Haverhill, Mass. (Second Church).—Bicknell Young, New High School Hall (instead of City Hall, as previously announced), 3:30 p.m., Dec. 4.

Highland Park, Ill.—Willis F. Gross, Church Edifice, Hazel avenue, near St. John's avenue, 3 p.m., Dec. 11.

London, Ont.—William D. McCrackan, M.A., Majestic Theater, Dec. 11.

Los Angeles, Cal. (Third Church).—Prof. Hermann S. Hering, Simpson Auditorium, 3 p.m., Dec. 11; 8 p.m., Dec. 12 and 13.

Pittsburg, Pa. (First Church).—Rev. William P. McKenzie, Memorial Hall, Fifth avenue and Grant boulevard, 3 p.m., Dec. 11.

Sandusky, Ohio.—Bicknell Young, Carnegie Hall, Nov. 29.

Sterling, Ill.—Frank H. Leonard, Academy of Music, 8:15 p.m., Dec. 9.

St. Joseph, Mo. (Second Church).—Clarence C. Eaton, Tootle Theater, 504 Francis street, between 5th and 6th streets, 3 p.m., Dec. 11.

Syracuse, N. Y.—Frank H. Leonard, Wieting Opera House, Dec. 11.

Wenatchee, Wash.—Prof. Hermann S. Hering, Wenatchee Theater, Dec. 1.

Wheeling, W. Va.—Lecture Nov. 27, postponed.

NEW GERMAN REPRINTS.

Attention is called to the fourteen new German reprints listed on the inside cover advertising page of this week's *Sentinel.*

TESTIMONIES OF HEALING.

I have good reason to be thankful for Christian Science, which showed me a clear way to God, and this means all to me. When Christian Science was first mentioned to me, I accepted it at once, because I was in great need of it. I suffered very much with headache every week, from an injury to my back, which was very severe, also from catarrh and rheumatism. I was relieved of all these ills after reading "Science and Health with Key to the Scriptures" by our beloved Leader, Mrs. Eddy.

Before Christian Science was mentioned to me, I had the very best medical advice that could be had, from doctors and specialists; but their treatment failed. When the good news came to me about Christian Science, it took about two weeks to be relieved from all my ailments. How good it is to know that God is ever-present. It has been proven to me many times in our family that God is an ever-present help in time of need. All I am and all I have I owe to this wonderful truth. Through the study of the Bible and Science and Health, I have learned that God is our Life, that in Him is our health and our strength; that "in him we live, and move, and have our being." The physical benefits are, however, the least of the blessings received in Christian Science; they do not compare with the joy, love, and peace that fill our hearts when we learn, at least in part, to have that Mind in us "which was also in Christ Jesus."

ROBERT MENZEL, Newark, N. J.

[Translated from the German.]

It has long been my wish to give thanks publicly for the blessings which have come to me through Christian Science. "Out of the abundance of the heart the mouth speaketh," and I gladly state that I have become well physically since I began to be interested in Christian Science three years ago; but above all, through the study and assimilation of this glorious truth I have regained energy, buoyancy, and joy of life.

At the time I went to Dresden I suffered physically and was weighed down mentally through the loss of what seemed to be the dearest object of my life. Although I had always stood firmly by the church in which I had been brought up, the understanding of God's essential nature and man's relation to Him only became clear to me through Christian Science; and although formerly I sought comfort in Paul's saying that the sufferings of this present time are not worthy to be compared with the glory which shall be revealed in us, yet I believed these words to refer to the stage beyond the experience which we term death. Now I know and have the proof in daily experience that this glory is being revealed to us here and now if we forget those things which are behind and press toward the mark for the prize of the high calling. Glory and praise be therefore to God, who healeth all our diseases, who maketh us happy, and causeth our strength to be renewed like the eagle's—and thanks to that revered woman, Mrs. Eddy, for her unselfish and tireless work.

FRAU ANNA KUKKUCK, Königsberg, Germany.

As a child I knew I had to be a lawyer when I grew up, and in my boyhood the profession acquired a peculiar fascination for me. The model I had before me was that of the sarcastic cross-examining counsel, and I remember one of my greatest pleasures toward the end of my school career was the making of a terse translation of Cicero's Orations against Catiline, which I had as a subject of an examination. I thus unconsciously acquired a habit of sarcasm and criticism, which was backed up by ambition and what I then considered a most excellent quality—determination. This habit of sarcasm and criticism so grew upon me that after I entered the business world and found that few of the expecta-

Digitized by Google

tions and ambitions I had formed were realizable, I rapidly degenerated into a cynic and a slave to tobacco. Added to this I had indifferent health. When at school I went in greatly for cross-country and long-distance running, of which I was very fond, but toward the end of my school days I strained myself. My heart troubled me, and I was obliged to wear elastic stockings on both legs constantly, besides other bandages, on account of supposed weakness of the veins. Without the support of the stockings I had difficulty in standing for any length of time.

I was in this condition when I heard of Christian Science. When I first began to read the text-book I was not aware that the use of tobacco was not in harmony with Christian Science, and had I known it at that time, my condition of thought was such that I should probably not have continued the study. I was quickly able to dispense with the wearing of the elastic stockings and bandages, and as the result of Christian Science treatment I am now in perfect health, being able to stand, walk, and endure fatigue as others can. I have also been healed of a chronic bowel trouble, and the desire to smoke has completely left me. I have found Christian Science to be of the very greatest help to me in my business. My work is now done better, more quickly, and more accurately, and to this I should also add that it is done from a higher standpoint.

The physical healing, however, I count as nothing compared with the change which has come to my thought and the spiritual uplift I have received. I am unable to express sufficiently my gratitude for the Christian Science publications, and specially would I mention *The Christian Science Monitor*, which has broadened my thought and given me an entirely different view of home and international politics. It has also been a great help in showing me how to introduce Christian Science more into my daily work. I also desire to express in writing my deep gratitude to and love for our Leader, Mrs. Eddy.

W. K. PRIMROSE, Dumfries, Scotland.

I wish to give a testimony to the healing power of Christian Science, and I gladly stand a witness to its healing of diseases. Although I had known of Christian Science for several years, it was not until May, 1907, that the truth of it dawned upon my consciousness. I was ill and was being treated by a skilled physician, who did all he could to relieve me. I am grateful for his devotion and kindness to me, but I was not healed. A dear friend then advised me to try Christian Science and kindly loaned me a copy of Science and Health. This I began to read, and I then sent for a practitioner.

I can never forget the spiritual help and love which were manifested to me, the result being that one ailment after another disappeared, especially a neuralgic trouble which I had had for years. I feel deeply grateful to our heavenly Father, and to Mrs. Eddy, our dear Leader, who has shown us the way out of sin, sickness, and sorrow into joy and health.—MRS. LEONA S. BEAN, Livermore Falls, Me.

I send this as a testimonial of deepest gratitude to God, and to our dear Leader, Mrs. Eddy, for the many blessings received in the study and practice of Christian Science. It has been and is to me the Comforter that our Master promised to send. It means to me a true knowledge of our Father's love for all His children. It has taught me what it means to be obedient to the command, "Acquaint now thyself with him, and be at peace." To me Christian Science is the truth our Master taught, revived by the earnest, pure thought of one of God's chosen workers, who was willing to listen to His voice.

It is about six years since my husband and I began the study of Christian Science, and during that time we have received many physical healings, and, what is more to us, spiritual uplifting. The truth has been demonstrated in our home, and in the homes of many others, and we are indeed grateful for it.

MRS. ALICE MORGAN, Auburn, N. Y.

I wish to bear witness to the healing and saving power of Christian Science. With me the power of Truth has been demonstrated in mental purification and regeneration chiefly; I will say, however, that all my physical needs and those of our family in this particular have been supplied.

I will mention one case of healing which meant a great deal to me. I was seized with very alarming symptoms, which seemed to develop rapidly, and before I had time to work for myself I needed the help of a practitioner, which was secured at once. During the treatment I fell asleep, and when I awoke I felt as though I had been made over, but as some of the symptoms still seemed severe, I was treated again that evening, and on waking the next morning I knew that the disease had been conquered. The fever had disappeared, but it seemed to have left me in a weakened condition, and the so-called after effects which appeared, seemed even harder to overcome. What most impressed me, however, was the wonderful effect of the first two treatments. It seemed as though a mighty power were lifting me right out of sickness into health, which was, indeed, the case. The year previous to this I had had an attack quite similar to the one described, seeming to manifest all the symptoms of acute lung trouble, and just as quick a healing was accomplished through Christian Science, except that there were no after effects. In each case I missed two days from work, but I knew that under medical treatment I should probably have been confined to my bed for weeks.

In our home the change effected through Christian Science has been wonderful. The children used to have colds and all sorts of aches and pains at certain seasons of the year, but these are now things of the past; or, at least, if any such things do come up, they are quickly overcome by Truth. The moral and spiritual awakening brought to its students by Christian Science has lifted me out of many bad habits and sins formerly supposed to be pleasurable, but which would now bring no sense of pleasure to me. All of the publications of the Christian Science cause are received and read in our home, and those of us who study them get great help in our efforts to do right. I am sincerely and humbly grateful that the great light of divine Truth has been revealed to us through Mrs. Eddy, and I am grateful for the privilege of being a Christian Scientist, of following Christ, a privilege our unselfish Leader has lived so nobly to give us. God does bless all righteous effort and give it eternal victory.

LEMUEL O. GRIFFITH, Pittsburg, Pa.

Previous to taking up the study of Christian Science, I had been a semiinvalid for seven or eight years, during which time I was constantly under a doctor's care. I tried everything, even to nature studies and rigid dieting. When I commenced to take medical treatment, it was for a slight organic derangement; but I steadily grew worse, and each year brought new diseases, along with the old, until I found myself a victim of chronic illness of different kinds, including nervous and stomach trouble, heart disease and functional irregularities, pain in the head, etc. The backaches were so constant and severe that at times it seemed impossible to bear the suffering any longer. One doctor told me it was natural for me to have backache, when he found he could not even relieve me.

During one of my heart attacks I had four doctors at my bedside; and they all agreed to try a hypodermic injection to arouse me, which the torture did. When I was permitted to get out of bed I could hardly walk, because of the terrible

Digitized by Google

pain in my thigh. On examination the doctors found that they had injected the solution in the muscle. I held very great fear of this trouble, and so did the doctors. *Materia medica* offered little or no hope of healing the cavity, which soon was very deep and getting more so. The cavity was burned daily for nearly six months, and about this time, when my funds were nearly exhausted, a lady invited me to attend a Christian Science service with her Wednesday evening. I accepted her invitation, and about the first thing I understood was that here were people who knew God to be all good. I eagerly accepted that much, and in a little while I heard two testimonies of healing of cases similar to my own. The cases were those of men who had been in the Civil War, and who were healed through the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy. This was over three years ago, and I enjoyed the meeting so much that I have attended regularly ever since. I do not remember anything of the angry-looking cavity since that time. I must have been healed right then and there, and now there is hardly a scar to be seen.

For the healing of remaining ailments I engaged the services of a Christian Science practitioner, and in two weeks the backache had disappeared, the functional inaction was overcome, and my thought was so uplifted that I undertook to try to help myself. My healing was slow, covering more than a year; for which I am now grateful, as my earnest effort made me better acquainted with God, the All-in-all. Sometimes it seemed as though I never should be entirely healed, but I knew that Christian Science is of God, and that it could heal. It was I who needed more of the love which makes perfect.

Today I am healed absolutely, with never even a hint of one of the old errors manifested on me. I have had lesser ills to meet, but they were all destroyed quickly, which is so different from the old way. I have gained greatly in weight, and a friend (who is not a Christian Scientist) remarked to me the other day that it made her feel well just to look at me.—I looked so healthy. Christian Science has also brought me peace,—something I had never known before. It has lifted me out of the depths mentally, therefore physically. It has made me a better daughter, a better sister, and a better friend.

To those who may be suffering, I wish to say that Christian Science is absolute in its results when properly applied. "The kingdom of heaven is at hand" here and now; all we have to do is to accept it by the renewing of our minds. To think good is to thank God, so I try each day to improve my thoughts. I thank God for giving us Mrs. Eddy, who has taught me what a useful book the Bible really is.

ANN ELISABETH KELLAR, Cleveland, Ohio.

[Translated from the German.]

It is with hearts filled with gratitude that we wish to testify to the healing of our seven-year-old child through Christian Science. The child was taken ill with bronchitis and rheumatism. The physician's treatment brought no relief, but the condition rather grew worse, till the child would neither eat nor drink, but lay in bed like a deformed creature, and was given up by every one, no hope whatever being held out to us. We did not give up, however, but sought Christ Jesus and his light, for there was no other help. We asked for help in Christian Science, and after the first treatment the child improved wonderfully, began to eat and drink, and in two weeks' time was able to walk a little; whereas the physician had told us that we might expect the disease to be of long duration. In a short time the child was absolutely well, which seemed a miracle to everybody. As the result of our daily experiences we praise Christian Science and give God the glory.

HERR UND FRAU WILHELM RITTER, Hannover, Germany.

It has been my desire for some time to express through the *Sentinel* my sincere gratitude for the overcoming of fear. To me it means as much as the healing of a physical trouble. I had a great sense of fear at being left alone after dark, and so asked for Christian Science treatment. I now feel that I have received a great blessing which words cannot express, and a sense of thankfulness to our Leader naturally follows, for having made clear to our understanding the Master's promise, "Ye shall know the truth, and the truth shall make you free."

Last year I received immediate help in an attack of physical illness. For three days previous to wiring a Christian Science practitioner, I had been unable to retain either food or liquids, while suffering a great deal of pain. After receiving treatment I was able by lunch time to sit at the table and take a little food, and in a few days I was well and strong again.

MRS. EDITH CURTIS, Townsville, Australia.

After having had medical treatment for about two years, and being given up by doctors and friends, my husband tried Christian Science as a last resort, and was healed. To encourage those whose healing seems slow, I will say it was about three months before he went to his regular work again, but he has grown stronger ever since. Our oldest child was subject to very severe attacks of croup, but after having help for one attack, my husband and I, with our slight understanding of Science, could help her ourselves. Previous to that time she would have the attacks every night for three weeks, although under a doctor's care. Our children have had no other help but Christian Science in over four years, and they are healthy.

We thank Mrs. Eddy for a clearer understanding of a loving God than was possible in the old way.

MRS. EUGENIE SMITH, Carthage, N. Y.

I had recently an occasion to prove the efficacy of Christian Science as a therapeutic agent, also occasion to be grateful for the privilege of being a student of a science that helps every one who puts it into practice, not only in the way of spiritual uplift, but by the healing of the ills to which the flesh seems heir. I was cleaning something with an acid, but did not know that it was supposed to injure one if externally used. My hands became saturated with the acid, and although I washed them, they began to burn and to pain me excruciatingly. I then sat down and tried to realize that God is the only power and that the law of divine Mind is ever harmonious in its action. I told no one of the occurrence until an hour afterward, and then the demonstration had been made. During that hour I worked continually with both hands. All sense of pain, numbness, and discoloration was destroyed. I am indeed grateful for this added proof that Truth is all powerful.

ELEANOR VAN TINE, Pittsburg, Pa.

I wish to express my gratitude for what Christian Science has done for me and mine, to tell of the wonderful demonstration made in the healing of my mother through Christian Science. My mother, who makes her home with me, and who was not a Scientist, made a visit to another part of the state, and while there she was taken suddenly ill. I received a message from her physician, saying that I must come at once; that she had had a hemorrhage of the brain, with complications, and that she might not be alive by the time I got there. It was impossible for me to go at that time, but my husband and I went to work in Christian Science to the best of our knowledge, and he started at once to go to her. This was on Thursday morning, and he arrived there at six in the evening, finding her quite ill to mortal sense. By nine that same night she was much better

Digitized by Google

and recognized him, Friday night she was able to sit up, and Saturday morning she was able to ride five miles to the station to catch the train for Kansas City, which meant an all-day ride. Truth, however, sustained her, and when she arrived home she was feeling much better, only a little tired from the trip.

For this and many other demonstrations we are indeed thankful that Christian Science has come to our home, and we are also grateful to our beloved Leader, who has led us into the understanding of Truth.

MRS. ESTELLA OSBORN, Kansas City, Mo.

I send a few words to express our gratitude for the many blessings received in Christian Science. About nine years ago, my husband had a severe attack of rheumatic trouble, and continued to suffer more or less from that time until two years ago. He was under the care of different physicians, but about a year ago he asked for help in Christian Science. A practitioner came to our home and began to treat him, and after receiving a few treatments he was healed. Then my little daughter had a severe attack of fever, which was overcome within twenty-four hours, and the serious ear trouble which came with it disappeared in a few days.

During the two years that we have been studying the Bible in connection with "Science and Health with Key to the Scriptures" by Mrs. Eddy, I also have been greatly helped, and for all the blessings which we have received we are truly thankful to God, and also to our dear Leader.

MRS. EMMA J. LEE, Union Springs, N. Y.

Although I did not come into Christian Science for its healing, I have had many beautiful proofs of God's loving care for His children, when we turn to Him unreservedly. Over four years ago I was attacked by acute rheumatism, and as my father and brother were reporting my case to their respective physicians, it was none the easier for me; but with God's help I was up and about in two weeks. I had, however, two good lessons to learn, which at that time I was not sufficiently awake to grasp, for the following winter I had another attack, which held me in bondage for ten days, and two weeks later still another, which seemed even harder than either of the two previous ones.

At this time the practitioner who had my case told me she was going away and would give my case over to some one else, saying she thought it wiser, as she was afraid I was relying too much on her personality. Needless to say, the case was met inside a week, and the very night it changed hands I was able to go to bed, a thing I had not done for three nights. I now learned that I must rely on Principle instead of person, and also that I must overcome all sense of will-power, for both times previously I had rebelled over my illness, knowing it was not of God's sending, and so I put too much of my human will into my efforts to get out of bondage; but when I saw what I had been doing I learned to say, "Not my will, but thine, be done," and I found out that God does not require of us more than to "know" the truth, for the Master said, "Ye shall know the truth, and the truth shall make you free." I would like to say that although the physical healing was very great, it was nothing compared to the spiritual healing I have received since being interested in Christian Science, and words cannot express the gratitude I feel to God, also to Mrs. Eddy, who has pointed out the Christ-way through Christian Science.—J. S. TITCOMB, Boston, Mass.

My heart is overflowing with love and gratitude to God, and to our dear Leader, for benefits received through Christian Science. When this healing truth was brought to me I was a physical wreck, sick and discouraged. I had suffered for years with stomach, bowel, and heart trouble, and a physician said I had a growth that required an operation to save my life, and there was only one chance in a thousand for me to come through it alive.

Then Christian Science came, like an angel of light, and showed me that God is my life, and this gave me hope. By constant study of Science and Health, and the loving help of our loyal Scientists, I found that Truth sets us free. One by one each error has disappeared, and I am a well woman, happy in the understanding that nothing is impossible with God, and I am able to overcome many trials. Being ill so many years, my mental garden was sown with much that was not good, and I am striving to uproot all that is unlike God,—the beliefs of disease, fear, and sin,—and to reflect Him always and all the way.

The spiritual understanding is dearer to me than all else in my healing, and the Bible is a new book, for now I realize that God's promises are true, and that He is indeed ever present, as the Scriptures teach us; that we "live, and move, and have our being" in God, divine Love. Since through Christian Science we have learned the power of God to heal, we have used no material remedies. If any suffering ones should see this, I hope it may encourage them to seek help through Christian Science, and get health and happiness.—MRS. MERCY E. GIBSON, Bozeman, Mont.

I wish to express my gratitude for what Christian Science has done and is doing for me. About five years ago I was healed of a chronic complaint for which I had tried many physicians. In two weeks' treatment in Christian Science I was entirely healed, and since that time have relied wholly upon Truth to meet every difficulty which has arisen, physical or otherwise.

While the physical help I have received is immeasurable, the spiritual help has been even greater. The Bible, through the study of our text-book, Science and Health, has become illumined to me. For all the blessings that have come to me and mine through the study of Christian Science, my heart is full of thankfulness to God, the giver of all good, and to our Leader, Mrs. Eddy, who has shown us the way.

ALICE F. WYATT, St. Louis, Mo.

Three years ago I heard about Christian Science and its many demonstrations of the truth. I was at that time very nervous, and it seemed impossible for me to go out alone because I had so much fear. I consulted many physicians and used medicines without any result. I had suffered in this way for about seven years, so I was very discouraged and felt that I could not be healed.

A practitioner in Amsterdam told me much about Christian Science and of the healing power of Truth, and on my request she gave me treatment. After a few weeks I went alone for short distances, and after two months I went by myself to a town in the neighborhood and called on my brother, who was very much surprised to see me alone, as this had not happened for many years. The practitioner told me to have no fear, as God is always with us, and she repeated to me the words of St. John, "Perfect love casteth out fear." My bodily condition also was changed, the headaches disappeared and I began to feel stronger. After five months I no longer needed treatment. In that same time I had a severe attack of bowel trouble, so bad that I had to stay in bed on account of high fever and severe pains, but the practitioner helped me to overcome this disease, and within a week I went out.

I am thankful to Mrs. Eddy, who has opened again the way for us to get a better understanding of God's power and love.—WILHELMINA JANSEN, Amsterdam, Holland.

I have received many benefits through Christian Science, physically, morally, and spiritually. About three and a half years ago I was suffering from what seemed to be a nervous collapse, and was taken to a sanitarium, as my mind

Digitized by Google

was almost a blank. I was there only about two weeks when I was taken home. My dear wife had been corresponding with a Christian Science practitioner, and a short while thereafter I was able to resume work at the printing business. While I am thankful for this and for other physical healing, I am most grateful that I am now a much better man, that now my deeds are open and I have nothing hidden from God. It was not always so.

Our daughter was also healed through Christian Science on several occasions. Once, while living at Pleasant Ridge, O., there was a scare of small-pox in the village, and one day during this time I received word by telephone from my wife to send a message to the practitioner who had helped me, to treat our daughter; and I did, though not knowing what the trouble was. When I got home in the evening my wife told me that she had noticed an eruption on the girl's face when she awoke that morning which frightened her. But when a letter from the practitioner arrived the child was well, all symptoms having disappeared. At another time, while living where we do now, she was again attacked by illness. When I came home one evening my wife requested me to go down town and send a message to the practitioner, which I did. I also sent a note by mail, mentioning the mother's fear of acute lung trouble. In a few days thereafter, on the arrival of a letter, my wife's fear was all gone, and the child well.

For these and many other benefits which we have received, I sincerely thank God, the giver of all good, as well as Mrs. Eddy, whose teachings have made this healing possible.—JOHN F. HUGO, Cincinnati, Ohio.

Christian Science has brought such happiness to me that I feel I must tell the good news to others. After wearing glasses for years, I can now do without them. I was also troubled with an affection of the throat, which a London specialist said I would have all my life, and other ailments, including nervous exhaustion, all of which have been healed in Christian Science. Besides this, on Sept. 17, 1909, during a thunder-storm, I was in my room when the house was struck, and I received a severe blow on my head, which was enveloped in flames. My hair was scorched and my watch stopped, but nothing in the room was disturbed, although every other room in the house was disarranged, the room next to mine being completely wrecked. My parents, who are not Scientists, were ill for days, but I never felt better in my life and was able to attend to them, giving them Christian Science treatment. I am deeply grateful to God for this wonderful truth, and to those who helped me to find it.

NELLIE LIGHTFOOT, Crowthorne, Berkshire, England.

A little anecdote which has helped me to make clearer to those in trouble how it is that God can help them although He does not know about their troubles, and how Christ, Truth, saves us, although God knows no sin, may help others. A young man who had a good mother and a happy home, went to the Boer war in South Africa. He fell in with bad companions and soon learned to do as they did. One day he received a most loving letter from his mother, who knew nothing of her son's evil surroundings and bad habits, telling him of all the dear home news, of their longing to see him, and of all the love which awaited him on his return. This letter arrested him in his downward career, and he turned at once from his evil ways. His mother did not need to know of her son's fall into error in order to save him. So the Christ—the Word of God—comes to us through Christ Jesus' teachings, which reveal the love of the Father, and this love "constraineth us" to arise and go to our Father, and He is our salvation. The power of divine Love is wonderfully illustrated in all the teachings of Christian Science, and is the basis of all its healing work.—ISABELLE TENNANT.

FROM OUR EXCHANGES.

[William Jennings Bryan in *Commoner*.]

In our haste to make money we have cultivated the impression that life is to be measured by its income and that men are worthy of respect in proportion as they have accumulated. If I were delivering a religious address, I should insist that life should be measured by its overflow rather than by its income. I should insist that it is what we put into the world and not what we take out of it that determines the success of a life. But for the present I shall content myself with presenting an economic standard rather than a religious one, and say that the only economic rule for accumulation is that one shall draw from society in proportion as he contributes to the welfare of society. Forms of government, methods of administration and legislation, all should have for their object the securing to each citizen of the rightful and legitimate rewards for his toil. . . . The commandment "Thou shalt not steal" will not have the weight that it ought to have among men until it is so construed as to bring the feeling of guilt and shame to those who draw from the common store more than they add in service. If we can but create a sentiment that will make men ashamed not only of wrong-doing but of idleness as well, and fill them with an earnest desire to make generous return to society for all the blessings that society confers, it will be easier to prevent the varieties of larceny which are so difficult to define and which the officers of the law find it hard to detect and punish.

[Harold Begbie in *Christian World*.]

Christianity is not a philosophy. It is a revelation creating enthusiasm,—enthusiasm for God, enthusiasm for humanity, enthusiasm for life. Directly it loses enthusiasm it becomes a philosophy, it ceases to be a religion. But if it has no force at all as a philosophy, it has a force which is absolutely irresistible as a religion. It does not argue that God is good, but proves that amazing proposition out of the lives of its rejoicing and triumphant disciples. "One thing I know, that, whereas I was blind, now I see." No man can be truly happy who is not a Christian, and no man can rightly call himself a Christian who is not happy. The good tidings of Christ make for happiness and solve every problem which can present itself to the reason. "I will turn their mourning into joy, and will comfort them, and make them rejoice from their sorrow . . . and my people shall be satisfied with my goodness, saith the Lord." Keep Christianity in the region of enthusiasm, refuse to argue about it as a philosophy, insist upon its work in the world as the only force making at once for righteousness and satisfaction, and there is no refutation possible to the enemies of the faith, no criticism which the lives of the saints cannot answer overwhelmingly. Christianity in the pulpit is too often either an explanation or an apology. It should never be anything but an invitation and a challenge.

[William Henry Meredith in *Christian Intelligencer*.]

Doubtless one of the greatest if not the very greatest hindrance to the gospel today is to be found, not in the higher criticism of the Bible, but in the lower living of some who are epistles read and known of all men, as being inconsistent Christians, for there are Christians and Christians! The greatest need of the church today is not more money. We now have more than enough to evangelize the whole human race, if it were so employed; not more learning in pulpit and pew. Never was the pulpit better equipped than today, nor the pew more intelligent. Not more support by those in high social places of society. Her membership includes sovereigns, emperors, presidents, judges, scholars, merchant princes, kings of intellect as well as of commerce.

Digitized by Google

All these and all such may be of great service to the church. They are often magnetic and draw others to the church because of their high social standing; but the greatest drawing power of the church is the uplifted Christ, first on the cross, and then in the lives of his followers. The church which produces the best Christians is the best church, just as the mill which produces the best cloth is the best, even if not the biggest mill. The best Christian is not necessarily the wealthiest nor the wisest, though these may be the best if they will be. The most useful Christian is not always the most active, and certainly not the noisiest one.

[*Outlook.*]

Many a man has thirsted after God and been sent to some abstract formula, some minutely elaborated organization. He longed with all his soul for the living, loving God with whom he could stand in an intimate and childlike relation, and he has been offered a remote and angry being whom he must first placate,—a metaphysical conception expressed in a subtle and arid creed, or a great paraphernalia surrounding an august deity to whom he must carry authoritative credentials. There must be creeds and organization, but the loving Father should never be shut off by them from any human soul that needs Him; nor should doctrine or priest of any name or kind come between the heart that pants for the water-brook and the flowing fountains. The end of creeds is to clarify the thought of God, not to obscure it; and the office of the priest is to lead men to God, not to keep them at a distance.

[*British Congregationalist.*]

It is easier far to indulge in a sort of sentiment of love for mankind in general, than it is to give practical expression to it by helping the person in need who is at your very door. It is easier to pity the poor in general than it is to serve the particular poor person who is nearest to you and most needs your help. Christian love does not waste itself in emotion. It bends itself to service. It ministers to the individual case. It condescends to the unit. Love is service and giving. It means that we are not content to do our beneficence by proxy, but that we ourselves go about doing good. This man, living to help and bless his fellows, loving them in this personal and practical way,—this man is the "good" man.

[*Independent.*]

There are many kinds of degree of conservatism, and some of them serve the useful purpose of compelling new theories to justify themselves adequately by facts. But this is the kind that brings obloquy upon religion, because it ignores the obvious and falls below the common enlightenment of our time. The fact is that such defenders of Christianity are the real heretics. No more damaging heresy could be propagated than that which supposes that religion and the Bible can be saved in the esteem of men by stifling inquiry and ignoring the reverent and fearless Biblical scholarship of our time.

[Rev. C. Silvester Horne, M.A., M.P., in *British Congregationalist.*]

The Founder of Christianity expounded his gospel in terms that never traveled far from the mystery of life—seeds and flowers, the vine and the mustard-tree, the lily and the bird, aye, and the mystery of the breath that bloweth none knows whence and none knows where. My gospel, he seemed to say, is life and beauty, scent and song; it is soul, born of the breath of God.

[*Christian Register.*]

They who are best qualified to have and enjoy the things that money can buy are those who are best equipped with the things that money cannot buy.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author, also a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

NEW PAMPHLETS.

Now on sale are three new pamphlets: "Seeking and Finding," "Prayer and Healing," and "The Divine Nature." Each pamphlet contains five to eight articles that have previously appeared in the *Journal*, *Sentinel*, or *Monitor*; and they are particularly suitable for handing and sending to inquirers or persons who are becoming interested in Christian Science.

Hereafter, the price of all pamphlets (except "What our Leader Says" and "Christian Science and Legislation") will be reduced to 5 cents a copy; 55 cents a dozen; $2.00 for fifty, and $3.50 for one hundred. Hereafter, also, the republication in the English language of single articles as "tracts" or "reprints" will be discontinued. It is believed that their place is better taken by the daily article on Christian Science in the *Monitor* and by these new pamphlets and others that may be issued.

NEW POST CARDS OF THE MOTHER CHURCH.

Post card photogravure, in sepia tint; an exact reproduction of the large photogravure of The Mother Church Buildings and Publishing House with parkway in foreground.

Single copy	$ .05
Twenty-five copies	1.15
One hundred copies	4.25

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90; six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news dealer, 12 cents a week, payable to the news dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

In a ruling handed down at Jackson, Miss., Judge John E. McCall in the United States circuit court nullified the efforts of the Government to have assessed against the Standard Oil Company of Indiana penalties aggregating in excess of thirty million dollars. The ruling of the court, instructing that a verdict of not guilty be returned, took place at the conclusion of the chief case of the prosecution. The Elkins law regarding interstate commerce was violated, it was alleged, by "scheme and device," the specific offense charged being the receipt of freight rate concessions. Taking up the much discussed "blind billing," it was held by the court that it was done by the carrier and "that there is not one syllable of testimony tending to show that the defendant company knew that the carrier was so blind billing the shipments."

Asserting that their *alma mater* should confine itself exclusively to classical education, the class of 1885, in a memorial to the board of trustees, advocates changes in the curriculum of Amherst College. After expressing the belief that the institution can no longer compete successfully with either the state university or the technical school, it makes these recommendations: That the instruction given at Amherst College be a modified classical course; that the degree of bachelor of science be abolished; that the college adopt the deliberate policy to devote all its means to the indefinite increase of teachers' salaries; that the number of students attending the college be limited; that entrance be permitted only by competitive examination.

An interesting development of the campaign for more efficient banking superintendence in New York state is found in the activity of some of the trust companies themselves to have a more accurate check kept upon the enormous trusts handled by these institutions. A recent compilation of trust company statistics issued by the United States Mortgage and Trust Company gives the total wealth which the trust companies of the United States protect as trustees or administrators at twenty-five billion dollars, in addition to the five billion dollars banking capital representing their own resources.

Special reports on the construction and sanitary condition of railway mail cars having been received, the postmaster-general announces that he has served formal notice on the railway companies, informing them that payments for mail service will be made only when the department is satisfied that cars of safe construction and proper sanitation are being used. Authority for this action to safeguard the lives and health of postal clerks was granted the postmaster-general by Congress at its last session. The railways also are being urged to substitute steel postal cars for wooden ones.

One of the largest engineering surveys ever accomplished in Illinois was finished recently in the Kaskaskia valley, in the southwestern part of the state, preparatory to devising plans for the drainage of the entire district along the river from New Athens to Chester. As a result of this investigation the reclamation of three hundred thousand acres of fine land is probable, contingent upon the acceptance of the report by the international improvement commission of Illinois, under whose auspices the work was undertaken.

The American Sugar Refining Company, which has paid out more than two million dollars in settlement of underweighing frauds, must reimburse New York city to the extent of $325,000 for water, if a report of a referee handed down recently is sustained. The city alleged that from 1897 to 1903 the company used at its Williamsburg plant unmetered water, the taxes on which amounted to more than five hundred thousand dollars.

Secretary Ballinger has awarded contracts for the construction of the forty miles of canal which will compose the main laterals of the distributing system for the "Wide Hollow" branch of the Yakima reclamation project in Washington.

The Government, in view of the great destruction of standing timber by fire the past summer, is conducting an investigation to determine how long timber will remain commercially valuable after having been fire swept.

President Taft will deliver the opening address at the seventh convention of the national rivers and harbors congress, which will be held in Washington Dec. 7, 8, and 9.

To furnish accommodations for the great crowds that attended the recent Harvard-Yale football game at New Haven, thirty-seven special trains were run.

Unless unforeseen complications arise, the indicted members of the so-called beef trust will be placed on trial at Chicago Dec. 20.

International.

The total number of visitors who passed through the turnstiles at the Japan-British exhibition in London during the summer amounted to 8,350,000. Three hundred thousand dollars' worth of Japanese exhibits were sold, and as a result of the exhibition new markets have been opened up and a better knowledge of the class of article best suited for export to England has been obtained.

The fiftieth anniversary of the proclamation of the Italian kingdom will be commemorated in Rome next year. A part of the commemoration will consist of a retrospective or historical exhibition, which it has been decided to organize at Castel Sant' Angelo to illustrate life in Rome from the middle ages up to the middle of the nineteenth century.

Industrial and Commercial.

So far as known, none of the Argentine meat companies controlled by North American interests is contemplating meat shipments to the United States. The American companies which control materially the meat supply of the United States entered the Argentine field barely half a dozen years ago, but have already attained a commanding position by reason of their capital and progressive methods. United States companies do not yet control, so far as is currently known, a majority either of the companies or the cold storage output of the country, but their production is increasing more rapidly than that of the Argentine or English plants and they have purchased land on the Parana river, presumably with a view to erecting freezing works. The two avowedly North American companies already are shipping about a third of the total of frozen beef and mutton and more than half of the chilled beef.

Retail hardware dealers of Pennsylvania, New York, New Jersey, Maryland, Virginia, West Virginia, Ohio, Delaware, and Indiana attended the meeting of the newly organized American Hardware and Supply Company held at Pittsburg Nov. 21, when plans were considered for the establishment of a distributing agency in Pittsburg for the retail hardware dealers. The American company has been chartered with an initial capital of five hundred thousand dollars, which ultimately will be increased. The business that it is proposed to conduct will be a general selling of hardware, railway, mine, and mill supplies, the object being to place the retailers in a position to secure their stocks at a lower cost.

Iron ores abound in practically every province of Canada. Only eight iron mines are in operation, and only one of these is producing as much as one hundred thousand tons of ore in a year. At present the chief Canadian blast furnaces draw most of their ore from Belle Isle, in Conception bay, near St. Johns, Newfoundland, which is very rich in iron ores, nearly one million tons being mined annually, most of which is used in Canada. Large quantities of hematite ore have been found in New Brunswick, within easy distance of large coal fields. Deposits of high quality have also been proved in Ontario, Quebec, and Nova Scotia in the east, and in Vancouver and British Columbia in the west.

Texas nurserymen who grow and handle citrus fruit trees have placed orders for more than two hundred and fifty thousand young orange trees to be planted in south Texas this fall and winter. It is conservatively estimated that there will be planted, all told, more than four hundred thousand of these trees before the season closes. More than one million Satsuma orange trees have been imported from Japan during the last four years.

Twenty-three bids were recently made for the Triborough subway of New York city. All of the twenty-three contractors were willing to do the work with the city's money. Seventy-seven bids in all were submitted. The bids received were for the construction of those parts of the Triborough route which include the Broadway-Lexington avenue subway, the Canal street crosstown section, and the Broadway-Lafayette loop in Brooklyn.

A company capitalized at five hundred thousand dollars, composed of Galveston business and professional men, has been formed for the purpose of carrying on a banana importing trade between Galveston and Honduras. The company will start operations Jan. 1, at which time there will go into effect contracts with Honduras banana growers sufficient to bring to the port one steamer every ten days.

Freight Traffic Manager McInnes of the Canadian Pacific railway has given out the official calculations made by the Grain Dealers' Association, which put the total yield at one hundred and four million bushels. This is fifteen million bushels less than the total yield of 1909. The farmers are holding back shipments in anticipation of higher prices.

There are two hundred and twenty-five thousand colonies of bees in Missouri and their annual product of eight million pounds of honey is worth nearly one million dollars. It is estimated that between seventy-five and ninety-five per cent of the honey is consumed within the state.

The potato crop of 1910 is placed at two hundred and eighty-five million bushels. The area under potatoes was three million one hundred and twenty-nine thousand acres. The rate of yield averages about ninety-one bushels per acre.

Within the past year nearly twenty million pounds of beet sugar have been produced in Canada.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

A GREAT MISSIONARY MOVEMENT.

M. G. KAINS, M.S.

AT a recent meeting of a prominent Church of Christ, Scientist, many plans were advanced whereby every one might do his or her share in supporting and promulgating the work of what might be called the Christian Science missionaries. It would be impossible to enumerate here all the good points brought out by the score or more of speakers, but what follows will show the trend of the meeting and furnish hints upon which the reader may act when opportunity presents.

In the propaganda of Christian Science work is not limited to the preaching of the gospel. The sinful are reformed, not by fear of future punishment or hope of future reward, but by redirection of their course through the attraction of right thinking and doing as taught in Christian Science. The work of the Christian Science missionary movement is characterized by the healing of sickness, which sets the seal of authenticity upon it. Evidences of health restored are the "signs" which Jesus declared should mark the labor of those who understood and obeyed his teachings. The effective Christian Science worker, therefore, is welcomed everywhere, because his mission is not only to preach good tidings unto the meek, but to "bind up the brokenhearted, to proclaim liberty to the captives, and the opening of the prison to them that are bound; . . . to comfort all that mourn; . . . to give unto them beauty for ashes, the oil of joy for mourning, the garment of praise for the spirit of heaviness."

Some have supposed that the Christian Scientists have no missionaries. They have thought that the work of promulgation was done by readers and practitioners, and that the sphere of operation was restricted to the few who visit these practitioners and readers! They need to be better informed. Practitioners, and readers, and lecturers,—yes, and lay members,—all take part in the propagation of the Christian Science cause, while in addition to Science and Health and Mrs. Eddy's other writings, four great missionaries are to be noted, namely, *The Christian Science Journal*, the *Christian Science Sentinel*, *Der Herold der Christian Science*, and *The Christian Science Monitor*. With these, but more especially with the last, the meeting referred to was most concerned.

It was shown that *The Christian Science Journal*, which was founded and at first edited by our Leader, has grown under her supervision to a magazine of sixty-four pages of articles, editorials, and testimonies of healing, besides a voluminous and constantly enlarging list of churches and societies, practitioners and nurses, in all parts of the world. It was shown that the *Journal*, *Sentinel*, and *Herold* are effectively ministering to the wants of people already more or less interested or likely to be interested in Christian Science. But one great need of the world at large had not been met by these three missionaries, and therefore *The Christian Science Monitor*, a daily newspaper, was established.

In the first issue of that paper (Nov. 25, 1908), Mrs. Eddy graphically characterizes the work of each of these missionaries in the following words (which were quoted at the meeting): "I have given the name to all the Christian Science periodicals. The first was *The Christian Science Journal*, designed to put on record the divine Science of Truth; the second, I entitled *Sentinel*, intended to hold guard over Truth, Life, and Love; the third, *Der Herold der Christian Science*, to proclaim the universal activity and availability of Truth; the next I named *Monitor*, to spread undivided the Science that operates unspent. The object of the *Monitor* is to injure no man, but to bless all mankind."

It was natural that the review of the work accomplished in this particular city should be presented in detail; and what a record it is! Whereas, not so many years ago, public and private institutions would not allow Christian Science literature upon their bookshelves and tables, now the homes for children, for the afflicted, and for the aged; hospitals, sanitariums, asylums, prisons, and other establishments,—all accept these periodicals with a constantly warming welcome. A thorough and systematic canvass is being made of the hotels, clubs, steamships, fire halls, police stations, and a score of other kinds of places where men and women congregate or must spend time, and the *Monitor* and ofttimes the *Sentinel* and the *Journal* are constantly kept within easy reach, wherever accepted. And the number of places is ever increasing, because there is a steadily growing demand for really helpful literature.

At this stage of the meeting came the appeal to all Christian Scientists to help in this, the greatest missionary movement the world has ever known. Money was not the object and was not asked for. The support desired and asked for was—copies of the literature! Many people have no use for issues of the periodicals after once reading them, and these copies are desired by the distribution committee, which sees to it that the literature is placed where it will do good missionary work. Every one who has a copy of the *Journal*, the *Sentinel*, *Der Herold*, or the *Monitor*, can help to just that extent by taking it to the church for the distribution committee to use. Never mind how old it is! It will be useful! The committee does not, however, restrict donors to such copies; all who wish may subscribe for one or more of the periodicals, and have it sent regularly to some place specified or leave it at the option of the distribution committee.

The awakening receptivity of this particular locality was frequently commented upon at the meeting, though it is perhaps no more characteristic of this city than of the United States, or of the world. As a matter of fact, people everywhere are learning that the Christian Science movement is characterized by good and good only, and in consequence their fear is breaking down. This is especially true with respect to the *Monitor*, which is destined to become the greatest missionary of the four. Contrary to some predictions, the news it contains does not, as with the ordinary daily news sheet, get stale before the paper is dry. Because of careful selection and presentation, its information has an abiding educational value. This is attested by the fact that in the

Copyright, 1910, by Mary Baker Eddy.

United States consulates throughout the world *The Christian Science Monitor* is sometimes worn out because of constant reading. In these foreign lands it is doing a wonderful missionary work, quite apart from the solitary article that each issue contains upon some Christian Science topic. It is correcting the false impression of the people of the United States,—an impression born and nurtured by those newspapers which lay emphasis on the dark side of human affairs. In this way it is sure to justify its name, since it will teach publishers to alter their policies and give the world's best rather than the worst news.

The *Monitor* caters only to the good that men do. Not being planned to make certain individuals wealthy, it does not seek to build up an enormous circulation by sensational methods to increase its advertising rates. Its aim is far beyond mere circulation: it seeks readers. Although only two years old, it has already established a secondary circulation—the people who read it after the original subscribers have passed it along.

Here recurs the appeal. Each one can help: every one who has the promulgation of good tidings at heart, whether this be along Christian Science lines or only upon the basis of ordinary patriotism—love of country and desire to see that country placed before the world in a true light. Each can be a missionary supporter to the extent that he turns over his periodicals to others for perusal. Each can help in the greatest reform movement the world has ever seen, the reform of thinking along secular as well as sacred lines, and none need fear that he will not reap a reward in doing this needed work for the "nations that sit in darkness." Each will reap a harvest of good in proportion to the joy with which he gives. "For as the earth bringeth forth her bud, and as the garden causeth the things that are sown in it to spring forth; so the Lord God will cause righteousness and praise to spring forth before all the nations."

"BE YE THANKFUL."

CALEB H. CUSHING.

Not infrequently the student of Christian Science is deprived of the larger realization of health and harmony which is man's birthright as a child of God, through a failure to discern and correct errors that may not stand out so prominently or seem so important as others to overcome. These may be sins of omission as well as commission, and an illustration of this is our failure ofttimes to be fully appreciative of the good that we have received and are receiving today and to thank God for it.

When the New Testament writer said, "Be ye thankful," he doubtless saw that this was a Christian and scientific demand, to enable us to reap the blessings of today as well as to receive the good of tomorrow. Our Leader emphasizes this when she says (Science and Health, p. 3), "Are we really grateful for the good already received? Then we shall avail ourselves of the blessings we have, and thus be fitted to receive more." The benefit that has come to those who have taken some time each day for an enumeration of their blessings and for an individual praise and thanksgiving service to our heavenly Father for these blessings, proves conclusively that this thankfulness is requisite in order to bring out a well rounded demonstration of health, harmony, and happiness. When we start in to count our blessings, we find that, in the words of the psalmist, "they are more in number than the sand," and they make the seeming claims of evil pitifully small in comparison. This steadfast contemplation of all the present good that is ours dissipates what may seem to be evil, as light vanquishes darkness; while to reach out for some great future blessing, without due consideration and appreciation of the blessings at hand, breaks with the divine order and hinders our demonstration in Christian Science.

We are surely grateful to God for His revelation of eternal truth in the Bible, for the Christian religion founded and demonstrated by our great Exemplar, Christ Jesus, and for the scientific and practical import of these teachings set forth in "Science and Health with Key to the Scriptures" and the other writings of Mrs. Eddy. We are grateful to every Christlike character in the past and in the present who by precept and example has helped to uplift faith and understanding to prove that "God is a very present help in trouble." We greatly appreciate our Sunday and Wednesday services, the places that divine Love has provided for these services, and for all those who faithfully cooperate in carrying them on. We are also grateful for our helpful literature that comes, monthly, weekly, and daily in the form of the *Journal*, *Sentinel*, and *Monitor*, and for those who edit, manage, print, and contribute to these periodicals.

We should constantly praise God for the understanding of Christian Science which enables us to heal ourselves and others of sin, sickness, and discord of every kind. We can give daily thanks for a more spiritual sense of sight, hearing, and all that reveals the useful, good, and true; for food, clothing, shelter; for our homes, our friends, and for countless other blessings. These are but a few of the things for which we could and should be daily thankful, and we know that in doing this we are obeying a divine requirement and helping to bring the kingdom of heaven into our experience here and now.

CHRISTIAN COURTESY.

HARRIET DAVIES.

The writer, who was at the time the only Christian Scientist in the small country place where she had just then removed to live, received several visits from a local clergyman, a very highly esteemed and able man. Their conversation on these occasions was chiefly concerned in a discussion of the Scriptures; they differed only because of their different view-points, and invariably, when the visits came to a conclusion, they expressed themselves as mutually benefited by the amicable and edifying interchange of ideas.

During one of these friendly talks the minister volunteered the information that while going through a course of theology at a world-reputed German university, he had made a careful study of "Science and Health with Key to the Scriptures," and said he considered much of Mrs. Eddy's teaching very elevating, though he could not accept her philosophy entirely. When, therefore, shortly after this, the Scientist heard that her kindly visitor, who had won for himself wide renown in the neighborhood as a preacher, had made use of his pulpit to denounce Christian Science, she not unnaturally felt surprised, and, just for the moment, perhaps, personally aggrieved and affronted.

Nor did surprise end at this juncture, for very soon after this hostile and intolerant denunciation, a messenger called to ask if the minister might borrow the Christian Science text-book for a little while. Her first impulse was to refuse pointblank and to stand behind a reserved and dignified silence as to the reason she found it impossible to comply with this most unexpected request. Divine Love, however, happily soon overruled this discourteous and resentful decree of personal sense and feeling, for above all things else Christian Science teaches its adherents the gospel of Love; that they are, as St. Peter taught, to "love as brethren. . . . be courteous;" that "Love is reflected in love" (Science and Health, p. 17), and in kindness, courtesy, forgiveness, justice, meekness, mercy,—the unfailing prerogatives of all God's children,—and they should consider it their highest privilege and duty always to be ready to minister to those who ask for the truth.

This conclusion reached, the messenger was cordially received and forthwith stated the object of her errand, viz., that Mr. —— was about to prepare a series of sermons on the spiritual interpretation of the Bible, and would be glad of Mrs. Eddy's book as a reference on the subject. It was then explained, as simply and as briefly as possible, to the

Digitized by Google

lady who had undertaken the delicate mission, the deep affection and reverence in which Christian Scientists hold their text-book, the constant use to which they put it in conjunction with the Bible, both for the daily study of the Lesson-Sermon and as their guide to God, especially in times of temptation, sickness, and sorrow. Having proved it to be a healing as well as an inspiring statement of spiritual truth, they have come to think of it with a consideration kindred to that which is shown the Scripture writings; nevertheless, since Mr. —— desired it for a legitimate purpose, he was indeed most welcome to the loan of it. This outspoken confession quickly changed the messenger's attitude, and she took careful possession of the text-book, promising that it should be returned as soon as possible.

The writer found much earnest work to do that day, her work consisting in the reiterated declaration and affirmation of the truth. She strove to realize that mortal man could not, in order to serve his own passing pleasure and purpose, either misconstrue or distort God's eternal word, the word of Truth. Toward evening it was the minister himself who came to restore the much prized volume. As he entered it was instantly perceived that the book had been considerately wrapped in paper and tied. The truth declared had been effective, and, sitting within the genial warmth of the fire, the clergyman paid generous tribute to the author whose inspired book he had sent to borrow. "The world owes Mrs. Eddy a far greater debt of gratitude than it is at present conscious of," he said thoughtfully; nor did he forget to add that he considered the interpretation of the 23rd Psalm, by the Leader of the Christian Science movement, very beautiful.

Since that memorable occasion, no further adverse criticism with reference to Christian Science has fallen from the lips of the preacher, not at least, so far as the writer's knowledge goes; but at intervals his kindly visits have been repeated, and one Sunday morning not long ago, the well attended church over which he presides resounded with its zealous pastor's voice, in tones of stern vehemence, when the devout members of his congregation were thus admonished: "My beloved brethren, go home and read and study your Bibles, as the Christian Scientists do."

CHRISTIAN SCIENCE AND SALESMEN.

E. E. SUTHERLAND.

In starting out on the road to sell a line of merchandise, I should rather be possessed of my present knowledge and limited understanding of Christian Science, travel in a territory where the house I represent, the goods I sell, and myself are all unknown, than to have all the advantages in this respect without a knowledge of the power and availability of Christian Science to satisfy my needs, here and now.

When I learned that Christian Science is the direct opposite of what I supposed it to be, and that it presents the full and complete answer to Pilate's memorable question, "What is truth?" I was engaged in no business at all, having but a few months previously withdrawn from a medical manufacturing company. It is needless to say that, after having studied Christian Science enough to know something of the Principle governing its teaching, I did not reengage in business along similar lines. For nearly two years I devoted myself almost exclusively to the study of Christian Science, until it became necessary for me to earn sufficient money with which to buy a home for my aged parents. At this time a position was offered me to sell goods to merchants in California and the Northwest, for a manufacturing company located in one of the middle states. During these two years I had learned from my study of the Bible and Science and Health that "divine Love always has met and always will meet every human need" (p. 494); and this understanding did not permit fear or doubt to come into my mind, for so sure and certain was I of success that I took no thought of what I should say if asked by a prospective customer for some information concerning the fabrics I desired to sell; neither was I embarrassed when one of the first merchants I called on asked me if my goods were worsteds or cassimeres, but answered quickly and frankly, "I do not know."

I then explained that I was a druggist by profession, had been engaged in the manufacture and sale of medicines for nearly twenty years, but for certain reasons I was no longer engaged in that business. He expressed his conviction of the fact that it is unusual for a firm to send a representative so far from home who had no knowledge of the goods offered for sale; and more especially since the salesman, the goods, and the house were practically unknown in the territory. Notwithstanding this merchant had started with me to the sample room, he hesitated; said he had been in business twenty-five years, but never before had been asked to take up his time in going to the sample room with a drummer who confessed ignorance of his line. "Having handled this class of merchandise for a quarter of a century you must be pretty well posted," said I. He affirmed that he was. I then asked him what difference it could make whether or not I knew cotton from wool, or ramie from silk, as long as he was posted. He saw that I was willing to leave the matter entirely with him, and satisfied with this, went with me, and bought.

The Bible statement, "Perfect love casteth out fear," goes beyond the rising and the setting of the sun. It is not limited by the fear of a train wreck, a steamship disaster, a hotel fire, or being "held up" on the way to the station to catch a midnight train; but it does eliminate all fear,—the fear that one will fail to sell goods, or that one may receive or give the losing end of a business transaction; the fear that others may get all the orders, etc. Christian Science teaches that perfect love instructs and gives one the understanding that there is but one infinite good; that this infinite good is God, divine Mind, the source of all supply, and that this supply is inexhaustible. It teaches that this infinite God is ever present, and that we receive of His bountiful supply in proportion as we apprehend man's true nature and relation to God.

Christian Science inculcates that perfect love which prevents one from wanting a merchant to give him an order for goods unless it is to the interest of the merchant, and to the interest of the merchant's customers for him to carry this particular brand of goods. This perfect love liberates one from every selfish motive, and thus it is that in presenting my wares I find myself silently but earnestly and conscientiously considering, not only the best interests of my prospective customer, but the welfare of his customers as well. Just to the extent that I understand and reflect Christian Science, or that perfect love which casteth out all fear, I manifest that understanding of Principle, in dealing with my fellow-man, which precludes the possibility of any fear on his part that I am endeavoring to influence him into buying, regardless of his own interest.

When I sent in the report of my first week's business, one of the directors of the company wrote me that it was unusually large. This letter, while sincere and written with only the best intentions, awakened an unhelpful sense of self, and by the end of the fourth week I was not selling enough goods to pay traveling expenses, though working harder than ever. This was in the spring of 1908, just after a so-called panic, and the talk of hard times, failure etc., indulged in by salesmen and merchants generally, so affected my thought that fear crept into my consciousness, and before I could get rid of this it became necessary for me to seek the aid of a Christian Science practitioner, to help me to apprehend the fact that in God's creation there is no such thing as panic, hard times, or failure. This practitioner reassured me understandingly, and explained that, as the Bible says, no good thing will be withheld from them that walk uprightly, that keep the commandments.

Digitized by Google

About this time came the new by-law which requires us to cease numbering the members of our churches, and in meditating upon the wisdom of our dear Leader's instructions, I appropriated the substance contained in this by-law and applied it to my own business. I accordingly quit devoting so much time to figuring up each night the dollars and cents worth of goods sold during the day, and my sales at the end of each week, and it is an interesting fact that the book-keepers in the home office, who receive pay for doing this work, showed by their statement at the close of the season that out of twenty-seven salesmen I stood number eight in point of sales, while the following season closed with my name fourth on the list.

I would like to add one more thought: When Mrs. Eddy discovered Christian Science, and gave it to the world in her wonderful book, Science and Health, she knew that though the understanding of this Science gives health to the sick, peace to the sorrowing, and plenty to all, these are but the incidentals, so to speak, when compared to that holy, uplifting desire to be good, and the ability to do good, which a knowledge of this Science bestows, and the endless and unspeakable joy and comfort which it brings.

THE CASTING OUT OF EVILS.

GUY PARKHURST ESTES.

WHILE conversing with one on whom the light of Christian Science was just dawning, the remark was made that in Christian Science devils, as referred to in the Scriptures, are regarded as evils. The old belief in a personal devil had always made it very difficult for this friend to understand such passages as are found in Luke's Gospel, where we read that the seventy returned and said, "Lord, even the devils are subject unto us through thy name." In Christian Science we learn that it is a mistake to personify evil. On page 348 in Science and Health Mrs. Eddy writes, "Here is the difficulty: it is not generally understood how one disease can be just as much a delusion as another;" and she continues, "Jesus established this foundational fact, when devils, delusions, were cast out and the dumb spake."

Throughout the ages, either through ignorance or wilfulness, this "foundational fact" has been disregarded and error has masqueraded in every imaginable attire, according as human opinion changed; and so, like a mirage, the illusion of something in nothing has come to seem real to frail mortals. Many writers since Jesus' time have in part depicted the falsity and cowardice of evil, but when Christian Science was given to the world evil was exposed, even as Christ Jesus exposed it, and a way was opened by which humanity could make use of the infinite power of Truth to annihilate evil's seeming power. Goethe, in his "Faust," made for the thinkers of his period a cunning concept of evil. The sound of church bells and the sign of the cross (symbols of righteousness) made his devil cringe and skulk backward. It, however, went no farther, and the mortal was not armed with the understanding necessary to conquer his tormentor when the evil belief assumed its varied forms. The devil could not face purity, yet, disguised by means of flattery and the pretense of personal attachment, unseen, the thief crept into consciousness. No matter what phase evil may assume, if Christian Scientists but abide by the scientific basis of their teaching, they will find that evil in all its forms and phases is subject to the power of Truth. How wonderfully Mrs. Eddy has given this vital fact to the world, when she says, "The self-seeking pride of the evil thinker injures him when he would harm others" (Pamphlet: Personal Contagion, What Our Leader Says, p. 7).

Today the truth of being is again placed before the world as it was over nineteen hundred years ago by Christ Jesus. The Bible is full of scientific statements which strip off every disguise of error and tell us exactly how to recognize the nothingness, the utter delusion of evil. One instance among the many is the raising of Jairus' daughter. The first step pointed out by Jesus was this, "Be not afraid, only believe." There is really nothing to fear when we know that God is All. The material senses may laugh us to scorn, even as they did the Master, but the tumult of mortal belief made no impression on Jesus. "He put them all out,"—all the devils, evils, evil suggestions; then he took the father and mother of the young girl, and three disciples (harmonious thoughts of the one Mind), and entered "where the damsel was lying." The delusion was met and conquered, then he took her by the hand and she arose to her feet and walked, supported by her new-found understanding of Life. She was raised out of the material beliefs which had formerly surrounded her, for the evil beliefs were cast out which would have sent her to the tomb.

In Science and Health we read: "Jesus elaborated the fact that the healing effect followed the understanding of the divine Principle of the Christ-spirit which governed the corporeal Jesus" (p. 141). How beautiful, and yet how natural! Every evil is thus proved no-thing when it is met as Jesus met it. He recognized it as an unnatural, unreal condition, never having place or part in Life, the divine harmony of being. That "error is a coward before Truth" (*Ibid.*, p. 368) can be proved even to the overcoming of death, that last delusion which shall be destroyed through Christian Science.

"THE SUN OF RIGHTEOUSNESS."

AMELIA HASTWELL.

AFTER a heavy fall of snow, which in turn was succeeded by a keen frost, I was much interested in watching the efforts of the men who had the work of removing the snow from the roads and footpaths. How laborious and often futile were their efforts; and I noticed that the flagged pavement often showed the damage their spades had made in removing the ice.

The next day the sun appeared and shone steadily, hour after hour, and it was beautiful to watch and see how easily and gently it accomplished its work. Soon there was not a trace of the snow left. Then I thought, How like our condition before Christian Science came to our aid! How different and discouraging were our efforts to remove the discords of sin and disease; but the promise, "Unto you that fear my name shall the Sun of righteousness arise with healing in his wings," has been fulfilled in our experience. As our consciousness is flooded by the warmth of divine Love, fear, selfishness, envy, hate,—all the many phases of error which throng the human mind,—begin to melt and disappear, and we feel it possible to say, as one of our hymns so clearly expresses it, "My path in life is free."

To refer once more to the snow, I noticed what a long time it remained in corners of the garden which missed the direct rays of the sun. So, deep in the human heart, there may be lurking hidden sins that may be retarding our growth or hindering our healing, and which need to be uncovered that the "sunlight of Truth" (Science and Health, p. 162) may do its work. Well may we all revere and love our dear Leader, who, not content with getting into the sunshine herself, is helping all mankind into the same happy place.

Thinkest thou the cares and burdens of adversity beyond thy strength? Then travel farther with thy thought, and thou wilt soon perceive that prosperity hath its burdens no less weighty and perplexing than those which seemingly belong solely to adversity. Thus thou shalt discern how God's grace abounds where'er thou art, for these terms after all do but symbolize how well thou knowest God.

WM. W. PORTER.

SELECTED ARTICLES.

[Editorial in *Boston Post.*]

Our esteemed contemporary, *The Christian Science Monitor*, celebrated yesterday the second anniversary of its birth with a very creditable and attractive issue of 96 pages. The *Monitor* has made a place for itself in American journalism. It has won it not by sensational methods, or by attempting to invade the field of its contemporaries. It has pursued the even tenor of its own ways, getting out a public-spirited, well printed, and interesting sheet, adapted to its clientele. It appeals not merely to a local but a country-wide constituency. The *Post* tenders its professional felicitations to *The Christian Science Monitor*.

[Judge L. H. Jones in *Paducah* (Ky.) *Sun.*]

There are perhaps no people on earth today who believe more absolutely in the divinity of Christ Jesus and that he was and is the Son of God, than do Christian Scientists. Among the "five indisputably divine testimonies to the deity of Jesus Christ," cited by our critic, on all of which the Christian Scientists entirely agree with him, but which he apparently cites in refutation of Christian Science, there is this one, viz.: "The divine words he spoke, for he spoke as never man spake."

Among the words of Jesus Christ most conspicuous in the sacred narrative, is his injunction to his disciples to heal the sick. When his emotional disciples were protesting their passionate devotion to their Master, Jesus quietly reminded them, "If ye love me, keep my commandments." Is our critic keeping his Lord's commandments to heal the sick? It is not recorded anywhere in the Bible that Jesus ever authorized anybody to preach in his name that he did not immediately impose on him this injunction, to heal the sick. In Luke's Gospel it is written: "After these things the Lord appointed other seventy also, and sent them two and two before his face into every city and place, whither he himself would come." Is the critic preparing for the coming of the Christ to Paducah, in the manner that the Master commanded his disciples to prepare the way in "every city and place, whither he himself would come"? Will Christ come to Paducah unless the way is prepared just as he commanded it should be prepared? Does our critic know better than Jesus how to prepare the way for his coming?

Jesus told his disciples how to prepare the way in "every city and place, whither he himself would come," and this is what he told the seventy, viz.: "And into whatsoever city ye enter, and they receive you, eat such things as are set before you: and heal the sick that are therein, and say unto them, The kingdom of God is come nigh unto you." When our critic entered Paducah did he prepare for the coming of the Lord in the way his Lord commanded him? And if he did not, what authority will he have for saying to the people when he leaves, "The kingdom of God is come nigh unto you"? Every evangelical minister recognizes that his only authority to preach in the name of Jesus is contained in the great commission which our Lord and Master gave to his disciples just before his ascension, which is recorded in the last chapter of Mark's gospel as follows:

"And he said unto them, Go ye into all the world, and preach the gospel to every creature. He that believeth and is baptized shall be saved; but he that believeth not shall be damned. And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover. So then after the Lord had spoken unto them, he was received up into heaven, and sat on the right hand of God. And they went forth, and preached every where, the Lord working with them, and confirming the word with signs following."

According to Jesus, it is the same gospel that heals the sick and saves the sinner. The healing of the sick is an incident of the power of this gospel to save the sinner; but it is a most important incident to us, for it is the sign by which we are to know when we have accepted it in the measure of belief necessary to our salvation. He has plainly told us what this measure of acceptance is, and no salvation is promised on any less acceptance. He says, "He that believeth and is baptized shall be saved:" and forthwith he tells us what this saving measure of belief is, viz., a believing that carries with it the power to heal the sick. No salvation is promised on any other kind of believing, it matters not how much we may be baptized, how passionately we may protest our loyalty, how much we may cry, Lord, Lord. What authority has any one to promise salvation to the people on any less measure of belief than Jesus has prescribed? These words of Jesus are very plain and simple. He has left no doubt as to what the signs of a saving acceptance of his gospel would be, so that there is no excuse for mistaking other signs for his signs. He has said exactly what signs should follow "them that believe."

[John M. Dean in *Journal and Tribune*, Knoxville, Tenn.]

In the *Journal and Tribune* of Oct. 18 appears an article from the *New York Times*, which, while not commented on by your paper, necessarily receives a greatly enlarged circulation with the added weight of your recognition and presumable indorsement.

In the question of the agitation of "drugless healing" by the Episcopal conference, or by any other body of people, Christian Scientists have little interest, aside from the fact that it indicates a trend of thought in the right direction and a recognition of the fact that Christian Science is making itself felt by following in the footsteps of Christ Jesus, the apostles, and the early church. However, the methods proposed by the Episcopal conference, as well as by other religionists who are engaged in a similar propaganda, differ so radically from the methods of Christian Science that the two diverge from the very outset. Christian Science healing contains no element of hypnotism, nor does it in the remotest way depend upon the action of the human mind. On the contrary, its entire dependence is placed upon the proper understanding of the omnipotence and omnipresence of the divine Mind, which is but another name for God.

If Christian Science did not really heal it is hardly possible that it would have survived to the present time, yet it has much more than merely survived—it has grown to such proportions as to attract the attention of the thinking world, and its success in healing has been so marked that it has made other religious movements wake up to the fact that they are only teaching and practising one half of the Master's command to "preach the kingdom of God, and to heal the sick." It may also be added as a self-evident truth that Jesus considered preaching and healing as absolutely inseparable. That an occasional failure can be charged to Christian Science is a very poor argument, and if the same rule were applied to any of the many systems of *materia medica* the answer would constitute a terrible indictment. As it is, the public hears little regarding the many cures wrought by Christian Science,—it is the alleged failures that are heralded to the world through the sensational press, and in many, many instances cases so reported have not the remotest connection with Christian Science nor Christian Scientists. Those unacquainted with its teachings too often confuse every system that purports to exploit "faith-cure" or "mind-healing," or "drugless healing," with Christian Science itself. In any event, it is well to remember that in the midst of imperfection we are simply striving for perfection, and perfection is not gained in a day.

The charge that Christian Scientists make no use of prayer is so pitifully untrue that one wonders how any

Digitized by Google

right-thinking man ever got his own consent to make such a statement, unless it was prompted by a lack of information, which is a quality not to be commended in one who assumes to criticize. What constitutes prayer? Surely not a mere physical attitude, nor faltering unbelief, nor yet "much speaking." In her book, "Science and Health with Key to the Scriptures," Mrs. Eddy devotes an entire chapter to the subject of prayer, and no fair-minded person can read this chapter and arrive at any conclusion other than that Christian Scientists are preeminently a prayerful people. Indeed, they put great stress on Paul's injunction to "pray without ceasing," and certainly a compliance with this would be impossible if prayer is comprised in mere lip service or physical posture. The opening sentence on the very first page of Science and Health reads as follows: "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love." The quality of a thing is usually measured by the results it produces, and Christian Scientists are quite willing to have their prayers judged upon that basis.

The statement that "their God is pantheistic" is as wide of the mark as it could possibly be, but it is a fitting illustration of the rash conclusions into which overzealous critics are sometimes entrapped. Christian Scientists worship the God of the Bible, and consequently the same Deity that other Christians worship. Are they, then, to be harshly criticized if they think of God as omnipresent Spirit rather than as a humanly circumscribed being with bodily form and parts? A corporeal God could assuredly not be everywhere present, nor could He be infinite Spirit. That God is good is surely a statement with which no Christian will take issue.

[Alfred Farlow in *Springfield* (Mass.) *Republican*.]

A review of an attack on Christian Science contains the following statement: "To trace the belief in malicious animal magnetism to its source is to trace it to Mrs. Eddy." To be accurate, the gentleman should have said that the belief in the various forms of magnetism has existed for ages. It is not in any sense a part or a product of Christian Science. Mrs. Eddy has laid bare the false belief in this power which psychologists call "pernicious mental evil," and has shown the world how to counteract and destroy this deception by simply being awake to the truth.

