed, and wise, withal, will be sure to find that, though he talks far less than formerly, his words are effecting far more.

To make inadequate, untimely, or injudicious statements of truth is to commit an offense which is far more serious than a mere waste of time and effort, since it is likely to beget a false concept of the truth and thus stereotype ignorance or intensify prejudice. They who venture to answer the challenge of error should certainly look to it that they do not hinder the cause they are seeking to serve. Argument with those who are not truth-seekers, but who perchance are simply amusing themselves at our expense, is usually the occasion of intemperate and altogether unwise statements, and hence it will not be indulged in by Scientists who "note their steps lest they stumble."

It would be easy to find unnumbered illustrations of our Leader's exceeding care to point her arrows before she gave them flight. No student of Science and Health can have failed to be impressed with the far-seeing wisdom with which, in the chapter on Marriage and other portions of her writings, she has presented the Christ-ideal in a way which rebukes yet inspires, which reveals the requirements of absolute Science without discouraging those who are capable as yet of taking only the first step of an improved belief. In this she has displayed that discretion, that sanity of judgment which made such a large contribution to her equipment for the leadership of a great world movement, and has set her followers an example which they do well to emulate.

JOHN B. WILLIS.

RESIGNATION OF MRS. MIMS.

IT is with sincere regret that the Board of Directors has accepted the resignation of Mrs. Sue Harper Mims from the board of lectureship of The Mother Church, after many years of faithful and effective work for the cause in this direction. That her talents, long since consecrated to the service of the Master, will find other fields of usefulness we cannot doubt, for our beloved Leader has taught us that "there is no limit to infinitude or to its reflections" (Science and Health, p. 517).

AMONG THE CHURCHES.

PROVIDENCE, R. I.

On April 24, the Rhode Island branch of the Federation of Churches held a convention in the Union Congregational Church of this city, to which First Church of Christ, Scientist, had been invited to send delegates. Nearly every denomination in the state was represented in the convention. The object of the federation is to find a common ground for united effort in seeking to bring to realization the kingdom of God on earth: to form a "clearing-house" for religious activities. It was the sentiment of the convention that a federation of churches was not the union for which Jesus prayed, but simply a step in the right direction; that the basis of united action must not be compromise of belief, but a union of effort along lines of agreement. It follows, therefore, that perfect agreement will only come with that perfect understanding of Truth which is the foundation of unity. It is a joy to see the walls of separation melting away; to see the churches devoting their powers to building up the kingdom of God rather than contending for distinctive creeds and doctrines: for each to look for the good in the other, which is the only real, rather than the evil which is unreal, and thus find that we are all one in our love of good.

As we take our place in conference with the various denominations for the first time in this state, we are reminded of the days not so long ago when some of the largest denominations of today, such as the Methodist and Baptist, were refused fellowship; when a Methodist minister could not find a public hall in Boston where he would be allowed to hold a public service; when Roger Williams fled to the wilderness and providentially found a home among the Indians and there founded a city which he named Providence. We rejoice that the Providence Plantations have recognized that we have part in the kingdom of God and His Christ and have given us fellowship on these lines.

Correspondence.

KEY WEST, FLA.

At half past five on the morning of April 24, First Church of Christ, Scientist, in Key West, Fla., laid the corner-stone of their new church. The style is colonial, the material reinforced concrete. The seating capacity is two hundred. The location, on Division and Georgia streets, is in the best residential section of the city. It is expected that the building will be so far completed by the end of August that it can be used for regular services.

THE LECTURES.

DEADWOOD, S. D.

The event of the present year in the religious circles of Deadwood was a lecture at the Deadwood Theater Sunday afternoon [April 2] on "Christian Science" by Bliss Knapp. The lecturer was introduced by Judge W. S. Elder, who said:—

The close of the nineteenth century and the beginning of this one will be memorable in the annals of American history for certain great political, social, and religious movements which took place during this period.

