THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

The following are published in German only:—

CHURCH BUILDING IN CHRISTIAN SCIENCE.
LOVE IS LIFE.
PRACTICAL RELIGION.
THE IMPERSONAL NATURE OF EVIL.
"THE LAST ENEMY THAT SHALL BE DESTROYED."

PRICE, POSTPAID: Ten copies, 10 cents; 100 copies, 75 cents; 500 copies, $3; 1000 copies, $5.

MISCELLANEOUS

BIBLES. Clarendon Brevier (01483 x), heavy faced, very distinct type, Turkey morocco, size, 6 1-2 x 4 3-8 inches, corresponding in size and binding to pocket edition of Science and Health. Price, $3.75.

Morocco cases, to hold pocket edition of Science and Health, *Quarterly*, and above Bible, may be had at $1.25.

Text Bible. (01561 x), pica square type, Alaska seal, size, 7 1-2 x 6 1-4 inches, 1 1-2 inches thick. Specially adapted for use of Second Readers. Price, $7.25.

"PERSONAL CONTAGION" AND "WHAT OUR LEADER SAYS." By Mary Baker Eddy. Single copy, 10 cents; 12 copies, $1; 100 copies, $7.50.

EDITORIAL COMMENTS ON THE LIFE AND WORK OF MARY BAKER EDDY. Containing "Excerpts from Editorial Comments," also the special editorial tributes in our own publications, and the *Outlook* article by FREDERICK DIXON. 132 pages with index. Published in two styles of binding. Prices for paper covered editions: Single copy, prepaid, 15 cents; 12 copies to one address, $1.50; 50 copies, $5.75; 100 copies, $10. Cloth binding: Single copy, 75 cents; by mail, 85 cents; six copies, prepaid, $4; 12 copies, prepaid, $7.50.

CHRISTIAN SCIENCE AND LEGISLATION. Consisting of articles by EDWARD A. KIMBALL, JUDGE CLIFFORD P. SMITH, and JUDGE SEPTIMUS J. HANNA, together with testimonies of healing, editorial comments, etc. 128 pages. Single copy, 10 cents; 12 copies, ONE ADDRESS, $1; 25 copies, $1.85; 50 copies, $3.50.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. New Edition. A History of the Building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Illustrated; 107 pages. Single copy, $1.50; one dozen, $12; half dozen, $7.

THE CHRISTIAN SCIENCE HYMNAL. Revised and enlarged. Cloth, single copy, $1.15; one dozen, $9; half dozen, $5. Half morocco, single copy, $1.40; one dozen, $12; half dozen, $6.50. Full morocco, single copy, $2.50. Levant, single copy, $3.50. Pocket edition, size 4 5-8 x 6 5-8. Full morocco. Single copy, $3; one dozen, $30.

PHOTOGRAVURE OF MRS. EDDY, printed in three sizes on India paper and mounted on heavy plate paper ready for framing, is for sale at the following prices: 8-inch (mount 12x16), single copy $1; six copies $5.25; 12 copies $9.50; 12-inch (mount 15x20), single copy $2; six copies $10.50; twelve copies $19. 16-inch (mount 21x28), specially adapted for reading-rooms, single copy $3.50; three copies $9.50; six copies $18.50; twelve copies $33.50.

PICTURE OF THE FIRST CHURCH OF CHRIST, SCIENTIST, in Boston, Mass., and the Publishing House of The Christian Science Publishing Society. Artist's proof with remarque on Japanese vellum. Size, 18 x 24. Each, $5; on India paper without remarque, each, $3. Ten per cent discount to Reading Rooms. Smaller reproduction of the above picture. Size, 11 x 14. On Japanese vellum. Single copy, $1; six copies, $5; twelve copies, $9.50. Photogravure Post Cards, reproduction of the large picture of the Church and the Publishing House, each 5 cents; twenty-five, $1.15; one hundred, $4.25.

QUARTERLY COVERS, in black morocco. Pocket size, 4 1-2 x 6 1-2, $1.15 each or $11 a dozen. With change pocket, $1.40 each or $14 a dozen.

MUSIC. Poems written by MARY BAKER EDDY and used by special permission, have been set to music as follows:—"THE MOTHER'S EVENING PRAYER," 75 cents; "O'ER WAITING HARPSTRINGS OF THE MIND," 27 cents; "SHEPHERD, SHOW ME HOW TO GO," 27 cents; "CHRIST MY REFUGE," 75 cents; COMMUNION HYMN.—"SAW YE MY SAVIOUR?" 50 cents; "BLEST CHRISTMAS MORN," 27 cents; "LOVE," 40 cents. For quantity prices and further information see our latest catalogue.

Our latest catalogue, containing description and prices of above named literature and a selected list of Bibles, will be mailed free on application. Remittances should always accompany orders, and be made by check, money order, or exchange on Boston or New York. Currency or coin should not be sent by mail unless registered. Please send no money or business letters to the Editor or Editorial Department.

FALMOUTH AND ST. PAUL STREETS, - BOSTON, MASSACHUSETTS

All orders for the works of Mrs. Eddy should be sent with remittance by New York draft or money order, directly to Allison V. Stewart.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00; six months, $1.20.

Ten copies to one address, each, one year, $1.90; six months, $1.15.

Twenty-five copies to one address, each, one year, $1.80; six months, $1.10.

Fifty copies to one address, each, one year, $1.50; six months, 90 cents.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. X indicates the year 1910; XI, 1911. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

TERMS OF SALE

Single copy, postpaid, five cents, in the United States, Canada, Mexico, and Cuba; twenty-five copies, one address, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, single copy, six cents; twenty-five copies to one address, $1.25; fifty copies, $2.25; one hundred copies, $4.00.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Before the year's outing season is over nearly half a million persons will have sought recreation and health in the national forests of the United States. The total last year was 406,775. With the finest mountain scenery and much of the best fishing and big-game hunting in the United States, the national forests, made more and more accessible each year through protection and development by the Government, are fast becoming great national playgrounds for the people. The use of the forests for recreation is as yet in its beginning, but is growing steadily and rapidly —in some localities at the rate of one hundred per cent per annum. The day seems not far distant when a million persons will annually visit them. Several of the natural wonders and landmarks of interest in the national forests have been set apart as national monuments, among them Cinder Cone, a great lava basin in California; the Gila Cliff Dwellings, extensive remains of a prehistoric race in New Mexico; the Grand Canyon of the Colorado in Arizona; Jewel Cave, South Dakota; Lassen Peak, the terminus of a long line of extinct volcanoes in the Cascades; the Pinnacles, a collection of remarkable jagged peaks in California, and the Tonto, a group of prehistoric ruins in the Tonto forest in Arizona. The Big Trees, Glacier Park, the Petrified Forest, the Oregon Caves and numerous other phenomena, serve to attract other hosts of visitors. The Government has cut 9,218 miles of trail, laid out 1,236 miles of road, and strung 4,851 miles of telephone lines.

A writer in *Everybody's Magazine* proposes that candidates for office pledge themselves on this set of questions: If elected to Congress will you vote for Cannon for speaker? to take away from the speaker the power of appointing committees and to give it to the House? to revise the tariff again, so that it will represent only the difference in wage cost of production between the United States and foreign countries? to authorize the interstate commerce commission to regulate rates on the basis of a physical valuation of railroad properties? to authorize the interstate commerce commission to limit the issuance of stocks and bonds to the actual investment? for the direct election of United States Senators? for a recognition of the postoffice department, and the appointment of a permanent director of posts? for a bill to prevent the Government from selling any more of its mineral deposits, the same to be leased at adequate rentals and for moderate periods? for a bill to prevent the Government from selling any more of its existing water-sites, the same to be leased as above?

Since the Lincoln design was substituted for that of the "Indian head" more than a year ago, 171,669,529 of the cents have been struck to Aug. 1. The Philadelphia mint, which makes all the copper coins, has been turning them out at the rate of six hundred thousand per day. Yet not only has this enormous output had no appreciable effect in displacing the old-style cents, but it is positively known that nearly thirty millions of the new Lincoln coins have passed out of circulation altogether—28,470,000, to be exact. These were the first series issued, which bore the initials "V. D. B." of the designer, Victor D. Brenner.

The Pan-American conference at Buenos Aires is ended. The American delegation will proceed to Chile in order to be there by Sept. 14, the date of Chile's centennial celebration. The delegation will also visit Peru.

The walking record of one hundred and five days from New York to San Francisco, made by Edward Weston, has just been excelled by John Irnis, who covered the distance in seventy-eight days.

An alleged illegal combination in the beef business in New England is before the United States grand jury for investigation at the Federal building, Boston.

International.

The establishment of an American banking institution in Russia is being seriously considered by a group of bankers of this country. It is understood that inquiries as to the demand for such an institution, as well as its chances for success, have been made by American commercial interests in Russia and Siberia. The cotton trade between American growers and Russian mill owners alone could be increased to a hundred million dollars a year, nearly double what it is now, it is said, with the aid of an American-owned and managed banking house to finance the transactions which are now indirect and go through Berlin or Paris. Such an institution would not be limited to ordinary banking transactions. The financing of the government railroads, municipalities, and the development of the natural resources of Russia would be undertaken.

The Labor party of Australia are responsible for bringing the principle of graduated tax on improved land values into the region of practical politics. Until very recently they were opposed by the Liberals. But, undeterred by criticism, they preached this doctrine of land taxation for twenty years in every town and village of Australia. The principle now is accepted even by the Liberals in some of the state parliaments, and a land tax bill will be one of the first measures introduced by the new Labor government in the federal Parliament. This bill will provide for a graduated tax upon all estates over £5,000 ($25,000) in value. The tax will begin at one penny (two cents) in the pound, and rise by half-penny gradations to four-pence. Absentee owners will be charged one penny extra in each case, and will not be allowed any exemption.

Russia is about to undertake a comprehensive improvement of the inland water system of its European provinces. The two most important projects are to connect by canals the river Dvina with the river Dnieper at Vitebsk and Orsha, and the Dvina with the Volga, using the rivers Mesha, Obsla, Waruca, Moskva, and Oka, thus providing for a direct communication by water from the Baltic sea to the Caspian and Black seas. The total cost of the improvements, administration, interest on invested capital, and contingent expenses during construction, is given at $79,825,000.

At a lunch given to members of the German National Agricultural Society, who have been visiting England, Lord Carrington pointed out that by the government's small holdings act of 1907 some eighty thousand acres—one hundred and twenty-five square miles—had been obtained for the agricultural laboring classes of England in two years. He is busy devising a plan for giving improved legislative, administrative, and financial facilities for establishing on a sound basis a system of cooperative credit banks for the benefit of agriculture, patterned after that of the Continent.

The Dominion government has six surveying parties at work along the Saskatchewan river to ascertain the nature and extent of the work required to render this waterway navigable between Edmonton, Alberta, and Winnipeg, but it is not expected that the survey will be completed before winter. The chief engineer in charge of this work states that a water route between these two points is quite feasible, but will prove a costly undertaking, requiring the construction of a number of locks and canals in addition to making a permanent channel up the river.

The new royal residence of the Kaiser at Posen, Germany, was occupied last week for the first time. Festivities lasting three days marked the occasion. This palace is the fifty-first owned by the Emperor. To maintain it he recently sold two of his smaller country places. It has been built for reasons of state, to symbolize to the Poles the Prussian supremacy in German Poland. The palace is a massive structure, built at a cost of $1,338,000, covers nearly an acre and a half, and contains more than six hundred rooms.

The Chinese government has decided to employ no foreign diplomatic adviser for the future. The Wai Wu Pu, the foreign governing board, will depend in the future on those of its own people who have had long experience in the diplomatic and consular services abroad. The post which is now to be abolished has paid a salary of twenty-five thousand dollars a year.

A plan is to be laid before the municipal council to relieve Paris of its congestion of statuary. The parks, squares, and all public places are becoming choked up and spoiled by the mania for commemorating in sculpture the notable people and events of the country.

The flourishing condition of English industries under free trade gives little comfort to tariff reformers. The figures for the first six months of the year show an increase in imports of £32,805,148 on last year, and in exports of £30,414,478.

The text of the convention under which Korea, the "Hermit Kingdom," is annexed to Japan, was communicated last week to the representatives of the Powers at Tokio. The document, according to now established facts, was signed Aug. 22.

The House of Commons has passed the new civil list of King George, which amounts to $2,350,000 a year. This is exactly the same sum that was allotted to King Edward VII.

Nineteen aviators have already met with fatal accidents in connection with their attempts to navigate the air.

Industrial and Commercial.

Three large tunnels under the Chicago river will soon be completed and ready for use for street-cars. Two of these connect the retail district with the west side, and the other joins the north side and the retail district. The three tunnels represent an expenditure of about two million five hundred thousand dollars.

The Oklahoma geological survey, in its report of coal deposits in Oklahoma, estimates that the available supply is nearly ten billion tons and says the state has six million acres of coal-bearing land.

It is estimated that the yield of corn in the United States this year will reach nearly three billion bushels.

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

MENTAL WORK.

CLARENCE W. CHADWICK.

To the student of Christian Science, mental work means nothing short of the unceasing prayer of self-denial. It signifies no idle pastime, no mischief-making, no inanity, no aggression. It means the constant subjugation of evil with good. It means obedience to the Ten Commandments and to the Sermon on the Mount.

Where does this work take place? In individual consciousness. One of the distinguishing characteristics of mental work is the knowledge of how to mind one's own business. Mental meddlesomeness is no part of the mental work confronting the true disciple of Truth. The power of Mind cannot be misapplied. It cannot be employed for the accomplishment of any selfish, damaging, or immoral purpose. The man who reflects or expresses divine Mind is demonstrating the will of God, which is a law of mental exclusion to all that is unlike good. Any departure from the utilization of the one Mind necessarily forfeits divine help and falls to the level of human thinking or mental manipulation and interference.

The student of Christian Science knows that power belongs to God, and that this power cannot be made manifest through human will. He will never presume to use the power of God to hate with or to accomplish any other selfish end, since it is susceptible of no such misuse. In so far as a thought of hatred, envy, jealousy, anger, lust, or any other error enters the mental abode of the would-be mental worker, in so far is the door of heaven closed to the accomplishment of any good. It is only the absence of evil in one's own consciousness that enables him to employ the power of divine Mind to bring about harmonious results. Sensuality, ingratitude, and dishonesty are not the avenues through which divine power finds expression. As the sun expresses itself only through its own light rays, so divine Love is expressed only through its own ideas of purity, goodness, compassion, kindness, and unselfishness. "Man's inhumanity to man" is not the exercise of divine power. It is evil thinking and evil doing, and is the absence of mental work that is inspired and sustained by God, the one Mind. It is the erroneous influence of the so-called human or mortal mind, which real mental work would soon extirpate.

The individual who believes that the senses of man are material, and who in consequence has not risen in thought to discern the omnipotence of good, is prone to argue for the suppositional power of liberated human thought, and will oftentimes express fear of the same. This attitude of thought on the part of some who have not understood Christian Science has doubtless given rise to the charge that Scientists are afraid of animal magnetism. They do not plead guilty to the charge, having proven for themselves and for others that an understanding of the one Mind practically and effectively disposes of the belief that liberated mortal thought has power to accomplish anything. Unenlightened mortals may believe that such thought has power, but blind belief cannot enlist the divine Mind in its own behalf nor even expect it to empower a single wrong thought. Liberated human thought is supposed to act, but only upon its own erroneous plane of blind human belief, since it is without God, without Principle, power, law, rule, or support. To say that such thought must be handled and guarded against is, however, but another way of saying that the disciple of Truth must be mentally awake, on the alert to "eschew evil" and to love the good.

The true mental worker is a disbeliever in any other than the power of God, good. He protects himself from the suppositional influences of evil by lifting his own thought above all belief in evil or in any evil power. The love of God, understood and demonstrated, cancels the claim of sin or evil in his own consciousness, destroys fear, and ensures trust and confidence in ever-present and omnipotent good. His only mental work is to dwell "in the secret place of the most High,"—"under the shadow of the Almighty." This by no means suggests the ignoring of evil thoughts, arguments, suggestions, or beliefs, but rather such vigorous and active treatment of them as to convince one's self of their utter nothingness and powerlessness, thereby ensuring their destruction in individual consciousness.

The individual who says that he knows that evil has power to defeat the purposes of good, has the Science of being reversed in his own thinking, and does not comprehend the meaning of mental work. He is in a rudderless ship drifting out to sea, liable at any moment to be swamped with the waves of fear and belief in more than one power. If he will meekly and humbly accept the metaphysics of Christian Science and begin to think and to act from the standpoint of an all-good God, who is "of purer eyes than to behold evil," he will soon be able to prove to his entire satisfaction the emptiness and powerlessness of evil, and ever afterward he will work mentally to uphold the dignity, potency, and all-inclusiveness of good. This mental work will heal the sick, reform the sinner, destroy vicious habits, and correct all erroneous thinking. It will lead thought into a working understanding of the kingdom of heaven on earth. It will do away with all mental inertia, indolence, indifference, and laziness, thus revealing the force of the Master's words: "It is the spirit that quickeneth; the flesh profiteth nothing."

Mental work always keeps right with God, else it ceases to be mental work. It is charitable, kind, and inoffensive. Like charity, it "doth not behave itself unseemly, seeketh not her own, is not easily provoked, thinketh no evil; rejoiceth not in iniquity, but rejoiceth in the truth." It is no hypercritical busybody, intermeddling with other people's affairs. Christ Jesus expressed only those thoughts and did only those things which pleased his Father. This is proof of his perfect mental work, which was absolutely devoid of hypnotism, clairvoyance, or occultism. He sought no personal control of other people's thinking. He obeyed not his own will, but the will of the Father.

The twentieth-century Christian has no other model after which to pattern his own mental work. The success of the Christian Science movement today is due to Mrs. Eddy's

Copyright, 1910, by Mary Baker Eddy.

Digitized by Google

unwavering obedience to Jesus' teaching and to her comprehensive exegesis of the great mental work that he did, making it possible for all mankind to begin to think and to act from the same spiritual standpoint. She has practically defined to this age, through precept and example, the omnipotence of good; and this doctrine alone is capable of bringing a true sense of peace and happiness to suffering humanity. One who presumes to think from any other standpoint is thinking at random and cannot grasp the modus of the scientific mental work done by the Master. Thought that is trending heavenward is approaching nearer and nearer to this great redemptive fact that good is omnipotent.

The student of Christian Science who has become sufficiently humble to accept this simple statement of fact and to make the application of it to his own daily needs, learns through this application to love the idea that assigns all power to God, and the more he loves it the less liable is he to make any mental departure from the standard of right thinking. It necessarily becomes a barrier against the temptation to intrude upon other people's thinking, to hear or to believe anything regarding one's neighbor that is not true in the sight of God. It gives inspiration to all righteous endeavor and encourages faith and trust in an all-good God, who is abundantly able, "above all that we ask or think," to satisfy every human need.

The highest thought of mortals has been tinctured with the belief in two powers, good and evil. This belief has shut the door upon correct thinking and consequently upon the possibilities of Christian healing. It has armed men with the weapons of malice, envy, hatred, and intolerance, and kept them ignorant of the milk of human kindness, of peace on earth and good will toward men. It has opened the door of greed, avarice, and selfishness in their worst forms and has held mankind in hopeless bondage to the so-called material senses. It has robbed them of faith in the power and influence of right thought through the belief that God endowed them with senses to think and to see both good and evil. It has made the omnipotence of good seem merely a theory to them rather than a demonstrable fact. It has kept them in baneful ignorance of the meaning of true mental work.

When the Principle or true Christian basis of mental work is understood, the individual loses his fear of other people's thoughts, for he will recognize the one infinite source of all right thought, which robs counterfeit thoughts of any supposed law, power, presence, or influence. Mrs. Eddy says: "Good thoughts are an impervious armor; clad therewith you are completely shielded from the attacks of error of every sort" (Pamphlet, What Our Leader Says, p. 7). Here is sounded the key-note of all mental protection from so-called evil influences. It means to be clad with good thoughts. It means to live in the atmosphere of good; in other words, to be conscious of the omnipotence of good, which reveals the impotence of evil. To do this one must be virtuous, pure, true, and honest.

The so-called evil thinker has no weapon with which to defend himself from the effects of his own wrong thinking. His so-called mental argument or work but results in his own undoing, in the heaping up of "wrath against the day of wrath." Christ, Truth, is our only Saviour, and when one is in Christ "he is a new creature: old things [thoughts] are passed away; behold, all things are become new." In other words, he has become a righteous mental worker with the omnipotence of good as his only weapon, which weapon can never be employed to further the selfish interests of friend or foe. Every blow struck by such an one is for the good of all mankind; it has no selfish or sinful motive back of it, and for this reason it has mighty power in the "pulling down of strong holds,"—of everything which would exalt itself "against the knowledge of God."

TODAY'S LESSONS.

WM. S. GILBREATH.

THE second stanza of Longfellow's beautiful sonnet, "The Two Rivers," is as follows:—

> O River of Yesterday, with current swift,
> Through chasms descending and soon lost to sight,
> I do not care to follow in their flight
> The faded leaves that on thy bosom drift!

There are few Christian Science practitioners who have not had the experience of one who comes to them for help and at the same time holds to the past with a viselike grip; or, as the poet so well puts it, who follows "in their flight the faded leaves that on thy bosom drift!" We have ourselves been loath to give up the things of yesterday, and in clinging to them have been unable to grasp the good things of tomorrow. Lot's wife was one of these, and as she fled from the doomed city, her thoughts and affections doubtless went back to her home of luxury and plenty. Lacking sufficient faith in the divine guidance, she turned and looked back, and in so doing she was forced to witness the absolute destruction of all that her heart held dear. In the bitterness and despair of it all, she was turned to a pillar of salt as a punishment for her disobedience. After our eyes are opened to the truth of being, there is so much of good, so much of beauty before us, that we do not need to spend one moment in dwelling on the dead leaves of the past; though we may draw some lessons from them, and even admire their color and form, even as the artist who groups and paints them so that all who see cannot but admire; but as he does this with trained eye and skilful hand, he forgets not that they but represent a past glory, to which they can never return.

Just after I had become interested enough in Christian Science to read a little and to understand a little, I met a man who had lost his all in stock speculation. He had planned to do much good with what he had and with what he expected to make, and he could not understand why with such intentions he should have lost. He had gone over the whole story again and again, and we wrestled together for several days, while I tried to show him that his good should have been done with what he had, and that his continual going over the past was maddening. The thought of Lot's wife presented itself, and though it took some time for him to grasp it, it had its effect. Today he has recovered everything he had lost, and more, simply by uplifting his eyes from the lessons of the past to the promises of the future.

I never see a sufferer who seems unable to let go, but that I am reminded of my own little boy, who was awakened one night with intense suffering from earache. He cried and cried, asking repeatedly for help. His crying was so distracting that it seemed difficult to think, and after asking him several times to try to be a little quiet, without an abatement, I finally said to him, "Now, if all that noise is helping you, the best thing to do would be for your mother, your brother, and I all to cry, and you would be healed." He stopped instantly, very much offended, and was asleep in ten minutes, healed. Young as he was, he had caught the point that his constant going over his trouble and making such ado about it, was not the way to heal it. Our friend who persistently clings to the stranded wreck, hoping for sympathy from others, wanting us to cry and bewail his fate with him, does he think the tears, the dead leaves, the sighs, will do anything for him? Does he think they will restore a glory lost?

Job had been sorely afflicted, and his three friends agreed among themselves to go and mourn with him. For seven long days they sat together; not one word of comfort, not one word of cheer, only that awful, bitter thinking. And what of the thoughts? They must indeed have been anything but good, for the first words uttered by Job were a

Digitized by Google

curse. That third chapter of the book of Job certainly expresses all the pent-up feelings, the very issue of those seven days of agonizing silence, when undoubtedly the boils, and the losses, and the fears, and the apparent hopelessness of it all, seemed to outweigh all else. So the clinging to the distressing things had only produced a curse and a terrible wish, for at the close of this chapter we read, "The thing which I greatly feared is come upon me, and that which I was afraid of is come unto me." We seem to see the procuring cause of all this, for we read, "His sons went and feasted in their houses, every one his day; and sent and called for their three sisters to eat and to drink with them." Job, instead of forbidding this, waited until the feast was over and then offered sacrifices for them. Being a just and an upright man himself, he felt keenly that the conditions which seemed to prevail were wrong, and so feared the consequences.

Well does one of his own friends say: "Thine own mouth condemneth thee, and not I: yea, thine own lips testify against thee. Art thou the first man that was born? or wast thou made before the hills?" Then come self-condemnation and self-pity. He desires them to have pity on him and to sympathize with his condition. He says, "Oh, that I were as in months past, as in the days when God preserved me." But another enters on the scene, and almost the very first words cover the entire argument. Elihu said to Job, "God is greater than man. Why dost thou strive against him?" Then followed a speech which undoubtedly started Job along the path of self-analysis, and which resulted, as it only could, in a complete restoration.

Mrs. Eddy says: "Anatomy, when conceived of spiritually, is mental self-knowledge, and consists in the dissection of thoughts to discover their quality, quantity, and origin. Are thoughts divine or human? That is the important question. This branch of study is indispensable to the excision of error. The anatomy of Christian Science teaches when and how to probe the self-inflicted wounds of selfishness, malice, envy, and hate. It teaches the control of mad ambitions. It unfolds the hallowed influences of unselfishness, philanthropy, spiritual love. It urges the government of the body both in health and in sickness" (Science and Health, p. 462).

And so our friend, with his useless and vain regrets and his strong hold on the dead leaves of the past, needs only to look within, analyze and dissect, and listen for that "still small voice" which said to David: "I will instruct thee and teach thee in the way which thou shalt go: I will guide thee with mine eye;" and which also impelled David to declare, in grateful acknowledgment: "The Lord is my shepherd; I shall not want. He maketh me to lie down in green pastures: he leadeth me beside the still waters."

WHERE ARE THE BEAUTIFUL AND GOOD?

EZRA W. PALMER.

THERE is a tradition that the philosopher Socrates once met the youth Xenophon, afterward so famous through his "Anabasis." The philosopher, barring the way with his leveled staff, began to ask him questions where this or that commodity could be bought. The boy answered readily. Finally the sage inquired, "Where can the beautiful and good be found?" To this the youth shook his head in perplexity.

Does not the failure of the youthful Xenophon to make satisfactory reply, illustrate a common failing of mankind? Men take keen interest in material things, frequently to the exclusion of spiritual verities which are vital to their highest welfare. Doubtless, had the youth been questioned further, he would have admitted that the gaining of right ideas of the beautiful and good was the most desirable possession a man could acquire, and yet he would have then been compelled to admit that most men, blinded by the illusion of material sense, are perplexed and confused when called upon to decide questions which concern their true spiritual being.

Happily for mankind, the question of Socrates as to where the beautiful and good are to be found can be answered more readily in our day than in the time of the Athenian philosopher. Socrates had an understanding of reality far beyond the period in which he lived, but even his vision was not sufficiently clear to comprehend in any marked degree so important a problem. So, although Xenophon became his disciple, it is not apparent that the young man received such illumination as would change his thought from a material to a spiritual basis.

Christian Scientists have deep reason for thankfulness that they know where the beautiful and good are to be found. They know that God, good, the One "altogether lovely," is the source and inspiration of all that is good, true, and beautiful. They know this not merely as intellectual assent to an academic discussion, but because they have demonstrated it in lives that have been spiritualized, clarified, rendered more harmonious and happy: and they know that this correct understanding of God will ultimately free them from every claim of sin, sickness, and death,—all the myriad evils of material sense. Mrs. Eddy says, "Where shall the gaze rest but in the unsearchable realm of Mind?" (Science and Health, p. 264). Truly, where else can we find anything enduring, anything that will satisfy the vision of man, the image and likeness of God? With this also agree the words of Jesus, "Why callest thou me good? there is none good but one, that is, God."

The coming of Jesus to earth, some four hundred years after the time of Socrates, was an event fraught with mighty import to mankind. He indeed was a true witness of the light which illumines the pathway of all men upward to God. Through his oneness with the Father he was enabled to pierce the night of darkness and bring a true sense of beauty and goodness to a world weary of mystic speculation and empty forms and hungry for a knowledge of the true God. When we remember that for many generations the world has persistently misunderstood and perverted the teachings and works of this meek and glorified teacher, we may well rejoice in the revelation of light which Christian Science throws on his life and works, whereby it has become possible for all men to prove in their own lives the truth of what he taught and demonstrated.

The dense atmosphere of mortal thought is being cleared through the redemptive mission of Christian Science. Mrs. Eddy, through her clear vision, has shown us "the line of demarcation between the real and unreal" (*Ibid.*, p. 505). The distinction between the beautiful and good, and the ugly and false, is made clear to all who strive to know. No longer need men pursue the illusive and unreal, through ignorance or otherwise, when by intelligent study of the Bible and Science and Health they can work even as Christ Jesus and his disciples worked, and have the healing signs follow in testimony of the power of God. The songs of joy and peace that ascend to heaven in gratitude for the advent of the Science of Mind no man can measure. He who has been flooded with the light of Love which Christian Science reveals, can understand in expanding measure this angel of beauty and goodness that has come to establish man in his true estate—unity with God. This is that ideal which Socrates saw, though but faintly.

GRACE.

LENA EDWARDS NEELY.

IN Science and Health (p. 4) we read these words: "What we most need is the prayer of fervent desire for growth in grace, expressed in patience, meekness, love, and good deeds." For several years I had tried to get an intelligent idea of the real meaning of the word grace. I

Digitized by Google

knew that I needed it, and the first step toward the getting of it was to understand what grace really is.

The answer to my prayer came in an unexpected way. I was helping a young student of Christian Science who was facing a very unpleasant problem. She wished to avoid the experience, as most mortals would certainly have done,—but when she was shown that she must drink "the cup" without a murmur, she yielded up her own will and joyfully took up the cross. Her face became beautiful, and to me it was the face of grace. As this was revealed to me, I thanked God and our dear Leader for the sweet message of Love.

I then saw that grace is the virtue which gives us power to yield up our own will and accept that of the Father. May this sweet visitor come to every one who needs the strength and peace which come when the human yields to the divine.

MEMBERSHIP PRIVILEGES.

GERTRUDE TILDEN THOMPSON.

As members of branch churches, we cannot too quickly or too thoroughly awaken to our responsibility and privileges as coworkers in the field of Christian Science, and we can best show our appreciation for our healing and spiritual uplifting by taking an active interest in the work of our church and the healing, liberating progress of Christian Science everywhere.

In doing this we shall be helped by the careful study of recent editions of the text-book and the Manual, by imbibing the spirit of our literature; and by quick and faithful obedience to their teachings. We should know that every member, the newest as well as the oldest, has equal voting privileges; that office-seeking is not scientific, and that rotation in office does away with the thought of limitation, selfishness, and human personality. When we can think of ourselves and others as God's ideas, we know that all can do that which God requires; namely, to "do justly, and to love mercy, and to walk humbly" in Truth, filled with the consciousness of God's omnipresence and the infinitude of Love.

Neither apathy nor selfishness, the products of error, should be allowed to argue that any one should not be alert and active as a member of a Christian Science church. We are told in the Psalms that "out of the mouth of babes and sucklings hast thou ordained strength." It may seem easier to shirk responsibility than to accept it, but we shall each awaken more thoroughly to our duty as Christian Scientists when we realize that responsibility means ability to respond to duty's call, and as true Scientists, to know that there is only one reality to which we can respond, and that is the one Mind, Principle, Love.

Our greatest privilege as church-members is not the holding of office, but is found in educating ourselves daily to think and speak and act wisely; in learning what is right, and then standing "fast in the liberty wherewith Christ hath made us free." When it is understood that there is but one Principle, God, discord, misunderstanding, and mistakes disappear. As each one strives to have that Mind "which was also in Christ Jesus," he will learn that although uniformity is not always unity, only through the unity of good can brethren dwell together in peace; that is, indeed, to have one God. Let us understand that real unity is unity in God, good, who is all-power, all-presence; then we shall truly love our neighbor as ourselves; in humility "preferring one another," whether young or old, in Science.

Let us as sons and daughters of God accept our responsibility as church-members with the confidence born of absolute trust in God,—always in God, everywhere in God, God at all times with us. Let us unfurl the banner Immanuel,—"God with us,"—and march on to victory, overcoming inertia, apathy, all fear, rising above zeal without works, selfishness, and all that is unlike good. If honest, we must know that the cause of Christian Science does not need us so much as we need Christian Science. Making "channels for the streams of Love," we shall be as ready to relinquish as to accept office. Our privilege to live and work for Truth can never be taken from us when we realize that God is the only Life, and also that we must go higher until we awake in His likeness.

Would it not be well to ask ourselves daily whether our thought is so pure that error can get no foothold for inharmony through us. Are we each prepared by daily study of the Lesson-Sermons so to eliminate self that the healing work may be done in our services? Are we spreading the good work of our daily paper, *The Christian Science Monitor?* Have we so banished fear and self-consciousness that each is ready to testify at our weekly meetings? Do we know that all we have belongs to God? Are our votes and our words consecrated to Truth? Such a searchlight of questioning turned inward upon the life of every member of a Christian Science church would soon awaken the world of sense to the power of Soul and Truth.

We should be as careful to avoid sham humility as we are watchful to know "there is none good but one, that is, God." Let us pray for sound judgment, that we be not self-deceived and call self-will or selfishness the government of Principle, or call apathy in making our demonstration humility. "Thou shalt not take the name of the Lord thy God in vain." Church-membership is a sacred privilege, and each one who is ready to accept its benefits should be grateful for the opportunity to fulfil its duties.

[Written for the *Sentinel.*]

"IF I BE LIFTED UP."

MINNIE BRITTON STODDARD.

And I, if I be lifted up
From sordid thoughts of earth,
May drink with him the bitter cup,—
Of worldly friends have dearth;
But I shall taste life's richest joy,
Sweet peace and truth and love,
The all of good, without alloy,
And power from above.

If I be lifted up to see
In all the child of God;
That all related are to me,
And all at-one with God;
If I refuse to see the ill
As any part of man,
And know 'tis only human will
That's worthy of the ban,

I, too, shall draw all men to me,—
To the good that I express,
And all with one accord will see,
Will gladly then confess,
That all mankind are one indeed,
And God at-one with all;
That each, in meeting others' need,
Obeys life's sweetest call.

Then we shall know the truth, and come
To fully understand
That to be one "as we are one,"
Is surely Love's demand;
That "I in them, and Thou in me,"
Means unity with God;
For Christ in us, and God in Christ,
Makes all at-one with God.

SELECTED ARTICLES.

[Frederick Dixon in *Norwood* (Eng.) *Review.*]

In the address on Christian Science, given by Dr. ——, which you reported, he made three definite statements, which he labeled the claims put forward by Christian Science, each of which he declared had been disproved. First, he said Christian Science claimed to abolish pain and disease. Argal, as the clown says, because pain and disease have not been abolished, the claim of Christian Science is disproved. Now, Christianity, if we put it in the doctor's way, claims to abolish sin, but sin still exists, therefore Christianity is disproved. This sort of *post hoc propter hoc* reasoning might be applied to all the religions and sciences in the world, with precisely the same result the doctor deduces from its application to Christian Science. What Christian Science says is that exactly in proportion as men attain the Mind which was in Christ Jesus, they will, as Jesus said, obtain the mastery over disease and pain, and these will be overcome. What Christian Science does is to attempt to show the world how it may bring to bear on sickness and sin the same understanding of Truth which it has always been admitted in Christian countries would, if brought to bear on sin, destroy sin. In this way, and in this way only, is it possible to fulfil the whole of the command of Jesus of Nazareth, not only to preach the gospel, but to heal the sick.

Secondly, our critic maintained that Christian Science claimed to be Christianly up-to-date, and this claim also had been disproved. It must be admitted that this particular statement is a trifle vague. If he means by Christianly up-to-date that Christian Science demands that Christian thinkers and workers should admit the plain significance of the words of Christ Jesus, and acknowledge that, in order to claim the name of Christian, they must acknowledge the demands he coupled with it, then Christian Science is certainly Christianity up-to-date. Jesus said that those who believed in him would be able to do the works he did, and in so doing, made the ability to perform those works the test of his followers' Christianity. Now, the works he did were, to a large extent, works aimed at the destruction of that pain and disease to which our critic himself alludes. Therefore, in order to be a Christian, as Jesus defined Christianity, it is necessary to begin at least to attempt these works. It was the Mind which was in Christ Jesus which accomplished the works of healing in the first century, and Christian Science certainly teaches that to be what our critic presumably describes as up-to-date, men should strive for that Mind, so as to be able to imitate them now. Exactly in proportion as the Christian Scientist today attains the Mind of Christ, so does he succeed in destroying pain and disease. That he has not so overcome sin in himself as to be able to heal like Jesus, who "was in all points tempted like as we are, yet without sin," scarcely proves that the commands of Jesus are not as much a part of Christianity today as of the Christianity of the first century, or that Christian Science is not, in our critic's rather unfortunate phrase, which no Christian Scientist has ever yet made use of, up-to-date.

Lastly, our critic says that Christian Science claims to be a profound philosophy, and that it has been proved not to be. Christian Science claims to be the profoundest philosophy in the world, and the profoundest Science, inasmuch as its teaching is based on that profound saying of Jesus the Christ, "Ye shall know the truth, and the truth shall make you free." How philosophic is its philosophy, how scientific its science, the world will learn when, instead of carping at its postulates, it learns to accept them as a basis for demonstration. Now, its postulates may be summed up in this, that God is infinite Spirit and omnipotent good, and, consequently, that all which truly exists is spiritual and is good. It was precisely the impossibility of reconciling this with the reality of matter and evil, which the orthodox churches teach, that led to Gnosticism, and seeing that Christian Science expressly denies the reality of evil and matter, it is not, and never has been, compelled to attempt to escape from its own postulates by teaching Gnosticism.

Gnosticism was the outcome of that meeting of the Jew and the Greek in the Asian Christian churches which brought in contact those opposing views which have been described by Matthew Arnold in the phrase, "anarchy and culture," and which St. Paul summed up in the saying that the Jews required a sign, while the Greeks sought after a philosophy. The result was that there grew up within these churches a school which had for its object the effort to reconcile what may be termed Hebrew materialism with Grecian idealism. This, in a way, is the difficulty of the orthodox churches of today. They are attempting to reconcile a material creation with a spiritual creator, or, as the Gnostics put it, to account for the imprisonment of spirit in matter, and they are attempting to account for a creation manifestly imperfect and impregnated with evil, as a result of a First Cause which is absolutely perfect and good. To confuse the teaching of Christian Science, consequently, with the teaching of Gnosticism, in the light of the fact that Christian Science denies both the premises which gave birth to Gnosticism, while orthodox Christianity accepts them both, is distinctly original, if it is nothing else.

Finally, may I refer to the one attempt at proof in which our critic has indulged. He quotes from page 413 of Science and Health, Mrs. Eddy's statement that, as water is not the natural habitat of an infant, it is no more necessary to scrub the infant all over every day to ensure its health, than it would be to take fish out of water for the same purpose. Unfortunately, he appears only to have quoted as much of the paragraph as suited his purpose. He carefully left out the fact that Mrs. Eddy stated that she was not patient with a speck of dirt, and that the washing of an infant should be confined to what was necessary for cleanliness, and not be allowed to develop into a medical fetish. Perhaps the following pronouncement by Dr. J. C. McWalter, in the *Medical Press*, may cause him to think again: "I assert that the washing of new-born infants is a superstition of the cruelest character, and is responsible for the death, by bronchitis or otherwise, of very many of them." Our critic is not slow to describe his neighbors as heretics. Dr. McWalter fully realized the danger he was running in making use of this phrase, for he admitted he was aware that "nowadays, if one preach anything but ceaseless lavations, he is dubbed an apostle of filth."

[C. A. Newman in *Australian Christian World*, Sydney.]

The teachings of Christian Science are not what is generally considered to be orthodox, since the latter teaching declares that sickness may be sent by God, so that when material remedies fail death is accepted as divinely ordered. Christian Science refutes all such statements, and maintains that God heals sickness, and proves this in many instances by practical results, based upon the interpretation of the Bible, as given by Mrs. Eddy in "Science and Health with Key to the Scriptures." Mere perusal of this work will not reveal the rule governing the healing; it is spiritual understanding which discerns it.

As a result of Mrs. Eddy's discovery, there are Christian Science churches and societies throughout the entire world, and every member of these churches gives glory to God, and at the same time expresses deep gratitude for her interpretation of the Scriptures. The opponents of Christian Science are many, but Mrs. Eddy advises her followers, in the words of Christ Jesus, "Love your enemies, bless them that curse you, do good to them that hate you, and

Digitized by Google

pray for them which despitefully use you, and persecute you." It was that kind of Christianity which accounted for her healing over forty years ago, and which has kept her well; and will help all others in the degree they manifest it. Paul wrote: "Let this mind be in you, which was also in Christ Jesus."

[E. M. Ramsay in *Kilmacolm* (Scot.) *Advertiser*.]

The world is full of kind-hearted, well-meaning people, who are striving to reform abuses and to help mankind, but it will be generally admitted that the expenditure of energy, thought, and money is out of all proportion to the results achieved. This lack of success is due to lack of understanding as to the cause of the evils which it is desired to remove, and uncertainty as to the methods which should be employed. Each reformer is working from his own personal belief as to good, rather than from a universal standard of truth. We are all agreed that twice two equals four, because we hold no personal opinions concerning numbers, but know what is true and abide by this knowledge. If on certain subjects we can know the truth and be at peace, why not on other subjects too? Our Lord and Saviour had no difficulty in knowing the will of God, and he told his followers again and again that they too could attain to the same certainty. In the Old Testament we find that all the prophets possessed to some extent this sense of God's nearness and guidance. What was possible in the old days must be possible still,—"As it was in the beginning, is now, and ever shall be."

Christian Science comes forward to explain, in a manner comprehensible to the thought of this day, how we, too, may gain this sense of fatherly protection and guidance. If God is creator, Father, Love, as the Bible teaches, then He must also be Mind, intelligence. All Christians believe God to be infinite and ever present; then Mind, intelligence, must be infinite and ever present. God is infinite, ever-present intelligence. What then of that which we call man's intelligence? What of my mind, your mind? Man is God's child, made in God's image and likeness. All of truth which man knows he receives from God, since God is intelligence, Truth. Our Lord never spoke of having a mind of his own, but ever did the will of the Father.

Christian Science teaches that there is but one Mind, God, and that the intelligence expressed by man is the reflection of that one Mind. This wonderful explanation enables the student to express more intelligence than in the days when he believed that he possessed a limited mind of his own. It opens out illimitable possibilities of good; but no man can avail himself of this power who is not willing to surrender self. He must be prepared to lay aside personal opinions and to sacrifice not merely the thoughts which he has hitherto recognized as unworthy, but even his human sense of good. In this way alone can he be born again and find himself translated into the kingdom of God's dear Son.

[W. C. Williams in *Baltimore* (Md.) *American*.]

Jesus said, "He that believeth on me, the works that I do shall he do also;" and healing, mentally, morally, and physically, was his work, accomplished through the power of God and not by material remedies. Nevertheless our critic says that the teaching that ministers can cure ills without the aid of medicine is "absolutely ridiculous." The promises of Jesus are fulfilled today as they always have been when explicit trust is placed in them. If there is anything "absolutely ridiculous," it is the heedless statement that the cures through Christian Science cited by Mrs. Eddy are falsehoods, when thousands upon thousands have testified to their healing by the truth in Christian Science, and in the majority of cases, after all other remedies had failed; therefore "sensible citizens" will not look upon them in the way the reverend doctor suggests.

Christian Scientists do not claim that ills are mere illusions, or borrowed from some other person's complaints. To the suffering, the pain or disease is tragically real; it is not "as nothing" to them until it is gone. Disease is only unreal from the standpoint that only that which God made is real, and Christian Scientists do not believe that a heavenly Father would be less merciful than a human one and inflict suffering on His innocent children. We are assured that "the law of the Spirit of life in Christ Jesus hath made [us] free from the law of sin and death;" and again, "Ye shall know the truth, and the truth shall make you free."

Our critic's vision might be cleared somewhat of his fanciful imaginings of what Christian Science is if he would use a little "brotherly love" mixed with the Biblical admonition "Judge not." There are unnumbered thousands of intelligent people in the world to-day who have proved and are proving daily that the law of God, as taught by Jesus and made clear by Mrs. Eddy in her "Key to the Scriptures," is an ever-present help in time of trouble.

There was no case published that had the outcome stated by this critic, but it may be admitted that some Christian Scientists have died under Christian Science treatment, as some Methodists have died under medical treatment. Yet the latter cases would not necessarily cast a reflection on physicians.

Our critic says he bases one of his statements on the "fact" that fees for cures are invariably demanded in advance by Christian Scientists. This shows that he based his remarks on unreliable information, instead of investigation, as he could easily have proved that no such demand is made and that no one is refused the help of Christian Science.

[H. Coulson Fairchild in *Plainfield* (N. J.) *Press*.]

The apostles' creed and all other creeds are man made. They are not even found in the Bible. Quoting from Judge Ewing of Illinois, the critic says, "There are numbers of creeds. They are all good (if lived up to). To believe in a creed will do you no harm, but a mere belief in a creed (while it will do you no harm) will never do you one iota of good, unless lived up to. A belief in a creed has never healed one case of disease from Christ's time to ours."

Our critic remarks that Jesus said, "Go ye into all the world, and preach the gospel." He ignores, however, the equally imperative command of Jesus to heal the sick. Preaching is easier than healing. We believe that if Jesus did not say in so many words, Go and preach Christian Science, he did give all his followers a command to heal the sick, which is virtually saying, Demonstrate Christianity. The Rev. Mr. Brock says, "Whenever Jesus healed a man, his sins were immediately forgiven." He has put the conclusion before the premise. Whenever a man's sins were forgiven, he was immediately healed. Christian Science does teach that there is no real healing unless it includes the healing of sin. Jesus said of the man whom he healed before the Pharisees, "Whether is easier to say to the sick of the palsy [merely tell it to him], Thy sins be forgiven thee; or to say, Arise, and take up thy bed, and walk? But that ye may know that the Son of man hath power on earth to forgive sins, (he saith to the sick of the palsy,) I say unto thee, Arise, and take up thy bed, and go thy way into thine house. And immediately he arose, took up the bed, and went forth before them all." Thus we see that the forgiving of sins and the healing of the sick are one and the same thing, according to the Scriptures.

[Olcott Haskell in *Pacific Dental Gazette*.]

I read with interest the experiences described in your journal for December, where it was found easier to work with a little girl who came from a home where the

Digitized by Google

parents were Christian Scientists than with one who came from a home where fear was largely in evidence. The contrast you draw is clearly in favor of Christian Science, but I should like to point out that its teachings differ widely from any form of mental suggestion.

In Christian Science the knowing of the "truth," to which Jesus referred, is the process by which man is saved from the evils of mortal existence. The great fact that God and the man of His creating are perfect, supports its entire philosophy and practice—just as the fact that basic, unvarying law governs perfectly all mathematical relations, and supports the philosophy and practice of mathematics. It is an understanding, to a degree, of God's perfection, a recognition of the immanence of God as divine Love, which gives to Christian Scientists (both children and adults) a peace and fearlessness which cannot be attained by other means.

[Willis D. McKinstry in *Holton* (Kan.) *Signal.*]

Christian Science is the word of God spiritually understood and scientifically demonstrated; it is an exact science because it has rule and Principle for demonstration; it is a Christian Science from the fact that it is the truth ascertained about Christianity as taught and practised by Christ Jesus. The activities of Christian Science are upon a divine basis. They rest upon the eternal fact that there is but one Mind, God, who is the source and governor of all true being; therefore they have no kinship with mental suggestion, hypnotism, mind over mind, or mind over matter. The healing of the sick and the preaching of the gospel go hand in hand. Sickness and disease being the result or effect of sin, whether sin through intent or ignorance, it naturally and scientifically follows that the destruction or overcoming of sin, which is the true forgiveness of sin, results in healing the disease. This Jesus clearly recognized when he said, "Whether is it easier to say to the sick of the palsy, Thy sins be forgiven thee; or to say, Arise, and take up thy bed, and walk?"

In the words of our critic permit me to say: May he who was the very incarnator of sanity, and he who was the physician of all physicians, and he who preached as never man preached, be your inspiration and mine, and be the true leader of your profession and my profession, so that we shall be workers together with him, and be able to say as he said: "The Spirit of the Lord is upon me, because he hath anointed me to preach the gospel to the poor: he hath sent me to heal the brokenhearted, to preach deliverance to the captives, and the recovery of sight to the blind, to set at liberty them that are bruised, to preach the acceptable year of the Lord."

And this great Exemplar, or Wayshower, who brought the only way of salvation from sin, sickness, and death to mortals, further said, "He that believeth on me, the works that I do shall he do also;" "And as ye go, preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give."

Is our clerical critic fulfilling these injunctions, and thus proving his faith by his works?

[John L. Rendall in *Register and Leader*, Des Moines, Ia.]

There is a growing sentiment upon the part of the public, and an awakening to indisputable facts, which will in the future preclude the possibility of placing upon our statute-books coercive, restrictive, and arbitrary laws which are introduced simply for the purpose of favoring one class of medical practitioners at the expense of all the rest and which are to the detriment of the general public. Christian Scientists have no quarrel with physicians of any school. Most of those who have accepted the Christian Science faith were strong believers in *materia medica* prior to the time when they arrived at the point where it failed to help them any longer. Who shall say that there shall be legislative enactment and the "evoking" of so-called law which shall deprive these people of their God-given right to turn to Him in their last extremity, and to be healed of their diseases, as thousands of well-authenticated cases attest they may be healed?

[George Shaw Cook in *Galesburg* (Ill.) *News.*]

Christian Science does not deny the divinity of Christ, and in following the command of Christ Jesus to heal the sick as well as to preach the gospel, Christian Scientists believe that they are offering the best proof of faith in Jesus' words and works. They have faith in all of the promises of Jesus, and they are daily demonstrating, through the healing of sickness and the destruction of sin, the truth of his teachings.

[Alfred Farlow in *Omaha* (Neb.) *Bee.*]

The term "malicious animal magnetism" in Christian Science parlance refers to the human opposite of Christian Science, the mental malpractice which undertakes to ape after Christian Science even as quackery undertakes to follow the practice of the honest physician. Mrs. Eddy does not believe in the power of evil, but she has discovered that certain persons do believe in certain deceptive mental operations, and she has taught her students how to protect themselves against such deception by understanding that God is in reality the only power.

[James D. Sherwood in *Fort Worth* (Tex.) *Record.*]

In a recent issue of the *Record*, a clergyman contributed an article entitled "The Divinity of Christ," in which he took occasion to make a sneering reference to the cures accomplished through Christian Science practice. Christian Scientists will heartily agree with the clerical critic on all the good things he has said about Jesus Christ,—his spotless life, his coming in fulfilment of the prophecies, his teachings, etc., and they believe that he might have said all these things quite as faithfully and as intelligently without having gone out of his way to make a thrust at Christian Science. The gentleman should know that Christian Scientists make no boasts as to what they are able to do by way of overcoming sin and sickness, but they hold that all Christians should be able to avail themselves sufficiently of the divine power to overcome all that is unlike God. They accept not only the teachings of Jesus Christ which the clergyman has mentioned, but also that portion of his teaching which is included in the following words: "He that believeth on me, the works that I do shall he do also." "They shall lay hands on the sick, and they shall recover."

Grant me: To bruise the serpent's head (Genesis iii. 15); to consider my latter end (Deuteronomy xxxii. 29); to cut off the occasions of sin (2 Corinthians xi. 12); to be sober (1 Peter v. 8); not to sit down in idleness (Matthew xx. 6); to shun the wicked (Psalm xxvi. 4, Titus iii. 10); to cleave to them that are good (Romans xii. 9); to make a covenant with mine eyes (Job xxxi. 1); to keep under my body (1 Corinthians ix. 27); to give myself unto prayer (1 Corinthians vii. 5); hedge up my way with thorns, that I may not find the path to follow after vain things (Hosea ii. 6); hold thou my mouth with bit and bridle, who am so unready to draw near to thee (Psalm xxxii. 9); O Lord, compel Thou me to come in to Thee (Luke xiv. 23).

From "The Private Devotions of Lancelot Andrews," Bishop of Winchester, Eng. (First edition printed in 1647).

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

INSTRUCTION BY MRS. EDDY.

We are glad to have the privilege of publishing an extract from a letter to Mrs. Eddy, from a Christian Scientist in the West, and Mrs. Eddy's reply thereto. The issue raised is an important one and one upon which there should be absolute and correct teaching. Christian Scientists are fortunate to receive instruction from their Leader on this point. The question and Mrs. Eddy's reply follow.

"Last evening I was catechized by a Christian Science practitioner because I referred to myself as an immortal idea of the one divine Mind. The practitioner said that my statement was wrong, because I still lived in my flesh. I replied that I did not live in my flesh, that my flesh lived or died according to the beliefs I entertained about it; but that, after coming to the light of Truth, I had found that I lived and moved and had my being in God, and to obey Christ was not to know as real the beliefs of an earthly mortal. Please give the truth in the *Sentinel*, so that all may know it."

MRS. EDDY'S REPLY.

You are scientifically correct in your statement about yourself. You can never demonstrate spirituality until you declare yourself to be immortal and understand that you are so. Christian Science is absolute; it is neither behind the point of perfection nor advancing toward it; it is at this point and must be practised therefrom. Unless you fully perceive that you are the child of God, hence perfect, you have no Principle to demonstrate and no rule for its demonstration. By this I do not mean that mortals are the children of God,—far from it. In practising Christian Science you must state its Principle correctly, or you forfeit your ability to demonstrate it.

MARY BAKER EDDY.

AN AMENDED BY-LAW.

ARTICLE VIII.

PRACTITIONERS AND PATIENTS.—Sect. 22. Members of this church shall hold in sacred confidence all private communications made to them by their patients; also such information as may come to them by reason of their relation of practitioner to patient. A failure to do this shall subject the offender to church discipline.

A member of The Mother Church shall not, under pardonable circumstances, sue his patient for recovery of payment for said member's practice, on penalty of discipline and liability to have his name removed from membership. Also, he shall reasonably reduce his price in chronic cases of recovery, and in cases where he has not effected a cure. A Christian Scientist is a humanitarian; he is benevolent, forgiving, long-suffering, and seeks to overcome evil with good.

PRECEPT AND PRACTICE.

It seems strange indeed that the part of Jesus' ministry to which public attention was chiefly directed, for we read that wherever he went the multitude thronged about him, eager to share in the blessings so freely bestowed, and that part on which the most stress was laid by the Gospel writers, namely, the healing of the sick, should have gradually passed into decadence and been put aside by later generations as impossible, impracticable, or obsolete. Yet this is precisely what was done between the third and nineteenth centuries, or until Mrs. Eddy, enlightened by her own healing, devoted herself to the study of the Bible until she discovered therein the scientific basis of our Master's teachings and practice.

That Jesus' gospel was intended to heal both sin and sickness, and that the healing of the one phase of evil was indissolubly linked to the healing of the other, are conclusions which logically follow the statement to the impotent man whom the Master had healed at the pool Bethesda: "Behold, thou art made whole: sin no more, lest a worse thing come unto thee;" and it is because of such statements by the master Christian that Mrs. Eddy teaches that the whole gospel of Christ is to be preached and practised, rather than a portion only.

The Christian who is obeying the Master's command to preach the gospel, to be consistent with his profession as one who is manifesting the spirit of Christ or of his teachings, must also obey his command to heal the sick. It is for this reason that the Christian Scientist cannot be content with preaching alone, nor can he consistently postpone the healing of the sick to "a more convenient season." It is his mission to heal those who come to him for relief from bodily and mental distress, and in so doing to point out to his patients the way of salvation and direct their thought thereto, that they may be made "every whit whole." Just as a tree is known and judged by its fruits, so Jesus provided a standard by which his followers might be known and tested; and it would seem to be the duty of every Christian so to adjust himself that his life will bear judging by the standard set forth in the closing verses of the 16th chapter of Mark.

Christian Scientists especially should ask themselves whether they are conforming their lives to this standard. They should ask themselves the questions so pertinently put by our Leader on page 496 of Science and Health: "Am I living the life that approaches the supreme good? Am I demonstrating the healing power of Truth and Love?" And she adds this loving, tender assurance: "If so, then the way will grow brighter 'unto the perfect day.' Your fruits will prove what the understanding of God brings to man."

ARCHIBALD MCLELLAN.

THE ONE MIND.

There is no part of the teaching of Christian Science which is of such vital importance as its steady insistence that in reality there is but one Mind, and that God, infinite Love. This truth was presented to the Hebrew people in the words, "Hear, O Israel: The Lord our God is one Lord," and Jesus laid special emphasis upon this declaration by making it introductory to that which he called "the first of all the commandments," namely, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind, and with all thy strength." In Science and Health (p. 183) we read: "Divine Mind rightly demands man's entire obedience, affection, and strength. No reservation is made for any lesser loyalty." This accepted, we are free to dispute and resist all the aggressions of evil belief, for these have no place as facts or factors in the one Mind.

Digitized by Google

Outside of the Christ-teaching, as made known to humanity in this age by Mrs. Eddy, there is an almost universal belief in many minds, all holding widely differing views respecting God, man, and the universe. Thus we find Paul saying that "the Jews require a sign, and the Greeks seek after wisdom." Again, he tells us of different opinions as to what should be eaten; while "one man esteemeth one day above another: another esteemeth every day alike;" but he earnestly beseeches his hearers to overcome these divisions, to the effect, as he adds, "that ye be perfectly joined together in the same mind;" and this doubtless meant that Mind "which was also in Christ Jesus."

It is very interesting to note the different mental conditions of those who come to Christian Science, nearly all of them being in the critical mood and few willing to investigate at all until the unanswerable argument of its healing work is presented to them. Even this does not go very far with some people, for of old the cavilers said of the Master's work, "By the prince of devils casteth he out devils." They quite forgot that this work was the very thing which their own prophets had foretold, even as some religionists today overlook the fact that Christ Jesus required of his followers that they should work as he worked, up to the extinction of all belief in evil, with its manifestations in sin, disease, and death. There are, however, many others who feel the force of this demand, and who "hunger and thirst after righteousness," and for such the cobwebs of false belief and misrepresentation are sooner or later swept aside, as they begin to recognize the divine Principle of Christian Science. To such the teachings of Christian Science are no longer "a stumbling-block" or "foolishness," to quote St. Paul, but instead they present as in his time "the power of God, and the wisdom of God."

Thus we find in one of the testimonies in the *Sentinel* for Aug. 27, an elderly lady saying that she had been bitterly prejudiced against what she had been told of Christian Science, but that when she began to read Science and Health she found it "pure, deep, and soul-inspiring." In addition to this she gained from her reading the healing of a painful affection of the knee. Another experience which illustrates the healing influence of the one Mind is told in the current *Sentinel* by a man, a scholar, who lives across the ocean. Here, too, it was a case of seeking help which could not be gotten otherwise, and where there was a deep desire to understand better the Master's life and ministry. This gentleman admits that he was startled by Mrs. Eddy's statement of the one Mind and its perfect ideas, which he characterizes as the "boldest" he had "ever encountered in the region of the metaphysical." Then came the proof of its correctness in his healing of what had been diagnosed as an organic disease, and this ultimately and necessarily led to the recognition of the allness of Spirit and the consequent nothingness of matter.

Mrs. Eddy's wonderful statement of the relation between the First Commandment and the fact of the one infinite Mind (Science and Health, p. 340), cannot be read too often, for it shows how each may attain the blessings of government by this Mind.

ANNIE M. KNOTT.

AMONG THE CHURCHES.

PETOSKEY, MICH.

Active operations have commenced on the construction of the new Church of Christ, Scientist, which will be erected on the recently acquired lot on Michigan street and Waukazoo avenue, and the first carload of vitrified brick which will enter into the structure has been placed on the ground. It will make a handsome edifice when completed.

Resorter and Petoskey News.

AMSTERDAM, N. Y.

The local congregation of Christian Scientists now occupies and holds services in its new church building, a former dwelling-house, at No. 9 Mohawk place. The building as remodeled affords a most delightful church home for the rapidly growing congregation. Situated midway between West Main and Division streets, shaded by towering elm-trees, and on one of the quietest of the city's streets, it is yet sufficiently central in location to make it easily accessible from any part of the city. The building is located on a plot seventy-four feet wide by one hundred and forty deep, which, when the proper time comes, will permit of the erection of a commodious church edifice.

Amsterdam Recorder.

PASSAIC, N. J.

Members of First Church of Christ, Scientist, in Passaic, held their first Sunday service yesterday [Aug. 7], in the building which they have recently purchased, at 58 Prospect street. The service, which was well attended, was simple but impressive.

Christian Scientists in this city look upon the purchase of the property by the church as a very progressive step. "The establishment of Christian Science here, as elsewhere, has been entirely due to the spiritual and physical benefits received from the study and practice of its teachings," said a member of the congregation today, "and members of the local church gratefully acknowledge that they have been directly benefited through the discovery of Christian Science by Mrs. Eddy."—*Passaic News.*

WINNIPEG, MAN.

This morning [Aug. 16] marked an important epoch in the history of the Christian Science church in Manitoba. The corner-stone of the handsome building which is being erected at the corner of River avenue and Nassau street was laid shortly after seven o'clock, in the presence of a number of the congregation. The service was a most simple one, consisting of the reading of passages from the Bible and Science and Health by the First and Second Readers, concluding with the recital of the Lord's Prayer. Enclosed in the stone is a casket containing a copy of the Bible, together with "Science and Health with Key to the Scriptures" by Mrs. Eddy, and other of her works.

The building promises to be a pleasing addition to the many handsome sacred edifices in the city. It will have exterior walls of brick, faced with pressed brick of light buff color and trimmed with heavily molded cut stone of lighter buff color. The main auditorium is designed to seat about nine hundred people.—*Free Press News Bulletin.*

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be Nov. 4, 1910. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 18, 1910.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to June 3, 1910, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

THE LECTURES.

LITTLE ROCK, ARK.

At the Majestic Theater, June 19, under the auspices of Second Church of Christ, Scientist, Clarence C. Eaton delivered a lecture on Christian Science. He was introduced by Gen. B. W. Green, a Presbyterian elder, who said:—

I have been requested to introduce the speaker of the evening, and do so with great pleasure, not only because he is an endorsed expounder of the faith and teaching of Christian Science, but because he is a living exponent of that doctrine. Some may ask why I, a well known Presbyterian, render this service. In answering the question I will refer to an incident in the ministry of Jesus Christ. When John the beloved, the best and purest of all the disciples, said to Jesus, "Master, we saw one casting out devils in thy name, and he followeth not us: and we forbade him, because he followeth not us." Jesus replied, "Forbid him not: for there is no man which shall do a miracle in my name, that can lightly speak evil of me."

The lecturer comes to us this evening as a religious teacher. Man is by nature religious, and when we touch him at this point he is at once interested. From the early dawn of his history, we find him feeling after God, perhaps groping his way in darkness, yet coming nearer and nearer to the light. We are moral agents and are held personally responsible for our belief. For a man will act upon his belief, and religion is ethics in action. How important, then, to know the truth. We are commanded to search the Scriptures,—to investigate and know if these things be so. As to any doctrine or teaching, or any new discovery in the realm of religion, we must adhere to the law and the testimony. We must take the Bible as the rule, and lay beside it these teachings, and if they speak not according to His word, then they must be rejected. We are commanded to try or prove every spirit, and are told that "every spirit that confesses that Jesus Christ is come in the flesh is of God." Jesus gave us an invaluable testing rule, because he so well understood human nature and its environments. It is short and to the point, easily understood, and is used by us in business and social life every day. It is this, "By their fruits ye shall know them." Christian Scientists do not avoid this test, but rather covet it.

Are we who are not Christian Scientists afraid of hearing those who claim that truth has been discovered which had been hidden for centuries? If so, it is an evidence of weakness rather than of strength. Truth does not conflict with truth, and of necessity must produce harmony. Can we have too much light thrown upon a subject which is vital? Some will say that Christian Science is not the truth, but thousands claim that it is, and their evidence certainly gives it sufficient importance to warrant our careful investigation. The lives of those who profess this teaching are living epistles "known and read of all men;" and it is the living demonstration which speaks louder than profession. They claim to have found the "pearl of great price," and are willing to sell all and purchase it. Were these the days of persecution, I have no doubt that many would go to the stake to verify the truth of what they believe. Cornelius was a devout man, one who feared God and gave much alms to the people, and he prayed to God always and God heard his prayer and sent Peter to teach him the way of life. When Peter came, Cornelius said to him, "Thou hast well done that thou art come. Now therefore are we all here present before God, to hear all things that are commanded thee of God." That is the proper spirit in which to receive the lecturer. The learned and cultivated Athenians heard Paul gladly when on Mars hill he told them in that wonderful speech of the unknown God whom they had ignorantly worshiped; but when he would have told them of the crucified one, of his death and resurrection, they politely dismissed him with this word, "We will hear thee again of this matter," which was not a scientific way of receiving the message.—*Correspondence.*

MINNEAPOLIS, MINN.

The Rev. Arthur R. Vosburgh lectured at the Auditorium, Sunday, June 19, under the auspices of First Church of Christ, Scientist. The lecturer was introduced by Judge C. M. Pond, who said in part,—

If this great movement be based on God, it will prevail against all opposition; but if based on error, it will certainly come to naught and soon be forgotten. I am in deep sympathy with every doctrine, system, or work that stands for the betterment of mankind. In considering this matter, let us therefore be fair and in all things speak with moderation. It will be conceded that Jesus Christ as the Saviour of mankind possessed all knowledge and all wisdom, and that in everything pertaining to the condition and destiny of man his words must be regarded as supreme and final. Every believer will agree that his instructions were all wise, far-reaching in effect, and intended for all men in all times. We are taught that Jesus came into the world at the most opportune period in its history for the accomplishment of his great mission. His advent upon earth was the most important and tremendous fact in the history of the race. He was not only invested with all wisdom and divine power, but assumed and had all the rights and duties of a world's citizen. His field of labor was the inhabitable globe.

For three brief years only did he go about to the accomplishment of his great task by healing the sick and preaching repentance to sinners. These two mighty things he did, and that only for the establishment of his kingdom on earth. He brought salvation for the body as well as salvation for the soul. Jesus had no generals to do his bidding, no armies, no equipage, and no followers save a few of the common people. From these hardly more than stragglers, without position or influence, he selected twelve men, and specially commissioned them to carry on his mighty work, and charged them, in effect, that they should go into all the world, heal the sick, cleanse the lepers, and preach the gospel of repentance. Poor, weak humanity, sick both in body and soul, was thus to be touched and made whole in all its parts. The same power that was to be used in bringing man back to his first estate was to be used in cleansing and upbuilding his poor, weak body. The injunction of Christ to his disciples to heal the sick was apparently as imperative and important as was his injunction to preach the gospel of righteousness. These two methods were to be jointly employed in laying the foundations for his church. So far as we can gather from his words, the one method was to endure as long as the other. Herein may lie a rock-ribbed foundation for Christian Science.

But the speaker, with thousands of others, is watching and waiting for more proof. We are in a receptive attitude, but before belief is possible the demonstration must be made clearer. That the mind is powerful in the treatment of disease, no well-informed person will deny. The genial doctor who fills the sick-room with sunshine and hope, will succeed where the more learned physician with a serious face will fail. Many of us have little faith in medicine as a remedy for the ills of life. One of the most learned physicians in this city, in a long magazine article on disease and its remedies, very frankly closed his article in these words: "The more I study human diseases, the less faith I have in medicine as a remedy." We may therefore hope that Christian Science has a vital place in the world of thought, and it may possibly be that this religious shoot will yet grow and encompass mankind.

The Christian Science system is certainly full of great and important truths, and great and lasting blessings are daily flowing from its practice. Men and women who are

Digitized by Google

well informed and are fair will not deny this. Aside, then, from some hard and strange doctrines which many of us find it impossible to accept without stultifying our reason and judgment, Christian Science contains within it a beam of sunshine and a benediction to the human race. Many of us, therefore, cannot but wish that the system as a whole were more susceptible to reasonable belief. It may be, however, and to that end let us pray, that the white limelight of Truth will today and from this platform make things clearer and more convincing. Let us listen, be fair, and consider the words that fall upon our ears.

Correspondence.

MILFORD, N. H.

An interesting lecture on Christian Science was delivered by Mrs. Sue Harper Mims on Monday evening [June 27] at the Unitarian church. The lecturer was introduced by David Blanpied of Newtonville, Mass., who spoke in part as follows:—

You are invited this evening by First Church of Christ, Scientist, of Milford, to listen to an address upon a topic which is not wholly unfamiliar to many of you, and your presence evidences an interest which is highly gratifying to the members of this church, and I am here to extend to you, on their behalf, a most cordial welcome. Christian Science is often misunderstood, and in consequence, misrepresented, thereby withholding from many the peace and joy which its ministry always brings to the receptive heart. It is the object of these lectures to correct these false impressions and answer the queries which sometimes puzzle the truth-seeker.—*Milford Cabinet.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Basin, Wyo.—Bliss Knapp, Fraternal Hall, 8:30 p.m., Sept. 6.
Billings, Mont.—Bliss Knapp, Opera House, 3 p.m., Sept. 18.
Chicago, Ill. (First Church)—Rev. William P. McKenzie, Church Edifice, 4017 Drexel boulevard, Sept. 19 and 20.
Coeur d'Alene, Idaho—Frank H. Leonard, Pavillion, Sept. 16.
Colville, Wash.—Frank H. Leonard, Odd Fellows' Hall, Sept. 19.
Great Falls, Mont.—Bliss Knapp, Grand Opera House, 8:30 p.m., Sept. 20.
Helena, Mont.—Bliss Knapp, Unitarian Church, Sept. 19.
Kalispell, Mont.—Frank H. Leonard, Kalispell Opera House, Sept. 13.
La Crosse, Wis.—Prof. Hermann S. Hering, La Crosse Opera House, Sept. 20.
Minneapolis, Minn. (First Church)—Rev. William P. McKenzie, Auditorium, 3:30 p.m., Sept. 18.
Needham, Mass.—Willis F. Gross, Town Hall, 3:30 p.m., Sept. 18.
Nelson, B. C.—Frank H. Leonard, Congregational Church, Stanley and Silica streets, 8:30 p.m., Sept. 20.
Park Ridge and Edison Park, Ill.—Hon. Clarence A. Buskirk, Clark's Hall, Park Ridge, Sept. 16.
Saline, Mich.—Mrs. Sue Harper Mims, Saline Opera House, 3:30 p.m., Sept. 18.
Spokane, Wash.—Frank H. Leonard, Auditorium Building, 3:30 p.m., Sept. 18.

NOTICE.

Publication committees will confer a favor on the editorial department by mailing promptly to the EDITOR a copy of all published articles. Clerks of branch churches can also be of assistance by sending reports of all lectures given and items relative to progress in church work.

TESTIMONIES OF HEALING.

I feel that I have delayed too long in sending an acknowledgment of my indebtedness to Christian Science. It was first brought to my notice over five years ago. At that time I was far from well, for in the previous winter I had contracted a severe cold (a thing of frequent occurrence in those days), which remained for many months. Things seemed gradually to become worse, and my fears were increased when a medical doctor informed me that my condition was serious, one of my lungs being in a bad condition. As a result I was subjected to more strenuous drugging than before, but without any benefit whatever.

When things seemed at their darkest, the fact of the existence of Christian Science came to memory. Often in the past I had wondered whether the miracles recorded of Jesus and the early church had not grown out of the perfervid imagination of tradition, since they seemed to traduce natural law as I apprehended it; or, if Jesus had really healed the sick and saved the sinning, whether he had done it scientifically or because of some special dispensation of God. I had long felt that there was something wrong, something sadly lacking, in the understanding I had of the life and works of Christ Jesus. Little did I dream, when I purchased a copy of "Science and Health with Key to the Scriptures," that I was to find therein the golden key which, as I can truly testify, has indeed opened the Scriptures from Genesis to Revelation, and revealed to me the Mind that was in the Master. It presented so extraordinary a view of God and man and the universe, and withal retained such a consistency of logic as to hold my mind in perfect acquiescence to its hypotheses and arguments.

Could it be true, if God were admitted to be infinite Life, infinite Truth, infinite Love, that sickness, death, evil of every description, had no origin, and consequently no real existence; that as entities or realities they did not exist at all? And the word "infinite" surely excluded all else but Himself—God—the good One and His ideas! The assertion of Mrs. Eddy that such is the case, was the boldest I had ever encountered in the region of the metaphysical. My training in natural science had been largely that of the experimentalist, and I readily admitted that her position could not be lightly set aside, and that, as she held, if it were true it could be proved or demonstrated.

I at once perceived, also, that the corollary which follows from the admission of God's allness, was that sickness had to be accounted for by one's own wrong thinking, in lack of knowledge of harmonious being, or simply in ignorance of God. And so strongly did I feel, after the first perusal of the text-book, that God is infinite Life, that I resolved to give up, there and then, all drugging and material doctoring, and trust to or have faith in right thinking to heal me, using as my guides the Bible and Science and Health. In a remarkably short time I had ceased to cough, and felt stronger than I had done for years; soon every symptom of the ailment vanished entirely. Some months later, I was enabled to lay aside spectacles which I had worn for many years, owing to severe headaches, due to a supposedly defective condition of the eyes.

Thus the truth of Christian Science was demonstrated to me, and I was deeply grateful. To give up its study was impossible, for one saw that it revealed the divine Principle whereby sickness and sin are destroyed in human experience. Perhaps the hardest task I had in the early days was in grasping "the unreality of matter." My work had dealt for many years with matter, with its asserted actions and interactions, and the study of the physical laws relating thereto. I knew how theory was gradually drifting away from the grossly tangible into far subtler realms, yet I for a time had no substitute for it. It was during class instruction that the truth dawned upon me, giving me great relief, that

Digitized by Google

the spiritual idea as the expression of the omnipresent divine Mind must take the place of the counterfeit material concept. Since then it has become more and more emphasized to me how true is our Leader's statement on page 496 of Science and Health, that "it is the spiritual idea, the Holy Ghost and Christ, which enables you to demonstrate, with scientific certainty, the rule of healing, based upon its divine Principle, Love, underlying, overlying, and encompassing all true being;" and that in proportion as we know it, we rise above the false sense of material seeming.

I am glad of this opportunity to express my heartfelt thanks to Mrs. Eddy for her discovery, and her many helpful writings elucidating it, and my deep regard for the love of her pure and good life. I know it is these characteristics which have opened her mind to Truth's inspiration, and, moreover, given her such rare wisdom to lead the Christian Science movement. I should like also to state how helpful I have always found the various periodicals issued by The Christian Science Publishing Society, and how happy I am that from its office *The Christian Science Monitor* is issued daily, an object-lesson to all newspapers in cleanliness and restraint.—DUNCAN SINCLAIR, B. Sc., Glasgow, Scotland.

I first heard of Christian Science when I was attacked by dizziness to which I had long been subject. The attack came on me while I was in a little shop, and the proprietor's wife took me to her living-rooms in the same house, and said she would help me. This she did, and she then told me of Christian Science, which had enabled her to aid me.

I had always been a church-goer and a reader of the Bible; it was therefore no task for me to recognize God's hand in the blessed work, and I laid the lesson to heart. One day while on the street I was again attacked with the dizziness. But I remembered that God was with me, and, relying on His sustaining hand, I felt a thrill pass through my whole being; the dizziness vanished, and has never returned. I have felt overflowing gratitude for the peace and comfort Christian Science has brought to me in restoring me to health that had been badly shattered, and I am daily gaining in health and spirits as well as regaining my flesh, after having been reduced almost to skeleton proportions.

To understand my condition it will be necessary to review my experience of a year previous to my hearing of Christian Science. In April, 1908, I underwent a surgical operation in San Francisco for the removal of a growth which had greatly troubled me for years. The trouble had been diagnosed as a stomach disorder, and treated as such until a specialist was consulted, who said I had about four weeks to live unless an operation relieved me. I went to a hospital, and left after two weeks, although the surgeon said I must stay four weeks. I had even then unbounded faith in God, and that faith sustained me, but I did not have the understanding that gives full aid.

Before I had recovered from the operation referred to, I was knocked down by a runaway horse and remained unconscious ten days. I had sustained very severe injuries on the head and body, and when I recovered consciousness I was informed that the doctors had said nothing could save me. I was tenderly cared for by neighbors, mostly young women and girls, but when I begged them to pray they smiled derisively, and to my request that they read the Bible to me they turned deaf ears, as they were not accustomed either to pray or to read the Scriptures. When my husband came home in the evening he read the Bible to me and prayed, and I experienced a sense of peace and relief, for I relied on the blessed promises in the Book of books. Though I had much comfort from the reading of the Bible, I did not get an adequate understanding of the Scriptures until I heard of Christian Science. After my recovery we removed to Stockton, and there in August, 1908, I first heard of Christian Science. I began to attend the meetings in September, and since that time all my ailments have vanished and I have been thoroughly healed. I have experienced great kindness from all the Scientists of whom I have sought help or information, and I am deeply grateful for all the blessings enjoyed.

I am sincerely grateful to God for His healing word, and to the dear Founder of Christian Science, Mrs. Eddy. May others receive the many blessings that I have.

MRS. ALICE COLES, Stockton, Cal.

I have long felt a sincere desire to show my gratitude for the many and great blessings which Christian Science has brought to me. I was a complete invalid from spinal trouble, spending most of the time in bed and part of that time was under opiates.

My husband is a traveling man, and among his customers was one who, after being told by the doctors that he must die, had been healed by Christian Science. This gentleman visited San Francisco every few months for his supplies, and on one of these visits he found my husband, who had just come home from a trip, in the store. On inquiring after my health, he was informed that the doctor had told me the day before to go to bed and stay there until I was well enough to wear a brace again, and that this treatment was to continue, as he had exhausted all his skill and knew that nothing more could be done for me.

The gentleman then recommended Christian Science treatment for me, and when my husband came home he asked, "How would you like to try Christian Science?" I had not the slightest idea of what it was, but I replied, "Oh, anything, if it will only relieve me." It was then arranged that I should begin the next morning to take treatment.

I shall never forget that first morning—the spiritual uplift was indeed beautiful. I had reached the point where everybody that looked healthy and happy filled me with envy and discontent; but that morning I went home singing a glad song, and with a realization that we are all brothers and sisters, for there is only one Father-Mother God. I felt as though I must tell every one I met how much love I felt. At the end of two weeks I removed the support from one side, and at the end of another week the other went also, although when I had been told that the practitioner would ask me to remove the brace I had indignantly replied that I would stop the treatments first. At the end of a month I asked if I might remove the rest of the brace, although I had been laced up in that big, high thing so long that I feared to catch cold if I went without it; but the practitioner told me to have no fear. With what joy I went to get an ordinary garment! After several long years of weary and painful bondage, to be free as others were—what a blessing! My medicines, of which I had a large supply, had all been thrown away during the first week's treatment.

That was nine years ago, and thank God I have never had occasion to revert to material remedies since. Divine Love has been my one panacea for all forms of error. I now look back upon my deliverance from that awful siege of bondage as the greatest blessing in my life, for then Christian Science was brought to me and by the study of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I have been enabled not only to help myself but others also. Words are feeble to express the great happiness one experiences in knowing what it is to be a channel for God's love to flow through. My one prayer is that I may be found worthy to feed His lambs, that I may have understanding enough to be enabled to help all those who need the healing.

I cannot express the love and gratitude I feel for our dear Leader. During my years of bondage I often wondered why Christ could not come to earth again, not know-

Digitized by Google

ing that Christ's presence and power are here—on earth—only waiting to be called upon. May God's richest blessing ever be with the one who has made this known to us.

MRS. ELIZABETH H. JONES, San Francisco, Cal.

I feel it to be my duty to testify to the benefits which I have received from Christian Science. I was troubled with catarrh for many years, also a stomach disorder and insomnia, besides a bad case of varicose veins, affecting both of my limbs. These had troubled me for nineteen years, and for nearly fourteen years I was practically a cripple. They had healed up some time ago, but broke out again in the center of the old scar. It affected the bone to some extent, and threatened to make me serious trouble.

It was at this time that I had my attention drawn to Christian Science, and when I became lame a friend kindly advised me to go to a Christian Science practitioner, which I, with little faith, consented to do; but I nevertheless began to improve. I was encouraged at this, and on being assured that the manner of healing was the same that the Saviour and his apostles practised, I became interested, and bought a copy of "Science and Health with Key to the Scriptures." I was then staying in a soldiers' home, and after a few days an old comrade who had been given up by doctors, and told that he could not be helped by Christian Science, came to me and asked to borrow the book. I let him have it, and in a short time he began to mend. His despair changed to hope; he had faith that he would get better, and it made a new and different man of him. To me it was a wonderful and convincing proof of the power of divine Truth to heal disease, no matter if it were considered incurable. This comrade came here with me from the home in April, 1909, and visited the same Christian Scientist, and he is steadily improving under her instructions.

The greatest wonder to me was when I for the first time told the lady what I considered my worst trouble, which had annoyed me more and more as time went on for at least twenty-five years. I told her of it in the evening, and the next morning I was astonished to find that the trouble had disappeared and I have never had it since. A doctor had told me that it was a case of very great enlargement of the affected glands, and it caused me to be entirely helpless when my strength was reduced by a fever. This doctor was the chief operating surgeon at Ancon Hospital, Panama (Canal Zone), and together with the first assistant surgeon made a personal examination of my case. The chief surgeon told me that nothing could be done to relieve me except to have an operation performed. He advised me to go north, as soon as I had regained sufficient strength to warrant it, and have this done. Other doctors told me the same, and said that the trouble would probably grow worse, and that at my age the sooner the operation was performed the better.

It appears to me that all my ailments are gone, for I eat and sleep well. I have no catarrh; all have disappeared except the enlarged veins, and they appear to be smaller and make me no trouble, although I am on my feet at work nine to ten hours a day. I have not lost any time, nor do I get tired as I did before. For all of these blessings I am thankful to God for His goodness, and for the teachings of Mrs. Eddy, which have shown us the way to draw near to God in an acceptable manner, so that we may receive what we ask.—HERMAN J. CONGER, Kalispell, Mont.

Myself and family certainly have great reason to be grateful to Mrs. Eddy, for teaching us that God heals today the same as He did centuries ago; also to God, for the many blessings He has bestowed upon us since we have learned to live and think aright. About twelve years ago, I came home one day with such severe pain through my body, especially in my right side, that I could neither sit nor lie down without intense suffering. I had five physicians that afternoon, but in the evening, my father, who was a Christian Scientist, having been healed of organic heart trouble in its worst form, said he would like to have me try Science. I told him that Christian Science might be all right for a weak heart, but I knew it could not relieve the pain I was suffering, and that I would prefer a physician. They called one that I knew, and he said that I had all the symptoms of appendicitis, but he preferred to hold a consultation. Later he came back with one of the best physicians in this city, who agreed with his diagnosis, and said they would have to operate in the morning.

If they had been able to assure me that the operation would be a success, this story might never have been told, but all the encouragement they could give me was that I had one chance in fifty. I considered this too uncertain, and decided to try Christian Science, reserving the operation for a last resort. A practitioner was called, and during his treatment I began to vomit. I was soon relieved, and slept quite well all night. I continued to improve, and in a week or ten days was up and around all right. I had a few slight attacks after that, perhaps a year or so apart, but they grew less troublesome each time, until they ceased entirely. It is now about seven years since I have had any such symptoms, and recently I was pronounced physically perfect by the doctor of one of the largest insurance companies.

After this wonderful healing it was seven years before I came into Christian Science, as I was not ready to give up a few worldly pleasures which I thought necessary for my happiness. Since coming into Christian Science I know absolutely that there is more genuine pleasure in knowing that you have gone through the day living and thinking the truth than in aught else. We have five children, two of them born before we came into Science and three since. With the first two, my wife stayed in bed two or three weeks, but with the last three we only called a physician to comply with the law, and she was able to be up in a day or two after the birth. To prove that this getting up so soon has had no ill effects on her, I would say that she is healthier and better looking every day.

In our family of seven we have depended on Christian Science for the last three or four years, and have had many wonderful proofs of its healing power. Many attacks of illness, some quite serious, have all been destroyed through the power of God, as taught in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Is it any wonder that we are grateful, or that we strive to be Christ's disciples seven days in the week, and so be worthy of all the blessings which we receive? By so doing it naturally follows that not only are we healed of our diseases, but are benefited in every way, in business and in our home, wherever we are and whatever we are doing. It rests with us whether we have heaven on earth, as God's part is already done, and we know it to be true that "all things work together for good to them that love God," and "if God be for us, who can be against us?"

HARRY S. THOMPSON, Detroit, Mich.

Six years ago I became interested in Christian Science, when I was told that it is a religion of Truth and Love. This was different from what I had heard of any other religion, and as I pondered the meaning of these words, I thought I would like to know something of it. I had drifted away from Judaism, and did not own a Bible, but got one about the same time I procured a copy of "Science and Health with Key to the Scriptures." I studied these two books at every possible moment, hungering for Truth; and it is needless to say that I have found Christian Science to be all that it was represented. The spiritual uplift means far more to me than the physical healing, and yet I am very glad for what Science has meant to my little girl, five and a

Digitized by Google

half years old, and to myself, in the overcoming of fevers, earache, and numerous other diseases. While visiting my parents in a country town where there were no other Christian Scientists, my little girl had an attack of illness and it seemed best to wire for treatment for her, as she had very high fever and other discordant conditions. For four days the fever was in evidence; then it vanished, and normal activity of the bowels was restored. For seven days she took no food, but on the seventh day she asked for food and enjoyed it. This healing meant very much to us and we are indeed grateful for it.

I am deeply grateful to God, and to our dear Leader, Mrs. Eddy, for what this truth has done and is doing for me and for my dear ones.

MRS. BERNYCE H. UNGER, Monroe, La.

Christian Science has been the only medicine that my two little children and myself have taken for over two years, and I have applied it to every problem that has confronted me. While walking, as it seemed, in "the valley of the shadow of death," the light of Truth was brought to my attention. We were in great distress financially, and also were in need of physical help at the time, but I can truthfully say that within twenty-four hours my two children and myself were healed.

I had a severe catarrhal ailment of several years' standing, which physicians told me could only be relieved through an operation. I was in Chicago at the time, and after speaking to a Scientist of my consultation with a specialist about a bone growth which had to be removed, she merely remarked that Christian Science would heal it without an operation. During the day, although I read Science and Health, my condition seemed to grow worse; but late that afternoon, on blowing my nose, I found a piece of bone in the handkerchief. My youngest child, then seven years old, had trouble with her eyes, said to be due to after effects of a fever. Not only were they painful and the suffering intense, but blindness threatened her. My other child was taken with a bad attack of croup; but all these ailments were met within twenty-four hours. Was this not sufficient proof of God's power?

During the short time that I have been reading Science and Health, I have overcome physical ills and accidents at different times and have worked out numerous business problems successfully. I am indeed thankful for the help I have received in the bringing up of my children, and for the progress they are making in school work. I have found that Christian Science is as far above medicine as the skies are above earth. I am thankful to God, and to Mrs. Eddy, for this truth.—MRS. J. S. POLLOCK, New Orleans, La.

Christian Science was brought to my attention by a relative who had been wonderfully healed by its ministry, and when she gave me the text-book, "Science and Health with Key to the Scriptures," I was almost afraid to read it, for fear it was something that was not orthodox. I little dreamed that Christian Science had come to me in answer to a lifelong desire for a more satisfying religion.

I am thankful that I did not let prejudice hinder me from reading the text-book, and one thing which especially attracted me to it was the statement that it was the "Key to the Scriptures," for I loved the Bible and found much comfort and help from its pages, though I always read it with the thought that it could not be understood, as it seemed to deal more with past and future events than it did with present-day problems. I believed it to be the inspired word of God, but this was a blind belief without understanding. Like many others, I had been trying to serve God through the medium of matter, believing that He knew and permitted evils and offered no way of escape from sin and disease except through death, by which we would enter heaven if we had accepted the doctrine of vicarious atonement. As to hell, I seemed to be having more than my share of it right here.

So bitter had been my experience before Christian Science came to me, that I had lost faith in everything but God, and I prayed that I might not lose that. Finally, as a climax to the many things I had suffered, my daughter, then in her eighteenth year, passed out very suddenly, leaving me bereft of all my earthly hopes. It was indeed the darkest hour before the dawn. The anguish of that hour was dreadful, and it was only through the loving help given me by Christian Science friends, that I was saved from insanity or utter collapse. I then turned to Christian Science as my only hope, and studied Science and Health faithfully, with an earnest desire to know the truth which Jesus said would make us free, and as the result a great baptism of light and love came to me. I had found the living Christ, Immanuel, God with us!

It is twelve years since this occurred, and during all these years Christ, Truth, has been my only physician, and the dark images of sorrow and death have been entirely eliminated from my consciousness. I rejoice in the understanding that no idea of God can for one moment cease to exist or be separated from God, who is omnipresent Life and Love. Through this understanding I was freed from many chronic ailments, among which were a stomach disorder, chronic catarrh, bilious attacks, female weakness, and skin disease. I am most grateful for the Lesson-Sermons, as through their study the Bible has become a new book, and the words and works of Jesus are illumined. So far as we understand his teaching, we are enabled to obey the divine commands to preach the gospel and heal the sick; and as righteousness or right thinking takes the place of diseased beliefs, we gain the peace which passes understanding.

My heart is filled with love and gratitude to our beloved Leader, through whose unselfish devotion to Truth this great joy has come to me. Truly it can be said of her, "She stretcheth out her hand to the poor; yea, she reacheth forth her hands to the needy. . . . She openeth her mouth with wisdom; and in her tongue is the law of kindness. . . . Give her of the fruit of her hands; and let her own works praise her in the gates."

MRS. SARAH HUSBAND, Hamilton, Ontario, Canada.

In May, 1907, at twenty-three years of age, I found myself discharged from the business position I had held in London, England. This disgrace was due to the demoralizing effects of intemperance, and was the culminating point in the life of general recklessness which I had led for about four years. I was so ashamed that a desire to get away from my former associates came to me, and for two months I lived an almost solitary life in Surrey. At this time better influences were introduced, and I came to know a little of the teachings of Jesus, which had not been prominent in my life since leaving the Sunday School, about six years previously.

In October I left England for New Zealand, where I belonged, and on the voyage I strove to learn more of the Master's teachings; but a certain book which was lent me and which I read, took away all the props my new-found faith possessed, and I was left with nothing. There was a minister on board, but he did not seem to be able to answer the statements in this book to my satisfaction. My life was a misery to me, because it seemed as if the Bible were not true.

On my arrival in Sydney, I was offered a good business position, and I felt impelled to stay. For several Sundays I visited churches of various denominations, in the hope of finding "something;" but being discouraged at my non-success, I gave up the hope. At this juncture, a friend spoke to me of Christian Science, for I had told him of a

Digitized by Google

physical trouble from which I suffered acutely. He lent me some pamphlets, and I immediately borrowed a copy of "Science and Health with Key to the Scriptures" from the reading-room here, and read it hungrily. It restored the Bible to me at once, but with a greatly enhanced value. In a fortnight I discovered that the smoking habit had "given me up." In about a month I had treatment for the stomach disorder and was helped wonderfully, for my former very limited diet speedily became unlimited.

I cannot describe the difference which this revelation of the truth, as contained in Science and Health, has made in my life. The old habit of drinking with acquaintances has been completely overcome, and quite without any effort on my part. Christian Science has made my daily business more of pleasure than work. It has made my life so full of happiness that at times it seems too good to be true. The lives of many of the workers here in Sydney who are demonstrating practical Christianity, have influenced me greatly. I write this testimony to the healing power of Christian Science with the deepest feeling of gratitude to Mrs. Eddy for her unswerving adherence to Principle, and in the hope that it may help some equally despondent brother to realize, as I have realized in my happy experience, that "divine Love always has met and always will meet every human need" (Science and Health, p. 494).

LAURIE E. WOOD, Mosman, Sydney, Australia.

It is nearly five years since I first heard of Christian Science—a friend told me of it, and said the reading of the text-book, Science and Health, had healed hundreds of people. I had suffered all my life with a bowel disorder, but I was healed in a very short time in Christian Science. My sight is also very much improved. The physical healing to me, however, is nothing compared to the spiritual illumination, and words are inadequate to express my gratitude to God, and to our beloved Leader, Mrs. Eddy, for the joy and peace that this truth has brought into my life. My greatest desire is to consecrate my life more and more to God, and to His cause, that I may prove by my right living that I am trying to be a Christian Scientist.

MRS. ELIZA CURRIE, Dublin, Ireland.

I feel deeply grateful to our heavenly Father, and also to our dear Leader, who has shown us the way out of sin, sickness, and sorrow, to health and happiness. I came into Christian Science about five years ago. I was then a physical wreck, having what the doctor called a spinal disease. I tried material remedies until the doctor said he would not give me any more, and in my distress I cried out day and night. I then got another doctor, and also a nurse, who took care of me by night. When she left, she took Christian Science treatment, and after a few weeks she came and told me what it had done for her and advised me to try the same.

In January, 1906, I made up my mind to try Christian Science; and from that day I laid aside all material remedies and got a practitioner to give me treatment. I have been reading and proving for myself the truth that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). The result is that one ailment after another has left me. The truth has indeed made me free. I feel that the greatest blessing I have received is the spiritual uplift, and that calm and glorious trust in God which I am learning to have. I shall endeavor to prove my gratitude to our blessed Master, and to Mrs. Eddy, his willing disciple, by spending the future in the service of divine Love, in doing good along the way.

B. A. METZ, Muscatine, Ia.

The weakness we lament, ourselves create.

SAMUEL JOHNSON.

FROM OUR EXCHANGES.

[Rev. William W. Peck in *Boston Herald.*]

The churches today are living on the momentum of theological discussions which were set going a century ago. The church is holding aloof from the civic and social problems of the day. It has fed upon the doctrinary teachings of a past century. The living relation of religion to the actual battle between good and evil which is being waged in the world by vigorous men is not insisted on, and the consequence is twofold. The work of importance that is being done to further social justice is being done by people outside the church, and also the church offers no attraction to people who would be of value to it—active, forceful thinkers and workers. Most of them are outside the church. The whole insistence of the training in theological schools is upon doctrines and theological subjects. This does not appeal to the young man of strength and vigor who is anxious to make his life count in waging war against the social injustices of the day, unless he feels courageous enough to attempt the almost impossible task of reconstructing his church along new lines.

The message of the church must be changed, if the church is to survive, from a message of another world to one of this world. The old distinctions between "sacred" and "secular" must be done away with. I hope that the present church will die a natural death, with the gradual death of its old adherents, and that the church of the future will give from its pulpit a spiritual interpretation of life of the present time with present conditions, used to inspire men to live out their present lives in the highest way. The time will come when people will learn to sink theological differences. They will drop disputing about the early theology of St. Paul, on which the present churches are founded, and through which the church has lost hold of vital things. I am sick of seeing one thousand people trying to support three or four miserable little churches in a community just large enough to maintain one church as it should be. It is disgusting, the bitter sectarian animosity of Lilliputian dimensions, which keeps the churches separate.

[Rev. Frank N. Riale, Ph.D., D.D., in *Christian Work and Evangelist.*]

We have got to cut death out, as well as sin and sickness, before the life triumphant will reign in these mortal bodies, as it did in the first full-ripened fruit of the Spirit in the life of the Son of God. There is no peace of mind till we have slain the last enemy, death, and the prince of darkness goes down forever before the prince of light. He met the enemy of the race, and became the great overcomer, solely that we might believe that the Spirit of life in Christ Jesus would make us meet him also and come off just as triumphantly. "Do you mean to say that death is dead?" I think I can hear the staggered reader reply. Precisely! We are meant to be just as dead to death and sickness as to sin, and in him should ever reckon ourselves so. This is the will of God for every child of creation. If thou shalt believe that God is working to will and to do of this mighty life-unfolding work of triumph, thou wilt see the glory of God growing more and more wonderful day by day. This is what the spirit of faith must bring one to believe, as the glory goal for all. This is a spirit of comfort, indeed. This is a spirit of peace that passes all understanding. This is a spirit of power. It is not too good to be true. Nothing can be too good to be true that the mind can conceive of. Beyond what ye are able to wish or ask, that is God's great desire to give to all. Surely there is nothing that one wants more than this, to cut out this "trinity of darkness," that death with sin and sickness may be swallowed up in faith's fullest victory.

[Rev. Daniel Dorchester in *Western Christian Advocate.*]

If Jesus had been simply a pious preacher and expounded only such themes as were common to the priests of his day, he would have been immensely popular and been proclaimed as the Messiah. It was his social message, his rebuke of those who were preying upon the people, and his unconventional friendship for those whom society called reprobates, that roused the antagonism which finally crucified him. The church today is charged with the same mission that the Lord was, and exposed to the same temptations. If she is careful only of her ecclesiastical preserves and spends her energies coddling her own members, if she has no social message, no righteous indignation against injustice, no helpfulness for the submerged tenth, she has no justification for existence. A church whose only concern is piety does just what the devil and all the organized deviltries of society would have her do, keep herself in a glass case of religious formalism while masses of the people go reeling to destruction. The wicked grow like a green bay tree in whose baleful branches the birds of prey and all manner of iniquities may build their nests, with none to molest or make them afraid, until the outraged decency of society does what the church should have done long before.

[*Churchman.*]

The terms of a common belief can never be ascertained except on a basis of a common action. Hitherto the great difficulty which has made Christian communions inimical to one another has been that they have ceased to work together and therefore have ceased to share in their own weaknesses and be of help in overcoming their faults and defects. It is this attitude of aloofness and isolation which is common to sectarian criticism of others that is so alien to Christianity. Churches have criticized one another because they have got out of touch with one another. For generations the only bond actually has been this joint concern in criticism of defects and caviling at achievements. Abstract propositions have been substituted for life, and the separation of Christian churches has produced an attitude of censoriousness, an affectation of superiority through which one church sits in judgment on another and proclaims itself to hold the standard of orthodox doctrine and gospel morality.

[*Interior.*]

Nothing is more evanescent than "the wisdom of the wise" in any of our specialized institutions. It was not the enemy of learning, but the searcher after truth who wrote

> Our little systems have their day;
> They have their day and cease to be.

The faith which is anchored deep in the needs, intuitions, and hopes of the race has ridden out all the storms of all these centuries and will live. The pen may be mightier than the sword, but the faith of the church has survived attacks from both. Jesus Christ did not exult prematurely when he "rejoiced in the spirit," thanking the Father that his gospel had found an anchorage in human nature rather than in human wisdom. That anchor still holds. It is the final religion because it is the religion of the soul.

[Rev. James W. Fifield, D.D., in *Advance.*]

The truths which we are asked to believe are often so conflicting. We know that truth is at harmony with itself everywhere. Yet all manner of statements are made. The heart yearns for certainty, for simplicity, for the abiding. We are told by some that there must be new truth for each age and that each generation must make its beliefs. If that statement be true, we are a bewildered and lost race. If that statement be true, there is no personal God. But that statement is not true. Truth may require an application to its age, but there are abiding facts upon which we may rest. God has not left His children without giving them a sure foundation for their faith.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings Description and prices of these will be found on the outside cover page of the *Sentinel.*

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel.*

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY

TO SUBSCRIBERS.

Subscribers to our periodicals are requested to observe the expiration dates of their subscriptions, as given on the wrappers of the periodicals which come to them, and to renew subscriptions prior to the date there given.

The notation "Nov. X" indicates that the periodical will not continue after the last issue of November, 1910, unless subscription is renewed, and "July XI" in the same manner denotes termination with the last issue of July, 1911.

Subscribers are also requested to refer to the subscription rates given in our standing notices before sending in subscriptions.

OF INTEREST TO THE FIELD.

The Publishing Society has a limited number of volumes of the *Journal* and *Sentinel* bound in cloth, half morocco, and half calf and arranged in sets from four to nine volumes. These sets are now on sale at special prices, ranging from $9.20 to $21.00, according to the style of binding and number of books in the set.

These special prices apply only on sets of books, and in no case on single volumes. The offer presents an exceptional opportunity to Christian Scientists to obtain rare volumes for reading-rooms, libraries, and individual use. Detailed information will be furnished on request.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herald,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and *not* to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90, six months, $1.15; 25 copies, each, one year, $1.80; six months, 95 cents; 50 copies, each, one year, $1.60; six months, 90 cents. In all other countries additional postage, at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES." MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90, six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage, at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Ex-President Roosevelt, on his speaking tour through the West, has declared himself in favor of these doctrines: Elimination of special interests from politics; complete and effective publicity of corporation affairs; passage of laws prohibiting the use of corporate funds directly or indirectly for political purposes; government supervision of the capitalization not only of public service corporations, but of all corporations doing an interstate business; personal responsibility of officers and directors of corporations that break the law; increased power of the federal bureau of corporations and the interstate commerce commission to control industry more effectively; revision of the tariff, one schedule at a time, on the basis of information furnished by an expert tariff commission; graduated income tax and gradrated inheritance tax; readjustment of the country's financial system in such a way as to prevent repetition of periodical financial panics; maintenance of an efficient army and a navy large enough to insure the respect of other nations as a guarantee of peace; use of national resources for the benefit of all the people; extension of the work of the departments of agriculture, of the national and state governments, and of agricultural colleges and experiment stations, so as to take in all phases of life on the farm; regulation of the terms and conditions of labor, by means of comprehensive workmen's compensation acts, state and national laws to regulate child labor and the work of women, enforcement of better sanitation conditions for workers, and extension of the use of safety appliances in industry and commerce, both in and between the states; clear division of authority between the national and the various state governments; direct primaries, associated with corrupt practices acts; publicity of campaign contributions not only after, but before election; prompt removal of unfaithful and incompetent public servants; provisions against the performance of any service for interstate corporations or the reception of any compensation from such corporations by national officers.

President Woodrow Wilson of Princeton University, addressing the American Bar Association at its annual convention, said: "Constitutional lawyers have fallen into the background. We have relegated them to the supreme court, without asking ourselves where we are to find them when vacancies occur in that great tribunal. A new type of lawyer has been created; and that new type has come to be the prevailing type. In gaining new functions, in becoming identified with particular interests, the lawyer has lost his old unction, is looked askance at in politics, and must disavow special engagements if he would have his counsel heeded in matters of common concern. Corporations do not do wrong. Individuals do wrong, the individuals who direct and use them for selfish and illegitimate purposes, to the injury of society and the serious curtailment of private rights. You cannot punish corporations. Fines fall upon the wrong persons—upon the stockholders and the customers rather than upon the men who direct the policy of the business. Many modern corporations wield revenues and command resources which no ancient state possessed and which some modern bodies politic show no approach to in their budgets. And these huge industrial organizations we continue to treat as legal persons, as individuals. We can have corporations, can retain them in unimpaired efficiency, without depriving law of its ancient searching efficacy, its inexorable mandate that men, not societies, must suffer for wrongs done. You will say that in many instances it is not fair to pick out for punishment the particular officer who ordered a thing done, because he really had no freedom in the matter; that he is himself under orders, is a dummy manipulated from without. I reply that society should permit no man to carry out orders which are against the law and public policy, and that, if you will but put one or two conspicuous dummies in the penitentiary, there will be no more dummies for hire."

The great forest fires in the Northwest are attributable in part, according to Gifford Pinchot, to the niggardly policy of Congress in not affording means to provide against such disasters by constructing trails, roads, telephone lines, and furnishing a reasonable number of men for patrol.

A demand for reparation, estimated at one million dollars, is being prepared for presentation to the interstate commerce commission by merchants and manufacturers in the Missouri river territory who assert that they have been defrauded by excessive railroad rates.

International.

Soon after the United States had acquired Porto Rico by conquest in the Spanish-American war, negotiations were begun by Denmark for the sale of the Danish West Indies, St. Thomas, St. John, and Santa Cruz, to the American Government. Opposition to the sale developed and the negotiations were dropped. Once more, however, they are offered for sale. The total area of the three islands is one hundred and thirty-eight square miles and the population in 1901, when the last census was taken, was 30,257, almost entirely negroes.

A little over a year ago there were less than one hundred aeroplanes in all Europe, principally in France, but statistics of constructors show that since the first cross-channel flights Blériot has built two hundred and fifty duplicates of the monoplane with which he crossed from Calais to Dover, and Farman has manufactured at his works over a hundred biplanes. Other types bring the French production up to about eight hundred, which have sold for something over two million five hundred thousand dollars.

A republican form of government in Portugal will soon be a fact, predicts Dr. Costa, head of the Republican party in Spain. He says that the election of the Chamber of Deputies, which has just ended in big gains for the Republicans, will be the last election under the monarchy, although the government party still has a majority in the chamber. The election was the fairest ever held in Portugal, and as a result the Republicans and their allies will be able to dominate the next session of the chamber.

Brazil's system of railroads at the close of the year 1909 totaled approximately twelve thousand miles of line in operation, of which some three hundred and sixty-six miles were constructed during the year. Of the total mileage about two thousand miles were owned and operated by the federal government, while nearly twice that mileage was owned nationally, but operated under lease from the government.

The increased cost of living, especially for the working classes, has induced the French government to institute proceedings, where proof is obtainable of unlawful speculation tending to increase artificially the prices of the necessaries of life, and to take action on any conduct which, while not legally punishable, may result in interfering with the ordinary course of supply and demand.

Fearing that international complications would ensue from the continued attacks of the populace on the Bogota City Railway Company, an American concern which has a franchise from the Colombian government to operate a street car service in the capital, the municipality of Bogota has bought the company, paying eight hundred thousand dollars for it.

When moving the second reading of the land tax bill, the prime minister of the commonwealth of Australia stated that he expected that it would produce a revenue of five million dollars during the current financial year.

The recent speech in which Emperor William intimated his belief that he ruled by divine providence rather than by the sufferance of the people, has created not a little stir in Germany.

One of the leading authorities in the British army believes that the days of the volunteer are numbered and that the time has come for compulsory service in the army.

Melbourne, Australia, is to improve her docking facilities. This will enable her to handle her increasing trade and accommodate the largest vessels that may call.

In his recent monoplane flight at Havre, Leon Morane, the French aviator, reached a height of 2,150 metres, or 7,054 feet.

The Australian government is taking steps to make its lands attractive and accessible to new settlers.

Industrial and Commercial.

Nineteen lawyers, representing big western railway systems, were present when the interstate commerce commission, last week in Chicago, began its hearing of testimony bearing on the advance in railroad rates scheduled to go into effect Nov. 1. The hearing involves two hundred and two transportation lines in western trunk line, trans-Missouri, and Illinois freight committee territory, as well as the shipping interests.

At a recent meeting of its board of trade a plan was submitted outlining a program for making at Skowhegan, Me., the third largest water plant in New England. This involves merging the several water rights, as now established by deed, into one new corporation, the issue of one million dollars first mortgage five per cent bonds, and the expenditure of the proceeds in acquiring necessary property to build new dams, canals, and power station.

A thorough investigation into the reasonableness of rates charged by express companies will be made this year by the interstate commerce commission. In the early autumn a series of hearings will be held. Up to date all complaints against interstate express rates have been filed by shippers and organizations. No complaint has been received from a state railroad commission.

Arbitration of the wage scale of employees of the Connecticut company, which holds the trolley lines in that state for the New York, New Haven & Hartford railroad, has resulted in awards which give 1,056 regular men and 598 extra men an average increase of about one half a cent per hour throughout the system as compared with the present scale.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE CHURCH MANUAL.

BLANCHE HERSEY HOGUE.

CHRISTIAN SCIENTISTS have for their instruction the Scriptures, the writings of Mrs. Eddy, which open to them the Scriptures, and the Church Manual, the rules of which help them to apply what they have been taught. The Bible, understood through Christian Science, is aiding its students individually to live in Christian discipleship; the Manual of The Church of Christ, Scientist, in providing that Christian Scientists shall work together, is helping them collectively to live in Christian fellowship. The teaching of the Scriptures and the Christian Science text-book bring about the individual correction of thought, while the rules of the Church Manual make possible right action through groups of individuals and through the whole body of Scientists. So, the Bible, Science and Health, and the Manual are equally important in their places. The Manual bears definite relation to the other two books in that it shows us how to take the steps that will bring their teaching into our lives in all necessary relations with our fellow-men. It safeguards and regenerates Christian fellowship by promoting the best possible form of church organization. For these reasons, therefore, it can no more be dispensed with than can the Scriptures or the Christian Science text-book.

Of the Bible Mrs. Eddy has written: "Christian Scientists are fishers of men. The Bible is our sea-beaten Rock. It guides the fishermen. It stands the storm. It engages the attention and enriches the being of all men" (*Sentinel*, March 31, 1906). Christian Scientists themselves know what place the Christian Science text-book holds in their regeneration; how it makes plain the words of prophet, apostle, and of the Master himself; how it brings Christian healing into human experience today. And concerning the Manual Mrs. Eddy has said: "Of this I am sure, that each rule and by-law in the Manual will increase the spirituality of him who obeys it, invigorate his capacity to heal the sick, to comfort such as mourn, and to awaken the sinner" (*Sentinel*, Sept. 12, 1903). In keeping with the law and order set forth in the Manual, we have the Sunday Lesson-Sermons, the mid-week testimony meetings, the provision of monthly, weekly, and daily reading-matter, the board of lecturers, the Christian Science reading-rooms, the publication committee work, the rotation of church officers, etc., while, in keeping with its instructions, students are being taught and patients are being healed in all the world. Great reforms, indeed, are going on through the united action for good which operates through the Christian Science movement, and the outward and visible activities bear witness to the inward and spiritual understanding, which is itself being quickened by the law and order and discipline of right organization.

It is best for the Christian Scientist at present that he is not allowed to live to himself. His place in organization teaches him many things that he cannot learn otherwise, for it lifts him from the selfish consideration of his personal problems to the unselfish support of an impersonal cause. Within the ample boundaries of the Christian Science organization he finds multiplied opportunities for surrendering his own will, his own opinion, and his own comfort to the good of the whole,—opportunities unafforded even by the home or by any outside life in the world; and he is cheered by good example and by happy fellowship to higher faith in good as the ends of organization are worked out together.

If, then, the Church Manual, with the organization for which it provides, has so large a place in the establishment and growth of Christian Science, it is essential that Christian Scientists be keenly alive to its provisions and its demands. Continual fidelity, for instance, to the instruction found in Article VIII., Section 1, that "neither animosity nor mere personal attachment" shall govern motives and actions; to the warning in the same paragraph against "prophesying, judging, condemning, counseling, influencing or being influenced erroneously;" to the demand for a charitable attitude toward all religious, medical, and legal points of view; to the adoption, so insistently urged, of the spirit of the golden rule,—this fidelity, we know, will help in the making over of human nature, until in some fair day by-laws to provide for such consistent Christian behavior shall be no longer necessary. And it is unquestionably true that he who really does heed the requirement set forth in the Manual concerning Jesus' teaching that each shall go to his brother alone and tell him of his fault before publishing it to others, accepts a discipline which makes him in deed as well as in profession a genuine Christian Scientist.

Because the question of church organization is so vital a matter, it becomes naturally an important point to protect. A Christian Scientist who cannot at the moment be made suddenly disloyal to the Bible, to the Christian Science text-book or to its writer, can perhaps, through innumerable arguments, be persuaded into a lukewarm attitude toward church organization. Indifference, restlessness, criticism that is mere fault-finding and is not constructively helpful, are the symptoms of coming under such persuasion. To prevent this each member needs to keep his thoughts warm and loving toward all church activities; to be cheerfully in his place at meetings whenever possible; to be helpfully interested in every detail of cooperative work, though this does not mean necessarily that he shall take part, personally, in every church undertaking; for the quietest and least conspicuous church-member is sometimes best serving the church. It does mean, however, that we must guard zealously our love for organization, even in its present incomplete form, that we may not hinder its growth into greater beauty and utility.

Indifference to organization indicates that we believe we value the Scriptures and the Christian Science text-book, but refuse the discipline their teaching asks of us through the rules and by-laws of the Manual. Finding and keeping a place within organization means sometimes the surrender of ease and self-will, but it means, too, shelter and safety and the right to peace. So long, then, as the Leader of the Christian Science movement sees there is need for

Copyright, 1910, by Mary Baker Eddy.

Digitized by Google

organization to establish Christian Science, no student may fancy that he has rightly "outgrown" organization. The Christian Scientist is a standard-bearer within The Church of Christ, Scientist, and he who remains loyally and lovingly at his post best serves God, all humanity, and himself.

It may be said, truly, that the inspiration for the Church Manual is found in the life of Mrs. Eddy. Everything asked of Christian Scientists in maintaining the cause beyond and above all personal interests, Mrs. Eddy herself has done before them. Had she consulted only her own comfort she might have been tempted to apply what she knows of God just to the working out of her own salvation. Instead, she has labored forty years and more to give of her store to the world; she has been impelled to found the church with all its educational branches, and to protect its growing activities; she has foregone ease, and has bound herself to this task, that we, too, may find the Christ-healing for our sin and pain. Consistent and blessed is the Christian Scientist who can bind himself with her until many more shall find their healing and until The Church of Christ, Scientist, shall stand in good will to all men, radiant and triumphant in the earth.

OUR INDIVIDUAL RIGHTS.

WM. LLOYD.

To me, one of the most attractive features in the teaching of Christian Science is that, while it upholds individual liberty, it inculcates respect for others' rights and maintains most emphatically that we mind our own business. It teaches that each must work out his own salvation; that no one can take the place of others and do their work for them. It therefore largely destroys the human desire to govern, order, or interfere with the lives and liberties of others. As a consequence, I can feel that, if my neighbor on one side calls in a homeopathic physician to heal his sick, it is his privilege; that if my neighbor on the other side calls in an allopath, it is his privilege; while if a neighbor farther down the street employs an eclectic or an osteopath, it is his privilege. It follows, therefore, that if I prefer personally to call a Christian Science practitioner, it is my privilege to do so.

Having thus referred to the various schools into which the medical profession is divided, I desire to say that as a profession it has my profound respect; that it has been my good fortune to know many noble and unselfish physicians, men who have devoted their lives to the service of their fellow-men, and that to my thinking there is no profession which labors more faithfully for the good of mankind. I say this so that it may be clear that what follows is not a criticism of any, but just a simple plea for our individual rights,—rights that my own experience most amply justifies. Christian Scientists are charged from time to time with neglecting their children, because no physician is called in when they are sick. To this, we might reply, "What school do you recommend?" and, "If I call the doctor you advise, will you guarantee that my child will live and not die?" Put thus, our critic, if wise, would shrink from assuming such responsibility,—that which involves the life of another's child.

Let me give my own experience. Briefly, I am one of ten children. By the time I was twenty-three there were four of us left, six having passed on at ages varying from infancy to young womanhood; also both parents were dead. All of the eight had passed out under the best medical care obtainable. Twenty-three years ago I lost my own first-born, also under the care of one of the best doctors in a large city. My keenest grief over this was that we added greatly to the child's sufferings by the severe material remedies we applied under the doctor's instructions. Then I turned to Christian Science, and with Christian Science and under its treatment alone, have brought up five children to young manhood and womanhood. They have had all that usually comes to a large family of children,—only no doctors and no medicine. I will illustrate their care with the incident that opened my eyes to the fact that Christian Science is an individual work and that it is literally God's power and presence which heals through the prayer of understanding.

For some fifteen years I had depended, in so-called serious cases, upon others for the healing of my children, and had invariably experienced for them quick and thorough healing. Seven years ago, one came down with measles. I sent for a Christian Science practitioner, and the child was quickly healed. I thought no more of it, but the next week a second child sickened with the same disease. I sent for the same practitioner, and again the healing was quickly accomplished. Once more I dismissed the matter from my thought, but one evening the following week, when I came home from work, I found all five sick—the three who had until now withstood the disease, with it, the other two with the complications said to follow these cases. My wife asked, "What shall we do? shall we send again for the practitioner?" I thought a moment, and replied, "No; we have exactly the same God that she has, and this seems to be our work." To which she replied, "That is exactly what I think."

So we gathered them all in a room with two beds, with the more severe cases in bed. Then I audibly declared what God is,—how all power and might and majesty belong to Him; that He is infinite Love, the only cause; how He is altogether good; that He never sent sickness or pain to any child of His, etc. Then we went over that week's Lesson, as it is perhaps seldom studied—all being absorbed in it. Then we separated for the night, and I sat up late, taking each child, one by one, to his or her and my loving Father-Mother God,—realizing for that child God's care and love and presence and power; in fact, the truth of creator and creation. I then retired, and we passed a quiet night. In the morning four of the children were quite well, the eldest boy, whose case had been the most serious, much better, and with continued work in twenty-four hours more he also was well. This is only one instance, out of many, of what Christian Science has done in one family.

I have still very lively recollections of what I suffered under similar circumstances as a boy,—the weary days in bed, the nauseous medicine, the tedious weeks of convalescence. Only the other day I overheard one of my children say to another, "Do you remember the fun we had when we had the measles and were kept out of school?" For, although quite well, they were of course kept out of school for the length of time prescribed by our city health department. So, if I were asked why, after twenty-eight years' experience of medical treatment, I had turned my back on it and adopted Christian Science, I should reply that, though the physical healing had first attracted me to Christian Science, I had found it as nothing when compared to the spiritual certainty this teaching gives; that it destroys the fear of death, and gives absolute assurance of immortality, as well as life harmonious here and now; that after a full and costly medical experience, I have found in Christian Science a much quicker and more certain curative system. Therefore, being a common-sense man, I have adopted and held fast to that which I have found, from my own personal, every-day experience, to be the best. The right to do this I am ready to accord to my neighbor, and I claim the same for myself.

WHOSE MASTER IS CHRIST.

ANNA C. WYETH.

"SINCE I have learned that 'man is not material' (Science and Health, p. 468), I do not care anything about the body," remarked a student of Christian Science, when asked why he did not use his understanding to destroy a

Digitized by Google

physical manifestation of discord. The writer has always thought of the body as a symbol expressing a mental condition, and bearing the same relation to the mental condition as the written symbol bears to the mathematical concept; but here seemed to be an exception to the rule, for one who was possessed of some understanding professed to be indifferent to an expression of discord.

Thought then turned to a little child for the solution of the problem. The little one, too young to go to school, delights to "play school," covering his slate with figures or symbols made in imitation of another child's work, though they mean absolutely nothing to him. In this chaos of mathematical imitation there stand out instances where he unknowingly expresses a mathematical truth. By and by he starts to school, where he learns that two and two make four. He also learns to express his new-found understanding in symbols, and great is his joy at finding that the symbols are familiar, though now they possess meaning for him; they express understanding.

Mortals are as children covering their slates, their human experiences, with symbols. These symbols are sometimes healthy bodies and harmonious conditions; but as often they express disease and discord of every name, and the mortal knows not how to differentiate between the one and the other. But a day has come to many of us when we started in at a school whose master is Christ, Truth, and whose text-books are the Bible and Science and Health. Here we began to learn of God and of man's relation to Him. Then we learned, as did the child, that the symbols were the same as those used before we had an understanding of Truth; but now, knowing what the symbols mean, we see that we need to watch that they are correct. The little one who should say, on having the statement, two plus two equals six, pointed out, "Oh, I know it makes four; and I do not care about the symbols being right, so long as I know it," would probably learn wisdom from bitter experience; and even so will we of larger growth.

Mortals who are growing tired of aimlessly placing their symbols, and who want to learn "how to divide between sense and Soul" (*Ibid.*, p. 240), are wisely turning to Christian Science, and we as students owe it to these beginners to show them, by striving to manifest harmony in all things, that to know the truth does indeed make us free.

ONE PARAGRAPH IN OUR TEXT-BOOK.

CASSIUS M. LOOMIS.

ONE beautiful Sabbath morning I found myself fairly well started on my eleventh reading of Science and Health. I had just picked up the book when my eye fell upon a sentence on page 63, as follows: "In Science man is the offspring of Spirit." Strange, was it not? but ten times I had read the paragraph which opens thus, and now for the first time did its true significance appeal to me. I had just been having some disturbing business experiences, and these may have helped me to a little added light. How many times are our eyes opened by having some difficult problem to solve! "If man is indeed the offspring of Spirit," I queried, "can he be moved by any human will, this way or that? What an astounding thought! Are there in reality any complexities in Mind?" Instantly my thoughts reverted to my recent business difficulties, and through this illuminating sentence they were fully and satisfactorily overcome. In ten readings I had failed to grasp a very apparent truth; now the simple words were both a treatment and a benediction.

The second sentence of the paragraph reads thus: "The beautiful, good, and pure constitute his ancestry." How completely does this verify the opening words. Ancestry! Has not the human family boasted of signets, seals, heirlooms, and inheritances—mere baubles, which any robber might purloin? In the light of these words, the most precious of earth's jewels must glitter in vain. Then came this sentence: "His origin is not, like that of mortals, in brute instinct, nor does he pass through material conditions prior to reaching intelligence," another declaration of astounding verity that opens to us possibilities at present unknowable.

The next sentence began as follows: "Spirit is his primitive and ultimate sense of being." Yes, "primitive and ultimate"—the first and the last, and how, therefore, can the Adam-man—lame, halt, and discordant—have any claim upon us? Does not God's perfect image stand alone as a wise creator's finished handiwork? Further we have this declaration: "God is his Father,"—and yet how we have doted upon our earthly fathers and mothers, forgetting Jesus' request to "call no man your father upon the earth: for one is your Father, which is in heaven." Then comes the closing affirmation, which serves to illumine and complete the entire paragraph: "And Life is the law of his being." In these eight words every law of mortal making is swept out of existence, for we know intuitively that in the spiritual realm all is governed by the law of Spirit, of divine Mind.

Verily, there is enough in these few lines for a whole year's contemplation! I find this fact to be true: that however much I study our text-book, every new reading, if I but read in the spirit of a humble Truth-seeker and try to apply what I read, lovingly, humbly, and with an open heart of obedience, brings me that quickened sense which can be used to meet and solve our every vexing problem; and the degree in which we make these things practical by application and test, determines their real value to us. It is the open-minded thoughtfulness of our study, and the use we make of what we read, that counts, and it becomes ever more apparent to me that our patient and devoted Leader has builded for us far better than we yet know.

TRUTH IS RADICAL.

MYRTLE CLARK HOVEY.

IT is sometimes said by those who have only a slight knowledge of our Leader's teachings, that Mrs. Eddy is too radical in her statements. The present writer remembers that not many years ago she said the same thing, when perusing for the first time our text-book, "Science and Health with Key to the Scriptures." Then, as thought became divested of some of its error, and as the false, material sense of things gradually faded before the dawn of spiritual understanding, she began to realize that not Mrs. Eddy, but "right is radical" (p. 452).

There is no half-way position between good and evil, Truth and error, right and wrong. The line between these is sharply defined, and Truth permits of no compromise whatever with evil, as the sincere Christian Scientist soon learns. In this connection, it was very surprising to the writer to note apathy and indifference to the temperance cause, upon the part of some professed Christians. Our Leader makes the emphatic statement that "strong drink is unquestionably an evil, and evil cannot be used temperately: its slightest use is abuse; hence the only temperance is total abstinence" (Miscellaneous Writings, p. 289). Measured by the high standard given to us by Christ Jesus, he who demonstrated by his every word and deed that good and evil never mingle, when he said, "Ye cannot serve God and mammon," and also by that which is set before us by Mrs. Eddy in all her writings, no true Christian Scientist can fail to discern that there is not one iota of good in the liquor traffic, and that the only possible excuse for its existence is one that is based on selfishness, greed, and lust. Every thinking person who desires to inform himself of the facts, knows that our prisons, jails, almshouses, insane asylums, and orphans' homes are filled with the products of the liquor traffic.

Digitized by Google

To be sure, we learn in Christian Science that, pushed to its last analysis, the evil of intemperance is but one of many phases of the belief of a life apart from God, and of pleasure and pain in matter; but the understanding of this does not release us "one jot nor one tittle" from our sacred duty to do all in our power to deliver those who do not "know the truth" from the cruel bondage imposed on them by the evil of strong drink; and no selfish love of material gain, no regard for "commercial interests," should sway any professed Christian Scientist one iota, when he is called upon to lend his support and influence in the cause of righteousness—of good *versus* evil. If he is swayed by commercial reasons to advocate evil in any form, he is declaring that there is good in evil, and thus betraying the Christ by serving evil in the name of good.

Loyalty to Principle, which means to unchangeable, unmixed good always, not materialism nor commercialism, should govern God's children. Paul said, "If meat make my brother to offend, I will eat no flesh while the world standeth, lest I make my brother to offend;" and again he says: "Take heed lest by any means this liberty of your's become a stumbling-block to them that are weak." If we are using this "liberty" of ours, if we are lending our influence, votes, and support to the cause of evil, as embodied in the liquor traffic (whether we permit ourselves to be mesmerized into believing that we are justified in doing so by business or other materialistic reasons, or not), how are we meeting the requirements of God in regard to our weaker brother? May we be Christian enough, as a proof of our love for God and man, and our worthiness to be called Christian Scientists, to take an unequivocal stand against a business, an asserted privilege, which is desolating homes and degrading character in all the land.

Good has no partnership with evil. We "cannot serve God and mammon," and whoever tries to do so must of necessity have a very thorny pathway to pursue, until he is willing to leave all for Christ, Truth. The divine demand, "Choose you this day whom ye will serve," comes hourly to every Christian Scientist, and the prosperity of our beloved cause rests very largely upon the manner in which we as individuals meet and respond to this demand. It is our God-appointed task to awaken mankind from their dreams, to a realization of the kingdom of heaven within. And how can we do this if we are aiding evil in perpetuating the dream—the lie?

THE COMFORTER.

E. ROSE COCHRANE.

ONE of the most vital points in the teaching of Jesus the Christ was contained in the promise of the Holy Ghost or Comforter, of which he said, "The Comforter . . . whom the Father will send in my name, he shall teach you all things, . . . he will guide you into all truth."

Is it possible that the great Teacher, who said, "Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven," intended to send to his followers that which, after nineteen hundred years of seeking and striving to understand, still remains a "mystery" to many? Surely Christ Jesus did not intend to send a guide that would be like a will-o'-the-wisp to those who needed practical instruction and leadership as much as did the disciples! The Master once said, "I thank thee, O Father, Lord of heaven and earth, because thou hast hid these things from the wise and prudent, and hast revealed them unto babes," and does not this statement prove that purity and singleness of thought and purpose, typified by a babe, can through revelation apprehend all truth? Why, then, are we not more willing to become as little children, instead of following blindly the "wise and prudent," while their mysteries yet remain mysteries to us?

R. L. Stevenson in "Lay Morals" truly says: "The longest argument is but a finger pointed; once we get our own finger rightly parallel, we see what the man meant, whether it be a new star or an old street-lamp. And briefly, if a saying (or fact) is hard to understand, it is because we are thinking of something else." Some may doubt this statement, until they find that it stands the test of practical truth, and as students of Christian Science we are proving its truth every day. What is the Bible but a finger pointing to the one great light? and what is our text-book, but a "Key to the Scriptures," a finger pointing to truths in this Book of books that are nearer to us than the street-lamps and brighter than the stars?

There is no new truth or light, in the absolute sense; we have simply failed to see what is, because we have been thinking of something else; hence the need of its being pointed out. Our past education and the general trend of thought are so much a part of us that for us to take in a new idea (on an old subject) is difficult, not because we do not want to know more of the truth, but because we do not want to give up thinking that which we have always thought. Following the teachings of the Bible on the subject of the Holy Ghost, and trying to give up thinking of something, or anything else, with the aid of Science and Health one can get one's "finger rightly parallel," and, lo, the "mystery" forever vanishes. One sees that nothing can teach us all things and guide us into "all truth" but divine Science, the unfoldment in consciousness of Truth and Love, a fact which receives supreme emphasis in the 8th chapter of Proverbs.

Let each one follow the "finger" rightly pointed, and see how it leads to making simple all the statements in the Bible where the Holy Ghost is referred to. What but true knowledge can complete the Godhead,—"God the Father-Mother; Christ the spiritual idea of sonship; divine Science or the Holy Comforter" (Science and Health, p. 331). "And these three are one," the apostle tells us. Speaking of this "triply divine Principle, Love," Mrs. Eddy continues, "These three express in divine Science the threefold, essential nature of the infinite. They also indicate the divine Principle of scientific being, the intelligent relation of God to man and the universe" (*Ibid.*). Just before Jesus ascended, he commanded his followers to tarry in Jerusalem, until they were "endued with power from on high," and he added, "For John truly baptized with water; but ye shall be baptized with the Holy Ghost not many days hence." This baptism, which was to be received after Jesus himself had ascended, was no formal rite or ceremony, but a transformation of the mind, so that to as many as received (understood) him, to them was given power to become the sons of God.

This gift of the Holy Ghost, which gave the disciples power to prove their faith by their works, and to speak with new tongues, was a divine knowledge, an apprehension of the truths of being, and this knowledge was free for all, as Peter found, when through revelation he gained a higher understanding of God, and perceived that He is "no respecter of persons." To "blaspheme against the Holy Ghost,"—what is it but to refuse to know and accept that which is true; and this lack of wisdom is its own punishment, keeping man from having his "part in the book of life." To the sick and sorrowing the Holy Ghost, divine Science, comes as the Comforter, saying, Awake! It is true that God can wipe away all your tears, and that there shall be no more death, nor sorrow, nor crying, nor pain, for the ignorance and false beliefs which were responsible for these discords have passed away. Mrs. Eddy tells us that "this spiritual consciousness is therefore a present possibility" (*Ibid.*, p. 574).

Throughout the New Testament it is to be seen that divine Science is the Holy Ghost, and it makes our at-one-ment with God possible because it alone reveals to us the

Digitized by Google

whole truth about God and man. Surely the prayer of our Lord has been answered, and God has sent us another Comforter, even the Spirit of truth, which is to abide with us now and forever.

"FRET NOT THYSELF."

MARY E. BARBOUR.

As naturally as the flower turns to the light, so do Christian Scientists turn to the Bible, and the spiritual interpretation thereof, as found in "Science and Health with Key to the Scriptures" by Mrs. Eddy, not only for help and comfort in every trial, but for daily light and strength. Recently a need was met in studying the 37th Psalm. As if to emphasize the importance of this Scriptural injunction, the psalmist repeats several times, "Fret not thyself," and further declares, according to the Revised Version, that "it tendeth only to evil-doing."

How clear this is in the light of Christian Science, for are we not making evil real when we fret over it? We are taught in Christian Science that evil is to us as real as we make it, and no more so. The psalmist does not leave us without refuge, but gives us good counsel. We are told to "trust in the Lord, and do good;" we are to "dwell in the land," and verily we are to be fed. We read further, "Delight thyself also in the Lord," and "Commit thy way unto the Lord;" finally, we read, "Rest in the Lord, and wait patiently for him." When we have reached the point of patient waiting, surely it will be easy to obey the command, "Cease from anger, and forsake wrath."

And what is the reward? What are the promises, all of which are conditioned? The very first promise, "He shall give thee the desires of thine heart," would seem to contain all those that follow. We read that "he shall bring it to pass . . . he shall bring forth thy righteousness as the light, and thy judgment as the noonday." Would not all of these bring "the abundance of peace" promised? Yet there are more: "They shall not be ashamed in the evil time; and in the days of famine they shall be satisfied;" also, "The Lord will not leave him . . . nor condemn him when he is judged."

Five times in the same Psalm the promise is given, "They shall inherit the land." And what is this land? Is it not "the land of Christian Science, where fetters fall and the rights of man are fully known and acknowledged" (Science and Health, p. 226)? So when we read, "Fret not thyself because of evil-doers," we may remember the words of our text-book, "Clad in the panoply of Love, human hatred cannot reach you" (*Ibid.*, p. 571). Mrs. Eddy also writes (Miscellaneous Writings, p. 331), "When downtrodden like the grass, did it make them [mortals] humble, loving, obedient, full of good odor, and cause them to wait patiently on God for man's rich heritage,—'dominion over all the earth'?"

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be Nov. 4, 1910. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 18, 1910.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to June 3, 1910, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

SELECTED ARTICLES.

[Frederick Dixon in *Bedford and County* (Eng.) *Record*.]

The theory of mental suggestion, whether worked out in mesmerism, hypnotism, or any of its other phases, is as old as the human mind. It is based on the belief that it is possible for one person to influence another person by some process of mental manipulation. The Old Testament is full of the records of these workers, who were known sometimes as magicians or necromancers, sometimes as diviners, and between whom and the priests and prophets of Israel there was waged a perpetual and relentless war. Now, as no one has ever dared to pretend that the human mind is not largely actuated by evil, it follows that the claim of this mind to do good is inseparable from its claim to do evil. The author of the Jehovistic document of the book of Genesis made use of his allegory to express this very fact, when he declared that those who ate the fruit of the tree of the knowledge of good and evil would surely die.

Centuries later, Jesus made use of a somewhat similar image. "A good tree," he said, "cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit." The human mind, impregnated with its animal passions, is certainly a tree capable of bringing forth evil fruit. In those words, therefore, Jesus once and for all set aside the recognition of the human mind as a possible factor in Christian healing. "But," he went on to say, "if I with the finger of God cast out devils, no doubt the kingdom of God is come upon you." The kingdom of God, he made it clear in these words, never could come to any man through suggestion from a mind believing in good and evil. The kingdom of God comes to a man precisely in the proportion in which he attains the Mind which was in Christ Jesus, and exactly as he gains this Mind, he gains necessarily the knowledge of the truth which Jesus said would make the world free.

A great English scholar and churchman has dwelt upon the distinction always drawn, in the Greek text of the Fourth Gospel, between the absolute and the relative. The writer, in the words just quoted, was referring to absolute Truth, the knowledge of which is the most scientific thing in the world, and which is referred to in the epistles in a phrase translated knowledge of God, but which should, of course, be translated exact, or scientific knowledge of God, and so of Truth. "Jesus of Nazareth," writes Mrs. Eddy, on page 313 of Science and Health, "was the most scientific man that ever trod the globe. He plunged beneath the material surface of things, and found the spiritual cause." Because, as the writer of the Fourth Gospel points out, Truth is absolute, he knew it was necessarily scientific, and being scientific was, equally necessarily, demonstrable. When, therefore, he sent out his disciples into the world, it was not merely to preach the gospel, but to heal the sick, for he declared those who believed in him would be able to do the works which he had done. The question, therefore, necessarily arises, what did this faith amount to, or in plain English, what is to be understood from the Bible use of the words belief and faith?

The English verbs to trust and to believe are quite incapable, as a great modern critic has pointed out, of conveying the moral significance of the Hebrew verb they are used to translate. Thus, the passage in Isaiah translated, in the Authorized Version, "If ye will not believe, surely ye shall not be established," is literally, "If ye be not firm, ye shall not be made firm." Now this is precisely what Mrs. Eddy has pointed out, on page 23 of Science and Health, in saying, "The Hebrew verb *to believe* means also *to be firm* or *to be constant*." That this firmness or constancy implied to the Jews something much more than blind faith, is certain.

Thus Philo, a Jew of the first century and a contemporary of Jesus, works out the Jewish view of faith in just

Digitized by Google

this way. Abraham, says Philo, "saw the unfixedness and unsettledness of material being when he recognized the unalterable stability that attends true Being, to which stability he is said to have completely trusted;" and he goes on to add that there is "nothing so difficult or so righteous as to anchor oneself firmly and unchangeably upon true Being alone," which in its essence, of course, is the grasp of spiritual causation. More than this, he continues that "the only good thing that is void of falsehood and stability is faith toward God, or a faith toward true Being." and this faith he calls knowledge. "Wherefore," he continues, Abraham "is said to have been the first to have trusted God, since he was the first to have an unaltering and stable conception that there exists one cause, the highest, providing for the world and all things therein."

Mrs. Eddy defines the word Abraham, on page 579 of Science and Health, as "fidelity; faith in the divine Life and in the eternal Principle of being. This patriarch illustrated the purpose of Love to create trust in good, and showed the life-preserving power of spiritual understanding." Faith then, obviously, as understood by the Jews of the first century, was the perception of spiritual causation, or, as the writer of the epistle to the Hebrews put it, "the substance of things hoped for, the evidence of things not seen."

Causation being obviously spiritual, since God made all that was made, and since Jesus told the woman of Samaria that God is Spirit, and faith as understood by the people in whose language the Old Testament was written and the teaching of Jesus delivered, being the perception of this spiritual causation, it becomes obvious why the writers of the epistles spoke of exact knowledge of God, for precisely as the perception of spiritual causation deepens into understanding, there comes that exact knowledge of God which is in itself the scientific knowledge of Truth.

The miracles of Jesus were nothing but his demonstration of this knowledge, the divinely natural effects of his understanding of divine law and spiritual causation. He saw that the one eternal First Cause who, in the words of Genesis, created the heavens and the earth, and without whom, in the words of John, was not anything made that was made, could be nothing but the divine Principle which men have agreed to name God. Unless, therefore, a fig-tree can bear olive berries and a vine bear figs, it is manifest that Spirit cannot produce matter, that good cannot produce evil, that Life cannot produce death. It was this realization of spiritual causation and of all that followed from it of which Jesus spoke when he told the woman at the well that had she asked him, he would have given her "a well of water springing up into everlasting life." It is the perception of this which is the basis of healing in Christian Science, and it disposes entirely of the claim of evil to be regarded as power.

[John L. Rendall in *Ottumwa* (Ia.) *Courier.*]

The Christian Science following consists of people of at least average intelligence and ability, people of good standing in each community, who are recognized as sane and sound on all subjects, people who are good citizens and reliable religionists, people of acknowledged Christian character, kindly, charitable, honest and upright in their dealings with their fellow-men. These people one and all agree that Christian Science has brought into their lives a larger measure of health, happiness, and success, a clearer and more adequate understanding of God and their relation to Him, and of their duty to God and their fellow-men, than they had possessed before knowing something of its teachings. It would indeed be a difficult matter to convince any of these people that they have been "humbugged." Now, it stands as a logical sequence that if those who adhere to the practice and follow the teachings of a religion are united in their evidence as to its nature and character, as to its effect upon their individual lives and characters, that all statements to the contrary from those who have not experienced these things and who do not believe in said teachings and are therefore not competent witnesses, are of little effect and prove nothing in the face of facts.

This critic stated that "Christian Science disregards the teaching of hygiene, sanitary laws, etc." With reference to hygienic theories, I will state that these are too varied, too contrary in their nature and teachings to make the criticism of much effect. What might be called "proper" hygienic ideas are susceptible of too many contradictions and too much diversity of opinion and application to be intelligently followed by any one, and if one should attempt to follow all, the result would certainly be disastrous. Now, with regard to "sanitation," cleanliness, etc., the facts of the situation disprove our critic's inferences and implications. Christian Scientists are among the most cleanly people. They are not disregardful or unmindful of proper sanitary precautions, or of the health laws of their community.

Christian Science is not "pantheism." It makes a clear and positive distinction between the creator and the created, but at the same time teaches that everything true and real in God's creation must of necessity reflect or express infinite good, absolute perfection. Nothing else is real.

That Christian Science heals the sick and reforms the sinner is no longer an open question. It is a demonstrated fact, attested to by thousands of competent witnesses, who present irrefutable testimony in support of the fact that Christian Science heals and saves—in compliance with and in conformity to the exact teachings of Christ Jesus in this respect.

The advice given by our critic to read certain books opposed to Christian Science is akin to advice which might be given to Christians to study the works of a number of so-called infidels in order to get an adequate understanding of Christianity. It stands as a matter of fact that in order to understand a science it is necessary to study that which contains the fundamentals of the science and that which properly elucidates its teachings.

To argue for the reality of sin, disease, and death is not to aid in the overcoming of these things. The Christian Science idea is much better and will ultimately result in the establishment within individual consciousness of the "kingdom of God," in which it must be conceded none of these things have any place.

Now, as to the "price of the Christian Science text-book," this concerns those who purchase it, and they are of the universal opinion that it would be cheap at any price. None of them would be willing to part with their copy for an amount greatly in excess of what they paid for it, unless they could procure another one. Science and Health is not nearly so expensive as many "text-books" on medicine and other subjects. If those who purchase Science and Health appreciate its value and are satisfied with its price, surely there is no reason for others to complain.

Christian Scientists are convinced that in Christian Science they have found a reasonable and practical religious teaching which has made them better and happier in every respect; therefore, they are willing to continue in what this critic erroneously terms their "delusion."

[W. C. Williams in *Baltimore* (Md.) *American*]

To be a Christian Scientist is not merely a matter of belief, it is necessary to know and to prove what one knows, but when once proven nothing can take away the knowledge attained, nor can one be false to it without being false to himself. This knowledge is manifested by living the truth, healing the sick, and overcoming sin. It is only through his understanding of the Bible that one proves his knowledge of Christian Science.

The key-note of Christian Science is the acknowledgment that the real man is the son of God, that as God is Spirit, the true man must be spiritual, and that the image and likeness of God must always have been perfect and always will

Digitized by Google

be. It is the false, evil, and material concept of man, called in the Bible the Adam-man, that never was perfect and never will be, and this concept must die before the true concept is realized. "As in Adam all die, even so in Christ shall all be made alive." Jesus died to prove to the world the grand verity that life is eternal; but he lived after the so-called death of his body, and he emphasized this in telling his disciples that he would raise himself again, and also that all who believed on him should never see death.

God's plan is not concealed from the spiritually-minded, but to the carnal mind, as Paul named it, the Bible is still a sealed book. Contrary to the statement of our friend, Christian Science teaches that the sinner "shall surely die;" it is only the spiritual man, the son of God, who will have everlasting life.

[Royal D. Stearns in *Bloomfield* (Neb.) *Journal*.]

Our critic classes Christian Science with faith-cure, mental science, etc., and asserts that each relies upon the same principle of suggestion. Suggestion is not depended upon, nor is it used in any way, in Christian Science. The basic idea in Christian Science healing is an absolute reliance upon the allness of God, and the proper apprehension of man's relation to Him "who healeth all thy diseases." "The effectual fervent prayer of the righteous man availeth much" in Christian Science practice. God alone is recognized as the healing and redemptive power by Christian Scientists.

Jesus himself said, "I can of mine own self do nothing." "The Father that dwelleth in me, he doeth the works." Again Jesus said, "I knew that thou hearest me always: but because of the people which stand by I said it, that they may believe that thou hast sent me." Certainly Jesus, in raising the dead and in healing those not in his presence, as was done in many instances, did not in any way make use of suggestion. Christian Science is deduced from the Bible and the teachings and works of Jesus. It claims to be a reinstatement of primitive Christianity, and submits as one proof of such claim its healing works, which are very similar to those performed by the early Christians.

Christian Science wholly discredits the claim that the human mind, or will, is a real healing agent; all real healing comes from God, the divine Mind, the source of all power and all goodness. "The carnal mind is enmity against God: for it is not subject to the law of God, neither indeed can be."

[Willis D. McKinstry in *Neodesha* (Kan.) *Sun*.]

Christian Science does not teach that sin and sickness are unreal to the erring human sense of existence, but it does give a demonstrable understanding that these are not of God; and if they are not of God, then in truth they must be unreal, because He is the creator of all being. Sin and sickness are conditions of the human mind which must be recognized as error, and overcome with the spiritual fact of being. Paul said, "For to be carnally minded is death; but to be spiritually minded is life and peace." God is Spirit, divine Mind, and man is his image and likeness; the universe, also, must be like Him, for Spirit begets spiritual objects and things; thus sin and sickness have no place in infinite good.

Our critic speaks of Christ's message as being "the only true one." We heartily agree with him on this point, and wonder why he does not accept this message in its fulness, as a "partial acceptance is insufficient" for a full salvation. The Galilean Prophet declared: "I am the way, the truth, and the life: no man cometh unto the Father, but by me." "He that entereth not by the door into the sheepfold, but climbeth up some other way, the same is a thief and a robber." Jesus recognized sickness and disease as effects of sin when he said, "For whether is easier, to say, Thy sins be forgiven thee; or to say, Arise and walk?"

Jesus' ministry was one of healing. The Gospels record many instances of his healing the sick, the dumb, the blind, the lame; of his casting out devils and raising the dead. Then he further said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." Then came that wonderful command to preach the gospel and heal the sick. Is our critic fulfilling the latter part of this command? Is it not just as imperative as the first? "Even so faith, if it hath not works, is dead."

While at this stage of their growth in the apprehension of Truth, the spiritual understanding of God, man, and the universe, Christian Scientists do not claim to be able to raise the dead; yet there are many who have, and are able to show forth their work by healing all manner of diseases and reforming the sinner. "Ye shall know them by their fruits." While Christian Scientists are grateful for their physical healing, yet their spiritual awakening is far more significant to them.

The teaching of Christian Science does not cause "people to let go the Saviour," nor discard the "Bible of their fathers." The first and second religious tenets of our faith, as found on page 497 of Science and Health, read: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life." "We acknowledge and adore one supreme and infinite God. We acknowledge His Son, one Christ; the Holy Ghost or divine Comforter; and man in God's image and likeness." There is no people more faithful to the study of the Bible than Christian Scientists; it is their daily companion; and these teachings have brought forth many a Bible from its hiding-place.

There are many in the ranks of Christian Science who had grown skeptical—in fact, doubted that there is a God—just because they could not understand the teachings of this most precious Book of books, but through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, the spiritual meaning of the word of God, as recorded in the Holy Bible, was illumined. This spiritual unfolding enabled them to demonstrate its teaching: therefore, to such as these, Christian Science has not only saved them from skepticism, but it has saved the Bible for them. In the ranks of Christian Science are to be found many who were at one time engaged in the ministry, also those who practised medicine. These are now happy in doing the works the Master did.

[Written for the *Sentinel*.]

LIFE'S ARMAGEDDON.

RALPH W. CROSMAN.

WHAT mean the strange alarms that 'round earth sweep,
The secret fears of some impending doom,
That rise now here, now there, and will not sleep,
But spread abroad their sick'ning, subtle gloom?
And what, in truth, portends the breaking light,
The swift, sweet light that floods the whole world o'er,
That fills men's hearts with peace and joy and might,
And to some presence bright throws wide the door?

'Tis this: life's Armageddon strife has come:
In city's mart, in desert, plain, and hill,
In hearts of all is heard war's muffled drum,
The silent crash that sends o'er earth its thrill.

Where'er Truth leads her white-clad army out,
Where'er Love's swift and piercing darts are flung,
There error's force falls deep in utter rout,
There blighting hate's long-'waited knell is rung.

The world's wide war is on; vast armies clash;
But no man dies: no sound but error's fall
Answers Love's clarion-call with might atlash—
For e'en in battle's shock God holds us all.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

NO BASIS FOR FEAR.

A PHYSICIAN in a recent letter to a New York newspaper calls attention to the varied and groundless fears which he alleges govern mortals from their earliest to their latest experience, and, speaking doubtless from experience of the effect which indulgence of these fears procures in the way of physical and mental disorders, he makes an earnest plea for their overcoming. He did not, however, point the way to this overcoming, and whatever good his article will do, though written with the best of intentions, will probably be limited to awakening the thought of his readers to the abnormality of the conditions which he described.

Merely calling on men and women to cease being afraid is not sufficient; it is not enough even to point out to them that their fears are foolish and groundless, and dilate on the baneful effects that follow in their train; they must be thoroughly assured that there is no cause for fear. To do this, it is necessary to go to the bottom of the question and indicate a remedy, and this cannot be effectually accomplished so long as the attempt is made on the basis that evil is real. Men do not fear that good will come into their experience; they hope and pray that it will. When they come to understand that God, good, is infinite Love and the only power, and therefore that evil has neither existence nor potency, they will cease to fear it, and no longer be its victims.

The apostle Paul had learned this lesson when he wrote to the church at Rome: "For ye have not received the spirit of bondage again to fear; but ye have received the Spirit of adoption, whereby we cry, Abba, Father." As Christian Scientists we have come out from the bondage of the fear of evil of any sort, for we know in whom we have put our trust, and that He is able to deliver us; in other words, we have entered into "the glorious liberty of the children of God." Likewise, we rest assured that, if faithful to the teachings of our Leader, "we can, and ultimately shall, so rise as to avail ourselves in every direction of the supremacy of Truth over error, Life over death, and good over evil, and this growth will go on until we arrive at the fulness of God's idea, and no more fear that we shall be sick and die" (Science and Health, p. 406).

Critics of Christian Science who find a stumbling-block in the teaching that evil is unreal, fail to apprehend that they are dishonoring God by contending for the reality of evil; yet this is the inherent logic of their position. If it is admitted that God is the creator of evil, it follows that He is not even as good as a just and respectable man or woman, because neither of these would wittingly create evil or do evil. On the other hand, if God is not the creator of evil, and evil exists, the plain inference is that God is not omnipotent; and not only this, but His power is secondary to that of evil and its creator. These are the horns of the dilemma, and the believer in the reality of evil must either take his choice of these or give up his illogical belief for a more tenable one.

Since that memorable time when Mrs. Eddy, with the courage born of conviction, not only declared that evil is not real, but gave a reason for the faith that is in her, namely, that there is no power or creator apart from God, and it is impossible that He should create anything so unlike Himself, fear has greatly diminished; and it will still further diminish as mankind attains to a clearer and fuller apprehension of the truth of this statement, which can be taken as a working basis from which to demonstrate the allness of God, good, and the consequent nothingness of all that is unlike Him.

ARCHIBALD MCLELLAN.

THE TRUE SETTING.

A FAVORED visitor in a beautiful home was moved with a sense of gratitude that his noble friends could have such an attractive place in which to dwell and dispense their gracious hospitality, and as he went his way he mused much upon how fitting it would be if every fine, high, unselfish thought had the native and legitimate setting for all that is true and good. The sunset's glory and the jeweled night; the lavish splendors of tropical forest and crystal-studded cave; the refinement of form and texture, of color and fragrance, with which nature ever surrounds herself,—all these give hint of the necessary and eternal fact that Truth's every idea and expression is framed in beauty, and that to man, the highest divine idea, belongs the fairest and holiest habitation.

Describing the beauty and strength with which God would surround even the prodigals of human sense, the prophet has said, "O thou afflicted, tossed with tempest, and not comforted, behold, I will lay thy stones with fair colors, and lay thy foundations with sapphires. And I will make thy windows of agates, and thy gates of carbuncles, and all thy borders of pleasant stones." Surely He who dispenses the good and the beautiful with the plenitude of light, wills that aspiring men be clothed with the abundance of His perfectness and His joy, and the fact that in all times many of the noblest and worthiest among men have been subject to the limitations of poverty no more argues for the divine arrangement of these circumstances than does humanity's subjection to sickness and suffering argue for their heaven-designed place and provision. All thoughtful people are practically at-one today in their recognition that it is the sin and selfishness of men, and not the providences of God, which are responsible for the human destitution and wretchedness that dishonor Christian civilization.

The imperative condition on which all may merit ideal human possessions is clearly defined in the Scripture statement, "Seek ye first the kingdom of God, and his righteousness: and all these things shall be added unto you," and it is apparent that its fulfilment would be in keeping with the highest good. If the chief and abiding interest of every Christian is centered upon the dwelling of the nobler man, the spiritual enrichment and adornment of thought, the resulting "hundredfold now in this time," while apprehended and expressed in spiritual terms, will answer to and supply his earthly need.

The all too common method of rating things by what they will bring us of sense satisfaction, finds its fruitage in the pitiful fact of unnumbered dwellings that abound with earthly plenty, but that know no contentment, no heavenly peace and joy, and this for the reason that there has been no seeking "first" for spiritual things. Desire has been toward gold-getting rather than truth-getting. If our thought were given primarily to the purification of sense, the attainment of an exalted consciousness, that "house not made with hands," whose foundations are faith and understanding, whose walls and turrets are built up of knowledge and temperance and patience and godliness, whose embellishments are the blossomings of brotherly kindness and charity, and whose courts are open ever and only to the sweet and pure radiations of truth and goodness and beauty, then how worthy would we be of that ideal setting which is surely embraced in Love's unstinted purpose.

Christian Science lifts thought to the naturalness of the abundance of good, but it teaches that the value of things and of experiences is rightly estimated only in terms of

Digitized by Google

their advantage to the spiritual life, the enduring good which they confer, and that material abundance becomes a blessing only in the measure of our devotion to that ideal life to which ideal surroundings normally pertain.

JOHN B. WILLIS.

CONSECRATION.

CHRISTIAN SCIENCE gives a wonderful interest to every part of the Scriptures by unfolding the spiritual sense and significance of all things therein, and by showing the relation of type and symbol to the tasks of each day. The account of the consecration of Aaron and his sons is deeply instructive, especially when we remember that in the realm of Truth the "only priest is the spiritualized man" (Science and Health, p. 141). The Bible says that the faithful shall be "priests of God and of Christ, and shall reign with him," which surely means that each one must be consecrated to the service of God and humanity; and this awakens a sense of the sacredness of every duty that makes "our common daily life divine," to use the poet's words, and gives a new meaning to the wise man's saying, "Whatsoever thy hand findeth to do, do it with thy might."

We read that when the priests were consecrated the sacred oil was sprinkled upon them, and that their ears, fingers, and feet were touched with blood. The definition of oil which is found on page 592 of Science and Health throws great light upon this subject. It reads thus: "Consecration; charity; gentleness; prayer; heavenly inspiration." Then we read (*Ibid.*, p. 25) that "the spiritual essence of blood is sacrifice." To the Christian Scientist the sacred service of each day should begin with the first conscious thought, for if that is turned toward the holy heights of Truth and Love there is little danger that the spiritual demand with respect to what we hear will be forgotten, or that error will be allowed to enter through the ear which has felt the touch of "heavenly inspiration." The hands may engage in common toil, but if they too are consecrated no task can seem hard, nor can these hands miss for a moment the guidance of divine intelligence; while the feet may go on an unending pilgrimage from shrine to shrine of duty, ever treading unwearied the path of Life.

In our lives as Christian Scientists the consecration of the tongue is perhaps the most needed of all, that only words of charity, gentleness, and truth may go forth therefrom. Dare we measure our words by this high standard? Yet in Truth and Truth's service there is no other! We read that Samuel began the priestly service when he was but a child, and that, like Christ Jesus, he grew, and was in favor with God, and also with men; and so shall we be, if we remember our consecration to Truth and Love in all that we say and do. In our service to humanity we should always hold most sacred that which is committed to us in confidence; the ear should take it in with the purpose to preserve it inviolate under all circumstances, and with this good purpose the tongue should keep covenant, for the one who serves faithfully at the shrine of duty has this promise which comes down through the long centuries, "I will raise me up a faithful priest, that shall do according to that which is in mine heart and in my mind: and I will build him a sure house; and he shall walk before mine anointed for ever." This was spoken to Eli with a warning that the unfaithful could not serve God or humanity, but that those who have clean hands and pure hearts shall know the divine purpose and fulfil it, God being their strength.