Strange to say, this critic has taken as an example of what Christian Science teaches on this subject, the story of a deluded woman apparently filled with fear because of erroneous teaching entertained by certain persons as a subterfuge for legitimate Christian Science. No one could possibly do harm by the practice of Christian Science, since his every thought and deed is prompted by faith in the infinite God. To do evil one is obliged to abandon Christian Science and to substitute therefor an evil subterfuge.

The gentleman declares: "If one cites the enormous spread of Christian Science doctrine as an example thereof, it does not mean that all those who enroll themselves in this body subscribe to the pseudo-philosophy of Mrs. Eddy or are going to regulate their behavior and their business on the theory that nothing exists but mind. It means that on the one side of their natures they are willing to yield to the persuasiveness of doctrines that would make the rest of their thinking and doing utterly nonsensical." Here the gentleman forgets that Christian Science appears and appeals to us where it finds us, and demands of us not only the attainment of the purely spiritual life which it reveals, but also a wise disposition of the "powers that be," the more or less material condition in which it finds us. Our critic might have applied his jest to our Master's teaching with equally good grace. He said: "Take no thought for your life, what ye shall eat, or what ye shall drink; . . . But seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you," and yet he must have known the exalted practice which he recommended could not be reached in a day, but must be established by gradual improvement. He declared: "Be ye therefore perfect, even as your Father which is in heaven is perfect," and yet he must have known that perfection could not be reached at a single bound. Christian Science certainly demands no more than he did.

The gentleman declares: "If a movement can give shelter to so pernicious a doctrine as malicious animal magnetism, it pointedly shows the menace to rationality inherent in every departure from right thinking." On this point we agree with him, but we beg to add that the procedure he has described is entirely outside the Christian Science movement, and in opposition to Christian Science teaching, and the Christian Science church has so defined it by dismissing from its membership those who undertook to substitute such movement and procedure for legitimate Christian Science. Christian Science teaches that divine Mind is the only power, and such a premise could never "support the possibility of malpractice," but, on the contrary, inevitably destroys the belief in its power.

[Frederick Dixon in *Belfast* (Ire.) *News Letter*.]

When a gentleman uses the argument that if Mrs. Eddy's theory is correct, every Christian Scientist ought to be able to do without food as well as drugs, and without sleep and clothes, one gathers that his power of reasoning is not particularly strong. The great teachers of idealism in natural science are today insisting that matter is unreal. One of them has expressed this in the notable phrase that matter is something we have constructed for ourselves. Presumably, our critic would argue from this that men ought to be able to construct physical phenomena to their own liking, certainly to do without food and drugs and clothes—indeed, to do without a body.

Let us examine the canon's statement, however, a little more closely. The canon's argument comes to this, that because mathematics is a science, everybody ought to be able to rival the senior wranglers, and as a matter of fact they would, if they knew enough. Now Jesus, if the analogy may be used with all reverence, was the senior wrangler of Christianity. He did do without drugs, certainly without food and sleep when he chose, and he no doubt could have got along quite as easily without clothes, if that would have done anything to decrease sin in the world. It is an extraordinary thing that our critic does not see that the ability to do without drugs and food and such things comes to a man in the exact proportion in which he acquires the Mind which was in Christ Jesus, for it was the Mind of Christ which enabled Jesus to do all that he did do.

Christian Scientists do not go to meetings to mock the members of other Christian sects for not being better than they are, any more than they claim to be better than their neighbors. They do claim emphatically that they are better than they themselves used to be in the past, and in their daily struggle to let that Mind be in them which was also in Christ Jesus, they have at all events reached the point when they can do without drugs, and even food and sleep are much less important to them than they once were. The day may come when they will have sufficiently grown in the stature of Christ to be able to do without food and without sleep, but it is extremely doubtful if the time will come when there will be anything to be gained by Christianity being expressed by men not wearing clothes. There is nothing in the teaching of Jesus to make any one think this probable, and it is the object of Christian Scientists to walk in his footsteps. The reasoning of our critic is not to be particularly admired from any point of view, though it seems to have moved some of his colleagues to laughter.

Leaving such criticism as this aside, it may be well to try to explain in a few words what Christian Science does teach. Christian Science, then, is the effort to restore once more

Digitized by Google

to Christendom the healing which was practised and preached by Jesus and his disciples. This healing was not, of course, confined simply to the sick,—it was aimed essentially at the destruction of sin, and so at everything which is unlike God. Mrs. Eddy has shown the world that it is the mortal mind and not its phenomenon, the body, in which originate all the thoughts of sorrow and sickness and sin which are disseminated throughout the world. She has shown that there is not a single material manifestation of these ills which is not produced by some mental cause, and she has shown that this mental cause is the belief in the power and reality of evil which Jesus denounced as a lie. Now a lie is something which is unreal, which never had any basis in truth; something which, as Jesus said, abides not in the truth, because there is no truth in it. The only semblance of power, consequently, a lie can ever even appear to simulate, is the power it exercises so long as it is believed in. The moment it is disbelieved in its power is gone, because, absolutely speaking, it never existed. Change the metaphorical language of Jesus into the ordinary language of the West today, and what do his words amount to but this, that in reality evil never existed, because there is no reality in it.

The only way to destroy the semblance of power a lie exercises is to teach the person who is deceived by it the truth. "Ye shall know the truth," Jesus said, "and the truth shall make you free." A man learns this absolute truth in the exact degree in which he acquires the Mind which was in Christ Jesus, and learning this truth is able to expose and destroy the lie. This was the gospel of good news which Jesus came to preach to the world, and because this gospel was a message of absolute Truth, it was a scientific message, and because it was a scientific message it was a demonstrable one. Therefore Jesus not only preached his gospel but demonstrated its truth by his miracles; and therefore he said that those who believed him would understand this gospel, and would be able to do his works; that is, to demonstrate the truth of it. This was why he bade his followers in all ages preach the gospel and heal the sick.

[From an editorial in *New York World.*]

Whether or not the impetus has come from Christian Science, the fact is undeniable that along with an increase of materialistic opinion and counteracting it, there has been a remarkable development of religion on the purely spiritual side. Belief in the efficacy of prayer to cure has become more prevalent, and there is a wider reliance on supernatural healing. The Emmanuel movement is seen, in the light of the proceedings of the Cincinnati convention, to have been symptomatic of a general growth in the church of faith that disease may be cured by spiritual means. Faith-healing was the foundation stone of early Christianity. The return of one element of the church to this original tenet after twenty centuries, and in an age of rationalistic opinion, proves its remarkable vitality as an essential of religion.

[Robert G. Henderson in *New Orleans* (La.) *Picayune.*]

Christian Scientists do not depend upon "suggestion" in healing either sickness or sin. They depend wholly upon the word of God, and every promise in the Bible supports their position and the work they are trying to accomplish, namely, the betterment of mankind spiritually, morally, and physically. In doing this work they depend upon an understood Principle and fixed rule. This Principle was understood, taught, and practised by Jesus and his disciples and by the early Christians for two or three centuries after the ascension, and was rediscovered and given to this age by Mrs. Eddy.

That healing by spiritual means alone has ample authority in the Scriptures is evidenced in the following passages from the Bible: "Bless the Lord, . . . who forgiveth all thine iniquities; who healeth all thy diseases." Jesus commanded, "As ye go, preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils." St. James writes, "Is any sick among you? let him call for the elders of the church. . . . And the prayer of faith shall save the sick. . . . The effectual, fervent prayer of a righteous man availeth much." Jesus did not use drugs in his healing or in his ministry, yet he healed "all manner of sickness and all manner of disease."

Mrs. Eddy, in "Science and Health with Key to the Scriptures" (p. 404), says: "Healing the sick and reforming the sinner are one and the same thing in Christian Science. Both cures require the same method and are inseparable in Truth." The spiritualized man is the most scientific healer on the face of the globe. And there are thousands who are bearing testimony to the efficacy of Christian Science in the healing of both disease and sin.

[E. M. Ramsay in *Dundee* (Scot.) *Advertiser.*]

The columns of our newspapers are full of the decline in church-going, but though many reasons are assigned for this, not one of them, I believe, gets down to the root of the matter. All the churches accept the Bible as the foundation of their faith, but they differ widely as to the interpretation of the Bible teaching, and only one of them, as a church, is endeavoring to fulfil the command of the Master to heal the sick.

If an ancient manuscript were discovered which seemed to describe the process by which the Tyrian dye, let us say, was produced, we should certainly say that the student who produced the dye was the one who had rightly interpreted the manuscript. So when a church, through a new understanding of the gospel teaching, is able to produce results which no other modern interpretation has produced, would it not seem probable that this fruit-bearing interpretation was the nearest right?

In what respect do the experiences of the Christian Science church differ from those of the other Protestant churches? While the others complain of declining numbers, of the indifference if not hostility of the working classes, and of the difficulty of raising funds, the Christian Science congregations are growing constantly, their members are drawn from all sections of the community, religion is found to be the most interesting of all subjects, the brotherhood of man is seen to be obtainable through the fatherhood of God, and a great vigor of spiritual, moral, and physical life makes itself felt.

How is the new movement regarded by the other Christian bodies? A steady stream of books and pamphlets, purporting to show up the fallacies of Christian Science, is sent forth year after year by people who have no understanding of the subject they criticize, while the healing of the Holy Spirit is ascribed to suggestion and men are unkindly spoken of for believing in the omnipotence of God! Would it not be wiser to follow Gamaliel's advice: "Refrain from these men, and let them alone: for if this counsel or this work be of men, it will come to nought: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God."

POEMS BY MARY BAKER EDDY.

Under the above caption the poems written by our Leader have been compiled in a handsome volume of 79 pages, now in press, and orders will be filled in sequence. All of Mrs. Eddy's hymns are included in the volume, also her earlier poems, which appeared in various publications from forty to sixty years ago.

The poems are printed in clear type on heavy paper, with initials and ornaments in red, and bound in fine English cloth, with a conventional design of wild roses. Price, single copy, $1.50; six or more copies to one address, $1.25 each. Address all orders and make remittances payable to Allison V. Stewart, Falmouth and St. Paul streets, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

THE SUPREMACY OF GOOD.

THERE was a time when the ordinary newspaper man simply threw up his hands in despair when asked to define Christian Science or to state what its teachings are: but the following editorial, which we copy from the *Waterbury* (Conn.) *Herald*, leads us to hope that this time has passed, and that the lack of knowledge on this subject which so generally prevailed as late as five or ten years ago, and is even now somewhat in evidence, is giving place to at least a rudimentary understanding of the subject. The *Herald* in its issue of Nov. 13 said,—

So many questions regarding Christian Science are constantly occurring in the public mind, that one almost fancies the establishment of a public information bureau would impress the average man or woman as a necessity in the making of recruits. Whenever such questions are made in good faith, every Christian Scientist is willing to do what he can to elucidate this subject.

Only the other day we were conversing with a man who declared that while he had been associated with a certain church all his life, he could not and did not believe in the resurrection of Jesus. He endeavored to advance arguments in the effort to prove why it was utterly impossible for Jesus to rise from the death-chamber after being dead three days and nights. This man spoke in evident sincerity, but we should be pleased to ascertain what sense of Methodism it was that served to eliminate from his belief the one doctrine of the resurrection of Christ. It would appear impossible for modern-day religious men or women to reject such a doctrine. What becomes of Christianity with the resurrection left out of it? Could this man be entitled to the declaration or belief that he was a Christian, in that he denied the resurrection of Jesus? This is the main artery that gives Christianity life, growth, and strength to fight the agnostics.

Christian Scientists believe, if our information is accurate, that God is infinite,—that God is infinite good, infinite Truth, infinite Life, infinite Love, infinite wisdom, and that "there is none beside him." But how do Christian Scientists account for evil, you ask? They maintain that the only Satan there is, is the false concept of being, or the carnal mind. In other words, just as soon as men stop sinning there will be no witness of sin, there will be no sin known; and in order to get rid of sin, the only way to accomplish it is to stop sinning. What is more paralyzing to a person's endeavors than to suppose that there is opposed to him some mysterious power—a supernatural agency with which he is unable to cope? The best way we know of to resist Satan, so called, is to cast the evil out of your own mind, thoughts, and life. The theater of a man's action must be his everyday life. Live that honestly,—honestly to yourself and to those about you,—and temptations will not constantly harass you.

As to the resurrection of Jesus, and his earlier work and the work of his disciples in healing the sick and raising the dead, there can be but one view of their relation to Christianity. These works were the demonstration of the religion which our Master taught and preached, and it is difficult to conceive of Christianity without them. Indeed, we might say with the apostle to the Corinthians: "If Christ be not risen, then is our preaching vain, and your faith is also vain. . . . If in this life only we have hope in Christ, we are of all men most miserable."

The vital need of the church today is the healing work which Jesus said was in accord with the will of the Father,—those "greater witnesses" of which he said: "The works which the Father hath given me to finish, the same works that I do, bear witness of me, that the Father hath sent me." It was to these same "works" that he referred in that wonderful assurance to the faithful: "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."

Without these healing and regenerative works religion possesses nothing that can be pointed to as the proof of its teachings, and it is because this proof was so largely lacking until the discovery of Christian Science by Mrs. Eddy, that many were driven into agnosticism. Nor is this so much to be wondered at when, sick and despairing, all earthly help seemingly denied them, they found themselves as those "having no hope, and without God in the world;" but now, thanks to Mrs. Eddy's discovery and her ministry, we have gone back to the primitive Christianity, the practical Christianity of Christ Jesus, and men are again encouraged to have faith in God and to pray the "prayer of faith" which heals the sick and sinning ones of earth.

Best of all, these hitherto hopeless ones are finding in Christian Science that through an intelligent understanding of God they are freed from the belief that "opposed to them is some mysterious power—a supernatural agency with which they are unable to cope." If we were to substitute the phrase "malicious animal magnetism" for that of "some mysterious power—a supernatural agency," we should then be in line with Christian Science doctrine, namely, that the belief of evil which Mrs. Eddy has for convenience called animal magnetism, is dissolved into its native nothingness by the perfect understanding of God, good. In other words, as Christian Scientists we come into our inheritance, the "glorious liberty of the children of God," through the understanding and demonstration of that Science which "brings to light Truth and its supremacy, universal harmony, the entireness of God, good, and the nothingness of evil" (Science and Health, p. 203).

ARCHIBALD MCLELLAN.

"FORGET NOT ALL HIS BENEFITS."

ALL through the Old Testament we find warnings against forgetfulness of the divine mercy and goodness, in evidence that this is a marked tendency on the part of mortals, who, however, seem to remember very vividly not only all the ills which they have experienced, but also those of which they have heard. How often do we hear people reciting a tale of the ailments from which they were said to have suffered in infancy, said tale having been handed down in the family as if it were some precious heirloom, the narrators quite unconscious that when the storehouse of memory is filled with unhealthful thoughts there can be very little room left for the real things of life, the manifestations of divine Love and goodness which are surely abundant if only we preserve the records as precious treasures, for we are told that God "keepeth covenant and mercy with them that love him and keep his commandments to a thousand generations."

The Israelites were bidden to tell their children of their many deliverances, and to remember the wonderful spiritual lessons which were taught them during their long wilderness journeyings, when they were forced to learn through hard privations "that man doth not live by bread only, but by every word that proceedeth out of the mouth of the Lord doth man live." That this lesson was not forgotten, but was handed down from one generation to another, we discover in reading the wonderful story of the Master's temptation in the wilderness, where he vanquished the arguments and assaults of evil with a declaration of this vital truth, that man's life does not come from matter, but from Spirit, God, and that his bread is the divine Word "which giveth life unto the world."

In the 103d Psalm we have a glorious record of divine blessings which we cannot afford to forget. The psalmist says, "Forget not all his benefits," and then he proceeds to tell us what they are. The forgiveness of sin and the healing of disease come first; then we are told of life redeemed from destruction, so that the grave is no longer its goal; then we read, "Thy youth is renewed like the eagle's." These progressive steps will be understood by every one who comes into Christian Science, and they are sometimes taken very quickly. That Truth rights all the wrongs of

Digitized by Google

mortal existence we are further assured in the declaration, "The Lord executeth righteousness and judgment for all that are oppressed;" and where one is burdened with a mournful sense of past errors, there comes the ringing assurance, "As far as the east is from the west, so far hath he removed our transgressions from us." Nor is this all—it is blessing upon blessing, benefit upon benefit, if only we do not "forget" our blessings!

Our revered Leader tells us that "we shall be ready for progress" when we take Paul's advice and forget "those things which are behind" (Science and Health, p. 353). She also says (p. 261), "We should forget our bodies in remembering good and the human race." We should strive to blot out each day the memory of the ills which have come up to be destroyed by Truth, and of past ills as well, except in so far as they remind us of the triumphs of Truth. If at the same time we see to it that we remember "all" the benefits bestowed upon us during the day by divine Love, then the next day will dawn for us with our senses quickened to see and to hear only that which will help ourselves and others. We shall thus be growing rich toward God and secure in knowing that "his kingdom ruleth over all," and that all good is to be possessed by those who "remember his commandments to do them."

ANNIE M. KNOTT.

SYMBOLS AND SCIENCE.

ONE of the distinctive teachings of Christian Science to which superficial criticism has found frequent occasion to revert, is that of the unreality of the material world, and the suggestion that, since in their opinion there is no matter, Christian Scientists ought to be able and willing to forego eating, walk through stone walls, etc., has been worn quite threadbare as a sop for the easily amused. Most intelligent people, however, will read Mrs. Eddy's statement that the metaphysics of Christian Science "resolves *things* into *thoughts*, and replaces the objects of material sense with spiritual ideas" (Science and Health, p. 123), with an interest which is born of their acquaintance with the fact that all truly rational perception is the outcome of such a procedure.

To illustrate, in conversation with a friend, all that we see or hear, the movement of the lips, etc., together with the tones of the voice, are manifestly nothing but symbols, which are entirely removed from classification with the ideas they awaken through the mind's constructive activity. So, too, when we read a letter, the things seen are nothing more than queer marks from which an orderly product of thought is constructed; while in looking at a picture the symbolic raw material of aggregated colors or shades, or, to be more specific, of different kinds of ether waves, is transmuted by thought action into a mental projection of beauty and significance. This is a matter of universal experience, and its apparent simplicity and naturalness witnesses to the fact that the many factors involved are wholly unthought of by the average person, the transmutation is so immediate and so absolute that the symbols themselves, as well as the process of interpretation may receive no attention whatever.

It is clear that this complex mental activity may be attended by varying and oftimes utterly opposed results, since unless one has the correct key to the symbols, the concepts they awaken may prove altogether misleading and erroneous. For those who are likeminded, who have a common point of view, there may be great uniformity in the interpretations attached to given symbols, otherwise not, and it is just here that Christian Science relates itself to such vast issues. The world of Science, of reality, differs wholly from the world of material symbols, and without a rational basis and rule of interpretation the sense world is inarticulate and unintelligible. Interpretation is always an erection by the observer of an edifice of thought, and in its revelation of God, the source of all being, as an infinite intelligence whose every manifestation maintains the integrity of that intelligence, Christian Science supplies a Principle and rule of determination which is demonstrably reliable; so that the mental structure we make, the apprehension we gain, is valid: we have come to know the truth.

The insistence of self-satisfied, so-called common sense, that the world of materiality is the real world, and that the key of spiritual insight which Christ Jesus offers for the right reading of experience is superfluous, is comparable to the insistence of the child who holds his book upside down and reads off its assumed content for the delectation of his credulous playmates. He is supplying them with a thought-product, but it is without rationality, hence without value. In fact the sense world is an utter confusion, and experience a tragedy, apart from the corrective interpretation of that Christian philosophy which penetrates appearances, discards material testimony, and bases its conclusions upon the truth of being,—God, Spirit, and His manifestations.

The practical, healing significance of this resolution of material things into thoughts appears at once. False thinking, as we all realize, is subject to true thinking, and when through Christian Science disharmony and disease, all the incidents of materiality, are clearly seen to be but the phenomena of falsity, we have in this realization taken a tremendous first step toward the goal of health, that spiritual sovereignty which pertains to man.

JOHN B. WILLIS.

AMONG THE CHURCHES.

THANKSGIVING SERVICE.

A Thanksgiving service was held in The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., Thursday, Nov. 24, in accordance with the order of service prescribed in the Manual for The Mother Church and its branch churches. The meeting was largely attended, and many improved the opportunity which was given at the close of the reading of the Lesson-Sermon, for brief testimonies of thanksgiving and gratitude.

Reports received from many of the branch churches indicate a general observance of the Thanksgiving service, and that a multitude of testimonies appreciative of the blessings of Christian Science were given.

TACOMA, WASH.

With Wright Park for setting, Lombardy poplars and decorative shrubs flanking its main approach, Greek Ionic lines closely following in its exterior design, and a delicate ivory white terra cotta trim, with walls of hollow tile plastered and tinted to match, the new First Church of Christ, Scientist, planned and soon to take shape in block 118, Division avenue, at the intersection of I street, promises to be a complete innovation in church architecture of the Northwest. The plans and specifications for the classic structure are done; the basement walls are ready for the superstructure, and a contractor will be named within the next week or two.

The estimated cost of the structure is $40,000. It will probably be ready for dedication the early part of next year. The seating capacity will be one thousand.—*Tacoma Ledger.*

HOUSTON, TEXAS.

George R. Christie, chairman of the board of trustees of First Church of Christ, Scientist, Houston, broke the sod last Monday morning [Oct. 17], commencing work on the new house of worship to be raised at the corner of Main street and Jefferson avenue. The new church will be one of modern design and is to cost between $40,000 and $50,000. Work has been progressing steadily during the week, and members of the church expect to occupy the completed structure next March.—*Houston Post.*

THE LECTURES.

PALO ALTO, CAL.

The Christian Science lecture by Frank H. Leonard at the Armory last night [Oct. 2] was delivered before a large audience. The lecturer was introduced by Theophilus Allen of Palo Alto, who said,—

The large audience assembled tonight shows how earnestly mankind is seeking for the voice of Truth. As of old, when Elijah lodged in the cave on Mount Horeb, listening and waiting for the voice of God—which was not in wind, nor in earthquake, nor in fire, but in the "still small voice"—so mankind is today waiting and listening for the same "still small voice." Mankind has failed to find this in materialism and its kindred thoughts, but Christian Science, the "still small voice" of Truth, comes today, and brings us a message from God, telling of our relationship to Him, a message which sheds light on darkened thought, gives surcease from sorrow, freedom from the bondage of sin, healing every sickness, assuaging every grief, and delivering the message of true brotherhood to mankind—the message of peace and love. It is the voice of Jesus the Christ, again speaking to the weary ones of earth that loving, tender message: "Come unto me, all ye that labor and are heavy laden, and I will give you rest."

It is to this glad message that we are to listen tonight,—the practical, demonstrable truth of Christian Science,—for which thousands are giving thanks today, all the world over, who have recognized it to be the "still small voice" of Truth speaking to their individual consciousness, and from which we can all learn and understand the divine law and how to apply it. This law, when understood and applied aright, banishes grief and sorrow, heals sickness and sin, and leads us out of the wilderness and error and bondage into the light and happiness of life and love, verifying the words of the Master, who said, "Ye shall know the truth, and the truth shall make you free." "I will not leave you comfortless: I will come to you."—*Palo Alto Times.*

WATERTOWN, WIS.

Sunday afternoon [Oct. 16] Willis F. Gross of Boston delivered a lecture on Christian Science to a fair-sized audience. He was introduced by Col. P. H. Swift, First Reader of the local church, who spoke as follows:—

Pilate in his inquiry of Jesus, "What is truth?" voiced an inquiry that has for the past nineteen centuries found expression upon the part of millions of earnest, hungering souls, and the answer to the inquiry is today just as eagerly sought as in the beginning of the Christian era. Since Pilate's inquiry, millions of men and women have caught glorious glimpses of the truth, and have come into a spiritual consciousness whereby the world has benefited. The apostle John said: "Grace and truth came by Jesus Christ;" and the Master said: "Ye shall know the truth, and the truth shall make you free." As Christian Scientists, we are striving for that truth which, rightly understood and practised, shall make us free; and in following and obeying the commands of the Master we have gained an increased understanding of God which destroys sin and its consequences, disease and death.—*Watertown Times.*

RUTHERFORD, N. J.

William D. McCrackan, M.A., lectured before a large audience at the City Hall on Monday night [Oct. 17]. Mayor Bosman, in introducing the speaker, said in part,—

Any new ideas, hopes, or teachings which serve to make us better men or women, physically, or morally, or spiritually, will be gladly welcomed, and if in the demonstration of Christian Science we receive an additional ray of light, then the world is the better for the establishment and promotion of this movement.

With its fundamental teachings I have very little acquaintance, but any religion which can stand the test of this incredulous age, and increase in membership as has the Christian Science church, must of necessity be built on a foundation strong and great.—*Rutherford American.*

DECATUR, MICH.

Clarence C. Eaton gave a lecture on Christian Science in the Town Hall, Tuesday evening, Oct. 18. In introducing the lecturer, C. H. Ring, Second Reader, said,—

There is perhaps no movement more generally and continuously occupying the attention of thinking people today than Christian Science. Its thousands upon thousands of cures of sin and disease, organic as well as functional, together with its remarkable and unprecedented growth, entitle it to thoughtful consideration by all seekers after truth. Christian Science offers much to humanity here and now, and no one can afford to reject its claims by giving credence to the many erroneous statements made and published regarding it.—*Correspondence.*

HARRISBURG, PA.

An audience of approximately one thousand persons gave close attention throughout to a lecture on Christian Science, delivered by Francis J. Flumo, M.D., in the Majestic Theater, Oct. 18. The speaker of the evening was introduced by Attorney Aaron E. Brandt, First Reader, who said in part,—

Many thousands of people living today have been healed of serious physical ills through Christian Science, not because Christian Science is a system of therapeutics merely, but because healing came through it as one of the natural results of an understanding of the divine law of life as revealed by a spiritual and scientific interpretation of the Scriptures, and as the operation of an all-inclusive curative Principle, which heals and regenerates physically, mentally, and morally, as promised by the Scriptures. Physical science, so called, and physical sense testimony have ever been antagonistic to divine law and spiritual causation, and this confusion of thought has been a stumbling-block to the world's spiritual progress. The lucid and logical explanation of this variance has been found in the teaching of Christian Science, which, of course, must be understood before it can be accepted and intelligently applied.

Correspondence.

MEMPHIS, TENN.

Several hundred people gathered at the Lyceum Theater yesterday afternoon [Oct. 23] to hear the Hon. Clarence A. Buskirk of St. Louis deliver a lecture on Christian Science. He was introduced by Judge A. B. Pittman, who said in part,—

The value to society or mankind of any organization, benevolent or religious, may be quite accurately measured by the sincerity of its members. The organization represented by the speaker of today has traversed a rough and rocky road, because it stands for something new in the world of religious thought, and has thus aroused the antagonism of hoary prejudices born of ignorance and fanaticism. It is a sad fact in history that every step of progress in the ascertainment of truth has been made over the dead body of some arrogant superstition, and those who have marched in the front, proclaiming truth, have often in ages past suffered imprisonment and even death. In this age, however, we

Digitized by Google

are more refined and less violent in our methods of obstructing the pathway of torch-bearers. The weapons nowadays in most cases are ridicule, satire, and derision. I do not profess to know much about the teachings of Christian Science, but I have many acquaintances who do make such profession, and they seem to me to be healthy, happy, cheerful, and confident. These things alone make out in favor of their religion what the lawyers call a *prima facie* case.

Commercial Appeal.

ROCKFORD, ILL.

If there has been any doubt of the growing interest in the subject of Christian Science in Rockford, it was dispelled Friday night [Oct. 28], when an audience which filled to its capacity the beautiful new edifice of First Church of Christ, Scientist, gathered to listen to a lecture on the theme by Prof. Hermann S. Hering, of Concord, N. H. Professor Hering was introduced by J. Stanley Browne, who said,—

The pleasant task of introducing the distinguished gentleman who is to address you tonight has been assigned to me, not because I am a Christian Scientist, but perhaps because I am not anti-Christian Science. On that question, as on all great questions, my mind is like an open book. In this age of automobiles, airships, wireless messages, and submarine vessels, I am not prepared to oppose anything that tends to benefit humanity. This old world does not stand still, but moves on, and what is a cult today is an accepted fact tomorrow. I have read much of Mrs. Eddy's works, and they have pleased and instructed me in so far as I can comprehend the author. This woman writes well; her sentences are magnificently constructed. Indeed I may say that I have never read more beautiful English. Perhaps light may come to me as it has come to others.

Rockford Register-Gazette.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Alhambra, Cal.—Prof. Hermann S. Hering, High School Building, Dec. 15.

Clinton, Ia.—Frank H. Leonard, The Clinton, Dec. 12.

Cripple Creek, Col.—Clarence C. Eaton, Lyric Opera House, Dec. 8.

Hudson, Mich.—Frank H. Leonard, Fowle's Opera House, Dec. 16.

Jackson, Miss.—Frank H. Leonard, Century Theater, 3:30 p.m., Dec. 18.

Kewanee, Ill.—Willis F. Gross, Church Edifice, Main and Tyle streets, Dec. 12.

Laurel, Miss.—Frank H. Leonard, Church Edifice, Dec. 10.

Napoleon, Ohio.—Frank H. Leonard, The Rink, Dec. 15.

New York, N. Y. (Sixth Church).—William D. McCrackan, M.A., Sixth Church, 61st street and Park avenue, 3:30 p.m., Dec. 18; 8 p.m., Dec. 19.

Ogden, Utah.—Francis J. Fluno, M.D., Ogden Theater, Dec. 13.

Pasadena, Cal.—Prof. Hermann S. Hering, Church Edifice, Oakland avenue, Dec. 16.

Portland, Ore. (First and Second Churches).—Clarence C. Eaton, Masonic Temple, corner West Park and Yamhill streets, 3 and 8 p.m., Dec. 18.

San Bernardino, Cal.—Prof. Hermann S. Hering, San Bernardino Opera House, 2:30 p.m., Dec. 18.

Sharon, Pa.—Bicknell Young, P. H. C. Building, Dec. 18.

Tomah, Wis.—Frank H. Leonard, Armory, Dec. 13.

Wagoner, Okla.—Francis J. Fluno, M.D., Court House, 3 p.m., Dec. 4.

Youngstown, Ohio.—Bicknell Young, Masonic Temple, 3:15 p.m., Dec. 18.

TESTIMONIES OF HEALING.

I trust that the following testimony may be of help to any one who has a belief in heredity to overcome. From childhood I was considered to be delicate, with an inherited tendency to weak lungs. I was frequently laid up with colds, which usually affected my chest, and if any kindred malady appeared in the neighborhood, I was generally one of the first victims. Although I became stronger as I grew up, I can scarcely recall a winter (prior to my acceptance of Christian Science) that I did not suffer from a cold during some part of the time. I also suffered much from my throat, and frequently had to resort to electric and other treatment, with only temporary relief. In 1901 I was invalided from South Africa and spent six months on "sick leave," during which time I was periodically laid up with illness which I seemed unable to shake off, in spite of a month spent in the Riviera. Finally, feeling that I could not stand the English winter climate any longer, I applied for a billet in Ceylon, and was taken off the sick-list in order to be sent there in March, 1902.

Although my cough left me and I seemed to get quite well again during the first part of my residence in that country, before eighteen months had elapsed I was again on the sick-list, suffering from anæmia with its attendant miseries. I was then sent for a six-weeks voyage on medical recommendation, but I returned to Ceylon worse than I had left it, and with a cough which no amount of nursing seemed able to remove. I was then examined by a medical board, declared to be suffering from a serious affection of the lungs, and was again invalided to England. My lung healed up on the voyage, but I reached home in the spring of 1904 a miserable invalid, at my wits' end to know what to do or where to turn for help. I was afraid to face another winter in England and equally afraid to return to the tropics, so it was suggested that I should try Switzerland or South Africa.

"Man's extremity" is truly "God's opportunity," and I was persuaded to consult a Christian Scientist, although I felt confident that there was little to be gained by it, having read much against it. In the course of two or three conversations with a practitioner, I said that I was afraid my complaint was beyond the help of Christian Science, being hereditary. The practitioner replied that heredity was merely a belief which could have no power to harm if one understood the truth as revealed by Christian Science. This reply seemed to convey to me for the first time that material conditions could really be overcome, no matter how chronic or constitutional they claimed to be. I asked a few more questions, and then I suddenly saw that Christian Science was true, and that in arguing against it I had been blindly opposing that which alone could give me health and happiness.

At that moment I felt that I was healed. I took one treatment then and there, more because I felt it to be a fitting climax to my talk with the practitioner than anything else, for I already knew that I was healed—the spoken word had healed me by conveying the truth to my inner consciousness. This was the one and only treatment I ever had for chest troubles. I left the practitioner feeling I could hardly refrain from praising God aloud in the street. I had been a confirmed agnostic, and God was now revealed to me as the one reality. That thankfulness and joy have never left me, and, thank God, will never leave me.

Two months later I was suddenly attacked with fever and chills, together with other severe symptoms of malaria. A Christian Scientist was in the house, and I asked for treatment, as I was feeling too ill to help myself. Within twenty minutes I was absolutely well, and in fact felt better than before the attack, as my thought had been uplifted by the healing. I had spent three weeks in hospital once with the same complaint on the east coast of Africa, so I

Digitized by Google

was well able to appreciate the blessing of Science treatment. I have never had any return of this malady. Within six months I was again examined by a medical board, who could find nothing the matter with me; and in view of their obvious surprise, I told the doctors that I had been healed by Christian Science. The president remarked that he had heard of many wonderful things being done by Christian Science, and very kindly added that he was glad I had found something to help me, and he only hoped it would last.

I was then posted to a station in the west of Ireland, and as no other Scientist was anywhere in the neighborhood I had to face my own problems. I must here give the details of an incident which more than anything else served to strengthen me in reliance on God's ever-present help. I was facing a winter in the British Isles, which doctors (including a noted London specialist) had advised me to avoid, and which my past experience had caused me to dread. Walking home one particularly cold evening, I felt the piercing wind, but instead of declaring the truth I wished I had my overcoat, and straightway admitted fear to my consciousness. The next morning I awoke with all the symptoms of a chill, which advanced as the day progressed. I thought to myself, "I am a Scientist, and consequently the belief will go;" but I did not then understand what it meant to work in Science. The following day I began to cough, and that night I awoke at about three o'clock with all the symptoms of a severe lung attack. For a moment I felt that I should have to keep to my bed on the following morning and confess to the world that the doctor's predictions were verified and that the attempt to winter in the British Isles was a failure.

There was no practitioner to turn to for help, and help was required immediately. This very realization turned me to God. My next thought was that while I was well I had believed Science to be true, and yet here was I, at the first onslaught of the enemy, declaring that evil had power to harm me. I opened that splendid little pamphlet "Prayer and Confidence," and studied it prayerfully until I felt my confidence return and felt absolutely certain of God's protecting power and presence in the room with me. Filled with a sense of peace and rest, I fell asleep, and awoke in the morning without a vestige of anything whatever the matter with me! My gratitude may be imagined. I have spent three years in the British Isles and three years in Hong Kong since then, and have never been laid up for a single hour. In fact, never in my life have I enjoyed such splendid health as I do today. I no longer notice drafts or fear exposure, for I am learning that "man is not material; he is spiritual" (Science and Health, p. 468).

So much for the physical healing. As for the spiritual, I can only say reverently and humbly that, however slowly, the "old man with his deeds" has been in process of being "put off" ever since I first saw the truth. Bad habits (including a passion for smoking) and other false appetites have gradually left me, and I rejoice in a freedom which has brought with it a peace and happiness which I certainly did not possess before. I have proved the power of Truth in solving financial and other problems in the daily life, and though there have been times when the way has seemed difficult, and I have felt discouraged at my slow advance, holding fast to Principle has always brought the solution eventually.

Best of all, I have been able to help others, and feel that not the least of the blessings which Christian Science brings is the realization that the Christian Scientist has engaged in a profession in which there is never any "retirement," never any superannuation. "Behold, I make all things new." I strive to show my gratitude by implicit obedience to our beloved Leader's every injunction, and realize that deeds rather than words will attest my sincerity.

MAJOR H. F. T. FISHER, Army Service Corps, Hong Kong, China.

I wish to confirm the foregoing testimony of my husband. The fact of his being so wonderfully healed convinced me at once that in Christian Science lay a great power which could set at naught material law; and although I could not then understand it, I determined that henceforward I would trust to Truth and nothing else. I, too, had "suffered many things of many physicians," had undergone no fewer than four operations, and was told that these would have to continue periodically. Since the moment of my husband's healing (June, 1904) no sort of drug or material remedy has entered our house. The doctors had recommended me always to drink wine, but since taking up Christian Science this has been altogether abandoned. I have had several severe attacks of illness in the last six years, which have all yielded to Christian Science treatment, and I am stronger and better today than I have been for years.

I had never given any thought to religion, as it had not appealed to me; but now, in Christian Science, I have learned for the first time something of what God is, and am trying to put this knowledge into practice in my daily life. For all I owe to Christian Science, I wish to express my deep and lasting gratitude to our Leader, Mrs. Eddy, who has grasped and demonstrated for us this healing truth.

MRS M. C. FISHER, Hong Kong, China.

As an expression of gratitude for Christian Science, and the many blessings that follow in its train, I send the following testimony: Eleven years ago I read for the first time "Science and Health with Key to the Scriptures," at the urgent request of a friend. I had passed through sorrow just previously, and for the first time in my life sickness and death had come near enough to show me the helplessness of human effort in battling with them. I found myself turning the problem of human life and death over and over, asking the same old questions of "why" and "wherefore" that have been asked since Adam appeared. The question that seemed most constantly with me was: Why did God do it? I felt as though a good reason would be very satisfying, but as it seemed an unsatisfying paradox, only growing worse at every step, my thoughts were confused by hopelessness, sorrow, and despair.

I accepted Science and Health without expecting it to offer more than a human theory about life,—even the name did not lead me to expect it to be religious; in fact, the chief incentive to my reading it at that time was the great kindness and sincere sympathy evinced by my friend, who placed a copy at my disposal. During my troubles I had felt that her sympathy had helped me, and when she gave me the book, telling me that I must read it, I felt that I could not refuse. I started timidly at first, and prayerfully, lest it should be misleading, but before I had gone very far I experienced that wonderful spiritual quickening which is so often spoken of in our meetings. I wish I could tell exactly what that experience meant to me, the wonderful awakening I had; how old things vanished and all things became new. It seemed as if the burdens, perplexities, doubts, and fears had all suddenly rolled away; as if the sun had emerged from behind the clouds, and everything was again bright and beautiful.

And what a feeling of strength, hope, and courage came! Those old troublesome questions, especially the question of death, were explained, and I felt a wonderful release to know that death was not of God. I read and reread the latter part of the chapter on Christian Science Practice, where that glorious truth is explained; it was so beautiful, so natural, and so true. There was such perfect joy to me in that freedom, that I used to declare over and over again, of those who had just passed from us (the members of our home circle), "They are not dead;" and so free was I made from the old bondage, that never since then has the thought of that change affected me as it did before.

Digitized by Google

In the first reading of the text-book I was healed of a catarrhal trouble that seemed to be an inheritance; then an ulcerated tooth was healed in one treatment, and now, after eleven years, I may say that I have been in excellent health, and have more strength and endurance than ever before. In addition to the physical benefits received, I have been greatly helped financially. I especially wish to speak of this help, not because my gains are great, but because of what the demonstration has meant to me. My physical healing was always quick, often instantaneous, while I worked on the financial question for at least five years, with only an occasional glimmer of light. Then dawned the understanding of spiritual wealth, that in God was the only supply for my need. This taught me practically that there is more work to be done than merely to say: "Lord! Lord!" which opened my eyes to the fact that my lack had come from a continual breaking of the tenth commandment, and other errors of self-seeking. I feel convinced that nothing could have made me see this but Christian Science; I should have, probably, spent all my days on earth in lack, but for this truth.

I am very thankful to Mrs. Eddy for showing us the way to overcome evil with good. As the way opens more and more, and the chances for increasing my usefulness grow greater, I have often wished that she could know how much I have received; and yet it seems as if another can never really understand, because they cannot know the specific temptations we avoid and the freedom we experience from the evils hidden in our own thoughts,—the subtle temptations and suggestions that cause such great trouble when not destroyed.

It seems that error's most deceptive argument has always been to make us feel that we are right, and that God sends the troubles that seem to come to us. Christian Science declares that God alone is right, and that all fear, ignorance, disease, and sin are apart from Him and His creation. It sets us free to know the truth,—to know that evil is of evil, hence is nothing. That was for me the first step toward freedom, and I thank God for it.

ETTA M. GILBREATH, Baltimore, Md.

I did not come to Christian Science for physical healing, but was led to investigate it by seeing the healing of my neighbor's daughter, who had been ill for three years. Physicians, medicine, and even an operation had failed to give her relief, but when she turned to Christian Science for help, she was healed in three weeks. I then began the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and found it really to be what its name indicates, for in a short time the "door" was unlocked and I began to catch glimpses of spiritual realities,—the real man, and the universe created by God,—and with this revelation, this spiritual discernment, this new light, I found I had no need of glasses to improve my sight, which is of God; so I laid them off, and from that time to the present, over five years, I have relied wholly on God for our help and healing.

But the real test of my faith came about two years ago, when my son had an attack of fever. Nothing could have entered our home which would have caused more fear, as my husband had passed away with the same dread disease. Fear was so great in myself and family, that I felt incompetent to do the work myself. A Christian Science practitioner was therefore called in, and with her faithful and intelligent work the battle was fought and won. In six days the fever broke, and in three weeks he was back in the office. I am so grateful that I was given grace for that day, for, as our dear Leader says, in Science and Health (p. 410), "every trial of our faith in God makes us stronger." The physical healing that is accomplished through the understanding of God, as revealed in Christian Science, is wonderful, but the spiritual exaltation, that peace which "passeth all understanding," is best of all to me.

I wish that I might be able to express fittingly my gratitude to God for giving us a Leader such as Mrs. Eddy is in this present age and day; I know, however, that I am grateful only as I live and demonstrate this truth as far as I apprehend it. What a true Leader she has been to all humanity, willing to endure all things rather than to have the garment of Truth divided before the world!

MRS. METTA E. WOLCOTT, Akron, Ohio.

I had worn glasses for over eleven years, and could not read the largest print without them. A prominent eye specialist whom I consulted told me one eye was so affected that I would entirely lose the sight of it in the course of a few years. After I had been a member of the Christian Science church for two years, a testimony of the healing of defective eyesight, given at the Wednesday evening meeting, drew my attention to the fact that the reason I found it necessary to wear glasses for reading was due to the imperfection of my mental vision; I therefore first attempted self-healing. My understanding, however, proving insufficient to overcome the erroneous beliefs of several years, I went to a practitioner, and after three or four weeks' treatment I was able to discard my glasses entirely. This healing was eight years ago, and my sight has since been normal.

In the summer of 1908, I had another proof of the healing power of Christian Science. I was at the seashore, and one day after bathing I was stricken with facial paralysis. I came to town to see the practitioner, and was completely healed in two treatments. A friend, who is a physician, staying at the same hotel, was astounded at the healing. He told me later that, according to *materia medica*, water had gotten into the ear and reached the facial nerves, and that he knew of no cure except months of patient waiting.

I am deeply grateful to God for many blessings, and above all for the discovery of Christian Science made by Mrs. Eddy, His chosen messenger, who has again shown mankind how they can be relieved from suffering and redeemed from sin.—ARTHUR O. PROBST, New York, N. Y.

I desire to express my gratitude for the benefits received from Christian Science treatment. If nothing else, it awakened me from a miserable belief that everything and everybody was opposed to me, and that the "survival of the fittest" was the rule of life. I see things in a truer light now, and persons whom I formerly believed to be my "natural enemies" I now count as friends.

As I look back over the past two years and recount my blessings,—count the roses that cling to my cross,—I know that great progress has been made, and this knowledge has lifted and does lift me over the many rough places encountered in traversing the road from sense to Soul. Christian Science has certainly made me acquainted with Life, and I know that I can have "life more abundantly," in proportion to my sincerity and right desire.

I. J. COPENHAVE, Omaha, Neb.

For two years I was in bondage to severe illness, recovering for a time only to plunge deeper into pain and its attendant mental despair. Then Christian Science was brought to me by a lady, who daily read and ministered to me until I was able to make a journey from home and do many things which were thought impossible before. I am deeply grateful to God for this new understanding of Life, which I feel has delivered me from being placed in a sanitarium, where I should no doubt have been now were it not for the power of Truth.

ELLA H. C. JOHNSON, Waterloo, Ia.

Digitized by Google

I feel it has been an act of ingratitude on my part that I have not sooner expressed through the *Sentinel* my deep and heartfelt thanks for what Christian Science has done for me. Over five years ago I came to it for physical healing, and since then I have taken no medicines, nor had a doctor, though before that time I was rarely a week without the former, and I was constantly having medical attendance and going to "waters" for my health.

Christian Science has healed me physically, mentally, and morally, and I know that "he which hath begun a good work" in me, will continue it unto the end. I have seen many in my household healed by the power of Truth. It has brought into my home greater peace, love, and harmony. Is it to be wondered at that my heart is full of thanksgiving and love to God? I also wish to express to Mrs. Eddy my true gratitude for having brought to humanity this wonderful Christ-healing, and the understanding of God as Love and all good; and, too, for the example to us of her life, filled as it has been with such courage, trust, and love.

ELLA MACKENZIE, Bracknell, Berkshire, England.

I take great pleasure in verifying the statements made by Ella Mackenzie, as to her healing in Christian Science. I have lived in the same house with her for over thirteen years, and before she became interested in Christian Science she was very ill many times with different ailments, one being varicose veins, for which she had to wear elastic stockings from ankle to thigh, for five years before she heard of this healing truth; these stockings were left off at once, and destroyed. She has also been cured of a very bad bowel disorder and severe headaches. All these ailments have been healed through Christian Science.

I may mention that it was through the wonderful healing and uplifting which I saw in this case that I myself sought the help of Christian Science and became a student of it. I shall be glad to answer any other question if needed, and here would express my gratitude to our beloved Leader, Mrs. Eddy, for what Christian Science has done for me.

MISS LOUISA K. LUCK, Bracknell, Berkshire, England.

I was unusually strong as a child, but for some unaccountable reason my health failed when I was a very young woman, and for twenty-five years, until I came into Christian Science, six years ago, my suffering was intense and continuous. The suffering was mainly mental, because my trouble was one of the nervous system. Besides my ill health, I labored under two other troubles equally as severe, yet I taught school for thirteen years while in this condition. I took the "rest-cure" four times—at home for two weeks, at a hospital for seven weeks, at a private sanitarium for nine weeks, and just before coming into Christian Science for ten days; but I was never even slightly benefited by this. I would say that my illness was of the most desperate type, and that was why I took the rest-cure so often, and as often with failure. It required five years, after I took up Christian Science, to complete my physical demonstration.

I am particularly grateful for the overcoming of worry about household matters, for that worry has always amounted to distress. While Science keeps me faithful to the sense of cleanliness and order, it prevents my being extreme. I have always been used to liberality as regards creature comforts, but I have felt even freer financially since coming into Science, and money has come to me at unexpected times from unexpected sources. I have always exacted a high standard of character and conduct for myself, but I have not always been able to attain this ideal, because uncertain health produced an uncertain disposition; but I am gradually growing more equable, more reliable, and less impulsive.

It has taken me three years to make the demonstration over hatred toward one who I thought had wronged me by taking what seemed to be mine. I have always tried to return good for evil, but it did seem as though it would be utterly impossible to do so in this case. Mrs. Eddy has said that "Love is the liberator" (Science and Health, p. 225), and I have found Christian Science to be the greatest thing in the world. I am deeply grateful to God, and to Mrs. Eddy, who has shown us the way.

AUGUSTA REINSTEIN, San Francisco, Cal.

I would like to add my testimony to those of many others who have proved that the great Physician does indeed heal us of all our diseases. The knowledge of God, good, as understood and applied in Christian Science, has been our only remedy for about nineteen years, and has healed the members of our family of various ills. I could relate many cures that I have witnessed among friends, but shall write only of my own healing.

I had not been allowed to eat any sweet or rich foods on account of the diseased condition of my stomach, and after many doctors and one specialist had said I would always have the trouble, treatment was given me by a Christian Science practitioner, and I was entirely healed. About seven years ago some sores appeared on my right limb, and for a time they discharged freely. There was also very severe aching in the bone, yet in ten days I was healed by the application of the truth as taught in Christian Science, and in that time I did not lose one day from my office work. This was to me a wonderful proof of Truth's healing power, for shortly afterward I read of a similar case in one of our periodicals, where as a last resort a gentleman after a long period of suffering turned to Christian Science and was healed.

I could speak of many other blessings, and through all the physical help I have received I have found that God's power is the quickest, indeed, the only remedy for all ills. I am more grateful than I can express for the spiritual illumination that has come to me through the study of the Bible, together with our text-book, "Science and Health with Key to the Scriptures," and to its author, Mrs. Eddy, for demonstrating this wonderful truth so that all might avail themselves of it and be made better physically, morally, and spiritually.—VERNA BELL, Toronto, Ont.

Some months before my first child was born, I was suffering much from sickness. I had heard of Christian Science, and so I concluded to try it. I went to a practitioner in Amsterdam, and was helped wonderfully. I began to improve at once, so that I could retain all my food. Some months later I was much troubled by my feet, and again called upon the practitioner. After a few weeks all pain had gone and I could walk as easily as before. Contrary to medical opinion, the birth of a child proved to be harmonious; I did not suffer much, and the baby was a fine healthy boy. I am able to declare that all untoward conditions before the birth were met and overcome by Christian Science.

During many years I had suffered from a stomach disorder. I had consulted different physicians, but received only temporary relief, until at last I despaired of ever getting rid of the trouble. I took treatment in Christian Science for this, and was never troubled by it again. I am therefore very grateful for having become acquainted with this teaching.—MRS D. FEITH, Utrecht, Holland.

It is with grateful acknowledgment of the help received in Christian Science, that I write this testimony of God's love to me and my family. Over seven years ago, my mother, who had been healed by Christian Science of a condition which *materia medica* could not relieve, resigned from the church of which she was a member to become a Christian

Digitized by Google

Scientist. Since then each of her four boys and four girls has been benefited by the understanding of Christian Science. My oldest sister was the second to experience the beneficial effects of Christian Science. She was healed of nervousness which for more than three years had kept her from school, although during this time medicine was continually administered to her, but without avail.

A year or so after my mother's healing, I had chills and fever, accompanied by discouragement and hopelessness. I was for one month under medical treatment, with no sign of relief,—in fact, I grew worse. Finally, refusing to take more medicine, I turned to God for life and health. In two treatments I was completely healed of all physical ailments, and more than this, there was awakened within me a desire to be better. God has been good to me in many, many ways since that time, therefore my heart is full of love and gratitude to Him for leading us "into the land of Christian Science, where fetters fall and the rights of man are fully known and acknowledged" (Science and Health, p. 226). I also thank God for our Leader, Mrs. Eddy, because her life is full of good works.

LEONARD LINDSAY GLOVER, New York, N. Y.

The time when I feel most grateful for Christian Science is when I look back a few years and see what a complete change it has made in my life. In December, 1904, after eight years of seemingly hopeless conditions of sickness, when all material remedies had failed, as a last resort I concluded to try Christian Science. The physicians called my disease nervous exhaustion, and I was in a state of collapse most of the time. My greatest enemy was fear. I knew nothing whatever of Christian Science, except that a friend had been healed by it, and I was willing to try anything. Of course, all I wanted was the physical healing, but I soon learned how many wrong things I had been thinking, and as I came slowly to understand something of this beautiful teaching,—that God is Love, that He is ever present, and that He does not send sickness and sorrow upon us,—new courage and strength gradually came to me, and I was healed.

My healing was slow; I think it was a year before I felt that I was free, and when my faithful practitioner used to tell me I would surely see the time I could walk and work,—do whatever I wanted to,—I could not believe it possible. But that time has now come. I am perfectly well and strong, and doing more work than ever in my life. The greatest happiness of all is, however, the spiritual inspiration—the "peace of God, which passeth all understanding"—and which no words can ever express. The knowing that God is ever with us,—the revealing light thrown on the Bible, which I never could understand before,—these are blessings for which I am more than grateful. I am grateful to Mrs. Eddy for showing us the way, and glad to live in an age when this healing truth has been given to the world. My greatest desire is to be a true Christian Scientist.

MRS. J. M. MCCANN, Toledo, Ohio.

Gone, they tell me, is youth,
Gone is the strength of my life;
Nothing remains but decline,
Nothing but age and decay.
Not so; I am God's little child,
Only beginning to live.
Coming the days of my prime,
Coming the strength of my life,
Coming the vision of God,
Coming my bloom and my power.

William Newton Clarke in *Examiner*.

FROM OUR EXCHANGES.

[*Churchman.*]

The one outstanding ground for gratitude for the year 1910 is to be found in the changed attitude of great communions of Christians toward unity. Chicago's Laymen's Congress, Edinburgh's World Conference, and Cincinnati's General Convention have, with a unanimity unknown in our history, acknowledged the need of a united witness of Christ to the world through his church. Wherever the records of congress, conference, and convention are known, there to the great thanksgiving for all God's mercies will be added the conscious sense of power that comes from obedience to God and His will. Yet none of these great gatherings of Christians placed unity where Christ placed it, as the first and final cause in the Christian economy. But the road to this full recognition is being mapped out and its course marked. If any one were to deny the unity of the Christ's personality, he would do so at his peril, for all Christians, without regard to division or sect, would be offended. Why is there not the same sense of wrong, the like consciousness of treason and sin, when the unity of the body of Christ is either denied or ignored—when a divided Christendom bears its witness to a divided Christ to the world which he commissioned his church to serve and to save? To St. Paul a divided discipleship meant only witness to a divided Christ. To him who was greater than St. Paul, the unity of his disciples was the essential condition of his being made known to the world. The indivisibility of the church is his evidential claim upon the faith of the world that his Father had sent him. Yet Christians have put other things before his claim. Divided Christendom continues to pray his prayer for unity, while they have given systems and philosophies and doctrines precedence over his way.

[Rev. Dr. Orchard in *Christian Commonwealth.*]

Truth is never going to take away from us anything of value. It may cause us to find different explanations, but to the soul truth itself is the supreme value. And loyalty to Jesus is not to be measured by creed, but, according to his own teaching, by doing the will of God. At least this is certain: We must get away entirely, for the present, from the whole dogmatic terminology and system. Correct or not, it does not state or preserve what Jesus considered to be essential and primary in religion. What we want first is to study historically how the church came to apply to Jesus the attributes of Deity. Harnack has done this in his "History of Dogma" with brilliance and fairness. He shows that the whole theologizing about Jesus led to corruption, if it was not that in itself. But this does not determine the position. We ought to discover what were the psychological reasons for the deifying of Jesus, see whether they are valid for our own experience, and only then endeavor to find for them suitable theological expression. Theology, by that time, may have grown spiritual enough to decide that there is no possibility of expressing satisfactorily this or any other vital concern in intellectual terms. These things belong to spirit; they can be expressed in disposition only. If Jesus has made us aware of God at work upon our souls,—and this seems to be the real effect of the New Testament experience,—this is the vital thing, and we are not going to do much to induce that experience in others by arguing them into accepting some theological definition of his personality.

[*Standard.*]

Be thankful that Christianity has increasing power in the life of today. By its transforming influence our national ideals and growth have been achieved. If we have any-

Digitized by Google

thing exemplary in our civilization over that of other times and nations, it is because the principles of the New Testament have had freer scope in cooperation with democracy. Today, our life is running in deeper channels of religion than ever before. We are discovering that religious faith and loyalty do not link on so closely to ritual and prescribed forms as to the actual, practical duties of human need. If the people who carry the burdens of life seem not so deferential to organized religion as formerly, it is because they have discovered that the religion of the Nazarene has invested the common duties of every man's task with a sacredness which does not inhere in mere ceremonial. Worship is seen to be no longer confined to religious contemplation and praise, but is genuine to the degree in which we put justice, mercy, and love into the service of our daily tasks. We are not becoming less religious, but putting our religion where it belongs. We are getting farther from the superficial and the unessential, and closer to the place where the Master walked and taught us that all life is sacred, and he who worships best is he who serves best.

[*Universalist Leader.*]

Sand, grit, or whatever you may call it, is the thing that spells success in about every field of life, and particularly in church life. These very secular words stand for a very religious quality. The softness, gentleness, and sweetness of religion have been magnified until there are those who fail to connect with this vital element of life the virility and strength which are a part of its nature. It is good to pray, but the prayer should be for the impulse and the strength to do. It is good to be submissive to the mighty hand of a God-purpose, but that does not relieve us from responsibility as shapers of world-purposes. We are to have divine convictions which we are to translate into human deeds. It is ours to know the will of God and do it, and not be simply the plaything of the will of man. We are to know truth and follow it, to have faith and abide in it, we are to embody purpose and live up to it. We are to start for something and get it, for some place and arrive there: we are to stick, and stand, and hang on, and acquit ourselves like men. This is being religious to some purpose.

[Dr. Day of San Francisco Theological Seminary.]

Is the account of the fall of man as given in Genesis historically true? We may distinguish between the spiritual fact and its literary garb. The narrative is an example of ancient modes of accounting for things which for the Hebrew people were of the essence of faith. The fact of human sinfulness was accepted as a fact of experience. How to account for the origin of it was a problem which occupied thoughtful minds. One of the early explanations is given in this chapter. Perhaps it was meant originally as a serious attempt to solve the problem. It does not follow that we are obliged to accept it in all its bald literalness. If any one wishes to do so, I admit his right. I think it better to interpret the words as symbolical of a great spiritual truth.

[*Congregationalist and Christian World.*]

Undue emphasis in the evangelizing of the community has been placed on the testimony of the lips. Every one who sought to be a disciple of Christ, however immature, has been urged, almost forced, to say something publicly about himself as a Christian. The important thing is the testimony of the life. But when the life in Christ is real, the testimony of the lips will not be withheld when it is called for by those who need it. Such testimony requires no compulsion. It is no boast of superiority, but the joyful, constant, crowning witness of determined and triumphant manhood and womanhood.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

NEW PAMPHLETS.

Now on sale are three new pamphlets: "Seeking and Finding," "Prayer and Healing," and "The Divine Nature." Each pamphlet contains five to eight articles that have previously appeared in the *Journal*, *Sentinel*, or *Monitor*; and they are particularly suitable for handing and sending to inquirers or persons who are becoming interested in Christian Science.

Hereafter, the price of all pamphlets (except "What our Leader Says" and "Christian Science and Legislation") will be reduced to 5 cents a copy; 55 cents a dozen; $2.00 for fifty, and $3.50 for one hundred. Hereafter, also, the republication in the English language of single articles as "tracts" or "reprints" will be discontinued. It is believed that their place is better taken by the daily article on Christian Science in the *Monitor* and by these new pamphlets and others that may be issued.

NEW POST CARDS OF THE MOTHER CHURCH.

Post card photogravure, in sepia tint; an exact reproduction of the large photogravure of The Mother Church Buildings and Publishing House with parkway in foreground.

Single copy	$ .05
Twenty-five copies	1.15
One hundred copies	4.25

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90; six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $10.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.
Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $10.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $10.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 40 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 50 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.50; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 20 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 20 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN E. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00; six months, $1.20.
Ten copies to one address, each, one year, $1.50; six months, $1.15.
Twenty-five copies to one address, each, one year, $1.80; six months, $1.10.
Fifty copies to one address, each, one year, $1.50; six months, 90 cents.
These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.
Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. X indicates the year 1910; XI, 1911. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

TERMS OF SALE

Single copy, postpaid, five cents, in the United States, Canada, Mexico, and Cuba; twenty five copies, one address, $1.00; fifty copies, $1.80; one hundred copies, $3.00.
To all other countries, single copy, six cents; twenty-five copies to one address, $1.25; fifty copies, $2.25; one hundred copies, $4.00.
Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The managers of the Sage Foundation Homes Company have announced that early in the coming year they will be ready to open Forest Hills Gardens, Long Island, in distance nine miles and in time thirteen minutes from the new Pennsylvania depot in New York, which is planned as a model suburb to provide homes for persons on moderate salaries. The proposed suburb will be similar in design to the English type of garden cities, with detached one and two-story houses, parking, and an abundance of trees. Three sides of the square which will surround the railroad station are to be built up with non-housekeeping apartments, to be rented out by single rooms or more. The Sage Foundation has already appropriated one million two hundred and fifty thousand dollars for the development of the suburb, apart from the land purchase, on which there was close to one million dollars spent. Besides this another five hundred thousand dollars will be appropriated for additional street development. About fifteen hundred houses will be built in the completed suburb, and, as far as possible, the company is planning to sell the homes only to persons who expect to live in them. A small initial payment will be required and the rest of the payments will be arranged for on a scale running from twenty-five dollars a month upward.

Resolutions were adopted at the annual convention of the National Grange held at Atlantic City, N. J., urging radical changes in the Payne tariff law and opposing a federal bureau of health. Drastic regulation of all the railroads in the country and giving the interstate commerce commission power to nullify freight and passenger rates proved to be extortionate, and physical valuation of railway trunk lines, was also urged by the farmers. Federal aid for road improvement, the parcels post, conservation of natural resources, a national income tax, direct election of United States senators, agricultural extension, and a non-partizan tariff commission were included in the report of the resolutions committee.

A new proposition from the Interborough Rapid Transit Company and an amended proposal from William G. McAdoo, covering the operation of the Fourth avenue subway in Brooklyn and the extension of the Triborough route in the Bronx, are expected by the public utilities commision of New York. Mr. McAdoo says: "I will operate the Triborough. It can be built, with minor modifications, for not to exceed one hundred million dollars; it can be equipped for fifty million dollars more, which my company will raise, and I'll hitch it up to every railroad terminal in New York city and Jersey, and make it the greatest rapid transit system on earth. I back my opinion by a million-dollar bond.

An appeal has been presented by the department of justice to the United States circuit court to outlaw the so-called sugar trust. Of those who built up the trust the Government brief says: "They managed and directed all the affairs and business of the former competing concerns whose shares they held, destroyed competition, fixed the price of sugar, prevented others from entering trade and commerce therein, and forced the retirement of many already so engaged." Twenty-seven individuals are named as defendants. The list includes directors of the main trust and other companies.

In reply to the offer of several western railroads to employ him at his own salary if he could show them, as he claimed he could, how American railroads could save one million dollars a day, Louis D. Brandeis of Boston has telegraphed that without any charge to them he would be glad to meet and point out to a conference or conferences of eastern and western railroad presidents how such saving could be effected. Mr. Brandeis is now in Washington, representing certain Atlantic coast shipping organizations in the freight rate increase hearing being conducted before the inter-state commerce commission.

Governors and governors-elect of various states of the nation gathered in Frankfort, Ky., last week for the third annual conference of governors. Among the subjects of discussion were the popular election of United States senators, the income tax, amendment to the Constitution, conservation of natural resources by state legislation, uniform divorce laws, and other subjects of nation-wide interest. Resolutions were adopted binding the members to urge the enactment or rejection of such legislation by the various state Legislatures as may be decided on at a conference.

The popular belief is that the national monetary commission is tending toward a central bank, and that this will be recommended in its final report. More depends, it is claimed, upon what sort of a central bank is established, than upon the mere fact that a central bank is considered desirable. Two things are doubtless essential if the country is to be permanently satisfied: Such a bank must be free, not only from political domination, but from the suspicion of political control. It must also be independent of Wall street and of the Standard Oil group of financiers.

Just as soon as the present members of sororities leave college, secret societies will become a thing of the past at Mount Holyoke. The faculty by an almost unanimous vote has decided that such student organizations shall be abolished. The conclusion is reached after a most thorough investigation, in which all parties involved have had an opportunity freely to express their views.

Arizona's constitution will be the briefest written in recent years by any state. According to estimates, it will contain fewer than sixteen thousand words, as against twenty-five thousand for New Mexico's constitution and one hundred and four in that of Oklahoma.

For the fiscal year ended June 30 last the twenty-five percent of national forest revenue which will go to the states for road and school purposes amounted to $506,194.84.

The navy department estimates that $127,016,158 will be required to meet the expenses of the navy in the next fiscal year. This does not include new construction.

Estimates for river and harbor improvements for the fiscal year to end July 1, 1912, amount to $22,227,361.

International.

There are twenty-seven Chinese students at the Massachusetts Institute of Technology. Twenty-five of these men are sent to America by the Chinese government in order to acquire an up-to-date technical and engineering education. On receiving a degree from Tech they will return to their native country and give their services to their home government for a period of five years, after which they are at liberty to leave the government's employ and enter upon any career or profession they may elect. Nearly half of this number were students of the Imperial Polytechnical College at Shanghai, China.

The controversy between the Austrian authorities and the Vacuum Oil Company, a branch of the Standard Oil Company, has reached a new and acute stage. The foreign office maintains its position that the Vacuum Company is registered as a Hungarian company, and therefore must be subject to the same regulations as other companies with a similar registration, and that the question at issue is purely a matter for Austrian internal administration and absolutely outside of diplomacy.

The question of granting an annuity to the Dowager Queen Maria Pia has been engaging the attention of the Portuguese government, and £13,500, which is the sum that has always been given to the Queen from the civil list, will probably be granted. It is understood that the Dowager Queen is anxious to return to Portugal and live in private in the country which has been her home for forty years.

Serious doubt that the projected loan of fifty million dollars to China by an American financial syndicate will be concluded is expressed in Pekin. Numerous difficulties have arisen, among them being the unwillingness of the Chinese to accept a foreign financial adviser. Without such control it is said that the promoters are unwilling to proceed.

The recent sale of school lands has brought the amount now to the credit of the Alberta government for school purposes to about five million dollars, on which it draws a yearly revenue of three per cent. It is expected that this amount will annually increase as more of the school land is placed upon the market.

Parliament was dissolved Nov. 28, and the contest between the House of Lords and the Liberals, which may result in a social revolution in Great Britain, is on. The new Parliament to be elected either in December or January, is ordered to meet on Jan. 31.

Industrial and Commercial.

An "insurgent" movement on the part of Chicago members of the Elgin butter board has brought to public notice alleged manipulation of prices by that body and assures a struggle for control at the annual election to be held on Dec. 19. For more than a quarter of a century the quotations of the Elgin board have served as a basis on which butter was bought and sold in practically every part of the United States. That the naming of the opening price each week has been done under farcical conditions, during recent years at least, is the chief contention of the Chicago members, who have been making a fight for lower figures since the first of the year, when the board arbitrarily posted a price of thirty-six cents.

The Russian government has hitherto found it impossible to keep in touch with Kamschatka during two thirds of the year, owing to the severe winter storms. Now, however, by the aid of wireless telegraphy, this region may be kept in communication with the rest of the world all the year round. A series of stations has been established, and special inducements are offered to operators who will take charge of these isolated points.

A new typewriter has been constructed that is said to be absolutely noiseless in its operation.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

[From *The Christian Science Monitor* of Dec. 5.]

MARY BAKER EDDY.

THE Reverend Mary Baker Eddy, Discoverer and Founder of Christian Science and author of its text-book, "Science and Health with Key to the Scriptures," passed away at 10.45 p.m. Saturday [Dec. 3] at her home on Beacon street, Chestnut Hill, Mass. She had been indisposed about nine days, but had been up and dressed and as late as Thursday transacted some business with one of the officials of the Christian Science church. She took her daily afternoon drive until two days before her going. Saturday night she quietly fell asleep, and those around her could at first hardly realize that she had gone. Her thought was clear until the last and she left no final messages.

No physician was in attendance, but she had the assistance of the students who comprised her household. With her at the time of her departure were Mr. Calvin A. Frye, Mrs. Laura E. Sargent, Mrs. Ella S. Rathvon, the Rev. Irving C. Tomlinson, her corresponding secretary William R. Rathvon, and her secretary Adam H. Dickey.

The funeral service will take place at the residence, on Thursday at 11 a.m. It is well known to her household that she believed in simplicity on such occasions, and in compliance with this knowledge the service will be private and of a simple nature, consisting probably of prayer and readings from the Bible with some brief selections from the Christian Science text-book. It is expected that only her relatives, her household, and the officials of her church are to be in attendance.

There having been no physician in attendance, Dr. George L. West, of Newton Center, medical examiner for the district, was called early Sunday morning. Dr. West, after investigation, pronounced the death due to "natural causes," and issued the customary certificate.