Among the religious teachers who voiced one phase at least of the demand for a return to the gospel of the apostolic age was the Founder of Christian Science. Her gospel of healing through Christian Science came like a warm and fragrant breath of spring into the cold and arid heart of humanity, and immediately the desert bloomed and blossomed with fresh hope. No one, I think, can justly deny that Mrs. Eddy was a great teacher. To deny it is to deny the facts of history. Her leadership is evidenced by the number of her followers among thinking men and women all over the world, by the churches and institutions which have been built in her name, and by the literature which is spreading broadcast over the whole earth the fundamentals of her faith. It is possible, I suppose, that a movement of such world-wide significance as that of Christian Science could have been built upon "fraud and delusion," but I do not believe it.

A tree is known by its fruits. The strongest and clearest proofs of a fact are often those which are the most difficult to explain. The blind man, in the New Testament, who had received his sight, when asked to tell about it, could only say, "One thing I know, that, whereas I was blind, now I see." Men do not gather grapes of thorns, nor figs of thistles. If the sick are made well and the lame to walk and evil is banished through the virtues of this gospel of Christian Science, what more proof do we need of its divine character? I am not speaking as a Christian Scientist, for I confess with regret that I have not given that careful study and earnest consideration to the subject which a matter of such vital importance deserves, but I speak as one who welcomes and believes in, theoretically at least, any movement which has for its mission the healing of the sick, whether of body or soul, and which brings comfort and peace to the weary and heavy laden.

Deadwood Pioneer-Times.

DENVER, COL.

Willis F. Gross lectured on the subject of Christian Science at First Church of Christ, Scientist, April 4. The introduction by I. I. Boak was in part as follows,—

All the discoveries of the past, whether by Franklin, Whitney, Fulton, Edison, Newton, Marconi or others, are of little value to humanity as compared with the rediscovery or rather uncovering of that religion, old, yet to us new, which came into the world with Jesus of Nazareth and was taught and so successfully practised and demonstrated by him nearly two thousand years ago; a religion that is rapidly becoming the dominant power for good in this and every civilized country in the world, of which the entire creed is covered in the one word Love, and which its Discoverer and Founder, Mrs. Eddy, has designated as Christian Science. This is a practical, every-day religion; not a mere doctrine or belief, but the manifestation of an actual, living, working, demonstrable Principle. It is an honest, common-sense admission and application of the natural laws of life and living, as given to us by the creator of the universe, but which, until quite recently, have been so poorly understood. I feel that we are indeed fortunate in having with us tonight one who by teaching, investigation, and personal knowledge is in a position to make clear to us the beauty, the value, and the adaptability of this practical religion which finds every-day expression in the hearts and homes of its devotees, that lives in deeds, not in words; in practice, not in creed.—*Correspondence.*

EVANSTON, ILL.

Clarence C. Eaton addressed a good-sized audience at First Church of Christ, Scientist, Tuesday evening [April 4]. He was introduced by Frank H. Edwards, first reader, who said:—

Christian Science, when viewed rightly, arouses the noblest thought and expectancy in man. It is not only beautiful in its simplicity, but it is scientific in its practice and quite encouraging in its results. Naturally, this Science must be approached at the right angle; it must be weighed carefully, and by the standard of its truth. Criticism by vague opinions is like judging a picture from the wrong point of view.

Christian Science is not only attracting the attention of the sick but also the interest of the well. Because of this interest, lectures are given from time to time which are enlightening and that serve to rid us of false impressions. It is, therefore, not difficult for me to welcome you all on behalf of this church. It is no task to congratulate you that you are to hear a lecture on this important subject, because one may congratulate you and be sincere at the same time. This, I am informed, is both scientific and Christian. What a world this would be if all our protestations were sincere!—*Evanston Press.*

NORWICH, CONN.