Never before in human history have spiritual realities been brought so near to men as in the every-day ministry of Christian Science, which reminds us of the prophecy that "holiness unto the Lord" is to be written upon everything, from the least to the greatest; and this surely means that all service, as well as the one who serves, must be consecrated "unto the King eternal, immortal, invisible, the only wise God."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

MEDFORD, ORE.

A chapel is soon to be built in this city by the members of the local Christian Science church. Its cost will be about thirty-five hundred dollars and it will be located on the lot owned by the church on North Oakdale avenue. The building committee of the Scientists held a meeting last evening [July 27] to consider plans, and satisfactory progress was reported.

Rapid growth has been experienced here. The meetings were held first in the commercial club rooms, which, owing to the large attendance, grew too small. The present meeting-place is in Smith's Hall on North Grape street, which is well filled at the stated meetings.—*Medford Sun.*

CHADRON, NEB.

Sept. 11 has been set as the time for opening the new church edifice of First Church of Christ, Scientist, Chadron, Neb. This is a forward step in our progress here, as many friends are anxiously awaiting the opening of the new church as a time for beginning a more active work in Science. According to the custom of Christian Science churches, our building will not be dedicated at this time, there being yet a small incumbrance on it. Considering the limited number of our members, we feel that the erection of a church here, nearly two hundred miles from any other Science church, is a work that promises much in this pioneer field.—*Correspondence.*

DALLAS, TEX.

With simple form the corner-stone was laid yesterday afternoon [Aug. 27] for the new Christian Science church. The building, already well under way, will be erected on the corner of Cadiz and Browder streets. It is to be of brick and stone and will cost seventy-five thousand dollars. The basement walls are complete, part of the wall of the superstructure is well advanced, and as rapidly as possible the structural work is being furthered. It is expected the edifice will be ready for occupancy about Jan. 1, 1911.

There was placed in the corner-stone, by the president, a tin box containing copies of Mrs. Eddy's printed works, also of *The Christian Science Journal, Christian Science Sentinel, The Christian Science Monitor, Der Herold der Christian Science,* and *Christian Science Quarterly,* of the *Dallas News* and *Times-Herald* of Aug. 27, 1910, with list of church-members and officers.—*Dallas News.*

MONTGOMERY, ALA.

At an early hour Friday morning [Aug. 26] the corner-stone of First Church of Christ, Scientist, was laid, six members of the church participating in the ceremony. The service was simple and impressive. After the stone was laid and the copper box with its contents was cemented in the receptacle in the stone, the members present placed their hands on the stone and bowed in silent prayer, followed by the audible repetition of the Lord's Prayer in unison, and as a conclusion of the ceremony the "scientific statement of being" (Science and Health, p. 468). In the box was placed the Bible and the complete writings of Mrs. Eddy, together with the current periodicals of the denomination, a list of church-members, charter members, officers of the church, board of trustees, and a list of Sunday School pupils.

First Church of Christ, Scientist, was organized ten years ago last March with five members, and from that time, while its growth has not been rapid, it has grown steadily. The new edifice, which is to cost about seven thousand dollars, is situated at 16 High street, and is to be a pretty brick structure.—*Montgomery Journal.*

THE LECTURES.

BROOKLYN, N. Y.

Eight hundred people attended the lecture on Christian Science, given under the auspices of Second Church of Christ, Scientist, by Frank H. Leonard, at the Fort Lowry Hotel, Bath Beach, Brooklyn, on Sunday afternoon, June 26. Mr. Leonard was introduced by Harvey M. Ferris, First Reader of First Church of Christ, Scientist, Brooklyn, who said:—

For ages the human heart has been hungering for a religion that would prove a "very present help in trouble," a religion that could be demonstrated in all the minutiæ of daily life, and in response to the prayer a message of love has been quietly and unostentatiously entering the consciousness of mankind for over forty years, healing every form of disease known to *materia medica*, awakening the sinner to the great possibilities of life in good, and reverberating its healing tones throughout the whole world. This gospel of love has been preached, practised, and demonstrated uninterruptedly throughout all these years, until today Christian Science stands the greatest remedial agent the world has known for centuries, and gratitude unbounded goes out hourly to its Discoverer and Founder, Mrs. Eddy, for this wondrous revelation of Truth.

I am not here to tell what Christian Science is or is not, but may venture to state that misconceived ideas about this religion, and beliefs in a power apart from God,—carnal beliefs, Biblically speaking,—are robbing us of our birthright and holding us in the bondage of sin, disease, and all bodily and mental suffering.—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Bozeman, Mont.—Bliss Knapp, Sept. 25.
Bradford, Yorks, Eng.—Bicknell Young, Mechanics Hall, 7 p.m., Oct. 15.
Darlington, Durham, Eng.—Bicknell Young, Temperance Hall, Gladstone street, Oct. 18.
Estherville, Ia.—Hon. Clarence A. Buskirk, Church Edifice, Seventh and Des Moines streets, 3 p.m., Sept. 18.
Frankfurt a M., Germany.—Bicknell Young, Masonic Hall Card, Oct. 7.
Gloversville, N. Y.—Willis F. Gross, Darling Theater, 3 p.m., Sept. 25.
Hastings, Neb.—Prof. Hermann S. Hering, Herr Opera House, 8:30 p.m., Sept. 22.
Indianapolis, Ind. (First Church).—Francis J. Fluno, M.D., Murat Theater, 3 p.m., Oct. 23.
Kirksville, Mo.—Willis F. Gross, Grand Opera House, Sept. 30.
Lawrence, Kan.—Francis J. Fluno, M.D., Bowersock Opera House, Sept. 30.
Mankato, Minn.—Miss Mary Brodkins, Mankato Opera House, 3:30 p.m., Sept. 25.
Milford, Utah.—Bliss Knapp, The Pat Theater, Sept. 27.
Missoula, Mont.—Bliss Knapp, Harnois Theater, Sept. 23.
Moscow, Idaho.—Frank H. Leonard, Christian Science Hall, Sept. 17.
Ottumwa, Iowa.—Francis J. Fluno, M.D., Grand Opera House, Sept. 19.
Pittsburg, Pa. (Second Church).—Willis F. Gross, Carnegie Hall, Ohio and Federal sts., North Side, Sept. 15; Church Edifice, North and Grant aves., North Side, Sept. 16.
Salt Lake City, Utah (First Church).—Prof. Hermann S. Hering, Salt Lake Theater, Sept. 25.
South Bend, Ind.—Mrs. Sue Harper Mims, Sept. 23.
Toronto, Ont.—Prof. Hermann S. Hering, Alexandra Theater, 3 p.m., Sept. 18.
Vancouver, B. C. (First and Second Churches).—Frank H. Leonard, Opera House, 3:30 p.m., Sept. 25.

TESTIMONIES OF HEALING.

In 1900 I was driven from my home and occupation by the accumulated beliefs in poor health during my own and two or three previous lifetimes. By the end of 1905 I was not only alone in a strange city and a strange state, but my efforts to find and retain good health had left me barely able to do the easiest work, and hopelessly discouraged. I had lately been obliged to stop eating ordinary food, and had just failed in the last of several attempts to get well on "health foods." At about this time I began a second experience with Christian Science. Fortunately I was led to see that material objects might really be less absolute than they seem to be. I was told that Christian Science would enable me both to eat and work,—that it would make me well. That was my one great and imperative necessity. As I had tried practically every other known means without lasting success, I could do no less than to try Christian Science; which I proceeded to do, although I was timid and more than half ashamed. When I was asked to go to church, that was quite a poser, for church-going had been neglected for a long time; but then Christian Science promised results that simply had to be secured; and besides, as soon as I could see it at all, I perceived that it was associated with some beautiful ideals, so I asked what I should do to receive the promised benefits to the fullest possible extent.

I am very thankful for those students who were wise enough and kind enough to lead me gently through those trying times. I shall never forget the first evening I went to my room with a borrowed copy of Science and Health, ready to read. It was the last day of the old year. I had been having serious trouble with my eyes for several months and had been able to read only a few minutes at a time, but I read that book almost continuously from seven o'clock until about midnight. As several great whistles sounded the passing of the old year and the coming of the new, I felt absolutely certain that the old troubles were going out of my experience, and that something good and true was coming in. I had never felt so glad and thankful in my life. That night I bought it. I would have bought a copy of Science and Health the next morning if one had been for sale on New Year's day. The following day I did buy one, and, after reading its pages "as for hid treasure," Having been advised to employ a practitioner, I did so for a couple of weeks, and the following are some of the benefits received.

The great gladness and thankfulness which came with the first glimpse of the glorious view that Christian Science opens before us, has already been referred to. As this view unfolded in my experience, such physical ills as severe spinal trouble and chronic hereditary bowel disorder very promptly disappeared. My greatest apparent need has been supplied; viz., I am able to work, and that continuously, no matter whether the work involves physical hardship or mental strain or both. Many other things that formerly were a source of disturbance or trouble have been largely overcome, so that the general conditions of life and thought have come into a state of greater ease and harmony, as well as prosperity, such as we never knew before. I had left off all church observances and had acquired, during many years, a somewhat free use of rough language. When I learned that the power of infinite good, that is, of God, was really available in every-day affairs; that it really helps us, now, to study the Bible as it is explained in "Science and Health with Key to the Scriptures" by Mrs. Eddy, the bad language habit became so distasteful that I had to stop it.

When I found that I was well, I naturally wished to take up my own work again. As time went on, the limitations which kept me from it began to seem almost unbearable, so I bought some late works on the subject, being determined to keep up my reading and, at the earliest possible

Digitized by Google

their advantage to the spiritual life, the enduring good which they confer, and that material abundance becomes a blessing only in the measure of our devotion to that ideal life to which ideal surroundings normally pertain.

JOHN B. WILLIS.

CONSECRATION.

CHRISTIAN SCIENCE gives a wonderful interest to every part of the Scriptures by unfolding the spiritual sense and significance of all things therein, and by showing the relation of type and symbol to the tasks of each day. The account of the consecration of Aaron and his sons is deeply instructive, especially when we remember that in the realm of Truth the "only priest is the spiritualized man" (Science and Health, p. 141). The Bible says that the faithful shall be "priests of God and of Christ, and shall reign with him," which surely means that each one must be consecrated to the service of God and humanity; and this awakens a sense of the sacredness of every duty that makes "our common daily life divine," to use the poet's words, and gives a new meaning to the wise man's saying, "Whatsoever thy hand findeth to do, do it with thy might."

We read that when the priests were consecrated the sacred oil was sprinkled upon them, and that their ears, fingers, and feet were touched with blood. The definition of oil which is found on page 592 of Science and Health throws great light upon this subject. It reads thus: "Consecration; charity; gentleness; prayer; heavenly inspiration." Then we read (*Ibid.*, p. 25) that "the spiritual essence of blood is sacrifice." To the Christian Scientist the sacred service of each day should begin with the first conscious thought, for if that is turned toward the holy heights of Truth and Love there is little danger that the spiritual demand with respect to what we hear will be forgotten, or that error will be allowed to enter through the ear which has felt the touch of "heavenly inspiration." The hands may engage in common toil, but if they too are consecrated no task can seem hard, nor can these hands miss for a moment the guidance of divine intelligence; while the feet may go on an unending pilgrimage from shrine to shrine of duty, ever treading unwearied the path of Life.

In our lives as Christian Scientists the consecration of the tongue is perhaps the most needed of all, that only words of charity, gentleness, and truth may go forth therefrom. Dare we measure our words by this high standard? Yet in Truth and Truth's service there is no other! We read that Samuel began the priestly service when he was but a child, and that, like Christ Jesus, he grew, and was in favor with God, and also with men; and so shall we be, if we remember our consecration to Truth and Love in all that we say and do. In our service to humanity we should always hold most sacred that which is committed to us in confidence; the ear should take it in with the purpose to preserve it inviolate under all circumstances, and with this good purpose the tongue should keep covenant, for the one who serves faithfully at the shrine of duty has this promise which comes down through the long centuries, "I will raise me up a faithful priest, that shall do according to that which is in mine heart and in my mind: and I will build him a sure house; and he shall walk before mine anointed for ever." This was spoken to Eli with a warning that the unfaithful could not serve God or humanity, but that those who have clean hands and pure hearts shall know the divine purpose and fulfil it, God being their strength.

Never before in human history have spiritual realities been brought so near to men as in the every-day ministry of Christian Science, which reminds us of the prophecy that "holiness unto the Lord" is to be written upon everything, from the least to the greatest; and this surely means that all service, as well as the one who serves, must be consecrated "unto the King eternal, immortal, invisible, the only wise God."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

MEDFORD, ORE.

A chapel is soon to be built in this city by the members of the local Christian Science church. Its cost will be about thirty-five hundred dollars and it will be located on the lot owned by the church on North Oakdale avenue. The building committee of the Scientists held a meeting last evening [July 27] to consider plans, and satisfactory progress was reported.

Rapid growth has been experienced here. The meetings were held first in the commercial club rooms, which, owing to the large attendance, grew too small. The present meeting-place is in Smith's Hall on North Grape street, which is well filled at the stated meetings.—*Medford Sun.*

CHADRON, NEB.

Sept. 11 has been set as the time for opening the new church edifice of First Church of Christ, Scientist, Chadron, Neb. This is a forward step in our progress here, as many friends are anxiously awaiting the opening of the new church as a time for beginning a more active work in Science. According to the custom of Christian Science churches, our building will not be dedicated at this time, there being yet a small incumbrance on it. Considering the limited number of our members, we feel that the erection of a church here, nearly two hundred miles from any other Science church, is a work that promises much in this pioneer field.—*Correspondence.*

DALLAS, TEX.

With simple form the corner-stone was laid yesterday afternoon [Aug. 27] for the new Christian Science church. The building, already well under way, will be erected on the corner of Cadiz and Browder streets. It is to be of brick and stone and will cost seventy-five thousand dollars. The basement walls are complete, part of the wall of the superstructure is well advanced, and as rapidly as possible the structural work is being furthered. It is expected the edifice will be ready for occupancy about Jan. 1, 1911.

There was placed in the corner-stone, by the president, a tin box containing copies of Mrs. Eddy's printed works, also of *The Christian Science Journal, Christian Science Sentinel, The Christian Science Monitor, Der Herold der Christian Science*, and *Christian Science Quarterly*, of the *Dallas News* and *Times-Herald* of Aug. 27, 1910, with list of church-members and officers.—*Dallas News.*

MONTGOMERY, ALA.

At an early hour Friday morning [Aug. 26] the corner-stone of First Church of Christ, Scientist, was laid, six members of the church participating in the ceremony. The service was simple and impressive. After the stone was laid and the copper box with its contents was cemented in the receptacle in the stone, the members present placed their hands on the stone and bowed in silent prayer, followed by the audible repetition of the Lord's Prayer in unison, and as a conclusion of the ceremony the "scientific statement of being" (Science and Health, p. 468). In the box was placed the Bible and the complete writings of Mrs. Eddy, together with the current periodicals of the denomination, a list of church-members, charter members, officers of the church, board of trustees, and a list of Sunday School pupils.

First Church of Christ, Scientist, was organized ten years ago last March with five members, and from that time, while its growth has not been rapid, it has grown steadily. The new edifice, which is to cost about seven thousand dollars, is situated at 16 High street, and is to be a pretty brick structure.—*Montgomery Journal.*

THE LECTURES.

BROOKLYN, N. Y.

Eight hundred people attended the lecture on Christian Science, given under the auspices of Second Church of Christ, Scientist, by Frank H. Leonard, at the Fort Lowry Hotel, Bath Beach, Brooklyn, on Sunday afternoon, June 26. Mr. Leonard was introduced by Harvey M. Ferris, First Reader of First Church of Christ, Scientist, Brooklyn, who said:—

For ages the human heart has been hungering for a religion that would prove a "very present help in trouble," a religion that could be demonstrated in all the minutiæ of daily life, and in response to the prayer a message of love has been quietly and unostentatiously entering the consciousness of mankind for over forty years, healing every form of disease known to *materia medica*, awakening the sinner to the great possibilities of life in good, and reverberating its healing tones throughout the whole world. This gospel of love has been preached, practised, and demonstrated uninterruptedly throughout all these years, until today Christian Science stands the greatest remedial agent the world has known for centuries, and gratitude unbounded goes out hourly to its Discoverer and Founder, Mrs. Eddy, for this wondrous revelation of Truth.

I am not here to tell what Christian Science is or is not, but may venture to state that misconceived ideas about this religion, and beliefs in a power apart from God,—carnal beliefs, Biblically speaking,—are robbing us of our birthright and holding us in the bondage of sin, disease, and all bodily and mental suffering.—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Bozeman, Mont.—Bliss Knapp, Sept. 25.
Bradford, Yorks, Eng.—Bicknell Young, Mechanics Hall, 7 p.m., Oct. 15.
Darlington, Durham, Eng.—Bicknell Young, Temperance Hall, Gladstone street, Oct. 18.
Estherville, Ia.—Hon. Clarence A. Buskirk, Church Edifice, Seventh and Des Moines streets, 3 p.m., Sept. 18.
Frankfurt a/M., Germany.—Bicknell Young, Masonic Hall Carl, Oct. 7.
Gloversville, N. Y.—Willis F. Gross, Darling Theater, 3 p.m., Sept. 25.
Hastings, Neb.—Prof. Hermann S. Hering, Kerr Opera House, 8:30 p.m., Sept. 22.
Indianapolis, Ind. (First Church).—Francis J. Fluno, M.D., Murat Theater, 3 p.m., Oct. 23.
Kirksville, Mo.—Willis F. Gross, Court House, Sept. 30.
Lawrence, Kan.—Francis J. Fluno, M.D., Bowersock Opera House, Sept. 30.
Mankato, Minn.—Miss Mary Brookins, Mankato Opera House, 3:30 p.m., Sept. 25.
Milford, Utah.—Bliss Knapp, The Pat Theater, Sept. 27.
Missoula, Mont.—Bliss Knapp, Harnois Theater, Sept. 23.
Moscow, Idaho.—Frank H. Leonard, Christian Science Hall, Sept. 17.
Ottumwa, Iowa.—Francis J. Fluno, M.D., Grand Opera House, Sept. 19.
Pittsburg, Pa. (Second Church).—Willis F. Gross, Carnegie Hall, Ohio and Federal sts., North Side, Sept. 15; Church Edifice, North and Grant aves., North Side, Sept. 16.
Salt Lake City, Utah (First Church).—Prof. Hermann S. Hering, Salt Lake Theater, Sept. 25.
South Bend, Ind.—Mrs. Sue Harper Mims, Sept. 23.
Toronto, Ont.—Prof. Hermann S. Hering, Alexandra Theater, 3 p.m., Sept. 18.
Vancouver, B. C. (First and Second Churches).—Frank H. Leonard, Opera House, 3:30 p.m., Sept. 25.

TESTIMONIES OF HEALING.

In 1900 I was driven from my home and occupation by the accumulated beliefs in poor health during my own and two or three previous lifetimes. By the end of 1905 I was not only alone in a strange city and a strange state, but my efforts to find and retain good health had left me barely able to do the easiest work, and hopelessly discouraged. I had lately been obliged to stop eating ordinary food, and had just failed in the last of several attempts to get well on "health foods." At about this time I began a second experience with Christian Science. Fortunately I was led to see that material objects might really be less absolute than they seem to be. I was told that Christian Science would enable me both to eat and work,—that it would make me well. That was my one great and imperative necessity. As I had tried practically every other known means without lasting success, I could do no less than to try Christian Science; which I proceeded to do, although I was timid and more than half ashamed. When I was asked to go to church, that was quite a poser, for church-going had been neglected for a long time; but then Christian Science promised results that simply had to be secured; and besides, as soon as I could see it at all, I perceived that it was associated with some beautiful ideals, so I asked what I should do to receive the promised benefits to the fullest possible extent.

I am very thankful for those students who were wise enough and kind enough to lead me gently through those trying times. I shall never forget the first evening I went to my room with a borrowed copy of Science and Health, ready to read. It was the last day of the old year. I had been having serious trouble with my eyes for several months and had been able to read only a few minutes at a time, but I read that book almost continuously from seven o'clock until about midnight. As several great whistles sounded the passing of the old year and the coming of the new, I felt absolutely certain that the old troubles were going out of my experience, and that something good and true was coming in. I had never felt so glad and thankful in my life. That settled it. I would have bought a copy of Science and Health the next morning if one had been for sale on New Year day. The following day I did buy one, and began to search its pages "as for hid treasure." Having been advised to employ a practitioner, I did so for a couple of weeks, and the following are some of the benefits received.

The great gladness and thankfulness which came with the first glimpse of the glorious view that Christian Science opens before us, has already been referred to. As this view unfolded in my experience, such physical ills as severe stomach trouble and chronic hereditary bowel disorder very promptly disappeared. My greatest apparent need has been supplied; viz., I am able to work, and that continuously, no matter whether the work involves physical hardship or mental strain or both. Many other things that formerly were a source of disturbance or trouble have been largely overcome, so that the general conditions of life and thought have come into a state of quietness and harmony, as well as prosperity, such as we never knew before. I had left off all church observances and had acquired, during many years, a somewhat free use of rough language. When I learned that the power of infinite good, that is, of God, was really available in every-day affairs; that it really helps us, now, to study the Bible as it is explained in "Science and Health with Key to the Scriptures" by Mrs. Eddy, the bad language habit became so distasteful that I had to stop it.

When I found that I was well, I naturally wished to take up my own work again. As time went on, the limitations which kept me from it began to seem almost unbearable, so I bought some late works on the subject, being determined to keep up my reading and, at the earliest possible

Digitized by Google

moment, to break the bondage that was holding me to other and less desirable working conditions. But in the mean time, a complication had appeared. Much as I wished to do my special reading, I could see very clearly that Christian Science was vastly the more important subject of the two. I therefore continued to study the latter at the expense of the former; in fact the very latest of my professional literature reposed safely in its original wrappings. This went on for some time; and finally I realized that if I ever expected to live at peace with myself under any circumstances, I must be able to do so now. That seemed to be a very hard lesson, but I knew it had to be learned and so set myself to the task. In a very short time the longed for opportunity presented itself, sooner in fact than I was looking for it; that is to say, the way opened by which I could return to the part of the country in which I had been accustomed to live, and to an office of my own, to my own work. But, to my astonishment, I discovered so great a change had taken place in my view of things, that I did not care to do either. I cannot go into the details of this situation, but I regard the outcome as proof that I had learned my lesson, had demonstrated the proposition that peace and contentment are not conditions of time or place or occupation, but that they are conditions of mind, and are attainable here and now—not some other time or in some other place or under some other circumstances: in other words, that the kingdom of heaven (the reign of divine harmony) is "at hand," not afar off, or beyond the grave.

This does not mean that I think I have no more work to do, nothing more to learn, no more progress to make, but it does mean that, to the best of my knowledge and belief, Christian Science teaches absolute truth; that I am proving the truth of its teachings, to a considerable extent, in the ordinary affairs of life, and that I find it the greatest blessing that ever came into my experience. My very earnest wish is that others may begin to know this wonderful truth which is making men free from all undesirable conditions, and that I may help them by living according to the divine Principle of harmony. In the year 1887 I thought that Mrs. Eddy's spiritual interpretation of the Bible was very unwarrantable assumption, to say the least. Now, with my best efforts, I can only feebly express my great thankfulness that we have in the world today a truth of such great practical value as that same spiritual interpretation.—ARTHUR D. BARKER, D.D.S., Spokane, Wash.

I wish to express my gratitude for what Christian Science has done for me. For several years I suffered from bowel trouble, nervousness, and an ailment which necessitated my undergoing several operations, none of which gave me relief. At last my physician advised me that I would need to have another operation, but he did not promise that it would cure me. At this point, I called on a Christian Science practitioner, and after taking several weeks' treatment I was practically healed. This was several years ago, and today I am a well and strong woman, able to look after every detail of my home. I am indeed grateful to God for the physical help and spiritual uplift which have come to me, and my daily prayer is to learn more of this truth which has been revealed to us through our dear Leader.

MABEL CRUMP MCCAULEY, Chicago, Ill.

During the summer of 1904 I was taken with a cold which developed into a severe cough. For three months I was unable to get relief, except for a brief period, from *materia medica*, and we were eventually brought to the conclusion that it was a serious case of lung trouble. By this time I was a physical wreck, and the consolation which I offered to members of my family was that at the rate I was going the struggle would soon be over; but having now reached man's extremity, I was ready to appeal to a higher power.

Through a number of influences I was induced to visit a Christian Science practitioner. Upon my first visit she gave me a very encouraging talk, and told me that I did not have to be sick, a statement which at that time I did not understand. She, however, advised me to think the matter over, and call on her again should I desire treatment. I did so, two or three days later, and I was treated for about one week. To outward appearance there was very little improvement, but on my way home after the fourth visit I realized what a Christian Science treatment is, that it is something which is not revealed to flesh and blood, but must be discerned spiritually; and I knew I was a free man. On entering the house I told my wife and daughter the good news, and we all were very happy and I might say awed, for none of my family up to this time had ever given Christian Science any serious consideration. Since my healing I have enjoyed more than four years of almost constant good health, and I have been able to perform a reasonable day's work with as little fatigue as when in my teens, over a half century ago. I would also state that almost simultaneously with the above healing I was freed from a chronic bowel disorder contracted during my service in the Civil War, although I had no special treatment for this.

Since taking up the study of Christian Science, myself and other members of my family have received much physical help and manifold spiritual blessings. During the time I was under treatment I applied myself diligently to the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy, to whom my heart goes out in grateful acknowledgment for her inestimable work in behalf of mankind. I have been a member of one of the Christian Science churches of Portland for almost four years. I give this testimony gladly, gratefully, trusting that it may afford a ray of light to some wanderer in the wilderness.

BENAJAH MORGAN, Portland, Ore.

Some time ago a condition came up which would have alarmed me greatly before I came to Christian Science. There was pain all over the head, extending down the neck, with a sense of something forgotten, something which I felt I ought to know. Christian Science had taught me that such a condition was unreal, that I had but to continue using what I knew of right thinking and all would be well. The pain and discomfort lasted throughout the day, and in the evening my daughter read to me an article from *The Christian Science Monitor*. As she read I knew that this was the knowledge for which I was searching. I asked her to read it again slowly, and as she read, there came in a flood of joy and gratitude to our deeply loved Leader, the remembrance that all the "promises" are operative now. Generation after generation had drawn comfort from the promises of the Bible, but we, through Christian Science, were seeing their fulfilment. Ours is the joy of learning that the words and works of Jesus unfolded a Principle that is applicable now and available to all, whether "least" or "greatest." The painful conditions, both physical and mental, rolled away with the reading, every appearance other than normal vanishing with the return of the knowledge that Christian Science is indeed the Comforter, bringing to our remembrance "all things" whatsoever that the Master had spoken.

How can a Christian Scientist ever be grateful enough to Mrs. Eddy, who has brought such gifts to humanity? The only outlet to the grateful love which lives in our hearts, is the knowledge that love is its own reward, and that this reward is "exceeding great." Love will bring her the reward so nobly earned; we may rest on that, and work to bring to others at least something of what has come to us in Christian Science through her self-immolation.

MRS. WINIFRED M. PLAYFAIR, Westminster, S. W., London, England.

Digitized by Google

Up to four years ago, my wife had been from childhood a constant sufferer from a bowel disorder, and her father in her younger days spent a great deal of money in trying to have her cured. In August, 1905, while spending our vacation in Maine, we made the acquaintance of a Christian Scientist and her daughter. We were in their company a great deal of the time for about three weeks, and while I was not of a very religious turn of mind myself, I was favorably impressed by the lady; so much so that I asked her to give my wife absent treatment when she returned to Chicago. She assured me that she would, saying that it was one of the greatest joys of her life to try to be of service to others. In a short time my wife began to improve, and normal action was established, something which she had not had since childhood. Although this was over four years ago, she continues to be well, and since that time has done away with all material remedies.

I thank God for the day that we became acquainted with Christian Science, and we are very grateful for benefits received. We are glad to send this testimony for publication, and hope it may lead others to investigate this teaching.

H. W. EMERY, Roxbury, Mass.

About a month before the birth of my last baby I was taken with a severe attack of neuralgia. I called a Christian Science practitioner, and in a few days the trouble was overcome. Later, at the birth of my child, I again called for help in Christian Science, and the result was wonderful. Baby and I were left in the best of health, while on two former occasions the prolonged suffering left me weak and I was long in recovering my strength. That which to me seemed most marvelous at this time was the absence of fear, for at the time of the other confinements there was great dread and also nervous physical conditions, both of which I escaped in this last experience. I am indeed grateful for Christian Science.

MRS. WARD M. FOWLER, Oklahoma City, Okla.

[Translated from the German.]

When I first attended a Christian Science meeting, in the fall of 1909, I knew nothing about this teaching. My brother had asked me to go there, as he thought it would do me good. After the meeting was over I thought that if I could have heard before what I had just listened to, I would have been spared many a dark hour. Here I had found what I had often longed for—a true concept of God. After that I became a regular attendant at the meetings, and thereby gained a sufficient understanding to be able to apply the truth myself with good results. While doing house-cleaning I injured my wrist, but I overcame the pain by holding firmly to the thought that there is no inharmony in God, and the swelling disappeared along with the pain. At that time I had not yet spoken to a Christian Science practitioner. I used to be very irritable, but this disposition has been almost unconsciously overcome. I formerly suffered much, and often would seek for comfort in the Bible, but found none, as I could not understand it; now I do, and I love to read therein.

I thank God that I was shown this great truth, which has been made comprehensible by Mrs. Eddy to all who seek after it; and I am grateful that we have an opportunity here of having this teaching expounded.

FRAU EMMA SCHULLE, Dresden, Germany.

I did not take up the study of Christian Science for physical healing, although I was in poor health at that time. The testimonies of healing heard at the Wednesday evening meetings and from friends did not impress me, but when I was given Science and Health to read, then I found what I had been looking for all my life, namely, God. I had been a regular attendant at church and Sunday School, and also a teacher in Sunday School; but many of my questions were unanswered and blind belief did not satisfy me—I wanted proof. I could never be persuaded to join any church, although I attended one for fifteen years. I did not see that it made my friends any better to do so, and I did not want to join unless it would change me for the better.

From the time I began to read Science and Health I could see that Christian Science is the truth, and I began to apply it, to prove or demonstrate it. I procured a copy of the text-book, also a *Quarterly*, and with the Bible I began the study. Then my diseases, one by one, left me, some of them without any effort on my part. A serious throat trouble which I had every winter was one of the first to leave; also backache, bowel trouble, a growth in the nose which a doctor had said would have to be burned out, and a tendency to take cold; all these ills left me without treatment. Stomach trouble in a very severe form yielded to treatment, and with the overcoming of these diseases, health, strength, and flesh were regained. My friends noticed the change, and when they were told what had brought it about, one and all admitted that there must be something in Christian Science,—that I was not the same person that I used to be, and that the change was wonderful.

Yes, I have found what I wanted; namely, a religion that can be applied to the overcoming of all evil, discord, sin, and disease; a God who is not afar off, but near at hand, here and now. Mrs. Eddy tells us on page 34 of Science and Health that "demonstration is Immanuel, or *God with us*," and I have had proof through demonstration that God is with us today. I am indeed grateful to God, also to our Leader, Mrs. Eddy, for Christian Science, and I hope that I may live its teachings.

MISS LUELLA MAY POTTER, Denver, Col.

It is clear to me that Christian Science reveals the truth about God and man's relationship to Him, and that this truth heals. This conviction was established in July, 1903, and since that time it has only become more deeply rooted. At that time I was suffering from an injury to the knee, sustained in a football game, when attending college. I consulted several physicians, and they all pronounced the trouble a very serious injury. They furnished bandages and elastic supports, which were used without satisfactory results, for notwithstanding these the knee would slip out in such a manner as to prevent the joint being straightened, and there was great pain and inconvenience. At last I consulted a specialist in surgery, who advised that only an operation could effect a cure, and that I would be confined to the hospital for a month at least, so that the outlook was far from bright.

Just then I was urged to try Christian Science, of which I knew nothing. I did so, and the second night after treatment was commenced I removed the bandage on retiring. The next morning I found that I could walk perfectly without it—the healing was complete. I thus learned that the truth is equal to every human need, even when a surgical operation seems necessary. I immediately purchased a copy of Science and Health, and since then I have had many proofs that a realization of the allness of God causes sin and sickness to vanish. I am indeed grateful for Christian Science, and to our dear Leader, who has reflected and continues to reflect so much of the divine intelligence, directing our footsteps in the way that leads from material sense to Soul.

A. LAWRENCE P. HUNTER, Vancouver, B. C.

It is with grateful recognition of the beneficial effects of Christian Science to me and in my home that I give this testimony. Over eight years ago I began to learn what Christian Science is. A friend who at that time had been

Digitized by Google

a Scientist for a number of years, was instrumental in getting me started. She loaned me a copy of "Science and Health with Key to the Scriptures," which I took home and began to read. I was very much in need of physical help, having been in poor health for some time, and was gradually failing in strength with what kind relatives and friends recognized as a disease of the lungs, which was supposed to be hereditary in my family, my mother having passed away with it some years before.

Upon my beginning to read Science and Health, I at once received great comfort and some physical relief, but the following spring it seemed necessary to have treatment, and I did. By this time my friend had returned to her home in Denver, and treatment was given me absently for several months. For the gain of health and physical vigor I am indeed grateful beyond words, but the spiritual uplifting and the surcease of mental worries, together with the pointing to the ultimatum of higher hopes fulfilled, is ever a well-spring of happiness. Prior to my healing, I had not been connected in any way with religious matters, but Christian Science has settled this question for me. I am thankful to God for the help received in many ways, including the lectures I have heard, and my heart goes out in love to dear Mrs. Eddy.

My husband joins me in the study of the truth and our ten-year-old daughter knows no other means of healing. In the town in which we are now living we rejoice with the other members of the little band of Scientists in both Sunday and Wednesday evening services, also in Sunday School for the children. When I began to receive so much help, my two sisters and brother became interested, and now each depends on Christian Science for daily needs. Through a realization of the truth I have been able to see the disappearance of evil for others in proof of the healing power of divine Mind.

MRS. BERNICE HAMILTON, Spearville, Kan.

The writer owes endless gratitude to God, and to our dear Leader, for the healing which came to her nine years ago, when an invalid, with little hope of again being able to walk or take any active part in life. A copy of Science and Health was loaned her. The book was taken up simply to pass the long, tedious hours; but instead of putting it to one side, and going to bed before seven o'clock, as for many months past, that book engrossed her attention till after midnight, and she left her room next morning well. Her youngest child was healed at the same time. From that time every need has been met for herself and family by the understanding of God, revealed to them by Christian Science, as set forth in Mrs. Eddy's different works. Since the physical healing, very much work has had to be done; there was a new understanding of God and of man to be gained,—an understanding of Truth, of Life, and of Love, —and this is being accomplished as self is surrendered and thought purified.

There is an old saying, "Dead fish float with the stream, live ones swim against it." One may indeed be grateful when, in overcoming difficulties which arise, we find ourselves going against the stream of mortal belief; nor need we be discouraged when the moral and spiritual healing come slowly and we wonder if we are emerging at all. Mrs. Eddy says (Science and Health, p. 251), "Error is not real, hence it is not more imperative as it hastens toward self-destruction." For this leading back to God, through the teaching of Christian Science, when wandering far from the pure, life-giving waters of Truth, no words can express sufficient gratitude. Jesus, in his walk to Emmaus with the disciples, "opened their mind, that they might understand the Scriptures" (Revised Version). How many proofs have we had that this spiritual understanding of the Bible is the word that heals. The psalmist says, "He sendeth his word, and healeth them" (Revised Version).

LOUISA E. BELL, Hurlingham S. W., London, England.

Mrs. Eddy says in Science and Health (p. 14), "Become conscious for a single moment that Life and intelligence are purely spiritual,—neither in nor of matter,—and the body will then utter no complaints." I can certainly testify to the truth of this statement, as I have been healed on three separate occasions through a realization of this truth. The malady of which I was healed is considered a dangerous and even fatal one, and yet I was healed instantaneously and the manifestation entirely disappeared.

I am glad to be able to testify that through the reading and study of Science and Health I have been able to overcome many discords, from toothache to ills of a much more serious nature. I had a very ugly wart on my hand for over a year, and it annoyed me greatly, but still I did not seem to know how to handle the matter. About a year and a half ago I had a trouble that seemed of a very serious nature, and was impressed with the idea that I must begin to work for myself immediately. I retired one night with the thought that I would work during the night on this particular ailment. During the night I knew I had made the demonstration, and I was declaring that error could not be recognized in my consciousness any longer, when I thought of the wart. I immediately declared the truth, and it was very clear to me that matter had no power to manifest anything of itself. In the morning the wart had disappeared, leaving no trace behind. This demonstration seemed very beautiful to me, although the trouble itself was a simple one, but it showed me clearly that matter is simply a projection of false sense.

I am indeed very grateful for all the blessings and benefits I have received through an understanding of Christian Science.—GEORGIE L. CARLISLE, Butte, Mont.

For years I was a sufferer from stomach trouble, also from rheumatism and dropsy. I had been treated by many doctors, and had been in a hospital, but grew worse instead of better. After spending a great deal of money and trying all kinds of healing, I was advised by a friend to try Christian Science; but I replied that I knew it would do me no good, as I had given up in despair, and I really did not care to live if I must endure such suffering. My friend was not to be put off in that way, however, and insisted upon my giving Christian Science a trial. At last I submitted, and we went to call upon a practitioner, but it took two people to assist me in getting upstairs. I still insisted that Science could do me no good, but I took treatment that day and the practitioner said if I cared to continue I should come the next day. He also gave me some Christian Science literature to read, but I said that I could not read, on account of my age (I was then about sixty-six).

The next day, however, I called again, and after the second treatment, to my great surprise, the swelling began to disappear from my hands and I began to think there was some hope for me. After a few more treatments the despondent thought had left me and I desired to live, for the suffering was all gone and I could eat anything I wanted. In less than one month I was walking wherever I wished to go, could go up and down stairs, sew, read, and do almost any kind of work, and people remarked that I looked twenty years younger than before taking treatment. I have not been sick since, with the exception of a cold, and that was soon overcome. I have not only been healed physically, but from the study of Science and Health I have learned enough of the truth to enable me to help others.

MRS. LITIA M. BAKER, Guthrie, Okla.

It comes to me that it is not only a duty, but a privilege to make an honest acknowledgment of the many blessings received through Christian Science, although they are more than I could enumerate. One of the greatest of these blessings is the apprehension of God as Love. For a number of years I belonged to an orthodox church, and

Digitized by Google

though I read the Bible with an earnest desire to understand its teachings, it was practically a sealed book until illumined through the study of the text-book of Christian Science, "Science and Health with Key to the Scriptures."

Some time ago I awoke one morning with what seemed to be a severe cold. I, however, arose and went to business as usual, working and declaring the truth for myself as best I could throughout the day, but with little or no relief. That night I had a high fever, and all the symptoms of a severe case of illness. The next morning I sought the help of a Christian Science practitioner, and in four days I was able to resume my duties at the office. For this healing and for countless other blessings I am grateful to God, and to our Leader, who has labored so patiently and lovingly to teach us how to acquaint ourselves with God,—to gain that knowledge of "the one true God" which Jesus declared "is life eternal." I am also thankful for the *Sentinel* and *Journal*, and grateful to all who have helped me to a clearer understanding of this wonderful truth.

MRS. CLARA A. NORTON, Chicago, Ill.

It is with a grateful heart that I write to tell of the benefits I have received from Christian Science. I was attacked with a very severe illness, having all the symptoms of acute lung trouble, a disease which had almost terminated fatally for me two years previously. Owing to this, much fear was manifested, and my faith in Truth was put to the test. The next day I was semiconscious, but with the help of a practitioner I was enabled to rise, as well as ever, two days later. Sundry other ailments have been overcome by realizing man's God-given dominion over error. Not only has Christian Science helped me from a physical point of view, but it has been a wonderful help in every-day life. Work which before seemed distasteful and was done in a slovenly way, is now done with the thought of perfection uppermost.

Lastly, Christian Science has given me a better knowledge of my fellow-man. Like most young men, I was always rather prone to judge people from outward appearances, but now I know that each one of us belongs to a brotherhood where all is harmony and peace, and where all have one Father, who is guiding and directing each true thought, word, and deed. I am very grateful to the all-wise God, to Mrs. Eddy, the Founder of Christian Science, and to all who by word and deed have helped me so far along the narrow way.

D. H. COOMBER, Sunderland, England.

I have been interested in Christian Science for some time, but I never realized the power of Truth, as revealed in Christian Science, until my healing of a skin disease. The eruption first appeared on the wrists and then on my face and arms, constantly extending and growing worse, until I was very much frightened. I then turned completely to Christian Science, and within a week I began to recover; in two weeks the disease had all disappeared, and there has been no return of it since.

At the time that I asked help through Christian Science, I had been troubled for years with rheumatism and a stomach affection, but I have been healed completely of both and am now entirely well. I am thankful to God for all the blessings Christian Science has brought to me. I am grateful for the new understanding it has given me of the Bible, and one of the things that I am most grateful for is the sense of confidence in God which it has given me, and the taking away of anxiety. It is teaching me how to live, and giving me a sense of happiness that I never knew before. I am indeed grateful to Mrs. Eddy for the revelation of divine Truth, as given through Science and Health.

JOSEPHINE B. AMES, Marshfield, Mass.

I have always enjoyed the reading of the testimonies in our periodicals, and would like to send a few words of thankful acknowledgment for the benefits of Christian Science. This truth was presented to us over thirteen years ago by one who had just been healed through its teachings. I had united with an orthodox church when twelve years of age, and was for several years active in Sunday School and church work. After my marriage and removal to another city, we lived near a church of another denomination, which we attended occasionally. Later, thinking its teachings were nearer to the way Jesus taught, we were immersed and joined that church.

I had always felt that if Christians were purer in thought and lived closer to God, they would be able to heal as Jesus and his disciples did so long ago. When I heard about the healing of sickness as well as sin, which is demonstrated in Christian Science, it at once appealed to me as the religion taught by Christ Jesus. We sent at once for a copy of Science and Health, and began its study, sitting up every night till very late, for it seemed as if this was indeed the spiritual food we had been hungering for. My husband was healed of a severe attack of rheumatism the first evening he read the book. Since that time we have never had any medicine in our home, and have had many beautiful demonstrations, with divine Love for our only physician. About a year after this we took class instruction. We have a family of three boys, the eldest being a member of one of the branch churches. The youngest, who is thirteen years old, has never taken any medicine.

Not long since, as I was stepping from an electric car, the car started and I was thrown violently to the ground. At first I seemed stunned, but the conductor helped me up and took my address and made some inquiries to see if I was much hurt. I said very little, but kept declaring the truth silently, trying to realize the omnipotence of God and the utter powerlessness of error. I managed to get to my sister's door, where I was going to spend the night, expecting to start for my home the next day. My sister's family are Christian Scientists, and I immediately felt their helpful thought, but still the trouble seemed to gain ground and my fear increased. I had several bruises and my left shoulder was so badly injured that I could not move my arm without severe pain. How many times during the next few days I thanked God for Christian Science, for without it I do not know what I should have done when fear and discouragement tried to talk to me. As I felt that my sister had enough to attend to with her own home affairs and caring for me, she wrote to my husband, and he came and began to treat me. The next Sunday I was at the church service there, and on Tuesday I came home and resumed my own household duties with a very thankful heart.

The physical healing does indeed seem wonderful many times, but the spiritual uplift gained from reading our text-book and in striving to understand God and man's real selfhood as His reflection, is far beyond all human language to describe. I can never express my thankfulness to God for revealing this healing, saving power to this age, and my heart is filled with tender love for the dear one whose thought was pure enough to understand and reflect the Love which has redeemed thousands from disease and sin.—KATIE F. HOWLAND, West Somerville, Mass.

For thirty years I had the tobacco habit and for ten years I had been trying to get rid of it. I tried will-power, also some tablets; but I could not hold out over six months at the longest, and then the desire would come back stronger than ever. I am thankful to say, however, that after I had read Science and Health for one week, all desire for tobacco left me, never to return. That was about three years ago. I was also healed of a very bad bowel and kidney trouble

Digitized by Google

that the doctor told me would put an end to my existence in a month. He had given me the strongest medicine known, but it had done me no good. I then came to Christian Science for healing, with little hope of getting any help; but I must say that I was completely healed in one month, and I have never had any trouble with the ailment since. Not long ago I had some dental work done, and the dentist, knowing that I was a Scientist, removed one of the nerves without treating it, to see if it would hurt me. To his surprise I did not feel any sense of pain. I also had a severe case of piles, of fifteen years' standing, which was healed in one treatment.

I am very thankful for the spiritual uplifting. The Bible was formerly an unknown book to me, but now it is my daily companion, and I pass most of my spare time with the Bible and our text-book. I am very thankful to God for what Christian Science has done for me, and grateful to Mrs. Eddy for making plain to us this healing truth.

J. W. HORNDASH, Peoria, Ill.

On page 3 of "Science and Health with Key to the Scriptures" Mrs. Eddy asks, "Are we really grateful for the good already received?" I feel that something more than a mere affirmative is required to answer this question, therefore I express my thankfulness in an endeavor to help others by testifying to the truth which heals and saves. Christian Science has brought into my life a sense of peace and security where once discord and despair reigned, a realization of the ever-presence of divine Love where skepticism and uncertainty held my thought, and health where suffering and nameless fears seemed to be the only outlook.

For many years I had been seeking an answer to the problem of mortality, and had wandered through the mazes of many so-called philosophies only to meet with disappointment and increasing perplexities. Four years ago I came in touch with Christian Science, and started to investigate its claims much in the same way that I had started on other investigations; but at the outset I saw that here was a revelation of Truth hitherto undreamed of, a practical system which could revolutionize the world, and one which I could prove for myself. My first visit to a practitioner resulted in the laying aside of glasses which I had worn for about eighteen months and which two oculists had warned me never to be without, and within a week I was enabled to dispense with bandages worn for over twelve years on account of varicose veins. I had always been in very straitened circumstances, never entirely free from debt and burdened with responsibilities which seemed almost more than I could bear; but all this has been changed by the light that Christian Science throws upon the word of God as found in the Bible. If we seek the truth ("the kingdom of God, and his righteousness"), all our needs are supplied; for our Father is ever with us, and we only have to learn to know Him as good to overcome all fears, which are really the cause of limitation and suffering.

Regeneration of thought is the key-note to harmony, and we can begin to realize this in our lives today by learning more of God and His infinite creation. Mrs. Eddy has made this possible by bringing to light the spiritual import of the Scriptures—the fact that God never made or sanctioned evil and that man in His image and likeness is perfect, even as our Father in heaven is perfect. My one desire is so to live that my gratitude for this understanding shall be proved in every thought and deed by constant endeavor to have in me that Mind "which was also in Christ Jesus," and thereby prove our beloved Leader's words, "Evil has neither prestige, power, nor existence, since God, good, is All-in-all" (Miscellaneous Writings, p. 115).

MRS. INA GOLDSMITH, New York, N. Y.

FROM OUR EXCHANGES.

[Sidney Arthur Alexander, canon of St. Paul's cathedral, in *Churchman.*]

Righteousness, we shall do well to remember, is, in the Greek, only another word for justice. Who can question in our social life the need of justice—justice, that rare, that half-forgotten virtue? Are we just to those from whom we differ in matters of politics or religion; are we just, above all, to the poor by whom we live, and to whom we owe so great an obligation? . . . I do not see how we can hope to arrive at a really happy and stable social order, until justice shall take the place of so-called charity in our normal attitude to those who do so much for our happiness and our life. But more: righteousness means also truth—truthfulness, honor, integrity, sincerity in speech and action. It means that reality of life and thought which enables a man to win the confidence of others, which enables him to pierce through the shows of the world and see things as they are. And no one can look our modern society frankly in the face, and notice its petty hypocrisies and mean deceits, its hollow and superficial forms, its insincerities in and especially its constant habit of judging and valuing men and things not by their intrinsic worth, but by their outward show of wealth and rank and power—no one can see these things and feel that Christian sincerity and truthfulness find a congenial atmosphere in the social world. Yet we need those qualities more and more in our national life.

[Rev. Kenneth Bond in *Christian Commonwealth,* London.]

While the authority of the churches has for the time gone, the authority of Jesus Christ is more dominant than ever. The passer-by hardly lifts an eyelid when he hears the question "Jesus or Christ?" But the cry of "Peers or people?" focuses his attention at once; and it is the passionate spirit of the Synoptic Gospels that accounts for the sudden arrest of his attention. The authority has shifted from the preacher to the politician. In this arena the "punitive attribute" of God is a terrible reality, and both sides instinctively feel it. It is no longer a question of theological dispute, of historical documents two thousand years old. The awakened conscience feels the commission that sent the disciples to rouse a sleeping world; the terror of those words, "Inasmuch as ye did it not to one of the least of these, ye did it not to me," is as fatal for us today as for our fathers; but its terrors lie in our own consciences, and in the actual working out of our daily lives. If the church could only learn this, and take the consequences, she might again be terrible as an army with banners; not consigning men to perdition for errors of belief, but leading them out of the morass of destitution and wretchedness into the peace of the kingdom of God.

[H. Bulcock in *Christian World.*]

Again, what is the pragmatic value of the miraculous, which has been so heartily defended as an essential of faith? What has miracle to do even with the truth of doctrine? Jesus, refusing to give a sign from heaven to accredit his teaching, indicated that the "sign" which mattered was to be felt in the quickened thought, purified hearts, and strengthened lives of those who sympathetically listened to him. A generation ago the yielding of the scientific accuracy of the creation narrative appeared to be the giving away of the drawbridge of the fortress of truth. But have men, accepting the change, ceased to feel the presence of God and to serve Him? If we could only get the habit of thus testing traditional doctrines, of asking ourselves what really matters for practical living, we should not only be better prepared to exercise true theological charity, but should also save ourselves from many distresses of soul and leave con-

Digitized by Google

spicuous, by the falling off of unimportant accretions, the features of faith that really do matter.

[*Watchman.*]

Here is the high privilege of the Christian: we are not simply to be like God, and to be one with Him in character and purpose, but we may be united with Him in very being and life, so that our thoughts and words and acts shall be no longer ours, but the thoughts and words and acts of God. This is the meaning of the promise of the fulness of the Holy Spirit. To use a modern phrase, God is immanent in us. We become one with God in a real sense. In Him "we live, and move, and have our being." The lives we live are His life. Our being is His. We are wholly filled with Him and He appears through us in the world, working out His purposes to His own glory and filling us with the ineffable holiness and peace and love of God Himself.

[Senator Dolliver in *Christian Herald.*]

I am convinced that there has been a great improvement in the morals of public men during the last twenty-five years. I have made something of a study of the subject, examining into the habits and customs of the statesmen of the time of Clay and Webster and of the intervening period, and I know that a great many habits and practices of those days are not to be tolerated as honest now. I think it is a decided advantage to a public man now to be known as a professing Christian. It is certainly true that most men who have openly scoffed at religion, have not achieved a prominent place in the leadership of our people.

[Rev. Richard W. Boynton in *Christian Register.*]

The theology of the past has said much about a hell, and even has dared to make it endless. We do not understand the full force of that solemn thought, unless we see in it an appeal in picture form to the moral consciousness. The hells of life are not in a future world of material fire and burning. They are in these souls of ours, here and now, and they are there as warnings to which we must perforce listen lest we finally stray forever from out the keeping of even God's infinite love. That would be eternal punishment.

[Rev. Charles Stelzle in *Universalist Leader.*]

There can be no real brotherhood without a love as wide as the world. There can be no real brotherhood without the fatherhood of God. The fatherhood of God implies a care for every one of His children. He sends His rain upon the just and upon the unjust. His provision is for all. Cursed be the man who dares withhold it from God's children—whether he be a monopolist by virtue of his wealth or by reason of his temporary power.

[*Universalist Leader.*]

Man is the world infant, beginning to be conscious of his powers, hardly daring to believe in his possibilities, and blind to his high destinies. Eons have gone to his fashioning, and other eons will go to his finishing. To measure him by three score years and ten is as absurd as to measure an oak by a summer day. It is too soon by an eternity to say that God has failed to make man perfect.

[*Interior.*]

Spiritual wisdom, according to the Bible, consists in choosing life's path early, and in crossing no bridges until one arrives at the river to be passed. Life without an aim is life without progress, but life burdened and harassed by the decisions of past years—which must be observed independently of present convictions—is a pitiful thing, robbed of joy because robbed of freedom.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings Description and prices of these will be found on the outside cover page of the *Sentinel.*

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel.*

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

TO SUBSCRIBERS.

Subscribers to our periodicals are requested to observe the expiration dates of their subscriptions, as given on the wrappers of the periodicals which come to them, and to renew subscriptions prior to the date there given.

The notation "Nov. X" indicates that the periodical will not continue after the last issue of November, 1910, unless subscription is renewed, and "July XI" in the same manner denotes termination with the last issue of July, 1911.

Subscribers are also requested to refer to the subscription rates given in our standing notices before sending in subscriptions.

OF INTEREST TO THE FIELD.

The Publishing Society has a limited number of volumes of the *Journal* and *Sentinel* bound in cloth, half morocco, and half calf and arranged in sets from four to nine volumes. These sets are now on sale at special prices, ranging from $9.20 to $21.00, according to the style of binding and number of books in the set.

These special prices apply only on sets of books, and in no case on single volumes. The offer presents an exceptional opportunity to Christian Scientists to obtain rare volumes for reading-rooms, libraries, and individual use. Detailed information will be furnished on request.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90, six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage, at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

PAMPHLETS AND REPRINTS

CHRISTIANITY IS SCIENCE, AND SCIENCE IS DEMONSTRABLE. By MISS MARY BROOKINS.

MISCELLANEOUS

BIBLES. Clarendon Bresier (01483 x), heavy faced, very distinct type. Turkey morocco, size 6 1-2 x 4 3-8 inches, corresponding in size and binding to pocket edition of Science and Health. Price, $3.75.

Morocco cases, to hold pocket edition of Science and Health, *Quarterly*, and above Bible, may be had at $1.25.

...xt Bible. (01561 x), pica square type, Alaska seal, size, 7 1-2 x 6 1-4 inches, 1 1-2 inches thick. Specially adapted for use of Second Readers. Price, $7.25

"ERSONAL CONTAGION" AND "WHAT OUR LEADER SAYS." By Mary Baker Eddy. Printed in French old style type, silk sewed. Single copy, 10 cents; 12 copies, $1; 100 copies, $7.50.

...RISTIAN SCIENCE AND LEGISLATION. Consisting of articles by EDWARD A. KIMBALL, JUDGE CLIFFORD P. SMITH, and JUDGE SEPTIMUS J. HANNA, together with testimonies of healing, editorial comments, etc. 128 pages. Single copy, 10 cents; 12 copies, ONE ADDRESS, $1; 25 copies, $1.85; 50 copies, $3.50.

PICTURE OF THE FIRST CHURCH OF CHRIST, SCIENTIST, in Boston, Mass., and the Publishing House of The Christian Science Publishing Society. Artist's proof with remarque on Japanese vellum. Size, 18 x 24. Each, $5; on India paper without remarque, each, $3. Ten per cent discount to Reading Rooms. Picture of The Mother Church only, size, 12 x 15, each, 50 cents; one dozen, $4.50. Souvenir Post Cards of The Mother Church, 25 cents a dozen.

QUARTERLY COVERS, in black morocco. Pocket size, 4 1-2 x 6 1-2. $1.15 each or $11 a dozen. With change pocket, $1.40 each or $14 a dozen.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Illustrated; 107 pages. Single copy, $1.50; one dozen, $12; half dozen, $7.

THE CHRISTIAN SCIENCE HYMNAL. Revised and enlarged. Cloth, single copy, $1.15; one dozen, $9; half dozen, $5. Half morocco, single copy, $1.40; one dozen, $12; half dozen, $6.50. Full morocco, single copy, $2.50. Levant, single copy, $3.50. Pocket edition, size 4 5-8 x 6 5-8. Full morocco. Single copy, $3; one dozen, $30.

MUSIC. Poems written by MARY BAKER EDDY and used by special permission, have been set to music as follows:—

"THE MOTHER'S EVENING PRAYER." By William Lyman Johnson. Arrangement for high and low voice in same copy. Single copy, 75 cents; one dozen, $7.

"CHRIST MY REFUGE." By William Lyman Johnson. Arrangement for high and low voice in same copy. Single copy, 75 cents; one dozen, $7.

COMMUNION HYMN.—"SAW YE MY SAVIOUR?" By William Lyman Johnson. Published in two keys for high and low voice. Single copy, 50 cents; one dozen, $5.

"BLEST CHRISTMAS MORN." By Frederic W. Root. Published in two keys, for high and low voice. Single copy, 27 cents; one dozen, $2.75.

"O'ER WAITING HARPSTRINGS OF THE MIND." By Frederic W. Root. Published in two keys for high and low voice. Single copy, 27 cents; one dozen, $2.75.

Please state, when ordering any of the last three numbers, whether high or low key is desired.

Our Catalogue for 1910, containing description and prices of above named literature and a selected list of Bibles, will be mailed free on application.

Remittances should always accompany orders, and be made by check, money order, or exchange on Boston or New York. Currency or coin should not be sent by mail unless registered. Please send no money or business letters to the Editor or Editorial Department.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of
Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only Text-book on CHRISTIAN SCIENCE MIND-HEALING. This edition contains a fine photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

Price (cloth), single copy $3.18
Two to twelve books (cloth only) to one address, each 3.00
Twelve or more books to one address, each 2.75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy 4.00
Twelve or more to one address, each 3.75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy . . . 5.00
Twelve or more to one address, each 4.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy 6.00
Twelve or more to one address, each 5.75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding. The above prices are all prepaid.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), single copy $2.25
Twelve or more books to one address, each 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, single copy 4.00
Twelve or more to one address, each 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy 5.00
Twelve or more to one address, each 4.75

The above prices are all prepaid. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy . . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.

Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.50; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 20 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 20 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittance by New York draft or money order, to

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00; six months, $1.20.
Ten copies to one address, each, one year, $1.90; six months, $1.15.
Twenty-five copies to one address, each, one year, $1.80; six months, $1.10.
Fifty copies to one address, each, one year, $1.50; six months, 90 cents.
These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.
Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. X indicates the year 1910; XI, 1911. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

TERMS OF SALE

Single copy, postpaid, five cents, in the United States, Canada, Mexico, and Cuba; twenty-five copies, one address, $1.00; fifty copies, $1.80; one hundred copies, $3.00.
To all other countries, single copy, six cents; twenty-five copies to one address, $1.25; fifty copies, $2.25; one hundred copies, $4.00.
Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The membership of the commission authorized by Congress to make an investigation of control of stock and bond issues by concerns engaged in interstate commerce, as announced, is composed of President Arthur Hadley of Yale, chairman; Frederic N. Judson of St. Louis, Frederick Strauss of New York, Walter L. Fisher of Chicago, and Prof. B. H. Meyer, who occupies the chair of political economy in the University of Wisconsin at Madison. The commission will thus be composed of two members of college faculties, two lawyers, and one banker, Mr. Strauss, who is also an economist. Both President Hadley and Professor Meyer have written extensively on economic and railroad subjects. Professor Meyer is chairman of the Wisconsin railway commission and is familiar with the long struggle in that state for the regulation of railroad service. He has been in the employ of the interstate commerce commission at Washington in charge of such valuation of railroad properties as the commission has undertaken, and has also been a special agent of the census bureau recently to furnish statistics on railway valuation. Both the lawyer members of the commission are well-known men. Mr. Judson, a graduate of Yale, has written books on law taxation and interstate commerce. Mr. Fisher is an expert in traction matters. He represented Chicago in the settlement of the traction disputes a few years ago, and successfully brought about the arrangements by which several street railway companies exchanged their securities for a new issue, so that the roads could be consolidated and the profits of operation be shared with the city. He is a vice-president of the national conservation commission.

The cloakmakers' strike in New York city, one of the greatest industrial disturbances in the history of American labor, has been settled. Seventy thousand garment workers, who have been idle for nine weeks, will shortly return to work. The industrial loss to employers and employees has run high into the millions. In loss of wages alone the total has been estimated at more than ten million dollars, while the loss to manufacturers, jobbers, and retailers the country over has been computed at ten times that amount. Points won by strikers are an end of sweat-shops and "preferential union shop," wherein all union standards and requirements as to wages, time, etc., shall be maintained; the point won by employers is an open shop with freedom of selection of employees when necessary skilled union labor is not available.

The public service commission for the first district, New York state, is now advertising for bids for the construction of an entirely new subway system, which is to link together the three most important boroughs of Greater New York and is to cost in its entirety not less than one hundred and twenty million dollars. It is hoped that within five years the triborough system will be completed. The proposed system will include about forty-one miles of road and its capacity will be one million passengers per day. It will connect the boroughs of Manhattan, Brooklyn, and the Bronx by a continuous line, which if operated as one system will enable a passenger to ride from Pelham Bay Park at the northerly limits of the Bronx down through Manhattan, over the East river, through Brooklyn, and out to Coney Island.

The third annual national good roads convention is to be held in St. Louis, Mo., Sept. 26 to 29. The change of dates from October to September, was brought about by the insistent desire on the part of the American contracting engineers to hold their annual meeting at the same time and to work jointly with the national good roads convention. Officers of nine national bodies are represented on the convention committee. The National Grange includes over one million farmers. The Farmers' National and Cooperative Union possesses a total membership exceeding two million. The farmers' union has not participated in previous conventions.

President Taft is contemplating, and probably will issue soon after his return to Washington from Beverly, an executive order putting all assistant postmasters and permanent clerks at money-order postoffices under civil service. Postmaster-General Hitchcock recommended this step.

The party of professors and students from the University of Commerce, at Cologne, Germany, who have been making a tour of the United States during the past six weeks, sailed for home last week.

Collector Loeb of the port of New York, from April 1, 1909, to March 31, 1910, has collected in fines assessed upon would-be smugglers and in penalties for forfeitures $2,387,969.86.

The population of New York city, according to the official count of the returns of the thirteenth census, is 4,766,883, as compared with 3,437,202 in 1900 and 2,507,414 in 1890.

International.

The United States wins on five points out of the seven submitted to the international court at The Hague in the Newfoundland fisheries dispute with Great Britain. Great Britain wins points one and five. On point five the court upholds the British contention that the three-mile limit must be measured from a line connecting headlands. Question one, the other question decided in England's favor, concerned England's sovereign power to make regulations not in contravention of United States treaty rights of 1818. The disputed Newfoundland regulations were referred to an expert commissioner to be appointed by The Hague tribunal. Future regulations must be submitted to a permanent fishery commission, to which the United States shall have the power to protest.

According to the annual report of the surveyor-general of Australia the 421,800 acres of land which have been surveyed are not sufficient to meet the demands. The government has purchased 62,790 acres for closer settlement. Noteworthy success has followed the subdivision of big estates, and there are now fifteen hundred persons on repurchased lands. The amount of territory now under survey amounts to one million acres, the greater portion of it being agricultural land.

A trust known as the "Single Service Packing Corporation of America" is being organized to buy and control all the patents covering the machinery used in the manufacture of "paper" and "other" containers, including a perfected paper milk bottle, and then to "lease" instead of "sell" the machines constructed under such patents to the consumer of packages.

So successful has been the telephone cable recently laid between Kent, Eng., and Gris Nez, France, that a second one is to be laid. Each cable carries four wires, giving two complete circuits. The charge at present for talking during a space of three minutes from London to Paris is $1.92, and it is expected that this charge will eventually be reduced.

Industrial and Commercial.

According to a London despatch, duralumin is a new alloy of aluminum discovered by the head chemist at Vicker's Sons and Maxim's Works, Barrow. The alloy is described as a little heavier than pure aluminum, but as strong as steel. The firm is building new works at Birmingham for the purpose of manufacturing the metal, which has been patented throughout the world. The alloy can be rolled, drawn, stamped, extended, or forged at suitable temperatures and is much less easily corroded than other aluminum alloys, and possesses such valuable properties that the firm thinks there is bound to be a large demand for it. The manufacturers hope to begin work on a commercial scale in October. It is only one third the weight of brass and the purposes for which it can be used are, it is said, practically unlimited.

According to the *Journal of Commerce and Commercial Bulletin*, conditions in the Portland cement industry in general give promise of some important developments in the next six months. The gigantic cement "trust," organized little more than a year and a half ago, appears to be nearing its end. On Feb. 1 next the original organization agreement of the Association of Licensed Cement Manufacturers, as the trust styles itself, will expire by limitation, and those best posted on the state of affairs say it is practically a certainty that it will not be renewed.

The Wonder Worker Shoe Machinery Company, a rival of the United Shoe Machinery Company, having an authorized capital of ten million dollars, and with Montclair and Bloomfield men as incorporators, has filed articles of incorporation in the office of the clerk of Essex county, New Jersey.

The Western Electric Company in a single year uses upward of a ton of platinum for telephone apparatus. As platinum costs thirty per cent more than pure gold, it is evident that this expensive metal would not be used so extensively unless results justified it.

The Chalmers Motor Company of Detroit, Mich., has declared a cash dividend of thirty per cent and a stock dividend of one thousand per cent, the capital stock increase involved being from three hundred thousand dollars to three million dollars.

What is said to be the largest single coking coal contract ever let in the East has just been obtained by the Davis Coal & Coke Company from the Bethlehem Steel Company. It runs for twenty years, and exceeds sixty million dollars in value.

The largest building in the world ever built at one time, the Pennsylvania railroad station in New York, has just been completed and declared officially open. Train service was inaugurated on Sept. 8.

The consolidation of the largest cab and taxicab interests of New York has been completed by the formation of the Cab & Taxi Company of New York, with a capital stock of five million dollars.

Up to the present 1,148,316 cases of fruit of various descriptions have been shipped from Hobart, Tasmania, to Australia and other countries.

A half-million-dollar electrical switchboard will control every switch in the Pennsylvania railroad's great new yards at New York.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

POINTS OF AGREEMENT.

W. D. MCCRACKAN, M.A.

INDIVIDUALS frequently disagree on matters of taste and sentiment, nations on matters of tradition and custom, and yet the points of agreement among nations as well as individuals are already numerous and are multiplying rapidly. Points of agreement which may be described as second nature to the men of today have often been won by a long process of education out of the darkness wherein every man's hand was against his neighbor.

A distinguished American novelist has pointed out that the customs of polite society are really points of agreement which operate without special regulations or the posting of special notices. How much more should self-operative good manners prevail when people meet together, animated by a common impulse to further the interests of righteousness, whether in church or state. Much of the administrative work of the British government has been carried on for centuries without written instructions and solely by custom and precedent. There is, for example, a simple mathematical tabulation in general use among men, over which no dispute ever arises, which never excites the least jealousy, the value of which is well-nigh inestimable. Yet this tabulation, consisting virtually of a series of points of agreement, is never enumerated among the crown jewels of any monarchy or the assets of any republic. It is independent of race or climate, latitude or longitude, prejudice or opinion. It is indispensable alike to the affairs of a palace, a church, a hotel, a factory, or a laborer's cottage. It is just as available in the waste places of the earth as it is in the crowded centers, on the top of the highest peak as at the bottom of the sea. Without it, human occupations would be thrown into inextricable confusion. This valuable possession, belonging equally to all men and nations, is the multiplication table.

Today, Christian Science awaits this universal acceptance. This Science, which has always been true, even before the foundation of the world, which has always been available by him who could understand it as revelation,—this Science stands knocking for admission at the hearts and minds of modern men and women. This understanding of God and man, which explains every human perplexity, whether individual or collective, which can be applied to regulate every disorder, overcome every evil, assuage every grief, and wipe out every enmity,—this Science is even now establishing points of agreement among men. It is preparing mankind for the glad tidings of universal peace, when nothing shall remain to vex and mar the normal unity of all under the one Mind, one God.

To the individual who has struggled in vain to establish the brotherhood of man by material methods, there are no words in the Christian Science text-book more reassuring and more inspiring than those which close the chapter entitled "Science of Being," in which Mrs. Eddy enumerates the blessings conferred by obedience to the First Commandment. In a few powerful sentences she sweeps together the problems of mankind and lays them at the feet of "one infinite God" (Science and Health, p. 340), in whose presence all discords fade into their native nothingness. There is no other way of multiplying the points of agreement among men. To have the same understanding of the only true God is to be in agreement upon all essentials. The irritating, obtrusive, and impertinent non-essentials can produce no disunion among those who know God.

CHRISTIAN SCIENCE AND JUDAISM.

FLORA R. TSCHOPIK.

To many Jews who would gladly adopt a religion that heals, there is an apparent stumbling-block in the use of the word "Christian" as applied to Christian Science. Later, however, they learn that the term Christian Science is impersonal and is thus interpreted—The Science of Christ, Truth. Before coming into Christian Science, I had a great antipathy to the name of Jesus Christ. I had never read the story of his life, but from an inherent feeling that he was an impostor, I, as a Jewess, rebelled at the thought of the worship attached to his name. After many attempts to be healed through *materia medica* (going to each new specialist with implicit confidence in his ability), after seeking health at famous European resorts, and failing to obtain the cure that I sought, I decided to give Christian Science a trial and was healed!

I then realized that if God answered the prayers of Christian Scientists in conformity with the method revealed by Jesus, the fact of its being in accordance with and not in opposition to God's law, was incontestably established. With the study of the Bible and of Science and Health by Mrs. Eddy, in which I became interested, the light dawned; my preconceived opinions fell away one by one, and I saw life anew. I began to comprehend the teachings of Jesus of Nazareth: I saw the magnitude of his life-work, his consecration to the God of Israel, his denial of selfhood apart from God, his humility and fidelity in his healing work, in ascribing all power to the God of Abraham, Jacob, and Moses—not to another God; his perseverance in striving to bring to human sight and sense a seeing of and an awakening to the spiritual facts of life. Through the study and application of the Principle and rules given in the Christian Science text-book, the hidden meaning of the Scriptures was uncovered to me, and the reality of spiritual Life overcame the false beliefs of material existence. I gained the understanding that the world, as we see it, is not a world of matter, but a world of human concepts which exclude from our view the world of God's creating; or, as Mrs. Eddy expresses it, "Eternal things (verities) are God's thoughts as they exist in the spiritual realm of the real. Temporal things are the thoughts of mortals and are the unreal, being the opposite of the real or the spiritual and eternal (Science and Health, p. 337).

Christian Scientists are profoundly interested in the truth of being, and are working away from the falsity of the material sense of existence. They accept the First Commandment as imperative, "Thou shalt have no other gods

Copyright, 1910, by Mary Baker Eddy.

Digitized by Google

before me." Christian Science emphasizes this command continually. Mrs. Eddy says, "The divine Principle of the First Commandment bases the Science of being, by which man demonstrates health, holiness, and life eternal" (*Ibid.*, p. 340). To have no other gods means to recognize no power but God, Spirit, good. Analyzed negatively, this means that one must not be cognizant of matter, for God is Spirit; one must not recognize sickness and sin as realities, for God created all and called it good; consequently sickness and sin are no more a part of the creation of good than matter is a part of the creation of Spirit.

Throughout the Bible we find that all the prophets have tried to awaken mankind from the spell which seemed to bind them. The wise man says, "Wisdom is the principal thing; therefore get wisdom: and with all thy getting get understanding." In other words, regardless of sense testimony to the contrary, awake to the true understanding of Life. It is the spiritual recognition of the allness of God which dispels the illusion of sickness and sin in Christian Science. Because Jesus revealed this truth, shall the Jews refuse to accord to God all-power, all-presence, and all true knowledge? Because Jesus was misunderstood and misinterpreted in his own day, shall the Jews of today refuse to come into absolute obedience to God's laws whereby they can gain health, happiness, and life eternal?

In Genesis we are told that God made man in His image and likeness. The Scriptures also inform us that God is Spirit. How can these statements be reconciled with the belief that man is material, a belief which is accepted by the world at large and by the Jew also, the true believer in God and His Word? Christian Science brings to light man as God's image, spiritual and perfect. Christ Jesus was the demonstrator of this fact. Christian Science reveals him as the Wayshower, the demonstrator of Christ, the divine idea, and he constantly urged others to follow his example, to demonstrate the truth of being and thus bring about God's kingdom, the reign of spiritual happiness and harmony.

The appearance of Jesus was the fulfilment of prophecy, and he came first to the Jews, seeking to reclaim "the lost sheep of the house of Israel" who had strayed from the spiritual worship of God and had become imbedded in materialism. It was the Jews, however, who made possible the coming of Jesus, for although they held man to be material, they worshiped the one God as Spirit. Jesus disclaimed power as belonging to himself, but emphasized the omnipotence and omnipresence of God. He proved by his works and his words that he had come to bring to the world redemption from sin and suffering. Christ Jesus is not prayed to as God in Christian Science, but he is loved and revered as one without sin who overcame all mortal temptations; who, in spite of the testimony of the senses, held steadfastly to spiritual existence, not as a future state but as a present reality.

The walking on the water by the Master, the leading by Moses of the children of Israel across the Red Sea, and the passing over Jordan by Joshua and the children of Israel were not infractions of law, but proofs of the superiority of the spiritual law over the seeming law of matter. That God, Spirit, is omnipotent, omniscient, and omnipresent is the substance of Christian Science. God is good, and only that which is good and expresses God has reality or existence, notwithstanding false testimony and logic. The proof of this is seen in the dispelling of evil through spiritual understanding and prayer in Christian Science, as exemplified by the life of Jesus, and as comprehended and demonstrated by Moses, Elijah, Elisha, and others of the Old and New Testaments and of the present day.

Jesus claimed God as his Father, but every one may claim this distinction who lives as a child of God should live and who strives to overcome all that is unlike God, whether it be sin or disease. Man is God's image, and this illusion of life in matter, with its attendant suffering, must be abandoned for the reality of Life. Christ, Truth, was revealed through Jesus and is accepted by Christian Scientists. This is proved by the "signs following" in substantiation of the statement made by Christ Jesus the Wayshower: "And these signs shall follow them that believe: . . . they shall lay hands on the sick, and they shall recover."

If the followers of Moses and the followers of Jesus would lay aside prejudice, and every man, woman, and child would earnestly seek his spiritual selfhood, the attainment of the Christ-mind, sickness and sin would soon vanish and the children of the world would become the true children of Israel, for which both Moses and Christ Jesus opened the way; they would be worshipers of the one God "in spirit and in truth," and the promise made to the Israelites under Moses would be fulfilled: "Thou shalt therefore keep the commandments, and the statutes, and the judgments, which I command thee this day, to do them. . . . And the Lord will take away from thee all sickness, and will put none of the evil diseases of Egypt, which thou knowest, upon thee."

CHRISTIAN SCIENCE, AN ASSET.

ALBERT M. WILBOR, D.D.S.

FORTY years ago a faithful, truth-seeking woman listened to the utterance of the "still small voice," and opened the door of her heart to the call of despairing humanity, seeking for freedom from sin and suffering. She then gave to the world an idea which has revealed the activity of Life as God, and made the realization of good possible for every man here and now. This has changed thousands of sufferers into healthful, happy beings, with smiling faces and kind words for all they meet, and has awakened the downtrodden and sinning to a recognition of their present possibilities, instead of leaving them to suffer mentally in the belief that there is no hope, no health for them in this world. Here was a woman who had found a great truth, and in her longing to share it with all others, she cried as did the apostle Paul, "Men, brethren, and fathers, hear ye my defense which I make now unto you."

We have only to look back a little into history to find that all who have discovered something really great have experienced much difficulty, at first, in bestowing their gift upon the world, and Mrs. Eddy was no exception to the rule as she labored for our good to place Christian Science before us. But she knew then, as we know now, that her discovery had the stamp and seal of God and eternity set upon it, and failure was a word that found no place either in her thoughts, her teaching, or her writings. We need not ask, today, if Christian Science has succeeded in its purpose, or if the effort to give it to humanity has been worth while, for we have but to look about us to find the results of Mrs. Eddy's great work.

If we happen to know a business or professional man who has found the way as taught in Christian Science, and go into his office, we note how different is the atmosphere found there from that which we meet in other places. If we ask him what he considers the most valuable asset in his business undertakings, he will tell us that it is Christian Science, which is truly the business man's religion, one that he can take with him and live anywhere, everywhere, as well as one that he cannot live without. He will tell us that theory may be good, but that practice is better and more helpful, and that his is a religion which has shown him how to demonstrate continual happiness and practical success each hour. In so far as he has realized and expressed the spirit of Christian Science, he has learned that heaven, harmony, and home mean one and the same thing, while need and supply are practically synonymous terms, because he has found that he knows no need which is not already supplied by divine Mind. As he recognizes his need, he turns to infinite Mind, and there finds

Digitized by Google

his supply awaiting him. He has eliminated worry and fear of failure from his routine of business duties as most necessary, since he is now making practical use of the promises of Christ Jesus, which he had read many times in a thoughtless, careless manner before Christian Science came into his life and taught him the difference between the mortal and the spiritual concept of man.

It is likely that he will also tell you how differently he feels toward his fellow-men, and that he is careful not to sow what he would not care to reap; that it has become easy for him to make a mental separation between a mean act and the true personality, thus rendering unto Cæsar the things that are Cæsar's and to God, good, that which belongs to God; in other words, not to recognize error as any part of the character of God's child. And so the business man could go on, showing just how Christian Science has made him happy and successful, and telling inquirers how they, too, can make it practical in their own experience.

Every business man who understands this wonderfully practical religion, who has learned that faith and works go hand in hand, cannot help but feel grateful to our Leader, Mrs. Eddy, for her many years of noble, self-sacrificing, diligent work in directing the unfoldment of her discovery, as it goes into the homes and hearts of thousands of people in every land, teaching them to read the Bible with more spiritual understanding, and to make it their constant companion.

THE LIMITED DEMONSTRATION.

ELIZABETH MURDOCK.

AFTER I had become thoroughly interested in the study of Christian Science, I remember that I read a Christian Science article which puzzled me very much. I have forgotten the rest of it, but I still remember distinctly the statement that puzzled me. It was this: "We should never outline a demonstration." Of course the obvious meaning of this was clear to me. I knew that we should not require that the desired good should come to us in just the way that we most desired, or even in what we really considered the best way. But still I felt that there was a deeper meaning in the words, which I failed to grasp. After returning to it again and again, sometimes even tempted to believe that the writer was mistaken, I finally decided to lay it away in my thought as the expression of a truth of value, which I hoped to understand later.

I have been doing a little mental house-cleaning lately, and during the process this statement has come to light again, and I have been working on it. In trying to answer the two questions that it suggests to me, What does it mean to outline a demonstration? and Why should we not do it? I let my thought dwell first on the meaning of outline. I knew that it meant to draw the outer boundary line of a thing, which would be to give it certain definite proportions and an exact form. As soon as this was clear to me, the thought came, Why, that is giving it limits, making it finite, is it not? This was immediately followed by, And in making it finite you make it material, do you not, since all that is finite is material? An affirmative answer to these questions was the only one possible, and I saw that I had defined the outlining of a demonstration. It was to make it finite and material.

Next I turned my attention to the meaning of demonstration. I remembered what a familiar word it used to be to me in the study of mathematics, and what a strong word it was. I recalled vividly the sense of satisfaction, and of a solid foundation under me, when, at the end of a course of reasoning, I was able to add, "which was to be demonstrated." I knew that, as applied to Christian Science, it must have the same strong meaning—the proving beyond the possibility of a doubt the proposition under consideration. And what is the proposition under consideration in Christian Science? Is it one, or many? I saw that in Christian Science there is but one proposition, and that the truth to be proved beyond the possibility of a doubt is the truth about God and man—that God is infinite Spirit, the only cause and creator, omnipotent, omniscient, omnipresent, and that man is made in His image and likeness.

As my thought endeavored to apprehend something of this wonderful truth that is to be demonstrated, its height and depth and breadth, I found that my second question was answered, and I knew why we should not outline—make finite and material—the demonstration of infinite Truth. At once this passage from the Bible came to me with new meaning, "As the heavens are higher than the earth, so are my ways higher than your ways;" and also the promise, that God "is able to do unto you abundantly above all that we can ask or think;" and I said, "Who could wish to outline a demonstration in Christian Science?" Then I saw, as never before, the wisdom of the command, "Seek ye first the kingdom of God, and his righteousness," for only by so doing can we avoid the stumbling-blocks of the finite. Almost as if really seen for the first time, the relation of the two parts of this passage appeared to me. Unconsciously my thought had carried over into the second part a memory of the word "first," as if we were to seek first, and then seek later. But this time I saw that nothing of the sort was implied—it meant seek first, last, only,—above all else,—and the kingdom of God was the only object of search, of effort; the other things were just to be added, to follow, to come into possession easily and naturally, as a necessary accompaniment of success in seeking "his righteousness."

I wished to make this line of thinking of practical value, so I began to apply it to my work, and asked myself if I had ever in that work tried to outline the demonstration—whether I had ever stretched out an eager hand beyond the true object of search, hoping to grasp and hold some of those things that were just to be added unto us. A little honest reflection convinced me that I had done this sometimes, though for the most part unconsciously. So I went on to inquire what the results of working in that way would be if the error had remained uncovered. It has always been my experience that in working for a definite and greatly desired end, I seemed to lose my sense of relative importance and proportion, and to be governed even less by human wisdom than I usually was, and that in this way I lost a large part of the final results, as well as a great deal of good along the way. I see no reason to question that in this case there would be a similar outcome.

Then I saw that, in proportion as we made the demonstration finite and material, we should come under the pressure of finiteness. It would soon seem to us that an urgent necessity had arisen and we should begin to exert pressure upon ourselves and others, bringing personality, human opinions, human will, methods, and means into use, in order to hasten and secure our ends. Though the desired results may seem to come, yet we need to scrutinize them closely, lest we mistake that which is really the product of human will and seek for a sign of "God with us." The thought of the growth of the church is closely associated with all our activities these days, and we have all rejoiced to have large numbers added thereto at the communion seasons; but in this new light I saw how unimportant the increase in numbers is, after all,—only something to be "added" again. If each individual member is constantly growing in the understanding of the truth, and how to heal by its power, the true growth is realized.

I recall here a conversation with a man whom I met casually, and who lives in the West in a section where the growth of Christian Science has been phenomenal. In commenting upon it he said, "Yes, it is very gratifying, very gratifying," and then pausing a moment he added, "If only it does not grow too fast!" I understood what he meant, but I thought it rather a pessimistic utterance, and

Digitized by Google

gave it little attention. Lately it has come again to my thought, and it is another proof of the necessity of constant watchfulness on our part, lest in any respect the material manifestation should be ever so little in advance of the spiritual understanding. Only as we guard against outlining a demonstration, or making it finite and material, only as we seek with a single eye the kingdom of God, can we expect to find these other things among our possessions, added unto us in their right and normal way and occupying the right place in our thought, and only so can we prove the abundance above all that we can ask or think.

LESSONS FROM A QUARTZ-MILL.

GEORGE C. FRANKLIN, M.E.

In the work of extracting gold from ore through the milling process, the writer's thought has frequently been directed into higher channels. To those familiar with the process, it is known that the percentage of saving depends upon the condition of the copper plate over which the finely ground ore pulp passes,—in its receptivity,—and the main thing with the successful operator is to maintain cleanliness, and to take care that the plates shall not become hard and non-receptive. In order to maintain these conditions, constant watchfulness is necessary, for should the plate become fouled it will catch little or no gold until it has been thoroughly cleansed. This at times requires laborious scouring with a soft piece of wood, great care being taken not to scratch or injure the plate, nor to lose any particle of the gold which has adhered to it. A plate gains in value the longer it is used, that is, the more gold it has caught, the greater percentage of the precious metal will it separate from the pulp. A perfectly new bright plate, lying beside one that has been run for months, will not catch so large an amount of gold, though at first it will appear to have caught more; but the sooner the copper is covered with the gold amalgam, the sooner will the highest percentage of saving be accomplished.

Mrs. Eddy has written on page 174 of Science and Health, "Truth is revealed. It needs only to be practised." Again, on page 355 of "Miscellaneous Writings," she says, "Learn what in thine own mentality is unlike 'the anointed,' and cast it out." Jesus said: "The truth shall make you free." The person who manifests the most harmony and the most freedom from error will be the one who most clearly understands Truth. Just as the plate which is freest from dross catches the most gold, so will the thought that is freest from impurity receive the most truth. Again, as the gold is equally distributed for all the plates, so the truth is equally available for each individual, and we shall receive in abundance if our thought is freed from materiality, and we are careful not to allow any spots of criticism, self-love, resentment, pride, mental laziness, or inaccuracy to make us non-receptive. When a spot of grease appears on a plate, if the operator is watchful and removes it at once, no loss occurs, and the plate receives no harm.

Man is not a creator, but he is a recipient of all good in the proportion that he reflects love, gentleness, and brotherly kindness. God is no respecter of persons, and whenever we are tempted to think that some one else has been given more than we ourselves have, it is well to examine our own mentality, and see that nothing unclean has been allowed to remain in our thought. Then we shall realize that the supply of all good is constantly flowing around us, and that it is only when the sense of self becomes more in evidence than the gold that we fail to receive.

About two years ago the writer had his right hand caught in a chain-block in such a manner as to crush and mangle his fingers badly, but he instantly declared audibly that there are no accidents in divine Mind, and while walking from the plant to his home kept constantly declaring the unreality of the material evidence. Help by an experienced practitioner was available within five minutes of the time the accident occurred, and though there was a sense of faintness from the pain, the glove was not removed, in order to comply strictly with the rule on page 421 of Science and Health: "If you would destroy the sense of disease, you should not build it up by wishing to see the forms it assumes." After the first treatment such a sense of relief and freedom came that I was able to go back to the mill and superintend the repairing of the broken machinery. That night I retired at nine o'clock and slept peacefully until the next morning. Thirty-six hours after the accident I shook hands with a number of people, using the injured hand and experiencing no discomfort, and two hours later I told them of the demonstration. Relatives and friends who were present had not noticed anything unusual, until their attention was called to it.

If we are faithful in following our Leader's instructions as found on every page of our text-book, and are prompt to destroy the belief in any other power than the one omnipotent, omnipresent Mind which is God, there will be no interruption in our harmonious progress, and we shall realize that, like the copper plate, our only value is derived from the omnipresent good flowing in a never-ending stream around us.

In large mills the plates are generally cleaned once a week; that is, the gold is collected and sent to the mint. So every student of Christian Science finds it beneficial to collect frequently the riches which Love has so freely given, to enumerate his blessings and return thanks therefor by giving to others, that this healing truth may become current coin in the redemptive thought of the world.

SIGNS OF THE TIMES.

J. L. WRIGHT.

Are there not many signs that we have entered upon the "last days"—the last days of error? Do not the subtle manifestations and deceptions of evil which we discern all about us indicate that error is fast ripening for destruction, indeed, in many instances is even now being destroyed?

How often do we find people, including many in the ranks of the religious, attributing real power, if not life itself, to some newly discovered or exploited thing, such as radium or electricity, which, while it may be interesting and wonderful, is purely material. It seems a common thing for religiously denominated and comparatively thoughtful people to be deluded into taking highly developed materialistic acts and things to be absolute good, truth, reality. Thus people's views of life become materialized, and we hear of such propositions as serving tea at prayer-meetings as a strong attraction to those who might otherwise fail to come, and of other forms of entertainment being offered in church services, as substitutes for spiritual food.

It is now not unusual for people who call themselves Christians to point to the works of various institutions, whose objects, though philanthropic, are wholly without the spiritual element, as the blossoms of modern Christianity. An earnest and devoted pastor of an orthodox denomination recently asked: "Who in this time is doing greater works than Jesus did?" and in reply to his own question said: "The hospitals." Yet certainly these hospitals, benevolent as their purposes may be, make no effort or claim to help spiritually those to whom they minister. Can any institution, system, or method be correctly characterized as truly Christian which leaves out the element of spirituality?

While the materialistic views and utterances of many intelligent people nowadays may seem shocking, still, in the light which Christian Science throws upon life and the Scriptures, is there not something in these same signs of the times which is encouraging? Is not error, with its

Digitized by Google

refined and subtle imitations and illusions, fast reaching or approaching the stage of materialism where its falsity and failure must be recognized by those whom it now deceives and keeps from seeing spiritual truth? Surely there are indications of progress in these conditions, and they remind the Christian Science student of these words of our Leader: "We welcome the increase of knowledge and the end of error, because even human invention must have its day, and we want that day to be succeeded by Christian Science, by divine reality" (Science and Health, p. 95).

TAKING GOD'S NAME IN VAIN.

EYRE CARTER.

ONCE, while reading the twentieth chapter of Exodus, I was struck by the narrowness of the limit within which most people confine the meaning of the third commandment, "Thou shalt not take the name of the Lord thy God in vain; for the Lord will not hold him guiltless that taketh his name in vain." The great English thinker and writer, John Ruskin, partly tore aside the veil of human misconception when he said, "If we hear a man swear in the streets, we think it very wrong, and say he 'takes God's name in vain.' But there's a twenty times worse way of taking His name in vain than that. It is to ask God for what we don't want. He doesn't like that sort of prayer. If you don't want a thing, don't ask for it; such asking is the worst mockery of your King you can insult Him with; the soldiers' striking him [Jesus] on the head with the reed was nothing to that. If you do not wish for His kingdom, don't pray for it."

Such an interpretation of the third commandment is indeed a voice "crying in the wilderness," but those to whom Christian Science has revealed the inner meaning of the Bible, realize that the behest given to Moses means even more than this. They realize that it means, Thou shalt not in thought, word, or deed belittle God's allness. We break the third commandment if we "ask God for what we don't want." Why? Because to do so is to treat God as if He were at the beck and call of the human will, whereas we know that He is "the King of kings," who, "since He is unchanging wisdom and Love" (Science and Health, p. 2), meets our every *need*.

But the taking of God's name in vain includes still more than this. Once we acknowledge that God is All, that He is the only power and presence, and all orthodox Christians do acknowledge this, is it not belittling our concept of God to believe in the power or presence of anything unlike Him? If we for one moment admit that error, whether mental or material, has a real existence and is able to control man, we are attempting to set up an entity in opposition to Deity, we are attempting to lessen the infinite. Every time we do a wrong action, every time we say a wrong word, every time we think a wrong thought, we are taking God's name in vain; whereas, the scientific understanding of God's all-power and a silent or audible declaration of this great fact, honors God and delivers us, thus proving that God's law is our sure defense.

THE MANUAL.

The 88th edition of The Mother Church Manual, containing all of the recent changes, has been issued and is now on sale.

Subsequent editions of the Manual will be issued when new by-laws are made or when important changes are made in by-laws already in effect; and due notice of each new edition will appear in the *Sentinel*.

Address all orders to Allison V. Stewart, Publisher, Falmouth and St. Paul streets, Boston.

SELECTED ARTICLES.

[Frederick Dixon in *Onlooker*, London, England.]

The headmaster of Eton, and the author of the pamphlet to which Canon Lyttelton's endorsement in the preface alone lends any significance, have been guilty of an indiscretion. They have set out to attack Christian Science. Only success could have condoned an attack so completely gratuitous and so amazingly inept. The only success they have achieved is a *succès de rire*. The fact is that both of them would have been well advised to refrain from the adventure; the pamphleteer because he knows nothing at all of the subject upon which he has undertaken to enlighten all and sundry, and Mr. Lyttelton because it surely is no part of the duty of the headmaster of Eton to pant, in the character of Ralpho, at the heels of a Hudibras who is himself a practitioner of some form of mental therapeutics.

After screwing his courage to the sticking-point of throwing in his lot with the big battalions, the pamphleteer expresses his willingness to bear all the blows which his intrepidity may bring about his devoted ears. If he had been leading a forlorn hope against the bulwarks of orthodoxy he could not have "spoken fairer." Seeing, however, that he has carefully ensconced himself behind their shelter, in order to heave the largest missiles of convenient rhetoric he can find on the heads of the diminutive band of Christian Scientists below, who were not even attempting to attack him, his attitude shows a refreshing lack of humor. Nor is the headmaster of Eton to be outdone in this respect. He talks benignly of the effects of Christian Science on "semi-educated people," forgetting, in the stress of his emotions, how many of these people received their education at Eton. As a matter of fact, I can assure him that Christian Scientists have been educated on very much the same lines as their neighbors, and that some of them are even quite intelligent—too intelligent, in fact, to have noticed the pamphlet in question had he not lent his name to it.

As I have stated that the author does not understand the subject which he has undertaken to criticize, it may be worth while to show categorically that this is the case. The alternative—that he does understand it—would leave him and his apologist in ethically a far worse case. He states, for example, that Christian Science healing varies from that practised by Jesus, inasmuch as the healing of Jesus was directed to men's souls, whereas that of Christian Science is directed to their bodies. In plain English, that the one aims at healing sin and the other at healing disease. If the pamphleteer had attempted to pervert what Christian Science teaches he could not have done it more glaringly. On page 150 of Science and Health, Mrs. Eddy writes as follows: "Now, as then, signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin—to attest the reality of the higher mission of the Christ-power to take away the sins of the world."

It would manifestly be difficult for any one to have stated more specifically precisely what Mrs. Eddy does *not* teach, and that is why it is more charitable to conclude that he has spoken in ignorance of his subject. But Mr. Lyttelton, if he felt moved to endorse this sort of criticism, might, as a scholar of some distinction, have remembered the cardinal maxim of the craft, "to verify your references."

No man, perhaps, ever committed himself to so many reckless and unsupported *ipse dixits* on the subject of his neighbor's religion as Canon Lyttelton's curious *protégé*. From one point of view this is fortunate for him, for in the occasional instances in which he has attempted any argument his logic is truly amazing, though it seems to have satisfied the headmaster of Eton. He states, for example, that Christian Science healing is no more a proof of the truth of Christian Science than a doctor's successful use of

Digitized by Google

a remedy is a proof of the truth of his religion. Now, in the first place, it is a little hard to believe that even the pamphleteer imagines that the effect of a dose of quinine administered by a Calvinist or a Roman Catholic is as much a proof of the truth of predestination or transubstantiation as the healing of a case of consumption by a Christian Scientist is a proof of the efficacy of prayer as understood in Christian Science; and, secondly, if this were really so, of what in heaven above or earth below would any healing he might accomplish be a proof? If the canon had to commit himself in print on a subject with which he is obviously imperfectly acquainted, why did he not confine himself to elucidating knotty little points of this kind?

Then the headmaster of Eton, still blindly following the lead of his *protégé*, falls foul of Christian Science as a denial of the Trinity. It is very much easier to excite prejudice at the expense of your neighbor for disbelieving in the Trinity than it is to explain what you yourself mean by the Trinity. If the headmaster of Eton will explain what he means by the Trinity it would be more to the point. A few years ago the Athanasian Creed was read in every church, and the congregations of those churches declared that any one who disbelieved in the teaching of this creed was doomed to damnation. The Athanasian Creed is no longer accepted with the same cheerful unanimity by the church. It would appear, therefore, that there is a sort of time limit as to what view of the Trinity is to be obligatory on churchmen, just as the vice-principal of Lichfield Theological College has recently stated four views of the atonement as a prelude to developing a fifth of his own. Whether, therefore, the headmaster of Eton does or does not accept the Athanasian Creed, is one of the things it would be interesting to learn before entering into a discussion on the subject.

Whether orthodox theology will be grateful for this display of what the headmaster of Eton describes as "the unique experience" which gives the pamphleteer a right to claim the attention of the public, is quite another question.

[Howard C. Van Meter in *Portland* (Ore.) *Oregonian.*]

If our critic's teachings border, as he says, on both those of Christian Science and a movement which advocates the use of drugs with prayer, it necessarily follows that his ideas are a combination of opposites which find no amalgamation either in logic or application, since Christian Science is as far removed from this movement as the divine will upon which Christ's teachings were based is removed from the human, hypnotic self-will.

Our critic is said to have given many instances of the cures that have yielded to treatment according to the teachings of Jesus Christ as practised by himself. We take it for granted that any one who claims to practise the same system as that taught by another must follow without deviation the rule or law of that system. Jesus never commended material methods of any kind, neither did he admit any limitation or specification as to the healing power of God, but on the other hand he did heal "all manner of diseases." Nor did the hostility or indifference of the church to the gospel of healing ever interfere with his cures. Therefore, we question our critic's authority for claiming his ideas to be based upon the Christ-method which today has been brought to humanity through Christian Science as an operative, practical manifestation of God.

We are glad that the good which Christian Science has accomplished is acknowledged and that it is admitted to be God's will. Since the latter statement is true, this good must come through God, and this, as well as the fact that all good is positive, will relieve one from any doubt as to whether Christian Science produces good in a negative way rather than through the understanding and application of its divine Principle to every human problem.

[Edward W. Dickey in *B'nai B'rith Messenger*, Los Angeles, Cal.]

In a late issue the statement is made that the Jew should beware of the "false God of Christian Science." Now the God of Christian Science is none other than the "God of Abraham, the God of Isaac, and the God of Jacob." The Christian Scientist believes in one omnipresent God, and thus affirms the Shemah: "Hear, O Israel: The Lord our God is one Lord." The God of Christian Science is not and cannot be false, because this Science declares for the one and only true God. The Christian Scientist, therefore, like the Jew, rejects a manlike God and accepts and builds upon the statement, "God is a Spirit."

There are many reasons why the Jew turns to Christian Science for help. Aside from the practical value, he finds that in this religion Christianity has but returned to the promised Messiah. He also finds the Old Testament illumined, the lore of Israel brought out in all of its spiritual practicality, and the Decalogue in its right setting. With Christianity returned to Truth, he no longer remains an "alien" or a "stranger." Thus it is that "there is neither Jew nor Greek, there is neither bond nor free, there is neither male nor female: for ye are all one in Christ Jesus."

[Henry Deutsch in *Mankato* (Minn.) *Journal*.]

We are not seeking to convert or proselyte. We are not asking or seeking to change people's religious views against their wishes. We believe in the spiritual interpretation of the Scriptures. More particularly are we firmly convinced that when the Master sent his disciples to "preach the kingdom of God, and to heal the sick," he meant that we were under obligation to do both things and not one only; and that the Master emphasized the idea that if the gospel were properly preached and practised, the healing of the sick must follow. Therefore, the practice of Christian Science is not allied with any mental or suggestive therapeutic system, but is *sui generis* in this age, though claiming to be not in any wise different from the system practised by the Master.

Jesus held that the power of God was manifested or rendered efficacious by two means: First, by faith; second, by abstinence from sin. In other words, Jesus' statement was largely, "Thy faith hath made thee whole," followed by the command, "Go, and sin no more." It is fair to assume that Jesus intended to bring home the truth that diseases were caused by ignorance or sin. A fair interpretation of the Scripture leads directly to the assumption that sin consists in a lack of faith in God or a deflection from the worship of the one God, as well as the other phases of sin which are more commonly known, such as theft, murder, etc. Jesus saw clearly the relation between man and God. He understood that God is Spirit, infinite Love, and the infinite source of all real being. He realized that when man stood in his proper relation to God, man reflected God, and therefore was in a position to appropriate all things from the infinite source.

It is a historical fact that for three centuries after the crucifixion of Jesus, those who followed his precepts and walked in his footsteps performed the same marvels, or miracles, as they are now called, which the Master performed, and this was particularly true of those whom you say were first called "Christians at Antioch." It should also be remembered that these same "Christians at Antioch" had the term applied to them as an epithet of opprobrium and ridicule. The healing power of Christianity continued until it became institutionalized as a part of the political power of the state under Constantine, and it is a curious as well as an interesting historical fact that when the Master's simple religion became formulated into creeds and doctrines coincident therewith, it lost its virility and power as formerly manifested in the wonderful demonstrations of the healing of both sickness and sin.

Mrs. Eddy claims nothing further than to have redis-

Digitized by Google

covered the Principle and rule of healing that was exemplified by the Master, and by his disciples for three centuries after. Whether or not Mrs. Eddy is correct, or whether or not her philosophy is to be accepted, is of course a matter of individual decision and consequence, but we are not trying to urge this upon any one. The standing that Christian Science now has all over the world ought to be sufficient warrant to demand for it at least courteous and respectful treatment, and to insure it from attempted ridicule or mockery. By the Master's test, "By their fruits ye shall know them," it has sustained its position. Surely, then, we have a right to expect that toleration from those who profess to be followers of the Master, whatever their creed, because he enjoined on his followers that charity and love which extended even so far as to the command, "Love your enemies."

[W. E. Fell in *Huddersfield* (Eng.) *Examiner*.]

In an article headed "Mental Healing" in a late issue, "The Hospital" enumerates a list of reputed therapeutic mental agencies, among the number being Christian Science. It is declared "that the success of their treatment depends on the receptivity of the patient combined with a capacity for conveying suggestion on the part of the practitioner." I believe this method to be admittedly that which is practised by the other agencies mentioned, but it most emphatically is not the way where Christian Science is concerned. Any one can certify to the truth of this statement by a perusal of the chapter in "Science and Health with Key to the Scriptures" by Mrs. Eddy, with the caption, "Animal Magnetism Unmasked."

All hypnotic agencies, wherein one mind dominates another mind, are unqualifiedly condemned in the teachings of Christian Science, and should be so condemned by all right-thinking people, for in theory they are just as capable of being used for evil ends as for any other. Hypnotism in all its branches implies despotic control, and human nature being such as it is, this mental domination is more likely to be used for sinister purposes than for the welfare of mankind. Christian Science, on the other hand, is a radical reliance on God and His Christ, a clear apprehension that God is the author of good, and of nothing of a contrary nature; that no material condition is so bad that it cannot be overruled and ruled out by the spiritual law as taught and demonstrated by the Founder of the Christian religion, Christ Jesus. Hypnotism and Christian Science are as far apart as are the east and west.

[Alfred Farlow in *Boston Post*.]

It is not at all strange that the audience of our clerical critic was surprised when he said that Christian Science is "a most pernicious and astounding fraud," and that the people who accept it are "fools," since almost every man and woman in the country has at least one intimate friend who he knows is not a "fool," and yet has been a beneficiary of Christian Science and has accepted its teachings. The gentleman is reported as having likened Christian Science to "a short bed and narrow covering under which the judges of Israel failed to hide."

To continue the metaphor, he does not explain why hundreds of us, because of various infirmities, were not able to stretch our legs to the full extent until Christian Science came to the rescue. It seems rather late to berate the theory of Christian Science after it has established itself by good works. It would be well for a clergyman to remember the Scriptural declaration, "By their fruits ye shall know them."

If the "crazy quilt" of Christian Science restores the lost health, harmony, and happiness of the individual and enables him to master sins which heretofore have held him in bondage, no doubt all of our critic's hearers will eventually provide themselves with one. The writer of this article did not secure one until he felt the need of it, and I confess that if I could have been relieved of my distresses by any means which were tangible to my material senses I should have deferred the investigation of that which is not perceptible to the senses, but which is none the less real. However, there is no "mystery" to be found in Christian Science, if one regards it from its own—the spiritual point of view.

The gentleman declares that Christian Science is "neither scientific nor Christian." Briefly stated, science is that which one knows. It is demonstrable knowledge. Christian Science plants itself unreservedly on the Scriptural premise that God is Spirit, and thus far no critic has ever undertaken to prove that any portion of the Christian Science text-book is not consistently deduced from this premise. If our critic accepts the Scriptural teaching that God is Spirit, he does so in contravention of the material senses, and in order to accept the entire teaching of Christian Science he has only to be consistent with this acceptance.

Christian Science does not deny that sin and sickness have a relative existence. In Christian Science the term real is applied only to that which is of God and is, therefore, eternal. Christian Science does not deny the existence of pain and sin in what Solomon called "the error of life," but it insists that these must be grappled with and overcome according to the spiritual understanding of their nature.

I have no intention of making any attack upon Hindooism or any other religion, but in answer to the gentleman's allegation I desire to state in unmistakable terms that Christian Science has no kinship whatever with Hindooism.

[C. L. Ramsay in *Montrose, Arbroath, and Brechin* (Scot.) *Review*.]

In a recent issue is a reference to books "exposing Christian Science." This would imply that there is something lying behind the teaching of Christian Science which cannot bear the light. And yet, what is Christian Science? Those who understand it well enough to be able to heal the sick and the sinner by its means will tell you that it is nothing else except the revelation to mankind of the infinite perfection of the God who is Love; that the only message it has to bring is the old, old message of "on earth peace, good will toward men;" the only demand it makes on its followers, that they obey the commandments—"Thou shalt have no other gods before me," and "Love thy neighbor as thyself;" the only object it has in view, that all evil may be overcome by the omnipotence of good. What Christian Science asks of the world today is honest investigation. Two thousand years ago the incredulous Galilean said to his friend, "Can any good thing come out of Nazareth?" The answer was, "Come and see." Is it too much to ask that those who wish to know if there is any good to be found in Christian Science should come and see? Let them study the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, which is to be obtained at every Christian Science reading-room in the world, and judge for themselves.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be Nov. 4, 1910. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 18, 1910.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to June 3, 1910, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

TAKE NOTICE.

THE article on the Church Manual by Blanche Hersey Hogue, in the *Sentinel* of Sept. 10, is practical and scientific, and I recommend its careful study to all Christian Scientists.

MARY BAKER EDDY.

"POWER TO HEAL SICKNESSES."

THAT man is subject to sickness, and that sickness can be cured and life prolonged only by material means, is the claim upon which all attempts to secure so-called medical legislation, or legislation for "the conservation of human life," are based; and the question before the public at the present time is whether this assumption is true.

How any one who believes in the Bible as the inspired word of God, be he Christian or Jew, can bring himself to accept the claim that material means are necessary for the restoration of health, is somewhat hard to understand, for both the Old and the New Testaments so abound in accounts of the healing works wrought by the prophets, as well as the Messiah and his apostles, that the rejection of spiritual healing is tantamount to a rejection of both Judaism and Christianity. The fact that spiritual healing has been done at any time, no matter how remote, is proof enough that the sick can be healed today by spiritual means, for what has been done once can be done again, inasmuch as that which was accomplished by the prophets, who according to the Scriptures were recognized and acknowledged as men of God by reason of their healing work, must have been done according to spiritual law, that law which is unfailing and ever operative,—now as in ages past.

Jesus certainly accomplished his healing work in the name of God,—"the Father that dwelleth in me, he doeth the works,"—and according to "the will of the Father." Unless, therefore, we are to believe that "the will of the Father" is changeable or erratic, we must believe that the healing of disease through the same spiritual means which the Master employed—the knowledge of the Father—is not only possible to us today, but the legitimate and the only legitimate means of perfect healing.

The trend of belief on this subject has been, until within the last few decades, away from the spiritual to the material, but as proof has accumulated that spiritual healing is possible now as in Jesus' time, the foundation of this belief has been gradually undermined, and men have commenced to think for themselves along logical and sane lines. They have begun to recognize the futility of anything inferior to the law of God, and there is a growing demand that the seeming mystery which has always surrounded the administration and application of material remedies,—practices which generations of patients have accepted with a blind belief in their necessity,—shall be cleared away. In the face of the irrefutable testimony as to the efficacy of the healing truth taught in Christian Science, thinking men can but see that there is no warrant for the contention that drugs and surgery are necessary to the healing of the ills of humanity.

Mrs. Eddy writes on page 110 of Science and Health: "Jesus demonstrated the power of Christian Science to heal mortal minds and bodies. But this power was lost sight of, and must again be spiritually discerned, taught, and demonstrated according to Christ's command, with 'signs following.'" Humanity has reason to rejoice that the spiritual law under which the cases of healing recorded in the Scriptures were wrought has again been made available through Christian Science. The faithful demonstration of this teaching is, we believe, the reason for the awakening which is taking place in human thought today, and it is because of this awakening that the belief that sickness can be healed only with the aid of drugs is rapidly losing ground. The demonstration of the efficacy of the Christ-healing,—the opening of the eyes of those long blinded by false beliefs,—is the task set us as Christian Scientists, if we would show ourselves loyal followers of the Master and of her who all undaunted declared the truth of her discovery of the Christ Science in the face of a world of unbelief.

ARCHIBALD MCLELLAN.

GROWTH.

WHEN we look about us at this season of the year and behold the rich and rare colors of the early autumn as reflected by fruit and flower, we may well pause to consider the significant statement of our text book, "that God creates all through Mind, not through matter,—that the plant grows, not because of seed or soil, but because growth is the eternal mandate of Mind" (Science and Health, p. 520). Of late years this fact has been finding expression not only in the depths of spiritually awakened thought, but in the outward world as well. No longer do we bow submissively before the long accepted belief that winter's stormy blasts can deprive us of the things that abound in the summer time, unless we bring them from the genial tropics, but instead we see evidences of the universal operation of the law of growth, which is the same everywhere that its conditions are complied with, no matter how faintly we may discern its ceaseless activity.

In Christian Science, however, we are most deeply concerned with the law of growth as we are conscious of its operation in ourselves or in others who have been awakened to the truth of being. In many cases the soil into which the seed of Truth is dropped appears to be very poor indeed; there is ofttimes a stony substratum of solidified belief in disease, heredity, etc., thinly covered over by a belief in material remedies and asserted health laws; yet, in spite of these unpromising conditions, we soon find wonderful evidences of the operation of the spiritual law of growth. This is explained by our revered Leader where she says, "Leaving the seed of Truth to its own vitality, it propagates: the tares cannot hinder it. Our Master said, 'Heaven and earth shall pass away, but my words shall not pass away;' and Jesus' faith in Truth must not exceed that of Christian Scientists who prove its power to be immortal" (Miscellaneous Writings, p. 111).

It is quite true that under present human conditions it seems necessary to prepare the soil of human thought as well as the soil into which we drop seed for a material harvest, but in the case of the former the all important thing is to know the vitality of Truth's idea and depend upon it to crowd out that which has not its origin in the divine Mind. Christ Jesus compared the kingdom of heaven to a grain of mustard seed, which he said was "the least of all seeds:" yet he declared that from this seed there came a tree in which the birds of the air lodged. Thus it comes that a little word of truth is dropped into the consciousness of some one who may be hopelessly ill, according to mortal belief,—"nothing to build upon," is the verdict of *materia medica;* but the spiritual law of growth begins to be felt in its mighty operations, and as a result the belief in disease, which is no part of man's being, gives place to the eternal fact that man lives because God is his Life, and

Digitized by Google

because health and holiness are his normal rightful condition.

At first the sense of health may be only like a tiny plant, just rising above the soil, but even so it is beautiful to look upon, because of its divine origin. It enables the erstwhile invalid to say, "I can now sleep, and eat, and walk!" Later, when he has grown nearer the stature of divine manhood, he says, "I can do all things through Christ which strengtheneth me." In Isaiah we read, "As the days of a tree are the days of my people;" and in Psalms, "The righteous shall flourish like the palm-tree: he shall grow like a cedar in Lebanon."

ANNIE M. KNOTT.

SPIRITUAL DISCOVERY.

NARRATIVES of exploration always have a fascination which is both peculiar and persistent. We read them over and over again with unabated zest. They keep us ever in that absorbing attitude of expectation which is the vestibule of discovery, and when we remember that the prospector is always looking to a resulting gain which embraces everything that is highly esteemed of men, his enthusiasm, his readiness to suffer and to hazard, is fully explained.

With ever more startling rapidity, in our times, physicists and inventors have been bringing forth those marvels of material mastery which demonstrate the dominion of thought and prophesy the richness of the realms of the yet unknown. Undreamed-of forces and relations which, since the foundations of the world, have been waiting the perception of an adequate sense, are being enlisted in such wondrous ways for the service of mankind that the impossible of yesterday is constantly becoming the commonplace of today. This progress of discovery has always been born of the union of two things, confidence in the existence and availability of an unappropriated good, and patient endeavor in the line of induction from known phenomena, or deduction from a known law which is believed to be causally related to the desired end. Columbus would never have supplied the democratic idea with its broadest arena of expression and growth had he not been possessed of an unfaltering faith in the possibility of achieving his undertaking, and an unextinguishable enthusiasm in its pursuit. What was true of him has been true of every other great explorer, whatever the field of his research, and it is particularly true of the Discoverer of Christian Science.

Having reached an impelling conviction of the ever-presence and availability of divine Truth for the enrichment of aspiring consciousness, and for the destruction of all that is opposed to the divine nature and will, Mrs. Eddy tells us how earnestly and patiently she sought through prayer and Scripture study for the positive and practical rule of scientific mental healing, and how "sweet, calm, and buoyant with hope" (Science and Health, p. 109) the momentous search became. Scenting from afar the fragrance of her longed-for land of faith, she held on her course, like the brave Genoese, despite all mortal adversities, until its empurpled shores burst upon her vision, an incontrovertible revelation of Truth whose attainment is to be a discovery for every individual.

Christ Jesus said, "The Father loveth the Son, and sheweth him all things that himself doeth: and he will shew him greater works than these, that ye may marvel. For as the Father raiseth up the dead, and quickeneth them; even so the Son quickeneth whom he will." Thought is simply overwhelmed by this disclosure of the compass and efficiency of the Nazarene's spiritual understanding, and when we realize in Christian Science that this wondrous statement is true of every divine idea, every Christlike man; that the infinite reach and richness of the domain of Truth, the wisdom and power and beauty and glory of God are accessible, that they may be drawn upon and utilized for the attainment of the ideal life of freedom and usefulness and joy, then indeed it can but seem passing strange that the Christian desire and expectation of apprehending all that for which we are apprehended of Christ Jesus should be so weak and indefinite, while the characteristic *ésprit* and enthusiasm of the scientific investigator is ofttimes wholly wanting.

Christian Science declares not only for the allness of good, but for the possibility of its discovery, of apprehending and utilizing it, as did the Master, for the endowment of every believer with the fortune and freedom of "the sons of God."

JOHN B. WILLIS.

AMONG THE CHURCHES.

WILLMAR, MINN.

The corner-stone of First Church of Christ, Scientist, Willmar, was laid at six o'clock on the morning of July 26. A copy of the Bible, the text-book, the latest issues of the Christian Science periodicals and local papers, also a list of members, and a historical sketch of the church, were inclosed in an iron box and set in the stone, after which it was put in place—*Correspondence.*

NEWPORT, R. I.

It was the desire of the members of First Church of Christ, Scientist, here, to distribute and introduce the *Monitor* during the recent sojourn of the United States fleet in Newport, R. I., and we were able from Thursday until Saturday evening to put out two thousand one hundred and fifty-four copies of the *Monitor*. There were sixteen vessels, and we sent one hundred of the different issues to each vessel.—*Correspondence.*

WINSTED, CONN.

The Christian Science Society of Winsted has closed a deal for the purchase of the Perkins property, corner of High street and Fairview avenue, on which they contemplate building a church in the near future. This is considered by the Christian Scientists their third step of progress in Winsted.

The first service was held at a private house Dec. 9, 1900, and in January of the next year a society was organized. Until June, 1905, the meetings were continued at private houses, with the exception of one year, when services were held on Sundays in Pythian Hall. In June, 1905, the society was reorganized and rooms were fitted up especially for them in the Wetmore block on Main street, where public services are now held and public reading-rooms are open daily. During the past few months these rooms have proven inadequate to accommodate the growing interest, and after consideration in regard to larger quarters the Scientists have decided to build.

The lot is most centrally located for church purposes. Situated at the head of Union street, it overlooks Main street and is in one of the best residential districts. A building fund has already been raised to purchase the property free from debt, and it is planned to have sufficient funds soon to build a chapel, for which plans are already being considered.—*Winsted Citizen.*

NOTICE.

Publication committees will confer a favor on the editorial department by mailing promptly to the EDITOR a copy of all published articles. Clerks of branch churches can also be of assistance by sending reports of all lectures given and items relative to progress in church work.

THE LECTURES.

SAN BERNARDINO, CAL.

Frank H. Leonard delivered a lecture to a large audience at the Opera House Thursday evening, April 7. The lecturer was introduced by the Rev. Mark B. Shaw with the following words:—

I am a lover of sunshine, of happy thoughts, of kindly words, and of smiling faces. Nothing can give me greater pleasure than to be in the company of those who put forth their best endeavors to banish unkind words and critical speeches and rasping tones from daily life. Many of my friends and acquaintances are Christian Scientists, and I have been greatly impressed by the fact that, without exception, they seem to be happy, contented, generous, and hopeful. I do not now call to mind one of them, who, like the old farmer, "enjoyed being miserable." I do not remember one of them who has ever bored me with long stories of aches and pains, of the pangs of "rheumatiz" of "floating liver," or of just plain "mizzery." I take great pleasure in welcoming to our city one who is the exponent of fundamentals and doctrines which produce such delightful characteristics in my neighbors, and shall listen to him with pleasing expectations and alert attention.

San Bernardino Index.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Anaconda, Mont.—Bliss Knapp, Opera House, Sept. 22.
Berlin, Germany.—Bicknell Young, Beethoven Saal, Koethener 32, 8:15 p.m., Sept. 29.
Calgary, Alta.—Frank H. Leonard, Y. M. C. A., Sept. 22.
Denison, Ia.—Prof. Hermann S. Hering, Opera House, 3 p.m., Oct. 2.
Fort Collins, Col.—Bliss Knapp, Majestic Theater, 3 p.m., Oct. 2.
Geneva, Ill.—Mrs. Sue Harper Mims, Congregational Church, 3 p.m., Sept. 25.
Hanford, Cal.—Frank H. Leonard, Hanford Opera House, Oct. 4.
Horton, Kan.—Francis J. Fluno, M.D., Opera House, 8:15 p.m., Sept. 27.
Hurley, S. D.—Prof. Hermann S. Hering, I. O. O. F. Hall, Oct. 4.
Kansas City, Mo. (First, Second, and Third Churches).—Willis F. Gross, Convention Hall, Sunday afternoon, Oct. 2.
La Grange, Ill.—Rev. Arthur R. Vosburgh, Church Edifice, 8:15 p.m., Oct. 4.
Lawrence, Kan.—Francis J. Fluno, M.D., Bowersock Opera House, Sept. 30.
Lincoln, Neb.—Judge William G. Ewing, Oliver Theater, Oct. 2.
Mexico, Mo.—Francis J. Fluno, M.D., Court House, Oct. 3.
Michigan City, Ind.—Prof. Hermann S. Hering, Grand Opera House, Sept. 19.
Rapid City, S. D.—Prof. Hermann S. Hering, Library Hall, 7:30 p.m., Sept. 29.
Redfield, S. D.—Prof. Hermann S. Hering, Opera House, 8:30 p.m., Sept. 30.
San Francisco, Cal.—Frank H. Leonard, Columbia Theater, 3 p.m., Oct. 2; Christian Science Hall, Sacramento and Scott streets, 8 p.m., Oct. 3.
San Mateo, Cal.—Frank H. Leonard, New Masonic Temple, Ellsworth avenue, Sept. 30.
Sioux City, Ia.—Prof. Hermann S. Hering, Auditorium, Oct. 3.
South Bend, Ind.—Mrs. Sue Harper Mims, Oliver Opera House, Sept. 23.
Virden, Man.—Miss Mary Brookins, Opera House, 4 p.m., Oct. 2.

TESTIMONIES OF HEALING.

In presenting this testimony of what I owe to Christian Science, I feel that I am discharging in a measure a debt of gratitude which can never be wholly paid, for can we ever cease to be grateful for that which never ceases to bless? About five years ago I was prevailed upon by a friend to try Christian Science for an attack of illness, brought on apparently by overwork. I was helped in a few treatments, and for about a year had Science treatment every time a physical ailment arose, having long since lost all faith in *materia medica*. While my cures were always rapid, I did not in reality make any progress in the knowledge of this Science, although at the time I thought I understood it perfectly. I had read through the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, several times, and because I had, as I then thought, absorbed its intellectual content, I fancied I knew all there was to Science and that there was nothing further to be gotten out of it; nor was there for me, at that time. I was not spiritually qualified to unlock this treasure-house of wisdom and love. I needed to be awakened, in the fullest sense of the word, before the truth which makes free could enter my consciousness.

After my first year of Christian Science I very unwillingly returned to *materia medica*, owing to my husband's bitter opposition to what he considered Science to be. I was never entirely well; in fact, I had not been so for years; still, I did not often have recourse to medical aid, for the reasons before given. I had several chronic complaints which medical treatment had failed to cure, and which I thought I would always have to bear. Besides, I was in a continual state of fear,—fear of drafts, fear of food, fear of fatigue, fear of anything and everything that came under the name of material law. Under these circumstances it is not to be wondered at that my condition kept growing worse and that my ailments increased; and when, some months after, my baby was born, I was thrown into a state of almost total collapse. Finding that I was unable to care for my child, and not willing to give him into the charge of strangers, I went to the home of relatives. I had medical treatment every day for about four months, the doctor, a dear old friend of the family, taking more than a professional interest in my case. Still, though everything was done that *materia medica* on the one hand and love on the other could suggest, my progress was fitful and slow. Certain spells of suffering came on at this time that nothing but an opiate would relieve. The doctor, unable to find any material ailment to account for these pains, called it a "sick habit," and said I would outgrow them in time. But instead of this, they kept getting worse and alarmingly more frequent, so that all hope and courage left me and symptoms of extreme depression began to set in.

I had never in my heart given up Christian Science, and now in sheer desperation, craving the truth as never before, I asked for Science treatment. A practitioner was called in, a woman whose very presence radiated love. I had been treated about two weeks or so, and though quickly relieved during treatment, the spells kept coming on more frequently and each one was seemingly more severe than the last; when suddenly one day the realization came to me that I was healed. It was like a voice whispering to my consciousness the good news, and I jumped up, filled with a strange new joy. I did not know at first whether to trust this silent messenger, but when day after day passed without pain, when I felt myself growing stronger and saw that I was gaining flesh, I knew the truth had made me free indeed, and inwardly I breathed a prayer of thanksgiving to God. In that instant I was cured of all my ailments, among which were chronic bowel and bladder difficulties, and I laid aside the glasses which I had worn constantly for twelve

Digitized by Google

years. More remarkable, even, than the physical change in me at that time, was the mental upheaval. It was as though a picture that had always been seen upside down was suddenly set straight. Whereas before my cure every circumstance had worn to my mental gaze a distorted shape, filling me with nameless fear and dread, now for the first time I was able to see things in the right light. Darkness vanished, and with it went the spectral twins. The demonstration was beautiful and complete.

This happened about two years ago, and since that time Science and Health has hardly been out of my hands and never out of my thoughts. I am studying it with a love and reverence that cannot be measured, for it continues to grow with my understanding. I have had many occasions to demonstrate Science during this last year, but in every instance have found cause for rejoicing, since each conquest over error is a mile-stone passed in our journey toward the spiritual kingdom. There are problems still to be worked out in Science, and though at times I feel the need of more spiritual guidance, help always comes with the asking when I pray aright; sometimes a thought in the *Sentinel* or in a Lesson-Sermon gives the required aid. The problems themselves are bringing blessings in the shape of added patience and faith, thus proving our dear Leader's words, "When these things cease to bless, they will cease to occur" (*Sentinel*, June 12, 1909); and I know that as I gain a fuller understanding of God and His laws, they, too, will be mastered and a correspondingly higher spiritual altitude be won.

As for Mrs. Eddy, whose spiritual, moral, and intellectual fitness has enabled her to be God's interpreter to this age, the whole world will one day know that it is her debtor, and greater earthly reward than this, there is none.

MRS. SOPHIE R. WEINERT, Sunnyvale, Cal.

Christian Science came to me when life was almost unbearable. I was a wreck mentally and physically, but after having taken up the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, I gained an understanding of the power of Truth and I was healed. I am now a different man. My associates with whom I am daily thrown can no doubt notice a change, but God alone knows the wonderful transformation that has been wrought in me through Christian Science, for which knowledge I am very grateful. I earnestly recommend it to a suffering world.

JOHN W. MCCRACKEN, Logtown, Miss.

In recalling my first visit to a Christian Science practitioner, the following conversation comes to me: "I have no faith that I can be healed." The practitioner remarked kindly: "You must have some faith or you would not have come." My reply was, "I don't think you can help the physical condition, but I do believe you can help me to overcome the fear of disease." The illness from which I was suffering was to sense a very serious lung trouble. I had been told some months previous that I would have to go out West; so the thought came to me to try Christian Science, though at the time I knew little about it.

Like many others, I thought it was all right for so-called nervous diseases, but that when it came to any organic trouble it would be of no avail. I wish to add right here that in my case the so-called organic disease was overcome in a very short time, while a nervous condition was slow in yielding. In five treatments I was healed of the lung affection—with cough, night-sweats, and great weakness. I shall never forget my first treatment; the whole world seemed to be transformed, and I felt as if I could never "see evil any more." Since that time I have had to come down from those heights, and step by step travel the road from sense to Soul. I have also been healed of a chronic stomach affection and of chronic weakness of the bowels in a few treatments. Before coming into Christian Science I was constantly using some material remedy; now I have found God to be my strength. This truth came to me in what seemed the darkest hours of my life. The testimonies in our periodicals have been such a help and encouragement, when doubts and fears seemed to surround me.

While I am grateful for the physical healing, I am still more grateful for the spiritual quickening, for the elimination of wrong thoughts, such as hatred, revenge, jealousy, and their like. The nervous condition is gradually yielding, and a recent proof of God's power was the healing of a badly injured ankle. I had a few treatments, and the first day was able to keep an appointment, though I did not put my whole weight on the foot, and on the fifth day I walked naturally. This meant a great deal to me, having had a similar experience in the old thought, when I was not able to use the foot at all for over a week.

For all these and many more blessings I am truly grateful to God for His loving protection and guidance, and to Mrs. Eddy for her life labors.

MISS ELIZABETH MOERECKE, Chicago, Ill.

[Translated from the German.]

Like many other sufferers who have trusted in God and set their last hope on Him, I too feel impelled to express my gratitude publicly and to call attention to the healing work accomplished through the wonderful teachings of Christian Science. I had suffered for years from a severe stomach disorder with all its attendant ills, and such a sense of despair would often take hold of me that I became tired of living. All the medicines which I took, as well as baths and massage, afforded only temporary relief. Some time ago a lady with whom I am acquainted told me about having been wonderfully healed through Christian Science. This lady had been suffering for years with the same disease and all its attendant complaints, and told me that she now felt like one new born. When I heard this I took courage, and applied to a Christian Science practitioner here for help. She took up treatment, and four weeks later I was healed physically and mentally. I am now a happy and contented woman, and attend to my household duties with joy.

In proof of my gratitude, I shall not fail to call attention to Christian Science, and to its beneficent influence on mankind, as often as an opportunity occurs for me to do so.

FRAU P. SCHREIBER, Hannover, Germany.

I come with a heart overflowing with love and gratitude to God, and to our dear Leader, for this truth which has set me free and placed my feet on the rock, Christ Jesus. Christian Science has given me an understanding of the one infinite Mind that governs man. I was for ten years a great sufferer, afflicted with many diseases. I was treated by local doctors, and took their medicine, but finally they could do no more for me and I went to an infirmary, one of the best in the South, where I had several surgical operations performed. I had the best of material treatment, and was cared for by good nurses, but I felt something was lacking. I would often ask the physicians who attended me to pray for me, but somehow I felt that their prayers would not help me. Finally I came home, but in a few months I had to return in a more deplorable condition than at first.

During these months I had begun to seek God as my healer, and to search the Scriptures daily, but I failed to get my healing. I read that Christ Jesus healed all manner of disease, and I longed to be healed in this way, but no one here believed in the Christ-healing. One day, when I was suffering intensely, a dear friend sat by my bedside, and I felt impressed to remark in her presence that I intend to quit all this medicine and trust in God for my healing. She said that the day of miracles had passed, and that I must take medicine. I told her that I had been reading the

Digitized by Google

Gospels and I had learned what Christ did, and that he is "the same yesterday, and to day, and for ever." I had never heard of Christian Science at this time, so I again went away for surgical treatment. It was while on the cars, as I was returning home, that Christian Science was presented to me. A lady handed me a copy of the *Sentinel,* and even as I looked it over I felt that it meant healing for me. I asked the lady if she was a Scientist, and her reply that she was made me very happy, for I knew that at last I had found what I had been seeking. She also gave me a *Journal,* and on reaching home I told my husband that I had found what would heal me. I sat up till a late hour that night reading the testimonies, and I never shall forget how I felt. They seemed to me the sweetest messages I had ever heard, and that the brightest sunshine was flowing into my life.

I had suffered greatly from sleeplessness, but next morning I arose refreshed, and ate what I pleased, which was something I had not done in a long time. I purchased a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and learning where I could find a practitioner, I went to her home at once. As I related my story I was instantly healed of female trouble, a disease which had exhausted the skill of a number of physicians and which they had told me could never be cured. I can truthfully say that the pain has never returned from that day till this, now over two years. I was also healed of a serious chronic stomach trouble. I read Science and Health almost day and night for months, and by the help of this kind practitioner and my constant study, the ailments began to vanish, and health came. With it came an understanding of God, divine Principle. While I had been a church-member for years, and had a great desire to do good, I never before could find out how to do it.

I am indeed glad that Christian Science teaches us that heaven is not afar off, but is wherever Truth abides, as by this understanding my life has become much happier. While all my pathway has not been smooth, but many a time has seemed very rugged, I have remembered the Master's words, "Lo, I am with you alway, even unto the end of the world." I have never used a material remedy, either for myself or two of my little boys, since coming into Christian Science, and I do thank God that through this truth they have been relieved from severe suffering. Neither one of them has been in bed a single day since Christian Science entered our home, and previous to that they were often in bed for weeks with some illness or other. One boy was greatly afflicted with epilepsy, and I had suffered terrible anxiety on this account; but the understanding gained through the study of Science and Health at once destroyed my fear, and he has never had the least symptom of the disease since. God's wonderful power also healed the other little fellow of a severe attack of illness. Many alarming conditions have appeared, but God is the healer of "all thy diseases."

In the dear old Bible we can find a remedy for every one, with the Key which our dear Leader has given us to unlock it, and I cannot express my love and gratitude to Mrs. Eddy therefor. The only way I can adequately show my thankfulness is to go on letting my light shine more brightly each day. I pray that I may be found ever active and faithful, never forgetting for a moment that God is the giver of this great gift.

MRS. CORA COLLEY, Morgan, Ga.

I wish to express my gratitude for all the good which has come to me since I began the study of Christian Science, over five years ago. I was then suffering from a serious nervous condition, which manifested itself in various ways, chief among which was a partial paralysis. For a period of three years I tried various material remedies, but without permanent relief. While in a distant city, I asked for Christian Science treatment, and received the help I was seeking; in less than a dozen treatments the twitching and paralysis of the face entirely disappeared and has never returned.

This manifestation of the power of Christian Science convinced me that I had found the truth which would give me a practical understanding of God. I began the study of the Bible, in connection with Science and Health, and have proven to my entire satisfaction that Christian Science is all that it claims to be, and that it may be demonstrated by all who "study thoroughly the letter and imbibe the spirit" (Science and Health, p. 495). The nervous condition and consequent manifestations were entirely overcome through further treatment and personal effort, and only those who have been delivered from such conditions will realize what this meant to me and to my family.

Many demonstrations of the availability of God as "a very present help in trouble," have strengthened my conviction that Christian Science is the truth taught by Christ Jesus, and I realize now that only as I live up to my highest understanding of this Science can I express in any degree my gratitude to God, also to Mrs. Eddy, for having gained some understanding of this truth which indeed makes us free from the bondage of material sense.

JEANNE A. CHICHESTER, Petoskey, Mich.

I am glad to express my gratitude for what Christian Science has done for me. In February, 1903, I was smitten with a sudden and acute attack of rheumatism. I did not work from that time until November of the same year. I tried the best doctors, but got no help. I went to Michigan and took sulphur baths, but the following May I had a return, worse than the first attack. The doctor gave me up, and said he could do no more for me. I then had other treatment, but it gave me no help. I could not move hand or foot, could not even speak aloud. When, through a friend, I finally called a Christian Science practitioner, I had not eaten any food for eight or ten days. In three days I sat up in bed, and by the end of the first week I was sitting in a chair and eating whatever I wished; all pain and swelling had gone. I soon returned to my work, feeling better than I had for years, for which I am most grateful.

In February, 1909, as I was stepping off a train, I slipped on the ice and fell between the train and the station platform. I was badly crushed and bruised by the trucks of the cars, but I was taken out and carried to the hotel, where I asked for a Christian Science practitioner. In one week I returned to my home, was there in bed for another week, and was back at work in ten weeks. My weight was one hundred and ninety-five pounds, and I hardly think that even a smaller man could have escaped serious injury.

I have not taken any medicine since my first help in Christian Science. I read Science and Health daily, and am most grateful to God for all the help that has come to me.

G. E. FLAISIG, Quincy, Ill.

About nine years ago I collapsed with what *materia medica* diagnosed as extreme nervous trouble. The three and a half years that followed were so filled with mental and physical suffering that I am today grateful beyond all telling for my changed condition. Many physicians of the different schools were called upon to help me, and I was taken about to see what change of scene and climate would do for me, traveling by rail and water. As each new experiment was tried, there seemed to be some relief, but the gain was soon lost in another attack, until I was brought very low indeed. Christian Science was not entirely new to me, but I never thought of trying to get help from it during these years of pain. When but a child I had heard of Mrs. Eddy—in fact my father purchased her book, "Science and Health with Key to the Scriptures," which was at that time in its fifteenth edition. Later I read it, but it made no im-

Digitized by Google

pression upon me. I laid it aside as "too deep," yet always kept it among my books and brought it to Mexico with me.

One evening toward the close of the year 1905, after a long trying day, I suddenly said to my husband, "Where is my copy of Science and Health?" The words came without premeditation, as I had not thought of the books in years. He brought them to me, and I opened the first volume at page 189. My eyes fell on these words: "Fear is the foundation of all sickness," and I could read no farther. I seemed to realize in one moment how filled with fear I was, but together with that realization came the perfect assurance that I need not be afraid, and then followed the longing to know how not to be afraid. I believe the healing began from that hour, and gradually I was made free from the bondage of fear. The terrible symptoms left me one by one, and after a short time I could eat, could see my friends, and be among them once more, and could again enjoy my family and home.

At the time we joined The Mother Church I had no trace of nervous collapse, and headaches, stomach trouble, fainting spells, etc., all had left me. The lifting from mental depression, fear, and worry is truly most wonderful, and for this great blessing I am deeply grateful—grateful to God, who truly does work "in a mysterious [to human sense] way His wonders to perform;" and grateful to Mrs. Eddy for the wonderful help her "Key" is to us. There are many things for me yet to overcome, but today I work and study as one with a great hope.

MARY D. VAN ANTWERP, City of Mexico, Mexico.

I am very glad to vouch for the statements made by my wife in her testimony. It was one of the most striking proofs of the power of Christian Science to heal by the study of the text-book alone, and without the help of a practitioner. —A. L. VAN ANTWERP.

The healing power of Christian Science came to me when I was abroad. It came as the light of my life! I read, studied, and with all my energies sought to know more and more of it. One day a paper was handed to me which I was told was a personal letter from Mrs. Eddy. I eagerly read it, but after struggling several days with mental distress I went to a practitioner, who told me that these letters were spurious and should be destroyed, and that I should study "Science and Health with Key to the Scriptures" as my text-book.

By so doing I was immediately benefited. I love Mrs. Eddy and am grateful for every effort made by the Publishing Society to give us the truth in its absolute purity. I am indeed happy in the study and demonstration of Christian Science.—LAURA M. SCHNEIDER, New York City.

Years ago my ignorance of Christian Science made me very antagonistic to it, but later, after I had tasted of its healing waters, I was lifted above a sense of loss which had come to me, with the help of a kind practitioner and these words from one of our hymns:—

And right is right, since God is God;
And right the day must win;
To doubt would be disloyalty,
To falter would be sin!

Again, after a short time, another ill presented itself in a visible form, one which to *materia medica* is very serious; and I can say to those who have not been immediately lifted out of their troubles, that they should read, study, and ponder, for, as Mrs. Eddy says, "The Bible contains the recipe for all healing" (Science and Health, p. 406). To me, and to my friends' darkened sense, it seemed as if Christian Science was not able to overcome this ailment, but I have learned through hard trials that there are no failures in this Science, and that we have to attune ourselves to it. When I sought the healing of sin instead of the healing of flesh, I gained both.

There may be some who will say, as I did, "I do not sin, I go to church, I pay my debts," etc., but through this wonderful study I have learned how we do disobey God's law. A false sense of life and being makes us sick, while a clear and scientific sense of God's creation, of His limitless supply, and the strength for our every need, has made me well and will keep me so. I know that when I can realize the full sense of Love all discords and evil will vanish like mist before the sun.

Words cannot express what Christian Science has done for me—I must express it in deeds. I am grateful to Mrs. Eddy for showing us the way to accomplish what has been done. I have indeed many reasons to be thankful, and the love-messengers.—the *Sentinel, Journal,* and *Monitor,*—can never be appreciated enough.

MISS EMMA E. HAHN, Sheboygan, Wis.

Five years ago, on leaving home to reside in San Francisco, my grandfather, one of the pioneers of Indiana and a Methodist minister, presented me with a copy of that wonderful book, "Science and Health with Key to the Scriptures," with the following inscription on the fly-leaf, "Read, and ponder well." Prior to this my grandmother had experienced several demonstrations of the power of Truth, which tended to open the eyes of those in our household, so on my departure I was beyond the stage of unjust criticism of Christian Science and willing in a measure to investigate; or at least not to condemn, its teachings.

As I was then enjoying the best of health, seeming success in business, and was contented with the way in which the world was treating me in general, I neglected to read the book, and allowed it to remain unopened. During my residence in San Francisco I encountered temptations to do that which I knew at the time to be evil; still, under my belief at that time, and from examples before me, I yielded occasionally, feeling that by asking God's forgiveness for these sins He would grant it. Time went on, until I had been in San Francisco about eight months, and then things became different. Mortal mind had its grasp on me, and I began mental accusations against my employer,—of jealousy, injustice, of almost everything. I was not obeying the commandment to love my neighbor as myself. I came back to Indianapolis on a vacation, all the time nursing this bitterness in my heart toward my employer. The company for which I was working decided to keep me here in their home office, having made other arrangements for my work in the West. My work here commanded a lower salary than I had been receiving and the work was of less importance, but I accepted all this as being sent by God and continued to feel bitter.

I was indeed in a deep pit, and one day while meditating over it all I picked up my copy of Science and Health. While reading the chapter on "Prayer" I could feel a great change take place in my consciousness, and I then and there commenced the overcoming of a very disagreeable disposition which I had cultivated during my entire life, and especially during the preceding few months. On continued reading I sought a new lease of life, and endeavored to lay aside all bitterness toward my fellow-men.

Through the realization that God is "the great I AM, the all-knowing, all-seeing, all-acting, all-wise, all-loving, and eternal; Principle; Mind; Soul; Spirit; Life; Truth; Love" (Science and Health, p. 587), I have been enabled to overcome the sense of limitation, and have been healed of farsightedness and other defects of vision which had been pronounced incurable. I have also been freed from severe headaches, which I had had regularly for many years, also healed of numerous other ailments which mortal mind asserts to be real. I have learned from all my experience in Christian Science that God is the "great Physician," and that if we would heed the promise of Christ Jesus, "Come unto me, all ye that labor and are heavy laden, and I will

Digitized by Google

give you rest," instead of relying on material aids, we should be happy indeed.

Shortly after my return home, and during his last illness, my grandfather, who was eighty-seven years of age, and, as I have said before, a minister, made the remark that if he were fifty years younger he would devote his entire time to work in Christian Science. This served as an incentive to me, coming as it did from one whom I loved and honored so much; so I determined to take up the cross, and at all times obey the counsel of our revered Leader, viz., "Watch, and pray for that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us; and to be merciful, just, and pure" (*Ibid.*, p. 497).

I thank God that I can now look with love upon all men, especially those against whom I once held bitterness in my heart, for I strive to see at all times only the perfect man created in the image and likeness of God. I am indeed grateful to our beloved Leader for bringing to us once more the true healing religion, as demonstrated by Christ Jesus, our Wayshower.

EUGENE G. REXFORD, Indianapolis, Ind.

My attention was directed to Christian Science by seeing the benefits of treatment given to a boy whose case had been diagnosed by the doctors as hip disease. His brace was laid off and he returned to school as usual. I then began to attend First Church of Christ, Scientist. I was an attentive listener at the Wednesday evening meetings, becoming convinced that the speakers had that Christianity pure and simple which I wished to have. In the early months of 1905, while traveling in Iowa, I had a severe attack of acute lung trouble. I applied to a practitioner for help, and treatment was begun in her home. My associate in business knew nothing about Christian Science, and he was afraid that I would not be able to get to Chicago; but we did, and absent treatment was given me for two weeks, when I was fully recovered. I purchased the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, but I was so pleased with my quick recovery that I wrote the practitioner that if anything happened to me later, I would like to consider her my regular practitioner. She, however, gently rebuked me, telling me to read Science and Health and that I would then be able to help myself. I did read the text-book, but like many others I did not grasp its deep meaning until I learned that I should think more about the truth of which I had read.

Later, there happened to me, through the folly of wrong-doing, a serious illness. I went to a practitioner, and told him of my faults. He gave me a number of treatments, then said he did not think I needed to come again. At the table where I sat in a family hotel, there were a mother and daughter who belonged to First Church of Christ, Scientist. Noticing that I was getting lame with rheumatism, they suggested that I call on a certain practitioner, not far away, for treatment; and this I did. She needed no explanations, but said to me after a treatment, "I think you need not come again." I was greatly surprised at her assurance, but could not accept it as applying to me, because I seemed to suffer so much from the pains. Seeing, I suppose, my lack of faith, she gave me several treatments afterward, and having to leave the city, she sent me to another practitioner, who worked perseveringly until the healing was realized. I had absent treatment for failing sight of one eye, then for difficulty of hearing, also for hernia, until one after another all these ailments disappeared. Later, I slipped on the ice and injured my wrist, but was cured in one treatment.

While some ailments remain, I feel deeply grateful to God for His tender mercies, and to Mrs. Eddy for Science and Health and her other writings. My desire is to acquire a practical spiritual understanding.

JAMES EDWIN CLARK, Dayton, O.

Christian Science was first presented to me in June, 1905, when I was entirely healed in one treatment of nervous breakdown and threatened brain fever, after being under a physician's care for over two months without getting the slightest relief. This healing proved to me that there is something in Christian Science, so I purchased a copy of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, in an endeavor to understand how the healing was accomplished. During the first two years I had to call for help in Christian Science for severe colds, also for trouble with my hands and feet, and in nearly every case experienced immediate healing. During the last two years I have been able to make my own demonstrations, besides being of some help to others. A case of catarrh with which I had suffered for about ten years (consulting with many doctors without the least benefit), also disappeared during this time.

One of the difficulties which I had to overcome was the attitude of my family toward Christian Science. Although they acknowledged my healing, they were strongly opposed to my studying Christian Science, being of the Jewish faith. This was the condition of affairs until April 1, 1908, when they saw that better and quicker results are attained by Christian Science than by *materia medica*. Two cousins, a brother and sister, were taken sick on the same day with a fever. The girl was healed in one treatment by Christian Science, while her brother, who would not accept its aid, was in the hospital for over six weeks. This demonstration changed the attitude of my family and relatives toward Christian Science.

I am earnestly striving to prove by my deeds my heartfelt gratitude for all that Christian Science has done for me. Although the physical healing is wonderful, it cannot compare with the peace and inspiration which have come to me through the understanding gained by studying Christian Science. My daily prayer is that I may follow our dear Leader's example and have that Mind which was in Christ Jesus.—ELIZABETH LEWISON, Chicago, Ill.

I wish to tell of the healing of my daughter, which took place in 1903. At that time she suffered from extreme nervousness, and was obliged to leave school. The complaint manifested itself in various ways, such as great fear, sleeplessness, and loss of appetite. She was under the care of several practitioners at different times during the summer, but the case did not yield. We, however, held to Christian Science, being fully convinced of its true healing power, and again called a practitioner, who successfully reached the case. In a comparatively short time my daughter was well and able to resume her studies. She has never had a return of the disease, and today is a picture of health.

We are very thankful to God for this healing, and also wish to express our gratitude for Christian Science as brought to us by our Leader, Mrs. Eddy, enabling her followers to apply the understanding of her teachings to the redemption of all mankind from sin, sickness, and death.

MRS. ANNA E. HANSON, Austin, Ill.

For some time I have felt impressed to give a testimony of my healing through Christian Science, as a token of my gratitude and love for our Leader. I was healed five years ago of a complication of diseases. I had been sick for a year, had spent several months in the best sanitarium in the state, and had undergone a surgical operation, after which the doctors said I would be well. Time passed, and as I was no better I returned a second time to this sanitarium and received treatment, but was still no better. After treating me for several weeks, the physician candidly admitted that he did not know what was the matter with me. Then I went to another specialist in another city, and was under treatment for several months, after which I returned home in a perfectly hopeless condition. I had given up.

Digitized by Google

Just at this stage of helplessness Christian Science was brought to me by an aunt who came all the way from another state to tell me of this healing truth. I had no faith in it, but as a drowning man catches at a straw, I consented to try it. Truly "man's extremity is God's opportunity," for, lo, I was quickly healed. My healing was grand, but it was not to be compared with the spiritual uplift I received through the light of Truth. I had tried to be a Christian. I had been a church-member for years and kept all the rules,—but I got no joy from my religion, and there was always such a yearning for something more spiritual.

It was only through Christian Science that I received that peace "which passeth all understanding." I can never be grateful enough for Christian Science, but I hope to show my gratitude by devoting my life to spreading the "good news."—MRS. JULIA DUBOSE, Washington, Ga.

[Written for the *Sentinel*]

"THINE INHERITANCE."

BEN. HAWORTH-BOOTH.

DEAR dweller in the dust of earth,
Man is not dust, and ne'er shall be:
His lineage of celestial birth
Provides a happier fate for thee:
Then lift on high those earth-bound eyes,
And take thy birthright of the skies.

Through Truth is the dominion given
Of all the earth, and air, and sea:
And all the height of highest heaven
Becomes a paradise for thee:
And thou shalt know nor sin, nor pain,
For Love has loosed thy captive chain.

Like eagle brooding o'er her young,
God hides thee 'neath His wings of might:
From fowler's snare and slander's tongue
He guides thy wandering ways aright:
The shafts of hate He turns aside,
And screens thee from the scorner's pride.

Who dwelleth in His secret place,
Beneath His shadow shall be blest
With joy and gladness of His face
And mercies full and manifest:
A thousand at thy side shall fall,
And thou be saved amid them all.

For He shall give His angels word
To guide thy hand and guard thy feet,
To save thee from the ravening sword,
And whisper counsel wise and sweet:
And this because aloft, apart,
To Him thou givest all thine heart.

And thou shalt rule the rolling deep,
And fearless ride the rustling wind,
Or wing the darkness while we sleep,
To bring new blessings to mankind,
To save from sickness and from death,
With healing hand and prayerful breath.

Thy life with love and light is fraught,
And His sweet Spirit, for thy guest,
Is guardian at thy door of thought
To bless thee—and thou shalt be blest:
Thy pain is past, thy sorrows cease:
He giveth His beloved peace.

FROM OUR EXCHANGES.

[*Interior.*]

Respect for the spiritual independence of one's neighbor, honor for him in the exercise of his right to seek out his own answers for his own soul's questions; sympathy in other men's struggles with doubt and strivings after light; gentleness and helpfulness toward those who seem to be departing from the truth; generosity and fairness toward those whom conviction calls one to oppose—whoever has not attained to these graces comes obviously short of being yet a thoroughly good Christian. And this general principle was exactly as true in the sixteenth century as it is in the twentieth. The men who were intolerant then—the men who fought and persecuted such as differed from them in belief—were in this degree not good Christians. And men who have it in their temper to do the same thing today are not good Christians any more than their prototypes were. When the Lord Jesus rebuked those disciples who would have called down fire on the heads of the inhospitable Samaritans—when he reproved them again for interfering with the man who, though not of their company, was yet casting out demons in the Messiah's name—he set an unalterable standard for his church. It is the business of the power of Christ to overcome the world and to conquer the flesh. Where it has free course to be glorified in any life, it will create toleration in spite of all obstacles.

[*Standard.*]

We are apt to measure religion in terms of theology rather than of experience. Religion is primarily a matter of life and not a question of statement. It is not something which can be attached on to a man's program of conduct, it is that which inheres in the very structure of human nature and which the soul demands for its highest perfection. Unless religion is a personal force, identified with the individual life, it is superficial and foreign to the daily life of need. Religion, defined in its deeper meanings, is man's right relation to God. Man can never express, in human terms, his concepts of what religion means to him. This necessitates constant modifications of statements of belief. There never has been a time in the history of organized religion when men have had so much to compel them to readjustment of thought, as in our own age. Popular education and the modern world-spirit, modern science and scholarship, all have contributed to bring men to new viewpoints of truth, though they have not done away with the need for truth or driven truth out of the province of religion. Every man's religion must depend in large measure upon his intellectual drifts, what he has received through inheritance and upon his experience. These things go a longer way than we suppose in influencing every man's interpretation of a divine revelation. Religion never can be confined in some permanent form of thought or type of service, any more than the sum of human need can be put into a single personality. So long as no two men are precisely alike, so long we must have a religion which will fit into the need of every man.

[Sidney Arthur Alexander, canon of St. Paul's Cathedral, in *Churchman.*]

Righteousness! How it has been narrowed down in the conflicts of the sects, by the blindness and one-sidedness of our little ecclesiastical schools of thought, until it has lost much of its ancient splendor! To one it has meant knowing right, to another being right, to another doing right; but now we are beginning to see that it means all of these, and more—that, whether we incline to evangelical, or sacramental, or rational conceptions of religious truth, righteousness must be our foremost test and aim. On the lips of

Digitized by Google

Jesus Christ it has a deep and splendid and comprehensive meaning; in it meet and are blended faith and character and conduct, these three; it is as glorious as the ideal beauty, as wide as the eternal truth. He alone is righteous, according to the gospel, who, independent of the desires and opinions and judgments of the world, is living in communion with a living Christ.

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth.*]

These things that seem to be you are not you. The real you is that which feels hungry for something better than you have ever found yet, or than the things of the outer world can supply. You suffer, you are starved and stunted, because you have not broken through, have not risen above, the things which come between you and God. Do you not understand that that in you which protests against the evil you do is already one with God? I love to call it Christ, for it is Christ. Christ is the sap of the tree of humanity, the force whereby we utter the divine idea that we are. In coming to yourself you find him; in coming to him you find yourself. And just as the summer flowers rise out of the darkness of the earth, lift their faces toward the sun in high heaven, and bathe themselves in his light, so must you arise out of the darkness of materialism, animalism, and selfish desire, and join yourself to the glorious love and joy of the eternal. "I will arise and go to my father."

[*Outlook.*]

One of the most profound changes between the ages which thought in terms of death and this age which thinks in terms of life is the modern hatred of waste. Death was a frightful waster; life is a tireless conserver. We cannot and will not endure the waste which our ancestors accepted as a matter of course; the salvation of the few, the destruction of the many, is not only hateful, it is incredible. Its doom was sounded in the hour when men began to see God as Christ saw Him. An angry God, hating sinners and pursuing them with relentless fury, has gone the way of the other nightmares which haunted our forefathers. A just and righteous God, hating iniquity and punishing it with unfailing impartiality, but following the offender with tireless mercy of forgiveness and opportunity, has revealed Himself in these later times and set the thought of life in place of the thought of death.

[Rev. F. F. Buckner in *Universalist Leader.*]

What are the vital things of religion? Not creeds; not theologies; not revenues and taxes; but the deep, eternal things of the human heart. They are the lessons of love, mercy, justice, self-control, faith, hope, and self-renunciation. These the prophets and poets have proclaimed in all the ages of change. Like the sky, the sea, and the reflection of the stars in the sea, these change not from century to century, however the outward conditions of human life may be changed by peaceful progress or vengeful war. "Feed my sheep," said the Master. The good shepherd—the helpful minister—who helps men and makes them strong and brave, has a mission today, and will always have under all outward conditions of living.

[*Watchman.*]

Christ, as king of human hearts, must be presented as he presented himself, in simplicity, in humbleness, in peacefulness, in gentleness, so that he wins love and gains devotion. We, as followers of him, extend our sway also by the method of the Master and must gain subjects for him by our Christian qualities. It is hard to perceive that these are the winning forces in the world, as they seem so ineffective beside the methods of men, but they prove themselves to be the silent, pervasive, persuasive means of drawing hearts to Christ.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings Description and prices of these will be found on the outside cover page of the *Sentinel.*

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel.*

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

TO SUBSCRIBERS.

Subscribers to our periodicals are requested to observe the expiration dates of their subscriptions, as given on the wrappers of the periodicals which come to them, and to renew subscriptions prior to the date there given.

The notation "Nov. X" indicates that the periodical will not continue after the last issue of November, 1910, unless subscription is renewed, and "July XI" in the same manner denotes termination with the last issue of July, 1911.

Subscribers are also requested to refer to the subscription rates given in our standing notices before sending in subscriptions.

OF INTEREST TO THE FIELD.

The Publishing Society has a limited number of volumes of the *Journal* and *Sentinel* bound in cloth, half morocco, and half calf and arranged in sets from four to nine volumes. These sets are now on sale at special prices, ranging from $9.20 to $21.00, according to the style of binding and number of books in the set.

These special prices apply only on sets of books, and in no case on single volumes. The offer presents an exceptional opportunity to Christian Scientists to obtain rare volumes for reading-rooms, libraries, and individual use. Detailed information will be furnished on request.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herald,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90, six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage, at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news dealer, 12 cents a week payable to the news dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The National Association of Supervisors of State Banks held a three-days convention at Washington last week. They were addressed by the controller of the currency, Mr. Murray, who proposed to the state supervisors a working cooperation with the national bank examiners. During the last eighteen months, the controller said he had refused one hundred and eight applications to form national banks because the men behind them had been found incompetent or dishonest; that there was not enough business to make the proposed institutions profitable, or that the applicants were men without standing within the communities. Weak banks and failures almost always come from banks which should never have been chartered.