A telegram was sent to her son, George W. Glover of Lead, South Dakota, apprising him of his mother's demise and requesting information as to his attendance and that of his family. The telegram is as follows,—

Dec. 4, 1910.

George W. Glover, Lead, South Dakota.

I regret to inform you that your mother passed away late Saturday night after a few days' illness. Funeral arrangements will be delayed until we are advised whether you or any of your family will be present and when we may expect you.

CALVIN A. FRYE.

A reply was received last night that Mr. Glover and members of his family had started east. The Hon. Henry M. Baker, Mrs. Eddy's cousin, who was in Washington, was also notified, and has arrived in Boston.

At the conclusion of the services at the Christian Science church Sunday morning, Judge Clifford P. Smith, First Reader of the church, read the following notice regarding the passing of Mrs. Eddy:—

"I shall now read part of a letter written by our revered Leader and reprinted on page 135 of 'Miscellaneous Writings.'

"'*My Beloved Students:*—You may be looking to see me in my accustomed place with you, but this you must no longer expect. When I retired from the field of labor, it was a departure, socially, publicly, and finally, from the routine of such material modes as society and our societies demand. Rumors are rumors,—nothing more. I am still with you on the field of battle, taking forward marches, broader and higher views, and with the hope that you will follow.

"'All our thoughts should be given to the absolute demonstration of Christian Science. You can well afford to give me up, since you have in my last revised edition of Science and Health your teacher and guide.'

"Although these lines were written years ago, they are true today and will continue to be true. But it has become my duty to announce that Mrs. Eddy passed from our sight last night at a quarter before eleven o'clock at her home on Chestnut Hill."

NAMING DISEASE.

W. D. MCCRACKAN, M.A.

PUBLIC opinion attaches undue importance to the mere nomenclature of disease. At times it would seem as though the physical diagnosis of disease was considered of even greater moment than the cure of it. To give a name to disease does not necessarily heal it. However, unless the name in some way uncovers the mental cause of the disease, the name itself has and can have no value in the process of bringing about a cure. A name once given which is based on physical diagnosis, the obligation of the physician to the public and his patient is often considered fulfilled, no matter what the outcome of his treatment may be; but if the Christian Science practitioner, on the other hand, does not give the disease a physical name, he is somehow suspected of being remiss in his duty, although he may heal his patient.

Mrs. Eddy calls attention to the fact that "sometimes Jesus called a disease by name" (Science and Health, p. 398). On the same page, however, she adds, "Often he gave no name to the distemper he cured." We read in the Scriptures that "Adam gave names" to all living creatures, but Science shows that these names were false concepts, and Isaiah prophesied that the time would come when the wild beasts at least would discard their false natures and lie down in peace with their less rapacious fellow-creatures. Adam's unfortunate experience in misnaming living creatures according to a physical diagnosis, should serve as a warning. The mind which is uninstructed in Christian Science desires, not unnaturally perhaps, to be given information concerning disease which it can understand and tabulate. It lays great stress upon the enumeration of physical symptoms. It generally professes to be satisfied, if only the statistics of diseases as physical phenomena are carefully kept. But the

Copyright, 1910, by The Christian Science Publishing Society

Digitized by Google

public is beginning to learn the unreliability and consequent valuelessness of mere physical diagnosis: that it shirks the responsibility of uncovering the real cause of disease, and leads to slackness and carelessness in the uprooting and destruction of those evils which, unless they are overcome, result in sickness and death.

In complete contrast with the physical method of diagnosis, Christian Science lays bare the mental causes of disease and heals by destroying error in human consciousness. Christian Science uses a different standard and establishes a different method of diagnosis from that to which the general public is accustomed. Merely to note the physical symptoms of disease, however accurately, does not put us in possession of the origin or nature of disease. The true healing is always metaphysical, never physical in its method. To diagnose disease physically may meet the legal requirements of mankind, but it does not fulfil the law of God. Christian Science wipes out the hidden cause of disease from the patient's thought, whether the practitioner is able to give the trouble a specific name or not. Disease may be and frequently is healed without the practitioner being aware of the particular nature of the disease. The recognition and realization of God as absolute Life, Truth, and Love is potent to bring from under cover all manner of disease-carrying idiosyncrasies, secret sins, and hidden beliefs, inherited or acquired. A practitioner of Christian Science knows that the operation of divine law can reduce these underlying causes of disease to their native nothingness without his giving names to them. The light does not necessarily specify every shadow it dispels. God does not take cognizance of the evil He destroys.

It is true that growth in Christian Science tends by degrees to lay bare to the practitioner all the mental aberrations which produce disease, so that he may bring them all to judgment before the throne of divine justice. He learns to detect the various modes of evil. But no mere juggling with names will heal disease in Christian Science. The divine Mind cures disease and the divine Mind uncovers all asserted modes of evil as pretentious nothingness. He who is willing to follow the leading of the divine Mind, to obey God's commands, can become an avenue for the destruction of sin, sickness, and death, but he must never know evil as reality and must never base his expectation of Truth's efficiency upon any material analysis and explanation of disease.

THINKERS AND SEERS.

FRANK H. SPRAGUE.

CHRISTIAN SCIENTISTS are sometimes deemed narrow-minded because they are not more hospitable toward differing forms of religious and philosophical belief. So generally has a readiness to study in detail each new human doctrine or theory been accepted as the test of broad-mindedness, that one who holds aloof from such investigation is liable to be thought illiberal, or even fanatical. In order to understand the attitude of Christian Scientists in this respect it is necessary first to consider the requisites of right thinking.

Broadly speaking, truth-seekers are of two types, the thinker and the seer. The thinker may be a student of the profoundest order, a veritable encyclopedia of information and learning; he may be versed in the lore of civilizations ancient and modern; reflect the culture of the important epochs in intellectual, religious, ethical, and esthetic development; keep pace with the advancing thought of the age, and still lack the open vision through which the essential quality or spirit of Truth alone becomes appreciable to human consciousness. "How knoweth this man letters, having never learned?" queried the erudite Pharisees concerning the Galilean Prophet. Here we find contrasted the two types, the mere scholar, or thinker, and the seer.

Every age has had its seers, stars of greater or lesser magnitude in the mental and moral firmament. Their inspired utterances have been the source from which the race has drawn its enlightenment and incentive to progress; the fountain-head from which have issued the waters that have nourished the ideals and institutions of an ever-broadening civilization. Mrs. Eddy has referred to this fact when she says: "Abraham, Jacob, Moses, and the prophets caught glorious glimpses of the Messiah, or Christ, which baptized these seers in the divine nature, the essence of Love" (Science and Health, p. 333). The entire world at large has responded, even though unconsciously, to their influence, and yet the scope of prophetic vision has in most cases been limited to imperfect and fragmentary glimpses of fundamental truth. Like a mysterious continent, the shores of which explorers have touched only here and there at random, leaving its territory unsurveyed and unmapped, the Science of being has remained undiscovered, unknown even to the thought which has recognized spiritual reality and experienced in some degree its essential quality. The ancients were familiar with certain features of the earth's surface; but their concepts lacked the continuity, consistency, and completeness which are possible only with the modern understanding of geography as a basis. So has it been with partial views of existence.

That much good is to be found even in the relative concepts of all great religions, is indeed true; but what the world has needed is that demonstrable understanding of the absolute good which Christ Jesus exemplified, the truth which he declared would make men free morally and physically as well as intellectually. However inspiring and beneficial the messages of the immortal poets, philosophers, ethical and religious teachers, they have fallen short even of pointing to the fact that being has an exact Science based on Principle, and that the problems of human existence can be intelligently and successfully worked out only as this Science is understood and the perfect and unvarying law of good made the basis of thought and conduct. A comparative study of the views of the profoundest minds cannot, therefore, be relied on to indicate the truth of being. The undivided garment of truth is not woven from human theories and impressions, even though they be transfigured with the light of religious inspiration.

The correct statement of a proposition is the first step toward its solution. Without an accurate and intelligent understanding of God and man, it is impossible to prove in concrete relations the facts about man. Many a seer who has had the most seraphic visions of man has been unable to apply the lesson of those experiences, because the key or basis of interpretation which an understanding of the Science of being affords has been lacking. Mathematics is universally acknowledged to be a science based on a fixed principle, because its processes lead to uniformly correct results in the working out of numerical values.

And yet, despite the fact that the Founder of Christianity taught and proved that man is governed in a similar way by the Principle of good, and that the harmony of man's existence is, therefore, equally demonstrable, the world for centuries has continued to regard human affairs as subject to chance and change, in keeping with the decrees of a mysterious providence working through material channels which lead to discordant results. "My Father worketh hitherto, and I work;" "He that believeth on me, the works that I do shall he do also," declared the great Teacher. Throughout his earthly ministry he based his works on the understanding that man is subject to the law of good, available at all times and under all circumstances.

It is evident, then, that even seership, the capacity to perceive certain aspects of eternal truth, be it ever so clearly, does not of itself evidence an understanding of the Principle and Science of being; in fact, many who have obtained clear glimpses of the real and spiritual have de-

Digitized by Google

veloped theories utterly incompatible with this Science. Hence the futility of expecting to reach an absolute standpoint or basis of interpretation by consulting works which set forth conflicting, relative views of existence. The inspiration of truth as revealed in Christian Science encourages genuine seership or spiritual discernment; but it is better, if need be, to plod toward a right destination than to soar uncertainly. If the temporary fascination of studying the occult operations of human mentality or exploiting novel methods of self-culture is allowed to usurp the place of scientific understanding and demonstration, the result must be retrogression, not progression, even though immediate indications seem to testify otherwise.

Without the demonstrable view-point of Christian Science as a starting-point, the quest of knowledge is at best involved in uncertainty, as attested by the ever-increasing array of conflicting human theories, doctrines, systems, schools, and sects.

TESTIMONY.

NELLIE B. MACE.

SUFFICIENT advice concerning the Wednesday evening service in Christian Science churches has been given to the Field through our publications, to have brought about ere now a well-nigh faultless testimony meeting, had this advice been heeded. If the purpose of the Wednesday evening service and its implied preparation were fully appreciated, there would never be an oppressive silence, but the hour would be "vocal with praise." In the church Manual (Art. VIII., Sect. 24) our Leader has said: "Testimony in regard to the healing of the sick is highly important. More than a mere rehearsal of blessings, it scales the pinnacle of praise and illustrates the demonstration of Christ, 'who healeth all thy diseases.'" The apostle John says, "That which we have seen and heard declare we unto you, that ye also may have fellowship with us: and truly our fellowship is with the Father, and with his Son Jesus Christ." And David exclaimed, "I will declare thy name unto my brethren: in the midst of the congregation will I praise thee."

Nowhere in the Scripture or in our Leader's works are we bidden to speak of the manifold blessings which come through the understanding of truth, except for the purpose of praising God in grateful remembrance of His benefits and attracting our fellow-mortals to the contemplation of spiritual good. The wisdom which planned these meetings contained no intimation that they were designed especially for expressions from the favored few who have been trained in rhetorical elegance, or that those only should speak who are advanced in the understanding of Christian Science. Nor is there any necessity for an attempt to expound the teachings of Christian Science here. The work of elucidating the Principle and practice of Christian Science is incumbent on the text-book and properly authorized teachers before private classes. Only the pure thought of gratitude for Life, Truth, and Love, and their innumerable and constant manifestations to "the children of men," together with the loving desire to persuade others to investigate Christian Science, should impel us to utterance. The least thought of selfish desire for prominence or self-aggrandizement mars the testimony and prevents the pure praise which can be adorned only with humility, love, and fearless confidence that God, the giver of all good, has imparted to the consciousness which acknowledges Him, the ability to reflect Him in words so fitly spoken that, as Mrs. Eddy says (Miscellaneous Writings, p. 183), "if he open his mouth it shall be filled—not by reason of the schools, or learning, but by the natural ability, that reflection already has bestowed on him, to give utterance to Truth."

It sometimes happens that a testimony perfectly expressed is no more convincing to the outsider than some broken, ungrammatical voicing of gratitude. This results from the fact that qualities of mind which reflect God are always effective. Gratitude, humbleness of mind, and love are acceptable, and carry conviction to sincere seekers of Truth. The effectiveness of these qualities, which can declare "I know that my redeemer liveth," cannot be hindered by a faulty use of words. Ignorance of the proper use of language is not commendable, however. It is one of the mortal limitations which should be overcome, and in our progressive modern times, with its many facilities for home study, it is possible and praiseworthy for all to improve themselves in this direction. But above the belief of limitation or the belief of educated ability is the important point that the purpose of testimony is to praise God,—to call attention to Him "who forgiveth all thine iniquities; who healeth all thy diseases." Each one should therefore strive to free his thoughts from self, in its various forms of fear, vanity, love of applause and prominence, or timidity and self-distrust, until no obstruction remains to hinder the pure voice of praise.

Jesus prayed, "Glorify thy Son, that thy Son also may glorify thee." When all who attend these meetings habitually endeavor to exalt Principle and its idea alone in their thoughts, our meetings will be permeated with an atmosphere of gratitude which finds expression through those whose offering takes form in words, and maintained as well by those who at times find that silent recognition of the divine presence is the highest praise they can offer. All can thus unite in fulfilling the Scriptural wisdom concerning "a time to keep silence, and a time to speak."

In the small churches error sometimes assumes the form of an oppressive sense of duty. A certain few carry the burden of the work, and these same few are expected to speak every Wednesday evening; if they fail to do so, they are perhaps reproved by their brethren. It has been said that "slavery to duty is often a form of fetish worship, an attenuated expression of fear." A proper sense of duty and obedience to duty is requisite, but it should not be exaggerated out of proportion by the belief that the success of the Wednesday evening service depends upon the activity of a certain few. The success of these meetings depends not so much upon the number of audible words spoken, as upon the spirit of thanksgiving which pervades the consciousness of the audience. When each one becomes awake to his individual part in maintaining this mental atmosphere of light and love, the Master's declaration, "It is not ye that speak, but the Spirit of your Father which speaketh in you," will be more clearly understood. This impersonal sense of the work will remove anxiety concerning the service, and bring instead a quiet confidence that this spiritually active condition will open the proper channel for grateful testimony.

On the other hand, members of the larger churches have been heard to say that they do not consider their modest effort necessary where there are many advanced Scientists to give such excellent testimonies. This error of self-distrust receives a rebuke where Mrs. Eddy quotes the stanza,—

> What if the little rain should say,
> "So small a drop as I
> Can ne'er refresh a drooping earth,
> I'll tarry in the sky;"

and continuing says, "You have simply to preserve a scientific, positive sense of unity with your divine source, and daily demonstrate this. Then you will find that one is as important a factor as duodecillions in being and doing right, and thus demonstrating deific Principle. A dewdrop reflects the sun. Each of Christ's little ones reflects the infinite One" (Pulpit and Press, p. 4). Scriptural allusions to testimony suggest a preparatory prayer for understanding, an effort for purification, preceding audible praise: "That in every thing ye are enriched by him,

Digitized by Google

in all utterance, and in all knowledge;" "Make me to understand the way of thy precepts: so shall I talk of thy wondrous works:" "I will wash mine hands in innocency: . . . that I may publish with the voice of thanksgiving, and tell of all thy wondrous works."

In the by-law quoted above, the first admonition is, in the words of St. Paul, "Glorify God in your body, and in your spirit, which are God's." Our first step is the preparatory work through earnest prayer of the self that, with its innumerable claims of sinful sense, would obstruct the pure reflection of Truth and prevent a grateful acknowledgment of its blessings "before men." As our daily lives increasingly attest our recognition and acceptance of the supremacy of good, we shall come to our Wednesday evening meetings filled with the assurance that the presence of Spirit is there to bless all, and that, whether through one individual or through another, sufficient testimony will be given to answer the inquiry of the "stranger that is within thy gates," who has not yet learned to "praise the Lord for his goodness, and for his wonderful works to the children of men!"

CHURCHES AND SERMONS.

EVA S. LOMBARD.

RECENTLY my attention was called to a printed sermon which had been placed conspicuously for free distribution, and the words "Christian Science" led me to take a copy home for review. Having been a member of the church from which it came, until I was nearly forty years of age, my heart goes out to the dear people who are so conscientiously struggling to know God. In the sermon under contemplation, the objection was raised that any one outside the church should "claim to save souls." According to historical records it would be difficult to locate "the church," and we all appreciate the efforts of Luther, Calvin, Wesley, and many others to establish a consistent church.

Mrs. Eddy in Science and Health (p. 583) says that the church is "that institution, which affords proof of its utility and is found elevating the race, rousing the dormant understanding from material beliefs to the apprehension of spiritual ideas and the demonstration of divine Science, thereby casting out devils, or error, and healing the sick." It was Peter's recognition of the healing Christ that led Jesus to say, "Upon this rock I will build my church;" and our recognition of the healing Christ is the "rock" upon which we must build today, if we would be saved. It is in Mind, not in any externals, however beautiful, that we must find our church, no matter to what denomination we may belong.

It is good that some of the churches are awakening to the perpetuity of Jesus' command, "Heal the sick." The time will come, and that at no distant day, when all Christians will acknowledge the logic and the spiritual healing influence of Mrs. Eddy's writings. They will study them and practise them, for those who are honest will see that the integrity of any church must tear away the veil that would obscure spiritual power. Mrs. Eddy says that "honesty is spiritual power" (Science and Health, p. 453), and this will reveal to them the fact that God has many channels through which to pour the healing truth. To call Christian Science a "sugar-coated compound" shows a lack of intimacy with its workings, for it certainly takes away a sense of flattered vanity and self-righteousness and uncovers and destroys "ravening wolves," a process which is just the reverse of sugar-coating. Our text-book tells us (p. 559) that we find the healing "sweet as honey," but that we must also digest the "bitter." (See Revelation x. 9, 10.)

Mrs. Eddy has shown us how to find in the Bible the instructions for healing the sick and casting out evil, and such work cannot possibly be done through a "false interpretation," and at the "expense of truth." Such statements recall the old accusation that Jesus' healing work was through Beelzebub, and his answer was that such a kingdom must of necessity be "divided against itself." Christian Science healing is accomplished in harmony with the truth. Christian Scientists are not alone in their contention that "there is no matter." Physical scientists have been working in this direction for some time, and are rapidly nearing the conclusion that this statement is the only explanation of the "atom" which can be relied upon; so that one must be guarded in calling this an "absurd claim" if he would be considered awake to the signs of the times.

The statement in this sermon that physical diagnosis is a "science, the wisdom of which is of God," would almost tempt one to believe that a clergyman should make a better diagnosis than a physician, although it is stated that the church does not attempt to diagnose physical ills, but leaves them to the physician, in which case we "must be sure the diagnosis is right;" but that, after entire lives spent in earnest study, "physicians fail to master this difficult problem of medicine" and, in spite of all they can do, they "find themselves baffled." Most of the testimonies of Christian Science healing have not been of "self-diagnosed" diseases, but thousands of patients have been healed of diseases previously diagnosed by physicians, through the practitioner's understanding of how to diagnose from the standpoint of Mind and not of matter. Does it not seem strange that the church should "acknowledge limitations"? Mr. Barbank seems to acknowledge no limitations in the floral world, and Mr. Edison none in the electrical world, and why should our clergy acknowledge limitations in God?

A special point for grievance, according to the sermon quoted, seems to be that Christian Scientists are prosperous, notwithstanding poverty has not been proven synonymous with virtue. Jesus said, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you," and Christian Scientists are rejoiced to have proven this to be true. Industry, honesty, wisdom, etc., are of God, and they do bring blessings from God's infinite storehouse. Jesus said, "The laborer is worthy of his hire," and if the work of a Christian Scientist is good it should bring him adequate reward. When Jesus selected his disciples, the one whose duty it was to be treasurer for the twelve found the money thought too strong for him, even with our wonderful Master as a daily companion and guide. If that one out of twelve could not resist temptation, did this prove Jesus' whole statement to be untrue? So, in the rank and file of Christian Scientists, if we should some time be shocked to find we have harbored a Judas, this would not prove the Science to be valueless.

We may not have reached the point where we can multiply loaves and fishes scientifically, but we should not be robbed of the privilege of working earnestly and honestly to learn more of the Principle by which Jesus accomplished this and proved that God is the source of infinite supply. If a better understanding of God has been made possible by the self-sacrificing efforts of one noble woman, why should any eyes or ears be closed to the marvelous possibilities of Christian Science, just because it has not been presented in the way of their appointing? Clergymen, above all men, should be most careful not to offend God's little ones—the infant thoughts that are humbly asking for proofs of God's omnipotence.

The method of the abundant life must be like the method of springtime and summer—the method of growth. The sunshine and shower fulfil the tree. They do not destroy it. So Christ fulfilled life. He implants it, causes it to grow. He makes the fragmentary complete. He makes life abundant, abounding. Let us get more of him, that we may have this abundant life.

SELECTED ARTICLES.

[Frederick Dixon in *Outlook*, London.]

Our critic remarks in a sort of parenthesis that a magazine has been brought to her notice which discusses healing without the introduction of the "irritating name of Mrs. Eddy." It no doubt does discuss healing, but it certainly cannot discuss Christian Science healing and leave Mrs. Eddy out. You might as reasonably talk of the irritation you suffered on hearing the name of Darwin connected with evolution, or that of Stephenson with the steam-engine. I can quite understand that Mrs. Eddy's name may be irritating to some people, because I know that there were those who regarded Paul as a "pestilent fellow." Our critic says that there is nothing to prove that Jesus himself did not "sanctify and strengthen one of the natural means of cure." Has our critic the faintest notion of what the medical science of the first century was like? Does she know that it consisted, according to Pliny, to a large extent of prescriptions which, even in that extremely plain-speaking Roman world, he described as too filthy to mention? Does she know that it consisted partially of healing by exorcism, and of the worship of Asklepios? Does she realize that the cure for a viper sting, to give a single instance, was tablets made from a viper, boiled in a shallow pan, in water seasoned with dill? Or does she mean that, although Jesus declared that it was impossible to heal by a belief in good and evil, that he sanctified this force of mental suggestion, and in some inexplicable way made evil good?

Finally, our critic is good enough to say that Christian Scientists deny all evil, and therefore the necessity of the command to take up the cross. Now it is perfectly true that Christian Scientists deny that evil is real—that is to say, that it is God-made—but they do not deny that the belief in evil has to be eradicated from the human consciousness by destroying in it the belief of evil as power. It is very much easier, with all due respect to our critic, to say that those who are opposed to you are not taking up their cross, than it is to take up your own, and it is a statement very much more honored in the breach than the observance. The only way in which the Christian Scientist can ever hope to heal the sick is by the effort so to destroy all belief in evil in himself as to begin to have in some measure the Mind that was in Christ Jesus. Our critic may talk lightly of Christian Scientists not taking up the cross, but Christian Scientists are going daily about the world, striving to heal the sick, with the knowledge that whenever they fail they may be dragged into the coroner's court and hounded there. When our critic herself faces a life like this she will have discovered one of the innumerable ways in which Christian Scientists are taking up their cross. Until she does it she would be more generous, and nearer the Christianity she denies to them, to remain silent on the subject, and to remember the saying of Christ Jesus, that Christianity consists not merely in preaching the gospel but in healing the sick; also, that Jesus never used material means.

[Judge L. H. Jones in *Paducah* (Ky.) *Sun*.]

There are those who say that Christian Science does not heal, or that it heals only functional and nervous disorders, but there are thousands of competent witnesses, as competent as any that testified to Jesus' healing works, who are telling the people from their own personal experience of the healing; that it does heal, and has healed every form of disease known to the medical profession.

Suppose these people are telling the truth. In the light of the Master's denunciation of those who reject his healing gospel, what of the ministers and others who are everywhere ridiculing and deriding those who stand for the healing power of Jesus' word today as of old? Who denied Jesus' healing in Palestine, who said he healed by the power of Beelzebub, who set the mob on him, and finally crucified him? The scribes and Pharisees, the ministers and orthodox church people of that day. The crime is so horrible that we fain would think it could only have been commited by the worst and most degraded element of society, but it is not so. The scribes and Pharisees were the highly educated, cultured, and most respectable people, who stood for law and order, who upheld society, who constituted society, who stood for morality and supported the church. In all these respects they were not a whit inferior to the same class of people today. They were devout religionists, and believed that in crucifying Jesus and rejecting and deriding his healing truth they were serving the best interests of the people and the church and were doing what their God wanted them to do. Is history repeating itself today?

Christian Science teaches no such silly doctrine as that sickness and pain can be destroyed by simply denying it or thinking it is unreal. It teaches the unreality of these things in the same sense exactly that scientists and philosophers in all ages have understood the "real" and the "unreal." It teaches that sickness, pain, etc., belong to and are confined to the sense world, the world of carnal or fleshly and material things, which is phenomenal and unreal as contrasted with the spiritual and real universe, which contains all that God created; that this, being the universe of God's creating, is the kingdom of God spoken of in the Bible, and that into it no sickness, sin, nor death can enter —neither anything that "maketh a lie."

There is perhaps no one point upon which distinguished scientists and metaphysicians of all ages are more unanimously agreed than this, viz., that the material world, all the material objects we seem to see around us and which seem to be the only real things we have, are not real things at all, but are nothing more than concepts of the human understanding. They are what our carnal minds give us; they are our opinions of real things. Once it was our opinion that the earth was flat, but that did not make it flat, although it certainly looks flat to us; once it was our opinion that the sun rose in the east and set in the west and that the world stood still in the mean time, but that did not make it true. It is the office of scientific and intelligent thinking to correct false opinions and false appearances, and the extent to which it succeeds marks the progress of the human race. In no other sense does Christian Science teach the unreality of anything.

[E. M. Ramsay in *Scotsman*, Edinburgh, Scot.]

In answer to "M," as is well known, very divergent views concerning baptism and the holy communion are held in the different Christian churches, and even by members of the same church. The Christian Science view of these important matters probably differs from that entertained by "M." Some of us who are now Christian Scientists were formerly zealous, well-instructed members and regular communicants of the Scottish Episcopal church and of the Church of England. We find that our new understanding of the teachings of our Lord has shown us how to live better lives than we knew how to live before, has given us a much firmer grasp on heavenly things, and enabled us in some measure to obey the Master's commandment, "Heal the sick."

[From *Medical Record*.]

Dr. William Brady of Elmira, N. Y., declares, practically, that there is no such thing as "catching cold." He classes "catching cold" as one of the "phobias," and has gone so far as to write an article with the title "The Catching Cold Phobia." He asserts that "the catching cold bogey proves a most deplorable obstacle to present methods of palliation and eradication of disease, and the responsibility for the well-nigh universal worship of this false image rests largely on our [the doctors'] own shoulders, since the stupid habit

Digitized by Google

of speaking of 'taking cold' prevails quite as widely among physicians as the laity."

The writer declares, moreover, that Mrs. Eddy may very well have had "catching cold" in mind when she wrote: "Disease arises, . . . through association,—calling up the fear that creates the image of disease and its consequent manifestation in the body" (Science and Health, p. 154). Here are some of Dr. Brady's views on the subject:—

"One can scarcely form an adequate conception of the abuse of this nonentity unless one makes an endeavor to avoid reference to cold, in the colloquial sense, in conversation with patients. In general practice it is really a problem to elicit a history from a patient of even high intelligence without recourse to this vicious phrase: fully nine-tenths of our patients believe, if they have not already been told, that their ailments are caused or aggravated by 'taking cold.' The very exceptional case in which the history does not gratuitously open with a 'cold' somewhere or other, will promptly rise to the bait of a leading question, put by the physician, bearing on the probable cause of the illness. Therefore the adjective universal is advisedly applied to this abuse in the preceding paragraph.

"Conscious of this unfortunate state of affairs, we should consider it our duty to show our patients at every opportunity the utter absurdity of their delusion. This of course will prove a gigantic task so long as medical men persist in the use of the catching-cold sophistry as a cloak for diagnostic ignorance,—for such it is, in all truth, at all times. Many practitioners greedily seize on this accommodating phrase as a useful scheme for hedging on the diagnosis pending the period required for the signs to disclose the true nature of the illness.

"These magicians are always capable of turning a 'slight cold' into measles, influenza, typhoid fever, tuberculosis, or whatever the exigency may demand. A very few of the craft, fortunately, become so expert at this trick of the trade as to conceal the mark of unclean instruments, or unwashed hands, in certain cases of septicemia, under the familiar label 'she has taken cold,'—a crime to which we, as a profession, are accessory when we do not try to discourage the widespread catching of cold fallacy that permits it.

"A bulletin from the bedside of a certain politician recently stated that 'the senator had contracted a very heavy cold, which it is feared may settle on the lungs'! Finally, there is that joy of the blunderbuss therapist, the diffuse or general cold which 'settles all over' and is consequently to be attacked by figuratively closing the eyes and shooting at random a scattering charge of some such junk as 'cold-improved' or 'cold-preferred' tablets into the victim's body. It is surprising how many survive such an attack, only to pass the remainder of their lives at the popular pastime of dodging drafts."

[Edward W. Dickey in *Pomona* (Cal.) *Progress.*]

The foundation of Christian Science is the one infinite, eternal God, divine Mind, the sole cause, creator, and power in the universe. Christian Science declares that this one infinite Being is good, and includes nothing unlike Himself. It therefore declares and proves evil in all of its phases, subtle, hidden, or otherwise, to be null and void—as something without basis, foundation, or cause, and to be dealt with as Jesus directed when he defined devil, evil, as "a lie." Mortals have been deceived by this serpent evil, *alias* animal magnetism, and not until the advent of Christian Science were scientific steps toward dominion over all error pointed out.

The term animal magnetism is not the result of the coming of Christian Science, but has come to the surface since its discovery that even hidden iniquity may be destroyed. Mrs. Eddy never taught that animal magnetism has power. She long ago discovered that others did so believe and even sought to exercise it ignorantly and maliciously. She has devoted a chapter in her book, Science and Health, to an *exposé* of this whole question. Her entire life-work and all she has ever written breathes the spirit and power of good to overcome evil, even as light dispels darkness, and in the place thereof "all is light."

Going to the "root of Christian Science" does not lead one to Mrs. Eddy, but to God. She is but its Discoverer. Through her own spiritual clear-sightedness she gained a nearer vision of divine Love, and the fruitage of that revelation has redeemed thousands of men and women from all phases of evil and disease, and lifted them to a purer and holier contemplation of God and His Christ. The nearer one gets to the "root" of Christian Science the nearer he gets to God and away from human personality.

[Arthur E. Jennings in *South Durham and Auckland Chronicle*, Aus.]

Permit me to thank the vicar of Auckland for his letter in your last issue. The gospel of suffering has been emphasized by the opposition against the Discoverer and Founder of Christian Science and her followers, and in this age Christian Scientists can explain what it means to drink the cup of our Lord. The point upon which the vicar does not seem clear is the teaching about the unreality of matter and evil. Paul declared, "We look not at the things which are seen, but at the things which are not seen; for the things which are seen are temporal; but the things which are not seen are eternal." This teaching we accept unreservedly, and it is true, because it is based upon the evidence of the spiritual senses.

All critics of Christian Science put themselves in the unenviable position of assuming that what we say is not common sense. Without referring to the emphatic declarations of our Master as to the allness of Spirit, here let me quote from the best schools of philosophic idealism. Fichte writes that "all things which we see or work with in this earth are as a kind of vesture or sensuous appearance." Huxley describes matter "as the unknown hypothetical cause of states of our own consciousness." Ostwald, who, by the way, received a Nobel prize, explains matter "as a thing of thought." Thus it will be seen that it is the wrong concept of matter that will change and not the thing itself. Paul made this quite clear when he said: "For if that which was done away was glorious, much more that which remaineth is glorious."

Another false and popular belief is that suffering is in matter; but it is in the human or carnal mind. One may not believe this, one may not have heard it before, but it is true, and we are proving every day that matter cannot think.

[R. Stanhope Easterday in *Greensburg* (Ind.) *Standard.*]

We cite our readers to the Christian Science text-book, not as an interpretation of Scripture to be accepted by all without question or proof, but as being the only safe and authentic source of information on the subject of Christian Science, before judgment is essayed. Christian Scientists by no means ask the world to accept Mrs. Eddy's interpretation of the Bible, except upon the very wholesome basis of positive proof and legitimate appeal to reason.

The fact that in nineteen centuries of Christian history there have not been satisfying evidences of a full interpretation of our Lord's life and teachings in the form of "signs following," would seem to indicate that our critic errs, moreover, in affirming that we need no further interpretation of the gospel. Indeed, the justification for the "visible church" today and in past ages is quite largely the fact that it affords such opportunity for interpretation of God's word. It is queer, also, that Mrs. Eddy's interpretation of the Bible should have been singled out by our critic from the thousands of interpretations extant, as the one sole and pernicious (?) violation of her own cherished

Digitized by Google

idea of a church "whose only creed is the Bible." It would doubtless develop upon investigation that our critic's "creed" is, after all, only her own or some one else's interpretation of one or more of the salient points of Christian faith couched in Scriptural phraseology.

[John H. Wheeler in *Kansas City* (Mo.) *Journal.*]

Mrs. Eddy writes (Science and Health, p. 322), "Mortals may seek the understanding of Christian Science, but they will not be able to glean from Christian Science the facts of being without striving for them. This strife consists in the endeavor to forsake error of every kind and to possess no other consciousness but good." From the above the conclusion may be easily drawn that those who profess the Christian Science faith may not indulge in human differences, much less may they claim the right to be intolerant of one another's convictions. Christian Science teaches that our Saviour's example of returning good for evil under all circumstances, is the least one can do to preserve in himself the spiritual relationship with God that heals discords and keeps him unspotted from the world.

There is one simple rule to be strictly followed by all Christian Scientists in assisting others to feel the benign influence of this faith, viz., that the seeker's part is to request voluntarily and earnestly this assistance before it is imparted, and under no circumstances is coercion or persuasion to be used. This rule of action thus becomes the reasonable and sane climax to every true Christian Scientist's profession of faith as he or she strives only to have the mind of the Lord; by doing that which always returns good for evil. A student does not always fully succeed in the application of this rule to human affairs, but he is less than a student if he deserts the rule in attempting to make the application, and hence one is not a Christian Scientist if the rule be broken.

Mrs. Eddy writes: "We are not Christian Scientists until we leave all for Christ;" again, "If we would open their prison doors for the sick, we must first learn to bind up the broken-hearted;" also, "I long to see the consummation of my hope, namely, the student's higher attainments in this line of light" (Science and Health, pp. 192, 360, 367). This rectitude of thought and exalted purpose, exemplified in the lives of individuals seeking to uplift mankind, is alone worthy of the name of Christian Science. Guided by this divine impulse, its adherents will so regulate all their human affairs that their deeds will not give offense to any one, but rather be a sweet smelling savor to all. This alone is the healing power; the benign Christ with us. "By this shall all men know that ye are my disciples, if ye have love one to another," said our Lord and Master.

[Gray Montgomery in *Boulder* (Col.) *Herald.*]

Our critic's accusation that Christian Science is heresy must be replied to as in the case of Paul when arraigned for a like misdemeanor: "But this I confess unto thee, that after the way which they call heresy, so worship I the God of my fathers, believing all things which are written in the law and in the prophets."

The Century Dictionary defines the word "heresy," when specifically used in theology, as "a doctrine rejected by the authorities of a church as contrary to the established creed of that church." Possibly our reverend critic refers to the doctrine of healing, which is an essential teaching and practice of Christian Science. If Christian Science is heresy because it fulfils the teachings of Jesus in regard to healing as well as preaching, then Christian Science must plead guilty to the accusation. Christian Science accepts all the teachings of the Saviour, and in all four Gospels his commands to heal the sick are invariably connected with his injunctions to preach the gospel. In fact, the greater part of his three years of ministry, as related by the apostles, Matthew, Mark, Luke, and John, is mainly a record of his healing works, which were in demonstration of the Principle he taught, a proof of his correct understanding of God.

Our critic's misinterpretation of what constitutes a Christian a follower of Christ, is no doubt the cause of his criticism that Christian Science is not Christian. The Christian Science text-book, Science and Health, shows very clearly that Christian Science is Christian because its healing works are of God,—Christ-healing, accomplished through the spiritual recognition of God's government.

[*Penny Illustrated Paper*, England.]

The American clergy are apparently going to take up seriously the question of Christian Science. Apart from the many quack "healers" who are fattening on the credulous, and who do not really understand the basis of the beliefs, there is no question, to our minds, that Christian Science in its enlightened form is going to play an important part in the world's religion of the future. We are not sure that it isn't going to be the means of filling our churches and chapels again. It certainly gives one wondrously to think.

[Willis D. McKinstry in *Topeka* (Kan.) *Capital.*]

The false claim of evil or error has existed contemporaneously with mortal man, and the term mesmerism or animal magnetism was used for almost a century before Mrs. Eddy discovered Christian Science. She says in Science and Health (the text-book of Christian Science) on page 102: "Animal magnetism has no scientific foundation, for God governs all that is real, harmonious, and eternal, and His power is neither animal nor human. Its basis being a belief, and this belief animal, in Science animal magnetism, mesmerism, or hypnotism is a mere negation, possessing neither intelligence, power, nor reality, and in sense it is an unreal concept of the so-called mortal mind." In Christian Science, animal magnetism is a term used to define error, or evil, in its every phase. Christian Science does not ignore the claim of malicious animal magnetism. It is recognized as the operation of erring mortal mind or human will. It is unreal because it is without basis or law; therefore it can be overcome and destroyed and mankind saved from its claim of evil influence.

It would be absurd for one to claim that frost is the origin of fire, or that darkness is the source of light; so it is equally absurd to say that malicious animal magnetism has its origin in or is akin to Christian Science. Christian Science imparts to mankind the fact that God is Mind; as there is but one God, there can be but one Mind. This one Mind is good and all inclusive, therefore it includes the universe. This one Mind being infinite extends into immensity, having no boundary nor frontier; therefore evil or its claim has no abiding-place in or outside of divine Mind.

I do not pray, O God, to Thee
To lift me high;
I do not ask that there may be
No troubles I
Must face in climbing up; I pray
For no man's help along the way.

But give me strength, O God, and heart
To try and try;
I do not crave an easier part,
I only sigh
For strength to stand among the few
Who bravely struggle and subdue.

S. E. KISER.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MARY BAKER EDDY.

THERE is a story of a certain old-world philosopher who, when it was asked of him, "What constitutes achievement?" answered, "To be able to reply Yes, every evening, to yourself, when you ask, 'Have I done good to any one today?'" It would be difficult to find a more practical and efficacious test of the value of a man's life-work, and it would be impossible to find any one to whom it could be more fearlessly applied than Mrs. Eddy. Her whole life, even before she discovered Christian Science, constituted an expression of an intense tenderness for suffering humanity, and as the years added themselves to years, and she learned more and more of divine Life, Truth, and Love, she came to fulfil absolutely the exhortation of Paul to the church at Colosse, "Walk worthy of the Lord unto all pleasing, being fruitful in every good work, and increasing in the knowledge of God."

Building in this way for God and not for herself, she built on sure foundations. The Christian Science church which, in the brief space of forty-four years, has literally folded itself around the globe, is in this way founded upon a rock, the rock of divine service. It is a rock against which the storms may beat in vain, for as long as the thoughts of men are turned away from selfish aims, in the endeavor to be able to say, at every close of day, "I have striven to bring healing to the sick, peace to the weary, joy to the sorrowing," they will be learning something of the meaning of consecration.

The depth of man's consecration may be measured by his understanding of divine service. "The song of Christian Science," Mrs. Eddy writes, "is 'Work—work—work—watch and pray'" (Messages to The Mother Church, p. 20), and certainly no one has ever put exhortation into practice with more selfless devotion than has she. "I saw before me," she writes on page 226 of Science and Health, alluding to her earlier trials, "the awful conflict, the Red Sea and the wilderness; but I pressed on through faith in God, trusting Truth, the strong deliverer, to guide me into the land of Christian Science, where fetters fall and the rights of man are fully known and acknowledged." Not once, in all those years of conflict, did she flinch, because not once in all those years did she put her own will before the will of God; and so today the Red Sea and the wilderness lie far behind, and the advancing hosts of Christian Science hear the voice of their Leader, repeating the triumphant words of her Master, "Fear not, little flock."

What Mrs. Eddy has won for Christian Science, her followers will maintain and increase, because she has given them a scientific understanding of Love; and, as she herself says, "Where shall the gaze rest but in the unsearchable realm of Mind? We must look where we would walk, and we must act as possessing all power from Him in whom we have our being" (Science and Health, p. 264). Though they stumble and falter as they press forward, press forward they must, because they have realized that the demands of divine Science are imperative, and that the peace of God which they one and all seek can only come to them in proportion to the measure of their performance.

This performance has, however, to be something more than individual, it has to be collective as well. Even in the affairs of this world the proverb declares that in union is strength. If this is true of the effort of discordant minds and temperaments to achieve a human victory, how much more true must it be of that unity in the service of God which is founded on unity of thought and action. Such unity is to be wrought out only in the determination to seek another's good rather than our own, for self-seeking is the seed which would grow into the tree of disintegration.

This is the lesson which Mrs. Eddy has held persistently before her followers, and we can only claim to be her followers in proportion to our obedience to her teaching; and to obey that teaching we have to devote our efforts to the attempt to live in good. "Who lives in good," she writes, on page 4 of "Pulpit and Press," "lives also in God,—lives in all Life, through all space. His is an individual kingdom, his diadem a crown of crowns. His existence is deathless, forever unfolding its eternal Principle. Wait patiently on illimitable Love, the lord and giver of Life. *Reflect this Life*, and with it cometh the full power of being. 'They shall be abundantly satisfied with the fatness of thy house.'"

ARCHIBALD MCLELLAN.

ONWARD AND UPWARD.

CHRISTIAN SCIENTISTS the world over have another reminder that they must arouse themselves as never before to prove by demonstration the priceless teachings of their beloved Leader. This she has always urged them to do, but the human tendency often leads us to rely upon another to work out our problems for us, and so far as this is yielded to we lay needless burdens upon others, and miss temporarily the unfoldment of our own spiritual capacities.

Some years ago, when Mrs. Eddy found it necessary to go away from Boston in order to gain greater freedom for the revision of Science and Health, and also for the writing of other books which have so wonderfully enriched our literature, many of her followers were greatly disappointed, because, as it then seemed, their captain had retired from the field and left them to fight their battles alone. Soon, however, they learned that this was far from being the case. As a result of the greater freedom gained by seclusion, she was enabled to work out the rules for our church organization, The Mother Church and its rapidly increasing branches; as given in the Manual. She also provided for the establishment of the Lesson Sermons, Christian Science reading-rooms, the board of lectureship, the committees on publication, and the extension of our literature in the publication of the *Sentinel*, *Der Herold*, and the *Monitor*. The *Journal* had been established by her in 1883, and she continued to be a frequent contributor to its pages.

Among the many other achievements of Mrs. Eddy's years of retirement from society, may be reckoned the building of The Mother Church edifice in 1894, also its magnificent extension in 1904, and later the erection of the publishing house. All of this, however, is but the outward expression of the mighty Christianizing influence which had its present-day inception in the giving to the world of "Science and Health with Key to the Scriptures." The redemption of thousands upon thousands of professed Christians from a doubting and uncertain faith in God and the promises of Christ Jesus, and the awakening of vast numbers of avowed agnostics to a vital faith in these and a new-found love for God and man; the physical healing of multitudes and their moral and spiritual quickening,—these are the things that really tell the story of what she attempted and by the grace of God accomplished. Well may the lesson of her life arouse all her followers from the lethargy of mortal belief and the delusions of mere personal ambition, to whole-hearted service in the cause of Truth.

The cause of Christian Science is firmly established, thanks to Mrs. Eddy's reflection of divine wisdom and her unceasing toil. To us is now committed the glorious task of seeing to it that no smallest portion of our spiritual heritage shall be lost to posterity, because of any lack of appreciation or energy on our part. As we think of our

Digitized by Google

beloved Leader, crowned with a record of long and selfless service such as the world has seldom seen, we may recall Tennyson's characterization of a great English statesman,—

> Whose eighty winters freeze with one rebuke
> All great self-seekers trampling on the right.

Mrs. Eddy's followers are such because most of them had hungered for but failed to find that which her teaching offers, the Science which reveals the facts of being, including man's limitless possibilities as a child of God, and which makes all the promises of Christ Jesus an absolute certainty. Like the Samaritans who listened to their townswoman's story of Jesus' wonderful teachings, we can say, "Now we believe, not because of thy saying: for we have heard him ourselves, and know that this is indeed the Christ, the Saviour of the world." Jesus, as a personal teacher, left his followers, but he promised that the Comforter, "the Spirit of truth," should come and abide with them forever, should bring to their remembrance all that he had taught them.

Mrs. Eddy has ever directed her followers to look away from her personality to the Holy Comforter, and as they have striven to obey they have found the eternal and infinite source of all comfort, the Life divine. They will prove their love for their divinely inspired Leader by greater faithfulness at each step of the way; they will "wait upon the Lord" and "renew their strength;" they will "run, and not be weary; . . . walk, and not faint."

ANNIE M. KNOTT.

THE TRUE TEST.

IN no respect, perhaps, do the judgments of men present more marked differences and contradictions, than in their estimates of what entitles individuals to the honor and praise of their fellows. History witnesses that distinction has been conferred by popular acclaim for a very great variety of reasons, some of which give proof that enthusiasm over a given accomplishment may make it easy to overlook the means by which it has been effected.

The glamour of the mere fact of success in one's undertakings may thus become a great temptation, and especially to the young and energetic as they enter upon business life, and one of the imperative demands which human welfare makes upon all parents and teachers is this, that they effect a life-impress of the truth that no achievement is worth while save that which is moral in its every factor, which is wrought in righteousness from start to finish, and that the value of the deed and the character of its doer are always determined by his fealty to this ethical requirement.

Individual so-called graces and virtues, the things that often characterize the popular man, the attractive personality,—these give no reliable evidence of genuine values. As cant is the semblance of saintliness, so pride and love of praise may clothe themselves in the garb of philanthropy, so that selfishness appears to men to be kindly and generous. Very much of that which makes for social standing and reputation is altogether too exterior, too separate from real selfhood to be a reliable witness as to virtue.

There is that, however, which, upon every plane of intelligence and in every condition of life, accurately measures and defines the worth both of the worker and the work; namely, the fact of loyalty or disloyalty to the highest ideal perceived. When of two or more concepts or courses the noblest, most unselfish, most spiritual is chosen and adhered to, then the real and forever test of genuineness has been met. How insistently the Master thrust home that reiterated query, "Simon, son of Jonas, lovest thou me?" This was his test-question: it was personal, interior, inevasible, and it could be affirmatively answered only as the heart was true to the highest known truth.

Witnessing before King Agrippa, Paul could glory in that when the light fell upon his pathway he was not "disobedient unto the heavenly vision;" and today unnumbered thousands are moved by the remembrance of another disciple, who, having found the way, after long and earnest seeking, followed it with a devotion so steadfast, a zeal so unswerving, even when resistful sense had filled it with thorns, that the marvel becomes greater with every recurrence of thought. Here was a test of character whose rare severity sounded the depths of a rarer worth. Nothing ever weakened the tenacity of Mrs. Eddy's maintenance of her adherence to the Christ-idea, the concept of spiritual being which she had demonstrated to be able to save suffering humanity from sickness and sin; and in this she fought her "good fight."

Christian Science makes the individual privilege and duty of its every exponent perfectly clear. Each for himself must prove his worthiness, the genuineness and efficiency of his understanding. Truth makes no concessions, and we must stand unreservedly, unequivocally for it. This is the call today, and the rejoicing answer of every worthy Christian Scientist will be found in a quickened inspiration, a deeper consecration, a more tender compassion, a more humble, more unselfish, more Christlike doing of every least duty revealed to him in this dawn of a splendid day.

JOHN B. WILLIS.

AMONG THE CHURCHES.

CHICAGO, ILL.

The congregation of Sixth Church of Christ, Scientist, yesterday [Oct. 31] purchased a site for its proposed new church building on Prairie avenue, 166 feet south of 113th street. The church has been gathering a building fund for some months, and having purchased the lot, intends to begin building soon.—*Chicago Record-Herald.*

DAVENPORT, IOWA.

The most important incident in this field for the past year, and indeed for several years, is the purchase of an exceptionally beautiful site for the larger church building which will soon be needed to house the rapidly increasing congregation of First Church of Christ, Scientist. The spacious lot lies in one of the handsome sections of the city, and is located at the intersection of Kirkwood boulevard and Grand avenue. During the past few months the attendance at both Sunday and Wednesday evening services has been such that it has been necessary to place extra chairs wherever possible in the auditorium, and also seat a goodly number in the reading-room adjoining. The purchase price has been fully paid and plans for the new church building are now in preparation.—*Correspondence.*

ITHACA, N. Y.

The corner-stone of First Church of Christ, Scientist, Ithaca, N. Y., was laid at an early hour Thursday morning, Sept. 15, in the presence of the First Reader, the board of trustees, building committee, and architect. There was placed in the corner-stone a copper box containing the Bible, Science and Health, a current *Quarterly*, *Monitor*, and *Sentinel*, together with a parchment scroll giving the history of the church, the names of the charter members, present members, and officers. As the stone was lowered into place, all united in silent prayer, followed by the audible repetition of the Lord's Prayer.

The church edifice is located in Cascadilla Park at the foot of University avenue. It is bungalow in style of architecture, with a seating capacity of about two hundred and fifty. Work was begun on the church in July and it is expected to be ready for occupancy in December.

THE LECTURES.

SAN FRANCISCO, CAL.

Frank H. Leonard delivered two lectures here on Christian Science. At Columbia Theater, Oct. 2, he was introduced by Marion Vecki, who said in part,—

One might think that when efforts are being made to put into universal practice that teaching which will do away with all the ills to which mortals have hitherto been thought to be heir, that at least all could occupy common ground and work concertedly and harmoniously to further such efforts, the goal of which is the accomplishment of so grand a mission. All of us, no matter what our faith or purpose in life may be, are seeking for the truth, that truth of which Christ spoke when he said: "Ye shall know the truth, and the truth shall make you free." Surely, no nobler effort could be made by thinking men than to contribute toward the realization of Christ's message of peace on earth and good will toward men. All kinds of untruths, told and retold about Christian Science, have created misconceptions and misapprehensions in the minds of those who know little or nothing about it. These lectures are given for the very purpose of correcting these misconceptions and misapprehensions, to clear away any possible doubt regarding Christian Science, and to give to those who are seeking for truth, and want to find it, an opportunity to learn that in Science there is naught but right thinking.

At Christian Science Hall, Oct. 3, Mr. Leonard was introduced by Mrs. E. T. Le Blond, who said in part,—

Why are we here tonight? Because we want to know. Each one here is waiting for an answer to some question. Those who have felt the touch of this mental leaven which is leavening the whole world are here for a larger baptism. Those who have not felt the influence of this truth in their lives, but have seen it manifested in others,—in sickness healed, sin cast out, life sweetened and elevated,—these come asking what and whence the power that does these things. They come asking, like Pilate, "What is truth?" but, unlike Pilate, they are ready for the answer, and the answer is here. Christian Scientists are not only truth-seekers, but truth-finders. Truth is revealed in Christian Science, and we are teaching, preaching, living, and demonstrating it just in the measure that we understand it—no more.—*Correspondence.*

MINNEAPOLIS, MINN.

Two lectures on Christian Science were delivered by Willis F. Gross in Second Church of Christ, Scientist, on Monday and Tuesday evenings, Oct. 17 and 18. The large auditorium was filled to the doors both evenings. The lecturer was introduced by Henry Deutsch, First Reader, who spoke the first evening in part as follows:—

As I look over this large audience, completely filling our auditorium this evening, I feel as though nothing need be said as to why there are Christian Science lecturers and lectures on Christian Science. The interest that is manifested by this attendance tonight and the attendance that you will find at practically all lectures on Christian Science, indicates that in the forty odd years of its existence Christian Science has proven its assertions, has demonstrated its Principle; and that today, as a result thereof, the world is looking and seeking for all it can find of the knowledge of Christian Science; therefore, it is eager and ready to attend these lectures prepared for those who come to know what Christian Science is and what it does.

In its original inception the board of lectureship of The First Church of Christ, Scientist, of Boston, Mass., The Mother Church, was organized for the purpose of sending forth among the people those who were capable and qualified to explain away misconceptions and misinterpretations of Christian Science, but it is a great joy today to know that the lectures at this time are not now primarily for that purpose, but more largely to supply the desire of the world for this great truth which Christian Science is expounding and promulgating for the healing and salvation of the world. And yet, even today, in this enlightened twentieth century, there are some who refuse to admit the claims of Christian Science, there are some who are still ready to misconstrue and misinterpret what it teaches; so, for the benefit of all these classes, the members of the board of lectureship are traveling from one end of the world to the other, explaining the real message and real meaning of Christian Science.

Correspondence.

NEW YORK, N. Y.

A lecture was given by William D. McCrackan, M.A., in the edifice of First Church of Christ, Scientist, Tuesday evening, Oct. 18, before a large audience, many having to stand. Mr. McCrackan was introduced to the audience by William W. Porter, who said in part,—

On behalf of First Church of Christ, Scientist, New York city, permit me to extend to each and every one present here tonight a most cordial and hearty welcome. As a member of a neighboring branch Church of Christ, Scientist, I received with a great deal of pleasure the courteous invitation from the trustees of this organization to be present tonight to introduce to you the speaker of the evening.

We have come here for the purpose of listening to a lecture on the subject of Christian Science. The word science designates that which presents and proves something, and the word Christian designates that which relates to the Christ, the Word of God, the Son of God; and since Jesus himself referred all things to the Father, the word Christian ultimately and finally relates to God; therefore we find the term Christian Science to mean, in plain language, that which affirms God as the presence of all right thought, and rationally deduces man in His image and likeness. Jesus said to the people, "Ye shall know the truth, and the truth shall make you free." He also said to you and to me, "Be ye therefore perfect, even as your Father which is in heaven is perfect." Jesus was never accused of needless multiplicity of words, and when he uttered this saying it is evident that he meant what he said and said what he meant; therefore it may not be considered presumptuous for one to seek to understand something about "the one true God," Him whom Jesus declared it was life eternal to know.

Correspondence.

INDIANAPOLIS, IND.

Francis J. Fluno, M.D., delivered a lecture on Christian Science in Murat Theater, Sunday afternoon, Oct. 23, before an audience of three thousand people, and it is estimated that fully two thousand people were turned away, unable to gain admittance to the theater. The lecture was given under the auspices of First Church of Christ, Scientist. Clare G. Cameron, First Reader of the church, who introduced the lecturer, spoke as follows:

The Bible has been a closed book to most of us, so far as having any practical relation to our daily living. Many interpretations of its teachings have been given to the world, but none of them have satisfied the cravings of the heart which longed for something better and higher, or revealed the spiritual meaning whereby we could realize the fulfilment of the promises contained therein. Mrs. Eddy, through her purity and wisdom, has given to this age Christian Science, which is proving its worth to all mankind. The truth contained in her writings has been the means through which many thousands of people have been healed spiritually, morally, and physically.

GRAND RAPIDS, MICH.

A lecture on Christian Science was delivered Sunday afternoon, Oct. 23, at Powers Theater, by the Rev. William P. McKenzie to an audience of about sixteen hundred people. The lecturer was introduced by Percival Bancroft Garvey, a member of the board of directors of the local church, who said in part,—

These lectures are given largely in order that any prejudice, misconception, or false statement concerning Christian Science, its meaning, teaching, or theology, may be corrected and cleared away. It is not our desire or purpose to extol Christian Science, but rather to explain it,—its motive, operation, and beneficent influences. This scientific healing, saving, regenerating process, or message from divine Love, is awakening, educating, elevating all mankind into better, purer, holier habits of thought and living, through a clearer apprehension of Truth, and is revealing a practical theodicy, a present-day possibility of understanding God, Principle, the creator, preserver, and giver of every good and perfect gift.

Christian Science is growing rapidly, and it is occupying the thought and attention of people more and more. It does not create or establish a truth, it simply and consistently proclaims it, and projects into human consciousness that which always was and always will be true. It is God's unfoldment of the truth in a way never before known. Christian Science offers no apologies and asks no favor but good will. It stands upon its own merits,—the proofs of demonstration, the "fruit of the Spirit."—*Correspondence.*

WABASH, IND.

The Eagles Theater was comfortably filled with an appreciative audience Thursday evening, Oct. 27, to listen to a lecture by Clarence C. Eaton of Tacoma, Wash. The lecturer was introduced by O. O. Oldfather, who said,—

We read in the Bible that Jesus healed the sick, gave sight to the blind, and relieved the suffering and sorrowing. In his efforts to impress upon his hearers the ever-presence and eternal availability of Christ, Truth, he said: "Before Abraham was, I am," and "Lo, I am with you alway, even unto the end of the world." The prophets, through their perception of this truth, performed many wonderful works, and it is the same understanding of God and His Christ that is bringing health, peace, and happiness today to those who have ears to hear. Christian Scientists are proving their faith in the Master by complying with his teaching that those who believed on him should do the works which he did. Hear his words from Matthew: "Heal the sick, cleanse the lepers, raise the dead, cast out devils; freely ye have received, freely give."—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Riverside, Cal. (First Church).—Francis J. Fluno, M.D., Loring Opera House, 3 p.m., Dec. 18.
Santa Ana, Cal.—Prof. Hermann S. Hering, Dec. 10.

One strong thing I find here below: the just thing, the true thing. My friend, if thou hadst all the artillery of Woolwich trundling at thy back in support of an unjust thing, and infinite bonfires visibly waiting ahead of thee to blaze centuries long for the victory on behalf of it, I would advise thee to call a halt, to fling down thy baton, and say, "In heaven's name, no!"

CARLYLE, "Past and Present."

TESTIMONIES OF HEALING.

When first I heard of Christian Science, I had begun to think that in time I should be a chronic invalid. I had been for weeks in a "home," and on account of heart trouble fainted nearly every day. I also had distressing attacks of earache with abscesses, from which I had suffered since childhood. I dreaded the winter, as I used to be in bed for weeks with bronchial and throat trouble, surrounded by medicine bottles, inhalers, doctors, and nurses. Everything that mortal mind could suggest was done to help me, but I always felt tired and nervous and only seemed to recover from illness for a little time to get something else or to have a return of an old attack. At last, after long continued illness, the doctors said that I must have an operation as soon as possible. The day was fixed and everything arranged, but I felt very miserable and only agreed to it because a specialist said that the illness was acute and that I might pass away in the next attack before an operation could be performed. They had quite decided that I was to have another attack, and so had all my friends, also myself.

I did not know what Christian Science was at that time, but during the few days of waiting for the operation I came across an article on Christian Science and concluded that it was the spiritual healing taught and practised by Christ Jesus. Even then a kind of buoyant hope filled me: I could not rest, and begged my husband to go out and get Mrs. Eddy's book, "Science and Health with Key to the Scriptures" for me, but he came back without it, having been to most of the large booksellers in London without success, and they were not able to tell him where to get a copy.

We knew nothing about the reading-rooms where all Christian Science literature may be bought, but eventually we got a copy which I read with the conviction that God, good, omnipotent power, who had made a perfect creation, could never have made such a miserable, imperfect specimen as I seemed to be. I wondered how I had reached such a condition of perverted thought. Man is made in the image and likeness of Spirit, therefore perfect, and was I going to allow myself to be made into a drudge for mortal mind? I decided at once, with great relief, that after realizing such a great truth, no operation could take place, and that unless I could respond to "the law of the Spirit of life in Christ Jesus," which makes "free from the law of sin and death," it was useless for me to expect to get health and happiness from material means.

I was practically healed then, as I did not see the doctors again. My husband told me that they were very kind and interested about it, but I came under the guidance of a dear Christian Science practitioner at Reading, who had been treating me, and she gave me another of Mrs. Eddy's books, "Unity of Good," which was the greatest comfort and help to me, as was also the steadfast Christian Science work and services at both Reading and London. These have helped me to realize how much a faithful worker can do to help others to the understanding of the power of divine Love and Truth. A river of plenty flows down all our streets, and the pool of Bethesda is at our feet. If we are willing to be "absent from the body, and to be present with the Lord," the healing follows naturally; as we grow more spiritual, the body responds. Spirit cannot be sick, ill, or deformed, and Christ Jesus gives us the command, "Be ye therefore perfect."

I have had no return of these attacks since I became a Christian Scientist, nearly three years ago. I have had great help from a practitioner when fear presented itself,—once about the earache, but with Truth's guidance I realized at once the powerlessness of error, and the pain stopped instantaneously and has never returned since. We must come into an understanding of the laws of being, of divine

Digitized by Google

Principle, in the same way that a little child knows he is under the guiding protection of loving parents, shielded from harm and free from fear. Our love goes out in gratitude to our dear Leader, Mrs. Eddy.

MRS. J. M. HEWITT, Hampstead, England.

I wish to confirm all that is said in the above testimony. I am not myself a Christian Scientist, but having seen my wife suffer in the way she did, I can only join with her in heartfelt thankfulness for the freedom from pain and the health which through Christian Science she now enjoys after such a long and trying period of illness.

T. H. HEWITT, Hampstead, England.

It is from a heart overflowing with gratitude and love to God, and to our beloved Leader, Mrs. Eddy, that I give my testimony and hope that some poor sufferer by reading it may be led to the truth which healed me. Divine Truth and Love has given me in Christ Jesus renewed courage, and has shown me how to "rise in the strength of Spirit to resist all that is unlike good" (Science and Health, p. 393). Three years' study of the Bible and "Science and Health with Key to the Scriptures" has taught me that God is ever present, and this knowledge saves from disease and death. One of my greatest blessings is the release from the bondage of fear and depression.

Nearly all of my life I had been a great sufferer. During a period of thirty-five years I was treated by numerous physicians, obtaining only slight relief, although taking medicine constantly, besides electric treatments, etc., which were recommended by my physicians. I underwent several minor operations, and most of the doctors advised a serious operation, but none could promise permanent relief. They admitted that it would be best to postpone this, for there would be other affected organs which they could not leave without attention, and they believed I could not live through such an operation. I was said to have a kidney disease which was very painful, also headaches every few weeks, which sometimes kept me in bed for days and weakened my memory. I was also said to have enlargement of the liver with a bowel disorder, and this continued for twenty-five years.

A number of times my life was despaired of, and the physician upon entering my room would ask the nurse if I was still living. Overhearing such remarks, I determined that though the death sentence had been passed upon me, there was yet some help somewhere, little knowing how divine Love was leading me. I finally consulted two well-known physicians, asking of them a truthful diagnosis of my case. One said he had studied my case very carefully, together with information given him by his father, who had been my physician for nine years prior to his death, and that his conclusion was that I had a malignant growth in an advanced stage, and he told a relative that I could live for a short time only. The other said he had exhausted all medical means, and in a kindly manner told me there was no hope for me, as also there was no hope for himself. He said he had an incurable kidney disease and might pass away at any time, and in a very short while he did. He told me I might live for some time yet, but he was certain I should have to carry my burden to the grave. He advised me to keep away from *materia medica*, as I had been deceived long enough. He also advised me not to undergo an operation. "Trust in God," were his last words to me. To add to the afflictions mentioned, I had enlargement of the joints, and the suffering which accompanied this disease can be known only by those who have gone through a similar experience.

When Christian Science was presented to me, I was on the verge of insanity. I called on a practitioner for treatment, and asked for relief only, saying I hardly expected to be healed after so many physicians had pronounced my case incurable. She replied that all things are possible to God. I can never forget the renewed hope I received through her kind instructions. I felt like a new creature, and after several treatments I knew positively that my healing would be complete. Instead of fulfilling my physician's prediction that the year 1908 would be my last on earth, it proved to be my best year, as never before had I been so free from pain and mental depression. I am truly thankful to God, and to our beloved Leader, Mrs. Eddy, for the spiritual uplifting received through the understanding obtained by a careful study of our text-book, "Science and Health with Key to the Scriptures."

I have learned to know and to love the true God through this teaching, and where formerly inharmony and discord prevailed, there is now peace and happiness. I can truthfully say that through this wonderful teaching I was restored to health and happiness, and have been able to demonstrate the truth in my family. My earnest desire is to follow in the footsteps of our Master, who said, "By their fruits ye shall know them." I also wish to express my gratitude for *The Christian Science Monitor*, which is a great blessing to mankind, and for all the Christian Science literature. God bless Mrs. Eddy, is my prayer.

MRS. ANNA NEWMAN, Chicago, Ill.

I wish to give my testimony to the benefits I have received through Christian Science. For many years I suffered from nervous debility, stomach trouble, and melancholy, which developed into a serious mental disorder and was pronounced incurable by the leading physician at the state hospital of California; but, thanks be to God, through the teachings of Christian Science, as explained by Mrs. Eddy, I am now healed.

HENRY SHALLISH, Los Angeles, Cal.

Christian Science did not at first come to me through the healing, but because it appealed to me as a religion, adequate to meet every need of mankind. Through a great sorrow I was led to seek its help, and I can truthfully say that its message is one full of joy and hope. To those who have been through great trials, it opens wide the door to peace, and blessings unnumbered are its fruits. My progress in the understanding and acceptance of this truth was very slow, but little by little I learned the powerlessness of evil and the omnipotence of God, good. It seemed very hard at first to give up all material remedies. In the case of my children, the doubts and fears were sometimes almost overwhelming, but as proof after proof of God's love and care came to me, I saw the nothingness of human beliefs and fears, and gained confidence. The period of changing or readjusting thought is not one of peace, and trials will continue until mortal mind gives up its arguments, doubts, and false beliefs, and we awaken to man's real selfhood, which is the reflection of divine Life, Truth, and Love.

My experience for four or five years after I became interested in Science was one of ups and downs, and it seemed as though I was constantly in need of help for myself or the children. It was not until I learned to love the truth for its own sake that my greatest freedom came, and now I know that trials and sufferings last so long as we need to be pushed along the way, so long as we forget that "growth is the eternal mandate of Mind" (Science and Health, p. 520). Loving the truth, seeking it by night and day, in sickness or in health, we need not suffer; the old fears vanish, and greater blessings than were ever dreamed of flow into our lives.

I am more than gratified that this movement has been blessed with a Leader endowed with the greatest courage and most unselfish love. Mrs. Eddy has indeed cleared the pathway for us all, and has shown us how we may obey the command of the Master to heal the sick and comfort the sorrowing. Those who have seen and experienced the

Digitized by Google

fruits of Christian Science can best appreciate her work. For this continuous work, for the blessings it has made possible not only for myself but for all humanity, I shall be forever grateful.

FLORENCE B. HAMILTON, Toronto, Canada.

It is with a heart full of gratitude that I write these few lines. My healing was slow, but this was well, for it has helped me to put off "the old man," and to rise into a holier consciousness as a child of God. Christian Science is a great comfort and help to me, here in this far Northwest country, where there are no Christian Scientists. The *Journal* and *Sentinel* are very welcome guests, and the testimonies are such a help. I wish to thank one and all who have helped me on my way. As I grow in this new understanding of Life, I realize more and more how much we owe our dear Leader, who has shown such patience, meekness, and great love for humanity.

MARY E. JAMES, Semans, Sask.

I am sending a thanksgiving offering in the form of a testimony for the *Sentinel*. I have felt for some time that I wanted to express the gratitude which I feel for what Christian Science has done for me. I came into the understanding of this truth five years ago, through my healing of an abdominal growth. I had had three attacks of illness, but not until the third attack did I know how serious was the condition. While in New York city the attending physician was a specialist on diseases of this sort, and he told me I had a fibroid tumor, and that an operation would be necessary. In just a year from that time I had another attack, which was so severe that at times my life was almost despaired of. The physician said that if I recovered I ought to have an operation as soon as I was strong enough.