A lecture on Christian Science was delivered by Prof. Hermann S. Hering at the Y. M. C. A. Hall Monday evening [April 3], and was attentively listened to by a large audience. The speaker was introduced by Herbert M. George, who said in part,—

Christian Scientists are proving by actual demonstration that "Science and Health with Key to the Scriptures" by Mrs. Eddy is the most helpful commentary upon the Bible that has ever been written, since by its teachings it has made possible the same healing works in this the twentieth century that were practised by Christ Jesus in the first century and by his followers for three hundred years after the crucifixion. Every Wednesday evening, hundreds of thousands of people assemble to voice their gratitude for the many blessings which they have received through Christian Science and to offer a chance to others to learn how to gain the health and happiness which they enjoy.

Norwich Record.

BANGOR, ME.

The lecture on Christian Science, given in City Hall Thursday evening [April 6] by the Rev. Arthur R. Vosburgh of Rochester, N. Y., was heard by a large and interested audience. Gorham H. Wood, first reader of the local church, introducing the speaker, said in part,—

We all recognize that Christ Jesus had a clear understanding of the kingdom of heaven. We have read many, many times what he had to say about the kingdom and the way into it. Where then is the kingdom of heaven and how shall we find it? Jesus said, "The kingdom of God is within you." Then it must be here and now and it must be mental, just as Mrs. Eddy, the Discoverer and Founder of Christian Science, has clearly set forth in the Christian Science text-book, "Science and Health with Key to the Scriptures," and just as men, women, and children, in countless numbers, following the teachings of this text-book, are proving all around us day by day. The understanding has been opened, as in the days of the first disciples.

HERKIMER, N. Y.

The lecture on Christian Science delivered at the Grand Opera House last Sunday [April 9] by Frank H. Leonard was of a quality which merits more extended notice than was possible in our immediately following issue. We are accordingly presenting herewith a summary both of Mr. Leonard's able address and of the introductory words of the Rev. Mr. Ledyard, of the Newport Universalist church. The latter gentleman gives splendid expression to the open attitude of mind which he and many others endeavor to maintain toward every expression of truth, and the seeking spirit in which they approach the later theories of theology to determine what degree of truth they may contain. Mr. Ledyard, after declaring his pleasure in being present, his appreciation of the honor done him, said:—

In the strict sense of the term I could hardly be called a Christian Scientist, for as yet I am unable to understand many of its teachings; but any movement which is able to do the unquestioned good which this body of truth-seekers has accomplished and is doing should receive the genuine support of all who look out with hope to the time when the brotherhood of man shall be a reality and the fatherhood of God shall be understood. Too long have we been seeking to make God in our image, when as a fact God made man in His image. The teachings of the church in the past would make God manlike; Christian Science makes man Godlike. And because of this fact I am glad, as a minister of the goodness of Jesus Christ, for this opportunity to voice my hearty approval of this great movement and my confidence in its truth, for the starting-point of Christian Science is "that God, Spirit, is All-in-all, and that there is no other might nor Mind" (Science and Health, p. 275); and this God is Love, therefore Love is the divine Principle.

Because of our blinded vision we have mistaken shadows for realities and by this delusion of the imagination have conjured up to our mortal mind many harmful and disgusting things which after all do not exist. We see but through a glass darkly, but the time is coming,—we are now standing upon its very threshold,—when we shall see face to face and become like the great ideal, the man Jesus, for we shall be able to see him as he is. Then shall we understand for ourselves that truth which Paul proclaimed, that "God is all and in all;" and because we know that God is good, so ought we to know that all is good.—*Telegram.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Bucyrus, Ohio.—Prof. Hermann S. Hering, Opera House, June 16.

Charlotte, Mich.—Bliss Knapp, Church Edifice, Lovett and Washington streets, June 16.

Chicago, Ill. (Fourth Church).—Bicknell Young, Church Edifice, Harvard avenue and 67th street, June 15 and 16.

Dover, N. J.—Prof. Hermann S. Hering, Assembly Hall, 24 East Blackwell street, June 5.

Excelsior, Minn.—Frank H. Leonard, Opera House, June 16.

Fennville, Mich.—Francis J. Fluno, M.D., Dickenson's Opera House, 3 p.m., June 11.