Approximately ninety million acres of land withdrawn from entry as being valuable for coal deposits or for classification, have been thrown open to agricultural surface entry under regulations approved by the acting secretary of the interior. The opening of these lands is accomplished under the act of June 22, 1910, one of the Administration conservation measures providing for the agricultural entry of the surface of public coal lands, the coal deposits being reserved for separate disposition by the United States. The agricultural title will pass from the United States, but all coal deposits will remain subject to exploration and purchase under appropriate coal laws.

The special commission created by the Massachusetts Legislature to appraise the property of the New York, New Haven & Hartford railroad has engaged Prof. George F. Swain to superintend the work. He will organize a force of experts and clerks and set it to work at once. This commission consists of the railroad commission, the tax commissioner, and the bank commissioner. Its work will be to examine the assets and liabilities of the company for the purpose of determining if the assets are sufficient to secure its outstanding capital stock and indebtedness, the expense of the investigation to be assessed upon the New Haven property.

The Pennsylvania railroad tunnel system beneath two rivers, which finally is to connect New Jersey and Long Island by continuous trackage, was opened last week so far as the section from Manhattan to Long Island City is concerned. The tunnel from New Jersey to this borough is complete now and will be opened later. A comparison of the old and new Long Island railroad schedules gives an idea of the saving in time for those living on Long Island who come to Manhattan. Where it formerly took forty-four minutes to come from Jamaica to Manhattan it now takes just fourteen minutes, and there is a corresponding saving from other points.

At the Boston-Harvard aero meet, held at Atlantic Sept. 3-13, Claude Grahame-White, an Englishman, won prizes amounting to twenty-two thousand one hundred dollars, including one of ten thousand dollars for a double flight to Boston light and return, a distance of thirty miles; Ralph Johnstone won prizes amounting to five thousand dollars; Walter Brookins, four thousand two hundred and fifty dollars, and Glenn H. Curtiss, who made the trip from Albany to New York a short time ago and also flew across Lake Erie, two thousand dollars. The meet was a very successful one every way. New American and world records were made.

During the next few weeks the few national banks in the United States which are rated as "weak" will have their last chance to strengthen themselves or get out of business. The one hundred and five examiners have been instructed to carry that ultimatum to every board of directors which needs it. Acting on the principle that it is better to liquidate a weak bank, pay off the depositors, and save some of the investment for the shareholders, Controller Murray will use all the authority of his office to compel sound banking in the strong institutions and force the weak ones to strengthen or retire.

"The principles of conservation," says Gifford Pinchot, "are few and simple. One of the first is that the natural resources belong to the people and should be developed, protected, and perpetrated mainly for the profit of all the people and not mainly for the profit of the few. Another principle is that the natural resources still owned by the people, which are necessaries of life, like coal and water-power, should remain in public ownership and be disposed of only under leases for limited periods, with fair compensation to the public for the rights granted."

According to a report submitted to the board of directors of the Philadelphia Rapid Transit Company, the strike of conductors and motormen early this year cost the company two million three hundred thousand dollars. The report states that the loss in fares during the strike was one million five hundred thousand dollars and the expenses incurred amounted to eight hundred thousand dollars. A deficit of one million three hundred thousand dollars for the last fiscal year is reported.

Dr. Booker T. Washington, president of Tuskegee Institute, has joined the staff of the *Outlook*, and his contributions will soon appear in that publication. Dr. Washington is now abroad for this magazine, studying social and labor conditions of the sources of immigration to the United States. He will compare this class of Europeans with the colored laboring class of the United States. The title of the Washington series will be "The Problem of the Man Farthest Down."

The Aero Club of Washington has concluded arrangements that will make the New York-Washington flight race an event of next month. Acceptances have been received from Glenn H. Curtiss and the Wright brothers and tentative acceptances from Clifford B. Harmon and Charles K. Hamilton. The prize is to be twenty thousand dollars. The President will be one of the receiving party, according to arrangements. An aviation meet may be held there in October.

Preparatory work has begun for the opening of the Government lands of the Panama Canal Zone to settlement and cultivation. An act of Congress of Feb. 27, 1909, provides for twenty-five-year renewable leases of tracts of not more than fifty hectares (123.5 acres), to persons twenty-one years of age or over, who satisfy the Government that they expect to settle upon and cultivate the land.

International.

The contract is to be let this month for the construction in Mexico of one of the largest systems of irrigation upon the American continent. The main canal will be sixty-three miles long and its construction will involve the moving of nine million cubic yards of earth. The system will also require the building of more than two hundred miles of laterals. More than six hundred thousand acres of land, extending along the Rio Grande from Matamoras to the San Juan river, will be brought under irrigation by the construction of this system, which will involve an expenditure of nearly ten million dollars gold, according to estimates that have been made by the engineers.

A. W. Canning, the Australian explorer, has been occupied recently in exploring a large portion of the Australian desert in behalf of the government of western Australia. In so doing he traversed about one thousand miles of hitherto unknown territory, from Wilune more than eight hundred miles north of Perth to Hall's creek in East Kimberley. It had always been considered impossible for stock to be taken through this part of the country, since it was believed that there was no water available. Mr. Canning has proved that there is water to be obtained all along the route.

A project is being considered of improving the Columbia river from its source in the Rockies, so as to provide for an international waterway which, upon the completion of the Panama canal, would give a commercial water route from the heart of the Canadian Rockies direct to London and New York. The proposed route covers seven hundred and fifty miles of river way from the Kootenay and Okanagan districts to Portland, Ore., one hundred and fifty miles of which are in Canada.

The British Cotton Growing Association some time ago sent an expert to Rhodesia for the purpose of inquiring into the possibilities there for the culture of cotton. He reports that there are large areas of land in northern Rhodesia suitable for the cultivation of cotton, and a heavy yield of lint per acre has been obtained in the Loangwa valley district.

Robert Loraine, the actor-airman, recently flew from Holyhead, Wales, across the Irish sea to within three or four hundred yards of Howth Head, Ireland, finally falling into the water and swimming ashore. The distance covered was fifty-two miles—a record flight over the open sea.

The municipality of Paris will offer a prize of twenty thousand dollars to the French aviator making a flight with a passenger from Paris to Brussels and return, on the occasion of the visit of the city fathers to Brussels on Sept. 26.

Industrial and Commercial.

The *Wall Street Journal* says: There is every indication that the production of automobiles for 1911 will be smaller than that of 1910. There are several reasons for this, the chief one being that bankers here and in the West have been attacking the automobile as a menace to the country at large and, what is more vital, have adopted a highly conservative attitude in making loans to the depositor contemplating the purchase of a car. Another reason is that certain makers overproduced for the 1910 season.

The exportations from Mexico of crude rubber, manufactured from the guayule shrub, during the fiscal year 1909-1910 aggregated in value $16,760,008, and that of the guayule shrub exported during the twelve months, $9,368,121. Less than ten years ago the shrub, which is now in great demand upon the ranches at one hundred and eighty to two hundred dollars per ton, was looked upon as worthless.

More cement was made and used in the United States in 1909 than in any preceding year and the price per barrel was lower than ever before. The production was 64,196,386 barrels, valued at $51,232,079.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"WHERE IS ABEL THY BROTHER?"

HON. CLARENCE A. BUSKIRK.

IN the fourth chapter of Genesis we are tersely told of the judgment which followed so closely upon the crime committed by Cain: "And the Lord said unto Cain, Where is Abel thy brother? And he said, I know not: Am I my brother's keeper? And he said, What hast thou done? the voice of thy brother's blood crieth unto me from the ground. And now art thou cursed from the earth, which hath opened her mouth to receive thy brother's blood from thy hand." This may recall the oft-quoted lines of Coleridge,—

He prayeth best who loveth best
All things both great and small;
For the good Lord who loveth us,
He made and loveth all.

Whether wicked or righteous, poor or rich, weak or powerful, low or high, all men are our brothers and all women our sisters; for we all alike, in our true selfhood, are God's children. Only divine justice is capable of right judgment upon man. True, it is our duty to condemn error, but what human being is capable of sitting in just judgment upon another? "Judge not," said the Master; therefore, condemn not, and hate not. Does one deem himself wise and knowing enough to estimate rightly his brother's temptations, weaknesses, environment? Indeed, we might often pity or love where we hastily censure. Do we not, all of us, quite too frequently try to justify ourselves to ourselves, as well as to others, with the pitiful and ignoble excuse, "Am I my brother's keeper?" Are we not, all of us, quite too prone to overlook the fact that a selfish and cruel thought may and does manifest itself in many other things besides murder? Does not Truth say, Thou must foster thy love for thy brother, and forget it not, however tempted to do otherwise; else, mortal thought may lead thee to do him injury. Whenever thou doest thy brother wilful injury, whether in person or in property, in character in reputation, or in happiness, art thou not as Cain and adjudged miserable,—"cursed from the earth"? And forget not that thou must guard against doing thy brother wilful injury with thy thought as well as with the power of hand or thy purse or thy place.

The impulse to kill often shows itself in the conduct of governments and peoples toward each other. Are they who direct, or abet, or sympathize with such thought in any wise different from those who are guilty in their individual acts? Ignoble attempts at self-justification are abundant as well as specious in all the instances alike. "Am I my brother's keeper?" This is the unworthy and false defense always. When the rich and powerful oppress the poor and weak they manifest the spirit of Cain, and divine justice has pronounced sentence against them. This is true of individuals and nations alike. Tardy it may sometimes seem; but it is as sure as the circuit of the stars, for it is God's law. When the poor or weak seek to do injury to the rich or powerful, or envy or hate them, they too are breaking God's law and must suffer the doom pronounced upon evil-doers. This evil thought frequently is brazen enough to make itself heard in legislative halls, although it likes better the whispers of bribers and corrupters; it flows in the ink of writers' pens, and defies the light of day in books and periodicals and newspapers; it envenoms the tongues of the envious, of mischief-makers and slanderers, of scolds, of all who are depraved in thought or deed. It is in the glances and words of the impure, and it seeks to conceal itself in the cunning wrinkles that it helps to mold upon the thief's face, whether a thief according or contrary to man's law. In brief, the act of the murderer is only one of its unnumbered manifestations.

Divine Love, for naught else could do so, purposes and effects the divine will. Divine Love explains the motive for the existence of everything which belongs to God's universe; therefore, all which is not in perfect alignment with divine Love must be under condemnation. God's universe is not a vacuum; behind the more beautiful appearances to human sense are the eternal facts of God's true universe, and these are symbolized in many harmonious phenomena to the spiritual vision. The reflections of divine Love shine in the symmetry and symbolism of the rainbow, they are painted on the delectable greenery and flowers of the earth, and they lend their radiance to the eyes of friendship and compassion. Divine Love is typified in the stately argosies of the clouds moving across the skies with their priceless possessions of rain and intelligently directed energies, in the roseate smile of the morning and in the eternal comradeship of the stars at night, in the trade-winds and tides of the oceans, in the sure recurrence of the seasons, in the hymns of the feathered hermits of the woods and the melodious murmurs of rills among their rocks; in brief, innumerably and indescribably. We are constantly surrounded by these benign influences. They appeal to us, they strengthen, purify, and cheer us, in myriad ways, in so far as they tell us of God. We may be faithless to them, but they are never faithless to us.

When divine Love is reflected and typified in human character and conduct, humanity awakens and steps forward and upward rejoicingly and with renewed hopes and energies, for thus we recognize our celestial kinship; but when the evil thought is shown in hatred, lust, greed, cruelty, and other evils, humanity is impelled backward. We cannot find happiness by selfishly seeking it; rather is it like the song-bird in Emerson's lines:—

Oft did-st thou thread the woods in vain
To find what bird had piped the strain;
Seek not, and the little eremite
Flies gayly forth and sings in sight.

Walk with loving thoughts the paths of thy duties, however dusty or difficult they may seem, and the shy song-bird of happiness is watching thee from its covert; but all the wealth and power of the world can never tempt it forth.

Thou who art obsessed with the belief in evil, in any of its phases, remember that the Father is not childless, and that thou by reason of man's kinship with all that is good canst still reflect somewhat of the beauty and beneficence of

divine Love. Try this—try it today—and mark well the results to others and to thyself. Our revered Leader says (Science and Health, p. 239), "To ascertain our progress, we must learn where our affections are placed and whom we acknowledge and obey as God. . . . The objects we pursue and the spirit we manifest reveal our standpoint, and show what we are winning."

UNFOLDMENT.

MAGDELANA FRICKEY.

In answer to the question, "How can I progress most rapidly in the understanding of Christian Science?" Mrs. Eddy writes: "Study thoroughly the letter and imbibe the spirit. Adhere to the divine Principle of Christian Science and follow the behests of God, abiding steadfastly in wisdom, Truth, and Love" (Science and Health, p. 495). In the Gospel of Luke we read, "And the child grew, and waxed strong in spirit, filled with wisdom: and the grace of God was upon him." Here we learn that, in order to grow individually, we must be obedient, as the first step. When Jesus was sought by his mother, where did she find him? Doing the work that his Father had sent him to do. His reply to his mother's gentle reproach, "Wist ye not that I must be about my Father's business?" conveys to us a profound meaning. When we are sought of others may they know that we can be found about our Father's business, ever working for the reign of Love to be revealed in each and every consciousness, and preparing it for the appearing and reception of the Christ-idea. In turn, may we always seek and find this idea reflected in others, and so bear true witness of man as God's child. By seeing this true likeness everywhere, the spiritual idea grows in ourselves.

We read further that "Jesus increased in wisdom and stature, and in favor with God and man." Mrs. Eddy says, "To understand all our Master's sayings as recorded in the New Testament, sayings infinitely important, his followers must grow into that stature of manhood in Christ Jesus which enables them to interpret his spiritual meaning" (*Ibid.*, p. 350). Let us "consider the lilies how they grow." With perfect trust we should look to Love to feed and clothe us, so that we may bring to others the holy influence of meekness, purity, righteousness, breathing forth the sweet fragrance of spiritual being. Like the lilies, our lives should exhale an essence which tells of His living presence.

Again, there is a lesson on growth from the vine and the branches: "Every branch in me that beareth not fruit he taketh away: and every branch that beareth fruit, he purgeth it, that it may bring forth more fruit." The purging process is most needful for our growth. It will take away whatever would prevent the manifestation of the perfect life, the fruit of Spirit. It is this fruit that feeds the hungry, and in the partaking of it we grow into the knowledge of life everlasting. In the lesson from the vine, wisdom teaches us to "abide," for each branch is to receive the same nutriment if it abides in the vine. How close we shall then grow to each other, so close that each and all share in the divine bestowal.

The growth of our cause rests upon the manifestation of the one Mind, and the reflection of love to each other. The Master said, "By this shall all men know that ye are my disciples, if ye have love one to another." Thus we fulfil the law of Life, Truth, and Love, and destroy the unreal law of sin, disease, and death. Upon this foundation, the truth, we build our church, the outward manifestation of divine Truth and Love in consciousness. As we spiritually discern and read our title clear, we lay upon this foundation stones of gratitude, and in oneness of purpose build our walls, cemented with unity, upon which will rest the dome, the whole crowned by love, and reflecting the kingdom of heaven.

As we behold The Mother Church, with one voice we say of it as does our beloved Leader, "God is in the midst of her: how beautiful are her feet! how beautiful are her garments!" (Miscellaneous Writings, p. 141). Surely the branch churches receive a fuller sense of life from the strong growth of the vine, if they abide therein. As one of our hymns so beautifully expresses it,—

Up into Thee, our living Head,
Let us in all things grow;
Till Thou hast made us free indeed,
And spotless here below.

"WHAT SHALL WE DO?"

LUCY HAYS EASTMAN.

We are all more or less familiar with the account of Jesus' feeding of the five thousand, and have gained therefrom an assurance that there is a law of supply which if understood and put into operation silences forever under all conditions the belief in or fear of limitation and poverty. We see also in this same experience how Jesus led the human mind, bound as it was by doubt, incredulity, and materialism, to the perception of this law by demonstrating its efficacy in meeting an immediate and practical need. In this way human desire was uplifted for something outside of itself, until in response to his gentle knock the doors of consciousness were opened wide and the question was asked: "What shall we do that we may work the works of God?"

Jesus' reply set forth the most important factors in the accomplishment of any righteous work; namely, that the desire, motive, and method be in accord with the Principle of righteousness, and that a faith amounting to an understanding of this Principle be gained. If we look deeply into the meaning of these words, we find the mental qualities for which they stand are interdependent upon each other and follow in natural sequence to the furtherance of any act or deed. For instance, a desire (longing for) is inert and lifeless of itself, and becomes operative only as it gains a motive (that which invites to action); while motive, to have fruitage, is dependent upon method (an orderly procedure), which in turn is dependent upon Principle for correctness. Jesus explained this when he said: "Ask [desire], and it [a motive] shall be given you; seek [this motive], and ye shall find [the method]; knock [use this method], and it [understanding] shall be opened unto you."

One's desires and motives may be right, but without method and Principle they are valueless; and *vice versa*. The multitude desired the loaves and fishes. Jesus unclamped and loosened this rank materialism with the reminder, "Your fathers did eat manna, and are dead;" hence the necessity to work for something beyond the mere satisfaction or need of the moment. Then, turning their thought to the "living bread" and its satisfying substance, he aroused a hunger and thirst for that of which the material loaves and fishes were but the symbol. Here it may be seen that, although Jesus' methods were destructive to all that involved the material testimony, they were always constructive to that which was based upon the eternal, the true and actual substance.

When the human consciousness beheld the Word "made flesh," and was convinced that Jesus possessed knowledge of a power of which it was altogether ignorant and which he was able to make practical in a most satisfying and helpful way, it immediately wished to do likewise, with the motive thus to glorify self. Recalling that Moses had performed a like miracle, and recognizing Jesus and Moses only as human personalities, but without the slightest perception of the spiritual identity lying back of the personality, which alone enabled them to manifest the works of God, this mistaken sense thought it reasonable to suppose that it could

Digitized by Google

follow their example. If for one moment it had realized the cost, the demand to be made upon self to awaken from the dream of satisfaction and pleasure in the senses, would the question have been asked?

How clearly Christ Jesus drew the line of distinction between mortal mind's frail attempt to do anything of its own self, and the wonderful manifestation of God's power as reflected by man, with the consequent result, eternal Life. He said that Moses had not given to their fathers the bread from heaven, nor had he himself been able to give them this true bread, save as he lived by (reflected) the Father, thereby rising out of the human self into the divine selfhood of God. The motive of the multitude being laid bare as unworthy of fulfilment, it was apparent that it lacked method and therefore was without Principle.

The Master was successful in doing the works of God because his desires, motives, and methods were righteous, and because he understood the divine Principle of all being and was obedient thereto. It is self-evident that a blind belief in the unknown could never bring out intelligent results. Following this line of thought, we find facts in the answer of Christ Jesus as to how to "work the works of God" that might be called axioms: 1. Every desire that is governed and controlled by divine Principle is fulfilled with "good measure, pressed down, and shaken together, and running over," in proportion to its sincerity, detached from all self-interest, self-glorification, and personal aggrandizement. 2. Inevitable success comes with every motive based upon the glorification of God. 3. The understanding of God as divine Principle bears as absolute and perfect results in the works of God as two multiplied by two bears right results in arithmetic.

Let us then pray, not only that we may "work the works of God," but also that we may become so conscious of our God-given power and capacity to reflect Truth and Love, that we may find ourselves channels through which the one infinite God may work. Christian Science alone makes this possible through instructing the human mind out of its self-made beliefs and illusions into the understanding, as Mrs. Eddy tells us, that "whatever is possible to God, is possible to man *as God's reflection*" (Miscellaneous Writings, p. 183).

FORMULATED OPINION.

J. M. TUTT, M.D.

HANGING in a prominent place in a certain practitioner's office is this motto: "Don't criticize." With some knowledge of the circumstances that led to its finding a place in this friend's office, the writer often pondered the admonition and later was able to apply it to himself in his relation to others. One definition of criticism is "formulated opinion." Thus transcribed the motto would be, "Don't formulate opinions." In our daily intercourse it is not always easy to refrain from the spoken word of adverse criticism; how much more difficult it is, then, not even to permit opinions mentally to take form. And yet there stands the example of the Master, wherein he said to the sinful woman: "Neither do I condemn thee."

The basic fault with mortal opinions is the fact that they are without Principle. They do not emanate from Mind, but are illegitimate, the offspring of mortal mind. They are the result of the attempt to perpetuate the lie of life in matter by identifying evil with the individual. Thus arises the belief of a personal devil. It is (the one) evil formulated, and the experiences resulting therefrom may well be termed hell. If error is permitted to take form in thought, one may not be surprised if presently these forms begin to resemble here an acquaintance, there a friend, until finally is seen in others personalities which give expression to hatred, malice, revenge, personal ambition, pride of priesthood, with all the ugly et ceteras. But is any part of reality presented in such pictures? No, they are but expressions of formulated opinion. This is the indulgence of criticism.

The most common phase of unjust criticism, and a claim well-nigh universal in human experience, is the proneness to compare one's self with others. Jesus steadfastly pointed to Principle as the one standard for comparison. He said: "Why callest thou me good? there is none good but one, that is, God." And Christian Scientists are admonished to follow their Leader only as she follows Christ. Strictly speaking, it is not possible for one man to be better than another, for all of God's ideas are equally good—even perfect. How, then, could any individual set himself as a standard of right living for others to strive to attain. Is it not plain that each individual faces a different aspect of the one problem? It is imperative that humanity achieve an increasingly improved concept of man, and while another's life may be inspiring, it is for each to strive to reflect the one intelligence and not to imitate his fellow. Thus one mortal may and must be not better than another, but better than he himself formerly was. By what right, then, would one compare himself with his neighbor? To love one's neighbor as one's self is the divine demand; to entertain opinions as to one's more rapid advancement over another, is to pray with the Pharisee: "God, I thank thee, that I am not as other men are."

It would be presumptuous to find fault with God's man, and yet there is in reality no other man. While it would be erroneous to call evil good, it is for each to know at all times and under all conditions of seeming evil the allness of good, which consciousness excludes the supposition of man in the unlikeness of good, God. Our Leader writes in Science and Health (p. 200): "St. Paul said: 'For I determined not to know any thing among you, save Jesus Christ, and him crucified.' (I. Corinthians ii. 2.) Christian Science says: I am determined not to know anything among you, save Jesus Christ, and him glorified." Every phase of the old, old problem of the "serpent's tongue" must be met with an ever broadening charity, with more love for God's man and less opinion as to mortal man. Our Leader has given us an unfailing rule for our guidance: "The way to extract error from mortal mind is to pour in truth through flood-tides of Love" (*Ibid.*, p. 201).

ECONOMY.

SADIE KIEKINTVELD.

MRS. EDDY says in the Church Manual that economy (together with wisdom and brotherly love) should "characterize all the proceedings of the members of The Mother Church" (Article XXIV., Sec. 5). Many people seem to be laboring under a wrong impression as to the meaning of this word economy, confusing it with parsimony and greed. Economy rightly defined is the wise use of our resources, whether time, money, or anything else. Though it is the opposite of extravagance, which implies wastefulness, it is never to be confused with the penuriousness which hoards up its treasure for moth and rust to corrupt. Economy denies self that it may have to give to others. It is just and generous. It may not support charitable institutions, but it raises the standard of wages, and thus fulfils the Talmudic injunction that the noblest charity is to prevent a man from accepting charity.

Economy enables the Christian Scientists to build their beautiful churches, to give generously to lecture and literature funds for the spreading of the good news. It is the loving economy of time which might be spent in gossiping, novel reading, profitless amusement, or unnecessary work, that gives the Scientist time for daily study of the Lesson-Sermon, time to serve well if one is an officer in the church; time to explain the truth to inquirers; time, in short, to hasten the coming of the kingdom of God on earth.

Digitized by Google

Is it not worth while to economize our money, that we may give to our glorious cause? Is it not worth while to economize our time, that we may have more opportunities to acquaint ourselves with God, whom to know aright is Life eternal? Ask any genuine Christian Scientist these questions, and he will answer with strong assurance, "Indeed it is!"

SINGING PILGRIMS.

CARRIE F. LYMAN.

THE psalmist says, "Thy statutes have been my songs in the house of my pilgrimage," and in Science and Health we read (p. 254), "Pilgrim on earth, thy home is heaven; stranger, thou art the guest of God." The teaching of Christian Science that heaven is a present possibility to all, depending entirely upon the state of one's consciousness, has transformed many sighing and footsore pilgrims into the singing guests of God. No heart animated by a selfless love can long be songless, nor can any one truly keep the divine statutes merely from a sense of obligation or duty. The statutes become songs when obedience springs from love. It is interesting to note that while the word "duty" occurs but nine times in Science and Health, the word "love" and its derivatives take about five columns of the Concordance.

St. John wrote of "the song of Moses the servant of God, and the song of the Lamb," which those who had "gotten the victory over the beast" sang, with "the harps of God." Can we learn "the song of the Lamb," or how to express in our daily lives a singing self-immolation, unless we have first so loved the requirements of the divine law that its statutes are not regarded simply as duties to be performed, but our heartfelt songs as well? In Mrs. Eddy's poem "The Mother's Evening Prayer," which is now included in the new Christian Science Hymnal, occur these words:—

O, make me glad for every scalding tear,
For hope deferred, ingratitude, disdain!
Wait, and love more for every hate, and fear
No ill,—since God is good, and loss is gain.

Is it not a matter of deep gratitude to every aspiring heart that, by reversal, the very errors which have seemed to bring pain to us may be made to "serve as waymarks to the one Mind, in which all error disappears in celestial Truth" (Science and Health, p. 267).

Christian Scientists cannot but be deeply grateful to their Leader for the example she has set in her own life in the matter of never showing a spirit of retaliation because of the ingratitude, disdain, deferred hope, or loss which she has experienced. Indeed it has seemed to the writer that an old hymn contains some of the leading teachings of Christian Science, which Mrs. Eddy exemplifies:—

I lift mine eyes, the cloud grows thin,
I see the blue above it;
And day by day the pathway smooths
Since first I learned to love it.
The peace of God makes fresh my heart,
A fountain ever springing;
All things are mine since I am His—
How can I keep from singing?

NOTICE.

Publication committees will confer a favor on the editorial department by mailing promptly to the EDITOR a copy of all published articles. Clerks of branch churches can also be of assistance by sending reports of all lectures given and items relative to progress in church work.

SELECTED ARTICLES.

[Frederick Dixon in *Bedford* (Eng.) *Record.*]

The letter of our critic, published in your issue of the 27th inst., discloses extremely little beyond the fact that the writer is more than usually intolerant in his hatred of Christian Science, and more than usually violent in his manner of giving expression to that hatred. If the mere stringing together of unpleasant epithets constituted argument, the writer would have some claim to be considered a thinker; as, however, they unfortunately are a proof of nothing except want of control, it is a little difficult to discover in his letter exactly what he is taking exception to.

He quotes, for instance, the famous warning of Paul to Timothy, to avoid "science falsely so called," and ingenuously injects the word Christian, so as to make it read, Christian Science falsely so-called. He forgets that this particular verse has been used against every thinker of the last century by half the people from whom they have happened to differ. It is one of those phrases which may be used by any one hard pressed for an argument, and it has been taken full advantage of by every one in such straits. Again, he talks of the "learned label Christian Science." He forgets that if absolute truth is not Christian, Christianity is nothing at all, and that if truth is not scientific, there is no such thing as science.

The word has apparently a terror for him which it did not have for the writers of the New Testament books, or for their translators. Whether he is aware of it or not, the phrase is used both by Peter and Paul in the words *epignosis tou theou*, which mean full, exact, that is, scientific knowledge of God, and it is used by Wyclif in his translation of the Gospel of Luke in the phrase, "He shall show science and health to his people: into remission of their sins." With apparently lively satisfaction, he goes on to consign the whole movement to the reprobation of God, and to explain that every Christian Scientist is in peril of "perdition reserved for ungodly men, the certainty of which cannot for one moment be called in question." By this time, he has reached such a paroxysm of indignation that he has forgotten to explain exactly wherein Christian Science offends, and so ends his letter without having impressed his readers with anything except the interesting fact that he disapproves of Christian Science, and, therefore, that it is of the devil.

Now, what is the simple truth about the Christian Science movement? Science, Huxley once said, is the answer a man makes to the question, "What do I know?" Christian Science, so considered, would be the answer a man makes to the question, "What do I know of the truth which makes men free?" The answer is made precisely in the way which Jesus demanded, in the effort to heal the sick and to overcome sin and sorrow. When Jesus sent out the disciples, it was not only to preach the gospel, it was also to heal the sick, and in this way the healing of sickness became the complement to the preaching of the gospel. It is a significant fact that our critic, who quotes texts in the freest manner possible, omits all mention of the innumerable texts in which healing is insisted upon in the Bible. Jesus said distinctly that those who believed in him would be able to do the works which he did. In this way he, and no one else, made the healing of sickness the test of a man's Christianity. Jesus, indeed, went further than this, for he said that those who believed in him would not only be able to do the works that he had done, but greater works than these.

The only way in which it is possible to acquire the power to begin to do these works, is in the effort to attain the Mind that was in Christ Jesus. Exactly in proportion as a man gains a scientific knowledge of Truth, he will gain the knowledge of God (*epignosis tou theou*) which constituted the mind of Christ, and, in acquiring this mind, he will be

Digitized by Google

able to demonstrate his understanding of Truth in the way in which Jesus demonstrated it. The miracles performed by Jesus were simply his answer to the demand of the Jews as to what he knew of Truth, for the word translated miracle in the New Testament never had any supernatural meaning, but means simply an act of power or a sign. Christ Jesus came preaching in Judea and Galilee, and when his listeners failed to grasp the spiritual meaning of his gospel he bade them, if they could believe for nothing else, believe for the very works' sake. In this way the work, or miracle, became the act of power which was to arrest their attention, or the sign which was to prove to them the truth of the gospel.

Even by the time the epistle of James was written, the preaching of the gospel had become so separated from the healing of the sick that the apostle was driven to warn his readers that faith without works, theory without demonstration, was dead. For three centuries the healing of the sick lingered in the Christian church. Then, in the growing materialization of human thought, it ceased to be an integral part of orthodox Christianity. Truth, however, can never be destroyed. Jesus said, "Heaven and earth shall pass away, but my words shall not pass away." All through the centuries that followed, therefore, all through what are known as the Dark Ages, the Renaissance, and the days of rationalism, men arose, such as Luther, or Fox, or Wesley, who were able, through their faith, to encompass healing. This healing was, however, not merely sporadic but uncertain. It represented rather the fitful flicker of a candle than the light of the Sun of righteousness which, in the time of Jesus, rose "with healing in his wings."

The gift of Mrs. Eddy to humanity has been that she has shown the world once more that healing (and by healing in Christian Science is meant not only the overcoming of physical disease but the destruction of all that is unlike God in the human consciousness) is the result of obedience to the divine law, described by Jesus as the truth that should make the world free. When she herself was healed by reading her Bible, she did not accept the healing, as such healing had been accepted in the past, as a mere incidental answer to prayer; she realized that Jesus had told the world that those who believed in him should lay hands on the sick and they should recover. So she set herself to gain that scientific knowledge of God (*epignosis tou theou*) which Jesus said should free mankind.

"I knew," she writes, on page 109 of Science and Health, "the Principle of all harmonious Mind-action to be God, and that cures were produced in primitive Christian healing by holy, uplifting faith; but I must know the Science of this healing, and I won my way to absolute conclusions through divine revelation, reason, and demonstration." The answer to that search for Truth is written in the pages of Science and Health, and all over the world there are thousands upon thousands of men and women who have proved, beyond any question, that the understanding of the Bible brought to them through Mrs. Eddy's teaching is fitting them, just in proportion to their efforts to live in accordance with it, to carry the healing which has come to them to those who still are weary and heavy laden.

[Herbert M. Beck in *Monticello* (Ark.) *Advance.*]

Jesus plainly assured his followers, "He that believeth on me, the works that I do shall he do also." He commanded them to heal the sick with as much evident sincerity as he gave that other command, "Preach the gospel." Jesus also said, "By their fruits ye shall know them;" and at the grave of Lazarus he proved by his works that the Father had sent him; to John he offered to prove himself the Son of God by no other evidence than a recounting of the blessings which followed his ministry.

Unnumbered people have been healed and are daily being healed by Christian Science, and this fact indeed proves that "God is not a sleeping Baal to whom we have to cry aloud," but is a "present help in trouble." One man healed is better than the unbelief and doubts of a thousand men. In almost every city in the world may be found many who have been healed,—some from sins of selfishness, intemperance, lust, etc., and others from so-called incurable diseases.

Christian Science knows and accepts one God and one Christ, and only one. It has but one Bible, using the same authorized version that others use. In Christian Science God is not conceived as a "blind impersonal force" as this minister seems to have believed, neither is the term "personal being" used by Christian Scientists as applied to Deity, but rather the term "infinite personality." God is not to be considered as an enlargement upon or as a superhuman man. In God there is "no variableness, neither shadow of turning;" no alternatives; His "yea" is "yea" and His "nay" is "nay." He is omnipotent and omnipresent. He rules the universe, and to Him there is no question of supremacy between Himself and evil,—the "spirit of Satan." To God there is no issue joined between Him and any other power, because He is "above all, and through all, and in you all." "Power belongeth unto God," even if the testimony must be brought "from afar," as in the case of Elihu. God, being infinite, cannot of course be defined; but He is referred to in Christian Science as "the great I AM; the all-knowing, all-seeing, all-acting, all-wise, all-loving, and eternal; Principle; Mind; Soul; Spirit; Life; Truth; Love; all substance; intelligence" (Science and Health, p. 587).

The first evil recorded in the world's history is when men began to believe in "good and evil." Creation was good and was complete before the "and evil" was subjoined; and good, synonymous with God, will continue to be complete, a unity, an integrity, a perfect whole, without the aid or consent of evil in any form, whether men have left off their invention of "and evil" or not. To the Spirit of God there is no contest over dominion, as there is in mathematics no contest over numbers or their relations between themselves.

It is the purpose of Christian Science to bring to the conscious understanding of mortals the wholeness and integrity of this spiritual Life and the consequent and essential healing of disease and destruction of sin. This is "the way, the truth, and the life," the Christ who said, "And I, if I be lifted up from the earth, will draw all men unto me."

[From an editorial in *Indianapolis* (Ind.) *Star.*]

If Christian Science has done nothing else for modern religious thought, it is worth while simply for the demonstration it affords in crowded congregations, assembled through no enticements of pulpit oratory or celebrated singers and organists, but chiefly through the spontaneous impulse of personal religious experience. The idea of church service as worship must be kept alive. Too often it is overshadowed in our fashionable congregations by the duty of forming discriminative judgment on the contributions offered toward the enjoyment of the occasion by the literary allusions of the pastor, the upper register of the soprano, the dignity of the new usher, and the poems in willow plumes and Milan braid from our most refined and enterprising milliners.

[Willis D. McKinstry in *Hutchinson* (Kan.) *News.*]

To Christian Scientists, Mrs. Eddy is a most remarkable and lovable woman. They appreciate more than words can tell what she has done and is doing for the welfare of humanity. Loyal Christian Scientists recognize Mrs. Eddy as the Discoverer and Founder of Christian Science, and the natural Leader of this great movement, but they do not look upon her as a superhuman being to be worshiped; nor do they consider her their "spiritual mother." She has

always discouraged personal worship, and some years ago requested Christian Scientists not to call her mother.

In her book, "Science and Health with Key to the Scriptures" (p. 464) she says: "The author has labored to expound divine Principle, and not to exalt personality." A knowledge of the Science of being, gained through the teachings of Christian Science, unfolds to mortals the spiritual fact of one creator and one creation, one Father-Mother God, who is infinite Spirit. Mrs. Eddy is now numbered among the world's greatest women.

[George A. Law in *New Haven* (Conn.) *Leader.*]

Inasmuch as there is hardly an individual in any community who has not at least one friend that has experienced the benefits of Christian Science and become a "believer," it is indeed a surprise that a clergyman, whose duty it is to bring to suffering humanity the salvation taught and practised by our Master, should make the statements of our critic. That Christian Scientists are "fools" is too extravagant a claim to be taken seriously, for it is too well known that not only are Christian Scientists to be found in all walks of life, but it is also known that many Christian Scientists are among the most respected and successful of those engaged with large affairs in all professions and all lines of business. The utterances of our critic may be easily recognized as due to the common error of failing to separate the conduct of individuals from the teachings of Christian Science, so that he does not apprehend what Christian Science really is. In other words, Christian Science is being judged by the experiences and conduct of its individual representation rather than from its teaching.

Christianity is based upon the life and teachings of Jesus. Would it then be fair and just to judge Christianity by another's endeavor to live in accord with these teachings, attendant as it is with failures and human misconceptions? It is the experience of Christian Scientists that when one begins to understand its teaching he is sure to find that it is not only very different from what he at first supposed it to be, but often the direct opposite. Is it not, then, at once seen to be unfair to find fault with Christian Science because some one has failed to apprehend its true teachings and therefore engages in practices inconsistent with such teachings? Christian Science is founded on the Scripture and the life and explicit teachings of our Master. By his life and works he proved his teachings to be practical. His command to preach the gospel and heal the sick is taken as applying to all time, and the success which has attended the endeavor to live in accord with this command has repeatedly proven that this is practical at this day and age.

Christian Science is based upon the Scriptural authority that "God is a Spirit," and that "God created man in his own image." A study of the text-book of Christian Science from this standpoint, the standpoint of the writer, eliminates prejudice and bias from the thought, and not only reveals the fact that Christian Science has nothing in common with Hinduism, but also that its teachings are intelligible and consistent with its premises. It will also be found that it is scientific, being grounded in demonstrable truth.

[Frank Bell in *Lewistown* (Pa.) *Gazette.*]

Christian Science and methods which seek to combine drugs and prayer are not only not akin, philosophically or otherwise, but they bear no resemblance to each other in any important particular. Those who represent these methods undertake to relieve certain forms of sickness by the use of that phase of mental activity commonly known as suggestion or hypnotism. The sufferer weakened by disease or evil habits is brought, in a receptive state, into contact with a stronger mentality that is animated by an intense desire to do him good. The theory is that the stronger mind will dominate the weaker to the latter's advantage. I am not aware that any higher claim is made for the *modus operandi* of this movement. Christian Science, on the other hand, is based on the premise that the human mind cannot really destroy that which it is supposed to create, namely, sickness and sin; that the divine Mind, God, alone can do this, and that the true healing of human ills consists in directing the thought of the sufferer toward God, in encouraging him to rely upon the divine intelligence, which is omnipotent and omnipresent.

Christian Science asserts that the system of healing demonstrated and taught by the Founder of Christianity was as far above hypnotic suggestion as it was above inanimate drugs, and that a revival of the healing work of the early Christian church is possible only for those who through right thinking and pure living are able to reflect in some degree the Mind which was in Christ Jesus, which, as explained in the Christian Science text-book, Science and Health, heals both "sickness and sin by one and the same metaphysical process" (p. 210). Our purpose in thus writing is not to disparage these other movements but simply to correct the erroneous assertion that they bear any resemblance to Christian Science beyond a common recognition of the fact that the Master's command to heal the sick is no less imperative upon the church today than during the first three centuries of the Christian era, when "these signs" did "follow them that believe."

[George S. Powell in *Asheville* (N. C.) *Citizen.*]

In reply to a recent article in which Christian Scientists are criticized in connection with arguments made for the establishment of a national department of health, permit me to say that Christian Scientists are working just as intelligently and effectively to prevent and cure disease as any other class of people, and that this statement is provable.

While it is true that Christian Scientists employ metaphysics in the treatment of disease, in other words prayer, they are as a rule law-abiding people, believing in cleanliness, mental and physical, and conforming to sanitary rules and regulations just as other good citizens do. It is true that patients sometimes die under Christian Science treatment, because of a lack of spiritual understanding and application of the truth that there is no power apart from God, and that this power is good only. It is also true that one hundred and forty thousand patients die each day on the globe from disease under other systems of treatment; and until a system of therapeutics is developed that will cure these rapidly increasing diseases, people will exercise their rights in seeking the system they prefer, whether it be prayer or drugs, and it may safely be stated that as a rule people are capable of making this choice for themselves.

It has been truly said that history teaches nothing more clearly than that a state-bulwarked class becomes intolerant of advanced thinkers within as well as without its own ranks, and every effort to build up such a class is a blow to scientific advance and intellectual progress. It is also an historical fact that orthodoxy and conservatism have opposed every discovery and movement that has been made for the good of mankind. Since the days of the Man of Galilee no person has met with so great opposition from established schools as did Mrs. Eddy, when she wrote that "there is no life, truth, intelligence, nor substance in matter. All is infinite Mind and its infinite manifestation" (Science and Health, p. 468), and for more than a third of a century, in the face of the most bitter opposition, she has courageously held to this truth, knowing that because it is the truth it must some time be acknowledged.

Today we find men who stand at the head of natural scientific thought and research, boldly teaching this doctrine of unreality of matter. For instance, Prof. Wilhelm Ostwald of the University of Leipsic, Germany, writes of matter: "Matter is a thing of thought which we have con-

Digitized by Google

structed for ourselves, rather imperfectly, to represent what is permanent in the changes of phenomena." Professor Huxley tells us that the only world we know or can possibly know is the thought-world. Professor Fiske writes: "Apart from consciousness, there are no such things as color, form, position, or hardness, and there is no such thing as matter."

While all this shows a wonderful change going on in public thought in regard to matter, it is accepting only the Christian Science teaching of effect and not of cause, and no good is to be derived from a belief in effect while not understanding cause. The only cause or reason why there can be no matter is found in the statement above quoted, for "all is infinite Mind and its infinite manifestation." Had Mrs. Eddy written that all is human mind and its manifestation, it would no doubt have been promptly accepted as truth, for what is termed mortal of human mind is a great and firm believer in itself as cause.

Christian Scientists use metaphysics instead of material remedies in the treatment of disease, endeavoring to reach the cause rather than the effect, and it is to their credit that none of the pitiable slaves to the whisky, morphine, and other similar drug habits have acquired these habits under Christian Science treatment.

[From *Manchester* (Eng.) *Guardian*.]

M. D. Graham writes from 41, St. Mildred's Road, Lee, London:—The Wesleyan Conference at Bradford on Wednesday introduced an interesting innovation by enacting that in exceptional cases women should be allowed to preach. The old Pauline rule that women should keep silence in the churches holds good with very few exceptions to the present day, but even this long-established convention seems to be gradually breaking down. The religious communities in which this old order is giving place to the new are of entirely modern origin. It is the proud boast of the Salvation Army that the officers, men and women, stand on a precisely equal footing. Women can rise through all the ranks from that of the humblest private right up to the highest, with the exception that at the very head is the grand old General, who might, however, it is quite conceivable, be succeeded by a woman—his own daughter-in-law, for example. Another modern religion boasts of a woman for its Founder. Mrs. Eddy, the originator of Christian Science, is a truly remarkable character, and as is natural, in her sect men and women stand on precisely the same footing, or if anything the women hold the palm, as they are more highly developed in those particular powers which are demanded by their cult. There is also a strong tendency among the older religious bodies to recognize the rising status of women.

[A. W. Mainland in *Winnipeg* (Can.) *Telegram*.]

A critic is reported as "scoring . . . blasphemous things, such as Christian Science." It is no doubt true that Christian Science differs in some points from the creeds of the other Christian churches, but this does not make its teachings blasphemous or unscriptural. Christian Science teaches that God is perfect; that He is infinite intelligence and Love; that He is the only creator and that His creation is as perfect as Himself. It has too much reverence for God to charge Him with the responsibility for all the sin, suffering, and disaster that mar the peace and happiness of mankind. Christian Scientists are taught that they must worship God and God alone, and that they must worship Him as a kind, loving Father who tenderly cares for all His creatures and who is a perfect protection to those that trust Him.

Christian Science recognizes but one Christ, "the only begotten Son of the Father," who is infinitely greater than any personality, and through whom alone man can be saved from sin and sickness. Most of those who follow its teachings have come from some of the other churches, and they are unanimous in saying that they have more reverence for the Bible and study it with greater interest than in their previous experience. A candid study of this teaching would reveal the fact that it is very different from the popular conceptions of it.

[Edward W. Dickey in *Long Beach* (Cal.) *Press*.]

Nothing is more foreign to the teaching and practice of Christian Science than the endeavor to use it in the acquirement of any material thing, as such. This Science is a spiritual Science, dealing with spiritual things. The rule of practice in Christian Science is that laid down by Jesus the Wayshower, "Therefore take no thought, saying, What shall we eat? or, What shall we drink? or, wherewithal shall we be clothed? (For after all these things do the Gentiles seek:) for your heavenly Father knoweth that ye have need of all these things. But seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you."

The statement that a person may "think" himself into the possession of riches is repugnant to Christian Science. The fruits of this Science are health, holiness, peace, and joy, and these are all "signs following" the seeking of "the kingdom of God." Added to this true seeking comes freedom from poverty and the fear and limitations that attend such a condition. This, however, is the polar opposite to anything akin to the teaching described. Christian Science declares that the supreme intelligence is God, Mind, Spirit, and it compares "spiritual things with spiritual."

[From *Pittsfield* (Mass.) *Eagle*.]

A friend said to me yesterday: "I have read Mr. ——'s attack on Christian Science, and I have read about everything else that has been published against the cult. These things do no good. Thousands of people believe in Christian Science. What of it? It brings them comfort. Why should we seek to take it from them? It is none of our concern. Suppose it is an illusion. For aught I know a good illusion is the only reality that we know in this world. Doesn't a man feel kindly disposed toward somebody who has tided him over one of the rough places of life? Don't we stick by the man who was a friend in the years when we needed him? Certainly. We should be ungrateful if we didn't and ingratitude is the worst of crimes. So it seems to me that a man who believes in Christian Science is entitled to his belief and the cheer and peace it gives him. It sometimes seems to me that those who make the most earnest pleas for tolerance are themselves the most intolerant."

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be Nov. 4, 1910. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 18, 1910.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to June 3, 1910, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

"WHEN THOU PRAYEST."

It is not surprising, perhaps, that the novice in Christian Science should find himself somewhat confused as to the proper function and form of prayer. Having been awakened to a sense of the incongruity and unfitness of much that he has identified with it in the past, the needlessness of appealing to God that He consent to do the things that He must of necessity do in keeping with His unchanging nature, and not having learned as yet the more excellent way, he feels very much at sea and hardly knows what to do. If, in such an hour, he carefully and receptively reads the chapter on Prayer in the Christian Science text-book, it will bring him a sense of comfort and illumination which will constitute the first "new day," in that more satisfying and more effective religious life upon which he is just entering.

Like every other phase of its teaching, the Christian Science thought of prayer is directly related to the thought of God. Its prime essential is a childlike and unfaltering trust in the goodness and beneficence of the All-Father. Its forms and expressions may be many, they may vary with the aspects of human temperament and need, as well as with one's advance in spirituality, or they may pass altogether; but this heart of longing-love must beat on, forever and for all the same, in the bosom of those who truly pray. If its rhythm is constant and steady, its knock will be sufficient, and the door will be opened.

In Christian Science one comes to understand that prayer is an attitude rather than an act. It is the restful recognition of the inviolability of the law of Love. God is no longer thought of as capable of setting aside divine law in response to the appeal of "some peculiarly persuasive pleader," as one has said, but as that eternal Principle of being into harmony with whose forever-right activities we may all come for the healing of our every ill, through spiritual illumination, the appearing of the Christ. Mrs. Eddy has illustrated this in her reference to the pupil's mental pose toward a mathematical law or rule, the full apprehension and application of which will, as he well knows, give him perfect command of his problem, however involved it may be. He may or may not speedily reach the hoped-for solution, but if he temporarily fails he knows just why, and his faith in the rightness and adequacy of the law remains quite undisturbed.

When prayer is thus understood to be a prevailing thought and aspiration toward God, it becomes simple, and rational. We see how it is both possible and necessary to pray all the time, and we begin to do it. We see, too, that if utterance be given to our prayer, it must be perfectly sincere, that we should mean what we say and say what we mean before God, since anything of pretense or presumption in our address to Him is none other than blasphemy.

Prayer is honest desire for spiritual good, a desire that is expressed in faithful obedience to our highest sense of right and duty. It is the gratitude of appreciation, a rejoicing in God's immutable wisdom and love and faithfulness. Prayer is all this and something more, it is an apprehension of Truth and Love, a knowing of the all-good and of His availability, in keeping with unvarying law. Jesus said, "What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them." We are to understand and maintain in thought the eternal truth of a perfect God and His perfect kingdom and rule, the omnipotence of good, the falsity and nothingness of evil, the protection and endowment of man as the manifestation, the image of his Father. We are to remember the word of the Lord that His thoughts toward us are "thoughts of peace, and not of evil," to give us our expected end.

Thus thinking ever right thoughts of God and His creation, thus looking trustfully to our Father for wisdom and guidance, we shall prove that "self-forgetfulness, purity, and affection are constant prayer" (Science and Health, p. 15), and for their expression we need have little care; spiritual aspiration will find its natural and fitting channel.

JOHN B. WILLIS.

WAITING ON GOD.

There are thousands who have listened to the beautiful aria, "O rest in the Lord," and who have felt at least momentarily that it is good to "wait patiently" for God, who have never thought of applying this profound truth to every difficult experience of daily life. There is indeed nothing more trying to our human sense than to wait for results, yet this is an inseparable accompaniment of our best efforts, and the greater the thing desired the longer the period sometimes required for its full development. St. James reminds us that the husbandman waits for "the precious fruit of the earth," and this means that he must wait in many cases a long time ere the tree be grown, but he has "long patience for it" because he knows that when the planting and the watering are done aright God will give the increase.

In Christian Science we learn that there are no delays on the divine side, that God does not withhold from us any good thing, and of this we have many assurances in the Scriptures; but we also learn that too often we are unready to receive the blessing which is ready for us. It therefore follows that there are what appear to be long delays, and this often because mortals are unwilling to see what it is that hinders their progress, and like fretful children they merely cry out against the seemingly hard conditions instead of heeding the admonition, "Rise in the strength of Spirit to resist all that is unlike God" (Science and Health, p. 393). If the desire is for righteousness at any cost, this will bring strength to endure unto the end of the trial, and Truth understood will destroy all sense of pain and weakness. It should not be supposed that the overcoming of disease is a long or uncertain process in Christian Science, which teaches distinctly that neither disease nor sin has any place in man's true consciousness, and the overcoming of the belief in evil leaves thought free to work out all the problems of human experience. Here we may well apply to ourselves the tremendous test given in "Miscellaneous Writings" (p. 118) of being "willing to suffer patiently for error until all error is destroyed." One who is willing to do this will with St. Paul "rejoice in tribulation," and grow stronger at each step of the way.

The psalmist tells us in the 40th Psalm that he "waited patiently" for God, and that he was lifted out of "an horrible pit" and his feet set upon a rock; then he goes on: "I delight to do thy will, O my God: yea, thy law is within my heart." This result was surely well worth waiting for! Paul tells us that even those who have the firstfruits of the Spirit groan within themselves while waiting for the redemption of the body, and he at the same time speaks of our waiting for "the manifestation of the sons of God." When the sons of God are fully manifested there will be no vexed problems to adjust and no sickness to heal, but there will be "painless progress, attended by life and peace,"—to quote our revered Leader's words (Science and Health, p. 224).

Digitized by Google

While we are working toward this divine consummation, we should remember that patient waiting is a great virtue. Not only do we need moral and spiritual purification for ourselves, but others need to be saved as well as we, and we should be glad to wait if thereby the working together of all things "for good" be made more inclusive.

Like the metal which goes into the furnace as "idle ore," so must the mortal sense be subjected to a fiery ordeal until at last in human experience the pure gold comes forth, ready to receive the likeness of the perfect Mind. The human sense ofttimes cries out, "How long?" and spiritual understanding replies that one day with divine Truth and Love is "as a thousand years." The command is to "wait on the Lord, and keep his way," and the accompanying promise reads, "He shall exalt thee to inherit the land."

ANNIE M. KNOTT.

LETTERS TO OUR LEADER.

The article by our Leader in the *Sentinel* of Sept. 3, under the caption "Instruction by Mrs. Eddy," has called forth a wide-spread tribute of appreciation and gratitude, and we are privileged to present in this issue a few representative letters out of the very many which Mrs. Eddy has received on this subject.—EDITOR.

Sioux City, Ia., Sept. 6, 1910.

Beloved Leader:—A "pean of praise" to God, and of gratitude to you, certainly went up from many hearts in our church here when we read your precious letter in the last *Sentinel*. All day yesterday, expressions of love and joy came to me over the telephone, from different ones, because of it, and I felt you might be glad to know the blessing that your explicit instruction on this point has brought to us.

We have so often been rebuked here for declaring, "I am the child of God," that we do now rejoice to learn that we are free to "enter into the holiest." I am sure that your clear statement has enabled us to rise a degree in understanding, and we shall now partake of our inheritance more fully. We hope to bring forth fruits which will worthily express our gratitude.

Sincerely yours,
ADAH M. JANDT.

Des Moines, Ia., Sept. 6, 1910.

Beloved Leader:—I thank you for this renewed expression of your love for humanity. What greater love than the assurance that man is God's image! If man is in the flesh now, then he will always be in the flesh, for that which is true for one moment is true throughout eternity; but your writings reveal the spiritual fact that man never was flesh. Is not this truth that man is the image of God, "the law of the Spirit of life in Christ Jesus"? Under this law man has remained perfect. This eternal law is "silently present every where and every when."

In your address read before the "Parliament of Religions" in Chicago in 1893, you said, "As we gain the evidence in Science that man in God's image is the only real man, the evidence before the senses of man's deflection disappears, and proportionately as the fact appears to the consciousness of the mental healer, that man has his being in God, good, the reflection of this thought will restore the sick, reform the sinner, and, carried to its ultimate, as Jesus did carry it, must destroy the last enemy, called death."

This flash of Love through you will be a great rent in the veil of erroneous belief, and more of God will be manifest.

Lovingly and gratefully,
VALERIA J. CAMPBELL.

Englewood, N. J., Sept. 9, 1910.

Beloved Leader:—I, as one of your many, many followers, thank you for the wonderful truth expressed in your message and given out in the *Sentinel* under the heading "Instruction by Mrs. Eddy." These messages are the pearls of great price which fall to us from the ever-present Love and wisdom that is always awake to meet our need. God is blessing me and all men in blessing you, my dear, dear Leader.

Faithfully and gratefully,
GERTRUDE FRENCH.

Kansas City, Mo., Sept. 5, 1910.

Dear Mrs. Eddy:—From my heart I thank you for the message in the editorial "Instruction by Mrs. Eddy." It is divine Love meeting our need, and no doubt our problem is the problem of many another locality. Our little field has been so torn over the question. Have I a right to say I am God's perfect child? Loving one another, we have yet found ourselves widely at variance as to correct statement on this question. Your incisive, definite answer to that definite, incisive letter, illumines the whole question, and helps us to find ourselves of one mind,—the Mind that was in Christ Jesus.

Very lovingly and gratefully,
MARTHA GISH.

AMONG THE CHURCHES.

TONAWANDA, N. Y.

Beginning with Sunday, July 31, the Christian Scientists of the Twin Cities will hold their services in their new chapel at 26 Delaware avenue. This building, which was formerly the Rhombolt home, has been remodeled suitably for church worship.—*Tonawanda News.*

KANSAS CITY, MO.

Beginning next Sunday morning [Sept. 4], services will be held in the new building of First Church of Christ, Scientist, at Ninth street and Forest avenue. The work of reconstructing the church destroyed by fire Jan. 29, has progressed so as to offer accommodation to the congregation, although the building lacks completeness in many details. The big pipe-organ, with an echo organ and tubular chimes, will be installed by Nov. 1.—*Kansas City Star.*

CHARLOTTE, MICH.

The dedication services of First Church of Christ, Scientist, of Charlotte, were held today [Aug. 21] at eleven o'clock. An audience from among the best people of the city filled the church, and following the regular services a brief history of the growth of the society was presented. C. K. Skinner of Detroit, head of the publication committee of the state, was present and gave a short address. There were visitors from Lansing, Battle Creek, and other cities. The local society was founded in 1903, with eleven members. In 1906 the church property was purchased, and is all paid for.—*Detroit Free Press.*

ELMIRA, N. Y.

The Christian Scientists of this city who are organized as First Church of Christ, Scientist, have purchased the property on West Gray street which adjoins the Park church property. The property includes the substantial brick building which was built about twenty-five years ago as a private school for boys and was known as Bryant Hall. The building is well fitted for the purposes of the Christian Science organization. Reading-rooms have been opened on the first floor and a large room for public services on the second floor. The society has occupied the building for the past three weeks and the alterations and improvements are now complete.—*Elmira Star-Gazette.*

THE LECTURES.

KENNEBUNK, ME.

A lecture was given Tuesday evening, Aug. 16, at the Mousam Opera House, by Prof. Hermann S. Hering, of Concord, N. H. The lecturer was introduced by Harry E. King, of Toledo, O., who owns a cottage at Kennebunk Beach. Mr. King said in part,—

Charles Lamb was once asked how he liked a certain Mr. Smith who was well known and highly regarded in the community. "Why," said Lamb, "I do not like him at all." "Indeed, and why not?" asked the other. "Well," said the humorist, "I do not know him at all." For the same reason many good people dislike and oppose Christian Science. They do not know it at all, but do not hesitate to judge and condemn it. Their fears and objections would be overcome if they would intelligently inform themselves concerning the pure teaching and beneficent practice of Christian Science. This has been the experience of thousands in every part of the civilized world.—*Eastern Star.*

PRESCOTT, ARIZ.

Frank H. Leonard gave a lecture on "Christian Science: A Demonstrable Religion," April 3, before a large audience at the Elks Theater. The Hon. Henry D. Rose, district attorney, in introducing the lecturer, spoke in part as follows:—

Many religious faiths and creeds have contributed their share of labor and influence toward perfecting our present standard of civilization. Each new religion has encountered the combined opposition of all that preceded it. In this respect Christian Science has not been more kindly dealt with than its predecessors. Its spread and development have been contested on every side. It has met ridicule, misrepresentation, and intolerance with fortitude and Christian forbearance, and as the result of less than thirty years of militant work, its membership has grown from a mere handful to more than one million adherents. There are great opportunities for the Christian Science church. While other denominations have done great good, they have not and cannot meet the religious demands of all. There is a great work awaiting this church, and its tenets, its organization, its doctrines are such as to fit it for this work's accomplishment.

I like the Christian Science faith for the following reasons, among others: First, it is an optimistic religion; its members look at the bright side of life. Second, it is a democratic religion; it is deep enough, high enough, and broad enough to comprehend the whole of humanity. Third, it is a Bible religion; its fundamental doctrines are as old as the Bible, and indeed older,—are of the Bible and from the Bible.—*Correspondence.*

CHARLEVOIX, MICH.

A lecture on the subject of Christian Science was delivered Sept. 2 by Bliss Knapp of Boston. He was introduced by Mayor Hampton, who said in part,—

I believe that it is the duty of all good citizens, and especially all public officials, to assist and encourage in every possible manner any and all organizations, sectarian and non-sectarian, religious and non-religious, that are engaged in making this old world better; and I believe that the Christian Science church is making better and happier men and women of thousands of our people, and doing much to make this a better world for all of us to live in. I am not a member of the Christian Science church, but I have seen some of the good they have accomplished, some of the men made better through their membership in this society, and I am glad to say the good word for the good I know it has done.

It would seem to me that the doctrine of saying something good must be part of the Christian Science creed, for I have noticed that members of the church seem to be looking always for the best in others, for the good in life. They are optimists. And if there is anything we need more of in this world, it is people blessed with the optimism which helps us over the hard places, which sees the silver lining to every cloud, and helps our neighbors to see that silver lining.—*Charlevoix Sentinel.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Arkansas City, Kan.—Willis F. Gross, I. O. O. F. Hall (over Postoffice Building), Oct. 6.
Aurora, Ill. (First Church).—Prof. Hermann S. Hering, New England Congregational Church, 3 p.m., Oct. 9.
Baltimore, Md. (First and Second Churches).—William D. McCrackan, M.A., Lyric, 3:30 p.m., Oct. 9.
Beatrice, Neb.—Rev. Arthur R. Vosburgh, Paddock Opera House, Oct. 11.
Brookins, S. D.—Prof. Hermann S. Hering, Opera House, Oct. 6.
Chicago, Ill. (Second Church).—Willis F. Gross, Church Edifice, Wrightwood and Pine Grove avenues, Oct. 10 and 11.
Council Bluffs, Ia.—Francis J. Fluno, M.D., Dohaney Theater, Broadway and Sixth street, Oct. 6.
Crawfordsville, Ind.—Mrs. Sue Harper Mims, Music Hall, 3 p.m., Oct. 2.
DeKalb, Ill.—Mrs. Sue Harper Mims, Church Edifice, Sept. 27.
Delavan, Wis.—Prof. Hermann S. Hering, Opera House, Oct. 10.
Dubuque, Ia.—Francis J. Fluno, M.D., Princess Theater, 3 p.m., Oct. 9.
Fairbury, Ill.—Mrs. Sue Harper Mims, Central Opera House, Sept. 29.
Fond du Lac, Wis.—Prof. Hermann S. Hering, Henry Boyle Theater, 8:15 p.m., Oct. 11.
Fort Worth, Tex.—Clarence C. Eaton, Byers Opera House, 3 p.m., Oct. 9.
Hutchinson, Kan.—Rev. Arthur R. Vosburgh, Home Theater, 3 p.m., Oct. 9.
Kearney, Neb.—Bliss Knapp, Kearney Opera House, Oct. 6.
Leadville, Col.—Prof. Hermann S. Hering, Elks Opera House, Sept. 27.
Leavenworth, Kan.—Clarence C. Eaton, Church Edifice, Sixth and Spruce streets, Oct. 11.
Morrison, Ill.—Rev. Arthur R. Vosburgh, Auditorium, Oct. 6.
Mt. Vernon, N. Y.—William D. McCrackan, M.A., Church Edifice, North Ninth avenue and Valentine street, 3:30 p.m., Oct. 16.
Nebraska City, Neb.—Bliss Knapp, Church Edifice, Twelfth street and First avenue, Oct. 7.
Newman, Ill.—Rev. Arthur R. Vosburgh, Newman Opera House, 3 p.m., Oct. 2.
Oskaloosa, Ia.—Francis J. Fluno, M.D., Grand Opera House, Sept. 25.
Reno, Nev.—Frank H. Leonard, Majestic Theater, Oct. 6.
Santa Barbara, Cal.—Frank H. Leonard, Potter Theater, 3 p.m., Oct. 9.
Topeka, Kan. (First Church).—Willis F. Gross, Grand Opera House, 3 p.m., Oct. 9.

TESTIMONIES OF HEALING.

As I have been strengthened and encouraged by reading the testimonies of others, I wish to offer my own. After an earnest and prayerful study of the Bible, with the help of the Christian Science text-book, "Science and Health with Key to the Scriptures," and other inspired writings by Mrs. Eddy, we as a family (consisting of myself, wife, and daughter) have acquired something of a scientific understanding of God, to know Him as "all-power, all Life, Truth, Love, over all, and All" (Science and Health, p. 17). With this understanding we see man in the image of ever-present Love, and have been able to make many beautiful demonstrations both in the healing of disease and in overcoming evil in our every-day life.

Christian Science was first brought to our notice in February, 1901. My wife had met with an accident, which resulted in a serious injury to her knee. She was entirely disabled, and after other material means had been tried, without any visible signs for the better, an operation was recommended by a reputable physician, who informed us that she might be a cripple for life. The operation was not performed, however, but after she had been about ten weeks on crutches, without being able to put the injured limb to the floor,—in this hour of trouble, when our only hope had failed, and we were trying to reconcile ourselves to the time-honored belief that it was God's will, a shaft of light from ever-present Love was thrown across our pathway by an angelic messenger, and the darkness and despair began to fade into their native nothingness, thus making room for gladness and sunshine. We were told that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). Material means were at once laid aside, and the demonstration was such that even the most skeptical could not fail to see, although some of our friends would not recognize it as the work of divine Mind. The crutches were not used after the third treatment, and at the end of one week the patient was entirely free to walk any reasonable distance.

Even with this remarkable demonstration, Christian Science was not taken up as a study in our home until two years ago, when through the instrumentality of a very dear friend I was led out of darkness to the light of Truth that makes us free. A very severe case of stomach and bowel difficulty, from which I had suffered intensely, going about my daily avocation in great mental agony, was overcome at once. I was released from bondage, and entered into the greatest sense of liberty that I ever enjoyed. We have had many demonstrations with our limited understanding of this wonderful Science, but the greatest of all is the spiritual uplift, whereby we are enabled to know that divine Mind governs all and that divine Love is sufficient. For these great blessings we are truly thankful to God, divine Principle, to Christ Jesus the Wayshower, and to our Leader, the Discoverer and Founder of Christian Science, which is indeed the Comforter, for this day and age, and which will lead us "into all truth."

WILLIAM WYATT, Denver, Col.

I feel so very thankful for what Christian Science has done for me and for our little boy, that it gives me great pleasure to send a testimony, and I sincerely hope that many mothers may be influenced to have their children relieved from bondage through Christian Science. Four and a half years ago our little boy suffered intense pain in his side from what proved to be a rupture. A truss was fitted to him, which the doctor thought would cure it in a year. We waited two and a half years, then consulted another physician, who said that if the rupture was not healed in another year he should advise an operation. When the year had passed the child seemed to be getting worse, and we tried another truss, which the physician said he must wear night and day.

I had read "Science and Health with Key to the Scriptures" by Mrs. Eddy, and known of many wonderful demonstrations, but felt that this case was so serious that an operation was the only sure cure. We had consulted one physician regarding the operation, but the nearer the time came, the more dreadful it seemed to think of that dear child, seven years old, having to go through such an ordeal. One morning I asked my mother if she would take the little boy down and find a good practitioner. They went, and the child had a treatment that day. After they returned home we found that the enlargement was below the truss, so I had to put him to bed. The next morning when he stepped out of bed it was down again. This seemed dreadful, but I kept the thought that as God's child all would be well. We took him to the practitioner for five treatments, and one morning he said he had dreamed that the bunch was gone. He begged to have the truss taken off, and from that minute I knew that he was healed and I told him he need not wear it any longer. From that time he has been like a different child, for he romps and plays like a boy, which he never did before, and is perfectly well. He has now been without the support for over a year, and we feel so happy to think of his freedom from suffering.

I had worn glasses for nineteen years and was very dependent on them. The last time I was tortured with treatment and the lenses changed, the oculist informed me that I should not go without the glasses for a minute, and should never look at another note of music,—music being the one great interest in my life. When I told the practitioner that I knew my little boy was healed, I asked her to treat my eyes. She did so for four days. I took my glasses off at the first treatment, and in two days I thought I would try them on, but to my surprise I could not see through them. I have not used them since, and my sight is better than I supposed even normal sight could mean to any person. We are so very grateful to Mrs. Eddy for the wonderful revelation of Truth given through her "Key to the Scriptures," which makes the Bible, as she says, "a sufficient guide to eternal Life" (Science and Health, p. 497).

ETHEL B. DOWLER, Bartlesville, Okla.

I have felt for some time that I, as one who had been greatly benefited by the knowledge that God has imparted to His children, through "Science and Health with Key to the Scriptures," should testify to the world of the wonderful healing and spiritual unfolding that have come to me through the study of Christian Science, in connection with the Bible, and the services of a Christian Science practitioner.

I had been practically an invalid for twenty years. Despite this, as a lawyer I was forced to forge along the path of pain and distress for those many years, from the fact that my means were limited, and I often went into court when I felt, and my friends told me, that I ought to have been in bed. I had been afflicted for forty years with catarrh; for most of that time I was laid up several times each winter; and five years ago it resulted in an abscess in the ear, from which I was kept in my bed for forty-eight days, with two doctors waiting on me, and when I got up I was a physical wreck. I then traveled for four years, trying to regain my health, after which I came back to what was then Indian Territory, to the Radium wells, which are said to be the greatest health-giving waters in the world. After remaining there for six months, I had the misfortune to be taken with serious eye trouble. The medical treatment seemed to injure my eyes rather than benefit them. My good wife took me to Muskogee in June, 1906, to be treated by as good an oculist as our land afforded; I was led (for I could not see) to his office from one to five times a day for

Digitized by Google

more than ninety days; and tongue fails to tell the misery I underwent in that dark and gloomy time. I was distracted with pain and many times contemplated suicide; indeed, had it not been for my good wife and our little boy, I surely should have done so.

While in this condition one of God's angels (in the shape of an aged Cherokee lady) told me that if I would go to the Christian Science people they could cure me. My answer was, "I could not have the faith." She then informed me that if I would go they would have the faith for me; but I could not see it that way then, and went on with the doctor for almost a year longer. I then made up my mind to see what virtue there was in Christian Science, and on the last day of October, 1907, I consulted a practitioner. From her instructions, I bought "Science and Health with Key to the Scriptures," and commenced to study it, also to take treatment for my many ailments. At that time I could not see anything with my right eye, and both eyes hurt me. Besides this, my horse had fallen on the brick pavement and injured my foot, so that I walked with a cane. The day I commenced to take treatment I tried with my glasses to see with my right eye, and could not see one letter, but I thank God that under the treatment of a Christian Scientist and by the study of God's word, in six weeks I was a well man, and had gained greatly in weight. I could see to read with my eye that had been blind, and an obstruction that was caused from an ulcer over the sight of my eye was so thoroughly removed that I could read a whole page. In three days the soreness in my foot was wholly gone, and I have not had any trouble with it since.

My health is now perfect, and while I have passed the sixtieth mile-stone, all who do not know me place my age at from forty to forty-five. I am active, and in the prime of health, and the spiritual uplifting has been wonderful. I no longer contemplate self-destruction, and I can do as much service as when I was thirty, and feel as good as I did at that age. For all of this I daily thank God that He gave us our dear Leader, and that she with God's aid gave us "Science and Health with Key to the Scriptures." May God bless her, and bring all people to see Christian Science in the true light.—W. F. SEAVER, Muskogee, Okla.

It is over six years since I became interested in Christian Science, and words are inadequate to express my gratitude to God for the wonderful blessings He has showered upon me in that time. I had been suffering with bronchial trouble, asthma, a most distressing cough, and many other complications, and my condition was rapidly becoming worse. Everything had been done, according to *materia medica*, to alleviate my suffering, but nothing availed. I had become discouraged and hopeless, when a dear Scientist from the South, who was a guest in the same house with me, told me of Christian Science, and of its wonderful healing power. I asked her if she would help me, and she at once gave me a treatment, and another in the evening. I slept soundly that night, which was something I had not been able to do for several years, such a restful sleep that I awakened feeling refreshed and happy. In two or three weeks I was perfectly well. Since that time I have been healed of many ailments, one being a very serious trouble which was considered incurable.

I thank God for all His goodness, and the dear Christ who has shown us the way. I wish to thank all those who have helped me in the understanding of this truth that makes free; and I feel deeply grateful to our dear Leader, Mrs. Eddy, that she has been able to give us this message of Love which teaches us to feel the nearness of God; that Truth is our shield and buckler; that His angels have charge over us, and that if we call upon Him, He will answer, and will be with us in trouble, and bring us out of our distresses.—MRS. AGNES MATHEWS, Baltimore, Md.

I am glad to acknowledge what Christian Science has done for me. Two years ago I was taken with what the doctors said was a lingering fever. I was absent from my home, and I asked a physician to treat me, and get me well enough to go home. I gained enough strength to get home, and tried to work. One day, while cutting a piece of timber, a chip flew into my left eye, injuring it badly. I went to an eye specialist in Augusta, who treated me for two weeks, with very little benefit. He pronounced it an almost hopeless injury.

I lost all hope at this time, and felt that I did not care to live, but I then heard of Christian Science and went to the nearest practitioner for help. She was very kind to me, and began to treat me at once. She asked me if I could read, and I told her that I had not been able to read a line for a month on account of my eye. She then talked with me, and read from the Bible and Science and Health. I was so encouraged that I retired that night full of hope. The next day she read the Lesson-Sermon to me, and when she left me to look after some household matters, I took up Science and Health and began to read it. I experienced no discomfort from this and read several hours that day.

I had a bottle of medicine hidden in my pocket, but after dinner I threw it away, and a little later I removed the bandage from my eye. In three days I left the practitioner, and found some work with a farmer. I plowed my first furrow in five years, but did not feel tired at night after the day's work. I had suffered from two sunstrokes in my life, and a physician told me never to go out in the August sun, but I did not fear it and I worked right on until the crop was finished, feeling better every day.

I have taken no medicine and have felt well ever since. I am gaining more understanding of Christian Science each day and I thank God for what it has done for me.

B. B. WALTON, Washington, Ga.

Christian Science has brought to me so many blessings that I feel as if words could not adequately express my thankfulness for this truth. Over thirteen years ago I was healed of lung and throat trouble, and never have had any return of it. My case seemed very bad indeed, as I had been given up by several physicians. I am indeed thankful to Mrs. Eddy for bringing us Christian Science, and for all the kindness and patience shown me during the time of my treatment.—MARY CLEMENCE, Denver, Col.

Since I first began the study of Christian Science, over ten years ago, it has truly been to me the promised Comforter, lifting me out of many dark places and bringing me into the light which heals and saves. Before I heard of Christian Science I was very delicate, suffering intensely with nervousness, besides almost constant colds; and I seemed never to be free from headache. Of these and many other ills I have been healed through the loving work of Christian Science practitioners and my own study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. The most precious thing to me, however, is the happiness which nothing can take from me and the freedom from doubt, fear, and the constant struggle to gain an understanding of mortal existence.

From the time that I was eight years of age I constantly read the Bible and loved it, but there was much which seemed hidden, and I longed for an explanation. I was a church-member and attended a Bible class, but when I first found Christian Science I knew that it was the truth, and the only thing which I could honestly do was to follow the higher leading, so I severed my church connection and joined The Mother Church. I also had class instruction from one of Mrs. Eddy's students, and I have been enabled to take this healing message of Christian Science to others. My most earnest prayer always had been that I might be led aright, and that nothing might ever separate me from

Digitized by Google

God. This prayer I feel has been answered through our dear Leader's loving, faithful work for us, in bringing to us a knowledge of Christian Science, the Comforter which we have with us always.

I am earnestly striving to learn the meaning of obedience, and so prove my unending gratitude to our Father-Mother God, for the healing Christ, also for our obedient Leader, Mrs. Eddy, and for all that I have found through Christian Science.—REBECCA H. WHELEN, Philadelphia, Pa.

I want to make a just acknowledgment of what Truth has done for me. Some time ago, at the earnest solicitation of a friend (who is not a Christian Scientist), I consented to call a Christian Science practitioner. I was then, and had been for more than seven months, taking medicine regularly for a stomach and bowel disorder. For nearly ten years I had taken various remedies for this condition, but had gotten only temporary relief. The practitioner came in the forenoon, and among other things told me to discontinue the medicine. I did as directed and the difficulty was speedily overcome. Mine was surely a case of instantaneous healing. Two of my teeth had been aching for about ten days before the practitioner came to see me. My teeth were so sensitive that I could not eat with comfort, but soon after the first treatment in Christian Science I had my last toothache. I can now masticate everything thoroughly.

I am sure that no man enjoyed a cigar more than I, but in less than sixty days after I had turned to Christian Science, my desire for tobacco disappeared. This was accomplished without any effort on my part. I made no resolutions, although I had done so a few times before without success. I have endeavored to state the facts just as they have occurred. Inquiries will be cheerfully answered.—N. A. M. RALSTON, Middletown, Ohio.

Science and Health says, "Christian Science brings to the body the sunlight of Truth, which invigorates and purifies" (p. 162). The truth of this statement was made manifest in me four years ago. I turned to Christian Science for the physical healing, but found much more than just a cure for bodily aches and pains. All of my life I had been termed delicate, and my many efforts to accomplish some good in the world were handicapped by ill health. Finally I was put upon the most rigid diet, and after suffering one whole winter, receiving all the time treatment from five doctors, I turned to Christian Science and was entirely healed in three weeks. After the first treatment in Christian Science and two hours' talk; the world and everything in it seemed flooded with sunshine, and I found that "the Lord's hand is not shortened, that it cannot save; neither his ear heavy, that it cannot hear."

The healing seemed very wonderful to me, it came so steadily and surely; but even more beautiful was "the peace of God" which came to me, that peace which the world can neither give nor take away, and which is the real evidence of God's presence and power. I have no words to express the gratitude I feel for Christian Science.

KATHERINE D. MANSFIELD, Brookline, Mass.

I wish to express my gratitude for a few of the many demonstrations I have had of Truth's power. Christian Science was first brought into our home through the healing of my mother, who had rheumatism, but she was entirely healed in a very short time. It was about four years ago that I first caught a glimpse of this great truth for myself through the healing of a finger which had been badly crushed, but by knowing the power of Truth I was able, in three or four hours afterward, to go out and play ball, as my finger was perfectly healed.

Not long ago I had another good demonstration, which was a wonderful proof to me that man has a sensationless body, and that God is with us always and is an ever-present help in time of trouble. One morning, while working in a bookbinding concern, I was cutting the round corners on a book by a machine, when suddenly part of my finger got caught under the clamp and was very badly injured. I at once declared the truth, which helped me greatly. I met the pain in an instant. Mrs. Eddy says in Science and Health (p. 392), "Stand porter at the door of thought. Admitting only such conclusions as you wish realized in bodily results, you will control yourself harmoniously." In a short time the part of my finger which had been cut off was restored, and I can truly say my finger is as good as it ever was.

I have had many other demonstrations, and I know that God leads me and is with me always. Words can never express my gratitude for the many blessings I have had since I have been brought into this great truth, for all of which I am very, very thankful.

GEORGE F. KLEEBURG, Maplewood, Mo.

I want to express my gratitude for the help I have received through Christian Science. Nearly eight years ago, while I was unable to help myself in any way, after having been under medical treatment for many years, I read some testimonies in *The Christian Science Journal*. These appealed to me as true, and I thought that if others could be healed by Christian Science, I could also.

At this time the doctor, under whose care I had been for sixteen months, was treating me for kidney trouble and rheumatism; there was also fear of paralysis. I had followed his instructions most carefully, but I had frequent attacks, when I was wholly unable to help myself. My wife and two small children were unable to do the work on the ranch where we lived, and my affairs were in a very serious condition. The doctor had also told me that I would have to drink whisky so long as I lived, and I then began to realize that something must be done, for I knew what effect the whisky would have, as the desire for it had a strong hold on me already.

At last I went to a Christian Science practitioner, and she gave me some *Journals* to read; but I continued under the doctor's treatment until one day he told me that he could do nothing more for me; that I had followed his instructions most faithfully, but he was then giving me the strongest medicine, and that there was no use of my taking any more. I was glad when he told me this, for there was nothing then left to do but turn to Christian Science. I went to see a practitioner that same day and received treatment. I remember that during the treatment I smiled at the absurdity of the thought that this could heal me, but after making arrangements for further treatment, I went home with more comfort and less pain than I had experienced on the ride in to town, and slept well that night, much to my own surprise, for I had not been sleeping well for many months.

I saw the practitioner the next day, and told him something of how badly neglected my work was on the ranch. He replied that I could do anything I had to do, but I thought that he did not know what there was to be done on a ranch. The next day a neighbor voluntarily came over and offered to help me put some hay in the barn, work which greatly needed to be done. At first I thought it would be impossible, but I remembered what the practitioner had said, and told him to come the next morning. When I got up that morning, my wife had to dress me as usual, but I went to work, and at night we had twenty tons of hay in the barn, with just my neighbor, my young son, and myself to do it. The day was an unusually hot one in July, but we did not feel the heat, although we had to cover the iron hooks with sacks to keep them from burning our hands. After supper that night I milked the cows, and came running upstairs not the least tired and with no signs of back or kidney trouble or anything else. There has been nothing but Christian Science used in our home since.

Digitized by Google

I was wearing glasses constantly when I took up Christian Science, and had worn them for six years previous, having been told by an oculist that I should never be without them; but after studying Christian Science for two months I repeatedly forgot to put on my glasses, and then found that I did not need them any more. Divine Love had restored my sight, and I now have no trouble with defective vision or headaches. I soon quit using profane language, as it had become displeasing to me, and I have never had a desire to take liquor since the first two weeks' treatment in Christian Science. My home is now happy and harmonious, and my business is prosperous, while before it was the reverse.

I take great pleasure in studying the Lesson-Sermons and the other literature of Christian Science. My family join me in gratitude to God, and to Mrs. Eddy for showing us a better way to live.

N. TRACY CARPENTER, Sacramento, Cal.

I was always regarded as a delicate child, and at the age of sixteen the doctors said I had lung trouble, besides other ailments which were distressing me. I failed to get any relief from material remedies and was finally advised to go to Colorado. For a while the change seemed to benefit me, then my old symptoms became worse than ever. In the winter of 1891 I had a severe attack, and it seemed that I could not last much longer. As soon as it was possible for me to travel I decided to go to California. I learned later that after I left home the doctor said to a neighbor that I would never come back alive.

After trying the California climate for about six months, and finding that I was no better, I was persuaded by kind friends to try Christian Science. About a month after I began to take treatment, I was able to return to my home in Colorado. I expected to go back to California the following winter, as I did not think I could stand the winter north, but greatly to my surprise I found that I did not need to go back. I think it was about the middle of the winter when my attention was called to the fact that I had no symptoms of lung trouble, and as nearly as I could remember, it had been about two weeks since these had left me. I only saw the practitioner twice before leaving California, all my other treatments being absent. Through the persistent study of the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy, with help when necessary, all my other ailments were overcome. My greatest desire is for more of the understanding of this healing truth that Jesus brought to the world, and which has been more fully revealed to this age through Mrs. Eddy.

EVA MAYO, Los Angeles, Cal.

About a year and a half ago, through the healing of a little child in a home where I lived, Christian Science and its beautiful teachings of Truth first came to me. I had, for about nine years previous, suffered from severe colds and bronchitis, and each year these became worse, until I suffered all winter from the disease, getting very little relief from medical treatment. I went to a Christian Science practitioner, and in less than four weeks I was healed. I have since been healed of a broken vein on my leg, after doctors had told me I should never be able to do without a rubber stocking. For this and the many other blessings that come to me in my every-day work, I am grateful indeed to Mrs. Eddy, who has shown us the truth that makes each day brighter because we see its light.

MISS E. L. KOEHN, Chicago, Ill.

It is with great pleasure and the deepest gratitude that I tell of the wonderful blessing which has come through Christian Science to my family. My little daughter had two attacks of illness, which left her throat in such a diseased condition that the physician wanted to operate at once; but the child was in such a weak condition, not having had a whole night's sleep for twenty-three nights, that I felt she was entirely unable to undergo the ordeal. Having heard a great deal about Christian Science, I resolved to try it, and so I called a Christian Science practitioner, and had my child treated. In two weeks' time she was entirely healed. Since then I also have been healed and greatly benefited. I realize all the great truths and blessings which we have received through Christian Science.

MRS. E. COLBY, Chicago, Ill.

I wish to express my gratitiude for all that Christian Science has done and is doing at the present time for me and mine. When a little girl of eight years old I came into this truth. Through its healing power, and the help of right thinking, I have been shown the unreality of a violent temper, of revenge, jealousy, sickness, the sense of lack, and a belief in death. May my life be so purified as to enable me each day to bear testimony to Christian Science.

ALICE LOUISE AUSTIN, Denver, Col.

Prompted by divine Love, and with a heart full of gratitude for all that Christian Science has brought to me, I write this testimony, trusting it may help some one as others' testimonies have helped me. For over four years I suffered with severe organic difficulties and was under the care of physicians a good part of that time. The diagnoses of two physicians were alike very alarming, and that of a third, while similar to that of the first two, was even more so. Their treatment relieved, but could not cure me. I went through long sieges of dieting and lived strictly within certain rules as outlined by *materia medica*, with practically no result.

Christian Science came to my attention through some friends, and my wife and I went with them to their church, where were gathered the most cheerful and happy people we had ever seen, and we listened to some wonderful testimonies of healing, and later talked with some of those who had given the testimonies. In a few days I consulted a practitioner, and he asked me if I was willing to give up material methods if he gave me treatment in Christian Science. I answered in the affirmative, although at that time it seemed to me I could not live without medicine, as some of the so-called vital organs of my body would not perform the functions required of them without material aid, and even then very poorly. He gave me a treatment, and I went home and threw away all the medicines. I was greatly relieved from the first, so continued to take treatment daily, and in a few days all symptoms of the so-called organic troubles had entirely disappeared.

I took a few more treatments for my eyes, which had been left in a weakened condition from several attacks of snow-blindness in Alaska a few years ago. They had been treated by a well known oculist, and I wore glasses made under his prescription, also by some eye specialists, but I was only able to read an hour or two at most and then would suffer with severe headaches and inflamed eyes. Since coming into Christian Science, however, I have discarded the glasses altogether, and for over five months I have been reading and writing nearly every night until twelve o'clock, and often later, but have never had a headache or any trouble with my eyes whatever. I have not taken any medicine, or resorted to dieting or any form of medical treatment, since I took the first treatment in Christian Science, and I am now much stouter, healthier, and happier than ever before in my life.

But that is not all! The spiritual uplifting one receives through Christian Science is greater than the physical heal-

Digitized by Google

ing, although this may seem hard to believe by those who are sick and suffering. By making a study of this Science, for Science it surely is, both my wife and I have arrived at a consciousness of the allness of God, good. We find that every thought must be a thought of love. Mrs. Eddy says on page 183 of Science and Health, "Divine Mind rightly demands man's entire obedience, affection, and strength. No reservation is made for any lesser loyalty. Obedience to Truth gives man power and strength." It is a straight and narrow path, but it is divinely beautiful. Last but not least, I wish to say that when my wife and I first came into Christian Science, we thought there was too much tribute given to Mrs. Eddy, but that thought soon vanished. Our own hearts are today full of gratitude for her life, and for Christian Science. Now we see her as the "Moses" of this epoch, leading men out of the "wilderness" of mortal illusion, out of sin, sickness, and inharmony, into the "promised land" of virtue, health, and happiness.

HARRY D. COWDEN, Carson City, Nev.

In a time of great need and distress I was led to Christian Science for help. The healing of many physical ills came about most beautifully. The list would include almost every variety; loss of hair, sore feet, lameness from rheumatism, and chronic eye trouble,—all have disappeared. A diseased gland on the eyelid was healed quite rapidly, whereas before in such cases it had been necessary to go to an eye hospital for an operation. Above all, however, stands out the transformation from the old man to the new, the complete change of thought which has been brought about by the faithful work done for me.

The Christian Science vineyard is sure to show great fruitage with laborers who manifest true fidelity.

ALFRED S. CLIFFORD, New York, N. Y.

I am glad to forward my testimony to the *Sentinel*. I hope some one who reads it may be benefited. I was healed of hemorrhage of the lungs through Christian Science. Doctors said my lungs were in a very bad condition and that I could not live long in this climate. This was over two years ago. A Christian Science practitioner in Chicago was the one who brought to me the healing. I am very grateful for what Christian Science has done for me. I am not as yet a Christian Scientist, but I hope some day to be worthy of the name.—CHAS. E. PERRY, Clinton, Ia.

About three years ago my little boy was very sick, the physician pronouncing it a bad case of fever. He called daily, but still the child grew worse. For nearly twelve weeks he was in bed, then a friend advised me to try Christian Science. We called in a practitioner, and with the first treatment the boy grew better. In a few days he was up and at play. I am very thankful to God for Christian Science and what it has done for us.

MRS. H. BUEHRER, Chicago, Ill.

The care with which all machinery is cleansed and oiled, so that neither dust nor friction will wear the parts, is suggestive to us as Christian Scientists. Our mental work goes on without friction when we are constantly purifying thought, "even as he is pure;" and when thought is anointed with the "oil of gladness." If this oil is applied only to the surface, however, the inevitable inner friction will soon be expressed outwardly in jarring discord, instead of in the quiet, harmonious activity that should characterize thought and life, and that will characterize it when, from the never-failing cruse, we continually pour into the inmost recesses of consciousness this cleansing, softening, harmonizing oil.—ADA J. MILLER.

FROM OUR EXCHANGES.

[Editorial in *Biblical World*.]

Our hope is set, not on a kingdom of God to be ushered in by a personal, visible coming of the king in the clouds, an overthrowing of all human institutions and the establishing of new heavens and a new earth, but on the ever larger and fuller development of the kingdom of God that is now on earth. We are preaching the gospel not till the witness having been borne, the nations shall be destroyed and the handful of the redeemed shall become the nucleus of a new era, but in the confident hope that little by little the leaven may leaven the whole lump and the nations of the earth become the kingdom of God and of His Christ. The inspiration of victorious Christianity lies not in the hope of rescuing one's self and others from an impending cataclysm, but in the joyful devotion of one's self to the task of helping to create for today and for the future an order of things in which God's will shall be supreme and mutual love shall govern in all human relations. Instead of waiting for the day of the Lord as an event which is to come "out of the clouds," Christians increasingly find inspiration to strenuous endeavor in the thought that, working with God in an age-long process, they may not only achieve something for their own day, but make some contribution, be it ever so small, toward the realization of that ultimate ideal toward which God is continually guiding the race.

[*Interior*.]

The indolent habit of regarding one idea of life and duty quite as good as another and neither worth the effort to find out which is nearer true, is disastrous to conscience and deadening to spiritual perception. But the error of the ungenerous is in supposing that this disposition goes along with toleration necessarily. The two things have indeed been very largely associated in the trend of recent years. But they do not belong together. Tolerance is debased and maligned by the association. It must be rescued. An immediate and important task of the church is to break the companionship between religious tolerance and religious indifference, and to redeem tolerance to the fellowship where it belongs—the fellowship with positive, unwavering conviction. The Christian ideal—the ideal patterned on Christ—is a man persuaded of great truth that he stakes his life on, yet willing to have other men think their own thoughts and subscribe as faithfully to truth as it appears to them. There is nothing incongruous in the two phases of this ideal. If the Christ, who could see all, was tolerant, surely man, seeing only a fraction, should a thousand times rather be tolerant.

[J. B. Irvine in *Christian Work and Evangelist*.]

The advancement which the kingdom of Christ should make in this most favorable era of light and progress is delayed not so much by its foes as by its friends. God has chosen to make us "workers together with him." Hence, progress is dependent at present largely on our folly or wisdom. The chief causes of the church's weakness and backwardness are undue conservatism, unwisdom almost inexcusable, and lack of true faith. The good-natured self-satisfaction of Americans, with their great worldly achievements, blind too many to the sad fact that, considering the great privileges and opportunities of this wondrous age, the church of Christ is not making progress equal to that of science and industry or adequate to the demands of humanity and spirituality. Like the apostle Paul, we need to forget present attainments in view of the dangers and duties that require us to press on for safety and success to nothing less than the high calling of God in Christ Jesus.

[W. B. Hinson in *Pacific Baptist*.]

The greatest moral movements of the present day are eddies whirling around Christ. Brotherhood, and frater-

Digitized by Google

nity, and uplifting,—all are but echoes of Christ's speech concerning God's fatherhood, the family of the church, and the cross of sacrifice that blesses men as the moon uplifts the tides. The very heresies of the age are indicative of the all-absorbing attention Christ is demanding and receiving. The saner—because the more spiritual—attempt of higher criticism is to make bare the Christ; the larger hope is the emphasizing of the mighty sacrifice offered upon the cross; and of those who cannot but trust that "no life may fail beyond the grave," the great majority base their hope upon the hero of Calvary.

[*Christian Advocate.*]

If men and women were as diligent to do the things which they know are right and to abstain from those things which they know are wrong as they are to create confusion in their own minds and in the minds of their neighbors concerning the right way, righteousness would cover the earth as the waters cover the sea. For, after all men's quibbling, the way of righteousness is plain enough to those who honestly try to find it. It is not want of light that leads men astray, but want of honesty. It is not because wrongdoers are ignorant that they do wrong, but because they are selfish and wicked.

[*Outlook.*]

In every field of thought and knowledge, in every department of individual, social, and national endeavor, in all attempts to deal with moral and physical disease, the sovereign word today is—save. Life is everywhere invoked to destroy death; love is more and more invoked to drive out hate; the best is set to subdue the worst; the angel in man is more and more placed in power above the animal in him; the love of God more and more drives out the fear of the devil; the whole process of life becomes more and more a process of growth and redemption. Life is driving out death.

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth.*]

The true ascension of the Son of man is spiritual. What Jesus did with his life on the outer plane of being we must permit him to do with ours in the inner experience of the soul. The Son of man must rise in us and ascend in us up where he was before. What took place in Jesus on the scale of one human life is taking place on the larger scale of all human life, and must continue until all human life has become one with him in the glory which he had with the Father before the world was.

[Bishop Brent in *Churchman.*]

After all, controversy is in religion what war is in the clash of nations. In religion our conflict ought not to be to rout our opponents, but to win them. Controversy for the most part deepens the existing convictions on both sides and is apt to prove a bar rather than an aid to better understanding. At least there is a better way than controversy. Of two good things let us choose the better, and when opportunity comes let the better give way to the best.

[*Watchman.*]

The model church has its task set before it in returning to the overmastering spirit of love, in reassuming its ministries of love which have been taken up by others, and in gaining the loyalty of men and women who are now giving their allegiance to outside organizations rather than to the church of Christ where it belongs.

[*Advance.*]

What is the Christian religion? Put the answer into the most condensed and yet comprehensive statement possible and the answer will be that it is love. "God is love," and the two great commandments on which hang all the law and prophets are to love God and to love man.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel.*

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel.*

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

TO SUBSCRIBERS.

Subscribers to our periodicals are requested to observe the expiration dates of their subscriptions, as given on the wrappers of the periodicals which come to them, and to renew subscriptions prior to the date there given.

The notation "Nov. X" indicates that the periodical will not continue after the last issue of November, 1910, unless subscription is renewed, and "July XI" in the same manner denotes termination with the last issue of July, 1911.

Subscribers are also requested to refer to the subscription rates given in our standing notices before sending in subscriptions.

OF INTEREST TO THE FIELD.

The Publishing Society has a limited number of volumes of the *Journal* and *Sentinel* bound in cloth, half morocco, and half calf and arranged in sets from four to nine volumes. These sets are now on sale at special prices, ranging from $9.20 to $21.00, according to the style of binding and number of books in the set.

These special prices apply only on sets of books, and in no case on single volumes. The offer presents an exceptional opportunity to Christian Scientists to obtain rare volumes for reading-rooms, libraries, and individual use. Detailed information will be furnished on request.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. **Please do not send currency.**

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES." MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90, six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage, at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

As a sequence of the legislative investigation of the bribery charges against a former state senator, the affairs of the New York state forest fish and game commission have been undergoing a merciless probing by the committee appointed by Governor Hughes. The committee finds that New York state has been robbed of millions of dollars through huge thefts of timber from state lands in the Adirondacks; that the accused have escaped criminal prosecution except in one large case and a few small ones; that civil suits to recover the value of the timber and the penalties prescribed by law have been compromised for a small fraction of the amount demanded; and that vast tracts of practically worthless land have been sold to the state at exorbitant figures by individuals and corporations that had stripped the land of its valuable timber.

President Taft has withdrawn from entry approximately 70,382 acres of land in California and Colorado under the provisions of the act of Congress of June 25, 1910. The California lands, approximating 1,327 acres, are situated along the East Walker river in California. They are believed to be valuable for power purposes. Those in Colorado are in the Glenwood Springs land district, and amount to about 69,055 acres. They are coal lands and were withdrawn to permit the geologic survey to classify the grades of coal contained in them. This withdrawal makes the total of coal land withdrawals in Colorado approximately 6,295,138 acres.

Until this year the secretary of commerce and labor has been compelled, under the old law, to farm out sealing contracts to private concerns, and the Government's profits have been small. The companies holding concessions were not so particular as they might have been in the taking of seals, and their profits were enormous. A recent act provides for Governmental control and operation of the fur-bearing industry of the Pribiloff islands, off the Alaskan coast. It is estimated that the United States treasury will profit five hundred thousand dollars by this season's business.

The report that a petition for the dissolution of the American Sugar Refining Company has been completed by Government officials has been confirmed. The action will be entirely independent of the criminal proceedings which have attracted such wide attention and resulted in a number of convictions. The suit is said to be similar to proceedings brought against the Standard Oil Company and the American Tobacco Company, both of which are pending in the supreme court.

Federal Judge K. M. Landis has issued warrants for the arrest of ten of the leading packers of the country and warrants for others may follow. As a result of this action, the heads of the companies which organized under the name of the National Packing Company and are alleged to have controlled the price of meat, are brought face to face with a possible jail sentence.

Under an act passed by the last New York Legislature, the public service commission, second district, has assumed jurisdiction over the operations of telephone and telegraph companies operating in that state. The new law requires telephone and telegraph companies to afford a definite service at just and reasonable rates to all.

About seventy Chinese students arrived in Boston last week on a special train from California. They will study in various eastern colleges. Some of them are supported by the funds afforded by the non-acceptance of the full amount awarded the United States as indemnity for the troubles due to the Boxer uprising.

Special agents of the customs service have been sent to San Francisco to investigate the weighing and sampling of sugar in that port. It is said this investigation is one of the first moves in the now completed plan to examine customs offices at all the large ports.

As agents of the tariff board have not in all cases been given the facts sought from manufacturers, it may become necessary for Congress to empower the board with authority to compel the production of books and papers and testimony under oath.

The National Civic Federation is organizing state councils to promote the cause of uniformity in legislation, in conformity with a resolution passed at the Washington conference on uniform state legislation, held in January.

The policy of economy at the treasury department has enabled the bureau of printing and engraving to do eleven per cent more work on about one hundred and seventy-two thousand dollars less than it did last year.

Five and a half miles of the Panama canal, at the Atlantic entrance, have been opened to navigation for the sand and rock fleet of the Atlantic division. Five miles at the Pacific entrance are open to vessels of all kinds.

A court in Minnesota sentenced a banker to thirty days' imprisonment for overspeeding in an automobile. The case was carried to the supreme court and the decision of the lower court affirmed.

International.

Former Premier Bourgeois, in opening at Paris the first international conference on unemployment, announced that the purpose of the congress was to investigate the scientific causes of unemployment with the object of organizing methods for conserving human resources. Besides discussing means of combating unemployment, the delegates will attempt to lay the basis for a labor exchange between the city and the country districts and between different countries. The American delegation is headed by Charles P. Neill, commissioner of labor, and his associates are Prof. J. J. Andrews of Chicago, Prof. Edward Devine of Columbia University, and William Leiseron of New York.

There was recently opened for traffic at Auckland, New Zealand, a reinforced concrete bridge which contains the largest masonry arch in existence, say the *Scientific American*. The structure consists of nine approach spans of from forty-three to eighty-one feet, and a great central arch of three hundred and twenty feet. The latter is hinged at the abutments and at the center. It consists of two separate ribs, connected by cross struts, with a floor resting on slender columns built up from the ribs. Provision is made for a twenty-four-foot roadway and two six-foot sidewalks.

The premier of New South Wales declared in the course of a speech recently that it was his intention to open up for settlement purposes large areas of suitable crown lands in the west and northwest as soon as possible; another important feature of his policy will be the duplication of the main trunk railways and the general scheme for railway decentralization, as well as educational reform, and also the establishment of a woman's college for domestic and other training.

The British government has agreed to the projected opium conference, upon several conditions as to preliminary studies by the different Powers, with a view to the preparation of restrictions in the different countries upon the manufacture of and trade in opium. All the Powers now have on principle accepted the invitation to consider the question. The details of arrangements for the meeting will be left in the hands of the government of The Netherlands.

The prime minister, Sir Joseph Ward, referring recently to the question of the New Zealand meat trade, said in Parliament that in the event of any endeavor being made to control the New Zealand meat market, the members would be consulted as to the advisability of nationalizing the whole of the meat trade.

M. Aubrun, the French aviator, flying on the 11th in a Blériot monoplane, broke all speed records for three hundred kilometers (186.1 miles), negotiating the distance in 3 hours 33 minutes 7 seconds. His average time was 52.30 miles an hour.

M. Chavez, a Peruvian aviator, in a Blériot monoplane, last week flew over the Alps by way of the Simplon pass. In landing at Domo d'Ossola his machine was demolished and he himself severely injured.

Lloyd George, chancellor of the exchequer in Great Britain, claims that his tax on whisky has reduced its consumption by ten million gallons, with a consequent reduction of arrests for crime.

Industrial and Commercial.

At a special invitation of the chairman of the finance committee of the United States Steel Corporation, representatives of the leading steel interests of America met in New York last week and agreed on a price for steel products. This conference is looked upon as a confession that the steel situation had become strained and that an open market is threatened. The weakest spot was in sheets, black plate and tin plate. For some months the card rate in this line has been ignored and the tin plate business was becoming demoralized in its busiest season, as the bulk of this product is used in making cans for fruit and vegetables.

Boston is the largest fresh fish market in the United States. There is only one larger in the world, that of Grimsby, England. More than one hundred and twenty-five million pounds of fish, exclusive of shell-fish, aggregating in value over six million dollars, are handled annually through the Boston market. Over three hundred and twenty-five vessels, representing an investment of more than three million dollars, dispose of their catches there. Fresh fish is distributed from this city to points as far west as Salt Lake City, Utah, as far south as New Orleans, and as far north as Nova Scotia, and cured fish is shipped throughout the country.

The fur catch of the past winter, which is now beginning to arrive at Edmonton, Alta., from the north, will net the trappers, it is said, over two hundred and fifty thousand dollars.

The Hoosac tunnel on the Fitchburg road in Massachusetts is to be equipped for electric traction at once.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

A POSITIVE GOAL.

CLARENCE W. CHADWICK.

CHRISTIANITY has no uncertain meaning for him who has caught the true tone of the Christ-idea in human consciousness. He no longer thinks of it as a vain sentimentalism or as a religious philosophy suitable only for the unpractical and weak-minded. In Christian Science he has found the one and only living God, and man's true relationship to Him to be a divine certainty. A definite goal now confronts him, the realization of the perfection of being, and as never before he finds himself actively engaged in putting off the old man of sense and putting on the new man of Soul. He finds no uncertain significance attached to this regenerative work. On the contrary, it seems so comprehensive and peremptory that he marvels that he should not sooner have been healed of the mental and moral darkness which had for years blinded him to the truth of man's being in Science.

A new ideal, a new thought-model, now absorbs his attention; and it is certainly no meaningless vagary of belief to him, for he sees in it the ultimate conquest over all that would separate him from the spiritual perfection of his being. This ideal of life teaches him how to seek the good and how to find it, how to love and how to be loved, how to live and how to let live; in fine, it teaches him how to work out his own salvation, which involves the all-important factor of watching his own thinking. This means that he has entered the arena of right thought, and that a true sense of peace and happiness has begun to be realized. He no longer finds satisfaction in mentally meddling with other people's affairs, because he now knows it to be contrary to the divine law and order. He now knows that salvation is for all mankind, which makes the welfare of his neighbor identical with his own. He has found that the best way to help his neighbor is to be right himself with God by maintaining mentally man's true relationship to his Maker.

Through the positive proof of healing he knows what his mental attitude should be at all times. If doubt or fear ever suggest themselves, he finds his haven of rest in the recognition that "the Lord God omnipotent reigneth." He is never at a loss to know what thought to hold, since God is the infinite ever-present Mind from whom right thoughts are constantly passing to man. A positive goal is always before his mental vision, and he can say with the psalmist: "I have set the Lord always before me: because he is at my right hand, I shall not be moved." Best of all, he is learning to give power to thought. Why should he not do so, when he finds out that God clothes his own thoughts with omnipotence and makes them intelligently and lawfully operative to correct and to annul all wrong thinking?

For lack of understanding of this very subject, the religions of the past have failed to demonstrate the healing and vitalizing power of divine Love. They had drifted so far away from a scientific mental attitude concerning the practical nature of omnipotence, that matter, drugs, and hypnotism were given power rather than Mind. Faith in matter, be it ever so meager, loses sight of the pure teaching of Christ Jesus and breaks the First Commandment, "Thou shalt have no other gods before me." Christian Science insists upon obedience to this commandment to prove that one really understands the meaning of omnipotence. The Christian Scientist has caught a glimpse of its meaning, which has revealed to him the divine Principle upon which a complete salvation can and must be wrought out. This discernment inspires him with a firm faith in the final vanquishment of all belief in evil. It gives him positive assurance that there is something worth living for, and that the more of good he appropriates and expresses, the more conscious he becomes of that Life which was revealed to the world through Christ Jesus.

That more abundant sense of Life which Jesus made manifest to human consciousness through demonstration, is coming again to humanity through the teachings of "Science and Health with Key to the Scriptures" by Mrs. Eddy. Countless thousands realize and testify to the fact that through the moral and physical regeneration gained therefrom they have been granted a new lease of life. The world looks brighter to them, and they are more ready to lend a helping hand in the hour of need. Selfishness has given way to a conscious constant desire to do something for the upbuilding of human character. And with this desire is the positive knowledge of how to accomplish their holy purpose, through Mind and not through matter. They are no longer victims of the demoralizing assumption that the world owes them a living, regardless of their own mental or moral condition. Rather do they rejoice in that definite and positive assurance of being right which enables them to obey willingly and cheerfully the unchanging law of Mind and to refuse submission to the so-called laws of matter.

Through steadfast loyalty to divine Principle they learn to impersonalize good, and thereby to avoid the idolatry and mesmerism of personal leadership, teaching, and worship. To know that they are right with God, doing His bidding, brings to them a positive, satisfying sense that could not possibly come to one who is thinking and acting from the standpoint of erring human belief. They now know in whom they believe, and they no longer consider it experimental to trust God to do what omnipotence is supremely capable of doing for them. When once they give the truth the right of way in thought and act, they experience unspeakable joy and satisfaction in doing what they know to be for the good of all humanity. They have learned that of themselves they can do nothing, that the battle is not theirs, but the Lord's, and that their only duty is to "stand still" in holy, uplifted consciousness and see the salvation of God, good.

So positive is the proof of the actuality and tangibility of Christian Science, that its loyal adherents can and do look forward confidently and expectantly to the reign of "on earth peace, good will toward men," with its attendant freedom from sin and disease, and its demonstration of the eternal facts of being,—holiness, happiness, immortality.

OUR FATHER'S BUSINESS.

FRANK H. SPRAGUE.

An immortal craving prompts humanity to reach out toward the attainment of freedom in manifold channels—religious, political, social, industrial. No material object of pursuit, however, is capable of satisfying man's highest needs. Material boundaries, like the horizon-line of vision, merely mark the limits of human desires and ambitions for the time being, and steadily recede before the advancing footsteps of civilization. Each successive epoch in the progress of mankind has its peculiar problems. In the present period of rapidly maturing ideals and enterprises, two well defined currents are setting in opposite directions on the surface of affairs. The claim of the individual to the right to think and act in the manner that appeals to him as most fitting, is met by the counter-claim that combinations of individuals in various capacities or the organized body of society ought to control individual interests.

The growing complexity of modern civilization, the intricacy of the machinery of intercourse and exchange, the many-sidedness of public obligations and responsibilities, tend to infringe on the rights of the individual and curtail the free exercise of his capacities. It is not so much the ultimate outcome of the rapidly developing industrial tendencies of the period that concerns us at present, as it is the attitude we ought to maintain in the midst of the seemingly uncertain and threatening conditions which grow out of this unsettled state of affairs. Where is the line to be drawn between the duty of the individual to be a law unto himself and the obligation he owes to society as a governing body? In many cases it is impossible to decide rightly from a merely human view of the situation; the factors are too complicated to be analyzed and weighed in the balance of human judgment.

However conscientious one's purpose, in attempting to steer clear of a particular difficulty, he may find himself confronted with more serious troubles. In a system based on selfishness, where capital continues to control production and prices, and labor organizes to checkmate corporate greed and enforce its demands by equally arbitrary measures, the individual who relies on material indications as a guide is at the mercy of chance and circumstance. Without rudder or compass, he is driven hither and thither on the sea of mad ambitions and conflicting purposes.

At this critical juncture Christian Science comes forward with the understanding that man is not a creature of material sense, as prevalent economic theories assume him to be, but that he is the spiritual reflection of divine Mind. This enlightened view establishes a scientifically accurate basis upon which to work out the problems of existence in the concrete. As the needle points to the pole, so spiritual sense turns to divine Mind as the governing intelligence of man. The way is thereby opened to a realization of the fact that, in the midst of problems which baffle human judgment, man is amenable to the direction and protection of Principle; that the proper attitude for one to take toward all measures and methods, as well as his relationship to his fellows, is determined not by material indications, but by God's law, which produces only harmonious results.

With this single purpose at heart, he may depend on being led to choose the right course in any contingency. He has not to consult the probability as to the outcome of the line of action which opens; he has not to decide whether the difficulties and uncertainties which appear in the way involve too great a risk; nor need he doubt his ability to carry out the work in hand. If he is accepting and following the guidance of divine Mind, he knows that the divine order of being, in which God governs all, is not regulated by a human sense of supply and demand, market quotations, industrial conditions, etc.; that the success of one individual does not involve the failure of another; that occupation, position, employment, recompense,—all are determined by the law of good. To the extent that human industry is established on a spiritual basis, the uncertain, harassing, and baneful factors with which material sense reckons,—hard luck, competition, overcrowding, favoritism, jealousy, incompetency, and other mortal considerations too numerous to mention,—fade out.

"Wist ye not that I must be about my Father's business?" said Jesus. And again: "I can of mine own self do nothing:" "The Father that dwelleth in me, he doeth the works." In order, therefore, to be a law unto himself, in any true sense, the individual must come into harmony with spiritual law, the law which underlies and governs all real being. He then realizes that freedom and genuine success are gained not by attempting to adjust his efforts to the discordant order of things to which material sense falsely testifies that he belongs, but by being ever about his Father's business.

DIVINE GUIDANCE.

CLARA ISERMAN.

"Commit thy way unto the Lord," said the psalmist, and these words were quoted to the writer after she had attempted many times to commit her ways unto personality. At first this simple quotation brought a great disappointment, for she had expected a different answer to her questioning; afterward, however, they yielded the fruit of thankfulness, accompanied by a sense of deep-flowing peace. Yes, she would commit her way unto the Lord!

As this was not the first lesson she had had, she wondered why so many chastenings were necessary, why humanity should be so prone to fly right off to personality in order to realize one's desire, or as the Bible says, "bring it to pass." She could recall that in a former experience she had immediately gone to this same person, hoping to be told how to go about the realization of her wishes. Most sympathetically and kindly did this friend turn her away from personality, and at this time, also, disappointment was followed by a sense of gratefulness, for it awakened an understanding that drove the seeker to Truth. When she left out every human being and went direct and alone to Principle, God, the desire of her heart was answered. Her son, alone and without influence, walked right into the position of organist in a Christian Science church, in one of our large cities, ten days after he had entered a college there. Although a stranger in the city, he was given this work, and thus was the son of an orthodox minister brought into a Christian Science church and Sunday School, while the desire of a mother's heart was brought to pass.

As students of this beautiful Science, how prone we are to think that we can meet and mingle with other Christian Scientists, gain their ideas, make their opinions the basis for ours, and thus relieve ourselves from the work of study and demonstration. Mrs. Eddy says, however, "The song of Christian Science is, 'Work—work—work—watch and pray'" (Messages to The Mother Church, p. 20), laying the stress on work. Again, on page 156 in "Miscellaneous Writings," we are told that "experience and, above all, obedience, are the aids and tests of growth and understanding," and that "assembling themselves together, and listening to each other amicably, or contentiously, is no aid to students in acquiring solid Christian Science." In other words, our Leader seeks to impress upon us that the highest degree of knowledge or understanding of Christian Science is to be gained by a daily study and application of its teachings.

The writer is one only of thousands who out of their own experience can bear testimony to the truth of this, and never did gratitude and humility mingle in appreciation more truly than now for the beautiful lesson which would teach us to turn from person to Principle, from men to God.

PURITY.

LOUISE FANNY BODMER.

HIGHER than all other children of the Alpine flora, where only a few daring tourists disturb its peace, grows the edelweiss. The flower is an emblem of purity, as the name signifies. Attempts have been made to transplant it from the lofty summits of its native soil into lower altitudes, but despite the care given the tender plants, in the few instances where it took root and grew, the flowers were but poor reminders of the beautiful white stars that grow among the rocks and snows of the Swiss Alps.

Like the edelweiss, our consciousness can only reach purity and perfection when we dwell on the mountain top, in the realm of Mind, man's native soil. It cannot be transplanted into a lower altitude, however favorable the conditions may seem. Man is the reflection of God and expresses the purity of the divine Mind, but the suppositional opposite of the divine Mind, mortal mind, would make us believe that purity can be transplanted, taken into the environment of worldly thoughts. It is, however, only by jealously guarding our mentality against all intruders that we can resist the attacks of every foe and expand in beauty on the heights of Truth.

By heeding our Leader's counsel to keep ourselves "unspotted from the world,—uncontaminated with evil" (Manual, Art. III., Sect. 1),—we can realize our rightful heritage of purity of heart; and great is the reward of this faithfulness, for Jesus said, "Blessed are the pure in heart: for they shall see God."

COMPARISONS.

DR. H. ERNEST EVANS.

WHEN Christian Scientists reflect upon what was a mere existence and compare it with the fuller life of joy and peace that they now know, they can but remember our Master's promise, "I will pray the Father, and he shall give you another Comforter, that he may be with you for ever," and realize the truth of our Leader's words, "This Comforter I understand to be divine Science" (Science and Health, p. 55).

Looking back upon the days full of fear, distrust, jealousy, and unsatisfied ambition, we wonder now how we could possibly have supported such an existence, for it seemed to hold out little hope of happiness this side the grave, and we dared not think of the shadowy prospects hereafter. We had grown weary of a world "where but to think is to be full of sorrow," and often, perchance, we had sighed for some Lethean vintage that would have enabled us to fade away into forgetfulness. Our greatest desire was to stifle thought, for, as it seemed, that way lay madness; and to this end many may have plunged into pleasure and drank its cup to the dregs, only to find disappointment and disillusion. Some of us, in a desire to escape from the materialism of a material age, may have dabbled in philosophy or spiritualism, hoping to get some rest for our souls but finding none, until at last we escaped from the bondage of false sense and found safe anchorage in the quiet waters of Christian Science.

How different now is our outlook, for we feel the abiding presence of a God of love and there is no room for fear. No longer do we plot out our day so as to leave little or no time for meditation, for thought to us has become a constant and blessed necessity, and we know we can take all our problems to Him who is the author of our being. What a comforting realization of all this one has when, perhaps in the midst of a rushing day, he can retire for a brief spell of quiet meditation in order to straighten out some seeming difficulty; how soon the cloud has melted away, so that he has wondered that it had ever seemed to exist, and in its stead there has come to the heart "the peace of God, which passeth all understanding."

In this connection a recent experience well illustrates the speciousness of mortal mind with all its fallacious arguments. I had been trying to interest a friend in Christian Science, and one day, on asking him if he had been reading much of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, he replied in the negative, giving as a reason the fact that he had been greatly worried in his profession and would take up the study when matters had mended somewhat. It was the old ruse of mortal mind, "When I have a convenient season, I will call for thee." I told my friend that the reason he had given me for not reading the book would have been just the one that would have made me study it as diligently as possible, in order to find a solution for all the difficulties.

Speaking of retirement for meditation would perhaps lead some to suppose that Christian Scientists crave a sort of monastic quietness, where, apart from all the turmoil of the world, they may commune alone with God; but such is not the case, for, realizing what Christ meant when he said, "I pray not that thou shouldest take them out of the world," the true Christian Scientist bravely plays his part in life's drama, while ever conscious of the "peace that floweth as a river" and the love so infinite and so far beyond and above all earth's discords.

"*Sic transit gloria mundi*" has been writ large upon worldly achievements, and when we thought we had accomplished something, so soon came the period of disillusionment, and we felt inclined, like the Preacher of old, to exclaim, "All is vanity." Today the world is sighing for what it has not, and finds no lasting pleasure in possession. Every worldling is dissatisfied with his own lot, and yet, as in the old myth, when it becomes a question of the exchange of burdens, each clings to his own, as it then appears lighter than his brother's. Poor humanity! in bondage to its own beliefs, seeing danger everywhere, yet failing to discern the unfailing help "in time of trouble."

In Science how very different the outlook and from what a sea of trouble we are preserved. Realizing that there is but the one Mind controlling us, and that therefore in all his ways man reflects infinite good, we know that whate'er befall, it may be made to yield us good and thus prove a mile-stone on the road that leads upward, provided we are entering into "the glorious liberty of the children of God." Christian Science alone seems to teach people how not to worry, for it enables them to profit by the assurance that we may cast all our burdens upon the Lord, for He careth for us. Many medical men explain to their patients the evils that arise from worry, and advise them, to the best of their ability, but the needed relief can be given by those only who have learned to "minister to a mind diseased." When we are filled to overflowing with thoughts of love toward God, anxiety and fear can find no place of lodgment.

The changes wrought in us through Christian Science seem to come so naturally that few of us realize how we have altered until, after a period of months or years, perhaps, the contrast between our present status and our past is suddenly disclosed, and we perceive that we are entirely free from beliefs and superstitions to which the many are still subject. How thankful we ought to be that divine Science has lifted us out of the slough of many an old stupidity and revealed to us that Life is not dependent on matter, but is eternal.

That somewhat of superstitious fear still lurks in the consciousness of some who have been benefited in Christian Science would appear from their reluctance to acknowledge their personal healing at the testimony meetings. They seem to fear that, if they do so, they will somehow lay themselves open to the attacks of error and presumably suffer in consequence. Let any such realize that every affirmation of truth blesses not only ourselves but all the world and that, as Mrs. Eddy tells us, "we bury the sense of

Digitized by Google

infinitude when we admit that, although God is infinite, evil has a place in this infinity, for evil can have no place, where all space is filled with God" (Science and Health, p. 469).

Another great cause for thankfulness is our changed attitude in regard to what is called material prosperity. We have come to know through Christian Science that when, like Solomon, we sincerely pray for "wisdom and understanding," God gives us "both riches and honor;" that, having first sought "the kingdom of God, and his righteousness," all things are added unto us. The Master said, "Ye must be born again," and the world has ever been looking forward to a spiritual regeneration at some future time. Christian Scientists have come to realize that "the great far-off divine event is now," and that each one of us is born again when he enters into the consciousness of the life "hid with Christ in God." In acceptance and government of Christian Science one really begins to live, while that which has gone before has been but a mere existence.

WORTHY OF HIS MEAT.

ARTHUR F. FOSBERY.

Most people admit that the man who is doing the necessary material work entailed by present conditions should receive ample reward for his time, but many seem to think that any one who strives to lift his fellows toward that ideal condition where work will not be drudgery, but where all will rejoice in unity of purpose and action, in the loving expression of infinite bliss, and who spends his time in ameliorating untoward conditions to the best of his ability now, should receive but a mere pittance, a bare living in return for his labor. One reason for this peculiar notion is, that those who seek spiritual things denounce the folly of relying for happiness on material things, and maintain that we should be ever ready to give up material things for spiritual; therefore the onlooker, who does not discern spiritual substance, thinks that the proof of spirituality must necessarily be lack, because from his point of view the idealist is advocating the giving up of everything, and getting nothing in return except the hope of happiness in some mythical future state.

The Christian Scientist is striving to show that those who rely wholly on spiritual consciousness for their supply do not suffer from any sense of lack, but gain abundantly, now—in the present time. He does not always rise to the visible demonstration of this fact, and one of the causes which sometimes contribute toward his failure in this direction is indiscriminate giving. There are times when it is right to give freely, and there are times when such giving is even harmful. If a bricklayer built houses for nothing, or for half the regular wages, because he used an improved method of building, and wanted people to adopt it and build their own houses, he would, instead of accomplishing his object, be merely tempting people to let others do their work for them. His time being taken up by people who should do their own work, he would not be able to teach or build gratuitously where such gratuitous teaching or building would be right; whereas, if he charged full value for his time, and his work being more important, his time would be more valuable than it had been while using the old method, people would pay more attention to his teaching, and be sooner able and willing to do their own work. Justice requires a full recompense for labor; and if we labor in the right way, we get our supply and use it in the right way, because we know that only as we discern it rightly is it of value to ourselves and others.

Mrs. Eddy says in "Miscellaneous Writings" (p. 307): "God gives you His spiritual ideas, and in turn, they give you daily supplies." The most important thing about our supply is the understanding of what its substance consists,—God's spiritual ideas. But if we combine a mere intellectual acknowledgment of this with a love of and reliance on the material, instead of a spiritual consciousness of the infinitude of supply, we have on hand only so much matter, the value of which will continue to shrink, even to the finite sense which grasps it, because the sense of limitation continues to increase in proportion as it is indulged, whether the material possessions increase or diminish.

RESULTS FROM ONE TESTIMONY.

LILLIAN HALES TURNER.

Few, perhaps, realize how far-reaching is the good that comes from the giving of testimonies at the Wednesday evening meetings. By way of illustration, let me tell of the help that came to two homes recently as the result of a testimony given in an experience meeting ten or more years ago. The woman who gave the testimony said substantially, that if we were told we indulged habitually many thoughts of hatred, each of us would probably deny the charge, as did she, believing that hatred was a mental quality foreign to her disposition. Upon turning the searchlight upon her thoughts, however, she found that she was indulging the sense of hate in many ways, such as hating certain idiosyncrasies and faults in others, conditions in environment, hating to perform rightful duties in the home, in society, in church work, with all that they entailed. When roused to the condition she proceeded to correct it, and gave an illustration of how she did it.

Among other things, she disliked walking, and although she lived within easy walking distance of the church, she always avoided the walk, taking a long, round-about street-car route in preference. Realizing that this dislike was only another form of hatred, she began to reverse this kind of thought by knowing that activity is natural, that it is natural to love to walk. Following the thought with the active doing, she walked to and from church and at all times when it was the normal thing to do, and within a short time, to her own surprise, she found that she enjoyed walking, and thereafter did much of it.

Recently this testimony was told in response to a remark a woman made about some inharmonious condition in her home. Some weeks later she said, "I want to tell you how much help that thought about the overcoming of hatred has given. There has been such a change in our family; there is so much more harmony; not one of the children has been sick; and I am feeling just splendid." She said further that she had told the testimony to her sister, and that two weeks later her sister had said to her: "You know how I have always hated housework? Since I last saw you I have been housecleaning, and have done most of the work myself, and the marvel is that I enjoyed it; it did not make me tired or sick, as it formerly always did. That testimony about hatred which you told me changed my entire thought about the work and has made me happy in it."

Christian Science thus unveils error and shows us how to correct and eliminate it with the positive loving thought. The relation of experiences in this direction, in our Wednesday night meetings, may indirectly help many beyond the reach of our voices to see how practically Christian Science corrects wrong thinking, and thus brings harmony into our daily activities.

SELECTED ARTICLES.

[Alfred Farlow in *Eastern and Western Review*, Boston.]

The distinctive feature of Mrs. Eddy's work is her venture beyond the fundamental truths of Christianity and her formulation of a system of consistent deductions from these premises, the acceptance of which is making religion more practically significant to present needs, as in the healing of the sick. Christian Science is not, however, merely an improved system of therapeutics. It inculcates that spiritual regeneration and religious practice which enables mankind to rise superior to bodily ills. It is here seen that Christian Science is not a form of or related to mysticism or occultism. It may be as easily understood and demonstrated as a mathematical proposition, but as in the study of mathematics one cannot gain a certain understanding of the rule while skipping the "examples for practice," so one cannot be sure of his knowledge of Christian Science and neglect its proofs. One cannot attain a working knowledge of Christian Science without using it. Furthermore, the student must be content to have the first lesson first, the second lesson second, and so on; and each successive lesson must be practised, in order that sufficient advancement may be made for an understanding of the next.

Christian Science does not depend upon suggestion, as this term is used in the schools of psychology. It relies unreservedly upon divine power. Its prayer consists of an abiding realization of the divine presence, such as overwhelms and destroys our conscious and unconscious sense of disease or disorder, even as light dispels darkness. Thus it conforms to the instruction of the Scriptures, "Overcome evil with good."

A Christian Scientist's faith and trust in God supplants his former beliefs for the simple reason that he has acquired a clearer and more definite knowledge of God. In the ratio of his increased understanding he loses his finite sense of Spirit and spiritual things. Thus God becomes greater to him and his troubles become proportionately less. As he realizes the infinitude and hence the allness of God, he realizes the nothingness of the error and disease which erroneously appear to share the infinite power and substance. This liberates him mentally, and bodily improvement follows as a consequence, on the scientific basis of the Scriptural statement, "Ye shall know the truth, and the truth shall make you free."

In Biblical lore, sin, sickness, and death are classified as the "works of the devil." Satan or devil is defined as abiding "not in the truth because there is no truth in him," and this is because his existence is not true but false. It is further declared that "when he speaketh a lie, he speaketh of his own, for he is a liar, and the father of it;" that is, the adversary's claim of authority or "his own" is a lie, "for he is a liar, and the father of it." Satan's fatherhood may be said to consist in the fact that he is a liar and his offspring, sin, sickness, and death, a lie. They do not exist by divine authority or by virtue of truth, but stand a self-constituted "liar" and "lie." With this knowledge we readily understand Christ Jesus' saying, "Ye shall know the truth" in order to obtain freedom, and thus it may be noted that Christian Science correctly classifies sin and disease as errors and falsities, and points out the effective remedy therefor without using or looking to any material means.

This is an age of scientific development, and why not scientific religion? Mrs. Eddy has discovered the Science of the Master's teaching, she has proved the word of God to be demonstrable. She has stated the Principle and rule of divine Science, and thus related its saving truth to the lives of mortals. Mrs. Eddy discovered the fundamental propositions of Christian Science in 1866, but she says she did not understand the subject as she now does until the time of the publication of her book in 1875. She was especially qualified both by nature and experience for such a revelation, and by revelation we mean the discernment of positive and absolute spiritual truth, in contradistinction to mere undemonstrated beliefs accepted from a human teacher. The Rev. Enoch Corser, a well-known clergyman of his day and one of Mrs. Eddy's private tutors, said that she was his brightest pupil and that even in her youth she was interested in spiritual subjects that were too deep for the apprehension of many of her friends. Her choice of books on philosophy and moral science, and her religious development even at the age of twelve, indicated the trend of her youthful thought and portended her future development and research into the domain of religious thought.

Christian Science affords such an enlarged and definite knowledge of God, the Principle of all good ideas, as will greatly add to the satisfaction of Biblical research and knowledge. Indeed, the student of Christian Science finds that his new and clearer understanding of the only cause and creator improves proportionately his sense of all things, since he is able to judge effect by his positive and demonstrable apprehension of cause, on the scientific basis that "like begets like," that the effect is always in the likeness of the cause. All this is in keeping with the Biblical teaching that "if any man be in Christ,"—if he possesses a spiritual sense or perception and has acquired the faculty of interpreting the nature of effect by a correct knowledge of spiritual cause,—"he is a new creature: old things are passed away: behold, all things are become new."

St. Paul speaks of those "who through fear of death were all their lifetime subject to bondage," and declares that it was the mission of our Lord to destroy that fear and thereby liberate us. In his prayer the Master said, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent;" thus teaching in unmistakable terms that life or existence is to become more substantial and enduring by a true knowledge of God and His Son, the divine cause and its effect. This teaching is in keeping with the texts previously quoted regarding freedom to be obtained by knowing the truth, and both texts justify Mrs. Eddy's affirmation that "Jesus of Nazareth was the most scientific man that ever trod the globe;" that he "plunged beneath the material surface of things, and found the spiritual cause" (Science and Health, p. 313). By scientific adherence to the natural and unvarying rule as to the relation of cause and effect, Mrs. Eddy has reestablished the Saviour's practice of healing sin and sickness by the simple process of overcoming error with truth. She says in her text-book, "We classify disease as error, which nothing but Truth or Mind can heal;" and, "Science has called the world to battle over this issue" (*Ibid.*, p. 483). Thus she has attached the word Science to Christianity, and by unmistakable proofs has established the propriety of this union and justified her use of the term Christian Science. If, as the Scriptures declare, man is to escape from sin and its consequences, disease and death, by becoming Godlike, he must first attain a clear understanding of God and of man in His likeness, in order to know wherein he must improve,—what to incorporate into his life and what to eliminate therefrom. Such a knowledge is justly entitled to the name Science, because it embraces the truth of being, and it is equally deserving of the name Christian because it is based upon the teaching of Christ Jesus.

St. Paul described the practice of this spiritual science as a putting off of the old man with his deeds and a putting on of the new man, "which is renewed in knowledge after the image of him that created him." In this explanation the apostle clearly teaches that we must first possess a knowledge of God's image, which fundamentally means a knowledge of God, in order to put off the unideal and unChristlike and to put on that which is essential to true manhood. Who shall say that such knowledge is not scientific and Christian? The contention that the use of the term

Digitized by Google

"science" should be restricted to matter or to that which is cognized by the material senses, is equivalent to the assertion that there is nothing to know beyond the material, an assertion that no one but an atheist or an absolute materialist could consistently make.

It is freely admitted that the teaching of Christ Jesus which Mrs. Eddy emphasizes is not in accord with material testimony, but the question of science is not a question as to what seems but as to what is. Even modern physicists have demonstrated the unreliability of material seemings, and some have discredited them altogether. Moreover, if we are correctly informed, most if not all religionists agree with Mrs. Eddy's premise that "God is Spirit," though perhaps without noting that they do so in contravention of material sense. Hence, they need only to be consistent to endorse all that Mrs. Eddy teaches, since her entire system of thought is wholly consistent with her premises.

Furthermore, all will allow that a religious belief is of no benefit except in so far as it makes its adherents better, and from the very nature of its premises Christian Science demands perfection, although recognizing that such a state can be attained only by spiritual growth. It insists that man, expressing as he does God's creative activity, is just as God would have him be, even His own image, and each individual must awaken to the Godlikeness in order to satisfy and "be satisfied." Skepticism and infidelity are due mainly to the generally prevailing effort to retain religious beliefs which are undemonstrable, and which in large measure are in conflict with physical science. Christian Science harmonizes religion and physical science by correcting the erroneous view of both. Hon. C. C. Bonney, president of the World's Parliament of Religions held in Chicago in 1893, said, "True science could never look otherwise than up through nature unto nature's God." God is the only cause, hence all that exists is of God and there is nothing to know besides God and His creation.

Since creation is the continuous manifestation of its creator, any erroneous sense of creation must be corrected by a true knowledge of the creator. Christ Jesus gave a definite statement as to the nature and characteristics of the creator. He taught that God is "Spirit," "Love," "good." This may or may not be in accord with the theories which we already entertain, and it is certain that our material senses will never help us to understand these propositions. Nevertheless, as in the case of a mathematical proposition, we have no other choice. We must take it for granted that the theory is correct, and then prove its truthfulness by demonstration. If, in utilizing the ideas of truth which Christian Science teaches, we are able to realize certain good and desirable results, we thereby prove that these ideas are correct. There can be no doubt about this, since the practitioner knows what he has used in order to obtain the results. The demonstration is unmistakable.

Christian Science furnishes a safe and satisfying anchorage for those who have long been subject to the ebb and flow of the tides of human belief, as well as a means of relief to those who are suffering from bodily ills. It satisfies because it teaches demonstrable truth. The truth always carries with it an element which seems to say, "It is enough." Christian Science has spread to the farthest parts of the earth, and in our own country it has found acceptance with a very large number of intelligent people. It is, therefore, safe to say that Mrs. Eddy has contributed as much if not more toward the health and happiness of the human race than any other person during the Christian era.

[Frederick Dixon in *Outlook*, England.]

Christian Scientists, as a matter of fact, are really often quite well educated, and some of them, like our critic, have even read Plato, and Aristotle, and Leibnitz. Many of them have become Christian Scientists not because they have been healed of physical disease, but because, after careful study, they have been satisfied of the scientific value of Mrs. Eddy's teaching. That, however, may be the proof of their mental perversity.

The natural scientist, to tell the simple truth, knows as little about matter as Huxley admitted he knew a score of years ago. The atom, the eon, "the flux in matter," however learnedly any one may talk of them, are naked and unashamed hypotheses. A well-known chemist told me himself quite recently that natural scientists ought to be the last people to smile at Christian faith, seeing what an amount of faith their own theories demanded. Our critic quotes Philo, but Philo himself defined faith as the perception of spiritual causation. "Spiritual causation," writes Mrs. Eddy on page 170 of Science and Health, "is the one question to be considered, for more than all others spiritual causation relates to human progress." Now what is spiritual causation but the truth, the absolute truth, as Westcott points out, the knowledge of which, Jesus said, would make men free?

This, after all, is only another way of describing that which in the epistles is spoken of as the full, exact, or scientific knowledge of God, and so of Truth; and because this knowledge is exact, it can of course be demonstrated. Jesus demonstrated this knowledge by means of the miracle, and the Greek words translated miracle in the New Testament have not, and never have had, as anybody who possesses a lexicon is aware, any supernatural significance. The miracles were the answer Jesus made to the questions put to him by the scribes and Pharisees as to what he knew, and Jesus, as Mrs. Eddy points out on page 313 of Science and Health, "was the most scientific man that ever trod the globe. He plunged beneath the material surface of things, and found the spiritual cause." What he could do, he declared, those who believed on him could do also; and if, as Philo says, faith is the perception of spiritual causation, it is easy to understand how this is the case.

In Science and Health Mrs. Eddy has explained to the world today what spiritual causation is, and what Christ Jesus taught about it. She has given humanity no mere bundle of paradoxical theories, but a demonstrably scientific religion, preaching the gospel with signs following. She has, in short, accomplished something alluded to by Spinoza when he said that people instead of living were making experiments about life. Christian Scientists have passed beyond the experimental stage on to the sure basis of science. How rapidly they progress will depend on how nearly they succeed in walking in the footsteps of Christ. "If any man will come after me, let him deny himself, and take up his cross, and follow me."

[Edward W. Dickey in *Anaheim* (Cal.) *Plain Dealer*.]

Christian Science teaches belief in the Bible, and the first of the religious tenets of Christian Science reads as follows: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life" (Science and Health, p. 497). This Science teaches that man's salvation comes through a spiritual sense of the Scriptures, and that God worketh in us, "both to will and to do of his good pleasure."

However much may be quoted in regard to salvation, Paul's statement, "Work out your own salvation," has special application in the light of what the Master said and did. It is true that "neither is there salvation in any other: for there is none other name under heaven given among men, whereby we must be saved;" and Christian Scientists subscribe to this. The Master gave us the way to work out our salvation through Christ, and in pointing out this way he healed all manner of sin and disease and did many mighty works. Salvation is the transformation of mind that gives us a better understanding of God, Life, and this understanding is "deliverance from temporal evils and earthly destructions."

Digitized by Google

It matters little how one may regard the various quotations given by "Layman," the fact remains that Christ Jesus pointed out the way to the Father, and Christian Scientists are striving to walk in that way, and to prove that "the grace of God that bringeth salvation hath appeared to all men."

[Frank C. Barrett in *Bangor* (Me.) *News*.]

The statement is made that by becoming Christian Scientists we have "deserted the church of Jesus Christ." While Christian Scientists do not profess to be better than other Christians, they do know and prove by their lives that they are better morally, spiritually, and physically than they used to be. Their religion has made them so. Christian Science is founded on the teachings of Jesus Christ, and in so far as Christian Scientists practise the teachings of Christian Science, they cannot depart from the church of Jesus Christ. Christian Science teaches absolute faith in God in every hour, in sickness and in health. It is because they have proved by their faith that the words and works of Jesus are true,—that his teachings are applicable in this age in every trial,—that Christian Scientists give more "time and thought" to Jesus' teachings than they used to do before they learned of Christian Science.

How can it be said that those who are working to establish the kingdom of heaven on earth have "deserted the church of Jesus Christ," even though their interpretation of the Bible may differ from that of some of the older denominations. Some do not interpret the Scriptures to mean that the "prayer of faith shall heal the sick" physically as well as morally and spiritually; but Christian Scientists do, and by reforming the sinners and healing the sick we believe we are "giving the church of Jesus Christ a fair show in the matter." Indeed in the early church, three hundred years after it was founded, even the dead were raised. From that time on healing by spiritual understanding seems to have been lost sight of, until its reinstatement in Christian Science.

Christian Science does not teach that sin, sickness, and death do not seem real to those who are in bondage, nor does it teach that such things are only imaginary. Jesus said of a woman "which had a spirit of infirmity," that Satan had bound her, "lo, these eighteen years." He declared that Satan is "a liar, and the father of it." The bond of a "liar" is a false claim, untrue, unreal. Jesus took a different view of the woman than did others; he knew the truth about her sufficiently to loose her from her bonds. Truly it would seem that her painful bonds were "mental," inasmuch as by mental means she was restored instantly after eighteen years of suffering. Where did the "pain" (probably rheumatic) go to? It must have been a "thought" or belief which had suddenly become unreal to her, leaving her free. One's belief in an untruth may amount to solid conviction, which will only yield when he is sure of the truth about it. It matters not what the error is; be it sin or sickness, Jesus said, "Ye shall know the truth, and the truth shall make you free."

If a clergyman convinces a sinner that there is no real pleasure or happiness to be found in sin, he has succeeded in making it unreal to him, provided he also convinces him of the allness of God; for in this way a sinner ceases to sin, not because of his fear of punishment, but because it is right to do right. So far as sin, evil, is concerned, he sees that there is "nothing in it," no attraction, for God, good, is all powerful. How else can the kingdom of heaven come, except by the destruction of sin, which is the enemy of true manhood in Christ Jesus; but there is no advantage in holding before the sinner an all-powerful evil. It renders him powerless to help himself; but when he understands that evil is not real power, that in the sight of God it is impotent, then and not until then can he rise to his full height "of the knowledge of the Son of God, unto a perfect man, unto the measure of the stature of the fulness of Christ."

Christian Scientists subscribe to our critic's words in another part of his address, "If you would live more by your faith than by your doubts, you would find this a very different world."

[E. J. Simpson in *Chickasha* (Okla.) *Journal*.]

Your editorial, embodying kindly advice to those exposed to the heat, and commending to them "to use a little Christian Science," has been read with much interest; and your good-natured irony certainly contains many elements of truth with regard to the potency and power of Mind. But allow me to supplement what you have written by a few brief explanations.

To escape the ill effects of intense heat requires more effort than passively to "let your mind dwell continually on the fact that it is not a hot day, that you just imagine it is." Christian Scientists realize that to the human consciousness the days have been hot, very hot; and that this is more than imagination, amounting at times to disagreeable conviction. They endeavor to free their thought from dwelling "continually" upon the discomforts, and to find refuge and help in the knowing that man—spiritual and real—made in the likeness and image of eternal Mind, possesses God-given dominion over what we call the material. The spiritualization of this Bible statement and declaration should absolutely enable spiritualized man to rise above all things and conditions which vex and annoy. The footsteps of truth will lead to these realizations; the way may be rugged and the roads winding and steep; but by patient toil and study, and holding steadfastly to the faith, the summit of rest and peace will be reached.

The refreshing titles of the books mentioned by you, which depict arctic regions and picture snow and ice, seem rather nice, and I have no doubt would prove pleasant reading and be very entertaining. But the Book of books—the Bible—would be more instructive and uplifting, for "in them [the Scriptures] ye think ye have eternal life." The power of Mind, nay, the omnipotence, the omnipresence, and omniscience of Mind, are therein most beautifully and impressively delineated. "Science and Health with Key to the Scriptures" by Mrs. Eddy, "corroborating and explaining the Scriptures in their spiritual import," accentuates the great truth that all is Mind and that Mind is God, and points the way in simple and clear guidance for man to attain and exercise dominion even over the problems of heat and cold. Not by imagining, but through understanding his sonship and thereby knowing his dominion. But until these demonstrations are made, the intelligent Christian Scientist will not unnecessarily expose himself to danger; but will work out his salvation in prayer and constant watchfulness, confident that "patience must have her perfect work."

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be Nov. 4, 1910. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 18, 1910.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to June 3, 1910, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

TAKE NOTICE.

I HEREBY announce to the Christian Science field that all inquiries or information relating to Christian Science practice, to publication committee work, reading-room work, or to Mother Church membership, should be sent to the Christian Science Board of Directors of The Mother Church; and I have requested my secretary not to make inquiries on these subjects, nor to reply to any received, but to leave these duties to the Clerk of The Mother Church, to whom they belong.

MARY BAKER EDDY.

Sept. 28, 1910.

"LIKE AS A FATHER PITIETH."

THE Mosaic law of "an eye for an eye, and a tooth for a tooth," carries with it the thought of vengeance as well as retribution, whereas the law of Christ brings the healing touch which cleanses from all sin; the law which, as Mrs. Eddy writes in "No and Yes," "will not let sin go until it is destroyed,—until nothing is left to be forgiven, to suffer, or to be punished" (p. 30).

Christian Scientists are coming to understand, in proportion as they apprehend the teachings of their text-book, Science and Health, that sin and disease have one and the same basis, namely, a false sense of God and man; and that the sinner is no more to be condemned than is the mortal whose physical condition excites the sympathy of all who come in contact with him. The sin which besets one person is no more real than the sickness which besets another, and the object of those who are endeavoring to fulfil the commandment to love their neighbor is to set him free, whether he be bound by sickness or sin.

The teaching of Christian Science in regard to sin is most forcefully set forth in the third tenet of Christian Science, on page 497 of Science and Health, as follows: "We acknowledge God's forgiveness of sin in the destruction of sin and the spiritual understanding that casts out evil as unreal. But the belief in sin is punished so long as the belief lasts." The healing of the sinner through the destruction of the sin of which he is the exponent, is the one great thing to be accomplished, and probably no example of this healing of sin is so constantly before Bible students as is the case of Paul, who through a mistaken sense of duty had persecuted the followers of Jesus without mercy. But when his eyes were opened to his sin in all its enormity, his zeal to show the genuineness of his repentance knew no bounds. Even the earlier disciples, who at first demurred against accepting him as of their company, could but believe when they saw that the promised "signs" followed him.

Criminal laws are necessary in the present stage of human experience, and through these laws "the belief in sin is punished so long as the belief lasts," though this punishment is no longer dealt out with the thought that the wrong committed must be avenged, but rather with the object that the criminal may be reformed and the public protected from his wrong-doing, so long as he believes there is pleasure or profit in doing that which the law forbids. For the same reason, the person who has sinned in his own consciousness, that is, committed a sin of which the law takes no cognizance because it is not accompanied by any overt act of lawbreaking,—such a one, if he has reformed, should not be the object of vengeance, the fault of which he has so bitterly repented made a constant reproach, but rather should he be the recipient of forgiveness and loving-kindness.

When the prodigal son awakened to a realization of his folly and wrong-doing, even to be willing to turn his face homeward, there to acknowledge his fault and humbly to take a lower place, his father did not meet him with threats of vengeance because of his former sins, but welcomed him with rejoicing, requiting his repentance and humility with all the good things that the love of a father could devise. The lesson which Jesus taught through this parable, that he who has seen his sin and has truly repented, —forsaken it,—is a cause for rejoicing in the heavenly courts, is one which should be heeded by all his followers. Especially should it come home to Christian Scientists, who are taught that "God removes the punishment for sin only as the sin is removed—never punishes it only as it is destroyed, and never afterward" (Messages to The Mother Church, p. 49).

ARCHIBALD MCLELLAN.

PROTECTION.

IT is generally admitted that Christian Scientists have a wonderful trust in the power of God to protect them under all circumstances; indeed the complaint is sometimes made that they carry this too far when they cease to rely upon material remedies. In most cases, however, it was the failure of material means to cure or even to relieve their sufferings which impelled them to seek spiritual means through Christian Science, and as the healing came, quickly in some instances, and surely even if slowly in many others, it would have been simply illogical to go back to that which had failed. It is quite true that we do not at once rise above all dependence upon materiality, our mental training prior to our acceptance of Christian Science having done little or nothing in the way of bringing out reliance upon God and spiritual law, but at each step of his progress the sincere student finds that there is absolutely no risk in doing what the psalmist advised so long ago, namely, "Trust in him [God] at all times."

The Christian Scientist never believes in faith without works, only his "works" are not of a material character, so far as the working out of his salvation from sin or sickness is concerned. In this effort he studies constantly what is said in the Bible concerning the "works" of Christ Jesus, and his demand that every faithful follower should do like works, or even "greater." The Christian Scientist also finds it necessary to study diligently the message of Truth to this age, as found in "Science and Health with Key to the Scriptures" by Mrs. Eddy, that he may avail himself to the utmost of the protection of divine Truth and Love. He must know how humanity can best lay hold upon the divine aid in every problem of every day.

In some cases the old tendency presents itself, and the student is disposed to think that he can simply trust God and stop there. Mrs. Eddy lays great emphasis upon the Scriptural requirement that we must work out our own salvation, and she adds that this "demands self-reliant trustworthiness, which includes spiritual understanding and confides all to God" (Science and Health, p. 23). This means unceasing watchfulness and prayer and recalls the obligation set forth in the Manual, that the Christian Scientist shall not be "made to forget nor to neglect his duty to God, to his Leader, and to mankind" (Art. VIII., Sect. 6).

Digitized by Google

In the 91st Psalm is this significant statement, "Because thou hast made the Lord . . . thy habitation; there shall no evil befall thee, neither shall any plague come nigh thy dwelling." There is a danger of falling into the habit of "vain repetitions, as the heathen do;" of relying upon these repetitions, and there is also the danger of forgetting that it is only as each one has "made" God his refuge that he is safe and sure of protection. To one whose every thought responds with ready obedience to divine Principle, apply the words of a seldom used stanza of a familiar hymn, based upon this psalm,—

On the lion vainly roaring,
On his young thy foot shall tread;
And the dragon's den exploring,
Thou shalt bruise the serpent's head.

Deliverance, protection, and long life are promised in this psalm to those who put their trust in God, and the requirements are that we know God, set our love upon Him, and call upon Him in every time of trouble. None who truly trust divine Love,—make God their refuge,—ever can miss protection, for the promise is, "I will set him on high, because he hath known my name."

ANNIE M. KNOTT.

"YE SHALL BE AS GODS."

HAD Eve been half awake to Truth, she would have surmised, at least, that the serpent's promise of wisdom was an allurement of error. She was deceived into the acceptance of a statement which was utterly incongruous with the most fundamental fact of her being, her knowledge of the one God and man in the likeness of immortal Truth. Moreover, what was true then is forever true, that the creature of God's creation cannot be deceived; therefore, the claim of selfhood which can be deceived is not a verity, but is in itself a falsity. This is one of the first and most fundamental declarations of Christian Science.

The moment we begin to think of Adam and Eve as embodiments of material sense, the nature of their impulse and experience can be understood. Light dawns at once, too, upon the forever insistent question, How could the image of God be fooled into the acceptance of error for truth, or find evil more attractive than good? The answer of Christian Science is that God's image is not involved in the tragedy, that man is forever unfallen as light is forever undarkened,—a proposition which fully accords with the logic of the universally accepted Scripture teaching that man is made in the divine likeness. This phrase "as gods" is but an epitome of that lure of evil which means for mortals today just what it meant in the long ago, viz., the promised possession of the things that are longed for by material sense,—and for these how easily do men still forget Spirit and its demands, duty and its call, even as did Eve.

More than this, to mortal sense this seduction means freedom, the privilege of doing as one pleases, and this is evil's subtlest deception. Men are most frequently and fatefully tripped by being led to believe that conformity to divine law means limitation, that license means liberty. And this seems the more surprising in view of the fact that in the whole realm of physical science and common life, everybody recognizes that conformity to law is not only wise but absolutely essential to one's well-being. He who was indifferent to gravitation or any other so-called law of the physical universe, would be accounted daft by mortal sense, and yet there is no temptation which is more frequently welcomed by men than this old suggestion of Satan that one can have a better time, a larger sense of personal satisfaction, when he does not have to conform to the eternal law of good, the requirements of the spiritual ideal. Evil's cleverness and cruelty are seen alike when men are mesmerized into the belief that sin is sweet, that thereby they may become "as gods." Let him who doubts this read again the story of a De Quincy or a Poe.

Who knows not Circe,
The daughter of the Sun, whose charmed cup
Whosoever tasted lost his upright shape,
And downward fell into a groveling swine.

"As gods" means in fact "as slaves," and even the beginner in Christian Science has come to see this as never before. Ecclesiasticism has always decried sin, and yet it has declared for the sweetness and legitimacy of the satisfaction of that material sense which is forever at war with the demands of Spirit. The awaking even in modest degree to the nature of man as the immediate expression of the divine, that "God is his Father, and Life is the law of his being" (Science and Health, p. 63), breaks the mesmerism of materiality, annuls the attractiveness of sin, and inaugurates that Christ-mindedness which delights "in the law of the Lord; and in his law doth . . . meditate day and night." He who has come to realize man's relation to divine law can no longer be deceived by the serpent charm, and this tremendous advantage in the work of character building has come to him as one of the many gifts of Christian Science.

JOHN B. WILLIS.

AMONG THE CHURCHES.

NEW HAVEN, CONN.

All those interested in the religious advancement of the city will rejoice with First Church of Christ, Scientist, in the completion of its new edifice at Winthrop and Derby avenues. The first services will be held in the new home tomorrow [Sept. 11], and the public has been invited to participate in them. Jealousies for creed and sect must be set aside when any independent religious body of importance and lofty purpose constructs a new church. A new church building is something that encourages public pride and points to the moral improvement of the community. Christian Science is not old in New Haven—the first services of that faith were held here in 1888—and it is to its credit that in a comparative infancy it is so strong and prosperous that one of its societies should be able to maintain a church structure of its own. The new church will add to the building attractiveness of the city, and in adding to the city's charms and promoting its moral welfare the Christian Scientists are to be congratulated; moreover, thanked.—*New Haven Palladium.*

BUFFALO, N. Y.

Formal announcement was made this morning [Sept. 10] that First and Second Churches of Christ, Scientist, have united, and henceforth their meetings will be held at First Church, Jersey street and Prospect avenue. Negotiations toward this end have been pending for some time. First Church has between four hundred and five hundred members and twice as many adherents. Second Church has a membership of about one hundred and fifty and a congregation of about four hundred. "Both the churches were in a very prosperous state and the union was brought about solely for the general good of the cause in Buffalo," said William E. Armstrong, clerk of First Church. "Experience in other cities has shown that the best results are obtained by uniting the older churches and then branching out from that. That there is no lack of members is shown by the crowded condition of First Church. We are now seeking a larger auditorium to use until we can build. There will be no change of officers as a result of the union; the members of Second Church simply come in individually."

NEW BEDFORD, MASS.

Plans for erecting a new church which may possibly materialize soon are being discussed by members of First Church of Christ, Scientist. Land at the southeast corner of County and Mill streets, where the Adelphi rink was formerly located, has been purchased for a site. This is almost paid for, and members of the church are looking forward to having the ground broken for a commencement of work next spring.

The energy with which the members of this church are going about this work is characteristic. It was about a year ago that they purchased the lot where they are planning to locate their church, and since that time they have succeeded in almost completing the payment for it without the necessity of making a single canvass. Every contribution has been voluntary, and there is an enthusiasm behind the project which assures its success.

New Bedford Standard.

LANSING, MICH.

Early in the morning of Sept. 10 the corner-stone of First Church of Christ, Scientist, was laid, with only the officers and building committee of the church in attendance. The simple ceremony of reading from the Bible and the Christian Science text-book, and the audible repetition of the Lord's Prayer, was conducted by the First Reader of the church. The copper box which was placed in the corner-stone contained copies of all of Mrs. Eddy's printed works, current copies of the Christian Science *Journal*, *Sentinel*, and *Monitor*, a list of the charter members of the Lansing church, with date, and the first board of directors; a list of present members and present board of directors and building committee; also a list of all those who have acted as Readers to date.

A committee, appointed in April, 1907, to secure a church site, reported in July, 1908, that a suitable site had been secured at the northwest corner of Walnut and Allegan streets at a cost of eight thousand dollars, giving us a fine location opposite the capitol grounds, and where several fine churches of other denominations have been built. The lot has a frontage on Walnut street of four rods and is seven rods in length, with the entrance to the reading-room on Allegan street. In architecture the building is in keeping with the design of other Christian Science churches of the country. The church will have a seating capacity of five hundred.—*Correspondence.*

SONG OF THE SENTRY.

BELLE A. MUNDY.

I SEE my brothers marching by,
  Their armor sparkling in the sun;
I hear with joy their fearless cry,
  Their swords are flashing, one by one;
But comforted am I, nor yearn
  To join the ranks of small or great,
To me a blessing sweet is given,
  They also serve who stand and wait.

They also serve. Can I repine?
  I fold my hands in patient mood,
My active thought is on the field,
  To speed the battle of the good.
My feet may follow not the strife,
  Mine eye must watch from dawn till late;
But this sweet blessing on my task—
  They also serve who stand and wait.

THE LECTURES.

ROME, N. Y.

At First Church of Christ, Scientist, on Monday evening [Sept. 12], the Hon. Clarence A. Buskirk delivered a lecture on Christian Science. The speaker was introduced by Miss Alice G. Potter, who spoke as follows:—

We rejoice in the opportunity to share with you the message of truth which our lecturer brings to us this evening. It is our hope that you may hear his message with the "hearing ear"—with the receptivity which is born of a desire for truth for truth's sake; and that any misunderstanding which may lurk in consciousness regarding the teaching and practice of Christian Science may be replaced by a clearer understanding of the divine Principle upon which our religion is based.

Love—spiritual, perfect, changeless—is this Principle, and in proportion to their understanding of and direct dependence upon divine Love, Christian Scientists are today fulfilling the saying of Christ Jesus, "He that believeth on me, the works that I do shall he do also;" and "By their fruits ye shall know them," for the sick and sinning are being healed, and those dwelling in the valley of the shadow of materialism are being raised to a higher sense of Life, and all because of the selfless love and wise guidance of our Leader, Mrs. Eddy. Is it surprising that we desire to share that which has blessed us, with all who will receive?—*Rome Sentinel.*

PUNXSUTAWNEY, PA.

A lecture was delivered by the Hon. Clarence A. Buskirk, on Christian Science, in the Jefferson Theater last night [Sept. 9]. Attorney Lex N. Mitchell, First Reader of the local church, introduced Mr. Buskirk, and said in part,—

Christian Science is that for which man has been searching throughout the ages. It is the truth. It is the religion of Jesus the Christ, as taught and practised by him in Jerusalem and throughout Judea, and by his followers for nearly three centuries after his crucifixion. It is the messenger of health instead of sickness, of joy instead of sorrow, and of life instead of death. It teaches man to love his neighbor as himself, and shows him how to do it. It teaches man that he that loveth not his brother whom he hath seen, cannot love God whom he hath not seen. It is a practical religion, requiring the disciple to prove all things and hold fast to that which is good.