Just before leaving home for the city where I expected to have the operation performed, I heard of Christian Science. I immediately accepted it and felt as if it was an answer to prayer. I went to this city and called on a practitioner, who assured me that I could be healed. I commenced treatment and was completely healed in a short time. Since then many diseases have been overcome, and I wish to tell of one special demonstration of the truth. I ran a piece of steel into my eye with such force that it seemed as if my eye was destroyed, but as quickly as thought itself I denied the error and declared the allness of divine power. I walked the floor, holding my hand over the eye, affirming over and over again the power of Truth. I had no pain at all, though the eye swelled a good deal; but, aside from that, I had no discomfort. I telegraphed to a practitioner for help about an hour after this happened, but she told me afterward that the work was done when I so quickly turned to Truth. This happened on Tuesday, and by Saturday there was nothing to show that the eye had ever been injured. For all this I am filled with praise to God, the giver of all good gifts, and especially for the understanding which enables us to prove that He is "a very present help in trouble."

Since that time, now five years ago, Christian Science has made progress in our community. We have a room for Wednesday evening services, and many are becoming interested and asking for help. Surely, as our Leader says, "the time for thinkers has come" (Science and Health, Pref. p. vii.). I wish to express the great appreciation and reverence which I have for Mrs. Eddy, that she has been able to show us the truth even as it was shown to her.

MRS. MAY SMITH, Ashland, Ky.

If I should be asked what was the greatest thing that had ever come into my life, I should gladly and unhesitatingly reply, Christian Science. I was not brought into Science through the physical healing, but for relief from a most unhappy mental condition and a desire to know what God really is, to have a better understanding of life, and to know myself. At the time I began the study of Christian Science, as I took an introspective and retrospective view of human existence, I pronounced it a failure, a disappointment. It had in no way approached my ideal, and when weighed in the balance it was found wanting. Even the God I had tried to serve since my childhood was gone, and the only prayer I seemed able to offer was, "Why hast thou forsaken me?"

I had been a member of a church, and had been actively engaged in church work since my early girlhood. I had taken up the different cults and sciences, in order to understand life and its many seemingly difficult problems; but I had reached a place where these things no longer satisfied; so I had given them all up, and seemed to be adrift, alone, without God and without hope. I had heard a great deal about Christian Science, but more by way of ridicule than in its praise. I however thought it might prove an interesting study, and I decided to see what there was in it. I was earnestly seeking the truth, and if Christian Science appeared to me to be the truth after I had given it careful study, I wanted it; if not, I could give it up, as I had many other studies.

When I procured a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and began the study, I can never tell how it appealed to me nor the light that it has since brought into my life. It was the very knowledge for which I had been hungering and thirsting, and it satisfied as no other book ever had. I had always loved the Bible, and portions of it seemed very beautiful to me, but with the understanding of the Christian Science text-book the entire Bible has become illuminated and its promises are living truths. While reading and studying Science and Health I soon noticed that my entire mental attitude toward life had changed, and I was freer and happier than I had been since I was a child. All self-pity, disappointment, bitterness, discord, and an utter disregard for life had gone, and I had found perfect happiness, love, harmony, and spiritual bliss. It has indeed restored to me the joy of salvation.

I love Christian Science because it has given me a knowledge of the true God, which Jesus declared to be eternal life; and I love it because it has taught me of life and immortality, taught me to see myself and others, not as the manifestations of error, but as the spiritual ideas of God; and I love it because it is the truth about God and man,—the most inspiring truth that ever came into any one's life. I care not what his station may be, nor what the seeming difficulties to be overcome. When Truth has rolled away the stone of mortal thought, and I behold the vision of perfect Life, Love leads me to heights undreamed of in former days, and I am thankful, even for every trial that has brought me into closer touch with this wonderful spiritual truth. God has blessed our dear Leader for giving this truth to struggling humanity, and we read that they are blessed "which do hunger and thirst after righteousness: for they shall be filled."

ELEANOR M. PARKER, Chicago, Ill.

Having received so much help from the testimonies published in the *Sentinel* and *Journal*, I desire to add mine. After more than forty years of wandering in the wilderness, I have escaped, and I have no desire to return to the land of Egypt. I was constantly serving "other gods," whom I knew not, and would not hearken nor incline my ear to the prophets. Although I strove with all the will-power I could exercise, and with the aid of eminent and kind physicians, I was condemned to an early death; but through the influence of a friend I was induced to ask help of a Christian Science practitioner. I wrote to one who could not take the case on account of his lecture engagements, and although

Digitized by Google

somewhat discouraged, I wrote to another and stated my case. At that time I could neither eat nor sleep. I was taking drugs every hour, but they had ceased to give me much relief. My physician had told me that I was liable to die at any moment, and that I had better prepare for this. I had had several physicians in different states where I had gone in search of help from climate, but all that the doctors could do was to give me temporary relief, with no encouragement as to a permanent cure.

The first letter from the practitioner at Pueblo, Col. (I was some sixty-five miles south of there), said that she would take the case, and declared that I was not beyond God's power to heal. She added these words from Science and Health (p. 388): "If mortals think that food disturbs the harmonious functions of mind and body, either the food or this thought must be dispensed with." I decided to give up the false belief, and surprised my family by sitting down at the table and eating a hearty supper. I retired at bedtime and slept the whole night, which was the first time in years. I awoke fresh and well, and resumed my work, as all can do who will accept the truth. Though I continued treatment for some two weeks, I was healed of stomach and heart trouble with the one treatment, and since then I have been healed of many minor ills by the constant study of "Science and Health with Key to the Scriptures" and other works of Mrs. Eddy, also the *Sentinel* and *Journal*.

I am able by the authority of Truth, as revealed to us through the teachings of our revered Leader, to help others, for which I truly thank God, and His messenger to this age. My wife and I are members of The Mother Church and are striving to "grow in grace, and in the knowledge of our Lord and Saviour Jesus Chrst;" and we receive constantly a share of the great blessings which are the portion of those who follow our beloved Leader.

JOHN F. REYNOLDS, Cheyenne, Wyo.

Christian Science was first introduced to me seven years ago by a maid, who was a member of the church of which I was pastor. I had been traveling in the United States, and on my return told my people, among other things, how I spent my Sundays when in America, and I made some remarks derogatory to faith-healing. These remarks were carried by one who heard them to the maid already mentioned, and the next day she came to see me, desiring to know what I had said against Christian Science. Although I had been in the States three months, this was a new subject to me, and I at once confessed my ignorance, requesting to know what it meant. Then she told me, with great joy, how Christian Science had been the means of healing her niece in Manchester, after the doctors had declared she would be a cripple for life through an injury to the spine. She told also of the change it had made in her sister's home, where everything that was discouraging had yielded to joy, and remarked, "My sister could not be deceived, for she was always a good Christian worker!" Then she asked if I would like to read the book which was responsible for all this new experience. Immediately I consented, for any new book, especially of such a character, was always welcome.

The next night she came to lend me her own copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, through the reading of which, with the aid of a Christian Science practitioner, she had been cured of what is known as "housemaid's knee." This was all the more wonderful, as it was bringing the matter home to a member of my own flock, and was also much nearer than Manchester; for what now happened was at Sandbach in Cheshire. I accordingly read the book, and in a short time had purchased this copy from the maid, who said she knew where to get another. By this time my curiosity was fairly aroused. The subject appealed to me. It seemed to throw a new light on theology, on sociology, on brotherhood, and, best of all, on the teaching and practice of Christ Jesus in reference to the healing of the sick. A case of a dear friend in sickness was engaging my attention, and naturally the thought arose that if Christian Science could do these things, here was a chance of putting it to the test. In this endeavor I was led to pay a visit to Manchester, where I saw for myself what the new movement meant, and now at last I am out of the wood, and know what it is to be free, for, as the Master said, "If the Son therefore shall make you free, ye shall be free indeed."

This is my happy experience following on class instruction, which was to me a perfect revelation and brought with it a new phase of existence. The old ministry has been changed for a new, in which there is an atmosphere of certainty, a tone of confidence, and a feeling of reality which the old had failed to give. It is in the strength of this conviction that my family and I are settling in Rochdale, my native town, to start in this field of labor. During the past seven years the truth has been put to the test in my own home, and one can never be grateful enough to Almighty God for this message. Truly the prophecy of Joel was fulfilled: "And also upon the servants and upon the handmaids in those days will I pour out my spirit."

This testimony would not be complete without reference to the way in which the thought of Mrs. Eddy came to take such a place in my heart and life. It was when my heart was desolate through the sense of loss occasioned by the passing of my own dear mother that the truth of Christian Science came, filling the void, joining hands across the sea of separation, and giving me a new interest among those for whom my mother had toiled. It came as "the oil of joy for mourning, the garment of praise for the spirit of heaviness." Thus it was that a sense of irreparable loss gave way to an inspiration which illumined the whole of life, and brought the physical healing that followed. One cannot help expressing a love for this noble woman, not only because she has known what all this means, and much more of a deeper sort, but because she was able to understand him who "himself took our infirmities, and bare our sicknesses," thus bringing to the world what it so much requires, the blessed assurance that "divine Love always has met and always will meet every human need" (Science and Health, p. 494).—R. WOOLFENDEN, Rochdale, England.

While studying the Lesson-Sermon this morning, such a feeling of gratitude came to me that I was impelled to give expression to my heartfelt thanks to God for this glorious awakening, and to Mrs. Eddy for her brave fight against such seeming odds, with the consequent result that she has been able to point the way to eternal harmony to all who care to accept it. Even a slight understanding of this Science shows the hopelessness of the puny efforts of mortal man to evolve order out of the chaos of his own making. I have stood on the hills and been in the valleys many times since Christian Science was first presented to me, over a year ago, but I am thankful to say that my descent into the valleys becomes less frequent and my stay much shorter.

Among the many things for which I am grateful is the gradual but certain disappearance of a constantly recurring sense of terrible depression and weakness, which medicine had never been able to cure. I also wish to thank the many kind Scientists who have helped me so patiently and explained entirely to my satisfaction any seeming difficulties.

HARRY RUSSON, London, England.

It is with a deep sense of gratitude to God, and to our Leader, Mrs. Eddy, that I write of the great help Christian Science has been to my family and to me. In August, 1909, we went to the coast for a few weeks in camp, and our preparations for the trip were very different from what they formerly were. I had been a druggist for a long time, and formerly we used to take many kinds of medicine with

Digitized by Google

us; but now we took none, and did not need any. Reaching the ocean late in the afternoon, the children went in bathing the next morning, being in the surf bright and early. Our baby, who was not quite two years of age, was with the others nearly all day, without a hat or bonnet, and when night came on he was badly sunburned. He fretted and cried, but was given treatment in Christian Science, and slept peacefully all night. The next morning there was not a trace of the sunburn. He was perfectly healed, and was not affected by the sun again while at the beach.

On the last day of our return trip, when we stopped for our noon meal, one of the mules kicked me in the forehead and temple, the shoe cutting two long gashes in my forehead. I fell unconscious into the arms of my son, and when after a few moments I regained consciousness he was doing his utmost to stop the flow of blood with his handkerchief and was repeating aloud the scientific statement of being as given on page 468 of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Instead of calling to his mother or the other children who were near, he turned instantly to God, who is ever present to help. (Let me say right here that our Sunday Schools do good work.) Soon the pain was entirely gone; the boy's understanding of the power of God had done the work. We walked to our wagon, and I reassured my wife, telling her not to be afraid. She, however, insisted that we go to a surgeon and have the wounds sewed up, as the appearance was very alarming and she feared there would be scars. But I said, "No, we can do the work ourselves." One of my sons pressed the edges of the cuts together, while my wife put several pieces of court-plaster over them, and meanwhile all were declaring the truth for me.

I did not suffer one twinge of pain, nor have I since. In fifteen or twenty minutes we were eating our luncheon as though nothing had happened. That afternoon, when we reached home, I telephoned to a practitioner about the accident, and asked for some absent help. Then I helped to unpack the wagon and did my share of the night's work. Next day I did a hard day's work, then came to the Wednesday evening meeting as usual, and gave a testimony of the healing, in Science, of one of my sons, of rupture. The following Sunday I taught a class in Sunday School and acted as usher in church. Three or four members of our church who met me said afterward, when the accident was mentioned to them, that they had seen me and talked to me, but saw no trace of the accident. As a matter of fact, the injury was perfectly healed in less than a week, and is leaving no scar.

I am indeed thankful for this healing, and especially for the spiritual uplifting which has come into my consciousness. Surely Christian Science does heal quickly and wholly.—ALEXANDER M. GREENE, Riverside, Cal.

It is with gratitude and pleasure that I give my testimony of healing through Christian Science. A lameness of my right arm, which seriously interfered with the exercise of my vocation as newspaper correspondent, and which at one time formerly had altogether prevented the use of my arm, disappeared under Christian Science treatment. During this period the general condition of my health was better than had been manifested for some years.

ALFRED M. MYROVER, Fayetteville, N. C.

Thy brother needs thy smile
Today—there is no morrow;
Save not the cheering glance,
But lighten care and sorrow
Of him who in thy way
Is found, a-hungering
Today.

JENNY A. PAMPERIN.

FROM OUR EXCHANGES.

[Rev. Frank N. Riale, Ph.D., D.D., in *Christian Work and Evangelist.*]

The "gift of healing," as a mode of the divine approach to men, Christ gave to the twelve apostles who were the pillars of the new dispensation, as the twelve patriarchs were to the one, which was passing, of Jesus the world-light. He called unto him the twelve disciples and gave them authority over all unclean spirits, to cast them out, and to "heal all manner of sickness and all manner of disease." Jesus gave this gift also to the seventy, but when with inexpressible joy they returned, telling the results of their new-given power, lest they might get this gift out of its true perspective in the plan of redemption, there came from the Master the caution, "Rejoice not, that the spirits are subject unto you; but rather rejoice because your names are written in heaven." These results of healing, as of forgiving of sins, must take place; but remember they are only the fruitage of the Spirit, which makes those who possess it the truly redeemed, whose names are written in the Lamb's book of life. These healings they should ever perform, but ever remember that they were to say, "Sin no more, lest a worse thing come unto thee." What men need is not the momentary healing, but the abiding Spirit of the Father, which makes perpetual the fruitage of this gracious gift.

Last of all, when Jesus was about to finish his earth-work and give his final command, it was not to the twelve or to the seventy, but to "them that believe." As truly as we are called to be saints, we are called to be sent, bearing the good news that God is no respecter of persons in His gracious gifts of the Spirit. When Christ came, he took all true believers up on to the heavenly plane of equality with himself. It grieves his heart and dishonors his name, and retards mightily his work, for us to think of ourselves as aught else than his friends and brothers in the divine joint heirship. "That they all may be one: as thou, Father, art in me, and I in thee," are his last great prayer words. As the Father hath sent me, so have I sent you into the world, is his mighty copurpose. But his ringing last words were about the "gift of healing," which it was the Father's purpose should be ours as fully as it was his. Here are the tense, terse words with which Mark's Gospel closes: "Go ye into all the world, and preach the gospel to every creature. He that believeth and is baptized shall be saved; but he that believeth not shall be damned. And these signs shall follow them that believe: In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover. . . . And they went forth, and preached every where, the Lord working with them, and confirming the word with signs following."

It certainly is as clear as a beam of sunlight that the gift of healing was not a special gift to the twelve, or the seventy, or even the first disciples sent forth to preach, but to every one that believeth. It is conceded by scholars, almost universally, that there is not a grain of ground in the Bible for the belief that this law is ever to be outlawed, as long as sin and sickness hold a vestige of sway over us.

[*Christian Register.*]

It is not too much to say that it is extremely dangerous for any one, of even moderately earnest purpose, to cherish, however secretly, any desire that he would at heart be sorry to see realized; for what shapes itself in the mind is sure to take on outward form and substance in some measure. On the other hand, it is highly salutary to entertain even what may at first seem to be extravagant hopes and unrealizable ambitions, provided they are of a noble and unselfish sort. They are all the time striving, largely

Digitized by Google

without our knowledge, to accomplish their own fulfilment. Even the vague aspirations and irrational desires of infancy have a way of getting themselves gratified, in part at least, as time goes on; and one is made to feel shame or honest pride in the issue, according to the baseness or the worthiness of that early yearning. What one of us but can look back and see how some absurdly lofty ambition of unreasoning childhood has, after half a lifetime perhaps, been in its essentials realized, and how some less laudable desire has, in our maturity and, it may be, against our later wishes, got itself actually fulfilled.

[*Church and Home.*]

Eliminating wholly plans and schemes, words have been uttered at Cincinnati that will live for generations to come. Such expressions might be taken from the words of many speakers, but we choose to extract the following from the address of Bishop Brent at the mass meeting on the World Missionary Conference at Edinburgh: "How almost absurd it is," declared Bishop Brent, to think of trying to Christianize foreign lands and bear to them the brotherhood of man, without a united church at home. The time has come when our church should take the position of corporate leadership in church unity. We should see to it that we treat others as Christians in deed and in truth. We should count the defaming of the name of another church as one of the greatest sins that could stain our lips. . . . Let us lay aside this pale respectability which so characterizes our church, and run the perils that will make our church more virile. Rather than continue in the lines of conventional Christianity, I would run the risk of losing our distinctive character in trying to gain the unity which Jesus Christ meant his church to have.

[Harold Begbie in *Christian World.*]

I cannot understand how any man who closely observes the present condition of things and follows the course of their tendency, can be in despair of Christianity. The morals, ethics, politics, philanthropies, and ambitions of mankind are not only, all of them, woven and interwoven, permeated and pervaded, penetrated and interpenetrated by the spirit of Christ, so that they cannot by any manner of means become disentangled from Christianity, but they instantly become, every one of them, utterly irrational and absurd when the revelation of Christ is denied. Examine any of the general and embracing ideals of humanity, and you will find that in every case the foundation is Christ, and that without that foundation the ideal is illogical. There can be no reason, for instance, why statesmen should struggle for peace, provided conquest can be proved an economic advantage, unless we accept the teaching of the brotherhood of man.

[Lyman Abbott in *Outlook.*]

We reverence Jesus not by singing hymns to him, nor by singing hymns about him, though that is legitimate. Certainly we do not reverence him by wrangling about the titles we will give to him, or the place we will assign to him in the universe; we reverence him by carrying on the work which he began, by manifesting in our lives the spirit which he manifested in his; by serving our generation as he served his generation, with the same unselfish devotion, the same unpretentious heroism; in a word, by doing all that we can to make this world a happier world because a better one, and this life a life better worth living.

[Rev. I. M. Atwood, D. D., in *Universalist Leader.*]

We do not so much need more truth, as more men and women in whom the truth we have has become incarnate; not so much more and better institutes of righteousness, as more righteous men in those we have. The supreme need yet is, for a real army of the Lord, composed of individuals whose hearts have been touched with holy fire and their minds made luminous with divine light.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel.*

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel.*

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herald,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

NEW PAMPHLETS.

Now on sale are four new pamphlets: "Seeking and Finding," "Prayer and Healing," "The Divine Nature," and "Upward Footsteps." Each pamphlet contains five to nine articles that have previously appeared in the *Journal, Sentinel,* or *Monitor;* and they are particularly suitable for handing and sending to inquirers or persons who are becoming interested in Christian Science.

Hereafter, the price of all pamphlets (except "What our Leader Says" and "Christian Science and Legislation") will be reduced to 5 cents a copy; 55 cents a dozen; $2.00 for fifty, and $3.50 for one hundred. Hereafter, also, the republication in the English language of single articles as "tracts" or "reprints" will be discontinued. It is believed that their place is better taken by the daily article on Christian Science in the *Monitor* and by these new pamphlets and others that may be issued.

NEW POST CARDS OF THE MOTHER CHURCH.

Post card photogravure, in sepia tint; an exact reproduction of the large photogravure of The Mother Church Buildings and Publishing House with parkway in foreground.

Single copy	$ .05
Twenty-five copies	1.15
One hundred copies	4.25

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. Ten copies, ONE ADDRESS, each, one year, $1.90; six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy 6.00
Twelve or more to one address, each 5.75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding. The above prices are all prepaid.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), single copy $2.25
Twelve or more books to one address, each 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, single copy 4.00
Twelve or more to one address, each 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy 5.00
Twelve or more to one address, each 4.75

The above prices are all prepaid. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy . . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.

Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.50; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 20 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00; six months, $1.20.

Ten copies to one address, each, one year, $1.90; six months, $1.15.

Twenty-five copies to one address, each, one year, $1.80; six months, $1.10.

Fifty copies to one address, each, one year, $1.50; six months, 90 cents.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. X indicates the year 1910; XI, 1911. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

TERMS OF SALE

Single copy, postpaid, five cents. In the United States, Canada, Mexico, and Cuba: twenty-five copies, one address, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, single copy, six cents; twenty-five copies to one address, $1.25; fifty copies, $2.25; one hundred copies, $4.00.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Three reports from the members of the joint committee to investigate the merits of the Ballinger-Pinchot controversy have been presented to Congress. The majority report absolves Secretary Ballinger from the charges made against him by Gifford Pinchot and Louis Glavis; the minority report declares that Mr. Ballinger "has not been true to the trust reposed in him as secretary of the interior; that he is not deserving of public confidence and that he should be requested by the proper authority to resign his office as secretary of the interior"; a third report is practically in accordance with that of the minority members and in conclusion says: "He has not shown himself to be that character of friend to the policy of conservation of our natural resources that the man should be who occupies the important post of secretary of the interior in our Government, and should not be retained in that office."

Secretary of War Dickinson, in his report to Congress, referring to the fitness of the Filipino people for self-government, says: "There are very many highly educated Filipinos—many men of talent, ability, and brilliancy—but the percentage, in comparison with those who are wholly untrained in an understanding of, and the exercise of, political rights under a republican form of government, is so small, and under the best and most rapid development possible under existing conditions will for a long period continue so small, that it is a delusion, if the present policy of control of the islands by the American people shall continue, to encourage the Filipino people in the hope that the administration of the islands will be turned over to them within the time of the present generation."

The estimates of appropriations required for every branch of the federal Government during the fiscal year ending June 30, 1912, aggregate $748,414,861, and are distributed as follows: War department, $205,257,546; interior department, $180,151,875; treasury department, $141,509,997; agriculture, $19,681,066; navy department, $128,942,158; commerce and labor, $16,276,970; District of Columbia, $13,602,786; legislative, $13,426,806; justice, $10,063,576; state, $4,875,576; independent offices, including interstate commerce commission, $2,638,695; post office department proper, $1,697,400; executive, $990,170; territorial governments, $202,150.

Indictments have been returned by the federal grand jury in Michigan against sixteen firms and thirty-two individuals alleged to have obtained control of eighty-five per cent of the output of enamel iron bathtubs, sinks, lavatories, etc., in the United States. The criminal proceedings grew out of a civil suit to dissolve the alleged combination, begun by the Government in the federal court at Baltimore, hearings being held in Chicago, Pittsburg, and New York.

Chinook salmon of the Pacific coast have been established in Lake Sunapee, N. H. This is undoubtedly the result of a plant made in 1904 by the New Hampshire fish commission, the eggs having been supplied from the Government's hatchery at Baird, Cal. Encouraged by the outcome of this experiment, the commission made a plant of forty thousand fingerling chinook in Lake Champlain in the spring of 1910.

President Taft, in his message submitted to Congress, when it convened on the 6th, favored fortification of the Panama canal; ship subsidies; reciprocity with Canada; future tariff revisions by schedule; the establishment of American banking institutions abroad; consolidation of customs districts and customs collectors; reduction of the number of appeals to the United States supreme court.

Secretary Meyer of the navy recommends giving up and disposing of the naval stations at New Orleans, Pensacola, San Juan, Port Royal, New London, Sacketts harbor, Culebra, and Cavité. He finds that the average yearly cost of maintaining these stations for the past five years has been $1,672,075, while very little useful work has been performed therein.

With a view to reaching a satisfactory determination of the application of the present interstate commerce act to telegraph and telephone companies, the interstate commerce commission has just given a hearing to officials of telegraph and telephone companies, which, by terms of the law, are made common carriers.

James A. Patten of Chicago, Eugene Scales of Texas, William P. Brown of New Orleans and others have been again indicted by a federal grand jury, charged with conspiring to monopolize interstate commerce in available cotton during the last four months of the crop year ending Sept. 10, 1910.

Efforts have been begun looking toward the hope of consolidating the Boy Scouts of America and the American Boy Scouts in one great organization, which as a result shall be able to do even more effective work than the two separate bodies acting independently and as rivals.

Indictments have been found jointly charging an infringement of anti-trust laws against the Atlantic Coast Line railway, the Seaboard Air Line railway, the Merchants and Miners' Transportation Company, and two grain merchants of Philadelphia.

The adoption of an amendment giving county option in Oregon, in matters of taxation, opens the way for a possible trial of the "single tax," which many Canadian cities in a more or less modified form have adopted.

A limited parcels post for the rural free delivery routes will be recommended by Postmaster-General Hitchcock in his forthcoming annual report.

The immigration commission in transmitting its report to Congress, unanimously urges the restriction of the unskilled labor immigration.

The question of the constitutionality of the bank guaranty law of Oklahoma is before the supreme court of the United States.

J. Armstrong Drexel rose to a height of 9,897 feet in his flight for a world's record at Philadelphia on Nov. 23.

International.

In the report of the elevator commission, which was appointed by the Saskatchewan government early in the year, it transpires that, in the matter of ownership and control, the commission approves of none of the schemes that have been advocated, on the ground that they do not solve the problem satisfactorily. The commission recommends the formation of a cooperative joint stock company, to be owned entirely by the farmers of the province, and in which the government shall not be represented, but to assist which the government is to be asked to contribute financially in the form of a loan, repayable in twenty years.

The Shakespeare memorial and theatrical exhibition held in the Whitechapel art gallery during the last six weeks has been an undoubted success, having been visited by more than eighty thousand people, mostly of the poorer classes, and it has shown in a remarkable way the immense popularity of England's greatest dramatist with all sorts and conditions of men.

As a result of the extraordinary agitation in recent months by Chinese anti-opium societies, the imperial Senate has passed a resolution almost unanimously looking to the drastic extermination of the drug. The interprovincial transportation of opium will be abolished in July, 1911, and the planting of the seed and smoking will be prohibited after January, 1912.

The suit instituted by the representative of the Turkish government against the Reichsbank at Berlin to compel that institution to surrender four million five hundred thousand dollars which it has on deposit to the credit of the deposed Sultan Abdul Hamid, has been decided by the imperial supreme court in favor of the Turkish government.

The opposition to the naval program of Premier Laurier of Canada and the government, which was brought to the fore immediately after the opening of the dominion Parliament, has been overcome, and the vote on the matter assures the construction of a navy in the future.

The Swedish government commission, appointed in 1907 to examine the country's defenses, recommends an annual expenditure of about twenty-three million dollars for eight years on defenses. This will include the construction of four battleships.

The agitation for the sale of the Danish West Indies to the United States has been renewed by the islanders, and that Government has received an address in which the petitioners asked that negotiations to that end be opened.

Austria is the first European nation to make aerography compulsory on passenger ships. The government has ordered that all steamers voyaging beyond Gibraltar or Aden must be equipped with wireless apparatus.

Russian interests are behind the proposed international railway connecting Russia with Persia and the Indian system of railways.

Berlin's population on Dec. 1, 1910, has been officially announced at two million one hundred and eighty thousand.

Industrial and Commercial.

It is announced that the Cunard line has invited specifications for a vessel of even larger proportions than the Olympic. It is understood that her length will be 885½ feet and her beam 95 feet 6 inches, as against 882 and 92 for the Olympic. She will, it is said, provide accommodation for 650 first saloon, 740 second saloon, 2,400 third saloon passengers.

The official estimates of crop production for the year are: Wheat, 601,760,000 bushels; corn, 3,121,381,000; oats, 1,036,306,000; barley, 158,138,000; rye, 32,088,000; buckwheat, 17,084,000; potatoes, 328,787,000; flaxseed, 15,030,000.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL—WATCH" JESUS

[From *The Christian Science Monitor* of Dec. 8.]

MARY BAKER EDDY.

AFTER services attended by her family relatives, the members of her household, officials of The Christian Science Church and Publishing Society, and her personal students residing in Greater Boston, the body of the Rev. Mary Baker Eddy, Discoverer and Founder of Christian Science and author of its text-book, "Science and Health with Key to the Scriptures," was placed today in the receiving vault at Mt. Auburn cemetery.

The funeral services at the Chestnut Hill home at eleven o'clock were simple and were conducted with quiet dignity. A great hall divides the house. At the left are two parlors, and in the rear parlor, in the bay window, was the casket of massive bronze containing the body of Mrs. Eddy. Upon the casket was a bunch of pink roses from the members of the household. This was the only floral offering to be seen. The casket was opened, so that all might see the well-known face before the journey to the cemetery. Mrs. Eddy's son, grandchildren, and adopted son, who had a view yesterday, were also in the line that filed past the casket today. In the rear of the hall Judge Clifford P. Smith, First Reader of The Mother Church, who conducted the services, was stationed. Those invited to the services were in the hall, the front parlor, and the library, to the right of the entrance. Grouped on the second floor at the head of the wide staircase were the members of Mrs. Eddy's household. The members of the family were in the room where the casket rested. The old-rose draperies harmonized with the wall decorations, and the soft light of day illuminated the surroundings.

Among those in attendance were Mrs. Eddy's son, George Washington Glover of Lead, S. D., his daughter, Mary Baker Glover, and his son, George Washington Glover, Jr., Dr. E. J. Foster of Waterbury, Vt., Mrs. Eddy's adopted son, and other relatives, including Gen. Henry M. Baker of Bow, N. H., Mrs. Eddy's cousin; John B. Baker of Concord, N. H., another cousin of Mrs. Eddy, and his son Rufus; Calvin A. Frye, Mrs. Laura Sargent, Adam H. Dickey, the Rev. I. C. Tomlinson, Mr. and Mrs. William R. Rathvon and Mrs. Martha W. Wilcox, members of Mrs. Eddy's household; Josiah E. Fernald of Concord, N. H., one of Mrs. Eddy's trustees; Archibald McLellan, Stephen A. Chase, Allison V. Stewart, and John V. Dittemore, of the Christian Science board of directors; William H. Baldwin of New York, President of The Mother Church; Alfred Farlow, committee on publication of The First Church of Christ, Scientist, in Boston, and a number of Mrs. Eddy's personal students. In all about one hundred and twenty persons were present.

Judge Smith began the services by the reading of a Lesson-Sermon composed of selections from the Bible and correlative passages from "Science and Health with Key to the Scriptures" by Mary Baker Eddy. The Lesson-Sermon was as follows: Psalms xci., 1-4, 9-11, 14-16; John xiii., 34, 35; John xiv., 15-27. "Science and Health with Key to the Scriptures," page 410, lines 3 to 19; page 57, lines 23 to 30; page 574, lines 27 to 30; page 60, lines 6 to 16; page 66, lines 30 to 1 next page; page 265, lines 23 to 30; page 598, lines 23 to 30; page 516, lines 9 to 23. This was followed by silent prayer and the repetition of the Lord's Prayer by all present. The poem "Mother's Evening Prayer," by Mrs. Eddy, was then read by Mrs. Carol Hoyt Powers, Second Reader of The Mother Church.

This concluded the services, and the casket was then carried to the hearse in waiting, and the journey to Mt. Auburn cemetery was begun. The honorary pallbearers were: The Hon. John L. Bates of Boston, Edward P. Bates of Syracuse, N. Y., Arthur Brisbane of New York, Judge Charles R. Corning of Concord, N. H., Frederick Dixon of London, the Hon. Samuel J. Elder of Boston, Mayor Charles E. Hatfield of Newton, Mass., William B. Johnson of Boston, Albert Metcalf of Boston, and Gen. Frank S. Streeter of Concord, N. H. The active pallbearers were: Bliss Knapp, William Farlow, James A. Neal, Lewis C. Strang, the Rev. William P. McKenzie, Thomas W. Hatten of Boston, John C. Lathrop of New York, and George H. Kinter of Chicago.

There was no service at the receiving vault, other than the reading of the 23rd Psalm by Judge Smith and the last verse in Jude: "To the only wise God our Saviour, be glory and majesty, dominion and power, both now and ever," given as a benediction. The casket was then taken within by the pallbearers, the vault was sealed, and there a guard will be maintained until a mausoleum has been built on the plots chosen for the final resting-place of the body.

EXCERPTS FROM EDITORIAL COMMENTS.

[*The Woman's National Daily*, St. Louis, Mo.]

It is peculiarly human to venerate and sanctify our ancestors and stone those who seek to better life while we are living it. But a comparatively few years ago a man died whose life had been spent in causing the world to swim in blood and misery. The world trembled and gasped in relief as he died, and then proceeded to glorify him as it had groveled at his feet while he lived. He had emptied a million homes of their breadwinners, caused more widespread misery and distress than any man who ever lived, and built a world empire which crumbled before he was gone; yet when Napoleon Bonaparte died all the world bowed its head in tribute to the beating he had given it.

Two nights ago a frail little old gentlewoman died who, too, had built an empire, but not of blood and misery. A million hearts silently mourned her for a moment, but in accordance with her own teachings it was only a tribute of love and loyalty for the brighter, better view-point of their own life and death she had taught them. There was no pomp; but a few brief words following the usual services, and the announcement that a loved and revered Leader had exchanged a mortal form for an immortal one. She had shed no blood, destroyed no homes, shackled no nation, but what she had done was to take away a little human

Copyright, 1910, by The Christian Science Publishing Society.

Digitized by Google

misery and substitute a happier, better attitude toward life. She taught nothing new, for what she taught was but a different view of the first thing—the beginning and the end. We may differ from that view, but none even now can doubt but that she was one of the most remarkable souls that has appeared in human guise.

We cannot know how much of such rare human lives is abnormal genius and how much a message and a lesson put in understandable, humanly tangible form by divine Love. Certainly, whether we agree with teachings or reject them, the lesson is the same and the world grows better with each such lesson. We stoned her for a time, as usual, and perhaps she will be soon forgotten, or perhaps future generations will cloak her with divinity. At any rate, the world owes that frail woman a greater debt than it owed the world-conqueror, and if her works be of life they will live; and if not, they will die, but the fact that even a single life has been made better will not be lost in the world's melting-pot from which through countless centuries a great purpose, beyond our human understanding, is being worked out. Some time in the future, perhaps, the race will stone the bloody monster who seeks to make it swim in blood to gratify his own lust, and honor the pure of heart, who seeks to brighten it; but we are not yet quite that civilized. I have never read Mrs. Eddy's book or teachings, but I have seen some results of them which compelled both honor and respect, and I believe that all are agreed that a reasonable way of judging a tree is by its fruit. Nothing could have been finer than the way of her going and its reception by the multitude whose Leader and loved teacher she has been.

[*Boston Globe.*]

The deep sorrow felt by Christian Scientists over the loss of their Leader, Mary Baker Eddy, will be shared by people of broad sympathies outside that church who regret the passing of any notable figure. The impulse toward higher standards of conduct in life which had its birth within her mind will continue to live and influence humanity.

Within a generation Mrs. Eddy founded and established a sect, and lived to see her teachings accepted by many peoples scattered throughout the entire world. The ethical part of her faith, pointing to rules for every-day conduct, has found general favor, and it is chiefly the therapeutic side of her teachings that has aroused criticism. Whatever one's view on religion may be, few will care to deny that Mrs. Eddy's influence has been directed toward the betterment of those that she intimately touched. It must have been singularly gratifying in the closing days of her life to realize how widely her belief has been adopted, for few men and still fewer women live, as did Mrs. Eddy, to see their fullest hopes realized. This is not an appropriate time to set an estimate upon her right to enduring fame, which can better be judged by posterity, but the present-day testimony must be one of respect for a woman of remarkable mind and of unusual ability, who, after a long and active life, spent her closing years at peace with the world. She has now passed on, leaving behind her an institution that she created.

[*Concord* (N. H.) *Monitor.*]

Whether one agrees or disagrees with the Christian Science faith in its concept and practice, few, we think, will deny to the Founder of that church the laurels of greatness and the right to be called "a wonderful woman."

Study the story of her life as written by friend or foe,—the impartial pose toward her seems to have been a very difficult one to maintain,—and every careful and thoughtful reader must be impressed with what Mrs. Eddy accomplished in her old age, for the dawning of her success was not much more than twenty-five years ago and she was eighty-nine when she died. The permanence or brevity of the spiritual empire she created, the extent of her influence upon modern thought and life, will be justly valued soon by time, the great appraiser. Whatever that verdict may be, the memory of Mrs. Mary Baker Eddy will long be cherished in Concord, the city which by her and through her has been so much beautified and benefited.

[*Chicago Tribune.*]

With the death of Mrs. Mary Baker Eddy there passes from this world's activities one of the most remarkable women of her time. Whatever the degree of faith or unfaith with which the individual may look upon what she taught and what was accomplished by or through her teachings and her influence, the amazing and well-nigh miraculous achievement set down to her account cannot but impress the imagination and arouse our profound consideration. She has builded in her own lifetime a great religious institution, a faith wide-spread and held by hundreds of thousands of believers. And not only is the number of her following notable, but likewise its character. Mrs. Eddy has not swept into her church myriads of the unthinking and uneducated. On the contrary, her teachings have appealed to the highest classes, and the level of the character and intelligence of the Christian Scientists is everywhere high.

As to the right value of Mrs. Eddy's message, the permanence, importance, and extent of the church she founded, no contemporary estimate or prediction is worth much. A hundred years from now it will be easier and safer to evaluate her teachings, the worth of the work she did, and her own place among the men and women who have risen to lead and influence powerfully and extensively the lives, the thought, and the spirit of their fellow-men.

[*Boston Post.*]

The passing of Mary Baker Eddy removes one who for more than a generation past has been a force of exceptional magnitude in the spiritual life of a large following. The cult which she introduced, and of which she remained the acknowledged and venerated head and exponent to the very end of her long life, has in it elements which have appealed strongly to many people.

The record of the Christian Science church is phenomenal in the history of modern religious movements. It is hardly thirty years since The Mother Church was organized here in Boston, and today its branches number more than one thousand and its congregations are established in the eastern as well as the western hemisphere. This has followed the quiet, persistent spread of those ideas of which Mrs. Eddy stands as the author. It is not necessary that one should hold agreement with the postulates of Christian Science to recognize this marvelous extension of the cult and to appreciate the fact that Mrs. Eddy has exercised a tremendous power in directing it. She pointed out the applications, as she conceived them, of religious ideas nineteen centuries old, in their relation to the conditions of life among the people of today.

As was to be expected from the range of the doctrines propounded by Mrs. Eddy, strong antagonisms were aroused, and it is in meeting them with steady calmness that she demonstrated the stability of her own personal faith and gave inspiration to those who accepted her leadership and stood with her. Even those in emphatic disagreement with Mrs. Eddy's doctrines may well recognize in her a remarkable personality.

[*New York American.*]

So wide-spread is the fame of Mary Baker Eddy that there is no country in the world that will not take note of her death. Her extraordinary influence upon her generation will everywhere suggest comparisons or contrasts between her work and that of the seer who died in Russia a few days ago. Count Tolstoi spoke to the intellect and

Digitized by Google

Mrs. Eddy to the heart. Nobody has any right to doubt the sincerity of either; though every one will think and feel as he pleases or as he can—concerning their wisdom and inspiration.

Thousands of homes in America and elsewhere have felt the cheer of her brave spirit—and will cherish her memory with the feeling that it is a reviving and inspiring presence. But no reflective person can doubt the significance of the great rally of the human mind against the discouraging materialism of the nineteenth century—a revolt of the soul against mechanism and fate, in which this woman played so remarkable a part.

[*Chicago Journal.*]

The death of Mary Baker Eddy well might serve as inspiration for a new beatitude: Blessed are they who need no monument; their names are graven on many hearts. Opinions may differ as to adequacy of the Christian Science faith to answer the full requirements of the human soul; but few deny that to hundreds of thousands of devoted followers the teachings of Mrs. Eddy have been a hope and inspiration.

Wisely anticipating the time when she could be with her followers only in spirit, she recently had withdrawn herself as far as possible from the details of church management. Consequently, the organization that she has perfected will continue to perform its functions. Her life-work was well completed and will endure.

[*Montreal Gazette.*]

Of the many women who have led religious movements in modern times, none attracted more attention or established a wider influence than Mrs. Mary Baker Eddy, who died at her home near Boston on Saturday night. Mrs. Eddy's followers or fellow-believers were not generally of the class that is subject to emotional excitement. They were largely of superior intelligence, readers, and always ready and able to defend the doctrines they accepted. They maintain in Boston a daily paper, which in its breadth of views and ability to discuss large questions has few superiors in America. The Christian Science people have been scoffed at and laughed at, and some of them, going to extremes, have suffered harder fortune. Their story, like the story of many another religious movement, may, more than anything else, mean that the human heart longs for the preaching of faith, and turns to whoever can preach it with earnestness and sincerity.

[*Grand Rapids* (Mich.) *Evening Press.*]

If history makes clear any one fact, it is that contemporaneous judgments are often inaccurate. The perspective of time is necessary to a calm analysis of the influences which shape thought. Posterity more than once has rejected those acclaimed prophets in a bygone day and crowned those who were overlooked by their fellows.

The axiom will hold good in the case of Mrs. Mary Baker Eddy, Discoverer and Founder of Christian Science, who died Saturday evening. The world is too close to her life and her work to give an unbiased decision as to their significance. On the one hand are her thousands of followers, scattered in almost every civilized land, who believe she has given to the world a real message of peace, hope, and ultimate freedom from the ills to which flesh so long has been heir. On the other hand are her many critics, some bitter, some mild, but all denying her doctrines.

Whatever the future has to tell of Mrs. Eddy and her teaching, and aside from whatever opinion one may have as to the tenets she preached, it is certain that she has been a powerful factor in current thought. The growth of Christian Science as the sincere belief of men and women of varied classes, the hundreds of magnificent churches which have been reared by her disciples, and, most of all, the enormous circulation of her book, "Science and Health with Key to the Scriptures," proves that. Through Mrs. Eddy thousands believe they found the way to health.

If any one influence which she exerted should be remembered, it is that she taught optimism. Christian Scientists are sunny, hopeful, cheerful. The Leader taught that brooding on the ills of life is a sin, and this wholesome doctrine has remade chronic grumblers and fretful invalids, loaded under a burden of imaginary ills, into bright, active, and helpful men and women.

[*Cleveland Plain Dealer.*]

The death of the Founder of Christian Science removes from the world one of the most remarkable women of all time. Her career commands admiration, no matter what opinion may be held of her teachings. Mrs. Eddy founded a religious sect that during her lifetime multiplied its proselytes till it has become a great force in American life. She retained her position as sole Leader, and was looked up to by her followers as the sole source of inspiration. Virile and vigorous, she was a natural commander, a natural organizer, a woman who displayed intellectual qualities of the highest order. The work that Mrs. Eddy has done will remain as her monument. Christian Science will not perish with the death of its Founder. It has assumed proportions that assure permanency.

[*Baltimore* (Md.) *Sun.*]

Mrs. Mary Baker Eddy, Founder of Christian Science and author of many books treating upon that subject, is dead at Boston, having some months ago passed into her ninetieth year. Mrs. Eddy was one of the remarkable women of her time. A sickly, weak child, she grew into a frail woman who seemed to have but a slender hold on existence, and yet she lived to an unusual age, a life full of work and teeming with results. Establishing a church, she remained its head to the time of her demise, managing its affairs with great executive ability and penetrating judgment. She also amassed a large private fortune, which she seems to have handled with fine business acumen. Whatever may be the fate of the church she founded, now that her forceful hand is removed from the management of its affairs, there can be no doubt of her wonderful administrative ability, her keen insight into human nature, and her tremendous capacity for work. Her place in history as one of the really extraordinary women of her day is secure.

[*New York Morning Sun.*]

The creed which Mrs. Eddy built in the minds or hearts of her multitude of disciples has one aspect or incident which seems to us to deserve universal recognition. It is apart from any question concerning the theology, the pathology, the psychology of her doctrines, and apart even from the facts of her personal career.

We are thinking of the astonishing influence she exerted in thousands of homes for the amelioration of life and manners in some of the details of family and social intercourse. She taught cheerfulness of spirit, and observation encourages the belief that the great majority of her followers either became more cheerful, both subjectively and as consistent examples to those around them, or with more or less success simulated a modification of temperament in that respect, which amounts in practice to nearly the same thing. She taught charity in judging the deeds and motives of another—who does not know of more than one case in his own circle of acquaintance where apparently hopeless vinegar has become oil because of her? She went so far as to devise a vocabulary of euphemism, which proceeds in the right direction, no matter how you may regard some

Digitized by Google

of its extreme manifestations; for there are many habitual and conventional asperities of expression which serve beyond doubt no better purpose than to intensify the sentiments they denote.

It may be said that this is nothing more than an insistent application of principles common to all the forms of the Christian faith. Granting that, is it any the less the duty of candor to recognize the effort and results and to acknowledge the service?

[*Morning Telegraph*, New York City.]

It is satisfactory to know that the great work started by Mrs. Mary Baker Eddy, who died last Saturday, will go on. The world owes much to the woman who apparently discovered a great truth, and who at least has raised thousands out of the slough of despond, converted a multitude of hypochondriacs into hopeful and cheerful persons. Mrs. Eddy lived until she was in her ninetieth year and never wavered in her deep-rooted faith, and died affirming it. So thoroughly had she instilled her views into her followers that her work will live after her, and without doubt the Christian Science church will expand, gather in disciples, and continue to do the good work.

[*Manchester (N. H.) Union.*]

Mary Baker Eddy, who died on Saturday night at a ripe old age, was a woman who had made her mark upon the time in which she lived. It is as idle as it is contemptible to refuse to recognize facts, and the church which she founded is a substantial fact indeed, in whatever light it may be viewed. That a woman at middle life should have gathered about her a little band of pupils and should have so impressed her teachings upon them that they became her devoted disciples, that she should have lived to see that little company increase and expand until it became a religious organization counting nearly a thousand churches and more than eighty-five thousand members in this country alone, and with branches in most of the countries of the world, is a fact which may well attract the interest and hold the attention of any one who desires to be well informed and who professes to hold an open mind.

It is a development which must be admitted to be the more remarkable because it came in a period of the most notable discoveries in medical science. At the same time that the effect of certain germs upon the physical organization was beginning to be understood, Mrs. Eddy and her followers boldly and persistently maintained that disease is more of the mind than of the body. Nor were those followers gathered only from among the ignorant and the credulous. The character of the members of Christian Science churches is such that ridicule may be said to have become itself ridiculous, and it has well-nigh ceased.

[*Chicago Post.*]

The passing of Mrs. Mary Baker Eddy brings to a close a life story that is one of the most wonderful that this country of unlimited possibilities has to show. Out of nothing that is physical, no great fortune, no industrial invention, no inherited opportunity, Mrs. Eddy built up a great career. It is the greater because its greatness was not for herself but for the church which she founded. She took from the Bible one of the fundamental commands which modern Christianity had overlooked, the solemn injunction to "heal the sick." This, with an inspiration that burned steady and serene for long years, she put into a faith and a creed that has brought happiness and health and the active religious spirit to thousands upon thousands of her fellow-beings.

This accomplishment cannot be denied her, even by those to whom Christian Science is most distasteful. Its proof lies first in the growth and solid strength of the Church of Christ, Scientist, and secondly in the character and bearing of the members of that church. The stately church buildings in this city and its suburbs, and the constant additions to their number, give concrete evidence of this marvelous development. But more significant than the church buildings, more meaningful than the numerical strength of the church, is the character of its congregations. Without humbug or sentimentalism, any outsider can and must admit that Christian Science people are *good people*. They not only believe in their church and attend its meetings with a passionate faithfulness that other churches envy, but they also carry their faith with them into their daily lives. By its very nature they have to. For if Christian Science means anything to any man or woman, it must mean everything.

It is this inherent strength in the fundamental idea of Mrs. Eddy's church that will hold it together even after her hand has been removed from its direction. The faith will still live. Only by a full realization of this fact can the outside world gain any comprehension of the calm exaltation of spirit with which Christian Scientists will receive the tidings that the earthly career of their Leader has closed. Only in this way can it understand dimly their fine and vivid belief that "there is no death" in the old pagan sense of that solemn word.

[*Boston Traveler.*]

Mrs. Eddy has been one of the world's greatest benefactors. Her followers will say more than that, perhaps, but there is no reason why even her enemies should say less. Regardless of differences of faith or philosophy, the world must recognize, in her work, a vast contribution to human happiness. Certain it is that Mrs. Eddy found the world full of doubt and despondency, and gave it a larger measure of brightness and hope. She taught the weak that they need not be weak, the sick that they might be well, the suffering that they had it within themselves to end their wretchedness. Those who were ailing, physically or mentally, were enabled, as she herself had been, to become strong in soul and body. Neurasthenia and melancholy yielded to the gospel of optimism.

Call it what you will, it is a fact that Christian Scientists, as a class, are healthy, hopeful, happy, and prosperous. And Christian Science modes of thought have permeated the thinking of the world, outside the pale of the church. It is a great thing to be a teacher when the teaching bears such fruit. And as Mrs. Eddy, full of years, goes to her rest, the world is full of gratitude for the good she has done.

[*Boston Transcript.*]

It is peculiarly characteristic of Massachusetts, so generally derided as hard-fisted, unsentimental, and ultra-practical, that here spiritual and emotional ideas take strongest root. Not ideas and practices that connote spectacular demonstrations, but those that lie close to the fundamentals of life. This fact has led to the sneer at Boston and Massachusetts as the home and favorite haunt of fanatics, and such zealots are rather pleased to be so called. The anti-slavery propagandists delighted in the term. So did the spiritualists, and we have not known much resentment of it from the devotees of the cause whose Founder passed on Saturday night. Of all these causes, Christian Science has flourished most and most amazingly. And that growth has come in a period that we are used to calling especially commercialized, narrow, and sordid. Indeed, many persons regard its success as due almost wholly to a natural revulsion or at least reaction from this overmaterialistic public spirit. That may account for its growth, but it can hardly account for its origin, which was certainly due to the genius of one woman.

What a rise and growth it has had! It is the only world

Digitized by Google

religion, so far as we can now remember, that had its rise in an English-speaking country, and is the only new one that has been created for centuries. Wonderful spiritual forces must have been set at work to accomplish this marvelous result. Somewhere in it must be germs of truth. Otherwise its story would be utterly inexplicable. No other recent cause has had such tremendous territorial extent, either in this country or in the world. All these things must be conceded by those to whom Christian Science is utterly enigmatical or anathema. These cannot understand the theory of its application, but they must admit the beneficent results that often come from this treatment and they recognize the satisfaction which Mrs. Eddy had a right to feel over the triumph of her cause. Few founders of a religion have been so rewarded in beholding the tangible success of their labors. Most of these founders died in ignominy and defeat.

[*Springfield* (Mass.) *Union.*]

No just or accurate estimate of the character and work of Mary Baker Eddy is possible at this time, and anything that may be attempted in that direction must necessarily fail of the approval of a very considerable number of people. About no personage of her generation has so much and such bitter controversy raged as around the Founder and Leader of the organization and doctrines known as Christian Science, who has just died. The facts of her life and the very question of her existence in recent years, as well as the value of her teachings and example, have been a subject of fierce and acrimonious contention. Many years must elapse before an adequate and fair summing up of her work can be made. But, from whatever view-point one regards the subject, it is beyond the possibility of dispute that she was one of the most influential as well as one of the most remarkable figures of the age.

In the last few years the power and vitality of the Christian Science movement has been shown more clearly than at any previous time. However much Christian Science has been overestimated as a reformative and constructive agent, however strained or unsound some of its tenets may be, it has unquestionably been a force to influence thought and religious institution, and its effect has been felt far beyond the membership of the Christian Science organization. The dignity of her bearing, the patience and self-control she has displayed in the most trying emergencies, have been no slight contribution to the success of her cause. To have preached uniformly the doctrine of peace and love to so many listeners, year after year, is in itself a great thing. In the element referred to as "healing" Mrs. Eddy seems to have touched a spring that is giving religion a new impulse in modern life. How deep and how genuine this really is, must be left to the future to determine.

[*Lynchburg* (Va.) *News.*]

Mrs. Mary Baker Eddy may properly be estimated as one of the most remarkable women of the age. As the Founder of a new religious cult; as the projector of what she believed was the true Science of Christianity; as the builder of a great church with ramifications reaching all over the nation and beyond its borders, she has long stood out as a bright and shining target for the arrows of vituperation, of ridicule, of scorn, of implacable hostility, of the bitterest of cynicism and the harshest of jeers. It was because she survived these things; because the storm and tempest which beat upon her availed not to drive her from the doctrines for which she stood; because amid the stress of almost superhuman trial, and the fierce avalanche of opposing arguments, she serenely held safe poise of mind, and fealty to conviction, and fidelity to purpose, that she should be accounted great. Though everything in which she believed and which she taught should hereafter fall and crumble beneath the assaults of logic and research and demonstration; though with her death should also be witnessed the decadence and the early death of Christian Science,—things which we by no means predict,—yet Mrs. Eddy's place in history would be secure as one who achieved to tremendous purpose; who wrought mighty results; who was revered by vast hosts of intelligent, God-fearing men and women and children as the mighty mistress of a cause that was noble in objective and good in inspiration; that accomplished much in affording relief from human ills and the peace of mind for those who craved and needed helpful ministration.

It is not necessary to believe in Mind-healing as Mrs. Eddy believed in it, to accord her this distinction. It is not necessary to give intellectual acceptance to the creed of her church, to concede that Mrs. Eddy nobly lived and worked and aspired,—and that she deserves to be ranked among the most striking, the most interesting, and the strongest figures that ever graced and distinguished the annals of her sex.

[*Montreal Star.*]

Mrs. Eddy's death leaves her work, which was that of building up the Christian Science organization, well entrenched, with all the necessary and visible signs of a thoroughly officered going-concern. There are churches in abundance, a great newspaper, bands of devoted adherents, whose "daily walk and conversation" are examples to the best communities in the world. The movement has spread so that its followers may now be found in almost all of the English-speaking countries, and to a lesser extent in the rest of the world. With Mrs. Eddy's disappearance, in all human probability, the course of her followers will vary little, and the cause she espoused will probably suffer no immediate negation.

[*Atlanta* (Ga.) *Constitution.*]

One need not be a subscriber to or even a sympathizer with the creed of Christian Science to recognize its Founder, Mrs. Mary Baker Eddy, as a remarkable and achieving figure of history. Founders of religions and creeds there have been in plenty, but not in our day, at least, has there risen one to build so stanch and so phenomenally an increasing following as that which pays tribute to Mrs. Eddy as its originator and Leader.

When all is said and done, it remains that this woman taught and achieved in large measure that conquest of the flesh by the Spirit that is all too sadly needed in an age engrossed with the lure of substance. She disseminated happiness and cheerfulness among men and women, inspired hopefulness to those that were sick of heart and gave many a battle-weary spirit courage to face once more in the direction of the dawn. By whatever term it be described, that accomplishment stands for the furtherance of good and the encouragement of uplift. And, on the personal side, there are elements of greatness in a woman who could win and so persistently hold the love and absolute confidence of a following mounting into the many thousands.

[*Inland Herald*, Spokane, Wash.]

The death of Mary Baker Eddy removes from earth one of the most remarkable characters of history. In a full and consecrated life of nearly ninety years she accomplished two things, either of which would have crowned her with immortality. The American business man is not only overworked but overwrought and overworried. His practical training affords him no philosophy. His one need is the serenity and relaxation of mental rest. He needs a mental anchorage that at the same time sustains and buoys, but across the anchor which he throws out into the unknown seas must be written "absolute certainty." There must be no questionings.

Christian Science affords its believers just that. Its car-

Digitized by Google

dinal doctrines of the final supremacy of eternal good and the swift doom of imagined evil are doctrines which, put into practice, confer a calm serenity and unshakable confidence that is only good. Christian Science is a practical, inspiring religion. It was born of a woman, and it has been baptized in the tears of grateful millions. In its promulgation Mary Baker Eddy has answered the cry of thousands of tired hearts. In this, if in nothing else, she has been a great benefactor to the world.

Her second great achievement has been the organization of a mighty church in a single lifetime. She accomplished in one generation that which followed only centuries after every other great religious leader. No other founder of a great church ever lived to see his work complete. Neither Confucius, Gautama, or St. Augustine ever beheld the fruit of his teachings materialize as Mary Baker Eddy did. Few will mourn the death of Mary Baker Eddy as other deaths are mourned. Her own doctrines preclude that. Moreover, her personality was something apart, always above and apart, and but little known and understood. But, whatever the verdict of the ages shall be, Mary Baker Eddy today sits enthroned in the hearts of thousands and thousands of admiring followers, her remarkable accomplishments an epitome of one of the most extraordinary and potent personalities the world has known.

[*Butte* (Mont.) *Evening News.*]

The United States has lost, in the death of Mary Baker Eddy, one of the truly remarkable characters of the century. That in this practical age the beliefs and theories of Mrs. Eddy interested and held nearly a million people sincere and devoted to their Leader, and that this fidelity continued year after year with increasing force, demonstrates not only that Mrs. Eddy was a woman of superior intellect, but that she was one of innate goodness to have stood the test of time. Mrs. Eddy's accomplishment is remarkable in that it was attained without evangelizing or proselyting. Her church might be called a natural growth, and it grew with the dignity which characterized the woman herself. It had chiefly to contend with ridicule of the practical class, whose materialistic natures could not and would not accept the teaching of the woman. Some responsive chord her teaching certainly found in the public mind, and nothing has ever shown that her influence was other than good. Even if Mrs. Eddy accomplished nothing more, she effected in her followers a mental harmony which in this busy land, with its tendencies to discord, was in itself—to those who needed it—a benison.

Mrs. Eddy's disinterestedness stands out prominently. She is free from the accusation of promoting her own worldly affairs at the expense of her zealots. The fruits of her years of labor revert to the organization she planned and perfected. Mrs. Eddy was the most striking example the century has had of the power of repose; hers was not a church militant and her church was the antithesis of that of the evangelical whirling dervish whose creed is as transient as it is tempestuous. From all walks of life, high and low, Mrs. Eddy recruited her army of followers; hers was no appeal to any particular class, nor to any particular nationality, and in point of universality in America the sect was in a class by itself. Few will advance the theory that Mrs. Eddy has not left the world better than she found it.

[*Kennebec Journal,* Augusta, Me.]

In the death of the Founder of Christian Science, America has lost another of its greatest women. However much we may have disagreed with her or have criticized her utterances, we can but admit her greatness and the remarkable power she had of leading. She founded a religious sect that has shaken the foundations of every evangelical church in the country. Her life has added one more proof that humanity longs for a belief in the spiritual, for trust in a higher power and for visual evidence of its agency. Mrs. Eddy's religion appealed to the sick, the afflicted, and the hypochondriac, where others appealed to the outcast and the forsaken. She won largely, and the force of her character will be felt in her church for all time. Regardless of the merits or demerits of Christian Science, it has become an unmistakable influence of the century. Mrs. Eddy built a church which has drawn to it persons of culture, education, and property, and we have no doubt that it will go on.

[*Philadelphia Public Ledger.*]

Whatever may be the opinion of the world at large upon the doctrines inculcated by the church of which she was the Founder, it is a question whether Mary Baker Eddy in the building up of this organization of half a million fervently loyal adherents has not outdone the achievement of any other woman who ever lived. There has been many a woman who "led her soul, her cause, her clan" to the accomplishment of a great humanitarian undertaking—who notably contributed to the promotion of temperance, to the amelioration of the lot of slaves or prisoners, to the effectiveness of missionary labor in the domestic or the foreign field, or to the alleviatory ministration to invalids in hospitals in war-time or in times of peace. The world has quite recently been called upon to mourn the passing of two such women—Florence Nightingale and Julia Ward Howe, both of whom were of approximately the age of Mrs. Eddy when they obeyed the summons of the invisible. But Mrs. Eddy was more than philanthropist and humanitarian. To create such a church and to inspire a following so numerous and so devoted, Mrs. Eddy must have been a woman of altogether extraordinary personal endowments.

[*Denver* (Col.) *Times.*]

Mrs. Eddy appeared in an age when men had begun to cast off the outward observance of religious teachings. Success was the fetish men were worshiping. When she first spoke the greater part of the world smiled and shrugged its shoulders. What did a woman know of soul life? But as Joan of Arc led a nation out of bondage, Mrs. Eddy pointed the way to a delectable land of Spirit in which hundreds of thousands have found consolation. We may not agree with the declarations of Mrs. Eddy; we may not be of the opinion that they will be as universally accepted as some of the older religious ideas, but we do think that Mrs. Eddy deserves a high place in the estimation of mankind. Any one who has endeavored to make this earth a more pleasant abiding-place deserves well of his fellowmen. Of late years much mystery enveloped Mrs. Eddy. The charge was made that she had died and that an impostor was parading in her place. However, the world had come to accept the statement made by those closely associated with her, that she was still among the living. The announcement of her death brushes aside all former declarations regarding her material condition.

Hypatia helped rekindle the waning fires of culture; Queen Victoria and other splendid women have builded material empires, but as the world hurried on its endless journey the religious life of the people has been carried unfalteringly by women. And Mrs. Eddy stands as one who has made sweetness and light enter far places.

[*Rocky Mountain News,* Denver, Col.]

Christian Science is a solace, a support, and an inspiration to hundreds of thousands of human creatures. To them it is more precious than their daily bread. In its comforting power to its followers it is entitled to the world's reverence; and therefore the name of its Founder must claim the world's respect.

Digitized by Google

Happily Mary Baker Eddy lived long enough to see the sneer give place to admiration. The new religion, or philosophy, or "Science," was compelled to make its stand in a nation much given to scoffing and in an age of free debate. That it has survived and flourished, that its Founder overcame all evil report, must be attributed to the deep spiritual effectiveness of the personality and the absolute answer of the faith to the needs of its devotees. No one now doubts that Mrs. Eddy sincerely believed in her mission to mankind. The fair-minded world acknowledges that she possessed a rare endowment of inward vision and external influence, and that she sought to bless her fellow-beings with her "Science" of absolute health. In that bestowal, her labor was a "marvelous work and a wonder." And through unnumbered generations and by countless millions of devotees she will be revered as the most inspired woman of all time.

There is always a possibility of schism in a church when it comes to its first loss of leadership. But in the case of the Christian Science cult such division is not now probable. The creed and practice have been settled within well-defined lines; the membership is an intelligent democracy; and not even ambitious or avaricious rivalries would be able to disintegrate the fabric. From the days of popular "exposure" and ridicule, Christian Science has moved quietly and efficiently onward to its present high station. It has brought peace to many tempest-worn lives; it has given health to many pain-racked bodies; it has conferred content upon many tortured minds; it has established faith and cheerfulness, where formerly was despair of this world and doubt of the hereafter. For all the beauty and usefulness which it has given to a million lives, the faith is to be revered and the name of its Founder is to be held in grateful remembrance.

[*The Asheville (N. C.) Citizen.*]

The death of Mrs. Eddy marks the passing of a most remarkable figure in the religious world. Wielding a wonderful influence over a great army, and it was undoubtedly an influence for good, it being reflected in the lives of thousands of her followers, she needed no brass bands to make the world conscious of her presence. While many there are who could not fathom the depths of Mrs. Eddy's teachings, few have denied her sincerity. Her writings bear the imprint of the close student of God and man. Her gospel was largely one of sunshine and mental uplift. Of her home life we know but little, but from all accounts it was an exemplary one.

Mrs. Eddy was also a woman of rare moral courage when we consider that forty years ago she founded a creed at total variance with all established beliefs. The doctrines she enunciated at that time had no other adherent than herself. The scorn and ridicule which greeted her first book has given place to a wide-spread interest, and a great portion of humanity today believes that the pill and potion are not essential to the cure of disease.

[*News Tribune*, Duluth, Minn.]

Not Christian Scientists alone, but people of all faiths and no faith, join in tributes to Mrs. Mary Baker Eddy, one of the most remarkable women the world has produced. What the doctrinal teachings of Christian Science are, we do not know; we do not know wherein its interpretation of the Bible differs from that of the evangelical churches. We do not understand the Principle underlying its healing; we cannot, to our own satisfaction, differentiate between the subconscious and the divine Mind. But this is known to all, that Christ gave to his disciples power "to heal all manner of sickness and all manner of disease," and this power was not limited to the twelve.

Moreover, its teachings are accepted, not by cranks and faddists, not by those always seeking something new, but by the educated, the cultured, the thoughtful, and the student. Whatever its secret may be, it has produced a wonderful faith, a marvelous spirit that shows in a power of self-command, of self-denial, of sympathy, and helpfulness that is truly Christian. It has brought a new power into the world, which has gained its way against the fiercest and most stubborn prejudice, against ridicule, scorn, and almost ostracism, until it has compelled recognition and respect, with the acknowledgment of its permanency. Today, while millions profess open allegiance to Christian Science, many more express a sympathetic interest in it. From a mysterious, sort of uncanny, and somewhat dangerous cult, allied with the black art, to be approached only by those insulated in dread and suspicion, it has taken its place as a faith and as a church.

Mrs. Eddy's dominance has also been resented. She has been misinterpreted, maligned, and persecuted. Volumes have been written against her. Her power as an executive, her administrative ability, and her gift of organization were as wonderful as the faith she founded. Yet that she built her structure on broad, sound, permanent administrative principles, instead of founding a house of cards on shifting sands, has been the cause of most of the attacks personal to her. In this, however, her experience was no different from that of any other great and strong personality in the world's history, and few have left to the world a greater heritage.

[*Milwaukee Daily News.*]

History is full of the tales of women whose influence has been a power in the affairs of men. But, strange as it may seem, by far the greatest number of those who have risen on the written pages of history attained their power through charms of person and through their influence with men of power. But the leading woman of her time, and among the greatest in history, rose to her high place through the power of that which is most eternal in mankind—thought.

Mrs. Eddy was not born to power, nor did she seek the influence of those who were so born. By the force of the thought that she expressed and lived has she attained the high place she holds today, and by its force will she live. No matter what individuals may think of the system of thought that bears her name, it is an acknowledged power for good among mankind, and thousands have found comfort and relief through its teachings.

[*Times*, Louisville, Ky.]

The death of Mrs. Eddy is mourned by a million of her followers. We are too near in time to measure in full the meaning or the value of her work, but the force of her personality and the influence of her teachings have been established permanently beyond all question. No more remarkable woman has been born in this country and none whose work is more certain to live after her. Christians and scientists may differ as to her teachings, but in the minds and hearts of thousands they have won and kept a place and power that have worked mightily in the molding of religious thought.

[*Democrat*, Johnstown, Pa.]

Whatever may be the judgment of history concerning this remarkable woman and the great organization which she was largely instrumental in building up, this much at least must be said now: Mrs. Eddy has profoundly influenced the lives of many thousands of people, and this influence exerted through the Christian Science church is likely to live long after her frail earthly body shall have moldered into indistinguishable dust.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"JUDGE RIGHTEOUS JUDGMENT."

It seems only fitting at this time to devote a large portion of our space in this issue of the *Sentinel* to excerpts from the columns upon columns of editorial comment that have appeared in the secular press during the past week,—a tribute in its apprehension and appreciation of the greatness of our beloved Leader and the work she has done for humanity at large, as generous as it is wide-spread.

There is one phase of this comment which is characteristic. Few of the editorial writers lay claim to a personal knowledge of the teachings of Christian Science, but with very few exceptions they concede that its Discoverer and Founder was a wonderful woman and that she wrought a wonderful work; that the world is better and happier because of her, and that wherever this faith has become established its exponents are "living epistles" that make for the general uplift of the community.

It is true that Christian Scientists do not need to be told how truly great is the mission of Christian Science and how much of good it has accomplished. None know better than they the tireless energy, the unfailing watchfulness over its welfare that in the last forty years has gone to its establishment and upbuilding; that there was no fear or faltering on the part of the Leader who set her hand to the fulfilment of her high calling, but it is none the less gratifying when such generous tribute to the greatness of her accomplishment is paid by those who have judged her by the Scriptural standard: "By their fruits ye shall know them."

One can but ponder, however, how much more of good would be accomplished if the teachings of Christian Science were more generally accorded recognition, if the truth it presents in all its beauty and simplicity, the truth which centuries ago Christ Jesus declared should make men free, should lead them out of the darkness of despair into "the glorious liberty of the children of God," should be accepted in its entirety. One can but believe that the ever lessening minority of those who misjudge and condemn Christian Science do so because they have failed to apprehend, to lay hold on its animating and dominating truth, that because God is omnipotent good, evil is shorn of its assumed power; that the reasonableness of its propositions lies in the fact that they are demonstrable by each and every one in the proportion that they are accepted and put into practice.