Louisville, Ky.—Frank H. Leonard, Macauley's Theater, June 11.

Milan, Tenn.—Frank H. Leonard, Opera House, June 12.

Owensboro, Ky.—Frank H. Leonard, Grand Opera House, June 13.

Painesville, Ohio.—William R. Rathvon, High School Auditorium, 3 p.m., June 4.

Tiffin, Ohio.—Bicknell Young, Grand Opera House, 8:15 p.m., June 13.

Toledo, Ohio (Second Church).—Bicknell Young, Valentine Theater, 8:15 p.m., June 12.

White Plains, N. Y.—Bicknell Young, Newell Theater, 3:30 p.m., June 11.

TESTIMONIES OF HEALING.

Seven years ago I stood in the consulting-room of a noted physician, listening to the following verdict: "I cannot pass you for mission work in Madagascar as you desire. You could not stand the journey, or the climate; under the most favorable conditions your life cannot be prolonged beyond seven years, and it may end suddenly at any moment." I went in silence out into the street, feeling that of all the weary ones who trod its pavement there surely was none more lonely than I. Of those I loved some had lately passed on, and others I had lost by that which sunders more completely than death itself. That I was among the unwanted, I realized most keenly; that I did not yield to the temptation of self-destruction, which often assailed me, was I think through fear of physical suffering. I had no love of life, but so long as life went on I determined to make the best of it. "Glad would I live, and glad would die," but how glad to die none can know but those who bear the weariness of the flesh with no hope of relief. Pain I always hated, and I strove against it with all my might; but beyond this I never looked, and took each day as it came, loving intensely the sunshine and clouds, the trees and flowers. I made new friends, and dwelt more and more in my own thoughts. My greatest trial was my failing sight, with terrible headaches. Knowing them to be a feature of my case I bore them badly and hopelessly enough, but I strove to make no moan. My cottage home and lovely garden had grown very dear to me, and I had a fuller measure of earthly love in the life which I now lived than is granted to most women, but each spring I thought would surely be the last.

At last a copy of the *Christian Science Sentinel* was sent to me, and the truth it taught seemed to be mine at once. I was a great reader and thinker, and the spiritual world was so real to me that most religious teachers of all faiths had long seemed to me to be but simply repeating old truths which I had known since childhood, and for some time I had read and reread the life of Christ as my one unfailing guide. It may perhaps seem strange that one of a deeply religious turn of thought should ever be tempted to self-destruction, but it was my intense desire "to depart and be with Christ," as well as the weariness of mortal existence that made me look in at the gate of death with longing eyes. As I read the *Sentinel* I saw a woman who was before me on the road, who stood in the light of life while I stood in the twilight shadows of approaching death. I read and reread "Science and Health with Key to the Scriptures," for it was a spiritual revelation to me. To me it was not death but life, and life was the gift of God through Christ Jesus; not a patient preparation for death, but a joyous living here and now. I saw that this life could be ours only by a conscious withdrawal from all fear of evil or its power, and a conscious dwelling with God now. Then sin, sickness, and death were nothing either to fear or dwell upon. I put forth my hand and took the gift, and thanked God for the woman who showed me the way.

For months I have had no headache, although until Christian Science came to me I had hardly known for many years what it was to wake in the morning without a sense of pain in my head, which became more acute as time went on. I can read now without weariness, which is a great joy, and I am stronger than for years past. Recently I went to the dentist and had teeth out with no fear and hardly any pain, though I had suffered tortures on previous visits, as I could take no anesthetic. Some time ago a great and unexpected blow fell on me suddenly, without a moment's warning. It was not only a serious loss, but it revealed such an environment of hatred and cruelty as I had never deemed possible. In the first moment of shock I found myself trembling so that I could not stand, but I quickly realized that nothing could hurt me except my own anger.