Because Christian Science brings so much joy into the lives of those who understand it, they love to pass along this regenerating truth to others. They long to see the day when prejudice and misconceptions concerning its teachings will no longer withhold from the sick and sin-laden the peace and joy which the ministry of Christian Science always brings to the receptive heart.—*Punxsutawney Spirit.*

OAKLAND, CAL.

Francis J. Flumo, M.D., delivered a lecture on Christian Science Sept. 6 in Rice's Institute, under the auspices of Second Church of Christ, Scientist. He was introduced by the First Reader, Mrs. Eva J. Bray, who said,—

We are here to learn more of the teaching of Christian Science, the Science of Love. Even as the disciples asked Jesus, "Lord, teach us to pray," so the whole world is asking not only how to pray, but how to love their neighbor as themselves. Christian Science teaches us how to pray that our prayers may be answered. It also teaches us how to love our neighbor as ourselves, to think no evil and to fear no evil.—*Correspondence.*

Yankton, S. D.—Prof. Hermann S. Hering, Church Edifice, Oct. 7.

TESTIMONIES OF HEALING.

With heartfelt gratitude I wish to express my thanks to God for my healing through Christian Science. For three years I suffered from an internal complaint—which seemingly affected another internal organ. I saw several good doctors in different towns in England, had medical treatment for three years, and I cannot speak too highly of the kindness I received from these gentlemen; but I did not get healed by them. One doctor suggested an operation for me, but another said it was not needful; so I continued to spend a great deal for medical treatment, but felt well-nigh hopeless at times.

At that time I was an actress in a traveling company, and in order to be able to do my work in the evening I had to take a good deal of rest, to rise very late in the day, and if I took a walk out it was only for a short distance, often being glad to take a friend's arm before I returned. I rested until it was time to go to my work, and directly the performance was over I rested again until I went to bed. My life was an utter burden to me, and often I prayed that I might die and be rid of my tiresome body. After suffering for two years, I heard of Christian Science and was loaned a copy of Science and Health, which I did not then understand. I also read certain newspaper articles against Christian Science, and made great fun of what I imagined this Science to be. A year later, however, I heard of something that changed my thought about it, and then meeting a lady who was a Christian Scientist, I asked her to treat me. She very kindly consented, but as I was leaving that town she was obliged to give me absent treatment.

Ten days afterward I was completely healed. On the tenth morning I was running down a street, not because I was in a hurry, but for sheer joy that I could run, when I heard some one calling me. I turned and saw a friend, also an actress in the company I was then with, panting up the street after me. As I turned to meet her, her greeting was, "What on earth is the matter with you?" "Nothing," I replied. "Why?" She answered, "But you were running!" "I know I was," I said. She again exclaimed, "You! running!" What of it?" I asked. "Well, all I know is," she retorted, "that only the other day you were glad enough of my arm to crawl up the street." I told her of my healing, but she did not seem to grasp the fact, and all that morning I caught her casting side glances at me, as if she thought me demented. That week I went for a swim, and although I had not been able to go swimming for three years, I remained in the water half an hour, swimming all the time, and experienced no fatigue or ill effects afterward.

My healing was complete and permanent, and it brought my mother into Christian Science. It was also, a year later, the means of bringing a brother, who at first was very much opposed to what he believed Christian Science to be. Many old ailments disappeared with my internal trouble,—throat trouble, bad styes on the eyes, severe bilious attacks (to which I had been a victim), headache, toothache, and other ills. Before I began the study of this healing truth I lost a tooth every year for five or six years. I have now been studying for over four years and have not only kept all my teeth, but have never experienced toothache. From being a poor weak thing who continually required to be helped, I am now considered to be exceptionally strong for a woman. I cannot properly express my gratitude for all these blessings, or for the greatest of all, the spiritual uplifting, the blessed comfort of knowing that God's promises in the Bible are for us, here and now, and of which our text-book, Science and Health, shows us how to avail ourselves. It is such a blessed hourly comfort to know that one need never worry about anything, for, as our beloved Leader has told us, "Divine Love always has met and always will meet every human need" (Science and Health, p. 494).

Digitized by Google

Over and over again I have proved this statement to be true, and I do not know how to express my love and gratitude to Mrs. Eddy for her explanation of the Bible and for giving her discovery of Christian Science to the world. My earnest prayer is to be worthy the name of Christian Scientist, and although only a humble beginner, I am not the least loving, grateful, and obedient.

MISS MAUD BUCHANAN, Brighton, Sussex, England.

I desire to give this testimony, having, as Paul says, "renounced the hidden things of dishonesty, not walking in craftiness, nor handling the word of God deceitfully; but by manifestation of the truth commending ourselves to every man's conscience in the sight of God." I was raised from sickness,—a fever, and hemorrhage of the lungs,—which was pronounced incurable by *materia medica;* but thanks be to God, and to our beloved Leader, Christian Science has healed me and rolled the burden from my heart. I feel especially grateful for the beautiful hymns in the Christian Science Hymnal, having in mind more particularly No. 125.

Feeling that it is a great privilege to testify to the benefits received, I write this, with the hope that it will help others to come into the truth.

MRS. IDA M. SWINEHART, New Philadelphia, O.

I feel that I cannot even begin to be grateful enough for Christian Science, for all that it has done and is doing daily for me and mine; but I should like to give expression to a little of my gratitude by telling of the recent overcoming of a sense of separation, hoping that the experience may perhaps prove helpful to some one else who is facing the same problem. Through the exigencies of a professional life, it became necessary for me to be separated from a member of my family with whom I am constantly associated and whom I dearly love, so that the parting, though not likely to be of very great duration, seemed at first a greater burden than I could bear. I have been a student of Christian Science for several years, and I went to work, as we are taught in this great truth, to find out what wrong thinking had brought about the necessity for this lesson, and what was to be learned therefrom. The result was the uncovering in my thought of a sense of dependence on human personality, which astonished me, as I had always been accustomed to think of myself, even before coming into Christian Science, as a strong and self-reliant woman, and since then had believed myself to be relying solely upon God.

I asked for help from another member of my family, through whom I came into Science, and was told by her that if I had two children who loved each other so dearly that they turned to me only when they wanted something, and then forgot all about me, I could readily see what a wrong and unhappy state of affairs that would be. The simple illustration seemed to throw a flood of light on my problem, and I at once began to work to realize that God, good, as the author of all things, must be loved and trusted supremely, and before all else. This in itself enables man to love his brother more unselfishly and more helpfully, since, as our Leader, Mrs. Eddy, tells us, "Love is reflected in love" (Science and Health, p. 17). This realization was followed by a peaceful sense of the ever-presence of divine Love, which healed my belief in loneliness and separation, as I knew that the one loving Father holds us all safe in infinite Mind, and that in reality there can be no separation for God's ideas.

I have had numberless helpful proofs of the truth of Christian Science, but this seems to me one of the greatest of them all, and it is difficult for me to express the gratitude I feel, both for the uncovering of the error and its destruction.

VIOLETTE KIMBALL DUNN, New York, N. Y.

For many years I was a sufferer from stomach and heart ailments, at times unable to retain any food, and very weak. A Christian Science practitioner moved into the town, and came to see me, but I was strong in the belief in which I had been reared, and would have felt lost without it; however, the practitioner's words were so beautiful and inspiring that I was impressed, and while she did not treat me directly, since I did not ask for it, nevertheless the truth which she voiced wrought my healing,—first of the stomach trouble, which was to my mind a wonderful demonstration of God's power to heal disease. For awhile, however, I was worried on account of my heart, but a week after this first experience I was visiting the practitioner, and as she was carrying some packages for a short distance, I excused myself from offering to assist her with the bundles, saying I had not the strength on account of my heart trouble. She again declared to me this wonderful truth of God, and, as in the former instance, the heart trouble disappeared, and I found I could walk back home without fatigue or weakness. The ailment has never returned, and thus my entire healing was accomplished through Truth, proving the declaration of the psalmist, "The entrance of thy words giveth light."

MRS. SARAH WARREN, Montrose, Col.

Christian Science has brought me, not only physical healing, but the healing of sin, for which I am deeply thankful. Three years ago a Scientist who was visiting in my home told me of a case of healing that seemed very wonderful. As I had heard very little of Christian Science, I began to ask this friend questions and she gave me a practitioner's address. I had been under the care of physicians for over ten years, undergoing one operation, and as a last resort was trying electricity, with the hope that another operation would not be necessary. During this time I had moved from the city into the country, and at the time that I heard of Christian Science I was going into the city once a week for electrical treatments, coming home each time worn-out and discouraged.

I dreaded these trips greatly and seemed to be growing worse all the time. Accordingly, after getting the practitioner's address, I decided to try Christian Science. I did so, was given a treatment, and in six weeks I was healed. The practitioner gave me some pamphlets, and I became so interested in them that I was sorry when my journey was ended that night. It was the same trip that only the week before had seemed so hard, but this time I was happy and not a bit tired. From that day until now I am more grateful than I could express in words for the understanding I have of this truth. Through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and the daily study of the Lesson-Sermon, which is giving me a spiritual understanding of the Bible, I am being taught how to get rid of malice, hate, irritation, inharmony, evil thinking, and to see God as Love and man as God's reflection. During these three years I have been healed of a serious ailment with which I had suffered since childhood, also of severe headaches and many other ills, and for all that this truth has taught, and is teaching me, I am most grateful.

I am deeply grateful to Mrs. Eddy for our text-book and all her other writings, which show us how to live aright, and my desire is to reflect this truth more each day, and so prove my sincerity. I am also very grateful to our Publishing Society for the *Sentinel*, *Journal*, and all our periodicals. Each time they come they meet a need for me. I am also thankful for our church services, and all that has helped me to an understanding of Truth.

MRS. BLANCHE L. TUBBS, Darien, Wis.

My little daughter was very much afflicted with kidney trouble, and for some time we had been giving her medicine prescribed by a doctor; but she grew worse. I then requested

Digitized by Google

my husband to try Christian Science, and though he thought it was foolishness, he consented. I wrote to a practitioner for treatment, and she treated the child with improvement from the first; but, as the demonstration was delayed, I wrote again and told the practitioner that I was much surprised that the healing was not complete. She told me that there was perhaps some fear in my mind; and I then discovered that I had been overanxious and worried for fear the cure would not be made. Then I decided to leave it all with God, and my child was freed at once. She is now perfectly free from this trouble, and is much improved otherwise.

I hope this testimony will show others how to accept Christ, Truth, without doubt or fear. If we just leave all to God, with perfect trust, then all will be well.

MRS. EMMA STINAR, Dopelius, Minn.

I had used tobacco for a number of years, and had several times made the attempt to give it up, but without success. I am a railroad man, and one day the engineer on the engine I was firing said to me, as he saw me using the weed, that it was a habit I should give up. This engineer was a Christian Scientist, and from that day I have never used tobacco in any form. The desire for it simply left me. I cannot express my gratefulness to God, and to Mrs. Eddy for this helpful truth and for what it has done for me.

JAMES MARTIN, Guernsey, Wyo.

Some time ago, I had a severe cold in the head and a very bad and obstinate cough. I asked for treatment in Christian Science, and soon found relief. After a week I told the practitioner to stop the treatment, not thinking that a headache which had troubled me needed attention. Soon, however, the pain in my head grew worse, and once more I asked for help. In four or five days, I was free from all pain. My daughter, too, had a similar attack, the cold settling in the ears. She was in great pain, especially at night, and for some days was quite deaf in one ear. She, too, got help through Christian Science, though not quite so quickly as did I. We are both very thankful to Mrs. Eddy for showing us the way of Truth in Christian Science Mind-healing.

FRAU FANNY BRAUN, Stuttgart, Germany.

About a year and a half ago I was stricken with a nervous breakdown from worry and trouble. At times I was very melancholy, and often contemplated the ending of my life. I became so bad that my family got alarmed, and I was finally placed in a hospital under the care of a physician, where I remained for three weeks. I asked the physician to let me go home, but he would not at first allow it. He, however, finally gave his consent, and a member of my family made arrangements for Christian Science treatment and procured a copy of Science and Health, which I read with great interest. In one week there was a decided change, and in three weeks I was a well man. I am now happy and enjoying the best of health; in fact, a better man all round than I ever had been in my life.

Before this experience I had denounced Christian Science in the bitterest terms, but now I am for it first, last, and all the time. I thank God for all I have received. I feel certain that Christian Science can help me as nothing else can.—G. J. ZORN, Burlington, Ia.

It has been a matter of self-reproach to me that I have neglected public acknowledgment of the blessings which have been brought to me through Christian Science. It has been many years since I experienced my first healing, but it was only the loaves and fishes that I cared for then, and my gratitude went no farther than the admission that I had been helped. I was first healed, in two weeks, of a so-called chronic bowel ailment, said to be hereditary. When my mother, in despair of any permanent help from medicine, arranged for treatment for me, she was not interested in Science, but she felt that nothing else would help me. With the arrogance of youth and my ignorance of Christian Science, I felt rather disgraced, and used to take the back streets to reach the practitioner's house. If, perchance, I met an acquaintance when I was about to enter, I walked on by, and after that first healing, I returned to Christian Science only when material remedies failed me. Once, after suffering agonies with a rheumatic affection, I sent for the practitioner, and experienced blessed and almost instantaneous relief.

For a year prior to my marriage, I had been unable to use my eyes to read, and this was a great deprivation to me. Two different eye specialists, one in my own city and one in another state, pronounced my trouble one which, combined with other difficulties, would make the use of glasses necessary for all time. Tumors formed on the inside of the lids, one following another within a few months, and both were removed by the knife. Finally, after giving glasses a trial, and becoming worse all the time, I went to Kansas City and consulted an oculist who was said to be the best one west of Chicago. At that time another tumor had appeared, which he said must be removed by an operation. He pronounced the same sentence upon me that the other two had, and fitted me with glasses, which he said I should have to wear always, and at all times. I was to return to him in a few weeks for the operation, but before the time came, I had turned again to Christian Science, and the same kind practitioner, who had been so patient with my ignorance, treated me. The tumor disappeared within a week, and I laid aside my glasses, never to resume them. That was about sixteen years ago, and my eyes have had constant, hard use, without any ill effects since then. It would seem that this would have made me a Christian Scientist, but though I bought the text-book, Science and Health, I was still clad in the garments of worldliness, and could not seem to understand it. I soon stopped trying to understand, often asserting that though I had been healed, I could never become interested in Christian Science.

Something over three years ago, when in trouble, Christian Science was brought again to my notice by some dear friends in Chicago. I had been called there by the illness of my mother, and after coming home, I turned to the text-book with all the hunger of an unsatisfied consciousness; and then, because my need was so great and my longing for the understanding of Truth commensurate with my need, the precious light came to me. Since then I have had some beautiful answers to prayer, after learning how to pray aright, as taught by that priceless volume, Science and Health. Soon after I began to study, and before I dreamed of standing alone upon my spiritual understanding, I had a wonderful demonstration of God's power and love. Our second boy, then eight years old, was taken ill with what the doctor thought would develop into a fever. As my husband was at that time not a believer in Science, and I not yet firmly grounded, our fear overcame us, and we turned to material remedies. For several weeks the boy continued about the same, but finally the conditions became more serious, and half a dozen new kinds of medicine were prescribed.

That noon my husband said, "This child has been sick for three weeks, growing worse all the time. Tomorrow you must take him to Topeka [our former home] to see Dr. —— [our old physician]." After my husband had gone back to his office, I decided to give the truth that saves a chance to do so. I talked to my boy, explaining as well as I could about Christian Science, and that I was going to discard the medicine and trust God, knowing that He was all-powerful to save. Then I began to work. The child was drowsy with the fever, and soon dropped off to sleep. I treated him for an hour, and with inspired confidence, for

Digitized by Google

I realized the presence of divine Love as I never had before. At the end of the hour he awakened, all trace of the fever gone, and got up and dressed and went out on the front porch, where for a time he watched his brother and some other boys playing ball, something he had not taken any interest in for over three weeks. When his father came home, he was taking part in the game. That night he ate a hearty meal, for the first time in weeks, and by morning the swelling and other symptoms of illness had entirely disappeared.

This is but one of many healings which have been vouchsafed us, and we have been helped not only physically and financially, but, best of all, spiritually. When I first began the daily study of the Lesson-Sermon, I did not know where any book in the Bible was, though I had been a church-member for years. But the Bible was opened for me, and in a very short time I became familiar with it. Last summer my fourth child was born under Christian Science treatment, and it was a wonderful demonstration, followed by others still more wonderful. The baby was born with defective vision, but the nurse discovered the error, called the practitioner's attention to it, and it was overcome in a very short time. The child's eyes, from having been dreadful to look upon, have become so beautiful and clear that they attract attention wherever he goes, and his sight is perfect. Last winter my little daughter was healed of acute lung trouble in a few hours' time. In fact, every false material claim has been met and overcome by Truth, whenever and wherever it has appeared.

My gratitude to God for His manifold blessings, and my love for His faithful messenger, Mrs. Eddy, whose apprehension of Scriptural truth has brought security, peace of mind, harmony, and spiritual enlightenment to so many thousands, is greater than I can express.

MYRA WILLIAMS JARRELL, Holton, Kan.

About two years ago I had my first interview with a Christian Science practitioner. At that time I was a well-nigh helpless cripple, not having taken a natural step for about two and a half years, as I was suffering from what is known as locomotor ataxia. For eight or nine years before this I had been treated by *materia medica* for rheumatism, which proved to be a wrong diagnosis; and when my actual state became known, I was informed that doctors could not do anything for me.

I had my first treatment in Science, June 28, 1908, and its benefits were at once apparent. I will give a brief outline of the progress I have made since then, as nearly as I can remember. On the first Sunday I went to church with cane and crutch and my wife as an aid, but I had a hard time of it; the second Sunday it was the same; on the third Sunday, I discarded the crutch; the next five Sundays I took my son with me; the next six months a younger son, ten years old. Up to October, 1908, the practitioner was obliged to call on me at my home, but after that time I went to his house, and since May 2, 1909, I have been going out by myself every day and anywhere. About August, 1908, I discarded the use of cane or crutch altogether in going about the house and premises, holding on to whatever was at hand. A month later I began to walk about without any artificial aid.

Up to this time I had not been able to go out after nightfall, but one evening I attended a lecture at night and took my wife along with me. A few weeks later I attended a lecture in the afternoon and was able to walk five blocks. About this time, too, the smoking habit, which was of twenty-three years' standing, left me. I had not been able to stand on my feet to wash myself, but now I can stand for hours at a time, performing all kinds of labor, including carpenter work, having put up all the wire fences and partitions in my poultry-yard; in fact, I can now do almost any kind of work.

I also wish to call attention to the healing work that has been done for two of my children. In February, 1909, the little boy, aged three, had croup; we telephoned to the practitioner about eight o'clock; at about ten the same morning, while I was writing a letter to give details of the attack, the little boy got up and started to play with his little sister—the ailment had left him entirely. Later the boy was suffering from the after effects of measles, but after one absent treatment the eyes were entirely healed and the cough stopped. The little girl, aged six, had an abscess in her ear, also a stiff neck, but after two days' treatment she was free from both discords, and went back to school.

While I myself am not yet entirely free, I feel that it will be only a short time until the demonstration is completed. I thank God, first of all, for these many blessings, and next I thank our dear Leader for the help received in Christian Science.—OSCAR J. GOLDSCHMIDT, St. Louis, Mo.

I wish to express my gratitude for the blessings I have received through Christian Science. When I began to study it, about two years ago, I was suffering from a chronic chest trouble. When a child I had acute disease of the lungs, and every winter after I had an attack; but since learning that there is only one power, and that westerly winds cannot affect God's child, I have been healed. Severe headaches and neuralgia have also been overcome, through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and the help of a dear Scientist friend.—ISABEL WEBB, Sydney, Australia.

[Translated from the German.]

It is with a grateful heart that I wish to tell of the infinite goodness of God which I have experienced through Christian Science. Two years ago I felt very miserable; I was worn out physically through years of heavy work, besides all the sorrow and anxiety I had gone through. As a result of several attacks of illness, disease appeared in a severe form. I was suffering greatly both physically and mentally, and as the family physician was unable to afford help, in spite of various painful treatments which were resorted to, I applied to another physician, under whose care I improved temporarily; but the symptoms of the disease did not disappear, and I was steadily losing strength.

My relatives then lovingly urged me to try Christian Science, and although I did not want to hear anything about it at first, my unbearable condition compelled me to accept the help offered. After the first few treatments I experienced a peace of mind which was also greatly appreciated by those around me, as I had been at times in a state of great excitement. My condition gradually improved, sleep and appetite returned, and I regained my weight, which I had lost in an alarming fashion. All symptoms of the disease disappeared by and by. God has restored me to health. I feel as strong as I used to, and never get tired, even when I exert myself, for thanks to Mrs. Eddy's teachings and spiritual illumination I know that God is our strength, and that His love and omnipotence enable us to do all things. All my acquaintances who have not seen me for some time are surprised at my strong and healthy appearance.

A year ago I met with an accident, a physician stating that I had a serious injury of the arm. During the first few moments I was unconscious, but soon realized that it was fear which had brought about this experience, and the thought then came to me that in God all is harmony, and that I, as a child of God, could not be inharmonious. After a while the pain disappeared—at the very time my message reached the practitioner, as I learned later. It was impossible for her to come and see me immediately, but when she called the next morning, I joyfully waved the arm which was supposed to be injured, and could tell her that all sense

Digitized by Google

of inharmony had left me and that I had slept beautifully. After the fifth day I removed the plaster cast in which the physician had put my arm, and in two weeks' time I could use it as formerly. This experience was to me a proof of divine Love, and it meant a great deal to me. I often have had harmony restored on other occasions; for instance, when I inadvertently seized a very hot stove-lid. I quietly put it into its place, the thought coming to me that there is no sensation in matter and that I could not be injured thereby. There was a feeling of having been burned, but the pain soon left me, and no blisters formed.

These experiences have convinced me that a great revelation has come to us through our beloved Leader, Mrs. Eddy, for which we must be very grateful to her; that God sends us His blessing, and through His messengers shows us the way, so that we may find Him. Words fail to express my gratitude, and the sense of joy which fills me in the realization that God's omnipresence has lifted all cares and burdens from me, and that I only need to become conscious of His unchanging love and faithfulness in order to experience His ever-present help.

MARGARETE BORGFELDT, Berlin-Wilmersdorf, Germany.

When I came to Christian Science it was not for physical healing, though I was sadly in need of it. I had exhausted about all that *materia medica* had to offer in my search for health, and was in a serious condition both physically and mentally. A friend, who was not a Christian Scientist, but a deep student and a fine Bible scholar, told me about this teaching and then brought me some Christian Science literature and asked me to read it.

I read the text-book, Science and Health, through in a week, and when I had completed it I was so confused in thought that I knew not one sentence it contained, but from that day I never wore my glasses again. Some of the best oculists and nerve specialists in our large cities had told me I would never be well, and prophesied my total blindness if I did not discontinue my work as a teacher. The condition of my right eye was such that my nervous system was affected, and my entire left side was partially paralyzed. I had been in this condition ten years, and words are inadequate to describe the suffering I experienced with my head. I was healed of all this simply by reading Science and Health.

I had been reared under Christian teaching, but had grown so dissatisfied and unhappy that I was an agnostic and had not attended church for two years. What had been taught me in the church did not wax strong "in time of trouble," and the Bible was no comfort, as I could not understand it or apply its promises with profit. Now, with the joy, peace, comfort, contentment, and all that makes life worth living, I am finding my way in Christian Science.

Each moment I remember, "Thou wilt keep him in perfect peace, whose mind is stayed on thee: because he trusteth in thee." I try to realize constantly the immanence of God and to have that Mind "which was also in Christ Jesus," and so to watch my thought, guard my lips, and reflect divine Love, that I may help every one with whom I come in contact. Henceforth my unceasing prayer will be one of love, gratitude, and thanksgiving to God for revealing this healing truth to us through our revered Leader, whom we all love.—KATHERINE E. STRAUB, Indianapolis, Ind.

NOTICE.

Publication committees will confer a favor on the editorial department by mailing promptly to the EDITOR a copy of all published articles. Clerks of branch churches can also be of assistance by sending reports of all lectures given and items relative to progress in church work.

FROM OUR EXCHANGES.

[E. M. Martinson in *Standard.*]

There are disturbing voices that are guiding voices, and we must learn to follow them. On the mount of transfiguration, when the church militant, in the persons of Peter, James, and John, was introduced to the church triumphant, in the persons of Moses and Elijah, "behold a bright cloud overshadowed them: and behold a voice out of the cloud, which said, This is my beloved Son, in whom I am well pleased; hear ye him. And when the disciples heard it, they fell on their face, and were sore afraid." It was a disturbing voice because it showed them that some one besides Moses and Elijah and Jesus was in that mount. It was a disturbing voice because it sealed upon their lives the consequences of discipleship, which they had already accepted, in such a solemn and momentous and irreparable fashion. It was a disturbing voice because of their conscious sinfulness and unworthiness in the immediate and audible presence of the infinitely holy God. But the voice which came to them, comes also to us. These disturbing voices torment us with difficult ideals. High ideals are not comfortable to live with unless you are forever running after them. The road they lead you is not soft to your aching feet, nor safe to your uncertain life, as Jesus discovered, and Peter, and Stephen, and Justin Martyr, and Huss, and Savonarola, and Adoniram Judson, and a host of other empurpled witnesses.

[Rev. A. S. Fiske, D.D., in *Christian Work and Evangelist.*]

The churches have lost worlds of respect from manly men and womanly women, and so lost multitudes in numbers and vastnesses of power and moral and spiritual effectiveness by hesitancy and sheer cowardice in this sort of avoidance. Not mix your religion with business? If you've got a religion that won't mix well with your business, drop either your religion or your business, and get a better! Get a religion that will leaven your business, or a business that will not bedraggle your white robes of Christliness. Just so with your politics. If you practise a political game that is not fit for a pure and simple Christianity, pull yourself out of it, as from hell-fire. If you've got a religion that won't purge a rascally politic, be mightily certain that it won't save your soul! Just so with everything else. A piety that doesn't march with and through every function, private or public, of your life and work, is a sham and a shame to you and your Master. There is not one great evil that besets and corrupts the individual, social, business, or political interests of man or woman or child that is not within range of legitimate fire from the sharpshooting of the individual Christian, the volley-fire of the organized church, and the heavy gun of the pulpit.

[*Christian World.*]

The great preachers, the men who have stirred their generation to newness of life, have always been preachers of the universal. There have been two orders of them. There have been the scholar preachers—men who have absorbed the learning of their times, and so have known how to link their message to the whole world of discovered fact: and there have been those who, not scholars in the academic sense, have nevertheless possessed in themselves the instinct of the universal: who from the knowledge of their own hearts have touched with the heart's accuracy the themes that were felt by their hearers as of the essence, of the center. These men have been of every age and of every religious denomination. The sect, the system, the creed—these were of the form, for which they cared little. What they cared for was the thing behind. Wherever such appear there are always congregations.

[*Standard.*]

The world will not be satisfied with our assertion that we have been born again. Constantly those about us are looking for the evidences that the spirit of Jesus is really in us. We cannot hope to convince them that we are children of God while we live selfishly, graspingly, unlovingly. Men do not care half as much about our theories as about our lives. They will scoff at Christianity as represented in a stingy, unscrupulous disciple; but they respect the religion which leads men to do good. When Jesus taught here upon the earth he declared that the righteousness of those who would enter the kingdom of heaven must be greater than that of the religionists of his own time. Scribes and Pharisees were scrupulous observers of the ritual law. They prayed and fasted and gave alms and tithes, but they were not citizens of the kingdom. They were not righteous. They were arrogant and proud and unloving.

[*Christian Register.*]

The fate of the church does not depend upon the existence or character of ministers of religion. These persons are important, and they may be exceedingly influential in shaping the institutions of the church and its relations to the world at large which does not call itself religious. But the church is a product of human nature, it is founded in human needs, and, whether with ministers of religion or without them, will shape for itself some kind of expression and adopt some method of culture and rules of action. And yet a church cannot come to its own and be great, influential, and authoritative unless it has servants and spokesmen, efficient, active, and devoted to the interests for which the church stands.

[*New York Observer.*]

No Christian believer can stand still, or be content with what he is now, for however much he has attained he is not yet perfect. Such believers as imagine that they have attained unto perfection delude themselves, though probably not their neighbors. Growth in Christian character is gradual, though we are quite willing to admit that in the case of many people it could be much more rapid were it not for cherished pride or prejudice, harbored selfishness, or condoned faults and failings. The edifice of character is reared brick by brick, stone by stone. Acts added to acts produce habit, and habits in time construct character. No one thing does it, no particular influence by itself alone is decisive of the moral and spiritual result.

[*Universalist Leader.*]

One of the most hopeful tendencies of our age is the increasing disposition to put the emphasis where it belongs, on experience, on life itself. In spiritual matters the mastery of environment is giving way to the control of will and consciousness. In the very presence of this towering scientific fatalism which makes man a creature of circumstances, the drift of religious thinking is almost entirely toward the conviction that man is the maker of his world. The impression grows that where men are at home with God, they are at home with Him whatever the outward conditions may be.

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth.*]

I think it probable that before the world is very much older we shall have to revise some of our assumptions as to the distinction between physical and spiritual and what is possible to either. The more closely I examine this New Testament narrative the more do I feel that we are dealing with an exceptional occurrence which probably took place as narrated, namely, the transformation of a physical into a spiritual body without passing through death, the reason being that he who dwelt in that body had made it the instrument of the highest spiritual life that can be lived by man.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

TO SUBSCRIBERS.

Subscribers to our periodicals are requested to observe the expiration dates of their subscriptions, as given on the wrappers of the periodicals which come to them, and to renew subscriptions prior to the date there given.

The notation "Nov. X" indicates that the periodical will not continue after the last issue of November, 1910, unless subscription is renewed, and "July XI" in the same manner denotes termination with the last issue of July, 1911.

Subscribers are also requested to refer to the subscription rates given in our standing notices before sending in subscriptions.

OF INTEREST TO THE FIELD.

The Publishing Society has a limited number of volumes of the *Journal* and *Sentinel* bound in cloth, half morocco, and half calf and arranged in sets from four to nine volumes. These sets are now on sale at special prices, ranging from $9.20 to $21.00, according to the style of binding and number of books in the set.

These special prices apply only on sets of books, and in no case on single volumes. The offer presents an exceptional opportunity to Christian Scientists to obtain rare volumes for reading-rooms, libraries, and individual use. Detailed information will be furnished on request.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES." MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2, six months, $1.20. Ten copies, ONE ADDRESS; each, one year, $1.90, six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage, at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news dealer, 12 cents a week payable to the news dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.

Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 40 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Patriotism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.50; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 20 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 20 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00; six months, $1.20.

Ten copies to one address, each, one year, $1.50; six months, $1.15.

Twenty-five copies to one address, each, one year, $1.80; six months, $1.10.

Fifty copies to one address, each, one year, $1.50; six months, 90 cents.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. X indicates the year 1910; XI, 1911. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

TERMS OF SALE

Single copy, postpaid, five cents. In the United States, Canada, Mexico, and Cuba; twenty-five copies, one address, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, single copy, six cents; twenty-five copies to one address, $1.25; fifty copies, $2.25; one hundred copies, $4.00.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Iowa farmers have been arranging for drainage improvements in their low lands at a cost of about three hundred and seven million dollars. Much of the work has been started in the various river counties in the state, and some of it has been finished. When completed Iowa will be among the richest agricultural states in the world. In five years, since 1904, the public drainage ditches in fourteen of thirty Iowa counties have actually cost $7,438,847, and the reported cost in the remaining sixteen counties will be between seven and eight million dollars. This gives a total of fifteen million dollars which have been expended on drainage ditches in thirty of the ninety-nine counties. These improvements have been made on about three million acres at an average cost of five dollars an acre. The result has been the reclaiming of swamp and flood lands which are now worth from seventy-five to two hundred dollars an acre.

At the interstate conference on rates, convened by Governor Stubbs of Kansas, he said: "This conference was called to discuss ways and means to protect the interests of the producer, consumer, shipper, and the public generally in the middle West from the advance in freight rates involved in the most important case that has ever been heard by the interstate commerce commission. The public demands nothing short of a *bona fide* valuation of all railroad property. Congress should immediately enact a law providing for the physical valuation of railroads by the interstate commerce commission, and this should be done before any general advance in freight rates is permitted. The general policy of railroads throughout the United States, to favor large centers and build up great cities at the expense of the rural communities, is little less than a crime against civilization."

The total gifts and bequests to both income and principal of Yale for the year ended June 30 amounted to $2,398,291.54, as compared with $1,259,932.03 for the twelve months previous. The number of students in attendance in all departments of the university was 3,381, the average cost per student to the university being $293.27 and the average receipts by the university per student $134.21. The investments of the university total $12,101,993.78, the average yield being 4.93 per cent. Of this amount $5,841,129.46 is in bonds, $1,758,796.40 in stocks, $3,750,305.69 in notes secured by mortgages, and $751,762.23 in real estate.

A new cable from Penzance, Cornwall, Eng., to Roberts Bay, Newfoundland, has just been laid in the record-breaking time of thirteen days by the eight-thousand-ton steamship Colonia, the biggest cable-laying ship in the world. While continuing the line from Newfoundland to New York the cable parted about two hundred miles off the coast of Maine in water over three miles deep. Fortunately the first grappling hooks to be lowered caught the end and brought it to the surface in seven hours' time. A break in the cable sometimes means a delay of six months.

Chicago is having an aviation meet, which began on Oct. 1 and continues to the 15th. The preliminaries in the Chicago-New York race will take place between Oct. 8 and 15. For the first eight days of the meet there were daily flights by entrants in that race. Walter Brookins, in a Wright biplane, flew from Chicago to Springfield, a distance of 187 miles in 5h. 44m. of actual flying time, but 7h. 43m. of elapsed time, winning the ten-thousand-dollar prize offered by the *Record-Herald*. He alighted twice for supplies and oil and water.

Irrigation upon a large scale is to be tried out in certain sections of Cuba which have suffered a big decrease in tobacco production during the last three years through lack of rain. Pinar del Rio, where the drought seems to have had disastrous effects, has taken decisive steps toward obtaining an appropriation sufficiently large to irrigate the province. Other provinces are also considering the project.

President Taft announces that in his message to Congress in December he will recommend the appropriation of two million dollars to begin the work of fortifying the Panama Canal.

Contracts have been filed for the building in Wausau, Wis., of a Government experiment station for testing wood pulp.

International.

The *Indian Mirror*, in an editorial says: "The future of India, it has been well said, is in the hands of her women. India is sufficiently advanced to realize the truth of this observation. If that is so, what should we do to fit our women to wield the destiny of the nation? The ways and means have been indicated by Lady Muir-Mackenzie. Break the fetters of caste bigotry and superstition, spread the light of education in Indian households, propagate the golden creed of brotherhood of man and sisterhood of woman. Let our women be brought up to feel and realize that they are the better part of the nation, that they are expected to be educators of the rising and succeeding generations. The education of women, therefore, should engage our first attention in the work of nation-building. The work of social reform will be immensely facilitated by the education of womanhood. We heartily congratulate the ladies of Bombay on the excellent work they are doing for the education and the advancement of Indian womanhood and for closer union between the European and Indian communities."

The negotiations of the Ottoman-American Development Company of New York for a railroad concession in Asia Minor are progressing favorably, and the concession, which has already been signed by the minister of public works, will probably be confirmed at the next session of Parliament. The concession sought is for the construction of a railway in Asia Minor to cost a million and a half. Objection was made to this by the German government, which resulted in an inquiry being made by the state department at Washington as to the reasons for the objections. In reply the German government expressed itself as generally favorable to American enterprise in Turkey, but limited its approval to spheres where the Americans would not affect her interests adversely.

An agreement for a supplemental loan for the Tientsin-Nanking railway of twenty-four million dollars has been signed with the Deutsch-Asiatische Bank and the British and Chinese Corporation at five per cent at Pekin. Sixteen and a half million dollars are apportioned for the German section and seven million five hundred thousand dollars for the British section. The railroad is six hundred and seventy-five miles long. It is divided into two sections, German and British, respectively four hundred and two hundred and seventy-five miles in length.

A company is being formed at Campinas, Brazil, with the object of establishing a large cotton mill in that city. The capitalization will be one thousand contos of reis, or about three hundred and twenty thousand dollars in gold. A three-hundred-loom mill will also be started in Espirito Santo do Pinhal by two merchants of that city, while a hundred and fifty thousand-dollar cotton mill is under contemplation by Geniano Costa and others at San Carlos do Pinhal.

Germany is protesting against the artificially forced rise in meat prices, and there is a general cry for the opening of the frontiers, or at least a modification of the tax. The Bavarian government has determined, in view of the meat famine, to appeal to the imperial authorities and demand a relaxation of the duties and restrictions upon meat import, and to permit frozen meat to cross the frontiers free of charge.

The international court of arbitration is hearing the pleadings at The Hague in the claims case of the Orinoco Steamship Company in the dispute between the United States and Venezuela.

Industrial and Commercial.

The beet sugar industry of the United States passed through a successful year in 1909. Of the sixty-six factories in existence, all were in operation except the new plant at Nampa, Idaho. In beet acreage planted and harvested, in total tonnage of beets worked, in amount of sugar produced, in average quality of beets and in percentage of sugar extracted, all previous records were exceeded. The production of beet sugar for the season was 512,409 tons.

Firewood to the value of $240,840,728 is used on the farms, in the towns and small cities, in cities, and in mineral operations in the United States annually. The greater part of the firewood is obtained from farmers' woodlots, which often have very little value for other purposes; but where good timber is plentiful, much that might be used for lumber, cross-ties, cooperage, and similar purposes, is cut for fuel.

The total known coal production of the world (exclusive of brown coal or lignite) in 1908 was about nine hundred and fifty million tons, of which the United Kingdom produced more than one fourth and the United States considerably more than one third.

The preliminary forecast of the jute crop of India, as prepared by the British government, shows an increase of one hundred and seventy-two thousand acres under cultivation. The estimate of the yield this year is eight million eight hundred thousand bales.

The International Portland Cement Company, Ltd., with a capitalization of three million dollars, has been incorporated under the laws of the state of Washington and proposes to erect an extensive plant near Spokane.

The United Shoe Machinery Company has settled its differences with the Plant Company, a rival concern, manufacturing "Wonder Worker Shoe Machinery," by buying out the company at a high figure.

Successful experiments have been conducted in the use of water-oil, a by-product of water-gas plants, in sprinkling streets and laying dust. This renders usable an otherwise waste product.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

SILENT SIGNALS.

M. G. KAINS, M.S.

ONE evening, when coming home from business, I stood at the front door of the first car in a subway train. The position commanded as good a view of the track as the motor-man had, and I was interested in watching the signals as we approached them. On nearing the principal express stations, the signals, which are all in pairs, presented the following combinations: two green, a green and a yellow, and perhaps several red and yellow pairs. The train continued to advance up to the red signal, then stopped. When the red signal silently changed to a green, the train advanced again to the next red signal. Each change of signal was given without noise, but was just as plainly expressive as if an audible command to advance had been given.

At one station I noticed that the train started without the usual sound of a bell rung twice, as in street-cars, and I wondered if a mistake had been made by the motor-man. Upon reaching the next station I watched closely to see if some other signal had been substituted for the bell. The train started again without a sound signal, but I noticed a little lamp burning in front of the motor-man and I thought, "That is the signal." At the next station I noticed that when the train stopped the light went out, and when it lighted up again the motor-man immediately started the train. I learned from the motor-man that this light goes out as soon as a door in any car is opened, even if the opening is only the fraction of an inch. All the doors in the train must be closed in order to establish the electrical connection so as to give this signal that the doors are fast and that the train may start.

These silent signals which gave the assurance of safety to the man in charge of the train, suggested to me the silent signals that indicate the correctness of Christian Science practice. The signs of healing which characterize the intelligent application of Jesus' teachings are reliable indications that the beginner or student is safe in his method of procedure. Without such signals or signs it is impossible to know whether the individual is thinking along correct lines, or whether the road he is following is the correct one. Without them it is even impossible to know whether danger is not ahead, and it would be just as hazardous in its own way to advance on the basis of human speculation as it would be for the train to advance beyond a warning signal.

In another way these silent signals serve to illustrate human experience. In view of the supposed subjection of mankind, as a whole, to the asserted law of material sense, it not infrequently transpires that the innocent and the good are most unjustly afflicted, but in the instance of the unthinking and worldly-minded, sequent human ills, discomfort and disease, pain and poverty, should remind them that they are on the wrong track; that there is danger ahead, and that they should stop and get in the line of safety.

Christian Science supplies the world with a correct system of thinking. The proof of this correctness is evidenced by the silent signals, the "signs" which follow "them that believe." By means of its application thousands of people who have been pursuing wrong methods of thinking,—been disregarding the signals,—have been set right, their diseases healed, their poverty banished, and their dispositions changed from the unlovely to the lovable. Their lack of trust in God has been replaced by an abiding confidence, a knowledge that God really is present here and now in His universe, available at all times and equal to every emergency, and that all they have to do is to understand the truth and obey it.

In order to become a Christian Scientist the individual must look for the light before he makes any advance, just as the motor-man looked for the flash of the light in the lamp in front of him before he could start his train without danger to the passengers. And in order to have the light burn he must close his mental doors on the sights and sounds that would interfere with the appearance of the guiding light. He must shut out the thoughts of doubt and fear, and know that he is safe in obeying the silent signals, the rules which were laid down by Jesus the great Way-shower and which are explained in this age in our text-book, "Science and Health with Key to the Scriptures," by our beloved Leader, Mrs. Eddy.

"CALLED UNTO LIBERTY."

ROBERT NALL.

TRUE liberty is spiritual, not material. It is emancipation from the enslavement of the senses. It is deliverance from those entanglements which cause mortals to bear a heavy yoke, and which make life so burdensome to humanity. The popular idea of liberty is based upon a wrong concept; and while that is held, there can be no advance into the realm of truth and righteousness. Peer and peasant, rich and poor, the learned and the illiterate, alike are burdened with the thought that they have been deprived of something that would make life happier and more endurable. A feeling of dissatisfaction is the universal possession of mortals. They crave that which they have not; and even should they receive the material things they desire, the hunger remains.

What a hopeless bondage it is when the thought is earthly, the vision cramped, and the consciousness so darkened that spiritual light has as yet found no entrance. As Jesus looked upon the crowds that flocked to him because of his miracle of feeding them, he penetrated into their motives, and in a few words directed their thoughts from the unreal and temporal to the real and spiritual. "Labor not," he said, "for the meat that perisheth, but for that meat which endureth unto everlasting life." He saw them the slaves of sense; he sought to lift them up to a higher and purer conception of what life meant. Knowing that the truth alone makes free, all through his ministry he ever kept in the forefront of his teaching and his example the possibility of deliverance from the thraldom of the fleshly mind, and a present realization of the inheritance which is man's birthright.

Christian Science comes with a clarion call to true liberty. It promises freedom from the misery and suffering under

Copyright, 1910, by Mary Baker Eddy.

Digitized by Google

which humanity seems everywhere crushed. It plants its standard on the basic statement, "God made man free" (Science and Health, p. 227), and it ensures to all who will seek, that by patient continuance in well-doing they may know what it is to enter into the "glorious liberty of the children of God." But this means work—steady, persistent, daily and hourly watchfulness. The thought of freedom is exhilarating: it refreshes and strengthens and encourages. The thought, however, must be translated into action. In this connection the writer remembers with profound thankfulness his first reading of the chapter on "Prayer" in Science and Health. He had long been searching for light and liberty, praying as best he knew how; but, having an entirely false conception of God and man, the darkened condition was unchanged. The illumination that came with the true understanding of what prayer is, has never ceased to be a guide to higher spiritual attainment. From that time began the awakening from the false sense of life, and the newer and clearer and purer apprehension of Truth.

Our Leader has declared with the divine emphasis which characterizes all her teachings, that "the enslavement of man is not legitimate," and that "it will cease when man enters into his heritage of freedom, his God-given dominion over the material senses" (*Ibid.*, p. 228). There is definite encouragement to those whose deliverance is coming slowly. Why be impatient or despondent? The promises of God are always fulfilled, and they are rich enough and broad enough to meet every human need. God has done His part; how are we doing ours? It may seem at times as if the iron-bound shackles of mortal belief would never be broken; but that in itself is a wrong thought which needs to be destroyed the moment it presents itself. The demand upon us is to give no quarter to the falsities of mortal mind, but to obey the injunction of the apostle, "Stand fast therefore in the liberty wherewith Christ hath made us free." This is the freedom that is ours by virtue of the fact that we have come to know that man is the spiritual idea of God, and that the law which claims to hold mortals in subjection to sin, sickness, and death is illegitimate—is in fact not law at all, but only a counterfeit of law which is spiritual.

If, therefore, we have not entered upon our "heritage of freedom," there is need for the most solemn investigation. In what way have we erred and strayed? Is there not a call for prayer that we may be divinely shown the unreality, the nothingness, of those things that obstruct our progress. "Who did hinder you that ye should not obey the truth?" If we would know what freedom is—the freedom from spiritual doubts and unrest as well as of physical ills—then, by prayer and study, ignorance will give place to knowledge, fear to confidence, doubt to an all-absorbing faith in God as the absolute good. We shall soon come to grasp the fact that mortal mind assumes a power to hinder that it does not possess, and that nothing can keep us from our birthright.

That means the daily overcoming of discord and inharmony, and the appearance of that "new man, which after God is created in righteousness and true holiness." What Paul wrote to the early disciples may be echoed today—we are "called unto liberty," and in proportion as we respond, we shall know the joys of spiritual freedom.

THE MONITOR.

PHILIP R. KELLAR.

I ALWAYS look at *The Christian Science Monitor* from two view-points: first, that of a person who is trying to practise Christian Science; and second, that of a person who in working for several years upon daily newspapers had to read eight of them every day, and who knows how they are made. From either view-point I find it to be the best newspaper published.

It is well for us to remember that our Leader established the *Monitor* because she discerned the need for such a paper and the good it would do; therefore it was to become one of the weapons of the Christian Science cause in the warfare with impersonal evil. Just now it is the advance guard of our army, entering homes and offices and other places where perhaps none of the other periodicals would be found, thus paving the way not only for them, but for Science and Health, for the practitioner, for the Christian Science friend. In this way it is the means of taking to many the "good news" which ultimately will make them free.

There is no good reason why every member of a Christian Science church or society, or every person who is studying Christian Science, should not support the *Monitor*, mentally and financially, silently and audibly; and there are many, many reasons why each one should give it unceasing and earnest support. Sometimes we may not be able to discern all the reasons; sometimes we may be tempted to believe there are no such reasons; but the fact that this newspaper has been established by our Leader and that we have been asked to give it our support, should be sufficient to cause us to search our own mentality very earnestly if we do not immediately respond.

It is possible that some of us were disposed at first to question the wisdom of establishing a daily newspaper. Most of the forward steps taken by Mrs. Eddy have been criticized at first, but all of them have proved beneficial to the world. If we do not understand this particular step thoroughly, we can at least be obedient and wait and pray for growth that we may understand. Some—and there were Scientists among them—said that the venture would prove too costly; others, that it was not needed; others, that it was making Science too common; others, that it looked too much like making money out of one's religion. Possibly some of us were consenting to echo in these thoughts the criticisms of the world. A daily newspaper conducted upon clean, honest, upright, and pure lines was the very last thing which would appeal to error. Anything which would show the contrast between the forces of evil and the forces of good, would be immediately labeled as error's most dangerous foe.

None of us would knowingly be used as sounding-boards for the criticisms of the world, and the way to silence these criticisms is to make the *Monitor* so prosperous that its success—and success in every way—cannot be questioned. As a newspaper it is already established. Recently, in the office of the editor of a magazine, I saw a copy of the *Monitor* and spoke of it. The editor responded quickly, "Yes: it is by far the best newspaper published." He was not a Christian Scientist, not even especially interested in Science, but he was interested in good newspapers. Another point is that a newspaper cannot be a full success without advertisements, and the following statement is the comment of a business man—not a Scientist—who has had experience as an advertiser and as an advertising solicitor: "I wouldn't want anything better than to solicit advertising for the *Monitor* among general business circles. The only trouble is that its charges are too low."

The starting of a modern daily is generally looked upon in business circles as a forlorn enterprise. The history of most papers shows a long string of weary, struggling years when each week seemed to be the last. A few have survived and become prosperous; the majority have gone under. This was what the world predicted for the *Monitor*—only that the struggle for existence would be shorter, because it was to be a paper free of the extravagances, vices, etc., which seem to characterize most of the successful newspapers. But the prophets were wrong. The *Monitor* did not "go under" in a few months; it did not "lose a fortune in the first year of its existence;" it did not "degenerate into a fanatical, religious organ without semblance of a modern newspaper," as was predicted. It started out as a first-class newspaper, fitted for general circulation everywhere, and it has continued to get better and better. But,

Digitized by Google

whether the paper lost money or made thousands of dollars, this in and of itself has nothing to do with the fact that Christian Scientists ought to support it. We have been asked to give this support. If obedience to the wishes and requests of our Leader had ever resulted in evil to us, then we might question those requests. Since this has not been the case, we should be prompt to take advantage of our privilege when she makes a definite request.

Another valuable feature of the *Monitor* is that it is a daily magazine. A person who reads only this paper will, at the end of the year, be well informed as to the world's progress. Furthermore, it has inaugurated one of the greatest philanthropic movements ever started, in its free advertisements for help and situations wanted, something which no other paper has ever attempted. By this one stroke the *Monitor* has effectively refuted all open and secret criticisms to the effect that Christian Scientists are not philanthropic. Every day the *Monitor* prints enough of these free advertisements to bring in at least four hundred dollars if they were charged for, which means that practically twenty-four hundred dollars' worth of space is given each week in the effort to find work for those not employed.

The advertising value of a newspaper depends upon its circulation, the amount and the character of that circulation; that is, we are helping the *Monitor* more by subscribing for it by the year than for shorter periods, even though we would actually pay more for the paper in the latter way. If every member of the Christian Science churches were to conform to the rule in the Manual of The Mother Church which states that it is both a privilege and a duty for every member to subscribe to the periodicals, the circulation of the *Monitor* would be increased materially; and if every member did a little more than his or her mere duty, and talked about the paper to others and explained the advantages of subscribing for it, a still greater increase in circulation would follow.

If each and every Christian Scientist would keep the *Monitor* in mind when seeking employees or positions, or when they know of persons who are seeking either, and make use of its columns for advertising purposes, both free and paid, and advise others who are not Scientists to do the same, they would be doing good work for the paper and for the Christian Science cause. If they would patronize those who advertise in it, and tell them that they were sent to them by the *Monitor* advertisements, they would be helping still more. The *Monitor* is the Christian Scientists' daily paper, and it is the world's. If Christian Scientists do not appreciate it, how can they ask or expect those who are not Scientists to appreciate and support it?

LIFE IN MATTER.

CARL E. HERRING.

Long ago Dean Swift wrote concerning "a creature pretending to reason that should value itself upon the knowledge of other people's conjectures and in things where that knowledge, if it were certain, could be of no use," with the ironical comment, "What destruction such doctrine would make in the libraries of Europe!" Philosophical writings are easily divisible into two classes. One starts with some great fundamental truth and constantly reverts to it, enlarging and building up only to make the emphasis of this truth the greater. The other starts with truth and constantly departs from it in an ever widening circle. Needless to say that our libraries are groaning under the latter and that the former can be carried in a satchel.

The philanthropist who believes in the diffusion of knowledge by much placing of many books in the hands of the people, has a most worthy motive, but diffusion is a most perfect synonym for dispersion. We would have no patience with volumes written on the science of mathematics which constantly indulged in departure from fixed rules, in conjecture as to their origin, or in copious illustrations of false reasoning; and yet, upon a subject of vastly more importance, the Science of Life, we have not only welcomed man-made theories, but they have permeated the thought of the masses and warped the understanding of the sweetest souls of all ages. If we hark back to Egypt, typical of darkness and of error, and the Egyptians, we find that their concept of life in matter led them to embalm the body, in the vain hope that it might be preserved, but primarily that the heart, which was believed to be the seat of life, might not be destroyed. To kill the body was a crime, but to ravish the soul by destroying the heart was an unpardonable offense which not even the judgment of the court of the dead could atone. This belief in the potency of matter we lightly dismiss with a smile of pity,—it was held so long ago and by a people just emerging from darkness.

But let us draw the lines a little closer. Matthew Arnold, the apostle of "sweetness and light," was so overshadowed with the universal belief of life in matter that he despairingly conceded its claims and then with soul unsatisfied, he posited outside of this mortal delusion "the eternal, not ourselves, that makes for righteousness." Like the Athenians he erected an altar to the "unknown God," not knowing that this altar is the heart of the real man and that the man of matter whom he had ignorantly conceded to be the man of God, is but a false concept. The centuries do progress, but it is rather in the way of preparation to receive the truth than in contribution to truth. There is no middle ground for Christian Scientists. Better far that the inquirer should remain in the outer fold than that he should be lulled to rest by departure from fundamental truth. The slight variation in the point of departure may seem unimportant, but when that point of departure is the foundation stone which shall redeem the world, we must not trifle with the completed structure. The mariner who journeys on the tremor of the compass will never reach his destination.

An acknowledgment of the existence of life in matter is demanded from us on every hand and in every conceivable form. Yielded to but one jot, and we begin again the weary cycle of manifold conjecture, of personal opinion, ever departing from the norm of truth, until finally the truth is again lost in the corruptions of commentaries. Small wonder that the world has been troubled in finding a name in history for Mrs. Eddy. A creation implies that which did not previously exist. A discovery, that which existed but was lost or never found. The truth of Christian Science is a discovery. It was far worse than lost, for while exposed to full view, it remained unattainable by reason of the fetters of mortal belief. The plodder after truth can mark his progress when a passage from our text-book which he had failed to understand comes to him with illuminating force; and what crystal meaning is contained in the words of Mrs. Eddy: "We have no right to say that life depends on matter now, but will not depend on it after death" (Science and Health, p. 409).

EXPRESSED APPRECIATION.

ANNE ARCHBOLD MILLER.

Have we not divine authority for expressing appreciation to our fellow-man for words well spoken, for work well done? Was not Love's crown of appreciation expressed when, after the baptism of Spirit, Jesus was so imbued with the Christ-consciousness that "he saw the heavens opened, and the Spirit like a dove descending upon him: and there came a voice from heaven, saying, Thou art my beloved Son, in whom I am well pleased."

Again and again did the Master express his loving appre-

Digitized by Google

ciation for words well spoken, for services well rendered, for work well done; yet he who did humanity the greatest service ever given by man, he whose words of love brought life to a world in need, he whose works revealed to man the forever Science of being in God, save in a few humble instances was denied earthly appreciation. He did not, however, deny it to others, knowing that the just appreciation of unselfish effort in the service of his Father could but inspire holier desire and higher accomplishment. With what unmeasured joy must the disciples have heard these words: "Ye are the salt of the earth. . . . Ye are the light of the world," though followed by the gentle admonitions, "But if the salt have lost his savor, wherewith shall it be salted?" and "A city that is set on an hill cannot be hid." With what spontaneity of tender appreciation did the Master say to the impetuous Peter, "Blessed art thou, Simon Barjona: for flesh and blood hath not revealed it unto thee, but my Father which is in heaven."

Again, how joyfully must the disciples have received his tribute to their higher spiritual understanding, when he said, "But blessed are your eyes, for they see: and your ears, for they hear." In many cases of healing Jesus first verbally expressed his appreciation of the faith reposed in him; as in the case of the woman who desired but to touch the hem of his robe, that she might be made whole. To her he said, "Daughter, be of good comfort; thy faith hath made thee whole." In the presence of the woman whose loving devotion to him had manifested itself in the pouring out of a precious ointment, he said: "Why trouble ye the woman? for she hath wrought a good work upon me." No loving word, no gentle service, "be it song, sermon, or Science" (Science and Health, p. 234), born of a loving motive, but is worthy of our tenderest appreciation, the voicing of which could never fail to create higher, holier effort. That spoken word, that kindly service, which brings any good, however small, to a fellow-man, is in its very nature wholly selfless, for all good is of God; hence an expression of appreciation is but praise to God,—to Him "from whom all blessings flow." Each and every such expression enriches the giver by enlarging his love for another and aiding in the effacement of self.

Thus, through sincere appreciation of our brother's honest effort, shall we help to gain that greater sense of Love which in its unfoldment will one day bring the baptism of Spirit; when "seeing," we shall see the Spirit of God descending like a dove, and "hearing," we shall hear a voice from heaven, saying, "This is my beloved Son, in whom I am well pleased;" and again the King shall say: "Come, ye blessed of my Father, inherit the kingdom prepared for you from the foundation of the world."

WATCHING.

WALTER SHAW.

Why do Christian Scientists find it so necessary to watch? Why should Mrs. Eddy have chosen this saying of Jesus for the constant head-line of our *Sentinel*, "What I say unto you I say unto all, Watch," and why should a by-law be needed in our Church Manual, entitled "Alertness to duty" (p. 42), and such constant attention be directed to this subject? Surely it must have a very important relation to our spiritual advancement to be thus accentuated.

Most of us see that many and various human conditions seem to obstruct our progress in Science. Gradually to improve these, we have to be intensely in earnest about the "one thing needful," or we do not make the needed effort to acquire more of truth. One of our greatest temptations is to cherish our inherent belief in the reality of matter. If we are not striving in some way (however small) to overcome this belief, we are not truly watching, and our consciousness is liable to be invaded by an overwhelming sense of the reality of material things. It is comparatively easy to assent to the premises of Christian Science when we have reasoned them out, but it is quite another thing to strive hourly to put them into practice. To repeat at the close of our service, "There is no life, truth, intelligence, nor substance in matter. All is infinite Mind and its infinite manifestation" (Science and Health, p. 468), while making no effort to prove it, will not insure growth.

What is it that often tries to hinder us when wishing to get into closer unity with truth? Sometimes it is our sense of human personality, or a bodily condition says, "I am too tired to rise early to study this morning." Social position or business duties may demand so much time as to crowd out the quiet hours needed for study. Christ Jesus saw how the cares of this world claim to hinder mortals from following him. There are other obstacles besides these material things that strive to hinder us. Much in the mentality of each of us needs correction. We should daily become more loving and kind through our advancement in understanding, more free from criticism of others, more ready to forgive an injury, more patient under tribulation, and ever prompt to help those who need our assistance.

There is enough work for us all, if we are but looking out for it and praying for divine guidance. In Science and Health (p. 22) we read: "Final deliverance from error . . . is not reached through paths of flowers nor by pinning one's faith without works to another's vicarious effort." As the searching truth of these inspired words comes to us through the gleaming, we are encouraged to press onward, knowing that when striving to do right no evil can befall us, nor any plague come nigh our dwelling. Then we see new meaning in these words from one of our hymns:—

> Take up thy cross, the Saviour said,
> If thou wouldst my disciple be;
> Deny thyself, the world forsake,
> And humbly follow after me.

[Written for the *Sentinel*]

TRUTH'S GENTLE APPEAL.

MINNIE BRITTON STODDARD.

THE low, sweet voice of Truth is ringing in my ears,—
Like tones of silv'ry bells, the melodies of years.
It calls me from all care, all fear, all want and strife,
From everything that mars the beauty of my life;
It takes away all ill, all sorrow, and all pain,
For in its presence dear no evil can remain.

It rings the glad refrain of "Peace, good will to men;"
It spells the sweetest lays e'er heard from tongue or pen;
It pours into my soul the music of the rill,
Which seems to sing to me the song of "Peace, be still."
Its echoes still resound, and never know alloy;
And ever and anon, I sing aloud for joy!

It shows me life's broad scope, that comes with service sweet,
Whose radiance fills the soul, and life becomes complete.
It shows that purer joys do come to those who wait,—
The love that never cloys, that never turns to hate;
Its richest, greatest boon to serve for others' sake,—
To voice one thought sublime, that shall some soul awake.

And ever 'mid the years it bears life's truer tone,—
That Love, o'ermastering hate, shall reign supreme, alone;
That only Love is Lord, dissolving every ill,
And meeting my great need by conquering human will.
For Love's the master hand that wakes life's grandest chord;
I need no other king, for Love alone is Lord.

SELECTED ARTICLES.

[Frederick Dixon in *Occult Review.*]

What constituted the gulf between Christianity and the other religions with which the early Christians were surrounded, was the fact that Jesus separated once and for all the claim of the power of the human mind to effect good or evil, from the scientific knowledge of absolute Truth as the only real existent power. The claim of the power of the human mind to do good is inseparable from its claim to do evil, and as nobody has ever dared to pretend that the human mind is not largely actuated by evil, it follows that such a theory maintains that evil is power. The author of the allegory of creation in the Jehovistic document of the book of Genesis, uses the imagery of the tree of the knowledge of good and evil to typify this, and he draws from it the inevitable deduction that he who eats of this fruit will die. Now, as Paul maintains that by sin death came into the world, it is manifest that, according to the teaching of Christianity, a belief in the power of good and evil is itself sin. Centuries later Jesus referred to the same subject, making use of a similar image. "A good tree," he said, "cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit." In this way he made it perfectly clear that a tree which produced good and evil fruit was of necessity corrupt, and so he put his teaching on this point in harmony with the allegory of Genesis. "But," he went on to say, "if I with the finger of God cast out devils, no doubt the kingdom of God is come upon you." The kingdom of God, then, cannot possibly come to any man through suggestion from a human mind which of necessity believes in both good and evil and which, therefore, in Jesus' own words, is corrupt.

The scribes and Pharisees, desiring to destroy Jesus' influence over the Jewish people, chose this very point in his teaching for their attack. Confident that they could confuse the healing effected by the divine Mind with the so-called healing which it was claimed could be effected through the human mind, they declared that Jesus cast out devils through Beelzebub. To the Jew of the first century the implication was clear. From the time of Abraham downward, the leaders of the chosen people had waged incessant war with the magicians, astrologers, necromancers, and all other workers by means of the human mind, who had claimed through this instrumentality to perform wonders and to heal the sick. Ignorant themselves, perhaps, of the difference between the miracles performed by Jesus and the miracles wrought by the wonder-workers, they imagined that the people would confuse Jesus with the latter. Jesus' reply separated spiritual healing from healing through mental suggestion, and eliminated the latter forever as a factor in Christian practice. The kingdom of God, he showed in effect, never came and never could come to any man through suggestion from a mind believing in good and in evil. The kingdom of God could come only as men began to perceive the Christ, and so to gain the Mind of Christ. Evil, he said, using the imagery of the East, and personifying it as the devil, abode not in the truth, because there was no truth in it. Take away the metaphorical atmosphere of the East and translate the Greek into the more matter-of-fact language of the West, and what do these words come to but this? Evil does not abide in truth, because evil has in reality no existence. Evil, in plain English, is not power, and is not real. The only reality it has is its relative existence in the human consciousness as opposed to a relative sense of good. The only power it has is the temporary sense of power a lie seems to exert so long as it is unexposed.

It was while following the golden clue which she had obtained from the Bible, through the mist of the caverns of mortal mind, that Mrs. Eddy met Mr. Quimby. For a moment she thought that she had found what she was seeking, and, as was her way, she gave him generous acknowledgment and praise. Gradually, however, as she began to understand the spiritual teaching of the Bible better, she began to realize that Mr. Quimby's teaching was a broken reed, and so she turned forever from reliance on human aid in any way, and devoted herself, single-handed, to the effort to recover the Science of Christian healing. Little by little the light dawned upon her until, to adopt a phrase of her own, on page 224 of Science and Health, she saw "truth's full-orbed appearing." From that hour until today her one thought, her one work, has been to let her light so shine before men that they might see her good works and glorify her Father which is in heaven.

The experience of healing came to Mrs. Eddy, as it had come before her to Moses, to Elijah and Elisha, and to the great workers in European Christianity. She was healed when she was on the point of death. But, unlike her predecessors, she was not content to accept this healing as a special interposition of Providence. She realized that the truth which had healed the Hebrews in the desert, which had raised the son of the Shunamite woman, which had made clean the Syrian Naaman, which had cured Melancthon and the sick woman at Mansfield Woodhouse, was simply the understanding of the Christ which was never absent from humanity, and that, in her own words, on page 494 of Science and Health, "Divine Love always has met and always will meet every human need."

It was precisely here that Mrs. Eddy's vision differed from that of those who had preceded her. They believed God to be the fashioner of laws of disease, and an occasional lawbreaker to please some peculiarly persuasive pleader. She saw that God is divine Principle, and that this consequently was why Jesus had been able to say, "A good tree cannot bring forth evil fruit." From infinite good, she saw, nothing but good could proceed, and from this she deduced the existence of divine law and spiritual causation. "I knew," she writes on page 109 of Science and Health, "the Principle of all harmonious Mind-action to be God, and that cures were produced in primitive Christian healing by holy, uplifting faith; but I must know the Science of this healing, and I won my way to absolute conclusions through divine revelation, reason, and demonstration." It was in this way that the Science of Christianity, or Christian Science, was given to the world, and the world owes Mrs. Eddy a debt it has as yet scarcely begun even to suspect, in that she has recovered the interpretation of the Scriptures from the ebb and flow of a sea of religious emotions, and established it upon the rock of Science. The miracle was the answer given by Jesus to that question in the mouth of the Jews; and the miracle, though as supernatural to the man ignorant of divine law as the telephone is to the savage, is as divinely natural to the Christian Scientist as the telephone is to the physical scientist. "When," writes Emerson, "a faithful thinker, resolute to detach every object from personal relations, and see it in the light of thought, shall at the same time kindle science with the fire of the holiest affection, then will God go forth anew into creation."

[Eugene R. Cox in *Syracuse* (N.Y.) *Journal.*]

One of the daily papers in New York which for years was bitter in its denunciations of Christian Science, said editorially last winter that Christian Science had proven itself as a religion of brotherly love, and that paper has since made no attack on Christian Science. As this is a secular paper it would seem a bit strange that ministers of the gospel should still be attacking what the world is ready to recognize as a religion of brotherly love. The gentleman rightly says that few people worship intelligently, because few people think for themselves. That they are beginning to do so, however, is amply proven by the growth of Christian Science, for it is a religion which preeminently requires people to think along right lines and to prove their faith by

Digitized by Google

their works. A theological discussion has never yet proven of benefit to any one, and I should not notice the remarks of the gentleman except for the erroneous statement that Mrs. Eddy in "Science and Health with Key to the Scriptures," declares that there is no such thing as heaven. Christian Science is derived from and founded upon the Bible, and the words of the Wayshower, "The kingdom of heaven is within you," are repeatedly emphasized by Mrs. Eddy.

[Editorial in *Rogue River Courier*, Grants Pass, Ore.]

On the 16th of July Mrs. Eddy, Discoverer and Founder of Christian Science, passed her 89th birthday, and the event has been made a matter of comment by the newspapers throughout the entire country. During the last few years a number of writers have published magazine and newspaper articles which severely criticized Mrs. Eddy personally and also her religious teachings, but no one of all the writers who have mentioned Mrs. Eddy's birthday has indulged in other than friendly words regarding her. None will attempt in the future to deny that this woman is a remarkable character, and we at the present day must admit that she will go down in history as one whose teachings have found followers in all ranks of life. It matters not what we may think of her religious belief, or of her therapeutic teachings in connection therewith, she is quite certain to occupy an important place among the founders of great religious organizations. The world will give her this distinction, regardless of what has been said by her detractors. As time goes on the thinkers of the world will place her name beside those who have accomplished something for the good of mankind. Already the encyclopedias have given her recognition on a par with the founders of other religious orders.

This paper believes in fairness and fair play. Every person has a right to think for himself, and no one should be condemned for his honest belief, be it religious or otherwise. This is said in the broad sense and does not mean that discussion should be curtailed. Mrs. Eddy's place before the world will not be affected by the criticisms of those who do not like her personally or believe in her teachings, but by that other class who become her disciples. There is room enough in the world for all who aim to do good, and it will be at least Christlike to give them an opportunity.

[Willis D. McKinstry in *Junction City* (Kan.) *Union*.]

There is no resemblance between Christian Science and hypnotism. They are no more allied than light and darkness. Hypnotism is a belief of sentient life in matter, or mind over mind; it is a belief of one human will controlling another, which can be used for wilful and evil purposes. The basis of Christian Science is spiritual; it is the operation of divine law, the law of good made manifest in healing disease and sin through the understanding that there is but one infinite Mind, God, the source and governor of the universe and man. This spiritual knowledge can be used for no other purpose than good. Paul recognized this true mental activity when he said: "The weapons of our warfare are not carnal, but mighty through God to the pulling down of strong holds; casting down imaginations, and every high thing that exalteth itself against the knowledge of God, and bringing into captivity every thought to the obedience of Christ."

[A. W. Mainland in *Winnipeg* (Man.) *Telegram*.]

A recent issue reports a critic as saying at the Anglican congress at Halifax, that Christian Science had killed some and would kill more. It is common knowledge that thousands die every year under other forms of treatment, yet it would be a very extravagant statement to say that all those who were not healed were "killed" by those who were faithfully ministering to them. Large numbers die every year on the operating-table or through mistakes in the administration of drugs, yet it can never be truthfully said that any one has died because he has too much Christian Science. The only effect of Christian Science, which may be defined as divine Truth operating in the human consciousness, is to heal and to save. Failures always result from a lack of understanding. The practice of it is as yet in its infancy, but sufficient results have been obtained to give encouragement for the future, as it has already healed practically every known disease. Many of those healed have been given up as absolutely incurable by other systems. Justice demands that each system be judged by its successes as well as its failures, and that the decision be based on impartial evidence.

[William J. Bonnin in *Manchester* (Eng.) *Chronicle*.]

To any one who wonders how the many amazing misconceptions as to the true nature of Christian Science obtain currency, a recent issue should prove instructive.

First, there was an account of an inquest at Nottingham where a woman had died without medical treatment. There was no evidence whatever that she had received any Christian Science treatment at any time. The account, however, was headed, "Christian Science." In this connection it might be pointed out that the constant endeavor to discredit the great work that Christian Science is accomplishing by giving an undue prominence to sporadic instances of alleged failure, seems to imply some forgetfulness of the fact that the argument, if it be an argument, is one to be easily turned against "orthodox practice" with overwhelming force. Imagine every death under medical treatment having a quarter of a column in the daily press assigned to it with an indictment of that treatment for a head-line!

Secondly, there was in the same issue a contribution over the name "Jeff," dealing with what the writer called "a new name for will-power." The wiser people have almost abandoned the practice of attacking Christian Science with no knowledge of their subject. Unfortunately the ground where these wiser and more angelic natures fear to tread does not necessarily remain altogether untrodden. Christian Science has, of course, no more to do with human will-power than with suggestion; it is but the understanding, or science, of our true being, and it fulfils the promise, "Understanding shall keep thee: to deliver thee."

[Charles K. Skinner in *Boston Times*.]

In a little discussion recently on the subject of Christian Science with one of the orthodox clergy, the writer was told that Jesus' followers were first to preach the gospel. This is true, and it is what Christian Scientists are doing daily. According to dictionary authority, "preach" means to "declare, proclaim, or publish," and "gospel" is defined as "Godspell, good spell, or good tidings." As Christian Scientists invariably tell the good tidings of release from the bondage of sin and disease through the marvelous love of God to His children, they are surely preaching the gospel, which if accepted is followed by the "signs" Jesus promised should attend it. Our critic quibbles over our rendering of the word "believe" as in many instances conveying the meaning of "understanding, firmness, and trust." If he prefers the ordinary sense of "believe" we will accept his choice, while reminding him of the assurance that "these signs shall follow them that believe." Do these signs follow our brother? He has seen fit to criticize his brethren (in the face of his Lord's command, "Judge not, that ye be not judged") who are doing, to the best of their understanding, the works commanded.

This writer contends that the healing was to come from the laying on of hands,—personal contact; that "there was no absent treatment." Our brother has read the Scriptures to little purpose if this is his understanding. In Matthew's

Digitized by Google

Gospel, 8th chapter, it is related that a certain centurion sent to Jesus to heal his servant; but when the Master said he would go and heal him, the centurion said, "Speak the word only, and my servant shall be healed;" and Jesus said, "Go thy way; and as thou hast believed, so be it done unto thee. And his servant was healed in the selfsame hour." In John, 4th chapter, is recorded the healing of the nobleman's son who was in Capernaum when Jesus was in Cana. Jesus' words to the boy's father were, "Go thy way; thy son liveth." In Psalms cvii. 20, we read, "He sent his word, and healed them." In John's Gospel is the promise, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do." Does our brother believe this? Is he doing the works? The clergyman's reference to "hard cash" is ill-fitting from one who doubtless never refuses the quarterly stipend for doing half the work commanded, while Christian Scientists, to the best of their ability, are fulfilling all the commands.

Jesus' words were, "If ye love me, keep my commandments;" not part, but all. Our critic asks if Christian Scientists cast out devils? "Devils" are neither more nor less than evil thoughts and passions, and we answer, emphatically, Yes. Lest there be an attempt to question our rendering of the word "devils," we ask if any one ever saw or heard of even one personality being cast out of another? No one at this hour believes that seven persons were cast out of Mary Magdalene, although as many evil thoughts might be cast out of any of us at times. It is then asked: "Do they take up serpents, do they drink poison and receive no hurt?" The instances are numerous where the effects of bites from snakes and animals, and of poisons taken by mistake, have been counteracted by Christian Science. If, however, the gentleman means that poison should be taken in bravado, the words of the Master when like suggestions were made to him, is the only answer, "Get thee behind me, Satan: . . . it is said, Thou shalt not tempt the Lord thy God."

We are further told that "the Saviour did not come as a healer. What he did in this line was very little, and has been made too much of by many who have failed to comprehend his mission." Among the hundreds of thousands who are relying on Christian Science for spiritual and physical relief from all their ailments, are those who were once clergymen of the various orthodox churches, physicians of every school, and level-headed business men and women. A number of the clergy have come from large churches where they were successful pastors (some of them from the writer's own denomination), and it is barely possible there may be among them those who are peers of our critic in point of spirituality and intelligence, but who found in their sore need something more helpful than their one-time creed.

While it is true that Jesus' mission was to teach people to grow out of their old ways of living, out of their belief of pleasure in materialism and sin, he never neglected to clinch his argument for right living by healing the sick, casting out devils (evils), whenever the opportunity offered. At the same time Jesus made a demand upon all who desired his help: to one it was, "Go, and sin no more;" to another, obedience; to another, faith. The command, "Heal the sick," cannot be evaded by saying that Jesus' works in this line "were very little." The Gospels are full of his loving help to humanity. Just one instance, recorded in Matthew iv. 23-24, will suffice: "And Jesus went about all Galilee, teaching in their synagogues, and preaching the gospel of the kingdom, and healing all manner of sickness and all manner of disease among the people. And his fame went throughout all Syria: and they brought unto him all sick people that were taken with divers diseases and torments, and those which were possessed with devils, and those which were lunatic, and those that had the palsy; and he healed them."

To say that Mrs. Eddy is avaricious is not borne out by facts, for the records show that she has devoted much time and labor and given much money to worthy charities, including hospitals, orthodox churches, and schools, besides contributing to funds for sufferers from disasters. In all the healing she did in her early years she received no fees. In all of her classes a number of students were taught gratuitously, and in the last class of seventy no fee was received.

I still insist that Christian Scientists do not proselyte, and those who are members of its churches will corroborate this statement. It is true that the majority come from other churches, and they come because their former churches and pastors have failed to feed them with the "truth that makes men free." Of what value is it to read to the sick and sorrowful of the Lord who "healeth all thy diseases," who "healeth the broken in heart, and bindeth up their wounds," if when they ask how they shall find Him the reply is, "I don't know; better go to a doctor and read your Bible;" whereas Jesus' words were emphatic: "He that believeth on me, the works that I do shall he do also."

[William Amos Gillody, Jr., in *Manchester* (Eng.) *Chronicle*.]

As a constant reader of the *Chronicle* for fifteen years and a supposed "victim of suggestion," though not a member of any Christian Science body, I would like to offer a few remarks.

"Hubert" seems to forget that there is truth, not only as fixed as the stars, but equal to the force which governs them. It would not be a suggestion to state that the sun is due south at twelve noon. It would be to state a fact which may be proved by demonstration. If, as "Hubert" suggests, Christian Science is in direct conflict with and in opposition to science, religion, philosophy, and common sense, I state a fact when I say the conflict is theirs, and does not in the slightest degree touch Christian Science. Not only in consumption and aneurism, but every other ill whch comes to a limited human experience, the Christian Science handling is right.

I wish to state that Christian Science is the exact opposite of suggestion.

[From *Dulwich* (Eng.) *Post*.]

Christian Science has come, and as usual with new things has come from America. Its votaries in Great Britain already number tens of thousands. We had an idea that this was the case, but were not quite sure about it. Therefore, on Wednesday night we attended in full force at First Church of Christ, Scientist, at Sloane Square. It was the most remarkable church we ever entered. We found the place full of a well-dressed and enthusiastic congregation. We were astonished at the number of persons from Dulwich and Peckham that we met at the Sloane Square church.

In our opinion they won't stop going to the church, but more—many more—will follow their lead. Christian Science has every appearance of having come to stay.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be Nov. 4, 1910. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 18, 1910.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to June 3, 1910, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

TAKE NOTICE.

I HEREBY announce to the Christian Science field that all inquiries or information relating to Christian Science practice, to publication committee work, reading-room work, or to Mother Church membership, should be sent to the Christian Science Board of Directors of The Mother Church; and I have requested my secretaries not to make inquiries on these subjects, nor to reply to any received, but to leave these duties to the Clerk of The Mother Church, to whom they belong.

MARY BAKER EDDY.

Sept. 28. 1910.

WISDOM'S SINGLE SOURCE.

WHEN Christ Jesus defined evil, the devil, as a lie and liar, he made it clear that escape from evil, from every type of disharmony, is an escape from the rule of falsity, the subjection to some phase of belief in that which is not true. Salvation is thus seen to involve the acquisition of a right understanding, and faithful adherence to its counsel.

This gives new significance to the oft-reiterated counsel of the Old Testament prophets and preachers, that with all our getting we get wisdom. It gives new meaning to the peripatetic teaching of the Master, and his constant resort to the use of the parable, the schoolmaster of the east. It also throws light upon Paul's identification of Christ as "the wisdom of God," his prayer for the Colossians that they might be filled with all wisdom, and his frequent explanation that this saving knowledge is not that learning of culture which is "foolishness with God."

This thought of the philosophy of salvation as an educational enterprise seems to simplify things, and may prove very helpful; nevertheless, in so far as men are forgetful of the kind of wisdom needed, it may become a distinct hindrance to the spiritual life. It is apparent that truly redemptive faith does not consort with ignorance, which invariably leads to torpid indifference or to gross superstition and fear: that there is no negative good, even, in stupidity. On the other hand, it is equally apparent that historic rationalism, with all its learned refinements, has failed utterly to save men. The educational work of Christian missions has sometimes contributed to the religious advance, as well as the political betterment of the people, and it has sometimes resulted, sad to say, in the loss of the soul of evangelism, the power of the gospel.

With the individual, as with organized Christian bodies, the greatest problem is reflected in the ancient cry, "But where shall wisdom be found?" What is the specific knowing that will save from the tendencies and reactions of mortal sense? and the answer which was of old is worth our remembering: "God understandeth the way thereof, and he knoweth the place thereof"—He is "our refuge and strength." In the presence of human doubts and questionings, Christ Jesus constantly directed thought to the fact that it is God who accomplisheth all good in us, and Christian Science is again fixing the world's attention upon this truth, that it is the right thought of God which makes possible the solution of every human problem. Said James, "If any of you lack wisdom, let him ask of God;" and it is entirely in keeping with this teaching that Mrs. Eddy has given such prominence to Deity, His nature, His causal and governing relation as divine Principle, His guiding and protecting nearness as omnipresent good, in selecting the subjects of our Lesson-Sermons. Of the twenty-six themes assigned for study, eight have to do directly with the divine nature, four with God's relation to man, to being, while all the others find their logical elucidation in the recognition that God is All-in-all. No one can question, therefore, that the dominant thought of Christian Science teaching is this—To know God is eternal Life. Light for every problem is to be found in a closer touch with God, a clearer realization of Truth. Christian education might therefore be defined as the knowing of all that to which divine Principle is causally related, and the unknowing of everything else.

The application of this test to the things which would absorb our time and interest will prove a very illuminating and profitable exercise. In the hour of confusion and uncertainty, when we seem to stand at the parting of the roads and cannot determine what is the wise course, to remember just then that "God . . . knoweth the way," that quite apart from the exercise of human judgment we may commit our goings to the All-wise, and find our path determined for us, and "so fortunately," as it is seen after many days, perchance,—this is to find rest and quietness, a new sense of Paul's saying that God, Truth, worketh in us to will and to do.

JOHN B. WILLIS.

THE PROMISE OF THE SPIRIT.

ALL through the Old Testament we find promises of the coming to mankind of better days, when sin and sorrow shall cease and when peace shall everywhere prevail. It is to be noted that all this blessing is inseparably connected with the coming to human consciousness of the spiritual sense of being, for righteousness and spirituality are really one as the effect and its cause. It is undeniable that health, happiness, and prosperity when rightly understood are the direct outcome of spiritual understanding, and this is the message of Christian Science to a needy world. The one who understands God as Spirit and man as spiritual, maintains his own rights without ever invading the rights of others. Mrs. Eddy says that "those who discern Christian Science will hold crime in check. They will aid in the ejection of error. They will maintain law and order, and cheerfully await the certainty of ultimate perfection" (Science and Health, p. 97).

In the 32nd chapter of Isaiah we find a remarkable picture of human consciousness and its externalized manifestations, showing a marked contrast between the asserted rule of mortal mind and the reign of Spirit. We read that "the vile person will speak villany" and "utter error against the Lord." Under this régime of evil belief, thorns and briers spring up everywhere, the vintage fails, the harvest does not come. Then, like a clarion call, we hear the voice of Truth, bidding those that are careless and at ease in the midst of such conditions to "rise up;" yes, even to be troubled because of the wide prevalence of evil, and there is no hint of any real betterment "until the spirit be poured upon us from on high." Then there is a great change—the wilderness becomes "a fruitful field," while judgment and righteousness prevail and are accompanied by "quietness and assurance for ever."

All this but typifies the experience of each individual who accepts the truth, which comes to us as "a covert from the tempest; . . . the shadow of a great rock in a weary land." If any should ask when the Spirit will be poured out from on high, it may be answered that it will come when we are ready to receive the outpouring. All the prophets have foretold the reign of Spirit with its boundless bless-

Digitized by Google

ings, and in Acts we read of a fulfilment of these prophecies, when Peter said that a great outpouring had come, following the glorious healing ministry of Christ Jesus, and reminded his hearers that the promise read, "I will pour out of my Spirit upon all flesh;" then, like the psalmist, each one who is baptized of Spirit may see the Christ always before his face, and knowing that Truth is on his right hand, he will never be moved.

Knowing that this outpouring was for all who were ready to receive it, Peter and John healed the lame man at the gate of the temple, never heeding the threatening of priestly authority. What mattered it that the rulers took counsel together "against the Lord, and against his Christ,"—they had no power to close the windows of heaven from which the healing baptism of Spirit was descending! Peter, the unlearned but enlightened fisherman, with unconscious irony demanded of the high priest and his associates, before whom he was arraigned, "Whether it be right in the sight of God to hearken unto you more than unto God, judge ye." He had experienced the outpouring of the Spirit, and by it he was able to heal the sick and even to awaken Dorcas from the dream of death, so he had no fear of that which sought to hinder the work of Truth.

Today this outpouring has come in Christian Science, and our Leader lays great emphasis on the Master's promise, which she quotes on page 55 of Science and Health, that the Comforter is to abide with us forever.

ANNIE M. KNOTT.

AMONG THE CHURCHES.

LOS ANGELES, CAL.

Entirely free of debt and standing as a magnificent monument to the gratitude which many in Los Angeles feel for benefits derived from Christian Science, the beautiful new Second Church of Christ, Scientist, West Adams street, near Hoover, was dedicated yesterday [Sept. 11]. At four consecutive services, each an exact counterpart of the others, the large auditorium was comfortably filled, members of the other four local organizations, as well as many friendly to the cause but not identified with the church, flocking to the various meetings. Notable both as to architectural design and the artistic manner in which it is finished, the church has been a subject of much comment. The fact that the church edifice, including the site, cost something more than three hundred thousand dollars, and that the entire amount was given without solicitation, is a matter of gratification to those who believe that such a church should be a free-will offering from the people. In connection with the services yesterday, the following telegram was sent to Mrs. Mary Baker Eddy, Founder of the faith:—

"Beloved Leader: Upon this, the joyous occasion of the dedication of Second Church of Christ, Scientist, of Los Angeles, the love of all Christian Scientists in this field goes out in deepest gratitude to you who have again given to mankind the spiritual understanding of God which this church is teaching and demonstrating."

The address of the Hon. John D. Works, president of the congregation of Second Church of Christ, Scientist, upon the occasion of the dedication of the church, was in part as follows:—

"This material structure is most beautiful in its design and execution, even magnificent in its proportions and appointments. In the material sense it is a fitting and worthy home for a Christian Science church. But the material structure is only a symbol of the spiritual idea, a memorial of the true church defined by our beloved Leader as 'the structure of Truth and Love' (Science and Health, p. 583), founded on divine Principle. It is the emblem of that house 'not built with hands, eternal in the heavens.' As such we dedicate it to the use of the true church, and as an instrument for the advancement and perpetuation of our religion of Truth and Love, the healing of the sick and the redemption and regeneration of the sinner. To make it an effective aid to these purposes we must consecrate and dedicate ourselves to the great work that is before us as a spiritual, a Christian church.

"In order to realize and appreciate the possibilities and the responsibilities of the future, it may be well to look for a moment at the achievements of the past, to the work already accomplished, as a church, by which we have been brought to this occasion; not to pride ourselves upon what we have done, but to bring us to a realization of the fact that better things may be wrought in the future, and to impress upon the minds of this people the obligation, the duty, to live nearer to God, to follow in the footsteps of the Master, and to profit by the teachings of our beloved Leader and thus make ourselves the more worthy of them.

"This church was organized as a society on the 12th day of January, 1898. It was organized and incorporated as a church June 20, 1898, with twenty-five charter members, all of whom were members of The Mother Church. In April, 1900, a division of territory was made between Second and Third Churches, the latter being formed of the members of Second Church residing in the territory assigned to Third Church. Simpson Auditorium was in the territory of Third Church, therefore this church was left in possession of the auditorium, which it has since purchased for its use, and Second Church removed to the new Ebell Hall, on Figueroa street, until this building, then under construction, was completed, Jan. 23, 1910, when our first service was held in it.

"In the mean time and within a month after Third Church was formed, it was demonstrated that Simpson Auditorium was still inadequate, and territory was assigned to Fourth Church and that church organized by members of Third Church living in that territory. In August, 1909, a new division of territory was made in this city, between First, Second, Third, and Fourth Churches, which, under the rule that membership should be held in the church occupying the territory in which members resided, made a very considerable transfer and change of membership necessary in all of the churches. In addition to this a church had been formed in Hollywood, composed mostly of members of Fourth Church. There was also a society at San Pedro and one at Gardena. Since then Hollywood, San Pedro, and Gardena have been annexed to and become a part of the city of Los Angeles, and the Hollywood church has since changed its name to Fifth Church of Los Angeles. Thus it will be seen that we have now five Christian Science churches and two societies in this city and all of them are growing and prospering.

"To return to our own church history: The lots upon which this building stands were purchased Jan. 20, 1905, at a cost of twenty thousand dollars. The church building was commenced March 20, 1907. The corner-stone was laid with simple and appropriate ceremonies March 12, 1908. The cost of the building was $298,427.82. Thus you will see that our church home which we are now dedicating has cost a total, with the building and grounds, of $318,427.82. This amount may be varied slightly by the final adjustment of accounts. We are greatly indebted to the other Christian Science churches in Los Angeles for their generous contributions to our building fund. It is hoped that we may soon be able to show our gratitude by aiding these other churches in providing suitable church homes for themselves. We should not, on this happy occasion, overlook the work done by our own and other Sunday Schools in contributions to the building fund. Our own Sunday School has contributed $3,761, and the Sunday Schools of other churches have given generously.

"Let us so use this church edifice, which we now dedicate, as to advance the cause of true religion, elevate and ennoble

Digitized by Google

mankind, heal the sick and reform the sinner, and in all things endeavor to do God's will. So shall we prove the truth of our religion and of the teachings of our Leader."

Los Angeles Examiner.

CHADRON, NEB.

The opening service in the new chapel of First Church of Christ, Scientist, last Sunday [Sept. 11], was simple but impressive, all expectations of the members being fully realized. The lot and building together cost about twenty-six hundred dollars.—*Chadron Journal.*

NORRISTOWN, PA.

On Sunday morning, July 31, First Church of Christ, Scientist, held the first service in its own church home, a large stone mansion situated at the corner of Franklin avenue and Lafayette street, the residential part of the town. On Sept. 9 the church was granted a charter by the courts, and for all these blessings the members are deeply grateful and greatly rejoice.—*Correspondence.*

DENVER, COL.

Members of Second Church of Christ, Scientist, will expend sixty thousand dollars on a handsome church edifice to be erected on the property recently purchased by the congregation at South Grant and Bayaud streets. The building permit was issued yesterday [Aug. 2], and work on the structure will be begun at an early date. It is expected that the building will be completed in the near future.

Denver News.

BERKELEY, CAL.

The Christian Scientists of Berkeley are making plans to start the building of a new fifty-thousand-dollar church at the northeast corner of Dwight way and Bowditch street. The structure will be of concrete, wood, and glass, cathedral glass being extensively used. The new church will be built in the bungalow style of architecture. There will be a large auditorium, with a seating capacity for over seven hundred, and there will be Sunday School rooms, ladies' parlors, directors' rooms, and a Readers' room. The church, which will be finished roughly on the exterior, will cover the entire lot, 100x100 feet.—*San Francisco Call.*

NEW HAVEN, CONN.

The opening of the new church edifice of First Church of Christ, Scientist, of New Haven, yesterday [Sept. 11], marks an event in the progress of the Christian Science denomination in this city and state. In addition to the regular morning and evening services, an afternoon service at half past three o'clock was held for the convenience of visitors from out of town. The church was well filled at all three services.

Approached by Chapel street, the new church, which faces Monitor park, presents a fine and attractive appearance. The building, which is 56x90 feet in size, is of the early English renaissance type of architecture, and with its exterior color scheme of gray and white presents a quiet and dignified appearance. The interior arrangement of the building consists of a large auditorium, 65 feet long, 55 feet wide, and 26½ feet high, and seats between five hundred and six hundred people.—*Journal-Courier.*

No men living are more worthy to be trusted than those who toil up from poverty—none less inclined to take or touch aught which they have not honestly earned.

ABRAHAM LINCOLN.

THE LECTURES.

MINNEAPOLIS, MINN.

On Sunday, Sept. 18, the Rev. William P. McKenzie delivered a lecture for First Church to an audience of over two thousand people. In point of numbers and interest this was the most successful lecture we have had for several years. The speaker was introduced by the mayor of Minneapolis, the Hon. James C. Haynes, who said in part,—

Except for the wisdom of the framers of our federal constitution, there would have been an established church, to which all citizens would have been compelled to pay tribute, whether members of that church or not; but, happily, the utmost liberty to the conscience of every man, woman, and child was recognized and granted, each and every American citizen being permitted to worship or not to worship, according to his own conscience and belief. As the result of this broad and liberal policy, there has grown up in this country an almost endless variety of Christian forms and denominations, and as time has passed, many have come to feel that the greatest church or religious organization is necessarily the one which has the truest and highest concept of God and His relation to mankind, and that this depends largely upon the concept which that church and its members have regarding their relation one to another and to mankind in general.

It would seem to follow that the church which fulfils these requirements, no matter which it may be, is the one which will ultimately demand the recognition and support of all men. Undoubtedly one of the most recent and most remarkable phases of religious movement in this country is represented in what is termed the Church of Christ, Scientist, commonly known as Christian Science, and we are assembled here today for the purpose of hearing that subject explained by one who is undoubtedly thoroughly competent to speak.—*Correspondence.*

KALISPELL, MONT.

Frank H. Leonard delivered a lecture on Christian Science at the Opera House, Sept. 13. He was introduced by the Rev. H. H. Griffs, pastor of Central Christian church, who spoke as follows:—

A few weeks ago I preached from the pulpit of the Central Christian church of this city a sermon on "The Church for the Twentieth Century." Now, do not be alarmed, for I am not going to preach that sermon this evening. I mention the fact simply to recall two qualities which in that sermon I said should characterize and eventually would characterize the church of the coming age. These two qualities are unity and liberty,—unity in good work and liberty in speculative opinion. In the coming church, I believe these two features will be equally important, equally essential, and equally ubiquitous. They will exist only as they coexist, for unity without liberty is tyranny, while liberty without unity is anarchy.

But the question arises, How are we going to coordinate these two principles, how shall we harmonize the centripetal force of unity and the centrifugal force of liberty? My answer is that it will be done by the introduction of the third principle, the principle of loyalty. Loyalty to whom? Loyalty to Jesus Christ. There, men and women, is the true center of our unity and there is the true circumference of our liberty. Not a book, not a creed, not a ceremony, but the glorious personality of the Son of God. When men and women once become really loyal to the Man of Nazareth, they will have no trouble either in uniting their sympathies for the accomplishment of good deeds, or in granting one another the utmost liberty to differ about matters of philosophy.

And, it is while standing on this platform of loyalty to Jesus Christ that I feel perfectly justified this evening in

Digitized by Google

calling for your candid consideration of that system of religion known as Christian Science, for I believe that the adherents of this system are trying to be just as loyal to the Christ as the adherents of any other religious system. We may differ about our methods, but not about our motives. We may differ in our metaphysical speculations, but not in our desires to exalt the Son of man in human life. Yea, we may differ about the very phraseology which I am using at this moment, but we do not differ about the sentiment that I am trying to express; so I repeat that I have not the faintest tremor of embarrassment in opening this public discussion of Christian Science, because I feel that we are all equally sincere in professing fidelity to him who is "the way, the truth, and the life."—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Bangor, Me.—W. D. McCrackan, M.A., City Hall, Oct. 21.
Cadillac, Mich.—Rev. William P. McKenzie, Congregational Church, Oct. 24.
Camden, Me.—Bliss Knapp, Church Edifice, Oct. 25.
Chelsea, Mass.—William D. McCrackan, M.A., Church Edifice, Reynolds avenue, Oct. 20.
Chicago, Ill. (Ninth Church).—Willis F. Gross, Assembly Hall, Woodlawn Masonic Temple, Lexington avenue and Sixty-fourth street, Oct. 20 and 21.
Chickasha, Okla.—Prof. Hermann S. Hering, 8:30 p.m., Oct. 23.
East St. Louis, Ill.—Frank H. Leonard, Church Edifice, Summit avenue and Washington place, 3 p.m., Oct. 23.
Evanston, Ill.—Francis J. Fluno, M.D., Church Edifice, Oct. 21.
Grand Rapids, Mich.—Rev. William P. McKenzie, Powers Theater, 3 p.m., Oct. 23.

Hudson Falls, N. Y.—Bliss Knapp, Court House, Main street, Oct. 20.
Indianapolis, Ind. (First Church).—Francis J. Fluno, M.D., Murat Theater, 3 p.m., Oct. 23.
Lawton, Okla.—Prof. Hermann S. Hering, Ramsey Opera House, Oct. 20.
Logansport, Ind.—Clarence C. Eaton, Elks Hall, Oct. 21.
London, Eng. (First Church).—Bicknell Young, Lambeth Baths, Kennington Road, Oct. 28.
Memphis, Tenn.—Hon. Clarence A. Buskirk, Lyceum Theater, 3 p.m., Oct. 23.
Montreal, Can.—Willis F. Gross, Windsor Hotel, Oct. 24.
Northampton, Mass.—Bliss Knapp, City Hall, Oct. 23.
Oklahoma City, Okla.—Prof. Hermann S. Hering, Overholser Opera House, 3 p.m., Oct. 23.
Plymouth, Eng.—Bicknell Young, Corn Exchange, Nov. 10.
Reading, Eng.—Lecture for Nov. 2 postponed.
Rich Hill, Mo.—Frank H. Leonard, Church Edifice, Oct. 24.
Rochdale, Lancashire, Eng.—Bicknell Young, Theater Royal, 3 p.m., Nov. 6.
Rock Island, Ill.—Prof. Hermann S. Hering, Oct. 25.
Stillwater, Okla.—Prof. Hermann S. Hering, Grand Opera House, Oct. 21.
St. John, N. B.—W. D. McCrackan, M.A., Opera House, 2:30 p. m., Oct. 23.
St. Louis, Mo. (Second Church).—Frank H. Leonard, Church Edifice, 4234 Washington boulevard, Oct. 21.
Terre Haute, Ind.—Clarence C. Eaton, Grand Opera House, 3 p.m., Oct. 23.
Worcester, Mass.—Bliss Knapp, Mechanics Hall, Oct. 24.
Yonkers, N. Y.—Willis F. Gross, Yonkers Public Library Hall, 3:30 p.m., Oct. 23.

TESTIMONIES OF HEALING.

The beauty, the wonder and joy, of which we get glimpses through Christian Science, fill one with overflowing thankfulness, and though deeds and practical proof are the true way of showing our gratitude, one desires to express it in words also. If Christian Science had done no more for me than to lift me out of the state of extreme fear and depression which I had reached over two years ago, I could never be grateful enough; but the way in which it is bringing love and joy and happiness and health and peace into my life is beyond words. It gives one a sense of perfect safety and assurance in place of fear, and above all a practical help and hope with which to lift others out of misery. When one starts in life with high ideals, older people often say that we will have to compromise with the world sooner or later; and though one instinctively feels that there is a mistake somewhere, he does not know how to make these high ideals and inspirations practical. Now, through Christian Science, we are thankful to know that the higher and more beautiful a desire is, the truer and more practical it is, because God Himself is infinite Truth, and as all beauty and perfection are of Him, therefore good must prevail.

For the last two years every need and every problem, for which I have faithfully turned for help to Christian Science, has been met. And when my own faith and understanding were not sufficient to wipe out the false belief, and help has been asked from a practitioner, it has been patiently and unfailingly given. I can only begin to express my gratitude by trying faithfully to practise it by living steadfastly only to Principle, by healing sickness, by striving patiently to clear the mirror of my own consciousness, to be obedient to Truth's demands, and to serve my fellow-men with love and patience. I can never express my gratitude for all the blessings,—the Lesson-Sermons, our periodicals, our church services, and the kind help passed on by other students of Christian Science. My heart is inexpressibly full of loving gratitude to our dear Leader for her life of purity and faith in God, which fitted her to receive and impart the light of Truth. Though clouds sometimes seem dark and persistent, they vanish if we persevere in looking steadfastly to Truth, and we see more light than before.

LILIAN TOBIN, London S. W., England.

It is over six years since I became interested in Christian Science through the healing of my aunt, whom the doctors could not help. At that time I was suffering from a nervous breakdown, my mental suffering being almost unbearable. I became tired of everything, and had made up my mind to end it all, for I knew no medicine or doctor could help me; but one day, when I called to see my aunt, she asked me if I would like to read the *Sentinel*. I said I should, as I thought Christian Science might help me if it had helped others. She told me to read the Bible, especially the New Testament, and that I would see it was the truth. I did as she asked me, and after I had read that copy of the *Sentinel*, I wanted more of them to read, as I saw it was the truth, for as I read I felt a change coming over me. I seemed to have a better understanding of everything I read, and I had more patience with my children. I did not shout at them as I had been doing, but became quiet. I would walk around very quietly, and did not talk much above a whisper. The children noticed this, and asked why I did so, and why I wanted them to be so quiet; but I did not know the reason myself, only that it seemed to me there was some presence in the house which I had not known before. How beautiful are these words to me now, "Be still, and know that I am God."

This went on for about three weeks, and yet evil seemed to be very real to me, until one afternoon when I read an

Digitized by Google

article on faith which helped me greatly. I asked myself, What is faith? Am I having faith? At this point I seemed to hear the Master's words, "Fear not," and how beautiful they were I can never tell! It seemed that I had awakened out of a dreadful dream. I saw that I need not fear anything, for God would take care of me, and all of us; that if I feared, I was not trusting Him. I became perfectly well in mind and body; I loved everything and every one, especially dear Mrs. Eddy, for bringing this healing truth into our lives. I felt so happy that I simply cried for joy. I wanted to go and tell every one they did not have to be sick; that if they would only have faith in God, He would heal them. Since that time our family of five has relied entirely on Christian Science for all our needs. I found that I had work to do to uproot all the weeds that had grown in my mortal mind; that we must not lay our armor down.

After this, through admitting worry, evil again seemed very real to me, but when in an extremity the voice of Truth again said, "Fear not; you are not separated from God," I saw mentally the separation between myself as God's child and this false belief in the power of evil. I saw that evil could not even touch me, and how comforting, how uplifting that was to me! I saw all of God's children as perfect, my spiritual sisters and brothers, separate from all evil. I also understood, through reading our text-book, "Science and Health with Key to the Scriptures," that we must not see evil as real, neither believe in its presence, for it is only a make-believe, since God is the only Mind.

Over a year ago our baby, aged two years, was taken very ill with lung trouble. My dear friends did all they could for him; then we wired to a practitioner for help, and in less than a week he was running about. At times the conditions seemed very alarming, but I knew that the only way was to get the thought right, and to know that God is the only presence. This baby's healing was a beautiful proof of God's all-power, and we were very thankful. Christian Science is also changing my disposition from being malicious, sulky, and revengeful, to a humble and forgiving one, for which I am very grateful. Other complaints have been destroyed in our family by declaring the truth as taught in our text-book. I hope this testimony may be a help to some one. My greatest desire is that I may be worthy of the name Christian Scientist. My husband joins me in thanking God for all He has done for us; also dear Mrs. Eddy for showing us the way.

MRS. CHRIS MOORE, Chatfield, Minn.

It is surely my duty to give some expression of gratitude for the multitude of good things I enjoy, the result of putting into practice the teachings of Christian Science. Is it not indeed a great demonstration to have the comfort of knowing "in whom I have believed," no longer to live day after day in a nebulous state, halting between two opinions, with the balance of power sometimes apparently on the side of good, sometimes the reverse?

Much physical relief has come to me, but I am so glad to know increasingly that best of all is the assurance that we have a real practical rule and guide by which all our problems are solved, that we can begin to live up to our privileges as children of a loving Father, heirs to nothing but absolute good; that no evil shall come nigh our dwelling, and that we may "rejoice in the Lord alway." Words poorly express our deepest feelings, but to neglect making use of them as we may, is to shirk one of our duties. Our lives are the best testimony, it is our deeds that really prove our sincerity.—MARY BLANCHE WINSER, Kaweah, Cal.

Over two years ago we first learned of Christian Science in our home, and since that time we have had many demonstrations of the truth, one of which I would like to mention. Some time ago, while shoeing a vicious horse, I received a kick on the left arm which injured it seriously. I was advised to go to a doctor and have the bone set, but on my way into town I kept thinking of the power of Truth over error, and so I decided to go first to a Christian Science practitioner. I did so, and she began to give me treatment at once. In just three days the swelling and pain were gone, and I have been handling horses with that arm ever since, without any trouble. I consider this a wonderful demonstration of Truth's power. Words fail to express my gratitude to God for the good that has come into our home since we have learned of Christian Science.

W. F. DEARDUFF, Napa, Cal.

It is over three years since I took up the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. It was not sickness that brought me to Christian Science; it was more a desire for truth and a better understanding of God and His creation. I had been brought up in a Christian family, was a member of a church for many years, and always tried to associate with Christian people, but I never could say I was satisfied. The question, What is God, and who am I? was never answered. In my search for an answer I investigated in different directions, but year after year passed by without any result.

When Christian Science was brought to my attention, and I had studied for a few days, I was convinced that I had finally found that for which I was looking. Science and Health was a great revelation to me, as it gave me more information about God and His creation than I ever expected to find in my earthly life. I am learning to understand what God is, also what man is, and what Christ Jesus meant when he said: "The kingdom of heaven is within you," and "Be ye therefore perfect, even as your Father which is in heaven is perfect." Old beliefs are passing away, and all is becoming new; today I am satisfied. To search for more truth and a better understanding is sweet work, and I am not discouraged when progress sometimes seems slow. We cannot leap into Christian Science, we have to go step by step.

I am trying to be grateful for what I have gained thus far. I am satisfied to know that God's storehouse is open for me, and when I look back to where I started I can see how I came out of darkness into the light. In Christian Science I have not only found an answer to all my questions, but I have found a practical religion.

C. F. THROM, Toledo, O.

I give this testimony with a heart overflowing with gratitude. It is over three years since I accepted Christian Science. When I attended a Wednesday evening meeting for the first time, I was much impressed by the many happy faces I saw there. I had not been able to attend my own church for months, as I was so ill that it seemed painful for me to sit still during the service. After attending this meeting I went home and slept peacefully all night, something I had not done for weeks. Soon after this I ordered a copy of Science and Health through a practitioner, who gave me several treatments, which brought me greater freedom than I had ever experienced.

Before coming to Christian Science I had tried many physicians, massage, electricity, etc., but I then found that I had no more use for medicine. Very soon after this my husband and children accepted Christian Science, for which I am very grateful. My husband and myself have had the privilege of class instruction, and have beautiful demonstrations of Truth's power in our home daily. One day a large wagon ran over my boy's foot. He came to me in great pain. I immediately took him to a room where I was alone with him, and these words came to me: "Lo, I am with you alway." I realized the Christ-power as never before, and the healing was instantaneous. Several hours later we looked at the foot, and there was no discoloration,

Digitized by Google

no inflammation. Later, this same boy cut his wrist very deeply. I bandaged the wrist, and held to the thought that the child of God had never been touched; that there are no accidents in the divine Mind, and the healing of this injury was very quick. Several weeks after there was not a scar left.

I could tell of many other proofs of this healing truth that we have found in Christian Science. Science and Health has made the Bible a new book to me, and I am more grateful every day for the understanding of God and man that I am gaining through the study of these books. I am grateful to God for sending this message of Truth through Mrs. Eddy, who has made it so clear to us. I am also grateful for the *Sentinel*, the *Journal*, and our other publications; they are all helping us onward in our journey from sense to Soul.—Mrs. Amelia Throm, Toledo, O.

[Translated from the German.]

Through trusting divine Love and by the help of a Christian Science practitioner, I was healed a year ago of a serious affection. Two weeks after the birth of my boy my breast began to show a diseased condition, and every step caused severe pain. When I was told that I must have an operation, and of the pain I should have to endure, I turned to God as a refuge, and applied to a Christian Science practitioner in Basel. After one more struggle during the night, I improved daily, and was healed in two weeks' time. Although I felt a slight hardening for several months, I paid no attention to it and continued to nurse the child. I wish to add that I have had very good results with my child, as well as among my relatives, through the application of Christian Science, and that I shall always turn to it in any case of sickness.

Christian Science daily shows me the necessity of overcoming "the world, the flesh, and the devil," and destroying all error. I am praying daily for a better knowledge of Truth and Love, and words fail to express my gratitude to God for this healing truth.

Anna Tschudin-Schaetzle, Loerrach b. Basel, Switzerland.

Many times I have attempted to give expression to the wonderful good that has come to me through Christian Science. I am sure that no one ever turned to this method of healing who came more wholly for the physical help than I did. For some time before I asked for treatment I had been fortunate enough to have the *Journal* and *Sentinel* placed in my hands. I read them, as I thought at the time, carefully and thoughtfully, though it was always the testimonies of physical healing which appealed to me; but I have been very thankful for this opportunity to read Christian Science literature, for when my extremity came I knew where to turn for help.

It is now over six years since I had my first treatment, and while I have stumbled, and even fallen down many times, I have always been helped up through the pure thought of Christian Science and have been enabled to go on my way rejoicing. I realize today that no one ever had greater help than I have had. It has been both physical and spiritual. During the first week's treatment I was healed of a chronic stomach disorder, from which I was a great sufferer. The pain would be so severe at times that a physician would have to be called in the night to give a hypodermic injection, which would stop the pain but would leave me very weak and depressed. After one of these attacks I would have to stay in bed for days and live on the most simple diet. Besides being completely healed of this ailment, I was healed at the same time of a bowel trouble of thirty years' standing. After one week's treatment and the constant reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy, the light began to dawn on my darkened consciousness, and I saw that it is God who forgives all our iniquities and heals all our diseases. During the last six years the presence of God has been realized many times for myself and family. My daughter was instantaneously healed of an eye trouble of fourteen years' duration.

When the greatest sorrow of my life came, Christian Science was my only solace. This trouble came through the mental breakdown of a member of my family. As he was not interested in Christian Science, he turned to physicians, and when he was not helped in that way he went to a private sanitarium. There he was under Christian Science treatment for eight months, when a normal mental condition was restored and he was enabled to come back home a well man. All of this work was done by absent treatment, and when outsiders have said to me that they did not believe in absent treatment, I have been enabled to realize that God fills all space and that His love is far-reaching; also, to know that opposition to the truth comes from ignorance and not from prejudice.

I am very grateful indeed to be able to say that it does not make any difference what we come to Christian Science for, so that we come. I learned through class instruction, which was given by one of Mrs. Eddy's faithful students, that if we come earnestly and sincerely we shall always receive more than we expect, and I am thankful every day that I have learned something about how to "rise in the strength of Spirit to resist all that is unlike good" (Science and Health, p. 393).

Mrs. Emma L. Fraser, Indianapolis, Ind.

I am indeed very grateful for the benefit which I have received through Christian Science. I am thankful for the regeneration, or entrance upon a new sense of spiritual life, also for the healing of a badly injured ankle, for which I received absent treatment. I was healed so that I could walk about the house, and in a short time was able to walk anywhere. Besides this I have received many other blessings.

It is over six years since I first heard of this great truth, and during that time I have been at times in the valley, and again on the mountain-top. At times I have stumbled and felt weary, but through divine Love I have been shown the way. I am thankful to God, also to Mrs. Eddy, for this wonderful understanding of Truth and Love.

Caroline S. Musson, Los Angeles, Cal.

Five years ago I was addicted to the drink habit. I had tried many times to free myself, but my attempts always proved a failure. Tobacco also was my constant companion. The excessive use of these stimulants caused me great suffering, and resulted according to the doctors in a diseased condition of the heart. I often became unconscious, and I began to consider my case a serious one. The doctors said that if I did not stop the use of liquor and tobacco it would result in death; but their telling me to stop it, and my doing so, were two different things. Matters went on from bad to worse, until there was little hope left.

One day a stranger came into the restaurant where I was staying, and began talking to a friend of mine about Christian Science. He told of his own healing and advised me to try it. He also gave me the address of a practitioner, who came in a short time and gave me treatment, also explaining to me something about the Science. That night I slept well, which was the first good sleep I had had in many weeks. From that time I began to improve, and the desire for liquor and tobacco lost its hold on me. In about two months I was strong enough to go back to work, and I have enjoyed good health ever since.

Digitized by Google

Christian Science has helped me in many ways since then, and I am truly grateful to God, and to Mrs. Eddy, the Discoverer of this Science which is doing so much to lift people out of sin and suffering of every kind. May God hasten the day when all shall know this truth.

C. L. HEDRICH, Salt Lake City, Utah.

With a heart full of gratitude to God, and to our Leader, who has shown us the way to Him in Christian Science, the writer gives the following personal illustration of how "divine Love always has met and always will meet every human need" (Science and Health, p. 494). The firm with which I became connected had never required service during about three or four months of the year, and taking that as the precedent, I began to look about for extra work to fill in the idle months. Necessity cried that I could not afford to be idle, that the household bills must be met; but faith in God was firm, and daily I declared the allness of God, knowing that divine Love would meet the every need. Without going into details, I may say that when the time came to leave for the summer, the management decided that I might be needed, and therefore allowed me to remain two months longer at full salary, though only working half of each day. This gave me time for which I had prayed, in order that I might be able to study, and left only one of the summer months to be provided for.

Love led every step of the way, and forced me to decline a position offered to fill in this month, even though error kept me awake nearly all one night, urging that I must keep at work, that there was no other way, etc. However, Love won the victory, and in obedience to the spiritual command, I remained at home the next morning after the struggle, and telephoned to be released from the work already engaged. Home conditions made the step seem almost criminally negligent, but the morning mail brought the "reason" for the same. A letter came from one who wished to come into my home for special treatment, and offered to pay a goodly sum for the privilege. To make the story short, the patient was accepted, and in three weeks a beautiful healing was brought about. Other healing work came, and at the end of the month, when the old position was once more open, I was twice as well off financially as I should have been under the regular office salary (all from Christian Science work). To make it doubly successful, and a perfect demonstration, upon my return to the office I was handed a check for the salary for the whole month I had been away, with the remark that the firm had decided it was right that I should have it and was entitled to it. This is one of the many demonstrations which have come under my personal observation and experience. Surely God is "a very present help."

HELENE LOCKE PALMER, Fort Worth, Tex.

It gives me great pleasure to tell of the blessings I have received through Christian Science. I had been suffering two years from a malady which the doctors did not seem to be able to cure. It was thought that I should have to leave the country, as the climate was too hot for me. I did not want to leave, but did not know what else to do. It was at this time (early in 1908) that a kind friend told me about Christian Science. I lost no time, but went that same week to see a practitioner. Within two weeks I was as well as I am today. This was some eight months ago, and not only did the malady referred to pass away, but a stomach disorder, from which I had suffered for many years, also disappeared, and I am able to eat anything which is put before me and feel no ill effects therefrom.

At first the physical healing seemed to me to be everything, but I soon began to see that it was the least part of the blessings I was receiving. The wonderful joy which has come to me through the study of Christian Science is more than I can express in words. Neither can I tell how grateful I am to those who have helped me, and especially to Mrs. Eddy; but, as we read in Science and Health, "Action expresses more gratitude than speech" (p. 3). I pray that I may not be found wanting and that I may be ready to help others as I have been helped.

FLORENCE DAVIES, Wellington, New Zealand.

The privilege of adding my testimony to the many which are appearing in the *Sentinel* and *Journal*, is a great pleasure to me. The healing from bodily ailments which I have experienced has been accomplished through an understanding of God as the giver of good and only good. Reflecting Him, perfect being, we are sinless and perfect. In understanding this, I saw that it was mine to bring out perfection, being governed by the Christ mind.

When I first took up the study of Christian Science, it was not for physical benefits, but for relief from financial trouble and from its attendants, worry and fear, depression and mental unrest. In attending a lecture on Christian Science, it seemed that every word was meant for me, that the ideal, "Thy kingdom come on earth," was possible. On returning to my room that evening, I tried to realize that what I had been seeking after was only the unreal, temporal pleasure and success, and that very hour every thought seemed to change, and I knew that it was possible to experience the truth that divine Love can supply our every need. I resolved to test it then, and from that moment the smoking and liquor habits were given up, though up to that time both of them were very pronounced.

The most wonderful opening, however, came the next day, when I received an offer of a good position in a small town, where I could make new friends. These naturally were Scientists, and the year of work in association with them and in the study of the Bible in the light of Science and Health, brought a great awakening and great benefit. The problem of supply was met, and on the basis of spiritual apprehension. This gain resulted from an earnest study of Science and Health and the other Christian Science publications. My work, while not what I liked, was made harmonious and pleasant and I knew that I had to outgrow present environment in thought before I could be fitted for a better position. Later I applied for class instruction, and at the same time received a splendid offer from a large business firm which I was very anxious to accept. The problem was to me a serious one, but in asking my teacher what to do, I was told that the problem was my own. She said, "If you desire Truth above all else, the way will open." This proved to be true, for the day the lessons were completed, a position was offered me, one I had never dreamed of, with Scientists, and with better financial possibilities than before.

In coming to a decision I knew that God was all intelligence and man His reflection, and while the work was entirely new and much of it difficult, every advancing step was made possible as I applied my understanding of Christian Science to my work. While there are problems each day, each is being overcome by applying practically the Master's statement, "Lo, I am with you alway," and in this ever-presence of Christ, Truth, the human will must yield to the divine. My appreciation of Mrs. Eddy's life-work can only be expressed in trying to put into practice the divine Principle of Christian Science.

JOHN KROYER, Bloomington, Ill.

I have heard the remark several times lately that one never sees a testimony in the *Sentinel* from Cape Town, therefore I consider I ought to be the one to send my own, having derived marked benefit from Christian Science. About two years ago I was indeed very, very ill, to all

Digitized by Google

mortal belief, and my husband, family, and friends really thought I could not live much longer. I suffered with an internal ailment, and had undergone one operation, which only made me weaker than before. Then the doctor said that in twelve months after the first I should need to have another, which I felt sure I could never recover from.

But, thank God, a dear friend of mine had heard of Christian Science, and took me to one of the Wednesday evening services, which greatly impressed me, and particularly the text above the Reader's chair: "Divine Love always has met and always will meet every human need" (Science and Health, p. 494). Surely my need was great, and I kept that text in my thought. After the service a gentleman, seeing we were strangers, inquired if I would like to speak to a practitioner, an offer of which I gladly availed myself. The practitioner spoke to me lovingly and gave me much hope. She also loaned me a copy of Science and Health, at the same time telling me that people had been healed by simply reading and gaining an understanding of the teachings of that book. I took the book home, and determined I would study and do my utmost to grasp the truth and therewith heal myself.

To my great joy, in a few weeks I was completely healed of my illness of years' and years' standing, which seemed wonderful to my dear husband and children, who could scarcely realize I was once more well and strong. Christian Science has indeed been the greatest blessing to me ever since then, and it seems wonderful that I could have lived all these years without understanding more than I had of our Master's teaching. Christian Science has also been of great help to me in other ways; healing the many little ailments children usually have, and warding off fever, in the case of my son (who is in Rhodesia), and who makes grand use of his small understanding of Christian Science, which, thank God, he gained before leaving Cape Town. My husband, who is also up there, is keenly interested in Christian Science, and knows that it saved my life and has benefited us in many other ways. My family and self are shortly going to Bulowayo to join husband and son, and I am so glad to know there are already a few Christian Scientists up there (one lady writes me such nice letters, and assures me of a welcome among them), and I shall be pleased to join them.

I could fill sheets of paper with the details of the blessing Christian Science has been to me, and to all those I know who truly follow dear Mrs. Eddy's teachings as given to the world in her book, Science and Health, which is beyond price to those who read it with a desire to study it earnestly and catch at least the seeds of the truth that alone heals and helps to higher understanding. I can never be sufficiently grateful for being brought to Christian Science.

F. E. ROELKE, Cape Town, South Africa.

NEW PAMPHLETS.

Now on sale are three new pamphlets: "Seeking and Finding," "Prayer and Healing," and "The Divine Nature." Each pamphlet contains six or eight articles that have previously appeared in the *Journal*, *Sentinel*, or *Monitor*; and they are particularly suitable for handing and sending to inquirers or persons who are becoming interested in Christian Science.

Hereafter, the price of all pamphlets (except "What our Leader Says" and "Christian Science and Legislation") will be reduced to 5 cents a copy; 55 cents a dozen; $2.00 for fifty, and $3.75 for one hundred. Hereafter, also, the republication in the English language of single articles as "tracts" or "reprints" will be discontinued. It is believed that their place is better taken by the daily article on Christian Science in the *Monitor* and by these new pamphlets and others that may be issued.

FROM OUR EXCHANGES.

[Rev. J. A. Ross in *Christian Register*.]

The signs are hopeful. Ecclesiasticism is dying. The dream of the present will be the reality of the future. The sects are pushing back and out of sight their respective attachments. The Calvinist is not so dogmatically certain about the divine decrees, nor is the Puritan sure that he has packed all the truth about the atonement into his creed statement. The Methodist does not insist, as he once did, on so emotional an experience; and the Baptist is a little shaky on his exclusive mode of baptism. The advocates of an inerrant, verbally inspired Bible are not denouncing as heretics all who cannot agree with them; and the higher critics are more conservative in their conclusions. Congregationalists are not shouting so loud, "Great is autonomy, our inheritance and our chief glory!" Eternal conscious torture is no longer made the corner-stone of our religion, and Christians no longer claim to know more about the future than the Bible teaches. The barriers are being thrown down, the denominational lines are fading in the brightening light, the one all-comprehensive city of God is coming down out of heaven where denominationalism is unknown; and soon all the tribes and people and tongues shall unitedly worship before the great white throne. The church of Christ will free itself of ecclesiasticism,—is freeing itself from ecclesiasticism. It will contend earnestly for the faith delivered to the saints, but each separate body will not contend that in its enclosure alone are "the saints." It will not be a divided church, keeping aloof from the world because in its weakness it is afraid of the world; but one body, "terrible as an army with banners," it will subdue the world. Casting behind it its ecclesiastical arrogance and forgetting its sectarian jealousies, it "will follow the things which make for peace, and the things whereby we may build up one another." There will not be separate folds carefully guarding small and diminishing flocks, but there will be one flock, as there is one shepherd. There will be no exclusive temple, for all will prostrate themselves before the central throne. All the gates will be open, and multitudes will flock through them; but nothing unholy will pass through any one of them. And then, and not till then, "they shall bring the glory and the honor of the nations into it."

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth*.]

The force which really prevails for good, the force that really lifts mankind toward the throne of God, is the love that seeketh not its own. There is no exception to this rule, however much you may try to persuade yourself to the contrary. It is no use enlisting selfish motives on your side if you want to gain a good for the world; you may gain your institution, your immediate end, but you have not gained your good. Selfishness and godliness are essentially opposed, and you never serve the latter by invoking the former, you only take way off the ship. Men are slow to believe this, and the church of Christ is suffering today because of that poverty of faith. We are always trying to make alliance with the lower in order to promote the higher; it cannot be done. The kingdom of God has never yet been advanced a step save by the operation of that same spirit to whose service Jesus consecrated himself.

[Rev. A. A. Pfanstiehl in *Christian Intelligencer*.]

The law of God is more than a specified commandment. It is great principles of life—highways to noble deeds, true courage, broad outlooks, causing the soul not to fear but to rejoice, not to dwell in constant dread, but setting it free to develop by the diverse workings and the multitudinous applications to whatever specified actions may present themselves. There is no life so full of misery as that which is

Digitized by Google

lived in attempts to square itself by circumscribed rules, because constantly, in spite of the most strenuous efforts, they break one rule or another. On the other hand, there is no life so happy, so abounding in joyousness, so inspirational in and to the world, so enthusiastically and optimistically forcing itself, in spite of failures and stumblings and weaknesses, to push on and upward, as that life which is lived according to the law of God. Now, how is the law of God to be fulfilled? By love—love is the fulfilment of law. To love is to get back to God. "God is love." Loving is living in God, for God, to God, by God. Here is joy. Here is hope. Here is inspiration. Here is liberty. Here is freedom from the thraldom of an accusing conscience which makes one miserable because he constantly breaks some rule. To love enlarges the soul, makes it effective, great, powerful.

[*Universalist Leader.*]

The world of living men and women is going to be bettered and lifted in just the measure that living men and women in whom the spirit of Jesus lives become the saviors of their own little worlds. The men and women about us are getting not only their standards of spiritual values but their incentives to spiritual effort from us, and they will get their answer not from our lips but from our lives. Can our friends and neighbors discover by our lives that a way of living called Christian, the essentials of which are service and sacrifice and unselfishness, is the real way of living? Does our religion seem to them an occasional interruption and interpolation in our lives or the natural growth and normal development of our lives? Could a stranger find among us a common and abiding purpose to live in that way, even though we fail repeatedly to accomplish our purpose?

[*Outlook.*]

He who believes that God loves him and cares for him will not worry about the future; but he will provide for others as God has provided for him. He who loves his neighbor and cares for him will not be happy in himself faring sumptuously every day, while Lazarus lies hungry and sore at his door; but if he accumulates, it will only be that he may serve, and he will make his process of accumulation itself a social service. No wise regulation of conduct will make one righteous if his inward motives are those of greed and self-aggrandizement. No unwise regulation of conduct will make one unrighteous if his inward motives are love for his fellows and ambition of service.

[*Christian World.*]

If you find life empty, it is because you are empty. A full soul finds always a full world. "No," of itself, is no man's food. If you stay in it you will be starved. Its one service is as a step toward a "yes." The ennui, the misery of modern society, lies in its want of spiritual conviction, in its failure to grasp a religious reality. And nothing that rank, or fortune, or circumstance can offer will fill that void. The inner hunger here can be satisfied from only one source. For man is made for God. His emptiness is himself is the negative that requires this positive to make him a man. That vacant spot is the place where God would incarnate Himself in us.

[*British Congregationalist.*]

He who aims, not merely at producing a sense of progress in his own mind, but at satisfying the ultimate ideals and the ultimate judge, will, as he looks up, be moved to humility, and as he looks backward and down, be moved only to a determination that the future must excel the past.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

To Subscribers.

Subscribers to our periodicals are requested to observe the expiration dates of their subscriptions, as given on the wrappers of the periodicals which come to them, and to renew subscriptions prior to the date there given.

The notation "Nov. X" indicates that the periodical will not continue after the last issue of November, 1910, unless subscription is renewed, and "July XI" in the same manner denotes termination with the last issue of July, 1911.

Subscribers are also requested to refer to the subscription rates given in our standing notices before sending in subscriptions.

NEW POST CARDS OF THE MOTHER CHURCH.

Post card photogravure, in sepia tint; an exact reproduction of the large photogravure of The Mother Church Buildings and Publishing House with parkway in foreground.

Single copy.....$ .05
Twenty-five copies..... 1.15
One hundred copies..... 4.25

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90, six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage, at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

PAMPHLETS AND REPRINTS

CHRISTIANITY IS SCIENCE, AND SCIENCE IS DEMONSTRABLE. By MISS MARY BROOKINS.

MISCELLANEOUS

BIBLES. Clarendon Brevier (01483 x), heavy faced, very distinct type. Turkey morocco, size 6 1-2 x 4 3-8 inches, corresponding in size and binding to pocket edition of Science and Health. Price, $3.75.

Morocco cases, to hold pocket edition of Science and Health, *Quarterly*, and above Bible, may be had at $1.25.

Text Bible. (01561 x), pica square type, Alaska seal, size, 7 1-2 x 6 1-4 inches, 1 1-2 inches thick. Specially adapted for use of Second Readers. Price, $7.25

"PERSONAL CONTAGION" AND "WHAT OUR LEADER SAYS." By Mary Baker Eddy. Printed in French old style type, silk sewed. Single copy, 10 cents; 12 copies, $1; 100 copies, $7.50.

CHRISTIAN SCIENCE AND LEGISLATION. Consisting of articles by EDWARD A. KIMBALL, JUDGE CLIFFORD P. SMITH, and JUDGE SEPTIMUS J. HANNA, together with testimonies of healing, editorial comments, etc. 128 pages. Single copy, 10 cents; 12 copies, ONE ADDRESS, $1; 25 copies, $1.85; 50 copies, $3.50.

PICTURE OF THE FIRST CHURCH OF CHRIST, SCIENTIST, in Boston, Mass., and the Publishing House of The Christian Science Publishing Society. Artist's proof with remarque on Japanese vellum. Size, 18 x 24. Each, $5; on India paper without remarque, each, $3. Ten per cent discount to Reading Rooms. Picture of The Mother Church only, size, 12 x 15, each, 50 cents; one dozen, $4.50. Souvenir Post Cards of The Mother Church, 25 cents a dozen.

QUARTERLY COVERS, in black morocco. Pocket size, 4 1-2 x 6 1-2, $1.15 each or $11 a dozen. With change pocket, $1.40 each or $14 a dozen.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Illustrated; 107 pages. Single copy, $1.50; one dozen, $12; half dozen, $7.

THE CHRISTIAN SCIENCE HYMNAL. Revised and enlarged. Cloth, single copy, $1.15; one dozen, $9; half dozen, $5. Half morocco, single copy, $1.40; one dozen, $12; half dozen, $6.50. Full morocco, single copy, $2.50. Levant, single copy, $3.50. Pocket edition, size 4 5-8 x 6 5-8. Full morocco. Single copy, $3; one dozen $30.

MUSIC. Poems written by MARY BAKER EDDY and used by special permission, have been set to music as follows:—

"THE MOTHER'S EVENING PRAYER." By William Lyman Johnson. Arrangement for high and low voice in same copy. Single copy, 75 cents; one dozen, $7.

"CHRIST MY REFUGE." By William Lyman Johnson. Arrangement for high and low voice in same copy. Single copy, 75 cents; one dozen, $7.

COMMUNION HYMN.—"SAW YE MY SAVIOUR?" By William Lyman Johnson. Published in two keys for high and low voice. Single copy, 50 cents; one dozen, $5.

"BLEST CHRISTMAS MORN." By Frederic W. Root. Published in two keys, for high and low voice. Single copy, 27 cents; one dozen, $2.75.

"O'ER WAITING HEARTSTRINGS OF THE MIND." By Frederic W. Root. Published in two keys for high and low voice. Single copy, 27 cents; one dozen, $2.75.

Please state, when ordering any of the last three numbers, whether high or low key is desired.

Our Catalogue for 1910, containing description and prices of above named literature and a selected list of Bibles, will be mailed free on application.

Remittances should always accompany orders, and be made by check, money order, or exchange on Boston or New York. Currency or coin should not be sent by mail unless registered. Please send no money or business letters to the Editor or Editorial Department.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only Text-book on CHRISTIAN SCIENCE MIND-HEALING. This edition contains a fine photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

Price (cloth), single copy $3.18
Two to twelve books (cloth only) to one address, each 3.00
Twelve or more books to one address, each 2.75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy 4.00
Twelve or more to one address, each 3.75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy . . . 5.00
Twelve or more to one address, each 4.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy 6.00
Twelve or more to one address, each 5.75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding. The above prices are all prepaid.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), single copy $2.25
Twelve or more books to one address, each 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, single copy 4.00
Twelve or more to one address, each 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy 5.00
Twelve or more to one address, each 4.75

The above prices are all prepaid. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy . . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.

Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.50; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00; six months, $1.20.

Ten copies to one address, each, one year, $1.90; six months, $1.15.

Twenty-five copies to one address, each, one year, $1.80; six months, $1.10.

Fifty copies to one address, each, one year, $1.50; six months, 90 cents.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. X indicates the year 1910; XI, 1911. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

TERMS OF SALE

Single copy, postpaid, five cents. In the United States, Canada, Mexico, and Cuba; twenty-five copies, one address, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, single copy, six cents; twenty-five copies to one address, $1.25; fifty copies, $2.25; one hundred copies, $4.00.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Secretary of the Interior Ballinger has restored to the public domain one hundred and fifty thousand acres of the land which was temporarily withdrawn in 1908 and 1909 for the purpose of creating the Alabama national forest. The restored lands will become subject to settlement on Oct. 31 and to entry on Nov. 30. The idea of establishing the Alabama national forest was abandoned by the forest service because, upon investigation, it was impracticable from a business standpoint. The area, it is said, was small and contained timber of poor quality, and a portion of the land was valuable for agricultural purposes.

Charles A. Conant, who represented the United States at The Hague conference on the proposition of establishing uniformity in international bills of exchange, has reported informally to the state and treasury departments the results of that conference, which was in session from June 23 to July 25. Representatives of all the principal commercial nations of the world participated in the conference. While there was substantial agreement upon such a law, a subsequent conference was proposed.

A new long-distance record for wireless transmission is claimed by the Marconi Wireless Telegraph Company, which announces that the officials were informed in a despatch from London that Mr. Marconi, who is now in the Argentine Republic, has successfully received signals direct from Glace Bay, N. S., and from Clifden, Ireland, at the high-power station now almost completed in the Argentine Republic. The distance covered is estimated at fifty-six hundred miles.

Probably for the first time in this country scenic beauty has been given concrete value and afforded the protection of the courts in a decision rendered by Judge Lewis in the United States district court at Pueblo, Col., when a permanent injunction was granted prohibiting a water-power company from using the water which forms the chief scenic attraction of the canyon on which is situated Cascade Town.

Citizens of Port Richmond, Staten Island, N. Y., have organized a Subway Company which will permit of an all-rail route from Richmond borough to Manhattan. It is proposed to run tubes from Port Richmond under the Kill von Kull to Bergen Point, N. J., where a connection will be made with an extension now building of the McAdoo tunnels under the Hudson from Jersey City to Manhattan.

A saving of approximately one million dollars was effected by the navy during the fiscal year of 1909-10 through economy in coal and lubricating oil as the result of an engineering competition among the warships. The battleship Nebraska has been awarded the trophy for achieving the best results at the least proportionate cost of any of the twenty-five battleships and armored cruisers competing.

The Boston Chamber of Commerce has taken up the consideration of the question of a greater or metropolitan Boston. Inclusion of the suburbs lying within a radius of fifteen miles of the State House at Boston would give the city a population of a million and a half.

The question of whether it is unlawful for one wireless company wilfully to interfere with the transmission of messages by a competing concern, has come up for argument in the supreme court at Buffalo, N. Y.

President Woodrow Wilson of Princeton University, who has been nominated on the Democratic ticket for Governor of New Jersey, has begun his campaign.

For the first time in fifty years the doors of gambling-houses in Nevada have been barred by the law, which became effective Oct. 1.

Justice William H. Moody of the United States supreme court has offered his resignation, to take effect Nov. 20.

Boston has given hearings upon a plan to extend greatly and improve its harbor line.

International.

The commission appointed by the provincial government of Manitoba, Can., charged with the construction and purchase of grain elevators throughout the province, has extended its operations over all sections of the wheat-producing area of the province. The total number of grain elevators is 666, with storage capacity of about 21,576,000 bushels, or an average of 31,000 each. Of these the commission has purchased about 164, and in addition there are ten now in course of construction in accordance with the standard which the commissioners are establishing as part of their system.

The idea entertained for many years of establishing in India a Christian university, seems about to be realized. Two years ago efforts were made, both in Great Britain and in America, to raise funds for the purpose, and though the amount estimated, which was upward of £250,000, has not been obtained, still sufficient money has come in to allow of a start being made. A staff of one Indian and five European professors will accordingly take up their residence in Serampore during the month of October, and students are expected from all over India.

At noon, Oct. 3, the newly-constituted imperial Senate of China was opened by the regent, Prince Chun. There was little or no ceremony to mark the historic event. In a brief address Prince Chun stated that the wish of the people was for a parliamentary government, and he commanded the Senators to labor for this consummation. A parliamentary building of ample dimensions will be constructed.

The provincial government expects soon to complete its arrangements for the location and establishment of the twenty-five demonstration orchards in British Columbia. The object of these orchards is to discover the varieties of fruit best adapted to the districts in which they are located, and thus prevent much of the loss now occasioned by the selection of trees not adapted for certain localities.

About one seventh of the entire area of Denmark has undergone reforestation since 1866, and in another generation the entire region known as the heath will probably have disappeared, unless a portion of it is preserved as an example of what was for centuries a characteristic feature of the country.

A revolutionary uprising in Portugal on Oct. 4 has resulted in the proclamation of a republic under a provisional presidency and ministry. The King, Dom Manuel, with his mother, uncle, and other relatives, fled and reached Gibraltar. It is thought that he will not make any effort to regain the throne.

A proposal is before the Australian House of Representatives and the Senate to subsidize a press cable service which will insure a minimum quantity of six thousand words of the cable service being transmitted weekly from Europe or from America.

M. Wynmalen, the aviator, at Mourmelon, France, on Oct. 1, established an altitude record of 9,180 feet. The previous record of 8,470 feet was made by Chavez, the Peruvian aviator, who made a daring flight over the Alps.

Industrial and Commercial.

Reports of the enormous yields of Egyptian wheat this year in the lower valley of the Rio Grande, and that the production per acre will average about two hundred and eighty bushels from the three cuttings, are fully corroborated by the state department of agriculture. This grain bears very little resemblance to the ordinary wheat that is extensively grown in other parts of this country. The grain is small and light of color. It is said to contain much greater nutriment than the other grains which it resembles. The stalk of the Egyptian wheat is small and delicate. Its foliage is specially suited for fodder. In Russia the grain is ground into flour and is the staple bread product of the poorer classes.

Stockholders of the Boston Fish Market corporation, capitalized at about a million dollars, have approved of the thirty-year lease of the new pier to be built by the commonwealth of Massachusetts in South Boston. The pier will be twelve hundred feet long and three hundred wide. The structure calls for an expenditure of over one million dollars. The rental to be paid is said to be thirty-five thousand dollars a year for the first ten years, and forty-five thousand dollars for the remainder of the term. The pier will provide ample accommodation for the fish industry, which is growing fast. The Boston market is second only to that of Grimsby, England.

Workmen are draining a small lake near Oroville in Okanogan county, Wash., to save an immense deposit of epsom salts. The salts are pronounced equal to the German product, the wholesale price of which is twenty-five cents a pound. The lake is one thousand feet in length and about one hundred and eighty feet in width and it is believed there are thousands of tons of salts available for commercial purposes.

A hardwood famine, as the result of the reckless waste of timber by lumbermen in the United States, is predicted in a report submitted to the National Hardwood Lumber Association in its annual session at Louisville, Ky.

During the nitrate year ending June 30 the Chilean fields produced 2,260,000 tons of nitrate, an increase of 420,000 tons over 1908-9. Of this amount the United States consumed 109,000 tons.

Egypt's cotton crop this year, it is estimated, will exceed seven hundred million pounds, probably the largest crop ever yielded by Egyptian fields.

There are now in Kansas City, Mo., five motor-car factories, besides the assembling plant of the Ford company.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"THE BLESSINGS WE HAVE."

SAMUEL GREENWOOD.

STUDENTS of Christian Science who may be tempted to complain of the barrenness of their experience, will find a most effective rebuke of their meager receptivity, and an unfailing recipe for the increase of their sense of good, on page 3 of Science and Health, where Mrs. Eddy asks, "Are we really grateful for the good already received? Then we shall avail ourselves of the blessings we have, and thus be fitted to receive more."

A too common tendency of mortals is to desire what they are not willing to work patiently for, and this must be overcome by the student before he can rightly progress in Christian Science. The lazy worker says to the more provident and diligent disciple, "Give me of your oil, for my lamp is gone out." Probably every Christian Science practitioner is more or less troubled with repeated calls for help from those who would gather the good fruit of Christian Science, but who are too indolent or too indifferent to cultivate it for themselves. What such as these need to be healed of is not the recurrence of discordant symptoms, but of their apathy toward the demands of Truth. Self-love and self-indulgence will always be found asking for more, while abundant blessings are waiting unused.

They who are satisfied to work as little as possible for themselves are usually those who expect most of others, and are apt to charge their practitioner with the lack of responsiveness which they alone can remedy. The way of human salvation has been revealed in Christian Science, but it is a way of individual striving, growth, and attainment, wherein no one can substitute his work for another's. The infantile thought must be carried and cared for in its early stages but the time comes when it must begin to do these things for itself, when it must do its own studying, working, watching, and praying. No mortal is good enough to dispense with his own personal obedience to the truth. One who thinks he can continue to receive the healing benefits of Christian Science, and continue in the way of the world the same as before, is deceiving himself most. The practice of truth must precede its possession, a rule from which no one is exempt.

In Science and Health Mrs. Eddy has given mankind her great discovery of the Science of being, or Christian Science, and has made plain the way to its understanding and demonstration. Do we as Christian Scientists fully appreciate this priceless privilege of gaining that working knowledge of the truth about God and man which it presents, the truth which "prophets and kings have desired to see," and which has baffled the seeking of the ages? Or do we value this blessing so lightly that we are content to get along with just enough understanding to keep us out of physical trouble? In her lesser writings Mrs. Eddy has amplified this great theme, and has given lessons upon lessons that are invaluable to every student. Are we availing ourselves of these "blessings" in gaining spiritual enlightenment, and in working out our problems?

It is surely idle to lament a sense of lack if we are not availing ourselves of the good which God has already provided and which is within our reach. It should not be a question of receiving more so long as we are not using what we have, for this is the prayer of idleness and is never answered. Mrs. Eddy has provided the student with everything essential to his success and progress, but it remains with him to take advantage of these provisions. Our Leader's writings, the Manual, and the publications and periodicals of The Christian Science Publishing Society, are blessings which are daily available to all, but their value is known by those only who use them. If we are sincerely grateful for Christian Science, we shall certainly avail ourselves of these means of good; but to leave them largely unused upon our tables, depending for help upon the faithful work of others, is little better than not to have them at all. Bread does not feed a hungry person unless he eats it; neither do these blessings bless unless we use them. The habit of resorting to a practitioner to work out our problems is not far removed from one's former habit of resorting to a doctor for relief. The Principle and rule of Christian Science are as demonstrable for one as for another, and although the student may require help occasionally, the privilege of understanding and demonstrating the truth for oneself must some time be taken advantage of by all.

The common excuses for not availing oneself of these provisions for our spiritual welfare are lack of time and lack of means. We have no time, say some, to study the Lessons, or to read our periodicals, etc. Of all, this is probably the most pitiful subterfuge. We have time to make dollars and cents, to expand our business interests, to add acre to acre, and to enjoy the so-called pleasures of existence, but we have no time in which to gain a knowledge of God or to add to our store of spiritual good. Whose time do we use? Can we bring a moment into being, or do we hold security upon a single future hour? If we know that eventually all must seek and find that knowledge of the truth which makes free, we know that some time, either willingly or perforce, we shall have to take all the time God demands for this work. How much better for mortals to do this from their love of good than to be driven to it by the rod of suffering.

The plea of lack of means may seem a more plausible excuse, but this sense of poverty will never be overcome while one admits that he cannot afford the price of our Leader's works, or to subscribe to our periodicals. We need the faith as well as the courage of our convictions. If convinced that the truth of God's infinitude which is taught in Christian Science is the divine corrective for the error of want as well as for the error of disease, let us abide by that conviction and reject material sense evidence in the one case for the same reason as in the other. "All that a man hath will he give for his life." Are the things of Spirit less vital to us, and do they concern our real being and happiness less than the things of material sense? If our hunger for the knowledge of God were great enough to sacrifice anything to gain it, would we not break any sense

Copyright, 1910, by Mary Baker Eddy.

Digitized by Google

of limitation that may now seem to hamper us? Mortal belief will keep us poor so long as we plead poverty against the possession of those means by which God is revealing Himself to mankind. If it comes to a question of love—and it must—which lies nearer our heart, the material or the spiritual?

We are either taking advantage of these blessings or we are not; if we are, then the way will grow brighter and our sense of good increase,—but if not, even our own sense of justice will condemn us to suffer the result of our ingratitude and indifference. One may be loud-spoken and effusive in apparent appreciation of Christian Science, but only the use made of it decides one's genuine attitude. Mortals cannot patronize the truth, but they may learn to live it. Divine Principle heeds not human praise, entreaty, or condemnation, but responds to the slightest degree of unselfed goodness and spiritual understanding. If one admits the truth of Christian Science, he is bound by his own sense of honesty to live it as best he may, and by every tie of brotherly love to advance its cause among men; but for such a one to make no effort in these directions, condemns his position as hypocritical.

A practitioner, however earnestly he may work, cannot pass over God's demands upon his patient. One who announces his belief in Christian Science, yet persistently ignores its requirements, and neglects to avail himself of the blessings it offers him, will find sooner or later that a practitioner's treatment cannot compensate for his remissness, nor bring to his consciousness the good which Truth demands he must himself work for. "How shall we escape," says the Scripture, "if we neglect so great salvation?"

AN OBJECT-LESSON.

NELLIE B. MACE.

GLANCING up from study one morning, attention was attracted to a bright spot of light on the darker side of the room under a heavy chair, where the color of the carpet was intensified into a brilliant red. The sun was streaming into the room, but from a direction which rendered it impossible for it to reach this particular place. The brilliancy was recognized as a reflection, and a glance was cast about to discover its source of illumination. At an angle from the chair stood a book-case, the glass door of which was receiving a direct ray of sunshine and sending back its borrowed light into this shaded nook, lending to the carpet a color more beautiful than that of any other part of the room.

The Lesson-Sermon which was the subject of study at the time this silent object-lesson was observed, strongly emphasized the truth and beauty of reflection in the universe of Spirit, and the fact that nothing but love can comprehend and adequately represent Love, divine Principle. A few moments later, when the sunshine had passed the windows, the spot so attractively bright had deepened again to a dull tint, and the glass in the book-case was likewise without light or reflection. It was clear that the glass had in itself no power to give out light, but once in the path of the sunlight it reflected a perfect image, in accordance with the law of optics.

How like our lives. Unillumined by the light of Truth, how void of spiritual energy is the human consciousness; how powerless to impart true comfort to suffering mortals and how unrelieved remain the shadows of material existence. But facing the light revealed through Christian Science, how responsive becomes awakened thought to the appeal of spiritual truth, and how surely its light will be reflected to others, and that perchance without conscious or direct effort.

How deep should be our gratitude for the revelation of Love as the Principle underlying all genuine service in the world, how constant should be the effort to set our affection on things above, from whence alone can come this true illumination, and how unceasing should be our endeavor to light up with the radiance of reflected love all the dark places in our own lives and in the lives of those within the radius of our influence. How compassionate the wisdom which has given to men the hope that, while saving love inheres not in mortal mind, yet it is possible to progress toward the realization of Immanuel and the individual utilization of the spiritual law of reflection. How the erstwhile drooping hope rejoices to find the hitherto cold and unresponsive inertia of material beliefs dissolving under the touch of Love, and the appearance in its stead of the warming desire and increasing ability to love and to help.

How may we rejoice in beholding the ever widening influence of the example of our Leader, who has discovered and practised the truth about Love and Love's reflection, watching meanwhile that we be not lost in idle admiration of her life and work, but be ourselves progressively obedient to the command, "Go, and do thou likewise," remembering her teaching that "the substance, Life, intelligence, Truth, and Love, which constitute Deity, are reflected by His creation; and when we subordinate the false testimony of the corporeal senses to the facts of Science, we shall see this true likeness and reflection everywhere" (Science and Health, p. 516).

BEARING WITNESS.

PERCY WAXMAN.

SOME little time ago a young student in Christian Science said to a friend of the writer: "I wish I were a good speaker. I have had a very beautiful healing through Christian Science for which I am extremely grateful, but somehow or other I cannot pluck up enough courage to give a testimony at a Wednesday evening meeting. You know, I have never yet spoken in public."

The friend replied: "Perhaps I can help you to overcome your fears and doubts. Suppose you were to enter a law court where a man was being tried for his life. Suppose the circumstantial evidence was so much against him that conviction seemed certain. Suppose it so happened that you alone of all the persons present possessed such knowledge of his innocence that your evidence if given would free him: would you not give it? Would the fear of your being a poor speaker hold you back from giving the evidence that would save the man? Would the presence of judge, jury, and trained pleaders prevent you from speaking what you knew to be the truth? Could anything deter you? No, a thousand times! Your sole thought would be to free the man unjustly accused. Now, a Christian Science church on a Wednesday evening may hold some unfortunate who has been sentenced by some supposed material law to suffer or die. You and every other Christian Scientist present have evidence in your possession which will free that man from his unjust sentence. Will the thought that you do not consider yourself a good speaker prevent you from helping your brother? Will anything keep you from bearing witness to the truth that makes men free? Of course not."

The result of this advice is easy to guess. Many people overmodestly consider themselves poor speakers. But what constitutes a good speaker? Is it not one who speaks the truth? The giving of testimony should be a very simple matter, for is it not born of gratitude for benefits received? The speaker who is truly grateful will never have to hesitate about properly expressing his gratitude. To give testimony does not mean to give vent to oratorical flights. It does not mean the undue exercise of elocutionary eloquence. It does not mean an opportunity for promiscuous "teaching," for obvious reasons, not least of which is the possible unreceptivity of many present. It does not mean that one should attempt elaborate explanations of the *modus*

Digitized by Google

operandi of Christian Science healing. In other words, the giving of testimony means exactly what the statement implies, viz., bearing witness. Nothing speculative, conjectural, or imaginative should enter into a testimony. The plain recital of facts is greatly to be desired. How often the simply worded testimony of a child makes a more pretentious effort seem insignificant. To bear witness to the truth is a simple and beautiful procedure if gratitude impel the speaker.

Our beloved Leader, among her manifold expressions of wisdom and love, has instituted these Wednesday evening meetings to give us the golden opportunity of expressing our gratitude to God, that in so doing we may help our brothers as well as ourselves, for, as she tells us in Science and Health (p. 372), "In Christian Science a denial of Truth is fatal, while a just acknowledgment of Truth and of what it has done for us is an effectual help."

ELEMENTS OF GROWTH.

REV. HENRY M. PERKINS.

SOME movements owe their success to argument based along the common material lines of reasoning, but it has been otherwise with the advance of Christian Science. The most clearly stated arguments have often left some opponent only the more closely intrenched against spiritual truth. When Philip said to Nathanael, "We have found him, of whom Moses in the law, and the prophets, did write, Jesus of Nazareth," he was met by the incredulous reply, "Can there any good thing come out of Nazareth." Here was an invitation to argue, but Philip, a good judge of human nature, merely said, "Come and see."

Now as then, the healing, enlightening, and saving truth appeals to men on the ground of results accomplished. Having come, Nathanael dismissed his doubts. The key to his real character is seen in the words of Jesus. "Behold an Israelite indeed, in whom is no guile." Are not these words suggestive of one important element of growth, viz., receptivity? The healthy plant is proof that good seed found lodgment in good soil. So the unprejudiced, sincere, and open mind has ever proved to be right soil for the teaching of Christian Science. When we are in the right attitude toward God, the truth flows to us unobstructed.

Mrs. Eddy has said, "The effects of Christian Science are not so much seen as felt. It is the 'still small voice' of Truth uttering itself. We are either turning away from this utterance, or we are listening to it and going up higher. Willingness to become as a little child and to leave the old for the new, renders thought receptive of the advanced idea" (Science and Health, p. 323).

Another element of growth is the expression of the truth. Sometimes that expression is by the spoken word, again by the faithful and consistent life, by the kind act or by patience and forbearance, along with other manifestations of love. The form of expression depends somewhat upon natural tendencies and aptitudes, upon circumstances and opportunities. The law of increase in the commercial world is based upon the use of what may be already at hand. This, however, is only an imperfect type of spiritual law, as unfolded by the words of Christ Jesus, "Unto him that hath shall be given;" and by those other words, "If ye know these things, happy are ye if ye do them."

As the clouds are both receivers and givers of blessings to earth, so will a faithful study and application of the teachings of the Bible and Christian Science enable us not only to be receptive of the truth, but also to be light-bearers, each in the measure of his opportunity clearing away the mists of error. Thus shall we realize and prove the value of Peter's words, "Grow in grace, and in the knowledge of our Lord and Saviour Jesus Christ."

SYMPATHY.

MAY BELCHER.

LACK of sympathy is a charge frequently brought against students of Christian Science by those antagonistic to its teachings. What mortals generally understand by sympathy is often little more than mere emotionalism and the manifestation and expression of error. It sometimes seems difficult to explain to those outside of Christian Science how this false view of sympathy, which merely adds to our brother's burden instead of helping him, must give place to the true sympathy, which lifts him out of his sense of grief and discord and shows him that health and happiness are man's rightful heritage as God's spiritual child. When cases of sorrow and suffering were brought to our Master to be healed, he showed his true sympathy in proving to the sufferer the unreality of all his troubles by destroying and healing them. In Matthew's Gospel we read: "And Jesus went forth, and saw a great multitude, and he was moved with compassion toward them, and he healed their sick."

While striving to put into practice our understanding of Christian Science, we must not forget that true sympathy is the reflection of divine Love, and also that divine Love is full of compassion, mercy, and patience. The truly sympathetic man or woman is one who has a quick insight into the needs of others, and such a one would never make the fatal mistake of saying to some timid inquirer into Christian Science, one who is, to mortal sense, full of pain and sorrow, "You have nothing the matter with you; all your suffering is a lie." He would first prove to the patient the nothingness of error by demonstrating to him the allness of God, good, in the healing of his sense of pain and discord. Then the patient, when he had gained that practical proof of the power of infinite Love, would be ready to see and understand how all belief in evil is an unreality, a false state of consciousness. We who are students of Christian Science need to be very much on the alert to guard our consciousness against the entrance of any error in the shape of impatience with a brother's seeming slowness in apprehending the truth. Doubts and difficulties out of which through God's help we have worked, are still very real to him, and we need to be very compassionate and gentle, and lead him step by step over the rough places with words of cheer and encouragement, until at last he too is able to rejoice in the "glorious liberty of the children of God." In Science and Health (p. 514) we read, "Tenderness accompanies all the might imparted by Spirit." The strongest thought is therefore the one which manifests the most tenderness and compassion.

All through our Leader's writings she impresses on us the necessity for wide sympathies and the human affection which alone can enable us to understand and meet the needs of others. She tells us that "the physician who lacks sympathy for his fellow-being is deficient in human affection, and we have the apostolic warrant for asking: 'He that loveth not his brother whom he hath seen, how can he love God whom he hath not seen'" (*Ibid.*, p. 366). We must be willing to see things from our brother's standpoint as well as from our own. Wholesale condemnation of his cherished opinions and beliefs will never help him out of them. Courtesy is an essential part of sympathy, and we must be careful not to hurt a brother's feelings by any scornful or slighting allusions to the faith which he has hitherto held.

While rejoicing in the truth contained in the teachings of Christian Science and in the clearer understanding of God and man which has come to our own consciousness, we must not forget that those differing from us also believe in the truth of their religion; that to them it has been, perhaps, very real and vital and hallowed by many tender memories and helpful experiences, and the effort to break away from all this, and to grasp what to them may seem difficult to

Digitized by Google

understand, may be causing them many a struggle and heartache. Let us always bear in mind St. Peter's wise admonition in his first epistle, "Be pitiful, be courteous," and gently and tenderly show them the truer concept of God, thus lifting their thoughts and our own higher, and proving to them by our practical loving sympathy and courtesy that Christian Science is no mere theoretical religion.