In this connection a clipping from the *Washington* (D.C.) *Herald*, which reports a sermon by one of the pastors of that city, is particularly apropos. The Rev. Lloyd Douglass, preaching from that wonderful promise of the Master which is the foundation stone of Christian Science practice,— "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do,"— said:—

> I am not a Christian Scientist, and my position as pastor of an orthodox church makes that point quite clear. Yet I had rather be identified with that cult than to be identified with the large and increasing body of people who are zealous in impugning all of its teachings without going to the trouble of investigating.
>
> When Mrs. Eddy began her teachings she felt the Christian church was failing to realize the practical value and usefulness of the power which Jesus Christ had delegated to his disciples. Some of the most ardent enemies of Christian Science are people who have not taken the time or trouble to study the principles set forth in Science and Health. It would be better if these people would devote their controversial powers to some matter upon which they had more information.

We read in the Gospel of Luke that when Jesus came back to his home town of Nazareth after his experience in the wilderness, he read in the synagogue this prophecy from the book of Isaiah: "The Spirit of the Lord is upon me, because he hath anointed me to preach the gospel to the poor; he hath sent me to heal the brokenhearted, to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised." Here in epitome is the mission of Christian Science, the work inaugurated by our Leader and its every obligation fulfilled,—the work it is the high privilege of Christian Scientists everywhere to carry on in faithful continuance, watching, working, and praying until the light which has come to them through her teachings shall "radiate and glow into noontide glory" (Science and Health, p. 367): until the leaven shall have leavened the whole lump, until men everywhere shall see in Christian Science the undivided garment of Christ Jesus.

ARCHIBALD MCLELLAN.

LOVE'S INSISTENCY.

The solicitous urgency of the two angels, the messengers of Truth, who figure in the story of Lot's escape from Sodom, their compelling cry, "Escape for thy life," fittingly illustrates that persistent call to and following after the sons of men, if haply they may be saved, which speaks in human terms for the ceaseless activity of divine Love. Upon the lips of the Master this thought comes to its bloom in the sweetly touching tale of the good shepherd. Said he, "How think ye? if a man have an hundred sheep, and one of them be gone astray, doth he not leave the ninety and nine, and goeth into the mountains, and seeketh that which is gone astray?" What he thus expressed in word, of Love's continuous seeking for the wanderers of the flock, he expressed in deed when upon the cross he offered up his life, "a ransom for many."

In Christian Science it is seen that Truth never abdicates, Love never yields, and every heroism of human affection, every pleading prayer of the mother-heart witnesses to the demands of the good that is God. Jacob's lone wrestling in the night watches upon the banks of the Jabbok, his broken cry, "I will not let thee go," speaks well for the aspiring human sense when, in the hour of conscious weakness and pressing need, it casts itself wholly upon God as life's only refuge and hope; and yet more definitely, more wonderfully, does it speak for that clinging persuasion of the divine which will consent to no peace for the aspiring save "the peace of God."

In another aspect of human experience the persistent assaults of conscience give equally convincing witness to that patiently pursuing rebuke of Truth and Love which knows and can know no capitulation and no defeat. Pressed upon every side by a sense of the impossibility of escaping from the monitions of the divine, the psalmist cried out, "Thou hast beset me behind and before . . . Whither shall I go from thy spirit? or whither shall I flee from thy presence?" and in this he voiced the deepest consciousness of both the good and the bad. The touch of the lash of conscience upon the quivering sense of the sobered and suffering *roué* speaks quite as surely for Love as does the winsome appeal of the ideal to him who with elated responsiveness yields himself to its heavenly guidance.

Truth's seeming pursuit of the erring, its eternal condemnation of error, but expresses light's intolerance of darkness, its imperative that all is and shall be light. Thus our Leader writes, "The thunders of Sinai and the sermon on the mount are pursuing and will overtake the ages, rebuking in their course all error and proclaiming the kingdom of heaven on earth" (Science and Health, p. 174). This immutable decisiveness of Truth, this dominance of Deity, is the wonder of being, the one safe anchorage of faith. It yields no place to evil, and of it Christ Jesus said, "Whosoever shall fall on this stone shall be broken: but on whomsoever it shall fall, it will grind him to powder." The divine nature forever maintains that perfect integrity which, when understood, yields a thousandfold

Digitized by Google

of blessing to all those of whom it is found, who trust in and thus utilize its beneficent law; while upon those who in the choice of evil dishonor Love's high mandate, the sufferings of self-infliction must fall with overwhelming severity. He was a poet of rare perception who wrote,—

I fled Him, down the nights and down the days;
I fled Him, down the arches of the years;
I fled Him, down the labyrinthine ways
Of my own mind; and in the mist of tears
I hid from Him—

From those strong Feet that followed, followed after.

But with unhurrying chase,
And unperturbed pace,
Deliberate speed, majestic instancy,
They beat—and a Voice beat
More instant than the Feet—
"All things betray thee, who betrayest Me."

JOHN B. WILLIS.

THE "FINISHER OF OUR FAITH."

ONE of the most important things in any undertaking is the persistence necessary to carry it to its completion. It is well known among men of affairs that in every enterprise unexpected difficulties arise, involving unlooked-for delays and expenditures, and these conditions evidently prevailed in Jesus' time, for we find him saying to some who were eager to become his followers: "Which of you, intending to build a tower, sitteth not down first, and counteth the cost. . . . Lest haply, after he had laid the foundation, and is not able to finish it, all that behold it begin to mock him." This illustration was followed by these significant words, "So likewise, whosoever he be of you that forsaketh not all that he hath, he cannot be my disciple." This teaching relates itself very naturally with the requirement that we "work out" our own salvation, and its accompanying assurance, "For it is God which worketh in [us] both to will and to do of his good pleasure."

Those who seek physical healing in Christian Science, soon find that it has much more than this to give them, that it really offers the key to the solution of each one's life-problem, and begins by showing what that problem really is,—that it is not the acquisition of wealth or learning, or even of health and happiness, but the knowing of God and one's self. It is true that the gaining of good health by spiritual means is part of the process, and the efforts required to this end result in great clarity of thought and moral and spiritual unfoldment. It however happens that in some cases the desired results come very slowly, as in the case of a backward spring, and then there may be needed "great searchings of heart." The temptation in some cases is to blame every one and every thing but one's own lack of receptivity, and thus many opportunities to work out the problem are missed.

The one thing which above all else we need to be sure about is the entire reliability of the promise, "He that hath begun a good work in you will perform it until the day of Jesus Christ;" and the closely related statement that Christ, the divine idea, is "the author and finisher of our faith." It is almost certain that in many cases it is the element of doubt as to the final result which operates like the supposed influence of a miasma, and which, so long as it is undetected, retards the healing. We need to be sure that, as Jesus said, it is our Father's good pleasure to give us the kingdom (including health and strength); that He cares for us, and that nothing can interfere with the divine purpose to complete our salvation. A poor fellow was once lifted out of a life of degradation by a young girl's assurance that God cared for him. He said, "Oh, if He's trying to make something out of me, I'll be a man. I'll take whatever He sends. I never thought He cared."

The evidence is abundant that God is working in us and around us, to bring out perfection and nothing less. The question is, whether we are willing to follow wherever Truth leads, willing to see what it is that would hinder our healing and prevent us from being Christlike in goodness, purity, and power to help ourselves and others. Our dear Leader gives us this strong word of counsel which has steadied many faltering footsteps, "Let neither fear nor doubt overshadow your clear sense and calm trust, that the recognition of life harmonious—as Life eternally is—can destroy any painful sense of, or belief in, that which Life is not" (Science and Health, p. 495). This means that we should keep our gaze fixed on the heights as we climb toward them; it also means new strength gained in climbing, burdens laid down, and full assurance of reaching the goal attained by "the author and finisher of our faith."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

NASHVILLE, TENN.

The temple of First Church of Christ, Scientist, at Seventh avenue and Commerce street, formerly the Episcopal Church of the Advent, purchased and improved at a cost of $35,000, was formally dedicated Sunday morning [Nov. 6]. The following message from Mrs. Mary Baker Eddy, the Leader of the Christian Science movement, was read:

Brookline, Mass., Aug. 25, 1910.

First Church of Christ, Scientist, Nashville, Tenn.

Beloved Brethren:—May God bless you, and build the church triumphant in the hearts and lives of the people. To this end may your material structure prosper, and the church in Nashville be a monument for His praise and glorification.

Lovingly yours,
MARY BAKER EDDY.

The address of Mrs. H. M. Mason, Second Reader, was in part as follows:

A few years ago the healing influence of Christian Science reached certain persons who are now members of this church. Within a short time those who had developed sufficient reliance upon spiritual means for healing to resolve to abandon forever all other methods, formed a society. The interest in this teaching increased daily, until the strength of the organization justified the institution of a church under the corporate laws of our state, and in conformity with the rules and regulations prescribed in the Manual of The Mother Church—the constitution of the Christian Science denomination.

Jan. 8, 1905, this First Church of Christ, Scientist, held its first service. As this demonstrable teaching unfolded its spiritual power and reclamatory influence in the minds of its students, the development of our cause progressed in a corresponding degree, continuously enlisting rejoicing witnesses to its healing and uplifting power, and adding to the church-membership. The first progressive step toward a church home was the move from an office room in which services were held to a small hall. The next advance was to a larger hall, and still another move was made before reaching this room. This particular church has celebrated but few birthdays, but as its vitality comes from the perpetually sustaining Truth which is without beginning of years or end of days, its maturity is assured. We are thankful to God for His glorious promises revealed to His beloved disciple, John, who said: "As many as received him, to them gave he power to become the sons of God," while our hearts are full of loving esteem and tender affection toward our Leader, Mrs. Eddy, who, through her exemplary devotion to God and perseverance in truth, inspires us to continue the glorious warfare of truth against error, "till we all come in the unity of the faith, and of the knowledge of the Son of God, unto a perfect man, unto the measure of the stature of the fulness of Christ."

THE LECTURES.

RENO, NEV.

A lecture on Christian Science was delivered at the Majestic Theater Oct. 6, by Frank H. Leonard. He was introduced by Judge J. L. Van Derwerker, who said,—

Christian Science appeals to the wide-awake men and women of today, because it is a religion of success. It proclaims emancipation to those enthralled in the bondage of fear; it strengthens the weak, and restores the sick and disabled to health; it turns the distress of poverty into the happiness of prosperity. Its beneficent power enters the cottages of the poor and the palaces of the rich; and its fruits therein are plenty and harmony, health and happiness. Language is responding to its influence, and the word "incurable" is in a way to become obsolete; it is transforming "hopeless" into "hopeful," "failure" into "success;" and into kindliness, friendliness, and love it is infusing a wonderful activity. This is a Christianity that the practical business man carries into his home and business; for it transforms its students from fear, worry, sickness, and trouble, to freedom, happiness, health, and prosperity. It appreciates the self-sacrificing endeavor of the conscientious medical practitioner, and it kindly invites his consideration of the better way discovered by Mrs. Eddy. To hostile attack Christian Science turns the other cheek, and erects another church.

Correspondence.

NORTHAMPTON, MASS.

Bliss Knapp delivered a lecture on Christian Science in the City Hall, Sunday evening, Oct. 23. He was introduced by Richard W. Irwin, district attorney, in the following words,—

Notwithstanding the cynic's carping, the world is surely, steadily, and wisely becoming better. The advance of mankind is toward righteousness. Ignorance is making way for intelligence; the chill mist of doubt melts before the warmth of confidence; unreasoning belief gives place to information, understanding, knowledge. The demonstrating of Christianity as Science, as the fundamental law of God, as sure and unerring today as of old time, in and under whose benign influence we live, and move, and have our being, is no small factor in elevating still higher, toward perfection, the thought of mankind.—*Correspondence.*

OAK PARK, ILL.

The Rev. William P. McKenzie lectured for Second Church of Christ, Scientist, in New Masonic Hall Friday evening, Oct. 28. He was introduced by Atty. George C. Mastin, who said in part,—

We frequently hear Christian Science referred to as the wonder of this age. It is the crowning wonder of any age. Christian Science is preeminently a practical religion. I mean this literally, just as I mean that the discovery of the various uses of electricity by Edison has been proven to be wholly practical. And Christian Science makes no claim it does not prove. This is in step with this age of progress, for full proof is demanded of any new and wonderful discovery. After a final and hopeless struggle against sin and disease, the sinner and invalid must be shown—not simply told—the truth. In this regard, Christian Science is ever proving that it is practical.

Belief is one thing; knowing is quite another. Belief is probable knowledge; to know is to be absolutely certain. Knowledge includes belief, but belief does not often, if ever, include knowledge. A theory, or a creed, or a mere doctrine, will not satisfy. A scientist strives to know, and is satisfied alone with knowledge. Substitute "believe" for "know" in "I know that my redeemer liveth," and "Be still, and know that I am God," and "Ye shall know the truth, and the truth shall make you free," and the result would be phrases in meaning dull and comfortless that are now everlasting sources of happiness, confidence, and strength to them that do know. We may well suppose that Mrs. Eddy, after her many years of patient work and proving, when she came to name her discovery, had in mind the primary definition of science, to wit: To know, as opposed to mere belief. The derivation of the word "science" is from a Latin word meaning "to know," though a more elaborate definition declares "science" to be knowledge amassed, severely tested, coordinated, and systematized.

I would not advance so broadly and emphatically the existence and need of this doctrine of absolute knowledge in Science, did I not myself know (though not a member of the Christian Science church), from proof positive, concrete, permanent, and measurable, that Christian Science is a mighty and practical help in every time of need. The purpose of this meeting is to bring about correction of the prejudices and false views that prevail in a constantly diminishing volume with reference to the real meaning of Christian Science.—*Correspondence.*

FAYETTEVILLE, ARK.

A representative audience that filled the Ozark Theater gave the closest attention Sunday afternoon, Oct. 30, to the Hon. Clarence A. Buskirk, who gave a splendid address on the subject of Christian Science. He was introduced by Dr. Charles Hillman Brough, professor of economics, University of Arkansas, who said in part:—

Among the many movements that adorned the latter part of the nineteenth century, none were more remarkable or interesting than the rapid and substantial growth of what is commonly known as Christian Science. From the rediscovery of the divine healing by Mrs. Eddy in 1867, and the publication of her epoch-making work, Science and Health, in 1875, her disciples have waxed in strength and devotion until now there are nearly a thousand churches in the United States.

Among the many beautiful tenets held by the Christian Scientists are the reality of Spirit and the unreality of matter, the conquering power of Love and the weakness of passion, the omnipresence of God, the omnipotence of good, and the impotence of evil.—*Arkansas Sentinel.*

FITCHBURG, MASS.

There was a large audience present at City Hall yesterday afternoon [Oct. 30] to listen to the address by Prof. Hermann S. Hering, upon the subject, "Christian Science: The Science of Salvation." He was presented to the audience by the Rev. Robert F. Leavens, pastor of the First Parish Unitarian church, who said,—

As a Unitarian and a Christian I have my own convictions, some of which are at variance with some of the teachings of Christian Science. But also as a Unitarian and a Christian, some of the teaching of Christian Science has helped me to live rightly and to help others to live rightly. In return for that service, I am glad to speak this word of greeting. So, too, many of you doubtless belong to other churches. But we are all as Christians pledged to the golden rule, to do as we would be done by. And as Americans we are pledged to give a fair hearing to any man who has something to say, especially when his coming here is warranted, as is Professor Hering's, by his record and by the fact that he is an authorized member of the board of lectureship of The Mother Church.

Professor Hering, my word of greeting is brief, simply to assure you that you will have a respectful hearing from

Digitized by Google

your audience, to promise that we will listen to you with our sympathy and our judgment; that we are willing to be taught, and willing to be helped.—*Fitchburg News.*

BIRMINGHAM, ALA.

William D. McCrackan, M.A., spoke to a large audience yesterday afternoon [Oct. 30] at the Bijou Theater on "Christian Science: A Religion of Progress." He was introduced by State Senator-elect Hugh Morrow, who said in part,—

Although a little more than forty years old, the Christian Science gospel has spread into every land, and its influences touch every shore of humanity. It counts among its followers good men and good women from the humblest to the highest walks in life. While I am not a Christian Scientist, and do not profess to understand the philosophy of its teachings, the time has come when, attracted by its numbers, its intelligence, and a membership so useful and necessary to the social and moral life of our country, the public has long since ceased to scoff, and now demands for it a standard, frank, and impartial hearing. We can differ and both be honest; we can differ and both be friends; we can differ and both be worshipers of the same true and loving God.—*Age-Herald.*

COLUMBIA CITY, IND.

A large audience greeted Clarence C. Eaton, who delivered a lecture on Christian Science at Tuttle's Opera House, Friday night [Oct. 28]. The Hon. S. P. Kaler, who introduced Mr. Eaton, said in part,—

In the past few decades Christian Science has established itself all over the world, and its devotees are everywhere. They are people of character. They are cheerful, healthy, and contented. They see the beauties of nature and recognize the fatherhood of God and the brotherhood of man. They are optimists, wishing, seeing, and doing good. No shadow of hate or jealousy ever crosses their brow and no unkind word comes from their lips. They are people who leave the world better than they found it.

As a religion, Christian Science places itself on a high plane, far above all discord and inharmony. Its healing powers are no longer a subject of debate or denial. Physicians who once said they cured only those who were not sick, later said they could cure functional but not organic disease. Now many of them freely admit they cure all kinds of disease and that these cures are almost if not quite miraculous.—*Columbia City Commercial-Mail.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Little Rock, Ark. (First Church).—Frank H. Leonard, Kempner Theater, 3 p.m., Jan. 1.

London, N., Eng.—Bicknell Young, Kings Hall, Hackney Baths, Mare street, Hackney, Jan. 5, 1911.

New York, N. Y. (Churches and Societies Greater New York).—Prof. Hermann S. Hering, Carnegie Hall, 3.30 p.m. and 8 p.m., Jan. 1.

Westmount, Can.—Rev. William P. McKenzie, Victoria Hall, 4 p.m., Dec. 18.

SMALL QUARTERLY ONLY.

Our readers will please note that, beginning with the next quarter, January, 1911, *The Christian Science Quarterly* will be published in the small size only.

TESTIMONIES OF HEALING.

It is with great pleasure that I add my testimony to the many which appear in our priceless periodicals. My experience in coming to Christian Science was very similar to that of many others. The first thing that appealed to me was the healing, as recorded in the *Sentinel* and *Journal*. The first time Science and Health was placed in my hands, I read for a few moments and then threw it out of the room, and forbade my wife to bring it there again. She replied that she had been looking all her life for that which the book contained.

I shortly afterward found it was the same truth which I wanted, and I then read it without prejudice, with a desire to know if it was the truth. I found it necessary to read with it the Bible, and I commenced with St. Luke's Gospel and read it from beginning to end, and part of another Gospel, before retiring to bed at about three in the morning. I rose at the usual time and went to work; but I forgot my pipe and tobacco, which had been my companions for thirteen years, and have never required them since. About two weeks later my desire for ale and porter was also destroyed. I had previously tried to give up both, but had failed every time, and seemed after each attempt to be worse than before. This time I quickly knew the appetite had been destroyed never to return, and I noticed that it disappeared without any effort on my part. The fear I had of yielding, if my old friends asked me also disappeared, and no one asked me for two years. A change of occupation caused me to visit every hotel in the city, but not once was there any desire on my part to drink or smoke.

Twenty-two years ago I had left school at the age of twelve, and at that time vowed never to read again, and I almost kept my word. At the age of eighteen I had joined the English army, and spent most of my spare time in smoking, drinking, and gambling. My parents had told me at the age of twenty-one that I had caused them more trouble and anxiety than all their other children put together, and they could never induce me to read the Bible. My mother said she had prayed that I might be a preacher, yet I had turned out to be the worst of her children. I came to Canada five years ago, gambled day and night coming over, and landed with about two dollars on hand. My wife came on later in the same year, and was desperately ill in November; but she recovered, and in the following February we heard of Christian Science. We had at that time almost no furniture in our home, and were in debt to the doctor, the chemist, and the nurses. I considered ale and tobacco essential to my health, as well as medicine. Twelve months after becoming interested in Christian Science our flat was comfortably furnished and my position changed to one much more to my liking.

At the time my wife and I began the study of Science and Health, my wife was still in a weak condition, but from the time we both began the study, health returned quickly, and peace and harmony speedily took the place of trouble and discord. The pleasure we have today in studying the Bible and our Leader's works cannot be expressed in words. The nearest I can find is in Bible language, "Man doth not live by bread alone, but by every word that proceedeth out of the mouth of God." These last four years have been the happiest of my life, and it is to divine Love and to our Leader that we owe these blessings. Our hope is to see the day when, as Habukkuk says, "the earth shall be filled with the knowledge of the glory of the Lord, as the waters cover the sea."—WILLIAM A. BONSHOR, Montreal, Canada.

The belief that a public expression of my gratitude may help others, impels me to place my experience in writing. As a member of the legal profession, I had until three years

Digitized by Google

ago considered that the only rules for personal action were those evolved by men as regulations of human conduct. God was never near to me, and was considered more as the court of last resort, to which I might some day appeal if I ever became dissatisfied with or fearful of the outcome of the battles which I imagined I was then fighting, or might thereafter be called upon to fight. I had for upward of fifteen years been addicted to the use of intoxicating liquor, and frequently found what I thought was amusement and pleasure in intoxication, reveling in intemperance in many forms. Professional work was being neglected, property interests were becoming apparently hopelessly involved, and my friends and associates were filled with sorrow and resentment because of my misdoings. I had for months been closely associated with Christian Scientists, occasionally conversing with them about Science, but never agreeing with them as to its power to heal sin and disease, and frequently ridiculing it and glorying in any publication or item of news which attempted to belittle it.

In July, 1907, after a period of gross indulgence, a dear friend in words of earnestness and love asked me if I would give Christian Science a trial and take treatment for the awful sin of intemperance with which I was beset. I believe it was the brotherly love in that request which called forth without hesitation a promise to give it a trial and see a practitioner the following day. That same day I made an appointment, kept it, and received a treatment lasting about thirty minutes. In those few minutes the appetites and passions of over fifteen years were so completely destroyed by Truth, that strong drink, and all that goes with the indulgence therein, lost all attraction, and all sense of its necessity to my quickened sense was destroyed.

This healing was followed by a period of reconstruction. I took up the study of Christian Science, finding undreamed-of joys and comforts as I progressed. My wife and son followed me in the investigation. A year later we became members of a Christian Science church, and now find daily comfort in holding fast to Truth and studying the beautiful and strong Lesson-Sermons which our *Quarterly* supplies, incidentally reaping the glorious benefit and understanding which come from using our text-book, which is in fact a "Key to the Scriptures." With our advancement in this great religion of Life and Love, the financial difficulties which once beset us disappeared; I found a stronger and clearer mentality to apply in my professional work, followed by marked successes in my practice; and the fear, doubt, and uncertainty of the old thought was replaced by faith, confidence, and sure-footedness.

In the month of March, 1909, the belief of pleasure and mental solace in tobacco, strengthened by twenty-one years of habitual and excessive use, suddenly left me one evening, without any conscious effort on my part, while reading "Science and Health with Key to the Scriptures," and the following morning at breakfast I found that coffee, which my mortal sense had long associated with tobacco as a stimulant, was distasteful and could not be partaken of. I have not felt any desire whatsoever to use either since that time. These represent some of the false beliefs which have been removed and for which I am deeply grateful, but there are other things which make me sing songs of gratitude and love for our Leader, Mrs. Eddy, and among the latter are peace, absence of envy and resentment, the presence of brotherly love and its incident harmony, and the glorious certainty that I have found the only demonstrable way that leads to the understanding that "the kingdom of God is at hand;" not one to be enjoyed only during a future period of existence, but a kingdom ever present, a realm in which we hourly move and have our being.

To every mortal to whom intoxicating liquors appeal or have attraction, I state unequivocally that through Christian Science, if it be given a fair trial, this false appetite and sinful indulgence which leaves so much disaster in its wake can be destroyed. The demonstrations in the early history of Christianity by which devils (evils) were cast out, are being daily—yes, hourly—duplicated in this age and day, and help is at hand today as it was for the lame beggar at the gate of the temple, to whom Peter said, "In the name of Jesus Christ of Nazareth rise up and walk."

HARRY WOOTTON, Atlantic City, N. J.

For the benefit of those who are sick and in trouble, who do not know God, and very little if anything of Christian Science, I wish to give this testimony. For many years I suffered with bad headaches, also from stomach trouble, which it seemed impossible to cure; in fact, I could not eat anything without pain. My kidneys and back gave me such pain all the time that I could hardly endure it, but since coming into Christian Science I have been healed of almost every complaint, and feel perfectly well. I am very glad to be able to say I was healed by divine Truth, through Christian Science, and the efforts of a practitioner. Truth never fails to help us see the light, which is always shining for us.

I praise God for the spiritual uplifting, and am thankful to Mrs. Eddy for having shown us the way to find truth and happiness through the study of the Bible and Science and Health.—BESSIE M. GROUT, Los Angeles, Cal.

The outward manifestations of God's goodness in physical healing are indeed wonderful and glorious; but to the earnest Scientist who is striving every day to cast out evil from his thought and to have only the Mind of Christ, the inward renewing is the greater cause for rejoicing; the wonderful glimpses of Truth, the daily increasing understanding, which brings with it increased power over evil,—these are our greatest blessings.

About two years ago, my six-year-old son, while running on the cement sidewalk, fell headlong, injuring his lips very severely. The lacerations and swelling seemed very dreadful, and those around him declared it would be several days before he could eat. I reached him about ten minutes after this occurred, and taking him in my arms, began to treat him at once, trying to shut out the sense of everything but Truth. In a short time he was peacefully asleep, and when we reached home, about two hours later, he ate a hearty supper without the slightest inconvenience. The swelling disappeared instantly and in a few days there was not a single mark left.

Last winter we proved God's power to heal in a very severe case of hemorrhage. The attack came suddenly the day before Christmas, when I was preparing for a large house party. I had no help and felt that I must go on with my work. I overcame the sense of suffering and weakness, and was ready to meet my guests and entertain them. The hemorrhage continued for days, but without hindering my work. On Sunday, however, there came entire collapse, accompanied by pain and high fever. The fever was overcome instantly that evening by this word of God: "Before they call, I will answer; and while they are yet speaking, I will hear." I was unable to rise in the morning, so we telephoned to a practitioner. I spent only that one day in bed, and had no more pain, though for a few days I seemed too weak to walk. My health has been normal ever since.

If I should try to tell all I have seen of the power of divine Love, words would fail. Every issue of the *Sentinel* seems written especially for our present needs, and to our dearly beloved Leader, Mrs. Eddy, we owe more gratitude than human heart can express.

MRS. EDITH E. BROWN, Palo, Ia.

Although "mine enemies"—my mortal thoughts and fears—have many times seemed to pursue me most persistently, and to come in almost overwhelming numbers, yet always there has been help received through the study

Digitized by Google

of Science and Health or some other of our Christian Science literature, to put them to flight and to enable me to press on more vigorously in order to destroy them utterly. Recently I was helped through an experience, and for this help I wish to express my most sincere thanks to God. It was the one thing I had always thought could never be made even bearable, and as I thought I was not strong enough in my own understanding to meet this myself, a great grief, a sense of loss and separation, the greatest that could come into my mortal experience, was met and overcome for me by the help of one who knew the truth,—knew that under no condition could joy ever be overcome by sorrow.

In very many ways I have been greatly helped through Christian Science. I was enabled to discontinue the use of glasses, which I had worn for eight years, through the faithful work of a friend; and through my own realization that there is no selfhood apart from God I have become less selfish, sensitive, and resentful, and am trying to destroy many mental qualities considered natural to mortals. As gratitude to our Leader is better expressed by deeds than by words, I can only try to prove my right to be called a Christian Scientist.

SADIE M. EVARTS, Alton, Ill.

I wish to tell briefly what Christian Science has done for me. I had been sick for a period of about seven years, my trouble having come from overwork. In November, 1908, I left San Francisco for San Diego, seeking health in a change of climate. Prior to this I had fallen three times from heart trouble. I also had bronchial trouble, accompanied with a bad cough, which had been with me for about five years day and night. I had not been able to retain any solid food for over a year. My kidneys were said to be diseased and I did not sleep well. I had been treated for these troubles by doctors and magnetic healers until they could do nothing more for me.

In December, 1908, I decided to take up Christian Science as a last resort. While in San Diego I was sent to a practitioner by a friend who was not a Christian Scientist. After the first treatment the pain in the head left me, and inside of five days I was able to get some rest. I had been obliged to sit up in a chair at night for some time. On being relieved of the pain, I began to realize that Christian Science had something more behind it than human will-power; so I continued to take treatment, and was healed. The practitioner explained to me that Christian Science, when lived, means more than the mere healing of the body. It purifies character and brings happiness, where without Christian Science there would only be trouble.

F. LESLIE MEEKER, Oakland, Cal.

I am deeply grateful for all that Christian Science has done for me and mine, and could tell of many cases of healing in my family. My youngest child was healed of acute lung trouble. She had one attack after another from the time she was six months old, and on one occasion her life was despaired of, the doctors saying her only chance was to be taken South every winter and kept there until the warm weather. With three treatments in Christian Science she was healed and has never had any return of the disease, which is now over two years.

Christian Science has eliminated from my consciousness a great deal of fear, and has proven to me on two occasions the nothingness of the man-made law of contagion in a case of whooping-cough, which the youngest child had. This was overcome in a short time, whereas in the old thought it would probably have meant a long and severe siege. Two other young members of the family, who had never had the disease, did not take it. In a case of mumps, which I had last summer, my three children were with me constantly, but were not affected. I myself have been healed of many ailments, and on one occasion an infected foot was healed by my realization of the truth of our dear Leader's words on page 495 (lines 14 to 24) of "Science and Health with Key to the Scriptures."

For all these physical healings, and many more, I am truly grateful; but for the spiritual and mental uplift I am even more thankful. Until I took up the study of Christian Science, I had never known anything of the Bible and had no desire to, and my children were being brought up in the same way; but now I enjoy the Bible, and my children are all attending the Christian Science Sunday School. It is needless to say that they love to go. I am very grateful that I was receptive to this grand truth,—grateful to our dear Leader, Mrs. Eddy, for her unselfish and loving patience in bringing this truth to humanity. My daily prayer is that the same Mind may be in me that "was also in Christ Jesus," that I may love my neighbor as myself, and that I may be found worthy to bear the name of Christian Scientist.

MRS. BLANCHE LOEBE, Chicago, Ill.

I am thankful for what I have come to know of God, through the study of Christian Science; it has helped me in many ways. Like many others, I did not take up Christian Science until it was the last resort. I believed firmly in the Bible, and especially in Jesus' teachings, and also believed that the healing in the Bible was for us if it could be understood. I wanted the truth, and I wanted healing, but I did not want Christian Science, for at that time I thought it merely fanatical teaching; but divine Love has shown me the way. When all "other gods" had failed me, when I had no other hope, I turned to God and was healed, and found that Christian Science is the truth of Jesus' teachings for which I had been longing. I can say that I am truly thankful for the trials that brought me to this blessed truth, for Christian Science gave me a foundation on which to stand; it makes me free from everything but good, and gives me an understanding of how and why I exist, for I have learned that man is not subject to chance or change, but subject to the harmonious law of life in God.

I first came to Christian Science about nine years ago. I had been suffering from chronic stomach trouble for a number of years, had tried all sorts of medicine, been treated by a number of specialists, with nothing but temporary relief, and as I suffered continually, life seemed almost unbearable. In this condition I came to Christian Science, and after one week's treatment dropped out because I could not see that anything was being done for me. In a short time, however, I found myself free from misery, and every symptom which had tortured me for years seemed to disappear; also a rheumatic trouble, from which I had suffered for some months, left me; but I would not give Christian Science the credit of healing me, I thought it was the medicine which was finally taking effect. I told my friends that Christian Science might help others, but that it could not help me; that I wanted the healing in the Bible, which was good enough for me. I was not ready for the truth which would make me free; I needed another trial, and it came.

About five years later kidney disease manifested itself, for which the doctors all told me there was no cure. At first I tried all kinds of medicines, but received no benefit. I then went to six of the leading physicians of the city, and they all told me there was no help for me as it was only a question of how long I could hold out, and they gave me from five to nine months at most. Still I was not satisfied, and went to a mineral spring and took baths, but without benefit. On my return I went to a friend who is a physician, who told me I was merely throwing money away

Digitized by Google

by taking medicine, and that the only possible way to prolong my life was by a very rigid diet, which he prescribed. This was the straw which broke the back of error, for while seated at my very limited meal, the "still small voice" of Truth came to me, and I heard the Master's words, "Take no thought for your life, what ye shall eat, or what ye shall drink; nor yet for your body, what ye shall put on. Is not the life more than meat, and the body than raiment?" I thought, Am I doing this? Then, with one foot in the grave, as it were, I turned to God through Christian Science, and was healed in a very few treatments.

It is now over five years since I was healed, and so far as those two diseases are concerned, I have been in perfect health. This testimony is enough to prove the power of divine Love, for in the first instance I was healed almost against my will and without any respect for Christian Science as the truth; in the second instance I was healed just as soon as I was willing to turn to God for help. I find that the more I study Christian Science, the better I like it and the more I want of it. My desire is so to reflect Truth as to show more my appreciation of what God has done for me, for it is not our words but our lives which prove our deep gratitude for what Christian Science has done for us.

I write this with the hope that it may help some one who is in the wilderness between hope and despair, to place his feet on the solid rock of Christ, Truth. I cannot express my gratitude in words for the blessings and understanding I have received in Christian Science. All I can say is that I thank God for it, and I am grateful to Mrs. Eddy for having, through her teachings, shown us the way.

C. P. SANDS, Columbus, Ohio.

It is surely due that I return thanks for the many blessings received in Christian Science. My first benefit through this Science was in a case of severe throat trouble, which was healed in one treatment. I have since been relieved of biliousness and severe liver complaint; also of an attack of mumps, so that I was able to be out of doors in two days, when others, who were not in Science, were suffering from the same ailment for three or four weeks.

Although I am grateful for the physical healing received in Christian Science, the spiritual uplift seems best of all. Before I came into Christian Science all was darkness and doubt, every day a mystery, and I was without hope and without God in the world. The Bible was a sealed book; but now, with the aid of the Christian Science text-book, Science and Health, it is easily understood, and I love to read and ponder the things of Spirit. First I thank God, and His Son the great Wayshower, and I am grateful to Mrs. Eddy for these many blessings received in Christian Science.

Is it any wonder that we love our dear Leader, who has shown us the way to health, peace, and happiness, and points us to Christ? Oh, that all might know what is in store for them in Christian Science!

A. VERNON RANSDELL, Antelope, Ore.

Many good things have come to me through Christian Science for which I have reason to be thankful. I am very grateful for my healing, which occurred over two years ago, and which seemed very wonderful to me, but even more wonderful is the spiritual light which I have gained through the study of the Bible in connection with Science and Health. "Now know I that the Lord saveth his anointed; he will hear him from his holy heaven with the saving strength of his right hand." I am very grateful for the understanding that evil is unreal and impersonal. Often, when shadows seem to gather, our Leader's assurance that evil "is neither person, place, nor thing" (Science and Health, p. 71), has enabled me to separate evil from personality, and thus restored harmony.

To Mrs. Eddy, and to all who have assisted me on the road from sense to Soul, I render heartfelt thanks; and while I am still young in Science, I hope to gain a deeper understanding of this truth that makes us free.

MRS. HETTIE TEMPLEMAN, Shreveport, La.

For many years I had suffered from nervousness and kidney trouble, and about a year and a half ago a dear friend advised me to read the Bible and also "Science and Health with Key to the Scriptures" by Mrs. Eddy. I did so, and with the help of a practitioner, Christian Science has done for me that which no doctor could do. I am free from the kidney trouble and nearly all of the other diseases. I thank our heavenly Father for all He has done in helping me to see the light of Truth and Love, and how to overcome sin and all evil.

MRS. E. J. CRYMBLE, Los Angeles, Cal.

It is with sincere gratitude for the many blessings which Christian Science has brought me, that I give this testimony. Early in the spring of 1909 I had what seemed to be a very deep-seated cold, and as I was not able to overcome it in a reasonable length of time, I telephoned to a practitioner, telling her of the conditions to be met, and that I wished she would help me. In a little while the tightness in my chest was gone, and by morning the ailment had disappeared. Words cannot express my thankfulness to God for His goodness, and to Mrs. Eddy for bringing this great truth to the help of the whole world.

MARGARET F. CROWSON, Fayetteville, N. C.

I first heard of Christian Science through the healing of my brother of a very severe attack of throat trouble. For a number of years before that I had been almost a confirmed invalid. Several times I had been given up to die from heart disease, and my doctor said that my lungs were so bad that I could hardly live a year. We were very skeptical in regard to Christian Science, especially doubting if there was any power in absent treatment; but as there was no help for me in anything else, my husband said that if Christian Science made me a well woman, he would believe there was something in it. We wrote to a practitioner, and I began to improve at once. In a few weeks I knew that the old diseases were gone, and we threw away more than a bushel basket full of medicine bottles, some full and some empty, for we knew we should never need material remedies again. I have never had any return either of the heart disease or the lung trouble.

Our first child had passed on at birth, but our little girl is strong and bright and has never had any serious illness. She is now over five years old, and is a very faithful little Scientist. Last spring she had an attack of earache, but overcame it herself in a few hours. At present I am doing all my own work, though I have two boarders and often have five or six extra for meals. I know that Christian Science has saved my life, and it has also given us a happy home where before we were never free from worry and anxiety.—MRS. CARRIE PATTERSON, Palo, Ia.

In September, 1909, our little girl, four years old, was taken ill. We called a Christian Science practitioner, and after a couple of days it was decided to call in a physician to diagnose the case. He pronounced it one of the epidemic fevers, and as the conditions were very serious we sent for a Christian Science nurse. In five days the child was up, and at the dinner-table, and in two weeks she was

Digitized by Google

entirely well. This is only one of the many proofs we have had of the healing power of divine Mind through the understanding of Christian Science, as taught by Mrs. Eddy in "Science and Health with Key to the Scriptures," for which we are very thankful.

MRS. HATTIE D. CLELAND, San Mateo, Cal.

When but a child, I used to read the command of our dear Master to preach the gospel and heal the sick, and I wondered why people now did not heal the sick as he did. This was before I had heard of Christian Science, and when this Science was introduced into my life it so harmonized with my ideas that I immediately took to it, so much so that I began to read the text-book, "Science and Health with Key to the Scriptures," through. I did not study it, but merely read it as one would any new book in which he was interested.

It was during this reading that a very convincing proof was shown to me. Previous to this I had been troubled with bronchitis so badly that in cold weather I could not talk above a whisper, and, to add to my discouragement, I was told that I could never be cured. One day, about a month after I first began to read Science and Health, I suddenly remembered that I had not been troubled with the ailment since I had started reading it—I had forgotten all about it. This was to me very convincing, and I have never taken any medicine since. Christian Science has also healed me of the effects of poison ivy and many other things. All of these things, however, I consider only secondary to its real purpose, which is the moral uplifting of humanity.

I am assured that no one can lose by putting his faith in this truth. It is the basis of all true living, since to do right is Christian Science; and we need not hesitate because some of our friends may have denounced it, for it will not be found lacking. We all have much to overcome, but the sunrise of Truth, above the horizon of our lives, will dispel the shades of error and human discord with the light of divine Love which shines forever.

E. V. SEAGER, Des Moines, Ia.

[Written for the *Sentinel*.]

THE KEY TO THE SCRIPTURES.

MARY HICKS VAN DER BURGH.

"There shall be showers of blessings," ran the line:
I looked on every side, but saw no sign,—
The heavens seemed brass. Said one, "The promise is,
A brighter world beyond repays for this."

Slow ran the weary years, begirt with ill,
And wrong and greed ruled with relentless will;
E'en hope had turned to colorless despair:
Had God forgotten—did not answer prayer?

But, longing still for light, I came to look
Within the pages of a new-found book,
And in the reading of the foremost line
Dawned the sweet light which broke in floods divine.

"Today is big with blessings"*—so I read—
Today, today, they break upon thy head.
I grasped the thought: good is, unfailingly,
Yes! to God's healing word I'd found the key.

Since then I know the word men could not bear
When the dear Master breathed our earthly air,
Has come as he foretold; since then
I bless her name who blessed her fellow-men.

* Science and Health, Preface, p. vii.

FROM OUR EXCHANGES.

[Washington Gladden in *Continent*.]

The arguments which are intended to prove that peace is visionary and impossible are largely inspired by human rapacity and greed. And, strangely enough, the predatory classes have always been permitted to set the standards of thought and conduct, so that the ruling ideas of Christian society have hardly included the conception of social peace and good will as attainable under present conditions. We have not considered the promise of the angels as having application to the existing state of society. We have supposed that business must be carried on and politics conducted under the law of conflict—of strife and struggle—by matching wits against wits and wills against wills; by contending for advantage and mastery. And we have been quite content for the most part to have business and politics go on in that way; we have assumed that that was the right way—for business and politics. It now begins to appear that this partial, half-way, one-sided interpretation of the promise of Christmas has been a pernicious and paralyzing error. In the minds of a great many people the question is arising, "What right have we to put the fulfilment of this promise so far away? Who has authorized us to say that peace on earth and good will among men are not to be looked for until the millennium? What is the reason why they should not be looked for here and now? Is there anything that hinders their coming except the selfishness of men? Would they not come at once if men believed in them and desired them?"

Granted that the rapacious and the cunning and the greedy do not desire them, and therefore, of course, do not believe in them, has not the time come when we should no longer permit the rapacious and the greedy and the cunning to tell us what we ought to believe in and wish for? We are not all beasts and birds of prey; we are men and women; we want to be friends; to live together peaceably and helpfully; and this, as we understand it, is just what Christmas means. The song of the angels signifies this. What is it but the deadliest and most damning unbelief that puts the fulfilment of such a promise a thousand years away? Let us claim it now, and have it now. Nothing is needed to bring it but faith in it. As soon as men begin to believe that it can be, it will be. And there is nothing in the world to hinder any of us from beginning to believe what the angels said, and beginning to act as if it were true. It is a fact, no doubt, that a great many of our neighbors do not believe that it is true and do not intend to act as if it were, but I do not know that that is any reason why those of us who do believe in it, and are sure that it is the only right way to live, should hesitate about living up to our own convictions.

[Rev. R. J. Campbell in *Christian Commonwealth*.]

Christ is always coming. He comes in that opening of the soul to God called conversion or the new birth, which to many people is just as real and definite as any external event within their range of experience. He comes in the spiritual deepening effected by sorrow, in the mortal crises whereby we rise to greater heights of power and self-knowledge, in the sweet ministry of love, in the blessed sympathies of spiritual fellowship with other human beings, in the grandeur of self-renunciation, and in the joy that floods the soul in hours of special vision and insight; in fact, every spiritual gain in our individual experience is a true coming of Christ. He comes, too, on the larger scale of the destinies of nations and the evolution of human society as a whole. Nothing has ever been truer than the prophecy that Christ would come to put an end to the dispensation in which the Christian church was born. Remember, it is nowhere stated in the Gospels, in so many words, that the Master's second coming would be the end

Digitized by Google

of the world. Such a rendering of the prophecy is incorrect; it is the end of the age that is spoken of, not the end of the world. On the contrary, it was supposed that the world would make a fresh start therefrom, and nothing is clearer from a scrutiny of all the apocalyptic passages in the New Testament than that a blissful reign of Christ was looked forward to on earth, but a transformed earth, an earth spiritualized and made glorious by an invasion of heaven. This consummation has not yet been reached; it is indeed very far off, but there have been successive crises in the world's history which have represented stages on the road toward it.

[Harold Begbie in *Christian World.*]

The need of the present hour, for the preachers of Christianity, is a return to the missionary spirit of their great forerunners, the apostles and martyrs. And there is one way, bright with hope and glad with promise, which the philosophers of the churches must seek before they can hope to capture the magic and enthusiasm of the missionary spirit. It is the way of observation which follows the great highroads of civilization and pursues the thousand deviations of those roads to their darkest windings. Let the preacher forsake his books of theology and go upon this way, and everywhere he will see the power of Christ. For the Christ whom he deems is neglected by men, and the religion which he fears is losing its hold upon the loyalty and affection of mankind, are everywhere at work in the social organism, are everywhere leavening humanity and saving the soul of the world. Without any rich or powerful organization, without method of procedure or elaborate definition of belief, without conscious knowledge that they are the salt of the earth, exactly as Christ himself foretold, men and women are doing the will of God.

[*Outlook.*]

The dawn of the new era of morally efficient religion appears in the rise of the new evangelism that is patterned after Jesus' proclamation of it at Nazareth as the mission of the Spirit of God: "To preach the gospel to the poor; . . . to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised." Of such religion there can be no cheapening so long as its root is watered, as Jesus watered it, in constant communion with God.

[Rev. Pemberton Hale Cressey in *Christian Register.*]

It is when we refuse to take our little worlds too seriously, that we catch a glimpse of a larger world. As long as we are overpowered by what is, we are not likely to discover what may be. What is tragedy in a small sphere shades off into comedy in a larger one . . . and blessed is he who suspects that the world is larger than it seems. We tuck away our vexations and disappointments into the corner where they belong, and throw up the western windows.

[*New-Church Messenger.*]

What society needs most is love toward the neighbor and love for the Word and the Lord. It is for the church as a church to explain the Word, and to inspire with the love of man and of the Lord. These are the things that are primary and most. From these the church is a church.

[*Christian World.*]

A new movement, deep down in the soul of the millions, a single new thought there—the thought which is coming—and without trampings or trumpetings all the walls of the world's despot Jerichos will lie prone upon the ground.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel.*

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel.*

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herald,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

NEW PAMPHLETS.

Now on sale are four new pamphlets: "Seeking and Finding," "Prayer and Healing," "The Divine Nature," and "Upward Footsteps." Each pamphlet contains five to nine articles that have previously appeared in the *Journal, Sentinel,* or *Monitor;* and they are particularly suitable for handing and sending to inquirers or persons who are becoming interested in Christian Science.

Hereafter, the price of all pamphlets (except "What our Leader Says" and "Christian Science and Legislation") will be reduced to 5 cents a copy; 55 cents a dozen; $2.00 for fifty, and $3.50 for one hundred. Hereafter, also, the republication in the English language of single articles as "tracts" or "reprints" will be discontinued. It is believed that their place is better taken by the daily article on Christian Science in the *Monitor* and by these new pamphlets and others that may be issued.

NEW POST CARDS OF THE MOTHER CHURCH.

Post card photogravure, in sepia tint; an exact reproduction of the large photogravure of The Mother Church Buildings and Publishing House with parkway in foreground.

Single copy	$ .05
Twenty-five copies	1.15
One hundred copies	4.25

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90; six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, $12\frac{1}{2}$ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE: ITS RELIGIOUS PHILOSOPHY. By HON. CLARENCE A. BUSKIRK.

CHRISTIAN SCIENCE: A RELIGION OF DOING. By JUDGE WILLIAM G. EWING.

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. By FRANCIS J. FLUNO, M.D.

CHRISTIAN SCIENCE: THE RELIGION OF THE BIBLE. By JUDGE SEPTIMUS J. HANNA.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. By PROF. HERMANN S. HERING. Also printed in German.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. Also printed in German.

CHRISTIAN SCIENCE: ITS ADVANTAGE TO MANKIND. By EDWARD A. KIMBALL. A London lecture. Also printed in French.

CHRISTIAN SCIENCE: MAN'S DOMINION OVER EVIL. By EDWARD A. KIMBALL. A Harvard University lecture. Also printed in French.

CHRISTIAN SCIENCE: ITS NATURE AND PURPOSE. By BLISS KNAPP. Also printed in French.

CHRISTIAN SCIENCE: DEMONSTRABLE RELIGION. By FRANK H. LEONARD.

CHRISTIAN SCIENCE: A RELIGION OF PROGRESS. By WILLIAM D. MCCRACKAN. Also printed in German.

CHRISTIAN SCIENCE: OR DELIVERANCE FROM EVIL. By REV. WILLIAM P. MCKENZIE. Also printed in French.

CHRISTIAN SCIENCE: THE CHRISTIANITY OF JESUS. By MRS. SUE HARPER MIMS.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. By REV. ARTHUR R. VOSBURGH.

CHRISTIAN SCIENCE: ITS PRINCIPLE AND METHOD. By BICKNELL YOUNG. Also printed in German.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the JOURNAL. Also printed in German.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science.

THE CHRISTIAN SCIENCE CHURCH. Its organization and polity. By CAROL NORTON.

PRAYER AND CONFIDENCE. Printed in German only.

PRAYER AND HEALING.

SEEKING AND FINDING.

THE DIVINE NATURE.

UPWARD FOOTSTEPS.

PRICE, POSTPAID: Single copy, 5 cents; 12 copies, ONE ADDRESS, 55 cents; 50 copies, $2; 100 copies, $3.50. Orders for above pamphlets may be assorted as desired.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Containing many *important* changes and additions by the author. THE ORIGINAL, STANDARD, and only Text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price (cloth), single copy $3.18
Two to twelve books (cloth only) to one address, each 3.00
Twelve or more books to one address, each 2.75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy 4.00
Twelve or more to one address, each 3.75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy . . . 5.00
Twelve or more to one address, each 4.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy 6.00
Twelve or more to one address, each 5.75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding. The above prices are all prepaid.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), single copy $2.25
Twelve or more books to one address, each 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, single copy 4.00
Twelve or more to one address, each 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy 5.00
Twelve or more to one address, each 4.75

The above prices are all prepaid. Orders for Miscellaneous Writings *in lots of twelve or more to one address may* include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 607 pages, 10x7, and addendum, bound in cloth, marbled edges. Price, prepaid, single copy . . $5.00
Twelve or more to one address, each 4.50

CHURCH MANUAL. Containing the By-laws of The Mother Church. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $7.00 per dozen.

CHRIST AND CHRISTMAS. An illustrated poem.
Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, prepaid, single copy, $1.06; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 40 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 91 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.50; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00; six months, $1.20.

Ten copies to one address, each, one year, $1.90; six months, $1.15.

Twenty-five copies to one address, each, one year, $1.80; six months, $1.10.

Fifty copies to one address, each, one year, $1.50; six months, 90 cents.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. X indicates the year 1910; XI, 1911. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

TERMS OF SALE

Single copy, postpaid, five cents, in the United States, Canada, Mexico, and Cuba; twenty-five copies, one address, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, single copy, six cents; twenty-five copies to one address, $1.25; fifty copies, $2.25; one hundred copies, $4.00.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Announcing that conspiracy under the Sherman antitrust law is a continuing offense, the supreme court of the United States holds as good the indictment in New York in 1909 of two men identified with the sugar cases, who pleaded the statute of limitation. Justice Holmes, in announcing the opinion of the court, said: "It is true that the unlawful agreement satisfied the definition of the crime, but it does not exhaust it. It also is true of course, that the mere continuance of the result of a crime does not continue the offense. But when the plot contemplates bringing to pass a continuous cooperation of the conspirators to keep it up, and there is such continuous cooperation, it is a perversion of natural thought and of natural language to call such continuous cooperation a cinematographic series of distinct conspiracies, rather than to call it a single one. The indictment charges a continuing conspiracy. Whether it does so with technical sufficiency is not before us. All that we decide is that a conspiracy may have continuance in time, and that where, as here, the indictment, consistently with the other facts, alleged that it did so continue to the date of filing, that allegation must be denied under the general issue and not by special plea. Under the general issue all defenses, including the defense that the conspiracy was ended by success, abandonment, or otherwise, more than three years before July 1, 1909, will be open and unaffected by what we now decide."

Attorney-General Wickersham expects to reach all the officers of both the sugar and beef trusts under the supreme court decision. He says the court has at last given to his department the weapon that has been needed to strike a crushing blow at both of these combinations and at the men who have engineered the lawbreaking operations.

While the question of a conspiracy under the Sherman antitrust act being "continuing" did not become the leading issue in either the Standard Oil or the tobacco corporations, both of which are soon to be reargued before the full bench of the court, it figured in the argument in both cases, especially in the Standard Oil suit. It is said that the decision may have an appreciable effect on the argument as to what weight should be given the acts of the corporations before the Sherman antitrust act was passed.

As a fund to promote the work of abolishing war between nations, Andrew Carnegie, Dec. 14, transferred to a board of trustees, comprising men of international reputation, ten million dollars in five per cent first mortgage bonds of a value of eleven million five hundred thousand dollars. Announcement was immediately made of the establishment of the Carnegie peace fund. Leaders of the peace movement in France express deep gratification. Canada, it is announced, will take the initiative in an effort to have a permanent peace treaty made between Great Britain and the United States. As soon as Parliament reassembles, a resolution will be introduced urging the British government to take immediate steps to make a compact with the United States which will forever prevent a war in the settlement of a dispute between these two great English-speaking countries.

The United States circuit court for the eastern district of Pennsylvania has decided that there is no general conspiracy among the anthracite carrying railroads or coal companies to restrain trade or commerce, or to monopolize the trade or to maintain certain prices. It held, however, that the Temple Iron Company is a combination of anthracite carrying railroads in violation of the Sherman antitrust law. It granted the prayer of the Government for an injunction restraining that corporation from continuing a violation of the act.

Frank B. Kellogg, who as special counsel for the Government prosecuted the Standard Oil Company and other alleged trusts, told nearly a thousand members of the Economic Club and their guests at the Hotel Astor, New York, that control and regulation of the great corporations by the federal authorities was necessary if commerce and the industrial life of the country were not to become dependent upon the whim, the caprice, and the greed of a few men.

Senator Gallinger of New Hampshire has introduced a bill in the Senate limiting the value of the property that the Rockefeller foundation may hold to one hundred million dollars and giving authority to Congress to distribute all of the property after a period of one hundred years.

The state department has announced the successful completion of long-continued negotiations, looking to an international conference, with the object of suppressing the opium traffic. May 30, at The Hague, has been accepted as the date and place of meeting.

Consonant with his policy of strict economy in the business of the Government, President Taft may require employees to be on duty from nine to five, instead of four-thirty as at present. President Roosevelt advanced the hours from four to four-thirty.

Secretary Ballinger recommends that the Alaskan coal cases under investigation on charges of fraud or irregularities be transferred from the jurisdiction of the general land office to the court of appeals of the District of Columbia.

The combined debt of the larger cities of the United States is nearly one billion and a quarter of dollars. This debt is secured by a property value of two and three quarter billions of dollars.

International.

In the presence of the court, the ministers, the diplomatic body, and principal authorities of Vienna, the Emperor Francis Joseph recently opened the second main water supply of the city. This great engineering work is the outcome of ten years' labor and the overcoming of great difficulties. The sources of this new water supply are in the valley of the Styrian Salza, seven hundred feet above sea level. In one place the mountains had to be tunneled for more than three miles. The largest aqueduct is eight hundred feet in length and seventy-five feet in height. The cost of this work amounts to about twenty-one million dollars. The water is of good quality and will provide Vienna daily with forty-four million gallons of water.

A bill is before the provincial Legislature of Alberta to grant a charter to the Canadian Northern Western railway, a subsidiary of the Canadian Northern, to build westward to the British Columbia boundary, whence it will continue to its coast terminal at Stewart in the Portland canal district. It is claimed that this line will open for settlement in northern Alberta twenty million acres of good agricultural land, in addition to large tracts in northern British Columbia. It will cross a number of rivers and give access to immense timber lands.

The program of the English government for the coming session, in addition to the veto bill, will include electoral reforms, such as the payment of the members of the House of Commons and the abolition of plural voting, and possibly also a bill for the holding of all elections on the same day. No other important legislation will be attempted, home rule and Welsh disestablishment being postponed until 1912.

The premier of New South Wales recently announced that the government intended to make exhaustive investigations as to the crown lands suitable for settlement that were available and held under improved laws and for short tenure. It is expected in this way to make many millions of acres available for settlers, a large portion of which would be in the great wheat-growing districts.

All the opposition parties in the Russian Duma have united in addressing an interpellation to the ministers of the interior and justice regarding the reported wholesale flogging of political prisoners in the Zarantui and Vologda prisons in Siberia.

There is an increasing demand for typewriting machines in Russia. It is expected that there will be an importation of over ten thousand machines this year, of which seventy-five per cent will be of American manufacture.

At the Allahabad exhibition this winter some two hundred kinds of native timber will be shown in the natural, in the rough, and polished; also a collection of the products of forest trees and their various uses.

The farmers of eastern and western Canada are making an organized demand upon the Dominion government for free trade with the United States, at least in agricultural implements and hardware.

Industrial and Commercial.

The president of the Oregon Horticultural Society and of the Portland Apple Show will issue a call for a convention to be held in Portland of the apple growers of the Pacific Northwest to organize a cooperative selling agency company, with five hundred thousand dollars capital, to dispose of the five-million-dollar apple crop of Oregon, Washington, and Idaho every year.

A "pitching tank" has been invented by a Hamburg engineer, Herr Frahm, designed to prevent the rolling of ships. The invention consists of U-shaped tanks extending from side to side through the hold. As the ship rolls the water in them rises and falls. In a test with two steamers fitted out with the device the roll was reduced from eleven degrees to two.

The exploitation of mineral, timber, and farming resources of the section immediately contiguous to Chattanooga, Tenn., on a great scale is being planned by capitalists and steel operators.

A merger of nine large cotton mills of South Carolina has been projected. The capitalization will be ten million dollars. The combination represents three hundred and sixty thousand spindles.

A St. Louis concern has secured a million-dollar army contract for shoes, which has been held by Massachusetts for ten years.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

GLORIFYING GOD.

BLANCHE HERSEY HOGUE.

THE student of Christian Science, if he is honest, has before him one definite task: his single aim must be to glorify God. Perhaps a reason not altogether unselfish has brought him to Christian Science, or some motive not wholly sincere may perhaps be animating his present attempts to apply Christian Science to his needs and to his desires; but, because Christian Science is what it is,—because the whole nature of its teaching, when correctly applied, destroys all self-seeking,—every student must come soon or late to the singleness of purpose which is bent upon bearing witness to God's presence and power and to His goodness to "the children of men."

Not easily nor at once, perhaps, is this spiritual altitude reached. Mortals have so long and so persistently lived to satisfy themselves, that living purposely and definitely to glorify God is a new and an untried thing to them. The whole mortal self must be regenerated in order to live first for God, and the selfish or the worldly tendency in each one of us does not yield readily to the pursuit of righteousness,—to right thinking and right living. Even worse, our materiality may try, in our first study of Christian Science, to bend the word of God toward the ends of personal ambition and gain.

Praying for the gratification of selfish desires is not outgrown with ease; but, because human thinking when directed by Christian Science lays hold of divine activities, the actual spiritual law thus enlisted in our behalf begins to dispel, beyond our own power to undo evil, the selfish instincts. Though we turn to Christian Science hoping to strengthen and brighten our ways, we soon find that what we learn of it is steadily purifying our ways and causing them to give place eventually to God's ways. Thus we find, in the course of spiritual growth, that Christian Science brings gladness to life not by gratifying the mortal, but by exalting God and Godlikeness; and that in this way it sets us about what the master Christian called "my Father's business,"—even the business of manifesting this Godlikeness in every thought and in every undertaking.

The voice of the prophet Isaiah was an earnest cry against worldliness,—a plea that God should be glorified, for he writes: "Ye are my witnesses, saith the Lord;" "I have declared, and have saved, and I have shewed, when there was no strange god among you: therefore ye are my witnesses, saith the Lord, that I am God." The apostle John wrote of that other John, the forerunner of the Christ, that "he was not that Light, but was sent to bear witness of that Light." And Christ Jesus, to whom John the Baptist looked for the "true Light, which lighteth every man that cometh into the world," carried the matter even beyond the vision of Isaiah and John when he said, "But I have greater witness than that of John: for the works which the Father hath given me to finish, the same works that I do, bear witness of me, that the Father hath sent me." To the Jews who would kill him for glorifying God, because their misunderstanding hearts insisted that he was thereby "making himself equal with God," he patiently replied: "The works . . . bear witness." It was for the works, not for himself, that he wanted recognition. And here is the lesson for all Christians: religious fervor may desire to glorify God, but the works of Godlikeness alone exalt Him.

Whether our thoughts and deeds are truly for the glory of God, or whether they are in part the outcome of human will and desire, depends wholly upon the spirituality of our thinking. All material beliefs exalt matter. Every spiritual manifestation exalts God. The question, "Does this glorify God?" tests everything we think and everything we set about doing. A measure for the day's work already done is, again, How much did it glorify God? Every plan, every temptation, everything to be accepted or rejected in our work, our play, our companionships, our surroundings, our daily going and coming,—everything, in short, to be done or not to be done, can be tried by this one swift stroke that cleaves its way cleanly to the root of all action.

Perhaps just to refrain from that which gratifies ourselves is many times quietly and humbly to exalt God; always to keep from being betrayed into positive and aggressive evil is to prove God victorious; again, a situation may be so involved that to choose a lesser evil seems sometimes the best one can do at the moment to bear witness to God; and many times, indeed, the thing we feel constrained to do to glorify God may seem to the observer, because of a differing point of view, the very thing that we ought not to do. Yet it is true, that in all the conflict of human opinions, and under the pressure of varying demands, this one question asked honestly of ourselves concerning every responsibility at hand, keeps us in a safe mental place, where progress out of difficulty is assured and where we become of definite use in the earth. To live for any selfish purpose whatever is to add to the world's materiality, but to live that God may be glorified is to subtract trouble from humanity and to be a multiplier of peace.

What we know of God is for us all that is eternal, all that is worth while. The present daily life is cared for by this divine knowledge, and in no other way can it be really protected. To attempt the direct use of spiritual understanding, however, in order to build material success and happiness, is to pervert the teaching of Christian Science. Mortals cannot "use" the law of God for any ignoble purpose. As they lay down self-seeking, divine law makes use of their purified thoughts to overcome sin and disease. Christian Science heals sickness and destroys sin and helplessness and poverty, not because it is perfecting mortality but because it is doing away with mortality by reason of the appearing of immortality; because the evil in human nature is succumbing to the better understanding of the divine nature.

The causes for disease and poverty bred in the beliefs and habits of the human mind give way as unselfishness lessens under the desire to understand God, and so the effect of spiritual thinking finds room to appear in purified affections, unselfed purposes, a success that brings the greatest

Digitized by Google

good to the greatest number, and a health that is not at the disposal of matter. To gain one's desires at cost to others, to succeed because others fail, or to rise from a sick-bed with strengthened belief in animal health and in physical health or laws, may appear to be success, but in no way does it glorify God. Furthermore, to allow any self-exaltation because of the happiness and health that appear by reason of knowing God better, is to fail in so far to understand Him and to miss that much the way that glorifies Him. Gratitude, not gratified human pride, belongs to the Christian Scientist; and nothing short of the spiritual understanding that puts out self completely to find God All-in-all, is witnessing worthily to God's greatness and goodness.

By fair logic a discordant and suffering world does not bear witness to a good God. Sin, sickness, and death do not in themselves glorify an all-wise, all-merciful, ever-beneficent creator; neither does resignation to these things exalt Him. Christ Jesus was divinely patient, yet he glorified God in an active ministry against sin and disease and told the world plainly that we should all be about the same business. He also made clear the difference between relieving disease that mortals may be more comfortable in matter, or destroying disease in conjunction with sin that God's presence may be made manifest in the earth.

To understand ourselves, to find out whether we want health and success for the sake of it or in order that God may be glorified, is to determine the genuineness of our profession as Christian Scientists. The search-light of this question may very likely discover to us the reasons for some slow healing, and for multiplied trials after we understand somewhat the teaching of Christian Science. Demanding honest analysis of motive from ourselves, and comparing our hidden instincts and impulses bravely and squarely with Christlikeness, we bring to light the causes for trouble, and with Christian Science we can dispose of them. However, whether healing be slow or fast, whether we learn trust and patience through gradual deliverance or whether quick healing comes to foster our faith, we are, if striving to do everything for the glory of God, coming into our own,—finding through spiritualized thought-processes that oneness with God which must in its appearing manifest all good.

"A faithful witness will not lie," declared King Solomon. And he who obeys Christian Science is refusing daily to express untruth and is striving to become more truthful,—a better witness to God,—in his thoughts, his deeds, his health, and his usefulness. Sickness and idleness do not tell the truth about God any better than do false words and deeds. No Christian Scientist would claim, however, that in his human conduct and condition today he wholly glorifies God; he knows too well what needs yet to be cast out of himself. But Christian Science reveals to him the spiritual man of God's making, demands of him nothing less than that God shall be glorified by the continual appearing of this spiritual manhood, and sets him about the business of watching and spiritualizing his own thoughts to speed this divine coming. And in the measure that he hastens God's glory in the earth, he finds his own vexations cease, so good is God.

Knowing all these things, Jesus said, "I have glorified thee on the earth: I have finished the work which thou gavest me to do;" and St. Paul admonished, in his letter to the Corinthians, "Therefore glorify God in your body, and in your spirit, which are God's."

"MEAT FOR STRONG MEN."

WILLIAM HART SPENCER.

THE following incident is offered with the hope that it may be of help to some who are young in Christian Science, enabling them to see that, even when expressed in the old phraseology, the truth may be rightly understood and accepted in Christian Science.

Two men were stanch friends for many years, and as both held strongly to the old theology, their mutual interest naturally centered around the beliefs held in common. One went to a foreign shore; but continued his attachment to his old belief. The other gradually became dissatisfied, and finally ceased all religious activity; in the course of time, however, he became a student of Christian Science. The two friends lost sight of one another for a number of years, but their lines again came together, and in the mean time some one had given to the first the information that the other had become interested in Christian Science, which fact was referred to in a letter, full of love and friendship, but absolutely at sea concerning the subject of Christian Science, the reference to which read as follows: "If your faith has been sidetracked, as I have heard, if you have come to accept one of the delusions with which these last times abound, as has been foretold, my heart is filled with unspeakable sorrow." To this his friend answered in part as follows:—

"I'm going to strain a point, and refer to the last part of your letter. I do not need to remind you that, as far as theology is concerned, I am as well read as yourself. You also know that I was not confined to a literary knowledge of the Bible, but will concede, I am sure, that for years I strove to lead a spiritual life. You also know that a number of years ago I became, not an 'unbeliever,' as some would phrase it, but decidedly dissatisfied and discouraged—broken mentally and physically. Nearly seven years ago, during a time of great stress, I was led to read some Christian Science literature, principally because I knew of its redemptive work, which was effective in the lives and characters of some of my intimate friends. I then supposed, as many do now, that Christian Science was some kind of heretical philosophy, and I expressed myself freely at first, to the effect that I wanted nothing contrary to the Scriptures. This stricture, I supposed, applied to Christian Science, but I have found out my mistake! My old Bible has become a new book to me,—I read and study it more than ever before, and little by little its spiritual interpretation has dawned upon me. I found Christian Science anything but a 'delusion.' It has proved a 'key,' whereby the many hitherto hidden things of Scripture are being made clear to me. That this leading is of God has been practically proven. Instead of the 'falling away' which you mention, I am growing closer in touch with the faith of the early church, as taught before materiality destroyed its spirituality.

"Where, in years gone by, there was theological speculation, there has dawned on me the vision of the living Christ. I have had it said to me that I had no right to call myself a Christian,—that I denied the atonement, etc. I now know more about the atonement by far than I ever thought of knowing under the dogmatic teaching of years agone. I more than know about it. Thank God, I realize it! The words and works of Christ Jesus my Saviour are my daily food. Through the leading of the Christ I have come into touch with my heavenly Father. I can and do love God, and know that I am a joint heir with Christ. In all these years I have not used a drop of medicine. God is sufficient for me. I trust Him in all things. Moreover, I am assured that He will work within me a 'far more exceeding and eternal greater weight of glory.'

"I was going to add, 'If this is not Christianity, you may tell me what is,' but I will not ask it. You could not tell me! I have left the milk and am feeding on 'meat.' Instead of feeling sorry for me, rather give thanks to God that I have come into my inheritance, which was in Christ before the foundation of the world. Just think of me as loving you more than ever, which love will increase as my knowledge of God, who is divine Love, increases."

"OUR FATHER."