Digitized by Google

I sat down quietly, and while all around me was in a tumult I took up a *Sentinel* which was lying on the table and tried to read. At first my sight was blurred; but I read on, and soon the trembling ceased and I was able to calm and strengthen those around me. For a few days my heart troubled me, but I held fast to the thought that though to outward sense evil had triumphed, yet I could by God's grace rise above the dark clouds which had gathered round me, into the sunshine of the divine presence,—above all that treachery and injustice could do to me. I was able to sleep peacefully and with quiet confidence trust my future plans to Love's guidance, knowing that all would work for good if I but loved God. Had I not known the truth of Christian Science I believe the blow would have killed me, but I was unscathed, and feared no evil.

I have read Mrs. Eddy's life by Miss Wilbur and have followed each step of the way with the deepest sympathy and comprehension. All that the poets have sung and the philosophers taught,—the young men's visions and the old men's dreams,—are possible of fulfilment when the world awakes to the great truth which this brave woman has given to mankind. We see the light of a glorious dawn, in which "the eyes of the blind shall be opened, the ears of the deaf unstopped, then shall the lame man leap as a hart, and the tongue of the dumb shall sing;" not in some unknown sphere beyond the gates of death, but here on the earth which is ours, not by force of arms, but by the uplifting of the thought of the world to its divine heritage of the sons of God. The nobler thought demands "the outward and visible sign" of "the putting away the filth of the flesh," and then sin and misery would be impossible. It seems a long road from the city of destruction to the city of God, but Christian Science bids us lay down the burden of sickness, sin, and death, and go joyfully forward even "through the valley of the shadow of death," where we need "fear no evil" for none exists.

I have a loving, grateful thought for the woman whose eyes have seen "the king in his beauty," and who has revealed Him unto men; who has taught us to love "the man Christ Jesus" with the only perfect love, the love that strives to follow in the Master's steps by doing his works, and who has shown us by "signs following" that our weak efforts are crowned with success above all that we could ask or think. Thousands are now uplifted from darkness by the radiant shaft of light which falls from our "Key to the Scriptures," and with resistless power it spreads until we see afar the golden age when "the earth shall be full of the knowledge of the glory of the Lord, as the waters cover the sea."

HESTER I. TURNER, The Garden Colony, Horsington, Lincoln, England.

Christian Science came to me as the light that shineth in darkness, when after experiencing repeated failures in business ventures my mental condition had become one of great despondency. There would be weeks at a time when no cheerful thought would be mine. I became an agnostic, and even to hear the name of God mentioned caused me to become enraged.

My sister first presented Christian Science to my notice some years ago, but finding that it dealt with the subject of God, I rejected it and continued in darkness until my despair became so great that I longed for something better than the illusive pleasures of matter, which always ended in disappointment and pain, and my involuntary prayer was answered! One day, when I was suffering from a severe cold, I asked my sister to give me a treatment in Christian Science. To be frank, I must say that I do not know why I asked for the help, as I expected no result from it, and in fact was rather amused at the idea that a prayer could help any one either mentally or physically. I was on my way to business, and the trip from my home to the office consumed about a half hour's time. My surprise was intense when I found that the cold had entirely disappeared before I reached the office. I had been so hoarse that I could not speak aloud, while my lungs and throat were very sore and inflamed; but now I was well. In the evening I told my sister that the cold was gone, but that no doubt it would have gone any way, as it had probably run its course. She very patiently refrained from arguing the matter with me, and for the time nothing further was said.

Some days later I had an attack of illness, and as I dreaded the long siege of intermittent pain which always came with these attacks, I again applied for help. This time my sister told me she would give me treatment if I would take a copy of Science and Health to the office and read at least one paragraph at some time during the day. I was again healed within a very few hours, and then I was interested. I took the book, and read not only one paragraph, but page after page! Gradually, as I read, it began to dawn on my benighted consciousness that there really is a God, an infinite Principle, who is Love, Life, and Truth, who not only is not and could not be the author of the evil I had seen and experienced, but at whose coming sin, disease, and death disappear. Of course this glimpse of Truth was very slight, but it is unfolding gradually and assuming grander proportions in the ratio of my ardor in seeking the truth.