This perfect sympathy must be demonstrated in every thought, word, and deed of our lives; our homes must be made brighter, happier, and more harmonious because of it. Often, when the wonder and beauty of Christian Science begin to dawn on our understanding, we are tempted to become absorbed in the study of "the letter" to the exclusion of all else, and it may sometimes mean that we forget the little every-day duties which lie close to our hands,—those duties to which the spirit of Christian Science is always applicable. Tender, loving care for others, consideration for their comfort and happiness, intelligent interest in their pursuits, and faithful, cheerful performance of "the daily round, the common task,"—all these will do far more to prove to those who seem to be antagonistic to Christian Science, that our religion is the practical Christianity which Jesus taught and practised, than any mere giving out of theories, or the utterance of another's thought, no matter how beautiful it may be.

Only through the broadest sympathy and unselfed love can we gain the full confidence of the sick and sinning. Our Master's infinite compassion and love showed Mary Magdalene the hollowness and unreality of her sinful life and revealed to her the true concept of Love, and our work today is so to put into practice our understanding of Love that no trouble shall seem too small to be brought to us for help and healing, and no sin too terrible. If we keep the Christ-ideal uplifted in our own hearts, we can never be justly accused of lack of understanding and sympathy.

LOVE'S PLAN.

WILLIAM H. COOMBER.

The old adage, "Man proposes, but God disposes," is well known. Through the teachings of Christian Science we are learning to realize more fully the truth of these words. We have learned, and are still learning, that God alone governs the universe, and that nothing can withstand His omnipotent power to accomplish His infinite purposes of good.

When first we commence to glean a little of the spiritual understanding which Christian Science brings to us, it would seem that the manifestations of evil are as numerous, and even more so, than those of good; but a better understanding of the truth reveals to us, that all appearances of evil, of whatever name or nature, are unknown to God, infinite good, who the prophet tells us is "of purer eyes than to behold evil;" and who shows us how to overcome its seeming reality and power by revealing that in His sight evil is unknown; that, as He created man in His own image and likeness, evil is also unknown to the man of God's creating. Our work is to endeavor in thought and by application to be constantly alert to "know the truth" which sets free, to think and acknowledge good only always and everywhere, through the understanding of the allness of God and of His spiritual and perfect creation.

From this we see that the plan of divine Love for each one of His ideas is never less than all good. He who is infinite good is incapable of sending anything less. Christian Science therefore reveals that our heritage is the infinity of good, and it is our privilege to recognize this and avail ourselves of it by exercising our God-given dominion over all the earth, while we know that only good can be our lot if we are truly seeking to know Love's plan for each one of us. We must see and recognize, too, that the manifestations of good are not limited in any way, but that they are above all we can ask or think, and that we alone live it ourselves. Knowing this, we shall not be anxious for tomorrow, even if to human sense the way seems difficult, because we know that divine Love alone governs and we can rest assured that henceforward all good is ours—all that is our rightful heritage, and that we cannot miss any legitimate or true happiness or anything that it is right for us to have.

Christian Science teaches us to live in the present, to take each step forward as it appears; and if we live up to this teaching, new opportunities for giving and getting good will appear to our human sense in their order, and in demonstration of the plans of God, who doeth all things well. Thus we shall learn to make fewer plans for ourselves, and to wait for the clear leading of divine Love—our work being to know that He who is infinite wisdom and intelligence can infinitely and unerringly direct our way from sense to Soul, until at last we come to Truth's green pastures, and are satisfied.

SABBATH REST.

FRED C. HOUSE.

It was on the opening day at one of the theaters in a western city that the writer had the following experience, which may be of help to others. It was a Sabbath day, and he had been to a Christian Science service, where his thought had been lifted into a peaceful contemplation of God's mercies, power, and presence. In the line of his usual occupation he was led to go almost directly to his employment, and to all appearance it was not to be a day of rest for him. On arriving at the scene of his work, he was asked into a room by one of his associates, who was in a state verging on collapse.

"Do something for me," he begged. "I have been up all night,—not drinking, but waiting for a saloon to open. You see my condition. I hate to be humiliated before the others."

The man seemed to be trying vainly to collect himself. A few words were spoken to him in response to his appeal, words quite different in substance from those he was accustomed to hear; but they were words of Truth, and presently their influence was felt and acknowledged. The writer then assured him that he could perform his task that day, and at the moment when the demand was made upon him he was able to meet it without any difficulty. His thanks were sincere and hearty for the help he had received, but the writer felt that he was the one who had been greatly blessed, in the peaceful day brought to him by this proof of the power of a word of Truth spoken when it was needed. This incident was followed by a day of spiritual activity analogous to the great sabbath in God's creation, wherein the six days' labor ends in rest but not in idleness.

Our beloved Leader, Mrs. Eddy, says in Science and Health (p. 519), "The highest and sweetest rest, even from a human standpoint, is in holy work." Deeds punctuate eternity more than mortal days and years, and one day with the Lord in His vineyard is as a thousand years. In Christian Science there is truly a Sabbath of rest for the children of God.

"Happiness finds every place alike good, but a little misfortune will abase a very great man."

"A good word shines more than an emerald in the hand of a slave who finds it in the mire."

"The wise man is satisfied with his knowledge; good is the place of his heart, sweet are his lips."

From a book of maxims by an Egyptian prince, *Ptah-hotep* (5th dynasty).

SELECTED ARTICLES.

[E. M. Ramsay in *Scotsman*, Edinburgh, Scotland.]

It is undoubtedly true that a number of actors and actresses have become students of Christian Science, because they have been enabled by its teachings to rise above many of the difficulties which they have to encounter in their profession. Christian Science is not a sect; it is a method of thinking, a way by which men may journey out of sin and disease into the liberty of the sons of God. People familiar with their Bible will remember that "the way" was the name by which Christianity was first known. Christian Science, then, is a return to the methods of primitive Christianity.

Christian Science enlarges our conception of the nature of God by presenting Him as infinite intelligence, unchanging Love, unending Life. It emphasizes the Bible teaching that man was made in the image and likeness of God, and points out that nothing which is unlike God can form an essential part of His image—man. Thus it shows us that, since there is no jealousy in perfect Love, God, there can be no jealousy in His child; that, as "every good and perfect gift is from above, and cometh down from the Father of lights," we, His children, can have all the intelligence, originality, and strength we require, if we will but turn to God in humility and faith. In this way the Christian Science student is brought to see that there is no cause for jealousy, no need for it, no reality or power in it, since all power belongs to God. Thus he ceases to express jealousy or to fear it. By a similar process he is freed from nervousness, anxiety, and fear, and from all the other evil thoughts which assail him. He also finds that as his consciousness becomes purer, more compassionate, brave, and true, he manifests more health, and is less affected by heat, cold, change of diet; he finds that journeys by land and voyages over stormy seas have ceased to fatigue or upset him. "Thou wilt keep him in perfect peace, whose mind is stayed on thee."

The prevalent impression that Christian Science is a form of suggestion, or is based on the exercise of will, is the very opposite of the truth. In proportion as man surrenders his erring human will and rejoices to be governed by the divine Mind alone, do sin and illness cease to influence him. "To be spiritually minded is life and peace."

[Frederick Dixon in *Christian Commonwealth*, London.]

With respect to the discussion on faith-healing, reported in a recent issue of the *British Medical Journal*, and referred to in a late issue, will you permit me to point out that, with all due respect to the writers in question, there is a distinct absence of logic in their views. Dr. Henry T. Butlin, who is certainly one of the most eminent medical men of the day, admitted that an occasional case of organic disease may be healed by faith; but if an occasional case can be healed, logically every case can be healed, and the only question at issue is the amount of faith requisite. Dr. Osler, on the other hand, insisted that Christian Science healing was entirely confined to functional disease. His only ground for this statement was, however, the fact that he had personally not come across a case of organic disease which had been so healed. Now, talking personally to an eminent doctor some time ago with respect to the healing of cancer, he told me, quite plainly and without any equivocation at all, that no case of malignant cancer could be healed by Christian Science treatment, and that if any such case appeared to have been healed, it was not malignant cancer but there had been a mistake in the diagnosis. Could any argument possibly be more hopeless than this?

The deduction, then, which emerges from these somewhat contradictory statements amounts to this, that it is admitted that Christian Science does heal functional disease, and that organic disease can be healed by faith. If the Gospel record is true, Jesus healed organic, functional, and nervous disease indiscriminately, and declared quite plainly that those who believed in him should be able to repeat this healing.

The miracles of Jesus were nothing but his demonstrations of his faith in, and understanding of, things unseen. There was nothing whatever supernatural about them. They were the divinely natural effects of his knowledge of divine law and spiritual causation; and simply by making use of this knowledge he healed the sick and raised the dead and stilled the tempest, proving, in the face of a doubting world, that those who knew the truth were freed by that knowledge from the fetters of materialistic ignorance.

For centuries the wise men of the world have sought the explanation of the origin of evil. They have never found it, and fortunately they never will find it, for the day in which the origin of evil was discovered would be the day of its discovery as a reality. Jesus himself, speaking to his disciples of evil, personified it after the manner of the age and country in which he lived, as the evil one, or devil. Never, however, did he say a word which could be construed into acceptance of it either as reality or power. He was a liar, he said, and a murderer from the beginning, and he abode not in the truth, because there is no truth in him. Strip away the metaphor of the East, and reduce this saying to the matter-of-fact idiom of the West, and what does it mean but this?—evil is a lie, and a lie would murder every statement of truth; but a lie has no existence in truth, because there is no reality in it.

[Louise Satterthwaite in *Lippincott's*.]

A good example of optimism is that given by Christian Scientists. Meet one or a dozen of them wherever one may, and one is usually impressed that here is a happy people. Not many years ago, a confession to any such leaning was equivalent to being classed with the faddists and "cranks" of the community; but even then Christian Scientists were optimists of the first water. They were convinced that right ruled, and they cared not a whit for anything else. Today, throughout the United States and foreign lands, thousands find this belief satisfying. It is practical optimism, since by its use they keep happiness, prosperity, and first-class health.

The business man needs optimism throughout all departments of his establishment. The housewife must have it if she would build a real home. The professional man, whether in the ministry, the law, or medicine, finds it his best assistant. This, of course, must needs be the real optimism. Not the smiling exterior which conceals but poorly the underlying moroseness or despondency, but the simon-pure article which comes from the heart, whereby its owner finds life so worth the living that his enthusiasm and steadfast courage, even in dark days, spread to all around him. Inwardly and outwardly the Christian Scientist strives to keep a crystal-clear consciousness of the fact that good is the only thing worth knowing. He never says or thinks that the country is going to the dogs. He is never caught mourning aloud about the scarcity of money, the dearth of good servants, nor the supposed increase of immorality in the world. He rules despondency of all kinds out of thought, and the result is that every one in his vicinity feels the better for it.

One of the favorite criticisms of Christian Science is that it takes the ground that, since God is good, He cannot have created sickness or death; therefore, since there is only one creator, these things have no foundation in absolute fact and are therefore unreal. The logic of the reasoning seems to some extent lost upon the world at large, but the Christian Scientist, finding that better health, morals, and business result from the belief in the unreality of evil rather than from faith in its power, points to the full measure of value

Digitized by Google

received from this species of optimism, and goes on his way rejoicing. Could the whole world be convinced that unfaith in evil is really throwing all its force in with good, might it not be worth while? Should we never again fear anything, never be afraid of germs, drafts, foods, the weather, contagion, "colds," in short, all the pet bugaboos of modern times? Should we not be a healthier, saner, and a more joyful people?

The only optimism worth having is that which proves of practical use. Christian Science has demonstrated its value in just this way. Had it not done so, it would have died a natural death long ago, since there is little on the surface of it to allure or tempt the average mortal to a study of its metaphysical statements.

[H. Coulson Fairchild in *Plainfield* (N. J.) *Press.*]

In a recent issue one signing himself "A Local Pastor" criticizes my second reply to a critic on the subject of the atonement. I do not think it was misleading, as my latest critic implies, to refer your readers to the Christian Science text-book for the exact meaning of the atonement as taught in Christian Science. There is no higher authority on the subject of Christian Science and its teachings than the text-book, "Science and Health with Key to the Scriptures," by Mrs. Eddy. In view of the fact, however, that a brief explanation of our views may satisfy our critic, I will state that atonement in Christian Science does not mean the loss of one's individuality. The true individuality of man is brought to light when man reflects the divine image and likeness and becomes at-one with God as His reflection.

Our critic presents some quotations from Science and Health, parallels them with some picked texts from the Bible, and ends up by saying that he wishes the general public to "know the radical difference between the atonement as Christian Science teaches it and the atonement as taught in the Bible." By what authority our critic presumes to state exactly what is taught in the Bible we do not know; we certainly have no objection to his stating his particular belief as to what the Bible teaches on this subject; but we must remember that there are at least one hundred and eighty different religious sects in this country calling themselves Christians, who are ready to tell us what they think "is taught in the Bible." Without doubt all are doing some good and all have a right to their particular views. What we do object to is the tendency of critics of Christian Science to endeavor to explain what Christian Science teaches, in addition to explaining their own beliefs.

During many years' experience in reading criticisms of Christian Science, I have seen a number of so-called deadly parallels which purported to set forth a difference between the teachings of Mrs. Eddy and those of the Bible, but taken as a whole there is a chain of confirmation of Christian Science running through the entire inspired word of the Bible. When verses from the Bible are separated from their context and quotations from Science and Health are similarly used, the setting of these quotations one over against the other, constitutes a wholly unreliable criticism.

Our critic confuses the thought of Christ with the personality of Jesus. The Scripture verses which he quotes as referring to the body of Christ from the Christian Science standpoint, relate to a spiritual and not a material body. We partake of the body of Christ when we live and understand the truth as taught by Christ Jesus. We are redeemed by the blood (life) of Christ when we walk in the footsteps of the Master. Christian Scientists believe that in this sense Christ Jesus gave his life for the life of the world. They do not believe in the transubstantiation or substitution of human blood as the saving power. Jesus himself said, "Follow me;" "If ye love me, keep my commandments;" "Be ye therefore perfect," etc. Paul said, "Work out your own salvation." Our critic seems to object to the interpretation of these plain words and says, "The atonement, then, according to the Bible, is something we receive, but according to Christian Science, it is something we work out." Our critic is correct in his assumption that Christian Scientists are trying to work out their own salvation, knowing that it is God who worketh with them, "both to will and to do of his good pleasure." Some religions make Christianity a mere matter of belief, resting on the one verse in Scripture, "Believe on the Lord Jesus Christ, and thou shalt be saved." Christian Science says true Christianity is the pearl of great price. We must do something more than believe; we must understand and demonstrate it. Christian Scientists believe that Jesus' command was perpetual, "Go ye into all the world, and preach the gospel;" "Heal the sick."

The term "once for all," so strongly emphasized by our critic, would indicate to Christian Scientists that Christ Jesus overcame sin, disease, and death, and "once for all" established the proof of the dominion of good over evil. Christ Jesus was the way, and pointed out the way for all men. He said: "If any man will come after me, let him deny himself, and take up his cross, and follow me." I do not see how any Christian can avoid the conclusion from these words that salvation is something to be worked out and is not merely a matter of acceptance and belief. According to our views, Christian Science emphasizes and reiterates in faith and practice the great fundamentals of primitive Christianity.

[Frank C. Barrett in *Portland* (Me.) *Argus.*]

A critic says that "if that book [Rudimental Divine Science], and Science and Health, were offered to any church, they would be rejected on the ground that they were unscriptural." Then he goes on to say that a statement of Christian Science might be submitted to the Methodist conference or the Episcopal convention for final judgment. But would the judgment of such a conference or convention be entirely reliable? To make my meaning more clear, let us suppose the Methodist conference should sit in judgment on the creed or doctrine of the Episcopal church, and *vice versa*. Would not each find that they themselves were right, and the other wrong, on Scriptural authority? No doubt they might attempt to disprove the Scriptural authority of Christian Science by the same token.

The "scientists" mentioned by our critic who have sat in judgment on the discovery of the North Pole, understand the "science" of astronomy. Unless the clergymen likewise understand Christian Science, and prove it by actual demonstration, how can we be sure they are competent to pass judgment until they do understand it? Christian Scientists have proved their claims. The Master said, "By their fruits ye shall know them." It matters not whether Christian Science is approved by certain individuals in the churches, or not: it must stand or fall on its own merits. That is the reason why I did not refer to our critic's statement in reference to putting the books before a committee of men who do not profess to understand Christian Science. I do not see that the opinion of such a committee would carry any more authority than our critic's opinion.

I assure you, I propose to tell the whole truth and nothing but the truth: therefore I must thank our critic for giving me this opportunity to answer the whole statement. However, it has not been proved that Christian Scientists are "impostors," nor that Christian Science does not heal the sick and sinful. And what is more to the point is that the public is turning to it for moral, spiritual, and physical healing, in ever increasing numbers. Would this be so if the claims made for Christian Science were not being proven? If it is desired, the writer will furnish testimonies of healing, made on oath in court. Also testimonies by physicians of renown concerning cases which passed under their own observation. In fact, there is so much evidence to sustain our claims that even our critic's only excuse for

Digitized by Google

rejecting them is that the cures were not effected instantaneously in every instance, and because of some failures on the part of Christian Scientists to demonstrate Christian Science.

The apostle Paul went about for a long time with a "thorn" in his flesh. Some say it was rheumatism; others that it was sore eyes; but we may well believe that after a period of spiritual growth he overcame his difficulty. So it is with every one who attains "unto the measure of the stature of the fulness of Christ." When they do attain that standard, they will never fail; but no person on earth can claim to have attained all. It is what a person has accomplished for humanity that shows his real worth, and today hundreds of thousands rise up and call the Discoverer of Christian Science blessed, for they have been restored to their friends and their families, ofttimes when they would have perished without the truth which destroys all error. It is such proofs as these that sustain Mrs. Eddy's claims for Christian Science and annul the charges of her detractors. Her claims have been so thoroughly proven that today many M. D.'s have given up the practice of medicine and are now Christian Science practitioners; and many clergymen have joined the ranks of the Christian Scientists. Surely, this could not have happened until the efficacy of Christian Science had been demonstrated to their satisfaction. In fact, the teachings of Christian Science have received such general recognition that many leading clergymen and divines approve of spiritual healing and are even now taking steps to introduce it into the churches. Does not this prove that Mrs. Eddy's prophecy to the effect that "in the twentieth century every Christian church in our land, and a few in far-off lands, will approximate the understanding of Christian Science sufficiently to heal the sick in his [Christ's] name" (Pulpit and Press, p. 22), is already coming true?

In the face of these facts is it not true that Christian Science has advanced the "standard of medical and theological thought"? The one depends less on drugs and more on nature, cleanliness, purity, etc., and with a growing recognition that the mental condition of the patient has a great deal to do with the success of the cure,—and last, but not least, some have already given up the practice of medicine for Christian Science methods. In the churches the clergy do not preach an all-powerful devil, to the exclusion of the one omnipotent God, so much as they used to. No, evil is not accredited so much power since Christian Science has taught people to allow nothing but Life, Truth, and Love to fill their consciousness. It has raised theology to the point where it must demonstrate its utility; where it must meet the needs of the people in actuality rather than in theory. Christian Science has taught them that creed and dogma give place to the authority of Truth. Indeed, Christian Science has elevated theology to the point where preaching without practice is seen to be incompatible with the words and works of our Lord and Master.

Christian Science has been the greatest factor in this awakening for the reason that it has proved the efficacy of divine Life, Truth, and Love to destroy the sins, diseases, and discordant conditions of mortal mind, by the power and supremacy of the divine Mind which it reveals. In writing of her discovery of Christian Science, Mrs. Eddy says: "The Bible was my only text-book. The Scriptures were illumined; reason and revelation were reconciled, and afterward the truth of Christian Science was demonstrated" (Science and Health, p. 110). Thus it will be seen that what Mrs. Eddy teaches in Science and Health was gleaned from the Scriptures. What she found there she comments on in Science and Health, making the Bible teachings practical in this age.

[Eugene R. Cox in *Buffalo* (N. Y.) *Enquirer*.]

In a recent editorial entitled, "Can a Man Die of a Broken Heart?" appear some favoring comments on the effects of Christian Science, but the closing sentence is one calculated to give readers a mistaken sense of what Christian Science teaches. After saying that if the man who died of a broken heart had been a Christian Scientist, he would have been dancing at the wedding feast instead of lying in his coffin, you state, "It is better to die occasionally of a broken heart than to spend your whole life in the very dull and uninteresting belief that nothing is real." Such is not at all the teaching of Christian Science. In the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy, the word "real" is used 183 times, and the word "reality," singular and plural, is used 139 times. Thus in the space of 600 pages, these words appear 322 times, and in no place is there a failure to explain logically and clearly the difference between the real and the unreal.

One pertinent illustration (used on page 386 of Science and Health) is that of a false despatch, telling of the death of a friend. The recipient, if merely told that his grief was unreal, would resent it bitterly, but when shown the falsity of the despatch, would dry his eyes and realize himself the unreality of the whole occurrence. Christian Science, therefore, differentiates between the false testimony of the physical senses and the reality of the spiritual and eternal, and in so doing brings a peace and harmony into our lives never before known.

[M. S. Bruen in *Dublin* (Ireland) *Herald*.]

Christian Science has no connection with the methods of those who practise faith-healing, with which, however, Christian Scientists have no wish to interfere. There is no blind dependence on Christian Science; certainly the student has faith in the rule which he learns in Christian Science, just as the schoolboy learns to have faith in the rules of arithmetic, but it is only as he understands them that he can put them into practice. Healing in Christian Science is the demonstration of scientific knowledge of Truth, it is the proof of fact, not fancy. Even a child can demonstrate his understanding of numbers, and a beginner can put to the test his grasp of the facts which Christian Science unfolds; but it is a mistake to call it "faith-healing."

[Ashcroft in *San Jose* (Cal.) *Mercury*.]

Talking about newspapers, let me go on record as a reader and admirer of *The Christian Science Monitor*. Next to the *New York Evening Post*, it is nearer real literature than any newspaper printed in this country. Its columns are clean and informative, its features original and capital in style, its editorials both virile and finished. The byways are not raked for the salacious scandal, nor is it a purveyor of the reddened dramas of modern society. It is a well-written, sweet-tempered medium, a wholesome, powerful influence in the land at a time when the dailies as a rule are up to their ears in cheap sensationalism. It would be a narrow-minded denominationalist who failed to see the worth of this superior journal, and a still narrower one who refused to read it simply because it is the official organ of the church founded by Mrs. Eddy.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be Nov. 4, 1910. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 18, 1910.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to June 3, 1910, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

TAKE NOTICE.

I HEREBY announce to the Christian Science field that all inquiries or information relating to Christian Science practice, to publication committee work, reading-room work, or to Mother Church membership, should be sent to the Christian Science Board of Directors of The Mother Church; and I have requested my secretaries not to make inquiries on these subjects, nor to reply to any received, but to leave these duties to the Clerk of The Mother Church, to whom they belong.

MARY BAKER EDDY.

Sept. 28, 1910.

"THEM THAT BELIEVE."

WE often hear people say that they believe implicitly in the Bible, but when we attempt to reconcile their actions with this statement, we find that the point of view of the individual enters largely into the matter, and that their belief in the Bible is simply a belief in their own interpretation of the Scriptures.

A case in point is the common interpretation of the 8th verse of the 5th chapter of Peter's first epistle: "Be sober, be vigilant; because your adversary the devil, as a roaring lion, walketh about, seeking whom he may devour." It can be readily seen that the interpretation given to this verse by one who literally believes that there is a personal devil, and that evil is as real as is good, would be entirely different from that of one who knows that there is no personal devil, nor can be, because there is but one creator, God, and it is inconceivable that He could have created evil and "the father of it."

It is essential, therefore, in order to interpret the Scriptures and to form a correct concept of man's relation to God, and God's relation to the universe, that we first have some premise which is entirely consistent with God's nature and omnipotence. Herein lies the incalculable value of the service that Mrs. Eddy has rendered humanity, in the promulgation and demonstration of her discovery that there is a divine Principle and that this Principle can be scientifically demonstrated.

On page 108 of Science and Health she writes: "I learned these truths in divine Science: that all real being is in God, the divine Mind, and that Life, Truth, and Love are all-powerful and ever-present; that the opposite of Truth,—called error, sin, sickness, disease, death,—is the false testimony of false material sense, of mind in matter; that this false sense evolves, in belief, a subjective state of mortal mind which this same so-called mind names *matter*, thereby shutting out the true sense of Spirit."

Again, on page 492, she declares: "The notion that mind and matter commingle in the human illusion as to sin, sickness, and death must eventually submit to the Science of Mind, which denies this notion. *God is Mind, and God is infinite; hence all is Mind.* On this statement rests the Science of being, and the Principle of this Science is divine, demonstrating harmony and immortality."

Much as critics have found fault with Mrs. Eddy's exegesis of Genesis and Revelation, as given in Science and Health, the fact remains that it is entirely consistent with a premise which honors God as no other premise honors Him, a premise from which is logically and scientifically worked out the healing of sickness and sin as Jesus healed them. We must always remember that our Master promised that such "signs" as he gave should "follow them that believe." In other words, the hall-mark of Christianity is the healing of sickness and sin through the same means which Christ Jesus employed.

That the healing work which Christian Scientists are doing today is being wrought out on this basis, is amply proved by the thousands upon thousands of testimonials which have been published in the *Sentinel* and other official periodicals, as is also the fact that it is being done through the understanding of the Scriptures which has come to them through their study of Science and Health.

ARCHIBALD MCLELLAN.

THE REWARD OF PATIENCE.

PATIENCE is undoubtedly regarded by many as a rather negative sort of a virtue, though such an opinion has no support in human experience or in the teachings of the Bible. The very fact that patience is none too easily cultivated goes to prove that it deserves to be classed with the rarest and sternest virtues; indeed, it is so classed by St. Peter in his wonderful second epistle, where he places patience between temperance and godliness, while St. Paul urges that we "be not slothful, but followers of them who through faith and patience inherit the promises." In another place he prays that the "God of patience and consolation" would enable the followers of Christ to be of one mind, that thus they might glorify God.

The most impressive teaching on this subject is perhaps Paul's statement of the absolute justice of God, "who will render to every man according to his deeds." The apostle goes on to make practical application of this great verity in these significant words: "To them who by patient continuance in well doing seek for glory and honor and immortality, eternal life." Then, after telling of the direful results of unrighteousness, he returns to the rewards of right doing and says, "But glory, honor, and peace, to every man that worketh good, . . . for there is no respect of persons with God;" in other words, the operation of divine law is unvarying, and what we most need is a clearer understanding of this law, and patient obedience to its every demand.

In studying the Christian Science text-book we find great emphasis laid upon the need of patience. On page 49 we have a brief yet comprehensive review of the Master's character and work, where Mrs. Eddy speaks of "his mighty works, his toils, privations, sacrifices, his divine patience, sublime courage, and unrequited affection;" and on page 242 she gives us the process by which we, too, may reach the heights of spirituality and be like the well-beloved. The passage reads: "In patient obedience to a patient God, let us labor to dissolve with the universal solvent of Love the adamant of error,—self-will, self-justification, and self-love,—which wars against spirituality and is the law of sin and death."

The thought of "patient continuance in well doing" is indeed an inspiration to all who may at any time be tempted to grow "weary in well doing," and Christian Science assures us that we need never fear lest faith should fail, since that which we most need can never be denied us by the Love that gives all. Paul asks if we despise the forbearance and long-suffering of God, or fail to see that "the judgment of God is according to truth." If we ever doubt this, we cannot work out our problems with patience, which does not mean with delay, much less with uncertainty, but rather with an absolute assurance of the triumph of good

Digitized by Google

in every human experience. Patient continuance in well doing implies ceaseless activity in all that is right,—in performing the duties of each hour, in striving to gain that healing which means wholeness, holiness, in throwing off "the encumbering mortal molecules, called man" (Miscellaneous Writings, p. 205), and in refusing to take on new burdens of mortal belief. We need to assure ourselves ofttimes of the unfailing activity of divine justice, striving meanwhile to reflect it in all we think and say and do. The same duty pertains to our recognition of divine Love, whose service brings the richest return that we can ever know. Christ, Truth, says to us today, as to John in Patmos, "Behold, I come quickly: and my reward is with me, to give every man according as his work shall be."

ANNIE M. KNOTT.

"NOW IS THE DAY OF SALVATION."

MORTAL belief makes its most confident assertion in the statement that at its best life must speedily yield to death; that "it is soon cut off, and we fly away." The general acceptance of this order of experience is no more certain, however, than is the fact that it is wholly out of alignment with the Scripture which declares man to be the image, the manifestation of eternal Life, and it has been made clear to all intelligent Christian Scientists that to be saved, in keeping with our Lord's teaching and demonstration, means the overthrow of the entrenched belief in the normality of a practically universal human experience.

When one thinks of the vastness of this issue, he can but realize that a more daring assertion was never made than that of our Leader when she took her unequivocal stand against the testimony of human history, experience, and philosophy, and averred that "to the real man and the real universe there is no death-process" (Science and Health, p. 289). The assurance of ultimate triumph over death as commonly held by professed Christians has not meant to them that death has no place in the economy of God, or that it should be eliminated from experience by being banished from belief, and just here the vital significance and searching detail of the teaching of Christian Science should be the better understood, for we remember that, according to physiologists, the belief in death comes into touch with the human sense of life at every point.

St. Paul's appealing cry, "Who shall deliver me from the body of this death?" seems peculiarly fitting when we thus think of the unequal and unpromising struggle into which men are precipitated by the educated beliefs of material sense, and especially when we remember that the great body of Christian people are accepting these false beliefs as of God and both binding and inescapable.

Christian Science has come to uncover the subtler reaches of this death-claim and to prove their nothingness in the presence of the realization of the omnipresence of Life. That death is ultimately to be triumphed over through faith, has ever been the gladdening assurance of creedal statement, but it has brought little illumination, inspiration, or stimulus to those who, as the result of their ignorance, or their devotion to material theories, have been "all their lifetime subject to bondage." Christian Science teaches that if the seeds of death are to be destroyed, it is through the understanding not only that there is and can be no collusion or copartnership between Life and death, but that "there is no reality in death, since the truth of being is deathless" (Science and Health, p. 427). When the perception is gained that the vaunted place and power of death is not grounded in reality, in Truth, but only in false material beliefs, the "today" of salvation is consciously entered upon in the acceptance of the logical and demonstrable truth of man's spiritual nature and inseparable union with God; that every element of his being is the manifestation of that eternal Life which knows no death.

This is the very heart of Christian Science teaching, and as it becomes more and more fully resident in consciousness, the false material beliefs about life and its subjection to decay and disease are cast out, the asserted death-process is arrested at its incipiency, and we begin to live "now," in God's appointed time. This is the tremendous vantage of the Christian Scientist, that he better understands the nature of his problem and can immediately begin its solution—begin the victory over death today, by beginning to know and to assert the truth about man as the reflection of Life. Thus do we obey the eternal mandate of Love, "Turn ye, turn ye, . . . for why will ye die."

JOHN B. WILLIS.

AMONG THE CHURCHES.

FENNVILLE, MICH.

The Fennville Christian Science Society have closed negotiations whereby they become the owners of the Dr. H. J. Turner property in this village. The consideration was $2,000. The family of the Rev. J. F. Thompson will occupy the eastern part of the house while the Scientists will have their rooms in the western half.

Fennville Herald.

OREGON CITY, ORE.

First Church of Christ, Scientist, in Oregon City, having outgrown its present accommodations, is preparing to erect a church edifice on its lot, which occupies a sightly and commanding location on the corner of Center and Ninth streets, overlooking the bluff and adjoining one of the best residential districts in the city. The excavating for the basement is finished, and the material is arriving for the structure, which will be a modern bungalow church, fifty-five by thirty-five feet. The reading-rooms will be in the church building, which is centrally located.

Correspondence.

EDINBURGH, SCOTLAND.

On Friday, July 1, at 8 o'clock in the morning, the corner-stone of the church building of First Church of Christ, Scientist, Edinburgh, was laid. The site of the church is in Inverleith terrace, opposite to the Botanical Gardens, commanding a fine view of Arthur's Seat and the Pentland Hills with the old gray city in the foreground.

A short service was conducted by the First Reader, consisting of selections from the Bible, silent prayer, and the Lord's Prayer. After that, three letters from Mrs. Eddy, received by the church at different times, were read; then the corner-stone of New Hampshire granite was laid by the president, assisted by the scholar who had been longest in the Sunday School. The repetition in unison of the "scientific statement of being" (Science and Health, p. 468) concluded the ceremony. The corner-stone, which was the gift of the Sunday School, contained a leaden casket, in which were placed copies of the Bible and of Mrs. Eddy's works, also of all the Christian Science periodicals, and the names of the members and officers of the church.

The building will be a simple, solid stone structure, capable of seating 636 people.—*Correspondence.*

SMALL QUARTERLY ONLY.

Beginning with the issue of January, 1911, the *Christian Science Quarterly* will be published in the small size only. Our readers will please note, therefore, that after that date orders for the large size cannot be filled.

THE LECTURES.

CHEYENNE, WYO.

A lecture on Christian Science was delivered at the Elks' Home by Judge Septimus J. Hanna, Sunday afternoon, Sept. 3. He was introduced as follows by Judge C. N. Potter:—

Religion or religious belief has such an important bearing upon the life of the individual, the community, and the nation, and is usually so dependent upon the influence of nativity, training, or environment, that the promulgation of a theory antagonistic to or in advance of preconceived ideas, is necessarily a profoundly significant event. It may become, so to speak, a new force swaying the heart and impulse of mankind so as to deserve and receive the most thoughtful and intelligent consideration. However skeptical one may be concerning the particular doctrines, creed, or faith of the Christian Science church, the fact cannot be mistaken or ignored that it represents one of the most remarkable movements of this or any age in the progress of religious thought—a movement which seems to one not professing a belief in its theories to appeal rather to the intellect than to the emotions, and to develop a deep spiritual insight, while seeking the promotion of the happiness, peace, and content of mankind by bringing the individual into harmony with divine Mind. In so short a period that it is one of the striking events of the present generation, the Christian Science faith and the Christian Science church have had a marvelous and substantial growth, and we have witnessed in that period the erection in almost every important center of population in this country of stately, beautiful, and commodious edifices devoted to Christian Science instruction and worship, all bearing testimony of the constantly enlarging circle of its influence, while the excellence of character, fervency of faith, and purity of life taught by the church and exemplified by its membership commands universal admiration.

One of the glories of our modern civilization is the spirit of toleration, guiding each individual and each organization to give respectful consideration to the religious opinions of others, while strenuously emphasizing and advocating his or its own. Knowing the good that is intended and has been accomplished by Christian Science, though not one of that faith, I esteem it an honor to have been invited to introduce to this assembly the distinguished gentleman who is to lecture before us, and expound for our instruction and benefit the fundamental truths of the faith which he so ably represents.—*Wyoming Tribune.*

NELSON, B. C.

Frank H. Leonard delivered a lecture here Sept. 20, to an audience of about three hundred and fifty people, in the old Congregational church, which is occupied by the Christian Science Society. The lecturer was introduced by William F. Cochrane, Second Reader, in the following words:—

The Christian Science movement, though somewhat new to us in Nelson, and of recent date generally, has assumed such dimensions, and is showing such astonishing vitality, that it has become of very general interest, and has occasioned an unusual amount of criticism from those who misunderstand its teaching and conceive that it is contrary to what they understand to be the teaching of the Bible. The object of these lectures is to give an authoritative presentation of so much of the subject as is possible in a lecture, in order to correct wrong impressions, mainly gathered from unfriendly critics, and not from an unprejudiced examination of the genuine literature on the subject.

It is not claimed that Christian Science is new, but that it is a restatement, suited to modern thought, of the truth taught by the Master nineteen hundred years ago, and subject to demonstration now as then. He said that certain signs should follow those who believed or understood his teaching, and that those who believed or understood should be able to do the works that he did, and even greater works, because he was going to the Father. Christian Science is not primarily an agency for physical healing. The healing is but a proof of its truth. We believe that Christianity is scientific, and that it is demonstrable, as is all science, in the measure of our understanding of it; that the works of Jesus were not supernatural, but divinely natural, and capable of repetition, as he promised, by those who understand and obey his teaching, and there is nothing to show that the power was confined to any particular period of the world's history, but is available now as well as nineteen hundred years ago.

I have personal reason to be thankful to Christian Science for restored health, and I also know of so many cases of wonderful healing of disease understood to be incurable by material means, that with me its truth has long ceased to be a matter of opinion only, but is a very solid conviction.

Correspondence.

SOUTH BEND, IND.

A lecture on Christian Science was delivered by Mrs. Sue Harper Mims at Oliver Opera House, Friday evening, Sept. 23. The opening address by John F. Gaylor was in part as follows:—

Christian Science has a message of good cheer and good hope, and to any sufferer here tonight, and to any one whose condition in life is one of limitation or discord or inharmony, the message of the evening comes with healing in its wings, offering freely an entrance into that larger and more abundant life of which Jesus spake and which he promised to all who should follow after him. Christian Science, in its beneficent ministry, requires something more of us than a blind faith or mere belief, for neither faith nor belief of themselves have power to correct the slightest ill. One single step forward, however, advancing from faith and belief into even a faltering understanding, brings a joy and a peace, a hope, and a degree of health which proves conclusively to its recipient that the Principle underlying his new understanding is founded on Truth,—as fixed and absolute and unchanging as God Himself.

So, in coming here tonight as you have, to learn of this greatest of all discoveries, to find, perhaps, if there may be that in it which will meet your own particular need, you have taken the step which may lead you out and away from many a cherished but profitless belief, up into an understanding of that divine Principle which we call God, and to which, in the language of Scripture, all things are possible, —even to the healing of our diseases.—*New Era.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Bay City, Mich.—Bliss Knapp, Masonic Temple, 3 p.m., Oct. 16.
Beaver Falls, Pa.—Rev. Arthur R. Vosburgh, Lyceum Theater, 3:15 p.m., Oct. 23.
Berlin, Ont.—Bliss Knapp, Church Auditorium, Water and Francis streets, 8:15 p.m., Nov. 1.
Birmingham, Ala.—William D. McCrackan, M.A., Bijou Theater, Oct. 30.
Braintree, Mass.—Willis F. Gross, Music Hall, Quincy, 3:30 p.m., Oct. 30.
Brockton, Mass.—Bliss Knapp, Music Hall, Ward and Main streets, 4 p.m., Oct. 30.
Bromley, Kent, Eng.—Bicknell Young, The Drill Hall, Nov. 8.
Brookfield, Mo.—Frank H. Leonard, Court Room, Oct. 25.
Chickasha, Okla.—Prof. Hermann S. Hering, Convention Hall, 8:30 p.m., Oct. 23.

CHANGE OF ADDRESS.

The mail and telegraph address of Clarence C. Eaton of the board of lectureship is now 719 Union Avenue South, Tacoma, Wash.

TESTIMONIES OF HEALING.

In offering this testimony for publication I hardly know where to begin, as there is no end to the good I have received through Christian Science. I have been led by ways that I knew not. Old thoughts have passed away, new and right thinking has made me a new creature.

Possibly few have had a more remarkable physical healing. Using our Leader's words, I had "committed liver complaint" (Science and Health, p. 431), and from the ill-boding results my offense in this line must have been grievous. From bilious attacks this disease had developed into what doctors call gall-stones, and if they know of anything else that can produce more violent suffering, I can only say I am thankful to have escaped it. In the winter of 1906, while suffering from this trouble, I came so near to death's door that practically all hope of my recovery was abandoned. An absent sister was wired for, and came to be with me, as my family all feared the end was near. After eight days of terrible suffering, the physician who had my case in charge called in three others; also one from another state (we having just moved to Nashville) under whose treatment I had been for four years. After due consideration, they decided that a surgical operation was my only hope.

Arrangements were made to this end, and in getting me ready for the ambulance the trained nurse mentioned that they were going to carry me to a certain sanitarium. I was unable to speak an audible word, but I felt a great dread of going there, and whispered to her the name of another hospital that I decidedly preferred. She made this request known to my husband and family and it was quickly granted, but the surgeon who was to perform the operation (possibly the most eminent in this state), declined to go to this hospital, saying he preferred to withdraw from the case if the patient were not sent to his own infirmary. (I was later told by our regular physician that this surgeon was rather glad to withdraw, as he considered the operation a most dangerous one, with practically no hope of its being successful, owing to my weak condition.) At this juncture another surgeon was called. When he entered my room, he had scarcely given me a second look before I heard him say, "There is a time for all things, but this is not the time for this operation." Upon his advice the operation was abandoned for the time being, and I believe that everything that conscientious and faithful physicians know how to do was done for my relief.

I seemed to get better, and was afterward able to be up and about for several months. Hoping I would continue to improve, the operation was still deferred; but in July of the same year (1906) I was again seized with suffering just as violent, and for which I then had absolutely no hope but the surgeon's knife. At the last visit from our physician he advised my husband as follows: "I have done all that I know to do. I have telephoned these other physicians, and they say there is no use of their coming again. Unless we have the operation there is nothing else to be done, and if she were my wife I should have it as soon as possible." Naturally I was much discouraged at this, coming from a doctor in whom we had the utmost confidence. I then determined to try Christian Science, having been told only a short time before that I could be healed by it. I had not even known that there were such people as Christian Science practitioners, much less that two of them were within six blocks of my home. I began to take treatment on Saturday after five o'clock in the afternoon, and before the following Wednesday morning I was well! I was absolutely healed, without one vestige of the disease left, and I can truthfully state that I have had no symptom of the trouble from that day to this.

Wonderful as it may seem, the physical healing is only a

Digitized by Google

small part of the Christian Science whole. The spiritual awakening that has followed the study of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, together with the Bible, cannot be given in words. Having both eyes and ears, I had been totally blind and deaf to the truth. "If therefore the light that is in thee be darkness, how great is that darkness!" Not for anything the world has to offer would I be back in the old state of ignorance. The Master said, "Not as the world giveth, give I unto you;" and added to this is the fact that the world cannot take his gift away.

MARGARET COLLEY TURNER, Nashville, Tenn.

It is now over three years since I learned of Christian Science, and it has made me the happiest, healthiest, and I believe one of the most contented men on earth. A testimony of my healing appeared in the *Sentinel* of Aug. 1, 1908; but I did not tell all that was overcome, so I am writing this with a hope that it may interest those who are thirsting for a better understanding of God and His ways. Besides being a physical wreck and a sufferer from sleeplessness for over a year, I also had a severe case of liver complaint, so serious that medicines had no effect; but as I began to study "Science and Health with Key to the Scriptures" and the Lesson-Sermons, in less than eight weeks my system began to work regularly and I have been in perfect health ever since. I can truthfully say that I have not reverted to any material remedies since I learned of this blessed truth, but have overcome these ailments simply by studying our text-book and constantly reading the *Sentinel* and other Christian Science literature. I used to frequent all-night sociables, where I would smoke, drink, and be merry; but Christian Science has helped me so that the smoking and drinking habits have vanished into nothingness, and instead of frequenting those places, I find more pleasure in going to my room after my day's work is over, where I now have better companions, with God, His Christ, and the Comforter promised by the Master and revealed in Christian Science.

Some time ago I had a most remarkable demonstration. In jumping from my wagon I severely injured my ankle. This happened on a Friday just about noon, but I continued delivery all that evening, getting off and on the wagon as best I could, continually declaring the truth and repeating the "scientific statement of being" (Science and Health, p. 468). When I got in that evening I hobbled to my room, a distance of seven blocks, and immediately went to work to treat myself, without the aid of a practitioner, and when I awoke the next morning my surprise may be imagined when I got up to find that the trouble had all vanished into nothingness. I am indeed thankful to God, and to our dear Leader for this blessed truth. I am giving out Christian Science literature on my various routes and wherever I can, and am doing just as our text-book tells us, "Give them a cup of cold water in Christ's name, and never fear the consequences" (*Ibid.*, p. 570).

IKE SAMUELS, New Orleans, La.

Four years ago, when I came into Christian Science, I was a very delicate girl. At the time, I was visiting some friends in another town who were not Scientists. All through girlhood I had suffered from an ailment which resulted in spasms of the heart and serious throat trouble. While down town one day I stopped at the Christian Science reading-room. The librarian talked to me very kindly and loaned me a copy of Science and Health to take home, and told me not to hurry with it. When I had read about half way through the book I was able to lay aside my spectacles, although at that time I was doing some very fine needlework. I had worn spectacles a little over seven years for far-sightedness and terrible headaches. I have never used them since, and that was five years ago last spring. Within two years from that time I was healed of the heart and throat trouble. I have changed so much in appearance and weight that all my friends are greatly surprised.

I would also like to tell of an accident that occurred over a year ago while at a friend's house. There was a heavy swinging door which I was about to push when it was accidentally pushed from the other side with such force as to throw me against the opposite wall. For a few minutes my nose was quite flat. That evening I went to see a practitioner—not for treatment, but to ask her advice. She said I could have the nose examined and set by a surgeon, if I so desired, and leave the healing to Science. The nose was said to be quite badly broken, in fact, a bit of bone was protruding through the skin, but I did not go to a surgeon to have it set. In eight or ten days the bone which had protruded disappeared, and in a little over three weeks all sense of pain to the touch was gone.

I was also healed in less than a week by the help of a practitioner from a painful injury to the foot, which was considered a very quick healing. With the exception of some deafness, of which I am improving, all my ailments have been healed through Science, and words fail to express my deep gratitude to divine Love, and to Mrs. Eddy, who through her wonderful life has shown us our birthright.

GERTRUDE LYDIA SOULE, Alameda, Cal.

Like many others, I have been helped so many times by Christian Science that I would like to give my testimony for the *Sentinel*, in the hope that it may lead some one into health and happiness as I have been led. About eight years ago it was brought to my notice by a dear friend, and through the study of our text-book and other Christian Science literature I have been helped over many rough places. I have been healed of a felon on my thumb. It appeared in the afternoon and I slept but little that night. Next morning the thumb was badly swollen and the pain severe. I saw I needed help and that afternoon I went to see a Scientist about twelve miles away. He took up my case, and both of us tried to realize that Truth would do the work. I slept fairly well all night, and awoke next morning to find the swelling greatly reduced, and I experienced but very little pain. I returned home that afternoon and rested fine all night, and arose next morning with a hand as whole as the other and no sense of soreness or pain. I was healed.

On another occasion I was putting the harness on a horse and the animal stamped on my foot, marking it seriously, and for a few minutes the pain seemed unbearable. Then the thought came to me that God is All, and in an hour the pain was about gone and I went on with my work. I worked in mud and water all day without any bad results, and next morning there was no swelling and only a slight sense of soreness. My foot was badly discolored from the bruise, but the healing was complete.

I could tell of many more blessings received through the study of Christian Science, for which words cannot express my gratitude to God, and to our dear Leader, Mrs. Eddy. I say to all who are searching for life and happiness, Take up the cross, bear it, and learn of God.

T. KEY, Hext, Tex.

Christian Scientists do not claim to be better than other people—just better than they were before they gained a knowledge of this healing truth. In taking an inventory of my consciousness, I am glad to find that while in my experience, since Christian Science entered it, no mountain-peaks of healing or deliverance rise up above all others, there has been continuing improvement in all ways and things which have gone to make up this experience.

It is good to count as blessings within the compass of several years, less of self and the clamor of fear, less of

Digitized by Google

unlove, unrest, and all the varying elements of the carnal mind, and more of joy and freedom, better health, higher morals, more harmonious conditions in the home, better results in business, more abundant supply, finer associations, more satisfying and helpful relationships, a higher appreciation of my fellow-man. Besides all this there comes enlarged capacity, greater breadth of thought, more serenity of mind—all in witness of some measure of spiritual understanding, activity, and growth, the entering in of the Christ-mind which Christian Science, through the study of its text-book with the Bible, holds for each and every earnest and persistent student. This attainment is clearly set forth on page 272 of Science and Health in the statement: "It is the spiritualization of thought and Christianization of daily life, in contrast with the results of the ghastly farce of material existence; it is chastity and purity, in contrast with the downward tendencies and earthward gravitation of sensualism and impurity, which really attest the divine origin and operation of Christian Science."

Christian Science has indeed unfolded for me "the life that maketh all things new," for which the gratitude expressed in words is but a poor return. The fruits of a life transformed—which I strive to bring forth—are a perpetual tribute to the "all-transforming Spirit." My appreciation for the life and work of our Leader grows with each advancing footstep toward the goal of Christlike living and doing.—GRACE POTTER, Portland, Ore.

In April, 1908, our two little girls had a fever. A physician was called, but the younger one, aged three, instead of recovering continued to suffer from various ailments until July, when she had a severe rheumatic trouble besides a return of the eruption. Later she was afflicted with boils, having as many as seven at one time. Her kidneys, stomach, and heart did not act right, and in October we were greatly discouraged when we noticed that she was becoming mentally impaired. She was constantly under the care of physicians, who did all they could for her. It is needless to write of the constant suffering, day and night, with almost no rest, and she had to be carried and cared for like a babe. This was her condition in November, when the physician advised us to take her to Hot Springs; but we turned to Christian Science, though with faint hope of receiving help. We are glad to state that after the first treatment the child rested better than for five months. The kidney trouble and eruption disappeared the first week, and in less than three weeks the child walked eight blocks continuously without asking to be carried. She had treatment for five weeks, and every trace of disease was destroyed.

We are sincerely grateful for the blessing that Christian Science has brought us in the restoration of our child to health, and we wish to express our gratitude to Mrs. Eddy, who has enabled us to realize that God is truly "a very present help in trouble."

O. C. MUSSELMAN, MRS. STELLA MUSSELMAN, Yonkawa, Okla.

Six years ago I went through an operation which I was in hopes would make a strong woman of me, but as time went on I found that I was just as great a sufferer as before entering the hospital. As this state of things became more and more apparent, I began to grow despondent, irritable, and moody, and I realized that a crisis had come in my life, on whose issue my whole future happiness hung. Just at this time a friend, without knowing my state of mind, suggested our visiting the Christian Science church. That evening I attended a testimony meeting, and there met one who afterward became my faithful practitioner. In one week's time my healing, physical and mental, was so wonderful that my husband accompanied me to the church, where we have since become members.

Eight months from that time my husband changed his business and secured an income far beyond anything we had thought possible. Things went along smoothly for some time, and then a dark hour came when everything was gradually taken away from us. Conditions grew from bad to worse, until I was really more wretched than when Science found me. At length, one day, when far removed from the practitioner who had treated me, humbled and absolutely broken in spirit, I fell on my knees and cried to God to show me light. Like the little child that He would have me be, I knelt there waiting—waiting for my answer—and the great Love that never fails in our hour of need, heard and answered me. It was as if a heavy veil was lifted from me, and I for the first time saw my true self, and there was but one word that would describe the opposite mortal concept, viz., "ingrate."

In vain I looked for one instance where I had in some measure given, for all I had received, but with shame I realized that there had been nothing but carelessness, neglect, and ingratitude for all the health, wealth, and happiness that Love alone could bestow. I understood at last that the demonstration from the first had been made through another's understanding of the truth, and not through any work on my part. That hour of humiliation saw the birth of the Christ-idea in my consciousness, and with the peace "that passeth all understanding," I arose a little child indeed, willing, eager to be led, guarded, and guided by the one Father-Mother God. I took up the Bible, our text-book, Science and Health, and the *Quarterly*, and began to work. From that day my understanding has grown, and today I can truly say that I have a firm foundation which nothing can overthrow, and I thank God for the truth which in every hour of bitterness, pain, and misery helped to lead me from darkness into light.

I know that if one heart can speak for many, our beloved Leader, Mrs. Eddy, is blessed hourly by a gratitude that can only find expression in working faithfully for that Mind to be in us "which was also in Christ Jesus."

GERTRUDE H. FRENCH, Englewood, N. J.

Through Christian Science I have been taught how to love others, and of all the blessings I have received this is the most wonderful to me. The little reflection of Love that I am now able to manifest has destroyed so much hatred, envy, and selfishness that my gratitude is unbounded for the peace and happiness I have received. I still have much to overcome, but I know that by reflecting divine Love every seeming evil can be destroyed. I have also had many physical healings, and for all these blessings I am very thankful.

MRS. AGNESE R. COWLES, Kansas City, Mo.

[Translated from the German.]

In November, 1908, I had a severe trouble in the ear, to which I paid little attention at first. My condition grew much worse within a few days, however, and as I suffered severe pain, I had to apply to a physician, who stated that the disease was in an advanced stage. I remained under treatment for several weeks without improving. There was a profuse discharge from the ear, and the pain did not grow less, while I was losing strength all the time. My attention was then called to Christian Science. I asked for treatment, and within a few days the pain disappeared. The sense of hearing, which I had completely lost, was restored and my strength returned, so that I was able to resume my work even before the disease itself was overcome. In three weeks' time I was absolutely well, for which I am deeply grateful. I thank God for Christian Science.

ALFRED SPRENGER, Breslau, Germany.

Digitized by Google

I consider it a great privilege to be afforded an opportunity to tell my experience, and to express gratitude for Christian Science. My family and I have been interested in this always practical and operative religion over eight years, during which time Christian Science has destroyed every manifestation of discord that has presented itself in our household. We became interested through the healing of a very dear friend, who suffered intensely from a malignant growth. She had been operated upon twice for the disease, and was in dread of a third operation. She was perfectly healed in three months, and is now a Christian Science practitioner in Los Angeles.

When I decided to try Christian Science, the first move that I made was to throw away a surgical appliance that I had worn for years, as I was suffering from a trouble for which I had been operated upon, and was expecting to undergo another operation for the same trouble. I also threw away a large supply of medicine, and am thankful to say that I have never needed any material remedy since. I took the "scientific statement of being," as given on page 468 of our grand text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and earnestly strove to realize the infinite completeness of those wonderful statements, and with the assistance of a most patient practitioner, I was completely healed, and have remained so.

My wife has been healed of many ailments, recently having sent in her expression of gratitude to the *Sentinel* for the many blessings she had received. Six years ago, our son, who was then eight years old, was perfectly healed in forty-eight hours of a fully developed case of fever, experiencing no after effects whatever.

I also wish to say that the application of Christian Science in my daily business life has been of very great value in removing fear, doubt, worry, impatience, and the many mortal mind manifestations. With the removal of these disabilities my business has become more prosperous, and my daily blessings are innumerable. For this moral and physical regeneration I am indeed profoundly grateful to God, and also to Mrs. Eddy.

C. E. MILLSPAUGH, Los Angeles, Cal.

Several years ago my sister sent for me, and when I reached her home I found her little daughter, about six years of age, ill and in bed. At the first glance it appeared to be a case of jaundice. My sister was just becoming interested in Christian Science, so she asked me to treat the child. Previous to accepting Christian Science, she had treated the children's minor ailments according to the rules of a homeopathic doctor's book, and she said that the child's symptoms seemed even worse than those described in the book.

After treating the child awhile, I read aloud to her from "Science and Health with Key to the Scriptures" by Mrs. Eddy. She seemed too young to understand it, but I knew that many others besides myself had been healed by reading that book, and I felt sure it would help her, should my own understanding not be sufficient to meet the case. After awhile I asked her if she would like me to read to her from another book, but she said, "No, I want you either to treat me or read to me from Science and Health."

The child seemed to know where the healing was to come from. It was a little after noon when I reached there, and about evening when I left, and all of the time was spent in treatment or in reading from the text-book; yet I was almost discouraged, for she seemed nearly as bad as when I found her. But I went resolutely home, knowing that though I was not with her, God was still there. I continued to work for her at intervals until I went there again about nine the next morning. On my way there the thought kept coming that no matter what the appearance might be, it is God who does the work, and He will not leave her. Her little sister opened the door for me, and with eyes dancing said, "I've a surprise for you upstairs." Sure enough, there was the sister dressed and walking about the room. She still seemed a little weak and did not attend school that day, but every symptom of the disease had disappeared and did not return.

The many lessons learned while working over this case have helped me in numerous ways since then, so I am not only grateful for the healing, the proof that God is Love and that He is ever with us, but also for the clearer understanding that came with it. May this tribute of gratitude to God and to Mrs. Eddy help another who is just learning of this healing truth.

MISS LEILA M. WHITE, Baltimore, Md.

[Translated from the German.]

It is with a sense of deep gratitude that I testify to what Christian Science has done for me. When I was a year old, an operation was performed on the left leg, which, however, remained weak, and flat feet resulted, so that it became necessary for me to wear a special shoe. During the time I attended school I suffered greatly from headaches, which grew worse in the course of years, and I was weakened in mind and body through disease. Eight years ago it again became necessary for me to undergo medical treatment for the foot, as walking had become very difficult. All sorts of material remedies were resorted to, but without success; my condition rather grew worse, as for a time I could take scarcely any nourishment. The stomach was weak, in short the whole organism did not perform its functions properly, and there were days on which I was almost unable to attend to the necessary household duties. In spite of the kind efforts and advice of various reputable physicians of both schools, I did not get well. I then was advised to take other treatment, which I did, but I was not healed of my diseases. I became greatly discouraged, as I saw that in spite of the great patience and endeavors of the one who was trying to help me, the various troubles kept coming up.

At that time I became acquainted with Christian Science, and gradually learned that God, infinite Principle, is the only healer, and that He is an ever-present help in time of trouble. After the first Christian Science treatment I improved perceptibly. The practitioner explained to me this healing method, and gave me some copies of *Der Herold* to read. (To this publication I later subscribed.) Through having treatment once a week, which consisted solely in having the teachings of Christian Science explained to me, and through the reading of *Der Herold* and other Christian Science literature, I began to understand that God has made man whole, and that he cannot be made sick. I endeavored to apply in a practical way what I had heard and read. At first I worked with a sense of will-power, but not long, it being explained to me that I should make no progress in following such a course. I resolved to work quietly and patiently, and soon had good results, being able, with my small understanding of Science, to overcome a minor as well as a more serious ailment.

One night I awoke with severe cramps and some alarming symptoms. Without permitting fear to take hold of me, I began to declare the truth, and after about five hours I was able to sleep. On the following day I again had to work against the attack, until it was completely destroyed. It became clear to me that we are helped when we turn to God with firm trust, neither must we forget that it is God who heals, and not man. After I had been treated for some time, it was thought that my understanding of Christian Science was sufficient for me to do my own work. I owe my comparatively rapid growth in the understanding of this truth to the explanations given me, and I also derived much benefit by attending the services regularly.

I have often had good results since. As I had already

Digitized by Google

been compelled to give up most worldly pleasures, and had but little faith in medicine, it was a comparatively easy thing for me to part with the material. I was still wearing the supports in my shoes, when it dawned upon me one day that I did not need them; but some time elapsed before I was able to lay them aside. Although the trouble tried to manifest itself several times, it could not assert itself. Through the foot trouble I had become somewhat one-sided, but was healed of this condition through the power of Truth, and I have learned enough in Christian Science to know that one should not and indeed cannot force anything, for we are freed from our diseases only through the understanding of the allness of good and the nothingness of evil. Through perseverance we win the victory.

I now enjoy the good health for which I had longed, and earnestly strive to live in accordance with the teachings of Christian Science. The power of Truth has not only made me strong physically, but spiritually as well, for which I owe a debt of gratitude to God, and also to the Founder of Christian Science, Mrs. Eddy.

FRAULEIN AMELIE DECK, Basel, Switzerland.

It was not the physical healing which attracted me to Christian Science so much as its scientific statement of Principle. About two years ago, after beginning the study, I was exposed to smallpox from my brothers, who were affected with the disease. Nine days afterward, when at a town thirty-five miles distant, I began to manifest the symptoms, and a fever set in. It was January, but by the aid of Christian Science I was able to return the next day to my home, riding the thirty-five miles in the cold weather. The next day I kept my bed, but the third day was up and out, and though I had considerable fever I did not have the weakness and other symptoms which my brothers had. On the fourth day I resumed my work as usual, as well as ever.

FRANK B. WARREN, Montrose, Col.

I had been interested in Christian Science but two years when my first child was born. My relatives and neighbors, except my husband, opposed my having its treatment, but without making it known to them I placed myself under the care of a practitioner at a distance from my home. When the time of delivery arrived, I had a slight pain, which proved to be the forerunner of the birth, and that came on normally and was entirely painless. There were none of the bad results which often follow childbirth, and I have had other children born since with similar results. I am perfectly well and healthy.

MRS. ANNA M. WARREN, Montrose, Col.

NEW PAMPHLETS.

Now on sale are three new pamphlets: "Seeking and Finding," "Prayer and Healing," and "The Divine Nature." Each pamphlet contains five to eight articles that have previously appeared in the *Journal*, *Sentinel*, or *Monitor*; and they are particularly suitable for handing and sending to inquirers or persons who are becoming interested in Christian Science.

Hereafter, the price of all pamphlets (except "What our Leader Says" and "Christian Science and Legislation") will be reduced to 5 cents a copy; 55 cents a dozen; $2.00 for fifty, and $3.75 for one hundred. Hereafter, also, the republication in the English language of single articles as "tracts" or "reprints" will be discontinued. It is believed that their place is better taken by the daily article on Christian Science in the *Monitor* and by these new pamphlets and others that may be issued.

FROM OUR EXCHANGES.

[*Christian Commonwealth.*]

In these days the idea of God is undergoing perhaps the profoundest transformation in its history—from transcendence to immanence. This, we must remember, is a symbol, an image, a metaphor, just as much as the thought of God as a man limited and local, as a rock, a high tower, a refuge from the storm and heart of life. It is easy to point out the absurdity of the doctrine of immanence if you forget that it is a metaphor. Immanence means indwelling; but since God is Spirit He cannot occupy space and cannot be diffused throughout the world or dwell in the world. All symbols fail to express the ineffable. "Immanence" does not denote a particular metaphysical theory; it sums up and unifies the whole modern outlook upon life and the world. A great change is taking place in men's thought of God, but this change is not due to the influence of speculative philosophy merely, but to all the manifold and tremendous influences of modern civilization. It summarizes and unifies a great spiritual progress, it marks a great stage of race evolution, and measures centuries and ages of spiritual development.

[Rev. J. A. Ross in *Christian Register.*]

The scribes teach with a certain authority, an official authority, to which was added the authority of a law handed down by tradition, and blindly adhered to because it was so ordered by the ecclesiastical organization to which the individual happened to belong. Not so Jesus! He makes slight use even of the authority of miracles. He has no backing of the church. In fact he was outside the church. He was the heretic of that day. He is his own evidence. The authority with which he teaches is the appeal to the individual soul, the light from heaven, but the light shining into and illuminating the soul, the light which lighteth, not the church, but the man. "Follow me," is the call. The emphasis is on the "me." The teaching must subjugate and carry captive the soul. It must be the full and hearty assent of my soul, and not the implicitly accepting and devoutly cherishing what is handed down by tradition, as I lovingly and carefully cherish the heirloom in the family because of tender associations connected therewith.

[*British Congregationalist.*]

Till we know how to act in cooperation with God, and to discern His voice, we must wait; till we know the one thing needful, it is vain to do something wildly and noisily. It is to sin against the science of our Christian life. But it may be true after all that we must do something. We must do the one thing needful; we must recover our lost insight, and to this end we must do this first and last and this only, we must return unto God in Christ Jesus, and adjust ourselves to His revealed will. We must pray. Then in His good time He will call us to an enterprise at once quiet and convinced and fearless and restful. The time spent in waiting will not be lost, though more of our number fall away and the hours of humiliation linger. One day, by the mercy of God, out of the darkness we shall see flaming once more the pillar of fire, and then the people of God will move in quietness and confidence.

[*Universalist Leader.*]

Labels have ceased to be definitions. Denominations are no longer sects. There is, however, one line of cleavage that grows increasingly apparent. It makes a classification by tendency instead of by tradition. It separates the churches of the backward and the forward look. The church of the backward look neither cares nor dares to face the future. If it moves at all, it is because it is dragged forward by the course of events. It is a religious almshouse in which those who have become spiritual paupers end their

Digitized by Google

days in drowsy idleness. Whatever prosperity it has is disquieting, because it is a sign of increasing spiritual poverty.

[*Interior.*]

The Edinburgh conference revealed that there is a profound unity of all believers in Christ which overmasters differences. Disagreements as to doctrine and organization need not mean division in service. On the platform of common obedience to the same command, High Church and Low, Calvinist and Arminian, Presbyterian and Congregationalist, may stand together. The dominance of the surpassing vision of the Redeemer showed a new route to victory; and wrought the wonder for which this church council will always be notable. A deep loyalty to Jesus Christ appeared on every side. He is still the Lord and Master of loving, heroic hearts. The passion for him was the brightest of all the beacons that shone on this height.

[Rev. Charles F. Aked in *Christian Advocate.*]

The man who yields himself in simple loyalty to Christ and seeks to live in his spirit, is a medium of light, a source of health, a center of knowledge, a saving energy, a redemptive force, a tendency making for righteousness and making for love. Each one who has come out of selfishness into service has become a savior. He has crossed over from the side of things which spoil and lay waste and destroy. He is one with all good men everywhere,—all good movements, all angels of heaven, all operations of God for saving men.

[*Zion's Herald.*]

The Bible is a fascinating book when properly studied, when it is found to break up into a collection of separate volumes, which may be called so many interpretations of religion from various human standpoints, yet all converging on a redemptive consummation, and all directed by the wisdom of the divine Spirit. The Bible is many books in one—hence its universality; and it is one book in many—hence its integrity and its authority.

[*Christian World.*]

The preacher who has conquered for himself his own bit of spiritual territory, who has found truths by living them, who knows the ground round his own heart's dwelling-place, may be always sure of response. His message, because it is true in that region, will, although he may not know it, fit in always with the universal scheme, for it is part of it. This is why humble, uncultured souls can speak with profit to the greatest intellects.

[*Watchman.*]

The burdens of labor and the worries of business are not caused by the efforts needed to live, but by those required to live as others live. It is not the high cost of living which is so heavy, but the cost of high living. The souls that dare to live the simple life are the free spirits. The complex life is slavery.

[*Universalist Leader.*]

There is a spirit in man. Some men hide this spirit in gross and sensual excess, until their bodies become corrupt and vile. But other men make their bodies the instruments for revealing the spirit and for expressing the character incorporated in them.

[*Examiner.*]

All vital religion is the fruit of the Spirit. To the degree that any man, in any age or in any part of the world, has been sensitive to divine breathings and responsive to the calls and visions of God, has he been moved by the Spirit.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

TO SUBSCRIBERS.

Subscribers to our periodicals are requested to observe the expiration dates of their subscriptions, as given on the wrappers of the periodicals which come to them, and to renew subscriptions prior to the date there given.

The notation "Nov. X" indicates that the periodical will not continue after the last issue of November, 1910, unless subscription is renewed, and "July XI" in the same manner denotes termination with the last issue of July, 1911.

Subscribers are also requested to refer to the subscription rates given in our standing notices before sending in subscriptions.

NEW POST CARDS OF THE MOTHER CHURCH.

Post card photogravure, in sepia tint; an exact reproduction of the large photogravure of The Mother Church Buildings and Publishing House with parkway in foreground.

Single copy	$ .05
Twenty-five copies	1.15
One hundred copies	4.25

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES." MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2, six months, $1.20. Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Definite standards of safety appliances to be attached to railway cars and locomotives finally have been agreed upon after nearly a third of a century of effort. It is estimated that the proposed changes in equipment will cost the railroads about fifty million dollars. The agreement was reached by a committee appointed a short time ago by the interstate commerce commission. The committee consisted of fifteen men, equally divided between representatives of the operating departments of railroads, safety appliance inspectors of the commission, and railroad operatives. Radical differences of opinion and judgment were met by concessions. The agreement applies only to new equipment, but the commission, from time to time, will determine what the standards shall be on the present equipment. The effort to force the railways to adopt safety appliances goes back many years. The first step was the safety appliance law, which required the gradual equipment of cars with airbrakes. The railroads constantly disputed the orders of the commission. This agreement is a tardy recognition by the railroads that they must do something to prevent the terrible loss of life on American transportation lines. During the year 1905 seven hundred and fifteen persons were killed in collisions or derailments and five thousand five hundred and sixty-five injured.

A conspiracy on the part of railroads to deprive western grain shippers of the advantages of cheap water transportation and to drive the grain transportation business from the Great Lakes, is charged in a petition filed with the interstate commerce commission by the Chicago board of trade. The complaint is directed against the Pennsylvania railroad, the Baltimore & Ohio railroad, the New York Central and seventy-four other railroads operating east of Chicago and other Lake Michigan and Lake Superior points. It is represented that "by reason of a conspiracy on the part of defendant carriers, substantially all means of all-rail through transportation from Chicago to New York and other Atlantic seaboard points, and also all parallel and competing through lines of transportation *via* the Great Lakes from Chicago and other lake points to Buffalo and from Buffalo to New York and other Atlantic seaboard points, are owned and controlled by the defendant carriers."

William R. Hearst has offered a prize of fifty thousand dollars for the aviator who first flies between the Atlantic and the Pacific oceans. The contest opened Oct. 10, 1910; closes Oct. 10, 1911. The flight must be made in seven hundred and twenty continuous hours, or thirty days. The start must be made from Boston or New York City, and the finish made at either Los Angeles or San Francisco, Cal., or *vice versa* from west to east. A landing must be made in Chicago on the way. It is optional with the contestant to choose any route; to stop as often or as long as he pleases; to make flights of any distance or duration, providing the entire distance is traversed in consecutive point to point flights within the time limit.

The war department at Washington has given its approval to the most important part of the new harbor line of East Boston, on which hinges the scheme for an extensive development of Boston's commerce and water-front industries. This will make it possible to go ahead with the construction of the new immigrant station and to start the immediate development of docks and other facilities. It is understood that the rest of the line, as recommended by the Chamber of Commerce and adopted by the Massachusetts Legislature, will be formally ratified by the Government engineers after further plans for the development of the locality have been perfected.

In an action for fire trespass on the Black Hills national forest, brought by the United States against the Missouri River and Northwestern railroad, the jury has awarded damages to the Government not only for the loss of merchantable timber, but also for the destruction of unmerchantable young growth. This is regarded by Government officials as establishing a very important precedent. So far as is known it is the first time that any court has recognized what foresters call the "expectation value" of young growth as furnishing a basis for the award of damages.

The supreme court of the United States has reassigned the hearing of the tobacco cases and the Standard Oil cases under the Sherman anti-trust act to Jan. 3, in order that they may be heard before a full bench. The corporation tax cases have been set also for the same date. The boycott and contempt cases arising out of the injunction proceedings in the District of Columbia against the American Federation of Labor by the Bucks Stove & Range Company of St Louis were reassigned to be heard on Jan. 16.

An examination of the Boston customs service has been started. The special agents are required to make examinations of all official books, papers, and accounts of the officers of the port. They will examine the collector's office, the appraiser's office and the surveyor's office, the operation of inspectors on the steamship docks, inspection of baggage, and finally the office of the naval officer who has charge of the accounts of the port.

The United States has eight telephones to every one hundred inhabitants. No other country has half as many. Canada stands second and Sweden third. Germany has as many telephones as the state of New York, and Great Britain as many as Ohio. Chicago has more than London and Boston twice as many as Paris. In proportion to her population, Europe has only one thirteenth as many.

The supreme court of the United States, presided over temporarily by John M. Harlan, as senior associate justice, opened the October term on the 10th inst. and prepared for what is likely to go down in history as one of the most important years in the record of that judicial body. Charles Evans Hughes, formerly Governor of New York, took the oath of office.

Walter Wellman and his daring crew started from Atlantic City, N. J., on Saturday, Oct. 15, at 8.02 a.m., in his great dirigible balloon for a trip across the Atlantic. On Sunday about noon he was reported by wireless as having passed Nantucket island, distant about three hundred miles from the starting point.

Official tabulations show approximately eleven hundred national and state banks in operation in Texas on Oct. 1, with approximate deposits of one hundred and ninety million dollars.

Twenty national bank examiners, about one fifth of the force employed by the Government, have been transferred to new fields by an order from the controller of the currency.

The total receipts of the missionary board of the Congregational churches of the United States for one hundred years have been $40,-101,789 43.

International.

The island of Mytilene or Lesbos, lying in the Ægean sea, within about ten miles of the coast of Asia Minor, to the north of the Gulf of Smyrna, will shortly have the distinction of being the first of the islands of the Grecian archipelago to possess a railway. As soon as the necessary authority has been received from the Turkish government, the order for the construction of the line will, it is understood, be placed with a firm of British engineers. Although covering not more than six hundred and seventy-six square miles, the inhabitants are prosperous, the majority being farmers occupied in cultivating vineyards and olive plantations.

The government bill for a graded land tax has passed the second reading of the Australian Parliament. The bill is a comprehensive one, covering both urban and country property, and has some drastic provisions, providing even for compulsory sale under certain conditions.

Industrial and Commercial.

Another source of crude rubber supply, recently discovered in Mexico, is the palo amarillo tree, which grows wild over an extensive territory bordering the Pacific coast, and extending toward the interior as far as Guanajuato. The commercial possibilities of this tree as a producer of rubber have been thoroughly tested by the Mexican government and by representatives of large American interests that are investing considerable capital in the new industry. The palo amarillo tree bears no resemblance to the guayule shrub, and it is also of a different species from the rubber tree of the tropical regions of Mexico and other countries. It attains a height of about thirty feet and is of rapid growth, reaching a commercial size in five years. It is tapped in a manner similar to that of the rubber tree, and produces a large flow of elastic fluid at each tapping. It is stated that the tree will stand several years' constant production without being injured. The fluid contains an average of ten per cent of rubber and twenty-five to forty per cent of resin, the latter product being of value for various purposes.

There are in India one hundred and thirteen million acres of waste land, according to *Pioneer*, which, if planted to cacti, might add in four years' time a sum of £17,327,000,000 to the wealth of the country. It points to the success which has attended the growing of cacti on the inferior tracts of land in the United States. The fruit has been found to contain not only an excellent coloring matter for jellies, but six different kinds of sugar, capable of being turned into alcohol. Experiments made disclosed the fact that denatured alcohol, to the value of some one hundred and fifty pounds the acre, could be obtained from the plants after an average growth of about four years.

There were afloat in ten vessels last week 213,500 barrels of Almeria or Malaga grapes, all bound for New York with the exception of twenty-five hundred barrels for Philadelphia and seven thousand for Boston. The Spanish grape crop is quite a large one this year, much above the average, with an estimate of five hundred million pounds.

Upon some of the farms in the lower Rio Grande valley of Texas more than five hundred bushels of sweet potatoes to the acre have been harvested. They are being sold at a dollar to a dollar and a half the bushel.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE DIVINE REMEDY METAPHYSICAL NOT PHYSICAL.

SUE HARPER MIMS.

IN that very remarkable 4th chapter of Zechariah we read the word of the Lord to Zerubbabel, "Not by might, nor by power, but by my spirit, saith the Lord of hosts;" and today as never before thoughtful Christian people are asking, Is there power in Christianity to meet every human ill? Does the Bible teach any other than spiritual ascendency over material obstacles? Is this remedy universal, is it metaphysical and spiritual, not physical or material?

Nothing more deeply concerns humanity than these questions. As we see a seeming increase in epidemics, and a growing ascendency of material methods for relief and prevention invading every avenue of human experience, we are led to ponder deeply these things. Is not our God "a God at hand"? Do we forget that obedience to the statutes of God was the only basis on which the diseases of Egypt were kept from the children of Israel? Are we oblivious of the triumphs of the prophets and the glorious example of the master Christian, who overcame sin, disease, death, the grave itself, by spiritual means, the utilization of that "law of the Spirit of life in Christ Jesus," which, St. Paul says, "hath made me free from the law of sin and death"? Where is our ever-present God, the lawmaker and governor of man and the universe, the only cause and creator? Why do we declare with the lips that God is infinite, omnipotent Spirit, and then recognize a reign of discord, disease, misery, and death? Where is our logic? Where is the spiritual discernment that separates between the seen and the unseen, the false material evidence and the spiritual facts of being? Are we not admonished to "look not at the things which are seen," because they are temporal, but rather to fix our gaze on the unseen and eternal? Jesus said, "There is one good, even God."

Surely "the time for thinkers has come. . . . Ignorance of God is no longer the stepping-stone to faith" (Science and Health, Preface, p. vii.). Mrs. Eddy has aroused this age to a more profound contemplation of a spiritual, primal cause, whose effects must logically correspond to that cause. This logic, so simple, so profound, is the *Logos*, the Word, the wisdom of God, that heals the sick and reforms the sinner, even according to the Scripture, "He sent his word, and healed them." According to this logic, if God is Spirit, then man and the universe must be spiritual and perfect, because the Father is perfect. Here we begin to glimpse the spiritual idea or true thought which must correct and displace a false, material, mortal concept of God's man.

In seeking a remedy, we must needs look not at effects, but for the cause of the error to be remedied. Jesus said, "Every plant, which my heavenly Father hath not planted, shall be rooted up." In Romans (1st chapter), St. Paul sums up in masterly detail the awful results of sin, and shows us the seeming cause for this inversion and perversion of existence, and states the cause or origin of the appalling facts in these words: "For the wrath of God is revealed from heaven against all ungodliness and unrighteousness of men, who hold the truth in unrighteousness; . . . Because that, when they knew God, they glorified him not as God, . . . Professing themselves to be wise, they became fools, and changed the glory of the uncorruptible God into an image made like to corruptible man, and to birds and fourfooted beasts, and creeping things." Here the apostle clearly states the cause of all earth's wretchedness and sin; and since the Scriptures teach that sin brings death, then sin, disease, and death are part of this poor, fleeting, material, false sense of existence.

We are also told that this carnal mind is enmity against God. If, then, this perversion and inversion of truth is the explanation of human tragedy, where shall we find the one remedy? The answer is brought us today by Mrs. Eddy in her statement of Christian Science. It is the glorious revelation of Truth in righteousness. She declares for the incorruptible God and His spiritual, deathless, incorruptible man and universe. With invincible logic she shows the impossibility of divorcing cause from its effects, even as did Jesus when he said, "Be ye therefore perfect, even as your Father which is in heaven is perfect." She shows that a false belief about God and man can be corrected and remedied only by the true idea of God and man and the universe. As the remedy for this seeming separation from God and condemnation of material man, as narrated in the 2nd chapter of Genesis, Mrs. Eddy says that Jesus "threw upon mortals the truer reflection of God and lifted their lives higher than their poor thought-models would allow,—thoughts which presented man as fallen, sick, sinning, and dying. The Christlike understanding of scientific being and divine healing includes a perfect Principle and idea,—perfect God and perfect man,—as the basis of thought and demonstration" (*Ibid.*, p. 259). She clearly shows the conflict between the flesh and Spirit to be between a false thought or belief about God and man, and the spiritual fact or truth about God and His glorious creation or manifestation, and that the spirituality of God's universe is the tremendous fact of creation.

The mission of the "Spirit of truth" as defined by Jesus is to show us plainly of the Father. Christian Science teaches that God, who is Spirit, Life, Truth, Love, is also the only Mind, the Mind that was in Christ Jesus: and we are commended to have that Mind,—to be likeminded. This creative Mind fills the universe with His own ideas, individualized and characterized by intelligence, and this is the truth of being which must supersede the carnal mind and its corruptible phenomena,—all that is material, physical, diseased, and dying. This healing truth is made available to us through the invitation and illumination of Christian Science, which reveals the mental process of "dying daily" to a false sense, thought, or concept of man and the universe, and of rising in newness of life, as did Paul, to "walk not after the flesh, but after the Spirit," since "the natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned."

It was Phillips Brooks who said that "all great truths are very simple," and Mrs. Eddy in her writings shows us that the redemption of humanity can and must be wrought out by the simple exchange of a false thought for a true, immaculate idea or concept of being. This putting off of the old man with his deeds of sin and death, and putting on of the new Christ-man or true thought, heals the sick, sinning, earth-bound human consciousness, and brings the glorious freedom of manhood in Christian Science. This uprooting of false knowledge, and the replanting of human consciousness with the fruit of "the tree of life, which is in the midst of the paradise of God," is the most glorious work in which humanity can engage. Silent as the dew and tender as the starlight, it has the very potency of omnipotent God, of the Mind that is Spirit and Life.

LIBERATION.

CAPT. FAITHFULL CUMBERLEGE.

THE student of Christian Science soon learns that both the letter and the spirit are essential to the successful practice of Christian healing. The letter is truth reduced to human understanding; the spirit is the reflection of divine Love. Without Love to give it life, the letter would be only a useless imitation of truth, having none of truth's vitality or power. It would then be the letter that killeth, that would lead men away from rather than toward Truth.

But, fortunately for mankind, omnipresent Love is never absent, however much it may in belief appear otherwise, and some measure of Love's sunshine and peace invariably brightens the heart that submits, however slightly, to its inspiration and guidance. Yet even Love reflected would lack the "greater works," if it could be parted—as in belief it often seems to be—from its intelligence, the divine Mind, the absolute Truth; while the letter alone never yet healed anybody or anything. Hence the wanderer on this earth must seek to know the science of Truth as well as the love of Love, else he is almost helpless to combat the errors of mortal mind.

All human beings begin their conscious and systematized fight with the flesh from the standpoint of seeming lack of both of these qualities, truth and love. Probably the majority lack one rather than the other. If this is so, it is tolerably certain that most individuals lack love even more than truth, for intellect is the predominating boast of the human race. In Science and Health we read (p. 327): "Reason is the most active human faculty." Experience endorses this view emphatically, and leads on to the conclusion that mankind perceives more about truth and love than they can or would care as yet to practise; while, to judge by the repeated exhortations of Jesus and of the New Testament writers, the need of loving more, as a means to salvation and health, was as little understood then as now.

Love is wholly unselfish, whereas the suppositious human mind is essentially self-centered, owing to its finite nature. The human mind believes wrongly that its existence depends upon its own fleshly body, and that it is thereby in constant peril. It believes falsely that there are other human minds, each having a separate fleshly existence, and that they can do one another mortal injury. This mind thinks, incorrectly, that it can be deprived by its brethren of all that it needs for its sustenance, that it can improve its own position at the expense of its fellows, and *vice versa*. Is it any wonder that the things it so greatly fears come upon it, and that mortal man lacks divine love when burdened with so great a weight of ignorance and distrust!

In order to find a refuge from his fears, mankind, individually and collectively, must climb above the mire of matter and find a footing in Spirit. As matter fades from view, eyes are opened to discern man as "idea, the image, of Love" (*Ibid.*, p. 475). Then a man is no longer afraid of those about him, and he loves more. Loving more, he identifies himself more with divine Principle, Love, and his life immediately expresses more of the harmony of Love. The reason for his former troubles is then clearly uncovered. Having lacked mostly love, it was love he needed most to prove the harmony of Life in God, and when that need was supplied he rose above the ills of mortality.

He who would claim Love's complete immunity from the discords and diseases of the flesh, must persevere until he reaches the standpoint of Christ, beyond mortal ken. Before he can reach this goal he must learn by experience the control of Spirit over matter, and emulate the deeds of the Master. Love reflected, appearing in belief as a human quality, would see itself robbed of every earthly possession with perfect equanimity, and only long to wrap the wrongdoer in the kindly thought which does not condemn but heals and saves. It would only pity the dense blindness of the ignorant one who could so far mistake the nature of true substance, Truth and Love, as to covet the illusive treasures of earth, and would forget all else in the desire to make the truth known. The man who approaches this standard, or even aims at it from afar, rises above the belief of matter as substance and can sustain no loss that fails of divine recompense.

Love, reflected under a human exterior, would hear itself unjustly reviled, and yet not one single angry thought nor any resentment could find a loophole to enter consciousness, or space to fill and so disturb its unalterable peace. A heart that overflows with kindliness and brotherly love stands harmless and unharmed in the midst of the wildest storms of mortal mind, for the fury of hate finds no answer therein, and it cannot communicate itself, because it is but a belief and belongs not to the realm of the real. "Not imputing their trespasses unto them," the true Christian will share the Christly work of reconciling men to God. He will lift his persecutors up above their sin, and in so doing he will deprive the latter of its sting, and ensure his own health and wholeness.

This standpoint is not gained without an effort, but it can be reached. We may desire it more than all else, and yet when the test comes—as it certainly will, for mortals do not easily rid themselves of their illusive beliefs—we shall have reason for giving grateful thanks for our knowledge of the all-presence of God, good, and the strength and power that goes with it, if we have, like Jacob, but held our own through a long night of desperate struggling against the suggestions of malice and hate which seemed to make the reputed harmony of God's universe a cruel jest. Everything around us, the horrors of evil, the malicious deeds of the enemies of Truth, the betrayal by false friends, the cruelty and injustice of mankind, all seem terribly real when mortal mind feels the presence of Truth and rises in rebellion, knowing that its time is short. Pride, self-righteousness, and resentment will make yet again one more effort to gain the upper hand, until we can say with Jesus, "The prince of this world cometh, and hath nothing in me."

Though we may stumble time and again, Love will not let us fall, for there is no limit to the patient endurance of infinite Love. But we shall commence successfully to bar the door of our thoughts against these attacks only as we recognize the law of Love, namely, that love never hates; that love and harmony go hand in hand; that harmony comes from loving, but only discord from hating; that mortal man, if he would escape the discord, must not hate; and conversely, that if he succeeds in loving, his health and happiness are assured.

Mankind as a whole does not yet know the need to love. Starting from that level, the student of Christian Science has a long journey to take, but the way is mapped out for him and he has only to see to it that his own neglect does not cause him to wander. Did humanity only suspect an infinitesimal portion of the blessings to be found along that road to Love, there would be a wild scramble to overtake the travelers who have gone ahead. Even as love enter-

Digitized by Google

tained brings countless blessings, so in belief lack of love experiences the want of everything that makes for true happiness and prosperity. Students who may be struggling with some stubborn sense of discord will do well to examine themselves to see how far they are from demonstrating the Christ-love in their relations with their fellow-men. If the comparison reveal serious shortcomings, let them remember that their efforts at overcoming supposititious disease and seeming lack are based upon the demonstration of perfect Love scientifically understood and expressed. In this Love whatever is less than infinite and all good has no place. Mortals do not attempt to work out a sum in arithmetic with the aid of fancy figures which the science of mathematics does not recognize. Neither should they expect to demonstrate the healing power of the Science of Love, while expressing sentiments which Love does not know.

Scientific healing follows the expression of Love and Truth as a matter of course. If mortals did little else than understandingly seek to manifest divine Love as much as possible in all their daily occupations, there would be very little they could not do both for their own good and for the good of others.

BAPTISM.

LOUISE C. MARTIN.

THE New Testament abounds with references to baptism, and Jesus and his disciples in their preaching called the world to it, as well as to repentance. What is this baptism, one may ask, and who shall administer it?

Christian Science, penetrating the letter of the inspired Word through spiritual understanding, and interpreting the meaning of baptism in all its fulness and grandeur, says, "Our baptism is a purification from all error" (Science and Health, p. 35). It is, then, not a man-made ordinance, materially administered, but a divine process, mentally begun, and finished by the effectual working of the law of Love. In our text-book (p. 581) Mrs. Eddy gives this definition of baptism: "Purification by Spirit; submergence in Spirit." Well did John the Baptist exclaim, "I indeed baptize you with water unto repentance: but he that cometh after me he shall baptize you with the Holy Ghost, and with fire." This agrees in meaning with Isaiah's words: "When the Lord shall have washed away the filth of the daughters of Zion, and shall have purged the blood of Jerusalem from the midst thereof by the spirit of judgment, and by the spirit of burning."

In the article "Pond and Purpose" (Miscellaneous Writings, p. 203), Mrs. Eddy has briefly but beautifully described this metaphysical process of purification, whereby the carnal mind is laid off and the manifestations of divine Mind appear in its stead. At times, it seems to be a fiery ordeal, wherein the elements, the elementary false beliefs which go to make up so-called mortal existence, "melt with fervent heat," and the agony seems greater than we can endure. But, with St. Paul, we can joyfully cry, "I reckon that the sufferings of this present time are not worthy to be compared with the glory which shall be revealed in us;" while, with Peter, we may "look for new heavens and a new earth, wherein dwelleth righteousness." This brings to light the great truth that, as we are baptized into purity, our universe is baptized with us.

There is, however, nothing to be lost by this wonderful process of "burning" or washing away, but a false sense of existence, as Noah's experience proved. The "fountains of the deep" were opened, the floods came, the earth in its material sense disappeared, and "all in whose nostrils was the breath of life" perished. But the ark, which Mrs. Eddy tells us is "the understanding of Spirit, destroying belief in matter" (Science and Health, p. 581), rose higher and higher, until it was made apparent that the spiritual realities as created by God exist forever. Then out of the ark came every living thing. So not only was Noah saved by this "washing of regeneration," but his universe with him.

In the proportion that our sense of man is spiritualized, we are truly baptized. Well may we rejoice, as we pass through fiery trials, if by so doing we are being refined in the fire of divine Love, and are working out the problem of being up to the point where we shall be "pure in heart," and "shall see God,"—behold infinite, eternal Mind, filling the universe with love, holiness, and harmony, and shall see in man the complete expression of that Mind, forever reflecting God's being in all its immortal glory.

Surely the goal is worth reaching, and Christian Scientists should rejoice that this baptism has begun; for by it the whole world will be transformed; sin, disease, and death will cease; humanity will finally know naught but sinless bliss, and all will be one grand symphony of heavenly Love.

THE VICTOR'S WAY.

ELIZABETH EARL JONES.

THE consciousness of power through reliance on Truth and Love, and the joy of victory,—these are the natural accompaniments and outgrowth of foundational work, of a consecutive line of right thought and action, rather than the immediate offspring of an event. Hence all Christian Scientists should work not for results and achievements, but for purification and spiritualization of thought and desire.

There can be no real or lasting defeat to an honest, loving heart, for the defeat of the human is the victory of the divine, and *vice versa*. The overcoming of false beliefs, fear, sensitiveness, self, etc., and the larger growth in meekness, patience, charity, generosity, joy, and love, are the mile-posts that mark the victor's way. Righteousness and joy are inseparable qualities. The sense of hardship and the smoke of conflict linger not long with the victor over self, the one who has drunk deep of his Master's cup. In her "Miscellaneous Writings" (p. 288) our beloved Leader tells us, "The selfish *rôle* of a martyr is the shift of a dishonest mind, nothing short of self-seeking; and real suffering would stop the farce."

The ability to "rejoice always" comes of understanding that good is the only power. Because evil is powerless to produce suffering, it is likewise incapable of causing pleasure. No career that has not demonstrated this fact in Science can truthfully be termed successful. Are we working for dominion over evil suggestions and over self, or are we working for self-advancement and worldly achievement? The answer to this question will determine our courage and endurance and our ability or disability to rise above criticism, seeming defeats, and outward stress.

When the applause of the world rings gaily in our ears, do we remember to pray, "Thine, O Lord, is the kingdom, and the power, and the glory"? If so, then we can also rise and rejoicingly claim, when human condemnation pours forth its weighty flood, "I and my Father are one," and "There is therefore now no condemnation to them which are in Christ Jesus, who walk not after the flesh, but after the Spirit." Unity with God, spiritual dominion, is the divine purpose and the destiny of man, and it is in outgrowing the mortal, the claim of or belief in any other man, that we may all learn our lessons in the way we most need.

GOD THE ALL-GOOD.

EDWARD C. BUTLER.

THE nobler Mexican traditions entwine about Tezcatlicapa, the "Soul of the World," and "Benevolent God." This deity is believed to have been the creator of the world, and its worship runs back to the dawn of Mexican history. Long before human sacrifices were instituted among the

Digitized by Google

rose-red teocalli or temples of the ancient Aztecs, the worship of Tezcatlicapa, purely primitive and simple, stood as a rebuke to polytheism.

Those peoples, so far removed from this age of achievement, cherished traditions concerning the creation of man, the flood, and other human epochs, that are singularly similar to the Biblical accounts. They had a form of the eucharist, also baptism, confession, penance, fasting, prayer, and they emphasized the sacredness of matrimony and sobriety. Drunkenness and offenses against chastity were punishable with death. Among the idols of hewn basalt, mainly of black color, to be found in the National Museum, none is more noticeable than that of Tezcatlicapa. They were rescued from the burning teocalli of Mexico City in 1530 by the Aztec warriors. They fled with their idols, and when hard pressed by the Spaniards, threw them into the lakes. Recently one of these images of Tezcatlicapa was unearthed at the northwest corner of the Alameda, within a stone's throw of the site of the Spanish Inquisition of New Spain.

It is singularly significant that this God of Benevolent Good is one of the most revered deities of the ancient Mexicans. This historical fact gives additional weight to this statement in Science and Health (p. 286): "In the Saxon and twenty other tongues *good* is the term for God." Had the peaceful régime of Tezcatlicapa prevailed the Aztec race would not have lost its pristine purity. Monotheism faded under the withering touch of the rank polytheism of later years. Similarly, the worship of the one God, good, vanished until the time of Jesus Christ. Even after his stupendous epoch, the race seemed to sink into the polytheism of minds many, gods many, in the realm of medicine as well as religion. It remained for Mrs. Eddy to resurrect, as from a riven sepulcher, the monotheistic worship of the one God,—Him of whom Jesus said, "God is a Spirit: and they that worship him must worship him in spirit and in truth."

Humanity will some day acknowledge its immense debt to the Discoverer and Founder of Christian Science for having reopened the pathway to Him who had been so ignorantly worshiped. To know God as omnipotent, omnipresent, omniscient good, and man as the perfect creation of good, has been but dimly hinted in human legends. The full revelation of the fact was made by Christ Jesus, the Saviour of mankind, and in this age it is declared anew in Christian Science.

LOVE MANIFESTED.

M. ELIZABETH STEVENS.

ST. PAUL writes: "Be kindly affectioned one to another with brotherly love; in honor preferring one another." This passage from the epistle to the Romans has impressed itself upon my heart very persistently since coming into an acquaintance with or a comprehension of Truth, as explained in Science and Health, the text-book of Christian Science.

While I am as yet only an infant in this understanding, it comes to me more and more that the basis of Mrs. Eddy's teaching is Love, and if so, what a great responsibility is ours! Should we not constantly ask ourselves: Am I manifesting Love? Am I preferring my brother's well-being to my own? Does Love rule every action? Am I as grateful over the success that comes to my brother, as he labors in his portion of the vineyard, as over whatever of good follows my own efforts in another portion? If to these questions I am able to reply emphatically, Thou knowest that I love thee, brother mine, I may rest assured of my nearness to the kingdom and of a rapid advance heavenward. If I cannot answer thus, I may well ask myself, Where do I stand? or, in our Leader's words, "Am I living the life that approaches the supreme good? Am I demonstrating the healing power of Truth and Love" (Science and Health, p. 496).

Can we hope for success in the vineyard, if we are disobedient to the demands of God, divine Love? It would be wise to ponder whether Science and Health would ever have been written had not its foundation been laid upon what Paul characterizes as "the greatest of these"—Love manifested. Could our blessed Master have accomplished what he did for mankind's redemption in those three wonderful years, had it not been that he was "rooted and grounded in love"? Can the servant hope to be above the master? This is a sacred hour for loyal Scientists. Shall we allow rivalry, pride, sensitiveness, animosity, misunderstanding to creep around to a side door, while the sunlight of Love is beaming into our front windows, flooding us with its light and bearing in its rays the healing that binds this sinsick, weary, sorrowing world to God?

Is it not our duty to work, watch, and pray that we may be accounted worthy to share our beloved Leader's mission of love in behalf of a sorrow-darkened race? Shall she not be assured that her loving wishes and counsel will be heeded by all her followers, and that, no matter when or where, they will be found dwelling in Love?

OUR PRIVILEGE.

HARRY S. MOIR.

THE hope and the outlook of one who has gained the first glimpse of Truth not only remain firm, but as the first small proofs of Truth's power become more and more manifest, the mental outlook takes on the thought of brighter opportunities and sees more of the boundless growth which is made possible by apprehending and demonstrating the Science of Mind, God. The privileges of such a one are great. The conviction that man reflects and manifests perfect Mind begins at once to eliminate the beliefs of stupidity, hypocrisy, lack of education, ill health, poverty, etc.

In honestly following the strict, clear reasoning of the teachings of Christian Science, one cannot remain stupid. It is simply impossible to turn away from his comprehension of the crystal-clear thought of "perfect God and perfect man" (Science and Health, p. 259) and exhibit in his everyday affairs the lack of wisdom and discretion which he once manifested. Unnumbered thousands testify to the increased clearness and consequent harmony of their thinking since they accepted Christian Science. This better understanding brings increase of capacity and power; it is an idea of omnipotent Mind, and not only stimulates thought but drives out all that would mar the harmony and beauty of life.

Thus the honest worker who strives for the right gets his reward constantly and from the start. He is lifted up into the atmosphere of intelligent harmonious thinking, and what joy and gratitude must be shown by him who has made this start and who knows that this is but the first sip of that fountain whose waters are life-giving and free to all. To our Leader, Mrs. Eddy, who has placed the character and works of the Master in their true light before the world, there ever goes out an increasing flood of gratitude from those who have responded to the call of Truth.

He who catches the one great thought of purpose in life has heard the first syllable of God's message to him. And after the struggle by which he consents to God's will in him, renouncing selfish desire, welcoming trying conditions, accepting a stern commission, always the angels come and minister to him. You shall know you have seen yours: for he will have brought you heaven's sure token, a heart at rest.—JOSEPH MAY.

SELECTED ARTICLES.

[From an editorial in *Memphis* (Tenn.) *News-Scimitar.*]

Mrs. Eddy in her ninetieth year is the trusted Leader of a million or more of people throughout the world who non-believers in their doctrines say in the ordinary walks of life express the best type of citizenship. This church has been built up in the past half century of thought and labor of its Leader, she who is, *Life* has said, "one of the most remarkable women ever born in this country."

The mayor of —— assumes a great responsibility in dictating to a family of this belief how they shall worship God, and in intruding on the privacy of that family and deciding the issue of life and death within its own household. Gamaliel advised his associates, priests and rulers, against mistreatment of the followers of a new faith; that the issue had best be left with God; that if it was from God it could not be destroyed, and if from men it would die of itself. It would seem that this tolerant and considerate orthodox teacher of nineteen centuries ago might be interpreted to mean that professions and doctrines should be met with arguments and not with the brute force of the police power in the hands of the majority; that they should be met on their own ground.

Could the mayor of —— guarantee a cure by the orthodox doctor that would warrant his assuming such knowledge and authority? Faith on earth is what is needed, and it must be conceded to these people that they set the example of great faith when they hazard the lives of themselves and their families on the truth of their contention. Is it more necessary to lengthen a little a short physical life than to encourage the trial and practice and growth of faith?

The physical scientists may force us all in self-protection to become Christian Scientists. The former are frightening us to death. Hardly a day passes but what the daily press chronicles a new thing discovered by the physical scientists for us to be afraid of. These physical scientists may be like the promoters of war armaments that are no sooner finished than useless, and both may bring their contentions to a *reductio ad absurdum*. The Christian Scientists, on the other hand, hold out the hope to us of being afraid of nothing except doing wrong. They would place every man's destiny in his own hands entirely. They dignify manhood wonderfully and greatly exalt God, when they urge that the declaration that He is all wise, all powerful, and all present should be taken seriously and for what it says. They seem to dignify God in urging that He needs no agencies, material or otherwise, to accomplish His work. They urge that He fills all space. He is all and everywhere present. They repeat and renew the inquiry if it is a strange thing that God should raise the dead.

It would seem that a Christian community should let alone these people who urge but do not intrude upon others the life and doctrines they themselves profess. They dignify man and urge that the time of man's development has arrived, when the power over life and death displayed by the disciples for many decades after the death of Jesus can be again employed, and that the time has come when man's achievements of character as well as intellect should encourage the world to think possible to men those great powers promised by the Master when he said that those who believed in him and lived his life should do the works he did, and greater works.

[W. J. Tucker in *Richmond* (Va.) *Times-Dispatch.*]

Christian Science does not deal "purely with physical ills and their remedy." The principal aim and effect of Christian Science is to regenerate scientifically the individual, elevating him spiritually and morally. The physical benefits necessarily accompany this result, and are incidental thereto. A regeneration that omits the establishment of physical health is a poor substitute for the regeneration which was demonstrated by Jesus Christ, who confirmed his teaching by "signs following," healing the sick and commanding all his followers to do likewise. If our critic had made a moderately fair investigation of the effects of Christian Science, she would have found that those who have been healed physically by Christian Science, value their spiritual benefits even higher than the physical.

[From *Sporting Life*, London, England.]

Charlie Dawson called yesterday afternoon at the *Sporting Life* office, looking fresher and brighter than we have ever seen him looking before. Having fully recovered his eyesight, he is ready to take again his place in the billiard world. Chatting over his illness, Dawson surprised us by asserting most emphatically that his eyesight has been completely restored through Christian Science. Not only so, but Dawson is so grateful that he desired us to publish the story of how he recovered his normal eyesight. We offer no comment on the statement, which the great billiard player accompanied by reference to several instances of cures having been effected of those within his own circle of friends.

[The story of Mr. Dawson's healing, as related in a testimony written for the *Sentinel*, appears on page 153 of this issue.—EDITOR.]

[Frederick Dixon in *Essex County* (Eng.) *Chronicle.*]

The writer of the letter on consumption very truly says that Christian Science teaches that disease exists simply in the mind, and that the physical manifestation is caused by mental conditions. At the same time, the deduction might be drawn from this that Christian Science teaches that disease can be healed by some operation of the human mind which produces it. That the mind which causes disease can temporarily affect the conditions which it has itself produced, may be true, but this does not constitute healing, and this is seen in the fact that patients who have been relieved by various sorts of mental suggestion, are in no way less susceptible to the ravages of disease in the future.

The human mind undoubtedly believes in the power of good and evil. It, therefore, was perfectly typified by Jesus, when, speaking to the Pharisees, he declared that a house divided against a house cannot stand. "But," he continued, "if I with the finger of God cast out devils, no doubt the kingdom of God is come upon you." Now, the only way in which the finger of God ever comes upon man is in the exact proportion in which he gains the Mind which was in Christ Jesus. That the Mind which was in Christ Jesus did not believe in the reality of disease was proved by the way in which he healed sickness and raised the dead; and that this Mind did not believe in the power of evil was proved when he told Pilate that he could have no power at all if it were not given him by God.

Nobody, presumably, believes that Jesus meant by this that God endowed a man with the power to do wrong; he meant, obviously, that the only power Pilate could exercise lay in the fact that he himself, for the sake of humanity, had determined to prove, in the face of the world, that it was impossible for the Roman governor or for the Jewish high priest to destroy life, and so had determined to permit them to attempt to do so. That is to say, that Jesus, who knew so much more of God than any other man who has ever lived as to have earned the title of the Christ, permitted the Roman to use his human authority for the sake of demonstrating the powerlessness of that authority over the divine authority which had made spiritual man the indestructible image and likeness of God. The only reality or power evil can ever seem to manifest is the temporary sense of power and reality which a lie appears to enjoy until it is exposed. Consequently, just as Jesus raised himself after the crucifixion, through the knowledge of his own spiritual

Digitized by Google

indestructibility, which constituted him the Christ, so every man becomes able to destroy sickness and overcome sin in the exact proportion in which he, too, gains the Mind which was in Christ Jesus, the knowledge Jesus possessed of eternal life. For, as he himself said, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent."

[William J. Bonnin in *Manchester* (Eng.) *Chronicle*.]

If there is one thing that is absolutely certain, it is that Christian Science, so far from being based upon what is known as suggestion, is the very polar opposite to and exterminator of all forms of suggestion, or belief in the power of one human or mortal mind over another. That statement cannot be made in terms which are too sweeping. The merest beginner in the study of Christian Science recognizes it. Your contributor, "Hubert," appears to think differently. In your last issue he wrote one column of sound sense on the subject of suggestion. He wrote also another column on his strange conception of Christian Science, which, unfortunately, was neither sound nor sensible.

A brief consideration from one point of view of what Christian Science really does teach will best show how painfully wanting he was in any understanding of his subject. Granted that there is man and the universe, what do we know of them? Do we know anything beyond certain states of our own consciousness? Are those states of consciousness the effect of some existence, real, independent, objective, without ourselves? Or are the appearances which go to form the visible material universe the projected effect of our consciousness? In other words, is absolute Truth, apart from our human relative concept of it, physical and material, or is it metaphysical and spiritual? Both it cannot be. Christian Science comes to declare that Truth is spiritual, and that materialism is error. And here it would be well to warn any one who might feel tempted to deride this fundamental teaching of Christian Science of the reality of Spirit and consequent unreality of matter, that to do so is not only to controvert the greatest spiritual Teacher of all ages, but also to mock at the whole school of philosophic idealism.

Fichte, for instance, wrote (and Carlyle endorsed it) that "all things which we see or work with in this earth are as a kind of vesture or sensuous appearance: under all there lies, as the essence of them, the divine idea of the world, the reality which lies at the bottom of all appearance." And while Huxley put matter down as "the unknown hypothetical cause of states of our own consciousness," Ostwald, who was recently awarded a Nobel prize, has thus defined it: "Matter is a thing of thought which we have constituted for ourselves rather imperfectly to represent what is permanent in the change of phenomenon."

Christian Science, then, insists on dealing with fundamentals, and upon differentiating between absolute spiritual truth, the truth of things as they exist in the divine Mind, and the false material concept of the same, according to which nothing is real, changeless, and eternal, but all is subject to change, decay, and destruction. In other words, it insists on the existence of one Mind only, and denies the existence of a multiplicity of human minds and opinions and beliefs, upon which suggestion by its very nature depends.

However real evil may appear to the human mind, it has no existence in the divine Mind, wherein all is perfect. Hence its only existence is as a negation, a denial of spiritual Truth. The destruction of evil, a question your contributor made merry over, is effected precisely in the same way as other negations are destroyed, by the introduction of the positive. How else are such negations as emptiness and darkness to be destroyed? Rightly apprehended, Christianity is not a creed or mystery to be blindly accepted, but the understanding, or Science, of spiritual Truth. To allow this understanding to enter into one's consciousness to effect its work of redemption and salvation by sinking one's pride of self, by shaking off one's subservience to human opinion and belief, by refusing to worship the objects of sense, is to follow Paul's injunction: "Let this mind be in you, which was also in Christ Jesus." And as the false material concept is thus corrected, evil, its offspring, vanishes into its native nothingness. Thus today is the eternal promise being fulfilled, "Ye shall know the truth, and the truth shall make you free."

Could anything be less like your contributor's description of the working of suggestion? By a most curious blindness, he was prevented from seeing that the very antidote for suggestion he recommended (though unable to tell how it was to be attained), the "mental balance," is to be found in refusing to be led by mere human opinion, and in permitting oneself to be guided only by the Principle of all being, by acknowledging the one Truth, reflecting the one Mind; in other words, in the practice of Christian Science.

[Edward W. Dickey in *Los Angeles* (Cal.) *Eagle*.]

In a recent issue the statement is made that "Christian Science is about to become nothing more nor less than a political faction." Christian Science is a religion. All of its activities, therefore, are of a distinctly religious character and built upon religious principles. The inauguration of *The Christian Science Monitor* was not for the purpose of favoring or furthering any political faction, nor indeed an endeavor to build up a strong commercial or political power. This newspaper stands for clean journalism and for all the fundamentals of primitive Christianity. It seeks only to record "the good that men do." Its advertising matter is carefully censored and nothing of a questionable character is permitted space in its columns.

The "central thought and principle" of Christian Science is the healing of sin. "The physical healing of Christian Science," Mrs. Eddy writes in the Preface to "Science and Health with Key to the Scriptures," "results now, as in Jesus' time, from the operation of divine Principle, before which sin and disease lose their reality in human consciousness and disappear as naturally and as necessarily as darkness gives place to light and sin to reformation" (p. xi.). All of the denominational activities of the Christian Science church are in accord with this high spiritual aim to elevate, purify, and heal humanity. *The Christian Science Monitor* does not take sides with any political faction, nor does it stand sponsor for any of the political questions of the day, other than in an endeavor to uphold righteousness in all things. Its editorials as well as its news and advertising matter are in accordance with this aim.

[R. Stanhope Easterday in *Indianapolis* (Ind.) *Star*.]

In an editorial in a recent issue Christian Science is mentioned as one of the "modern tendencies to race suicide." I have been a student of Christian Science for many years, and I find nothing in its teaching that would bear out this surmise, although Christian Science strikes a tremendous blow against sensualism. Mrs. Eddy, in the Christian Science text-book, makes the following statement in favor of marriage: "Marriage is the legal and moral provision for generation among humankind;" it "should improve the human species, becoming a barrier against vice, a protection to woman, strength to man, and a center for the affections" (Science and Health, pp. 56, 60).

As a matter of fact, the Christian Science church, like other denominations, leaves the subject of marriage to the individual, and does not by hint or otherwise condemn marriage, although it points to a spiritual life above and beyond material usages, where mortals shall be "as the angels," not only above the necessity or possibility of marriage, but above and beyond the necessity or possibility of eating or

Digitized by Google

drinking. However, it is the further teaching of Christian Science that such an exalted state of existence can only be reached by spiritual growth, and centuries may pass meanwhile. Here as elsewhere Christian Science agrees with the teachings of the Master.

[From *National Druggist.*]

The direct and indirect influence of Christian Science is alone cutting noticeable inroads into the general percentage of drug sales; for this cult has taken from the druggist people in each community who were once his best customers —people of wealth with real or imaginary ailments that had made them steady patrons of the proprietary shelves or prescription counters. But Christian Scientists patronize drug-stores for non-medical merchandise as much as they ever did, and they have more money to spend for the comforts, conveniences, and luxuries which a druggist sells than they had before.

[C. A. Newman in *Watchman*, Sydney, Australia.]

Under the heading "Failing Causes," you allude to Christian Science, and characterize it as belonging to that class. Now, the opposite phrase could be more appropriately applied to Christian Science, for, instead of "failing," it is rapidly spreading all over the world, and the list of its beneficiaries is daily increasing through the practical results which accrue from the study of its teachings.

Christian Science is not orthodox as that term is commonly understood, yet its teachings are based solely on the Bible, and to state that "it has no rootage in apostolic principles" is the reverse of facts. Mrs. Eddy discovered, through her close application and study of the Bible, the basis upon which the great healing and redemptive works were performed by our Master, who said, "He that believeth on me, the works that I do shall he do also." Mrs. Eddy has revealed to the world that Christianity can be scientifically applied to our daily problems, whether manifested as sin or sickness, and results appear in proportion as God and His laws are understood. On page 203 of Science and Health, the text-book on Christian Science, Mrs. Eddy states: "If God were understood instead of being merely believed, this understanding would establish health."

According to *The Christian Science Journal*, the official organ of the denomination, there were, in March, 1904, 814 churches and societies where Christian Science services were regularly held; whereas, in May, 1910, the churches and societies numbered 1215. Evidently, the impression that Christian Science is beginning to "totter" has no foundation.

[M. S. Bruen in *Sligo* (Ireland) *Times.*]

Christian Science teaches intelligent obedience to the law of God as taught by the Founder of the Christian religion, which healed the sick then and does so now. Humanity has always been engaged in a desperate struggle for existence, and an eager search for relief from its pains and sorrows. Many material remedies—animal, vegetable, and mineral—have been tried and have failed to heal, but it has been constantly preached that sin can be overcome by the power of Christianity. Forty-five years ago Mrs. Eddy found that the spirit of Christianity also heals physical disorders. She discovered the Principle from which it came, and that it was powerful to act for other sufferers besides herself. She has given her discovery to the world, with rules which every sincere seeker can apply for himself. Not for the purpose of doing without the service of doctors, for we find on page 150 of the text-book, Science and Health, that "the mission of Christian Science now, as in the time of its earlier demonstration, is not primarily one of physical healing . . . but these signs are only to demonstrate its divine origin,—to attest the reality of the higher mission of the Christ-power to take away the sins of the world."

To study the text-book for oneself is the only satisfactory way to become acquainted with Christian Science. It is better than depending on the answers of one who may himself be only a beginner in its study. One can then avoid the mistake of accepting the relative for the absolute, which is a stumbling-block that has upset many clever people. Dr. Johnson fell into this trap when he thumped his stick on the ground to prove that Bishop Berkeley's theory of the unreality of matter was incredible. "A totally irrelevant proceeding," Huxley said. Sensations of pain and disease seem very real, but we learn in Christian Science that it is not beyond the power of infinite Love, "who healeth all thy diseases," to blot out these sensations and their cause, and we are also taught how to avail ourselves of this healing truth.

[John L. Rendall in *Hopkinton* (Ia.) *Leader.*]

Those who are best acquainted with the teachings of Christian Science know that instead of its being "vitiated with deadly and foolish error"—instead of its having a tendency to "make us the laughing-stock of the religious world"—the very opposite of these assertions is true. It must be recognized as a positive fact that the people known as Christian Scientists are intelligent people, good neighbors, and among the most highly respected citizens of the community. It must also be recognized that these people as citizens have their individual right to worship God in accordance with the dictates of their own conscience, and in this right they should be undisturbed and unmolested by those who may differ from them. There is absolutely nothing in the teachings of Christian Science that is in any degree inimical to the best interests of the individual or the community at large, and there is everything in its teachings which, if they are accepted and followed, would produce a higher, better, and more perfect condition, morally, physically, and spiritually, among the people than at present exists. These statements are entirely demonstrable. They stand out as obvious facts in the experience of all those who have embraced this teaching.

[Written for the *Sentinel.*]

THE LIGHT SHINES ON.

MYRA POLLARD.

DARKNESS and cold and terror all about,
Grief and despondency and doubt;
But in the distance, lo, a light beams out,
And shineth on.

And as I bend my footsteps toward the light,
Larger it grows and evermore more bright;
A beckoning star from out a darksome night,
The light shines on.

Alas, alas, a chasm unaware!
Terror of fear; instead of hope, despair!
But up afar a steady glow is there,—
The light shines on.

Now up and on and toward the light once more!
The way grows brighter, clearer than before,—
Welcome as haven on a storm-beat shore,
The light shines on.

At last, effulgence as of perfect day,
A radiance glowing, glorious alway.
And through eternity, with fadeless ray,
The light shines on.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

THE UNDIVIDED GARMENT.

It is often asked of Christian Scientists why they make so much of the healing of sickness, and why they give so much time to this work; all of which would indicate that those who make these inquiries have failed to grasp the great truth that the healing of the sick is as much a part of the Christian religion as is the saving of men from sin; that Christian Scientists are but endeavoring to walk in the footsteps—follow the example—of him who "went about all Galilee, teaching in their synagogues, and preaching the gospel of the kingdom, and healing all manner of sickness and all manner of disease among the people."

The Master, indeed, gave so much of his time to this work, that the record of his ministry is largely a record of the healing of the sick and distressed, those who were afflicted in body or mind. It is apparent, too, from his words that have been handed down to us, that he considered this work to be of equal importance with the preaching which made his gospel understandable to his followers; that the healing of men's bodies was indissolubly linked with their salvation from sin, else why was his command to preach the gospel invariably coupled with that to heal the sick.

There is nothing in the Gospel record which indicates that the Master used this healing power merely as a means of competing with other religionists, or that he looked upon the power which he possessed as something to be exercised or not exercised as he might feel inclined. On the contrary, there is evidence that he knew that the doctrine which he preached necessarily healed the sick, and that the "signs following" were simply in demonstration, or the confirmation, of the Principle which he taught. The difficulty has been that as time went on the church which he founded, while accepting his promises so far as salvation from sin was concerned, and laboring zealously in this direction, grew faint-hearted and finally ignored the equally binding obligation to heal the physically distressed,—to make them "every whit whole." Of this half-hearted acceptance of their trust Mrs. Eddy says: "If we are Christians on all moral questions, but are in darkness as to the physical exemption which Christianity includes, then we must have more faith in God on this subject and be more alive to His promises" (Science and Health, p. 373); in other words, know that He "who forgiveth all thine iniquities," likewise "healeth all thy diseases."

If Christian Scientists should fall into the error of supposing that their religion could flourish while ignoring the healing of the sick, they would make as great a mistake as would the man who believed that he could build a stone wall by telling his neighbors that he owned a granite quarry. No one knows more of mathematics than he can demonstrate, and no one knows more of Christ Jesus' teachings than he can prove to be true; and as to how these teachings are to be proved, there is no question, for the Master laid down the rule when he said: "These signs shall follow them that believe; In my name shall they cast out devils: they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." His disciples put these statements to the proof in the years that followed, and Christian Scientists today, in taking up the work which the Master outlined, are likewise availing themselves of the whole gospel, the undivided garment of Christ.

The supposition, however, that the power to heal the sick which Jesus and his followers exercised was miraculous, or that the healing which is being wrought through the efficacy of Christian Science savors of the supernatural, is the one great mistake which keeps men from availing themselves of the dominion which they rightfully possess over their own bodies, a mistake which must be rectified before the perfectness of God and man in His image and likeness is realized.

ARCHIBALD MCLELLAN.

"BE YE STEADFAST, IMMOVABLE."

THERE are few virtues that are in greater demand today than that of simple steadfastness. One is continually meeting with evidences of the subjection of human thought to the domination of impulse. Being governed as yet in large part by the testimony and the desires of material sense, the average individual, though altogether well-meaning, is more or less subject to the tides and cross-currents of that sense, and hence is carried hither and thither in a course which is neither intelligent nor intelligible.

It is to this anchorless and motorless type of mentality that St. Paul refers in his letter to the Ephesians, when he speaks rebukingly of those who are "children, tossed to and fro, and carried about by every wind of doctrine, by the sleight of men, and cunning craftiness, whereby they lie in wait to deceive." In kindred terms St. James declares that the "double-minded" man is "like a wave of the sea driven with the wind and tossed;" and he adds, "Let not that man think that he shall receive any thing of the Lord."

This last rather caustic reminder of the apostle should direct thought to the probable explanation of the unsatisfactoriness, the unanswered prayers and general inadequacy of the life of many would-be Christians. And the reasonableness of the explanation can but appear when we think of how fatefully foolish would be the chemist or astronomer who was in the habit of making one undemonstrated theory after another the basis of his investigations, instead of adhering continuously to the unvarying law of optics, or molecular affinity,—how absolutely sure his failure. It is just here that the glamour of that asserted "spirit of liberality" which gives welcome to all manner of beliefs and opinions, works for the dissipation and demoralization of thought, the serious hurt of those who are influenced by it.

That there can be no steadiness or reliability of judgment, of conduct, or of demonstration, apart from the recognition of Principle and conformity thereto, is a fundamental teaching of Christian Science which Mrs. Eddy has writ large upon well-nigh every page of our text-book, and which is everywhere illustrated in the chronicles of the lives of men. The utmost prominence is given this truth by the Scripture writers, in their declarations that God, the supreme intelligence, is the "rock of our salvation." "Other foundation can no man lay," says St. Paul, than Christ, Truth, and this thought of the unity and immutability of divine Mind and its manifestations as the basis of all being and all right thought, is the center and circumference of Christian Science teaching.

In the far-reaching fore-grasp of St. John's vision, he perceived that there was to be "no more sea:" that false material sense, the medium of persistent and tumultuous conflict, of contradictions and strifes and tragedies, was to pass away, as human consciousness became "filled with the knowledge of the glory of the Lord," the apprehension of Truth. Christian Science brings the dawn of this glorious day in supplying for each individual the concept of "perfect God and perfect man,—as the basis of thought and demonstration" (Science and Health, p. 259).

Digitized by Google

He who subjects every proposition to the test of logical articulation with this immutable ground of all right sense, will soon be able to face the most complicated and distressing phenomena of mortal mentality and experience, and yet remain as undisturbed as the north star. He has begun to express the poise and stability of Truth, and with the psalmist he can say, The Lord hath "set my feet upon a rock, and established my going."

JOHN B. WILLIS.

"THE FINGER OF GOD."

THERE are a good many devout people who are held down to an anthropomorphic sense of Deity by the literal interpretations of Scripture which have been so largely accepted in the past, and which will doubtless be accepted by many so long as a material concept of God and man prevails in human belief. The pity is that so many fail to see that the giving up of material belief for the spiritual fact never lessens faith, but instead strengthens it. Like Thomas, they insist upon seeing the print of the nails, quite forgetting that Christ Jesus did not commend this mental attitude, but condemned it when he said, "Blessed are they that have not seen, and yet have believed." In Science and Health (p. 547) we are told that "inspired thought relinquishes a material, sensual, and mortal theory of the universe, and adopts the spiritual and immortal;" and Mrs. Eddy adds, "It is this spiritual perception of Scripture, which lifts humanity out of disease and death and inspires faith."

In the 31st chapter of Exodus we find the statement that Moses was given "two tables of testimony, tables of stone, written with the finger of God." Most scholars readily admit that this statement is purely figurative, an oriental way of conveying the idea that Moses had received the law direct from God, but there are some people who seem to think that the authority of the Ten Commandments depends upon the question whether they were literally in the handwriting of God. They seem to overlook the fact that we must find the divine origin of law, and its authority, not in historical attestation, but in the nature of the law itself and because it is seen to be necessary to human welfare. Thus we can explain to our children that the Ten Commandments are the basis of all human codes which uphold justice and right; and that no one can absolutely obey the law so far as it applies to his fellow-men unless he first recognizes the Supreme Lawgiver, who says, "Thou shalt have no other gods before me."

There are nearly one hundred texts in the Bible which refer in some way to the hand of God, all of which present the idea of the power and activity of infinite Mind. In the Old Testament we find many such passages. For instance, in I. Samuel we read that "the hand of God was very heavy" (in the destruction of error); and the psalmist tells us that "with a strong hand, and with a stretched out arm" God delivered Israel. Then we have the gracious promise that God will write His laws upon the hearts and minds of all men, and this is perhaps the one statement as to the handwriting of God which most concerns us today.

Coming back to the statement that the Decalogue was written by "the finger of God," we have a closely related statement by Christ Jesus (as given in the 11th chapter of Luke), when he said, "If I with the finger of God cast out devils, no doubt the kingdom of God is come upon you." He said this when some of the people challenged his healing work and imputed it to Satan, or sorcery. Now we can never suppose that the finger of God as here mentioned could mean anything other than the power of infinite intelligence, the same power which gave the law to Moses, and which today is known to us as the hand of God stretched out over the nations. Any failure to recognize the spiritual significance of the many Scriptural statements which through type and symbol tell us of the divine Lawgiver, must to some extent hinder us from doing that which the great Teacher declared to be essential to human progress, namely, knowing that God is Spirit and that He must be worshiped "in spirit and in truth." Such worship unfolds the human capacities for good, and brings to men holiness, health, happiness, immortality.

ANNIE M. KNOTT.

AMONG THE CHURCHES.

EVERETT, WASH.

First Church of Christ, Scientist, of this city, laid the corner-stone of their new church edifice, on Colby avenue and Thirty-third street, on Thursday, Sept. 1, placing therein a copy of most of Mrs. Eddy's writings and current copies of the *Journal*, *Sentinel*, and *Monitor*. The board of directors, the Readers, and the building committee were present. The building is a neat and attractive structure, in bungalow style, with a seating capacity of four hundred and fifty.

Very soon after the church was organized here, with a membership of only seven, they erected a church building, which they gave up in May, 1909, on account of increased numbers, and moved into Masonic Temple building, which has since been their home.—*Correspondence.*

INDIANAPOLIS, IND.

The corner-stone of the new church edifice of First Church of Christ, Scientist, of Indianapolis, Ind., was laid at five o'clock, Thursday morning, Sept. 22. Gathered to participate in the ceremony were the officers, trustees, and directors of the church, and the members of the building committee. The ceremony consisted of the reading of selections from the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy, followed by silent prayer and the audible repetition of the Lord's Prayer. Placed in the cavity prepared for it was a copper box, containing the Bible, "Science and Health with Key to the Scriptures" and other of Mrs. Eddy's writings, the Christian Science *Quarterly*, current numbers of the Christian Science *Journal*, *Sentinel*, and *Monitor*, together with a historical sketch of the church and a list of the officers and members. After the stone had been sealed, the ceremony was concluded with the reading of the benediction.

The church edifice is colonial in design and is built of brick and stone. It is located in North Meridian street, in one of the most beautiful residence sections of the city.

Correspondence.

Some of our readers may find a helpful hint in the following letter from one of our correspondents.—EDITOR.

Our little plan for disposing of our Christian Science literature may be of interest to some readers. It is so simple I had not thought of mentioning it, but is so effective that we could use several times the amount we have. We have several faithful tradespeople coming to the house, daily or weekly,—the milkman, iceman, janitor, laundryman, and server of bottled water. They are all eager for good reading matter, and the *Monitor*, which "gives the news from all over the world," as they exclaim after the first copy, especially appeals to them. It carries them out of their hard work and rather narrow vision, and I have no doubt often replaces a cheaper, coarser relaxation.

We fold in a copy of the *Sentinel*, also, when we have one to spare, but they, and the *Journals*, have been busy going to those we knew were in need of their help. I cannot express too much thankfulness for the daily visitor and for all the literature, which always seems to bring just the word of strength, encouragement, or chiding I need in my own work. For our beloved Leader, Mrs. Eddy, and for all she has provided for us, my thankfulness and wonder grow as I progress in the study and application of the rules so kindly and faithfully given.

THE LECTURES.

CALGARY, ALTA.

Frank H. Leonard delivered a lecture on "Christian Science: A Demonstrable Religion," in the Y. M. C. A. Auditorium Thursday evening, Sept. 22. The speaker was introduced by Mayor Jamieson, who said in part,—

We each have, I believe, some knowledge of God and His supreme goodness, and our presence here this evening clearly indicates that we are looking for more light. The history of the human race is one of struggle and strivings along the road of progress, with anguish and groanings under the oppressors, with blind groping in the darkness of antiquity, on through the dim light of medieval times to what we know in our day as the Christian era. I think we all believe what has been termed "the sweet story of old, when Jesus was here among men;" that Jesus, the Christ manifest in the flesh, dwelt for a brief time with men, spoke as never man spoke, and did as never man did. He not only preached, but practised the precepts that he taught. His every teaching had an eternal significance, applicable to all time. Before his earthly career, during that time and for all time, the Christ-spirit, or Truth, has ever been available for mankind; for we are told that "before Abraham was, I am." The eternal verities always existed, now exist, and always will exist. It is for us to apprehend them and to apply them, and we are today in the brightest day of all the days, of all the years, of all the ages, enjoying to a fuller extent than ever before the light that he saw and enjoyed, the "light, which lighteth every man that cometh into the world."

In this our day a restatement or rediscovery of the Christ-teachings, which had become dimmed by the neglect and dust of ages, has been comprehensively set before us and brought to our attention, through the careful study and years of prayerful and earnest work of Mary Baker Eddy, author of the book "Science and Health with Key to the Scriptures," the text-book of Christian Science, wherein is set forth clearly the practical and scientific application of the Christ-teaching. We have with us this evening one who is authorized to speak of the subject to us.

Correspondence.

PLATTSMOUTH, NEB.

Francis J. Fluno, M.D., lectured last evening [Sept. 25] at the Parmele to a fair-sized audience. Prof. J. W. Gamble, in introducing the speaker of the evening, said:—

We of today no doubt live in the greatest age the world has ever known. It is essentially an age of progress, due largely to invention and discovery, an age characterized by its scientific bent. We are no longer content to know merely, we must know how and why. In the moral and religious world we are keeping pace with the industrial. Our ethical code, if you will permit the expression, is more scientific and we appeal to the intellect rather than to ignorance and superstition. This is an age of creeds and sects. Religious influences enter more into the realms of health and happiness than ever before. And I suppose that health and happiness in this life, together with an assurance of a life in the future more perfect than any we have yet experienced, are, after all, the essential factors of life.

I have always had profound respect for the man who, traveling what he believed to be the best and most direct road to future happiness, where sin, death, and disease are not, was willing that others might travel a different road without his interference. On the other hand, I have had little respect for the man who, while traveling no road himself, occupied his time in placing obstacles in the path of those who had chosen a road, vainly endeavoring to show why that road was not passable, without pointing them to a better. Any man or any body of men who have for their object the betterment of mankind and their ultimate perfection, are entitled to the tolerance of society; and if they are able to prove from a scientific standpoint the truth of their claims, they are then entitled to its cooperation.

Should the speaker of the evening be able to prove clearly and logically that Christian Science is the means whereby life, health, and happiness are attainable by journeying along the pathway he points out, he should be welcomed by every citizen of this community and many people should be willing to journey along the way he will point out to you this night.

Journal.

GLOVERSVILLE, N. Y.

A large number of people took advantage yesterday afternoon [Sept. 25] of the opportunity to hear an interesting discourse on Christian Science delivered by Willis F. Gross. E. D. Berner introduced Mr. Gross, speaking as follows:—

The doors of the Christian Science church are ever open wide to those who seek truth for truth's sake, and its most earnest endeavor is to give a cup of cold water in Christ's name. The world at large is yearning for the truth, hungering for "crumbs of comfort from Christ's table" (Science and Health, p. 234), and Christian Science comes to supply the needs of humanity here and now, "feeding the hungry and giving living waters to the thirsty." Its healing, saving, and regenerating message from Life, Truth, and Love is educating and elevating all mankind into better, purer, holier thinking and living, through a clearer apprehension of Principle. It asserts the practical possibility of understanding God as all-inclusive good; the creator and the giver of every good and perfect gift.

Christian Science teaches that God's healing and saving power is available now just as it was in the time of our great Master, and it proves the correctness of this teaching by healing all manner of diseases. It is a practical, demonstrable truth, so that every man having eyes to see and ears to hear may prove it for himself.—*Herald.*

DE KALB, ILL.

Mrs. Sue Harper Mims delivered a lecture on Christian Science at the church edifice Tuesday evening, Sept. 27. She was introduced by Mrs. C. F. Toenniges, who said,—

The innate longing and searching in the past for the truth, has caused the development of many systems of philosophy and religion through the ages. To some of you, probably, Christian Science is simply one of the comparatively new religious creeds, characterized by a striking phase—the healing of disease. To us who have studied Christian Science and use it in our every-day life, the name brings before us the blessings which have come to us through its study and practice,—not only the physical healing, but the help in overcoming sin, the changing of hatred and jealousy to love,-the quieting of discord and strife to harmony and peace, the opening and explaining of "the book of life," the Bible.

Your presence here tonight indicates that you do not care to rely on common report as to what Christian Science is; and you certainly do well, as experience has taught us how unreliable such reports are. If any here have gained incorrect impressions, if any of you believe that Christian Science holds something of help and longs to hear more concerning it, if any of you are already students and desire further information, you all are provided tonight the way whereby wrong impressions may be corrected, truth brought to eager listeners, and further enlightenment to the student.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Amsterdam, N. Y.—Francis J. Fluno, M.D., Neff Opera House, 3:30 p.m., Nov. 6.
Bloomington, Ill. (First Church).—Willis F. Gross, Church Edifice, Monroe and Prairie streets, Nov. 7.
Cedar Rapids, Ia.—Bliss Knapp, Greene's Opera House, Nov. 7.
Champaign, Ill.—Willis F. Gross, Illinois Theater, Urbana, Nov. 8.
Chicago, Ill. (Seventh Church).—Bliss Knapp, Church Edifice, 5318 Kenmore avenue, Nov. 3 and 4.
Columbus, Ind.—William D. McCrackan, M.A., Crump's Theater, 3:15 p. m., Nov. 6.
Columbus, Ohio.—Willis F. Gross, Memorial Hall, 3 p.m., Nov. 6.
Downers Grove, Ill.—Frank H. Leonard, Auditorium, Nov. 3.

Ask God to give thee, dear,
An eye to see
What doth not yet appear;
And may God grant to thee
An ear to hear life's melody.
Pray for a loving heart
That understands another's need;
And, seeing, hearing, loving—thou
His sheep shall daily feed.

LAURA B. DOORLY.

TESTIMONIES OF HEALING.

It would be impossible for me to express in words my gratitude for what Christian Science has done for me. It is now nearly two years ago that, during my engagement in the London tournament, I awoke one morning to find that both my eyes were very much swollen and bloodshot, and it was only with great pain that I could slightly open them. A doctor was sent for, who advised me to consult an eye specialist without delay, and he made an appointment for me to do so the same day. I consulted one of the well-known specialists in Harley street, London, and my eyes were thoroughly examined. The left one was found to be twisted considerably out of its proper place and the sight almost gone; the right eye was not quite so bad. I was told by the specialist that I should have to wear eye-glasses as long as I lived, and the only chance I had of ever getting my sight back again was by an operation; but it was far too risky, and he would not recommend me to have it performed. I found myself unable to read a newspaper, and afraid to cross the road if any traffic was about, and this was the case for a considerable time afterward, when I was wearing eye-glasses. For twelve months I tried all kinds of glasses, and in that time had consulted five different specialists and had just about given up all hope of ever getting my sight right again, for I really thought I should lose the sight of the left eye altogether, since the sight seemed to get worse instead of better.

In this miserable condition Christian Science was brought to my notice by a letter-card I received from Manchester, dated Sept. 1, 1909, asking me to make my way to the Christian Science church, Sloane terrace, London, and place myself in their hands, assuring me that I should soon get the relief I wished for. I had never heard of Christian Science before this, and I read the letter over and over, and thought what a beautiful expression of confidence it was. Why this confidence? I asked myself. Well, I know the reason now, because the friend (for it must have been a friend, although we are not acquainted) knew by experience what Christian Science could do for me. I took the advice offered, and got the loan of "Science and Health with Key to the Scriptures" by Mrs. Eddy. At first I could only read it a few minutes at a time, so my wife read it for me. It so impressed me that I attended the Wednesday evening meeting. What struck me most was the welcome every one receives, and I went away fully convinced that what I had heard was common sense. I have been a regular attendant ever since, with the result that my eyesight is now all right again.

I cannot express my gratitude to the person who brought this wonderful teaching of truth to my notice. My eyes were healed during the last Thanksgiving service in the church. I had been in church a short time, when I was compelled to take off my eye-glasses through pain. I forgot I had them off during the service, but on leaving the church I realized that I had not been wearing them and I immediately put them on. I had soon to take them off again, however, through the pain I experienced. Then the thought came to me, It is the New Year. Why not turn over a new leaf and do without them? and I have not worn them since. From that time I have been able to do anything I have wished to, for my eyesight is as good now as ever it was. This is indeed a blessing to one who has to depend on his eyesight for a livelihood, and has been compelled to wear eye-glasses continually for nearly sixteen months, for it is only when he receives such blessings as these that one realizes and believes the power of Truth as illustrated and given to every one by Christian Science.

Christian Science has not only done this, but it has given me an understanding of the Bible I never had before, also an example to follow in daily life, and I cannot be grateful enough to Mrs. Eddy for the way she has so beautifully

Digitized by Google

interpreted the Bible that we may understand the truth in the Word of God, for her writings have been my only help, and I shall always be grateful to Christian Science for the wonderful demonstrations of the power of Truth it has revealed to me and the many ways in which it has helped me.

CHARLES DAWSON, London, England.

All I have and all I am, I owe to the understanding gained by the study of Mrs. Eddy's teaching, as given in all the books and papers published under her guidance. It is about five years since I was so wonderfully healed.

I had heard of Christian Science some years before that time, when a stranger gave me some *Journals* and a copy of Science and Health, and told me that if I would read them I could be healed. I thought this foolish, as I was crippled in my right arm, due to a terrible operation for a malignant growth. Both knees were crippled from a fall; I had stomach and bowel trouble from childhood, and the doctors said I must be operated on as soon as my strength would permit. I was also subject to neuralgia and rheumatism. I was told that in two or three years I should have a return of the growth; and my right arm never ceased to ache, although everything possible was done to relieve the pain. It seemed foolish to expect ever to be well, and in less than four years I was on the operating-table once more. I wanted them to operate on the lower bowel, but they said it was too late, that I could not endure it; so I came home once more, hopeless as it were, the doctors saying all that could be done was to give me opiates.

But God is good, and He sent a friend that I knew well as a Christian woman. She wrote, telling me that if I would read Mrs. Eddy's book I could be healed. She sent me an old copy, which I read and reread half way through or more. I read with the Bible close beside me, and all this time this friend's mother (an old lady) was writing me the best of Christian Science letters every day. And what a revelation came to me when I realized that God is Love, that all He made is good, and that He made all! Then this thought came, that if He made all, it must all be good. Then I said to myself, "Why, that is just what Mrs. Eddy has taught all through the book," and how my heart went up in thankfulness to her and to God.

I was taking a large quantity of an opiate at that time, besides other drugs. My left arm was in a sling, and the right one disabled. I could not turn in bed without help, and was utterly hopeless, until I knew the truth of which Jesus said, "Ye shall know the truth, and the truth shall make you free." Then I was free indeed. It was wonderful. I called my little adopted daughter, and told her I was well; I put both arms around her and cried for joy. Then my husband came. I told him I was well. He said, "Praise the Lord," but he really thought my mind was weak, and so did all my friends. I cooked my own breakfast next morning, swept and did all kinds of work, then walked over a mile to see my sister. And I have kept right on! I have learned to weave since then; I run a loom for rag carpet now, and am nearly sixty years old.

My husband was healed of liver trouble of many years' standing, and with many other complications, the following June. We have never used anything but the Christ-cure for the many ills that present themselves to us as a family, from that time to this, which is almost five years, and we have had some wonderful demonstrations since that time. I have written too much, but if any of it or all of it can be of any use in helping others, I shall be glad.

MRS. CARRIE A. CARR, Washougal, Wash.

I have reason to be very grateful to Christian Science for many things, but one incident in particular I wish to give to the field. One day, about three years ago, as I was on my way to town, I stepped into a hole, injuring my left ankle severely. I fell down in great pain, but I immediately declared the truth, and after a few moments raised myself from the ground, though with much difficulty. I retraced my steps, the pain seeming to increase all the time, so that it was difficult for me to retain my consciousness.

Upon reaching the house, I immediately went to the telephone and called a Christian Science practitioner. She told me to have no fear, and that she would come to me at once. She did so, and gave me treatment. This was about the middle of the forenoon, and by noon I was able to rise from the couch and assist in preparing dinner. I received another treatment in the afternoon, and by ten o'clock that night the pain had all ceased, and also a feverish condition had disappeared. In the morning I put on my shoe as usual, and went about my work. Fear was not entirely overcome, but by the second day I was all right. I consider this a wonderful demonstration, as a number of years ago, when a young girl, I had a similar experience, and was unable to walk for weeks.

I am indeed grateful to God, and to Mrs. Eddy for showing us this blessed way out of our troubles.

ADELL PINNEO, Chatfield, Minn.

[Translated from the German.]

Although it is only nine months ago that I became acquainted with Christian Science, blessings in various ways have come to me through its glorious teachings, and I feel impelled to tell others of these proofs of the power of Truth.

About a year ago I lost my wife, after a severe case of confinement, and was left alone with the new-born twins and a four-year old daughter. One week later this child was taken ill with a throat affection, her condition being most alarming. I was sick myself, but had to attend to my work all day long. Besides this, I was going through great financial stress, so that I became very much depressed mentally. Having lost all faith in God, my moral strength failed, and while in this state of despair my attention was called to Christian Science.

I frankly admit that my attitude toward the subject was one of great distrust, and it was only owing to the fact that the teaching was presented to me by a good friend that I tried to find out what were the contents of the pamphlet which had been handed to me. The more I thought this teaching over and tried to be led, the clearer it became to me that Christian Science is the true way in which humanity may be led to the truth. Since then I have gradually regained my inward peace; I have been able to overcome financial difficulties more easily than I should have otherwise, and have experienced the power of Truth in the following instances: My little daughter was healed of mumps with one treatment. I myself was healed of a most distressing headache of years' standing, which had baffled the skill of several physicians. Some time ago I was attacked by erysipelas. The physician whom I had to consult, according to business rules, told me afterward that he had had but little hope of my recovery, as such cases usually affected the brain. The Christian Scientist before mentioned, upon my request, took up treatment, unswervingly declaring the truth for me, as I was unconscious for six days. The success of this was evidenced in my recovery in rather a short time, contrary to the physician's expectations. I have also received help through Christian Science in several minor instances.

For all these demonstrations of the power of divine Truth and Love I am grateful with all my heart, next to God, to our beloved Leader, Mrs. Eddy, and to the dear people whose brotherly love I have experienced. I hope to grow more and more in the understanding of Truth, and to be able to help my fellow-beings through Christian Science.

GUSTAV KLEMM, Chemnitz i. S., Germany.

For many years I was a great sufferer, and during the last few years before I knew of Christian Science I was subject to frequent attacks, from which I could get no relief. The family physician told me that my only chance would be an operation, but that I could not live through it as my heart was too weak.

About this time my attention was called to Christian Science by the healing of a neighbor. When asked by one of my friends to call upon a practitioner, I refused, saying that I wanted nothing to do with them as I was a church-member. Later the practitioner was sent for, and when I realized that the healing power was complete for her of whom the doctor had but little hope, I was very much impressed. During one of my severe spells, only a few days later, I sent for the same practitioner, and was instantly healed. During the treatment there was a strange sensation in the side where the pain was which seemed remarkable to me. The peace that came to me during the treatment I shall never be able to express to any one.

A year or more later the family physician called on me, and we talked of my healing. When I told him of the sensation I felt during that treatment, he said, "Now that you are healed, I am going to tell you that you had gall-stones, and they must have passed away with that sensation you speak of." After an examination of my heart and lungs, this doctor told me that my heart was stronger than it had been for many years (for eighteen years he had been my physician). He also said he would not give me any medicine, because I did not need it; he advised me to stay with Christian Science, since it had done me good.

During some of my first meetings with the practitioner, I asked her not to mention Mrs. Eddy's name to me. She answered, "You will soon realize what Mrs. Eddy has done for mankind." Today words cannot express the gratitude and love that I feel for our Leader, who has done so much for the world. I have been a constant student of Christian Science since my healing, now over three years ago. Each day brings me new blessings. I am now able to help myself in small things, and also other members of the family. For this I am very thankful, and what a blessing comes to one who can realize that God is an ever-present help.

MRS. JOHN BEAR, Marshfield, Ore.

Thanks to our heavenly Father, our beloved Leader, Mrs. Eddy, has shown us the way to health and happiness. I cannot feel grateful enough for all the blessings we have received through this truth, which was revealed to us by the healing of my mother about seven years ago. So many ailments have been overcome that I shall not try to mention them all now.

Three years ago last fall, while I was away at college, I was exposed to a supposedly infectious throat disease. I made preparations to go home, and on arising the next morning I realized that a great effort was needed to overcome the attack, which seemed to affect my whole system. I took my copy of Science and Health and studied until it was almost time to go to the depot. I took the train, rode about twenty miles in the country, stayed with a friend over night, and went home the next day. The following day I rode a distance of twenty-five miles, and took a college examination, then came home the next day. The healing was realized from the time I came to my friend's house. This attack was overcome through the power of Truth alone.

The following spring, while away at a different college, I became ill, but attended class as usual. I then understood that my classmates feared contagion, so I asked to be dismissed. I had a very high fever, and after telephoning to my home went to bed, as I felt unable to be up. I was then boarding with a private family, and they called a doctor, who pronounced it a severe case of fever. These people were alarmed, and telephoned to my home at once, telling the family the doctor's verdict. My sister then called a Christian Science practitioner, who lived about twenty-seven miles from my home, and the following day my brother drove out to get me. I rode home, a distance of twenty-five miles, although it was in March. After that I was kept in bed for about three days, suffering intensely, but the fourth day I was up and dressed. I could not endure a light until the fifth day, and then I had to wear a shade over my eyes for a few days. Within two weeks the disease was all overcome, leaving no bad effects. How thankful we should be for the many privileges and blessings we can secure by declaring the reality of good and the unreality of evil!

My younger brother also had a slight attack of this fever, but it was all overcome within a few days. Indeed we have so much to be grateful for that words cannot express the gratitude and love that I feel. I thank God with all my heart for His help, and that the healing works of Christ Jesus are again being made ours through the discovery and application of Christian Science.

MISS REGINA V. JOHNSON, Tampico, Ill.

Eight or nine years ago I was operated upon for a serious uterine trouble, but afterward I was no better, rather the worse, and for several years I took treatment and medicine under the care of three different surgeons. At the end of that time I was completely broken down in health, so that I could not retain my position as a stenographer, and ruin stared me in the face. I was at home for three months, sick and out of work, taking treatments from the family doctor and also electrical treatments for my hearing from a specialist, as I seemed to be very deaf. He told me that both ear-drums were affected, and unless what he did helped me, nothing else would; but after the treatments ceased I became worse.

At that time I suffered from extreme nervousness, bilious attacks, severe headaches, also an affection of both eyes for which a specialist had given me glasses and told me to wear them daily for at least a year; but, finding they did not help me at all, I threw them away. At night my eyes were so tired I could not bear the least light. I felt exhausted all the time, and tonics did me no good. A bowel disorder was a lifelong ailment, and besides the uterine trouble, the worst of all, I began to suffer from a condition of the feet. Every morning both feet would swell so that for three or four hours I could only hobble. When I went to the doctor, he said he could give me nothing that would help me. Added to these afflictions I was becoming mentally unbalanced, due to continual suffering and anxiety for the future.

At this time I became acquainted with Christian Science. A young friend of mine, also a stenographer (and a Jewess), with whom I went to business, she on crutches, became helpless from spinal and hip diseases, and after seven operations the doctors finally left her bedridden and pronounced her a cripple for life. She was healed by Christian Science treatment in a few weeks, and today is strong and well. This impressed me, and I decided to investigate Christian Science. I had heard of Science and Health and wanted to read it, thinking I might be able to understand some of it and apply it to my own case.

Upon coming home one afternoon from the ear specialist's, it began to rain, and I turned into a Christian Science reading-room and asked for the text-book, which I took home with me and studied for six weeks. I had nothing else to do but read, and I studied for ten hours a day. When too ill to sit up, I would lie on the bed and study. I had many battles with the book, and upon reading it through the second time I decided to have nothing further to do with it, and took it back to the library. I thought Christian Science too frail a plank to trust to in my serious struggle with disease, but for a day or two after this I felt as though I had been dropped into the bottom of a deep well, from which all light was excluded. I felt more and more

Digitized by Google

unhappy, and soon realized that what I wanted was that particular book. So I went and got it back, and in all read it through seven times. It was well I did so, for first the bowel trouble left me, also the trouble with my feet; headache ceased, and gradually every ailment but two had been met through study. The catarrh was at times very severe, so I finally took treatment. The faithful practitioner helped me much, but it was not until several months later, when the error was uncovered and I had taken a week's steady treatment, that the trouble was fully met.

I now have nothing left to enumerate, unless it be the deafness, which is rapidly improving; that is, nothingness is giving way to somethingness and I hear better. For one thing I am most grateful: I certainly do not underrate the physical healing, for through it I was enabled to resume my occupation and prosper as I had never done before, but the spiritual healing casts all the rest in the shade. As a bright sunbeam throws the shadow of every material object in its path into greater relief, so my troubles seemed in greater contrast because of this illumination, but now they are melting away in the light of understanding. From the first I seemed to understand Science and Health, which I did not expect to do; but my daily prayer has been, "Give me understanding," and it has seemed wonderfully clear and simple.

I am most thankful that I was compelled to study and work for myself, as well as receive help from others, because this has resulted in a new life in which the Christian Science literature is my daily delight, and I attend all the services and meetings. I used to say, in regard to Science and Health, that I never knew a book to make so much trouble; but now I know it has removed all my troubles, little and great, and the seeming struggle was only the battle of mortal sense against Truth. I now find Life between its covers, with the Bible and the *Quarterly*. I would fain lay my grateful, happy heart open for all who run in the way of this earthly pilgrimage to read, as the least tribute of thankfulness I can offer to God, and to her who, more than any other, has been my dear Leader from misery to joy.—BELLE A. MUNDY, New York, N. Y.

I have been striving to practise the teachings of Christian Science for a number of years, and am very thankful for them, and for the wonderful way that this understanding opens up the Bible. Truly Science and Health is a "Key to the Scriptures."

I have been healed of asthma of long standing, rheumatism, fever, heart trouble, and other ills of the flesh. I find this truth to be an ever-present help, and the spiritual uplift that I have gained through this understanding far surpasses everything else. I wish especially to tell of the work which I was enabled to accomplish at an age when men are expected to retire from active life, and this was done through the understanding gained in Christian Science that God is our source of supply. When young I learned the machinist trade, worked at it a few years, and then went to farming and fruit-raising, at which I worked until I was over sixty years of age, when for reasons which it is not necessary to mention here, I came to this city and secured a place in a factory. It had been over thirty years since I had worked at my trade, and the materials to be worked and the tools to work with had changed very much during that time.

My first attempt was at a coarse repair work, but after a few months I removed to another place where the work was much better. The men working with me had been at the business for years, but they never knew that I had not been at work all the time. Several times men were laid off when work was slack and I would be retained. While I have not yet attained to the finer grades of work in a machine shop, I have been considered a good general workman, and have had some work to do which requires a good deal of skill. At one time the men were requested to work until nine o'clock in the evening, and at the end of the week I was the freshest man of the lot. Christian Science is a help to me every day of my life.

J. HOLBROOK, Toledo, O.

Nowhere, I am sure, is there a family that has more reason than have we to be grateful for Christian Science. It was brought to our home about twenty years ago, at a time of great need. My father had contracted several diseases during the Civil War. He had consulted a number of physicians, and they had all agreed that it was impossible for him to be cured, as organic changes had taken place. He would gradually grow worse, they said, until the end. My mother had been an invalid for a number of years, and had also been pronounced incurable and condemned to die at any time. One sister was a victim of severe headache and another of catarrh of several years' standing, while I suffered every winter with severe throat trouble. The many acute diseases that were frequently making their appearance, in addition to the troubles already mentioned, made the services of a physician an almost constant necessity in our home.

Having tried all the various systems of *materia medica*, to no avail, we were ready and willing, when Christian Science came to us, to dispense with medicines entirely and try to put our trust in God. It would be difficult for me to tell how much the truth accomplished in our midst and how grateful we are for the bles-ings bestowed upon us,—grateful to God for giving us the truth, and grateful to Mrs. Eddy for showing us how to use it. Not only were we healed of all our diseases, but during the years that we have been studying "Science and Health with Key to the Scriptures," and trying to apply its teachings to our every-day problems, we have been helped out of many difficulties and have been protected and shielded from many ills that might otherwise have beset us.

One of my first experiences with Christian Science was in being healed of a fever. Although I knew very little about it at that time, I had no difficulty in deciding between *materia medica* and Christian Science, for my mother had been healed and had become thoroughly convinced of its truth. The fever lasted less than a week and I was delirious only one night. Just as soon as I felt a desire for food, I was given anything and everything I asked for, without any bad effects. As is usually the case after a fever of this kind, my hair began to fall out in such quantities that I was advised to have it cut. Instead of doing this, however, I had Christian Science treatment; with the result that not only did the falling out stop, but new hair began to grow in very abundantly.

A number of years after this, an acquaintance who had been questioning me about my religion said, "Now tell me, honestly, if you had something really serious the matter with you, say for example typhoid fever, wouldn't you send for a doctor?" I was very glad to be able to tell her my experience, which of course was much more convincing than any mere expression of opinion would have been. Whenever I hear of fever patients who are under the care of *materia medica* and are confined to their bed for weeks and sometimes months, enduring great suffering, I feel more than ever grateful for my own deliverance and wish that they too might know that, instead of "pinning" our faith to material remedies, it is much safer to put our trust in the Almighty.—C. LOUISE SCHAFFNER, Chicago, Ill.

I have many reasons to be deeply grateful for Christian Science. It gives an inspired meaning to the Scriptures, which leads one to the Bible in time of need. The physical help which I first received was for a chronic bowel disorder and a general affection of the digestive system. For four years I had been on a rigid diet, by the advice of physicians.

Digitized by Google

At this time I became interested in Christian Science and called a practitioner, and after the first treatment I ate anything that was served, and I am very glad to say that all this trouble was entirely overcome. For this and many other physical blessings which I have received I am deeply thankful, but above all for the spiritual enlightenment which Christian Science gives. This is more to me than all else, and my heart overflows with love to our beloved Leader, who so willingly sacrificed earthly pleasures and secluded herself from society in order to lead the way to that spiritual understanding which illumines the pages of the Bible, making it dearer to the heart of every one who has studied her inspired works.

MRS. EFFIE F. WHITE, Lodi, Cal.

I have several times expressed my gratitude for Christian Science verbally, and now wish to do so through our periodicals, since it has helped me greatly, both spiritually and physically. My last experience was a severe attack, affecting one of my feet. It began in the morning, and by evening the ankle was so stiff and swollen that it was impossible for me to walk even one step. I asked for help from a Christian Science practitioner, who at once responded to my call by giving me absent treatment. The next morning all sense of stiffness and swelling had disappeared, and my foot was perfectly well. I was able to walk up and down stairs just as usual.

This is only one of the many blessings received through Christian Science, for which I am very thankful to God, and also to Mrs. Eddy.

MRS. M. ISABEL FORTUNE, Buenos Aires, Argentine Republic.

I wish to acknowledge what Christian Science has done for me. About a year and a half ago I was taken quite ill. As I had no Science help at home, I went to a sister who is a Christian Scientist, and was treated by her for two months. I returned home in better health than I have known for a long time; I am entirely healed, and thank God for this healing truth, discovered anew by Mrs. Eddy.

I will add further that I have much to be thankful for as I see the truth overcoming every kind of discord.

MRS. IDA T. KELLOGG, Utica, Mich.

I wish to testify that through Christian Science I was healed of diseases of the stomach and liver that had troubled me all my life; also of a serious throat trouble, and numerous other ills. I was changed from a timid, weak woman into a strong and hearty one, able to cope with the temptations and trials of mortal sense and to grasp somewhat the possibilities of spiritual sense.

MRS. ETTA WILSON ROSE, Berkeley, Cal.

God give us men! A time like this demands
Strong minds, great hearts, true faith and ready hands;
Men whom the love of office cannot kill;
Men whom the spoils of office cannot buy;
Men who possess opinions and a will;
Men who have honor; men who will not lie;
Men who can stand before a demagogue
And damn his treacherous flatteries without winking!
Tall men, sun-crowned, who live above the fog
In public duty and in private thinking:—
For while the rabble with their thumb-worn creeds,
Their large professions and their little deeds,
Mingle in selfish strife, lo! freedom weeps,
Wrong rules the land, and waiting justice sleeps!

JOHN G. HOLLAND.

FROM OUR EXCHANGES.

[Christian World.]