VIOLET KER SEYMER.

IT is safe to say that a great number of those who turn to Christian Science for healing are in some way or other victims of the belief that there is a law of heredity; that is to say, they are considered to have inherited physical or moral defects from their progenitors. In Science and Health, however, we find this significant statement: "The foundation of mortal discord is a false sense of man's origin" (p. 262). In Christian Science healing is accomplished by the realization that God is the only creator and the only lawgiver, the infinite and only source of life, individuality, and constitution in their true sense. Jesus said: "Call no man your father upon the earth: for one is your Father, which is in heaven." Strictly speaking, mortality is neither a parent nor an offspring, for no mortal has the power to originate or to transmit life, and it is evident that mindless matter cannot transmit sin or disease; therefore Christian Science reveals mortal mind, so called, as the aggressor and divine Mind as the liberator in every instance.

In support of the belief that God institutes or permits heredity along the line of material descent, people will often quote from the commandment: "I the Lord thy God am a jealous God, visiting the iniquity of the fathers upon the children." Memory is playing them false, however, if they forget that the conclusion reads: "unto the third and fourth generation of them that hate me; and shewing mercy unto thousands of them that love me, and keep my commandments." Could it really be supposed that God is punishing hereditary hatred on the one side and rewarding inherited love and obedience on the other? Would not this imply that goodness, independently of personal effort, is guaranteed in some cases, whereas in others the burden of an evil legacy is unavoidable? The shame and despair this theory engenders are responsible for much of the suffering from which hundreds of individuals seek and find deliverance in Christian Science. The inner meaning of this commandment goes to show that hatred punishes itself wherever the belief is indulged, while goodness flows from God and is its own reward, and that relationships have nothing whatever to do with the question. When the understanding of divine Love as the perfect Principle of creation dawns upon sufferers, they make the discovery that man is a spiritual being governed by spiritual law, and they gain a better sense of what their true individuality includes and excludes. They begin to perceive the "measure of the stature of the fulness of Christ," and meanwhile experience a blessed relief from pain and the conflict of sin.

While the very general belief in the law of heredity is not to be accepted, there is indeed a true law of inheritance without which Christ Jesus could not have taught his followers in every age to pray "Our Father." These two simple words alone reveal a most glorious inheritance of purity, perfection, and immortality. As if to forestall the claim of presumption, Jesus still further emphasized the fact of men's true inheritance as his coheirs in the words: "I ascend unto my Father and your Father." When all Christians understand something of the scope and something of the requirements of these two words, "our Father," they will pronounce them joyfully, and forever renounce the supposititious inheritance of sin and disease. Having put their hand to the plow, they will not look back to past conditions, but resolutely cast out the old beliefs until not a seed of false sense remains to furnish a crop of weeds.

Then will come the discovery that laws of inheritance truly exist,—liberating laws of health, joy, and eternal progress; and that this true sense of inheritance obliterates its counterfeit at every point, no matter how indelible its marks may have seemed to be. Those, however, who would escape the false claims of heredity in practice, must no longer uphold them in theory or quote them in conversation. Through earnest study, accompanied by demonstration, they can prove that evil is no inherent part of their individuality, and so doing they can confidently replace the old fears with the new and true conviction: "I and my Father are one." It will be a grand day for humanity when the medical profession takes this view of the true law of heredity, upholds it, and beholds its easy victory in Christian Science practice over all the ills that flesh has hitherto seemed heir to.

The apostle tells us that "as many as are led by the Spirit of God, they are the sons of God" and "joint heirs with Christ." When this awakening is more general, men will be found silencing the belief in spurious laws rather than advocating them. They will no longer manacle their own wrists as heretofore, nor insist that because the fathers have eaten sour grapes "the children's teeth are set on edge;" and this self-correction will hasten the universal demonstration of the glad prophecy: "As I live, saith the Lord God, ye shall not have occasion any more to use this proverb in Israel."

DISCRETION.

WALTER SHAW.

THERE is an old saying that "charity begins at home," which in its common interpretation may be taken to mean that we should give what we have to spare to the needy ones connected with the family before seeking to bestow our gifts upon strangers. The phrase also implies a mild rebuke to ostentatious almsgiving, by placing outsiders (through love of applause) before those who have a prior right to claim our sympathy and consideration. The application of the proverb could be extended to many conditions and circumstances to which there is now no occasion to refer. Its bearing upon Christian Science may be seen in the human desire to teach anybody and everybody our first smatterings upon this vast subject. It is rightly natural to wish to share the blessings we have experienced with others, but it is also essential to consider whether we are ready to impart its truths prudently, or able to discriminate as to those who are prepared to receive it.

If "charity begins at home," should we not at first seek to enrich our own consciousness and ensure a clear and firm grasp of Christian Science teaching, so that we may spontaneously radiate the glorious light it has brought to us? Most students find there is much home work to be done in order to entrench themselves against the assaults of old beliefs, before they are equipped to instruct others. Mrs. Eddy writes (Science and Health, p. 373), "Healing is easier than teaching, if the teaching is faithfully done." Yet how many young students essay to teach Christian Science to friends and acquaintances before they have actually had much practical experience in the application of the healing power of Truth. In "Miscellaneous Writings" (p. 355) we read, "Less teaching and good healing is today the acme of 'well done;'" and by following carefully our Leader's wise instructions we shall avoid much painful disappointment which may otherwise result from the exuberance of an inexperienced zeal.

The essential point for each worker is to get a true and positive hold of the fundamental teachings of Christian Science, and this can only be done through much patient, earnest study of our text-book and Mrs. Eddy's other writings. Our periodicals also furnish important help in study which no one can afford to neglect. A great responsibility rests upon those who undertake to explain Christian Science to enquirers. So much depends upon first impressions, that we should fervently pray to be divinely guided on every occasion that we are called upon to voice this subject to outsiders. It is often wiser to refer people to Science and Health and say where the book can be obtained on loan, or to send them Christian Science periodicals, rather than to attempt to argue the various points that present difficulties to beginners.

Digitized by Google

The results of Christian Science should only be given to those who seem ready to appreciate them. Much harm is done by considering the merely polite listener as "so interested," and passing him on to another student as "a beginner who wants help." The more experienced worker may find such a person to have been already bored beyond measure, and if he is wise, he will gently lead the conversation into other topics. To discriminate between quiet acquiescence and the shy (but real) desire to learn more of Christian Science teaching, demands prayerful attention toward the needs of our fellow-men. There is no reason, however, to shirk or avoid a firm statement of truth when it is required, and we may always rely upon divine Love to guide us in what we have to say, if we are but watching for this help, and not depending upon our human sense of intellectual prowess. Truth is ever attractive to those really looking for it. We can well afford to be modest in all our statements, for the most advanced student is keenly conscious of the vast amount he has yet to learn. To keep self out of the way should be our constant aim, remembering our great Master's prophetic words, "And I, if I [Christ, Truth] be lifted up from the earth [separated from materiality], will draw all men unto me."

DAILY SUPPLIES.

ERNEST W. DAVIS.

I REMEMBER well, when we first began to receive copies of the *Journal*, the *Sentinel*, and later the *Monitor*, how jealously they were guarded and filed away to be reread. With the constant coming of new copies, however, and our study of the Lesson-Sermon, there seemed to be no time to read the back numbers again, and at last, driven to it by the rapid accumulation of the various publications, we were compelled to give them away to make room for later ones. Before parting with them, however, we would run them through and lay to one side those in which were articles that seemed to fit our case especially, and many times we would clip out some article and place it in our scrap-book. Then, because the publication was mutilated, we would throw it into the waste-basket, and by so doing deprive some one else of help which might have been received by the reading of that particular copy.

Back of the impulse to save and hoard those copies was fear,—human fear of lack of supply; a sense of limitation, and distrust of God and of His ability to meet our needs. But later we began to see that God, good, is infinite, that truth is eternal; hence man, being the idea of God, must bring out throughout eternity the infinitude of good. We, as Christian Scientists, are receiving, more and more each day, as we grow in the understanding of God, the substance of Spirit. And we shall continue to receive, in increasingly greater degree, as our capacities for assimilation and receptivity are enlarged by giving. Should we not, then, resolve ourselves into aids to the distributing committees, and send our back numbers of the Christian Science publications to this department, which is so important a part of the church work? Let us go even farther, and if in looking about us we should discover some brother or sister who is struggling with error in the form of limitation, and really trying to overcome it, although confronted by seemingly unsurmountable obstacles, we may encourage him and perhaps lay low some mountain of fear and exalt some valley of discouragement by making it possible for the *Sentinel* or *Journal* or *Monitor* to visit him regularly throughout the year.

Our Christian Science Publishing Society is doing a grand work through its publications, and every copy that is sent out into the world carries "healing in its wings;" each article is a flash of light which shall accomplish the work whereunto it is sent. Mrs. Eddy tells us there are "millions of unprejudiced minds, simple seekers for Truth, weary wanderers, athirst in the desert" (Science and Health, p. 570), who are "waiting and watching" for this acquaintance with and understanding of our Father-Mother God which we as Christian Scientists have and are receiving through the life and labors of our beloved Leader. To experience the gratitude which must ensue from an acquaintance with her works, and the pure, purposeful, and unselfish manner of living which made it possible for this truth to be expressed through her, is in itself a taste of heaven.

But we have not touched the hem of Christ's garment until our greatest desire is to follow in our Master's footsteps, even though the path be one of thorns. As earnest followers of our Leader, we can do no less than improve every opportunity that is presented for the furtherance of the understanding and demonstration of Truth, so that God's kingdom may be established in the hearts of men. Let us give to waiting hearts the "cup of cold water in Christ's name" (*Ibid.*); and one of the most effectual ways of doing this is by furnishing them with copies of our publications, in addition to living daily and hourly the truths therein taught.

NO DEATH.

R. A. GILBERT.

WHILE writing to a dear friend of the fact that Christian Science had made a wonderful demonstration for me, not only physically but spiritually, a beautiful thought came to me. As it flashed through my consciousness it answered for me a statement to which I had given much thought, namely, that there is no death. In a moment I realized as never before its meaning.

In a lodge of which I was an active member for some years, a service is held once a year in remembrance of the departed brethren. These services are held in some public place, which gives all an opportunity to pay their tribute of love and respect. A list of the names is given to the speaker at the ceremonies, and he calls each one's name distinctly three times. And what is the response in the hearts of this assembly of sorrowing ones, as the names of their beloved are again recalled? Often there is nothing but regret; indeed it is to most of them nothing but death. Again, let a Christian Scientist attend this same ceremony and conduct it from a scientific standpoint, and what would be his thought? As this question came to me, I recalled the words of Christ Jesus: "Lo, I am with you alway, even unto the end of the world:" and again these words: "If a man keep my saying, he shall never see death."

How beautiful is this thought to all those who can realize and know the fulness of this glorious truth! Need I add that my heart has gone out in thankful gratitude and love to our revered Leader, through whom the true concept of God as Life, Truth, and Love was revealed to us.

It is not correctness of opinion that constitutes rightness, but that condition of mind which, as a matter of course, causes it to move along the lines of truth and duty—the life going forth in motion according to the law of light: this alone places a nature in harmony with the central Truth. It was in the *doing* of the will of his Father that Jesus was the Son of God—yea, the eternal Son of the eternal Father. Nor is this to make little of the truth intellectually considered—of the fact of things. The greatest fact of all is that we are bound to obey the truth, and that to the full extent of our knowledge thereof, however little that may be. This obligation acknowledged and obeyed, the road is open to all truth—and the only road. The way to know is to do the known.

GEORGE MACDONALD.

EXCERPTS FROM EDITORIAL COMMENTS

[*Dallas* (Tex.) *News.*]

To have founded a faith which has its followers wherever there is civilization, and counts them by the hundred thousand, is of itself title to such fame as few men, and fewer women, earn. At least this tribute to Mrs. Eddy men of all creeds, as well as the creedless, may unite in giving, for it involves no question as to their agreement with the tenets of the faith which she either revived or instituted. Indeed, it ought to be possible to pay her higher tribute than that without arousing sectarian controversy; for we think it is indisputable that the faith she taught has quickened with hope and joy the souls of multitudes in whom other creeds inspired only a perfunctory morality. Thus it has justified its existence, proved that there was room for it.

Christian Science has lived too long, the spread of its influence has been too persistent and rapid, to allow any one to imagine that it is merely a transitory phenomenon, a spiritual delusion destined to pass away. It has been subjected to the same test which every other faith has had to withstand, that of intolerant skepticism. Man is disposed to regard every new idea as somewhat intrusive, and when that new idea is one that unsettles religious formula he is disposed to resent it as a thing of malign inspiration. Primitive Christianity itself underwent the same combat with paganism, and every Christian sect since then has encountered the same opposition, proportioned to the angle of divergence from all other fashions of orthodoxy.

Though the Christian Science church, as a church, has met this opposition with serenity and smiled into the face of frowning hostility, some few of its members, with an impatience that ill comports with their creed, have complained of the bigotry that is wont to look at them askance. They have no grievance that is not common to the disciples of every new faith, and indeed they are more fortunate in that their faith was founded at a time when, if intolerance was quite as active, it was at least less sanguinary in its methods of repression. Mrs. Eddy and that little band first won by her teaching have suffered the sting of hostile gossip and have often been isolated by a social ostracism, but at least they have not felt the sword nor known the gibbet and the stake; moreover, they have pressed more rapidly than most new creeds did into the circle of toleration.

The world at large may still look at them askance, but only in the backwoods are they any longer objects of curiosity. Men are coming rapidly to see that with them at least their faith is real. They exemplify it in their daily conduct with a fidelity that compares favorably at least with the fidelity with which the followers of any other creed manifest their faith; and as men behold it thus exemplified, they have come to see that, instead of being incompatible with Christian morality, it imposes a standard of ethics in which other Christians can find no flaw and conceptions of life beyond the grave that imply the highest degree of religious optimism.

It is this optimism that contrasts so forcibly with some other phases of religious thought which would have us regard this earthly life a vale of tears. From it has sprung that confidence in the unlimited possibilities of the human soul which has literally transformed the physical as well as the spiritual life of thousands of its adherents.

[*Herald*, Washington, D. C.]

The death in her ninetieth year of Mrs. Mary Baker Eddy, Founder and Leader of the Christian Science church and system of faith, is an event that will profoundly stir practically every city and community throughout the United States, so universal was the spread of her doctrines and the congregations of her followers. Already from her adherents have come expressions of regret and outpourings of love—all of these tinctured with a beautiful faith of the orthodox Christian kind which allows the believer in the gospel of Jesus Christ to say over the bier of a beloved one: "She is not dead, but sleeping."

As to the doctrines of Christian Science which Mrs. Eddy promulgated with such success, there is still a wide diversity of opinion, but we think all will agree that there is much that is inspiring and helpful, even to the most orthodox, in Mrs. Eddy's teachings; and the unprejudiced, those not of her faith, but of open mind, must in justice admit that her work, through long years, was always for the betterment and the uplift of mankind.

The religious system she taught was a system of optimism; her promulgations agreed closely with the teachings and practices of Jesus Christ. She taught the gospel of right thinking and right living; she taught, in other words and phrases, the gospel that "a man's work lives after him," and that, so far, there is no such thing as death. And we shall find, we think, that her own career will exemplify this teaching, for though Mrs. Mary Baker Eddy is dead in the flesh, we know that she shall live in the spirit; that the work to which she put her hand shall go on, informed always with the soul of love and charity and hopefulness and faith, to comfort many to whom the old creeds and forms no longer have appeal. For, without going into the minute particulars of the forms of Christian Science—and of these there are but few—the fact remains that fundamentally the faith of Mrs. Eddy and her followers was the faith of Jesus Christ. It was faith in the eternal goodness of things; the faith that destroys evil and works bravely for the good.

"God is my life" are reputed to be her last written words; words of strong faith that, could they be reechoed by every man, would make the world a happier and better place to live in. Hers was the gospel of salvation by work aided by prayer, and perhaps the one point on which those outside of her church were unable to follow her was in her positive belief in the efficacy of prayer to resolve all human doubts and cure all human ills. But, even in our inability to follow Mrs. Eddy thus far, we are, after all, but confessing that our faith in God's word was less than hers. For it is true, as Tennyson phrased it, that—

> More things are wrought by prayer
> Than this world dreams of. Wherefore, let thy voice
> Rise like a fountain for me night and day.
> For what are men better than sheep or goats
> That nourish a blind life within the brain
> If, knowing God, they lift not hands of prayer
> Both for themselves and those who call them friend?
> For so the whole round earth is every way
> Bound by gold chains about the feet of God.

[*South Bend* (Ind.) *News.*]

As the Leader of one of the most remarkable religious movements the world has ever witnessed, Mrs. Eddy found it necessary as well as agreeable to her to live in dignified seclusion, appearing to the followers of her faith at times when the proprieties called for her presence.

Mrs. Eddy's life was notable for its longevity as well as for its purity, beauty, and usefulness. She was born ninety years ago in Bow, New Hampshire, and her youth was spent in sympathetic touch with the picturesque beauty of nature for which the region is famed. Her great grandfather was a man of honored reputation and bore a commission conferred by the provincial assembly. Her father and grandfather were sturdy farmers who fostered in their children the elements of a noble character. The intellectual tastes and assertive strength of her father and the piety and loving winsomeness of her mother were united in her nature, and one who knew her intimately in her girlhood has spoken of her as being distinguished even then for "superior ability and scholarship, her depth and independence of thought, and her spiritual-mindedness," all of which were prophetic of her future work in the world.

The education of the young girl was given careful consideration by her parents, and at sixteen her fertile pen and

Digitized by Google

her ceaseless inquiry and investigation began to disclose that instinct of the poet and truth-seeker which in later years was to achieve such beneficent and far-reaching results. She is said to have been constantly seeking that revelation of truth which would bring her heart assurance and peace, and she followed the path which leads from the plane of common experience to the higher levels of spiritual apprehension. In an hour of hopeless physical suffering she is said to have reached such a realization of the present healing potency of the Master's word that she was immediately made whole. This was in 1866, and since that time Mrs. Eddy has been devoted to the teaching of her faith and its practical application to human needs.

The visible results of Mrs. Eddy's work are found in the establishment of nearly a thousand churches in this and other countries, where the Christian Science faith is taught, and more than a million followers of that faith. Perhaps no religious movement was ever more derided and obstructed in its progress, but it has steadily advanced, and in some particulars, especially in the building of churches without an entailment of indebtedness, has set a new and commendable example.

[*Journal-Courier*, New Haven, Conn.]

The editorial comments on the life and career of Mrs. Eddy show a gratifying sense of tolerance. Here and there a newspaper expresses its violent dissent from Christian Science doctrines, but the great majority frankly express their admiration of the woman from both a personal point of view and spiritual. Had she died ten years ago this would not have been the case, which is additional tribute to her marvelous power of organization.

It was the *Springfield Republican*, if we are not mistaken, that emphasized the immense good she did in influencing the medical profession by establishing the influence of mind over matter. That truth was not original with her, but it was she who preached it until it became a gospel with over two million souls. The *New York Sun* emphasizes still another phase of her usefulness, and it is this after all that has received such a visible manifestation. Says the *Sun*: "We are thinking of the astonishing influence she exerted in thousands of homes for the amelioration of life and manners in some of the details of family and social intercourse. She taught cheerfulness of spirit, and observation encourages the belief that the great majority of her followers either became more cheerful, both subjectively and as consistent examples to those around them, or with more or less success simulated a modification of temperament in that respect, which nearly amounts in practice to the same thing. She taught charity in judging the deeds and motives of another," etc., etc.

This attitude of tolerance does more than gratify the followers of Mrs. Eddy, which we take it it does. It reflects the highest credit upon the American people, who are brave enough and fair enough to acknowledge an achievement without small jealousy. The more this spirit is encouraged the nearer shall we get to the real brotherhood of man and church unity.

[*Los Angeles* (Cal.) *Express.*]

Not merely one of the world's great women—one of the world's great personages passed away when Mary Baker Eddy died in Boston Saturday night. She must be adjudged great if measured only by the extent of the influence she exerted over the minds and lives of men and women over all the earth. That influence was world-wide and strongly potent in its workings, guiding and controlling the views of hundreds upon hundreds of thousands of exceptionally intelligent disciples. Whether her long career be regarded with reverent consideration or in hostile criticism, friend and foe must unite in the judgment that places among the group of the world's great, this woman, whose body now lies dead but whose spirit still strongly lives.

The change that men call death came softly and painlessly after four score years and ten of life devoted to the search for truth. Her search ended where all life begins—in God. Death found her work complete, her mission ended, her service fulfilled. The way she pioneered, the path she found, now runs broad and smooth to the feet of all who believingly follow. She made God easy of approach to hosts of men and women who, losing faith, *else* had not known Him. She gave vitality to belief, direction to aimless purpose, ideality to life, new sanctity to truth, supremacy to Mind, healing to the body, and did her part in bruising the serpent's head. It was a great creative work that Mary Baker Eddy achieved in an age when faith had begun to depart and belief to darken.

It is too early to measure the scope of her achievement. Although for years she has lived in retirement, perspective still is lacking. It is not in this generation or the next that it will be possible in the judgment of men to assign her to her rightful place. The work she did endures and will endure. Her teachings survive. Death has no power over truth. The church she founded, losing a founder, yet has lost but a member. It remains unhurt, the embodiment of principles, not a creation dependent for vitality upon an individual. While it continues faithful to Truth, and combative of error, a medium whereby increasingly is established the unity between life and God, it cannot die.

[*Birmingham* (Ala.) *News.*]

In the death of Mrs. Eddy there passes from the stage of life not only one of the most remarkable women that the world has ever seen, but a woman remarkable in a most distinctive way. In the past, women have commanded armies and ruled empires, but Mrs. Eddy was the first of her sex to found a religion, and in this work her greatness lies, not in the line of invention or discovery.

It remained for Mrs. Eddy to assert the absolute nonreality of matter and to pronounce the belief in its existence the source of all evil, both spiritual and physical. And she did this with a bareness, a force and a persistence that won from their former moorings not only minds mystical by nature, but also minds pronouncedly materialistic. It is in this ability to rehabilitate an old thought, swing it clear of long accepted foundation, and drive it home to the consciousness of a materialistic age, that Mrs. Eddy's greatness lies.

[*Pasadena* (Cal.) *Daily News.*]

Whatever the partizan conviction of the average American churchman as to the permanent quality and present ethical and spiritual value of the religious faith of which Mrs. Eddy, the author of the text-book on Christian Science, was the acknowledged Leader, thinking people will at least pause to accord her that measure of justice and respect which her remarkable life, drawn out to the limit of almost ninety years, commands. Even in her old age she has been the object of the enmity of those who perhaps slightly understood her work and her real part in the realignment of the religious thought of the world.

Mrs. Eddy's remarkable book, it must be admitted by friends and critics alike, has resulted in one of the most wonderful religious developments of our time. It cannot be denied that its teachings have carried relief to hundreds of thousands of hopeless sufferers, many of them having exhausted every other possible source of relief. Whatever may be thought of its interpretation of spiritual truth, whatever may be the judgment of the world at this time of its logic, the fact remains that to suffering humanity it has been a boon. No intelligent fair-minded person, in the face of the overwhelming evidence of the value of this belief in

Digitized by Google

bringing health, mental sunshine and cheer, in expelling suffering, fear, worry, and hate, can question that it is one of the great, potent, and virile religions, however they may differ from its point of view. It professes to be a religion of love and unshrinking trust.

The more religion the world can get, under whatever name, that will strengthen faith and relieve suffering, dispel discouragement, fear, and hate, the better for humanity. It is perhaps the common consensus of opinion that in this direction Mrs. Eddy's life and work has contributed its full part. Abuse and persecution has not retarded the growth of Christian Science. Its hold on men and women of discrimination, intelligence, and character has been the most conspicuous development of modern religious thought.

[*Cleveland (O.) Leader.*]

One of the most remarkable women of the age, or of any age, has ended her career in the death of the Founder of Christian Science. The most bitter hostility to Mrs. Eddy and the most complete rejection of her doctrines and her church organization cannot, if honest and intelligent, deny that she has been a far-reaching and vital force in the thought and life of her times. The religion which she founded and completely dominated has more or less colored and permeated very important phases of existence for a multitude of men and women who do not call themselves Christian Scientists and are not, in fact, connected with the Christian Science organization.

Her doctrines and her great influence upon tens of thousands of intelligent people, in this country and in other lands, was a wholesome antidote to the extreme materialism which is one of the distinctive characteristics of the age. In so far as her teachings were credited and her conclusions were accepted, the ideal was exalted and the sensual and sensuous weakened. The spirit became more and material things less important. Nor can it be denied, by those who are well informed, that the result of the remarkable growth of Christian Science has been to give peace of mind and more wholesome conditions of life in every sense to many of Mrs. Eddy's followers.

[*San Francisco Examiner.*]

It will be difficult to the layman in either the religious or medical worlds to properly estimate at its true value the life and career of Mary Baker Eddy. This much, however, the unprejudiced must admit: She was a woman with a mentality strong enough to hold her own against as bitter a tide of hostile criticism as ever threatened to overwhelm any leader of a new thought. In spite of this hostility Mrs. Eddy established, here in the United States, a cult which is today an important factor in the religious and social life of the nation. The Christian Science church is a recognized moral, religious, and medical force. Its edifices are reared in nearly a thousand cities and towns. Its membership is large. Its growth has been rapid. Its influence reaches into every quarter of the civilized globe.

A woman who could in the short span of a generation—she did not found the church of which she was the Leader until 1879—build so great an edifice upon so firm a foundation was more than an ordinary woman. She was a great woman. How great the future alone can determine, for the true greatness of a leader of a new thought can only be measured through the perspective of years.

[*Philadelphia Press.*]

There have been various founders of faiths, in all ages, who showed that the appeal they made to an absolute unquestioned, undoubting trust and belief in the spiritual and in its immediate revelation to and knowledge by every human being who accepts and seeks it, meets a need in human nature. Whether this belief be logical and capable of proof or not, it exists; it has been preached by some conspicuous leader in almost every Christian century, and it has always had some acceptance and has often founded a new sect, communion, or church.

In no other instance in this country has this acceptance been so widely diffused, shared by so many or accompanied by such readiness to flock to a new church and to follow a new leader, as in the case of the Church of Christ, Scientist. No one in our day and few in any day have ever succeeded in this particular task as has Mrs. Eddy. She leaves great churches, great congregations, and tens of thousands who feel that their lives, their souls, and their bodies have been transformed by her teaching. Her influence has been great outside of her own following, and she has sensibly influenced the preaching and the teaching of many churches and the lives and thought of many who did not for an instant accept either her utterances or her claims.

[*Sandusky (O.) Register.*]

The death of Mrs. Mary Baker Eddy removes from the living one of the most remarkable women of the centuries. However people may differ about the doctrines she taught, however diverse human opinion may be as to her claims and her writings, whatever may be the final judgment of an intelligent Christian world concerning Christian Science, all must admit that she was a transcendent character. No other woman in modern times has ever reached anything like Mrs. Eddy's heights in leadership, in organization, and in enduring fame.

The church Mrs. Eddy founded but a few years ago already has a membership in this country of probably one hundred thousand, made up not of ignorant, credulous people, not of those who are easily duped, who are moved by prejudice and passion, but more largely than the average denominational church, of thoughtful people, educated people, intelligent and cultured people, drawn largely from the leading Protestant Christian churches throughout the world, a unique religious body unlike any other in history and yet holding to certain fundamental truths which people of all religious beliefs admit, a religious body having some of the finest edifices erected in modern times. Mrs. Eddy did not live in vain. The world has been made and will still be made the better for her having lived, and she has left an impress world-wide that will go down the centuries yet unborn.

[*Providence (R. I.) News.*]

Mrs. Eddy has been the subject of much comment, but that she was a great leader of men and women is proven by the many thousands of adherents that she secured in the most cultured sections of this country. The handsome church structures that the Christian Scientists have erected in Boston and this city indicate at least that they have a firm confidence in the continuance of their organization. Nothing is easier than to find fault with those who advocate changes of such a radical nature as did Mrs. Eddy, and yet the fact remains that, no matter what doubters may assert, many have found bodily health and more mental calm by reason of the attention given to the courses she advocated.

Mrs. Eddy had stanch friends and many earnest workers in her cause. She undoubtedly did much good, and whether one agrees with either the religious views she advanced or her belief in the all-powerful control of matter by mind, she alleviated much real distress and gave to men and women, many of them of undoubted sincerity, a new faith at least in themselves. Her long life, therefore, was a most useful one and she will long be remembered as one of the remarkable personages of the last years of the connecting extremes of two progressive centuries.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

[Republished by request from *Sentinel* of Dec. 18, 1909.]

CHRISTMAS AS IN CHRISTIAN SCIENCE.

MARY BAKER EDDY.

CERTAIN occasions considered collectively, individually, and observed properly, tend to give the activity of man infinite scope; but mere merry making or needless gift giving is not that wherein human capacities find the most appropriate and proper exercise. Christmas respects the Christ too much to submerge itself in merely temporary means and ends. It represents the eternal informing Soul recognized only in harmony, in the beauty and bounty of Life everlasting,—the truth that is Life,—the Life that heals and saves mankind. An eternal Christmas would make matter an alien save as phenomenon, and matter would reverentially withdraw itself before Mind. The despotism of material sense, or the flesh, would flee before such reality to make room for substance, and the shadow of frivolity and inaccuracy of material sense would disappear.

Christmas, in Christian Science, stands for the real, the absolute and eternal,—the things of Spirit, not matter. Science is divine; it hath no partnership with human means and ends, no half-way stations, nothing conditional or material belongs to it. Human reason and philosophy may pursue paths devious, the line of liquids, the lure of gold, the doubtful sense that falls short of substance—the things hoped for and evidence unseen.

The basis of Christmas is the Rock, Christ Jesus; its fruits, inspiration and spiritual understanding of joy and rejoicing; not because of tradition, usage, or corporeal pleasures, but because of fundamental and demonstrable truth, the heaven within us. It is love loving its enemies, returning good for evil, that suffereth long and is kind. It elevates medicine to Mind, it casts out evils, heals the sick, raises the dormant faculties, appeals to all conditions, and supplies every need of man. It leaves hygiene, medicine, ethics, and religion to God and His Christ, to that which is the Way, in word and in deed,—the Way, the Truth, and the Life.

Hitherto there is but one Christ Jesus on record. Christ is incorporeal. Neither the you nor the I in the flesh can be or is Christ.

Pleasant View, Concord, N. H.

[So many requests have come to us for the republication of our Leader's message on "Christmas as in Christian Science," which originally appeared in the *Sentinel* of Dec. 16, 1905, and was reprinted a year ago, that we are glad to give it the place of honor on the editorial page, recognizing that it will reach thousands of hearts with a special significance at this season.—EDITOR.]

"THE HEARING EAR."

IN the book of Proverbs we find this significant saying, "The hearing ear, and the seeing eye, the Lord hath made even both of them." It is quite possible that many may regard this as merely a reference to the material sense of hearing and sight, but rather does it point away from material sense to the spiritual, and thus it recalls the Master's words, "They seeing see not; and hearing they hear not;" and again, "Who hath ears to hear, let him hear." In Revelation we read again and again, "He that hath an ear, let him hear what the Spirit saith." The thought of the hearing ear also recalls the words of our dear Leader's hymn,—

> I will listen for Thy voice,
> Lest my footsteps stray.

It is beyond all question that if we hear and heed the divine voice, we cannot stray from the right path, or miss the needed word of guidance if the way seems beset with difficulties or even dangers.

Strange as it may seem, it has come to pass in human experience that very few think of listening for the voice of God, Spirit, and many question without reserve the Scriptural accounts of those who talked with God and were thus led from bondage to freedom. Respecting this Mrs. Eddy says, "Before human knowledge dipped to its depths into a false sense of things . . . it is possible that the impressions from Truth were as distinct as sound, and that they came as sound to the primitive prophets" (Science and Health, p. 213). It may be that the sense of hearing is not today keen enough to cognize spiritual reality to any great extent, but there are few who have not at some time or another—usually in some crucial experience—been aware of a voice from a realm far above the mortal, which spoke to the inner ear, and in unmistakable tones told of the Mind that comprehends and supplies all human need. The prophet must have felt this when he wrote, "Ye shall have a song, as in the night; . . . and gladness of heart . . . and the Lord shall cause his glorious voice to be heard." And again, "Hearken diligently unto me, and eat ye that which is good. . . . Incline your ear, and come unto me: hear, and your soul shall live."

The physicists tell us that the non-use of any faculty results in its decay and its final disappearance. Does not this explain, or rather typify, the absence from human consciousness, of the spiritual sense which enables man to commune with God, as in the tender relation of *parent and* child? Men have come to think of God as so far away that it seemed vain to listen for His voice,—a thought which finds expression in the words of a familiar hymn,—

> When I soar to worlds unknown,
> See Thee on Thy judgment throne.

Yet with strange inconsistency mortals have poured out their pitiful plaints to the Almighty without listening for His reply.

In Christian Science a wonderful unfolding of spiritual sense has come and we learn from its teachings that this sense is indestructible because it is created by God, divine Mind. The non-recognition of this sense, or even its denial by mortal mind, does not affect in the least the eternal fact that God made "the hearing ear" as a faculty of Spirit, not matter, and through it "the real reaches the unreal. Soul rebukes sense, and Truth destroys error" (Science and Health, p. 350). It may be that we need the rebuke of Spirit more than anything else for our complete healing, and Spirit says, through the Revelator, "As many as I love, I rebuke and chasten." This being true, the all-important thing is to hear, then obey, rejoicing meanwhile that we are spiritually quickened so that we can hear the Father's voice, distinguish the clear utterance of Truth, and know that error has no power to allure us from the path of Life. The Christ says, "They shall hear my voice," which indicates that "the hearing ear" is an eternal possession of all God's children.

ANNIE M. KNOTT.

"CHRIST IN YOU."

WHEN one considers the universality of the Christmas celebration, that the old and young of all the nations and peoples denominated Christian have on the average devoted many hours, if not days, of active thought to the joyous anticipation and unselfish doing which it prompts, he can but realize the possible mental significance of the event. Nevertheless, it must be said that this celebration is not

Digitized by Google

regarded by the many as having any immediate or important relation to the world's redemption or to their individual betterment. It figures as having to do with pleasant experiences, rather than with spiritual quickening, and in so far its religious meaning is practically lost.

This is a mistake of far-reaching effect, whose seriousness is beginning to be apprehended, through Christian Science, in all the world. To identify the Christ-coming as an incident which transpired nineteen centuries ago, to limit it in thought to the appearing of the Bethlehem babe, is practically to accept the phenomena of God "manifest in the flesh" which the life of the Master presented, in lieu of the experience of the Christ-coming in our own lives.

In Science and Health Mrs. Eddy writes: "The incarnation of Truth, that amplification of wonder and glory . . . is consonant with ever-present Love" (p. 501); and in this declaration she epitomizes the teaching of Christian Science, which places the Christ-coming in an entirely new relation to individual thought and interest. Writing to the Colossians, St. Paul speaks of "the mystery [the deep spiritual truth] which hath been hid from ages . . . but now is made manifest to his saints: . . . which is Christ in you, the hope of glory." Here is a concept of the incarnation which brings it exceeding nigh, and while one's interest in the Scripture narrative is not lessened thereby, his interest in the reappearing of the Christ-child, the divine idea in his own consciousness, is wondrously illumined and increased.

What does this "Christ in you" mean for me? That is the question. It is not that one personality is in another personality, but that the law of the divine intelligence and activity, the word of God, finds expression; that there is begotten in us Godlike thoughts and doings. The manifestation of the wisdom, the power, the unselfishness, the purity, the love which glorified the Master's life, speaks for a new Bethlehem and a "new birth," the coming and in-ruling of Christ. Said Jesus, "Believe me for the very works' sake," and now we better understand what he meant. His exhibition of the power of divine law was the sufficient witness of the presence of the Messiah.

To be content, as many seemingly are, to link all Christmas thought to the historic appearing of the divine order in the man Jesus, is not to honor Christ, but rather to lapse into the embrace of a wholly inadequate sense of the substance of the gospel. The Christ-coming is commensurate with human redemption, the affirmations of Truth are as continuous as the radiations of light. This is the great theme of Christian Science, and from its individual realization must spring every blossoming of "the hope of glory."

The manifestation of God in and over human consciousness is the individual Christ-coming which is without years or length of days. It is superior to times and places, all sense limitations, and it establishes that temple within, that true church, in which the exhibitions of the power of God are ever present. As Christian Scientists it is ours to demonstrate this more spiritual, more inspiring apprehension of the joy-bringing Christmas-tide, in the showing forth of all that speaks for the coming and reign of Truth and Love in our own hearts and lives.

JOHN B. WILLIS.

AMONG THE CHURCHES.

WILLMAR, MINN.

The edifice for First Church of Christ, Scientist, is now completed, and it will be opened for worship with a lecture on Christian Science, Nov. 21, by Prof. Hermann S. Hering. Like all Christian Science churches the Willmar church was founded on healing. It had a rather unusual start in that it was begun entirely by men. Nine men who, one after another, had found help in Christian Science, met together every Sunday to read the Lessons for nearly three years before a single woman became interested. The church was organized in the spring of 1903 with fourteen charter members.

The new church is a beautiful structure. It is the result of much earnest work and generous giving on the part of the members. It is situated on one of the best corner lots in the city, on the south side of the court house square. The reading-room is in the church. There is a full basement under the church, and this will eventually be used for a Sunday School room. The total cost of the building and lot is $8000.—*Willmar Tribune.*

BEDFORD, ENGLAND.

We are taking a step forward this week [Nov. 28] in opening new rooms, centrally situated, for our reading-room. This has been a long-felt need, and we feel very grateful for an added proof of our Father's love and supply. The rooms are situated just at the top of the main street in one of the busiest parts of the town. They overlook St. Peter's green, at the corner of which stands the bronze statue of John Bunyan. We feel that in taking this step it will broaden our opportunity to reach the seeker after Truth and enable us more fully to obey our Leader's words on page 570 of Science and Health: "Millions of unprejudiced minds—simple seekers for Truth, weary wanderers, athirst in the desert—are waiting and watching for rest and drink. Give them a cup of cold water in Christ's name."

The suite of rooms of which ours are part is most beautifully appointed and newly decorated. This step follows many months' work by our distribution committee, who are taking our periodicals to several public institutions in the town. We are grateful for every little step forward which will mean the greater healing and saving of mankind.

Correspondence.

BALTIMORE, MD.

A large congregation attended Second Church of Christ, Scientist, at St. Paul street and Mount Royal avenue yesterday morning [Nov. 20], to take part in the opening of the new structure, which represents the work of four years of unceasing labor since the congregation was incorporated in 1906.

There was nothing in the service to mark the incoming era in the history of the church, unless it was the spaciousness and beauty of the new surroundings. Not a single reference was made by either of the Readers to the completion of the task which has occupied the attention of the building committee in the last few months. It was just as though another step had been taken as easily as many others that had gone before, and there was no exultation. It was only thankfulness that filled the hearts of the listeners. A pretty compliment and token of love was sent by First Church of Christ, Scientist, a sister congregation and the first branch of The Mother Church established in the city, in the form of a beautiful bouquet of white chrysanthemums.

Since its foundation in 1906, when the first meeting was held in a room at 322 North Charles street, the church has made rapid strides, until now the congregation is almost as large as that of First Church. Rooms were later taken over Albaugh's Theater, but finally they, too, proved too small and the theater itself had to be used until the completion of the new church, the construction of which was begun last spring. The edifice occupies a part of the lot at the southwest corner of the streets and faces on St. Paul street.—*Baltimore Sun.*

SMALL QUARTERLY ONLY.

Our readers will please note that, beginning with the next quarter, January, 1911, *The Christian Science Quarterly* will be published in the small size only.

THE LECTURES.

OSWEGO, KAN.

A large and representative audience greeted Frank H. Leonard at the Grand Theater, Thursday evening [Oct. 20]. Judge E. C. Clark, who introduced the speaker, said,—

We are here assembled this evening for the purpose of listening to a lecture upon a subject recently referred to by an Episcopal clergyman as being "a jewel lost by the church and picked up by a woman." Personally, I am by inheritance and education a Presbyterian in religious belief, and of course adhere to that doctrine. Of the subject of Christian Science I know but little, never having given it any study or thought. However, there are some things that we learn without study or thought, from mere observation, and one of the things that I have learned from mere observation is that Christian Science has made some bad people good, and some good people better, and by so doing has commended itself to my favorable consideration. Whether Christian Science is in fact the true religion which Jesus Christ taught when on earth more than nineteen hundred years ago, as contended by the adherents of that faith, is a question that has long been and will continue to be one upon which human minds will not be a unit; but we must all agree, I think, that if everybody on earth were true Christian Scientists, we should have less use for warships, and indeed might thereby be enabled to close now and then a court house for want of business. We can truthfully say the world is better off that Christian Science has lived and thrived, whether we agree with its religious tenets or not.—*Oswego Independent.*

MATTOON, ILL.

A representative audience assembled Sunday afternoon [Oct. 30] at the Majestic Theater to hear a lecture on Christian Science by the Rev. William P. McKenzie. The speaker was introduced by F. N. Henley, who spoke as follows,—

The highest ambition, the greatest wish and desire of man is met when he is absolutely satisfied and contented; when he is at peace with God and all of his fellow-men. This, of course, must include all things, both temporal and spiritual, as a man may be satisfied with his worldly lot and yet be ill at ease with himself spiritually. All men of all nations, at all times, have worshiped God, and all men of all civilized nations do now and have at all times worshiped the same God. Nearly all churches of today teach the same general belief and doctrines of one and the same Deity. They may differ in the minor details of their teachings, but the one great object sought, the final end to be attained, is always the same—the happiness, contentment, and salvation of man.

The Christian Science faith, my friends, differs in no way from any other faith or belief as to the ultimate result sought; moreover, it strives to bring about these results only by the teachings of the same Holy Bible used, believed in, and taught in all Christian churches of today. One great difference between the Christian Science church and the several other Christian churches of today is that the Christian Science church teaches that if in the days of Jesus Christ and his disciples, sickness, disease, and all other tribulations from which people were apparently made to suffer, could be overcome, cured, and prevented by the doctrines of the Holy Bible, there can be no valid reason why, by like application of the same teachings and doctrines, identical results cannot today be obtained. If these so-called physical results, in addition to the salvation of men, can be achieved through Christian Science, then I say to you, my friends, the highest ambition, the greatest wish and desire of the individual is met; he is satisfied; he is at peace with his God and with his fellow-men. We are here today to hear a brief statement of how these much-sought and always-desired results are reached through the teachings of Christian Science.—*Mattoon Morning Star.*

PITTSFIELD, MASS.

The Rev. Arthur R. Vosburgh delivered a lecture on Christian Science in the Colonial Theater, Oct. 30. He was introduced by Atty. J. Ward Lewis, who said in part,—

Christian Science makes what at first blush seems to be most startling claims,—claims which include the absolute making over of men, spiritually, morally, physically. It claims to have its part in all the multiform activities of one's life, in his business and professional concerns, in his home and social life, in his recreations, in his studies, in all public affairs, in all private dealings. Nothing that concerns men is foreign to Christian Science, according to the claims of its adherents.

The friends of Christian Science assert that it solves business and financial difficulties, and men in whom you have confidence will tell you that they have proved the truth of this assertion. Men and women testify to having been absolutely freed from false appetites, from hatred, envy, jealousy, and all sorts of evil dispositions. Whether in private conversation, at public meetings, or in the publications of the Christian Scientists, you will hear most remarkable statements of the healing of physical disease of all kinds, and of every sort of mental disorder. Christian Scientists insist that this philosophy, this religion, concerns itself with all the relations of man to himself, to *his neighbor*, to his creator, and that it satisfactorily solves every human problem,—they make no exceptions.

These are large claims, but no one is asked to accept Christian Science on the strength of these claims alone. Every inquirer is told that this Science is simple, easy to be understood, and that its great beauty and the strength of its appeal lie in the fact that every person can prove its truth for himself; that it is a demonstrable science, based upon the most absolute assurance that there is a God and that He is good. These claims, startling enough from the view-point of the older theology, surely merit careful consideration.—*Correspondence.*

TOLEDO, OHIO.

The Valentine Theater was well filled Monday evening [Oct. 31] when Mrs. Sue Harper Mims delivered her lecture on Christian Science [under the auspices of Second Church]. In introducing the lecturer Arthur A. Hall said in part,—

Christian Science needs no introduction. Although less than half a century has elapsed since its discovery, it is well and favorably known by its healing and regenerating work and has taken its place, as Mrs. Eddy writes in Science and Health, as "an immanent, eternal Science" (p. 150).

This gift of Christ-healing is as old as time. It is God's gift to mankind and has always been available to heal all manner of sickness, sin, and fear. The prophets of old practised it to some extent, Jesus taught and demonstrated its Principle, as did his followers for about three centuries after his ascension. Then through the materiality of the times it fell into disuse, and lay practically dormant until discovered by Mrs. Eddy in the latter half of the last century and named by her Christian Science. It not only heals all manner of discord, but uplifts the patient mentally and creates in him a greater desire for good—to know more of God and His word, the Bible.—*Toledo Times.*

Digitized by Google

PEORIA, ILL.

To an audience which filled the seating capacity of the beautiful Shriners Temple on Monroe street, Clarence C. Eaton of Tacoma, Washington, last evening [Nov. 1] set forth the teachings of Christian Science. E. H. Clark, First Reader of the Christian Science church, introduced Mr. Eaton, and said in part,—

We are gathered at this time for the purpose of considering a subject which in the world-wide character of its teachings is bringing unnumbered thousands a message of good cheer; a fuller and more perfect realization of happiness and contentment than they have ever before known. As a religion it impels its adherents to observe right living and right thinking. It is not only redemptive spiritually and morally, but in its further application makes for better minds and better bodies, and in so doing is fulfilling the words of the psalmist when he said, "He sent his word, and healed them, and delivered them from their destructions." It is the same truth proclaimed and practised by Jesus the Christ when his feet pressed the plains of Judea and the shores of the Galilean sea.—*Peoria Journal.*

CHAMPAIGN, ILL.

Willis F. Gross lectured on Christian Science before an interested audience at the Illinois Theater Tuesday evening [Nov. 8]. The lecturer was introduced by H. I. Green, a prominent lawyer of Urbana, who said in part,—

It is a great pleasure to me to give this public expression of the warm feeling I have for so many of my good friends who are adherents of a faith about which I know so little. I have in a professional way had the pleasure to meet in business matters a great many adherents of the Christian Science faith, and I have always been impressed—I almost said devoutly impressed—with two things which seem to characterize every man and woman of my acquaintance who have adopted as their chosen religion in this life of religious, moral, and temporal activities, the Christian Science faith: First, it is their universal optimism concerning the affairs of life; and secondly, that which has most impressed me is the practical application in their every-day lives of the doctrine they preach. And in this day of thinking men, of religious, moral, and economic discussions, it has always seemed to me a good sign for the preservation of our free institutions that we have at least one faith that really practises what it preaches; and to that, more than anything else, I have attributed the tremendous growth and interest in this faith.—*Urbana Courier-Herald.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Altus, Okla.—Frank H. Leonard, Odd Fellows' Building, Jan. 3.

Bartlesville, Okla.—Frank H. Leonard, District Court Room, Jan. 2.

Centralia, Ill.—Frank H. Leonard, Pittenger Grand, 3 p.m., Jan. 8.

Fort Wayne, Ind.—William D. McCrackan, M.A., Majestic Theater, 2:30 p.m., Jan. 8.

Indianapolis, Ind. (Second Church).—Prof. Hermann S. Hering, Murat Theater, 3 p.m. and 8 p.m., Jan. 8.

Mt. Vernon, Ind.—Prof. Hermann S. Hering, Court House, 8:15 p.m., Jan. 10.

Plymouth, Eng.—Bicknell Young, Corn Exchange Hall, 7:30 p.m., Jan. 17, 1911.

Yates Center, Kan.—Frank H. Leonard, Jan. 6.

TESTIMONIES OF HEALING.

In the early part of the year 1908, after I had been for many months suffering from acute stomach trouble, from the loss of a dear daughter, from lack of work on the stage, on which I have been for over sixty years, and from worry and trouble of a personal nature, I turned to Christian Science. In the course of a few months I was healed to the extent of being again able to eat anything that pleased me; the worry and personal troubles were straightened out as soon as I put into practice the Christly teaching of "judge not according to the appearance, but judge righteous judgment;" the lack of work was disposed of by my having an almost continuous engagement in two successes before the public (except as will be related), and I have learned to know, in respect to the loss of my dear companion, that I have still with me all the good that an idea of God could manifest,—love, tenderness, happiness, which are undying.

Some months after my first healing, which was great enough to give me absolute confidence in God as being "very pitiful, and of tender mercy," while acting in a vaudeville engagement between seasons, I was suddenly taken ill on the stage of one of the New York theaters. I was taken to the hotel that for years has been my New York home, and early next morning sent for the practitioner who had been of assistance to me in helping me out of my former troubles. It was impossible for him to come immediately, but he sent to me a faithful coworker, and between them they never left me night or day until I was out of all danger. It became necessary for the practitioner to close his offices for some five days and remain almost constantly with me, his absences being filled by the other, who acted also in the capacity of a nurse. The newspapers were full of accounts, which were copied in other papers from Maine to California, also in Canadian papers and some abroad, that I was dying under Christian Science treatment, and describing the peril in which I was said to be, etc. The telephone was kept ringing with inquiries from the local reporters, and friends came to the hotel to inquire about me; but to all these things I was quite unmoved, for the simple reason that I was in a state of unconsciousness, or semiunconsciousness, for some three days. It was reported that I was dying from acute lung trouble, but that was utterly without foundation. No one knew what was the physical trouble, but to the ordinary onlooker there lay on a bed a woman of about seventy-four years of age, hopelessly ill.

After constant work in Christian Science I gradually regained consciousness, was able to sit up and take a little nourishment, which I had been unable to do previously. In a couple of weeks I was enabled to go to Atlantic City and have a nice holiday and rest until the time arrived for rehearsals. Since then I have been able to attend to my duties on the stage without missing any performances, to travel with the younger members of the companies on one-night stands and in stormy and cold weather and also in the extreme heat. During these experiences, which are most trying even to the youngest of the people, I have felt no inconvenience other than of being just naturally tired at times. Once or twice or so I have been obliged to ask for Christian Science help, which was always gladly given and to which I quickly responded.

To say that I am grateful to God, is but a mild way of putting it. I am a new woman. My seventy-fifth birthday is on the 19th of this November, 1910. I am, so far as I can see, in fine health and better than I have been for years; happy in the love of all, and loving all; without enemies, and with an eternal hope. In consequence of this change in my character I have found everybody considerate, tolerant, kind, and thoughtful, and with much respect for Christian Science, even though they may not be in harmony with what they believe it to be.

ANNIE YEAMANS, New York, N. Y.

Digitized by Google

I have been a pharmacist and physician for a period of over thirty-five years, twenty-seven of which have been spent as a practising physician. During the greater part of that time I have been addicted to the use of morphine. I tried several of the so-called cures, and was at one time in a sanitarium for treatment. More than once I have been able to break away from the morphine, but was only free from it by using strychnia, whisky, and other strong tonics, suffering all the while from severe attacks of rheumatism and weak heart.

In the summer of 1908 I went through a siege of about four months of trying to cure myself with drugs, shifting from one stimulant to another, but gradually growing into a worse condition both mentally and physically. I at last made up my mind that I would try Christian Science, for I fully realized that I was at the end of *materia medica*. In the latter part of October of that year I applied to a Christian Science practitioner for treatment, and from the first I began to improve and was able to get some rest the first night without the use of any drug. After forty-eight hours of treatment in Christian Science I had no desire for morphine or any drug to take its place, and I have not taken a dose of medicine since the above date. A rectal stricture has entirely disappeared, as has also all stiffness as well as pain in the toes of the left foot, dating from an injury sustained when I was seven years old. I have gained about forty pounds in weight and feel perfectly well in every respect.

While appreciating gratefully this physical change, I would not for any consideration be without the spiritual understanding that is gradually dawning upon me. Day by day comes a clearer insight of Truth and what God truly is. I can and do love my fellow-men as Jesus taught, and am trying to measure my life by the golden rule of doing to others as I wish them to do to me. In all this I feel that I am indebted to the truth as taught in Christian Science.—I. N. MILLER, M.D., Kansas City, Mo.

I wish to express my gratitude for the benefits which I have received in Christian Science. I was never strong physically, and therefore was unable to attend school. This made me very unhappy, and as time advanced my physical condition grew worse, so that I was forced to give up my studies altogether. From my childhood I had studied the Bible, and in solitude and unhappiness its truths became my constant companions. The New Testament, with its narratives of healing, was very dear to me, and I gradually began to see how inconsistent human life is when viewed in the light of the Master's teachings.

At times I suffered from extreme depression, and would look up helpful passages in the Bible. During the long sleepless nights I would repeat these passages, and would always find relief. Soon a hope that I would be healed began to dawn; my health improved, and I resumed my studies. I had been a member of an orthodox church for a number of years, but now I felt strangely separated from its teachings; and, as no one seemed to understand my new-found joy, I longed for some one who could sympathize with me.

This longing was satisfied when I met a young lady who was a Christian Scientist, and from her I learned that healing was not a lost art as I had supposed, but newly rediscovered by Mrs. Eddy. I purchased a copy of Science and Health, which I read almost night and day, and in a short time felt a sense of freedom such as I had never known before. My joy was unbounded. I never once doubted, but knew that Christian Science was the truth; and I know now that my years of solitude prepared me to accept and understand it. My physical ailments yielded quickly, through the reading of Science and Health, but when I began to break away from the material belief of church and its work, then it was that I needed the help of a practitioner. I shall always be thankful for the sympathy and love bestowed upon me during this time of want and woe, and will mention a few instances when I received almost immediate help.

At different times, while preparing to attend the Christian Science services, I was taken with violent attacks of vomiting, but I was relieved each time instantly. At another time, while on my way to school, I suddenly became unconscious, fell, and injured my ankle, the pain being very severe. I was, however, perfectly healed in twenty-four hours. While I was undergoing this mental turmoil, my friends left me, and I felt absolutely alone. Mrs. Eddy speaks of this separation on page 266 of Science and Health, and says, "Even if you cling to a sense of personal joys, spiritual Love will force you to accept what best promotes your growth. Friends will betray and enemies will slander, until the lesson is sufficient to exalt you; for 'man's extremity is God's opportunity.'" When I realized that my concept of friendship must change from a material to a spiritual basis, I gradually regained my friends and began to learn man's relation to man.

I have applied the truths of Christian Science to a great many phases of evil, and have always found them able to meet my every need. It is now three years since I joined the Christian Science church, and I am happier than I have ever been before, or have ever hoped to be. I am thankful for all that Science has done for me, and I am grateful beyond words to Mrs. Eddy for having given us in Science and Health the truth which is lessening sin, disease, and death and ushering in the time when all shall know God, from the least to the greatest.

SOPHIA A. BARBO, Bellingham, Wash.

Words fail to express my gratitude for what Christian Science has done and is doing for me and *mine*. In August, 1908, when our little daughter was taken with a fever, we called a Christian Science practitioner and the fever was overcome in about two weeks. She continued to improve for about three weeks; then she seemed to go back, and all the after effects of the fever set in, so that in a short time she was terribly reduced, but with the help received through a Christian Science practitioner she was thoroughly restored to health again.

I would like to state that during the time when the hours seemed darkest I was called to help another in trouble. On Monday night a mother called me over the telephone and asked me to help her year-old baby. At first I hesitated, as it seemed I had all I could do, but I thought that God could surely restore two as well as one, and I could only trust Him. I did so, and by Wednesday the child was much improved, and in two weeks was perfectly well.

For these and many other blessings I feel most grateful to God, and also to Mrs. Eddy, who in living so close to God was enabled to give us this truth that teaches us how to understand God. My sincere desire is that I may be worthy to be called a loyal Christian Scientist.

MRS. EMMA R. WADE, Kinston, N. C.

Any one who has honestly tried Christian Science has a story to tell worth the hearing. I feel that my experience is no exception to the rule. Since taking up the study of Christian Science I have witnessed a series of wonderful demonstrations of Truth's absolute control, of which the following are examples.

When attacked, some time since, with that dreadful disease of the South called "breakbone fever," it was expected that I would have to suffer many days, but the first treatment from a faithful Christian Science practitioner broke it up, and I was certainly grateful. Not long afterward an attack of cold left me with a cough, which increased in severity until I began to have serious symptoms; also I grew so ill that my relatives recommended

Digitized by Google

change of air, etc., and their worried appearance finally awoke me to the need of Christian Science treatment. The same practitioner again came to my rescue, and in two treatments her clear thought of the truth of being had stopped the sweats and so greatly lessened the cough that I was not surprised to find it entirely gone within a short time. I am now perfectly well, and my deep gratitude is taking the form of diligent study of Christian Science, that I may in turn be able to help others.

Two years ago we came here from Syracuse, N. Y., where the most eminent physicians had failed to cure my husband of what they pronounced "Potts' disease" and a severe kidney or bladder trouble. We called on this practitioner, who met both claims promptly, stopping the development of the deposit on the vertebra and doing away with the need of a steel and leather jacket.

Words are inadequate to express my gratitude for Christian Science.—Mrs. W. R. Elliott, St. Augustine, Fla.

I wish to express my gratitude for what Christian Science has done for me and mine. I came to Christian Science through the healing of our little boy, who had suffered with a rupture from the time he was one year old until he was four and a half, when I took him to a Christian Science practitioner and he was healed in a short time.

Another demonstration of the power of Truth was made over our seven-year-old boy in January, 1909, when we were having some grading done. The men left one of the wheelers in such a condition that it was easily moved by a child, and both of his hands were caught. Two fingers of the right hand were almost entirely severed and every finger on the left hand was terribly lacerated. A Christian Science practitioner was called and absent treatment given. In two hours the child was free from pain, but it seemed best to call a doctor to have the hands dressed. The doctor who was called said it would be a wonder if the fingers were saved, but he would bind them on and in three days he could tell whether they would have to be amputated or not. We were told to keep the child quiet and to give him only a little light food. This injury occurred at half past five in the afternoon and it was eight before the doctor arrived. After twelve o'clock the child slept well, and the next morning he ate a hearty breakfast and played as usual. He slept well at night, ate heartily, and was bright and cheerful all the time. In two weeks the bandages were removed and in four weeks he went back to school, using his pen and pencil. In six weeks the stitches fell away, leaving the fingers perfectly healed.

It is six years since we first came to Christian Science, and there has been no material remedy used in our home, though we have had many demonstrations of the truth. We are indeed grateful to God, the giver of all good, and to Mrs. Eddy for her ministry to the world.

Mrs. Alice Crosby, Kansas City, Mo.

I feel impelled to write a brief account of some of the many blessings I have received in the past four years through a slight understanding of the Principle of Christian Science. I became interested in this truth for the help of my first baby, who was born under *materia medica* and who scarcely ceased crying night or day for months. Every known remedy was used, also two slight operations were performed, but nothing seemed to have a soothing effect until I applied for Christian Science treatment. The baby began to improve and to sleep better almost at once. I had treatment for him only a short time, but I continued to read and study Science and Health by Mrs. Eddy in connection with the Bible, also some Christian Science periodicals that were given me.

Severe burns, fever, and accidents have all been overcome with the word of Truth, and I am most grateful for this effectual healing agency, but much more grateful for a practical religion that is fast completely filling my life; whereas, before coming to Christian Science I was almost as spiritually dead as a mortal could be, having only a vague sense that God did exist. I would like to add how grateful I am for the periodicals, having recently been helped and given light to deal with what appeared to be an overwhelming sense of evil by reading the *Sentinel*. Almost every article seemed to fit my case, and it has always been to me a friend in need. So also in the case of the Hymnal, which has so often helped me to overcome sickness as manifested in the children, by sitting down at the piano and opening my thought to the helpful promises as I sang. I know it would be helpful for any mother to have our Hymnal in her home. I am grateful to God for all the good I have received, and also to Mrs. Eddy, who has been and is our friend indeed.

Mrs. J. H. Montgomery, Bairdstown, Cal.

In June, 1907, I was taken ill with what the doctors pronounced to be Bright's disease with various complications, also appendicitis and peritonitis. They thought it better not to operate, as I probably would not live through the operation. The doctors and a trained nurse did what they could and allayed the severe pain; but they said that if the pain returned the only chance of saving my life was an operation, and they would take that chance. I continued in this condition for six weeks, taking only liquid food. I was a little better one day and not quite so well the next. One Saturday night the terrible pain came back, and when my mother asked what doctor she should send for, I told her I did not wish for any, as a doctor would say that I must have an operation, and this I would not consent to.

My mother had previously been greatly benefited by Christian Science treatment, and in my extremity I decided to try it for myself, although I had formerly been much opposed to it and had said many unkind things about it. A practitioner came, and in half an hour all the pain had left me. I rested all night—such peace I had never had before, and the thought came to me, "This is the 'peace of God, which passeth all understanding.'" The next day I was able to take solid food, and I also had a short ride. I continued to gain in strength and in flesh, and in a very short time I was entirely healed. My mother, wishing to make sure that the healing was complete, had one of the doctors who had treated me make a thorough examination for evidences of the kidney disease, but he found no trace whatever.

Since I was healed my life has been happier than ever before. The spiritual uplift that has come to me through Christian Science seems an even greater blessing than the physical healing, although, in the condition in which I was, I could not have received the latter without the former; indeed, I have learned to know that the healing and the spiritual uplift are parts of the same process. As I look back to three years ago, I feel like asking myself if I am the same person. We have received many other blessings through Christian Science, and I thank God every day for this Science, and for the life of our dear Leader, who has given it to the world.—Clara M. Wood, Fitchburg, Mass.

I am very glad to tell others of the results which came from a week's absent treatment in Christian Science given me during a trip to California, headaches, car-sickness, and other ailments being overcome. It seemed to me almost impossible to take so long a journey, and yet I reached Pasadena, Cal., in splendid condition; was not even tired, which seemed very remarkable for I had never been strong. I had the help of a practitioner, and through the goodness of God was enabled to enjoy what otherwise would have been anything but a pleasure trip.

Mrs. Myrtle Snyder Paul, West Falls, N. Y.

While living in San Mateo, Cal., in 1907, on Thanksgiving day, at one in the morning, I was suddenly stricken with a paralytic attack. A Christian Science practitioner was sent for immediately and reached me in about an hour, remaining with me until eight o'clock, when she went away for a couple of hours. I then arose, dressed, and went upstairs alone, and continued to improve from then on, so that I left in February for the East. I was then past seventy years of age. Thank God for the help received, and Mrs. Eddy for what she is doing for mankind.

MRS. MARTHA A. BURNAP, Elmira, N. Y.

[Translated from the German.]

It is with a feeling of deep gratitude to God and to our revered Leader, Mrs. Eddy, that I wish to testify to the infinite blessings which have come to me through the revelation of divine Truth and Love. When a few years ago I became acquainted with the teachings of Christian Science, I was in a state of utter discouragement. Since childhood I had suffered from nervous irritability, severe attacks of headache, and other troubles, and as the years went by these ailments were often seemingly unbearable. Material remedies had brought me but temporary relief, and had proved absolutely ineffective as a real curative means. I was at variance with God, and my trust in Him as a God of love and a Father to His children began to waver.

The truth did not bring quick results at first, the light dispersing but slowly the dense mist of material beliefs; but, although these past years have meant a hard struggle with error, still I look back upon them with gratitude, for they show me the eternal activity of the law of the saving, divine Truth which delivers us from the bondage of disease and sin. The text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, which I started to read after a few weeks, at once interested me through its logic, thus preventing the rise of doubts as to the truth of the statements contained therein. Yet there were hours of great discouragement and despondency, during which the tempter would whisper to me that the truth would not help me after all. But the arm of divine Love held and protected me, and I was led safely through the darkness. The physical ailments have almost entirely disappeared, and the old faults must also flee before the divine Spirit.

I am very grateful for the gradual dropping off of the fetters of fear; I know that God is my Life, and therefore that I need not fear. I rejoice in the thought of the way being open for me to enter in and to assimilate more and more of the truth through earnest and sincere striving, which will enable me to become a greater help to others.

BERTHA SCHLÖSSER, Dresden, Germany.

Two years ago a mule ran over our four-year-old boy, and stepped on his left leg above the knee, injuring it very severely. I carried the child into the house, and began to declare the truth as best I could. He became quiet in about five minutes, and I then straightened the limb and wrapped a towel around it. Then I sent for his father, who was about three miles from home. When he came the child was resting so well that we did not call in a surgeon, and next day we wrote a Christian Science practitioner, asking her to treat him, as we felt that our understanding of Christian Science was limited. She began treatment as soon as she received the letter and the boy continued to improve.

The only time he seemed to suffer was when he was moved. Great fear was expressed by relatives, and many false reports were being circulated. It was told that the child was suffering terribly and that nothing was being done to relieve him. So many similar statements were made that the medical doctors and a number of friends in an adjacent town were so stirred up that they asked a dentist, who is a personal friend of my husband, to call and see the child. He came the fourth night after the accident and remained about three hours. He was in the room where the child was all the time, and on examining him was surprised to find the injured limb just as normal as the other, and to see the child resting so well. He said he could not believe the limb was broken, because it did not seem possible for the child to rest as he did if this were the case. After seeing the child he was perfectly satisfied that the reports were false. He also noticed that there was no discoloration, and we told him there had been none from the time of the occurrence, and he was more surprised than before.

After a few weeks the soreness disappeared, but the boy did not attempt to walk and we noticed that the limb was not straight; that it was turned outward. We became discouraged, and it was decided that I should take him to the practitioner. On arriving there it was discovered that paralysis with complications had set in. She at once treated him, and the child walked next day. He remained with the practitioner three months, when I brought him home. Friends who did not know which limb had been injured would ask when he returned which one it was, and said they could not tell by his walk, for one seemed to be just as free as the other. The leg has never given him any trouble since.

I feel that I can only show my gratitude for this wonderful deliverance and the overcoming of many other ills, through the teachings of Christian Science, by devoting my life to God, good, as taught by Mrs. Eddy.

MRS. W. M. SWAIM, Jonesville, N. C.

When, about two and a half years ago, I heard that Christian Science was being demonstrated in Dresden, I was a member of an orthodox church, and heard there that Christian Science was confusing the minds of *the people*. Although I was very much afraid of the supposed danger, I did not fully trust the statement, and thought I would find out with God's help. It was not possible for me to believe that people who accomplished healing work among the sick could be without God. My health had become poorer each year through frequent attacks of illness, as well as from sorrow and worry, and a professor of medicine in Leipzic told me that I must go to a sanitarium. As I could see no possibility of doing so, and as the pain became so severe that I had to take large doses of an opiate prescribed as a sedative, I decided to find out whether or not the healing wrought through Christian Science came from God. During the first treatment I kept praying to God that He would rather let me be ill if it were not His will that Christian Science should heal me. I was convinced that God is omnipotent, and I had confidence in Christ Jesus' words: "Whatsoever ye shall ask in my name, that will I do." The sense of freedom and well-being which I experienced on the following morning, and which had before been practically unknown to me, gave me the assurance that God is with Christian Science.

Unfortunately for me, I began to criticize and judge those who attended the services, and this brought back the old doubts, so that the ground seemed to slip from under my feet. It was not until a year later that I began to get some understanding, when through loving and patient explanations I was shown how much there was in me that needed to be changed, and how I should work on these lines. Now I am convinced that Christian Science is practical and applicable Christianity. To my unspeakable joy I see more and more how Christian Science illumines the word of God, which formerly seemed to me dark and difficult to understand, and how it makes it an ever-present source of strength and help. With a feeling of deep gratitude to our noble Leader, Mrs. Eddy, I am striving to walk in obedience and faith the narrow path of the Christ-teaching which has brought sure help, better health, and light into my life.—FRAU DR. L. JUNGE, Dresden, Germany.

[Translated from the German.]

My heart overflows with gratitude to God, and to our beloved and revered Leader, Mrs. Eddy. During the two years since I have been in Science many, many blessings have come to me. Last summer I was taken ill with a severe stomach trouble. I must state that I had repeatedly suffered since childhood with this complaint. As I did not at this time have a sufficient understanding of Christian Science, I applied to a practitioner, who took up treatment at once. There was much that had to be overcome, especially fear, so that it took about four or five weeks, but I can say with a grateful heart that I am completely healed.