I have never had another attack of pleurisy, and have since been healed of the tobacco habit, to which I had been a slave for many years; the social drink habit and the need of wearing glasses have also gone. At one of the recent testimony meetings some one testified to having been healed of despondency, and it was then that I realized I had not been despondent or discouraged for a long time. *Christian* Science does meet every need of man. *I trust that this* testimony may be of benefit to some one in need.

SIDNEY H. DAVIS, Boston, Mass

I desire to acknowledge the many wonderful blessings which have come to me through the understanding of Christian Science, and with a thankful heart I give my testimony to the unlimited power of infinite Love. For several years my work has led me among foreign people, and much of the time I had near me no one of my own countrymen, but God has never failed me yet, nor left me alone in my need. I have seen so many manifestations of the power of Love in annihilating hate, discord, anger, resentment, prejudice, dishonesty, limitation, incapacity, and physical inharmony, that I really feel I should never doubt an instant, no matter what or how great is the seeming.

Not the least of my joys have been the beautiful results of impersonal work. Many times, in the associations in which I have been placed, I have seen the quick change from chaos to harmony, and from impending ruin and failure to success, for persons who came within the radius of the thought of Truth. The Science of Mind has opened up to me the wonderful beauties of my art, and through the realization of divine intelligence I have been enabled to manifest some of them. I know God's law is the law of progress, and each day brings me new opportunities to prove it. I wish all girls who come over here to study or work might have the knowledge of the truth of being, for I am convinced that it is the only power that can solve their problems for them. In my own experience conditions which seemed insurmountable have disappeared, and things which in my old way of thinking would have been impossible have been accomplished, and others are daily being worked out not only in outside conditions, but in ourselves, where of course our greatest work has to be done. With God everything good is possible, and all I am or ever will be I owe to Christian Science, for I have learned that of myself I can do nothing.

I now can realize faintly the wonderful work of our beloved Leader, and words cannot express my deep love and reverence for her; but I am indeed grateful for her steadfastness, which has brought to me, as it will to all who are willing to accept it, this beautiful, practical knowledge of God.—FANNY LOTT, Milan, Italy.

I am most grateful for the knowledge of the power of divine Love gained through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, in connection with the Bible. I have been with my daughter the past year and a half and can verify the statements given in her testimony. We have had many proofs of the ever-present help of divine Love.

MRS. ETTA E. LOTT, Milan, Italy.

Mrs. Eddy says: "A just acknowledgment of Truth and of what it has done for us is an effectual help" (Science and Health, p. 372). Therefore, with the realization that I ought to acknowledge and herald upon the housetops what Truth has done for me, I will speak briefly of some experiences that I have had, and which may be of some help to others.

In the winter of 1893 about one hundred and fifty Armenians were imprisoned in Cesarea, Asia Minor, as revolutionary suspects. After an absence of eleven years from my home I had just returned from Jerusalem to visit my parents, and being an entire stranger to the Turkish government officers, I was naturally considered a suspicious person, and was the first to be put in prison. After two months or so all the prisoners were sent to Angora, the capital city of the state by that name, which is the ancient Galatia to the church of which St. Paul wrote his epistle to the Galatians. While in the Angora prison, there came a rumor, through friends in the city, that as the result of an appeal by the Armenian Patriarch at Constantinople, the Sultan, Abdul Hamid II, had promised to release the Armenian prisoners at Angora on the Mohammedan or Turkish holiday called Ramazan Bayrame.

After a few days, when this subject was once more being discussed among the prisoners, realizing that we were then in the Lenten season, after proving through the Armenian church calendar that the Armenian Easter, the day of our Master's triumphant resurrection, was due fully a week ahead of the Turkish holiday, I said with deepest reverence: "I thank God that I was born and brought up a Christian, and during my stay in Jerusalem for seven years I have as archdeacon of the church served in the holy places where Jesus Christ, our Lord and Master, was born and buried; also where he trod, and in the garden of Gethsemane where he watched and prayed for all mankind. I did all this, for I believed him to be the Son of God." Although we were more than once plainly told by the prison officers that we would be sent to Constantinople to be thrown into the sea at the Bosphorus, yet I always believed that the Almighty would in His own time release us from this prison. Therefore I said, "I now know that Christ Jesus will come and release us on his blessed Easter day, and not let Mohammed come and free us on his holiday."