This provincialism of faith—which goes one mile and refuses to go the next—has produced some singular results in doctrine and life. So often man's blundering, half-educated intellect has cut across the heart's truer and more generous verdict. For centuries a wrong interpretation of the Bible has proved the enemy of faith. The dogma that the Old and New Testaments were throughout on the same level of inspiration shut up good men to the belief in an immoral Deity. How pitiful it is today to read the arguments of Law, of Waterland and other ortho lox divines of the eighteenth century, to prove that the massacre of the Canaanites, the pitiless slaughter of the Amalekites, the whole story of Jewish atrocities recorded in the Bible, were justified by the fact that they were by God's express command! The light which has come to us had not yet dawned upon them: the light which enables us to see in these actions simply the moral level to which these people had attained, a level which permitted them to perform the deed, and then to boast about it as divine! It is the same want of faith, the faith that the highest is the truest, that has led theology into such strange conceptions of the divine nature, and of its dealings with man. Theologic pessimism, also we may say its cynicism, surely reached its height in the position of Mansel, who in his Bampton lectures argues that the Deity is essentially unknowable; that our moral sense is no guide to the divine moral sense, and that therefore we are in no position to judge of the deeds recorded as of God in the Scriptures, because our notion of good and evil may be quite different from His. If we believed that doctrine we should have to cease believing in Jesus as any authentic revelation of the Father; cease believing in the soul as of any common nature with the Over Soul; cease believing in reason as reflecting the universal reason; cease believing in the unity of life, in any coherence of things, in any proper link between this world and the next. Mansel proclaims his doctrine as the true orthodoxy. We proclaim it as the most baneful of heterodoxies, the heterodoxy which denies that man is made in the image of God.

[British Congregationalist.]

Men and women recognize readily enough that the outwardly great and critical hours of their life go far to decide their ultimate spiritual condition and fate. The particular temptation and the way in which it is met—the special responsibility and the way in which it is accepted or set aside—all these things count, of course, and their effects remain. Somehow we shall hear of them again. But we leave out of account the inclinations which just dropped in for a moment and, then, without having been transmuted into action, slipped forth again—the suggestions of right and wrong which moved, like mists and vapors wherein we discerned no clearly outlined form, across the field of our inner being—the mere impressions which have touched us more or less powerfully as the spirits of goodness and of sin passed by. Yet there is a prophet's word which, claiming to echo a word of God, says, "Behold, I will bring evil upon this people, even the fruit of their thoughts." The utterance points to a large and searching principle. Every thought that does but flash with electric speed across the spaces of the mind—every feeling that rises into but a moment's dominance—every mood that appears to lay but a light touch upon our life as it comes and goes—every attitude toward the high or the base that the spirit takes up for but a fleeting breath—all leave us different from what we were. We are, morally and spiritually, today something more than our mere deeds have made or shown us to be; and we shall be through all our tomorrows something more than the mere deeds of our tomorrows will account for.

[W. B. Hinson in *Pacific Baptist.*]

To quote the words of a poet: "We live in deeds, not years; in thoughts, not breaths; in feelings, not in figures on a dial." And these deeds, and thoughts, and feelings follow us wherever the soul may soar or sink. We write our life's history in everlasting ink; our deeds are inerasable as diamond marks on glass. We are primarily what heaven makes us, but secondarily what we make ourselves; for, as the body assimilates that which sustains it, so the soul receives into itself the result and consequence of what we do below. "Heaven means character," said Confucius; "their works do follow them," saith the Scripture; hence the importance and awful responsibility of life.

[*Christian Register.*]

The most serious question now before the educated and civilized world relates to the evident and pressing need for the raising up of master minds capable of controlling and directing the mighty energies which have been set free in the natural world, and who, at the same time, have a sense of justice to match their power and the gift of sympathy to temper justice with mercy. One great emergency gave us George Washington; another one brought Abraham Lincoln to the front; but now we need not one, but thousands of intellects and consciences to match the amazing outflow of power which, controlled, will work miracles for human well-being, but, let loose without masterful supervision, will devastate human society.

[*Churchman.*]

It is worse than blindness to speak of giving up anything for unity, for the unity of the church of Christ, like the Lord and Master himself, is the ingatherer of everything that helps man to become like Christ. The time is ripe to take into account the sympathies of Christians with Christians, the sense of brotherhood between communions as communions, the aspiration after national freedom and independence and the inspiration of the dependence of nations and churches upon each other. So we shall come under the influence of the Saviour of the world, that we may in our turn serve him in saving the world.

[Rev. R. J. Campbell in *Christian Commonwealth.*]

My conviction is that hell is a dreadful reality, and that one feature of any spiritual reawakening which comes to the modern world will be a reaffirmation of it. Live for the world, and your hell will be that the world will not let you go even when you have laid the body down, although all your old sources of gratification must perforce be left behind. If your rejection of God, or your neglect of God, really means that you are making as good a bargain as you can with the world, terrible will be your awakening, here or hereafter, when you find that that for which you have been living is not life but death.

[*Christian World.*]

The need of our age is a new faith in faith. It is in the soul what radium is in matter, a source of inexhaustible energy. Its presence in humanity keeps it young. When it decays a generation becomes senile, stricken with inner death. It is the heart's uplift, its secret of power. Only as we draw its breath can we taste life's highest joy, do its greatest things. The supreme call of today is for new adjustments of faith, new ventures of it into the vaster realms which knowledge is gaining; the harnessing of it to the new tasks of our puzzling social and spiritual world.

[Rev. Albert E. Hylan in *Watchman.*]

Love is life. Hate is death. God, the giver of all life, is Love. This is the profoundest fact of life. Love is the mainspring of all true life. Preeminently is this true of the Christian life. Love is the tie that binds our hearts to Christ. Our love is the measure of our loyalty.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel.*

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel.*

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

NEW PAMPHLETS.

Now on sale are three new pamphlets: "Seeking and Finding," "Prayer and Healing," and "The Divine Nature." Each pamphlet contains five to eight articles that have previously appeared in the *Journal, Sentinel,* or *Monitor;* and they are particularly suitable for handing and sending to inquirers or persons who are becoming interested in Christian Science.

Hereafter, the price of all pamphlets (except "What our Leader Says" and "Christian Science and Legislation") will be reduced to 5 cents a copy; 55 cents a dozen; $2.00 for fifty, and $3.50 for one hundred. Hereafter, also, the republication in the English language of single articles as "tracts" or "reprints" will be discontinued. It is believed that their place is better taken by the daily article on Christian Science in the *Monitor* and by these new pamphlets and others that may be issued.

NEW POST CARDS OF THE MOTHER CHURCH.

Post card photogravure, in sepia tint; an exact reproduction of the large photogravure of The Mother Church Buildings and Publishing House with parkway in foreground.

Single copy	$ .05
Twenty-five copies	1.15
One hundred copies	4.25

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90, six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage, at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news dealer, 12 cents a week payable to the news dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Radical reforms in judicial procedure were considered by the American Bar Association at its thirty-third annual convention at Chattanooga, Tenn. At the convention a year ago a committee was named to investigate and propose methods whereby litigation could be expedited and the much complained of "law's delays" obviated.

The sensational story of an alleged five-hundred-thousand dollar corruption fund carefully distributed in an effort to defeat the anti-race track betting legislation at Albany in 1908, was told on the witness-stand before the legislative bribery investigation committeemen at New York last week.

Practically all of the corporation tax, aggregating in excess of twenty-seven million dollars, has been collected by the treasury department. The officials declare it was collected with less annoyance and was paid apparently with less reluctance than any other internal revenue tax imposed.

Julia Ward Howe, author, lecturer, Unitarian preacher, woman suffragist, and peace advocate, perhaps most widely known as the writer of the "Battle Hymn of the Republic," passed away Oct. 17.

Jacob M. Dickinson, the American secretary of war, who is making a tour of the world, has arrived in Paris from Berlin.

Judge Landis in the United States district court has set Nov. 4 as the date for the trial of the beef trust cases.

International.

The success attending the "Boy Scouts" movement of Lieut.-Gen. Baden-Powell, which has now become world-wide, has led him to work out a plan that shall give parallel opportunities to the girls. They will be known as "Girl Guides." Any girl between the ages of eleven and eighteen can become a Girl Guide, providing parents or guardian give their consent. The girls are organized under military discipline and military titles. They have a guide "oath" and a guide "law." The unit is a patrol of eight girls, of whom one, the leader, must be over fifteen. She has an assistant, a corporal. Three or more patrols form a company, which has a captain and a lieutenant. Lieutenants must be over eighteen and captains over twenty-one. A special course of preparation for girls, differing somewhat from that of the boys, is now in preparation under the caption, "How Girls Can Help." As outlined the course of training includes swimming and rowing, aid-giving of many sorts, and on Saturdays and holidays long tramps or "marches" into the surrounding country on all kinds of expeditions and purposes that give usefulness and charm to the activities of the Girl Guides.

Agitation continues in the Netherlands with the object of hurrying on the commencement of the work of drying up the Zuyder Zee. This question has been under consideration for years by the citizens of the country. Many of the smaller seas and marshy lakes in Holland have from time to time been dried up and replaced by green fields and meadows, and it only requires sufficient capital to do the same in the case of the Zuyder Zee. It is estimated that the land, if the sea should be expelled by means of dikes and a drainage system, would be worth five hundred dollars per acre, and would actually add another province to the area of the little kingdom.

In a biplane flight with passengers from Paris to Brussels and return, Henry Wynmalen reached Brussels and returned as far as St. Quentin, one hundred and sixteen miles from Paris, the same day, and slept there. He thus covered two hundred and thirty-four miles the first day. He ascended the next morning and reached Issy, a suburb of Paris, at 12:13 p.m., having occupied fifteen and a half hours on his three hundred and fifty-mile trip. The prizes offered amounted to thirty-five thousand dollars.

The government of Portugal has issued a decree proscribing the Braganza family to the position of an exiled house. Concerning the property in Portugal owned personally by King Manuel and others of the royal family, the decree states that this matter will be settled as soon as possible. The government promises that the legitimate rights of the exiled royal family shall be respected.

A new licensing bill has been introduced by the government of New Zealand, which includes a proposal for national prohibition if fifty-five per cent of the voters favor it. The bill provides that if national prohibition is enforced, intoxicating liquor shall not be imported into, manufactured in, or sold in New Zealand.

Frenchmen have invested about five hundred million dollars in Turkey, Germans about one hundred and seventy-five million dollars, Englishmen about one hundred and fifty million dollars. Frenchmen own four fifths of the Turkish bank stock and more than fifty-five per cent of Turkey's public debt is held in France.

The French balloon, Clement-Bayard, recently made the voyage from Compiegne, forty-five miles northeast of Paris, to London, in six hours, a journey requiring seven hours by the fastest express trains and boats. The total distance is about one hundred and ninety-five miles.

In the four and a half years since the publication of the "Everyman" series was begun, something like eight million volumes have been sold. Of Shakespeare alone ninety thousand three-volume sets have been sold.

There was a surplus this season of over fifty thousand boxes of butter in Australia, which will be shipped to London. The output of butter is growing rapidly all over the country.

Chile has now 145,894 acres of vineyards, 47,403 acres being under irrigation. The output of wine last year was 254,046,959 gallons.

Industrial and Commercial.

At Tomakamai, in Hokkaido, Japan, a four-million-dollar paper mill plant was completed in August, 1910. This is the most important individual commercial enterprise of this nature in the Far East. Only one foreigner is employed, an American who was sent out to assist in installing the paper-making machinery. The total cost of the machinery in this model plant is placed at one million dollars. Of this all but three per cent, it is stated, was purchased in America. The cost of the electrical machinery in this plant, all of which was imported from America, is placed at about one million dollars. This does not include the cost of the reservoir and power house plant, located fourteen miles distant at Lake Shikatsu. This lake is eight hundred feet above sea level, and as the paper plant at Tomakamai is only a few feet above the nearby Pacific ocean, excellent power facilities have been provided. Already a fifteen thousand horse-power plant has been developed, to which seventy-five hundred horse power will be added.

The long expected and long-predicted break between the jobbers and the United States Steel Corporation has come, says *Iron Trade Review*. Gradually the Steel Corporation has manifested a disposition to establish warehouses and to handle its own products in a retail way. A few weeks ago the most radical action was taken in the withdrawing of price concessions made to jobbers by the Steel Corporation. Following this action, the Carnegie Steel Company a few days ago sent out twenty salesmen to represent its Pittsburg warehouse and scour the central West for warehouse orders.

A group of American capitalists has just entered the Mexico oil development industry, and will operate in the territory adjacent to Tampico. They have organized the Mexican Oil & Asphalt Company, with a capital stock of ten million dollars. About fourteen thousand acres of land in the heart of the oil-producing section has been secured and a number of wells will be bored. It is reported that the company will erect a large refining plant at Tampico. It proposes to make a specialty of utilizing the asphalt by-product obtained in the oil refining process.

The Pennsylvania Railroad Company has purchased five acres south of Polk street, Chicago, for an extension of its freight terminal, and buildings are being torn down to make way for the tracks. The improvement is said to be part of the company's project to build a twenty-million-dollar passenger station on the site of the Union station at Canal and Adams streets. The price was one million eight hundred thousand dollars, or eight dollars a square foot.

The value of the pearls found in the Mississippi and its tributaries since the fishing began last spring is estimated at five hundred thousand dollars or more. Maiden Lane dealers assert that the American pearls are sold as Oriental in Paris and London and that returning tourists are regularly paying duties on Mississippi river pearls which they buy abroad. The highest price paid this season for a single pearl was five thousand dollars.

The final steps have been taken at Cincinnati, O., to give the city a thirty-million-dollar railroad terminal station. The nine large railroads which enter there have agreed upon the general plan.

Skymar, Cal., claims to have the largest olive grove in the world. It has one hundred and twenty thousand bearing trees and they produce, on an average, fifty pounds of fruit each.

The sum of $47,313.94 has been apportioned among 584 employees of the Consolidated Gas Company of Boston as a result of the profit-sharing plan adopted by the company in 1906.

Building operations in one hundred and twenty-eight cities of the United States during the calendar year 1909, represented expenditures close to a billion dollars.

If Canada's wheat crop last year had been shipped by rail, each car holding fifteen tons, it would have made a continuous train 1,365 miles long.

Coal-mining in Spitzbergen is proving successful. In quality the coal has been compared with the well-known Pocahontas.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

DEMOCRATIC GOVERNMENT.

JUDGE CLIFFORD P. SMITH.

THE by-law of The Mother Church which provides that "each branch church shall be distinctly democratic in its government" (Art. XXIII., Sect. 10), refers to the word "democracy" as used in civil government. In modern use this word means "a representative government where there is equality of rights without hereditary or arbitrary differences in rank or privilege" (Webster's New International Dictionary; Oxford English Dictionary). The by-law therefore adopts this manner of government for the branch churches—"distinctly" this. Our Leader has set it forth in these phrases: "Equal rights and privileges, equality of the sexes, rotation in office" (*The Christian Science Journal*, June, 1904).

In the first place, then, democracy in church government puts all members upon an equality. Old members and new members are on a par. Children, even, unless the state law declares otherwise, after admission to membership have the same voice and vote as adults. Teachers have no greater rights than other members, and they have no right to direct or control their pupils. The basis of democracy is the equality of all men before God.

It is of course true in human experience that one individual may speak, vote, or act more wisely than another. From this premise it might be argued that the better qualified members of a church, or the best qualified member, should be allowed to direct its affairs. In the election of officers qualifications ought indeed to be considered; but any person truly eligible to membership in a church is worthy to be a voter at its business meetings and elections, and he has an equal right to have his qualifications considered for the offices to be filled. Moreover, popular government develops the capacity of all members to participate in the governing, and it is often found that newly chosen officers exhibit surprising fitness for their work. The strength of a church is in the mental and spiritual growth of its members, and our Leader says: "Growth is restricted by forcing humanity out of the proper channels for development, or by holding it in fetters" (Miscellaneous Writings, p. 359).

Democratic government is more than a form of organization; the spirit as well as the machinery of government needs to be democratic. Indeed it has been well said that "the form of government is an unimportant thing as compared with the spirit in which government is administered" (Hadley, Freedom and Responsibility, p. 1). The by-law under consideration prohibits an irregular direction of church affairs, that is, in a manner not defined in its charter or by-laws. It forbids the exercise by an individual or faction of control over the officers of a church. It abolishes the rule of "bosses" and persons imbued with the feeling of self-sufficiency. It contemplates that all offices, not strictly subordinate or temporary, shall be occupied successively in rotation by the members best qualified for them. Not only should the officers of a church bring before the members, in a timely and orderly way, all matters that should properly come before them, but the members should never fail to support the officers in the performance of their duties. Office seeking, which is a common hindrance to civil government, should never occur in a church. In short, democratic government is representative government, based on equality, with each member doing his part and letting the others do theirs.

The equality of democracy implies a responsibility that is strictly individual. A member should neither attempt to control the vote or action of another, nor permit himself to be controlled. In his church relations the pupil is independent of his teacher and his teacher's association. Both teacher and pupil should observe the by-law against pupils being guided by their teachers' personal views (Art. XXVI., Sect. 6); and the members of a church that have the same teacher should beware of acting or voting in such a way as to constitute a party or faction within the church. Each member should seek the guidance of divine Principle and act according to his own understanding, while remembering that the other members have equal access to the Father. And each member should ever keep before him the need of unity, for, to quote our Leader's words, "unity is divine might, giving to human power, peace" (Miscellaneous Writings, p. 138).

Unity in the church, with peace and success, will be promoted if each member understands the nature and object of our church, as defined on page 583 of Science and Health and on page 17 of the Church Manual, the use of organization, and his part in attaining the object of both church and organization. The true church is neither a material edifice, a charter, nor an organization. These are mere machinery. To quote Mrs. Eddy: "Our true temple is no human fabrication, but the superstructure of Truth, reared on the foundation of Love, and pinnacled in Life" (Pulpit and Press, p. 2).

In human affairs, the church is an institution having a certain object and known by its fruits. The object of the Church of Christ, Scientist, is to heal and save individual and universal humanity; it is to lessen and abolish sin, sickness, and death; it is to finish the work begun by Christ Jesus. The organization of our church is simply a means by which its members may work together to this end; and it is a secondary or subordinate means, for the primary means is purely mental and spiritual. At the present stage of progress, organization is requisite (See Miscellaneous Writings, pp. 91, 145, 358, 359); and a so-called Christian Scientist who should say that he did not need to act with our church would need, surely, to learn to love his neighbor as himself.

The part which each member may take in the work of the church remains to be considered. In his branch of The Mother Church, each member may attend its services and invite other persons to do so; he may testify at its Wednesday evening meetings and request his patients to do likewise; vote at its business meetings and elections; contribute willingly to its financial support; enter heartily into the work of any office or committee for which he may be chosen; fulfil

Copyright, 1910, by Mary Baker Eddy.

Digitized by Google

his obligation to The Mother Church; heal the sick and the sinner as opportunity is offered, and exemplify Christian Science in his daily life. The last two items are most important; without them the others are of no great value to the world.

The question, therefore, What is my part? which each member of our church may ask, is answered by the Discoverer and Founder of Christian Science in these words: "You have simply to preserve a scientific, positive sense of unity with your divine source, and daily demonstrate this. Then you will find that one is as important a factor as duodecillions in being and doing right, and thus demonstrating deific Principle" (Pulpit and Press, p. 4). As an individual achieves this, he may rightfully and confidently say, as did the great Wayshower, "And I, if I be lifted up from the earth, will draw all men unto me."

TRUE DEMOCRACY.

DAISY BEDFORD.

IN these days democracy as the essential basis for right government is uppermost in the thoughts of all earnest workers. Our Leader in her wise and loving forethought for her church and students has named it the essential foundation for church government and administration. Much has been said and written on the subject, and it behooves us as Christian Scientists thoroughly to understand its meaning and application, not only as concerning church government, but with regard to the regulation of our conduct and work, everything appertaining thereto, so that every member may be able to bring his or her tithe of right thinking and right acting into the storehouse, which will bear fruit in the harmonious cooperation and advance of the whole community.

So often, it may be, we ask ourselves, Why is it we seemingly fail in our work? Why is it we do not see the clear manifestation of the healing truth? Is it not because we have not yet learned the essentials of self-government on a democratic basis, and hence, in the absence of a proper understanding and application of the rule, have failed to get the correct answer to the problem? It has been said that "true democracy will carry on an insistent search for those wisest and best, and will elevate them to posts of leadership and command." Do we in consciousness persistently seek for that which is wisest and best and allow it to govern the thoughts, actions, motives, and desires of our daily life? Are we careful never to permit personal sense, untrue motives, love of place and power, desire of admiration and praise, to sway us as we strive to follow in the path our Master trod?

That which may be said of the administration of an organization, may be said of the working out of life's problem in each individual consciousness. When unworthy motives predominate, then mob rule is being observed, with all the discordant features it brings in its train. Man is made in the image and likeness of God, and we must keep this glorious heritage ever in view, until, as we learn in Christian Science, "the material, transformed with the ideal, disappears" (Science and Health, p. 442). An allegiance to any lesser understanding of what constitutes man will defraud us of our birthright, for we lose sight of what should constitute "the radicalism of true democracy," *i.e.*, that perfect individualism which becomes manifest as the recognition of and loving service to each and every one of God's ideas—the logical conclusion of true brotherhood—is demonstrated. The true democrat is he who adheres to and puts into daily practice Jesus' teaching, as set forth in the sermon on the mount, and who understands intelligently man's dominion over all that is unlike God, in the conscious constant realization of his unity with his divine Principle—"I and my Father are one"—and in the manifestation of that true spirit of humility and self-immolation expressed in the words of our Master, "The Son can do nothing of himself: but what he seeth the Father do."

Perhaps the greatest enemy to the realization of perfect democracy is the imitation of or clinging to a given personality. Our Leader says (Miscellaneous Writings, p. 308): "Intensely contemplating personality impedes spiritual growth." Any form of personal imitation must mean lack of individual growth, of intelligent clear thinking; it denotes apathy, a noncomprehension that "man is properly self-governed," and "should be guided by no other mind than Truth, the divine Mind" (Messages to The Mother Church, p. 50). Each idea possesses a distinct individuality, and we are surely trying to sell our birthright if we desire to merge any part of it in that of our neighbor. The rose is even more beautiful, because it is close by the lily, pure, serene, and fair, and offering all it has to bless mankind. The lily would certainly appear less beauteous growing on a rose-bush, the rose on the graceful stem of the lily. Yet many people try to bring about almost as incongruous a result by their slavish worship of personality and their willingness to be governed by the wishes, desires, aims, and opinions of those whom for personal reasons they have chosen to rule over them.

The true democrat must be alert, he must give to every duty earnest consideration, based on his understanding of what God is and what man is, not putting anything aside as too trivial or unimportant, for it is only by being faithful in small things that we shall be found faithful in the larger ones; then, too, he must have learned how to obey, in order that he may take his part in ruling. We can only learn to rule by learning how to serve. Our Master said of himself: "I am among you as he that serveth," and of that service it is chronicled in one of those beautifully descriptive passages in which the Bible conveys so much in so few words, "Jesus went about doing good."

Here is the key, the incentive, the example for all who would be scientifically democratic, all true Christian Scientists, all who are trying to do good. In doing so we shall make it possible for our neighbor to do likewise, because unkind, ungenerous criticism, fault-finding, lack of love, will no longer hamper his work, and we shall bring our gift to the altar with the knowledge that our brother has naught against us. Like St. Paul, let us endeavor to show that grace has not been bestowed upon us in vain, and laboring ever more and more abundantly, prove our worthiness of our "high calling of God in Christ Jesus."

INDIVIDUAL WORK.

ANNE MAY LILLY.

EVERY loyal Christian Scientist is most grateful for *The Christian Science Monitor*, and is naturally anxious that it may reach as many of his fellow-men as possible. While the various distribution committees are doing most excellent work in this line, it would seem that to obtain the best results their activities must be supplemented by intelligent individual cooperation.

For instance, Mr. B. may receive free copies of the *Monitor* through the mail; but, if he is a prominent man, he undoubtedly receives many other publications in the same manner, and often they all find their way into the waste-basket, unread. If, however, a friend of Mr. B., who is acquainted with his tastes and interests, is on the lookout for something that will particularly appeal to him, and when he finds it, gives the paper to Mr. B., calling his attention especially to the article, Mr. B. will, in nine cases out of ten, read not only the article itself, but will at least glance over the rest of the paper, and will probably be placed in a more receptive state of mind by gratitude for the thoughtfulness of his friend.

The range of subjects ably covered by the *Monitor* is so wide that one may find something of interest to every one.

Digitized by Google

Even the children can help in this work by calling the attention of their playmates to the descriptive pieces, the games, etc., to be found on the Home Forum page. The page devoted to sports is conceded to be one of the best, and should furnish an opening wedge which can be used to advantage in bringing the paper to the attention of boys and young men. Musical and dramatic matters are particularly well covered. Recently a young woman to whom the writer gave a copy of the *Monitor*, calling her attention to this particular department of the paper, expressed great surprise at the excellence of the articles on these subjects, stating that she had always had much difficulty in finding papers that gave her the information she wanted along these lines. Of course, this method of work calls for some thought and trouble, but if faithfully persisted in by all loyal Scientists, it must inevitably result in a steady and substantial increase in the circulation of our paper.

There is one point which seems important, namely, that in our zeal we should always keep in mind the dignity of our cause and the real worth of our paper, inasmuch as it is human nature to undervalue what one gets for nothing. From the newspaper standpoint merely, the *Monitor* is a paper that is altogether worth while, since it contains much of interest to the general public. It is able and willing to stand on its own merits, and we should be careful not to cheapen it in the eyes of those who are perfectly able to purchase it, by indiscriminate free distribution. In this, as in all things, the Master has given us the concise instruction, "Cast not your pearls before swine," and Christian Science teaches us not to offer the truth to the thought which is not ready to receive it.

Our Leader's wisdom was shown in her naming the paper *The Christian Science Monitor* instead of merely *The Monitor*, and we do well to use the full name in referring to the paper. If *Monitors*, or any of our literature, be given with a clear realization that all God's children love and respect the truth, more satisfactory results will ensue than if given thoughtlessly. In this, as in all else, we must work with Principle.

THE UNRULY TONGUE.

JOSEPH B. BAKER.

In the epistle of James we read, "The tongue can no man tame; it is an unruly evil, full of deadly poison;" and how often have we found the saying true! A moment after the hasty or ill-considered word has passed our lips, we wish it recalled, but the poison has been sent out into consciousness. A conversation which we had meant to guide in the ways of pleasantness, shepherding a brother in the right way, goes awry in an interval when we are off guard. The belief in evil slips in, and, because we forgot to heed our Leader's admonition to "stand porter at the door of thought" (Science and Health, p. 392), it has been embodied in some unlovely speech, leaving a sense of strain, irritation, or even estrangement.

The lack of Christian alertness ever carries its old penalty of repentance at leisure; for does not sincere self-examination always show that it is not at all what the other said that leaves us troubled in spirit, but always what we ourselves said under the temporary dominion of the intruding, inharmonious belief? We can, however, learn to guard the tongue against inadvertent slips by praying that we may reflect Truth and goodness, for the good sought consciously will, more and more, stand by us when in need. Our Leader tells us that "when we wait patiently on God and seek Truth righteously, He directs our path" (*Ibid.*, p. 254).

Solomon has said that there is "a time to keep silence, and a time to speak;" but when to speak, and when to keep silence—that is the insistently recurring question which we must answer. If we can keep God, Truth and Love, steadfastly in view, with no other gods before Him, not only shall we ourselves come safely through, but, more, we shall have helped another by manifesting God's help to him. We shall not be betrayed by the lure of a sharp answer, an unlovely recrimination, or any seeming human success in the situation that we might grasp by the spoken word. To put resolutely behind us all self-justification; to remember that divine energy operates on a different plane from any of the activities of mortal mind; to be willing to accept a present misunderstanding for the sake of leaving the truth in another's consciousness, free from all earthly alloy,—these are things to work for!

The time to speak is when we have some thing—a real thing—to say. If we take the as yet unuttered thought to divine Principle, that test will refine it, and the search for guidance will find whether the purposed utterance be wise, or necessary, or loving. If the search takes time, so that we do not answer our brother immediately, the demonstration will bring also another blessing, that is, a step gained in self-control; for the brother will perceive that we are trying to be just in thought and careful in speech, and will be the more likely to listen when we speak again. When to keep silence is the other half of our task, in which we must be equally wise. The right rejoinder is not always given us to speak; but if we do not know what to say, and so keep silence, with love burning none the less brightly in our hearts, the very lack of answer, though it may seem to leave us in a false position, may yet be the most helpful response that could be given. It will at least direct the attention of our brother back to his own question or remark; and he may then himself see the answer, since it comes, without any front of antagonism, from his own more awakened consciousness. If the question pertains to a matter concerning which Christ Jesus has not spoken, and which is without the realm of present demonstration, it is always safe to say, frankly, "I do not know."

"The tongue can no man tame." To attempt to reform the unruly tongue by human will is to lean upon a broken reed. We can govern it only by leaning wholly upon God, through unselfed thought and earnest desire to hear the "still small voice." And the overcoming is by realization of the omnipotent power of Love.

STORM AND CALM.

EDITH DOYLE.

The sea and its waves have served as similes for all peoples in all ages. They are used throughout the Bible, from the days when the flood of waters covered the earth, to the final revelation of the new heaven and the new earth, where "there was no more sea." This theme came to me lately as a fresh inspiration, and perhaps the ideas brought to me may be of some help to others.

One night I fell asleep in an unsettled state of mind, vainly trying to solve a somewhat difficult problem. It was a wild night, and the storm outside seemed to be a part of the storm in my consciousness, so that I dreamed of a great wind and a waste of waters. When I awoke in the morning the wind was still blowing outside, and my mentality seemed utterly confused, with no solid or fixed ideas; and I felt that it would take hours to get to the calm state that was needed to begin the day's work. When, however, I looked up the Lesson for the day, the first selection from Science and Health was, "You must utilize the moral might of Mind in order to walk over the waves of error and support your claims by demonstration" (p. 455).

This seemed a direct order, and as I was trying to obey it, trying to realize that evil is powerless to hurt, or even to attack one, the thought of a lighthouse came to me. I thought of it as it stands through the darkness and the storm, with the waves dashing against it, and sometimes entirely hiding it with spray. But the walls were so solid

Digitized by Google

that the waves were thrown back on themselves; they could not even shake the lighthouse, for it was built upon a rock. It did not merely stand firm in the midst of storm, but it threw out a light to guide ships away from danger into a place of safety. Neither the winds nor the waves could quench that light, for it was shielded from the storm, and cared for from within, where all was calm.

Then I realized the powerlessness of evil. What matter if we seemed in the midst of discord, and wrong thoughts hurled themselves against us—they could not shake our firm foundation in Truth; they could not disturb the calm within, or prevent us from sending out light and help to others. It is just in times of storm that our light is most needed. As peace came to my sense, I thought of the lighthouse in the morning, when the storm had subsided. The rock on which it was built showed high above the waters, and the sun was shining on an untroubled sea. The mental work which I had thought would take hours, had been done in a few minutes. The same idea applies to the work for our church and cause; it is expressed in a broader sense in one of our hymns,—

> In vain the surge's angry shock;
> In vain the drifting sands:
> Unharmed upon th' Eternal Rock,
> Th' Eternal City stands.

This verse was in my mind all day, and my difficulties disappeared.

The next morning the lighthouse taught me yet another lesson; it stood for the life of a Christian Scientist. The rock on which it is built is the rock of Christ, Truth, and is a sure foundation. The building itself meant to me the life which from a human standpoint seems frail and insecure, but in the strength of Christ it is able to withstand the violence of the waves, and thus to endure through all the storms that arise. The light is the love which is shed abroad in all directions to help each and every one that comes within its radiance. The purpose of the light is not to attract travelers to the lighthouse, but to guide them away from danger into their "desired haven." It is a type of that universal love which is often spoken of in our textbook, the love which Jesus must have meant when he said, "Let your light so shine before men, that they may see your good works, and glorify"—not yourself or your works, but—"your Father which is in heaven."

OUR RIGHT PLACE.

GENEVA MARY CLIPPINGER.

THE great desire and business of the Christian Scientist is to know God. As progress in any science is founded upon understanding, or demonstrable knowledge, of that science, so progress to the Christian Scientist is founded upon knowledge of God, demonstrated as scientific Christianity. The world has always thought of a Christian as one who, like the Master, "went about doing good."

This concept of Christian activity has been broadened and deepened in our day by the light which has been thrown upon Jesus' life through Christian Science, whereby we have seen that the true Christian's good deeds must include the healing of all manner of disease and discord. Jesus' days were occupied largely with healing, and he was the master Christian. He showed the way in which his followers should live and work; consequently, to a Christian the chief concern should be to obey Christ Jesus' commands: "Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give." This is therefore the Christian Scientist's greatest desire, greatest joy, and greatest reward, namely, to grow in the knowledge of God, and they completely fulfil the Master's commands.

The ability to heal does not require any especial church position, other than to be right with God, and where this ability to heal spiritually unfolds in one's thought, it crowds out any desire for human place or power. For if we are working honestly and rightly to be about our Father's business, we shall be always in our right place, and we shall never be used by the argument that we should like to be in this or that position of prominence. We shall meet such an argument by the certain consciousness that God has a good usefulness for every idea of His creating, and that one idea cannot possibly do another's work; that He alone can say what is our usefulness; and He alone can prepare us for and give to us our right activity.

No work for Christian Science and no position in church work can be rightly filled without a demonstrable knowledge of God. If we are wholly concerned in the all-absorbing work of gaining daily more of this understanding of God, we shall be so busy that personal ambition cannot find its way to our thought. For it is fundamentally true that personal ambition has no place in a Christian's thought or life. He is wholly occupied in the loving, humble purpose to do good, to be good, and to prove that good is all that can govern thought, action, condition, or being.

Then if, today, Christian Scientists, in searching their thought, find any desire for prominence tucked away in the secret corners of mortal mind, they should immediately recognize it as unholy, unfit for a place in thought, and a usurper of their right to scientific thinking. Having recognized it for what it is, the Scientist will go to work earnestly to put this thought out, to replace it by the consciousness that he wants only the place and activity which God gives to him, and that he does not want and cannot have any other. Because, since God is the only giver of good, what He does not give to us cannot possibly be good or lasting, and what God does give to us nothing can take from us.

By right thinking, therefore, the Scientist comes into his legitimate activity, based always upon the demonstrable understanding of God. He avoids the calamity of being drawn into some work which is not his, and he has the right opportunities to be thoroughly and continuously useful. He becomes truly the servant of God—of good. He learns unequivocally that the best position he can ever have in any church or in any place is the attitude of unity with Truth, of oneness with Love, of willing, humble service to God by the uninterrupted reflection of the Mind "which was also in Christ Jesus." He is completely freed from the arguments of personal ambition. He comes into his right place.

What is bounty but love in the giver,
That waits for no plea to bestow
The evergreen boon of the river
To the fields that are blessed by its flow?
Does the light when the morning uncloses,
Count the leagues of its flight on the plain?
Does the sky call the roll of the roses
That hold up their lips for its rain?

God is never at loss with His plenty,
And nature, His handmaid, no more
Ripens sweets for the feast of the dainty
Than bread for the fare of the poor.
'Tis a loan with no burden thereafter,
'Tis a grace never measured or weighed;
If the banquet turns weeping to laughter,
The debt of the eater is paid.

Give us want, give us nothingness rather
Than this; better never be born
Than to harvest the fields of our Father
And leave Him unthanked for the corn.
The just will pay measure for measure
And the selfish give love for a fee;
But they squander an infinite treasure
Who sin against love that is free.

THERON BROWN.

SELECTED ARTICLES.

[Miss E. M. Ramsay in *Edinburgh Scotsman.*]

In every branch church of Christian Science throughout the world communion services are held twice a year, but without the symbols of the bread and wine. On the subject of baptism I would call attention to the following words of St. John the Baptist, as given in the 3rd chapter of St. Matthew: "I indeed baptize you with water unto repentance: but he that cometh after me is mightier than I . . . he shall baptize you with the Holy Ghost"! Christian Scientists think not less but more of baptism than do most Christians, but they believe that the essence of baptism is a radical change of heart and life—the new birth.

[Frederick Dixon in *Richmond and Twickenham* (Eng.) *Times.*]

Whether it is wise for jurymen to indulge in newspaper communications after a case has been tried is distinctly doubtful, but since one of the jurymen engaged in the recent inquest has written an anonymous letter to your paper, I am sure you will permit me to reply to him.

First, then, it is an amazing contention that the limits of toleration have been reached when a patient prefers to trust to Christian Science for treatment rather than to ordinary medical help. It is precisely this argument which has been used to defend every phase of persecution. What the juryman fails to see is that he is making his own prejudices the test of what is reasonable. That has been the genesis of persecution in all ages. The juryman goes on to beg the entire question by calmly assuming that, if the patient had had medical treatment, she would have recovered. The patient had had medical treatment, including six operations, until she was terrified of having any more. Then, and not till then, did she decide to accept Christian Science treatment, as a last resort. Seeing the enormous number of people who die every year of cancer, in spite of all the help that the medical profession is able to give them, it is almost indecent to argue that, in the present instance, the patient's life would have been saved by adhering to the ordinary method of treatment.

Finally, the juryman gives evidence of the fact that he is completely ignorant of what Christian Science treatment is, by explaining that it consists "of wishing yourself well, and having faith that it will be so." It would be impossible within the limits of a letter to a paper to attempt any satisfactory explanation of what Christian Science treatment is. It must suffice to say that the description given by the juryman is a complete travesty of anything Christian Science teaches, and is about on a level with the argument of those common-sense materialists who, as Huxley has explained, endeavored to disprove the theory of idealism by stamping on the ground, or some such irrelevant proceeding. A Christian Scientist certainly holds that the material body is the subjective condition of the human mind, and that, this being so, every manifestation of disease must be mentally produced, and can only be destroyed by destroying the mental cause. This is, however, about as far from wishing yourself well, and believing you will get so, as anything it would be humanly possible to conceive.

[Frank C. Barrett in *Rockland* (Me.) *Courier-Gazette.*]

An editorial which appeared in a recent issue of the *Courier-Gazette* states that in your opinion "*The Christian Science Monitor* is about the best morning paper that Boston now produces." This frank statement as to the merits of the *Monitor* is greatly appreciated by those who have made its acquaintance, and so it is rather surprising to them to read in the same paragraph that, "of course no paper with that name could ever attain to general circulation."

Is there anything in a name? In this case I believe that there is. In the first place *The Christian Science Monitor* was so named because it is a daily newspaper conducted according to the teachings of Christian Science; therefore any other name would not reveal its true identity, in fact would not do at all. This newspaper is now recognized as one of the best in Boston—indeed it has been called the best newspaper in this country from the standpoint of actual world's news, having better facilities for obtaining the news than other newspapers. As Christian Science teachings are altogether responsible for the quality and success of the paper, the name stands as a guarantee of its worth. As time goes on, it continues to "injure no man, but to bless all mankind," and its name is a label which insures genuineness and honest endeavor to "tell the good that men do."

Thus it is apparent that the name should be and is the best reason why the paper should "attain general circulation." It shows that the Christian Science church is back of it and is responsible for it. It means that it will always be a good, reliable, clean, up-to-date newspaper for the home. Devoid of sensationalism, with no startling accounts of crime, it is yet the most interesting of newspapers.

Furthermore, the paper has already attained a large "general circulation," and is read in every state in the Union by all classes of people, irrespective of their religion, because it is just such a paper as they have desired for their homes and can be read by every member of the family with great profit to all. It is not devoted to religious interests, but it is a strictly first-class daily newspaper in every sense of the word. It is not yet two years old, but it has already the reputation of being one of America's greatest dailies.

[John L. Reidall in *Odebolt* (Ia.) *Chronicle.*]

There are "several reasons" why Christian Science is making rapid progress. Our clerical critic does not by any means state them all. Its name indicates its practical teachings, for it is the exact Science of Christianity, presenting in a positive and demonstrable way the scientific relationship between God, man, and the universe; and a scientific and Christian teaching by means of which all human discords may be overcome, and wherein man may understand his true and right relationship to God. In fact, Christian Science is exact, positive, demonstrable Christianity, including both the healing of the sick and the saving of the sinner, in conformity to the religion established by Jesus Christ. Christian Science does not, in any degree, depend upon "human will-power" for its efficacy, but rests entirely and absolutely upon the power of God. The psalmist said (Psalms cvii. 20): "He sent his word, and healed them, and delivered them from their destructions," and it is the "word of God" that heals in Christian Science.

The growth of Christian Science is because of its intensely practical teachings; it is because of accomplished results in the healing of the sick and the reformation of the sinner; it is because its teachings are an exposition of the vital, fundamental truths of Christianity, and it is because people are finding in Christian Science that satisfaction, that hope, joy, and peace which they have not found anywhere else. This is the day and age of practical things, outworn and outgrown theories are being relegated to obscurity, where they properly belong. A vital teaching of the Christ-truth, such as Christian Science is, necessarily grows and makes progress, because it is irresistible and because it is meeting the human need for something higher, better, and more satisfactory than other teachings presented.

It is not a logical conclusion that "Christian Science appeals to the selfishness of man in the healing of disease." We read that our great Exemplar, Jesus Christ, gave to the inquiring disciples of John the fact of his healing work as proof of his Messiahship. He said: "Go and show John again those things which ye do hear and see: the blind receive their sight, and the lame walk, the lepers are cleansed," etc.

Digitized by Google

The erroneous statement that "Christian Scientists mix much error with the truth they started with," does not prove anything. As a matter of fact, truth and error do not mix; whatever is true is eternally true, and error never was anything. The basic truth of Christian Science is, God is Spirit, and God is Mind. God created all, therefore it follows that the real creation is spiritual, not material. St. John wrote: "All things were made by him, and without him was not any thing made that was made." And in Genesis i. 31, we read: "And God saw every thing that he had made, and, behold, it was very good." Every teaching of Christian Science is a logical deduction from its fundamental basis.

If "the pulpit has been negligent of matters pertaining to physical troubles of people," does not this constitute a valid reason for Christian Science, which includes the complete gospel, healing the sick and reforming the sinner. The statement that "Mrs. Eddy has taken Christ away and that he could not be found in their [Christian Science] teachings," can only be believed by those who have not read the writings of Mrs. Eddy and the Christian Science publications. From beginning to end Science and Health points to Christ as the Saviour. The following, from the Christian Science tenets, should be conclusive: "We acknowledge and adore one supreme and infinite God. We acknowledge His Son, one Christ; the Holy Ghost or divine Comforter; and man in God's image and likeness" (Science and Health, p. 497).

It would be difficult indeed to find a Christian Scientist who would be willing to change his certain sense of God's protecting care for the vague uncertainties of his former experiences.

[James D. Sherwood in *Beaumont* (Tex.) *Enterprise*.]

A clergyman, whose sermon was reported in your columns, says, among other things, "Jesus does not ignore the fact that we are sick. Christian Science says you are not diseased at all. It is simply a delusion of mortal mind; there is no sin, no sickness, no death."

The infinity of God is readily acknowledged by theologians. That God is infinite indicates that He is All, and that there is naught beside Him. God is Spirit, hence Spirit is the only substance, the only entity. From this premise is it presumption to relegate to the rank of unreality all that is unlike God, all that is unlike good? It is from this viewpoint that Christian Science repudiates the illegitimate claims of evil seen in the many forms of sin, sickness, and death, whenever and wherever it is claimed that these evils proceed from God, the only creator. If evil exists, it must proceed from God, else God is not the only creator; but God is the only creator, and all that is real God made, and all that God made He pronounced good; hence one is justified in refusing to believe in the reality of anything that is so unlike God. That sin, disease, and death, as appearances of evil, are constantly in evidence in the world of sense, is acknowledged; but that they proceed from God we deny, and we hold that all that is real is comprehended in the good works of a good God.

If Christ Jesus had believed sickness to be true, he would have believed it to be the work of God, and hence that it was right for a man to be sick. In that event he would have found himself working against the will of God every time he destroyed sickness and healed the sick; but on the contrary he knew that sickness was the phenomenon of false belief and that it would vanish with the appearance of the right idea concerning God and man. He said of the woman who was bowed down with rheumatism that Satan had bound her, and he lifted her thought out of the belief that she was suffering punishment inflicted by an angry God, and this immediately healed her. In like manner Christian Science is today presenting to the waiting thought of suffering humanity an abiding conviction of the loving-kindness of a good God, His omnipresence and omnipotence, and thereby it is demolishing sin and disease at the same time and by the same spiritual process.

Our critic began his discourse by saying, "Man is a ruin." What a picture of discouragement and desolation is presented in that brief sentence. Think of it, "the noblest work of God" a ruin. God's best effort and His greatest work a ruin and a failure! Now, Christian Science takes the very opposite view-point, and declares without reservation that which is written in the Holy Bible,—that God is All and there is none beside Him; that God is infinite perfection and that man is God's image and likeness. God is Spirit, man is spiritual. God is eternal Life, man is immortal. Man is always image, and he reflects God. Man is never material; man is never sick, never dies, neither can man in God's image commit sin, fall from his high estate, nor become a ruin. In belief a mortal sins, gets sick and dies; but a mortal is not man. A mortal is but a poor counterfeit of the real man. (See Science and Health, p. 148.) He is a false belief concerning man, and is the outcome of ignorance concerning God and what constitutes the Son of God. It is quite evident that if one is regarding a mortal as man, then he believes that man is fallen, and that man is become a ruin; but that kind of man is not the ideal man that was made in the image and likeness of God, and hence that is not man at all. A correct knowledge of God and the spiritual man is the rock on which the healing effected by Christian Science is based.

Our critic seems to be antagonistic in his mistaken view of Christian Science, and I feel quite sure that he will be more kindly disposed when he learns what Christian Science is accomplishing for the reformation of the sinner and the recovery of the sick through an understanding faith in God as able and willing to heal and to bless all who call on Him today, just as He did centuries ago.

A Christian Scientist only claims to be an humble follower of Christ Jesus, seeking to emulate his example by doing the works that he demanded of his followers. Hear his own words: "In my name shall they cast out devils: . . . they shall lay hands on the sick, and they shall recover." If our critics fail to make this proof of discipleship, they should not feel inclined to cast stones at the Christian Scientists who are daily healing the sick by purely spiritual means and in strict accord with the requirements of the Master.

With mistaken zeal Paul persecuted the early Christians. Afterward in humility he came into an understanding of Christianity; then he became a wonder-worker, even to the extent of raising the dead. And, when we remember that many who are today earnest Christian Scientists were formerly opposed to it through their ignorance of it and of the good it is accomplishing in the world, we can be the more patient with our detractors and say in the language of the Master, "Father, forgive them; for they know not what they do."

[Edward W. Dickey in *San Pedro* (Cal.) *News*.]

There is no element of suggestion or human mind force in Christian Science. Its practice is reliance upon the one infinite God, divine Mind, and is beneficial whenever and wherever applied. Animals respond to loving thoughts and actions, and it should not seem strange, even to those unacquainted with Christian Science, that those who have found it a good remedy for their family should also find it good for their animals. Christian Science emphasizes the thought of kindness to dumb brutes, and Christian Scientists have found that they are able to relieve the suffering of animals quite as readily as that of human beings.

This Science teaches that God's spiritual creation is complete and perfect, and includes all created things. The law of the one infinite creator, divine Mind, is certainly applicable to all His creation. It is not logical or reasonable to suppose that a part of God's creatures should be benefited by His infinite law and not the whole.

[W. C. Williams in *Baltimore* (Md.) *American*.]

The text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy, claims that all things that are true were created by Mind, but Mrs. Eddy uses the word Mind as a synonym for God, and does not mean the so-called human mind. The statement that Christian Science teaches that man has gradually evolved from the lowest plane of existence is wholly untrue. In Christian Science man is declared to be the reflection, the image and likeness of God, now and at all times, past and future; that the Adam-man, the material expression, is a false conception of the real man, and that this conception must be changed before we see the real man, the child of God; but this true reflection of God is always there and always has been there, waiting for recognition and expression.

[From an editorial in *Register and Leader*, Des Moines, Ia.]

This thing of catching cold whenever the weather changes suddenly or we sit or sleep in a draft is all nonsense. We have this revolutionary doctrine not merely on the authority of Christian Science, but also on the authority of a regular allopathic M. D., duly graduated and admitted and of enough consequence in his profession to be allowed to set forth his ideas in a leading medical journal, the *Medical Record*.

Without a bit of fear of consequences this man, Dr. William Brady of Elmira, N. Y., declares that catching cold is a mere "bogy." Those who have lived in the fresh air, summer and winter, know from experience that the doctor is right, and they laugh at the deluded fear of sudden weather changes and drafts.

[R. Stanhope Easterday in *Indianapolis* (Ind.) *Star*.]

In essaying a reply to your anonymous correspondent, writing in response to my former letter, I am almost loath to burden your readers with tedious repetitions, but I feel that as long as they can stand tedious criticism they can stand courteous rejoinder. Truth, moreover, is really more interesting than meaningless fiction to a well cultivated mind.

Our critic hurls an indelicate challenge at Christian Scientists, attempting at the same time to dodge behind the superficial surmise "If marriage is unnecessary" and to buttress the stand with a juggled reference to page 31 of Science and Health; but it is unnecessary for us to take up the gauntlet in our vindication, because we have already safeguarded this avenue of approach in our former letter by citing Mrs. Eddy's reasonable vindication of marriage at the present juncture and for possible centuries to come. On page 31 of Science and Health, cited by our critic, she far from intimates "a human father to be unnecessary," but reasonably quotes our Master's own wholesome mandate: "Call no man your father upon earth, for one is your Father, which is in heaven." If our critic questions this citation from Science and Health, he questions not Mrs. Eddy, but Jesus Christ.

Very far, also, from intimating on pages 56 and 57 of the above cited Science and Health, that "there should be a discontinuance of the marriage relation," Mrs. Eddy unequivocally declares in this very connection: "Until the spiritual creation is discerned intact, is apprehended and understood, and His kingdom is come as in the vision of the Apocalypse—where the corporeal sense of creation was cast out, and its spiritual sense was revealed from heaven—marriage will continue, subject to such moral regulations as will secure increasing virtue."

In short, we would again urge upon your readers and our critic that the better way to arrive at a rational solution of all these hackneyed questions as to the correctness of Christian Science teaching would be a careful perusal, on the part of all, of the text-book on Christian Science, "Science and Health with Key to the Scriptures."

[Editorial in *Boston Post*.]

The opening of the approach to the Christian Science temple is one of the most notable contributions to the beautification of the city attributable to private enterprise.

The location of this admirable piece of architecture has been held to be unfortunate, inasmuch as it was in the heart of the apartment-house district, shut off in great measure from public observation. By the acquisition of the vacant lot, hitherto unsightly, between Huntington avenue and Falmouth street, and transforming this space into a park with pleasing features, a vista of approach has been created which inspires admiration.

It is now possible to view the great building as its architects intended that it should be seen. Indeed, it forms a conspicuous addition to the beauties of that section of the city in which the development of Boston along esthetic lines is most notable.

The march of commercialism invading this part of the town is pleasantly checked by this interposition of a spot of beauty. The Christian Science people have set an example of what may be done in the local development of Boston which may well be taken seriously to heart by those who have the direction of civic advancement.

[*Boston Common*.]

The Christian Science temple, one of the most beautiful pieces of architecture in the city, is being given a worthy approach. What has hitherto been but an unsightly vacant lot, between Huntington avenue and Falmouth street, has been transformed into a park, across which one sees the temple, The Mother Church, and the publishing house. The bare wall of a block at one side of the park has been skillfully treated, and a most pleasing Italian effect, as of a sunken garden, has been produced.

The vista from Huntington avenue is now one of unusual beauty, and embodies an idea which might be applied with advantage to other structures, such as the Custom House, City Hall, and Court House. In demonstrating the necessity of a beautiful approach for a beautiful building, the Christian Scientists have contributed largely to the esthetic needs of Boston.

[*Boston Post*.]

From an unsightly dump, filled with piles of building bricks and old timber, the open lot running from Huntington avenue to Falmouth street, in front of The First Church of Christ, Scientist, is fast becoming a triumph of landscape gardening. When completed, the part of the garden from Huntington avenue to the main doors of the church will be used as a park, to allow worshipers to reach the church from the avenue.

From the present brick walls of Huntington avenue the lot has been graded by a series of terraces to a large green in the center. On each side of this green are walks twenty feet wide. These walks are reached from both the Huntington avenue and Falmouth street sides by a series of granite steps. On both sides of each of the four flights of steps are arranged circular clusters of evergreens, made up of mountain pine, junipers, and dwarf pines, and are to be surrounded by bulb plants in season. Running beside the walks will be beds of flowering plants, evergreens, roses and bulb plants. The center will be a perfect lawn, in which will be set small trees of evergreen.

Running from the north walk along the Falmouth street side to Norway street will be a large green. In the rear of the apartment houses has been constructed a high retaining wall of granite, in front of which is to be laid out a row of poplars. This same system will be employed along the walls of Chickering Hall.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

"UNIFIES MEN AND NATIONS."

SOLOMON is commonly accredited as one of the wisest of men, and it was doubtless out of his own experience that he evolved this bit of practical wisdom, "A soft answer turneth away wrath,"—one of the best known, most frequently quoted, and yet least acted upon of his proverbs. The reason for this, perhaps, is that to human belief, while conceding the truth of this saying, preaching is held to be much easier than practice.

The counsel voiced by the prophet Isaiah is along the same line: "Come now, and let us reason together, saith the Lord;" but this reasoning process to which we are invited cannot be made effective if those who should "reason together" are not courteous, considerate, and Christian, rather than angry, dictatorial, and unchristian, and this applies to nations as well as to individuals. Indeed, we may reasonably ask how many of the wars which have stained the pages of history would have been prevented had the wisdom of Solomon prevailed, and had those concerned preferred to "reason together" instead of forcing conclusions, based, not upon the good of all mankind, but upon personal prejudice and angry intolerance, unmindful that he "who overcomes by force, hath overcome but half his foe."

Perhaps the same impression prevails with nations as with individuals, that a "soft answer" is an indication of a weak or invertebrate personality, but this is not true. "The truth is always the strongest argument," wrote a pagan sage, and the hand of iron grasps none the less firmly when encased in a velvet glove. As a celebrated English divine cleverly counseled his students: "If you are drawn into a controversy, use very hard arguments but very soft words."

The bringing in of the reign of universal peace is one of the great questions before the world today, and the progress that has been made in later years toward this end is most encouraging; but there is much yet to be done, and until the problems which arise from time to time in the affairs of nations in their relation to other nations are viewed from a less personal and selfish standpoint than that from which they have been viewed, the full measure of peace cannot be expected.

Jesus said, "Seek ye first the kingdom of God, and his righteousness;" and more specifically quoted, in answer to the lawyer's question as to which was "the great commandment in the law": "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind. This is the first and great commandment. And the second is like unto it, Thou shalt love thy neighbor as thyself. On these two commandments hang all the law and the prophets." There can be no question, if these two great commandments were to be followed with understanding, that peace would speedily prevail.

That Christian Science is helping to usher in the blessings of universal peace is the claim of its followers, and that it is following the teachings of Christ Jesus in this regard is apparent in that close bond of brotherhood which makes Christian Scientists "citizens of the world." Mrs. Eddy has definitely stated the teaching of Christian Science on this subject, and the Principle on which it is based, in the following words:

"'Thou shalt have no other gods before me.' (Exodus xx. 3.) The First Commandment is my favorite text. It demonstrates Christian Science. It inculcates the triunity of God, Spirit, Mind; it signifies that man shall have no other spirit or mind but God, eternal good, and that all men shall have one Mind. The divine Principle of the First Commandment bases the Science of being, by which man demonstrates health, holiness, and life eternal. One infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scriptures, 'Love thy neighbor as thyself;' annihilates pagan and Christian idolatry,—whatever is wrong in social, civil, criminal, political, and religious codes; equalizes the sexes; annuls the curse on man, and leaves nothing that can sin, suffer, be punished or destroyed" (Science and Health, p. 340).

ARCHIBALD MCLELLAN.

THE BAPTISM OF FIRE.

AMONG professing Christians there are many different opinions as to baptism,—its value, character, and significance,—and this is not so very surprising since we read that early in Christian history there was some uncertainty among believers concerning its true meaning and place. Paul evidently went straight to essentials in dealing with this question, for we are told in the 19th chapter of Acts that he asked some disciples whether they had received the Holy Ghost, and when they replied that they had not even heard of the Holy Ghost, he asked them, "Unto what then were ye baptized?" To this they responded, "Unto John's baptism." This naturally takes us back to the statements found in the 3rd chapter of Matthew, where we read that John called to repentance from sin all who would listen to him, and his preaching was accompanied by the simple rite of water baptism, which typified moral purification; but we are told that he pointed his followers away from his own teaching to something far higher, for he said, "He that cometh after me is mightier than I . . . he shall baptize you with the Holy Ghost and with fire."

It would seem from the Gospels that Jesus' disciples, several of whom had been followers of John the Baptist, continued to employ water baptism in their ministry, and this was doubtless a necessary link between the new and the old. It certainly seemed to have much less of materiality in it than had the elaborate rites and sacrifices of the old order, concerning which Isaiah tells us that God declared, "To what purpose is the multitude of your sacrifices unto me? . . . Bring no more vain oblations; incense is an abomination unto me . . . it is iniquity, even the solemn meeting." What God required was this: "Cease to do evil; learn to do well," and through all the ages this is the unceasing demand of God, who is revealed in Christian Science as divine Principle, Truth and Love. In so far as any religious observance tends toward this end, it should at least have our respect, even though we may have found "a more excellent way."

In John's Gospel we read that, although Jesus evidently permitted his disciples to baptize with water, he himself never did so; and although he had received this rite from John, he yet said, at a later period: "I am come to send fire on the earth; and what will I, if it be already kindled. But I have a baptism to be baptized with; and how am I straitened till it be accomplished!" Mrs. Eddy thus defines baptism: "Purification by Spirit; submergence in Spirit" (Science and Health, p. 581); and like the Master, each follower of Truth may be said to be "straitened" until the spiritual baptism is accomplished. When it is realized, we become conscious that God governs all that we think and

Digitized by Google

say and do, as Mrs. Eddy tells us in explaining the tremendous significance of the baptism of the Holy Ghost. (See Miscellaneous Writings, p. 204.)

In the 1st chapter of Acts we read that after Jesus' resurrection he told his followers that they were to wait for this baptism (which evidently had not come to them with any material rite), and that then they should "receive power" to be his witnesses, *i.e.*, to do the works which he had done by the understanding of Spirit and spiritual law. This they did; and wherever the baptism of the Holy Ghost was experienced we have records of healing, and even of the raising of the dead. It is for this that Christian Scientists watch and pray,—this fiery baptism which "will burn up the chaff of error with the fervent heat of Truth and Love, melting and purifying even the gold of human character" (Science and Health, p. 565). Well may we ask ourselves what evidence we can offer that we have been baptized according to the high standard of Christ's Christianity.

ANNIE M. KNOTT.

THE WINDS OF GOD.

WE of New England have come to the perfect afterdays when one hears the quickening call,—

Ho, for the hill-tops, a look at the sky
And the horizon's empurpled sheen,

The year's greatest color exhibit awaits, there, the delighted eye, and more, for it is the time when, as the psalmist has said, God "bringeth the wind out of his treasuries."

Facing this clear cool treasure-tide, one senses as at no other season the abundance and purity, the vastness and bounty of that fathomless sea of air whose heights ensphere the world, in whose depths all human events transpire, and upon whose floor earth's Alps and Andes shrink into the merest ripple-marks. Its mighty currents, coming one knows not whence, and hastening one knows not whither, define it in terms which verily pertain only to the infinite. We say of it, "The unseen, the all-embracing, the ever-present, the inexhaustible." Sweeping through the incensed aisles of the forests, and over the fragrant fallows of the fields, it has absorbed the essences of the grains and grasses, the odors of the fruits and flowers, and thus attained that fine quality, that sun-ripened sweetness which answers to our wonderment that the Greek Testament word *ouranos*, translated air in twelve instances, should have been translated heaven in two hundred and forty-one.

This bracing breath of autumn comes to remind us, not only of "the precious things of the earth," but, in the words of Moses, of "the precious things of heaven," of "the good will of him that dwelt in the bush." The highest interpretation of nature, as of experience, is that which penetrates its material veil and brings us directly into the presence of the realities of Spirit. Jesus lived for the most part out of doors. Here, ofttimes in the night and alone, he entered "through the veil" into the "holy place" of spiritual realization. Here he found uplift and strength for the trying days, and thus proved that to every hungry and aspiring heart it may be revealed, as it was to the poet, that "God sows Himself on every wind."

This possible ingathering for attuned receptivity is disclosed by Helen Keller when she says,—

The thousand soft voices of the earth find their way to me—the small rustle in tufts of grass, the silken swish of leaves, the hum of bees in blossoms I have plucked, the flutter of a bird's wing after its bath, . . . the thrilling energy of the all-encasing air, its stored up vibrations and movements . . . once having been felt, these loved voices ripple in my thought forever, an undying past of happy memories.

Given a kindred delicacy of spiritual perception, and the foreseeing of prophecy is no longer a mystery.

In awakening a clearer understanding, a more helpful sense of the all-encompassing nearness of God, Christian Science is leading men away from the low planes of self, and up to those summits of spiritual vision where Truth's fair winds forever blow, where we may gather daily strength and inspiration from the unfailing flow of Love's outgoing ministries.

In Science and Health (p. 579) we find the spiritual definition of wind to be, "That which indicates the might of omnipotence and the movements of God's spiritual government, encompassing all things;" and it was this higher thought, surely, which prompted Whittier to sing,—

Lo, winds of God, awake and blow
The mists of earth away;

and which led Markham, the poet-preacher, to say, recently, "I look forward to a great religious awakening, a great wind of God that shall blow over the barren world."

Thanks to a woman's great evoking faith, this wind has "sprung up" in the earth, and it is sweeping away the "spirit of heaviness" from many a human heart. Near and far it is bringing health and harmony, a new courage and a great joy to the sons of men; and in very truth they are going forth "to meet the Lord in the air."

JOHN B. WILLIS.

AMONG THE CHURCHES.

TELLURIDE, COL.

The Christian Science Society of Telluride having lifted the debt on its new church edifice, the building was formally dedicated last night [Sept. 11]. Mrs. James, in her paper upon the history of the Christian Science organization in Telluride, said in part,—

On Oct. 9, 1906, the Christian Scientists living in Telluride gathered in a private residence for the purpose of reading the Lesson-Sermons. Early in 1907 a dwelling-house on North Pine street was purchased. This was remodeled and on March 24, 1907, they moved into their new church home. At this time they organized as the Christian Science Society of Telluride, Colorado. In May, 1910, an addition was built, and as the church is now free of debt we have invited you here tonight to help us with your presence dedicate our church home.—*Journal*.

SERVICES AT SEA.

The following letter will be of interest as indicative of the profitable habit upon the part of Christian Scientists, when traveling, of getting together to hear the Lesson-Sermon read, and to realize the fulfilment of the promise, "Where two or three are gathered together in my name, there am I in the midst of them."—EDITOR.

On board steamship Cleveland.

It may be of interest to readers of the *Sentinel* to know that the influence of Christian Science is not limited to the material havens of any or all countries, but is felt, recognized, and exercised on the "deep" as well. On this ship, making its return trip around the world, are a number of Scientists from the various states. As many as can be accommodated in a large stateroom hold regular Sunday and Wednesday evening meetings, conducted along the same lines as those of the home churches. It is an hour we all enjoy, and the service is attended with great regularity. We feel its beneficent influence in every trying circumstance.

At Honolulu, Hong Kong, and Manila we have found prosperous churches, and all were pleased to have a visit from us, while we in turn were benefited by their experiences and fortitude. It is a common thing on shipboard to hear travelers talking together of Christian Science and making reference to people they have known who have been benefited by it. We are now on the Sea of Java, bound for Singapore, India, and other places, about which more anon.

I am sending you this word of greeting at the suggestion of the little company of Scientists on board our ship.

E. A. Crane.

THE LECTURES.

PITTSBURG, PA.

An audience that filled Carnegie Hall, Allegheny, last Thursday evening [Sept. 15], listened attentively to a lecture entitled "Christian Science: The Gospel of Salvation," by Willis F. Gross of Boston, given under the auspices of Second Church of Christ, Scientist. Congressman-elect Stephen G. Porter, in introducing the lecturer, said in part,—

Christian Science is more than a theory at the present time; the fact is brought home to many people that throughout the entire United States, and in fact throughout the entire civilized world, it numbers thousands upon thousands. This alone is enough to convince the most skeptical that there is more substance than mere theory in Science.

Pittsburg Herald.

OTTUMWA, IA.

An immense audience gave Francis J. Fluno, M.D., of Oakland, Cal., the closest attention last night [Sept. 19] at the Grand Opera House, where the well-known lecturer on Christian Science gave a splendid address on the subject. He was introduced by F. W. Simmons, whose remarks in part were,—

I am glad always to sit upon the same platform with men who think, and who are willing to give to the world their thought as they honestly believe. This is a great old world of inharmony,—inharmony of intellect in politics, in philosophy, in religion, and sometimes, I think, even in natural science as well as mental or moral science, and especially in religious matters, as man is mostly a religious subject. It is, therefore, the greatest and most serious thing which agitates and occupies the heart and soul of the human race. There were differences between Cain and Abel, and it may be said theirs was a religious difference. Moses did not have entire harmony with the children of Israel. Jesus Christ did not have harmony entirely with all his disciples, some doubting even to the end. The apostle Paul came a little later to enlighten the people and further cement the teachings of the greatest of all religious advocates. Savonarola and Martin Luther came still later to change and transform a large portion of the restless minds of the religious world. And so it has been since the beginning of time. We are a restless, anxious, truth-seeking multitude, feeling our way as best we can, groping in the dark at times and in the sunshine at times, but ever seeking for comfort and happiness in this life and for the life eternal.

Ottumwa Courier.

MISSOULA, MONT.

Bliss Knapp of Boston spoke to a representative audience at Harnois Theater last night [Sept. 23] on Christian Science. J. L. Wallace introduced Mr. Knapp, saying in part,—

I am not a believer in Christian Science, neither am I an unbeliever, but rather what might be termed an agnostic. Belief or unbelief in a theory should have for its basis reason, knowledge, understanding, faith. That lacking, no one has a right to say it is false or it is true. I do not understand, I do not comprehend; therefore, it is not for me to express a belief. Considered as a philosophy I seem to understand some of its workings, but the spiritual essence of Mrs. Eddy's theories is a cloud through which I am unable to find my way. A woman discovered and published to the world the theory of Christian Science. Mrs. Eddy was born in the little village of Bow, in the good old Puritan state of New Hampshire, in the year 1821. She had the courage of her convictions. She thought, she prayed, she worked, and as the result of her thought, prayer, and work, there was given to the world her great book, "Science and Health with Key to the Scriptures." I confess that the book is a mystery to me—I do not comprehend or understand. However, the Bible declares that spiritual things must be spiritually discerned.—*Missoulan.*

BERLIN, GERMANY.

The lecture delivered on Thursday evening [Sept. 29] at Beethoven Hall by Bicknell Young of London, Eng., on Christian Science, was attended by a crowded audience. Prof. George S. Atwood introduced the lecturer, saying in part,—

At the request of your lecture committee I have the pleasure and the honor to present to you the lecturer of the evening. Before performing this pleasing duty, I beg to make a very few remarks as to my personal impression of Christian Science. Two important features of Christian Science have always impressed me very forcibly, namely, the cheerfulness of its adherents and the utter avoidance of any attempt to make proselytes. You Christian Scientists are living examples of your faith, exemplifying the words of Holy Writ: "By their fruits ye shall know them." The living example of a good life is a never-failing proof to others of the practical working of one's faith.

Continental Times.

MANKATO, MINN.

Miss Mary Brookins of Minneapolis delivered a lecture on Christian Science at the Mankato Theater yesterday afternoon [Sept. 25]. Her audience was large and she was introduced by Attorney W. R. Geddes, who said,—

Among the liberties vouchsafed to every citizen of the United States by our Constitution, one of the greatest and most precious is the right of liberty of conscience in religious matters. This ought to make us all very tolerant of each other's beliefs. This is an age of research in all departments of human effort. We ought to be patient and charitable with each other in our efforts to search out that which comes most nearly to leading our hearts and minds to a fuller understanding of the teachings of the meek man of Nazareth, for if we cannot find a full measure of the solace that every human soul longs for in the words and acts of the Saviour, then, indeed, are we left in the darkness of despair.

From time immemorial to the present moment we find men and women seeking industriously for two great boons, and these are relief from the sickness of sin and the ills of the body, seeking for mental and spiritual rest, and if any messenger comes to us who claims to have developed from the teachings of the Bible that which satisfies this longing in greater fulness, then we are legally and morally bound to give that messenger a candid, respectful, and thoughtful hearing. It is with this thought in mind that I bespeak for the lecturer this afternoon careful consideration in all that she may say.

The more that one reads and studies the words and work of Jesus Christ, and the great apostles who followed him, the more we can see that they taught and practised that which tends to bring to the human race physical healing as well as relief from sin. That the burden of sin and sickness under which all mankind suffers is self-inflicted, is profusely taught in the Bible, and this is especially true of the teachings of the meek and lowly one who walked among men for three years and bore all the ills and fears that beset our physical being, and there is special warrant in his work on earth for believing that he came to relieve from physical suffering as well as to teach us the way of life in spiritual matters.

It is a well-known fact that those patient and long-suffering missionaries who go to carry the gospel message into heathen lands find the same longing for relief from the ills of the body that has been characteristic of the race for all time, and they find that the gospel message is more

Digitized by Google

readily received and embraced when this dual relief is brought to them, that is, relief from the bondage of sin and relief from the ills of the body.

If any one can come to us in these modern days, amid all our boasted enlightenment and Christian development, with a message that promises a realization of this dual relief that the souls of men most seek after, without destroying the message of the gospel, and without taking from us its benign promise and hope, then that person is aiding in bringing about a realization of the teachings of the Saviour, of Paul, and of their many colaborers whose words and works are recorded in the Scriptures, and such a one will certainly assist us in securing peace of mind and soul and will assist in bringing about that unity of action and purpose in Christian life that modern thought is fast carrying us on to. I believe that there is a real tendency extant today, all over the civilized world, to accept the belief that the message of the Christ had this dual purpose, and that in his work there is tangible evidence of the healing from sin and the healing from sickness of body, contemporaneously. I cannot make anything else out of it, and deny it as we may, the substance of this thought is being taught from all the pulpits of the world, with greater frankness than ever before, and it is not stretching the argument very far to say that such is the tendency of modern religious thought.

It is not for me to say that the faith of the Scientists, and their manner of teaching it, is or is not a step in advance in promulgating this fuller conception of the gospel story, but I do know that it is appealing to thousands of the most intelligent, best educated, and most profound thinkers all over the civilized world. If it is not, then why the marvelous growth of the Christian Science church? I suggest these things as reasons why we should be willing to listen to those who go out over the land to present their cause, as this lady has come to do this afternoon. I believe that the substance of the teachings of the Scientists has been greatly misunderstood, and, consequently, misrepresented; that when it is better comprehended, through more thought and investigation, it will be learned that there is no great abyss between these teachings and the orthodox churches. I believe that there will yet be a blending of all religious thought and teaching, which will bring to mankind in general more and more of the relief of healing through a better understanding of the relation of God to man and of man to God, without discarding one whit of the mellowing influence of the gospel message on the human soul.

I do not pretend to say that I understand their message in all its fulness, or that I embrace it all, but what I urge on this audience is to listen and to learn, weigh the message that she will present well, retain that which you can understand and can know to be good, and give future thought to that which you do not fully understand as she presents it, for in no other way can we grasp the real message of the Bible. The time for a blind acceptance of truth is fast passing away and careful contemplation on religious matters is taking its place, and I am optimistic enough to believe that the simple teachings of the Bible are being better understood today, and are being given a more practical application to the needs of human life than ever before, because of the better contemplation of all things religious by all the people.

If the Christian Scientists have a message that presents the essentials of the Christ-religion in a fuller sense than it has been done before, then it is bound to have a world-wide acceptance; and if they have not, then the judgment of men will soon condemn it.—*Mankato Free Press.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Amesbury, Mass.—Francis J. Fluno, M.D., Town Hall, 7:45 p.m., Nov. 1.

Atlanta, Ga.—Francis J. Fluno, M.D., Lyric Theater, 3 p.m., Nov. 13.

Bath, N. Y.—Prof. Hermann S. Hering, Court House, Nov. 14.

Beaumont, Tex.—Bliss Knapp, Auditorium, Woman's Reading Club, Nov. 11.

Birmingham, Ala.—William D. McCrackan, M.A., Bijou Theater, 3 p.m., Oct. 30.

Blackpool, Eng.—Bicknell Young, Grand Theater, 3:15 p.m., Oct. 30.

Bridgeport, Conn.—Frank H. Leonard, Universalist Church, Nov. 14.

Brighton, Sussex, Eng.—Bicknell Young, Hove Town Hall, 8:30 p.m., Nov. 4.

Centralia, Wash.—Rev. William P. McKenzie, Opera House, Nov. 11.

Chicago, Ill. (Third Church).—Willis F. Gross, Church Edifice, Washington boulevard and Leavitt street, Nov. 10 and 11.

Coburg, Ore.—Rev. William P. McKenzie, I. O. O. F. Hall, Nov. 14.

Detroit, Mich. (Second Church).—Rev. Arthur R. Vosburgh, Detroit Opera House, 3 p.m., Nov. 13.

Franklin, Pa.—Frank H. Leonard, Armory, Nov. 11.

Hyde Park, Mass.—Clarence C. Eaton, Waverly Hall, Nov. 10.

Jersey City, N. J.—Francis J. Fluno, M.D., Hasbrouck Institute, Crescent and Harrison avenues, 8:15 p.m., Nov. 10.

Lawrence, Mass.—Rev. Arthur R. Vosburgh, Lawrence Opera House, 3 p.m., Nov. 6.

Lima, Ohio.—Prof. Hermann S. Hering, Faurot Opera House, Nov. 10.

Manchester, Eng.—(First and Second Churches).—Bicknell Young, West Didsbury Public Hall, Burton Road, Nov. 11; Edifice First Church, Victoria Park, 3:30 p.m., Nov. 12; Edinburgh Hall, Alexandra Park, 7:30 p.m., Nov. 12.

Marshall, Mich.—Frank H. Leonard, Empire Theater, Nov. 8.

McKeesport, Pa.—Frank H. Leonard, White's New Theater, 3 p.m., Nov. 13.

Meadville, Pa.—Hon. Clarence A. Buskirk, I. O. O. F. Temple, Nov. 10.

Muskegon, Mich.—Bliss Knapp, Woman's Club building, Nov. 5.

Newark, N. J.—Prof. Hermann S. Hering, afternoon, Nov. 13.

Norristown, Pa.—Francis J. Fluno, M.D., City Hall, De Kalb street, above Airy, Nov. 11.

Painesville, Ohio.—Frank H. Leonard, High School Auditorium, Nov. 10.

Passaic, N. J.—Prof. Hermann S. Hering, Passaic Club House, Prospect and Erie streets, 8 p.m., Nov. 13.

Philadelphia, Pa.—William D. McCrackan, M.A., Church Edifice, 40th and Walnut streets, Nov. 13 and 14.

Port Huron, Mich.—Mrs. Sue Harper Mims, Nov. 3.

Reading, Pa.—Hon. Clarence A. Buskirk, Orpheum Theater, 3:15 p.m., Nov. 13.

Saginaw, Mich.—Willis F. Gross, Masonic Temple, North Washington avenue and Johnson street, Nov. 14.

San Antonio, Tex.—Bliss Knapp, Beethoven Hall, 3:30 p.m., Nov. 13.

Tacoma, Wash.—Rev. William P. McKenzie, Tacoma Theater, 3 p.m., Nov. 13.

Tulsa, Okla.—Rev. William P. McKenzie, Grand Opera House, 3 p.m., Nov. 6.

Wilmington, Del.—William D. McCrackan, M.A., Avenue Theater, 3 p.m., Nov. 13.

Zanesville, Ohio.—Prof. Hermann S. Hering, Gold Hall, Nov. 11.

TESTIMONIES OF HEALING.

I have desired for a long time to be willing to give as well as to receive, and out of a great sense of gratitude for Christian Science and what it has done for me, I send the following experience, hoping to bring cheer to others. Some years ago I was sick for two years, and was constantly under medical care without getting much better. I had seemingly a heavy load of sickness and sorrow, when Truth came to my rescue in the hour of greatest discouragement by sending to me the message of Christian Science. This was the first time I had ever heard of it, and when I asked if Christian Science had anything to do with God, the answer was that it was all about God. My response was that I would accept it, as I felt in perfect safety with God. At once the treatment began, after I had told my doctor that I had decided to give up all material means.

In one week I derived great benefit, and in three months I was entirely healed. Strange to say that after receiving such freedom, and while ready at all times to give Christian Science the credit for my healing, yet I was not grateful enough to look into it or study it. When several months later sickness in a different form took hold of me, I returned to the doctor, who relieved me promptly. Again sickness presented itself, in a different form, and this time I received very little help from medicine, although the kind doctor did all in her power to relieve me. After suffering sufficiently long to awaken my sleeping consciousness, I sent for a Christian Scientist. I asked her if she would be willing to let me look for a few moments at Science and Health by Mrs. Eddy, and she responded with joy to my request. After I had read for a half hour a sense of shame for my past ingratitude came over me, and I got up, desiring to know more of that God whom Christian Scientists worship. That same morning I had tried twice to get up from my bed, but each time I had fainted away. When, however, I got up with the desire to know more of God, I was able to dress myself, and declared to my dear ones at home that once more I had received sufficient evidence that Christian Science was the truth I needed.

Ever since that experience I have tried to deserve the name, a Christian Scientist, although feeling very unworthy of it. In spending several weeks in the country recently and meeting many who knew nothing of the benefits received in Christian Science, I could not help but feel what a debt of gratitude I owe to God for having given us our beloved Leader, Mrs. Eddy, who by her life of love and devotion is showing us the way into the kingdom of heaven.

How rich I feel when I realize the meaning of the word "Truth" as given us in Science and Health! What rich blessings are revealed to us in the Bible, from Genesis to Revelation, through even a very small understanding of our text-book, and what a sense of compassion one feels toward those dear ones who know nothing of the great blessings we receive from Christian Science. My sincere desire is to watch and pray that I may live a life of love and gratitude and be a messenger of light at all times and under all circumstances. I am indeed most grateful for all the good I receive and for our helpful literature.

BERTHA HEATH, Boston, Mass.

Less than three years have elapsed since I became interested in and took up the study of Christian Science. During this period I have been the recipient of many blessings. One in particular I take this time and means of presenting to the public, with the hope that it may prove a benefit to some other sufferer, and also as an expression of my gratitude and thankfulness for this ministry of Truth. In 1900 I became a mother, and from the birth of my baby, until cured in Christian Science, it seemed that I was doomed to a life of ill health. Poisoning, nervous and stomach trouble, partial paralysis, an internal growth, and numerous other ills, followed in such rapid succession as to leave me in a very short time a physical wreck.

Physicians from each of the different schools of medicine were employed on my case, with the result that for a time I would appear to be benefited by their treatments, but in each instance this seeming improvement was followed by a relapse, which left my condition worse than before. I was taken East to an eminent specialist, who stated that my condition was very serious, as complications had set in, and I was forced for months to live on a diet so light as to be practically nothing. Following this came mental suffering, when night was made hideous by frightful dreams and day a burden of morbid thoughts and misery. While in this physician's charge I received the best care and attention it was possible to bestow, and I feel deeply grateful to him for his efforts in my behalf.

About a year before I took up Christian Science, I was the victim of an accident which convinced my physicians and friends that I had internal injuries of such a nature as to render my case hopeless; but, as often occurs when hope has departed, a gleam of faith penetrated the clouds of darkness and despair, and faithful friends recommended Christian Science. For about a year I declined to heed them, having been reared by orthodox parents and being ignorant of what Christian Science really is; but at last in my extremity was found God's opportunity, and I commenced to take treatment. After about four months my long list of ailments had, like the Arabs, silently flitted away, leaving me a healthy and happy woman. I find myself unable to voice the deep gratitude I feel for what Christian Science has done for me, or to express properly my thankfulness to our dear Leader, Mrs. Eddy, for showing us how we may enjoy so many blessings, by understanding and realizing that God, good, is All-in-all.

I am striving daily to be a consecrated worker, and am actuated in giving this public testimonial by an unselfish desire to help others to a knowledge of the truth. To our gracious, loving Father I render my thanks, and devoutly implore His grace upon all who seek the truth.

MRS. ADA G. MCNEAL, Houston, Tex.

[Translated from the German.]

It is with a heart full of gratitude and love that I wish to give this testimony—to tell what Christian Science has done for me. Three and a half years ago I sustained a serious injury of the ankle bone, and was at a hospital for thirteen weeks, after which time I was turned over to a physician for nervous diseases, under whose care I stayed six weeks. I also consulted three other physicians, and the last one stated that it was a case of tuberculosis of the bone; but he could do nothing for me. I was almost in despair when Christian Science found me, but after having treatment for five months I was well, and during the last month could again take up my work at the sewing-machine by which I make my living. I have also been healed of a severe attack of illness within a short time, and while under treatment a corn disappeared which for years had caused me much inconvenience, in spite of the remedies I applied.

I am indeed happy to have found Christian Science, and that the opportunity is thereby afforded me to learn English and study the text-book, "Science and Health with Key to the Scriptures." I am also grateful beyond words for all the other blessings which I have received through Christian Science, and my deep prayer is that through God's grace I may grow in the understanding of Truth. Next to God I thank our beloved Leader, Mrs. Eddy, for showing us the way to Truth.—MARIE SCHMIDT, Berlin, Germany.

I give my testimony with the hope that it will help some one who may be suffering as I have suffered. About five years ago I had what the physicians called a dislocated jaw.

Digitized by Google

They told me I should probably need to have a plaster cast for some time to keep the jaw in place. Instead of doing this, my mother advised me to see a Christian Science practitioner. I did so, and am more thankful than I can ever express in words for the good which Christian Science did for me then and since that time. The next evening after commencing the treatment my jaw slipped back to its place, and in less than two weeks I was perfectly healed.

Besides this I have been healed in many other ways. I am indeed thankful to God, also to Mrs. Eddy, for this wonderful Science, and all the good I have received from it.

MRS. E. M. HARTER, Muncie, Ind.

I wish to tell of the healing of my child through the recognition of divine Love as the only power. When absent from home one day, in company with another boy, my child was riding on a bicycle, and was run into by a young man, sustaining severe injuries. A friend who is a Christian Scientist picked up my boy and immediately declared the truth for him. He also had the child repeat some statements for himself. A lady who saw the accident stopped her automobile and brought the child and my friend home, while the young man through whom it happened looked up a physician and sent him to the house. When I arrived at the house the physician was ready to leave. When I asked him what he had done he did not answer, but said he would be back next day. Twenty minutes after he left, my boy was carried down stairs and had dinner with us. Then he walked from the dining-room out on the grounds, and went for a drive. He slept as well that night as usual, and in the morning got up feeling perfectly well. He was dressed and out of doors when the physician came, who seemed quite alarmed, and told me that the thigh was seriously injured and that he had used strong silk to hold the wound together; that the boy should have remained in bed at least ten days.

I told the physician that the case had been treated by a Christian Scientist, and the boy was going about because he said he felt perfectly well. The physician returned after several days and removed the stitches. He was much surprised to find that perfect healing had taken place. I am indeed thankful to God, and to our beloved Leader, Mrs. Eddy, for my knowledge of Christian Science.

MRS. ANNA J. DREW, Southampton, Long Island, N. Y.

Three and a half years ago I sought a Christian Science practitioner for physical healing, as I had suffered from rheumatism for ten years. I had little if any faith in Christian Science, but the different doctors whom I had employed had done me no good and as a last resort I agreed to give Christian Science a trial. Three years previous to this time a relative of my husband had loaned me a copy of Science and Health, but after a hurried perusal I sent it back to him, saying I could get nothing out of it. I had been a church-member since the age of thirteen, and had requested the pastor to pray for me many times. I talked to him of Christian Science, but he said it was of the devil and that I should let it alone. But his prayers and advice did me no good.

At the time I took up Christian Science I did not tell the practitioner of other chronic diseases of which I wanted to be healed, but thought that when I was healed of the rheumatism I would have him begin on these. Before receiving permanent healing of the rheumatism I laid off glasses, although I had been told by a prominent oculist that I had been born with defective vision and would always have to wear glasses. I was healed of a bowel disorder and also a supposedly malignant growth in my nose, and at the end of six months I was healed of the rheumatism. I had suffered with every form of this disease, but the worst of all was the sciatic, which put me on my back for weeks at a time. My husband and two daughters have also been healed of many ailments.

Words are inadequate to express my deep gratitude to Mrs. Eddy for pointing me to a God "who healeth all thy diseases," and who is a very present help in time of need.

MRS. EVA COMSTOCK SHELLY, St. Louis, Mo.

I have long felt it my duty to tell of the benefits I have received in Christian Science. About three years ago I was attracted to it by the beautiful lives of neighbors who were Scientists. I was a church-member, and, until I observed the reasonable way in which they were enabled to interpret Biblical statements which had always been a great mystery to me, and which were not solved for me in the old faith, thought I was leading the best kind of a Christian life. When I think of the wonderful change in my life since I have taken up this study for myself, I am reminded that actions speak louder than words, as I was brought into it in a quiet way, and have had my spiritual understanding greatly enlarged.

I have had many beautiful healings in my family, two of which I will mention. Nearly three years ago my little son's lung became so badly affected as to cause great pain and fever. I called a Christian Science practitioner, and in less than four hours he was perfectly normal and at his play. I thought afterward that had I not seen it I could hardly have believed such a quick change possible. Now I have learned that this was as it should be and entirely possible. He was also afflicted with a bad eruption on the head, which the physicians had told me was hereditary and would continue for years. This was, however, destroyed entirely, to my great joy.

Words seem but an empty expression of my great thankfulness to God, and to all who have helped me in this understanding, which is truly "a wellspring of life unto him that hath it."—CARRIE L. BANTA, Waukegan, Ill.

Sixteen years ago I was stricken down with a terrible disease, known in medical circles as epilepsy, which clung to me year after year, attacking me at any time and place, so much so, that I always had a feeling of insecurity which made life a misery to me. I was able through following the sea as a profession to obtain advice of some very clever doctors in England, the United States, Canada, and Australia, but could get no consolation from any of them, as all were of the same opinion, namely, that there was no cure for me.

In August, 1908, while visiting some friends in Sydney, I heard that a friend of my sister had been cured of a malignant growth by Christian Science, after the medical advisers had given up all hope and asserted that she had but a few months to live. I was interested at once, and hearing that Christian Science claimed to heal all diseases, I resolved to put my case before a practitioner. I did so, and after the interview the lady consented to give me treatment. I called the following day, and after the first treatment was satisfied that I had found a sure means for the healing of my troubles, in the realization of the truth which the practitioner put before me. I walked home for the first time in fifteen years, with the knowledge that God is all powerful and ever present; also that God is Love, and that this knowledge was setting me free. I took two more treatments after this, but am satisfied that I was healed in the first.

My gratitude to God, and to Mrs. Eddy, who through His grace has brought Christian Science with its clear understanding of the healing truth, into this world and within reach of all, I hope to demonstrate by living my life as taught us in Christian Science.

JOHN L. RUSSELL, Sydney, N. S. W., Australia.

Digitized by Google

It is about eight years since I first heard of Christian Science, and I was indeed sadly in need of this religion of love. I had been mourning over the loss of some dear ones for eleven years, and by that time my grief was almost unbearable and I was growing morose and despondent. But the light of Truth broke through the clouds of darkness very suddenly, and grief and sorrow disappeared. Christian Science also healed me of a supposedly inherited disease which for years had caused me incessant suffering and seemed to be growing worse.

For all these blessings, and yet more for the spiritual uplifting and the great help which Christian Science is to me every hour, I am indeed grateful to God, whom Christian Science has taught me to know as a loving Father-Mother. I also feel sincerely grateful to our beloved Leader, who was found worthy to receive inspiration, and through whose writings we are enabled to demonstrate this blessed truth.

MISS SOPHIE MARIE GREUB, Palo Alto, Cal.

Gratitude compels me to testify to what Christian Science has done for me. On April 13, 1909, I was to take part in a prize-speaking contest at college open only to seniors. I had written and submitted my oration several weeks previously, but on the Thursday preceding the event I suffered an attack of rheumatism, and for the four following days I was barely able to get out of bed, to dress myself, or to walk, without intense pain. My family tried to persuade me to have a physician, but I thought it was only an attack from which I should recover in a day or so, and refused medical treatment. On Sunday my uncle, who is a Scientist, called upon me and suggested that I see a Christian Science practitioner, but I refused to do this also. On Monday I was no better, and began to think that my ambition, which I had fostered during my previous years in college, to take part in this contest, was not to be realized, so I concluded to follow my uncle's advice. I went that morning to see a Christian Science practitioner. He gave me treatment that day, and I was almost healed. The second treatment, which I received on Tuesday, entirely healed me, so that on that evening, when I delivered my oration, I did not experience the slightest pain, nervousness, or excitement, which the fear of contest usually creates.

At this time I had been wearing glasses for five years. The oculist who had prescribed them told me I should probably need to wear them all my life. When, however, I went to the Christian Science practitioner to be treated for the rheumatism, the latter suggested that I have my eyes treated at the same time. I readily consented and took off my glasses, and have not worn them since—not even when studying for examinations or when reading at night.

To show that Christian Science is not only a help in sickness, but is of practical value in all work, I modestly mention that it enabled me to win the second prize in the speaking contest. The practitioner told me to go into the contest with no thought of winning a prize, with no thought of trying to outdo the other contestants, but with only the idea of making a perfect speech. I endeavored to follow this advice, and sincerely feel that I owe my success to this ideal of Christian Science—perfection. I know that any person who desires help, whether in business, sickness, or anything else, will find it in Christian Science.

JOSEPH R. CURL, Washington, D. C.

A few months after my arrival in America, fourteen years ago, I was obliged to undergo a severe operation and remain for six months in a hospital, where every means was used to lift me out of my distressed condition. I gradually lost all faith in medicine, but particularly after this incident occurred to me. My pain was so great that the doctor deemed it necessary to give me a hypodermic injection, with the result of a night of peaceful sleep. The next night I asked for the dose to be repeated, then entreated the nurse, and at last demanded help, so the doctor at length acquiesced. In the morning when I awoke every one smiled as I told them of my beautiful sleep, and still laughing the nurse told me the injection was simply a drop of water. Disappointed in the help, I turned to God for assistance, as I knew there must be a greater power to help and deliver me. I had not yet heard of Christian Science, but during my stay in the hospital I refused all medicine and told the doctor that God alone could help me.

A year after leaving the hospital I heard of Christian Science through a neighbor. For one week I was treated, and studied the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I was healed of many ills, not only physically, but I obtained a great spiritual quickening and regeneration. My final demonstration was made some months ago, over an old ailment. The doctors had said that as long as I lived I should require a truss, and after gaining some knowledge of Christian Science I had tried many times to discard it, but it seemed as if I could not free myself from the mortal law which had been laid upon me by the physicians. A neighbor called on me to help their son, who was under a very serious illness. I was at first afraid to take the case and tried to induce them to have a practitioner, but they would have no one but me and I then realized that God had given me that work to do. I took it up with the greatest faithfulness, and in a few treatments he was healed. My gratitude and joy were unbounded, at being made an instrument for divine Love. While dressing one morning, the thought came to me as to why I still used the truss. I saw that it had no power, and asked myself why I should not apply the same law in my own case as I had applied to my neighbor's son. I then laid the truss aside, and the realization of the truth I preached to others healed me. I am perfectly well, and am so glad to express my thankfulness to God for this wonderful truth; also to Mrs. Eddy, through whose teaching we have received so much help and have been taught that God delivers us from all evil.

MRS. EUGENIE RIVOLLIER, Paterson, N. J.

I wish to express my thankfulness for the healing of our baby. The child became very ill and showed signs of a very bad attack of throat trouble. He could not take any nourishment for about twenty-four hours. The odor was very offensive, and I was obliged to wash his mouth quite often. Materially speaking, I was filled with fear, but I trusted all to God and Christian Science. I called a practitioner, and by faithful work and by trusting Truth, "the strong deliverer" (Science and Health, p. 226), as Mrs. Eddy tells us to do, our baby was healed.

Words fail to express my thankfulness not only for this healing, but for many other demonstrations of Truth's power that have taken place through the understanding which I have gained by the study of Christian Science.

MRS. MATTIE ERMIN GARRARD, Muncie, Ind.

I wish to express my gratitude for the benefits received through Christian Science. I was suffering from severe headaches, both physicians and oculists saying that the trouble came from my eyes. Two had treated me, and rendered the verdict that I must wear glasses to sew or read, and I did so for a few months with no benefit. I discarded them after taking Christian Science treatment, and have sewed steadily during the fourteen years since without any trouble from my eyes. I have received benefits from Christian Science in ways too numerous to mention, for which I am very thankful to God, and to Mrs. Eddy for giving us this truth.—MINNIE J. WAYCOTT, Peoria, Ill.

[Translated from the German.]

For seven months I suffered from twitching of the muscles and nervous spasms, and had to stay in bed for weeks at a time. As treatment by several physicians brought no healing, I tried to get relief by seeking a southern climate; but during my stay near the Lake of Garda I was confined to my bed most of the time. I there became acquainted with a lady who gave me some Christian Science literature, and told me that she had been healed of organic lung trouble through this Science. There was much in what I read that gave me hope and comfort, and upon the lady's advice I applied for treatment to a Christian Science practitioner in Berlin. In a week's time I was able to walk quite a distance, and ventured to go among people whom I had formerly avoided. In the course of another week the weakness of the heart and the great fear were almost overcome, and I was able to walk about four hours during the day without interruption, and a few days later even took a walk on a near-by mountain.

These were very happy days, for besides the physical healing Christian Science also brought me mental clearness and inward peace. I am infinitely grateful to Mrs. Eddy for having again made available to humanity practical Christianity. My mother, who had lost the sight of one eye, found healing in Christian Science. My healing took place two years ago, and there has been no relapse, although I have since made several strenuous cycling and mountain tours with my husband. I feel better than I ever did before.

FRAU WILHELMINE HOEFLING, Augsburg, Germany.

[Translated from the German.]

For many years I was afflicted with weakness of the eyes, for which I consulted several physicians. About six years ago I was again treated for some time by an eye specialist of high repute, who finally told me that he could do nothing for me. I went to another, but with no better result. Four years ago I became completely sightless in my left eye. Just at that time I heard of Christian Science, and after briefly looking over the literature, I gained confidence in this teaching, and asked a practitioner in Berlin to take up treatment for myself and for my daughter, whose testimony has just been given, and who at that time suffered from a severe nervous affection. These spasms grew less within a few days, in two weeks she was healed, and there has been no return of the trouble.

As for myself, in a few weeks' time I saw a faint gleam of light in the eye which had become sightless, and I then decided to go to Berlin with my daughter. A few months later my eye had so much improved that I was again able to read large print with the spectacles I had used formerly. This was four years ago, and I have had no relapse. Last year I was taken with spells of dizziness, but this condition was soon met through treatment. Christian Science is a comfort to me in many ways, and has brought me peace. I thank God with all my heart for our having become acquainted with this truth. The Bible and *Der Herold* constitute my sole reading, and divine Truth is my source of strength and courage.

SOPHIE KOENIG, Munich, Germany.

The screen of the stereopticon is the world about us. The lantern is our individual consciousness. The slides are our thoughts, either good or bad, and the light which illumines them is divine Truth. If the operator is divine Mind, the thought inserted will be pure and perfect, and the projection of that thought upon the world about us will be beautiful and harmonious; but if the operator is mortal mind, the thought inserted will be erroneous, and the projection will be in accord therewith. It is our individual work to remove and destroy every bad slide or thought.

KATHARINE W. FROST.

FROM OUR EXCHANGES.

[*Christian Work and Evangelist.*]

A very pitiable incident in the history of the Christian church has just come to light in the bewilderment of a young Japanese student, who is seeking the truth. He was attracted to the Church of Jesus Christ and was feeling that it had the answer to his question of where he might find eternal life, when he was suddenly confronted with the spectacle of each of three churches, differing quite radically in their polity and confessions, claiming that it, and it only, was the true church. The Japanese finally solved the question by passing all three by and joining a church whose only claim to being the true church was that it was trying to be in the world what Christ was and do what he did, wherein the Japanese showed his great good sense. But the question, Which is the true church? is being continually kept before the world. It comes up at every conference on church union. It appears at every council of the denominations. Yet it is very easily answered in the words of its Founder. Jesus founded the church when he gathered the twelve apostles about him and made them ministers with him of the gospel. He gave no explicit rules to these first ministers and members of the church as to either the form the church was to assume or the tests of membership she should impose. But he was very explicit in his expression of the purpose and mission of the Christian church. It was simply to be his representative in the world. If we can find in the Gospels express words of Jesus, telling us just exactly why he was in the world, what he stood for, what he called his disciples for, we can find just exactly which is the true church. The true holy church will be found to be simply that church which is most like in character and purpose the true and holy Lord.

[*British Congregationalist.*]

Into the spiritual making of us, into the forces which work out our inward salvation or our inward doom, there enter not only the impulses whence action is born, but the likings and the preferences and the subtle leanings of desire which are never revealed beyond the confines of our own soul. There is both encouragement and warning in the idea. Encouragement, because in the inner realms of mind and heart there may be possessing us aspirations which never find an opportunity of showing themselves, realized and worked out, on life's eternal stage; and these, wasted though they appear to be, have endless consequences, and consequences of good, in the spiritual fate that shall be ours. Warning, because even if the visible product of our life be kept blameless and fair, and even if into the things we make and do there enters scarcely anything that conscience must condemn, still there may be lurking in the hidden depths within us many a feeling, directed upon what is base, which never becomes more than a feeling, many a concealed affinity for the wrong which never comes through the doors of its hiding-place; and these things have upon our spiritual destiny an effect that endures. The scantiness of our accomplished good need not make us despair. There are other things that count. The absence of anything that could call up the flush of shame at the bar of man must not make us foolishly complacent. For, once more, there are other things that count.

[*Christian World.*]

That faith is the master principle of our world, the only thing that makes it go, is evident from whatever side we look at it. Nature insists on our being believers. That the outside world exists at all, that it is as our senses report it to be, is an act of faith. . . . The whole structure of our science is built on faith. For science depends on the belief, for which it has no demonstrative evidence, that the reason-

Digitized by Google

ing faculties give a true report of the universe; that given courses will go on producing given effects; that the cosmos is rational and not chaotic; that if you talk to it sensibly, it will give you sensible replies. So also every commercial transaction is a belief. The business world is on a credit system. Skepticism here would smash every bank and shut up every shop. The strange thing is the present parochialism of faith. Compelled to its exercise in their every-day transactions, men hesitate to extend it beyond these boundaries. . . . Men find reason in themselves and in their fellows, but doubt if there is any supply of it beyond. The best thing in this world is love, but they deny the existence of this best thing outside our planet. They see that in our sphere good overcomes evil, fights against it a surely winning battle, but fail to see that what happens here must happen everywhere—that the universe is working for good's final victory. They are unequal to that uttermost venture of faith which asserts that the system of things is essentially a good one, and means good to every creature that dwells in it.

[*Universalist Leader.*]

The real church, if it is a church, is a first and last thing in spiritual experience. It is the embodiment of our highest need and our supreme desire for fellowship in love. It is not a thing of yesterday or today. In the city which John saw in his dreams there was no temple. That refers to a building of stone. Jesus told the Samaritan woman that neither in Gerizim nor Jerusalem, neither in the temple of Samaria nor the temple of Judea, men should worship God. But whenever His spirit stirs in us there will be a Pentecost, a gathering multitude of believers. No power on earth could keep such awakened souls apart. Should they meet in a desert, or in a city street, or in the woods, or under the stars on the open veldt, there would be a church of the living God established there, for that would be a final state of human experience, a blending of a multitude of individual lives in one great common language of the Spirit. Not by outward sign would the miracle be wrought, but by that inward melting and fusing of souls which results in the unity and harmony of heaven.

[James E. C. Sawyer, D.D., in *Christian Intelligencer.*]

The real world, the world of spiritual truth and beauty, is not remote from us. Glimpses of its brightness come to us in hours of toil and sorrow and strenuous victory over severe temptations. Its loveliness unexpectedly appears to us in the heavenly deed of a commonplace man or woman. Its splendor shines in the faces of innocent babes and transfigures the worn lineaments of the aged and the sick. The rapture of its holiness, the sweetness of its peace, the joy of its unselfishness, are often seen in the lives of our fellow-pilgrims and its sunshine illumines their faces. When we have seen a human face like that of an angel, a window has been opened into heaven.

[*Christian Register.*]

When the man or woman of supreme virtue appears, there must be a crisis in human affairs which reveals to large numbers of men and women evils to be encountered, diseases to be rooted out, reforms to be administered, and progress of a definite kind to be promoted. When the hearts of men go out with longing for some supreme good, some revelation of divine wisdom, and some unveiling of the sources of inspiration and strength, there are always those who are fitted to respond to the call and many to respond who are not fitted. Indeed, we may repeat the saying that many are called, but few chosen.

[*Churchman.*]

The recovery of ourselves from the sin of division is the grave problem that is before Christendom and is blocking the progress of the kingdom of God on earth.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

NEW PAMPHLETS.

Now on sale are three new pamphlets: "Seeking and Finding," "Prayer and Healing," and "The Divine Nature." Each pamphlet contains five to eight articles that have previously appeared in the *Journal*, *Sentinel*, or *Monitor*; and they are particularly suitable for handing and sending to inquirers or persons who are becoming interested in Christian Science.

Hereafter, the price of all pamphlets (except "What our Leader Says" and "Christian Science and Legislation") will be reduced to 5 cents a copy; 55 cents a dozen; $2.00 for fifty, and $3.50 for one hundred. Hereafter, also, the republication in the English language of single articles as "tracts" or "reprints" will be discontinued. It is believed that their place is better taken by the daily article on Christian Science in the *Monitor* and by these new pamphlets and others that may be issued.

NEW POST CARDS OF THE MOTHER CHURCH.

Post card photogravure, in sepia tint; an exact reproduction of the large photogravure of The Mother Church Buildings and Publishing House with parkway in foreground.

Single copy	$ .05
Twenty-five copies	1.15
One hundred copies	4.25

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90, six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage, at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 35 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 40 pages. Pebbled cloth covers. Price, prepaid, single copy, 25 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 91 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.50; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 20 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 20 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00; six months, $1.20.

Ten copies to one address, each, one year, $1.30; six months, $1.15.

Twenty-five copies to one address, each, one year, $1.80; six months, $1.10.

Fifty copies to one address, each, one year, $1.50; six months, 90 cents.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. X indicates the year 1910; XI, 1911. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

TERMS OF SALE

Single copy, postpaid, five cents, in the United States, Canada, Mexico, and Cuba; twenty-five copies, one address, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, single copy, six cents; twenty-five copies to one address, $1.25; fifty copies, $2.25; one hundred copies, $4.00.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Plans for an outer harbor in Chicago, that will take care of freight and passenger business both, are being prepared. The plans, which will call for the expenditure of about three million five hundred thousand dollars, are being worked out along the following fundamental lines: Freight arriving for Chicago distribution, as well as that received for transshipment from water to rail, or *vice versa*, must be provided for in an outer harbor north of the Chicago river; dockage for passenger steamers with street-car connections to the center of the city, must be afforded; apparatus completely changing the present methods of handling package freight must be designed; traveling belts must be used to replace the hand trucks; the facilities should be leased to shippers rather than to supply service; and the compensation should be as small as is consistent with the amount of the investment of public funds, so that Chicago may be practically a free port.

The state tax commission of Minnesota has announced that it has fixed the assessment of iron ore lands at $225,304,469. This is an increase of more than forty-five million dollars over the assessment of these lands in 1908, and an increase of one hundred and thirty per cent over the 1907 assessment, which was $64,486,409. The increase is the result of a three-years campaign to determine the actual value of the ore lands and adjust the assessments according to a unit basis. Members of the commission say the raise is conceded by the owners of ore lands and has been welcomed by the owners of working mines as the best substitute for the proposed tonnage tax, the bill authorizing which was vetoed by the late Governor Johnson.

The ten balloons which started recently from St. Louis, traveled distances varying from 315 to 1,355 miles. Seven of them crossed into Canada. America II. was in the air 45 hours and 58 minutes and covered 1,355 miles, landing north of Lake St. John, Quebec, so far beyond civilization that four or five days were required by the pilots to reach a point where a message could be sent to friends who had meanwhile become anxious, concerning their safety. Dusseldorf II., a German balloon, covered a distance of 1,230 miles; Germania, also a German balloon, 1,190 miles; Helvetia from Switzerland, a distance of 850 miles, and Harburg III. of Germany, 795.

All the unallotted lands of the five civilized tribes of Indians in Oklahoma, approximating one million six hundred and fifty thousand acres, and the forested area in the Choctaw Nation, amounting to about one million three hundred and sixty-five thousand acres, are to be sold at public auction, according to a decision reached by the secretary of the interior. The land will be sold by counties continuously from Nov. 21, 1910, to March 1, 1911. These lands will not be sold in tracts larger than six hundred and forty acres each.

A nation-wide Federal campaign against "white slave" traffickers will be started, if the plans of United States District Attorney Sims materialize. When the Mann bill was passed, providing a heavy penalty for all persons engaged in such traffic, it was supposed that many of these persons would be driven out of the business. Instead of this, however, the investigators are said to have learned that more persons than ever before are engaged at the present time in the traffic.

About three score prominent lawyers, representing practically all the important railroad systems in the country, held a conference at the Waldorf-Astoria last week. The conference was in continuation of the meeting held at Portsmouth, N. H., last summer, and it is understood that the principal topics discussed by counsel for the railroads were in regard to the constitutionality of the new railroad laws and the powers of the interstate commerce commission.

The reduction of the postal deficit made in the fiscal year ending June 30 last was eleven million five hundred thousand dollars. The deficit of the previous fiscal year was seventeen million six hundred thousand dollars. This tremendous saving was made without the curtailment of the postal facilities in any direction. On the contrary, during the year there were many important extensions of such facilities.

Secretary MacVeagh is making an effort to minimize the Government's losses through undervaluation of imports. It is a common saying at the treasury department that the Government loses as much in one year through undervaluations as it does in ten years through smuggling or other evasions of the customs duties. It is expected that the tariff board will be the principal weapon in the fight for full valuations.

A canvass of the citizens of Houston, Tex., showed practical unanimity for an election in December to authorize a bond issue of one and a quarter million dollars to complete a ship channel of not less than twenty-five feet deep to the sea. Congress appropriated a like sum, conditional upon Houston matching it.

At a recent conference of Y. M. C. A. workers in the East room of the White House, it was announced that contributions of one million dollars for the world-wide expansion of the Y. M. C. A. had been received, five hundred and forty thousand dollars of which was given by John D. Rockefeller.

The inauguration of the postal savings bank system has been postponed until Jan. 1. Previously Nov. 1, and later Dec. 1 had been set as the date of the opening.

The state tax commissioner of Massachusetts has assessed $1,128,186 upon the street railways of Massachusetts as a franchise tax.

The department of justice began taking testimony in the Government's suit against the bath-tub trust in Pittsburg on Oct. 31.

International.

The international court of arbitration at The Hague has rendered its decision in the Orinoco claims case. This was the last of the Venezuelan claims and had been referred to The Hague, the others having been satisfactorily settled by negotiations. The Barge award was declared null on four points and the American company is awarded forty-six thousand eight hundred and sixty-seven dollars with three per cent interest since June 16, 1903, and seven thousand dollars costs. The judgment is to be paid by Venezuela within two months. The tribunal rejected the American contentions on the other points in dispute. This decision disposes of a long-standing dispute between the United States and Venezuela. The Orinoco Steamship Company, a New Jersey corporation, was granted certain exclusive privileges by the government of Venezuela, but the agreement was subsequently repudiated by President Castro.

Concessions from the government of Uruguay for a new railroad to extend three hundred and seventy miles from Colonia on the River Platte, opposite La Plata in Argentina, to San Luis in the department of Riviera and thence to Bage, Brazil, has been procured by the Pan American Transcontinental Railroad Company.

It is stated that the prince regent has decided to grant an early opening of the Chinese parliament. The probable date will be 1913 instead of 1910.

Industrial and Commercial.

The completion of the Cape to Cairo railway to Elizabethville is of great importance to the copper markets of the world, as this city is the first station in the Kantanga copper regions and in the immediate vicinity there are some six or seven copper mines. The Kantanga district lies in the remote part of the Kongo Free State, and extends nearly east and west across the streams forming the head waters of the Kongo. The mineral district is about two hundred miles long by twenty-five miles wide, and in it nearly one hundred and fifty copper deposits have been located. Only about fifteen mines have been opened up to any extent, and of these only two have been opened as deep as one hundred feet below the surface.

A combination of the resources of three woolen mill properties in New England is being negotiated. The mills are the Scotia of Woonsocket, the Strathmore of Concord Junction, and the Etna of Waltham, the first in Rhode Island, the last two in Massachusetts. The capitalization of the companies is two hundred and fifty thousand dollars, two hundred and twenty-five thousand dollars, and four hundred and fifty thousand dollars respectively.

At a recent meeting of the rice growers from Louisiana, Texas, Mississippi, and Arkansas, it was agreed to organize a central selling agency, through which every producer will be pledged to sell his rice. The object is to make a uniform price for rough rice and eliminate the middleman or broker. An executive committee is now formulating the plans.

Last summer's fires destroyed between one and two per cent of the total stand of national forest timber of the United States. The burned area represents a loss of fifteen million dollars, or approximately six billion feet of lumber. The area burned over is declared to be not less than one million two hundred and fifty thousand acres.

Nearly sixteen million dollars' worth of raw cotton was in the fiscal year 1910 imported into the United States. Most of this cotton from abroad is produced in Egypt, but more than a dozen other countries and all the continents contribute to the grand total.

It is estimated that electrical energy to the value of one hundred and forty million dollars per annum, if sold at one half the present market price of power, or twenty dollars a horse-power a year, is locked up in the states of Washington and Oregon.

The United States Motor Company has adopted a cooperative plan whereby its employees may become stockholders and participate in the profits of the company. Nearly twelve thousand employees are affected.

As a result of borings in the district of Talcahanano, Chile, large coal-beds have been discovered. It is estimated that the beds will yield fifteen million tons.

The value of the importation of diamonds into the United States for the calendar year is estimated at forty million dollars.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

GIVING.

W. D. MCCRACKAN, M.A.

AMONG the manifold blessings brought by Christian Science is the right concept of giving. There is a science and art of giving, to be learned and applied, and they repose upon the understanding of substance as spiritual and not material.

The carnal mind, as Paul uses the term, or mortal mind, as Mrs. Eddy so aptly characterizes this belief of a mind opposed to God, believes matter to be substance. Mortal mind would induce mankind to accumulate and hoard matter under the impression that it is saving substance unto itself. Mortal mind would make mankind reluctant to part with its accumulations and savings, would persuade it to be chary about giving, under the pretense that substance, being material, must be limited in supply. Mortal mind fears that there is not enough substance to meet the needs of all; therefore it tries to force individuals to seize as much material wealth as possible and to hold it against all comers. Hence spring greed, miserliness, theft, robbery, and oppression.

Christian Science exposes the falsity of the belief that substance is material. The Scriptures tell us of "the substance of things hoped for, the evidence of things not seen," clearly indicating that true substance is "not seen," not physical in its nature, but metaphysical, or beyond-the-physical. Mrs. Eddy defines substance as "that which is eternal and incapable of discord and decay." She writes: "Spirit, the synonym of Mind, Soul, or God, is the only real substance" (Science and Health, p. 468). Matter itself is unsubstantial, because it has no basis nor permanence in real being.

True substance is Spirit, hence it is unlimited. Therefore this correct understanding of substance leads to generosity in giving. The true Christian Scientist has no fear of losing substance, no doubt that its supply is sufficient for all, and he can therefore resist the temptation to take from others lest he should not have enough himself. The Christian Scientist indeed learns that true progress is marked by outgrowing the belief in materiality, by putting off mortality in order that immortality may appear. He sees the unreasonableness of the fear of lack, the foolishness of piling up mere matter against a supposed day of want; the senselessness of trying to limit others, when all have an unlimited source from which to draw.

Those who understand true substance as explained by Christian Science, feel that they can afford to be generous. Mrs. Eddy writes, "Giving does not impoverish us in the service of our Maker, neither does withholding enrich us" (*Ibid.*, p. 79). True giving resolves itself into the act of expressing or reflecting true substance,—Spirit, Life, Truth, Love. Unless the gift of material wealth be accompanied by spiritual understanding, it is of no real avail. So, also, a gift grudgingly given is no gift at all. Christian Scientists naturally welcome the opportunities for giving which proceed from the extension of their cause to all quarters of the globe. It is part of their necessary education to learn to give with the right mental concept. Right giving puts into practice what they have learned of the nature of substance, and permits them to demonstrate what they profess to know theoretically.

CAPTIVITY LED CAPTIVE.

HELEN E. FOWLER.

IN the book of Isaiah we read: "Thou hast broken the yoke of his burden, and the staff of his shoulder, the rod of his oppressor, as in the day of Midian." This text brought home to the writer a fuller sense of the freedom which Jesus Christ gave to mankind by the triumph won in his first recorded struggle with evil, in the wilderness. The forty days of silent communion and preparation were followed by the temptation of physical weakness, in which the human sense was brought face to face with hunger,—one of the material beliefs which has bound the Adam-race with more seeming power than almost any other. Up to that time the belief had held undisputed sway over mortals that life was dependent upon material sustenance and could not exist without it.

We cannot doubt that Jesus must have realized the full significance of the problem which confronted him, and resolved to work it out in a purely spiritual way. This loyalty to the highest possible demonstration of real being enabled him to turn from the lower demonstration suggested by the physical sense of immediate need. It would perhaps have been easy for him to turn the stones into bread and thus satisfy a seemingly natural craving; but although this might have sufficed to prove the measure of his spiritual understanding to a large extent, it would not have established the true sense of being, and its absolute independence of matter, which would still remain for him to prove, and which must be proved before he could arrive at the conviction which might declare, "Destroy this temple, and in three days I will raise it up." At the outset of his public ministry, he thus showed his readiness to sacrifice to the utmost the material sense of selfhood, and the belief in material causation thereby implied, in order to prove conclusively the absolute fatherhood of Spirit—the divine Mind—as the sole cause, sustenance, and substance of man.

It was on this rock of true being that Jesus built his whole three years' demonstration, until he reached that coping-stone of ascension described in the book of the Revelation, where consciousness is entirely spiritual. "I saw no temple therein," St. John writes; and our text-book, Science and Health, on page 576, points out the meaning of this vision of the divine creation in the following words: "The Revelator was familiar with Jesus' use of this word, as when Jesus spoke of his material body as the temple to be temporarily rebuilt (John ii. 21). What further indication need we of the real man's incorporeality than this, that John saw heaven and earth with 'no temple [body] therein'?" It was this spiritual idea of selfhood which dominated and determined the motives and actions of Jesus the Christ. The

Copyright, 1910, by Mary Baker Eddy.

Digitized by Google

perfect method which he employed in the solving of this problem set a standard which all professing Christians should strive to follow. His carefulness in demonstrating his loyalty to his knowledge of right, which refused to be diverted from its direct course by the plausibility of error's plea, are, indeed, an example full of warning to all who wish to obey his commands.

This one demonstration over the yoke of a false dependence on matter, revealed the way to freedom for all mankind, a freedom which each one of us may claim, and uphold fearlessly, since we have witnessed the glorious result of such upholding. The law of God is no respecter of persons, but remains in its eternal operation a life-giving, immutable, unbreakable law; in its methods and in its results "the same yesterday, and to day, and for ever." Throughout his ministry Christ Jesus held open the door to the freedom which life in Spirit, Mind, gives, inviting the human understanding to enter with him; bidding men to cease troubling about what they should eat and drink, and wherewithal they should be clothed; telling them to take the easy yoke and the light burden which he offered; urging them to seek, above all things else, to be ruled by that spiritual sense which is the kingdom of God within.

Mortal man's faith in matter, rather than in God; and his ignorance of the blessedness of this simplicity of Christ, has continued, in spite of Jesus' example, to bind mortals to dependence on matter and the evils resulting therefrom,—emulation, strife, jealousy, poverty, sin, and all the rest of the serpent brood. They still believe that matter has something to give; that matter confers or withholds; that matter affects vitality; that the quantity and quality of material possessions determine the measure of man's happiness and of his influence with his fellow-man. Nevertheless, the fact has remained throughout the centuries that from this wilderness of temptation Jesus sent forth a ray of light for all mankind,—of love for Truth, which forever broke through the darkness of mortal misconception, enlightening it with the courage which proves man's identity to be wholly spiritual, the real man's motives one with God's will, and his religion whole-hearted love for God.

The Master told his disciples, and the glorious promise applies to us now, that they should indeed drink of his cup and be baptized with his baptism. That cup was filled to the brim with love for humanity and the Christ, Jesus' spiritual identity, forever glorifying the absolute rightness of the true fatherhood, in which man lives and moves and has his being. The Christ finally rose above human view, in what we know as the ascension; that last demonstration, which led captivity captive and revealed God's eternal gift to man, at-one-ment with God, infinite and all sufficient in its application and in its quality.

No longer do we think of this cup which the Science of Christ has already lifted to our lips, as a cup of bitter dregs; but rather as a cup of life, of joy and peace, a cup whose every draft brings to us some measure of freedom from a sense of sin, disease, and death. Through the love of Christ Jesus, and our Leader's unveiling of that love, we have learned of man's freedom from all the bondage of material sense; it now remains for each one of us to unite in demonstrating that freedom by lovingly and loyally reducing our own measure of dependence on matter, and thereby increasing our dependence on Spirit; by following the guidance of wisdom and Love in the daily upholding of "the simplicity that is in Christ."

In Science and Health (p. 485) we are told to "emerge gently from matter into Spirit." Sometimes we seem to forget that "emerge" is the first word of this tender admonition. For thirty years Jesus was thus emerging, gently, quietly, persistently. Those three triumphant years but set the seal on his thirty years of loyalty and self-denying obedience to His Father, Spirit. As the Master thus proved for himself, so each individual must also prove, some time, now or hereafter, that life is conditional on but one necessity, namely, absolute obedience to the "great commandment": "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind; and thy neighbor as thyself." The Master's significant comment on the right answer given to him by the questioning lawyer emphasizes the teaching that knowledge is but a step on the way to life; it is fulfilment of knowledge which inherits eternal life. "Thou hast answered right: this do, and thou shalt live." Could there be a clearer statement of the fact that man's life, and all that life means to us,—health, strength, etc.,—depends only on spiritual qualities; goodness, and the demonstration of goodness, at every step of the way!

IMMORTAL BEAUTY.

LAURA GERAHTY.

SOME years ago two women were walking round a garden, from which a bouquet was being culled. They stood for a moment in front of one particular plant, which filled the air with its rich perfume and shot its spikes of blue-gray blossoms up and out in all directions. The fond possessor of this exquisite bloom hesitated to cut the flowers, because, as she said, "they die so soon." Then, as she raised her hand reluctantly to cut one, she added quickly and impatiently, "Why doesn't some one invent something to prevent cut flowers from dying?"

To this her companion scarcely replied. The words that were uttered were not caught, but the look which accompanied them could never be forgotten. It was at once a gentle rebuke and an interrogation—perhaps a prayer. Nothing more was said at the time, but the first speaker drank in that look with an amazement which stifled speech and begot a great longing to know its meaning. On looking back now, it is not difficult to translate that look; and in the mind of the Christian Scientist there can be little doubt as to what prompted it—that silent recognition of the realization that there is no death, no destruction, and no decay in God's eternal kingdom,—in that perfect kingdom where every reflection of Love, be it beauty, affection, sympathy, meekness, justice, mercy, or grace, lives on forever, the eternal, perfect work of God, leaving nothing that can be destroyed.

To the one upon whom it was so lovingly cast, that was no idle glance. Years have not effaced the memory of it, and by the subsequent study of Christian Science its meaning has grown clearer day by day. The thirst to know more of reality was not at once assuaged. The opportunity was not a solitary one, nor was the moment quite fitting for the necessarily hurried discussion on so vast a subject. The immediate future was to bring many a better opportunity, when the rough ways could be made smooth and the crooked places be straightened; when the soil would be prepared for the tiny seed that was to swell and break up the hard earth of materiality, rise above it, and perhaps ripen into maturity. And this would seem a moment for remembering the words of the prophet Isaiah, "The Lord God hath given me the tongue of the learned, that I should know how to speak a word in season to him that is weary."

Out in that garden, beneath the hot rays of a July sun, everything rejoiced. The varied hues of the rose, that "smile of God" (Science and Health, p. 175), gave an exquisite radiance to the simple scene; the perfumes hung heavily on the summer-laden air, and even to the materialist God seemed very present. To the Christian Scientist there was nothing between this and God's pure light; nothing but a long stretch of space, unflecked by a single cloud or shadow of fear or doubt, a vista which grew bluer and bluer as the space of years increased, till the eye rested and feasted on the perfect sky of Truth above. To her all was perfect, permanent; blessing and blessed. To the other it was all

Digitized by Google

equally beautiful, so far as it went. There was nothing in all the wide world so restful and peaceful as a garden of flowers, each one straining for and reaching to perfection under the fair summer sky. There was no place so satisfying or so delightful, but behind it all, deep down in her consciousness there lay the belief in a lie—the lie of death; and the poison of it, and at the same time the very root of the fear that stunted her joy, was that "they die so soon."

Oh, the joy and gladness when we can see even in a small measure the infinity and perfect permanence of God's work! Could the beauty and grace of that gentle ceanothus ever die? Could its perfume, had it been carefully preserved by chemistry, have been more a part of that exquisite thing than it is now? Does a tender word of friendship or comfort live less because it is not handed down to posterity in a phonograph? And does "the touch of a vanished hand" grow any colder or less dear for the years that have fled between it and now?

The glory of that day, spiritually perceived, was food and life to the Christian Scientist. With her back turned to the house where the fear of death had come, with icy forefinger menacing and threatening its inmates; where the years had nurtured indifference to the law of Spirit and dogged obedience to the laws of matter; where, because of human inability to understand God, good, and mortal stubbornness in refusing to entertain angel visitants, those "pure thoughts from God" (*Ibid.*, p. 298), evil had found an abiding-place,—there she saw nothing but God's ever-presence, Love's allness, and Truth's dominion! She saw no death or destruction in the radiant blossom; no hastening eventide in that glorious noon; to her all beautiful things were seen as the ideas of Mind, and in them there could be no element of decay.

It is the duty of every young Christian Scientist, each probationer in the vast field of the healing of disease, to turn out immediately the ever-encroaching and persistent thought of decadence, decay, and death. Before the opportunity is offered him of demonstrating at the eleventh hour the mighty truth that there is no death, let him learn, even though by slow degrees (and by so learning make that demonstration the easier when it is needed), in every small incident of life, even to the cutting of a flower, to crush out the mortal belief that "they die so soon." Error has just the power we give it, and we must give it none if we are to taste to the full the joys of Truth. In the glorious noon there must be no thought of coming sunset; in the strength and vigor of childhood, no thought of age and decay; in the fulness and brilliance of Truth, no shadow of doubt or fear. When the evening hours close in upon mortals, and when even perhaps moon and stars are invisible, they call it dark. To them, whether it be the darkness of night, of sin, or of sickness, it seems very real, for by the daily revolution of the earth upon its axis they turn their backs upon the sun. The light is just as brilliant at the antipodes as it was for us a few hours ago; it loses nothing as we turn away and lose it; and the truth of Life—not our poor, inefficient material conception of it—shines on brightly and forever, pure, perfect, and permanent, hindered not one iota in its course by any suggestion of mortal mind as to its so-called disappearance.

The "Sun of righteousness" has arisen, with healing in its wings, and nothing can dim its effulgence. So the truth of Christian Science has come and brightened many a household that was in the darkness of despair. It has revivified the hopes of thousands who had strayed off into the dark valleys of uncertainty and disappointment; it has raised many a one who had fallen into the deeps of sin and despair, into the pure light where God is seen; and it is demonstrating, even at the bedside where the last farewell had been uttered, that there is no death. That one has seen the blush of dawn peeping over the horizon and felt the irresistible force of its invitation, he has cast his fear and doubt behind him and has come out "for to see;" he has climbed to the heights of the mountain to feast his eyes on its full and lasting beauty, and there he has found the kingdom,—the kingdom of heaven, where all is Life. An old hymn says,—

> Fadeless the flow'rs in yon Eden that blow;
> Green, green the bow'rs where the still waters flow;
> Hearts like the garments as pure as the snow—
> Far, far away, far away.

Christian Science holds to the truth and beauty of this idea, but denies that the good and the beautiful are far away. They are here, because God is ever present, and the discernment of this great fact makes the desert blossom for us like the rose.

A GRATEFUL TRIBUTE.

EUGENIE REEVES.

In the 35th chapter of Isaiah we read: "The wilderness and the solitary place shall be glad for them; and the desert shall rejoice, and blossom as the rose." In the midst of the isolation and solitude in which my son, now fifteen, and I live, alone on a prairie homestead, a mile or two from the nearest inhabited house, we have daily practical demonstration of the help and ever-presence of divine Love, and thus the wilderness is made glad for us. We have been helped in every way. The privations to which we are subjected seem as nothing when we think of Love's ever-presence, and we both agree that the former life of comparative luxury without Christian Science, cannot in the least compare with the calm, the trust, the peace of mind, the faith, and the health of the present, although we are surrounded by what many would think to be roughness and poverty.

In August of last year my son was away, and in the evening, as I was watching for his return, I noticed heavy storm-clouds coming from the south, and bearing directly toward us. A two-mile walk across the prairie during a thunder-storm would have been to material sense a dangerous experience, but I quieted my own disturbed thought, and realized the truth of our dear Leader's words, "His arm encircles me, and mine, and all" (Miscellaneous Writings, p. 389). Very soon the heavy clouds passed away to the eastward, and a few days afterward we heard that it was a hail-storm and had done some damage elsewhere. Had it kept on the course it was taking when I first saw it, our little crop would have been wiped out. Again, at the season when prairie fires are so prevalent, there was one raging on three sides of us. The wind rose and it seemed as if we must be burned out. I sat down and read aloud from Science and Health for a time. Then, as I arose and looked out of the window, I saw that the wind had changed and was blowing the fire away from us, and we were safe. This recalls the words of the 91st Psalm: "Because thou hast made the Lord, which is my refuge, even the most High thy habitation; there shall no evil befall thee."

We have also been wonderfully helped in the care and training of our animals. We got a yoke of oxen which turned out to be so wild that men were afraid of them, but with us they were always gentle and quiet. A man whom I engaged to break them in was so rough with them that we took them in hand ourselves, and by treating them with the understanding gained in Science, of man's God-given dominion, we soon trained them to do any kind of work, but for a long time they would not let a stranger come near them. Of course we easily overcome the belief of fatigue; and health we recognize as a divinely bestowed quality, which we must reflect. Owing to the scarcity of hired laborers, and our small means, we do all the work of this little farm ourselves, knowing that divine intelligence and strength are ours at all times.

How beautiful and helpful is even our slight knowledge of Christian Science, making love well up in the heart for all one's fellow-men; and how sincere and tender is the

Digitized by Google

compassion we feel for those who will not admit this blessing to their lives! Day by day the light grows clearer and brighter, as it leads us into peace and guides us in all our thought and action. We reverently thank God, and His messenger to this age, our Leader, who has through her piety and long-suffering given us an example of true and faithful living.

READING-ROOM WORK.

IDA M. NICKERSON.

I WISH to express gratitude for the by-laws which regulate reading-room work. At one time I had for several days been trying to see how "the eternal stillness and immovable Love" of which Mrs. Eddy speaks in "Retrospection and Introspection" (p. 80), could be realized more fully in our reading-room. On a holiday I went there to do some extra work, and was led to examine a new copy of the Manual. As I read I came to Section 7 of Article XXV., which says, "No objectionable pictures shall be exhibited in the rooms where the Christian Science textbook is published or sold. No idle gossip, no slander, no mischief-making, no evil speaking shall be allowed." I exclaimed joyfully, "Here is my answer, for the textbook is sold in the reading-room, and this by-law applies here." In later editions of the Manual we are referred to this as a reading-room by-law.

Again I had reason for gratitude when I was told of the by-law which defines what literature shall be exhibited and sold in the reading-rooms. While there has never been any literature admitted to the reading-room in this locality except that which comes from the Publishing Society, yet this by-law gave us the needed authority for refusing to furnish anything else. More recently we have had yet another proof of our Leader's loving care over this branch of the work, in the by-law which separates practitioners' offices from the reading-rooms. Surely divine Love is leading us, and is meeting our every need, even as our Leader has so beautifully expressed it in Science and Health (p. 494).

I would also like to speak of another way in which help came when I was feeling the need of more definite instruction regarding certain phases of reading-room work. I chanced to pick up an old *Sentinel* (June 3, 1905), in which was an editorial entitled, "The Reading-Room." More than once it has provided an answer for important questions as they arose. I have also been deeply grateful for the thought of cooperation expressed at the publishing house whenever needed information has been sought. I have often been cheered and strengthened by the love reflected there.

Perhaps a few words concerning our circulating library may be of interest to some one, as it is proving an important help in overcoming misconceptions and of reaching people easily. In 1904 one of our directors noticed an article in the *Sentinel* in which the writer spoke of circulating library work in connection with a Christian Science reading-room. After due consideration it was decided that the plan should be tried in our own locality, and a few second-hand books, six in all, were given as a nucleus. From time to time others have been added, sometimes new ones, until now we have fifteen copies of Science and Health, five copies of "Miscellaneous Writings," and two or three each of the smaller books, with one each of the "Messages," and two of the Sermons. It is no unusual thing for us to have twelve copies of Science and Health loaned at one time, besides other books, and usually the books are returned promptly. We loan the books for two weeks, and if at the end of that time the book is being read with interest, the person borrowing can renew the loan for two weeks longer. At first our methods were very simple, but as the work grew, more businesslike methods were adopted, and for nearly a year we have had simple rules placed in each book, and a library card is given to each borrower.

The reading-room is often the place where inquirers turn for their first knowledge of Christian Science, and it is interesting to see their faces brighten as they are offered a copy of the *Sentinel* or *The Christian Science Monitor*, or are told that they can borrow Science and Health or some other Christian Science literature. Those who at first would not think of buying a book, after having read it and begun to appreciate its worth, often come to buy, or to say that they would like the loan renewed, as they hope by the end of two weeks more to have a book of their own. A large proportion of those who come to borrow come later to buy the books. It has frequently been our privilege to call the attention of beginners to the importance of the study of the Lesson-Sermons as an effectual help in gaining a demonstrable knowledge of Christian Science, and we have often been grateful that we could place before them the reprint, "The Lesson-Sermon," as an authorized statement of the best way to study the Lessons.

Another point of interest in connection with the work is the attractive appearance of the rooms. On entering them, the first impression usually is one of harmony and quiet restfulness, and as we look about, we notice the simple fitness displayed in all the furnishings. Sweetness is manifested in the cut flowers, and freshness and progress by the growing plants. All these seem but a suitable reflection of the "Love, redolent with unselfishness [which] bathes all in beauty and light" (Science and Health, p. 516). All these, together with the kindly greeting prompted by the spirit of true brotherliness which pervades all Christian Science work, are appreciated by the visitors, as is manifested by their growing realization that the material beauty and restfulness just mentioned are but counterparts of the true beauty of Spirit as brought out in our Leader's writings. This work is such a sacred privilege that we can serve there only with the constant prayer for wisdom and love to meet the varied problems in God's way.

Fear not, O little flock, the foe
Who madly seeks your overthrow;
  Dread not his rage and power;
What though your courage sometimes faints?
This seeming triumph o'er God's saints
  Lasts but a little hour.

Fear not, be strong! your cause belongs
To Him who can avenge your wrongs;
  Leave all to Him, your Lord:
Though hidden yet from mortal eyes,
Salvation shall for you arise;
  He girdeth on His sword!

As true as God's own promise stands,
Not earth nor hell with all their bands
  Against us shall prevail;
The Lord shall mock them from His throne;
God is with us; we are His own;
  Our victory cannot fail!

Amen, Lord Jesus, grant our prayer!
Great Captain, now Thine arm make bare,
  Thy church with strength defend;
So shall Thy saints and martyrs raise
A joyous chorus to Thy praise,
  Through ages without end.

"The Battle Song of Gustavus Adolphus," from the German of Michael Altenberg.

SELECTED ARTICLES.

[From an editorial in *Baltimore* (Md.) *American*.]

The Protestant Episcopal clergy, and laymen as well, are coming to the view that the healing of the sick is such a palpable duty laid upon the church through the agency of its ministrations, that the church is neglectful in not making this a distinctive part of its practical ministry. A revival of the healing faculty of the Christian church is looked upon as destined by the stage at which Christian faith has advanced.

Whatever may be the outcome of the new interest in the movement toward a revival of faith-healing as an accredited agency of the church, the present interest in the subject is directly due to the advanced position taken by the followers of Mrs. Eddy. Her followers, professing to hold in stewardship for the race the discovery of the exact relation of science to health, take the stand that any limitations upon the efficacy of prayer are human limitations, and through the agency of Mrs. Eddy's contribution to the subject these limitations may be dissipated—not perfectly in every case, but positively and progressively, nevertheless.

"A jewel which the church cast away and a woman picked up," was the concession made by one of the convention delegates to the insight of Mrs. Eddy in perceiving that the church was failing to use one of its most potent instrumentalities, and that it was neglecting one of the finest weapons of warfare, unmindful that it hung in the armory of the church as an obsolete piece of Christian equipment.

All Christendom believes in the power of prayer, and no church limits the power of God save in practical purpose. The revival in one great communion of the early ministrations in behalf of the afflicted would be followed by such a course in other churches; and thus one of the most impressive means for physical and spiritual benefit would be recovered—the sentiment of responsibility of the church for the physical well-being of the human race, as much as for the participation of the soul in the estate of the blessed. There will exist differences among users of prayer in relation to disease, but aside from those divergences the very fact of the revival of this primitive agency of the church, used in accord with modern enlightenment with regard to sin, disease, and the unity of God and the universe, marks this process as among the epoch-making advances of religion.

[E. M. Ramsay in *Edinburgh* (Scot.) *Dispatch*.]

We believe that most fair-minded people, on reading the account of the coroner's inquest at Ormston as given in a recent *Dispatch*, will regret the language used by the coroner and jurymen. Not long ago Sir Victor Horsley admitted, in court, that if there were an inquest on every patient who died subsequent to an operation, there would be no less than ten thousand of such inquests every year in London alone. In the face of such an admission, can it be regarded as a piece of amazing folly that a man should decline to undergo an operation?

England and Scotland each support an established church. These churches in theory unreservedly accept the Gospel narrative as true, and regard Jesus Christ as the second person of the trinity, in other words, as God. Seen in this light, the commands of the Saviour are actually the commands of God, and yet a man is severely reprimanded for endeavoring to obey them! For let it be pointed out that he was abused not for the lack of success of his prayer, but for thinking that prayer could avail. In spite of the occasional failures of Christian Science practitioners, we are convinced from personal experience that Christian Science is the most efficacious system of healing known on earth today, and signs are not wanting that the public is awaking to this fact.

[From an editorial in *Newburgh* (N. Y.) *Union*.]

According to a news report published elsewhere in these columns, a clergyman of Mount Vernon, one of the most eloquent and "learned divines in the Baptist church," spoke at the meeting of the Central Hudson Baptist Association last evening [Oct. 5], at the Moulton Memorial Church. The report declares that he "scathingly arraigned Christian Science, and that he termed it Buddhism with a Christian label."

With all due respect to the learned doctor, there is no more resemblance between Christian Science and Buddhism than there is between one of the whirling dervishes of India and the learned doctor himself. As for Christian Science and Mrs. Eddy, this much may be said of the faith and its first apostle: Christian Science minds its own business, and finds that it has quite enough to do without "scathingly arraigning" the Baptists or any of the rest. Mrs. Eddy is a kindly, gracious woman, upon whom old age has left nothing but marks of beauty. We never heard of her making a "scathing arraignment" of anybody.

Many cases having come under our own personal observation, in which we have had the opportunity to see the good that Christian Science has done, we do not hesitate to tell the "learned doctor" that his criticism of an elderly woman who has done him no harm is in decidedly bad taste.

[Frederick Dixon in *Bath* (Eng.) *Chronicle*.]

What Christian Science says of sin is exactly what it says of sickness, or of evil of any sort, namely, that though relatively speaking it is terribly real to the human consciousness, it is, none the less, speaking in an absolutely scientific sense, unreal, inasmuch as it is not God-created. Now, if sin is real, it must have been created by God, for God, the Bible declares, created all things, and declared His creation good. Therefore, if sin is real, not only is it God-created, but it is good. The alternative to this is inevitable. If God did not create sin, and yet it is real, it must have created itself, and so you have two creative powers, one of good and one of evil. Nor is this all; Jesus distinctly declared that a good tree could not bring forth corrupt fruit, neither a corrupt tree good fruit, so that neither good nor evil can possibly be the first cause, since neither could have produced the other, and so logically man would be driven to the admission that the first cause was a joint knowledge of good and evil, and this is practically what orthodox theology does teach.

Now, the only evidence of the reality of sin is the evidence given by the human senses. But until the human senses are educated to a higher perception of Truth they are deceived in innumerable ways. The ordinary man, for instance, is convinced that the sun moves round the earth. Only as he learns more of the science of astronomy, does he learn something of the truth which frees him from that false belief. Jesus said, "Ye shall know the truth, and the truth shall make you free." What was the truth about evil which, as he taught it, was to free the world from the belief in the power and reality of evil? Speaking after the manner of the age and country in which he taught, he personified it, called it "devil," and "Satan," but never gave it power or reality. He was a liar, he said, and abode not in the truth, because there was no truth in him. Reduce that phrase to the normal idiom of the west, and what does it come to but this: evil is a lie, it never had any real existence. It was the knowledge of this that enabled him to overcome evil with good, with the realization that good is the only power and only reality. God, the Bible declares, made all that was made and pronounced it good.

It is manifest, therefore, that good alone is real, and that evil or sin is nothing but a false belief, accepted by the human senses until man begins to learn the truth which Christ Jesus declared would bring him freedom. "How true it is," Mrs. Eddy writes, on page 312 of Science and

Digitized by Google

Health, "that whatever is learned through material sense must be lost, because such so-called knowledge is reversed by the spiritual facts of being in Science. That which material sense calls intangible, is found to be substance. What to material sense seems substance, becomes nothingness, as the sense-dream vanishes and reality appears."

[Frank Bell in *Allentown* (Pa.) *Call.*]

In the August issue of *Grace Chronicle*, the official publication of a Lutheran church in Bethlehem, Pa., the editor devotes several pages to an attack on what he apparently conceives to be Christian Science, but wherein the subject is so flagrantly misrepresented as to call for a public correction for the information of those who might otherwise accept this editor's erroneous ideas as to what constitutes Christian Science.

With that portion of the article devoted strictly to the right of a church council and pastor to designate the requisite qualifications of its membership and to withdraw the hand of fellowship from those who no longer conform thereto, an outsider may not quarrel. An organization is lawfully entitled to purge its membership of those whose professions or practices are considered by it to be at variance with its doctrines. But no pastor or other church officer has a right, in attempting to justify such action, to hold such members up in public view as persons "obsessed" with ideas which they have never entertained and which are in fact as repulsive to them as they possibly could be to the pastor himself. Therein lies the occasion for this communication.

In the first place Christian Science is not a "heresy," a "miserable fad," a "humbug," or any of the other choice things named by this critic. It is none of these things because it is Christian and scientific. It is Christian because, without addition to or subtraction from, it insists upon the simple teachings of Christ Jesus as to the duty of those who would be his followers to heal the sick as well as the sinful; because it declines to be judged by any test other than that prescribed by the Founder of Christianity: "By their fruits ye shall know them;" because its unvarying effect is to make increasingly manifest in the thoughts and actions of its adherents the Christlike qualities which are the ideals of Christianity everywhere. It is scientific because based upon the inevitable and self-evident truth of the Scriptural declarations that God is omnipresent, omnipotent, and omniscient good; that He made everything that was made, that He saw everything that He had made and behold it was very good; that His creation was perfect and nothing could be added to it or taken from it. The teaching of Christian Science departs not one iota from these plain and clear statements of Scripture. The "heresy" is all in the minds of those who for one reason or another persist in misstating and misrepresenting Christian Science.

The idea that Mrs. Eddy considers herself to be the chosen successor to Jesus Christ obtains only among those who have accepted as true the misrepresentations of the avowed enemies of Christian Science. The assertion is absolutely false, and it is without excuse because during the years since it was first given utterance ample opportunity has been afforded for all who may have been inclined to accept it to be undeceived. For the information of those who had not read her works, and in response to a question from the *New York Herald*, "Are you the second Christ?" Mrs. Eddy replied: "Even the question shocks me. . . . To think or speak of me in any manner as a Christ, is sacrilegious. Such a statement would not only be false, but the absolute antipode of Christian Science" (Pulpit and Press, p. 74). Mrs. Eddy's writings and teachings are consistent with that statement. In the church tenets to which every Christian Scientist subscribes, appear these words: "We acknowledge and adore one supreme and infinite God. We acknowledge His Son, one Christ" (Science and Health, p. 497).

Christian Scientists love and revere Mrs. Eddy as one through whose clear spiritual perception they have been taught of God as they never were before. They acknowledge with gratitude the fact that she has unselfishly devoted herself for the last forty or more years wholly to the establishment of the cause which is most dear to her and which has for its sole object the healing and saving of her fellow-men from sickness and sin. But they are most clearly taught that no human personality could be divine, and that the qualities of Christlikeness are spiritual, not material. The Christian Science church stands for the interpretation of the truth which Mrs. Eddy has contributed to this age as a still further advance toward that ultimate of the whole church, when material forms and ceremonies, man-made creeds and the human intermediaries of the priesthood, shall have been discarded and all men shall worship the Father "in spirit and in truth."

Our critic professes to be much displeased with the language of Mrs. Eddy's book, Science and Health. "One cannot read a chapter without being impressed with the fact that there is no logical sequence to the many things that are mentioned," he says. This is extremely unfortunate for the "one," but under the circumstances it is no reflection on the quality of Mrs. Eddy's writings, for hundreds of thousands of intelligent men and women all over the civilized globe have been able to grasp her meaning and have found her language not only abounding in logical sequence but redolent with spiritual truth which, dawning upon human thought, heals, regenerates, and saves. I happen to have before me an article in a library publication, commenting on a record recently noted in the public library of St. Louis of the calls for books in the non-fiction class. The leader in the list for the past year is Science and Health, there having been 618 calls for this volume as compared with the second on the list, Longfellow's Poetical Works, for which there were 416 calls. To any one who is not convinced that no one (especially a woman) can teach him more of truth than he already knows, the Christian Science text-book is a very mine of good. And yet Mrs. Eddy claims no personal glory for what she has done. She gladly acknowledges that the Bible is the source of all she has uttered with regard to the Science of Christianity.

Our critic, in protesting Mrs. Eddy's right to offer her interpretation of Bible language, evidently forgets that he is doing a similar thing every time he rises in his pulpit, reads a text, and delivers a sermon in explanation or amplification thereof. When he asks, "Was Mrs. Eddy selected of God to enlighten us properly as to the true meaning of Christ's words?" we say, Let him turn the question upon himself, and he will see how unreasonable and unfair it is.

The gentleman's assertion of his individual belief that Christian Science does not cure all manner of disease, need only be confronted with the fact that all over the land in the Wednesday evening services people are rising in grateful acknowledgment of having been healed in Christian Science of diseases pronounced incurable by reputable medical physicians. These people are usually well known in their communities and the facts as to their cases may easily be verified. Similar testimonies, bearing the full names and addresses of the individuals healed, are printed in large numbers regularly in the weekly and monthly periodicals of Christian Science. One man's mere profession of disbelief in the face of this army of witnesses is worthy of note only as again emphasizing that quality of the human mind which Jesus so aptly described when he said of the doctrinaires of his day that "neither will they be persuaded, though one rose from the dead."

The effort of our critic to show that Christian Science is nothing more than an exaggerated attempt to apply the well known influence of the human mind or will-power

Digitized by Google

over the body, is one of the misrepresentations to which I referred at the beginning of this article. To attempt to erect a system of healing, much less a religion, upon the frail foundation of the human will would be indeed a pitiable farce. Christian Science makes no such attempt. From beginning to end of the text-book the efficacy of the human mind as a dependable remedial agent is unequivocally denied. The student is specifically and repeatedly warned against trying to accomplish any good whatever with hypnotism, mental suggestion, or any of the modes of will-power, this being denounced as a false claim to power, dependence upon which is certain to end in disappointment and suffering. How idle to say that Christian Science practice consists in the application of that which Christian Science utterly repudiates! The "prayer of faith" which saves the sick today as in the days when the epistle of St. James was written, is the prayer by which the evil beliefs of the human mind and the degenerating tendencies of human will are supplanted in some degree by the consciousness of the divine Mind,—the Mind that was in Christ Jesus; the Father that "doeth the works;" God "who forgiveth all thine iniquities; who healeth all thy diseases." This healing consciousness, being omnipresent, is appreciable in proportion as the "carnal mind" of mortals, which "is enmity against God" and is primarily the source of all discord and sin, is put off in accordance with the Scriptural injunction. In Christian Science one learns how this may be done.

It is not true that Christian Science protests against an examination of the life of its Founder. Mrs. Eddy insists that her personality is not involved in the Principle set forth in her works. She tries to impress on all students that Christian Science is of value, not as it is accepted on the say-so of herself or any one else, but as it is tried and proved in individual experience. Naturally her followers regret that false statements concerning Christian Science and its Leader should still occasionally find utterance, especially from the pulpit and in the so-called religious press.

Our friend's warning to his people not to investigate Christian Science "just out of curiosity," lest they be swept from their moorings in his church-fold, does not ring true. No one ever did, or ever can become a Christian Scientist except through individual proof and demonstration. Those who are not ready and willing to give it a fair and thorough trial are in no immediate danger of becoming "identified with Christian Science," and thereby bringing down upon their heads the ordeal of the church council. On the other hand, those who are thus ready and willing are likely to be spurred on to investigate Christian Science by the very attempts of their pastor to prevent it.

[Edward W. Dickey in *San Diego* (Cal.) *Union*.]

With due respect for the opinion of our critic, permit me to say that there is a fixed and impassable gulf between Christian Science and all forms of faith-cure and other agencies of the human or mortal mind. The one distinctive thing about Christian Science is its declaration that there is only one Mind, one God. It is doing its good works by virtue of the unfailing operation of the law of God. This has no competitor nor equal.

I note it is stated that the late Professor James sought to give the best antidote for Christian Science by taking it out in the open instead of laughing at it. About the very best thing that can happen to Christian Science is to "take it out in the open" and keep it there. This Science contains nothing mysterious, occult, or hidden. "It presents," as Mrs. Eddy writes in Science and Health (p. 358), "the calm and clear verdict of Truth against error, uttered and illustrated by the prophets, by Jesus, by his apostles, as is recorded throughout the Scriptures."

No one has an antidote for the truth, and indeed would not desire even to present one should he recognize it. Christian Science declares and proves itself to be the expression of truth, and rests upon the broad and unfailing platform of demonstration. Truth, wherever found, rests for its verity upon this same platform, and Christian Science has no other for the purpose of establishing its validity.

[From *Wakefield* (Mass.) *Citizen*, concerning the "Mechanics Fair" in Boston.]

The average reader of the daily newspaper, it is safe to assert, knows very little of the processes by which this wonderful production of the present century is made ready for the eyes of the public day after day and many times daily. Such a knowledge, indeed, is quite a liberal education in itself and indirectly exerts a powerful influence for good not only upon the favorite journal but upon society as well. The exposition will be open every day excepting Sundays, from ten o'clock in the morning until ten o'clock at night, and during these hours a little daily newspaper will be published under the editorial control of *The Christian Science Monitor*. The mechanical part of the outfit will be supplied by the American Type Founders Company, Whitlock Printing Press Company, and the Mergenthaler Linotype Company, and every detail from the supplying of "copy" of the news and gossip of the big fair, to the setting of the type, the assembly, the make-up of the forms, the printing and the folding, will be in full sight of patrons. It will contain, among other things, a complete list of exhibits, the program of the concerts and other entertainments, and all sorts of news and chat about the people connected with the exposition. It will be distributed free, "hot from the press," to all comers.

[Lloyd B. Coate in *Dayton* (O.) *News*.]

Mrs. Eddy devotes one chapter in her text-book, "Science and Health with Key to the Scriptures," to the subject, "Animal Magnetism Unmasked," and those who desire to understand what Christian Science teaches on this subject will do well to study this chapter carefully. No doubt even a psychologist will admit that to the human sense of things there is a pernicious influence to be dealt with, such as hatred, envy, jealousy, etc. Mrs. Eddy defines animal magnetism or hypnotism (Science and Health, p. 103), as "the specific term for error, or mortal mind. It is the false belief that mind is in matter, and is both evil and good; that evil is as real as good and more powerful. This belief has not one quality of Truth."

The teaching of Christian Science removes the mask from error and proves to those who demonstrate its divine Principle that there is no occasion to fear "goblins." It does this by teaching the omnipotence and omnipresence of God, infinite good, divine Love, which casts out fear. Christian Science is in accord with what Jesus taught: "Out of the heart proceed evil thoughts, murders, adulteries, fornications, thefts, false witness, blasphemies: these are the things which defile a man." The Christian Scientist declares with the psalmist: "I will say of the Lord, He is my refuge and my fortress: my God; in him will I trust. Surely he shall deliver thee from the snare of the fowler, and from the noisome pestilence. . . . Thou shalt not be afraid for the terror by night; nor for the arrow that flieth by day; nor for the pestilence that walketh in darkness."

Christian Science teaches that all sin is to be dealt with in a Christianly scientific manner, and overcome through the power of God in the way Christ Jesus demonstrated, and thus proven powerless.

SMALL QUARTERLY ONLY.

Beginning with the issue of January, 1911, the *Christian Science Quarterly* will be published in the small size only. Our readers will please note, therefore, that after that date orders for the large size cannot be filled.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

OUR LEADER'S POEMS.

CHRISTIAN SCIENTISTS everywhere will be gratified to know, as announced by Mrs. Eddy's publisher, Allison V. Stewart, on page 193, that a volume of our Leader's poems is now in press. Many of these have never appeared in our periodicals, and will therefore have a special interest, particularly the opening poem, on the "Old Man of the Mountain," with its lofty note of inspiration and grandeur of concept. Other of the verses have been published in the *Journal* and *Sentinel* in past years, and will bring anew to those who have known and loved them, their message of salvation—of healing, hope, comfort, strength, and peace.

The desire has so often been expressed that all of Mrs. Eddy's poems might at some time be gathered together and published, that the opportunity now presented to secure these rare gems of true inspiration, which tell of God's kingdom ever with those who have eyes to see and ears to hear its message, will be eagerly welcomed.

ARCHIBALD MCLELLAN.

AN IMPORTANT DUTY.

WHEN it was first announced in these columns that the scope and influence of the Christian Science periodicals were to be enlarged and broadened by the issuance of a daily newspaper, the question was frequently asked as to why this was necessary—were there not already newspapers enough in the world?

This question Mrs. Eddy answered once for all when, at the head of the editorial page in the initial number of *The Christian Science Monitor*, she definitely set forth its unique object, namely, "To injure no man, but to bless all mankind." Other papers there were, but none so world-wide in its purpose,—a newspaper not for Christian Scientists alone, but for every advocate of clean journalism, whatever his religious or political proclivity; and it was because Mrs. Eddy realized the great possibilities of clean journalism, and the influence such a paper as she had planned would have upon this and future generations, that she gave directions for the establishment of the *Monitor*.

Until this paper was issued, the belief prevailed in many an otherwise strictly guarded home, that no matter how intrinsically bad a daily newspaper might be in its sensational reports of crime and scandal, it could safely be read by the man of the family; that the wife and mother might read portions of it with some measure of propriety, but to the children it must be as a closed book. Gradually, since the reading public has become acquainted with the *Monitor*, there has dawned upon a great many people the truth that even the man of the family, saint or sinner as he may be, cannot handle "the unclean thing" without defilement, and that the sensational exploitation of what is wrong and vicious in human affairs cannot be otherwise than degrading in its tendencies and harmful to all who come within its influence.

Because of this awakening, the scope and purpose of newspapers in general are becoming more clearly understood, and their place as the historians of their period is more definitely recognized. An example of this newer concept of the newspaper and of its use as an educational medium, is to be found in the following despatch from its Washington correspondent to the *Monitor* itself:

> The excellence of the daily newspaper as an exponent of current history is to be emphasized in the schools of the District of Columbia, especially in the normal and high schools, where the dictum went forth this morning that the pupils will in the future be expected to read good newspapers daily as part of their curriculum, the board of education having issued an order which requires pupils who are far enough advanced to digest the trend of current events as outlined in the press, to keep posted on current events.
>
> In issuing the order the board adopts the idea of Prof. George C. Pearson, formerly principal of the Washington county high school at Hagerstown, who has always insisted that quizzes in current events, based on newspaper study, should constitute a portion of the curriculum; that it is fully as important, if not more so, for present-day students to be not less familiar with history as it is made than with the epoch-making events of the past.

The broad and vitalizing purpose of this order is not to be questioned, if the coming generation is to be properly equipped to deal with the problems which present themselves to those who bear a part in the world's great work, and the boys and girls of today must be wisely instructed if they are to become the well-informed men and women of the future. It is an important duty, therefore, which rests upon parents and guardians everywhere, and one not lightly to be passed over, to see to it that the medium through which a knowledge of current events comes to the young people is wholesome and uplifting in its make-up and trend.

ARCHIBALD MCLELLAN.

HE THAT ABIDETH.

FROM the point of view of present religious consciousness, some of the statements of our Lord as to what his disciples might be and accomplish seem far removed if not extravagant. For instance, the promise, "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you," denies any limitations whatever to the practical power of the Christian believer, provided he meets the single condition named, a condition which, as it would seem, Christian thought should long since have mastered. And yet, for the great body of believers it is certainly true that this promise, together with many others which are kindred to it, awakens no thought even of the possibility of their fulfilment in the present life; much less do they stimulate serious effort to attain to that spiritual power which the early disciples so continually exhibited.