From that time on I earnestly began to do my own work, and I am so happy and thankful to have our wonderful text-book, Science and Health, which I am studying with the help of a dictionary. It gives me so much joy, and be it ever so busy a day I always find half an hour or an hour for my reading, and many are the blessings which I have been reaping thereby. Thus I have been enabled to overcome several ailments which the physicians declared were chronic. I have been completely healed of chronic rheumatism of the joints, as well as of a serious condition of the middle ear, and of many other complaints. I have found that all these ills have power only so long as we consider them to be real or true. What we need is to know that God is Love, and that evil has absolutely no power, and the truth that removes mountains will help us, if we pray aright. I am a changed woman; health, contentment, and peace are with me, and I no more worry.

HELENE GOERISCH, Charlottenburg, Germany.

In the fall of 1906 I was healed through Christian Science of a stomach disorder, sleeplessness, and swollen limbs,—symptoms which frequently attend maternity. The childbirth was nearly painless. Later the child developed a wasting disease, pronounced incurable by physicians, but under Christian Science treatment he was in a few weeks in a perfectly normal condition. An older son was healed of a troublesome rupture through Christian Science, and in a few months all evidence of the condition was gone. Indeed, we have had so many proofs of the value of Christian Science that we know always where to turn for our help.

I am able, as I go on advancing in the understanding, to realize something of "the glorious liberty of the children of God." May my life in all things attest my gratitude to God, and to our beloved Leader, Mrs. Eddy, for having brought this blessed heritage back to the world.

MRS. FANNIE LAVINA PIKE, Golden, Col.

[Written for the *Sentinel*.]

ANNO DOMINI.

F. O. SYLVESTER.

THE inn is crowded now, the keeper said,
And so, two thousand years ago today,
They turned the mother of our Lord away.
Within a manger near, a baby's bed
She made, and for the coming Christ-child's head
She formed a little pillow of the hay.
At dawn she kissed the lips God taught to pray—
Whose prayers the sick did heal and raised the dead.

O crowded heart, with all thy worldly guests,
Hast thou a quiet place for Christ this morn?
Is there in thee a room unoccupied,
Not filled with self or strife, where no greed rests,
Wherein the child of Spirit may be born?
Oh, then, rejoice, for God is glorified.

FROM OUR EXCHANGES.

[*Churchman.*]

The general convention resolved to seek the cooperation of the whole of Christendom in trying to answer the question, What are our relations to all other Christians in the conversion of the world? Our dependence upon the communions of Christendom is thus perfectly acknowledged. The unity of all Christians in Christ is proclaimed, and St. Paul's question, Is Christ divided? becomes the question of the age. And with it inevitably another question arises. If Christ is not divided, how can his disciples be divided? There is but one answer, and the Christian world is feeling and foreseeing what it must be. But it is not yet ready to commit itself by making that answer. Why? Primarily, because of the conviction that that answer must be given in terms of dogma. This, of course, cannot be done now. There is no possibility of its being done soon. To give the only answer, therefore, possible in the sight of God and man, would involve a statement false to conviction, because there is no universal dogmatic agreement. So long as dogma reigns supreme over life in the minds of Christians, the answer will wait, and the world will say with St. Paul that divided disciples witness to a divided Christ. But must dogma always reign? The religion of Christ is the religion of life. "I am the resurrection, and the life." Apostles and disciples preached the power of the resurrection,—not a theory, a philosophy, or a doctrine, but the power of the resurrection over the lives of men. The answer to the greatest question raised by the general convention must be made, and can only be made, as it always has been made, in terms of life.

[Charles A. Cook in *Standard*.]

While perhaps there is as large a measure of true and out-and-out Christianity to be found in this country as anywhere, there is a great and special need just now that here there should be manifested the highest type of Christianity possible, that in this country the exemplification of Christianity should reach its fullest conformity to its own high ideals. There is an imperative need just now that there should be exhibited in a nation-wide way a more pronounced and positive Christian living by all those who claim to be followers of Jesus Christ. This is needed for the sake of our own country and also for the sake of all the other nations, and especially for the sake of the great non-Christian nations. We need a more pronounced Christianity here in our own country in order thoroughly to arouse the great masses of our population from their religious indifference. Multitudes do not care anything whatever about the things that pertain to their spiritual welfare, and they are indifferent because our Christianity, as a rule, is so weak, so neutralized in its spiritual forces, that it produces no deep and positive impression upon them. It is a most lamentable fact that men who are not Christians may mingle with many who claim to be and never discover from anything they say or do that they are. It is this fact, as much as anything, that is making men everywhere careless and indifferent to the things of God and eternal life.

[Dr. J. H. Jowett in *Christian World*.]

We live in very jostling times. We are pushed and hustled and elbowed on every side. The crowd is always about us, the heedless, careless, competing multitude. The quieting genius of privacy has been almost banished. We are greatly rushed, and we greatly need "the secret place." How prone we are to become hot and feverish, to lose the coolness of our judgments, to grow hasty and irritable in temper, and to have our passions heated like an oven! Modern life has become very inflamed. We are not only working at high speed, we are working with friction. It is

Digitized by Google

not only the collision of man with man, of interest with interest, which generates this perilous heat, it is still more the collision within, the lack of smoothness in the inner life, the grinding of power against power, of conscience against will, of will against conscience, and of the entire being against the besieging presence of the eternal God. And thus our life is very heated, and therefore very wasteful, and we are in urgent need of some generous ministry which can adjust our bearings, reduce our friction, and make our spirits cool. Well, I think there is the statement of all we need in this glorious portal to this stately and venerable psalm: for our hustling, crowded life we are offered "the secret place;" for our heated and overwrought spirits we are offered "the shadow of the Almighty."

[Samuel Parkes Cadman, D.D., in *Christian Work and Evangelist.*]

People are not antagonistic to the gospel and to Jesus Christ, and the assumption that they are is not borne out by the facts. They have an interest in genuine religion which nothing can destroy. It is the warp and woof of their existence, no more to be cast away than the soul within them. They have shed some beliefs, they have lost faith in shibboleths they once lisped with reverence, and they have become alienated from a worldly, selfish, and crafty ecclesiasticism that has usurped Christianity, or a morbid and farcical religiosity which is made to do duty for it. But when all the churches have been converted to Christly fraternity the people will follow suit, and instead of the church saving the people, the people will in some instances save the church. Let us break down the barriers of caste and sect and place the best gifts of our ministry within the reach of all men surrounding us, and in living for them we shall live by them.

[*Christian Register.*]

The signs of a spiritual revival, apart from creeds and formal institutions, multiply on every hand, and they who have eyes to see and ears to hear know that we are living in a period of wonderful moral progress. The decay of institutions frightens timid souls, and, when a great ecclesiastical fabric goes down with a crash, it seems, to those who take superficial views of life, as if the end of all things good was at hand. But, just as an unspoiled naturalist, in spite of the terrible things that surround him, may live with delight amid natural scenes and objects, and think of this as a most beautiful world to live in, so it is possible for a sincere spirit to look behind the shams and shows and depravities of the time, and live in the currents of the divine life with even an ecstatic enjoyment of the wonders of the new dispensation.

[Dr. Orchard in *Christian Commonwealth.*]

There is no explanation of human nature which does not demand some kind of derivation from God, there is no explanation of the human spirit which does not involve infinity. God is the ultimate constituent of our personality. Most of us are still quite unaware of that. To make us aware was the work of Jesus. His teaching and his personality reveal that beneath his conscious life man is in touch with God. To seek conscious union with the true basis and goal of his life is the chief end of man. In this suggestion there meet in essence both the creedal affirmation and the reality on which the gospel depends.

Religion is not an act here and there. It is not a mere affair of churches and Sundays. Churches do not create religion. They are created by it. Men come together to worship because the need of fellowship in worship drives them together. To come in order to be worked upon by the man in the pulpit, to expect to have religion transplanted from his soul to theirs, is a mistake. There is no spontaneous generation in religion any more than in life. Both minister and people must have the germs of piety in themselves, the beginnings of the religious life, or nothing can come of their meeting together.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

ATTENTION IS CALLED to the new volume, "Poems by Mary Baker Eddy," now on sale. Specially bound; 79 pages.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel*.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

NEW PAMPHLETS.

Now on sale are four new pamphlets: "Seeking and Finding," "Prayer and Healing," "The Divine Nature," and "Upward Footsteps." Each pamphlet contains five to nine articles that have previously appeared in the *Journal*, *Sentinel*, or *Monitor*; and they are particularly suitable for handing and sending to inquirers or persons who are becoming interested in Christian Science.

Hereafter, the price of all pamphlets (except "What our Leader Says" and "Christian Science and Legislation") will be reduced to 5 cents a copy; 55 cents a dozen; $2.00 for fifty, and $3.50 for one hundred. Hereafter, also, the republication in the English language of single articles as "tracts" or "reprints" will be discontinued. It is believed that their place is better taken by the daily article on Christian Science in the *Monitor* and by these new pamphlets and others that may be issued.

NEW POST CARDS OF THE MOTHER CHURCH.

Post card photogravure, in sepia tint; an exact reproduction of the large photogravure of The Mother Church Buildings and Publishing House with parkway in foreground. Single copy, 5 cents; twenty-five copies, $1.15; one hundred copies, $4.25.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90; six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Price, prepaid, single copy $3.00
Twelve or more books to one address, prepaid, each . 2.50

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, prepaid, single copy, $3.50; six or more copies to one address, each, $3.25.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, prepaid, single copy, 65 cents; $3.00 per half dozen; $5.50 per dozen. Leather covers (pocket). Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 99 pages, cloth binding. Price, prepaid, single copy, $1.00; $5.00 per half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. 17 pages. Leatherette covers, gilt top. Price, prepaid, single copy, 37 cents; $3.00 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 55 cents; $2.50 per half dozen; $4.50 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, prepaid, single copy, 27 cents; $2.50 per dozen. Library edition, cloth binding, marbled edges. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *vs.* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, prepaid, single copy, $1.50; $7.50 per half dozen; $13.50 per dozen.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, prepaid, single copy, 26 cents; $2.50 per dozen.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

COMMUNION MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June 15, 1902. Deckled edges. 20 pages. Price, prepaid, single copy, 50 cents; $4.50 per dozen.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, prepaid, single copy, 60 cents; $3.00 per half dozen; $5.50 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston. 19 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, prepaid, single copy, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, prepaid, single copy, 50 cents; $5.00 per dozen.

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00; six months, $1.20.

Ten copies to one address, each, one year, $1.90; six months, $1.15.

Twenty-five copies to one address, each, one year, $1.80; six months, $1.10.

Fifty copies to one address, each, one year, $1.50; six months, 90 cents.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Subscriptions to the SENTINEL will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. X indicates the year 1910; XI, 1911. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

TERMS OF SALE

Single copy, postpaid, five cents. In the United States, Canada, Mexico, and Cuba: twenty-five copies, one address, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, single copy, six cents; twenty-five copies to one address, $1.25; fifty copies, $2.25; one hundred copies, $4.00.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The United States circuit court of appeals sustains the action of the United States district court for the northern district of New York, dismissing three petitions in involuntary bankruptcy which were filed by creditors against three heating and lighting companies. The decision of the higher court reads in part as follows: "By reason of the circumstance that they are given the authority with—to a certain extent—the right of exercising eminent domain, they are correlatively charged with a duty to the public which is no part of the obligations of ordinary corporations engaged in manufacturing, trading, printing, publishing, mining, or mercantile pursuits. And as a result, when financial adversity overtakes them, there are interests which have to be considered other than those which require attention when these ordinary corporations of the enumerated classes become insolvent. In the case of a public utility corporation, such as these, the public itself, the community in which the corporation is rendering service, has a right superior even to creditors of every class, and which right cannot be extinguished by the payment of a dividend in money. Moreover, the public safety and comfort imperatively demand that, whatever else may happen, the corporation, devoid of ready cash though it be, shall not make default on the public obligations with the result of plunging the community in darkness or stopping the transportation of passengers, and that in some way or other the public service shall be rendered while the financial affairs of the company are being wound up."

President Taft's speech at the banquet of the American society for the judicial settlement of international disputes came as a surprise to the many distinguished persons as they listened to the very plain words in which he made known his dissent from the alarmist views that have recently been freely circulated. He took direct public issue with the general staff of the army, which had prepared arrays of figures and strategic arguments in favor of a greater army, and also with Secretary of War Dickinson and Gen. Leonard Wood, who had indorsed the general staff in the suppressed reports to the House. The President gave the opinion that a hostile army would have some difficulty in crossing three thousand miles of ocean on one side and five thousand on the other, especially with the American navy keeping watch. He thought that a little attention by Congress to the needs of the present establishment and some few measures of expansion would leave us in a safe condition.

Postmaster-General Hitchcock states that everything will be in readiness for the postal savings banks in the various states and territories to receive deposits Jan. 3. One experimental office will be opened in each state and territory, with a view to making the first test of the service as thorough as possible under the limited appropriation. The offices designated are all of the second class and in localities where the conditions are exceptionally favorable for the development of a postal savings business. Several of the offices selected are in communities inhabited by foreign-born Americans who are remitting annually considerable sums of money to their native countries by postal money orders.

Following commencement of suit at Los Angeles for the recovery of ten million dollars as the value of oil lands said to have been patented illegally by the Southern Pacific Company, it is believed that the Government will very shortly make claim for recovery from the Southern Pacific Company of all the railroad oil lands lying between Bakersfield and Coalinga. The lands are estimated to be worth two hundred and fifty million dollars, and are in the heart of the oil belt which has astonished the world by its production.

Urgent demand for the passage of a law for the physical valuation of railroads by the Government is the feature of the annual report of the interstate commerce commission submitted to Congress. The report refers to the "well-known fact that no court or commission or accountant or financial writer would for a moment consider that the present railroad balance sheet statement purporting to give the 'cost of property' suggests, even in a remote degree, a reliable measure either of money invested or of present value."

John D. Rockefeller's final gift to the University of Chicago is ten million dollars. This makes a total of about thirty-five million. With the announcement of the final donation came also the resignation of his personal representatives on the board of trustees. In enclosing these resignations Mr. Rockefeller explained that he was only carrying out a conviction that the institution should be "controlled, conducted, and supported by the people," with whom, up to this date, he had been simply cooperating.

A federal investigation of more alleged sugar frauds against the Government is under way. Information reached the treasury department several weeks ago that the Government had lost several million dollars in the last few years through frauds in the drawback system, which allows original raw material to be imported, manufactured, and then exported with an accompanying return of a large part of the duty.

The United States court of the eastern district of Pennsylvania, which handed down its decision in the anthracite coal case two weeks ago, declaring the Temple Iron Company a combination in restraint of trade and dismissing the Government's contention as to other matters in the suit, has issued its decree. It restrains the railroad corporations that own its stock from further exercising control over the Temple Iron Company.

Acting upon the suggestion of the President in his message to Congress, a member of the House has introduced a bill to codify, revise, and amend the laws relating to the judiciary. This will especially endeavor to relieve the crowded docket of the supreme court.

The department of justice takes the position that the agreement which is in effect among bankers in the principal cities of the country to charge a uniform rate of exchange on all out-of-town checks is a violation of the Sherman antitrust law.

International.

Henry Farman, in a sustained flight of eight hours and thirteen minutes at Etampes, France, in a Farman biplane, covered a distance of two hundred and eighty-seven miles. M. Lagagneux at Pau, remained in the air in a Blériot monoplane from 8:34 in the morning to 2:35 in the afternoon and covered a distance of three hundred and twenty miles. He now holds, or did hold, the record for distance and also for height, having reached an elevation of ten thousand four hundred and ninety-nine feet on Dec. 9. On the same day a non-stop aeroplane flight, with a passenger, of one hundred and forty-five miles was made by Lieutenant Cammerman, accompanied by Captain Hugoni, from Chalons to Montigny-Sur-Aube and return. The flight was made in four hours and three minutes and establishes a world's record for distance in a non-stop passenger flight. It was undertaken under orders from the minister of war.

The delegations of farmers from the western provinces, who waited upon Premier Laurier of Canada at Ottawa, demand that the government take over the terminal elevators at Fort William and Port Arthur, through which practically all the export wheat of western Canada passes. Resolutions calling for the establishment by the government of a chilled meat industry, for the construction and operation by the government of the Hudson Bay railroad, and for a law to facilitate the formation of cooperative societies, were presented. Then the matter of tariff changes, the main object of the movement, was taken up, and there were prolonged cheers indorsing the proposals for reciprocity with the United States and free trade with England. The farmers stated that they would cheerfully submit to direct taxation to make up decreases in the revenue consequent upon reduction of duties.

The Chinese government has not yet come to terms with the American financial syndicate over the proposed loan of fifty million dollars to be used by China in furthering currency reforms and other interests of the empire. The final difficulty in the way appears to be in the matter of the appointment of a financial adviser to China, who will be in a position to influence the expenditures.

The proposal to abolish compulsory Greek in the University at Oxford was defeated, after an animated discussion, by a vote of 183 to 152.

Industrial and Commercial.

Plans for the Wentworth Institute in Huntington avenue, Boston, which is expected to open its doors in a year to young men in need of training in the mechanic arts, have just been made public. The institute was incorporated April, 1904, but the trustees have been waiting for the income provided by the three million five hundred thousand dollar bequest of Arioch Wentworth, from whom the institute takes its name, to accumulate so that it would not be necessary to encroach on the principal. The initial group of buildings, including a power plant, foundry, and four-story shop, will cost about two hundred and fifty thousand dollars. Provision is made in these buildings for departments of carpentry, pattern making, machine work, forging, foundry practice, plumbing, mechanical drawing, machine design, practical mechanics, electrical power-plant operating, steam power-plant operating, recitation rooms and offices. There will be day and evening courses.

The seventeen thousand-acre rice farm—said to be the largest in this country—situated near Buckeye, Tex., is to be divided into a large number of farming tracts and devoted to raising a variety of crops. The farm is owned by bankers of Dallas. While growing rice was profitable, it is the belief that better results will be obtained by raising a diversity of crops.

The value of diamonds and other gems imported during 1910 amounts to about forty million dollars.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

REVELATION AND PRESERVATION.

(A paper recently read at a business meeting of a Christian Science church.)

IN *The Christian Science Journal* for January, 1901, is an article written for a newspaper by our Leader on what the last Thanksgiving day in the nineteenth century should signify to all mankind. She said it signified, among other things, "that revelation, spiritual voice, and vision are less subordinate to material sight and sound and more apparent to reason." This was said a decade ago, and we may be sure that these spiritual phenomena appear more reasonable now than then. Public opinion has at least advanced them from the inexplicable to the mysterious; but still regards them as abnormal if not supernatural. Christian Scientists have advanced beyond this point, but it has been observed that many of them need a clearer view of revelation, especially the revelation of Christian Science.

What then is revelation? It may be defined as the passing of true thought from divine Mind to human consciousness; and in Science the passing of thought from God to man is the normal and incessant action of Mind; the receiving of such thought is the natural and necessary function of man. According to what Mrs. Eddy has written on pages 76 and 276 of Science and Health, man is "an individual consciousness," "cognizant only of the things of God."

From these definitions it follows that the discovery of Christian Science was a perfectly natural occurrence; it came to pass in accordance with the normal operation of divine law. Mrs. Eddy had become accustomed to ponder the larger problems of human life. She had grown in the love for God and neighbor until her desire and aspiration were to save the human race from its bondage to false belief. She had turned away from matter to Spirit with an unusual degree of understanding; her condition of thought had become so purified that she was prepared to receive, not merely a passing glimpse or transient vision, but an abiding understanding, of divine reality. Thus prepared, the action of divine law gradually unfolded to her consciousness the Principle of the universe and the relation of all things to the one cause—the true nature of God and His universe, including man. Incidentally the understanding thus gained enabled her to solve the problem presented by the apparent coexistence of evil with the infinitude of good, and to discover the mental modus or practice by which the belief in evil may be overcome.

To receive a revelation, then, may mean little or much according to the magnitude of the revelation; but it always involves an essential correspondence or oneness between the idea that is revealed and the mentality that becomes conscious of it. This being the case, there is not the slightest excuse for investing the discovery of Christian Science with any shroud of mystery, nor for regarding the Discoverer with either emotional ecstasy or personal worship; but there is abundant reason why mankind in general, and Christian Scientists in particular, should express for her, the utmost gratitude, love, and reverence.

Although Mrs. Eddy has received a revelation of transcendent importance to humanity, she is not a truth giver but a truth reporter. She is not a law giver but a recorder of divine law; therefore our Leader does not wish to be worshiped or deified. She does not even desire a personal following. She points steadfastly to the Principle and rules of Christian Science and asks of us nothing more than that we make good use of her discovery and preserve the knowledge of pure Christian Science, so that the so-called human mind may increase in goodness until the claim of a mind separate from God disappears.

Closely connected with the discovery of Christian Science is the question of guarding the knowledge of it from adulteration and perversion. Christian Science being divine, not human, it is immutable and eternal; but the present human sense of it is more or less imperfect. A perfect consciousness of Christian Science would include no mortal or material element; therefore do we need to heed the warning which our Leader has written on page 61 of "Retrospection and Introspection": "Posterity will have the right to demand that Christian Science be stated and demonstrated in its godliness and grandeur,—that however little be taught or learned, that little shall be right. Let there be milk for babes, but let not the milk be adulterated. Unless this method be pursued, the Science of Christian healing will again be lost, and human suffering will increase."

Since Christian Science is true, it was revealed by Mind to human consciousness. This being the case, it is reasonable to conclude that the mentality which received and recorded the revelation would be able to discover and declare the best means for preserving and increasing the knowledge of it in human consciousness. And, since Truth is inseparable from Love, whether as Principle or manifestation, the condition of thought that was fit to receive such a revelation as Christian Science must have included not only the desire to know the truth, but the desire to make it known to this and future generations, until man shall cease to be born of woman.

It is to be observed that Mrs. Eddy has labored unceasingly to this end. First, she healed the sick and sinful; she taught students and sent them out to heal and to teach. Then she wrote a complete statement of her discovery, namely, a comprehensive statement of the truth concerning God and His universe, with rules for applying the truth to human needs. This work was designed to be both a text-book for instruction and a criterion or standard by which to test any teaching or practice which might be offered in the name of Christian Science. Finally, she founded a church which should preach the gospel of universal salvation and protect humanity from false claims to the name of her discovery. The by-laws of this church are adapted to these ends. Our Publishing Society and our periodicals are simply agencies of the church.

It might be supposed that a text-book written with such care as was "Science and Health with Key to the Scriptures" would preclude dispute as to what teaching or practice is or is not consistent with Christian Science; and the cases have

Copyright, 1910, by The Christian Science Publishing Society.

Digitized by Google

indeed been few in which sincere students have gone far astray. But the Discoverer of Christian Science foresaw that cases might arise which would require the service of a tribunal that should refer the points in question to the rule established by the text-book and thus decide the issue. Provision to this effect was therefore made by Article XII., Section 2, of the Church Manual, which reads as follows.—

"If a member of this church is found trying to practise or to teach Christian Science contrary to the statement thereof in its text-book, "Science and Health with Key to the Scriptures," it shall be the duty of the Board of Directors to admonish that member according to Article XI., Sect. 4. Then, if said member persists in this offense, his or her name shall be dropped from the roll of this church."

This by-law is not designed to punish any one; its purpose is to protect the public and the cause of Christian Science, not only from mere heresy, but from misconceptions and perversions which, if ignored, might cause Christian Science to be despised and rejected of men. Although only a few cases have arisen under this provision of our church law, it has proved to be a most wise precaution. Of course, the persons found to have gone astray may not heed the call to return to the fold; but that is a matter of minor consequence. The vast majority of our people recognize the value of government by law based upon Principle, and will gladly accept its benefits.

There is a paragraph of our by-laws which constitutes a succinct treatise on government. It might be called the key-note of the Manual, for it furnishes the fundamental idea which is amplified in the Manual as a whole. It is the first paragraph of Article I., Section 9, and reads thus.—

"Law constitutes government, and disobedience to the laws of The Mother Church must ultimate in annulling its tenets and by-laws. Without a proper system of government and form of action, nations, individuals, and religion are unprotected; hence the necessity of this by-law and the warning of *Holy Writ*: 'That servant, which knew his lord's will, and prepared not himself, neither did according to his will, shall be beaten with many stripes.'"

Allied to the subject of defections from Christian Science is the topic which our Leader has called "personal contagion." An error that claims only one member of our church, no matter what its nature may be, cannot work much harm; but evil consequences ensue as the disorder spreads, and it usually spreads by personal contagion. With few exceptions the errors dealt with under the by-law first cited in this paper have been perversions incident to personal teaching, and the chief sufferers have been victims of misplaced confidence in human personality. Personal sense is, however, responsible for more than the error at which that particular by-law is aimed; personal sense is a synonym for error itself. In her article in *The Christian Science Journal* for August, 1906, entitled "Personal Contagion," our Leader declares: "There was never a religion or philosophy lost to the centuries except by sinking its divine Principle in personality." She adds, "May all Christian Scientists ponder this fact, and give their talents and loving hearts free scope only in the right direction!"

Profiting by the lesson which spiritual discernment gained from history, our Leader has from time to time adopted measures to guard against this danger. Among these are the seclusion which she has sought for herself; the abolition of personal preaching in our church services; and the bounds fixed to limit the scope of personal teaching and the functions of teachers. Other safeguards might be mentioned, but the most important of all is the doctrine of Christian Science, which implicitly and explicitly turns thought away from personality to the divine Principle of being. It explains and adopts Paul's exhortation: "Whatsoever ye do, do it heartily, as to the Lord, and not unto men."

Another danger that has menaced religion throughout the ages is that of preaching or professing and not practising. Too many who profess Christian Science are content to be patients rather than practitioners. The best practitioner, so long as he seems to have a personal, material body, may sometimes need to ask for help. This is entirely legitimate. But our system does not encourage any of its students to leave its practice to others. In fact, Christian Science is distinctly opposed to the theory that the people should be divided into a laity and a priesthood. This theory is nothing else than a part of the belief that man is separated from God, a claim which Christian Science consistently denies.

Our Leader says, "Generically man is one, and specifically man means all men" (Science and Health, p. 267). This being true, the divine order does not divide men into two classes, the one inferior and the other superior in the qualities of God; neither does it put one individual between another and his Principle. The divine law is that the sons and daughters of God which constitute the compound idea, man, are on a plane of spiritual equality. This fact should not—and truly understood, it cannot—detract aught that is good from any one, but it should and does declare to each individual that he also is of the household of God and has access by one Spirit unto the Father.

While the belief of life in matter persists, we may help to bear one another's burdens, and so fulfil the law of Christ, but the relation of patient and practitioner is temporal and it should be strictly temporary, never permanent, never even habitual. The long continuance of this relation tends to substitute person for Principle. When Paul was declaring the law of Christ on this subject he did not neglect to say, "Every man shall bear his own burden." So, while it is evident that all the members of our church are not ready to make healing their vocation, every member can and should be in some degree a Christian Science practitioner. Those who profess but do not practise are *like* the foolish virgins who did not equip themselves but counted on borrowing oil from the wiser virgins.

Constituent parts of the belief of inequality are the excuses that interfere with the usefulness of some of the members of our church. To the extent that a member of our church does his duty as such, to that extent will he find his own place as a spiritual unit in the kingdom of God. In short, whatever our vocation may be, we must, to quote our Leader's words from page 340 of Science and Health, "make life its own proof of harmony and God."

Harmony between individuals depends upon unity, and "unity," says Mrs. Eddy, "is spiritual cooperation" (*The Christian Science Journal*, August, 1904). To gain harmony and unity, therefore, it is necessary to lift thought above human personalities to the individual ideas which constitute the one man and are embraced in the one Mind.

The first articles of Christian faith are to be found in these words of Christ Jesus: "I and my Father are one." "Why callest thou me good? none is good save one, that is, God." In exact accord with these sayings are what Mrs. Eddy speaks of as "the two cardinal points of Mind-healing, or Christian Science," namely, "the nothingness of material life and intelligence and the mighty actuality of all-inclusive God, good" (Science and Health, p. 52). These cardinal points of Christianity and Science declare the basis of unity and show that the members of the true church are not material personalities, not expressions of mortal mind, but spiritual ideas in action. Such ideas, united to Principle, and equipped by His power, act in spiritual cooperation as the church against which the gates of hell shall not prevail.

In conclusion, therefore, let us cherish this precept from our Leader, found on page 354 of "Miscellaneous Writings": "A little more grace, a motive made pure, a few truths tenderly told, a heart softened, a character subdued, a life consecrated, would restore the right action of the mental mechanism, and make manifest the movement of body and soul in accord with God."

JUSTICE VERSUS INJUSTICE.

LLOYD B. COATE.

In the Christian Science text-book we read: "Justice is the moral signification of law. Injustice declares the absence of law" (Science and Health, p. 391). This declaration of truth is applicable to every condition of human need. It is a reiteration of the golden rule given by Christ Jesus: "Therefore all things whatsoever ye would that men should do to you, do ye even so to them: for this is the law and the prophets." This rule is the only basis of solution for the great question between capital and labor.

The moral signification of law demands justice on the part of the employer to the employee, and *vice versa*. This law is just as binding upon the housewife as upon the corporation employing thousands of men, for the law of justice is the law of right. It is a divine statute which forbids us to oppress "the hireling in his wages, the widow, and the fatherless, and that turn aside the stranger from his right." The Mosaic law says: "Thou shalt not oppress an hired servant that is poor and needy, whether he be of thy brethren, or of thy strangers that are in thy land within thy gates." The Manual of The Mother Church is a monitor of justice, admonishing its followers to be just to God, just to our divine Exemplar, Christ Jesus; just to our cause and our beloved Leader; just between man and man; just in church associations; just with student and patient. This law of justice is embodied in one of the church tenets: "We solemnly promise to watch, and pray for that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us; and to be merciful, just, and pure" (*Ibid.*, p. 497).

Our Leader refers to the justice of compensation when she says (*Sentinel*, Jan. 1, 1910), "Christian Science practitioners should make their charges for treatment equal to those of reputable physicians in their respective localities." The Church Manual forbids any injustice in charges; forbids a practitioner to sue a patient for his services, and asserts "he shall reasonably reduce his price in chronic cases of recovery, and in cases where he has not effected a cure." It defines a loyal Christian Scientist as "a humanitarian; he is benevolent, forgiving, long-suffering, and seeks to overcome evil with good" (Art. VIII., Sect. 22). Mrs. Eddy healed the poor without price and instructed some of them in Christian Science, thus setting an example for her followers. Yet, had there not been a sense of justice toward her by some of the beneficiaries of Christian Science, the cause she founded could not have reached its present growth. Mrs. Eddy has inaugurated every step of advancement in furthering the cause of Christian Science, and without just remuneration for her services she would not have been able to establish the stately operations of Christian Science as it is known to the world to-day.

Much is expected of the Christian Science practitioner in establishing the cause of Christian Science in his own locality. Truly, his work is a labor of love for the uplifting of humanity, and many practitioners give freely of their time in helping the poor. The writer is acquainted with practitioners who give one half or more of their time to work for the needy, for which they receive nothing except the joy which comes from doing good. There are many, too, who have consecrated their lives to God, and have given up everything to work in the Master's vineyard, healing the sick and reforming the sinner, as Christ commanded through Christian Science; therefore it is just and right that those seeking help should make proper return for such services, if in a position to do so.

Jesus defined the law of justice in this respect when he said, "The laborer is worthy of his hire." Paul says, "If we have sown unto you spiritual things, is it a great thing if we shall reap your carnal things?" We need to be watchful lest we forget the moral sense of justice, and the great wrong of injustice in all the affairs of life. There is a sense of justice due all who serve, whether in the church or in the shop. Justice implies gratitude; injustice, ingratitude. Injustice prevents an honest acknowledgment of benefits received. Justice is always willing to count its blessings. Injustice finds fault; justice is appreciative of any labor of love. Injustice tends to impoverish and leads to selfishness; justice enriches and leads in the way of righteousness. Injustice would limit the Holy One of Israel; justice finds divine Love an ever-present help in need. Injustice withholds; justice remembers the Lord with the first fruits.

Justice never forgets its benefactor; injustice stabs him in the back. Justice anointed Jesus with the precious ointment; injustice betrayed the Master with a kiss. Justice is the law of righteousness, honesty, truthfulness; injustice is unrighteousness, dishonesty, and falsehood. Injustice would hold God responsible for sin, sickness, and death; justice, as expressed in Christian Science, declares God not to be the author of any form of evil, but the deliverer from sin, sickness, and death. Injustice leads mankind to submit to unjust laws regarding disease; justice [Science] enables men to assert their God-given right of dominion over such conditions.

Mrs. Eddy, through her wonderful text-book, "Science and Health with Key to the Scriptures," is opening the eyes of mankind to a higher sense of justice, and it necessarily follows that, as mankind grasp a clearer idea of God, injustice and oppression of every name and nature, resulting from false law, will be destroyed. Science and Health (p. 228) says: "The enslavement of man is not legitimate. It will cease when man enters into his heritage of freedom, his God-given dominion over the material senses. Mortals will some day assert their freedom in the name of Almighty God. Then they will control their own bodies through the understanding of divine Science."

Since the publication of the Christian Science text-book, each year has witnessed a higher sense of justice. It is a source of gratitude to know that encyclopædias and biographical works ascribe to Mrs. Eddy the honor and justice which is her due as the Discoverer and Founder of Christian Science.

THE THINKER.

RICHARD P. VERRALL.

RODIN'S statue of The Thinker in front of the Pantheon in Paris, representing primitive man in the act of receiving his first idea, is an apt illustration of the hostile attitude which mortals invariably adopt when compelled to think in new channels. The muscular contortions of The Thinker vividly portray the fierceness of the struggle going on within him, and indicate the stubborn resistance of the carnal mind to the spiritual idea which comes to destroy it.

Carlyle says: "Truly a thinking man is the worst enemy the prince of darkness can have; every time such a one announces himself, I doubt not, there runs a shudder through the nether empire; and new emissaries are trained, with new tactics, to, if possible, entrap him, and hoodwink and handcuff him." The apparent success which this hypothetical "prince of darkness" seems to have had in deceiving the people in this and past ages, but emphasizes the need of a more scientific method of thinking, such as has been practised and communicated to others by Mrs. Eddy. She has remained steadfast in the faith and has succeeded in establishing on the earth a pure and undefiled system of metaphysical healing. She has thrown wide open the doors which a belief in materiality had barred, and has emancipated thousands of victims who had been bound by the love of sin and the fear of sickness.

In overthrowing the belief that evil has power with the

Digitized by Google

understanding that good is the only power, Mrs. Eddy has undermined the very foundations of falsity, and established the fact that "now is come salvation, and strength, and the kingdom of our God, and the power of his Christ." In showing mankind how true thoughts free them from the subtle influence of superstition and "personal contagion," she has said: "Good thoughts are an impervious armor" (Pamphlet, What Our Leader Says, p. 7). This encouraging statement naturally raises the question as to where the dividing line between good and bad thoughts is located, and how one can keep within the boundaries of the former. Paul answered this question when he wrote to the church at Philippi: "Let this mind be in you, which was also in Christ Jesus;" obviously implying that the right thinker must not only discard all malicious and carnal thoughts, but that he must actually think no other thoughts than those which come from the one divine Mind. As if to remove all doubt or misunderstanding on this subject, Paul further said: "And if any man think that he knoweth any thing [of himself], he knoweth nothing yet as he ought to know."

Is it not plain from the foregoing that there can be no right thinking which is not a reflection of the one infinite Mind? Jesus affirmed this spiritual fact when, praying for his disciples, he said: "And this is life eternal, that they might know thee the only true God [Mind], and Jesus Christ [God's manifestation], whom thou hast sent." It thus appears, in the new light thrown upon the Scriptures by our Leader's writings, that there are two fundamental lessons which must be learned and lived by every thinker before he can ultimately know the truth, and so be made free. First, he must lay down the belief that mortals can ever be converted into children of God by a process of transmutation of matter into Spirit; for perfection can never be evolved from imperfection. Second, he must come to realize that the individual man created in God's likeness never fell from grace, and is consequently perfect now, even as his Father in heaven is perfect.

TRUE ECONOMY IN SUBSCRIPTIONS.

ALICE PILSBRY.

As supplementary in extending the teachings of this vast movement of Christian Science, there are certain messengers, the *Quarterly, Sentinel, Journal, Herold,* and *Monitor,* and often it is in this order that they appeal to those who are just awakening to the fact of spiritual healing. Among such one sometimes hears it said: "There is so much to read that I do not have time for all of the Christian Science periodicals;" or, "I do not have the money to subscribe for all of them." My experience may serve to illustrate the self-destruction of this belief of limitation. After taking up the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, the *Quarterly* became necessary to further investigation. The *Sentinel* was joyfully welcomed as soon as it was brought to my attention, but the *Journal* seemed a luxury for which I should have to wait until some future time. Finally, to possess this periodical became a necessity, and I found the "burden light" and realized that I had availed myself of the highest ethical and metaphysical teaching ever published in the form of a monthly journal.

It was shortly after this that the *Monitor* appeared, and although I had been awaiting just such a publication as the ultimate of Christian Science journalism, the realization of this hope found me unprepared. The old thought of lack of funds again seemed to confront me, and in addition the lack of time in which to read the paper. I had, it is true, learned something from my *Journal* subscription of the abundance which is always ours when rightly sought, but to prove from an economical standpoint that nine dollars a year, the cost of *Sentinel, Journal,* and *Monitor,* was not a large sum to expend for Christian Science literature, I made a detailed statement of how much I had been spending for other periodical reading matter. Taking into account monthly magazines, weeklies, the Sunday and daily papers, the sum spent yearly was not only in excess of nine dollars, but much greater than I had thought it to be. The claim of insufficient funds to subscribe for these periodicals was thus shown to be absolutely without foundation, and I sent in my order for the *Monitor.*

I now had three periodicals which stand unique in the literary field as exponents of the reappearing of the greatest reformation the world has ever known. In them I found not alone inspiration and spiritual instruction, but also the most reliable and advanced information to be obtained in relation to educational matters, the arts, industries, and inventions, and a clean record of current political events, all so clearly and concisely written, so comprehensive and impartial, that the necessary daily data of "men and affairs" was easily and quickly acquired.

In further confirmation of having reached a better understanding of true economy, an analogy was noted between the almost universal tendency to fritter away small sums of money and a similar expenditure of time. Moments once spent in idle discontent or in hurriedly scanning an ever increasing number of periodicals of more or less merit, I now discovered had expanded into ample time each day in which to store my mental home with "good things" to sustain me when occupied with daily work. Apart from the hurrying material surface, I was learning to live in a quiet current of thought ever flowing on to God and His unmeasured eternity.

"THE GOSSAMER WEB."

DAISY WOODWARD.

On page 403 of Science and Health Mrs. Eddy speaks of "the gossamer web of mortal illusion." The writer has recently been much impressed by the aptitude of the above words, descriptive of mortal illusion in its many forms. Probably all of us have at some time or other paused to admire the construction of a spider's web. How beautiful is the dainty network of silken threads, sometimes seen on a winter morning outlined with gems of hoar frost sparkling in the sun. What a temptation to the unwary little fly to enter, but how short-lived the pleasure, for what appeared so harmless and beautiful soon proves to be a cruel trap from which there seems little chance of escape.

So is it with certain forms of sensuous attraction which deceive us by appearing on the surface so beautiful, so harmless, and so necessary, as we imagine, to our happiness and comfort. How easily we blind ourselves to the nature of these so-called pleasures, and indulge in them, until like the poor little fly we wake up to find ourselves seemingly entangled hopelessly in the web that error has woven for us. Sometimes we struggle violently and impatiently to free ourselves, murmuring against the cruel spider which has ensnared us; sometimes we sink despondently, fearing that we have not the strength to rise above our difficulties. Our efforts become feebler and feebler, until we hear the whisper of a "still small voice" which says, "Where the Spirit of the Lord is, there is liberty," and we eagerly ask ourselves, Where is the Spirit of the Lord?

Then comes the joyful answer, "God is Spirit and Spirit is omnipresent; therefore liberty, freedom, is everywhere, and for all who are willing to claim man's divine birthright. Spirit is the only attraction, and as we begin to realize this truth, and resolutely turn away from material pleasures, we shall find "the gossamer web of mortal illusion" swept away, and in its place we shall fearlessly enjoy "the glorious liberty of the children of God."

EXCERPTS FROM EDITORIAL COMMENTS.

[*Union*, Sacramento, Cal.]

In the death of Mrs. Eddy the world loses a woman who has been a very important influence in the uplifting of humanity. She has, during her lifetime, converted millions to her doctrines, and all over the country the effects of her teachings are visible. Among her adherents today are many who feel convinced that through her they have been cured of serious diseases, that their lives morally as well as physically have been bettered by reading her books and learning her theories and carrying them out, and although she has encountered much opposition from some of the older denominations in the advancement of her ideas, yet they have prevailed, and there are many who feel that the world is brighter and the future more promising because they have known of her, and have believed in the views that she has expressed. Among her followers are many whose lives have been completely changed as the result of her teachings and practising them, and they will hold her memory forever sanctified. No recent religious movement has spread more rapidly or can point to more substantial results, and this fact emphasizes the force of her doctrines and the vitality of her creed.

In Mrs. Eddy the United States has lost one of its most valuable citizens and the world one of its most philanthropic and broad-minded women. The recent death of Tolstoi suggests a comparison between the two, for both were engaged in trying to elevate humanity, but while the Russian was always pessimistic and saw only the somber side of things, this good woman saw only the bright side and sought to accomplish her mission not with tears, but with smiles; not by sad prophecies for the future, but by giving to the world brighter and better hopes and truer ideas of happiness, both on this side of the grave and on the other.

[*Joplin* (Mo.) *Daily Globe*.]

Mrs. Eddy's death is the world event of a day because her life is a world event of the age. The verdict as to her place in literature, or philosophy, or theology, or medicine is unimportant. The verdict as to her place in the life-story of the world is stupendous; it "passeth all understanding." Now that she has gone the world will speculate upon the effect of her departure and will reconsider and gently qualify many of the harsh, unfair sentences it passed upon her. The profound scholarship, for illustration, that had penetrated the depths of the labyrinth of human knowledge may be accorded belated recognition. Men of letters may apprehend it to be their duty to read the book which in the artistry of its proportion, the felicity of its expression, the puissance of its logic, its rare grammatical purity, the splendor of its visions, and the sweetness of its message is, in simple truth, a book of books.

And as men of letters may do honor to her scholarship, so philosophy may lay aside its pride and its intolerance and pay homage to a service that retrieved contentment from the world's lost arts. So, too, may theology, grim and resentful, address in a spirit of fellowship, one other of "the wondrous names of God." And who shall say but medicine, grappling resolutely but hopelessly with its adversary, may ultimately accept this school of healing as an ally?

As a Leader, a teacher, and evangel that sought strange, independent channels for her energies, Mrs. Eddy is held in reverence and affectionate esteem by the army of a million recruited from all the ranks of life. And in the assurance she has brought to doubt, the hope with which she has routed despair, the strength that has been given to weakness, the courage that has supplanted cowardice, the health that has banished wretchedness, the glory of the everlasting day into which she has marshaled the wanderers in night's terror—thus, in the grandeur and the permanence and the mercy of her works, she stands justified. And by these tokens and imperishable signs the voice of a million reiterates, "There is no death."

[*Salt Lake Tribune*.]

At a great age, Mrs. Eddy, the Founder and Leader of the Christian Science church, has passed away. She was a woman of very high ability along the lines which she chose or was led in her life-work. To formulate a system of belief, organize a church which spread with such strength and rapidity as the Christian Science church has done, and to retain the love, veneration, and devotion of such multitudes of her fellow-beings as Mrs. Eddy has done, shows the possession by her of qualities as remarkable as they were vital. It is idle to decry her or her work, in view of her resplendent success; to speak of a monument for her is but to ask for gilding to the fine gold of achievement for her work, and the church she founded will be her ever-present and most splendid memorial for all time. That work is a marvel, amazing to whoever will consider it candidly for what it is, and in its inception and growth. It is now one of the mighty factors in American life, and is still pushing on.

[*World Herald*, Omaha, Neb.]

In some respects, at least, Mrs. Eddy seems, from the perspective of today, one of the world's great women. It is possible that she will some day be generally accepted as the world's greatest woman. She was the "Discoverer" of a religion and the Founder of a church. It is a religion that seems to make a universal appeal, in that it is accepted by men and women of all races, creeds, and conditions, and so it is a church that gives promise of enduring permanence. Philosophically it rests on the doctrine of pure idealism, morally on the gospel of love. A religion resting on such foundations, and satisfying, as it has from its inception, some of the purest souls and clearest minds of the present civilization, should travel far through the generations.

There can be general agreement as to the rare qualities of heart and mind and personality of Mrs. Eddy, the Founder of Christian Science. Like Tolstoi, she is one of the unique figures of universal history.

[*Evening Index*, San Bernardino, Cal.]

In the passing of Mary Baker Eddy there was removed from earthly existence the most beloved woman in history. The good citizenship will applaud the efforts of any one who helps humanity to a more correct life, no matter through what channel of religion. Therefore it would seem but the insincere who would fail to say aught but good of this noble woman. She faced the world, with its harsh criticism and ridicule, alone, with only her God as a protection. For years she stood with her faith unshaken by that which would have quailed the stoutest heart. First dozens, then hundreds, then thousands, then tens of thousands were appealed to by her religion and found relief from many worries of life, until today Christian Science reaches around the world and to its farthest corners.

In the beginning Mrs. Eddy said steadfastly, "God is my life;" her last earthly message was, "God is my life."

[*Columbus* (O.) *News*.]

It must be admitted that Mrs. Eddy herself and her doctrinal school are among the powerful uplifting forces of this age. Even if its possible accomplishments have been exaggerated, as its antagonists contend, it cannot be denied that Christian Science has made mankind happier, healthier, and better. Judged by results, the life and teachings of this remarkable woman were rich in helpfulness to mankind.

Digitized by Google

[*Los Angeles* (Cal.) *Record.*]

In the passing of Mrs. Mary Baker Eddy, Founder and Leader of the Church of Christ, Scientist, this world has lost one of the most wonderful women it has ever known. Over two score years ago she discovered what she believed was the real religion taught in the Bible. Her ideas were ridiculed and attacked on every side. But she was not disheartened. She met all attacks, all opposition, calmly, bravely, as one who had the true courage of her convictions, and persevered. Little by little others came to believe as she did, and today the Christian Science movement has spread all over the world and has millions of faithful adherents, who daily thank God for His goodness, and give expression of their gratitude to Mrs. Eddy for her work in opening the door of this religion to them.

Although there are millions who believe in Christian Science, there are more millions who do not, but even the most bitter enemies must admit that Christian Science has done much to relieve suffering, and has brought health, happiness, and peace to hundreds of thousands who were ill, physically, morally, spiritually. Mrs. Eddy was a brilliant woman, a brave woman, and the world has been made better by her presence. Could she speak today, in the flesh, it seems as if she might fittingly say, as did Paul: "I have fought a good fight, I have finished my course, I have kept the faith: Henceforth there is laid up for me a crown of righteousness, which the Lord, the righteous judge, shall give me at that day: and not to me only, but unto all them also that love his appearing."

[*Pomona* (Cal.) *Morning Times.*]

With the passing of Mary Baker Eddy the world loses one of its most prominent and famous women. It is safe to say that no individual, with the possible exception of General Booth, has so touched and influenced the current of religious thought since the death of Wesley and Luther. It makes no difference what men think of Mrs. Eddy's teachings, whether they accept them as a revelation of the truth or whether they reject their claims for recognition, all must admit that hers was a remarkable character and individuality.

We believe it is safe to predict that the great movement which had its inception in her remarkable personality will continue to advance in days to come as it has in the past. Whether men believe and accept the teachings of Christian Science, is a matter for each individual to decide. Association with those who subscribe to the teachings of Christian Science will, we believe, lead a candid and unprejudiced observer to realize that its influence on their lives is for good. A careful scrutiny of the life, work, and conversation of the representative members of the cult reveals them to be among the best of our moral, intellectual, and law-abiding citizens.

[*Daily Tribune*, Maryville, Mo.]

That Mrs. Eddy was a remarkable woman not even those who have most bitterly assailed her system of religious therapeutics deny. Those who are not most extraordinary do not draw to them such a following as she had.

There is something remarkable about this Christian Science faith. Not long ago we incidentally referred to a man whom we had known years ago. At that time everything indicated that he would ruin himself. The man of whom we inquired said that he was doing well and making a very unusual success in business. "He has become a Christian Scientist," said the man. "Up to the time a friend gave him a copy of Science and Health he had been going from bad to worse, and was getting in bad shape, mentally, physically, and financially. The book changed his life." That is not an unusual or infrequent testimonial to the good results secured from Christian Science.

[*Kansas City* (Mo.) *Journal.*]

We of the present moment, lacking the gifts of prophecy or even of perspective, must estimate the life, character, and achievements of this Founder of a new religious and philosophic school on a basis of personal observation. To be just we must take rightful account of the wonderful influence of the Christian Science faith in our modern life. From ocean to ocean in this country stand the fashioned monuments to this movement, and engraven on each temple of Christian Science worship is the name of Mary Baker Eddy. Thousands of intelligent and serious-minded men and women have accepted her as their spiritual Leader. Her theories have brought solace to many a discouraged soul, and peace reigns in thousands of families where before was doubt, unhappiness, and dread. This much we know.

Thoughtful men and women, unblinded by prejudice, must pay a tribute of respect and admiration for this earnest and forceful character who made such an imprint upon modern thought.

[*Rutherford* (N. J.) *Republican.*]

In the death of Mary Baker Eddy the world has lost a wonderful woman, one whose life's work will go down in church history as the equal of the Wesleys, Calvin, Luther, and others of like prominence in the promulgation and foundation of theological teachings and ethics. As in the case with these others, thousands of men and women the world over bless the memory of Mrs. Eddy for the countless benefits brought into their lives by her teachings. It makes little difference by what name it is called, any creed or ethical doctrine which makes the ordinary human being more content and happy in this life, more worthy to live it, and inspired with a confidence and hope of that which is beyond, is a precious blessing to mankind, and one whose benefits cannot be calculated by human measure. Such a blessing the deceased head of the Christian Science church has conferred upon innumerable human beings, and with a confidence and gratefulness born of personal experience and benefits, these will hold her and her teachings in reverential memory forever and anon.

[*Evening Journal*, Ocean Park, Cal.]

In the passing of Mrs. Mary Baker Eddy, Saturday evening, the Christian world loses one whose life for nearly half a century has been one of the great uplifts to humanity. Her spiritual teachings stimulated the sick and unfortunate, drawing them into the "fold," arousing the latent character in the people of all that was good and had for the making of better men and women. No woman in all history had more influence for good on humanity than the dead Leader. She carried her message to every country and every nation, and the world is better that she has lived. There can be no successor to Mary Baker Eddy. But her teachings and writings will live and go on, and the love and good they brought to the mind and soul of humanity will continue its influence until time is no more. Let the world join with her followers in saying: "Peace to her memory."

[*The Iron Era*, Dover, N. J.]

Mrs. Eddy's life-work has been crowned with wonderful success, criticized, perhaps, by those understanding it little or worse than not at all, but nevertheless rapidly gaining numerically and in influence as a faith. On all sides may be seen living and enthusiastic examples of the cures worked by this belief, and whether or not prejudice or belief or profession shall cause some to sneer at and decry the real cause of these healings, all mankind must admit that if the practice of the teachings of one woman shall have done so much for humanity, it was good for that woman to have lived among us.

Digitized by Google

[*Californian*, Bakersfield, Cal.]

Mrs. Mary Baker Eddy must be reckoned as one of the remarkable characters of the world. No criticism as to her teaching can hide the fact that the organization which she founded has come to be a great force for good, its tenets leading those who accept them to live better lives, to breathe a purer atmosphere, to stand for the things that make for morality in men and women.

We may not agree with the teachings of this religion or that. Its tenets may not appeal to us, but every liberal thinker must give his approval to any cult or religion that is conducive to a higher plane of thought and action, that makes for wider humanity. And that the institution brought into existence by the great woman who has just died has done this and is doing it cannot be denied. It embraces in its following men and women of high intellectual attainments, many of the best minds of the day having accepted its teachings, and none who live within them but are humanized thereby.

It is estimated that a million people in the world have accepted the teachings of the woman whose life is ended, and she must therefore be recognized as one of humanity's greatest educators.

[*New Era*, South Bend, Ind.]

Judged by her achievements, Mrs. Mary Baker Eddy was one of the extraordinary figures of the nineteenth century. Putting aside all claims for the wonderful healing ascribed to the following of her teaching, one great practical good is apparent from her efforts, and that is the stimulation they have given to the reading and careful studying of the Scriptures by thousands of her followers, who by their optimistic views of life make their earthly journey one of hope and confidence born of a great love toward their Maker. To them the golden rule is the cardinal doctrine of conduct in their relations with their fellow-beings, and possessing, as they do, an abiding faith in their destiny, they face the world with a serenity of mind that adds greatly to the joys of life.

At this time it is proper to recognize the dimensions of her practical achievements and the claims which her remarkable personality and her creed have upon the world's attention and regard.

[*Los Angeles* (Cal.) *Herald*.]

The history of womankind has no parallel to the career of Mary Baker Eddy and its effects on the lives of others, and the woman who passed away at her home in Brookline, Mass., on Saturday night can be said to have directly influenced more persons than any other of her sex either in ancient or modern times. Considered either as a spiritual leader or as to her personality in its more human aspects, Mrs. Eddy was a most wonderful woman.

Considered apart from her religious position this can be said of Mrs. Eddy: The world owes her gratitude for showing how closely sobriety and temperance in act and thought (and the converse) may affect body and spirit alike. If the result of her efforts had only caused the multiplied thousands of her adherents to live more orderly lives and be examples to a headlong age, she would not have lived in vain.

[*Brunswick* (Me.) *Record*.]

The death of Mrs. Eddy at the age of ninety years brings to public attention the wonderful work she has accomplished. No one can doubt that she was a woman of rare power and intellect. Thousands have become her followers, learned the lessons which she has taught, and produce the results she has desired in the upbuilding of the Christian Science church. Aside from her teachings and the Christian Science doctrines, it is only fair to say that in so far as she has brought peace, happiness, and health to mankind she should be respected and honored.

[*Boston Journal*.]

There is no little significance in the fact that the Founder of Christian Science will be taken to Mount Auburn, her last resting-place, today with simple ceremony. It is even more significant that in the messages received by the church authorities from all parts of the world there is no note of sadness or of disturbance regarding the future. If for nothing else, then for the simplicity and the serenity which she inculcated by precept and practice, Mrs. Eddy has deserved the tributes that since Sunday have been appearing here and abroad. In an age which has been making special reports on neurasthenia, it is remarkable, if not positively providential, that through the agency of a woman, the world should have received partial relief by the exercise of a faith that was not permitted to backslide. There is great good in most beliefs. In this particular case that good was realized by steadfast practice of a gospel. It is a lesson which even those who run may read.

[*Kansas City Star*.]

Mrs. Mary Baker Eddy was one of the remarkable personages of the long period of time her life inclosed. She was the moving spirit in and the chief exemplar of a religious and spiritual phenomenon affecting in some degree nearly the whole of the civilized world. The Founder of the Christian Science church developed a way of life and a spiritual creed by which many thousands of persons have found serenity of mind and a correlative physical well-being. In her own mind and body she exemplified the value of her teachings. Her long life closed amid the spiritual veneration and love of hundreds of thousands of associated religionists and the kindly esteem of almost the whole world.

[*Post-Dispatch*, St. Louis, Mo.]

There is convincing evidence of the potent and lasting influence of Mrs. Eddy's work. It is difficult at this time to measure its effect. It has profoundly influenced religious thought and has modified medical science and practice. Mrs. Eddy's views on Mind as the only power and reality, and her method of applying the Christian ideal as a practical working force to the problems of daily life, have been accepted as revelations of truth by hosts of people. Her extraordinary power and influence are recognized by her bitterest opponents. She has a unique place among religious leaders and thinkers.

[*Springfield* (Mo.) *Republican*.]

Mrs. Eddy had done very much for the world, too. That must be admitted regardless of what one's position may be regarding her teachings. She lived a beautiful life, she taught others to live as cleanly. She taught hope and trust and happiness and goodness. She caused a great deal of all those principles to become the guiding influence in the daily living of people who believed in her,—an influence which has come to touch a very great portion of the earth.

[*Houston* (Tex.) *Chronicle*.]

The death of Mrs. Eddy is regretted throughout the United States. The Founder of Christian Science was a remarkable woman. Whatever those opposed to her teachings may think of Christian Science and the great Christian Science Leader, there is no doubt that she brought religious faith to many previously without it and her general influence on the world was good.

[*Daily Argus-Leader*, Sioux Falls, S. D.]

The great influence which Mrs. Eddy exerted on the religious thought of her day will not be lost with her passing away. Her work will go on, and undoubtedly history will accord her a place with the great religious leaders of the Christian era.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"THE WORKS OF THE FATHER."

WHEN Jesus was questioned by the followers of John the Baptist concerning his claim to the Messiahship, he did not at once reply, but continued his ministry to the sick and suffering,—the "works" whose fame had reached John even in his prison. Then, turning to his questioners, he bade them go and tell John what they themselves had witnessed. Again, when the Jews came to him in the temple and said, "If thou be the Christ, tell us plainly," his reply was the same: "The works that I do in my Father's name, they bear witness of me." They might doubt his assertion that he was, as Peter later declared, "the Christ, the Son of the living God," but the works he wrought through the power of that same "living God" were an indisputable proof of his sonship.

The doubter, the skeptic, the unthinking, are still abroad in the land, and Christian Scientists must prove the truth of the religion which they profess in the same way as did the Master—by works, not words. Christian Science is essentially a religion of works, and these works must be in line with the Principle from which they emanate. Mere platitudes and protestations, or, as our Leader has said, "hecatombs of gushing theories, stereotyped borrowed speeches, and the doling of arguments, which are but so many parodies on legitimate Christian Science, aflame with divine Love" (Science and Health, p. 367),—these travesties of truth do not and cannot open the prison doors for the sick.

The need for all Christian Scientists is that they do the "works of the Father," just as Christ Jesus did them, not that they may be seen of men, but because these works are the natural and normal results of right thinking,—milestones which mark the way of salvation. When men are so endued with the spirit of the Master that they are enabled to heal the sick and the sinning intuitively, instead of having to argue themselves into a frame of mind which is temporary, and therefore achieves only a temporary result,—then and then only will Christian Science have its full fruitage.

Our Leader sounded the key-note for her followers in all time when she wrote: "The song of Christian Science is, 'Work—work—work—watch and pray' . . . When a man is right, his thoughts are right, active, and they are fruitful; he loses self in love, and cannot hear himself, unless he loses the chord. The right thinker and worker does his best, and does the thinking for the ages. No hand that feels not his help, no heart his comfort" (Messages to The Mother Church, p. 20). It is on this basis, this gospel of works not words, that Christian Science is of value not only to Christian Scientists themselves, but to all mankind.

The righteous man does right because to him right is real and omnipresent, and it does not enter into his consciousness that there is any other way. When all who are striving to be Christian Scientists regard the works which Jesus did and commended to his followers as the natural and only example for them to follow, the demonstrations of Christian healing will become even more frequent than they are today. The means by which this state of consciousness may be reached are outlined and elaborated throughout our Leader's writings, and it must be remembered that every Christian Scientist has pledged himself to their demonstration through his assent to the "religious tenets of Christian Science," the first and last of which, as given on page 497 of our text-book, Science and Health, are as follows:

"As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life."

"And we solemnly promise to watch, and pray for that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us; and to be merciful, just, and pure."

Such are the sacred obligations to which as Christian Scientists we have bound ourselves, and we may well give heed to the fulfilment of our trust, even as Paul admonishes: "Watch ye, stand fast in the faith, quit you like men, be strong."

ARCHIBALD MCLELLAN.

SYMBOL AND SIGNIFICANCE.

A STUDENT once asked an artist how he might cultivate the capacity to perceive and enjoy genuine fine-art qualities and products, and instantly the reply came, "Get something that is really good, put it in your room, and look at it hard and often." Though somewhat surprised by this answer, the student thought upon it, and chancing soon after to see a bit of bronze by one of the world's famous sculptors, he bought it. It was only a little bunny, poised in his inimitable way for a quick look about him, but so masterfully modeled as to have all the charming alertness and *naïveté* of the rabbit's own pose, and for many years it has been looked at with unwaning interest and delight. In these years, moreover, the artist's advice has prompted the endeavor not only to give time and attention to the study of the best things, but to try to see all things at their best, to discover the highest values that are manifest in, or that may be suggested by every object and experience.

It is a splendid thing to be able to appreciate and so enjoy to the full those masterpieces with which genius is ever enriching the inheritance of mankind, but it is manifest that the finding of the good, the beautiful, and the true, which may be resident in or suggested by our common possessions and experiences, is of far greater significance to the many. Indeed this might be named the art of arts, since it has immediately to do with the happiness, the enrichment, and the consequent usefulness of one and all. To center our thought upon the best possible interpretation of every thing, to discover its heart of worth, can but conduce to the education of one's instinct for the ideal, for gold, and the only chance for slip in the broader following of the artist's advice is in the matter of determining what things are "really good" and hence merit our study. If one knew what constitutes genuine worth, wherever found in that complexity of good and evil which makes up the world of human sense, if he had the Lydian touchstone, if he always perceived the true value, he could then exercise that higher sense which leads ultimately to the complete identification of consciousness with its noblest object of desire.

All thoughtful people know that the telltalefulness of any thing is practically unlimited if its inquisitor be sufficiently perceptive and insistent; hence one's education may be said to be measured by the meaning to him of what is generally regarded as commonplace. The trouble is, and ever has been, that people—even many of the noble-minded—are uncertain and confused as to what is true and good; they have had no adequate and available criterion of worth, and not the least among the blessings conferred by the teaching of Christian Science is the fact that it at once lifts up for its every student an authoritative standard of judgment.

The acceptance of "perfect God and perfect man,—as the basis of thought and demonstration" (Science and Health, p. 259), supplies the true perspective of every object and event. The question it is forever putting is this, "What of Spirit does the given object or act embody, illustrate, or suggest? This answered, its worthiness is at once known. To think of every object, every experience at its best, is to think of it in terms of the spiritual reality it does or may express. It is to be looking for and finding the ideal factor

Digitized by Google

in every relation, the true significance of every symbol; and the moment we refuse to think of things in any other way, that moment we begin the fulfilment of St. John's prophecy, "We shall be like him; for we shall see him as he is."

This means the perception and assimilation of all true values, it means the redemption of history, literature, nature, the church, the state, marriage, home, kinship, friendship, humanity, self-consciousness—everything, thank God! To know no evil, but only good, is to recognize evil only for what it is, the absence of good, and to turn away from it. It is to follow the single emprise and joyous pursuit of the lee. It is to gain and reflect Truth and Love. It is to be a worthy Christian Scientist. It is to enter into the inheritance of man, into the joy of our Lord.

JOHN B. WILLIS.

PROFIT AND LOSS.

As the year draws to its close, the business man begins to take stock in order to determine his present standing, also to estimate the profit and loss of his undertakings during the past twelve months, in order to secure from the lessons thus gained the best possible results in the future. There are perhaps but few, however, who go over their moral and spiritual accounts with equal thoroughness, and who are ready to be entirely honest with themselves in examining the year's balance-sheet. The great Teacher said to his disciples, "What shall it profit a man, if he shall gain the whole world, and lose his own soul?" In other words, lose the spiritual sense of being,—fail to realize what it means to be a child of God, who is Spirit,—and miss man's God-given inheritance of dominion over all that is beneath him in the realm of Mind?

Even on the merely human plane it is easy to see that one makes a terrible mistake if in the mad pursuit of material riches he loses his honesty or tramples ruthlessly upon the rights of others. Though the cash-book might record the gain of millions in this way, yet in the final reckoning he would find that this meant only loss to him, and that his debt to divine justice must be paid sooner or later. If later, then the heavier the accumulated interest. So, too, in the case of the one who for the delusion of a false sense of pleasure, sacrificed, perchance, purity, or the opportunity to deny self in order to serve God and humanity. Here the apparent gain of the hour might mean a heavy loss of real happiness and spiritual possession; but let no one suppose that this is an argument for pessimism; instead it points to the fact that in daily meeting our spiritual obligations, or even in paying our past debts to divine Love, we are enriched, not impoverished, by every honest effort to meet the demands of God's law.

Speaking of loss and gain, our revered Leader compares our human experiences to variations in strains of music. These experiences tell us of "life's loss or gain,—loss of the pleasures and pains and pride of life: gain of its sweet concord, the courage of honest convictions, and final obedience to spiritual law" (Miscellaneous Writings, p. 116). Paul said he counted all earthly things but loss so that he might win Christ. If we take account of the past year we may find records of some sorrows, trials, disappointments, but these cannot be reckoned as losses if they have compelled us to "rise in the strength of Spirit" (Science and Health, p. 393), and prove that the good is an eternal possession. As to the actual gains, we have only ourselves to blame if these have not been at least encouraging. If we are better men and women, better Christian Scientists, than we were a year ago,—more honest, truthful, unselfish, and loving,—then we may indeed rejoice in knowing that we have laid up some treasure in heaven.

If we have gained greater confidence in the power of divine Mind to heal, in the power of Truth to right all wrongs, in divine Love to bless and beautify every desert of human experience till it blossom as the rose,—then we have indeed grown "rich toward God" and may greet the new year with hope born of assurance. What though the heathen rage? As of old, infinite Mind may even then be saying, "I have left me seven thousand in Israel, . . . which have not bowed unto Baal;" yes, even a multitude which no man can number. This being true, we may rest assured that our gains of good will increase proportionately to our love of God and goodness, and we should remember that it is the "Lamb" who is worthy to receive "power, and riches, and wisdom, and strength, and honor."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

MINNEAPOLIS, MINN.

On Thanksgiving day, Nov. 24, Sixth Church of Christ, Scientist, held its first service in the vestry of its new church building. The vestry, which will be our future Sunday School room, has a seating capacity of between five and six hundred. All the services of the church will be held here until such time as the large auditorium above is completed. The present plan is to begin the work on the superstructure as early in the spring as the weather permits.

The organization of Sixth Church took place two and a half years ago, to relieve the overcrowded condition of Second Church of this city. The services for the first six months were held in the hall of the Armory Building, and later in the hall of the Minneapolis School of Music, Oratory, and Dramatic Art, and as we entered into our permanent home on Thanksgiving morning, with hearts overflowing with joy and gratitude, we felt that God had indeed fulfilled the promise to David as recorded by the prophet Samuel, "Moreover I will appoint a place for my people Israel, and will plant them, that they may dwell in a place of their own, and move no more."—*Correspondence.*

BALTIMORE, MD.

The members of First Church of Christ, Scientist, of Baltimore have purchased ground for a church building on University Parkway, opposite Homewood, the new site of the Johns Hopkins University. The lot has a frontage of one hundred and twenty-five feet and a depth of one hundred and fifty feet. No definite plans for the building have as yet been decided upon, except that it will be in keeping with the lot and the location, and large enough to accommodate the fast-increasing membership for many years to come. The church owns property on Mount Royal plaza, on the corner of Oliver street, on part of which a chapel is built, and where the public reading-rooms are located, but the members decided to put this property on sale and to build farther out.

The meetings of the church have been held for a number of years in Heptasoph Hall, on the southeast corner of Preston and Cathedral streets, but the hall is becoming inadequate for the growing congregation.—*Baltimore Sun.*

SANTA BARBARA, CAL.

The Christian Scientists will meet for the first time in their new church on the corner of Anacapa and Micheltorena streets for a Thanksgiving service at 10:30 o'clock Thursday morning [Nov. 24]. The growth of this church has been very remarkable. From a little handful who met in a small hall, the number has increased steadily, and four years ago the State street church was rebuilt with twice its former capacity. There has been no diminution in the growth of the congregation, and again a new church has been built. The colonial style of architecture has been chosen for the new edifice, which is on the lot purchased recently.—*Santa Barbara Press.*

THE LECTURES.