The following Sunday was Palm Sunday, and early in the morning all the prisoners were preparing for the morning prayer, as we always had morning and evening prayer services, when we were told by two officers that the governor had just received a special despatch order from the Sultan to release immediately the Armenian prisoners and give them every necessary aid possible that they might be at their respective homes on or before the Armenian Easter day (we had about a week's journey in carriages, there being no railroads), that they might celebrate Easter with their families. I at once called the attention of my fellow-prisoners to the omnipotence and ever-presence of God, and there was not a dry eye when we all knelt down and with one accord offered thanks to our heavenly Father for His mercy and loving-kindness.

Twelve years went by, and I had been in the United States for about eight years, the greater part of this time conducting services as a priest of the Armenian church in different cities of New England, when in the winter of 1906 Christian Science was first brought to my attention. I was only a beginner in Christian Science when I had a severe attack of rheumatism, complicated with acute lung and heart trouble. My wife, who was a trained nurse, asked me if I would like to have a doctor or a Christian Science practitioner. Although we both had but very little knowledge of Christian Science, I told her that my father in Armenia, who had no knowledge of Christian Science, did not believe in doctors or medicine; that he had been healed on more than one occasion through faith in God; and that I, his son, would certainly rather have a Christian Science practitioner. A practitioner was sent for, and although, according to *materia medica*, my condition was considered very serious, and those of my wife's family who were not Scientists had already given up every hope of my recovery, yet through an unfailing faith and trust in the omnipotence and omnipresence of God and through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, within four months or so I was able to go to work.

St. Paul says in one of his epistles: "When I was a child, I spake as a child, I understood as a child, I thought as a child; but when I became a man, I put away childish things." It is my intention, in relating these two important demonstrations, to show that when I was a child in faith or belief in God, I spake as a child, for I understood as a child, yet I was enabled to demonstrate the truth sufficiently to find release from behind the bars of the prison and from the power of the Turkish Sultan; but when I became a man, and through the teachings of Christian Science my faith in God's power grew into knowledge and understanding, so that I commenced to realize the true and exact meaning of the following words of Mrs. Eddy: "There is no power apart from God. Omnipotence has all-power, and to acknowledge any other power is to dishonor God" (Science and Health, p. 228),—it was then that divine Life, Truth, and Love enabled me to overcome the asserted power of sickness and death. Therefore I can truly say with Job: "I have heard of thee by the hearing of the ear; but now mine eye seeth thee."

My heart has since been overflowing with gratitude to our heavenly Father for all the blessings He has bestowed upon me and mine, and especially for the spiritual inspiration and for the blissful harmony that I have enjoyed and am enjoying in my every-day life. I am also grateful to our Leader, Mrs. Eddy, who through her inspired life has been the channel for the transmission of this healing and saving truth to mankind.

HOVHANNESS G. MARCARIAN, Boston, Mass.

We wish to express in this way our gratitude to God for benefits received in Christian Science. In June, 1909, my husband came home about five o'clock one afternoon, saying he had fallen and hurt his shoulder. I went for a Christian Science practitioner, and was told she was out of town; so I returned home and began to treat him myself. This was on Thursday, and I sent word for the Scientist to come to me as soon as she returned. When I assisted my husband to prepare for bed, the appearance of the shoulder indicated that a bone was out of place. This was about nine o'clock, and he had eaten his supper and was quite comfortable, but we felt that it would be better to call a doctor. I asked a neighbor to telephone for a doctor, as we were strangers in the town. The man said he would attend to everything, and I went home. We waited for two hours,

but no one came, so as my husband was not suffering any pain he went to bed and slept all night.