The acceptance by Christian believers today of the fact that the early disciples did work the works of the Master, has a very important bearing upon their responsibility, since otherwise they might reasonably claim that in defining the practical efficiency of his followers' faith, Christ Jesus was speaking in terms of his apprehension of the universality and availability of the law of God which he utilized, and had no expectation that they would be able to understand and apply it for an indefinite time. The moment, however, it is granted that representative men like Peter and Paul, who had so abundantly evidenced their kinship to the average mortal, were able to understand his teaching so as to be able to heal the sick and raise the dead, that moment professed Christians are estopped from offering this explanation of their failure to "do his commandments," and the inquiry, "Why, then, are ye not doing these things?" can neither be suppressed nor ignored.

While Christian Scientists have abundant reason to be humble, they certainly can and do rejoice that they have acquired a clearer understanding of the conditions upon which the promise of spiritual dominion was made, and they have thus taken the first step, at least, toward the realization of its fulfilment. Christ Jesus' command of life, and his assurance of our possible freedom to do and possess, is no longer inexplicable when we come to apprehend in Science the relation of his words, his demonstrable understanding of the truth of being to the falsities of human sense which bring about sin and sickness. The pupil truly abides in the

Digitized by Google

teacher when he has received and assimilated his teaching and is governed by it, the effective common factor being their common knowledge. The law of Truth, an understanding of which made it possible for Christ Jesus to solve his every problem, to do as he would, became "mighty through God to the pulling down of strong holds," in the disciples; and in the nature of the case it can be no less mighty in every other consciousness in which it is received and utilized.

The moment one understands the multiplication table, that moment it relates itself to his every interest, begins to work in him to will and to do; and this illustrates the demonstrable fact in Science that the answer of our prayer is a matter of right apprehension bringing right desire into effect. The effective word of Truth may be separated from our selfhood in thought, but it is the substance of selfhood in fact, because of man's at-one-ment with God. The prerequisite of spiritual dominion is that continuity of right consciousness to which we are called by our Leader's words, "Allow nothing but His likeness to abide in your thought" (Science and Health, p. 495). The reign of this habit is imperatively demanded, if we would "abide" in Truth, and for its acquisition every worthy Christian Scientist is earnestly striving.

JOHN B. WILLIS.

COURAGE.

COURAGE is defined as that mental quality which enables one to encounter dangers and difficulties without fear; otherwise, "valor, boldness, resolution." But even the dictionaries tell us that the courage which is based upon physical conditions often forsakes one when he is most dependent upon it, even as the prophet Amos has said, "He that is courageous among the mighty shall flee away naked in that day;" which evidently means, when the spiritual source of strength and of courage is forgotten. We find innumerable admonitions, however, as to true courage, and many examples of it in the Scriptures, the first of these being in Moses' instructions to the men who were sent "to spy out" the promised land.

We read that these men went up, and returned with some wonderful fruit, but stricken with such a sense of fear that their abject cowardice spread like an evil disease among the entire people, and in a state of panic they were ready to stone those who still desired to go forward at the bidding of Truth. "Back to Egypt, even though we must again be slaves," was the wail of those who had cried loud and long for deliverance from bondage, but Joshua and Caleb were in no wise touched by this clamor of blind fear. "If the Lord delight in us, then he will bring us into this land," said these spiritual heroes of that early day; and they added, "The Lord is with us: fear them not."

Need we wonder that the glory of the Lord appeared before all the people, or that Joshua should in due time be called to lead forward his brethren, and that these were his oft-repeated marching orders: "Be strong and of a good courage: . . . be thou strong and very courageous, that thou mayest observe to do according to all the law. . . . turn not from it to the right hand or to the left, that thou mayest prosper whithersoever thou goest." From this we see that true courage is a divine demand, and that it is inseparable from righteousness; as witnesses Shakespeare, in his query, "What stronger breastplate than a heart untainted?"

All men despise cowardice, and yet how many mortals can claim to be superior to fear? So long as life is held to be dependent upon matter, men will be more or less in bondage to fear, their thoughts continually turning to bodily conditions, like a caged creature which knows not how to gain its freedom. Mrs. Eddy rebukes this unmanliness when she points us to Socrates, who dreaded not the poison cup. She says, "Even the faith of his philosophy spurned physical timidity. Having sought man's spiritual state, he recognized the immortality of man" (Science and Health, p. 215). During his imprisonment in the fortress at Cæsarea, St. Paul saw many an exhibition, no doubt, of that soldierly courage to which he referred when counseling Timothy to "endure hardness, as a good soldier of Jesus Christ:" and we read that he himself bravely endured cold, hunger, thirst, besides perils on land and sea. He tells us that he even gloried in these tribulations, since he proved that they could not separate him from divine Love.

All through the Gospels we find the key-note of the Master's teaching to be, "Fear not," and the sublime courage which he showed on every occasion may well inspire us anew when dangers threaten. Pilate must have recognized the heroism displayed by Jesus (who was brought before him after the cruel scourging, with a crown of thorns on his head), when he said to the mocking crowd, "Behold the man!" This should ever remind us that only as Spirit dominates the flesh can we rise superior to the suggestions of fear and display the courage which comes from Soul, not sense, and which leads onward to the promised land, whose fruits await those that triumph over every difficulty through the might of Mind.

ANNIE M. KNOTT.

AMONG THE CHURCHES.

BISHOP, CAL.

The Christian Science Society has purchased a lot on Main street for $1,200. The society is planning to erect a concrete church as soon as their plans are fully matured. This indicates a phenomenal growth of this society, the first organization having been effected here about one year ago.

Owens Valley Herald.

COLVILLE, WASH.

Colville Christian Science Society was organized in 1905 with fourteen members. A hall was rented for a few months, when one lot was donated and another purchased, on which a small bungalow chapel was erected at a cost of four hundred dollars. The electric lights were a gift from the Sunday School, which is a flourishing part of the society's work. The society has given two lectures, both of which were well attended.—*Correspondence.*

PATERSON, N. J.

First Church of Christ, Scientist, in Paterson, took title yesterday [Oct. 17] to the piece of property at Auburn and Fair streets which has been under consideration for some time. The price paid was eight thousand dollars. The site is 52 x 104 feet, and has on it two double houses. The houses will not be moved for the present, as the church figures to obtain a certain revenue from the rental. From this and other sources sufficient money will in time be obtained to erect a building devoted to church purposes.

Call.

COLUMBIA UNIVERSITY.

Last evening [Oct. 14] at 7:45, the Christian Science Society of Columbia University held its first meeting of the year in rooms C and E, Earl Hall. The president of the society, Miss Tannahill of Teachers College, presided at the meeting. About twenty-five members and visitors were present.

As announced by the *Spectator* of yesterday, the regular meetings of the society will be held at Earl Hall on the first and third Fridays of each month. All persons are cordially invited to attend these meetings.—*Columbia Spectator.*

CORRECTION.

In Section V. of the Lesson-Sermon for Nov. 13, reference (*24*) should read 572: 19-22.

THE LECTURES.

GREAT FALLS, MONT.

Bliss Knapp of Boston delivered an interesting lecture on Christian Science at the Grand Opera House last evening [Sept. 20] to a large and appreciative audience. The lecturer was introduced by William C. Kaufman, First Reader, who spoke as follows:—

To those who are tired of sin, who are weary of sickness, or who have found nothing in man-made systems, Christian Science says, in the language of our beloved Master, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." To those who are satisfied with the flesh and blind to the spiritual, it says in the words of the apostle, "Awake thou that sleepest, and arise from the dead, and Christ shall give thee light."

Christian Science is not a departure from the Christianity of Jesus, rather is it the fulfilment of that Christianity, because its teaching gives the student of Christian Science an understanding of God which enables him to heal the sick and do the works which Christ said we should do in his name. Christian Science should not be judged by the criticism of unjust critics, or by students who ignorantly misstate its teaching.—*Great Falls Leader.*

SALT LAKE CITY, UTAH.

Prof. Hermann S. Hering delivered a lecture on the subject of Christian Science at the Salt Lake Theater, Sunday evening, Sept. 25. He was introduced by Prof. Joseph E. McKnight of the State Normal School, University of Utah, who said in part,—

In the ordinary affairs of every-day life we are largely concerned with the problems that we meet in our struggle to realize for ourselves what seem to be the great primary necessities of human existence—food, clothing, and shelter. With these secured, our next wish is to be amused. "Bread and the circus," was the cry of the Roman populace, and we are not essentially different from those elder brothers of ours. But while it is true that the various callings and amusements of life absorb most of our time, to the exclusion of higher things, still there come moments to all of us when we realize that, after all, the great question of the ages is, "What is truth?"

It was old and trite even in the days when Pilate, whether jesting or not, put the question to Jesus of Nazareth. It is still new and fresh and interesting at the dawn of the twentieth century. The fact that it is now and locally an attractive question is attested by the presence here tonight of this magnificent audience. The attempt to answer this fascinating and all-absorbing question has given us the great systems of thought, ramifying into many fields of inquiry, that have swayed the minds and hearts of men in all time. Science has given one answer, art another, history another, theology another, and philosophy another. And so we have the "riddle of the universe," still puzzling, still unsolved.

The science of the nineteenth century,—and we of course have no other yet,—materialistic in its conception, materialistic in its point of view and methods of inquiry, was essentially and necessarily materialistic in its findings, and atheistic or at best agnostic, in its final conclusions. Physical science with its crucibles, its microscopes, its telescopes, and its spectroscopes, claims to have found in the universe two things, and two only: indestructible matter and blind, unintelligent force, but not God.

And thus it is that God is ruled out of the material universe. The biological sciences are no less materialistic than the physical sciences, for they have traced life to a physical basis in protoplasm, and declare that in some way life came about from mixing matter and force, and that the original, natural proportions will yet be reproduced in the laboratory.

Professor Häckel, the great German thinker, speaking for biology in particular, and in a general way for all the sciences, as well as the philosophy of the nineteenth century, says that no God was needed for the creation of life. That is in perfect harmony with the great Darwinian theory of evolution. Many people think that Darwin traced the descent of man from the monkey. But Darwin did not stop there. He said that man and the monkey are so nearly alike that they must necessarily have had a common ancestor. And so man, before he was a monkey, was in the remote past a fishlike animal. Now the ancestor of the fish was a worm; and the ancestor of the worm was the amœba, a tiny one-celled structure, the lowest form of animal life known to science. And this amœba, before it came to be a living thing, was a pinch of matter with a bit of force superadded. Such is the descent of man according to natural science: poor man! And so God is ruled out of the realm of life.

In the same way modern psychology rules God out of the domain of mind or soul. Theology, from *theos* meaning "God" and *logos* meaning "word" or "doctrine," is, or ought to be, the science of God. But the trail of the serpent is found on the fair garments of theology, for while she has insisted from the beginning that God is, and that He is Spirit, she has at the same time accused Him of having created matter, of having implanted in it life—even the life of man—and of having endowed the impossible combination with the germs of disease, the necessity for sin, and the inevitableness of death.

Among the ancient Greeks we find a belief in the centaur, a fabulous creature, half man and half horse. Man, mind, above; brute, matter, beneath. We smile at the absurdity, but in modern theology what is man? He, too, is a creature part man and part brute. Man, mind, aspiration, spirit above; animal, brute, sensuality, matter beneath—with the higher always at the mercy of the lower! What a dismal picture science and theology give us of the creation!

At this juncture, Christian Science enters the arena of modern thought and, in the teaching of that wonderful woman, its Founder, throws down the gantlet to each of these great systems of thought, challenging the validity of their reasoning and the correctness of their conclusions. To the physical sciences she might say, in effect, "You are right, O physical science, in one thing, but in one only. In all the physical universe there is no God. Nor did God create matter; but God is." To the biological sciences she might say: "You are right, O biology, in one thing, but in one only. God did not create that life which is inherent in matter, that life which you find a mere resultant of matter and force mixed according to the recipe of the atheist. But God is, and He is Life itself, the divine Principle of all that really is."

To psychology she might say: "You are right, O science of mind, in one thing, but in one only. God did not create that mind which you find merely the collective function or functioning of the brain, and which had its remote beginnings in the irritability of microorganisms. This mind you speak of is what St. Paul calls the carnal mind or mind in the flesh. No, God did not create the carnal mind; but He is Mind itself."

To philosophy she might say: "You are right, O philosophy, in one thing, but in one only. You have maintained, not very consistently, it is true, and not unanimously among your exponents, that this thing which men call matter is a product of the mind, of the human mind, and that without the human mind there would be no such thing as matter. You are right; matter is the product of the carnal mind, that mind which is always 'enmity against God.' But God is, and He is the creator of all that is real in the universe.

Digitized by Google

You, O philosophy, should have kept to your own sphere—metaphysics, the realm beyond physics." To medicine she might say, in the language of one of the songs of the people: "'The great Physician now is here'—brought back to earth through Christian Science; what need is there for you?" To theology she might say: "Come, let us take this man-thing of your creation and relegate it at once to that limbo in which we keep the centaur, the mermaid, the Frankenstein, the sea-serpent, and the devil. Let us do this, that God's man may appear. Science and Health will tell you who you are and what you are. It treats of your origin and of your destiny. It will lead you back to that masterpiece of the ages, the Bible. It will lead you back to God, and keep you near to Him."

There is no pitiful attempt here to twist the dear old book into harmony with modern science. There is no fear that the archæology of the Orient may disprove some of its pages. We are concerned only with its spiritual content. Its literature and its history, as such, are of no more value than those of any other great historic people. There is sublime audacity and effrontery in all this, or—there is divine assurance. No wonder there is opposition, no wonder there is criticism! Let us trust that the speaker of the evening, in trying to tell us what truth is from his point of view, shall be able at the same time to answer that pitiful, individual cry of the human heart—"What shall I do to be saved?" There are some of us who wish to know this very thing.

And so, ladies and gentlemen, I, not being a Christian Scientist myself,—at least, not yet,—but groping through the gloom toward the light, and finding more light in this direction than in any other, and hoping for still more light; feeling, too, that I should stultify my reason and belittle myself as a man were I to deny, even by implication, that I too am a beneficiary of this new-old religion which puts so much stress upon right thinking, this religion of hope and promise and optimism; in the spirit of that liberality and fair play which should characterize every member of my profession, I have the honor and very great pleasure of introducing to you the speaker of the evening.

Correspondence.

OSKALOOSA, IA.

A good sized audience gathered at the Masonic Opera House Sunday afternoon [Sept. 25], in response to announcements and upon invitation of First Church of Christ, Scientist, to hear a lecture upon Christian Science, delivered by Francis J. Fluno, M.D. The audience was representative of the critical and analytical thought of the city, students, business men, and residents coming out to hear and to know the thoughts expressed and the teachings advanced by the speaker. It was an attentive audience, that gave the closest attention to the subject. The speaker was introduced by Miss Carrie Baughman, who said in part.—

It is recorded in the Scriptures, that "he sent his word, and healed them, and delivered them from their destructions." Christian Science reiterates this message, and demonstrates that the word of God is as capable of healing today as it was twenty centuries ago. That it has lost none of its healing efficacy is verified in our midst by the sick who are healed, by the inebriate who is saved from his enslaving appetite, and by the tranquillizing influence exerted on human lives.

Out of a heart full of gratitude to our heavenly Father, I testify to you that the power of God, as revealed through Christian Science, rescued me from an incurable disease, which was fast consigning me to the grave, and restored me to perfect soundness. This understanding of God has given me years of health and strength. It has taken me out of the house of bondage, as were the Israelites of old.

Oskaloosa Herald.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Alamosa, Col.—Bliss Knapp, Oliver Opera House, Nov. 17.
Battle Creek, Mich.—Prof. Hermann S. Hering, Independent Church, Maple street, Nov. 18.
Buffalo, N. Y.—Willis F. Gross, Convention Hall, 8:15 p.m., Nov. 18.
Cambridge, Mass.—William D. McCrackan, M.A., Scenic Temple, Central Square, 3:30 p.m., Nov. 20.
Concord, Mass.—Clarence C. Eaton, Association Hall, Concord Junction, Nov. 18.
Duluth, Minn. (First Church).—Prof. Hermann S. Hering, Lyceum Theater, 3:30 p.m., Nov. 20.
Eureka Springs, Ark.—Francis J. Fluno, M.D., Eureka Springs Opera House, 3 p.m., Nov. 20.
Fall River, Mass.—Frank H. Leonard, Nov. 15.
Fargo, N. D.—Rev. William P. McKenzie, old Stone Music Hall, Nov. 8.
Houston, Tex. (First Church).—Bliss Knapp, Turner Hall, Nov. 12.
Joplin, Mo. (Second Church).—Bliss Knapp, Joplin Theater, Nov. 8.
Lancaster, Pa.—Hon. Clarence A. Buskirk, Roof Garden, Nov. 17.
Lowell, Mass.—Clarence C. Eaton, Opera House, 7:45 p.m., Nov. 13.
Lynn, Mass.—Clarence C. Eaton, Olympia Theater, 408 Washington street, 3 p.m., Nov. 13.
Mobile, Ala.—Mrs. Sue Harper Mims, Battle House Auditorium, 3:30 p.m., Nov. 20.
Montpelier, Vt.—Frank H. Leonard, Kellogg Hubbard Library, Nov. 18.
Newark, N. J.—Prof. Hermann S. Hering, Church Edifice, Hill street, 3 p.m., Nov. 13.
New Rochelle, N. Y.—Rev. Arthur R. Vosburgh, Zoew's New Rochelle Theater, 3:30 p.m., Nov. 20.
Norfolk, Va.—Hon. Clarence A. Buskirk, Academy of Music, Sunday afternoon, Nov. 20.
Ottawa, Can.—Frank H. Leonard, Russell Theater, 3 p.m., Nov. 20.
Plymouth, Mich.—Prof. Hermann S. Hering, Church Edifice, 7:30 p.m., Nov. 17.
Poughkeepsie, N. Y.—Willis F. Gross, Collingwood Opera House, 3:30 p.m., Nov. 20.
Pueblo, Col.—Bliss Knapp, Grand Opera House, Nov. 18.
Salida, Col.—Bliss Knapp, Osos Grand Opera House, 2:30 p.m., Nov. 20.
Savannah, Ga.—Francis J. Fluno, M.D., Lawton Memorial, 8:30 p.m., Nov. 15.
Springfield, Mass.—Willis F. Gross, Court Square Theater, Nov. 21.
Springfield, Ohio.—Rev. Arthur R. Vosburgh, Grand Opera House, Nov. 10.
Toledo, Ohio (First Church).—Willis F. Gross, Church Edifice, Monroe street and Lawrence avenue, Nov. 15.
Tremont, Ohio.—Willis F. Gross, Colonial Hall, Nov. 17.

POEMS BY MARY BAKER EDDY.

Under the above caption the poems written by our Leader have been compiled in a handsome volume of 79 pages, now in press, and orders will be filled in sequence. All of Mrs. Eddy's hymns are included in the volume, also her earlier poems, which appeared in various publications from forty to sixty years ago.

The poems are printed in clear type on heavy paper, with initials and ornaments in red, and bound in fine English cloth, with a conventional design of wild roses. Price, single copy, $1.50; six or more copies, $1.25 each. Address all orders and make remittances payable to Allison V. Stewart, Falmouth and St. Paul Streets, Boston, Mass.

TESTIMONIES OF HEALING.

I think it a duty which I owe to others to tell what Christian Science has done for me. I was a non-believer in this teaching, and only accepted it after all other remedies had failed and I was doomed to go. A physician diagnosed my case and pronounced my ailments organic and incurable; so I thought that if all the learned doctors with all the known remedies at hand could do nothing for me, Christian Science certainly could not cure me. I thought that Christian Science might do for people who imagined they were sick, but not for one in my condition.

My first attack of the organic trouble was in April, 1904, while living near Guthrie, Oklahoma. I was suddenly taken ill and my suffering was intense. A physician was called, and after a hypodermic injection to relieve the pain, he examined me and said there was enlargement of the liver, and that I had a growth in the stomach which could not be cured by medicine or removed by surgical operation. If I ate solid food, it caused me intense pain. My second serious attack was in August, 1906, at Otterbein, Ind. A prominent physician of Lafayette was called in consultation, and after an examination he told me that if I had any unsettled business, I had better attend to it at once. Then he called my folks to another room and told them that I had a malignant disease of the stomach and that I could not get well. Before leaving he told me that I might get up out of this attack; but if I did, I would have others just like it, and every one would be worse until the end. I lay there for nearly three months, and hardly expected to live from one day to another.

In March, 1907, we sold out our business and came to Kansas City. I had been here only two days when I was taken suddenly ill, as the Indiana physician had said I would be. My suffering was terrible and a physician was called. After giving me the second hypodermic injection, he made an examination, but said that the only thing he could do was to give me hypodermic injections from day to day to relieve the pain. A new complication set in, and he called a surgeon in consultation. He said it was a rupture and would require a surgical operation; that I would have to go to the hospital that afternoon and prepare to have an operation performed the next day. He said they could relieve me, but could not cure me. I was willing to do almost anything to get relief, but I asked the surgeon if there was any immediate danger in an operation of that kind. He said that they could not perform an operation of that kind without more or less danger. I did not go to the hospital or have an operation performed: if I had, I do not think I should be here to write this testimony, as I was very weak from my long illness and severe suffering.

Here is the other part of it: I have a sister living in Idaho who is a Christian Scientist, and she knew what it could do for me. My folks informed her of my serious condition when in Indiana, and she and her daughter hurried to my bedside. She wanted me to try Christian Science treatment, but I would not consent to it. I thought if I did not take my medicine regularly, about every fifteen minutes, that I should die. When my sister received the message of my serious illness here, she came again, still hoping that I would try Christian Science. As all my physicians had said there was no cure for me, Christian Science was the last resort. My sister called a practitioner, who gave me two weeks' treatment, and I improved from the first. After taking the second treatment, I got up and dressed myself, walked to the dining-room, and ate a heartier meal than I had eaten for more than two years. I had been living on a very light diet, but now I eat anything I want, and it has no bad effect on me. The growth, the calloused abdomen, and the enlargement of the liver have all disappeared, and there is no sign or symptom of either. The rupture is not entirely well, but has never given me any trouble. Six weeks after I took my first treatment in Science, I started on a long pleasure trip through the West. I spent the summer visiting, fishing, hunting, wading the snow-water streams, and climbing the mountains. I have gained greatly in weight and my health is good.

I might add that Christian Science found me an agnostic. I had no faith in religion and I had no use for the Bible; but this has changed. I now read the Bible, and Science and Health, and have learned to study them with much interest and profit. For all of this I sincerely thank God for His free and generous gifts, and I thank Mrs. Eddy for showing us the way.—I. L. BROWN, Kansas City, Mo.

I wish to testify through the *Sentinel* to the power of Truth, as propounded in "Science and Health with Key to the Scriptures" by Mrs. Eddy, to make men free. This has been well proven in my case. I was brought up under the tenets of the Church of England, but being a newspaper worker I had the opportunity to attend meetings in various churches and to learn their doctrines. None of the forms of religion with which I thus became acquainted appealed strongly to me, and consequently I was not induced to give religion in general any serious thought.

When Christian Science was presented to me by two practitioners, I was very skeptical, and would not consent to see any merit in it for some time. With my wife I however attended the Christian Science Sunday services, and grew to like them so well that when the proposition was made to me to join my wife in class instruction, I consented, although I was not even then thoroughly convinced that I was taking the proper step. I was, however, satisfied with the teaching, and during the class term I was healed of the tobacco habit, which I had tried on many occasions to give up. At the close of the study period I attended a large meeting at which testimonials of Christian Science healing were given. This was inspiring to me, and I concluded that the religion which could unclasp the hold of disease on people and cure them was good enough for me.

During our Christian Science career of over fourteen years, myself, my wife, and my family have received many blessings, for which we are deeply grateful to God, and also to our dear Leader, who amid trials and persecutions has reestablished that teaching of the Master which if strictly followed will relieve mankind of every ill. I have been healed of violent rheumatic attacks, and relieved of other troubles. My wife and members of my family have been cured when at times error seemed to strike hard. My younger daughter has been attacked by most of the ailments that children are subjected to, but from childhood she has known no other treatment than that of Christian Science. I also know of the healing of many serious cases of organic disease through the power of Truth.

Christian Science is not only a healer of the flesh, but it uplifts one spiritually. I have been made a better man through the destruction of habits that were against my happiness and welfare. Christian Science has given my family health and peace and prosperity, for all of which we are grateful, and in appreciation we strive to uphold and disseminate the truth, as given in Christian Science, which is destined ultimately to free the human race from the bondage of sin and disease.

T. C. CARTER, Boston, Mass.

It is about two years since I became interested in Christian Science, and I do not think that any one ever received more help from it, or felt more secure in it as a foundation for a harmonious future, than I do. When I think of telling in a few words of the sin, disease, and unhappiness out of which I have been lifted, I hesitate; but every day the blessings increase, and this makes it more difficult to tell.

I became interested while reading aloud to my parents, who were not in a condition to read themselves. Both had

Digitized by Google

been given up by physicians, but the testimony of their healing I will leave for them to give. None of us knew what Christian Science teaches, but we had acquaintances near by to whom we wrote to know if it would heal the sick. This inquiry seemed to open floodgates, for people in town were discovered who furnished us with Christian Science literature, and my relatives commenced to take treatment. By reading I found that the truth was what I was starving for, and though at first I did not feel that I could give up old ways of enjoyment, I soon learned to understand myself, to see what it was that I really longed for, and that the reason I was not happy was because I was traveling from instead of toward the things that would make me happy. In Science and Health (p. 21), is an illustration of my condition. My friends were all going in the same direction as myself, and as soon as I saw there was a better way, I was like the traveler who is "ashamed of his zigzag course," and who would then "borrow the passport of some wiser pilgrim." God gave me new friends, who helped me and who taught me what a friend really means, and I am now ready to become such a friend to any weary pilgrim who is a stranger to all the good contained in the Bible and Mrs. Eddy's book. Only my future life can show how grateful I am to her for her many years of sacrifice to help me, as she has done, by pointing the way.

My prayer is that every one who has ever known me in the past may see this and be benefited by it, for what Christian Science has done for me it will do for all who want the true happiness.

LILLIAN E. MOWRY, Greenwich, N. Y.

[Translated from the German.]

I feel that the time has come for me to give thanks for the many blessings received by us in Christian Science. For twelve years I suffered with a severe nervous trouble, and for three years was also afflicted with heart disease. I had spasms of the heart several times during the day, and often suffered excruciating pain. The physicians had pronounced my case incurable. We tried all the remedies they prescribed, but the improvement was only for a short while.

About a year and a half ago my mother heard of Christian Science through an acquaintance. We immediately applied to a practitioner in Hannover for help. She took up treatment at once, and with twelve treatments I was healed of these ills of years' standing; and the sense of fear which I had until recently, has completely left me. I believed that God loved us like a father, and yet I also believed that He had inflicted disease upon me. Now I am happier than ever before in my life, and not only myself, but my parents, sisters, and brothers as well, enjoy the best of health. My mother had been afflicted with a severe abdominal complaint for the past twenty years, and twice had to submit to a serious operation, but she has been completely healed of this trouble. In the fall of 1909 she was taken ill suddenly, and had inflammation at the roots of the teeth, and her face was so swollen that she could hardly talk. We immediately telephoned to a practitioner in Hannover, asking for help. With the second treatment the swelling went down, and soon she was completely restored, being able to attend to all the household duties on the second day.

My ten-year-old sister had lung trouble for four years, besides asthma and a throat affection. She was freed from these diseases, and now is a happy and healthy child. My eldest brother, who is serving in the army, suffered with an injured finger in the spring of 1909, and poisoning set in, so that he was thought to be at death's door for several days. His hand was operated upon several times. While in this distressing condition we wrote to a Christian Science practitioner, asking for treatment. The effect was marvelous, so that he was able to get up after a couple of days, and was dismissed well from the infirmary four weeks later. This wonderful healing has confirmed our faith still more, and in future we shall have no physician and use no medicine except the one great Physician.

For these glorious proofs of the truth we cannot be grateful enough to God, and also to our dear Leader, Mrs. Eddy, the Discoverer and Founder of Christian Science. May these lines be a help to some fellow-being who may be struggling with a sense of disease and sorrow.

MARIE OBERKRAEMER, Harlinghausen b. Pr. Oldendorf, Westf., Germany.

I have often thought of God's wonderful love to His children, and now I want to tell some of the blessings that have come to me through the understanding gained by studying the Bible in connection with "Science and Health with Key to the Scriptures" by Mrs. Eddy. It has been truly a key to me, as I have had my children restored to health from what seemed severe illness, and I have been given strength to bear what seemed grievous trials. I thank God for the spiritual uplift which I feel in my every-day life, and I pray that my light may "so shine before men" that they may see my good works and glorify God. I find in the every-day life the straight and narrow path that leads me ever upward and on as I "press toward the mark, for the prize of the high calling of God in Christ Jesus." It will take continued Christlike living on my part, fittingly to express my love to God and my thanks to Mrs. Eddy for showing me how to live so that I may enjoy the blessings set forth in the Bible.

MRS. DELLA WILMOT, White Earth, N. Dak.

Nothing could measure my gratitude to God for the many benefits I have received through Christian Science. Since I first became interested in Science, over seven years ago, it has helped me in innumerable ways and healed me of many ills. Among these were sleeplessness, acute stomach and bowel disorders, throat trouble, and numerous other ailments. In my profession, that of the stage, Christian Science is of the greatest help, and over and over again it has enabled me to go on and do my work when in former years I should have been obliged to "lay off." It has also taught me to love people and to see only the best things in their characters, and when we do this it is surprising how they blossom out and become really lovely. I have seen the most discordant atmosphere changed in this way.

I have surely a great deal to be thankful for; and my prayer is that each day I may gain a little more of this wonderful truth. We certainly do owe many thanks to Mrs. Eddy for her great courage in giving to the world "Science and Health with Key to the Scriptures," which points out and explains the teachings of the Bible so that the people of this age may find in them a strong and never-failing help in their daily life.

FLORENCE MAY SMITH, Detroit, Mich.

Having received various physical healings in Christian Science, I desire to attest my thankfulness to God for having given to our beloved Leader, through inspiration, the knowledge and understanding of the healing power of infinite Mind. Through Christian Science I have been healed of failing eyesight, a bowel trouble with which I was afflicted for twenty years, and recently I have been healed of injuries caused by a fall. These were so numerous and so severe that I was unable to raise myself from where I had fallen, and it was necessary to carry me into the house. A gentleman who kindly came to my assistance, wished to call a physician, but this I declined, and asked that they telephone for a Christian Science practitioner who resided in an adjoining city.

From the time of the accident until the practitioner reached me, I continued to declare the truth for myself. The practitioner came within an hour after she received the message and remained with me all night. With twenty or

Digitized by Google

thirty minutes' treatment I could move the injured arm from the hand to the elbow, whereas up to that time I had been unable to move it at all. A surgeon was called next morning (the accident having happened late in the evening), but on account of the condition of the shoulder and arm he could make only a partial examination. He was not called on to make a more thorough one after the swelling was reduced, as the practitioner's understanding of the power of divine Mind was sufficient to meet the case. She came to me for the three succeeding nights, and then had me taken to her home, where I was most tenderly cared for during the following two weeks. I was then able to return to my own home and resume my household duties. Two months after the accident the surgeon made a second examination, and found the face and nose with no signs of having been injured, the knee-cap in place, the collar-bone healed, and the arm in almost a normal condition. I received strictly Christian Science treatment, no material means of any kind having been used; whereas, had I received medical treatment, I was told that the collar-bone would have been put in a cast, and the arm in splints and bandages.

I am most grateful to Mrs. Eddy for having given to the world in "Science and Health with Key to the Scriptures" a practical understanding of divine Principle, which heals both physical and mental discords; and also for the uplifted thought gained by reading and studying her writings. Their study is bringing to me daily a clearer understanding of God as Love.—JOSEPHINE T. PROSSER, Philadelphia, Pa.

I have attended a Christian Science church ever since I can remember. I was about two years old when my mother became interested in this teaching. That was over eighteen years ago, and from that time to this Truth has been my only physician. When quite small, I was taught to help myself by declaring the truth, but it is only recently that I have really begun to understand in a measure what a Christian Science treatment is. After the age limit in the Sunday School was extended, I went back. I had only about a year to go, but during that year I learned much. I can now see that I formerly had faith, but little understanding, which made me rather uncertain of the result, and now I can really "know the truth," and this frees me.

From the time I was a little child, I suffered from a bowel trouble. My mother tried to help me, but the attacks seemed to become more severe and more frequent as I grew older, until about two years ago, when one attack would come right after another. Each time relief came through Science, but I felt that I could not be doing my own work correctly. One day I felt very badly; I was discouraged, and when I came from school I threw myself on my bed, thinking that I should have to call a practitioner; but the thought kept presenting itself that this was my work. While I lay there I realized the truth about man and his relation to God as never before, and after a few moments relief came. That was over a year ago, and the trouble has never returned. I can surely say that I know what a slow healing is, but I am very glad to be healed at last. The error had been fought for years, and just as I began to feel that I could not fight it much longer, it yielded. This showed me very plainly that it is God who does the work and not we ourselves,—"We are his people, and the sheep of his pasture."

I cannot tell how grateful I am for this healing religion, and for Mrs. Eddy, through whom the truth has reached mankind in this age. How she must have guarded the door of her mind against the thoughts which enslave! I am indeed grateful to God for all His goodness! I long to see the time when the Scriptural command, "Little children, keep yourselves from idols,"—the idols of jealousy, hatred, selfishness, and all that is unlike God,—shall be universally obeyed.—MARGARET BALDWIN, Norwood, Ohio.

Christian Science has brought me many blessings, to some of which I should like to testify, and to all of which I would if space permitted. Beginning with the time when the light of Truth passed through the door of my consciousness, over two years ago, there was work in plenty for it to do—such grimy walls, scratched all over with records of vice, intemperance, and other bad habits, of eighteen years' standing, and where aught less than Truth would have turned away, discouraged at the task before it. Truth, undaunted, took each belief and mastered it completely, banishing it forever out of my consciousness, so that today I gladly proclaim myself a new man. Success in anything now is mine as a heritage, which no unlawful claimant can prevent my holding.

While I was reading Science and Health, I suddenly took an aversion to tobacco. I realized the absurdity of thinking that man, who is the idea of infinite intelligence, should be dependent upon a questionable habit for his satisfaction. Another thing for which I have to be grateful to Mrs. Eddy is the purification of thought, escape from belief in the senses, the destruction of self-will, self-love, self-pity. Self was, in fact, the nucleus of all my troubles. Bartimeus, as Jesus of Nazareth was passing by, even when self or false belief commanded him to remain quiet, cried the louder, until Christ Jesus found him and restored his eyesight; and so did I cry, until I was awakened from my sense stupor. I should also like to tell how the study of Christian Science has improved my shorthand work as a reporter. Failing to read my notes after they had got "cold," I immediately came to the conclusion that the method was wrong. The remedy in this case was to unlearn the former methods and acquire new; so I forthwith acquired a new system, and have for my work commendatory remarks from a prominent lawyer.

As God is infinite Love, so is He likewise infinite in the bestowal of spiritual gifts; and it is folly for us to set a limit on what we can do in working out our daily problems, if Principle is known and declared as unlimited.

LORING RAYMOND FULMER, New York, N. Y.

For a very long time I have been troubled with an ingrowing nail on my left foot. Some years ago the trouble was very serious, the nail having to be cut out, and I suffered greatly. I was under a physician's care for two months or over. This time, with Christian Science treatment, the trouble was overcome in a couple of weeks. I had very little pain and was able to be on my feet, although the conditions to start with were as bad as in the former case. This is very little of the good I have received through Christian Science. Mrs. Eddy has taught us through "Science and Health with Key to the Scriptures" that God is a living reality and that He is an ever-present help in all trouble. Surely she is the greatest benefactor of our age.

M. ETTA FISCHEL, Pittsburg, Pa.

My attention was first called to Christian Science about six years ago, through reading the evidence for the defense in the Los Angeles case. It seemed to me that the people who gave this testimony possessed something of which I stood in need: so a copy of Science and Health was purchased and its study begun. In less than a year I had become fully convinced that this book contained the truth, for by application of what had been learned a severe case of bladder trouble which threatened to force me out of my position as a railway mail clerk, had been so completely healed that there has not been the slightest return of the trouble. Also, my work as postal clerk was of such a nature that I believed it required all the will-power I could muster to carry me through my week on the road, and as a result I returned to my home for the following week's layoff in a state of complete mental and physical collapse. For

Digitized by Google

the first two or three days of this lay-off my suffering was intense. This, too, has become a thing of the past, and now fatigue is quickly overcome on the rare occasions that it manifests itself. During these years I have relied entirely on Christian Science to overcome discord in all the forms in which it has presented itself, and it has never failed to do so quickly and completely.

This testimony is given in the hope that it may help others, and as a means of expressing my gratitude to God, and to our Leader for all the blessings that have come to me through Christian Science.

SAMUEL C. BARNES, Amesbury, Mass.

[Translated from the German.]

For years I had suffered with asthma without getting relief through medical treatment, so when I was taken with an acute attack of illness and my wife suggested Christian Science, I went to see a practitioner, who took up treatment immediately. She explained to me that the belief of disease obtains in mortal mind, that the body is sensationless, that taken by itself it is devoid of feeling, that the cause of disease is mental and must be understood as such. With a few treatments this trouble was removed, and I then told her about the asthma. She said that I should get rid of it all; that I must read the literature diligently, attend the services, yield to God in entire obedience, and recognize no power in evil. I attended the services and meetings regularly, and through the reading of the Lesson-Sermon learned to understand the Bible aright. After I had been under treatment for some time, it became clear to me that I must do my part of the work. I did so, and the asthma which had caused me so much trouble lessened; there has been no return of the attacks, and I now enjoy the best of health.

I cannot express my gratitude in words. Christian Science is my constant companion and leads me in all my paths. In my work, too, it stands a help at my side, and I know that God does not forsake me if I walk in the right path. We need not fear that He will not protect us; I have experienced this. While at work I sustained a severe injury on my face, which caused profuse bleeding. I was unconscious of my surroundings during the first few moments, but as soon as I was able to think I tried to realize that God is omnipresent, and as I began to declare the truth, the bleeding stopped. I washed the wound, and I might say that there was no swelling, neither was there any pain. After the fourth day the wound had completely healed. I thank God, and also our revered Leader for the great truth she has given us.—H. WESCHE, Berlin, Germany.

The sun comes up; and I doubt if e'er
Man's eye beheld a morn so fair.
Yet 'tis not new—the breaking day—
But an old, old thing, in a new sweet way.

The orchard blooms; and never the skies
A season saw in fairer guise.
Yet leaf and flower and trembling spray
Are but old, old things in a new sweet way.

The warbler sings; and I trow the air
Ne'er quivered to a note so rare.
Yet every merry songster's lay
Is an old, old thing, in a new sweet way.

Why dive for tropes? For the pearl you get
Is only burnished and reset.
What is your art except to say
Just the old, old things in a new sweet way?

THOMAS J. PARTRIDGE.

FROM OUR EXCHANGES.

[*Christian Work and Evangelist.*]

Jesus was very explicit in saying why he had come into the world. He said: "I am come that they might have life." The church that is giving life to the world is the true church. It makes no difference whatever whether the church has the same form of government the apostolic church had or not. That government might be good for today or it might not. But the church which is giving life, life of God to men, fulness of life to the weak and empty and poor, making the life of Jesus Christ real in the world, is the true church, regardless of its history or its claims. It is the church Christ founded. Jesus also said, "I am the good shepherd." He used this term frequently, and he mourned because the world had so few shepherds. His commission to his preachers was a commission to shepherd the lost flock of Israel and the Gentiles. A shepherd is one who cares in tender watchfulness for all his sheep. He said, too, that he came into the world to save men from their sins. He appointed his apostles to become "fishers of men," to rescue men from the depths of life. He appointed his church to save the world from its sins, and the church that saves men from their sins is the true church of Jesus Christ. Once more, Jesus was very explicit in saying that he had come to preach the words that were life and the truth that set men free. The baptism of the Holy Spirit, so that it speaks Christ's gospel in a tongue of consuming fire or divine persuasiveness, is sure sign it is just the church Christ appointed and abides with today.

[Prof. Kirsopp Lake, University of Leyden, in *Guardian.*]

The time has come upon us when there is a general simplification of thought about theology, when men refuse to take on authority statements which they do not feel to express their own experience. They are saying to each other that the words of eternal life are few and simple, and they will not listen to those who would bring them back to more complicated statements. There are not wanting those who think that this means a lowering of religious life, but it is not so, and theology is the only science in which men regard a simplification in the formula of expression as a loss rather than as a gain. It is not true that it is a lowering of the standard of religion, any more than it is true that the darkness is greater because the stars begin to pale before the rising sun. Much of our theology has been to us in the past as the candle-light is to the student sitting by his window during the short night of a summer's day. It has been a true light, and has enabled us to read in the book of religion; as the day breaks its light seems to be growing dim, but the reason is not to be found in the candle, nor is it desirable to increase its apparent brightness by drawing the curtains. If we would understand, we must look to the east in which the sun is beginning to rise, and the true act of faith is to recognize that the light which is dawning will not make it impossible for us to see what we are reading, but rather promises to throw a fresher and brighter light on many pages which we have hitherto been unable to read.

[*Christian World.*]

The organizing of society, so as to secure the material conditions of a wholesome human life, is a pressing necessity, the work that lies before this and coming generations. But no possible combination of this kind: no feeding, housing, coat-and-waistcoating of your man, will of itself make him human. There is in him a something not to be reached that way—a soul, to wit, that lives not by bread alone. It is interesting, supremely consoling to some of us, to note how, after long materialistic obscuration, the sense of this is coming back again to the thinkers of France and Ger-

Digitized by Google

many. From the best minds there is breaking a new cry for the spiritual life as the only real life for man. They are coming back to the heart's verdict. Continental philosophy is saying over again what Victor Hugo said a generation ago: "The heart cannot err. The flesh is a dream which passes. Whoever loves, knows and feels that man's resting-place is beyond earth. To love is to live beyond life. The loving being demands the immortal being."

[*Christian Register.*]

Jesus said, "The kingdom of God is within you." He magnified and ennobled the soul beyond all the idealistic conceptions of those who had gone before him, and it is the loss of his view of its grandeur and worth that makes an age grossly materialistic. The great defect of our time is the lack of authoritative leadership, of commanding beauty and harmony of soul to draw together and concentrate the scattered elements of what may be called a redeemed society, a society of the best, not in the worldly sense, which refers to money and position, but of the best lovers, truth speakers, inspirers of their kind. Without the united influence of the noblest spirits of the time, the age becomes arid, trivial, poverty-stricken on the side of the higher nature and exalted hopes of man. Our society will be barren, material, and gross, void of the spiritual idealism that alone exalts any community, without these elements.

[Bishop Brent at World Missionary Conference, Edinburgh, Scot.]

How almost absurd it is to think of trying to Christianize foreign lands and bear to them the brotherhood of man, without a unified church at home! The time has come when our church should take the position of corporate leadership in church unity. We should see to it that we treat others as Christians in deed and in truth. We should count the defaming of the name of another church as one of the greatest sins that could stain our lips. . . . Let us lay aside this pale respectability which so characterizes our church, and run the perils that will make our church more virile. Rather than continue in the lines of conventional Christianity, I would run the risk of losing our distinctive character in trying to gain the unity which Jesus Christ meant his church to have.

[*Continent.*]

Do not go hunting here and there for work, for things to do, at which to point and say, "There is something that is being accomplished." Let life rather be devoted to making self an illustration of the life and heart of God. The sunshine makes no noise, but it ripens the corn. Is not that activity? The moon is not trumpet-heralded at her new appearing in the west—a little silver crescent close to the horizon—but is she not hailed with joy by every eye that sees her? Life is what the world wants, and life must be active, and the activity which will make the church the mightiest force in the earth is that which, like that of the sun, making no noise, ripens the corn.

[*British Congregationalist.*]

When, as we think, the heart and mind lie passive, evenly balanced, with no particular dip toward the side either of right or wrong, the faintest touch upon either scale (a touch perhaps unnoticed by ourselves) will leave its permanent effect. Safety, then, lies in this alone—in throwing positively and ceaselessly upon the side of right all the weight we can. Even thought must be controlled, since thought, no less than action, must, in the prophet's metaphor, bear its inevitable fruit.

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth.*]

Properly speaking, there is no such thing as punishment; there is merely the operation of cause and effect. God never takes vengeance upon His children; their sin finds them out, and in so doing warns them away from that particular wrong road.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

NEW PAMPHLETS.

Now on sale are three new pamphlets: "Seeking and Finding," "Prayer and Healing," and "The Divine Nature." Each pamphlet contains five to eight articles that have previously appeared in the *Journal*, *Sentinel*, or *Monitor*; and they are particularly suitable for handing and sending to inquirers or persons who are becoming interested in Christian Science.

Hereafter, the price of all pamphlets (except "What our Leader Says" and "Christian Science and Legislation") will be reduced to 5 cents a copy; 55 cents a dozen; $2.00 for fifty, and $3.50 for one hundred. Hereafter, also, the republication in the English language of single articles as "tracts" or "reprints" will be discontinued. It is believed that their place is better taken by the daily article on Christian Science in the *Monitor* and by these new pamphlets and others that may be issued.

NEW POST CARDS OF THE MOTHER CHURCH.

Post card photogravure, in sepia tint; an exact reproduction of the large photogravure of The Mother Church Buildings and Publishing House with parkway in foreground.

Single copy	$ .05
Twenty-five copies	1.15
One hundred copies	4.25

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90, six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage, at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news dealer, 12 cents a week payable to the news dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged for 1910.

SUBSCRIPTION PLICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE: ITS RELIGIOUS PHILOSOPHY. By HON. CLARENCE A. BUSKIRK.

CHRISTIAN SCIENCE: A RELIGION OF DOING. By JUDGE WILLIAM G. EWING.

BIBLES. Clarendon Brevier (01483 x), heavy faced, very distinct type, Turkey morocco, size 6 1-2 x 4 3-8 inches, corresponding in size and binding to pocket edition of Science and Health. Price, $3.75.

Morocco cases to hold pocket edition of Science and Health, *Quarterly*, and above Bible, may be had at $1.25.

Text Bible. (01561 x), pica square type, Alaska seal, size, 7 1-2 x 6 1-4 inches, 1 1-2 inches thick. Specially adapted for use of Second Readers. Price, $7.25

"PERSONAL CONTAGION" AND "WHAT OUR LEADER SAYS." By Mary Baker Eddy. Printed in French old style type, silk sewed. Single copy, 10 cents; 12 copies, $1; 100 copies, $7.50.

CHRISTIAN SCIENCE AND LEGISLATION. Consisting of articles by EDWARD A. KIMBALL, JUDGE CLIFFORD P. SMITH, and JUDGE SEPTIMUS J. HANNA, together with testimonies of healing, editorial comments, etc. 128 pages. Single copy, 10 cents; 12 copies, ONE ADDRESS, $1; 25 copies, $1.85; 50 copies, $3.50.

PICTURE OF THE FIRST CHURCH OF CHRIST, SCIENTIST, in Boston, Mass., and the Publishing House of The Christian Science Publishing Society. Artist's proof with remarque on Japanese vellum. Size, 18 x 24 Each, $5; on India paper without remarque, each $3. Ten per cent discount to Reading Rooms. Photogravure Post Cards, reproduction of the large picture of the Church and the Publishing House, each 5 cents; twenty-five, $1.15; one hundred, $4.25.

QUARTERLY COVERS, in black morocco. Pocket size, 4 1-2 x 6 1-2, $1.15 each or $11 a dozen. With change pocket, $1.40 each or $14 a dozen.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Illustrated; 107 pages. Single copy, $1.50; one dozen, $12; half dozen, $7.

THE CHRISTIAN SCIENCE HYMNAL. Revised and enlarged. Cloth, single copy, $1.15; one dozen, $9; half dozen, $5. Half morocco, single copy, $1.40; one dozen, $12; half dozen, $6.50. Full morocco, single copy, $2.50 Levant, single copy, $3.50. Pocket edition, size 4 5-8 x 6 5-8. Full morocco. Single copy, $3; one dozen $30.

MUSIC. Poems written by MARY BAKER EDDY and used by special permission, have been set to music as follows:—

"THE MOTHER'S EVENING PRAYER." By William Lyman Johnson. Arrangement for high and low voice in same copy. Single copy, 75 cents; one dozen, $7.

"CHRIST MY REFUGE." By William Lyman Johnson. Arrangement for high and low voice in same copy. Single copy, 75 cents; one dozen, $7.

COMMUNION HYMN.—"SAW YE MY SAVIOUR?" By William Lyman Johnson. Published in two keys for high and low voice. Single copy, 50 cents; one dozen, $5.

"BLEST CHRISTMAS MORN." By Frederic W. Root. Published in two keys, for high and low voice. Single copy, 27 cents; one dozen, $2.75.

"O'ER WAITING HEARTSTRINGS OF THE MIND." By Frederic W. Root. Published in two keys for high and low voice. Single copy, 27 cents; one dozen, $2.75.

Please state, when ordering any of the last three numbers, whether high or low key is desired.

Our Catalogue for 1910, containing description and prices of above named literature and a selected list of Bibles, will be mailed free on application.

Remittances should always accompany orders, and be made by check, money order, or exchange on Boston or New York. Currency or coin should not be sent by mail unless registered. Please send no money or business letters to the Editor or Editorial Department.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only Text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price (cloth), single copy $3.18
Two to twelve books (cloth only) to one address, each 3.00
Twelve or more books to one address, each 2.75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy 4.00
Twelve or more to one address, each 3.75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy . . . 5.00
Twelve or more to one address, each 4.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy 6.00
Twelve or more to one address, each 5.75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding. The above prices are all prepaid.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), single copy $2.25
Twelve or more books to one address, each 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, single copy 4.00
Twelve or more to one address, each 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy 5.00
Twelve or more to one address, each 4.75

The above prices are all prepaid. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10x7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy . . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.

Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 35 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 40 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 91 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.50; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 20 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 20 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00; six months, $1.20.

Ten copies to one address, each, one year, $1.90; six months, $1.15.

Twenty-five copies to one address, each, one year, $1.80; six months, $1.10.

Fifty copies to one address, each, one year, $1.50; six months, 90 cents.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. X indicates the year 1910; XI, 1911. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

TERMS OF SALE

Single copy, postpaid, five cents, in the United States, Canada, Mexico, and Cuba; twenty-five copies, one address, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, single copy, six cents; twenty-five copies to one address, $1.25; fifty copies, $2.25; one hundred copies, $4.00.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The Illinois supreme court, in the case of the state against the Illinois Central railroad in the endeavor to recover back taxes, holds that the charter agreement of 1851, under which the railroad was to pay the state five per cent of its gross earnings, is a contract, and that the five per cent is not a tax in the legal sense. The court holds that all interstate commerce business of the road, as well as income from eating-houses, express business of charter lines as well as the trunk lines, form the principal on which the five per cent shall be paid to the state. In the matter of back taxes the court holds against the state, which sought to recover its percentage since 1877. On this point the court says that governors previous to Governor Deneen accepted the accounts of the railroads and the payments made by the road without question, and that therefore accounts prior to 1905 are outlawed. Under this ruling the fifteen million dollars which the state sought from the Illinois Central dwindles, roughly estimated, to about one million dollars. From 1905 the court lays down the rule for accounting by which the state, it is estimated, will receive two million dollars revenue annually from the road, instead of one million dollars or less, as at present.

A territory larger than the entire state of Delaware, or the island of Porto Rico, lying in the state of Kentucky, is the prize at stake in the supreme court of the United States. Owing to the carelessness with which Virginia is said to have issued grants just after the Revolutionary War to the unsurveyed and little-known land in what is now eastern Kentucky, the greatest confusion has resulted as to the true owners of land in the twenty eastern counties of that commonwealth. Kentucky, it is said, did little better during the first years of her history. In all about two million five hundred thousand acres of land are reputed to lie under the doubtful title.

The gates which are being made in Pittsburg for the Panama Canal will be the largest in the world. Any one of the ninety-two of them will be about as high as a six-story building, as wide (sixty-five feet) as many city streets, and seven feet thick. The structural steel that will go to make them will weigh sixty thousand tons. The cost will be five and a half million dollars. The thousands of individual pieces will be shipped by steamer, and with them will go over four hundred skilled structural steel builders. The first work will probably begin early in 1911. It will take three years to complete the job.

Contracts have been let by the Kaw Valley drainage board for beginning the construction of works along the river above Kansas City to furnish protection against the disastrous floods that have occurred there in recent years. Before the work is completed it will have cost anywhere between seven and ten million dollars. In the last seven years floods have cost Kansas City, Kan., and Kansas City, Mo., at the lowest estimate, thirty-five million dollars, the great flood of 1903 having accounted, according to the estimate of a board of army engineers, for approximately twenty-five million dollars' loss.

Mrs. Edward H. Harriman has given to the Palisades park commission a deed of ten thousand acres of land in Rockland county, N. Y., for state park purposes, and the state has transferred to the commission the abandoned Bear Mountain prison site, in accordance with legislation passed this year. Mrs. Harriman, in addition, is to give one million dollars to be spent in improving the park. The people will vote at the coming election on a proposition to bond the state for two million five hundred thousand dollars to be spent in extending the park from New York city to Newburg.

Contractors' bids on the three divisions of the Triborough subway for New York city, which were advertised last summer by the public service commission, have been made public. The total of the lowest bids on the twenty-one sections embraced in the three divisions amounted to $85,437,570, which is some three million dollars in excess of the estimates of the commission's engineers as to what the construction ought to cost.

Nine hundred thousand acres of land have been brought under cultivation by the irrigation projects of the United States, and the success of the work has been proved. The last Congress appropriated twenty million dollars for further extension of the work.

The present value of all the farms in the United States is approximately fifty billion dollars, as compared with a little more than twenty billion in 1900, although the total acreage has declined.

President Taft says that he desires that the tariff board shall be regarded as above politics, and that its membership shall have the same integrity as the supreme court.

International.

A Chinese imperial edict authorizes the proposed loan of fifty million dollars from the American group of financiers. The bond issue to cover the loan will be taken by the syndicate at ninety-five. The bonds will mature at a period of from forty to forty-five years from issuance. They will bear five per cent interest. Of the loan five million and possibly ten million dollars, will be devoted to industrial improvements in Manchuria. A large portion will be used in the extension of the planned currency reform.

A contract has been signed by the minister of public works and a syndicate of Paris bankers, giving the latter a lease of the federal railroads in the state of Bahia, Brazil, and providing for the construction of extensions of the lines. The Frenchmen obtained control of eighteen hundred and seventy-five miles of road. The cost of the extensions is estimated at thirty-five million dollars, payable in federal bonds.

The fourth session of the third Russian Douma opened last week. The first important business of the winter's program will be the consideration of a bill introducing universal primary education. Its passage is assured. The political bills relating to freedom of speech and of the press, personal inviolability, and martial law, will probably not be reached this session.

Berlin newspapers state that the forthcoming German naval estimates will exceed the previous ones by five million dollars, making a record total of more than one hundred and fifteen million dollars.

Sweden's government-owned telegraph and telephone systems netted the country one hundred and ninety-two thousand dollars during 1909.

Industrial and Commercial.

Should experiments about to be made in harnessing the tides of the Kennebec river near Bath, Me., so as to take advantage of the rise and fall of the waters, prove successful, enough power may be generated eventually to operate industrial plants in every city in Maine. According to Thomas A. MacDonald of Clinton, N. J., who is now looking for a suitable location for erecting an experimental station, there is enough tide power along the Maine coast to turn every wheel of every industrial plant of whatever nature in all the New England states. His system comprises a high and a low water pond, with a dam between in which turbine wheels are installed. The filling of one pond by the incoming tide and the emptying of its contents into the other during the receding tide turns the turbines, keeping them in constant motion.

Construction of the new subway system for New York city will have an important bearing upon the steel industry. Plans call for fourteen miles of four-track construction, seventeen miles of three-track construction, and thirteen miles of two-track. On a basis of one hundred-pound rails this trackage will require in the neighborhood of twenty-five thousand tons of rails, with a valuation of approximately seven hundred thousand dollars. Besides this must be added trackage of sidings. Structural steel requirements will add one hundred and twenty-five thousand tons, with a valuation of about three million seven hundred and fifty thousand dollars. Sheets for the construction of cars will add twenty-five thousand tons, with a value of four hundred thousand dollars.

Luxury rather than speed appears to be the distinguishing characteristic of the new Atlantic liner now being constructed for the Hamburg-American line. This vessel will be of fifty thousand tons, which is about eight thousand tons larger than the biggest White Star liner. Her dimensions will be nine hundred and forty feet long with ninety-four feet beam, and she will be driven by turbine engines, with a minimum speed of twenty-two knots. She will have large deck space, numerous dining-rooms, cafés, and gymnasia; there will also be the exact replica of a great London restaurant.

The White Star line's triple-screw steamer Olympic was launched successfully Oct. 20. This vessel exceeds by nearly one hundred feet in length, and thirteen thousand tons in displacement any other ship afloat. Her principal dimensions are: Length over all, eight hundred and eighty-two and a half feet; breadth, ninety-nine and a half feet; height from top of funnel to bottom of keel, one hundred and seventy-five feet; number of steel decks, eleven.

The largest contract let this year by a railroad company for electrifying any portion of its tracks is that awarded by the New York, New Haven & Hartford railroad to the Westinghouse Electric & Manufacturing Company for equipping the tunnel through the Hoosac mountains in Massachusetts. It is said that the contract price is more than one million dollars.

Prince Edward Island has this season the largest hay crop on record, viz., five hundred and fifty thousand tons. One-half the crop is for export. The yield of oats will be over seven million bushels. About four million bushels will be exported. The potato crop is estimated at six million bushels.

The wood of the western Australia yate tree is believed to be the strongest known, tests of it showing an average tensile strength equal to that of cast iron, while some specimens have equaled that of wrought iron.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THANKSGIVING DAY PROCLAMATION OF PRESIDENT TAFT.

THE annual Thanksgiving Day proclamation was issued by President Taft on Sunday, Nov. 6. It says:—

"This year of 1910 is drawing to a close. The records of population and harvests, which are the index of progress, show vigorous national growth and the health and prosperous well-being of our communities throughout this land and in our possessions beyond the sea. These blessings have not descended upon us in restricted measure, but overflow and abound. They are the blessings and bounty of God.

"We continue to be at peace with the rest of the world. In all essential matters our relations with other peoples are harmonious, with an ever-growing reality of friendliness and depth of recognition of mutual dependence. It is especially to be noted that during the past year great progress has been achieved in the cause of arbitration and the peaceful settlement of international disputes.

"Now, therefore, I, William Howard Taft, President of the United States of America, in accordance with the wise custom of the civil magistrates since the first settlements in this land, and with the rule established from the foundation of this Government, do appoint Thursday, Nov. 24, 1910, as a day of national thanksgiving and prayer, enjoining the people upon that day to meet in their churches for the praise of Almighty God and to return heartfelt thanks to Him for all His goodness and loving-kindness.

"In witness whereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

"Done at the city of Washington, this fifth day of November, in the year of our Lord, one thousand nine hundred and ten, and of the independence of the United States the one hundred and thirty-fifth.

"WILLIAM H. TAFT.

"By the President,

"Alvey A. Adee, Acting Secretary of State."

PRECISION OF LANGUAGE AND CANT.

HON. CLARENCE A. BUSKIRK.

THE Christian Scientist needs quite frequently to remember that the English language has been too largely fashioned under the potter's wheel of erroneous philosophical and theological notions, else he may find himself using many words, terms, and phrases which represent erroneous ways and habits of thinking. When thus confronted, what shall he do? Shall he try to reject erroneous terminology altogether, or shall he compromise somewhat? In the writer's opinion, occasional compromises are wiser and better than attempts to preserve at all times a strictly scientific precision of language.

In order to illustrate the point under consideration, let us take the words, "patient" and "patients." Let us suppose that a Christian Science practitioner is asked, "Will you take me as a patient?" Shall he answer, No, that he never takes patients? Or, if he is willing to take the case, shall he compromise somewhat, for the time being at least, and so answer, Yes? Is it not plain that his wiser and better answer is, Yes? Mrs. Eddy is a purist in her language whenever practicable; yet we find that she has employed the words, "patient" and "patients" frequently in her writings. There were no practical substitutes for her to use. She has explained carefully in the Christian Science text-book that she has found herself forced to use objectionable words and terms, at times, because there were no better ones to be found. May we not opine that in such instances she deemed it unwise to "distinguish and divide a hair 'twixt north and northwest side"?

The most of us dislike cant, and heartily endorse the words of Carlyle: "Clear your mind of cant! Have no trade with cant." Yet we must not forget that it is often the little foxes which are caught spoiling the vines. In his choice of words the Christian Scientist needs to use his most painstaking wisdom. He must carefully steer his course between Scylla and Charybdis—between carelessness and cant, *semper fidelis*. According to a supposed code of laws which humanity has been taught and accustomed to accept as true, a patient is, "one who suffers from a disease or indisposition; one who is under medical treatment; a sick person." According to this false code all human beings are condemned to endure sickness, erroneous habits, vicious tendencies, etc., because of some falsely asserted law; or, theologically expressed, because God has put His afflicting hand upon them, and therefore it is their duty to be as "patient" as possible until the time shall arrive, if ever, for their deliverance. Is not this belief Christianly unscientific? Is it not crassly illogical, especially when God is postulated? Is it not an obstacle to instantaneous healing? Can instantaneous healing be attained so long as such a line of thinking has not been overcome?

It follows that the careful Christian Scientist must not permit his own understanding to become clouded by his employment of such terms as "patient" and "patients," "sufferers," etc., and that it is likewise his duty to make a clear explanation to the person who seeks his assistance when he finds such person is prepared for the explanation. It will not do to surrender to the error that either a long period or a short period of time is to be expected to elapse before a person can be "free."—a period during which "patience" must be cultivated.

The writer is seeking to point out one of the subtle errors which may beset us; and incidentally to illustrate one of the reasons why we should work for instantaneous healing and the realization of man's spiritual wholeness.

OBSERVATION.

T. M. WINCH.

IN reading a Lesson-Sermon recently, I was struck with the statement of Jesus as to how the kingdom of heaven is attained. When the Pharisees demanded of Jesus when the kingdom of God should come, he answered, "The king-

Copyright, 1910, by Mary Baker Eddy.

Digitized by Google

dom of God cometh not with observation." Heaven, as we understand it in Christian Science, means harmony, and the text quoted shows that we can never realize harmony by any material looking for it, or, as translated, by "observation." The Greek word *paraklecsis* conveys a suggestion of stealth, and it is with this meaning that the word is used in Dr. Weymouth's translation of this passage: "The kingdom of God does not so come that you can stealthily watch for it." The same word is employed in describing the watching of the Jews at Damascus to catch Paul as he issued from the city.

The term "observation" in the ordinary acceptation implies mere looking on, watching, rather than doing or performing. Observation like faith (in its lower sense) is not enough in itself, because it implies passivity on our part instead of activity. The disciples had just been asking the Master to increase their faith (Luke xvii.), and Jesus very pertinently replied that faith, or understanding, as we interpret it in Christian Science, is not gained by mere looking on, nor by the efforts of others. It is the constant application to and reliance on Principle by each one individually that leads to heaven, harmony. Nor does observation necessarily infer desire to do likewise. One may draw conclusions from observation in the material sense, but it is of course impossible to observe spiritual things materially. If we continue to observe our brother as in bondage to sin, sickness, and death, we shall never realize the presence of the kingdom of heaven for him spiritually; the very fact of acknowledging our material observation as correct, or allowing it to be so thought of, must obscure for us the real presence of actual harmony.

To illustrate this question in a practical way, let us suppose that one is dealing with a case of physical suffering in Christian Science. To observe or to watch stealthily the patient to see if he is demonstrating harmony, or if Truth is doing its work, is not conducive to scientific healing. This attitude suggests fear and doubt, qualities that in themselves tend to induce failure, for are we not thus looking materially? This is not coming "boldly unto the throne of grace," or silencing the material senses, for it contradicts the Soul-sense of realizing the fact that the kingdom of heaven is within, is indeed here and now. I herewith append a case which came under my own observation and which goes to prove that Christian Science really does heal suffering and quickly, too.

I was quite a young student in Science when one evening I was told that one of the gardeners had been badly burned while turning on the acetylene gas. It seems that he put a naked light to an open pipe which should have been closed. He had the presence of mind to turn the tap off, but his hand and face and arm were very badly burned in the process. I should say that he had heard of Christian Science, but, like myself a few weeks before, he was still in the scoffing stage. I went to his house and found him apparently in very great suffering. I longed to offer Christian Science to him, but did not feel very confident of being of much assistance. I said, however, that I would go home and try to help him. It was with rather mixed feelings that I started to declare the truth, and as I did not get along very well, I felt impelled to go down to where the "fear and trembling" was,—where, as I understand it, salvation is to be worked out.

His wife and children left the room, and with Mrs. Eddy's book, "Science and Health with Key to the Scriptures," I tried to realize for the poor fellow that the kingdom of heaven is ever present. That my efforts were successful was very shortly proved, when after some fifteen minutes he told me that all the pain had gone except a little irritation in his arm. On returning an hour afterward, I found him quite restored, having had a hearty supper, and he was talking with his wife, both supremely happy. It was impossible to tell that he had been burned, save that the eyebrows had been burned away, and there was a slight mark on his nose. Otherwise his skin seemed like that of a baby.

Now, if we apply this demonstration of Love's power and presence to the subject mentioned at the beginning of this article, it is evident that by stealthily watching for material effects I should have defeated what I was trying to do, viz., to realize the actual reign of harmony on earth. On another occasion I was privileged to be able in a few minutes to restore to sobriety a man who was badly intoxicated. I should say, perhaps, that I am actively engaged in business, and this goes to prove that scientific healing is open to all and is not confined to a few practitioners. Demonstrations such as these I have related tend to open one's eyes to the immense possibilities in the near future of Christian Science work, and its extension over the whole world, till at last the kingdom of heaven shall indeed reign "from shore to shore."

IMPERSONAL WARFARE.

VIOLET KER SEYMER.

STUDENTS of Christian Science sometimes hamper their earnest efforts to rise above evil by condemning themselves, rather than condemning the various forms of evil which they have not yet outgrown. Self-condemnation is one of the greatest barriers to progress, and it is the fruit of regarding evil first as real, and second as personal. Such students wistfully watch the progress of others and deplore their own backwardness. Beliefs of discouragement, tinged with envy, presently set in, and the student sinks into the slough of despond, a prey to morbid regrets, little realizing that God's gladness is all about him, and that he could rise rapidly into practical reformation if only he would take a more impersonal view of the situation.

Belief in evil being the only evil, this mistaken belief, this seemingly powerful delusion, needs to be combated as a universal rather than as a personal tempter. One should as conscientiously resist the tendency to look upon evil as personal as one would avoid regarding good as personal. All God's children are by divine right joint holders in that which is good and true; humanity should therefore regard the belief in evil as its common enemy and fight it with the all-sufficient weapons of Truth and Love. It is right to eradicate one's own sense of evil in all its forms, but to lapse into self-condemnation results in needlessly handicapping the warrior.

Apart from Christian Science there is failure to discriminate between cause and effect, where evil is concerned; materialistic systems frequently condemn sinners and invalids, thereby condemning the consequences or effects of the preceding false belief. In Christian Science practice, however, the case is reversed: the false beliefs are condemned as untrue and unreal, and the victims are set free. Not until evil is rejected in theory, will mortals cease to be its victims in practice. All that is of God is forever good, true, and universal, while all that seems to be discordant is forever false and unknowable. To ruminate over evil is worse than useless, and only serves to prolong the delusion from which humanity is at least learning to awaken.

Evil, "a liar, and the father of it," is henceforward to be looked upon as nothing but an array of false beliefs, quite powerless to deceive those whom Truth has enlightened to the point of demonstration. Lead the erstwhile believer in evil to understand good, humbly but perseveringly to identify his true selfhood with the good, to disown evil suggestions, whether of discouragement, self-righteousness, or sensuality, and he will steadily rise into "the secret place of the most High," in other words, into the spiritual consciousness whither delusions and temptations cannot follow him.

Jesus taught mankind to begin their prayer with "Our Father," thereby pleading man's sinless origin, and at the outset giving the key-note of all harmony. In proportion

Digitized by Google

as the unsullied perfection of God, man, and the universe unfolds to each one, the student will eagerly rejoice in the discovery of his real being and break into song, for thought grows like what it looks upon, by virtue of reflection. In the Christian Science text-book we read that the Way-shower's prayers were "deep and conscientious protests of Truth,—of man's likeness to God and of man's unity with Truth and Love" (Science and Health, p. 12).

This prayer of spiritual aspiration alone is truly loyal and availing. It is the comforting, regenerating prayer that leads to heaven along the pathway of genuine and joyful progress; it gives buoyancy to the step and brightness to the outlook. Best of all, it beckons the weary and heavy laden into the pathway of light, proving to them that, as said the beloved disciple in epitomizing the teachings of his Master, "God is light, and in him is no darkness at all." Let us not fail to encourage ourselves as we would encourage others.

DESTROYING EVIL.

WALTER SHAW.

THE healing of sickness is but one feature of the regenerative work of Christian Science. It is perhaps the easiest to grasp, because of mankind's willingness to receive relief from this phase of evil. As the student progresses, he is confronted with deeper problems, for Christian Science means (ultimately) the utter destruction of all evil, and this begins when we faintly perceive the impersonal nature of evil. As we get firmer hold upon this, we begin to see that our chief work lies in clearing our own consciousness. The presentations of evil are so numerous that we are sometimes appalled and possibly inclined to abandon the struggle, but we learn later that every difficulty has to be faced, not run away from, and that there can be no evasion of the absolute demands of this great and vital truth.

On page 249 of Science and Health we read: "Either there is no omnipotence, or omnipotence is the only power." Merely to assent to this is one thing, but constantly to strive to act upon it demands persistent consecration to the cause of Truth. It is always helpful to turn to the Gospels and see how our great Master, both by precept and example, emphasized this fundamental fact, viz., the omnipotence of good. One form or phase of evil was no more real to Jesus than another. The poor demoniac living among the tombs, whom no man could tame, disturbed the Master's thought no more than the blind, sick, and halt by the wayside. While to ourselves an individual in a frenzy of passion, the callous selfishness of a fellow-traveler bent upon annoying his companions, the vulgar rudeness of those considered inferior in culture, or the pressing demands of a financial problem,—all these things, and many others, claim to disturb our grasp of truth by the seeming reality of the evil presented. Only when we are alert and able to recognize every untoward condition that arises as merely another temptation to think evil real, can we realize somewhat of St. Paul's meaning when he wrote, "None of these things move me."

We are taught in Christian Science that the way to conquer error is to deny it reality, and the "sin that doth so easily beset" most of us is the belief that evil in some of its presentations has reality and power. The greatest blow evil has ever had is from Mrs. Eddy's insistence upon its utter unreality and impersonality. Our success depends greatly upon our effort to grasp this fact, and daily apply it in demonstration. The worries of mortal life will gradually disappear, if we but faithfully cling to the truth of being. Not ease in matter, but a clearer knowledge of Christ, Truth, must be our aim, and when this is really our desire, whatever nature our obstacles may assume we shall ultimately rise above them, for the battle is not ours, but God's, and "if God be for us, who can be against us?"

Jesus said, "Resist not evil," and St. Paul adds, "but overcome evil with good." It is our resistance of evil as though it was something, which often antagonizes and provokes to greater mischief; whereas, overcoming is not merely ignoring the claim of evil, but holding so persistently to the truth of being that evil has no power to annoy us. The positive assurance of evil's unreality disarms it, and the evidence of its powerlessness is then demonstrated. We cannot do this while we see evil as a person, or attach it in our thought to any individual through whom it strives to approach us. The text, "Resist the devil, and he will flee from you," does not really involve a contradiction of the other command, although by a casual glance it may seem to do so.

Jesus described the devil as a lie, and we resist a lie by knowing the truth about the case; there is no other way. Our Leader has indeed illuminated the Scripture when she says, "Evil is a quality, not an individual" (No and Yes, p. 23). All through her writings Mrs. Eddy has carefully separated evil from personality, and thus she has forever set at rest the old worn problem as to the origin of evil, for we now find it never had an origin, not being included in the one perfect creation, but was, is, and ever will be, just what Jesus said,—"a liar, and the father of it."

CHRISTIAN SCIENCE FROM A JEWISH STANDPOINT.

JEANNETTE S. GROSSMAN.

Do people realize what it means to see so many Jewish people coming to the Christian Science churches? The numbers are increasing daily, and Jews are to be found everywhere among the practitioners and earnest students. To one who understands the history of these people and their traditions, it is the strongest proof of the efficacy of Christian Science. To appreciate this great change in thought, we must go back through the centuries and admire them for clinging so tenaciously to their faith, their one God, in the face of all persecution. We read of the dreadful crimes committed against the Jews in the name of Christianity, and how they worshiped their God in secret and died rather than acknowledge Christ. Even today in some foreign countries, the Jews are being persecuted in the name of Christ. An example of this is given in one of last year's plays, "The Melting-pot," which has been presented in several cities.

For years societies have been formed for converting the Jews, especially in the ghettos of Chicago and New York; but it is generally admitted that the converts have been very few. It is also said that those same converted Jews did not make good Christians. Then why is it that so many of them have come and are still coming into Christian Science, and are better men and women because of it? Is it not because God has given a divine message to this age, even as in the days of the prophets,—the message which has come to us through Christian Science? In "Science and Health with Key to the Scriptures" Mrs. Eddy explains what the Christ, the Messiah, really is: that Christ is more than the corporeal Jesus; that the Christ is expressed in the spirit of love, of goodness, of purity, of truth,—all that really is; that the coming of the Messiah is the coming to our hearts of God's spiritual idea,—the perfect man.

Many Jews will tell you how they scorned the word Christ—that they could not tolerate a cross, for did it not typify all they had endured for centuries? and when they had occasion to sing a hymn in which the name Jesus or Christ appeared they either did not sing the hymn or passed over the word. Not so, however, after they have come to understand Christian Science. The name of Christ means much to them now, and they enter into the spirit of the Christian Science services and sing the hymns with all their hearts. They know that Science and Health teaches the truth, for it has healed many of them and taught them to read the New Testament (hitherto a sealed book for them);

Digitized by Google

and, what is more, to love it. It has also made them love the Old Testament more than ever, because they read it in a new light. Science and Health is indeed a "Key to the Scriptures."

The question has been asked me by some of my Jewish friends, who have seen and known of the wonderful cures effected by Christian Science, and who also know how much better and happier these people are after taking it up, "Why could not Christian Science be called Jewish Science, or Moses' Science, for if the word Christ were eliminated, more of them would accept it and get the benefits which the others had realized?" My answer is this: "Because this wonderful truth was demonstrated and taught by Christ Jesus, and rediscovered by Mrs. Eddy, who gave it to the world in such a practical way that all may understand it."

Christ Jesus reflected divinity because he was the highest type of man, and his teachings were good and beautiful, and only good. He was the pure reflection of God. This Science is Christian because it is the following out of his teachings that enables us to heal others and to lead better lives. Did he not say: "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."

REALITY.

ALFRED THORPE.

At the outset of my inquiry into Christian Science I was faced with the apparently unusual use of certain words, and found it impossible to assimilate the teaching which was to be conveyed. This refers particularly to the use of the word "real," or its converse, "unreal."

With my previously entertained opinions as to sin, sickness, and death, it seemed utterly absurd to speak of them as "unreal," and not until I had looked carefully into the question and had sought the assistance of a good dictionary did I see in what connection our dear Leader uses certain expressions. I was able to discover by this means that the word "real" is in Christian Science intended to apply to that which expresses God and is eternal. Having arrived at this conclusion, and remembering that Jesus came about his Father's business and that this business consisted largely in the removal of the obstacles to true peace and progress, such obstacles could not, in the nature of the case, be said to be real, because if they were capable of being set aside, they were not eternal, and were therefore "unreal." As soon as I was in possession of this thought, I saw that the same method could be used in respect to other words and forms of expression; and so, many sayings which previously seemed to be void of meaning, now assumed their true guise in my thought, and I was able to grasp something of the idea which Mrs. Eddy intended us to hold. I thus gladly arrived at the inevitable conclusion that, in the light of our text-book and Mrs. Eddy's other writings, the gospel is, as St. Paul says, "the power of God unto salvation to every one that believeth."

Before taking up the study of Christian Science, some four years ago, I had practically all my life been a Bible student, but had never read into it the beautiful meanings that I am now able to discover. I had entertained the thought that certain promises found in the "book of life" referred to times and peoples of the past, while certain others were not yet realizable; and altogether, in common with so many others, I failed to grasp that, since God is "the same yesterday, and to day, and for ever," the promises once uttered are for all time and for all peoples, therefore for us, and all others in this day and generation. The declaration of the psalmist, "Bless the Lord, O my soul, . . . who forgiveth all thine iniquities; who healeth all thy diseases; who redeemeth thy life from destruction," now takes on a new significance and I have been able to demonstrate, in my own case and in that of others, that as God's children it is natural for us to reflect health and harmony; and that discord of any kind, including sin, sickness, and death, is indeed unreal.

In Science and Health (p. 276) we read: "The realization that all inharmony is unreal brings objects and thoughts into human view in their true light, and presents them as beautiful and immortal. Harmony in man is as real and immortal as in music." So, as we go on in the footsteps of our Wayshower, we realize more and more what it is to be "the sons of God," and our hearts go out in thanksgiving to our God and His Christ for having raised up in these latter days one who should make so clear to us the way of salvation.

PRINCIPLE — NOT CHANCE.

MARY THORN.

Not long ago, while speaking with a fellow-teacher about the element of chance which entered into a game that the boys were playing on the school grounds, she remarked, "Well, life is a gamble." As I thought over her words afterward, I recalled that, before studying the teaching of Christian Science, life often seemed to me to be governed by blind forces, and that there were times when in human affairs luck seemed to be a factor which had to be reckoned with. That there could be an intelligent Principle, which operated to destroy the sense of evil and suffering in human life, and bring to light a perfect and harmonious sense of being, was beyond my highest hope—a thought too good to be true.

The study of Christian Science, however, has opened up to me a view of life in which the element of chance or luck does not enter. The Science of being, as taught by our Leader in Science and Health and her other writings, presents an absolute and unfailing Principle of good. This divine Principle is available to all, and in proportion as it is understood and applied to the problems of every-day life, it makes possible the correct solution of these problems, and thus eliminates wrong answers which might otherwise appear as various forms of disease. Right thinking is thus proved to be the way out of error, and Jesus' words are demonstrated: "Ye shall know the truth, and the truth shall make you free."

One who is daily seeking to gain freedom from error by knowing and reflecting Truth, is being lifted out of the ignorance and fear of material sense existence into the pure atmosphere of Spirit, where divine Mind alone governs. Spiritual ideas which constitute the real universe become tangible to him, the law of righteousness is understood and applied, and the omnipotence and omnipresence of divine Love are demonstrated. The home, the shop, and the street become the laboratory in which he works to prove the truth of "the fundamental propositions of divine metaphysics" (Science and Health, p. 113). In the solution of these problems, through the application of divine Principle, the student of Christian Science is not only setting himself free from the sense of physical discord that assails him, but he is proving the falsity of all sense testimony and thus yielding to the government of divine Mind; thus the solution of every problem becomes to him one of those "stepping-stones of their dead selves," on which men rise to "higher things." Such a one, seeking to know the will of God and to be governed by it in all things, asks for no amulet or charm of good luck. He consults neither clairvoyant nor astrologist to learn his future or to gain counsel about his business. He knows that he is the child of an infinitely tender and loving Father, that all that belongs to this Father is his also, and that he has only to turn to Him in loving obedience and gratitude to receive all that he needs.

Another span of hours is meted thee,
As long and sweet as any passed away.
Receive them joyously, each holds in fee
The possibility of life's best day.

GERTRUDE RING HOMANS.

SELECTED ARTICLES.

[Frederick Dixon in *North Herts* (Eng.) *Mail.*]

Our critic has stated that all the good contained in Christian Science is found in Christianity. No Christian Scientist would feel inclined to dispute this for one moment. The question, however, naturally arises as to what Christianity is. It does not seem to have occurred to the reverend gentleman that he had embarked on the "voyage perilous" of defining Christianity as "what I believe"; in other words, that he had entered upon that supremely dangerous thing, a definition of orthodoxy,—orthodoxy, which has been itself defined, by a prelate with a sense of humor, as "my doxy," heterodoxy being "the other fellow's doxy." As a matter of fact, anybody who will take the trouble to think, must realize that the various Christian sects have been punishing, torturing, and murdering each other for centuries, for the simple reason that they, like our critic, conceived that because their neighbors failed to accept the views which seemed good to them, they were, as he says, being led "ultimately into darkness which was worse than before."

Curiously enough, what all these critics have omitted to observe is that there is a definition of Christianity in several places in the New Testament which is quite unequivocal in its directness. Jesus sent out the disciples "to preach the kingdom of God, and to heal the sick," and in doing this he made the one the necessary corollary of the other. This, however, is not all. He stated distinctly on more than one occasion that those who believed in him would be able to do the works he did, and not only these works, but greater works; and so he, and no other, made the healing of the sick and the destruction of sorrow and sin the test of a man's faith, and so of his Christianity.

Is it not a little remarkable that the religion of today which is demanding that the whole of Jesus' commands should be accepted as Christianity, and not part of them, should have been selected by the preacher as a sect which was working "untold evil"? If it is evil to teach men to have that supreme reliance on the promises of Jesus which will enable them to begin to attempt to live in practical accordance with the sermon on the mount, then Christian Science is evil. Jesus said, "Ye shall know the truth, and the truth shall make you free." The critics of Christian Science would be wiser if they were to devote their time to showing the world what this truth is, in a way which will enable it to do the greater works which Jesus spoke of, rather than to criticism of their neighbors for their attempt to accomplish the healing work, in no matter how humble a way. A single attempt to demonstrate your own knowledge of the truth which will free the world, will carry infinitely more weight, as an argument, than any quantity of denunciation of the insufficiency of your neighbor's demonstration.

[Charles F. Kraft in *Bellingham* (Wash.) *Herald.*]

Religious teachers frequently and perhaps unconsciously take advantage of the fact that the term "salvation" is susceptible of very broad interpretation, at least in a religious sense. Christian Scientists use this term in its broadest signification. They recognize that to be rescued from any bondage of evil is to be "saved" from that particular evil. As supporting his contention that the prevalent teachings of the church do not point mankind mainly to a state of future punishment or reward, our critic quotes the familiar text, "Now is the day of salvation," as representing the church's teaching; "but," he adds, "this does not refer to men's bodies, but to their souls." The text, "If a man keep my saying, he shall never see death," is also declared to refer to the same thing. In practice the church directs the sick man to the medical doctor and is told to pray that God will bless the means employed. If the means employed fail and the man dies, the bereaved friends are exhorted to "be resigned to the will of God." Logically, the responsibility is thus thrown upon God. Christ Jesus declared that to know (understand) God, is "life eternal." He also promised to those who should continue in his word, a knowledge of the truth which should make them free. It is this knowledge, or understanding, which Christian Science is bringing to the world, that is freeing mankind from every form of vice and suffering. This understanding was not to be the result of scholarly attainment, as may be inferred from our critic's position, but, as Paul declared concerning all the things of God, good, they must be "spiritually discerned." Christian Scientists believe that it is possible now, as in the time of Enoch and Elijah, for men so closely to "walk with God" as to rise above all sense of death.

Vague charges of neglect and unscrupulous dealing are made against Christian Scientists by the reverend gentleman. In all my experience as a student and beneficiary of Christian Science, during a period extending over nearly fifteen years, I have never seen anything that by the wildest stretch of imagination could be compared to the ridiculous and unchristian practices he has described. They are sufficiently remarkable to warrant careful investigation. Referring to the lecturer's account of his own healing, the gentleman incidentally observes that "he did not state the nature of his healing." I have heard the speaker's detailed account of his healing, and feel certain that he will gladly give it to any who may wish to hear it, as well as ample means for verifying the truth of his statements. The well recognized intelligence of the average Christian Scientist precludes the belief that they are anything but tender and loving in their care for the suffering, and careful investigators declare that they make use of the best means for their comfort and relief. Personally I have seen the hardened sinner reclaimed and rescued from nearly every form of vice and nearly every ill that flesh is heir to,—healed through the ministrations of Christian Science. The best test of a tree is in its fruits.

Because Mrs. Eddy "follows not with us," she is accused of misusing the Bible, although the more spiritual interpretation of the Scriptures which she has given to the world has brought a multitude into a consciously closer relationship with God and led them into healthier and holier living. The Master once rebuked his immediate disciples under like circumstances with the words, "He that is not against us is on our part." The Christian Science view of the Bible has made it logical, consistent, and practical to its adherents. They are learning that, as like produces like, so an infinitely good God cannot be the source or author of evil in any form, physical or otherwise.

In presenting to your readers the text from Isaiah, "I form the light, and create darkness: I make peace, and create evil," our critic is authority that this refers to "physical evil, not sin," and later adds that "God and Jesus recognized evil in order to destroy it." *Per se,* God destroys His own creation. I submit that the Christian Scientist's view of this text is more logical, practical, and desirable. The truth about a thing uncovers, unmasks, brings to light the hidden lie, "creates," in this sense, that of which the individual had not before been cognizant. It is in this sense alone that the above text should be understood. It is true that Jesus recognized evil (the devil), for he declared it to be "a liar, and the father of it." In other words, he accomplished its destruction in human consciousness by understanding its falsity, or "nothingness." Christian Science says with Habakkuk, "Thou art of purer eyes than to behold evil." It cries, "Hear, O Israel: The Lord our God is one Lord,"—and there is none else. All Christian Science argument is based on this premise. They recognize the eternal fact of God's creation to be perfect and unchanging, "real." That which is imperfect, unlike good, changeable, destructible, they recognize as built upon false foundations, hence false and in this sense "unreal."

Digitized by Google

Christian Science recognizes that to the human sense of things sin, sickness, and death seem real, but the consciousness of God, good, strips off their disguise and they are seen to have a fabulous existence, inasmuch as God's creation is not only good, but very good. In the language of Paul, "The things which are seen [material] are temporal; but the things which are not seen [spiritual] are eternal."

In her book "Science and Health with Key to the Scriptures," Mrs. Eddy has written a chapter on the subject of prayer which has opened the eyes of thousands to the truer nature of prayer and enabled them intelligently to "pray without ceasing." Our clerical friend tells us to "ask, and ye shall receive," but at the same time to make our request conditional with "thy will be done." As it appears in the Lord's Prayer, we find that we are to desire God's will to be done in earth as it is in heaven, and in no other way.

As an excuse for the use of material remedies we are told that they "are not forbidden." The great Exemplar who commanded his followers to follow him in all his ways, healed "all manner of sickness among the people" and afterward sent out his students with the command to "heal the sick" and "preach the gospel" as he himself had done. Finally, in the closing words of Matthew's Gospel, we find his last command, "Go ye therefore, and teach all nations, . . . to observe all things whatsoever I have commanded you;" to which he added the promise, "Lo, I am with you alway, even unto the end of the world." In the absence of any interdiction to the above command, we fail to see a valid excuse for neglecting it. Christian Scientists are called "false teachers" and Christian Science "false doctrine," and yet it is conceded that it may be built upon "truth which has too long been neglected."

The great anxiety lest the people be "deceived" by Christian Science manifested by some other religionists, is offered as an excuse for attacking it. Will these critics tell the people definitely some of the results of this deception, in order that they may intelligently choose their own course, or must they continue to learn only from those who, wandering in the darkness of sin, sickness, sorrow, and despair, were rescued by Christian Science and lifted out into the glorious light and liberty of the children of God, and who are today praising Him "for his goodness, and for his wonderful works to the children of men."

[James Phelps in *Milwaukee* (Wis.) *Sentinel*.]

I am willing to agree with the gentleman that no cult is able to reach fully the needs of humanity; but Christian Science is not a cult in the sense in which he is using this term; it is a science, and preeminently Christian, as it is based on the teachings of Jesus the Christ. If we get rid of sin, I am sure that we will not have to suffer with a toothache, or any other ache. "To hide your head like an ostrich in the sand, and imagine that there is no sin, no sickness, no disease," is not the teaching of Christian Science; and as there is much misunderstanding on this point, permit me to try to make the teaching of Christian Science in this regard plain to our critic and your readers.

Christian Science is based on the Biblical statement that God created every thing; that without Him was nothing made that was made; and when He saw what He had made, it was very good. Now, we claim that sin, disease, and death cannot possibly belong in the class covered by the words "very good." They could not have been created by a God who is wholly good, who is of purer eyes than to behold evil, and who could not look on iniquity. Jesus Christ said, "I am not come to destroy, but to fulfil;" yet he went about constantly healing the sick, forgiving the sinner, and raising the dead, thereby destroying sin, sickness, and death. While we take this position unreservedly, and defend it fearlessly, at the same time we recognize that "this malevolent triad" (Science and Health, p. 357), sin, sickness, and death, seem quite real to that consciousness which is unillumined by the truth of being, and the Christian Science text-book does not refer to them as creatures of imagination. When a Christian Scientist encounters the phenomena called evil, he does not dodge the issue, nor hide his head in the sand, but meets it with the same understanding our Master had when he said: "Ye are of your father the devil. . . . When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it."

When one has thus dealt with evil, not once, but thousands of times, and sees it and its evil fruits subside and then disappear, he has good reason for concluding that the position is correct and scientific. If in addition to this he is able to instruct others to go and do likewise, and the same results follow their efforts, may he not be pardoned for feeling secure and safe in abiding undisturbed "in the secret place of the most High"?

[Lloyd B. Coate in *Dayton* (O.) *News*.]

Mrs. Eddy does not claim to have discovered a new truth, for Truth has always existed. Moses and Jesus both declared that God is Truth, and Jesus said the truth should make men free. Mrs. Eddy does claim to have discovered the way to apply the truth, and has named her discovery Christian Science, or the Science of Christianity. As the result of gaining an understanding of the divine Principle of Christian Science, her students have been able to heal the sick in Christ's name, but not through mental suggestion, or will-power, or in their own strength. Here lies the difference between mental suggestion and Christian Science healing. No one is as capable of judging how Christian Science heals the sick as the practitioners of this Science.

Christian Scientists do not claim that they are better than other people—far from it; but they do claim that through the teachings of Christian Science they have gained a better understanding of the Christ-healing, and as the natural result of striving to govern their lives by the truth they have become better men and better women than they were before they knew of it.

Yes, the key-note of Christian Science is that "with God all things are possible." We believe this because it is in accord with that which Jesus taught. Christian Scientists recognize Christ Jesus as their divine Exemplar and Saviour. Of the tens of thousands interested in Christian Science, most of this number did not turn to Christian Science for help until after they had given material remedies a fair trial—many having been pronounced hopeless by physicians; and in their extremity they turned to God, and verily found that "with God all things are possible." This explains why they do not still cling to means and methods which failed to bring relief, but prefer to turn to the great Physician "who forgiveth all thine iniquities; who healeth all thy diseases; who redeemeth thy life from destruction; who crowneth thee with lovingkindness and tender mercies." The apostle Paul exhorts us to "prove all things: hold fast that which is good," and this is what Christian Scientists are striving to do.

It is the privilege of all people to have material means and methods if they prefer them. Great respect should be shown the humanitarian physician. So long as people desire medicine, there will be physicians to administer it, but if people prefer Christian Science treatment they should have it without molestation from others.

In the study of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, one should note carefully the view-point from which a given statement is made, just as one should read the Scriptures, or the writings of any author. It should be distinctly understood that to the human sense of things sin, sickness, and death are stern realities, and are to be dealt with in a Christianly scientific manner—in a word, Christian Science

Digitized by Google

teaches that these conditions are to be overcome through the power of God.

Christian Scientists use the word "real" when referring to all that God has made. They use the word "unreal" when speaking of that which God does not create (sin, sickness, and death), but which seems very real to mortals and will continue to seem real until overcome and destroyed by Christ, Truth. In the case of broken bones Christian Scientists are at liberty to call a surgeon and have the bones set. In a case of obstetrics they may call a physician. In a case of contagious disease they are instructed to report it to the board of health and have the home quarantined. There are physicians in this city who can verify this statement.

If those who write or speak on the subject of Christian Science would first consult those qualified to speak authoritatively thereupon, many things said would be left unsaid. When the teachings of Christian Science are rightly understood, they will be found to be preeminently Christian, and "to be in keeping with good common sense."

[Nellie M. Johnson in *Omaha* (Neb.) *World-Herald.*]

Any attempt to explain Christian Science from the viewpoint of malicious animal magnetism is analogous to an effort to describe the nature and origin of light by peering into darkness. Physics defines light as a mode of motion, something emanating (so far as the earth is concerned) from the sun. Darkness, having no source, admitted to be the absence of light, is nothing.

The "root" or basis of Christian Science is God, its divine Principle, and may be defined as ever-operative spiritual law manifested as the activity of good. Malicious animal magnetism is the human opposite of Christian Science, the darkness of material belief, having neither origin nor power; therefore, it is but a negation. As light dispels darkness, so Christian Science dissipates in individual consciousness all belief in the power or reality of malicious animal magnetism or evil.

Erroneously regarded as the formulator of some new phase of occultism, Mrs. Eddy cannot be understood; rightly viewed as the Discoverer of Christian Science, her strength and purity of character become apparent, for "a good man out of the good treasure of his heart bringeth forth that which is good."

[John M. Henderson in *Inland Herald*, Spokane, Wash.]

Telepathy is defined in the Century Dictionary and Cyclopedia as "the direct communication of one mind with another otherwise than in ordinary and recognized ways: the supposed action of one mind on another at a distance without the use of words, looks, gestures, or other material signs; also, the resulting mental state or affection." Reference to "Science and Health with Key to the Scriptures," the text-book on Christian Science, written by Mrs. Eddy, reveals the fact that Christian Science teaches the existence of but one Mind—the divine creative intelligence, the fount of all knowledge, the source and author of all mental activities and their resultant manifestations. The Bible teaches that God, Mind, is infinite good, and that He created man in the image and likeness of good. Christian Science teaches logically that man, created in God's likeness, is subject to the influence of divine intelligence alone, and that this intelligence radiates only that which is good, pure, elevating. The carnal mind, which the apostle Paul taught is "enmity against God," and "not subject to the law of God," should not be regarded as a safe guide, whose influence would elevate and purify. Telepathy is the logical opposite of Christian Science, since the latter acknowledges no power or influence other than that of divine Mind, God.

Dwelling in the consciousness of infinite good as his primal source and ultimate inheritance, man cannot become the arena for the parade and display of the forces of evil. When Jesus said, "Ye shall know the truth, and the truth shall make you free," he gave to mankind a definite rule by which they might escape the evil influences of the carnal mind, and abide ever under the protecting and saving influence of that Mind in whose image and likeness man was created.

[A. W. Le Messurier in *Guernsey* (Channel Islands) *Press.*]

There are in the world today thousands of practitioners, and the healing work of Christian Science proceeds apace, yet the cases of failure are relatively few. It should be remembered that the "last enemy" to be overcome is death, though the Founder of Christianity definitely stated that "whosoever liveth and believeth in me shall never die," and proceeded to furnish the proof in his own resurrection and ascension. This same Founder taught his followers in all ages that healing the sick was included in preaching the gospel, and that his method of doing both was the only possible method. He never discriminated—never once said that blindness could be cured by the operation of God's ever present spiritual law, but that "tuberculosis of the knee" could not. The world is steadily rising from the condition of unbelief which has hindered success and been its own undoing.

Now while, of course, divine Truth cannot fail, no practitioner of Christian Science claims to have reached the state where failure is impossible. The example of the early disciples' failure and Jesus' answer is too well known to quote. So any failure on the part of Christian Scientists to heal with the same degree of success as the Master did is no proof that God's power is not equal to the case, but, rather, that a greater understanding of that power is needed.

If a Christian Scientist fails (and the majority of patients come for help only as a last resort), an inquest is held and these cases are held up to the fierce fires of criticism, yet how seldom, comparatively, does the need for an inquest arise. Sir Victor Horsley has admitted that if there were inquests on all the patients who die after operations, there would be ten thousand of these inquests in London in a year. In their efforts to benefit humanity medical men do not hide the fact that their work is experimental, and they are often called upon to bear the grief of having failed after conscientiously doing their best.

[Editorial in *Los Angeles* (Cal.) *Express.*]

The Southern California Homeopathic Medical Society, at its meeting held in this city, heartily commended the campaign of the National League for Medical Freedom in opposition to the scheme to create a medical trust and arm it with federal powers. . . . Create a federal bureau with the powers proposed by the Owen bill, stuff it with disciples of a single school, and presently you will be debarred from the privilege of choosing your own physician or find yourself harassed when ill by inconceivable annoyances of interference with and supervision of the treatment you desire. . . . The individual citizen should possess the right to call in the practitioner of any school, and no department of Government should be armed with power to abridge his right. As well have a religious as a medical monopoly. Either would be intolerable. When Government sought to establish religious monopoly, there came the rack, the thumbscrew, and the stake. Progress ceased, retrogression began. Progress would cease and retrogression begin should the Government establish a medical monopoly.

Let not him who is houseless pull down the house of another, but let him work diligently and build one for himself, thus by example assuring that his own shall be safe from violence when built.—ABRAHAM LINCOLN.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

RESIGNATION OF JUDGE EWING.

In announcing the resignation of Judge William G. Ewing from the board of lectureship of The First Church of Christ, Scientist, in Boston, Mass., the Christian Science Board of Directors wish to and do express their grateful appreciation of the good work which he has done for the cause,—work which he was well qualified to do by reason of his profound learning, ripe experience, and great love for his fellow-men. In the less public lines of Christian Science endeavor which will now engage his attention, Judge Ewing will be the same kindly Christian gentleman and retain the loving regard of all who know him.

THE CHRISTIAN SCIENCE BOARD OF DIRECTORS.

Nov. 8, 1910.

"DECEIVING YOUR OWN SELVES."

WE sometimes hear members of Christian Science churches say, when appealed to for help, "Oh, I am not a practitioner. Go to So-and-so, who is a regular practitioner." A fair implication from this statement would be that there are two classes of Christian Scientists, one which heals the sick, and one which does not; or, more correctly speaking, one class which has a demonstrable knowledge of this Science, and another which has not; or, to carry the distinction still further, a class which is rightfully termed Christian Scientists, and a class which might rightfully be termed Christian sciolists.

This much being admitted, would it not be well—is it not a duty, even—for each one of us to take account of stock and find out where we stand,—decide in which one of these classes we could fairly be rated? If we find that we are in the latter class, then it is for us to decide whether we are content to base our hope of salvation upon a mere smattering of Christianity, or be willing to work for and obtain a demonstrable knowledge of our Master's teachings.

Jesus left an infallible rule by which Christians—those "whose profession and life conform to the teaching and example of Christ"—were to be known, and we may find it in the 16th chapter of Mark's Gospel. He did not say that "them that believe" should be able to direct any one in need of help to those who could cast out devils and heal the sick, but he said plainly that they themselves should do these mighty works, and it is a matter of history that for three centuries the sick were healed, and even the dead were raised to life again, as the natural and legitimate result of prayer and demonstration of the power of God on the part of the primitive Christians.

This golden age of Christianity was succeeded by an age in which a certain class became the self-constituted custodians of all holy words and works, and the belief obtained, and was fostered by this class, that the common people were cut off from God except as these few might appeal to Him in their behalf or distribute individual favors or punishments in His name. While such beliefs held sway in human thought, it was inevitable that ritual and darkness should take the place of that intimate knowledge of God which is the Christianity that Christ Jesus taught and practised,—that community of interest which he voiced in the declaration, "I ascend unto my Father, and your Father; and to my God, and your God."

It was just as inevitable, however, that the Reformation should come, and that the light of spiritual discernment and attainment should burn brighter and brighter as mankind in succeeding generations became ready to receive it. The discovery of Christian Science by Mrs. Eddy was the culmination of this process, and the revelation came to her because she was the one ready to receive it, and generous enough and courageous enough to proclaim it to the world. It therefore behooves us, now that the scientific Christianity of Jesus is again available to mankind, not to repeat the mistake of believing that the individual man cannot commune directly with God, and Mrs. Eddy's teaching on this point is both clear and emphatic: "It is possible,—yea, it is the duty and privilege of every child, man, and woman,—to follow in some degree the example of the Master by the demonstration of Truth and Life, of health and holiness" (Science and Health, p. 37); and again, she writes: "The Christian Scientist has enlisted to lessen evil, disease, and death" (*Ibid.*, p. 450).

In the face of this teaching can we be, are we willing to be, other than *bona fide* Christian Scientists,—"doers of the word, and not hearers only, deceiving your own selves"? Having enlisted as good soldiers in this great cause of the redemption of mankind, it is plainly the duty of each one to equip himself for his task: in other words, we should work for and acquire such a demonstrable knowledge of the healing truth that no brother, no fellow-being, need ever appeal to us in vain. This does not mean that we must all drop our present avocations, but it does mean that we should know of our own knowledge how—if the need arises—to hold the cup of living water to the thirsting lips or to break to the hungry the bread of life.

If as Christian Scientists we believe that it is a part of Christianity to heal the sick, then we must also believe that we are not entirely Christian unless we do this work: and the question which naturally results from this analysis is whether we shall or shall not be Christians. Should we hesitate to answer this question in the right way?

ARCHIBALD MCLELLAN.

THE DARING OF LIGHT.

HE was a very fair-meaning fellow, but an inherited bent, as it was said, plus certain events in the way of class honors, accepted articles, etc., had given him an estimate of the value of his own opinions which had something of the finality-flavor of a supreme court decision. To please a friend whose hospitality he was enjoying, he had consented to read a chapter in Science and Health, and having reached the second page he tossed it into a corner with the remark, that "for unalloyed presumption that book could easily beat the band." "Yes," added his friend, "it has the daring of light."

Nothing more was said at the time, but some months later, in an hour of mental struggle when he felt that everything was slipping away from him, the comparison was recalled and the book was again opened. Its supreme assurance impressed him as before, but the effect was not at all the same, and for the reason that he found it so surprisingly reasonable, while the definite affirmative tone answered well to his own sense of uncertainty and need. It had the restful quality of the mathematician's expression of numerical relations, or the chemist's statement of molecular reactions. The positiveness of the positions taken interested him, and he read on,—read himself, to his astonishment, into a consciousness of relief. He had entered the society of one person who was sure of things because she had demonstrated her proposition! The curtain had been raised a bit for him, and light entered.

Digitized by Google

He began to see that the statements of the book kept fast hold upon certain fundamentals of thought to which he could make no protest; that they were logically linked to basic fact, so that its decisive quality was communicated to them. He perceived that the recognition of the ideal nature and immutable integrity of God involves the recognition of the ideality of His manifestations, His universe, and His man; that no disharmony has any real being or place—it is but the fabrication of falsity, the darkness of human sense which the light of Truth must dispel, and that while opposites may seem to be very near each other, they never clasp hands.

Then for the first time he understood the Master's statement that to know God is eternal life. The simplicity of the gospel and of the plan of salvation began to dawn upon him. He saw the tremendous sweep of the radius of right thinking, the divine idea in consciousness, its remedial relation to all that is distraught, diseased, and dying. He saw that a statement is scientific only when it is grounded in, and demonstrably conformed to, the simple verities referred to by Ruskin when he said, "What a child cannot understand of Christianity, no one need try to." What had seemed to be presumptuous dogmatism thus began to loom large as legitimate deduction, as a radiation of rationality, a logical satisfaction of thought, the fulness of which is to be reached only when one realizes that the opposite of the accepted proposition is simply unthinkable, so that he can no longer be incredulous even if he would. When the young man had gained this point of view, his mental turmoil ceased; he had arrived, his feet were upon the rock.

As with light, so with spiritual truth: its insistent daring is inoffensive because it is gentle, illuminating, beneficent. It comes to eliminate chance, uncertainty, hazard,—all that is not scientific,—by bringing into manifestation what Emerson calls "the transcendent simplicity and energy" of divine law. "By mercy and truth," says the proverb, "iniquity is purged." There is no question, no circumlocution, no reserve, and Mrs. Eddy gives a no less striking epitome of Christian Science teaching, its directness, its reasonableness, its efficiency, its loving and comforting but irresistible finality, when she says in Science and Health (p. 542), "Truth, through her eternal laws, unveils error."

JOHN B. WILLIS.

POEMS BY MARY BAKER EDDY.

Under the above caption the poems written by our Leader have been compiled in a handsome volume of 79 pages, now in press, and orders will be filled in sequence. All of Mrs. Eddy's hymns are included in the volume, also her earlier poems, which appeared in various publications from forty to sixty years ago.

The poems are printed in clear type on heavy paper, with initials and ornaments in red, and bound in fine English cloth, with a conventional design of wild roses. Price, single copy, $1.50; six or more copies, $1.25 each. Address all orders and make remittances payable to Allison V. Stewart, Falmouth and St. Paul Streets, Boston, Mass.

SPECIAL THANKSGIVING MONITOR.

Announcement is made by The Christian Science Publishing Society of the forthcoming issue of a special Thanksgiving number of *The Christian Science Monitor*.

The Thanksgiving *Monitor* will contain ninety-six pages of news and advertising matter of exceptional value and interest to all. It will be profusely illustrated, and will contain a number of special articles prepared by eminent men and women, and promises to excel anything heretofore produced by this pioneer of clean journalism.

Copies of the Thanksgiving number of the *Monitor*, which will be issued from the press Wednesday, Nov. 23, can be obtained from Christian Science reading-rooms. Price, ten cents the copy.

SEMIANNUAL LECTURE IN THE MOTHER CHURCH.

The First Church of Christ, Scientist, in Boston, Mass., announces a lecture on Christian Science by Frank H. Leonard, of Brooklyn, N. Y., a member of the board of lectureship of The First Church of Christ, Scientist, Boston, Mass., in the Church Edifice, Falmouth, Norway, and St. Paul streets, Thursday evening, Nov. 17, at eight o'clock. The public is cordially invited.

AMONG THE CHURCHES.

CEDAR RAPIDS, IA.

First Church of Christ, Scientist, has purchased a valuable property on Second avenue, between Twelfth and Thirteenth streets, as a location for a fine church building which it is the society's intention to construct in the not distant future. The property is one of the most valuable and best located in the inside residence district, and has a frontage of 124 feet by 140 feet deep. The Scientists consider the location ideal, as it is half way between the First and Third avenue car lines. It is close to the church community on the east side—so close that it will be a part of that community.—*Cedar Rapids Gazette.*

OXFORD, MICH.

On Sunday, Oct. 23, the members of First Church of Christ, Scientist, held their first service in the new church home which they have recently purchased. The special features of the service were a brief history of the church, read by the First Reader; also a letter was read and sent to Mrs. Eddy, the Discoverer and Founder of Christian Science, expressing gratitude for benefits received through Christian Science. The cost of the property was about fifteen hundred dollars, and, though the membership is small, it is entirely paid for. The lot is eighty feet wide and nearly two hundred feet deep, making it an excellent site for a church to be erected in the future.

Oxford Leader.

BROOKLYN, N. Y.

About two years ago a few Christian Scientists, living in the section of Brooklyn known as Dyker Heights, gathered at private houses to read the Lesson-Sermon and sing hymns, and it was just one year last August that these devoted individuals, who had formed themselves into a Christian Science society, blossomed forth as Fourth Church of Christ, Scientist, Brooklyn. Since that time the membership has doubled. On July 18 of this year, by order of the supreme court of the state, this church was permitted to assume the name of Second Church of Christ, Scientist, of Brooklyn, since all obstacles had been removed, and on Aug. 10 the decree of the court went into effect, so that it is now legally known by that title.

We have a building fund, which is slowly growing and is being religiously kept intact. Our attendance is fully twice that of our membership, and we feel that we are gradually drawing toward us many who have been hungering for the bread of life so generously provided for us by our beloved Leader, and to whom the establishment of our church in this suburb gave the first opportunity to partake of this spiritual feast.—*Correspondence.*

True pleasure consists in clear thoughts, sedate affection, sweet reflections, a mind even and staid, true to its God and true to itself.—*Anon.*

THE LECTURES.

BELLINGHAM, WASH.

The lecture delivered last night [Sept. 26] at the Aftermath Club on "Christian Science: A Demonstrable Religion," by Frank H. Leonard, was largely attended and well received. The lecturer was introduced to the audience by Judge F. D. Yale of this city, who said,—

In all ages, from the earliest authentic history, the human race has been trying to solve the mysteries of life and the relation of God and man. From the dawn of intellect man has recognized a power superior to himself, and has pondered over the plan and purpose of the creator of all. In all ages prophets and seers have arisen and claimed the power and authority to speak for the creator and explain these great mysteries. All of them have found followers and adherents. As a result, the world is full of conflicting doctrines, theories, and religious systems, all claiming the seal of Almighty God. To ninety-nine per cent of the human race these mysteries have become more mysterious still, and mankind are still the victims of sin, sickness, and death.

In the mean time, with advancing intellect, reason is assuming sway, and that religion which can hold and actuate people must furnish proofs and demonstrations in the power of healing the sick and saving from sin. The little band of primitive Christians was lost and swallowed up in the dark and barbaric ages that followed. To later thought, the miracles of Christ were denied, accepted on faith alone, or explained upon the theory of a suspended law. The teachings of Christ were misunderstood or misconstrued, his real meaning and the true art of healing were lost and forgotten. The world is still unsatisfied with mere theories and theological speculations, and is demanding to know the truth. It gladly welcomes the prophet or seer who can show the proper credentials and prove the truth of his claims.

Amid all the doubt and confusion of the present age, one has arisen who, by unceasing toil, purity of purpose, great courage, and evidently guided by the unseen hand of God, has parted the clouds in the spiritual sky and revealed to man primitive Christianity in all of its original simplicity, purity, and power. Mrs. Eddy has established no new system, but has aided in the permanent restoration of the only religious system that ever demonstrated the truth of its claims to heal and save. The proofs of her claims are found in the thousands of human wrecks that have been healed and purified by the power of the divine Mind, in the rapid growth of the Christian Science movement among the brightest thinkers of all nations, and in the invincible fortification of Christian Science in the Holy Scriptures. We are here today to learn more of this great truth, a truth new to many of us, yet a truth as old and more enduring than the rock-ribbed hills.—*American.*

LAWRENCE, KAN.

Dr. Francis J. Fluno lectured on Christian Science at the Bowersock Opera House last night [Sept 30]. Dr. W. L. Burdick, of the law school of the University of Kansas, presided, and introduced the speaker as follows:—

Although I am not a member of, or personally connected in any way with, the religious organization under whose auspices the lecture of the evening is to be given, nevertheless I have many dear friends, both east and west, who are members of this church. The spirit of Christianity should be tolerant and broad, and I respect the religious views of other men, and accord them the same freedom of thought that I desire for myself. Personally, I desire to say that I have attended, several times, services at that great and beautiful church in Boston that is a monument to the works of the remarkable Leader of this faith. I have also read and found many things to admire in the book she has given to the world. I further know that your faith has professedly brought peace and comfort to thousands upon thousands of suffering men and women; consequently, I look upon this movement as one beneficent to humanity. In this spirit, I take pleasure, therefore, in introducing to you the speaker of the evening.—*Daily Gazette.*

VIRDEN, MAN.

The Opera House was comfortably filled on Sunday afternoon [Oct. 2] by adherents and others interested in the Christian Science movement, when Miss Mary Brookins of Minneapolis delivered a scholarly address dealing with the fundamentals and aims of the movement which is rapidly extending to all parts of the world. P. B. Biggins, Second Reader, introduced the lecturer, saying in part,—

The heart of humanity is hungering for something it has not yet attained. It is reaching out for something that will satisfy its longings. We are all united in one common desire—namely, to gain happiness. We are all desirous of getting that which will comfort us when in sorrow, heal our diseases, enable us to forsake our sins, and to overcome our weaknesses; for that, in short, which will meet our every human need. We all admit that such a possession is worth striving for; that it is indeed, to use the psalmist's words, "more to be desired . . . than gold, yea, than much fine gold."

Christian Science shows us that these blessings may be obtained, and that the way to obtain them is to know God better. Christian Science furnishes this better understanding of God. It throws such a clear light on the Scriptures that those who study the Bible in the light of this teaching clearly discern that God's healing power did not belong solely to a dispensation long past, but that it is available here and now.—*Empire-Advance.*

KANSAS CITY, MO.

Under the auspices of First, Second, and Third Churches of Christ, Scientist, a lecture on Christian Science was delivered by Willis F. Gross at Convention Hall, Oct. 2. He was introduced by H. G. Wilson, who said in part,—

From time immemorial the one thing most persistently sought by the human family has been and is a practical religion, one that can be used in our every-day life: a religion that offers not only the hope of a future life, with its compensations for the so-called deprivations on this plane, but one that, put to practical every-day use, offers surcease from the sorrows of sense, induced by a belief in man-made laws, replete with limitations.

Over eighteen hundred years ago this religion was taught and demonstrated by the man Jesus, the best man that ever trod this earth; his followers practised this religion for over three hundred years, when its important practical principles, its healing of the sick, its application to every-day problems, as well as its saving of the sinner, were lost sight of to human sense. In the last century the Principle of this religion and its Science; that is, the knowledge of the omnipotent power of God, was rediscovered by Mrs. Eddy, and given by her to the world in what many thousands of converts believe to be the second most wonderful of books, "Science and Health with Key to the Scriptures." This religion is denominated Christian Science, and the world today is better for it. Its followers are legion, and they are daily demonstrating the value of their teaching by its successful application to their daily needs. Christian Scientists do not proselyte, but they do try to see that their fellow-men have opportunity to gain a knowledge of these great truths.—*Correspondence.*

FORT COLLINS, COL.

An audience that filled the Majestic Theater on Sunday afternoon [Oct. 2] listened with rapt attention to a lecture on Christian Science, delivered by Bliss Knapp of Boston. The speaker was introduced by Dr. George H. Glover, head of the veterinary department of Colorado Agricultural College and president of the American Veterinary Medical Association, who said,—

Thought is becoming more powerful, and power is becoming more thoughtful. From the dawn of civilization man has engaged in a relentless struggle for power, and has, forsooth, made very poor use of it. A new era is dawning —an era of love. An era of cooperation, and not competition, save in those things which go to make life dearer and heaven nearer, an era of knowledge and desire to live in harmony with the good of things, an era where men are to conceive more and more of the things which God hath prepared for them that love Him. I am not a member of the Christian Science church, but I am informed that it is customary to invite an outsider to introduce the speaker on occasions like this. I assure you that I feel highly honored to be granted this privilege. I must confess that Christian Science people are, as a whole, the most loved and loving and consistently lovable people I have ever known. They must be and they are inspired by a great faith and uplifted by a great spiritual truth.—*Courier.*

MILWAUKEE, WIS.

"Christian Science: A Religion of Progress," was the subject of a lecture delivered Thursday and Friday evenings [Oct. 13 and 14] at Plankinton Hall Auditorium, by William D. McCrackan, M.A., under the auspices of Third Church of Christ, Scientist. Each lecture was attended by an audience which crowded the hall, and the addresses were listened to with deepest attention. L. J. Klug, First Reader of Third Church, introduced the speaker Thursday evening as follows:—

We are living in a most practical age. In every department of life we behold activities and achievements which proclaim the determination of man to improve his condition. Man feels that he has an inherent right to resist whatever makes for poverty, limitation, sin, disease, and death. He is rapidly repudiating all philosophies, doctrines, and teachings which attempt to reconcile these phenomena with the will of an almighty and intelligent God. He is again applying himself to the problem of proving that these phenomena do not comprise a constituent part of God's plan, and he is striving to do this in the same way that Jesus Christ, the great Exemplar, did.

All those who are observing the signs of the times can say that man's efforts in this direction have been crowned with splendid success. As a Christian Scientist I feel that the teaching and practice of Christian Science have been a most potent factor in making this success possible.

On Friday evening Mr. McCrackan was introduced by James Phelps, First Reader of First Church, as follows:—

I wish to felicitate the lecturer on the choice of his subject—"Christian Science: A Religion of Progress." When one thinks seriously and rationally about it, why should there not be progress in religion as well as in agriculture, transportation, manufacturing, mining, or any other forms of human endeavor? I, for one, have little sympathy with the sentiment that the religion of our fathers is good enough for us. If our fathers had reasoned thus, we should all be idol worshipers and indulging in other gross forms of superstition and ignorance. Certainly we should not have been Christians. I heartily concur with the poet who believed that

Through the ages one increasing purpose runs,
And the thoughts of men are widened with the process of the suns.

By this I do not mean to intimate that any one has progressed beyond the religion which Christ Jesus taught, demonstrated, and lived; but I do believe and maintain that Christian Science is a radical step out of materiality and toward the ideals of the Galilean Prophet. Christian Scientists claim that the Discoverer and Founder of their religion —the Rev. Mary Baker Eddy—has laid hold of the true meaning and import of Christ's teachings, and for the last forty years has labored unceasingly so to elucidate these teachings as to make them of practical benefit for the uplift of the human race.—*Milwaukee Sentinel.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Albany, N. Y. (First Church).—Bicknell Young, Harmanus Bleecker Hall, 3:30 p.m., Nov. 20.
Boston, Mass.—Frank H. Leonard, The First Church of Christ, Scientist, The Mother Church, Falmouth, Norway, and St. Paul streets, Nov. 17.
Camden, N. J.—Willis F. Gross, Temple Theater, 3:30 p.m., Nov. 27.
Chillicothe, Ohio.—Rev. Arthur R. Vosburgh, Masonic Opera House, Nov. 17.
Cincinnati, Ohio (First Church).—Bicknell Young, Music Hall, Nov. 28.
Colfax, Wash.—Prof. Hermann S. Hering, Ridgeway Theater, Nov. 25.
Concord, N. H.—Frank H. Leonard, Church Edifice, Nov. 29.
Easton, Pa.—Frank H. Leonard, Heptasoph Hall, Nov. 28.
Fresno, Cal.—Rev. William P. McKenzie, Horton Opera House, Nov. 22.
Independence, Mo.—Rev. Arthur R. Vosburgh, Court House, Nov. 22.
Kansas City, Mo.—Rev. Arthur R. Vosburgh, First Church, 3 p.m., Nov. 27; Second Church, Nov. 28; Morton's Hall, Nov. 29.
Laconia, N. H.—Clarence C. Eaton, First Unitarian Church, Nov. 20.
Los Angeles, Cal. (Second Church).—Rev. William P. McKenzie, Shrine Auditorium, 3 p.m., Nov. 27.
Marion, Ohio.—Hon. Clarence A. Buskirk, Grand Opera House, 3 p.m., Nov. 27.
Mechanicsburg, Ohio.—Rev. Arthur R. Vosburgh, Main Street Theater, Nov. 14.
Muskogee, Okla. (First Church).—Rev. Arthur R. Vosburgh, Hinton Theater, Nov. 25.
New Haven, Conn. (First Church).—Willis F. Gross, Church Edifice, Winthrop and Derby avenues, near Chapel street, Nov. 28 and 29.
North Yakima, Wash.—Prof. Hermann S. Hering, Yakima Theater, 8:15 p.m., Nov. 28.
Ocean Park, Cal.—Rev. William P. McKenzie, Ocean Park Auditorium, Nov. 28.
Paris, Tex.—Francis J. Fluno, M.D., Peterson Opera House, Nov. 22.
Riley, Kan.—Clarence C. Eaton, Sargent's Hall, Dec. 2.
Rutland, Vt.—Frank H. Leonard, Dunn Hall, Nov. 22.
Saginaw, Mich.—Lecture for Nov. 14 canceled.
Seattle, Wash.—Prof. Hermann S. Hering, Moore Theater, 3 p.m., Nov. 27.
Shreveport, La.—Mrs. Sue Harper Mims, City Hall Auditorium, Nov. 28.
Taunton, Mass.—Frank H. Leonard, Taunton Theater, 4 p.m., Nov. 27.
Wheeling, W. Va.—Bliss Knapp, Court Theater, 3 p.m., Nov. 27.
Willmar, Minn.—Prof. Hermann S. Hering, Church Edifice, 8:30 p.m., Nov. 21.

TESTIMONIES OF HEALING.

The Bible tells us that God is Love, yet for forty years I had wandered in the wilderness, not realizing this truth. Since my fourteenth year I had been a church-member, but I wanted something more than the services, ritual, and music of that church—something it did not give. I tried one path and then another, seeking that which seemed always beyond my grasp; never satisfied, always heart-hungry, feeling a lack, an aching void, even though when tired of the thorny paths I would rest in some quiet valley of seeming peace, trying to lull myself into content by believing there was nothing beyond that which I possessed.

One after another, my loved ones passed on,—mother, father, sister, husband; then I lost my home and health. The clouds were dark; I could see no light, and my heart rebelled. For four years I had been under medical treatment, and for more than a year I had eaten nothing but the most simple food, and even then had to use medicines. My physicians said the trouble was intestinal, and then that I had gall-stones and another ailment. Then, when I was under examination for these troubles, the doctors discovered that I had a most interesting and unusual malady—aneurism of the abdominal aorta. I then went to Boston and was examined by one of the most renowned surgeons there, who said I must be operated upon at once, to have the gall-bladder and appendix removed, or I could not live. My husband's death had followed a surgical operation; and I said if I felt certain of the result I would consent to an operation, but the thought of the months of invalidism that seemed likely to ensue, made me hesitate. The aneurism was pronounced incurable, and as I had read about the Emmanuel movement I wrote, begging to join one of the classes. I received in reply a kindly and sympathetic letter, which, however, said I must trust myself to my physicians' advice; that in the Emmanuel movement only functional troubles were treated.

I had thought of Christian Science and talked of it, but my friends had no faith in it. In the ten years I had lived in Maine, I had not been among the Christian Scientists, and had heard Mrs. Eddy spoken of only in terms of ridicule. I came to Ohio, and at a time when the aneurism was particularly troublesome, I went to a Christian Science practitioner who had formerly been a trained nurse, and asked her for treatment. She opened my eyes to the truth that God is All, and that He is good. She told me to get "Science and Health with Key to the Scriptures" by Mrs. Eddy, and to read it every day. The friend who had sent me to this kind lady had talked to me of God as no one had ever spoken to me of Him before; this practitioner used the same language and thought, and my soul was awakened to a great longing for light and understanding. I began to read Science and Health. I had read it many years before, but did not understand it; now, it came to me like manna from heaven, and the Bible which I had read but little for many years became dearer and clearer in this new interpretation. In one week I was a well woman! I was almost scared when I found that the pulsation had ceased,—I could not see it, I could not feel it, it was gone! and all the soreness and pain in the abdomen which for four years had been present, had disappeared.

It is now over a year since I was healed, and one who has been a doubting "Thomas" said of me recently to an enquiring friend, "She is always well and always happy." Surely I can say with the psalmist, "Thou hast put gladness in my heart." I do give thanks constantly to God that He has led me from destruction, and that He is guiding me; I no more bear the burden of sin and sorrow, the ever-present Christ has freed me. The pangs and pains of the flesh have been made null and void. Each day I see more clearly God's guiding hand. In His great goodness He permits that through my humble life a tiny spark of His great light and love should radiate and illumine the small orbit of my daily walk. This light shines steadily, thank God; not fitfully as at first, but softly, sweetly, gleaming from the sunshine fountain of Love; and with the knowledge of Christian Science all good has come to me,—health of body and spiritual wholeness.

The last barrier to go down was a little unacknowledged feeling I had harbored for years, that Christian Scientists gave too much credit, too much homage to Mrs. Eddy; yet I was reading her writings constantly and finding in my own life daily cause for thankfulness. The bane of my life for twenty years—severe headache—disappeared with all my other ailments. My eyes ceased to pain me. The first reading I have ever been able to do on the cars was when I began to read "Science and Health with Key to the Scriptures"—now it is my constant and dearest traveling companion. I never was brought near to God until I found Him through studying this book. One day, while reading "Unity of Good," a flood of love and gratitude to our beloved Leader swept through my being, sweeping away forever all barriers of prejudice and pride, and an overwhelming realization of the truth came to me. I seemed to see what her inspired teachings are doing for the world,—the hundreds of thousands lifted from evil and despair into the light of Love,—into health physical and spiritual. "Therefore did my heart rejoice and my tongue was glad."

MRS. NELLIE STANDART HOBBS, Milan, Ohio.

I wish to express my gratitude for the many blessings received through the study of the Christian Science literature, and the application of the truth therein taught. Science and Health found its way into my home when I was in need of the light which dispels darkness. This light was always present, but I saw it not until six years ago, when I was healed by reading this book, which was sent me by a good friend who asked me to read it, and said that if I did so I should not need to have another operation. I had already undergone three operations for an abnormal growth, and was no better. I was also suffering from a stomach trouble, and as I had not been able for over three months to retain food, I had become very weak. There were also various other ailments of long standing. A physician who examined me said I ought to have a most serious operation performed; but I did not, for a better way came to me, healing me completely after many years of suffering.

The morning of my healing I told my husband I was not going to get up until I was better. Afterward, as I lay there alone, my thought turned to God, and I wondered why He let me suffer so, after I had studied the Bible and worked faithfully in the church for years. I could not understand it then; but, whereas I was blind, now I see. An inward voice bade me read Science and Health, and I obeyed promptly. Getting the book, which had been in the house a short time, I began to read the chapter on Prayer.

When I got to the paragraph on page 14, which begins, "Become conscious for a single moment that Life and intelligence are purely spiritual," all sickness left me. After reading that paragraph I felt a freedom which I cannot express in words. The first thought was—"I am well! I shall never have to take medicine again." Getting up, I gathered up the various kinds of medicine and destroyed them. I have never used anything of the kind since, and there have been no ills in our family that Christian Science has not healed. When my husband came home I was dressed and went with him to the hotel for dinner. I ate heartily and had no fear, though I did not then know all that was in store for me and my family by putting into practice the beautiful teachings of Christian Science which heal the sick and cast out sin. After my healing I began a careful study of Science and Health, and was enabled in one treatment to heal my son of a cough which had troubled him for over three years.

Some time after beginning this study, I was riding

Digitized by Google

through the woods on horseback and had an accident which injured my foot severely. A physician who was called said I must have a plaster cast, and that I could not walk for two months or more. I knew that Christian Science would do the work and told him so, but he insisted in putting on a bandage. After he went away I removed the bandage and slept the rest of the night. In the morning the foot was badly swollen and discolored, but there was not much pain, although I could not move it. I read Science and Health nearly all day, and treated myself. The next morning I put on my shoe and attended to my household duties, and had no further trouble with the foot.

Many blessings have come to us, and the spiritual uplift has been very beautiful to me. My son and myself are earnestly working to realize, "Thy kingdom come," and omnipotent and omnipresent Love is healing the sick here in the South through those who are obedient to the teachings of Christian Science. The first three or four years of my new-born faith I was alone, the nearest Scientists being many miles away, but I found the *Sentinel* and *Journal* a great help and comfort. I love Mrs. Eddy because she was so spiritually minded that God could use her to give to the world the truth that heals.

MRS. JENNIE L. BARTRAN, Lake Charles, La.

The psalmist says: "Come and hear, all ye that fear God, and I will declare what he hath done." God sent His word, which restored my soul and healed my body, thus proving that the great Physician is here with us today. Before being led to investigate this healing religion, I was a young girl with apparently no prospect of a bright future before me. I had been forced to abandon my school work two years previous, on account of several ailments which appeared to have secured a firm grasp on me. I was said to have a serious spinal disorder, the result of an illness which I had when an infant. I was treated by different physicians, but their most untiring efforts failed to produce the desired results. I went to Kansas City, where I spent some time under medical treatment, which afforded temporary but not permanent benefits. I next turned to another method, only to encounter the same disappointment, after several months of treatment.

Having now abandoned all material means of cure, I turned at last, in a very humble attitude, to the supreme power for aid, and knocked at the door of divine Science for admittance. I was still suffering from all of the former ills, in a more aggravated form, together with a serious stomach trouble, to which I had become such a slave that for two months my diet had been very rigid. Since gaining admittance into this shrine of Truth, and having recognized man's divine right to dominion, these illusive conditions, spinal and stomach disorders, severe headaches, and eruption of the face, a sense of weakness and other ailments, have all disappeared (some instantaneously, others more slowly), until now I am declared to be a picture of perfect health. I have proven the truth of these words in Exodus: "I will take sickness away from the midst of thee."

I find myself so filled with gratitude for the many blessings I have received, that I feel the only way I can express my thankfulness is to devote myself wholly to this noble cause; and I have only this aim in life, to make earth a fairer, holier place, and to rise each day into a higher sense of Life and Love. While I am only in my teens and have my school work before me, I know that with divine Principle as my guide I shall finally reach this goal. Christian Science has been a help beyond estimate in my work in school. Through the understanding of God as my only intelligence, and therefore sufficient to meet my every need, whether in solving a mathematical problem, making a translation, or any other proposition, I have been able to pass creditably. I have overcome the fear of storms entirely, by holding the thought that God is all-power, and we have ever the divine assurance, "Fear not, for I am with thee." My heart overflows in gratitude to God, who has not only showered blessings upon myself, but upon other members of my family. I recently had the pleasure of attending a testimonial meeting, at Carthage, Mo. While I am at present debarred from this pleasure, owing to the fact that no services are held near my home, I content myself by diligent reading of the Bible, Science and Health, the periodicals, *Quarterly*, and other Science literature. Many times I have been wrapped in the peace which this reading imparts, with never a thought of the hard day at school before me, when the clock struck four in the morning.

I, too, entertain that same sense of thankfulness which all Scientists possess for Mrs. Eddy, through whom we have gained an understanding of the true God, "who crowneth thee with lovingkindness and tender mercies."

MISS DAYSE HOSHAW, Mount Vernon, Mo.

In April, 1908, my daughter, eleven years old, came home from school one Friday afternoon with a high fever. I tried to help her that evening and during the night, to the best of my understanding, for since coming into Science, about two years previous to this time, I had been able to meet any physical inharmonies for her; but the following morning I realized that I needed help, and called a Christian Science practitioner. In order to comply with the board of health regulations, a physician was also summoned. He diagnosed the case as a fever, then asked me how long it was since the child was first taken ill. I told him that it was only since Friday. He remarked that he had never known a case to develop so rapidly. Then for three days a battle against error was waged, for to sense the fever was of a malignant type, the patient being delirious most of the time, but in just one week from the time she was taken ill the entire condition was overcome through Christian Science.

After such an experience, in which Christ, Truth, has proven omnipotent, we can but praise God for His goodness to us, and we are grateful for the understanding that Truth does heal all our diseases. Through the study of Christian Science I am learning that as I strive, watch, and pray for that Mind "which was also in Christ Jesus" (Science and Health, p. 497), I shall be able to overcome all evil. Is it any wonder that every true Christian Scientist is filled with love and gratitude to our Leader, who has opened to us the way whereby we can gradually come "unto the measure of the stature of the fulness of Christ."

MRS. EVA INEZ WALTERS, Grantwood, N. J.

Since I came to know of Christian Science, in August, 1904, the blessings which it has brought into the lives of those I love, as well as into my own life, both physically and spiritually, are such as I cannot longer fail to acknowledge. The name of our honored Leader holds a sacred place in my heart, and to her it is due that all of her followers should give unceasing praise to the God whom she has taught them to know better and love more.

S. G. TREMAIN, Saratoga, N. Y.

I never felt so grateful for this healing truth as when I was led to recall my husband's healing in Christian Science. He had suffered with asthma for years, and when quite young in Science I was able to help him somewhat; but error crept in, and I could not do the work, and for a year it was a struggle. Being kept awake night after night, I was nearly beside myself, and at last I started out to get help. The "still small voice" guided me to a Christian Science practitioner, who treated him absently. He would not then read the text-book, but I felt that I must have help, and it seemed to me that help must come or he would not be here long, as the attacks were terrible. Formerly, when under a doctor's care, he would be prostrated for days, but

Digitized by Google

under Christian Science treatment, the attacks grew less and less, and finally disappeared in about three months. About three years have passed, and he never was in such robust health before. He is now gradually turning to Truth, without any material help, for Science always does the work in time of need for us both.

I thank God for revealing this blessing to humanity, and I am grateful to Mrs. Eddy that she was enabled to lead us aright, for without her we should all be in darkness still. My hope is that I may be able to help others in this truth.

MARIE A. HOUSEHOLDER, New York, N. Y.

Remembering how eagerly the *Sentinel* was searched for testimonies relative to the cure of so-called nerve and heart troubles, while my own healing in Christian Science was being effected, I write this, praying that some distressed one who may chance to read it, shall thereby gain new courage. In coming back to the scene of my illness of five years,—taking with ease the walks which I once found impossible, enjoying work or play with a zest only possible where perfect harmony of mind and body prevail,—I am moved to exclaim many times, "Oh, if only every poor sick girl could know what great things the Lord hath done for me!" I realize that the attitude, "Oh, I do not think Christian Science could help me; nervousness may be cured, but I have such terrible pain, and I have prayed so often, but I suppose I should just ask to be made patient instead of well," is the line which separates them from health and blessings undreamed of. If they could but grasp the comforting assurance that they need not trust in self at all, they would put themselves in God's hands and come out triumphant.

After suffering for five years from what was finally termed an arterial aneurism by three of my seven physicians, and knowing no relief from pain except when under the influence of an opiate, I was led in my extremity to write to a friend who I knew had been healed in Christian Science of serious lung trouble. She replied by sending me a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. In reading the chapter on Christian Science Practice, I grasped the essential point, and I went right to work. By mentally resting in the thought of security in Truth, the sense of pain vanished, my healing being only retarded by my needless fear. I realized that I had indeed been "transformed" by the renewing of my mind.—ANNIE L. ELLIOTT, Parrsboro, Nova Scotia.

It is with a heart overflowing with gratitude that I tell what Christian Science has done for me. Two years ago I was taken seriously ill with rheumatism, which seemed to settle in my right knee. I was a trained nurse, and at the time was in charge of a very severe case of illness. As soon as I could get off duty I went home and to bed, and it was four months before I was out again.

After many consultations, the doctors decided that my knee was tuberculous, and a plaster cast was put on from my hip to my heel. The cast had been on about three months, and I was given up to die by the medical profession, but a dear friend of the family suggested that I try Christian Science. I had very little faith, in fact none, but I was willing to do anything for relief, so this friend telegraphed to a practitioner in Minneapolis for treatment. After the first absent treatment I slept all night, the first sleep which I had had for two weeks. Even the opiate given me had been of no effect, and this in itself was another wonderful healing. So much of the drug had been used to deaden the sense of pain, that it seemed as if I could not live without it, but with less than a week's treatment in Christian Science all that craving was gone. This was the first of April, 1909, and I have never taken a hypodermic since and certainly never will.

After the cast had been taken off, my knee remained stiff, but I have faith that this will be overcome as I realize that in God is my strength and health. I never could return to medical nursing, but am very desirous to take up nursing under Christian Science. In gratitude to God I feel it my duty to use my knowledge of nursing in doing His blessed work. I thank God daily for this understanding of the Bible, and am also grateful to our beloved Leader, Mrs. Eddy.—EVA L. JONES, Jamestown, N. Dak.

I have long felt a desire to testify to the great good that I have received through Christian Science. Our little boy was taken ill with an acute attack of rheumatism over a year ago. He was in such pain that he could not move, and we sent word to a Christian Science practitioner, who gave him treatment. In a short time he was laughing and playing, and in two treatments he was healed completely. For this I am indeed grateful, and it is with a heart full of gratitude to God, and to our dear Leader, that I offer this testimony to Truth's healing power. I have known of Christian Science a little over three years, and more good has come to us in that time than ever before. When I came to Christian Science I was almost a confirmed invalid and was in bed the greater part of the time. I had been under the care of doctors all my life, but never knew what it was to be free from pain, and my heart was so weak that the doctor said he could do nothing more for me. I thank God that Christian Science came to me when in great need, and I can truly say, "The word of God is quick, and powerful, and sharper than any twoedged sword."

I have been helped mostly through the study of our textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, although I have taken a few treatments. I have not yet overcome all error, but I am trying to demonstrate the healing power of Truth and Love, and I know the way will grow brighter unto the perfect day. I had been a church-member for years before coming into Science, but now the Bible is a new book, full of life and hope. I am indeed grateful for this physical healing, because it has proven to me that I have found the true religion, the realization of which has brought me peace and joy beyond measure.—ANNIE E. HERRON, Nanton, Alberta.

My heart goes out in gratitude to God as I think of Mrs. Eddy. I had suffered for fourteen years with stomach trouble, when I found that Christian Science does heal the sick, for the Principle thereof is God. Could it have been aught but inspiration which led our revered Leader into higher realms of thought, where through faith she found and acquainted herself with God and was at peace! In the long years that I suffered I could find no help in *materia medica;* in fact, I was growing worse every time I tried to gain relief from medicine. The last two weeks before I found Christian Science, I was unable to retain any kind of food without terrible distress. Then I found a practitioner, and after taking three or four treatments, the spiritual uplifting was to me simply wonderful, for I was made acquainted with the God whom I had ignorantly worshiped. For three and a half months I did not know I had a stomach, when I was again brought to a realization that I must prove the truth at every step of the way. This took me about six months, when I learned to apply the Principle correctly, and this enabled me to overcome entirely the sense of stomach trouble and many other difficulties. For this healing I feel very grateful to God, and also to Mrs. Eddy.

MRS. E. DOROTHY BAKER, St. Paul, Minn.

It is with great pleasure and thankfulness to God that I tell what Christian Science has done for me. I daily thank Him for having revealed this truth through one who has ever been faithful in holding aloft the banner of purity, peace, and health.

In June, 1908, when I visited my sister, I was suffering

Digitized by Google

greatly with my eyes, being unable to read or sew. I had forgotten my glasses and was thinking only of material aid. Not having any faith in Christian Science, but believing it to be a courtesy due her, I asked my sister to treat my eyes. I shall never forget her beautiful faith in God, and her knowledge of His care,—His love and protection over us,—and I was impressed with her calm assurance. I wanted to know how I could worship God "in spirit and in truth." After I left, she gave me one other absent treatment, and that was all. Although I thought I should surely be troubled again, I was not. For many years, while in school, I have had to give up my studies for weeks at a time, and since then have been unable to read or sew, although I had been fitted with glasses at four different times, but this did not seem to be of any permanent benefit. I had always been told that I had inherited the trouble, but thanks to the clear understanding gained by my sister through the Bible as interpreted in Science and Health, the touch of divine Love has forever dispelled the mist which clouded my physical and mental vision.

After more than a year devoted to its teachings, I can truly say that I have found Christian Science to be the "pearl of great price." I pray that I may so live as to reflect the harmony of divine Love, which has been made known to us by our Leader as God's kingdom.

MRS. MATTIE WILKINSON, Fall River, Kan.

I am indeed thankful for the benefits I have received and am continually receiving through Christian Science,—thankful to God, who is Life, Truth, and Love, and thankful to the one who is the loved channel for this truth to us. I have been healed of several physical ailments with the aid of practitioners and also by knowing the truth for myself. The healing of my eyes and the laying off of my glasses were accomplished by the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I have not had my glasses on since, and although I have suffered at times, I know the truth, and have not had a return of pain or inconvenience for several months. I am doing very close work as associate editor on a banking magazine, and am in full charge of the paper a part of the time, so I have need of my sight. I pray for a full understanding of Christian Science more than for anything else in the world, for it means all; and to have received and realized even one benefit only, tends to make one cry out incessantly for more.

How shall I repay Mrs. Eddy the debt of gratitude I owe? By reverencing her as the one accounted worthy to declare the healing truth in this age, and by living in the consciousness of good at all times. The writers in all the Christian Science periodicals seem to know just what I need. Before the *Journal*, the *Sentinel*, or the *Monitor* is opened, I know that I shall find just the word of advice, of cheer, of comfort along the way, that I am longing for.

MINNIE B. R. AMES, Portland, Ore.

[Written for the *Sentinel*.]

HOPE.

WARWICK JAMES PRICE.

HOPE is no day-dream of a dim "perhaps,"
Nor castle-building reverie, which saps
Endeavor of the present. It is not
Some indistinct desire that my lot
Shall somehow shape itself to different mold
At my mere whim which, like a tale that's told,
Lives but an empty moment.
None of these
Is hope, sister of faith. It is the certainty
That victory's wreath will ere long rim my brow,
For God's good gifts are given here and now.

FROM OUR EXCHANGES.

[*Outlook.*]

Perhaps the most vital struggle of humanity is to keep God alive in its thought. The fathomless source of life, He has been and is fast bound in formulas which have as little relation to His tidal energy and vitality as the little stream which is conduited from the great cataract to do the work of a factory. The Master of life, whose universe moves through an endless series of changes, He is locked in catechisms and books of theology as if He were the creature of systems and could be compassed by them, instead of being the very Soul and source of abounding freedom. The great Lawmaker, He has been brought to judgment into statute-books and made the slave of human interpretations of His will. Men have been told again and again that He cannot justify the sinner, that He must receive the exact equivalent in blood of every ounce of transgression, that He cannot violate His own laws of matter—as if we knew finally what His laws are! There must be statements of faith, but they have no authority when they substitute a philosophy of which we are ignorant for an experience which we know; there must be churches, and there always have been churches in which the thought of God was an inspiration and the sense of His presence a great and sustaining comfort; but God is not shut up in churches, and any attempt to imprison Him within four walls is a terrible disaster to humanity. Many a boy has looked out of the church window on a summer morning and wished he were with the birds in the freedom of the radiant day, and believed himself a sinner for the longing; and has not known that the God of his fathers was calling him from the open fields rather than from the pulpit before which his fathers had sat. There is one God, and He is unchanging, but our thoughts of Him must widen as He more and more rises above the horizon of knowledge and experience. Each age must know Him for itself; each age must speak to Him in its own tongue; in every age the thought of His love and power must be renewed. The ancient revelation stands secure; but there must always be a new revelation in the experience of each succeeding generation.

[*Christian World.*]

In a sense we make our world. It is a world constructed largely from within. How far that inner product corresponds to the outer universe it is supposed to reflect, can only be with us a matter of faith. If we were different beings, if our senses worked in a different way, would not the world be different for us? We can only reply, "We are what we are, and the world is what it is to us." But this rebound of the soul upon its world is a great deal more than a mere metaphysical puzzle. It is the illustration, on the largest scale, of what we owe to the inner spirit. "Not that which cometh into the man, but that which goeth out from the man"—there, as Jesus put it, is our great concern. And behind that—in a way, more than that—there is what happens before the outcoming. The real history of the world, the future of the world, lies not in its battles, sieges, conquests, the whole material of our newspapers, our chronicles, but in what is taking place deep down in the recesses of the human spirit, in the perceptions, cogitations, wrestlings, will-determinings of the foremost minds. All the religions, all the literatures, all the social organizations, all the judgments upon life, can be reduced to one formula: they are the indications of the size and quality of the world's soul at any given time. Your creeds, your congresses, your governments, are straws in the wind. What really matters in any epoch is the question, Has the soul moved? has it gained any fresh step in its development? That is the event which will decide all other events.

Digitized by Google

[Rev. C. L. Goodell, D.D., in *Zion's Herald.*]

We preach many sermons about the rejection of Christ, and we blame the men of his century; but what is the condition with us? We bow before the conventional, and are smug and comfortable. If we had Christ with us today, we should find him a great inconvenience and maybe send him to an asylum. Such zeal as his is uncomfortable, but the record of history is that in all its great ages humanity has bridged the gulf which threatened it by "walking over the body of some fanatic who made himself a highway for the body of some fanatic who made himself a highway for his race." Jesus was a man of intense feeling, and he never held in his emotions. When he saw men rob their poor neighbors at the seat of the money-changers, he overthrew the tables and thrust the money-changers down the marble steps. When he saw the city given over to indifference and walking holy places with stolid heart, he wept. To be interested in men and things is not bad form—it is Christlike. To warm up to a publican and to warm over a Pharisee is the kind of business which thrills the heart of God. He said there was one thing all men needed, and that was conviction. We have our foibles and indifferences, our by-plays and our avocations, but we have not convictions. And what is a conviction? Why, something that makes a convict of you: a thing which shackles a man from every other thing; which binds him to a purpose so that he cannot let go. A Christianity without conviction is powerless, and it is a contradiction of terms. A Christianity that prefers plans of salvation to salvation itself, that raises definitions of the nature of Jesus above moral surrender to the joy-giving Saviour, is a travesty on the gospel of the Son of God.

[*Universalist Leader.*]

The simplicity of Jesus is not the dead level of uniformity of thoughts. It is not the concentrated narrowness and directness of a peculiar "mission." By all the standards of partisans and zealots the life of Jesus is a contradictory and perplexing fact. Its simplicity and unity and symmetry are understood only when we go out of doors and look at nature and think of creation. The simplicity of Jesus is the simplicity of birds and flowers and sunlight and blue sky and infinite beyonds, all blended in one great impression of order and grandeur and harmony. His is the unity of an inward principle of spiritual experience which blends all life in one vast sea of light and joy and confidence. He is living in God's world. He is breathing again the spirit that made dust almost into divinity in Eden. He is abroad in a universe whose every wind blows out of heaven, whose every form is a symbol of a divine life. Out there he lived, and morning, noon, and night brought him some fresh and beautiful sense of that presence which was everywhere. His life was not according to formula. It was a perpetual overflow of spiritual vitality. The old bottles never held the new wine of life. So full, so fresh, so free, so running over was that life with the crowding multitude of things tender and holy and prophetic, that each day had to furnish its works and words for revealing its power and progress. Such living never exhausts itself. Each morning and each evening it must find new measure into which to pour its wealth. And yet, in a life lived thus under the rule of God, there is never a moment of doubt, never any real complexity. Its movement is as rhythmic as the sea. Its simplicity is absolute. It lives in the whole and not in parts. It is the cosmic, universal Life.

[*Continent.*]

The Christ was so eager to save the sinner that it seems as if he almost forgot the sin. Surely he plunged straight into the midst of sin, fearless of its contact, unhindered by its shame and repulsiveness, feeling only the bitter loss and slavery suffered by the soul enthralled in it—determined at every cost to get the man or woman free to live once more the life that God meant His children should live.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel.*

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel.*

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

NEW PAMPHLETS.

Now on sale are three new pamphlets: "Seeking and Finding," "Prayer and Healing," and "The Divine Nature." Each pamphlet contains five to eight articles that have previously appeared in the *Journal, Sentinel,* or *Monitor;* and they are particularly suitable for handing and sending to inquirers or persons who are becoming interested in Christian Science.

Hereafter, the price of all pamphlets (except "What our Leader Says" and "Christian Science and Legislation") will be reduced to 5 cents a copy; 55 cents a dozen; $2.00 for fifty, and $3.50 for one hundred. Hereafter, also, the republication in the English language of single articles as "tracts" or "reprints" will be discontinued. It is believed that their place is better taken by the daily article on Christian Science in the *Monitor* and by these new pamphlets and others that may be issued.

NEW POST CARDS OF THE MOTHER CHURCH.

Post card photogravure, in sepia tint; an exact reproduction of the large photogravure of The Mother Church Buildings and Publishing House with parkway in foreground.

Single copy	$ .05
Twenty-five copies	1.15
One hundred copies	4.25

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herald,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90, six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage, at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The Standard Oil Company of Indiana will be brought to bar in the Federal court at Jackson, Miss., to answer to alleged violations of the Sherman law. The case is regarded as being of equal importance with the suits heard at Chicago by Judge Landis. Specifically, it is charged that the Standard Oil Company of Indiana received concessions from several railroad companies on numerous consignments of petroleum and petroleum products from their refineries at Whiting, Ind., to fifty-two cities and towns in the southern territory. At Grand Junction, Tenn., the Government declares, the shipments were reconsigned, this course being taken in order to procure an unfair advantage over competitors, a proceeding, it is claimed, which is in violation of the anti-trust laws of the United States.

It is calculated that eighty-six of the leading railroads in the United States, embracing 217,782 miles, utilize the telegraph in train despatching on 189,939 miles and the telephone on 24,831 miles. It was only as recently as the fall of 1906 that the telephone was first tried in train despatching. All the large systems are doing something at present looking toward the total or partial substitution of the telephone for the telegraph in train despatching.

Federal indictments, charging conspiracy to defraud the Government of more than twenty thousand acres of Alaska coal lands, valued at two hundred million dollars, were returned by a federal grand jury at Spokane, Wash., last week against six men who control three groups of coal lands in the Kayak mining field in Alaska. Each group represents one hundred and thirty-one claims of one hundred and sixty acres each.

The federal Government, through the department of justice, has taken steps to procure from the supreme court of the United States a definition of the question, "What is conspiracy, as it relates to offenses against the Government?" The supreme court seems never to have considered the application of the statute of limitations to conspiracies.

President Taft sailed on the 10th from Charleston, S. C., on the armored cruiser Tennessee with the Montana as convoy, for the isthmus of Panama, to get in personal touch with conditions along the big canal. He arrived at Colon on the 14th, and immediately proceeded to Culebra, the first place to be inspected.

Secretary of the Navy Meyer has just completed an inspection tour of ten thousand six hundred and thirty-three miles. He announces that there are too many navy yards on the Atlantic and Gulf coasts. He is enthusiastic over the proposed Guantanamo naval station.

The interstate commerce commission has taken important action in the pending rate case by requiring the railroads concerned to file certain data in the matter, covering practically all phases of the cost of operation of the roads. In addition an elaborate analysis of securities outstanding is called for.

A conference of New England mayors and other city and town officials was opened at the Boston City Club last week. The session was devoted to an address of welcome and promotion of mutual acquaintance and organization under the auspices of the "Boston-1915" civic advance campaign.

Nebraska is the state of lost towns. The shifting course of the Missouri river swept some away, the shifting of county-seats doomed some, and railroad routes not following anticipated surveys caused not a few to dwindle.

The Vermont Legislature proposes to tax trees cut for the Christmas trade twenty-five cents each. The avowed object is to prevent the forests of the state from being denuded of young trees.

According to the annual report of Superintendent Brooks of the Boston school committee, greater stress will be placed on the teaching of the elementary studies in the lower grades.

The next hearing in the Government's action against the so-called bath-tub trust will take place in New York.

International.

The Quebec Legislature has instituted a public utilities commission and empowered it to take such control and supervision of public utilities as places it in authority over every telegraph, telephone, and power company, over every tramway and street railway, and over every gas and electric light company in the province, and also over all steam railways of the province which do not come under the authority of the federal government.

The chancellor of the University of Cambridge, Lord Rayleigh, presided over a dinner held recently to celebrate the undertaking by the University of Cambridge of the publication of the eleventh edition of the Encyclopædia Britannica. He stated that the King had consented to accept the dedication of the Encyclopædia Britannica, and that the President of the United States had also accepted a similar dedication. The new edition has twenty-six thousand pages, forty thousand articles, and more than fifteen hundred contributers.

The total weight of the bronze coins struck by the British mint for the year 1909 was two hundred and fifty tons—pennies one hundred and seventy-eight tons, half pennies forty-seven tons, and farthings twenty-five tons. Including the colonial coinage, nearly one hundred and thirteen million coins were struck.

The Italian government will propose to the Chamber of Deputies a new system of taxation which, if approved, will provide an increase of twelve million dollars in the annual income. This sum will be devoted to the aid of the regions which have suffered from the recent earthquakes and storms.

It is proposed to establish an agricultural college for girls at Alkmaar, Holland, where only daughters of farmers will be accepted. The courses taken will be along the line of housekeeping for farmers, caring for calves, chickens, teaching in general the household duties for a farmer's wife.

The rumor is current that American capitalists have a scheme of connecting Egypt with the Bagdad railway by means of a Syrian coast line connecting Port Said, Jaffa, Haifa Beyrouth, Tripoli, Alexandretta, and Adana.

An agreement has been signed by which English, German, and French banks will participate in the loan of fifty million dollars which an American syndicate will make to China.

Emperor Nicholas of Russia, attended by Sergius Sazonoff, the Russian minister of foreign affairs, and a suite of fifty, visited Emperor William at Potsdam last week.

Among other proposals along agricultural lines, the Netherlands government considers establishing an agricultural college at Groningen for the education of colonial boys.

Railway expenditure by the Canadian government last year was $32,862,074, of which $21,505,975 was charged to capital, $2,260,214 to income, and $959,903 to revenue.

An agreement has been reached between the Turkish government and the German bankers for a loan of forty-eight million four hundred thousand dollars.

The municipal authorities of Liverpool have demolished twelve thousand unsanitary dwellings in the last forty years.

King George of England has issued a proclamation which fixes the date of the coronation as June 22.

Industrial and Commercial.

The meeting of the sub-committee on frames of the Society of Automobile Engineers met in Cleveland last week and passed the following: "The current practice in frames for motor cars has little uniformity in sizes and proportions of the sections. A smaller number of sections would be sufficient and give the following advantages: Reduce the tool cost; increase the output of all presses by reducing change of tools; reduce the number of different sizes of stock required; reduce the number of variations in the sizes of all parts fastened to automobile frames."

The famous Dull ranch property has succumbed to the tide of immigration that is flooding south Texas. It is situated eighteen miles from Garderdale, and contains sixty-five thousand acres, all of which is being divided into farms of fifty to two hundred acres each and sold to home-seekers. The owners of the property are establishing a demonstration farm of one hundred and twenty acres, where a variety of products will be grown. The ranch borders the Frio river. Most of the land will be irrigated from this river and from artesian wells.

On July 1 no fewer than 68,726 officials, clerks, and workmen were employed by the Krupp works at Essen, Germany, 37,761 being employed in the steel foundry and the gun-testing grounds alone. Coal and coke to the amount of 2,491,306 tons was consumed during the year, while the number of steam engines employed was 500, developing a horse-power of 80,130. In addition to its own plant for the production of electricity, the firm possesses its own gas-producing plant. It operates 87 miles of railway and has 52 locomotives and 2,306 wagons in use.

Eight big tanning and leather selling concerns, headed by the United States Leather Company, have joined in a protest filed with the insterstate commerce commission against increases from two cents to five cents per hundred pounds on leather, leather scrap, refuse, etc., imposed by several hundred railroads and water lines, particularly in the southern classification territory.

Over fifteen million dollars will be the outlay involved in the purchase just closed of one hundred thousand acres of coking-coal land in eastern Kentucky, its development, and the construction of over a hundred miles of railroad by the Louisville & Nashville and other systems in order to reach the coal field, contracts for the railroad work having already been let.

THE NOTHINGNESS OF EVIL.

SAMUEL GREENWOOD.

HAVE the teachings of Christian Science regarding the belief of evil, or has the attitude of Christian Scientists toward that belief, changed? They have not. In Science and Health, and in her other writings, Mrs. Eddy has always contended for the absolute allness of God, and for the consequent absolute unreality of what is called evil; and she has pointed out to her students that this belief must be met and overcome on the basis of its nothingness. Nowhere and at no time has she encouraged Christian Scientists to ignore the suppositional activities of this belief, but on the contrary she has repeatedly admonished them to guard their thought against its insidious claims. The insinuation that Christian Scientists are beginning to make something of evil is but a specious attempt of error to discountenance Christian Scientists for taking notice of it. "Leave us alone, what have we to do with thee," is ever the plea of error against the truth that is destroying it.

Possibly it might seem to some, who acknowledge reality in both good and evil, that for Christian Scientists to be consistent to their declaration of the allness of God, they should utterly disregard the seeming existence and power of evil. But it should be remembered that the one purpose of Christian Science is to destroy the effects of belief in this seeming opposite to good, and thus deliver mankind from their hypnotic obedience to its illusions; and that, in fulfilling this purpose, it is essential that so-called evil be correctly defined. Although, in the light of Christian Science, Mrs. Eddy has found and declared evil to be nothing, it is not therefore implied that Christian Scientists fully realize or demonstrate this scientific deduction, but they are thereby led to see evil's unreality and powerlessness and so protect their consciousness from its aggressive claims.

It is not the uncovering of evil, but the belief in it, that makes it seem real. Mathematicians refer to mistakes regarding numbers, and show how to correct or avoid them, but not on that account are they considered inconsistent to their conviction that mistakes do not occur in the science of numbers. This is likewise true of musicians, who do not admit that discords have any place or reality in the science of harmony, although they spend years of hard practice in order to avoid them. Then should not this rule hold good with Christian Scientists also, who do not make a reality of evil because they assert its nothingness, and then seek to overcome it on the basis of the infinitude of good. It should be self-evident to all that to be free from mistakes one must avoid or correct them. If the experiences of sin, disease, and death did not appear to mortals as realities, Christian Science would not be needed to show their falsity, or to deliver mankind from their needless servitude to these wrong beliefs.

It is a notable fact that the teaching of God's infinitude is accepted, theoretically at least, by probably every Christian church, yet no one can logically reason from that premise and reach any other conclusion than that reached by Christian Science, viz., that all that is known as evil is unreal. Evil is neither part nor product of good, but as a human belief it claims to oppose good and to neutralize its divine activities; but as good is God, and is all, nothing can truly oppose it; hence evil, even as a belief, is only falsely assumed to exist. To be sure this is abstract reasoning, but practical results prove it to be correct reasoning. Christ Jesus proved for all time the omnipotence of God, and every individual if he so chooses can repeat his demonstration, in some degree, in his own experience. Accepting the teaching of the allness of God, as Christian Scientists do, how are they to meet the claims of evil except as nothingness? In what other way can any Christian consistently meet them? It should not be demanded of Christian Scientists any more than of other Christians that they overcome all sense of evil before being permitted to call this lie by its right name, since it is only by knowing it to be a lie that they or any one can destroy its delusions.

Christian Science has never spoken with uncertain sound on these fundamental points. It has always declared God to be good, and all, and evil to be nothing; but "all" and "nothing" are terms whose significance is not fully comprehended by mortals, hence the frequent failure to draw correct conclusions from established premises. In Science and Health (p. 336) Mrs. Eddy says, "Allness is the measure of the infinite, and nothing less can express God." In Christian Science the word "all" is used with reference to Deity in its absolute sense, and means literally all; and the word "nothing" is used to define the status of evil, also in its absolute sense, and means literally nothing. But one's practical knowledge of evil's nothingness depends upon the degree in which he is able to prove the allness of God, and Christian Scientists do not claim for themselves anything more than this. They are grappling with the sense of evil in their own consciousness, and are slowly but perceptibly overcoming it, not because they believe it to be something and fear it, but because they are assured that it is nothing, hence no power and no person.

If beginners in Christian Science sometimes talk unwisely of certain phases of evil they may be endeavoring to overcome, or give the impression that they regard error of any kind as personal, it is only because their own thought is not yet clear regarding the teachings and method of this Science. Many years ago Mrs. Eddy stated that "the nothingness of error is in proportion to its wickedness" (*Ibid.*, p. 569), and that statement still stands for the guidance of Christian Scientists. Evil in the concrete is not less false than in the abstract. Although it could not present its claims except through some human personality, well-informed Scientists do not on that account invest error with intelligence or reality. Each human individual is responsible if he lends himself to the delusions of error, but in the light of revealed truth, in whatever manner evil is presented, it is, to use a recent phrase, but "vacuity vacuified," a belief possessing not a single atom of truth.

A student of Christian Science is not guided by the teaching of his text-book if he looks upon evil as having actual

being or presence: nor can one overcome it while he thus regards it. Those who are said to speak with bated breath of so-called malicious influence, or those who would make this suppositional evil activity a scapegoat for their own errors, find no justification therefor in the teachings of Christian Science. Evil is never held up to Christian Scientists as something to fear, but always as an error to be corrected through a knowledge of the truth. Every Christian should know, and know persistently, that evil cannot harm him, that it has no activity, intelligence, will, or presence; but he cannot know this if he believes it to be something or some one. He must take and maintain his position alone on the truth of God's infinite being. There is nothing unscriptural or unchristian in that position; but if one takes it, he must in all consistency attribute power to God alone.

Critics of Christian Science need not be disturbed that Christian Scientists sometimes talk about evil, so long as they give it its right name and meet it as a falsity. They are not giving the kingdom to Satan because they refer to certain phases of evil as malicious animal magnetism, for they know they are designating a lie, though their critics may not. Had Mrs. Eddy attempted to state Christian Science in terms to accord with mortals' beliefs, the Christian Science text-book would not have been written, but she has fearlessly and honestly stated the truth in terms best suited, in her judgment, to the demands of the situation. Christian Scientists, as we find them today, are only students, they are not masters or even graduates: but they are demonstrating what they have learned, and not only they themselves but all mankind are being benefited thereby. The history of the Christian Science movement shows that the seeming power of evil is being lessened, and this is the only disintegration that can be said to be in progress.

"AS ONE HAVING AUTHORITY."

WARWICK JAMES PRICE.

THE newcomer to London is rare who does not receive as his first lasting impression of the metropolis the efficiency of its big, blue, benevolent policeman,—"Bobbie," as he is known half the Anglo-Saxon world over. Driving hotelward, and peering out from his cab upon the seemingly endless processions of pedestrians and vehicles of all sorts which pack the narrow streets, the chances are in favor of the traveler's catching more than one glimpse of the order everywhere maintained in the heart of seeming chaos by the calmly confident guardian of the peace. Apparently impassive, yet actually the personification of alertness, wholly unarmed save for the visible insignia of his position bestowed by his uniform, the policeman stands in completest control of the surging thousands which throng the thoroughfares and parks. His unobtrusive yet impressive rule is felt everywhere. A white-gloved hand is raised no higher than the helmet's rim—and instanter the east-and-west traffic stops as if every horse were hobbled, each motor-car suddenly bereft of power. Geranium-laden coster-cart and package-piled van, luxurious victoria and crowded 'bus, all yield unquestioning obedience to that one man's silent command. A moment later and, at a second similar unspoken order, those accumulated columns stream on again while the north-and-south lines wait in turn.

What works the modern miracle? Not the broad shoulders and muscular arms of the man, surely; Hercules' self would be lost in such a contest. It is the recognition of the power which that lone figure represents. He stands on his crossing the embodiment of British government. He speaks as one having authority, and order follows.

What closer parallel may be drawn than with that other (and higher) exponent of present-day order, the student "who adheres to the divine rules of Christian Science and imbibes the spirit of Christ" (Science and Health, p. 462)? Firm at the post of duty, whether in some peaceful backwater of life, or, perhaps, at a point where the main streams of its activities sweep tumultuously together, he stands firm at his post, striving to express the glorious possibilities of man as God's likeness. He, too, is witness of that so-called "pageant of life" as it swirls and eddies past. Sin in its many guises—now as sordid as if but just come from some slums, now redolent of all those outward graces which the more potently mask its evil intent; disease, in its myriad forms,—each, after all, but a part of the one problem of the world's streets: the jingling chains of personal pride and place: the creaking wheels of envy and malice: self-indulgence, stretched at ease upon its cushions; sensualism, hurrying by, the blinds drawn tight across its windows,—these are some of the all but numberless phases of the one evil which this worker for Truth goes forth to annihilate.

It may be that we, who have entered upon this task, when first we look out upon the turmoil of human passions, rendered a thousandfold the more complex through its man-made laws which appeal to the material senses, stand aghast at the mere thought of encountering and mastering it. A second thought brings strength, however, for we know we carry with us, into that conflict, a manual of instructions dictated by infinite wisdom itself. Studying the inspired sentences which our Leader, Mrs. Eddy, has written for our guidance in the nobly necessary task to which we have set our hands and hearts, we know that we can overcome all these opponents through a knowing of the nothingness of evil and the allness of God. In our text-book we may read "traffic regulations" as broad as they are explicit: "To suppose that sin, lust, hatred, envy, hypocrisy, revenge, have life abiding in them, is a terrible mistake;" or again: "Sin, disease, and death give everlasting place to the scientific demonstration of divine Spirit and to God's spiritual, perfect man" (Science and Health, pp. 289, 99).

God's officer goes not single-handed into the conflict. Not only has God Himself declared the battle His own, but there is also the sustaining truth that the divine Mind who directs each effort with the omniscience of ever-presence, is upholding each worker with the omnipotence of divine might. The agent of such a Principle—nor agent merely, but perfect image in his true selfhood—may well take his stand, serenely undisturbed by the empty hubbub of error's raising, calmly confident in his realization of a strength not his own. The glorious privilege of serving God by representing Him, not mere personal volition from whatever motive, is the impelling force which has led him here. He needs no other weapon than the insignia of delegated power which glows from "the whole armor of righteousness." The Master's words echo in his thought, to uphold his hands: "I can of mine own self do nothing;" or as Paul phrased it, "It is God which worketh in you both to will and to do of his good pleasure." With this understanding of all that he represents, the Christian Scientist, too, speaks as one having authority,—and harmony ensues.

THE TRUE KNOWING.

COUNTESS FANNY VON MOLTKE.

To know is "to have a clear perception of a truth or fact," according to Webster. It is to be conscious of this truth or fact; always to have the consciousness of being. As there is but one God or good, who is infinite, there can be but one real consciousness, and this one consciousness the consciousness of good alone. God can know nothing but good, and hence there is no knowledge of evil, it does not belong to knowledge or science. If science is good, nothing which is not absolutely good can have the name of science, for God, good, is absolute in His allness.

Material knowledge is defined in Science and Health (p. 590) as "that which is not divine." If mortal sense says, "I know," it does so because it does not know what true knowledge means. God's allness expresses oneness and

Digitized by Google

omniscience, hence there can be only one science, the science of God or good. That which is not exact and not based on changeless law, cannot properly be called science. In the course of the centuries it has been found that what was once considered to be true has had to be given up. Many theories which claimed to be science have thus been shown to be mutable, unscientific, since only that can truly be called science, or scientific, which is the manifestation of unchanging law.

Real science cannot be material, since matter is subject to change. It must be spiritual; it cannot be finite, but must be infinite; it cannot be evil, but must be good; it cannot know "in part," it must know altogether. This science is the all-inclusive Science of Spirit, or Christian Science, which is based on the absolute, the one Principle; and this explains why there is no place, no room for suggestion. To suggest something would imply that there is some lack of knowledge, which has to be supplied, or that one belief has to be given up for another belief. To omniscience there can be no lack of knowledge; it is omnipresent intelligence. Treatment, the expression of Truth in Christian Science, is therefore not hypnotic suggestion; it is a knowing of the realities of being, a denial of the wrong, the untrue, the unreal; an affirmation of the good, the right, the eternal. This spiritual knowing clears away falsities and brings to light the ever-present verities of being. It uncovers that which seems to be veiled or hidden, and clarifies human sense so that the true consciousness appears.

What, therefore, is the "I" that knows? Can a mortal mind legitimately say, "I know"? Christian Science teaches that there is but one "I or Ego" (Science and Health, p. 588), the great "I AM," or God, and this teaching is in entire accord with the Scriptures. There can be but one infinite knower, God, who is expressed by man, created in His likeness. A likeness is not the thing itself, but the manifestation or reflection of it. As the reflection of the All-knowing, it can be said of man that it is for him to know what his creator knows, even all good, and no evil. Thinking of his true selfhood, God's reflection, one may therefore say, "I know," a predication which does not pertain to mortal mind.

There is no real knowledge or science in mortality, because that which is mortal only exists in belief, in the illusive concept of life and intelligence in matter. Immortal man always knows, is always conscious of knowing; he knows that he knows, that he is conscious of good as the inseparable reflection of the divine intelligence. Mortal mind, as the opposite of immortal Mind, is the negation of intelligence, understanding, science; it can therefore know nothing, and its so-called knowledge is neither true knowledge nor science.

TRANSFORMATION OF THOUGHT.

WILLIAM HART SPENCER.

MORTAL man, while tacitly admitting that there is a creator who is good, nevertheless imagines that His power is either inoperative or spasmodic, and that there is another power, that of evil, which is always operative, and that this so-called power is as great or greater than good. As a consequence, the mortal fears evil more than he loves the good. We have read that among some peoples religious ceremonies are designed to placate evil deities,—the good spirits not requiring worship or votive offerings, as they would not harm. Naturally, for such ignorance we have a sense of pity, based on the assumption that our present-day enlightenment has raised us above such reasoning, but this so-called heathen thought is more prevalent among us than many would be willing to admit. A study of the object of not a little present-day worship might strengthen the impression that the line of demarcation between Christian and non-christian civilizations is in many cases very faintly drawn.

From the view-point of this mortal plane, mankind study and dread the effects of evil. Their thought dwells continually either on the positive or negative side of so-called evil, and rests but little on the operation of good. While in such a mental atmosphere, if the fear of the penalty for wrong-doing were eliminated, love for good, of itself, is not strong enough to be the incentive for the forsaking of sin. The wish to be saved simply from the results of sin,—in order to avoid the wrath of a so-called angry God,—is really a desire to be saved in sin, and as such has no connection with the honest desire for salvation from sin, the being freed from hindrances which interfere with the understanding of God as Love.

The false belief that God, good, commissions a devil to deal out vengeance for sins committed, or allows the persecution of the children of men as a matter of caprice, has had a tendency to drive men away from God. Another hindrance is the difficulty of the adult mind, unfamiliar with spiritual leading, to overcome the thought of God as a magnified type of mortal man, with the variable moods common to humanity. To this mistaken concept of what is designated as God, is directly traceable a large share of the misery in the thought of the world. The thought of God as being susceptible to argument is a prevalent error, and leads to the likelihood of an attempt to bargain with Him by mentally asking for added proofs of His honesty of purpose. Gideonlike, the desire will be, not for one sign only, but two.

To one who is earnestly desirous, these unsatisfactory imaginings will prove distasteful. There is sure to be a craving for a definite understanding, and Joblike will come the cry, "Oh that I knew where I might find him!" Thus, while deliberately turning one's back on the erroneous thought, there will be a reaching out for the ideal. The realization of an ideal is properly the goal of our intent, and it is impossible to conceive of a human being who has not set up some standard which he judges to be a higher condition worth striving for, even if the ideal is vague and distorted. If the desire is strong, and the wish for enlightenment serious, the endeavor will be to discover some tangible rule or way which will give a practical working method, whereby the intelligent application will presumably lead to the desired results.

Honesty is essential to progress, leading us, as it does, to look squarely at the difference between that suppositional thing called mortal mind, which does not—for it cannot—understand God, and the human consciousness of the divine, through which we can apprehend the possibility of spiritual growth. In this matter of growth, a forward movement, however small, is not to be despised, and it is a decided gain when we can give our intellectual assent to some applicable phase of truth which appeals to us logically, even if we have not as yet been absolved entirely from a human sense of allegiance to a belief in the opposite.

It is wise to accept the proposition that good and only good can come from good, for then it will be but a step to the realization that good is God. Something could not develop from nothing. There must be an infinite One, but a God who is full of contradictions like mortal man could not be infinite, and so it is logical to consider the all-power as perfect in being and attributes. God being all, and God being good, there is no room for anything but good. Children often pick out a tune "by ear," but later, being taught the laws of harmony, they can perceive the melodic possibilities because they have been started right in the fundamentals. To those who have been blindly groping, Christian Science comes like Philip to the eunuch on the road to Damascus, and asks, "Understandest thou?" thus opening the Scriptures to the receptive mind.

In all time, the seekers of the higher good have had more or less clear thought concerning the result desired, but they have been unable fully to determine the way. One must have some realization of the extreme sinfulness of sin; and

Digitized by Google

to know this, as well as the way to overcome, necessitates a knowledge founded on the understanding of a heavenly Father who knows no sin. The whole trend of Jesus' teaching was to make clear the understanding of God and man in His image, and the victory won today over physical or mental ills is in exact ratio to our grasp and application of this teaching. The fulness of good comes with the fulness of understanding, and it is thus that untold thousands have been benefited through Christian Science, which, if studied in the spiritual atmosphere wherein alone it can be comprehended, leads one to understand the teaching of Christ Jesus, who was himself "the way" to the true God. The old phraseology becomes indeed a "new tongue" through this spiritual interpretation, which does not have to be accepted by creedal conformity, but can be proven experimentally, as God's way.

Christian Science is the truth about God and man and Christ, and the exposition of this truth, as given in the Christian Science text-book, is hidden from none who will honestly avail themselves of it. Our Leader says, "The purpose and motive to live aright can be gained now" (Science and Health, p. 326); and while to some may come the thought of wasted years, yet with the clearer understanding of God will grow the knowledge that in divine Love such sense of loss is destroyed, for He has said through the prophet, "And I will restore to you the years that the locust hath eaten." Some day this ebb and flow of mortal mind will cease, and all material beliefs will disappear.

DAY BY DAY.

GRACE FISH ROBINSON.

In the 11th chapter of Luke it is written that when the disciples asked Jesus how they should pray, he said: "Give us day by day our daily bread." One of the most beneficial lessons which the writer has learned is the endeavor to live one day at a time. During my childhood it was the custom of my parents to allow me each evening to express some wish or desire, providing I had been obedient during the day, although I have since wondered how they were able always to grant my wish; but I knew that it was only as I was absolutely obedient that I would be allowed to exercise this privilege.

Many years after, this experience of my childhood taught me an excellent lesson. For some time I had been trying to straighten out a financial difficulty, and as my knowledge of how to apply Christian Science was very limited, I endeavored to bring things about in my own way, in place of leaving it all to God, and knowing that it was God's will, and not mine, that must be done. Soon, in place of working things out harmoniously, as I had hoped to do, they became more discordant, and as I retired one night the predominating thought was one of discouragement. As sleep failed to come, I kept asking myself where the trouble lay. Gradually my thoughts traveled back over my short experience in Christian Science, from there back over the years previous to my acceptance of this truth, and so on until I found myself picturing once again the days of my childhood, and a voice in thought seemed to say, "Go back and be a child again."

As this thought kept repeating itself, I remembered that I had as a child lived just one day at a time, doing my very best to be good in each act, knowing that just in proportion to my obedience to good, my earthly parents would grant my wish. I also realized that it was not my own will which had governed me, but the will or wish of my father and mother to which I had to be obedient. No sooner had these thoughts become clear to me, than I realized that it was the will of my heavenly Father to which I must now be obedient, and with the understanding of God which I had gained through the study of Christian Science, I began to try simply to live one day at a time, absolutely shutting out every anxious thought for the morrow. In less than two weeks the discordant conditions were overcome, and greater harmony than I could have hoped for reigned. I realized the truth of what Mrs. Eddy tells us in Science and Health (p. 254): "When we wait patiently on God and seek Truth righteously, He directs our path."

We all have the opportunity daily of being obedient to God by the conscientious study of the Bible and Science and Health, as well as the other works of our Leader, and in living up to them to the highest of our understanding. But do we not at times let the worries and the plans of tomorrow, or next week, or even next year, take up the time which we might otherwise spend in study, and so improve and make the most of each day, leaving our supply for tomorrow and its joys in God's care? Are we asking just for today? and thereby being obedient to the command of him who said, "Take therefore no thought for the morrow."

OMNIPRESENCE.

ELIZABETH EARL JONES.

The realization of the omnipresence of God, as taught in Christian Science, carries with it immediate healing and cleansing power, and the demonstration of this truth causes the heart to overflow with gratitude to the one who was pure enough and near enough to God to discern this Christ-ideal. As God, good, is omnipresent, it is beautifully natural for man to be perpetually conscious of Him in whom "we live, and move, and have our being." It also becomes a simple and blessed experience when we so insist upon man's inseparable unity with God, Life, Truth, Love, that any and every belief of separation from Him is eliminated, and we perceive the eternal man of divine Mind. Every claim of error, sin, disease, death, is a denial in belief of the omnipresence of God.

In "Science and Health with Key to the Scriptures" (p. 12) our dear Leader, Mrs. Eddy, tells us that Jesus' prayers were "deep and conscientious protests of Truth,—of man's likeness to God and of man's unity with Truth and Love." Because God is All-in-all, nothing can separate God's word from the parent Mind, and not one instant of time can come between the declaration of Truth and its manifestation. "He [God] spake, and it was done," is the divine record of creation, and this order has not changed. Surely this is our permanent joy to know that in proportion as we become obedient to divine Principle we shall be able to express the divine activity and heal instantaneously as did Jesus, to "act as possessing all power from Him in whom we have our being" (*Ibid.*, p. 264).

GIFT TO THE DELAWARE.

A short time ago the battleship Delaware sailed up the Delaware river and anchored close by Wilmington to pay her respects to the people of the state whose name she bears. Incidentally she is claimed to be the newest and largest battleship in our navy, and the Delawareans are justly proud of her.

After lying at anchor for four or five days, during which period an opportunity was afforded to visit the boat, she steamed away, carrying with her among other gifts a complete set (library edition) of the several books comprising our Leader's writings, enclosed in a suitable mahogany case, a gift which was gratefully accepted by the captain of the ship in person. Furthermore, arrangements were made whereby *The Christian Science Monitor* will reach the battleship's library in whatever part of the world the Delaware may be cruising, thus insuring to her officers and crew the high standard of news which this valuable paper offers.

SELECTED ARTICLES.

[Frederick Dixon in *London Times.*]

It is to be feared that the new Crusaders are deficient in the qualities essential to their undertaking. They need backbone, they are deplorably indifferent to the teaching of history, and they are devoid of any sense of humor. It is impossible to dive, within the limits of a letter, into the category of misconceptions, stated without proof and maintained without evidence, which their latest recruit, your contributor "Churchwoman," offers to your readers as a serious criticism of Christian Science. The long quotation she gives from Mrs. Eddy's "Miscellaneous Writings" will, however, serve as an excellent test, as it is proof positive that she has never understood in the least the distinction drawn in Christian Science between the real and the unreal, the absolute and the relative, the spiritual and the material; yet on that distinction depends the understanding of the passage she has so completely misapprehended.

In teaching Christian Science Mrs. Eddy has pointed out, with the utmost care, the difference between the spiritual man, the image and likeness of God, and the sinning race of Adam. The first is the real man, reflecting the qualities of the divine Mind; the second is the human counterfeit, reflecting the passions of mortal mind, itself the negation of divine Mind. Now, whether the world at large recognizes this or not, it is made clear in the Bible. The 1st chapter of Genesis, known sometimes as the priestly and sometimes as the Elohistic document, contains an account of creation which differs completely from that, known sometimes as the primitive and sometimes as the Jehovistic, contained in the 2d chapter. Mrs. Eddy has been insisting on this for upward of forty years, and insisting on it from the standpoint, not merely of historical criticism, but of practical Christianity. The two accounts, she has explained in Science and Health, lie side by side for those who will read, mark, learn, and inwardly digest them.

The common-sense critic has been peculiarly humorous on this subject and quite as peculiarly ill-informed. To make this plain, it is only necessary to refer to the writings of a great scholar, himself a champion of the accuracy of the Bible, Professor Sayce. The reverence of the Israelites for the primitive document in Genesis did not, he writes, prevent them from accepting another symbolic narrative which embodied more advanced truth, nor did the acceptance of the later narrative cause them to cast away the elder Scripture,—"the two were placed side by side." The elder narrative, he explains, was frankly anthropomorphic, the later narrative contained "a wonderful spiritual discrimination and insight." The earlier narrative, he maintains, had all the elements of polytheistic superstition: the later narrative, on the other hand, is "a noble and simple declaration of the making of all things by God, who is One, holy and benevolent." The later document, he concludes, was intended to supersede the elder document and to suppress the anthropomorphic narratives. Prejudice, however, was too strong, and the compilers of the complete Pentateuch had to rest content with placing the spiritual narrative beside the anthropomorphic, with the intention that the anthropomorphism of the one should be corrected and interpreted according to the more enlightened views of the latter. If Professor Sayce is not, from the point of view of Christian Science, a Daniel come to judgment, it would be difficult to say what all this means.

It is a confusion of these two views which has led to the theory of what is known as mental suggestion, itself only the latest development of the earlier occult systems. The anthropomorphism of the human mind, as expressed in the Jehovistic story of creation, has impressed itself in all ages in the belief that one human mind has power over another human mind through magic or witchcraft, through will-power, mesmerism, or hypnotism, themselves all *aliases* of suggestion. The story of Israel is the story of a people waking out of the primitive belief of anthropomorphism into an understanding, more or less chaotic, of spiritual being. The history of the Bible is the story of the battle of these two elements in Israelitish history, the battle of Jehovah against Elohim, of God in the image and likeness of man against God who is Spirit. The anthropomorphic tendency manifested itself in graven images, in houses of Baal, and in the incantations of the magicians, by whatever name they were known; the unquenchable spiritual perception of the Elohists manifested itself in the rejection of human sacrifice by Abraham, in the rejection of the sacrifice of animals by Isaiah, in the proclamation of the gospel of purity by the Baptist, and in the final declaration of Jesus the Christ, "God is a Spirit: and they that worship him must worship him in spirit and in truth."

To attempt to trace this struggle in anything but a few words would, of course, be impossible within the limits of a letter. It must suffice to say that the two theories came in actual collision on the day when the Pharisees strove to brush aside the healing of Jesus as healing through Beelzebub; that is, by the occult art of the exorcist. It was then that Jesus silenced them with the declaration that a house divided against a house could not stand. That is to say, that a mind believing in matter and Spirit, in good and evil, was believing in contraries, and was, *ipso facto*, condemned to decay; but, going farther than this, he declared once and for all that if he cast out devils by the Spirit of God, then the kingdom of God was come. This was the final statement in the struggle between anthropomorphism and Spirit, between all that was contained in the theory of God as Jehovah, and of God as Elohim, of a God who created or permitted, and who was consequently conscious of good and evil, and God who was Spirit, absolute good, and consequently of too pure eyes to behold iniquity.

Now, when Mrs. Eddy speaks of the man conscious of absolute harmony, she is speaking of the spiritual man, the image and likeness of God; and in the exact proportion in which the human being gains the perception that man is spiritual and not material, does he begin to repent. The Greek word translated repent means literally to perceive or come to a conclusion afterward, and so a change of mind to the opposite standpoint. The man who gains the perception of God as Elohim rather than Jehovah, changes his belief in the image and likeness of God from a material to a spiritual basis, and, in thus repenting, finds, as Jesus said, that the kingdom of God is at hand. "That," in the words of Mrs. Eddy, on page 312 of Science and Health, "which material sense calls intangible, is found to be substance. What to material sense seems substance, becomes nothingness, as the sense-dream vanishes and reality appears." This is something about as far from the misconception of Christian Science which "Churchwoman" has so woefully conceived as anything well could be, for in it there is not a trace of healing by mental suggestion; there is nothing but healing by the realization of the Christ.

The fact is that mental suggestion cannot heal. The utmost it can do is to effect a temporary change of human thought, liable at any moment to relapse. It is a house divided against itself, a belief in relative good and relative evil, and as such it gives power and reality to evil. Evil, however, Jesus declared, was a lie, and the only power and the only reality a lie can ever even seem to possess is a supposititious power and the supposititious reality which adheres to it so long as it is believed in. The lie of anthropomorphism and materiality bound the believers in the Jehovistic theory of creation, and they fashioned their golden calves and they built their temples of Baal till Moses came down from the mountain and shattered the one and led the people into the land of promise, and until Elijah caused the priests of the other to call upon their gods in vain. These

Digitized by Google

were the heralds of Truth, which, when it rose full-orbed, was to heal the sick by the thousand in the land of promise and teach men the truth which was to make them free.

[George A. Law in *Torrington* (Conn.) *Register.*]

Christian Science is the religion of love; therefore it is readily appreciated that its manifestation is not found in an indulgence in human differences, but rather consists in an adherence to the golden rule, whereby respect is shown for the individual rights of each to select for himself the healing system or religion he desires. Intolerance of another's convictions and inhuman treatment toward those holding differing beliefs cannot be practised without the individual becoming less than a student of Christian Science and hence losing the right to the name Christian Scientist.

Mrs. Eddy in "Science and Health with Key to the Scriptures," the text-book of Christian Science, says (p. 366): "The physician who lacks sympathy for his fellow-being is deficient in human affection, and we have the apostolic warrant for asking: 'He that loveth not his brother whom he hath seen, how can he love God whom he hath not seen?' . . . Such so-called Scientists will strain out gnats, while they swallow the camels of bigoted pedantry." She adds, "If we would open their prison doors for the sick, we must first learn to bind up the broken-hearted."

Such motives preclude a possibility for the exercise of an unrestrained human will, which will causes most of the suffering and unhappiness.

[George Shaw Cook in *Freeport* (Ill.) *Journal.*]

Our critic's hypothetical case of the supposed leper who met the Christian Scientist is so absurd as to be scarcely worth noticing except for the reason that it might be taken by some to be a correct presentation of the attitude of Christian Scientists toward those who are afflicted with contagious disease. In the first place Christian Scientists as a class are not disposed to argue with those whom they chance to meet regarding the unreality of disease and matter. They recognize that the average person is strongly imbued with the belief that both are real, and it would be a waste of time if not an imposition to try to force the teachings of Christian Science upon those who are not seeking information on the subject. When the individual is ready to learn something of the unreality of disease and matter, he will find abundant opportunities to do so, and the wise Christian Scientist is perfectly willing that he should be left to choose his own time.

In the second place, Christian Scientists are advised by Mrs. Eddy to respect the feelings of their neighbors concerning the matter of contagion. They are requested by her to have suspected cases of contagious and infectious disease diagnosed by physicians and reported to the board of health if required to do so. Furthermore, Christian Scientists are generally very conscientious about observing quarantine regulations when these are imposed, and the community is as a rule in no danger of the spread of contagion by reason of the Christian Scientists' belief that disease is mental and not physical.

A useful hint is contained in this critic's suppositional case of "Mr. A. and Mr. B.," as it furnishes a good illustration of the all too prevalent tendency to frighten people into believing that they are sick. In some instances this sort of argument amounts to little less than hypnotic suggestion of the fear and symptoms of disease to one who might if left alone recover without serious difficulty. Any honest physician of wide experience will confirm what I say about this.

The intimation that Christian Science teaches that there is no need for the forgiveness of sin is seen to be erroneous when examined in the light of the following quotation from the Christian Science text-book: "We acknowledge God's forgiveness of sin in the destruction of sin and the spiritual understanding that casts out evil as unreal. But the belief in sin is punished so long as the belief lasts" (Science and Health, p. 497).

[Eugene R. Cox in *Chicago* (Ill.) *Examiner.*]

There is no patent on being good. We try to be good, and if others want to be good along our lines we surely can have no objection. If the Episcopalians have found much in our teachings which they desire to adopt, we can only take that as a compliment. We simply maintain that there is only one way of understanding God and His works; that is, a purely scientific way.

[From an editorial in *St. Louis* (Mo.) *Republic.*]

It was an interesting moment in the general convention of the Episcopal church in Cincinnati when the Rev. H. M. S. Taylor of Atlanta rose to second a resolution offered by a New Hampshire clergyman, contemplating the appointment of a committee "to prepare and report an office for the unction of the sick." Mr. Taylor said: "This precious jewel, this power of restoring the sick by prayer, was thrown away by our church and a woman picked it up. Now, I say, let us get back our own and use this magnificent gift in the name of the church." Which, divested of all surplusage, amounts to just this: That, in view of the fact that Christian Science appears to be distancing the church of the speaker, it behooves the latter organization to even the advantage so far as possible by taking over such distinctive tenets of the Christian Science fellowship as it may. In fact, Mr. Taylor spoke of Christian Science as "sapping the roots of other churches," whatever that may mean.

We should like to remark in passing that if the Episcopalians have lost ground to the Christian Scientists, they can never regain it by the appointment of committees and the drafting of "offices." It will require some more vital process than that. If Mr. Taylor believes in "the power of restoring the sick by prayer," we ask, in all respect, why he does not go out and restore some in that way? A church convention is not a dynamic body; it is only regulative. It can pass upon new spiritual growths and religious movements; but it cannot create. If a practice of healing the sick by unction should develop, it might sanction and regularize it; it could not originate it by all the resolutions that were ever resolved. More than that, the history of combat proves that the attempt to appropriate the enemy's strategy late in the campaign has little to recommend it save the frankness of the confession it incidentally involves.

[Jane M. Lyon in *Philadelphia* (Pa.) *Press.*]

It is a matter of great importance that the Protestant Episcopal convention has taken up faith-healing. It is a part of the Saviour's command which has been neglected. There is but one church, the Church of Christ, Scientist, which advocates this doctrine. Although the youngest church, its members are in every town and hamlet in the United States. Its growth has been phenomenal. Now it is meet and proper, and the bounden duty of the Protestant Episcopal church, the oldest apostolic church, to carry out this neglected command of our Saviour.

We have been preaching the gospel, but that is all—a one-sided work. It has been like pulling a pole wagon with only one horse, or rowing a boat with only one oar. Now we shall see what this oldest church can do with a full working force. But we must have faith. "Faith without works is dead." What of works without faith? We must believe in the omnipotent power of God. The God who made the heavens and the earth and all that in them is—cannot such a good God heal the sick? The God that formed the hand that writes, the eye that sees,—is it a greater work for such a God to heal the body? "With God nothing shall be impossible." We do believe, but we are ashamed to acknowledge our beliefs. Women are better Christians

Digitized by Google

than men. They are not hampered as men are. Men hold on with one hand to all their worldly possessions and vices while reaching with the other toward heaven. They are one-sided toward the whole truth.

Now that the Protestant Episcopal church is reviving the belief in prayer, in healing the sick, all churches will follow and all men and women will believe that what they ask for in pureness of heart, in faith believing, will be granted them. "Ask, and it shall be given you" is no idle promise. But we must ask in faith, believing that all things are possible with God, as they are!

[E. M. Ramsay in *Kilmacolm* (Scot.) *Advertiser.*]

The world is accustomed to employ words without weighing accurately their meaning, and, especially in matters of religion, is wont to uphold views which closer scrutiny reveals as mutually destructive. It is the object of this little article to show how Christian Science unfolds the fundamental statements of Christianity, thereby correcting erroneous impressions and giving us so firm a grasp of the true meaning as to enable us to use these spiritual facts in the affairs of every-day life. Let us take a statement to which all Christians would subscribe, "God is infinite," and see how it can be unfolded for us.

We are all aware that infinite means without bounds or limits, that which has no beginning and no end—all. Our Lord tells us that God is good, the only good, therefore we accept the statement that God is infinite and good. If He is infinite and good, it follows that God is infinite good; thus infinite good exists. Again we are told in the Scriptures that God is ever present. This clearly must be so, since the infinite, unbounded All can never be absent. If God could ever be absent, He would cease to be infinite. Thus infinite good is ever present. Our Master further describes God as merciful, perfect, true, holy; tells us that God is Spirit, Life; speaks of His love. If this be so, then perfection, Truth, Spirit, Life, Love must each and all be infinite, as God is in His very essence infinite. If each of these is infinite, it follows that they are synonymous, that they are simply different aspects of the same thing, that they are interchangeable terms. Thus we find that Truth and Love are one, that Life and Spirit are one, that Truth and Life are one. Infinite Life, infinite Truth, infinite Love, infinite Spirit are ever present.

What, then, of man? What relationship do we hold to this infinite good which we call God? In the 1st chapter of Genesis we are told God created man in His own image. If this be a true statement, then man is the image or likeness of good, the image of Truth, of Life, of Spirit, of perfection. Then all in our thought which is not like good, Truth, Life, Love, Spirit, perfection, is not like man. Turning to the New Testament, we find our Lord telling his followers to be perfect, "as your Father which is in heaven is perfect," and St. Paul says to the Athenians, "In him [God] we live, and move, and have our being; as certain also of your own poets have said, For we are also his offspring."

Rightly applied, this teaching acts as the most powerful of wedges driven in between man and evil of all sorts, daily separating him from sin, fear, ignorance, devil worship, and from the ill health, sorrow, and poverty which are the outcome of erroneous, inaccurate thought. "With what measure ye mete, it shall be measured to you again." No one can in thought separate evil from himself, without doing the same for his brother; thus forgiveness ceases to appear a virtue, by being seen as a necessity.

[Ethel Angier in *Northern Budget*, Troy, N. Y.]

The Christian Scientists of Boston have won the heartfelt commendation and appreciation of their fellow-citizens by one of the most striking contributions to the beautification of the municipality yet undertaken by private enterprise. The admirable church whose great dome rises above the city roofs in one of the most congested districts, has hitherto been suffocated and submerged by an unsightly array of apartment houses and faced by an unkempt vacant lot. This latter eyesore has recently been acquired by the Scientists and is now converted into a spot of beauty artistically terraced and laid out in grassy sweeps and well-designed walks, affording a vista of approach to the noble piece of architecture which inspires enthusiasm and sets an example for further civic advancement. The blank wall of the apartment block which flanks one side of the little park, and which has hitherto been given to glaring theatrical advertisements, has been made the foundation of trellis work which is presumably intended to support beautifying vines.

[Willis D. McKinstry in *Salina* (Kan.) *Journal.*]

The basis of Christian Science is purely spiritual, its Principle is divine; it adheres to the first and great command, "Thou shalt have no other gods before me." Christian Science holds to the inspired word of the Bible, the spiritual facts of being, and the operation of divine law, all of which are revealed truths and are taught in the Scriptures from Genesis to Revelation.

Christian Science has not given the world a new God or a new Bible, but it has revealed God by a new name, and it has also given the spiritual interpretation of the Bible. The record of creation set forth in the 1st chapter of Genesis, declares that God created the heaven and the earth and all that they contain; and when His work was accomplished, he pronounced it "very good." Because of the fact that "all things were made by him; and without him was not any thing made that was made," He must naturally be the Principle of all true being, thus we know God as divine Principle. God—Principle—creates, governs, and cares for His creation through the operation of divine law. Christ Jesus, understanding the superiority of this divine power or law, was able to perform what the world calls miracles, but to him they were natural demonstrations.

The teachings of Christian Science illumine the Scriptures; they impart to mortals the spiritual understanding of the Word; thus, in the degree that mankind understand God, the universe, and His law, they are able to demonstrate its healing and saving power, which is available now. Only Truth is true, and thinking must go on until it arrives at absolute truth. This is an age of mental activity; the people are awake, they are thinking along the lines of Christianity as taught and demonstrated by Christ Jesus. The old theological teaching of orthodoxy, with only a future salvation, no longer satisfies them. They believe that "now is come salvation, and strength, and the kingdom of our God, and the power of his Christ."

Christian Science is Christian because it embraces the whole of Christianity; it is scientific because it is the imparting of the truth; it is demonstrable, because it is based upon divine Principle.

POEMS BY MARY BAKER EDDY.

Under the above caption the poems written by our Leader have been compiled in a handsome volume of 79 pages, now in press, and orders will be filled in sequence. All of Mrs. Eddy's hymns are included in the volume, also her earlier poems, which appeared in various publications from forty to sixty years ago.

The poems are printed in clear type on heavy paper, with initials and ornaments in red, and bound in fine English cloth, with a conventional design of wild roses. Price, single copy, $1.50; six or more copies, $1.25 each. Address all orders and make remittances payable to Allison V. Stewart, Falmouth and St. Paul Streets, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

IRA O. KNAPP, C.S.D.

MRS. EDDY says on page 166 of "Miscellaneous Writings": "The monument whose finger points upward, commemorates the earthly life of a martyr; but this is not all of the philanthropist, hero, and Christian. The truth he has taught and spoken lives, and moves in our midst a divine afflatus." This is markedly true of our beloved friend and associate, the late Ira O. Knapp, whose good works are an eloquent testimony of his Christianity.

Mr. Knapp became a Christian Scientist almost thirty years ago, and early in his career as such was a student of the Rev. Mary Baker Eddy, from whom he received instruction in the Massachusetts Metaphysical College, after which he successfully devoted his energies to the practice of Christian Science healing. He was one of the twelve who with Mrs. Eddy formed The Mother Church, and in 1892 he became one of the Christian Science Board of Directors by appointment of Mrs. Eddy. He was also a member of the Bible Lesson Committee; and, above all else, he was one who did those mighty works of healing which Jesus declared should be done by "them that believe." In every one of his varied relations to the church and to his fellowmen, Mr. Knapp's whole-hearted service earned the "Well done, good and faithful servant," and he was greatly loved and esteemed by the entire field of Christian Scientists.

As our beloved Leader has said of another, so may we say of this dear and true brother: "Evil has no power to harm, to hinder, or to destroy the real spiritual man. He is wiser today, healthier and happier, than yesterday. The mortal dream of life, substance, or mind in matter, has been lessened, and the reward of good and punishment of evil and the waking out of this Adam-dream of evil will end in harmony,—evil powerless, and God, good, omnipotent and infinite" (*Sentinel*, Dec. 14, 1907).

ARCHIBALD MCLELLAN.

IMMORTALITY.

JOB'S mournful question, "If a man die, shall he live again?" is fully answered in the words of the Master: "If a man keep my saying, he shall never see death;" and again, in the ringing declaration of Christian Science: "In Science, man's immortality depends upon that of God, good, and follows as a necessary consequence of the immortality of good" (Science and Health, p. 81).

In spite of the fact that Jesus' teachings are held to be the final word of authority for all professed Christians, there is often found among them, as well as on the part of non-believers, an element of doubt and uncertainty as to man's immortality; nor is this surprising, where material evidence is relied upon as decisive on this all-important question. If we believe that man is matter, we may by the fairest logic accept Job's conclusion: "Man lieth down, and riseth not: till the heavens be no more, they shall not awake, nor be raised out of their sleep;" but while theology has ever pointed away from this to the spiritual fact, it was to something which should be realized after death, hence the doubt and unsatisfied longing for a faith which was susceptible of present proof and reasonable explanation, and Christian Science offers this to the sincere truth-seeker.

The fact cannot be overlooked that so-called material law pays no respect to goodness. According to this belief, saint and sinner are alike mortal, but Christian Science has come to awaken us to the spiritual sense which recognizes the immortality of all that expresses God; and whatever the material evidence, it stands by Christ Jesus' declaration and refuses to "see death."

It may here be asked wherein this attitude is different from that of the Christian believer who holds to the reality of matter and material law. To this we answer that there is nothing in the Scriptures to show that materiality is immortal, but the contrary. We therefore look for and find unmistakable evidence that man is spiritual, now and always; and as this truth is understood fear, disease, sin, and death begin to vanish before the advancing light of Spirit and spiritual understanding. Our progress may seem slow, as was that of our fathers who in this land and in other lands rose to assert their right to civil and religious liberty, and who were met with opposition at every step of the way until they proved by long-enduring faithfulness that they were worthy of freedom, and for this we owe them a debt which mere words can never pay.

When Christ Jesus declared for man's immortality, his listeners angrily asked, "Art thou greater than our father Abraham, which is dead? and the prophets are dead: whom makest thou thyself?" and when he maintained that man never dies, they took up stones to cast at him. If we go from this scene to John's account of the resurrection morn, we may learn a wonderful lesson. Mary, disconsolate and almost broken-hearted, looked into the tomb and saw therein two angels, who greeted her with the words, "Woman, why weepest thou?"

Why, indeed! Had she not just before witnessed the greatest tragedy the world has ever known? Had not hope been quite blotted out by the death of the one who had promised eternal life to all his followers? Before she had time, perchance, to comprehend the angels' question, the beloved Master himself stood before her, and his greeting was the very same. She was also bidden to go and tell the brethren—all who would listen—that his Father was their Father, his God their God; and it is to this glorious assurance that Christian Scientists cling in all their efforts to rise with Christ until, as Paul says, mortality shall "be swallowed up of life."

ANNIE M. KNOTT.

BEING TRUE TO TRUTH.

THERE are few objects on the continent more likely to stir the emotions of a thoughtful traveler than Thorwaldsen's celebrated Lion of Lucerne, in commemoration of the bravery of the Swiss guards who fell, Aug. 10, 1792, while defending the palace of the Tuileries. There are works of art which would be classed as more noble and impressive, but as a symbol of that spirit of loyalty which has contributed a touch of romance and of heroism to the darkest chapters of human history, there is nothing finer.

It may be questioned whether the protection of an unworthy ruler from the judgment which his own misdoings had provoked was worthy of such a devotion and such a sacrifice, but quite regardless of the worthiness or unworthiness of the cause, the exhibition of a fidelity which hesitates at no hazard always makes instant appeal, and for the reason that it witnesses in our thought to some phase of true manliness. Pride of race, of caste, or of reputation may beget allegiance to a prescribed code of ethics, or of honor—even thieves and gamblers are said to be sensitively jealous of their standing among their kind; but in all this there is no recognition of Principle, and no adherence to it, hence nothing of that loyalty whose root significance is devotion to the rule of divine right, whose true meaning

Digitized by Google

is faithfulness to Truth. This explains why clannish, partizan, and personal fealty always conduces to narrowness and intolerance. It explains, too, the inherently degrading effects of consent to the domination of society fads and fashions,—the saying and doing and wearing of things without consideration for either convenience, good taste, or common sense, simply because some person or class of persons has given a socially authoritative cue.

Christian Science brings new illumination and direction to thought respecting this matter, by making it clear that all true loyalty, whether to men or to movements, must have its ground and inspiration in fidelity to divine Principle; that we can entertain a right sense and impulse toward a brother or toward a cause only as we apprehend spiritual being and the relation of the given object of our interest thereto. When we are loyal to God for men and for enterprises, we are sure to do good, because we are sure to do right, and to be saved from prejudice and misjudgment, while we gain that spiritual poise which enables us to think of men and things at their best, and so to serve them ever for their best. All our loyalties are thus linked to the keeping of the First Commandment, obedience to which shapes every activity, whether of the head, the heart, or the hand, so that all is done to the glory of God.

The real value of one's devotion to his fellow-men is measured by the clearness of his concept of the divine ideal for each. Without this reflection of Truth, one's interest may mean only injury for those he loves; indeed, there can be no true ministry in a love that is not born of God. Shakespeare may not have so sensed it, nevertheless this surely is the meaning of his saying,—

> To thine own self be true,
> And it must follow, as the night the day,
> Thou canst not then be false to any man.

The test of character is found in our attitude toward our highest ideals, and in so far as this attitude is one of unswerving loyalty, in so far are we the ministers of Christ and truly helpful to others. To "trust in Truth, and have no other trusts," as Mrs. Eddy has counseled (*Sentinel*, July 4, 1903), is to be saved from those disappointing devotions to personality and to mortal concepts which tend in their outcome to deplete and dissipate well-meant and seemingly laudable human endeavor at right doing. It is to perceive and tenaciously adhere to the true, the beautiful, and the good, and these alone, wherever presented. It is to honor God in all our choices and acts, and this is the heart of genuine loyalty.

JOHN B. WILLIS.

AMONG THE CHURCHES.

DENVER, COL.

Ground was broken at East Bayaud and Grant streets, on Oct. 22, for the edifice of Second Church of Christ, Scientist, Denver, Col.—*Correspondence.*

ITHACA, N. Y.

Work on the new Christian Science church, which is being erected on the old Campbell mill site at the entrance to Cascadilla park, is progressing rapidly, and the building will be ready for services by the last of November or the first of December.—*Ithaca Journal.*

BUZZARDS BAY, MASS.

The Christian Science Society of Buzzards Bay, Mass., has purchased a building lot on Washington avenue which has a frontage of one hundred and forty feet, extending back one hundred and five feet. It is in a most desirable locality for a church, as it is near the turn of the car-track and will be convenient for people coming from either direction.—*Bourne Pioneer.*

KEWANEE, ILL.

On account of the rapid growth during the past year of the Christian Science congregation in Kewanee, it has been found necessary to increase the size of the meeting-place, and at the present time workmen are remodeling the frame building at the corner of Main and Lyle streets. It will be converted into a chapel with a seating capacity of over one hundred and fifty.—*Kewanee Star-Courier.*

OXFORD, ENGLAND.

New reading-rooms were opened here this summer, in a very central position, at 26 and 27 Cornmarket street, near the Bocardo gate of the city. The house in which these rooms are, is a relic of the ancient city and must be about five hundred years old. These rooms, looking on to the most crowded of our thoroughfares, are attractively painted and furnished, and have been visited by several inquirers during the summer. We hope they may help to spread the knowledge of the helping and saving power of Truth in Oxford. The Oxford Scientists are united in working and praying for the success of our great cause, and in deep and reverent gratitude to our dear Leader, for the health and happiness her wonderful message has brought them.

Correspondence.

STOCKTON, CAL.

The new church for the Christian Science congregation, at the northwest corner of Center and Flora streets, in the heart of the best residence district, is nearly finished. Some filling of the lot is yet necessary and some few details of the interior are still unfinished, but it is expected that next Sunday's [Oct. 8] services will be held in the new edifice. The church is a very modest structure, plain in both exterior and interior, and wholly without pretension. It is capable of seating three hundred persons, but seats will be provided for only about two hundred at the opening. As the growth of the attendance at the services has been very rapid, the present seating capacity will probably have to be increased very soon. The church was organized in 1898. No ceremonies will mark the opening, since it is the rule in Christian Science organizations not to dedicate church edifices formally until they are fully paid for and free from debt.

Correspondence.

[Written for the *Sentinel.*]

A PRAYER.

GERTRUDE RING HOMANS.

DEAR Lord, at such time as I am denied
  Room in the inn of some heart overfilled,
Where I have sued for lodging, and aside
  Must turn for shelter, let regret be stilled.

And in some humble place, where I can rest
  Among strong service-concepts gentle-eyed,
Let there be born and for the wise men dressed
  A healing thought to which Thy star shall guide.

And later, if I see it crucified,
  Support me till the resurrection morn
Shall show Love's power to prove it glorified,
  Despite the lowly spot where it was born.

THE LECTURES.

SANTA ROSA, CAL.

The lecture by Frank H. Leonard of Brooklyn, N. Y., Saturday evening [Oct. 1] at Woodmen Hall, awakened much interest. Mr. Leonard was introduced by Attorney L. E. Fulwider, who said,—

It seems strange that the world's attitude toward religion differs so much from its attitude toward the so-called secular affairs. To all the different branches of engineering, to all the different branches of transportation, to all the different branches of the arts and sciences, the world looks expectantly for advancement and improvement, and hails the same with delight; but in matters concerning the creator and His creation there is a prevalent idea that nothing more is to be discovered or learned.

Christian Science has come into the world to offer a reasonable interpretation of the Scriptures and an avenue of escape from sin, sickness, and disease. There are some, however, who have been prejudiced against Christian Science and its import and mission to the world, and to endeavor to remove this prejudice is the purpose of these lectures. I have studied Science and Health, not for the purpose of expounding its mysteries to others, but for my own satisfaction and benefit, and from the knowledge I have gained and the benefits which I have received, and the benefits which the different members of my family have received, and the many living examples of Christian Science healing which have come under my observation, I am convinced that Christian Science is not an experiment, but is founded on the rock, and "the gates of hell shall not prevail against it."

Press Democrat.

LINCOLN, NEB.

Francis J. Fluno, M.D., lectured to a fair-sized audience at the Oliver Theater yesterday afternoon [Oct. 2] on Christian Science. In introducing Dr. Fluno, O. A. Robinson said of Christian Science:—

Throughout the whole of infinity, everything as it really exists is maintained and governed by the infallible, immutable law of God; and feeling the need of a power above and beyond itself, humanity has for ages recognized that relief from its sorrow, sickness, and discord must come from an understanding of that law and its application to conditions incident to human life. The universal craving for this unseen truth has brought out many systems of philosophy and religion, and following the upward leadings of whatever portion of truth their teachings have contained, has resulted in all the moral and intellectual progress the world has made.

But all these systems, while beneficent in their influence, have been found inadequate to every-day needs, for they do not offer the same positive pardon for sickness that they do for sin, nor enable us to lay hold of the salvation which the Scriptures say is for us now. Mrs. Eddy says: "In the record of nineteen centuries, there are sects many but not enough Christianity" (Science and Health, p. 224). Another noted writer has said: "Christianity has been tried for nineteen centuries, but the religion of Jesus Christ has never been tried." This latter statement is mainly erroneous; and is based upon a misunderstanding of the nature of Christianity, for genuine Christianity is not merely an intellectual interpretation of the didactic teachings of Jesus, but includes spiritual understanding with the signs following. The scientific religion which Jesus taught and demonstrated has been tried, for it was put to practical tests by its Discoverer before it was offered to the world; and is not now being merely tried, but is being demonstrated as an understood Principle.

Christian Scientists accept "the inspired Word of the Bible as a sufficient guide to eternal Life" (*Ibid.*, p. 497); that it contains, as it has always contained, this absolute rule the world has so long sought, and furnishes, in the light of scientific understanding, a panacea for all human ills. It destroys the fears that dominate all human activities, and leaves man free to work out his life-problem unhampered by the sense of limitation and inability to accomplish that which is good. Proof of its utility is furnished by hundreds of thousands who have been restored to health, happiness, and harmony; whose lives have been broadened and bettered; whose capacity to think and work rightly has been increased, for the light which has always shone in the darkness is now comprehended, and has brought to their consciousness a new heaven and a new earth.

Nebraska State Journal.

FRANKFURT A. MAIN, GERMANY.

Under the auspices of the Christian Science Society of Frankfurt a. M., a lecture was given by Bicknell Young at the Masonic Hall, Mozart Platz, on Friday evening, Oct. 7. Mr. Young was introduced by Ferdinand Staib, First Reader of the Christian Science Society of Stuttgart, who spoke in substance as follows:

We live in an age of progress, when discoveries tread on each other's heels. All this progress, however, brought humanity no nearer freedom from the bondage of sin, sickness, and death, nor removed the seven times sealed mysteries of the Bible, until Mrs. Eddy discovered Christian Science and made it known to the world in her book "Science and Health with Key to the Scriptures." When this book first came into my hands, I did not believe in it, nor had I any desire to investigate its contents: eventually, however, I decided to read the chapter on Prayer. I chose this chapter because in former times I had experienced some answers to prayer and thought this would be a good test of the superior value of Christian Science. The reading was at first attended with difficulties, for I had little free time, and my school English was almost forgotten. It was three months before I had read the chapter through. But how rich was my reward! Before the chapter was finished, Truth had freed me from a stomach trouble, said to be hereditary, which had annoyed me for over fifty years. Herein was my first proof of the value of the text-book of Christian Science.

With the blessings which Christian Science has already brought to weary, sick, and sinning humanity, every one can acquaint himself who looks into the literature lying on the tables of our free reading-rooms, or by attending the Wednesday evening testimony meetings. In addition to these helps to enlightenment, our Leader is now sending messengers forth into the world to make Christian Science more generally comprehensible through their lectures. Such a messenger is the gentleman who will now address you.

Correspondence.

TOPEKA, KAN.

Willis F. Gross of Boston, Mass., addressed a large audience at the Grand Opera House Sunday afternoon [Oct. 9] on "Christian Science: The Gospel of Salvation." The speaker was introduced by Robert Stone, who said in part,—

You do not believe all that I believe, I cannot indorse all that you teach, but I concede the sincerity of your beliefs and the possibility that in some way I may be mistaken. The wonderful history of your young organization commands the world's attention. The great multitude of our people who believe in Christian Science do not of necessity prove that it is right, but the fact that they include some of the essential truths which for ages have been

Digitized by Google

neglected by the orthodox churches, have been gathered up by you and brought to light and usefulness. The realm of truth is so large that no man has yet explored all its territory nor discovered all its treasures. Let us not think, because we have one jewel, that what another has found must be only glass or counterfeit. Christian Science has brought to the world the old truth which Christ taught, that the kingdom of heaven is within us, and that godliness is goodness, and happiness is health.—*Topeka Capital.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Asheville, N. C.—Willis F. Gross, Church Edifice, French Broad avenue, Dec. 5.

Brunswick, Me.—Frank H. Leonard, Pythian Hall, Nov. 25.

Central Point, Ore.—Rev. William P. McKenzie, Central Point Opera House, Nov. 19.

Columbia University, New York, N. Y.—William D. McCrackan, M.A., Earl Hall, Columbia University, Dec. 2.

Decatur, Ill.—William D. McCrackan, M.A., Powers Opera House, 8:15 p.m., Dec. 5.

Grants Pass, Ore.—Rev. William P. McKenzie, Opera House, 3 p.m., Nov. 20.

Harvard University, Cambridge, Mass.—William D. McCrackan, M.A., Emerson Lecture Hall, Nov. 21. Open to all members of the university.

Haverhill, Mass. (Second Church).—Bicknell Young, City Hall, 3:30 p.m., Dec. 4.

Hornell, N. Y. (Second Church).—Frank H. Leonard, Woodbury Universalist Church, Dec. 2.

Kansas City, Kan. (First Church).—Rev. Arthur R. Vosburgh, Auditorium, Portsmouth Building, Sixth street and Minnesota avenue, Dec. 1.

Kansas City, Mo.—Rev. Arthur R. Vosburgh, for Third Church, Sunday evening, at Morton's Hall, Nov. 27; at First Church, Nov. 28; at Second Church, Nov. 29.

Kingston, Ont.—Frank H. Leonard, Ontario Hall, Nov. 21.

Kirkwood, Mo.—Clarence C. Eaton, Church Edifice, Washington and Clay avenues, 3:30 p.m., Nov. 27.

Louisville, Ky.—William D. McCrackan, M.A., Macauley's Theater, Dec. 4.

Ludington, Mich.—Hon. Clarence A. Buskirk, Lyric Theater, Dec. 2.

Marshall, Tex.—Clarence C. Eaton, Nov. 29.

Maryville, Mo.—Clarence C. Eaton, Empire Theater, 3 p.m., Dec. 4.

Newport, R. I.—Frank H. Leonard, Apollo Hall, 140 Thames street, Nov. 24.

Portsmouth, Ohio.—Rev. William P. McKenzie, Grand Opera House, Sunday afternoon, Dec. 4.

Pottsville, Pa.—Rev. Arthur R. Vosburgh, 3 p.m., Dec. 4.

Sapulpa, Okla.—Clarence C. Eaton, Dec. 1.

St. Louis, Mo. (Fourth Church).—Rev. William P. McKenzie, Church Edifice, Page boulevard, near Montclair place, Dec. 2.

Shreveport, La.—Lecture Nov. 24 canceled.

Stamford, Conn.—Bliss Knapp, Casino, Suburban avenue, 3 p.m., Dec. 4.

Valparaiso, Ind.—Frank H. Leonard, Memorial Opera House, Dec. 6.

Victoria, B. C.—Prof. Hermann S. Hering, Victoria Theater, 3 p.m., Dec. 4.

Walla Walla, Wash.—Prof. Hermann S. Hering, Keylor Grand Opera House, Nov. 29.

Winlock, Wash.—Prof. Hermann S. Hering, Mutrie's Hall, Dec. 2.

York, Pa.—Frank H. Leonard, York Opera House, Dec. 1.

TESTIMONIES OF HEALING.

My early experiences in Christian Science were given to the Field on page 583 of the December, 1905, *Journal.* Since then we have moved to Longmont, Col., where we were happy to find a small but faithful band of Scientists. We became members of the little church here and we also had the privilege of becoming members of The Mother Church. Our gratitude for the great blessings which Christian Science has brought to us has been growing every day, as after my first healing—of a most distressing and so-called incurable disease—other chronic ailments, believed to be the unavoidable companions of old people, have been overcome, or nearly so. The desire for strong drink and tobacco, which I might say I used almost daily from boyhood, has gradually left me entirely. I have had many other demonstrations of the truth, either through the loving help of practitioners or through our own work, and these have strengthened our faith.

For the encouragement of beginners in Christian Science, who do not overcome all error, sickness, or sin as quickly as was hoped for and perhaps expected, I wish to tell of a demonstration which I made lately, as it seems to me to be the greatest victory over error which I have won, even if the seeming ailment was not as distressing as many others of which I have been healed. About three years ago a peculiar skin trouble broke out on the inside of both hands, causing me much pain and inconvenience. It did not seem to make any difference whether it was cold or warm weather, and the use of gloves did not afford much protection; but I never hesitated to use my hands when necessary, neither did I ever try to find out the name of the disease.

I tried for a long time to handle the case in Science for myself, according to my understanding, but could not make the demonstration. Believing, at last, that this trouble, being before my eyes all the time, seemed too real to me, I asked a practitioner to help me, which she did. After some time the hands were almost entirely healed, but it was not long before the trouble broke out again, which was a great disappointment. Still I did not lose courage, and worked right along, for I knew that the reason for failure to realize the healing must be in myself. I had overcome a great many evils that possessed me, to be sure, but evidently I lacked something yet. Was there not one of the old cherished beliefs and practices which I was not yet willing and ready to give up for Truth? On examination I found that I was still dominated by some appetites which I felt to be unworthy, and straightway determined to give up their indulgence. It is interesting to be able to say that on that very morning I had to dig a ditch in hard dry ground, but my hands did not hurt me at all and healed right up,so that after a few days they were as smooth and soft as they were before this trouble began. The ailment vanished from my consciousness so completely that I forgot the following day to put on the gloves which I always wore out of doors, and from that same morning the desire for coffee or tea had vanished as completely as the belief in sore hands.

Since this experience I have more than ever before understood the necessity for unquestioning obedience, and know also that Christian Science, the word of God, is searching the very heart of man in order to uncover error and destroy it. I can, with St. Paul, thank God even for my infirmities. They help us to purify ourselves till we shall finally awake in His likeness.

FRED HALVERHOUT, Longmont, Col.

I am very glad of the opportunity of acknowledging my healing through Christian Science. For many years I had been an invalid, from spinal irritation and nervous break-

Digitized by Google

down which was only temporarily relieved by the kindness of friends and physicians; but this finally resulted in a condition which I feared would terminate in helplessness, so that I would never be able to walk again. Knowing that no material remedy could help me permanently, I tried Christian Science treatment as an experiment. It proved very satisfactory, for in six weeks' absent treatment I was so thoroughly healed that, although four years have passed, I have never had a day's serious illness since.

I am grateful to God for this healing, and for the understanding of His word which is coming to me through the study and demonstration of the teachings of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, of whom I will say, in the words of Paul, "I thank my God upon every remembrance of you."

CORA L. LOCKERBY, Quincy, Mich.

In "Science and Health with Key to the Scriptures" by Mrs. Eddy, we read, "We are sometimes led to believe that darkness is as real as light; but Science affirms darkness to be only a mortal sense of the absence of light, at the coming of which darkness loses the appearance of reality" (p. 215); and this has been my own experience. About two years ago a very small bunch appeared under my chin, but I did not deny the error in a scientific way and did not "stand porter at the door of thought" (Science and Health, p. 392). The growth did not increase very rapidly in size, and as it did not pain me I did not pay much attention to it until September, 1908, when it seemed to be quite noticeable. I then began to wake up, to realize where I stood. I certainly had been in darkness, and I knew that it was time for me to work.

I tried to clear my consciousness, and to know that as God did not create disease I could not manifest it. I worked on in this line for a few weeks, when I met a Christian Science practitioner to whom my husband had gone for treatment. She gave me instructions which I tried to follow, and worked to the best of my understanding; but error had crept into my consciousness with the suggestion of some malignant growth, and just then darkness seemed as real as light. I saw that I was losing ground, as the bunch was very much larger and had become very red and painful. I then wrote to the practitioner and asked her to take my case. In reply I received a telegram, saying she would begin treatment at once. That was the 9th of July, 1909, and at the end of two weeks the healing was complete. For a few days after the practitoner began treatment the pain was not so severe, but the sixth day it became very painful again and presented an alarming appearance. At night it began to discharge freely; then I was freed from pain, the soreness gradually went, and the light came. Two of my relatives had died from malignant growths, so it can be seen what this healing means to me.

I feel thankful to God, and to our dear Leader, Mrs. Eddy, who has taught us the truth that makes us free.

ANNIE M. KING, Wilmington, Del.

The past three years have been the happiest of my life. My cup of joy is running over. My mother had been an invalid in a sanitarium for twenty years, but she has been healed through Christian Science, and has been at home with her two daughters for over two years. She has outlived the doctor that kept the sanitarium, as well as the relatives and friends who sent her there.

For six months I was rejoicing about my mother, but after that the novelty wore off. I do not wish to condemn the doctors, but I am thankful that I have learned that there is a better way. In all, we spent over twenty thousand dollars for medical treatment. Christian Science has overcome for me the fear of sanitariums, hospitals, and rest-cures. After graduating from high school I went twice to a sanitarium for several months, as a result of overstudy. Afterward I traveled over Europe for a year and a half, but travel did not heal me of bitterness and fear. I have come to prove for myself the truth of which our dear Leader, Mrs. Eddy, writes in "Retrospection and Introspection" (p. 21): "It is well to know, dear reader, that our material, mortal history is but the record of dreams, not of man's real existence, and the dream has no place in the Science of being."

MISS GEORGIANA SPRINGER, Chicago, Ill.

I can truly say it is because of the inadequacy of human language to express the deep gratitude of my heart for the larger understanding of God which I have gained through the study of Science and Health, that I have refrained so long from declaring it through these columns; but now these words of Jesus come to me with a new meaning, "He that sent me is with me: the Father hath not left me alone." I realize as never before that the Father has never left me alone, and that He will now, and always, supply my need.

I had occasion recently to look over a large box of written matter, and to contrast my thought of fifteen years ago with my thought of today. All through those articles—articles on Scriptural topics, written for a small monthly published by the church to which I then belonged—I can trace my concept of God as either sending or permitting sickness, distress, trials, poverty, and the like, for a good purpose. I see, and marvel now, how illogically I argued that He would in some way bring good out of evil; that way, however, I never seemed to make clear. The point I would make in commenting upon it is the fact that underneath this pile of promiscuous words I plainly trace a plaintive soul-cry for purity, light, God! When I stumbled, as it then seemed, into Christian Science, four years ago, and when that grand "Key" was placed in my hands, I took it eagerly and unlocked, though slowly, the everlasting truths of the Bible, and understood for the first time what Job meant when he said, "I have heard of thee by the hearing of the ear: but now mine eye seeth thee."

For more than twenty-one years, just ended, I have ministered to the church in the capacity of a pastor's wife, and naught have I but love for all those with whom I have been associated. Although positive divergence of thought for the past two years at length terminated in our resignation, this separation came about so gently that now it is counted in the past. I simply am left to wonder at the graciousness of God's leading.

The people loved their pastor, and their expressions toward me have indeed been very tender and beautiful. My last public words, "Friends, I am not taking this step away from you, but nearer to you. If at any time you want me, if at any time you find yourselves hungering and thirsting for a heart to heart talk about the Christ Science, I shall be glad to help you,"—these words were received in love, because tendered in love.

The help for which I am most thankful is the answer to that soul-cry, sent up years ago, and all along the path, for light. The peace which has come into my life is past telling, but it is the "hope for years to come;" yes, it is all summed up in the larger understanding of God gained in the unfolding of divine Principle as taught in "Science and Health with Key to the Scriptures," and revealed in the Bible to all those who have eyes to see it.

I have had much to overcome, but even so I am thankful, for God has shown me how to do this, in proportion to my search to know, and since my awakening, four years ago, my search has been continuous and almost alone, with the exception of one dear Scientist, who tenderly yet unflinchingly has pointed out the way and helped me over the hard places. Pages and pages could I write about the overcoming of physical ills, faulty temperament, discordant conditions, and lack in everything and every direction.

Digitized by Google

Pages, too, upon the personal experience of the preventive element in the domain of Christian Science; but I hesitate to monopolize the valuable space in these columns, for I realize as never before that if all the benefits accompanying the acceptance of the help of eternal Truth were written, I might say with St. John, "If they should be written every one, I suppose that even the world itself could not contain the books that should be written." I rejoice with joy unspeakable that, although there are no words that can adequately convey the idea of Spirit, yet this priceless and practical religion needs not so much words as actions.

MRS. CLARA ISERMAN, Ridgewood, N. J.

We have recently passed through an experience that gave me an added proof of the omnipotence of God. Our only child, a boy of eight years, while at play barefooted, jumped upon an old iron rake, one prong passing through the ball of the foot and coming out on top. The child came into the house, and when I saw what the trouble was, I went quickly to the telephone and asked help of a Christian Science practitioner. My fear seemed to know no bounds, for I myself had passed through three months of extreme suffering from poisoning, supposedly caused by stepping upon a nail, a few years prior to my knowledge of Christian Science. The healing of the child's foot was most wonderful. He never once complained of its hurting him, lost no sleep at night, and just one week after was out at play, running, jumping, etc., as if nothing had happened.

Words fail to express my thankfulness to God, and my heart goes out with more gratitude than ever before to our brave, dauntless Leader, whose life of consecration, purity, and surpassing love for mankind has enabled us to experience this wonderful demonstration of God's power, as well as past blessings, through Christian Science.

MRS. DORA E. DOANE, Pasadena, Cal.

I have been helped a number of times in Christian Science. Four years ago I had absent treatment at the birth of my second child. When the birth took place, everything was natural and I experienced very little pain. The physician who was present at the time was amazed, and said he had never seen anything like it. The child was large and healthy and we both got along nicely. I was also helped at the birth of two other children. At another time, when my oldest child was a few weeks old, he suffered constantly with a bowel disorder. Finally, I wrote to a Christian Science practitioner to give him treatment, and in three days the action was perfectly normal. There are a great many other times when I and my family have been helped through Christian Science, for which I am most thankful.

I would like to tell of a beautiful demonstration of Christian Science healing which we had in the summer of 1909. Our little boy, then four years of age, swallowed part of a toy, made of iron, which caused violent vomiting. We called a physician at once, who thought it had passed into his stomach. The child was very sick and weak for some time, but gradually gained strength, although he had great difficulty with his eating, his throat being in a bad condition. After about six weeks he took cold, and his breathing was very bad. In October he became so much worse that it was thought best to have him examined with the X-ray. We were then told that the iron had lodged and almost entirely closed one lung. The physicians in attendance advised an operation, but said his lung was in such a bad condition that he could not possibly recover. We then took him to Chicago, to a hospital, and the physicians there said it would be a very dangerous operation, in fact would be fatal; so we engaged a Christian Science practitioner in Chicago, who began treatment at once, and we brought the child back home.

After three weeks of absent treatment I took him to Chicago again, and one of the city's best physicians examined him again with the X-ray. He said the iron was gone, but that no human power could save the child as he was in the last stages of acute lung trouble. I then took the child to the home of the practitioner and stayed there nearly a week. The improvement was very noticeable after this time, so that long before Christmas we felt that he was perfectly healed. He kept well all winter, and now, a year after the accident, he is as healthy and strong a child as one could wish to see. His disposition, too, has improved as much as his body. Before this experience he was cross and irritable; now he is sweet and loving. Needless to say we all feel the deepest gratitude, and it is with a very thankful heart that I send this testimony, hoping it will help some other who is past all human aid. We feel that we are greatly blessed to live at a time when so much truth is being brought to light. Our thanks are first to God, the giver of all good; then to Mrs. Eddy, the Founder of Christian Science, through whom the light of Truth has come to this age.—ZOETTA EDENS, Onarga, Ill.

Many times I have thought I would write to the *Sentinel* and tell how grateful I am for the blessings that have come to our family through the slight understanding we have, and the help of others in Christian Science. It would be impossible for me to tell all that has been overcome. At the time when I took up the study of Science and Health it was not for physical healing. I was a member of an orthodox church, but was not satisfied. I had studied "mental science" a short time, but there was much in it that I could not think was the truth. Then I came to see what Christian Science is, and it has been a constant source of comfort to me.

I hardly know how I could have passed through so many seeming misfortunes and accidents in our family of three, without the strength given in the understanding that divine Love is an ever-present help. I had a fall down a flight of stairs which resulted in very serious injuries. My husband, who is over seventy years of age, had two ribs broken from a fall, but in less than a week he was able to go to his office. Our son had his hand caught in machinery, so that it was thought by the surgeons at the hospital that they would have to amputate the whole hand, but he insisted that they must try to save it, especially as he had only the use of one hand. While he was not a Christian Scientist, as soon as I reached him he asked me to telephone a practitioner for help, which I did. He passed through the ordeal wonderfully, and when he became conscious asked for something to eat. One surgeon remarked that he had never seen the like of it before, but we knew from what source our help came. We brought him from the hospital the next morning, and he was dressed and sat up all the time. With all three cases there was no pain, inflammation, or fever, and the whole system was perfectly normal.

Is it any wonder that I cannot find words to express my gratitude to God, also to Mrs. Eddy, for the help we have had in Christian Science? If I were to tell all the good that has come to us through Science, it would take the space that belongs to others.

MRS. BEADIE MOSS, Missoula, Mont.

I often think of those who are not present at our helpful and uplifting Wednesday evening meetings, and I wish I might share with them the love and truth which is found there. When I think of some who are working out the problem of life, alone in some far-away country village, where perhaps they see no Christian Scientist for months to help them on with an encouraging word, I wonder how I, who have so much cause to rejoice, can ever complain or be a sluggard in the race.

Two years ago I just existed, my case hopeless according

Digitized by Google

to *materia medica*, and I was not strong enough, in the opinion of my relatives, ever to do much work; but that verdict has been set aside, for today I am living, not merely existing, healed of my physical troubles, and able to work hard and long every day. At that time I was going to church as in my boyhood days, but was unhappy and discontented because I had not found a God to whom I might draw nigh and know. Mrs. Eddy tells us in "Miscellaneous Writings" (p. 155) that "all power and happiness are spiritual, and proceed from goodness;" therefore I need no longer be unhappy, and how can I be discontented with an ever-present God, good, as my guide, my strength, my wisdom, and my all. I often ask myself, Am I really grateful for the good I have received in the short time since I put aside my prejudice and consented to read Science and Health by Mrs. Eddy, which a friend let me take because she said I needed to read it? I did read, but at first found nothing. I, however, read on, and still there seemed to be nothing in that book which I needed: but one day the light came, and it was not long before I obtained a copy for myself.

As the Christ-healing has been restored to us in God's own way, after being lost sight of for so many centuries, so all will sooner or later come to work out their individual problems, which are at times forgotten because of some worldly ambition or selfish desire. All I am and all I hope to be I owe to Christian Science, and my silent prayer is that I may be found worthy and prove my gratitude as I journey on from sense to Soul, to spiritual freedom and strength.—HENRY E. HEWITT, Boston, Mass.

For fifteen years I had eye trouble, which material means never relieved. The last two years of that time I suffered constantly, and had but little use of my eyes. I was often discouraged, still I always felt that somewhere I must find help; but gradually almost my whole system became disordered, and when I reached the point where I knew I must have help very soon, the truth was brought to me by one who saw so clearly God's love and care for His children that I was able to see it, too. A few days after Christian Science treatment began I was healed, and only those who have been through a similar experience know how happy I was—not so much that I was well, but because I had found God. That was over three years ago, and since then I have been striving to learn God's ways and how to walk in them. During that time I have been well, for the first time in my life; it almost seems as though a new body had been given me.

Quite recently God's protecting power was once more shown me. On retiring I noticed some spots on my arm, but gave no heed, and by morning my body was nearly covered. While in the woods the day before, I had come in contact with what is called poison ivy. The condition seemed so serious that a practitioner was informed of the trouble over the telephone, and in four days the eruption was all cleared away. To me this was wonderful, for the whole body was affected. There was no burning or pain, excepting for a short time on my hands and throat.

I am glad to have been guided to the truth, and I know that only as I live it in thought and deed can I show my gratitude to God. I am also grateful to our Leader, Mrs. Eddy, for her faithful ministry to mankind.

CANDICE B. HOBART, Canandaigua, N. Y.

I wish to tell of what I know of Christian Science. In 1905, I was in a hospital three months and had two operations in that time. I came out in April, and was well until June, when I became ill again, but so dreaded the hospital that it seemed I could not go there again. I had medical treatment until the next April, when I was very sick. I could not stand it, and I had two doctors, who said I must have an operation; that I was full of growths. I did not want to go, but they brought another doctor and he agreed with the others in saying that my case was very critical, as I had put off the operation too long. It was decided to operate on me the next day, and I sent word to my sister to come and see me.

My sister came, and she told me of Christian Science and said that I could be healed by it. I believed her, for I always had faith in God, and I was ready to trust Him. I told the doctors I would not go to the hospital, as I was going to try God's power for three days first, and if God could not help me I would then go to the hospital. They were very angry with me, and said I had already let it go too long; but I sent for a Christian Science practitioner, and at the first treatment the constant pain left me. I knew that the growths had been destroyed, and thank God that was the case. The first time the practitioner saw me I could not speak above a whisper, but the next morning I got out of bed and threw away all the material remedies. I kept on gaining, and realized the truth of Jesus' promise, "Ye shall know the truth, and the truth shall make you free." In six days I was able to go down town to the Wednesday evening meeting, and testified to what God had done for me.

I am very thankful to God for His love and mercy to me; also to Mrs. Eddy, for her understanding of God's love that has brought the truth to light.

MRS. ELIZABETH SLOCUM, Auburn, N. Y.

It is with the deepest gratitude that I give my testimony to what Christian Science has done for me. The efficacy of Christian Science was proven to me in February, 1909, at the birth of my baby. The birth was easy, it being wholly without pain. A nurse and practitioner attended me, there being no physician called. I am also grateful to Mrs. Eddy for giving us this wonderful truth, whereby we can work out our life-problems. If we study the Bible and her works carefully, we find each day a new way in which to apply this truth.

MRS. HELEN BLAKE PHELPS, Jackson, Mich.

Throughout the study of a recent Lesson-Sermon these words of the psalmist have kept recurring to my thought,—"Let the redeemed of the Lord say so." With this admonition came the earnest desire to express the gratitude I have long felt for the work of Truth through Christian Science. Some one has said that if nothing else had been accomplished by this movement than the restoration of weak nervous women to a life of usefulness, it would have done much toward the redemption of mankind. That this has been done in my own case in the last four years is not only a cause of personal thanksgiving, but has meant much in my relation to others, particularly in my work as a teacher.

I started life as a weakling, with very little promise of growing up. For years I struggled against an almost overwhelming sense of constitutional delicacy. I continued my education from year to year, only by the most careful attention to matters of diet and surroundings, my parents sacrificing much, in the mean time, to give me every possible kind of help. Just three years ago I came back from a long vacation, seemingly full of new energy and ready for work, but in just six weeks I had returned to the state of extreme nervous exhaustion which had almost ended my work the preceding spring. This was accompanied by such acute attacks of rheumatic trouble that I was in almost constant agony. These periods of pain kept increasing in duration, until I could scarcely keep my mind on the duty of each hour. I finally saw nothing ahead but to resign my good position and take a year's rest, which meant relying on my relatives for help, as I had no other source of income.

Just as this decision was reached, there came to me in a

Digitized by Google

most unexpected way a timid suggestion from a fellow-worker that I try Christian Science. It was almost wholly a new thought to me. I had tried massage and magnetic treatment, but never had the idea of Christian Science presented itself as anything that might interest or help me. I had read and heard some harsh criticism of it, so that I was somewhat prejudiced, but now, in sheer desperation, I clung to any hope of relief and went at once to a practitioner. Words can never explain the sense of peace that came to me in that first visit. God's "word" was indeed sent quickly with its healing message. I returned to my work the next day, knowing that I could continue and that I should find joy in it. In a week's time the sciatic trouble had disappeared, and I gained so rapidly in every way that many comments were made upon my changed appearance. Since that time several ailments of long standing have been gradually overcome. Perhaps the greatest freedom I have gained is in being able to do away with glasses, which I had worn most of the time since the age of twelve.

Many hard lessons awaited me before I was to begin my ascent from the "wilderness" of material sense to the spiritual heights, but I am now thankful beyond measure for each experience, for through it all has come that peace which the world cannot take away. That much besides physical well-being has come to me, need not be explained to those who have already experienced the healing in Christian Science. Since learning the joy of following the leadings of divine government, instead of my own stupid human will, my life has been directed in a wonderful way. This direction was not always understood at the time, but the results have shown a guidance in life-problems that could not possibly have been more satisfying. To the beautiful help and the patience of practitioners and Science friends both in the East and in the West I owe much of the good I have gained. The regenerative power of Christian Science lies, however, in the fact that it does enable one to work out his own problems whatever they may be, and this I am striving to do daily. From a position of misunderstanding and criticism I have come to feel the greatest love and respect for our wonderful Leader, and I rejoice in the wisdom and love that directs the manifold interests of this great movement. My greatest desire is that I may obey, and follow in all true humility of spirit, as she so surely follows only the Christ.

ELIZABETH CUTTING, Riverside, Cal.

[Translated from the German.]

It is with a grateful heart that I think of the help which Christian Science has brought me. I was suffering greatly from stomach and bowel trouble of years' standing, and medicines brought no permanent relief; but it was not until an operation was decided upon, that I turned to Christian Science and asked a practitioner for help. I had absent treatment, and was freed of the physical ills within a short time. Through Christian Science I have also come to the recognition of the truth which heals and frees us and lifts us above all material beliefs. I am very grateful to Mrs. Eddy, through whom has been revealed this truth which brings infinite blessings. I have become mentally free through the discernment of spiritual realities, as revealed to me through the study of her book, "Science and Health with Key to the Scriptures."

FRL. CHARLOTTE PRAHL, Danzig, Germany.

Blessed are the cheer-givers, for they shall be called the sons of the morning.

Blessed are the happiness makers!

Blessed are they that remove friction, that make the courses of life smooth, and the intercourse of men gentle!

HENRY WARD BEECHER.

FROM OUR EXCHANGES.

[*Outlook.*]

In no field does the process of hardening faith into dogma bear more tragical results than in the field of religion. The tendency to formulate a vital relation, to define rigidly a free and spontaneous movement of mind, plays havoc in every art, and transforms the fresh and spontaneous feeling, the new and individual method, into an academic formula. The struggle of all vital things in the world is to keep active and free, to resist the paralysis of hard and fast method. Every man of genius in art is a disturber of the peace at the start; not a lawbreaker, but a violator of those conventional rules in which the vital force of a great, affluent nature has been turned into hard and fast precepts. The experience of the race, the deposit of its endeavors to find truth, its struggles after freedom, its anguish of toil, is of immense educational value; but when this experience ceases to be a guide and becomes a master, ceases to be a liberator and becomes a yoke, it arrests the natural growth of the creative life of men. There are few things in history so pathetic as the conversion of the liberators of the mind and soul into oppressors, so that the apostle or martyr of freedom in one age is made an unwilling tyrant in the next; so prone are men not to follow the spirit of the leader, but slavishly to copy his methods. This benumbing tendency creeps like a slow paralysis not only over society at large, but over individuals, and the man of genius must strive like other men to keep his mind open and his spirit free; otherwise he, too, becomes an imitator, not of other men, but of himself. If the vision which made his youth glorious is to give his maturity constant renewal of power, he must keep near the sources of his inspiration, and the exquisite craftsmanship which practice brings him must never be counted other than as the servant of vision.

[Rev. C. Silvester Horne, M.A., M.P., in *British Congregationalist.*]

More and more I come to believe that the immediate necessity, if the church is to recapture and reassume her position of authority in the modern world, is that she should simplify her gospel. We do no dishonor to reason when we protest that we spend too much time in rationalizing our mysteries. What the world wants to know is not so much that our gospel is reasonable as that it is real. Theologies new and old have far more interest and value for the ministerial mind than for the non-ministerial. I do not suggest that we need to study theology less. But I do suggest that if we knew what is going on beneath those faces that confront us as we stand up to preach to them, what their secret hopes and desires, ambitions and passions are, we should take care first of all that our gospel is not philosophized or theologized or ceremonialized to death. Alas for the man or woman in mortal peril, waiting in vain for the word of deliverance from our lips, until we, their appointed evangelists, have agreed on a philosophy that can explain the universe!

[Rev. C. L. Goodell, D.D., in *Zion's Herald.*]

One fears that in some quarters the pulpit has lost nerve and has forgotten the evidence of history, that whenever Christianity has been most convinced she has been most victorious, and whenever she has been most apologetic she has been most futile; and also that it is the schools within Christianity which assert and construct, and not the schools that are critical and eclectic, which have chiefly affected their generation. Our fathers may have been too sure about everything. It would be an immense gain if some of us were absolutely sure of anything. It would be a great disaster if the intellect of the church should be so occupied in recasting the form of the Scriptures as to have no strength left for declaring the gospel contained in the Scriptures!

Digitized by Google

Is it not time that the strength of the ministry was withdrawn from criticism and given to evangelism? We have had enough of recanting; we long for some confessing. We are justified in disbelieving the things which have not been proved, but only if we believe the things which have been proved.

[Rev. Cameron Mann as reported in *Kansas City* (Mo.) *Times*.]

The really vital thing in the foreign mission movement is the rapidly growing tendency of the denominations to forget their sects and to unite for the betterment of the heathen. In helping the heathen, Christianity has helped itself, and we can see the dawn of a day that will know no sects, no creeds except the creed of Christ. The contempt that marked the beginning of the mission movement, when the sects met on foreign shores to combat each other for the number of souls saved, was not altogether misplaced. How could we hope to persuade the heathen that our faith was superior when we were quarreling among ourselves as to which was the better brand, as it were?, There has been an awakening within the last fifty years, and now it is one half of the world united in a firm purpose to bring about a universal brotherhood of man.

[William Henry Meredith, Litt.D., S.T.D., in *Christian Intelligencer*.]

Both the word of God and the world of men call loudly for Christian consistency, the agreement of the life of the individual Christian with his Christian confession. The gospel is a gospel of life as well as of salvation. It has very much more to say of the present life than it has of the future life. Collect the references to the life beyond, in the New Testament first, and then in the Old Testament, and again you will be surprised at the very few verses even which refer to the future, and the many, many chapters and sections which belong only to the present life. The gospel contains God's revealed plan of salvation from hell, through Jesus Christ, the only Saviour of men, but it is not merely a fire-escape or a life assurance policy which we are urged to secure.

[*Christian World*.]

It is the divine consciousness in us, ever developing, ever coming to clearer affirmations, which is steadily ridding us of earlier barbaric conceptions of God and man. The divine in us, which is teaching us the omnipotence of goodness, the limitlessness of love, which puts us alongside, inside, of our fellow-man, one with his innermost feeling and need, makes it impossible for us to conceive of God as other, as less than that. And so away go all doctrines which are contrary to this; all doctrines which imply that God can inflict torture for the sake of torture; can please Himself with another's sufferings. If God is a man, eternal punishment would be the eternal punishment of Himself; He would be Himself the eternal sufferer in His own hell!

[*Churchman*.]

The time is coming—we do not believe that it is far distant—when God's judgment upon this great sin of division will be so plainly and indelibly marked upon the world that no body of Christians will dare venture to set itself and its standards up as God's only standards. Standards for a reconciled Christianity cannot be sought for by conceiving it as an expansion of some already existing denomination or communion.

[*Universalist Leader*.]

Times have changed, the purpose, motive, and method of churches are transformed. We are living in a new day. The church is not here to save a few from a future hell, but to save all it can from all the hells of modern life, and set them on their way toward a kingdom of heaven which is going to bless this world right here and now.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE SOCIETY.

NEW PAMPHLETS.

Now on sale are three new pamphlets: "Seeking and Finding," "Prayer and Healing," and "The Divine Nature." Each pamphlet contains five to eight articles that have previously appeared in the *Journal*, *Sentinel*, or *Monitor*; and they are particularly suitable for handing and sending to inquirers or persons who are becoming interested in Christian Science.

Hereafter, the price of all pamphlets (except "What our Leader Says" and "Christian Science and Legislation") will be reduced to 5 cents a copy; 55 cents a dozen; $2.00 for fifty, and $3.50 for one hundred. Hereafter, also, the republication in the English language of single articles as "tracts" or "reprints" will be discontinued. It is believed that their place is better taken by the daily article on Christian Science in the *Monitor* and by these new pamphlets and others that may be issued.

NEW POST CARDS OF THE MOTHER CHURCH.

Post card photogravure, in sepia tint; an exact reproduction of the large photogravure of The Mother Church Buildings and Publishing House with parkway in foreground.

Single copy	$ .05
Twenty-five copies	1.15
One hundred copies	4.25

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2, six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90, six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage, at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

At the twenty-second annual convention of National Association of Railway Commissioners, in session at Washington, President Decker, who is a member of the New York public service commission and an authority upon questions of this character, said: "The whole matter of express service and express rates demands careful and thorough examination, with a report upon existing conditions and any indicated remedies. Such inquiry could also involve consideration of the propriety and effectiveness of a parcels post. It is my view that a strong and large committee of the association, organized to go fully and actively into the whole subject, should be appointed. This does not mean that such investigation should go to the extent of determining whether specific rates are unreasonable or unjust, for that is a matter for action directly by the commissions, but it does include the hearing of the general express rate system upon commerce, requiring quick service, the public requirements, the effect of the present system of express companies, contracts with railroads, the manner in which express rates are constructed, and the particular services which are rendered therefor. If our present express system contains features that burden or prejudice the public interest, the system to that extent should be revised. If the whole scheme of express service, as now performed, is obsolete or radically defective, it should be thoroughly reformed."

Secretary Ballinger of the department of the interior has issued a long statement emphasizing the necessity that Congress provide a method for the exploitation of the oil resources of California which will protect the interests of the public. It must be borne in mind, the secretary explains, that if the Government does not obtain a decision in the courts reserving oil lands heretofore patented to the Southern Pacific Railroad Company, "it will materially affect the policy which should be developed by Congress. The railroad, if the owner of the odd sections, will be enabled with its checkerboard holdings to drain the oil from the reserved public lands while the Government keeps them under reservation."

It is now nearly six months since the first automatic scale purchased by the Government was installed on the docks of the American Sugar Refining Company in Williamsburg, N. Y. The remaining nineteen scales contracted for are expected to be delivered in the near future. Taking everything into consideration Surveyor Henry of the port believes that the automatic scales are eminently satisfactory for the purposes they have been put to, and that one hundred and fifteen drafts an hour, of three bags of sugar each, is as much if not more, than can be weighed accurately by the old device of beam scales.

President Taft spent three days at the Canal Zone, examining the construction work of the canal, and was highly pleased with the showing. The canal will be completed Dec. 1, 1913, it is declared, although the official date of the opening remains Jan. 1, 1915. Lieutenant-Colonel Goethals desiring one year in which to train the canal tenders and get the machinery working smoothly. Slips in the mean time will be granted the privilege of the canal, but at their own risk of delays incident to inexperienced operation. The canal will be completed with the $375,000,000 already authorized.

The New Jersey court of errors and appeals has reversed the decision of the supreme court which sustained Justice Swayze in ordering the four great beef-packing companies to produce their books before the Hudson grand jury of New York state during its investigation of the high cost of living. While the prosecutor thinks the books would prove that there was an agreement to raise the price of beef, he thinks there is evidence enough for conviction without them.

The dissolution of the "glass trust" under a federal attack promises the development of deposits of silica glass in various places adjacent to Chicago. From some of these deposits the raw material has been shipped at heavy transportation expense to the eastern factories, the manufactured glass costing buyers in the West enough more to cover the "economic waste."

The tariff board has begun active work in the field to ascertain the truth regarding the cost of manufacturing pulp and paper in the United States and Canada. This was one of the questions in dispute when Congress undertook a revision of the tariff, and it is the purpose of the tariff board to uncover every possible fact that will show the exact situation.

After adopting resolutions in which charges are made that the state and federal anti-trust laws are being violated by combinations of capital which effectually restrain trade in sugar and molasses by monopolistic methods, sugar planters gathered at Donaldson, Ala., from eight parishes have taken steps to secure the prosecution of the alleged offenders.

Attorney-General Wickersham, by direction of President Taft, has begun an inquiry to determine whether six thousand acres of valuable oil lands in California were known to contain oil when patented to the Southern Pacific Railway Company. If such is the case, suit to recover will be instituted.

The perpetual franchise claimed for the trolley system of Providence, R. I., has been declared impossible by the city solicitor. He says the perpetual exclusive franchise creates a monopoly, and that it is repugnant to common reason. The local trolley system is now controlled by the New York, New Haven & Hartford.

The Boston municipal departments of street, water, and engineering works have been consolidated under one control in a board of public works, at the head of which will be a commissioner at a salary of nine thousand dollars a year, under whom there will be three deputies at five thousand dollars a year each.

The national deficit to date for the fiscal year is about $12,101,926, as against $27,182,028 at this time last year.

International.

Morocco has agreed to pay Spain thirteen million dollars indemnity as demanded by the latter government following the successful Spanish campaign against the Riff tribesmen in the summer of 1909. In addition to paying an indemnity, Morocco cedes to Spain the territory within a radius of sixteen miles of the Spanish settlement of Melilla. This is six miles farther than the Spanish army occupied during the war. Spain will also establish custom houses at Melilla and Ceuta.

A new section of the Cape to Cairo railway has just been opened from Wad Medeni to Sennar, a distance of sixty miles. In January last the section from Khartum to Wad Medeni on the Blue Nile was opened. One train per day will be run each way on the new section of the line. It is expected that the railway will reach Kosti, on the White Nile, by the end of this year or early next year.

Unable to reach any compromise on the veto bill as affecting the House of Lords, Parliament will be dissolved on the 28th inst. and a new election ordered. King George refused to promise the election of enough new Liberal peers to guarantee the carrying out by the Lords of the will of the Commons in adopting the veto bill.

It is now certain that the new British thirteen and a half-inch naval gun is to be met by the German admiralty with a fourteen-inch Krupp weapon of even greater power. It has recently been under trial and the results are said to be exceedingly good.

What is described as a "monster appeal" is being drawn up by the Chinese, urging Great Britain to abrogate the treaties with China which permit British interests to engage in the opium trade.

Count Leo Tolstoi, the great Russian reformer, passed away on the 20th.

Industrial and Commercial.

Comparisons made between the totals of lumber production and of lumber producers in the preliminary report of the department of commerce and labor on lumber, lath, and shingles, show increases of both in amounts that bode ill for conservation and for profits to the mills. The production has risen from over thirty-five billion feet to over forty-four and a half billion in ten years. The mills have increased from 31,833 in 1899 to 48,322 in 1909. These figures show that the small mill must have greatly increased in numbers. As the small mill is wasteful and not a conserver of the forests, the showing is regarded with alarm.

The New York, New Haven & Hartford railroad, having gained control of the Boston & Maine railroad through a holding company, is now petitioning for authority to purchase the Boston, Revere Beach & Lynn narrow gage road. The Company offers to standardize the gage, to electrify the whole road, and to extend it from Lynn to Beverly with a double track the whole distance from Boston, equipped with modern steel cars, electrically lighted, and a block signal system.

A picture postal card combine, comprising three of the largest firms in the country, has been formed, with nine hundred thousand dollars capitalization. The combination was directly brought about, so it is said, by the Payne-Aldrich tariff, which increased the duty on postal cards two dollars per thousand, making it impossible for importers of German cards to compete with the American product.

The state board of assessors of New Jersey has completed the assessment of railroad property for 1910. The figures show an increase of nearly eighteen million dollars in assessed valuation, and on account of this increase and an increase in the average tax rate, the railroads this year will pay in taxes practically five hundred thousand dollars more than last year, or a total of $5,542,611.

Actual work in the new Maverick mills, East Boston, has been begun, the first building of the group having been completed and machinery installed. Twelve hundred employees are already at the spindles in these mills, which are located on the Boston water-front.

The world crop of oats is nearly three billion seven hundred million bushels annually.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

TREATMENT IN CHRISTIAN SCIENCE.

CLARENCE W. CHADWICK.

NOTHING is more important in human experience than to gain a right concept of God. Millions of human beings are believing in God, without knowing in whom they believe, and Christian Science has come to correct such misconceptions, to free men from their misapprehension of divinity. That it is succeeding in its holy mission is evidenced by the fact that unnumbered thousands, representing all the nations of the earth, are testifying to the healing and redemptive influence of Christian Science treatment. What is this treatment, the results of which the worldly-wise have tried in vain to account for upon the basis of sense testimony? What is it that enables people to discard all material means, sometimes against the wishes of family and friends, and to derive benefits through Christian Science that neither prayers nor medicines had conferred upon them? What is it that oftentimes brings speedy relief from so-called incurable diseases, corrects and destroys the most degrading of human vices, and inspires men and women to live purer lives? These phenomena confront Christian people today, and well may they query, What does it all mean?

Before attempting to answer the question, What is treatment in Christian Science? it must be conceded by all honest opponents and critics of this Science, that only those who have made a careful study of Christian Science and who have made practical application of its treatment according to prescribed rules governing such treatment, are in a position to give any reliable information upon the subject. One who believes in and is familiar with counterfeits cannot be expected to define what is pure or genuine. One who has faith in matter cannot explain the modus of spiritual law: the supersensible or the metaphysical is beyond his reach. Spiritual things or ideas must be spiritually understood.

It is practically a self-evident proposition that the only scientific or proper kind of treatment must necessarily involve the exercise of right thoughts or ideas. The supposed application or exercise of any thought or idea of God or man that is not right or true is not treatment. The very first thing, then, to be considered in scientific treatment is one's concept of God. If this concept fall short of being true or accurate, all must admit that any so-called treatment into which this erroneous concept enters, would not be in harmony with the divine idea. To illustrate: if a given person's concept of God involved the supposition that God is in any way responsible for sin and disease, or that He permits them to exist for some wise purpose, this individual would be in no position to ask God to heal the ravages of either sin or disease, because he would be asking contrary to His will, or not in His name.

The only prayer that is answered is the one that asks in His name, and this certainly involves an activity of thought that is true and accurate. Guessing at things is not treatment. So-called experimental treatment, having neither Principle nor law by which to operate, is not treatment. God is the all-inclusive ever-active intelligence, or Mind, and whoever becomes conscious of Mind which is unceasingly operative for good, receives right treatment, and there is no other genuine Christian Science treatment. In the words of our text-book: "The basis of all health, sinlessness, and immortality is the great fact that God is the only Mind; and this Mind must be not merely believed, but it must be understood" (Science and Health, p. 339). It follows that whatever is not founded upon the understanding that there is in reality one Mind only and this Mind wholly good, permitting, including, and recognizing no element of evil or sin, is not treatment.

Treatment in Christian Science denies the reality of sin, disease, and death and so magnifies the name of the Lord, "the beauty of holiness," that human thought awakens from the dream of supposed life in matter to lay hold on things spiritual and eternal. The realization of God's all-power and presence does not lull people to sleep in the belief that man inhabits a material body which is a constituent part of his being. The law of Life understood and demonstrated leads thought away from matter into Mind. The application of this law in Christian Science to the needs of suffering humanity is called treatment, and it is found to be resuscitating, purifying, and uplifting. It is nothing short of the coming of Christ to individual consciousness. It is the harmony of Love's awakening call, "Go up higher," making its compassionate appeal to human consciousness.

Any so-called treatment that is minus the unction of divine Love is not scientific treatment. It is but the exercise of human will, which never leads heavenward. A mesmerist or hypnotist has no true conception of what treatment means in Christian Science, since it is the reflection or expression of divine Love, that Love which "is a consuming fire" to all that is sensual and sinful. "He that loveth not knoweth not God; for God is love." It is proven in Christian Science that divine Love is the only healing and saving power, and that it cannot be made manifest through sinful or impure channels. Love's manifestation or treatment is unerring and certain in its effects upon individual character. It can be relied upon at all times. It is in no sense experimental. The great secret of its success in healing and redeeming mankind lies in the fact that it is entirely separate from any taint of materiality.

Again, Love "thinketh no evil." For this reason our text-book makes this statement: "Love is the liberator" (p. 225). The only Mind that heals is the Mind that sees and knows nothing but good. The mind that believes in and knows evil cannot heal or save. Salvation means the overcoming of evil, and one cannot overcome that which he insists upon clinging to in belief. He must renounce all belief in sickness and disease, if he would experience the healing of disease. He must renounce all belief in malice, envy, hatred, and kindred errors, if he would realize the healing power of divine Love. Because Love "thinketh no evil," he must learn to think no evil, that he may become a purified transparency or medium through which Love may find its lawful and harmonious expression. Nothing but

Copyright, 1910, by Mary Baker Eddy.

Digitized by Google

belief in sin obscures the glories of eternal Life, that Life which the great Master tells us must be understood spiritually and not simply believed in, if we would enter the kingdom of reality on earth. To know the meaning of treatment in Christian Science is to begin to pray as Jesus prayed, and to enter into Life here and now.

"THE GREATEST . . . IS LOVE."

DAISY BEDFORD.

THERE is something in the word love which fills the despairing with hope, comforts the mourner, binds up the broken-hearted, and eases the chafing of the prisoner's chains, unclasping them ere long. Much had been said and written about love, but it needed the inspired teachings of our Master as to its right application to the needs of poor humanity; and later, owing to the lack of understanding of these teachings, our Leader's spiritual guidance to show us once again that in the desert of human beliefs, human opinions, still could be found the springs of water,—the true idea of love,—welling up to quench the thirst of those who sought for the source of immortal life in order that they might never experience that thirst again. Faithfully and lovingly has Mrs. Eddy pointed out in her teachings that what mortals designate as love is often akin to hate, malice, lust, masquerading in the name of that which expresses "the nature, essence, and wholeness of Deity" (Science and Health, p. 465), and under this guise sin and suffering have stalked unashamed throughout our land.

As Truth gradually uncovers to each one "the self-inflicted wounds of selfishness" (*Ibid.*, p. 462), we are overwhelmed to find that what we had always thought we possessed, namely, a pure love for our fellow-men, contains no element of tha which is the foundation stone of all true love—selflessness—seeking not to get, but to give; seeking not our own, but another's good. Such, then, is the ideal upon which to base the early strivings for a purer concept of what love is; which later should prove through constant, earnest desire for good the truth of Isaiah's words, "A man shall be as an hiding place from the wind . . . as rivers of water in a dry place, as the shadow of a great rock in a weary land." Then gradually dawns on the awakening thought some faint glimpse of the meaning of omnipresent Love—the hush of complete understanding, the stillness which is needed—because what is the world seeking now, as it beats itself like some restless torrent against its barriers, conscious of its limitations, yet ignorant of the way in which they may be overcome? Only divine Love can still the raging storm, the fierce demand for justice (and perfect love means perfect justice)—perfect understanding.

Omnipresent Love, which is God, cannot be conscious of any unlikeness to itself, because, being omnipresent, there is no place where evil or injustice can be found; therefore this knowledge removes the seeming barriers to man's perfection, and as an idea of God, reflecting all good, there is for him no consciousness of evil. This thought stills all material reasoning and removes the burden of a belief in minds many, a burden which has so often seemed too heavy to be borne. Our Leader bids us "wait patiently for divine Love to move upon the waters of mortal mind, and form the perfect concept" (*Ibid.*, p. 454). What a gloriously descriptive word-painting of that brooding Love which encircles each and every one of its ideas, that not even a sparrow falleth without its knowledge. Who does not in some measure realize this on some quiet, restful day, spent "far from the madding crowd's ignoble strife"? Nature is clothed anew with early summer tints, the sun, softly shining through the morning mist, gives promise of the strong light which will soon appear, and over the sheltered pool edged with rushes the lilies in their starry beauty crown the waters. The may-flies flit noiselessly here and there, a brilliant flash of color; the birds are silent, a deep hush pervades—one stands alone, in a sweet silence save for the lowing of cattle in the distance, the sudden splash of a trout in the clear pool, the almost soundless bending of the grasses as a gentle zephyr caresses them, each blade tremulous with dew. Hearing in the solitude the voice of God, who is Love, our hearts go out in gratitude to Him "who giveth us richly all things to enjoy."

Love—who can compass its height, length, depth? It is revealed in every detail of our daily life—guarding, comforting, chiding, rebuking, reproving, teaching us how self-will, self-righteousness, self-justification, all self-seeking, is hurting us. A little child called to its mother that the staircase was dark, and she was frightened, unwilling to leave the security of the light. "No, dearie!" replied the mother, "you are not frightened; divine Love goes with you." Back came the child's answer—"Does divine Love go all the way, mother?" "Yes, darling, all the way," was the mother's response. With each one of us divine Love goes all the way—no path too rough for it to tread with us, no sorrow too deep for it to heal, no draft too bitter that it may be the inspiration of it; and so we stand before this manifestation of omnipresent Love, abashed, silent, humbled, yet rejoicing—rejoicing in the evidence of the fatherhood and motherhood of God, His loving care for His little ones, rejoicing that ours is the privilege of reflecting in some small degree that Love which passeth knowledge, for Love's secret is to be always doing things for God, and not to mind because they are such little ones. The widow's mite was blessed, and if we are prepared to offer all we have upon the altar of Love—no matter how small that offering may be—"this man shall be blessed in his deed."

THE UNITY OF MAN.

RICHARD P. VERRALL.

IN the latter part of the last century Mendeléjeff, a Russian chemist, discovered what is now known as the "periodic law," which governs the relations of the elements. After plotting a chart for the purpose of proving his conclusions, Mendeléjeff wrote an essay in which he said, "It may be expected that new elements should be discovered to fill blank spaces within the table, and their properties can be predicted from a consideration of those of the adjacent elements." During the next few years three new elements, gallium, germanium, and scandium, were discovered, each exactly corresponding with the descriptions which had been outlined.

This illustration serves to show, from the standpoint of human experience, that systematizing what we have enables us to know what we have not; then, after seeking and finding, we awaken to the fact that the desired object has always been at hand and merely awaited our recognition. While materialists have been vainly trying for centuries to formulate a science of natural phenomena, and have attempted to trace every physical effect to some basic cause, it is interesting to note that beyond the hypothetical ether they cannot go, and they are forced to admit that the problem of matter cannot be solved by the physicist, but must be left to the metaphysician.

Christian Science, like a modern Sir Galahad, picks up the glove at this point and enters the arena of scientific discussion. It shows that matter does not have to be accounted for at all, and that Spirit alone is the infinite substance. While mortal belief persistently claims that material knowledge makes men wise, and that physical things are good to look upon, it has signally failed to make good these claims. One qualified to speak authoritatively on this question declared centuries ago that "all is vanity and vexation of spirit."

The fact that all good is fundamentally one is as axiomatic as the correlative fact that all truth is one. The unity

Digitized by Google

of good therefore involves the unescapable conclusion that whenever and wherever good is discernible to our human sense, it is the effect of the one good as it flows through the line of least resistance in each individual consciousness. While mortals may entertain a mistaken sense of good and believe that good and evil are in some way related, this belief has no foundation in fact. Christian Science, as discovered by Mrs. Eddy, enables mankind to prove that good is the only reality, and thus to demonstrate the unreality of evil. She has taught that no good is ever lost, although to mortal sense it may not be visible. Starting with the assumption that good is ever present and omnipotent, we are more likely to find it and to enjoy its benefits than if we assume that evil is real and has power.

Many centuries ago Abraham declared the oneness of God. Later on Jesus established the unity of God and man. Christian Science reveals the unity of God, man, and the universe, and shows that man and the universe represent the sum total of all that is like God. The work, therefore, of every one who would make Christian Science practical and available in daily life, is to establish an individual sense of unity with the one good by living according to his present highest sense of good. This disproves the claim to a power in evil, and proves that all things are created by the one God and are united to Him and thus to each other.

GRACE.

FRANCES FIGART WILSON.

ONE evening, during a call from a Christian Science friend, a question arose regarding the meaning of the word grace. We consulted a dictionary, and of all the definitions given, there was one of four words which to me brought out the meaning so clearly that ever since, when I see or hear the word used in the Bible, or Science and Health, or our hymnal, instantly those four words come before me and cause that word grace to manifest an undying energy.

The definition was this, "the exercise of love." In II. Corinthians we read: "My grace [the exercise of love] is sufficient for thee." Again we are told: "By grace [the exercise of love] we are saved;" for it is only by exercising love that we can be saved,—saved from the false belief that man is mortal and subject to sin, sickness, and death. Peter tells us to "grow in grace,"—grow in the exercise of love. In the Lord's Prayer we ask, "Give us this day our daily bread;" which in its spiritual interpretation means, "Give us grace for today" (Science and Health, p. 17). If we exercise love today, we need have no fear for tomorrow; for today is now, and the eternal now knows no tomorrow.

In studying Christian Science we need to refer to the dictionary very often, for the new tongue teaches accuracy in the use of words. In the old way the road was so broad and directions so inaccurate that one was constantly stumbling over carelessly placed words. Science teaches accuracy, and as we grow in the exercise of love we are enabled to put off the careless old man with his words and deeds, and to put on the new man; or, to change our mortal concept of man and become conscious that "man is immortal and lives by divine authority" (*Ibid.*, p. 76). We can become conscious of man's immortality only through growth in the exercise of love, or through growth in grace.

In the 13th chapter of I. Corinthians we learn somewhat of love, while in the 1st chapter of the second epistle of Peter we learn how to exercise this love and become partakers of the divine nature, escaping "the corruption that is in the world through lust." May we be diligent to add to our faith virtue; and to virtue knowledge; and to knowledge temperance; and to temperance patience; and to patience godliness; and to godliness brotherly kindness; and to brotherly kindness charity. For if these things abound in us, we cannot be unfruitful. When the human concept of man is lifted in Christian Science to such heights, mortal mind no longer holds the reins in our consciousness, but we become subject to the divine government. It is through the vigilant exercise of love that the human concept of man is purified and finally spiritualized.

Even with a small understanding of Christian Science we can begin this renovation of the human concept of man, and by the constant exercise of love, by growing in grace, we are enabled to overcome sin and be healed of the many ills that the fleshly concept of man is heir to, and finally demonstrate that the man whom God created in His own likeness can be nothing else than spiritual.

THANKSGIVING.

ELIZABETH J. VAN ZELLER.

THERE are many reasons for thanksgiving, but the greatest that has come to us in this age is the answer to the question, "What is Truth?" *i.e.*, What is God, and what is our true being? Until the wonderful revelation of Christian Science was given to the world through Mrs. Eddy in her book "Science and Health with Key to the Scriptures," we were very uncertain as to what Truth, or the truth of being, meant. Jesus said, "I and my Father are one;" and as the Father is Spirit, and He is our Father, our real being must be spiritual, as is so conclusively explained in Christian Science.

We each have a life-work to perform, and my chosen work was that of a professional nurse, to heal and to help the suffering, a calling which, during twenty-three years of service under medicine and surgery, gave me ample opportunity to meet with all phases of sickness. As a nurse I entered the sick-room prepared to notice every symptom which the human mind was believed to have discovered. Established theories of *materia medica* teach that according to symptoms the nature of the case is determined. Then we are told that the disease must last a certain length of time,—it must have so many days to develop and so many days to spend itself. The doctor looks for this, the nurse expects it, and the patient bows down before his sentence in fear and trembling. The loving, tender care of the doctor and nurse does much for the comfort of the patient, but their sympathy with an unreal and unnatural condition, which yet seems so real because of ignorance of the great fact that God is Life, the Principle of man's being, and that He made man in His own image and likeness (which is not sickness),—this kind of sympathy does much harm.

Understanding this fact, the Christian Scientist goes into the sick-room to help and to heal without fear. He knows, and makes his patient know, that God is Love, that God is the creator of all that is real; that man is the image and likeness of God, and that the real man partakes of the qualities of his creator and looks to the cause of all good. It may be true that not every case of disease is yet met, but in my experience of five years in the practice of Christian Science, which acknowledges God to be the only physician, and which was demonstrated by our great Master, Jesus the Christ, I have found the Christian Science treatment of disease infinitely superior to that of *materia medica* methods. It brings about, as it were, a reunion between God and man, a spiritual consciousness which the world has not known since Jesus' time.

TOKENS.

HELEN ANDREWS NIXON.

CHRISTIAN SCIENTISTS everywhere will rejoice to hear of the new approach to The Mother Church—the beautiful new park which extends across the front of the church edifice and the publishing house, and opens through to the next parallel street. It is apparent that the two broad walks

Digitized by Google

leading directly across this park, from the street-cars to the church, will prove a great convenience, and that much skill in landscape gardening has been displayed in the effects produced by sunken lawns, trees, shrubs, and vines is equally apparent.

Dearer, however, than all this, to the heart of the Christian Scientist, is the thought of the thousands of cases of healing by the power of divine Truth, as brought to humanity in our Leader's inspired teachings, and that these healings are directly responsible for the edifice itself as well as for the new approach to it. The Christian Scientist knows that the stately, unhurried progress of the Christian Science movement precludes the supposition that this last visible unfolding of utility and beauty is anything less than the scientific manifestation of another established fact in human consciousness—even the fact of a broader, more joyous recognition and acceptance of the message of Christian Science. It is but a wider opening of the "gates," that the "King of glory" may come in and abide with us.

INSTANTANEOUS HEALING.

ELIZABETH L. EAST.

WHEN the seventy returned to Jesus and told him of the wonderful works which they had performed, Jesus made this remark, "I beheld Satan as lightning fall from heaven." It is impossible to understand this passage of Scripture without a knowledge of its spiritual meaning as revealed in Christian Science.

We first read of Satan in Genesis as the tempter, the lying serpent, saying, "Ye shall be as gods, knowing good and evil." This is the first record of the temptation to know evil. St. James says, "Resist the devil, and he will flee from you." The word "devil" and the "evil one" are used in the Bible as synonymous with the word "Satan." As explained in Christian Science, the "devil" is not a hideous human being, but the specific term for the "one evil" or the "knowledge of evil" or the "knowing of evil." Since evil is the very opposite of good, it includes everything that is not of God, not good. It includes sin, discord, and also sickness, for no one will admit that sickness is good. Therefore, Satan, devil, evil, sin, discord, sickness are the "one evil," or "the evil one" (Science and Health, p. 16), against which we are warned.

On page 590 of Science and Health the kingdom of heaven is defined as the "reign of harmony in divine Science;" and Jesus said, "The kingdom of heaven is within you," therefore the kingdom of heaven must be the consciousness of absolute harmony. When we become conscious only of harmony, then discord, sickness, sin, evil, devil, or Satan, drops from our consciousness just as darkness vanishes when the light appears; and whenever an instantaneous healing, whether of sin or of sickness, takes place in Christian Science, these words of Jesus are renewedly fulfilled, "I beheld Satan as lightning fall from heaven."

AWAKENING.

BELLE A. MUNDY.

I WISH to give thanks for the beautiful thoughts that come to me in Christian Science. I used to wonder why it was that a quotation, a text, or an idea would flash into my mind at the moment of need, but I have since learned to recognize these whisperings of Truth.

One day, after receiving a treatment in Christian Science, which had been prolonged on account of the depth of gloom and despondency in which my thought was, I remembered how as a child I had often suffered from "the terror by night." I would awaken out of a bad dream, my little hands beating the air and tears of terror coursing down my cheeks; but, just when it seemed impossible to endure the sense of fear any longer, I would find bending above me the sweet, smiling face of my mother, and hear her say laughingly, "Why, darling, there is nothing here—only mother." Without having even sought her protection, I had found mother with me. Then I thought, "So is our Father-Mother God smiling upon me and saying to my awakening thought, as it struggles out of the dream of mortal experience, There is nothing here—only Truth."

I was on my way up a steep hill, but it seemed to me as though that mountain had just rolled from my heart and lay at my feet for me to climb, and I went tripping up to the top as I had never done before, in the joyful realization of the presence of Truth and Love.

THE SURE FOUNDATION.

BERT A. MILLER.

IN the construction of every large building one of the first and most important steps to be taken into consideration is its foundation. The proposed site for the building is examined, borings taken, and in many cases huge pilings are driven down to hard rock on which to rest the foundation and make sure it has the staying quality to carry the weight of the structure to be erected. Without a sure foundation the building would settle, the walls crack, and perhaps the entire structure be ruined. With the foundation sure, the workmen can proceed to build with the utmost confidence, stone upon stone, up to any desired height.

In Christian Science we are engaged in the building of a temple,—a "structure of Truth and Love" (Science and Health, p. 583),— and the first and most important step in the beginning of this work is to be sure that our foundation is divine Principle. We need to dig well beneath the surface of mortal material sense and find the spiritual cause, the center and circumference of all things; to study well the Science of being, that we may be equipped with that spiritual intuition which will enable us to detect any spurious material (mortal beliefs) that might gain entrance into this spiritual building. In the understanding of God as All-in-all,—Mind, Spirit, Life, Truth, and Love, the only cause and creator, and man as His likeness,—we have a foundation on which we can proceed to build for time and eternity, and day by day we shall find for our use the "living stones" without flaw or blemish.

With line upon line, and precept upon precept, our goodly temple will go up and up, till it reaches divine heights; and though storms may beat against this house it will not fall, for its foundation rests upon the rock, Christ, Truth. If we would not have our work to do over again, let us examine and test the foundation on which we are building, for we read that "other foundation can no man lay than that is laid, which is Christ Jesus." We also read in "Science and Health with Key to the Scriptures" by Mrs. Eddy: "The testimony of the material senses is neither absolute nor divine. I therefore plant myself unreservedly on the teachings of Jesus, of his apostles, of the prophets, and on the testimony of the Science of Mind. Other foundations there are none. All other systems—systems based wholly or partly on knowledge gained through the material senses—are reeds shaken by the wind, not houses built on the rock" (p. 269).

The Bible has been the Magna Charta of the poor and the oppressed; down to modern times no state has had a constitution in which the interests of the people are so largely taken into account; in which the duties, so much more than the privileges of rulers, are insisted on, as that drawn up for Israel. . . . Nowhere else is the fundamental truth that the welfare of the state in the long run depends on the welfare of the citizen so strongly laid down.—HUXLEY.

SELECTED ARTICLES.

[Editorial in *Los Angeles* (Cal.) *Herald.*]

One hardly looks to a religious organization for striking enterprise in the newspaper world, and the achievements of the Christian Science body in this respect are therefore quite unique. Two years ago *The Christian Science Monitor,* a secular daily, was started in Boston as a national newspaper. As such it had no chart or compass in the world of journalism. It had to work out its own ideas of what such a journal should be, as well as its own destiny in a business way.

How well it has succeeded as a pioneer is well known in the profession, at least. It has already become one of the foremost dailies in the country in every essential respect, and is one of the most quoted, as it is one of the most quotable, papers anywhere. A recent number at hand contains thirty-two pages. In October the *Monitor* established a complete plant at the Mechanics exposition at Boston and issued a miniature replica of its usual edition daily.

To the newspaper craft *The Christian Science Monitor* has been one of the most interesting developments of recent years. Its success opens up a field for speculation as to how adaptable the idea it has worked out is for other religious bodies.

[James D. Sherwood in *Texarkanian,* Texarkana, Ark.-Tex.]

The term malicious animal magnetism suggests the exercise of a malicious mental influence of one person over another, and such a practice is the very antithesis of the practice of Christian Science. It is the claim of the carnal mind that it exerts a mental influence by means of suggestion, but such mental action is not wholesome. Holy Writ declares "the carnal mind is enmity against God: for it is not subject to the law of God, neither indeed can be." On the contrary, in Christian Science practice sole reliance on the divine Mind is the universal rule, since God is understood to be the only power, the only intelligence, the only Mind; hence God is the Mind of man made in God's image. Christian Science ceaseless-ly enunciates the First Commandment: "Thou shalt have no other gods before me."

Mrs. Eddy did not originate malicious animal magnetism, as our critic contends. She exposed its falsity, however; and she has proved its powerlessness. In the text-book of Christian Science, "Science and Health with Key to the Scriptures," she has made it plain that any one who has an earnest desire for a knowledge of the truth of being may prove for himself the omnipotence of God and the powerlessness of evil. Some day her teachings will be more generally understood and the world will more fully acknowledge its debt of gratitude to her for her unselfish labors in behalf of sin-sick and suffering humanity.

It is generally accepted that fear, anxiety, and worry are the governing traits in the minds of mortals, taught as they are to regard evil as real and as something to be feared in almost every department of daily experience. This indicates that there is an instinctive belief in evil as a power that is able to hurt men even to the point of effecting their extinction. This universal sense of fear is the result of education. The belief of evil as able to interfere with the harmony of man is as old as any fact of history. The Bible is full of admonition against evil influences that work havoc in the affairs of men. Anciently it was believed that demons could inhabit persons, take possession of them, and induce disease, dementia, and death. It is recorded that Christ Jesus cast out devils with a word. This fact shows that the maladies were mental and that they were cast out by the truth. In like manner Christian Science is today casting out devils, evils, and is healing the sick by purely spiritual means.

There is today a well-nigh universal belief among men that evil is real and is power, if not the only power. This belief is mesmerism. Its malicious form is malicious mesmerism or malicious animal magnetism. A Christian Scientist may recognize the fact that mortals believe this claim of an evil power, but he is taught not to fear it nor have confidence in its claim, since he understands that God is omnipotence, and that good is the only power.

The writer of the magazine article makes the statement that "no religion can get along without a devil of some sort." It is plain to all that the purpose of religion is to show men how to escape from the "wiles of the devil." Any religion that fails to show men how to avoid the temptations of evil must inevitably lose its efficacy and become void.

[*Town Topics.*]

At the Episcopal convention in Cincinnati the subject of healing by faith and prayer was referred to a committee, instead of being referred to the Scriptures, where Mrs. Eddy found it and built her flourishing church upon it. Nothing in the New Testament is more clear than that Christ came as a healer. He repeatedly made his healing the test and proof of the divinity he claimed. He expressly transmitted the healing power to his disciples, ordering them not only to "preach the gospel," but to "heal the sick." He insisted that the vitalizing effect of his doctrines could raise the dead. Protestant churches that violate the Scriptures by ignoring this healing power do not need to be instructed by a committee, but by a prayerful study of the book which they profess to accept as the word of God.

[From an editorial in *Montgomery* (Ala.) *Times.*]

No observer can fail to see that the twentieth century will embrace a development of the spiritual side of religion such as the world has never known before, and there will be nothing "supernatural" about it, either. It will be the "natural" outcome of an evolution which has been in progress throughout the ages, and if Christ's teachings, practices, and absolute demonstrations were true, it is bound to culminate in man's realization of his divine origin and in a concept of existence diametrically opposed to that of the strict physicist.

This question of the power of faith and efficacy of prayer, it is easy enough to understand, is a very live wire, but layman, cleric, and prelate might just as well make up their minds at once that it will have to be handled. Nothing but courage is required, and, perchance, a due process of prayer might result in obtaining that. It is certainly worth trying; for almost anything is better than division and dissension, especially in "things heavenly."

[George S. Powell in *Charlotte* (N. C.) *News.*]

The statement that Christian Scientists do not believe in Jesus Christ as the Son of God would indicate that the speaker is as limited in his knowledge of what Christian Science teaches as he is in his acquaintance with Christian Scientists. Among the tenets of the Christian Science church are the following: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life. We acknowledge and adore one supreme and infinite God. We acknowledge His Son, one Christ; the Holy Ghost or divine Comforter; and man in God's image and likeness. . . . We acknowledge Jesus' atonement as the evidence of divine, efficacious Love, unfolding man's unity with God through Christ Jesus the Wayshower; and we acknowledge that man is saved through Christ, through Truth, Life, and Love as demonstrated by the Galilean Prophet in healing the sick and overcoming sin and death" (Science and Health, p. 497).

There are thousands of people of average honesty and intelligence who, brought up in orthodox churches, have afterward accepted the teachings of Christian Science and

Digitized by Google

still affirm their belief in Jesus Christ as the Son of God. Now, would it not be fair and reasonable to accept their statement as to what they believe, rather than the statement of those who show by their writings and utterances that they are not only misinformed as to the teachings of Christian Science but are prejudiced against it? Jesus himself stated what the proof of those that believed on him should be when he said, "And these signs shall follow them that believe: In my name they shall cast out devils; they shall speak with new tongues; . . . they shall lay hands on the sick, and they shall recover."

Christian Science does not magnify the devil into a god, but on the contrary teaches just what Jesus taught when he said of evil, or the devil, that "he was a murderer from the beginning, and abode not in the truth, because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it." Christian Scientists refuse to believe in any person, place, or thing, as an eternal reality, with such a character as this, and it ought to be evident that what Jesus called a murderer and liar could not have a place in God's creation, when everything which He created was declared by Him to be good, and man in His image and likeness. It is upon this teaching that Christian Science denies the power of the devil or evil, and this is in accordance with what Jesus meant when he said, "And ye shall know the truth, and the truth shall make you free."

[C. A. Newman in *Sydney* (Australia) *Telegraph*.]

Mrs. Eddy, who discovered Christian Science, and founded this movement, revealed to the world that God never did and never will cause any of His children to suffer; and this very fact alone, based upon abundant proof, has been the means of healing thousands. What hope has any sufferer who is held under the spell that it is God's will he should be sick, or that God sent the suffering? If God caused the suffering it must be good to suffer: therefore, why try to be cured? Yet there are many submitting resignedly to the idea that it is part of God's will for them to be sick.

The method of treating disease through prayer by Christian Scientists is much misunderstood. A Christian Scientist never tries to pray a person into health according to the ordinary idea of prayer, but endeavors clearly to realize certain fundamental facts which equip the Scientist with power to deal with disease, and which bring comfort and health to many who turn to Christian Science for help as a last resource. One fundamental fact is, as previously stated, that God never made any one sick. Our Master said, "Ye shall know the truth, and the truth shall make you free."

Christian Science goes to the seat of all ailments, and states unreservedly that the mental condition is the foundation of all suffering, whether it be heart disease, cancer, or even a headache; and when this statement is comprehended there will be no opposition to Christian Science, but all will be striving for that Mind "which was also in Christ Jesus," and in proportion as this is attained will health and harmony reign.

[Frederick Dixon in *Belfast* (Ire.) *Telegraph*.]

In discussing the question of Christian Science it is absolutely necessary to keep clearly in mind the definitions which have been adopted by Mrs. Eddy. If this is for one moment forgotten, critics embark on a process which can only end in distortion. In the attack on Christian Science delivered before the Church Congress in Belfast, our critic, as reported, starting with a complete misapprehension of what Mrs. Eddy means by real, ends in committing himself to a denunciation of something which she has never taught.

The word real is used in Christian Science to represent God and the spiritual creation. The consequence is that when this critic explained that Christian Scientists taught not that the mind had power over the body, but that there was no body, he was involving himself in the most complete muddle imaginable. As a matter of fact it is the idealism of natural science which declares that the body is controlled by the mind, but that the body is not real, as anybody who knows anything about the teaching of that school from Berkeley to the present day must be aware. Berkeley taught that the body as matter was purely a subjective condition of mind, and so unreal; Professor Ostwald teaches that matter is the result of energy, and that of energy alone reality can be predicated. Here then we have the first and the last of the school of natural science idealists, in modern times, announcing the very theory which seemed to cause so much amusement at the congress.

Now what Christian Science does teach is that matter is the subjective condition of mortal mind, and is entirely controlled by it. So far it agrees with the teaching of natural science. At this point, however, it severs itself completely from that teaching and adopts the idealism of Jesus—"That which is born of the flesh is flesh; and that which is born of the Spirit is spirit."

Because, however, Christian Science draws a distinct line between the material and the spiritual, and insists that the mortal mind which produces the phenomenon of matter is itself nothing but the negation of divine Principle, it does not, any more than the natural scientist, say that matter does not seem extremely real to the human sense. If it did, Christian Scientists would not be found in every country of the world struggling to overcome sorrow and sickness and sin. What it does do is to try to show the people burdened with these false beliefs—false because they are not God-created—the truth which Jesus said should make them free, and in proportion as this truth is accepted and is lived a man begins, however slightly, to acquire the Mind which was in Christ Jesus, and in acquiring that Mind he begins to understand why evil and all its phenomena are, as Jesus said, a lie, and being a lie, unreal. Spiritual things are, however, spiritually discerned, and the unreality of evil can only be understood in the exact proportion in which a man learns the allness of God. It would be ridiculous to go to the natural scientist and to refuse to listen to his explanation that light was positive until he had explained to you why darkness was negative, or to insist that a musician should explain to you why discord was discord before you allowed him to begin to show you what harmony was. Only as a man gains a clear perception of the positiveness of light or the truth of harmony can he learn the relationship they hold, on a material plane, to darkness and discord. Much more impossible is it for him to understand the nothingness of evil, while refusing to develop the spiritual understanding of good by demonstrating his theoretical knowledge little by little, and day by day, until through this patient demonstration his belief in his theory deepens into faith in it, and the faith broadens out into spiritual understanding.

[Frank Bell in *Butler* (Pa.) *Citizen*.]

The commonly accepted theory of "mind over matter" relates wholly to the human mind, and therefore bears no resemblance to Christian Science, which, instead of endeavoring to enthrone the human mind, teaches how the latter may be brought into subjection to the infinite, divine Mind, or God. Christian Science shows how to make "Not my will, but thine, be done" a practical rule of every-day living. With regard to the subject of prayer, it need only be noted that those who have come into Christian Science testify that they find their prayers to be more effective than before. It cannot therefore be said that any actual "ground of prayer" is denied by that which makes prayer more efficient.

While it is doubtless true that confidence in the physician on the part of his patients is the most important factor in his success, this is not the kind of faith that becomes operative in Christian Science treatment, where the sufferer is taught to rely no more upon personal magnetism than upon inanimate drugs, but upon the God "who healeth all thy diseases." Said the writer in James: "Is any sick among

Digitized by Google

you? let him call for the elders of the church; and let them pray over him, . . . And the prayer of faith shall save the sick." That is the character of the prayer and the faith employed in Christian Science treatment.

The "outward means" of true Christianity are not ignored by Christian Science. The Founder of Christianity said that his followers should do the works that he did, and that one of the "signs" that should be manifested by "them that believe" was the healing of the sick. The "outward means" employed by Jesus Christ were not ritualistic ceremonies, but the healing of sickness and the destruction of sin. Christian Scientists find that they are able to overcome disease and sin in proportion as they acquire the Mind of Christ. Any unprejudiced investigator may readily ascertain that Christian Science takes away neither God, religion, nor worship, but that on the contrary it elevates worship above the darkness of superstition into intelligent communion with the one God, and makes religion practical, provable, and livable.

It is no less a credit to the Christian Science church that it was founded by a woman than to the other churches that they are largely dependent upon women for attendance and support. In neither case is there occasion for an excuse or a sneer, as it is undoubtedly true that if the average of genuine spiritual goodness were as high among men as among women, the sum total of righteousness in the world would be vastly increased.

[E. M. Ramsay in *Scotsman*, Edinburgh, Scot.]

On reading the account of the coroner's inquest at Urmston, I feel sure that a great many others besides myself will feel indignant at the way in which the coroner and jury behaved. To the ordinary Scot there seems no reason why any inquiry should have been held at all. A sane, intelligent man, in the prime of life, suffering from tuberculosis of the knee-joint, was informed by his doctor that his only hope lay in the amputation of his leg; he declined to have the operation, and tried Christian Science treatment, which proved unsuccessful. At the inquest the doctor contented himself with saying that if the leg had been amputated the man might have had a chance of life.

It was made plain at the inquest that the patient had known about Christian Science for years, that it was he himself who asked for the assistance of the Christian Science practitioner, and that he took all responsibility upon himself. What more was there to be said? No excuse whatever can be made for the way the practitioner was treated under examination, nor for the way in which his faith in God was derided. The whole affair was a disgraceful attack upon the religion of a body of Christians who are making a humble and sincere attempt to keep the commands of the Saviour.

In conclusion, let me quote from a friend of my own, a resident of this very town of Edinburgh: "I have been operated on over ten times for what the surgeon told me was a tubercular affection of my arms, legs, and ribs; but it was not until I came in contact with Christian Science that I was cured, and the disease thoroughly eradicated from my system."

[Willis D. McKinstry in *Manhattan* (Kan.) *Mercury*.]

I agree with you that "disease is the result of wrong thinking, and can be cured by right thinking." A further explanation of what constitutes right and wrong thinking is necessary that your readers may have a clearer understanding of the teachings of Christian Science, lest it be confused with mental suggestion. Paul recognized this great truth when he said, "To be carnally minded is death; but to be spiritually minded is life and peace."

It is the false belief of life, substance, and intelligence apart from God—the erring human belief of a mind in matter, called mortal mind—that makes sin and disease. Christian Science recognizes these conditions as mistakes of mortals. They are erroneous; therefore, they must be corrected. As nothing but Truth corrects error, it becomes necessary to accept the admonition, "Ye shall know the truth, and the truth shall make you free."

The activities of Christian Science are upon a divine basis. They rest upon the eternal fact that there is but one Mind, God, who is the source of all true being. Through the realization that this one Mind is omnipresent, omniscient, and omnipotent, mortals have dominion over the claims of sin and disease. One might think that two times two equals five, yet he could never know it; but it is possible to understand that two times two equals four, and to know the reason why.

[Campbell MacCulloch in *New York* (N. Y.) *Tribune*.]

As to the question of a denial of the miracles, there may be much which is dependent upon an exact definition of the word. If by miracle is meant a positive violation of an established natural law, then Christian Science does deny the miracles, or, rather, that interpretation of them. If, on the other hand, miracle is to be defined as "a wonder," in accordance with its meaning in the original Greek, then Christian Science does not deny the miracles. Upon this point Mrs. Eddy has said, "Now, as then, these mighty works are not supernatural, but supremely natural" (Science and Health, Preface, p. xi). To Christian Scientists a miracle is only a natural marvel, and, to quote Huxley along this line: "If a thing has ever happened, it happened in accordance with some law or principle—even if unknown or misunderstood—and can happen again."

Thus Christian Scientists do not deny the miracles, if by those miracles are meant such marvels as the raising of Lazarus from the dead or the healing of the sick; but, on the contrary, they are daily proving in many hundreds of instances that these wonders are indeed not supernatural and far off, but supremely natural, and the result, as Mrs. Eddy writes, of "a divine influence ever present in human consciousness" (*Ibid.*).

[Eugene R. Cox in *New York American*.]

In the course of her remarks our critic says: "The Christian Scientists and other denominations that believe strongly in the power of 'suggestion' have a very large membership of men." I would ask your permission to comment briefly on this statement, because it conveys a mistaken yet popular belief regarding the relation of "suggestion" to Christian Science. The text-book of Christian Science, "Science and Health with Key to the Scriptures," by Mrs. Eddy, clearly shows that it is impossible to effect permanent healing by means of any method of "suggestion." Christian Science practice is based upon a scientific metaphysical understanding of the truth about God, man, and the universe, and shows that God sends only good, and not evil to mankind. An understanding of this divine law, even in a very small degree, enables one to throw off much fear, superstition, and anxious thought.

There must be a foundation in fact upon which every correct conclusion is based; and it should be apparent to all that absolute truth alone is the basis of all right thinking, and that no system of "faith-cure" or "suggestion" can possibly take the place of the truth which makes men free.

POEMS BY MARY BAKER EDDY.

Under the above caption the poems written by our Leader have been compiled in a handsome volume of 79 pages, now in press, and orders will be filled in sequence. All of Mrs. Eddy's hymns are included in the volume, also her earlier poems, which appeared in various publications from forty to sixty years ago.

The poems are printed in clear type on heavy paper, with initials and ornaments in red, and bound in fine English cloth, with a conventional design of wild roses. Price, single copy, $1.50; six or more copies to one address, $1.25 each. Address all orders and make remittances payable to Allison V. Stewart, Falmouth and St. Paul streets, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

NOTICE.

We are pleased to announce that on Monday, Nov. 21, upon the nomination of our beloved Leader and Pastor Emeritus, the Rev. Mary Baker Eddy, the vacancy in The Christian Science Board of Directors was filled by the unanimous election of Adam H. Dickey, C.S.D., to membership in said board, according to Art. I., Sect. 5, of the church by-laws.

THE CHRISTIAN SCIENCE BOARD OF DIRECTORS.

THE WORD FULFILLED.

QUITE recently our attention was called to an editorial paragraph in a newspaper, in which the great numerical growth of the Christian Science church was accounted for by the fact that this church offers more to its adherents than do other churches; that it even promises health and happiness to them on this plane of existence. The thought which seemed to be uppermost with this writer was that these assurances of a present-day salvation,—of physical as well as spiritual healing,—are attractive to the people; but he failed to say anything about the fulfilment of these promises which is taking place every day, ignoring the obvious fact that such assurances as Christian Science offers would soon lose their attraction to those who are in pain, sorrow, and distress, if they were incapable of fulfilment, and that there must be something more than mere promises if Christian Science or any other religion is to grow.

The truth about the matter is that the promises which this writer mentions are to be found in the Scriptures, and especially in the record of the words and works of Christ Jesus, with which every Bible student is familiar. In the book of Jeremiah we read these comforting words: "I will restore health unto thee, and I will heal thee of thy wounds, saith the Lord." The 91st Psalm is one grand pean of assured protection from evil; and again we read: "Happy is that people, whose God is the Lord." The Master said to those who are burdened: "Come unto me, all ye that labor and are heavy laden, and I will give you rest." "I will not leave you comfortless: I will come to you. . . . Let not your heart be troubled, neither let it be afraid." "He that believeth on me, the works that I do shall he do also."

Christian Science teaches that the fulfilment of these promises is a present-day possibility, and it was through Mrs. Eddy's faith that Christ's promises are, even as he is, "the same yesterday, and to day, and for ever," that she was led to the discovery of this healing truth. The growth of the movement is due to the healing work that is being done by Christian Science, and this is proved by the testimony of the thousands who speak at the Wednesday evening meetings in the churches, as well as that of the other thousands whose written statements are published in the *Sentinel*, the *Journal*, and *Der Herold der Christian Science*. The true reason, therefore, for the great growth of the Christian Science church is that one or more of these promises are fulfilled at the outset of the career of every one who adopts this faith. As an example of this fulfilment, let us quote from the statement of one who expresses her gratitude on page 256 of this issue. She writes: "About five years ago I was healed of a chronic complaint for which I had tried many physicians. In two weeks' treatment in Christian Science I was entirely healed, and since that time have relied wholly upon Truth to meet every difficulty which has arisen, physically or otherwise."

It is for such proofs of the efficacy of the Christ-healing as this, that today thousands of grateful ones are saying with the psalmist: "Bless the Lord, O my soul, and forget not all his benefits: who forgiveth all thine iniquities; who healeth all thy diseases; who redeemeth thy life from destruction; who crowneth thee with lovingkindness and tender mercies." Health and happiness are for all, but the difficulty has been that Christians generally have failed to avail themselves of these proofs of the Father's loving care for His children, and it is to them that we would commend these words of our beloved Leader: "If we are Christians on all moral questions, but are in darkness as to the physical exemption which Christianity includes, then we must have more faith in God on this subject and be more alive to his promises" (Science and Health, p. 373).

ARCHIBALD MCLELLAN.

THE NOBLER DOING.

THE world is well supplied with inactives, and for the most part they are inefficients. They make little if any contribution to the betterment of the race; indeed they add to rather than diminish the human handicap. Such people are accounted for not infrequently by poverty, and, as well, by riches. With many the economic struggle seems to consume every increment of their time and strength, so that there is no opportunity to do anything for others; while, on the other hand, the many cares which wealth entails, and the materiality to which it persistently tempts, often result in the centering of all thought upon the furtherance of sadly selfish aims and indulgences. The lack of educational equipment, and that spirit of dependence which is consented to, and cultivated in well-to-do young people nowadays,—these things all tend to augment the number of those, in well-nigh every community, who could be spared without awakening any thought whatever of public loss.

But, whatever the occasion of human impotence, it is certainly true that as a whole the dominating fact in the matter is a sense of incapacity rather than of indisposition. Inefficiency cannot yield self-satisfaction to any one, and though some may seem to pride themselves on the weakness that gives them distinction, the great body of those who for any reason are given to self-depreciation, who are tempted to rank themselves as "back numbers," "nobodies," etc., would be made very happy by the assurance that it is possible for their lives to mean something to the world's advance. This is especially true of that army of aspiring women who, because of their isolation, their physical weakness, their enforced dependence, or their immersion in a ceaseless round of "shut-in" work, seem to be hopelessly separated from that fair chance to be and to do for which they have longed all their lives, and who, consequently, in the wearying years, have acquired the habit of counting themselves out as relatively useless.

To these and to all Christian Science opens a door of practically limitless opportunity in its redisclosure and demonstration of the fact that to know is to achieve: that all true effectiveness is spiritual and finds its arena in right consciousness, through which the radiations of divine Truth are proved to be superior to the so-called human limitations which have heretofore seemed to spell inevitable defeat. In Christian Science it is seen as never before that the doer of the word is he who so abideth in the understanding of Truth that through him God is able to work His good pleasure in the overcoming of sickness and sin; and all this

Digitized by Google

in keeping with the Master's saying, "This is the work of God, that ye believe." Our thought of effectiveness, of success, is thus given an entirely new setting and perspective.

When we really lay hold of the truth that in the last analysis all genuine accomplishment is the dissipation of the darkness of false sense by the appearing of the "Sun of righteousness," the Christ-idea; that our doing for others, for humanity, is always measured by the completeness of Truth's work in us; that all effective service is spiritual, a matter of the reflection of the "light divine" upon human need, and that this work of God in our consciousness relates itself helpfully to the solution of every man's problem, becomes a silent benediction for all with whom we have to do,—then will we begin to rejoice and be glad every day, thanksgiving will have become perennial, and every temptation to self-disparagement and self-excuse will be met and mastered by the recognition that God "is able," as Paul says, "to do exceeding abundantly above all that we ask or think, according to the power that worketh in us."

JOHN B. WILLIS.

"SPIRITUAL SONGS."

AMONG other occasions for thanksgiving at this time we have a volume of poems by our revered Leader, which is well worthy of St. Paul's designation, "spiritual songs." In the very nature of things, prophecy and poetry are inseparable, and when one who has a great message for the age adds to the vision of the seer the voice of the poet, we may well listen that we may catch this message and learn the inner meaning of the things around us, until, as Mrs. Browning says, we shall begin to feel

> The spiritual significance burn through
> The hieroglyphic of material shows.

It is true that Elijah, one of the great prophets, left us no word of poetry as did Isaiah, Micah, Malachi, and some of the others, but as a result of his lonely communings with God, we learn that the Mind which governs the universe is not expressed in wind, earthquake, fire, or any destructive conditions, even as we are also taught in Christian Science. Isaiah gives many dark pictures of mortal conditions, as when he tells us that "the mirth of the tabrets ceaseth, the noise of them that rejoice endeth, the joy of the harp ceaseth:" but in striking contrast to this we read that with a spiritual awakening the mountains and the hills shall break forth into singing, and "all the trees of the field shall clap their hands."

When the question of inspiration presents itself as it should in respect to what we read, we may well ask ourselves whether the thing read inspires us to think truly and live nobly; if the faith awakened by a lofty appeal makes us faithful in meeting the high demands of Truth and Love: then can we decide upon the value to us of whatever we may read. Those who are familiar with Science and Health and Mrs. Eddy's other prose writings, soon become aware of a new sense of things,—the spiritual sense of man and the universe displaces the belief in materiality, and replaces the sense of disease and discord with a sense of health and harmony. As we read some of her earlier poems, we are touched by their deep pathos, and recognize the tender human sympathy with sorrow which impelled her to "seek" unceasingly until she had found its cure in the truth of being, and so could bid us

> follow and rejoice
> All the rugged way.

It is not possible to speak too strongly of the spiritual appeal of Mrs. Eddy's hymns,—the familiar "Shepherd, show me how to go;" the "Communion Hymn;" "Blest Christmas Morn;" and "O'er Waiting Harpstrings of the Mind,"—this last a wonderful presentation of the drama of redemption from sin, pain, and sorrow.

While a copy of this new book of poems was being examined by the writer, a letter from a Christian Science mother was handed her. It told of what had seemed a distressing and dangerous accident to this Scientist's little daughter. The child had been unconscious for some time after the injury, but happily was attended at once by one who knew that God is the only real Life and that His child is deathless. The little girl was taken home and the infinite power of divine Truth declared for her by a Christian Science friend. Later, a great sense of fear came over the mother, but she recalled an article published in the *Sentinel* some time ago, which told of another troubled mother who was asked if she had forgotten to "rejoice" (which Paul says we should do always). This was the needed reminder, and the mother invited the little daughter to join her in singing "Shepherd, show me how to go." As they sang together this spiritual song, all sense of fear vanished, and the complete healing was soon realized. As we reverently and gratefully turn over the pages of this volume, we pause at the closing poem, "Satisfied," and may well carry with us each day its opening words,—

> It matters not what be thy lot,
> So Love doth guide.

Then we come to these final words of promise and prophecy:

> The centuries break, the earth-bound wake,
> God's glorified!
> Who doth His will—His likeness still—
> Is satisfied.

AMONG THE CHURCHES.

AMESBURY, MASS.

First Church of Christ, Scientist, in Amesbury, has recently purchased a building lot at the corner of Main and Carpenter streets. The unanimity of opinion in the choice of the lot was most happy, and it is all that could be desired in regard to location, size, and shape. The funds were on hand and payment in full was made when the conveyance took place. The members have received from several people not especially interested in Christian Science many kind words of friendly congratulation on this acquisition.

Correspondence.

CHATTANOOGA, TENN.

An important real estate deal was consummated Saturday [Oct. 22], when the old Connor residence, located at the northwest corner of McCallie avenue and Houston street, was transferred to the local Christian Science church. Plans for erecting a church edifice on this property will be taken up as soon as the church's lease on Cadek's Conservatory of Music, where services are now conducted, has expired. This lease has a year to run.

The price paid for this piece of property was $20,500. The lot on which the house is located is 75 x 150, and is a very desirable church location, as it is in one of the best residential sections of the city. This portion of the city has recently seen much activity in the construction of church edifices.—*Chattanooga Times.*

Thy success. Poor devil, what will thy success amount to? If the thing is unjust, thou hast not succeeded; no, not though bonfires blazed from north to south, and bells rang, and editors wrote leading articles, and the just things lay trampled out of sight,—to all mortal eyes an abolished and annihilated thing. For it is the right and noble alone that will have victory in this struggle; the rest is wholly an obstruction, a postponement, a fearful imperilment of the victory.

CARLYLE, "Past and Present."

THE LECTURES.

BOSTON, MASS.

The semiannual lecture on Christian Science under the auspices of The First Church of Christ, Scientist, Boston, Mass., was given by Frank H. Leonard, a member of the board of lectureship of that church, in the church edifice, Falmouth, Norway, and St. Paul streets, Thursday evening, Nov. 17, at 8 o'clock. Every available seat in the auditorium was taken when Judge Clifford P. Smith, First Reader of The Mother Church, introduced the lecturer. Judge Smith said,—

It is a testimony to the truth of Christian Science that it has drawn to its service such men and women as compose its board of lectureship. Those who have spoken from this platform in the last few years were formerly students, teachers, scholars, lawyers, judges, physicians, or clergymen. Tonight we are to hear one who was formerly a city business man,—a successful man of affairs in the largest American city. Before entering upon his present work he dealt in carloads and shiploads of coal, and recognized nothing more to be desired than hard cash. Of the fact that his table of values has now been revised we shall doubtless get some glimpses as he speaks to us on Christian Science. It is now my privilege to introduce to you Frank H. Leonard of New York.

MOSCOW, IDAHO.

Frank H. Leonard of Brooklyn, N. Y., delivered a lecture Sept. 17 in Christian Science Hall, his subject being "Christian Science: A Demonstrable Religion." Mr. Leonard was introduced by Mrs. Maud H. McGuire, Second Reader in the local church, who said, in presenting the lecturer to the audience,—

Christian Science comes to the world with a message of hope and cheer. It brings to us a larger thought of God, a God who is universal, infinite, ever-present Love. It teaches us that there is nothing too good to be true; but that the eternal Truth is infinite good. It awakens our love and sympathy for our brother man. God is nearer to us when He is our physician as well as our savior. The Bible seems more precious to us when we find its promises are being fulfilled today as in the days of the prophets and apostles, and life is more harmonious as we realize to some extent that we "live, and move, and have our being" in God.

Star-Mirror.

DUBUQUE, IA.

Francis J. Fluno, M.D., of Oakland, Cal., lectured on "Christian Science and Christian Scientists," to an audience which filled the Princess Theater Oct. 9. The lecturer was introduced by the Hon. John D. Denison, who said,—

Probably never since the dawn of history has there been such diligent inquiry for the truth, in all departments of life, as there is at the present moment. Men everywhere are seeking to find fruitions of faith, fruitions of science, fruitions of government. The human mind, charged with divine discontent, is today groping more accurately, more exactly for the things that mean most to human life, and this Christian Science faith is one of the phases of this great movement, this great inquiry that is spreading throughout the land.

There is no doubt that Christian Scientists are in full sympathy with all those engaged in the colossal task of lifting men and women up and making them more healthful and more cheerful; helping them to get in touch with the divine, for the divine is Truth and the divine is Love, and those who are right-minded spiritually are seeking for Love.

Dubuque Times-Journal.

WHEATON, ILL.

Prof. Hermann S. Hering lectured on Christian Science Oct. 9. He was introduced by the First Reader, Fred D. Ewell, who said in part,—

Your presence here is a cheering evidence that you are in some degree interested in one of the greatest awakenings within the history of the human family. Somewhat over forty years ago our Leader, Mrs. Eddy, was led, through her study of the Scriptures and her spiritual understanding, to the perception of a great truth. This caused her to plant herself on the immovable platform of the omnipotence, omnipresence, and omniscience of Truth, God, and she thereafter conformed all her practice and teaching to the logical deductions from this premise, appealing to the teachings, works, and life of Jesus to support her discovery.

The profound propositions fearlessly enunciated by her have had a remarkable influence upon the thought of the world. Not only have they opened up to human consciousness the divine method of healing, so that today Christian Science is a recognized, efficacious, universal remedy to thousands upon thousands of people, but they are now permeating the common religious thought to such an extent that the creeds and dogmas of the centuries are truly crumbling. Only last Sunday one of Chicago's noted preachers is reported to have said in his sermon: "The day of the old authority is gone, and the signs of the times premise that a new authority is to come. There will be no authority but the authority of truth and goodness when reason, rousing and lifting up her torch, finds in her other hand not another torch but a cross."

The world has tried to laugh Mrs. Eddy to scorn, but, impelled with a divine conviction, she has devoted her life to the work of sowing this precious seed, till today people on every hand and in every land are recognizing the mighty import of her discovery.—*Correspondence.*

DENVER, COL.

On Monday and Tuesday evenings, Oct. 10 and 11, Bliss Knapp of Boston delivered lectures on Christian Science at the church edifice of First Church of Christ, Scientist. On the first evening he was introduced by Gray Montgomery, First Reader of the church, who said in part,—

Christian Science is reaffirming the beautiful teachings of the Saviour and bringing all mankind closer to God. It is showing the world that the essential, vital part of Christian living is love,—love for God, and love for mankind; a love which, in the words of our beloved Leader, Mrs. Eddy, is "broad enough to cover the whole world's evil, and sweet enough to neutralize what is bitter in it" (Miscellaneous Writings, p. 224). Through Christian Science mankind is turned away from the contemplation of the awful story of the degradation and fall of man to the correct view of man as the image and likeness of God. We learn that mortal man, by blotting out his dark images of thought and filling his mind with truth, may exchange his mortality for the radiance and beauty of immortality.

The introduction the second evening, by Mrs. Joy E. R. Zint, was in part as follows:—

In the dawn of time, in the history of creation as recorded in Genesis, when "darkness was upon the face of the deep," "God said, Let there be light: and there was light." Throughout all the ages since, man has repeated this proclamation as a prayer. The Scriptures are full of pleas for light and promises of light. Christ is rightly regarded as the "light of the world." David declared, "The entrance of thy words giveth light;" and again he petitioned, "O send out thy light and thy truth: let them lead me." Prophets and apostles caught glorious glimpses of this light, which enabled them to bring cleansing to the sinner, healing

to the sick, and comfort to the sorrowing. Even Pilate, though being used as an instrument to try to darken or to extinguish that light by condemning to death its highest earthly representative, proved his interest by his inquiry, "What is truth?" And this interest is continuing to lead to inquiry, and from inquiry to intelligent recognition.

In this age, when thought seemed to be darkened by centuries of materialism, of creeds and dogmas, one was pure enough again to discern that light which dispels the darkness of error, manifested as sin, disease, and death; but so clouded was the comprehension of mortals, that when the message of freedom through spiritual understanding was offered them, they turned away from the light,—having eyes they saw not, and having ears they heard not. Their "eyes were holden," their mentality deceived by the misconceptions, the misinterpretations and misrepresentations of the teachings of Christian Science. To disabuse the public mind of these misinterpretations and misrepresentations, a board of lectureship was established, and at frequent intervals we have these public lectures.—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Belvidere, Ill.—Frank H. Leonard, Opera House, 8:15 p.m., Dec. 8.

Catlettsburg, Ky.—William D. McCrackan, M.A., Court House, Boyd County, 7:30 p.m., Dec. 2.

Chicago, Ill. (Fourth Church).—Willis F. Gross, Church Edifice, Harvard avenue and Sixty-seventh street, Dec. 8 and 9.

Chino, Cal.—Prof. Hermann S. Hering, Church Edifice, Sixth street, Dec. 9.

Cleveland, Ohio (Third Church).—Bicknell Young, Auditorium, Cleveland Chamber of Industry, Dec. 1 and 2.

Columbia University, New York, N. Y.—Lecture for Dec. 2, postponed.

Conneaut, Ohio.—Frank H. Leonard, Republic Theater, Dec. 5.

Danbury, Conn.—Frank H. Leonard, Universalist Church, Main street, 3 p.m., Dec. 4.

Erie, Pa.—Rev. Arthur R. Vosburgh, Masonic Temple, 3 p.m., Dec. 11.