BLACKPOOL, ENGLAND.

At the lecture on Christian Science, delivered Oct. 30, at the Grand Theater, the lecturer, Bicknell Young, was introduced as follows by the Rev. R. Woolfenden, of Rochdale:—

Christian Science was first brought to my notice nearly nine years ago, by a member of my church, who came to tell me of the wonderful healing of her niece, in Manchester. This girl was a clerk in the office of the *Manchester Guardian*, where, one day, she fell and seriously injured her spine. The best medical skill was provided, and everything was done to heal her, but she was pronounced incurable, and told she would be a cripple for life. With her parents' consent she had Christian Science treatment, and within six weeks was completely healed and able to return to work, this time taking a situation in the office of Messrs. Baxendale & Co., the ironmongers, where she was well known. Today she is a married woman, happy, healthy, and strong, and doing good work, in Manchester, as a Christian Science practitioner. The news of this case set me thinking hard. It came as a shock to my faith, and led to a rude awakening. On making further inquiries, I found that the father, mother, and aunt of this young person had each received benefit through Christian Science treatment, and were studying the new doctrine in the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I borrowed the book and read it deeply. As a result I was soon convinced that all my work, as a minister, was like "preaching without practice," which, according to Mrs. Eddy, is "the error of the ages" (Science and Health, p. 241).

I read in this book that "the theology of Christian Science includes healing the sick" (*Ibid.*, p. 145). It was this that drew me to it, for I was sick, and in need of healing, having returned from missionary work in China broken in health and utterly broken in spirit, through a deep bereavement that followed. Christian Science came to me in the darkest hour of my life,—came to prove the truth of Longfellow's saying, that "like the kingdom of heaven, the fountain of youth is within us." The reading of this book had another effect on me. It started a question from which I could not get away, namely, Why can we not do this healing work in our own churches? It took me seven years to answer that question,—seven years, when it might have been answered in seven minutes had one been willing to humble oneself, willing to trust oneself to the conquering love of God, for, as Wordsworth truly puts it, "wisdom is often nearer to us when we stoop than when we soar." Today I know that Christian Science is the wisdom of God, and the love of God, breaking through our doubts and fears; the love of the omnipotent, all-knowing, ever-present God, who "forgiveth all thine iniquities; who healeth all thy diseases."

In those days I belonged to the most democratic church in England, a church which most freely recognized the fullest liberty of individual judgment, and yet there was no room in it for this healing gospel, this practice of divine, metaphysical healing to which Mrs. Eddy has given the name of Christian Science. I found, to my sorrow, that it could not be practised there with any encouragement or satisfaction. There was nothing for it, therefore, but to come out, and join hands with those who were brave enough and bold enough to take God at His word. I came out with one resolution, to take up the hardest work a man can ever find, and that is to become a missionary to his own people. For this reason I returned to Rochdale, my native town, where Christian Science had already taken deep root. It was worth all the toil and all the sacrifice involved, for in taking this step I discovered the secret of the ever-victorious life, the liberty of the sons of God. In this liberty I rejoice today, and especially in the opportunity, such as this occasion affords, of bringing it to others.

The healing power of Christian Science is now a matter of conviction with me, of demonstration, and proof in my own experience, an experience shared by my wife and children, as well as by an ever-increasing number of friends, whose testimony is cumulative evidence of the fact that harmony and happiness are to be secured in this way. This conviction is ever deepening in me, that Christian Science is of God, and that its basis is laid in the Bible. In this connection a pleasing incident occurred the other night. Standing at the counter of the Christian Science reading-room in Rochdale, I overheard the conversation of two Lancashire lads, looking at the books through the window. "Dun they believe i' th' Bible?" asked one of the other. "Ah, they dun that," replied his friend. That conviction is growing among ministers, doctors, journalists, members of the theatrical profession, and others. Many are only waiting for the church to give them a lead. But they will find, as we found, that the only church which is ready to give them this lead is the Church of Christ, Scientist, the church of our Leader, Mrs. Eddy, the Discoverer and Founder of Christian Science.

Today I am not ashamed to call myself a follower of that noble woman. Her teaching is the master key, the key that unlocks the spiritual understanding in every inquiring case. She calls us to follow her only as she follows Christ. We must therefore come out, in response to the call of Christ, and do this work for ourselves. In taking this step we wish it to be clearly known that we do not turn our back upon the faith of our fathers. We have not renounced our early faith. We love it all the more now that we know how to do so much more with it. Instead of changing our faith, we only "enlarge its borders and strengthen its base by resting upon Spirit instead of matter" (*Ibid.*, p. 430). By giving up its belief in materiality, our faith has advanced all the more rapidly in the direction of spirituality,—toward the full knowledge of God, who alone is Life, Truth, and Love. In Christian Science we have found the religion of health, harmony, happiness, and heaven, and gladly, therefore, do we commend it to all.

Correspondence.

ROXBURY, MASS.

On the evenings of Oct. 31 and Nov. 1, Willis F. Gross delivered two lectures on Christian Science. On the first evening, in Whiton Hall, Dorchester, he was introduced by George S. Haddock, First Reader of First Church of Christ, Scientist, Roxbury, who said in part,—

Jesus, the lowly Nazarene, proved by his wonderful works the availability of God as a very present help—available at all times and under all circumstances, even to the overcoming of death itself. He brought out in its completeness the marvelous unity of man with God, and the power flowing from that unity. He said, "The Son can do nothing of himself, . . . for what things soever he doeth, these also doeth the Son likewise." He also said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." In departing, Jesus promised that a Comforter or helper should come, and because Christian Science has revealed God to thousands in the healing of sickness and sin, so raised men spiritually as to enable them in a degree to do the works of the Master, brought peace and joy in place of discord and sorrow, harmony and freedom where once was stress and storm, we believe it to be the promised Comforter. Through this Comforter, this living truth, we know we have found our God, that we have come "even to his seat."

At Fauntleroy Hall, Roxbury, the second evening, he was introduced by William R. Knox, who said in part,—

Digitized by Google

It is a common remark that Christian Scientists are a happy people; and why not? You would naturally expect one to be happy who had found a practical and available means of salvation from the discordant conditions of this human experience. The Christian Scientists have found what "scientific" means, and they are beginning to realize some of the fruits thereof in restored health and peace of mind—consequently their happiness. To tell a man to cheer up and be happy is one way; but to give him reason for being happy is the better way. So you have been asked to come here this evening and listen to a lecture on "Christian Science: The Gospel of Salvation."

Dorchester Beacon.

LAWRENCE, MASS.

The Rev. Arthur R. Vosburgh of Rochester, N. Y., delivered a lecture on Christian Science at the Opera House yesterday afternoon [Nov. 6]. The Rev. Clarence Guy Robbins introduced the speaker in the following words,—

As pastor of the Church of the Good Shepherd, Universalist, I have been invited to introduce the speaker. I am very glad to do this as an expression of Christian courtesy and that good will which ought always to exist between those of differing religious faiths if all are working together to see God's kingdom on the earth and to bring in a larger measure of Christ's faith, hope, and love, to the end that human minds and souls and bodies may be made whole.

There should be the closest sympathy and cooperation between those of differing faiths. No one church has a monopoly of truth, and I fancy that not all of the churches together possess all the truth, for truth is infinitely large and inclusive. As the sunlight streaming through the cathedral windows falls in differing colors upon the tiles beneath and we know that there are not many lights but one light, so the great truth of Christ shines through the world, bearing differing guises, because of the differing mediums through which it shines. We are to hear of the truth of Christ as interpreted by Christian Science.—*Lawrence Telegram.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Ann Arbor, Mich.—Frank H. Leonard, 3 p.m., Jan. 15.
Ardmore, Okla.—Frank H. Leonard, Robison Opera House, Jan. 5.
Cleveland, Ohio (Second Church).—Willis F. Gross, Hippodrome, 3 p.m., Jan. 8.

SMALL QUARTERLY ONLY.

Our readers will please note that, beginning with the next quarter, January, 1911, *The Christian Science Quarterly* will be published in the small size only.

TESTIMONIES OF HEALING.

When Christian Science was first proposed to me as a healing agency for my wife's illness, it provoked and angered me as would a direct personal insult. My sister's reference to Science was prompted by conditions in my family which she saw needed the regenerating influence of Truth, and while I readily admitted that her own health had been restored, yet I could not and would not permit her to discuss the subject in my presence.

Brought up on strict lines of orthodoxy,—my father being a clergyman,—I had emerged into life's activities with an absolute hatred for everything religious, the result of being forced throughout my boyhood, up to my majority, to accept things religious. I was nursing this mentality when my sister proposed Christian Science to me, and my antagonism was at once aflame, while my vocabulary of profanity was released in emphasizing my condemnation of something I knew nothing about. Soon after this, however, I consented, in pity for my wife's suffering, to have her take treatment, and assisted her to the home of a practitioner. After the first treatment she showed rapid improvement, and my opposition gradually gave way to toleration, as I had soon to admit that, wherein drugs for nearly two years had failed to benefit her, Christian Science was fast restoring her to her former self. At the end of thirteen treatments she was healed—well!

Since this healing—over eight years ago—myself, wife, and son have relied entirely on Truth in all our troubles, physical and otherwise. I learned that our progress is in proportion to honest endeavor, and my ambition is to grow and let this knowledge develop into understanding. As I let go of material dependences, I found progress in health and greater insight, but I could not let go of all belief in material remedies at once. Fear held me, and only as I gained a little more would I let go of something from a fairly complete medicine chest; but after a year or two every material remedy had been thrown away, including prescriptions that formerly were believed to be indispensable to my supposed needs, except one little bottle of pills. Material belief queried what I would do if I should need them; so I let them remain for perhaps a year, then out they went, and I have never had need of them in the eight years since then.

I am indeed grateful for Christian Science, for our own publications and all they contain,—the varied articles which suit our respective cases, aiding us in the solution of trying problems which come up day by day. I thank God for the writers who can and do elucidate these subjects scientifically, yet with such plainness that we all can comprehend. I am thankful, too, for the wisdom which directs the management of these publications, and their general high efficiency in business methods. I am glad to forget all the erroneous teachings of my youth; glad to thank God for Christian Science. As to Mrs. Eddy, words are inadequate to convey one's appreciation of all she has done for the world.

A. L. KANAGY, Chicago, Ill.

I cannot conscientiously withhold my testimony any longer, when I recall the many blessings that Christian Science has brought to me and mine. This truth found me at a time when I was greatly in need of help physically, after physicians had unsuccessfully prescribed for me, for about two years, for severe stomach trouble. After visiting health resorts and drinking the waters recommended for such ailments, I returned each time in a worse condition than when I went away—almost in despair, and not knowing where to turn for relief.

At this time a sister told us of Christian Science, stating that she had been wonderfully healed, and that she knew I could be also; but I would not consent to try it; in fact, my husband and I only scoffed at it and expressed much

Digitized by Google

annoyance and even anger at the mere mention of the subject. She left us in this attitude, and I soon grew much worse. In the course of a few weeks she made a second visit, and found me no better; then it was that I turned to God, as all material means had failed me. I had not taken any food for about two years without experiencing great pain, was confined to my bed much of the time, and greatly reduced in weight. After my first treatment I could eat anything I desired, and have continued to do so ever since.

I have also been healed of headaches with which I had suffered all my life and which were supposed to be hereditary in our family, my mother and sisters having had them. Besides these, backache, rheumatism, bladder trouble, as well as minor ailments, are fast disappearing into their native nothingness, and I know that as I overcome self-love, self-pity, fear, anxiety, and all that is unlike good, I shall be free indeed. During the past eight years myself, husband, and son have depended wholly upon Christian Science and have found it sufficient for our every need. I am very grateful for all these blessings and the understanding of Truth that has gradually come to me, and while I have not advanced to the extent I desire, I am striving each day to live and learn more of this grand truth that makes free, happy in the thought that I have been able to help others, including my own family.

This spiritual awakening is indeed sweet, since I had never before given much attention to things spiritual. Oh, that the world might speedily learn through Christian Science the real God, the only physician; the way to Life, health, and happiness in the overcoming of everything opposed to the happiness of God's children. My gratitude goes forth to God for sending this truth—His gift to the world through Mrs. Eddy, who has been able to impart this knowledge to mankind.

MRS. GERTRUDE M. KANAGY, Chicago, Ill.

I would like to tell some of the many things that Christian Science has done for me. It has cured me of croup and severe nervousness. Some years ago I had a bad attack of illness. I had lain in bed about six days, had very high fever, and during this time had grown quite weak and thin, while my parents were very much worried over my condition. Up to this time I had been under the care of our family physician, but he was unable to break the fever, or relieve me in any way, so on the sixth day a Christian Science practitioner was called in. When she arrived, my fever was very high, but immediately after receiving treatment I got out of bed and told my mother I wanted some supper. The fever had entirely disappeared, and I ate heartily, also slept soundly that night.

I have attended the Christian Science Sunday School about five years, and am learning how to be healthy and to reflect good. Since my healing, no medicine has been used in our home.—CLAYTON I. KANAGY, Chicago, Ill.

Nearly five years ago I sought a Christian Science practitioner for help for deafness in one ear, said to have resulted from a fever in childhood. While being treated for this, I became conscious of the fact that I had been healed of an organic trouble which had caused me much suffering and great inconvenience in attending to necessary household duties. I had believed there was no release from this, at least for a number of years; so it never occurred to me to ask help for this ailment. I not only received the hearing for which I sought, but perfect health as well. One demonstration after another has been made all along the way since then,—colds, throat trouble, a case of accident, my husband's release from severe headaches and the tobacco habit, besides many other things, each demonstration proving unmistakably the omnipotence and omnipresence of God.

Words are inadequate to express my gratitude for all these blessings, but above all I am grateful for even my slight understanding of Truth, without which human life would be a blank. My daily prayer is for strength and understanding to prove by my works the love and gratitude to God which is in my heart; and also for our dear Leader, by whose unflinching courage and unwavering faith we have gained this light.

MRS. FLORENCE E. MORSE, Dorchester, Mass.

I wish to call attention to a most remarkable demonstration of the healing power of Christian Science, hoping that it may help some one. Three years ago I was stricken with very severe lung trouble in Goldfield, Nevada, and had medical treatment for it. I was taken on a stretcher to San Francisco, where I was in one of the finest hospitals in that city, and under the care of one of the kindest and most skilful of physicians. I was in the hospital six months, during a part of which time my life was supposed to be hanging in the balance. Just as I began to improve, a serious trouble arose that called for an operation, and the remaining three months of my stay were spent in trying to regain the scanty supply of strength which I had before the operation. At the end of the six months I was sent home in a very weak and impoverished condition,—impoverished not only in health but in pocket-book as well, as the illness had involved expenses amounting to several thousand dollars. I was told that I should very likely have another attack of lung trouble, which would mean death.

A few months after this my wife became interested in Christian Science, and induced me to look into it. I studied "Science and Health with Key to the Scriptures" by Mrs. Eddy, and read many articles in the *Sentinel* and *Journal*. I saw that there was a great deal in it, and I soon had an opportunity to put it to the test. In San Francisco I again developed all the symptoms of the disease, symptoms with which I was only too well acquainted, and I was pretty well scared. I was very ill and helpless, and this time I decided to leave my case to Christian Science. My wife took me to San Jose, where we became acquainted with a practitioner, who began to treat me on Monday, and by Thursday I felt much better. In my first illness I was for months on a liquid diet, and the practitioner surprised me very much by asking me if I would like some solid food. I partook of some and enjoyed it very much. I was up again on Sunday, just one week from the day the symptoms first appeared.

In this cure my moral uplift was most remarkable. Since this healing I have not lost any time through ill health, and have spent months at an elevation of seven thousand feet, although the doctors had told me that it would be most dangerous for me to go into high altitudes. I am now able to do as much work and more than I could before my first attack. I have been largely relieved of a bad habit of worrying, and can make many demonstrations for myself. I am deeply grateful to Mrs. Eddy for having made plain to us how God's power is available to us at all times.

WILLIAM S. THOMAS, Mountain King, Cal.

I was troubled for over two years with a very severe eruption, which baffled the efforts of the medical profession. I was then treated by several Christian Science practitioners, but received no help from them. I was recommended to another, to whom I went, and received two or three treatments, which resulted in my final healing. I had many years before this been healed of chronic catarrh by Christian Science, but had neglected to follow up the study of the subject. I am now studying the text-book and other writings of Mrs. Eddy, and must say that it is a great pleasure, for it appeals to my reason in every respect as the truth, which my healing attests.

BELA C. JEWETT, Denver, Col.

Digitized by Google

Christian Science came to me at a time when all medical means had failed, and the physicians said that nothing but an operation would help me. My parents were very much opposed to this, and at the suggestion of a friend we decided to give Christian Science a trial. At the first treatment I was greatly benefited, in less than a week I began to gain in flesh and had a healthy color, and in two weeks I was healed of the trouble for which the physicians wished to operate.

From childhood I had suffered from a very painful spinal affection and one hip was smaller than the other. Since coming into Science I have never had any return of pains in my back, and there is no difference in the size of my hips. I have had many beautiful demonstrations from my understanding of this truth. I attend a college where, during the last year, there was only one other Scientist, and I have always been able to protect myself from the many ills from which my fellow-students suffer. I am a daily student of the Bible and Science and Health, and am striving to learn more of Christ, Truth. I am very thankful to God, also to Mrs. Eddy, for the many blessings I have had in Christian Science.—MARY S. COIL, Muncie, Ind.

It is now over three years since I became acquainted with Christian Science, as it was in the spring of 1907 that I took my first treatment. I was once picked up for dead from what was called heart failure, and had suffered two strokes of paralysis. The latter affected my left side and greatly aggravated an injury to my left knee received in the army, so that I was very lame for a long time. I had the second stroke in May, 1907, at which time I could hardly talk and my left arm was helpless.

My wife, who was then taking treatment in Christian Science, telephoned for a practitioner, and I commenced to take treatment and to read Science and Health. I soon began to recover, and the first day the practitioner told me to continue in the work I had to do, which I did with but very little inconvenience. By the evening of that day my tongue was better, I could talk plainly, and my left arm was much stronger. I took treatment for one month, and read Science and Health through several times, studying it from a scientific standpoint. There is such a wonderful change in my physical condition that my neighbors and friends often remark about it. It seems strange to them that one of my age (at that time sixty-five years) should recover so rapidly. I now walk without any traces of the disease in my general appearance.

The study of Christian Science has enabled me to conquer the fear of disease which was instilled in my childhood, and I no longer fear that I shall take cold or get sick. Though exposed considerably I have not had a cold during the last two or three winters, and have enjoyed health and comfort much greater than in former years. I now regard myself as immune from colds. Since reading the Christian Science text-book I consider healing as an inherent attribute of man's consciousness, a divine blessing to the human family for the relief of distress and not a mere commodity to be brought to the patient in a medicine case. In all cases where the patient has faith this healing is found to be a free gift from God.

E. M. MARTIN, Enid, Okla.

I did not accept Christian Science for the healing of the body, and I never was healed until thoroughly convinced that it was the truth. I now see that I searched the pages of our text-book first for the healing of sin. Later, when I needed physical healing, I found it.

In the fall of 1908 I was visiting an uncle on his farm and while there was taken very ill. As there were no Scientists anywhere near me, I was at first very much frightened, as my uncle called a physician, who came and diagnosed the case as a fever. While he was there, these words came to me, "Choose you this day whom ye will serve." I refused to accept medical treatment, feeling that if God was everywhere, He must be there too. Then I asked a practitioner to help me, and a sense of peace and happiness came to me. In a few days I was free from almost all the symptoms, although the doctor had said they would last for at least three months. In less than three weeks I was well and filling a new position in a strange city, a position which demanded especially close attention and mental effort. I am indeed grateful to our Leader, Mrs. Eddy, for what she has done for all humanity.

MISS MARY J. ROUSE, New Bern, N. C.

When I see the need of Christian Science everywhere, I feel that I should tell others of the benefit it has been to us. Our year-old child awoke one morning with some fever, and about noon he accidentally swallowed a parched peanut, getting it into his windpipe. A doctor was soon called, and on examination found that the little fellow had a severe case of throat trouble, and very soon acute lung trouble set in. For several days it seemed as if the child could not live, the doctor in attendance saying that he had done all he could and that the child was too young to stand an operation. I then spoke to him about Christian Science, and he told me to have it by all means if I wished, but that he did not believe in it.

I telephoned to a Christian Scientist for treatment about six in the afternoon, and by noon next day the child was so much improved that he would smile at me and could take some food. In a few days he was well, and now he is a healthy, happy child. How can I ever be thankful enough to God for all His goodness, and to dear Mrs. Eddy! Christian Science has been so much help to me in the darkest hours.

Another child was healed of a severe nervous disease in a short time by this wonderful truth. As for myself, I feel if it had not been for Christian Science I should not be living today. I seemed to be diseased in every organ of my body, and the doctors could not do me any good, for the treatment for one disease would apparently hurt me in respect to another; so, when it seemed that there was no help for me, as I happened to hear about Christian Science, I turned to it, though with little or no hope. It has, however, given me hope and better health, and although not entirely healed, I have been so much benefited that I can assist in my housework, which is much better than being bed-fast, and I feel that as I come to know more about the truth, it will free me more and more, for the promise is, "Ye shall know the truth, and the truth shall make you free."

MRS. IDA E. ROGERSON, Stokes, N. C.

When Christian Science was presented to me by some dear friends, over six years ago, it seemed more beautiful than anything I had ever heard. It was not so much the physical healing that impressed me, but the fact that this was a practical religion, of use in our every-day affairs, and I soon obtained a copy of the text-book, "Science and Health with Key to the Scriptures," and began to read it eagerly, determined to find out if it was true. I had for years been subject to very severe headaches, and any little excitement or the shortest railway journey would always cause me great suffering, which would last several days; and nothing had ever relieved it. After I had been studying Christian Science for about six months, I had occasion to go on a journey of several hours' duration. At the end of the journey I found that I was quite free from pain, and I then realized that during the whole of the six months I had never had a headache. I had been healed by Truth, as revealed to us in Science and Health, and I have never had any return of this trouble. This proved to me that Christian Science is indeed the truth, and I am deeply grateful that it was brought to me.

Digitized by Google

A few months later my niece, then a child of four years, was sent to my home, as she had been ill, and it was thought she might be benefited by the change. She seemed to be in a bad state of health, had a large swelling behind her ear, and was never free from pain. My father sent for a doctor, who after examining her said that an operation must be performed at once, and as it was a serious case she must be sent to a hospital. He also said he would call on the following day to make arrangements for her removal. I did not know much about Christian Science treatment, but I knew that it was certainly not God's will that the little one should suffer, and I at once began to try to help her with the little knowledge I then had. After putting her to bed I sat beside her a few minutes, and I realized so clearly that God did love her and would protect her, that I left her feeling sure that she would be all right. I was away from home all the next day, but on my return my mother told me that the doctor had been there and was very much surprised to find that the abscess had entirely disappeared, and he said the child was perfectly well. This seemed very wonderful to me, and words can never express my joy and gratitude for this proof of God's love for His children. My love and thankfulness go out to Mrs. Eddy for her work in giving Christian Science to us, and to all those who have helped me to gain some understanding of this truth.

EMMA E. JOHNSON, Bedford, England.

[Translated from the German.]

Two and a half years ago I first heard of Christian Science, and since then I have known what it means to be in good health. As an infant I was ill constantly, and neither my parents nor the physician expected me to live. At the age of fourteen a severe internal trouble appeared, which lasted three years and would not yield, in spite of all the remedies applied, with medical treatment and our going to watering-places; in fact, I rather grew weaker, and had to stay in bed most of the time. The physician advised an operation, but in December, 1907, I heard of Christian Science. At first I would not have the subject mentioned, but as my parents urged me, I was brought to Hannover in January, 1908, to a practitioner, who took up treatment for me at once. After the first treatment I felt an improvement, and after a few months I was completely healed. I also used to suffer with headaches, but this condition, too, has entirely disappeared. Next to God, I am thankful to our Leader, Mrs. Eddy, who has discovered the truth and shown us the way to Life.

LYDIA MÜLLER, Emden i. Ostfr., Germany.

One day I was handling a blank pistol, and it went off unexpectedly, leaving the load of powder in my hand. I threw the pistol away, but another boy came along and picked it up, and he also was injured. He was treated with material remedies and passed away in two weeks, while I put my trust in the "great Physician," and with the explanation of the truth of being given in Science and Health, I am well. In our text-book we read, "Even though you aver that the material senses are indispensable to man's existence or entity, you must change the human concept of life, and must at length know yourself spiritually and scientifically" (Science and Health, p. 359).

My gratitude to Mrs. Eddy for this teaching, which is helping me to know that God is All, words cannot express; but I can and will, by abiding in the truth, show my gratitude.—E. KIRVEN WILSON, St. Augustine, Fla.

My heart is overflowing with gratitude for the blessings which have come to me through Christian Science. As a very young girl I was in ill health and afraid of every disease. After coming into Christian Science I was gradually healed of a stomach disorder through the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy. For three years I have been absolutely free from this trouble. As to nervousness, my friends now consider me almost phlegmatic, and will scarcely believe that I ever was nervous. My fear of disease has decreased as my knowledge of God has increased. I am now looking for good instead of evil.

Christian Science helped me greatly in my college work. After I began to realize that man reflects the one Mind and intelligence, my lessons were more easily learned and results better. Christian Science has also made me happier. I know that through its influence I am more loving and kinder to my neighbor than I was five years ago. I am less jealous and more glad to hear of my neighbors' blessings. Truth has indeed changed for the better every activity in my daily life, and I could not live without it. I am very thankful to God, who gives me all my blessings, and to Mrs. Eddy, who has shown us the way in Christian Science.—MRS. ALICE NEELD TAYLOR, Rockford, Ill.

A student in mathematics is not expected to solve all the advanced problems of arithmetic without some assistance, and I find this equally true in the study of Christian Science. Within the last six years I experienced two very bad accidents. On the first occasion I went to material means for help, and for over a year my suffering was intense and at times unbearable, unless I was under opiates. At the second accident both arms were seriously injured, besides other severe injuries; but all was restored to a normal condition, this time through Christian Science and without suffering. I am now convinced (through a better understanding of God and man, as set forth in Science and Health by Mrs. Eddy) that all diseases to which flesh is heir can be overcome by the truth.

MRS. HELEN A. SMITH, New Augustine, Fla.

About three years ago Christian Science was brought to my notice, and after speaking of it to a friend, I expressed a desire to know something of it. Shortly afterward my friend loaned me a copy of Science and Health. I at once commenced to read it, and I found it to be the truth as taught by Jesus of Nazareth. I made up my mind that I would attend one of the services, and on the Sunday following I went to the evening service. The subject for the day was "Reality." I was very much impressed with the Bible reading and with the service altogether. I thank God with all my heart that "the power of the Lord was present to heal." I left that service healed of a very severe stomach trouble which had caused me much pain and inconvenience for many years. A few weeks later, in the reading-room, I was healed of a very bad eye trouble, from which I had suffered for a long time.

A short time ago the doctor who used to attend me had occasion to call to see me concerning a business transaction. He said that I was a remarkable woman, as I had no traces of any of the old ailments left. It is the power of God that heals! God is ever present to do us good, and if we draw nigh to God, He will draw nigh to us. I have written this with the hope that it may help some one who is in trouble to look to divine Love alone for help in every time of need. Words fail to express my gratitude to God for all the good which has come to me since I have been looking into Christian Science.

H. HARRIETT JAMES, Bedford, England.

I feel deeply grateful to God, and to our beloved Leader, for this wonderful truth which she has given us in "Science and Health with Key to the Scriptures," and I should like to tell of a demonstration which I had in June, 1908. It was Wednesday evening, and my husband and I and a niece who was with us were getting ready for church. In

Digitized by Google

coming downstairs I missed a step and fell, injuring my ankle severely. I at once declared the truth, but my husband and niece were very much alarmed. They tried to help me get up, but I felt it best to rely upon the power of Truth. I reached my room with difficulty and asked for Science and Health, which they handed me. I was so faint, however, that I could not read, so I asked my niece to repeat the scientific statement of being aloud with me, which she did. Inside of five minutes I was able to stand, and I started once more down the stairs, as I recognized that error had no power to keep me out of my right place. I walked all the way to and from church without even having to limp. I feel very grateful for this manifestation of the power of Truth, for the reason that before becoming interested in Christian Science a fall would lay me up for days.

I should also like to say that I was healed of rheumatism and catarrh through the reading of Science and Health. I would add that the physical healing is not to be compared with the spiritual uplifting which we receive through the study of the Scriptures and our text-book. I am also grateful for our periodicals, including the *Monitor*, and realize how much we owe to all the faithful workers. I pray each day that I may reflect more and more of this wonderful truth, and that in so doing my light may shine forth and help light the path for others.

MRS. CATHARINE M. NOBLE, Boston, Mass.

I feel that I must express my gratitude, in part, for what Christian Science has done for me and mine, by writing my testimony. We became interested in Christian Science nine years ago, through some people who became our neighbors, but until about four years ago we never realized the might and worth of this teaching.

The incident which then occurred was the healing of my brother, who complained on Friday afternoon of sore throat, though it was not thought to be serious at the time. He, however, grew steadily worse, and when Monday morning came we all knew he must have help of some sort, as he could scarcely speak and his throat was in a terrible condition. When my father asked him to decide which he wanted, Christian Science or medical assistance, he merely intimated that he wanted to get better. A Christian Science practitioner was sent for at once, and she arrived that evening. No change was noticed until about noon on Wednesday, when he was completely healed. Even the swelling had disappeared, and no weakness remained to show that he had been sick.

In the spring of 1909 I was wonderfully healed through absent treatment of a very irritating skin disease. Yet the healing, wonderful as it seemed to be, was indeed small when compared with the spiritual enlightenment I received. We enjoy the Lesson-Sermons, and the *Sentinel* is always a welcome visitor in our home. We are all very thankful to God for the many, many blessings received from Christian Science.—ZULEIKA WALLACE, Gagetown, Mich.

[Written for the *Sentinel*.]

DAWN.

HARRIET BARTNETT.

A TUFT of light above the hill;
A windless silence, tense and chill;
A sharp, straight shaft of fire updrawn,
And, rose-clad, gold-clad, burst of dawn!

A gleam of consciousness in man,
A sure unfolding of Truth's plan,
An aspiration and faith's rest—
Lo, God's great light within the breast!

FROM OUR EXCHANGES.

[Rev. R. J. Campbell in *Christian Commonwealth*.]

One cannot but notice that at certain turning-points in history, certain moments of great spiritual advance—times of exceptional spiritual quickening, when the sense of God is renewed, as it were, in the soul of any people, and some mightier religion, destined to influence profoundly the future of mankind, is born—there always appears some colossal personality, some specially endowed prophet or teacher, who is the means of starting the movement and believes himself to be the God-sent herald of a new order. . . . Will God never come to the world again through an epoch-making master of men? Has the last crisis been passed, has the last word been spoken, and is there nothing more to follow? I should be sorry to think so. Signs are not wanting that the age in which we live is just about ready for some new spiritual stimulus, some fresh impetus from the unseen. In this respect the parallel between it and the old Graeco-Roman civilization which it replaced is rather striking. In both we have the same extreme of luxury and poverty, class antagonism, the burden of militarism, and the seething discontent of the unprivileged. Perhaps these could be paralleled in almost any age, though it is indisputable that, feature by feature, the social life of the Roman empire in the time of Jesus bore more resemblance to our own than any period since. In religion and philosophy the parallel is still closer. Never were there so many competing cults and superstitions as then; there has been nothing like it in the long interval between that world and ours; Rome was the great center in which they all congregated, and the most fantastic systems of belief and practice were as sure of a hearing then as now. Yet the majority looked on in scorn or indifference; the cultured classes had ceased to take religion seriously; materialism and agnosticism—under other names—had as great a hold upon intelligent minds then as they are said to have now. How different were the succeeding centuries when the Christian church dominated every thing! Looking back we can see that that old pagan world was a tired world, a world without vision, a world in which spiritual forces had spent themselves and there seemed no hope of renewal. Yet just at that moment Jesus came; he came and went almost without the world knowing of his presence; but in that brief advent he communicated something to it which broke up the old order and created a new one which has risen to heights of which Rome never dreamed.

Are we about to witness such another advent? Do not the times seem ripe for it? Is not the falling away of the masses of the population from religious worship a sign of it? What is wanted is the impact of some new spiritual force, some tremendous dynamic from the supersensible world, not only to make civilization once more conscious of God, but to carry it upward to a new plane of spiritual achievement. And here let me mention a somewhat remarkable thing. It is that all over the world, and not only under Christian influences but in other religions also, the feeling is wide-spread that God will yet send a mighty one who will bind all the nations into one faith and brotherhood.

[*Continent*.]

The liberal says the conservative is an intolerable hindrance to the spread of nobler truth and to the destruction of outworn institutions. The conservative says the liberal is an outrageous revolutionary who throws to the refuse heap the most precious inheritances of the race. Each would like to drive the other from the face of the earth. But God with a heavenly impartiality keeps right on distributing through the world a relative equality of both types, and even while they contend with one another, they are holding, by action and counteraction, the spinning globe

Digitized by Google

steady on its axis between them. The liberal undoubtedly succeeds from time to time in ridding the world of antiquated and useless baggage, but the conservative meanwhile saves from jettison the priceless things that maintain an unchanging worth through every generation. Contrariwise, the liberal brings aboard many a new and thrilling idea of betterment for mankind, while the conservative demonstrates the worthlessness of scores of fraudulent imitations which for a time appeared to be of substantial value.

[Rev. Frank N. Riale, D.D., Ph.D., in *Presbyterian Banner.*]

The great God of all, who is above all and through all, is within us all, striving to give forth the express image of His grace and glory as it is shown forth so flawlessly and faultlessly in Christ Jesus. The whole creation is groaning to bring forth such sons of the Highest. He was but the first full ripened fruit of the tree of life. He was this solely because he was ever led by the spirit that God was within him, working to will and to do of His purpose for all. He was the medium through which we behold the fulness of the divine purpose. Whatever God is in Jesus is His desire uppermost to be in us; and this will He work out if we only believe that He can and will do it. Believing this, our striving and struggle and stress and strain are over. We have rested from our work and entered into the great rest prepared for the people of God, who believe that God can do what He says is His great loving purpose ever to do for all who will fully believe.

[*Christian Register.*]

Monopoly is the goal which invites all masterly minds who are in pursuit of the prizes of power and success. Captains of industry, guilds and unions of working men, and controllers of the means of transportation who seek great opportunity, are tempted to monopolize the results of success. But the goal is off the track of human progress. It is on a side line, a branch road, leading nowhere. The men and women of our time who are right-minded and conscious of power know, beyond a doubt, that not monopoly, but diffusion of benefit is the only end to be sought by magnanimous souls. The temptations to be resisted are as potent and enticing to operatives, mechanics, and engineers as they are to those who have grasped the reins of enterprise and already sit in the seats of power.

[Rev. William P. Merrill, D.D., in *New York Observer.*]

The religious world is cursed today with a soft and easy conception of the religious life, its origin, its maintenance, its destiny. The preacher has sought too exclusively such texts as "Come unto me . . . and I will give you rest," neglecting the far more numerous words that tell of denying the self, taking up the cross, losing the life, being persecuted for righteousness' sake. Let ours be the gospel of the straight gate and the narrow way.

[*Christian World.*]

We are missing the lesson of life, the plain duty it enjoins upon us, if we do not enjoy it. We talk of service to our fellow, but there is no better service we can render than to show him a smiling face. That is our personal advertisement of the fact that God's world is a good one, and that he may take heart in believing it. Enjoyment is to be cultivated as a virtue; to be cultivated because it is largely an art. It is from our stupidity that we so often miss it.

[*New York Observer.*]

Christian character today needs more of the thrill and exuberant confidence of the early believers, who, whether apostles or not, knew that, though they lost all earthly things, God and heaven were still their own. Many men today are so afraid of a little loss that they lose their most valued possessions—themselves, their hopes of heaven, and the imperishable goods of a godly life.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel.*

ATTENTION IS CALLED to the new volume, "Poems by Mary Baker Eddy," now on sale. Specially bound; 79 pages.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel.*

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

NEW PAMPHLETS.

Now on sale are four new pamphlets: "Seeking and Finding," "Prayer and Healing," "The Divine Nature," and "Upward Footsteps." Each pamphlet contains five to nine articles that have previously appeared in the *Journal, Sentinel,* or *Monitor;* and they are particularly suitable for handing and sending to inquirers or persons who are becoming interested in Christian Science.

Hereafter, the price of all pamphlets (except "What our Leader Says" and "Christian Science and Legislation") will be reduced to 5 cents a copy; 55 cents a dozen; $2.00 for fifty, and $3.50 for one hundred. Hereafter, also, the republication in the English language of single articles as "tracts" or "reprints" will be discontinued. It is believed that their place is better taken by the daily article on Christian Science in the *Monitor* and by these new pamphlets and others that may be issued.

NEW POST CARDS OF THE MOTHER CHURCH.

Post card photogravure, in sepia tint; an exact reproduction of the large photogravure of The Mother Church Buildings and Publishing House with parkway in foreground. Single copy, 5 cents; twenty-five copies, $1.15; one hundred copies, $4.25.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. Ten copies, ONE ADDRESS; each, one year, $1.90; six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local newsdealer, 12 cents a week, payable to the newsdealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (*cloth*), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (*cloth*), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10x7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The report of the board of army engineers appointed to consider the advisability of the continuance or abandonment of reclamation projects in the semiarid regions of the West has been made public. Aside from its recommendations as to allotments of the loan, the board made several suggestions for the improvement of conditions of construction for the aid of settlers and on other points. The board examined twenty-five projects designed to irrigate three million two hundred thousand acres of arid or semiarid land at a cost of one hundred and forty-five million dollars. The general irrigation fund, the report shows, amounts to sixty-five million seven hundred thousand dollars and the amounts expended to date about sixty million dollars. Accretions to the fund in the next four years, from the sale of public lands and repayments, the board estimates at a total of twenty-eight million dollars. The board recommends that steps be taken as soon as possible to secure an adjudication of water rights where such adjudication has not been made. The water supply in most projects is under state control. The board heard complaints of the size of farm units, which varies in different projects from ten to forty and eighty acres, but suggests that further experience is necessary before a general change is made. It believes that the Government demonstration farms maintained by the reclamation service at the expense of the projects on which they are located, should be left to the department of agriculture.

Preparations to prosecute the electrical trust, which the department of justice characterizes as the "greatest trust in the world," have been completed by Attorney-General Wickersham. The electrical companies will be charged with a conspiracy to restrain trade under cover of the patent law. The department has not decided where the suit will be brought. For a year the Government investigators have been gathering evidence of the alleged manner in which the combination of electrical manufacturing companies operates to maintain extortionate prices on their products. They have reported that the trust is composed mainly of the General Electric and Westinghouse Electric companies, operating in agreement with seventeen associations of smaller manufacturers of almost every article employed in the use of electricity.

At the instance of the Government prosecutors the equity suit against the meat packers indicted with having formed in the National Packing Company a trust in restraint of trade, was dismissed in the United States district court by Judge Kohlsaat at Chicago. The move of the Government's attorneys in having the suit dismissed was not unexpected by those in close touch with the beef trust investigation. When the policy of indicting individuals instead of corporations was laid down by Attorney-General Wickersham and President Taft, it was believed that the civil suit against the National Packing Company would be dismissed if the directors were indicted by the federal grand jury.

The number of postoffices in operation in the United States June 30 was 59,585. The gross revenue of the postal service for the fiscal year amounted to $224,128,657. The deficit is $5,848,596, as compared with $17,441,719 for the preceding year. It is urged that salary increases amounting to seventy-five thousand dollars be provided for supervisory employees; that provision be made for the promotion to higher grades and increased salaries of expert distributors of mail in various offices, and that an appropriation of ten thousand dollars be made to reward postal employees who present to the department patented devices or processes that may prove of value to the service.

Professor Swain is examining the New York, New Haven & Hartford railroad system for the purpose of revaluation for a commission in Massachusetts which will report to the Legislature. The valuation is expected to exceed that made by Mr. Stevens some time ago, as it goes into the investments and holdings of the company in subsidiary properties. The book value of the road, as made up by the company's officers, is something like four hundred and twenty-five million dollars and it is said that the revaluation will place the figures close to six hundred million dollars.

Recent disclosures in the "draw-back" frauds against the Government have put the treasury department in a position practically to dictate the terms of compromise with the sugar refining companies. The American Sugar Refining Company's recent offer of seven hundred thousand dollars may not be accepted, in view of the fact that the Government is said to have evidence to compel the return of not less than one million dollars.

Archie Hoxsey in a Wright biplane broke the world's record for altitude at Los Angeles last week. He soared more than two miles into the sky, his barograph registering 11,474 feet, or almost one thousand feet above the altitude of 10,499 feet recently attained by Legagreux at Pau, France. This feat was accomplished in a forty-mile gale. Later in the week he sustained a fatal fall in his machine.

There is now pending in Congress a bill recommended by the committee on agriculture and forestry, known as the Doliver-Davis bill, the purpose of which is to secure federal aid in industrial and agricultural education. It would call for an annual appropriation of less than the cost of a battleship.

Demands will be made upon Congress, it is said, for an investigation of the wireless telegraph situation throughout the United States. Formal requests will be made for the appointment of a committee in each branch, with authority to summon witnesses and inspect the books of all wireless companies.

Electricity hereafter will be used to do all the cooking for the sailors aboard the new ships of the navy, as thorough tests have shown the superiority of the electric range over the old coal galley, not only in convenience, but in economy as well.

The battleship fleet is now on a cruise in European waters. Upon leaving the English channel, Dec. 31, it will attempt, as if it were a hostile force, to reach the Atlantic seaboard undetected.

President Taft has appointed Senator Elihu Root as American member of the permanent court of arbitration at The Hague to succeed the late Chief Justice Fuller.

International.

From the moment the old Sultan of Turkey was taken from the throne, the movement to modernize the country takes date. Reports recently rendered by four American consuls related almost exclusively to the plans of the municipalities for the introduction of the agencies of civilization hitherto unknown there. "The lighting system of Aleppo, a city of two hundred thousand," said a consul, "is still the old kerosene lamp, but it is giving way to electricity. A city telephone exchange is to be installed. A complete line of street-railways will be constructed. There are lacking water works, a gas plant, a sewerage system, a fire department, and many other lesser requirements, and the authorities are now ready to grant concessions the moment they are approached by parties able to furnish the necessary guarantees in good faith." The city council of Bagdad has just negotiated a loan of eight hundred and eighty thousand dollars for municipal improvement purposes, and many other Turkish cities are contemplating loans for the same purpose. Salonika is negotiating for a loan of three hundred thousand dollars to be spent in widening certain streets in order that the street-railway may be extended to meet the fast-growing requirements of the town. Every concession so far granted has carried a clause giving the city making the grant absolute ownership and control of the property at the end of a given term of years.

The Canadian railway commission has directed the express companies of the Dominion to file lower tariff rates within three months. The commission declares that express rates are too high and that, as the express companies are owned by the railway companies, there is no occasion for the existence of separate companies to handle the express business. A rate reduction of at least ten per cent in through express traffic is ordered, local rates to be correspondingly cut. The existing form of shipment contract is ordered abolished. The commission affirms that the express companies overpay the railways for accommodation in station, and intimates that this is a convenient way of disposing of profits which otherwise might be so conspicuously large as to be inconvenient.

The Chinese throne has met the situation arising from the almost rebellious attitude of the National Assembly with firmness and tact. Its refusal to create immediately a ministry responsible to the Assembly and to convoke forthwith a general Parliament has been followed by the issuance of an edict which, though peculiarly non-committal, is interpreted as a call to the people to prepare for a program providing ultimately for the establishment of a constitutional cabinet.

King Alfonso having assented to the "padlock" law, which prohibits further establishment of religious congregations, it was promulgated Dec. 28.

Industrial and Commercial.

The United States Government has sold its catch of 12,020 seal skins at Lampson's auction rooms, London, realizing the sum of four hundred and forty-five thousand dollars. This is a direct result of the determination of the United States Government to exploit its Alaskan seal industry, instead, as hitherto, of leasing its rights. The skins came from the Pribyloff islands. The average price per skin was about thirty-three dollars. Last year, when the Government leased outright, it received only one hundred and fifty-three thousand dollars as its share of the proceeds of the sale.

This year's yield of Egyptian cotton is estimated at one million four hundred thousand bales, the Alexandria price of which will average probably one hundred dollars a bale, making the crop worth one hundred and forty million dollars.

In the year 1909 one hundred and three cement factories in the United States turned out 64,196,386 barrels, valued at $51,232,979.

The lumber cut in the United States during the calendar year 1909 was 44,585,000,000 feet, board measure.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

[*Concord (N. H.) Monitor.*]

FOR MRS. EDDY.

CITY GOVERNMENT PASSES RESOLUTIONS OF RESPECT.

AT the meeting of the city government, Monday night [Dec. 26], held for the purpose of canvassing the returns of the recent municipal election and closing up the business for the year, action was taken on the death of the Rev. Mary Baker Eddy by the passage of appropriate resolutions. The resolutions were introduced by Alderman Cressy, and in presenting them he said:

"The year 1910 is soon to be a thing of the past, so is this city charter and this city government, and before the book of records which has been so faithfully kept by our worthy city clerk is closed, it seems wise, though a regrettable duty, to have spread thereon this resolution which I am about to introduce over the death of one of Concord's most distinguished citizens, the Rev. Mary Baker Eddy.

"Although some two years ago Mrs. Eddy took up a temporary residence in Massachusetts, that she might be nearer her work, Concord proudly and justly claims Mrs. Eddy as one of her citizens, and in her death we lose an honored, respected, and beloved benefactor. While some may differ in their technical belief, all Concord bows its head reverently at Mrs. Eddy's death, and I ask your careful consideration of the following resolution:

"By the decease of the Rev. Mary Baker Eddy, Concord loses its most distinguished citizen. During the many years she resided here, thousands of people from our own land and from foreign countries have visited our city in paying their respects to her. Through her followers, Concord has become known through the civilized world.

"Mrs. Eddy was distinguished by public spirit, deep generosity, wide charity, and tender and thoughtful helpfulness, and it seems fitting and appropriate that we, the mayor and the board of aldermen and the common council of the city of Concord, take some action in behalf of our citizens to express our appreciation of her residence among us and our esteem of her character; therefore

"Be it resolved, that by the death of the Rev. Mary Baker Eddy the world has suffered an irreparable loss and the citizens of Concord the loss of an honored and a devoted friend of our city, whose motto was 'to injure no man, but to bless all mankind.'

"And be it further resolved, that a copy of this resolution be spread upon the records, and also sent to George W. Glover, Lead, S. D.; First Church of Christ, Scientist, Concord; The First Church of Christ, Scientist, Boston, Mass."

CLIMBING THE LADDER.

HON. CLARENCE A. BUSKIRK.

THE ladder which every worthy student of Christian Science is earnestly and perseveringly trying to climb, has its foot resting upon the earth, but its top seems to be beyond our mortal vision. We ascend this ladder through the medium of spiritual thought, and many of us are able to climb it a little way with comparative ease. Indeed, it is a delightful novelty to get our feet off the ground, where ofttimes they have grown weary and discontent. Especially is this the case when the ladder rests upon some spot which is disagreeable to us, or even repulsive; but if the ladder has its foot in some pleasant place, where the flowers bloom and the grass grows and the birds come to sing, many of us linger there year after year, until some sharp-toothed anguish of mind or body compels us to mount the waiting ladder. It happens that the most delightful places on earth have their occasional evil sights and sounds, and after it has been learned that they can be escaped by climbing above them, the experience is never again forgotten.

There is a sense in which we often have to descend this ladder to attend to our daily duties. Even our thoughts frequently need to walk the earth, and sometimes in dusty and muddy places; but they do this much better, and with happier freedom, after they have climbed away from it all, even if for only a few minutes, for the vitalizing purity of a higher atmosphere attends them, nobler influences invigorate the consciousness, and the mud and dust are not so hard to endure as otherwise. Besides, the ladder is always ready for us to climb; and the oftener we ascend it the easier we find it, so that, instead of fatiguing, the climb refreshes and strengthens us more and more.

In our first experiences many of us are so transported with joy over our escape from some torturing thing below, and so enthusiastic at finding that the instrument of our deliverance is so strong and firm, and so adequate that it can never be crowded, that we want all to accept our report to be true and to follow at once. This is right, and our grateful testimony ought never to be silenced, however received; but the mistake made by many of us, until we have learned better, is to get impatient or discouraged because our glad evidence passes largely unheard and unheeded. We need to remember that the full ear does not appear on the first day that the seed is planted, nor even the day after. We all need, too, whether ready to welcome them or not, some heavenward influences in our lives, and without them we are sure to retrogress toward brutishness in its lower states. With them, however, we may develop something so aspiring and ethereal, so bright and uplifting in its qualities, that we shall no longer ask ourselves, in the words of the old English poet Donne,

> Why should our clay
> Over our spirits so much sway?

Not many men and women, in their best estate, are willing that only clayey associations and influences shall absorb and dominate all the days and nights of their brief pilgrimage on this planet. Consciously or unconsciously, they long for something purer, sweeter, higher. This is because man's true selfhood is heaven-born and not earth-born; therefore the mortal sense of existence is but a belief in temporary exile from a fairer sphere. If man were earth-born, would he not be content with earth? would history's page show, would our own hearts show, that humanity's

Digitized by Google

chief and most potent impulses, as well as its mental perspective and sense of right proportion, have their cradle in its unconquerable and indefatigable aspiration and hope for a higher and nobler existence? Is it not here that the dynamics of all religion is to be found? Are not these the basic tendencies which have saved our race from bestiality?

The divine fact recorded in many instances on the pages of the Old Testament, shown in the science of the teachings and works of Jesus, and in the profound dissertation thereon by Mrs. Eddy, verified by the highest human evidence,—this fact is irreconcilable with any other view. This divine fact also shows that we are bettered, physically as well as otherwise, as our thoughts ascend the ladder that takes us away from the gray fogs of earth into a more radiant and inspiring atmosphere. We walk the earth with a firmer and surer step after such excursions, and the higher we climb the more invigorating are the effects upon us. Thus drawing nearer to divine Love day by day, our steps grow ever surer, and no matter how many or high the rounds that await us, we mount upward in supreme confidence that a fairer, purer realm awaits us at the end.

"THEY THAT WAIT UPON THE LORD."

AGNES GARFIELD SMITH.

ONE of the most disheartening fallacies which has long held the Christian world in bondage is the belief that under some circumstances the laws of God and the laws of health necessarily conflict, and that when they do seem thus to conflict, one owes it to himself to obey the laws of health. In fact, to do otherwise is universally considered evidence of a lack of common sense. If this be true, then the Founder of Christianity showed less discernment than any other teacher before his time or since, for he recognized the laws of God only, and to these he rendered entire and ceaseless obedience.

Just what all the laws of health are supposed to be, it is impossible to state with accuracy, for this is a subject on which no two individuals probably ever held exactly the same opinion, and furthermore even those general laws of health regarding which most people agree, are so constantly changing that they are as difficult to keep up with as fashions in clothes. It is not the purpose of this article to discuss why and how such beliefs as these ever came to be accepted; it is enough to say that they have no sanction from the teachings or life of Christ Jesus, whose mandate was: "Take no thought for your life," but "seek ye first the kingdom of God, and his righteousness."

It may be said, however, that this statement should not be taken to mean that Christian Science advocates any unnecessary exposure to dangers of any kind, but it does advocate a fearless obedience to the laws of God; and if this obedience means that one must sit in a draft, go without sleep and exercise, or expose oneself to contagious disease, then Christian Science says, in the language of the psalmist: "Because thou hast made the Lord, which is my refuge, even the most High, thy habitation; there shall no evil befall thee, neither shall any plague come nigh thy dwelling."

But, argue many Christian believers, is not suffering the badge of true Christianity? Are not those who follow Christ supposed to suffer? Indeed, is this not one of the glories of the Christian gospel, that it teaches that final happiness is won only through suffering, and that if we love God as we should, we shall gladly bear the ills that follow in the wake of service to Him? The inconsistency of those who argue thus is shown by the fact that oftentimes these are the persons who also contend that when the laws of God and laws of health conflict, one owes it to oneself to obey the laws of health rather than bring upon himself the sickness which obedience to the laws of God would seem to cause. Nor do these same arguers hesitate to use every means in their power to get rid of sickness when it does come upon them as a result apparently of service to God. At such times "the glorious gospel of suffering" seems quite forgotten!

A careful study of all the Bible promises will show that their general tenor is this: "They that wait upon the Lord shall renew their strength." No proviso is made for those who are confronted with an evident conflict between the laws of God and the asserted laws of health; no protection assured to those who in such an apparent quandary follow the dictates of "common sense." And, after all, is it common sense to believe that obedience to the laws of God may bring loss of health? Do not even the heathen endow their gods with more justice than this? Disobedience to the laws of God is what should bring suffering, but to exhibit Christian courtesy, to serve one's fellow-man, and to visit the sick,—surely these can scarcely be denominated disobedience to the laws of God.

Is it logical, then, that those who obey these laws should pay the penalty of poor health in any of its numerous manifestations? Should not these be the very ones to have the best health and the most vigor? The fact that those who serve most often seem to suffer most, comes not because this result is necessary, but because people believe it necessary. The remedy for this condition of thought Mrs. Eddy states clearly on page 384 of Science and Health: "God never punishes man for doing right, for honest labor, or for deeds of kindness, though they expose him to fatigue, cold, heat, contagion. If man seems to incur the penalty through matter, this is but a belief of mortal mind, not an enactment of wisdom, and man has only to enter his protest against this belief in order to annul it."

Sane reasoning must convince us that they who serve God should acquire constantly, as a result of that serving, greater strength, that they may serve Him more, rather than that they should be afflicted with a loss of strength so that they are compelled to serve Him less. Sane reasoning must also convince us that the sons and daughters of God were never meant to be subject to so-called laws which often conflict with their Father's laws. And Christian Scientists are constantly proving in their own lives that in proportion as they render supreme allegiance to their Father's laws they cease to be conscious that any other laws claim to exist. Gradually but most assuredly they are coming to know that full and trusting obedience to the laws of God brings with it better health, greater strength, sweeter peace than they have ever known before. Already they have learned in some measure that "the spiritual demand, quelling the material, supplies energy and endurance surpassing all other aids, and forestalls the penalty which our beliefs would attach to our best deeds" (*Ibid.*, p. 385): already they have learned in some measure the truth of the wise man's saying, "He that followeth after righteousness and mercy findeth life."

TRUE DISCIPLESHIP.

EVELYN SYLVESTER KNOWLES.

To be a disciple is to be a follower of some teacher or school: it is to be a "learner." Formed from the same root as discipline, the word might suggest that a true disciple is one who is seeking to follow accurately and consistently an appointed line of investigation. When the character of the subject studied is exalted and the application to it is voluntary and conscientious, discipleship cannot fail to have a deep significance. It is apparent, however, that should a student fail in his effort to learn, or use unwisely the knowledge gained, the loss is entirely his own, and neither the teacher nor the teaching is affected by it or responsible for it.

The greatest teacher the world has yet seen was Jesus the Christ, because he taught the highest truth and lived

Digitized by Google

what he taught; hence to be his disciple is a divine privilege as well as a sacred responsibility. Jesus gave a brief yet comprehensive definition of discipleship when he said, "If ye continue in my word, then are ye my disciples indeed." This definition emphasizes the necessity of faithful, persistent effort, and the importance of resisting every temptation to let personal opinion usurp the place of the word, the demonstrable truth he taught. First we must hear the word; next we must understand it, and finally we must faithfully apply it. Thus only may we "continue" in it.

The matter of hearing appears simple enough, but were it really so, the Master would not so earnestly have enjoined us to take heed what we hear, nor have declared, "They that hear shall live." Had mortals sedulously cultivated that spiritual discernment urged upon them by daily experience, they would not have needed the warning, "Take heed what ye hear." Jesus saw that error would be offered in the guise of truth, and that the heedless would be likely to accept spurious teaching, and time has proved the correctness of his foresight. Many "false prophets" have indeed arisen, and if one be not watchfully and prayerfully listening for that unfailing inner voice, he may be drawn away from the true path.

Personal sense is one of these prophets, and it tempts both from without and within. From without it argues for or against ideas and individuals, according to its own bias. From within it whispers that revenge is sweet; that we shall not suffer for maligning our neighbors; that we may boast of our own achievements while undervaluing those of another; that we may gossip, scoff, or insinuate without harming ourselves. If we listen to these false suggestions, the truth may appear to be silenced for a time, until some startling experience awakens us from our mesmerism. If, on the other hand, our constant desire is to hear aright, this will be honored of Him who fulfils to us the desires of our heart, and who answers even before we call.

Having heard aright, to understand is not difficult, if we are mindful that spiritual things must be spiritually discerned. The careful guarding of thought necessary in order to hear the call of Truth only, enlarges and quickens our perception, and at the same time adds to our understanding. To increase further this understanding we have the teaching of the Scriptures as interpreted in Science and Health. If these books are made daily companions, we shall not lack spiritual guidance. Frequent communion with the word engenders the ability to put it in practice; and when we become "doers of the word, and not hearers only," we have begun to advance.

Once having found the truth, one would suppose that the easiest and sweetest thing on earth would be to continue in it, but experience contradicts this assumption. Even when the Master, who daily exemplified what he taught, was still lending them the strength and purity of his presence, the disciples found it easy to forget his teaching. It was difficult to continue in the face of ridicule, of unpopularity, of persecution; still more so a few centuries later, when the desire for personal power was in the ascendency; and to-day, in so far as we are governed by human sense, it is no less difficult. Without the aid of Christian Science it is no easy matter to give power to nothing but good; to bless them that curse us; to pray for the prosperity and advancement of those who despitefully use us. Yet, to be accounted a true disciple, we cannot neglect one of his commands. The word must be received in meek and earnest hearts. Day by day we should guard and protect this seed; it should be our constant care not to let it be devoured by greed and jealousy, or be choked by the pleasures and cares of sense, or allowed to decay through apathy, indifference, or sloth.

Our Leader has said that the assimilation of Truth may seem bitter, but persistent efforts to gain more will result in ultimate harmony of mind and body. It might be added that our efforts to give more should be equally persistent. When the Master gave bread to the disciples, they were expected to pass it on to the hungering multitude. What would have been the result to them and to the world had they thought only of their own need?

It is easy, when coming into the realization of Truth, to attend every service and give an occasional testimony, to tell our friends enthusiastically of our wonderful experiences in Science, secretly wondering that they do not at once accept our faith. Soon or late, however, there comes a testing time, when shadows may have gathered; when a sense of pain or loss or sorrow suggests that further effort will be fruitless; or ambition may knock at the door, pride steal in at the window; our good be evil spoken of, our best motives questioned; then opportunity is presented to prove how much of the truth we have really grasped and how deeply we value it—whether or not we are worthy to watch the "one hour" with the Master.

Are we faithful in our church attendance year after year, always ready to do whatever may be required of us to further the interest of the meetings? Do we trust the Father's rod as well as His staff to comfort us? Are we willing to stamp out ambition, choke pride, and bravely resist every temptation to exalt self rather than the one God? Can we patiently persevere through both evil report and good report, never yielding to discouragement, never turning back, never lamenting over present conditions or yearning for those outgrown? Are we obedient to God's law even when we cannot see just where it leads? Are we attending strictly to our own problems? Are we ready to be helpful without thought of reward? Are we humble, grateful, joyous? Are we resisting all temptations to be swerved from following divine Principle, turning a deaf ear ever to the calls of material sense? If so, we have touched the hem of Christ's robe and will be enabled to continue in his word.

The remark was once made to a Christian Scientist, "I wish I had grown more and could do better work. After studying Science for ten or fifteen years, one ought to accomplish wonders." The reply awakened much subsequent reflection. Said the Scientist, "It is a good deal just to have stood for so many years." So let us stand as pillars in the temple of our God, and go no more out. Let us faithfully uphold the hands of those who are ordained to serve and who are so efficient in their allotted places. The former things have passed away, and, behold, there appear new heavens and a new earth for those who are "disciples indeed."

HOLIDAYS AND HOME.

MARY M. SMITH.

At the Christmas season I am reminded of an experience which came to me some two years ago. Christmas morning had dawned cold and stormy, with a heavy rain falling. A keen sense of loneliness depressed me as I went about my morning tasks, for I was thinking of the dear ones who had gathered at the old homestead two thousand miles away, in honor of the day, and longed to be with them. With a heavy heart I took up Science and Health, opening it at the chapter called "The Apocalypse." As I read, a sense of peace and quietness began to steal over me; the description of the holy city had never before seemed so beautiful, and the last sentence of the 23rd Psalm, which closes this wonderful chapter, "'I will dwell in the house [the consciousness] of [Love] for ever'" (Science and Health, p. 578), brought to me a complete overcoming of the above-described condition.

Surely to dwell in the consciousness of Love is indeed to dwell "in the secret place of the most High," and to continue in this consciousness is to "abide under the shadow of the Almighty." Then it suddenly dawned upon me that this consciousness is home, the only real, permanent home I could ever have, and that I could not be separated from it. Error immediately argued that this realization did not bring me any nearer my own kinsfolk; but the

Digitized by Google

thought that "this spiritual, holy habitation has no boundary nor limit" (*Ibid.*, p. 577), that it was for them and for all mankind, put this argument to silence. Being very happy in this new understanding of home, I thought for a moment that I would rather stay in my own rooms than go to dine with the friend who had so kindly invited me to her home; but on second thought I decided to go, feeling sure that I could not be separated from the joy of knowing I had found a new home, or rather that I could take my home with me.

During the afternoon I overheard my friend and hostess say to her mother, "I invited Miss Smith to spend the day with us because I was afraid she would be lonely, living all alone as she does, and so far from all her people; but really she is the most joyous individual I ever saw. I wonder what makes her so happy." Certainly I was glad to know I had been able to keep my new sense of home with me throughout the day. Now Christmas means more to me, because its real significance as the appearing of the Christ-idea to human consciousness has become clearly understood, and I am more grateful than ever for our text-book, "Science and Health with Key to the Scriptures," which is showing us how to follow the Master's teachings.

DOORS AND GATES.

HARRIET DAVIES.

THE Scriptures make frequent mention of doors and gates, which, if taken in a literal sense, convey but scant meaning to the reader, until divine metaphysics comes to his aid and unfolds the spiritual interpretation of the sacred writings. On page 123 of Science and Health Mrs. Eddy explains that "divine Science, rising above physical theories, . . . resolves *things* into *thoughts*." The above expressions must therefore be translated into thoughts before the proper understanding of them is gained.

According to dictionary definition "gate" signifies a place of entrance into any enclosure; "door" an opening into a house. Before the children of this world can possibly pass over the threshold into the kingdom of heaven, which is man's rightful inheritance, their thoughts must be spiritualized, lifted up above the region of physical sense. "Lift up your heads, O ye gates," cries the psalmist, "and the king of glory shall come in." In a later psalm very clear instruction is given as to how these gates are to be entered: "Enter into his gates with thanksgiving." The prophet Isaiah is found to say, "Thou shalt call thy . . . gates Praise."

These expressive terms are employed by many of the authors of the books of the Bible to typify the mental passage to be traversed by man on his way from sense to Soul,—his eternal destiny. Moses, when describing Jacob's vision of the ladder set up from earth to heaven at Bethel, writes, "And Jacob awaked out of his sleep [his material conception of life], and he said, Surely the Lord is in this place [spiritual consciousness]; . . . this is the gate of heaven." And again, "the angel of the Lord" promises Abraham, "Thy seed shall possess the gate of his enemies; . . . because thou hast obeyed my voice." The writers of the books of Judges and Job, the psalmists, as well as the prophets Isaiah, Hosea, Malachi, all made use of the words doors and gates when transmitting their visions of Truth to writing, visions inspired by spiritual communion with the one divine Mind.

Later one came who declared himself to be the "door of the sheep." "I am the door: by me if any man enter in, he shall be saved." Again he said, "I am the way, the truth, and the life: no man cometh unto the Father, but by me." Thus spoke Christ Jesus, who with such ineffable love, such sublime sacrifice of self, wrought the way of salvation for all men, fulfilling thereby "the law and the prophets," welding the links of the mighty prophetical chain, so that it could never more be dissevered. In the last of the canonical books, the Revelation, St. John writes, "These things saith he that is holy . . . behold, I have set before thee an open door, and no man can shut it." And "blessed are they that do his commandments, that they may . . . enter in through the gates into the city."

On page 392 of Science and Health is found this mandate, "Stand porter at the door of thought," and every Christian Scientist will do well to keep this solemn precept of their revered Leader constantly in view, inasmuch as their release from material captivity, from sin, sickness, and death, depends entirely upon the diligence and faithfulness with which they guard the door of their thought. If God's thoughts are alone allowed to gain admittance to the realm of consciousness, and thinking is practised according to Love's infinite law of good, then the children of the universal Father will follow their Leader along life's highway, treading in the ever open footprints that Christ Jesus made as he went before to show them the way. When, after patient endurance and implicit obedience to the Father's will, the harmony of the Father's house is gained, as gained it surely must be, the faithful, clothed in the seamless robe of Christ, will find the sure heritage of God's children,—everlasting life.

[Written for the *Sentinel*.]

BEGINNINGS.

MARY I. MESECHRE.

BEGIN the year with God,
  O thou who standest on its threshold fair!
  And then, whate'er may come, thou needst not care;
  No burden will be thine thou canst not bear,
  Nor any task assigned thou may'st not dare;
So, ere a single step thou yet hast trod,
Begin the year with God!

With God begin the day!
  It is the day He made: in gladness speed
  To meet its every task, nor shalt thou heed
  Fear's subtle whisper that would bid thee plead
  Unfitness for thy place. His hand shall lead;
So, that thou may'st His guidance know for aye,
With God begin the day!

With God begin the hour!
  It is but lent thee: fill its slender span
  With cheering thoughts and loving deeds to man;
  On error's faintest murmur place swift ban.
  This hourly do: whoso thy work may scan
Shall know, by its full meed of love and power,
With God began the hour!

The hours, the days, the years
  That pass so swiftly, yet so endless seem,
  Are but the shreds and tatters of our dream,—
  False superstructure of a baseless scheme:
  Through its rent fabric we may catch the gleam
Of that fair dawn whose light our pathway cheers
Till God's full day appears!

For God is All-in-all!
  The years, the days, the hours, that seem to be
  So much, while we His plan but dimly see,
  Are naught to Him who views eternity!
  His Word reveals that in reality
Time's broken measures cannot us enthrall,
For God is All-in-all!

EXCERPTS FROM EDITORIAL COMMENTS.

[*Twentieth Century Magazine.*]

Mrs. Mary Baker Eddy, the Founder of Christian Science, passed into the broader life on Dec. 3, in her ninetieth year. The story of her life forms one of the most remarkable records among the histories of the religious leaders of the ages, and she was unquestionably the greatest religious leader that has arisen in the new world. To those who knew her personally and intimately she was the incarnation of love and kindliness of spirit, though resolute and brave in uncovering and opposing error. Seldom in the history of civilization has a great spiritual leader lived to see so rich fruition follow the giving of the message.

From infancy, her health was frail. Many of her early years were years of constant suffering and pronounced invalidism, and after seeming restoration to health came an accident that brought her to the gates of death. This was more than fifty years ago. When hope from human sources had been abandoned, she experienced an interior illumination or a realization of the power of God to heal. Since then, for over half a century, she wrought indefatigably, giving to the world the message she believed to have come from the All-Father as a new illumination, revealing anew the Christ-truth that made the early and uncorrupted church invincible.

For more than half a century, the most powerful opposition and antagonisms beat around her. For years and decades she was the target for ridicule, abuse, slander, and calumny. Conventional religion and organized medicine vied with each other in attacking her theory, ridiculing her position and impugning her motives. Foes arose within her own household, and to the fierce opposition that has almost always beaten with tempestlike force around the head of a great religious or spiritual leader, was added the opposition of organized medicine, only second to dogmatic theology in its intolerance for new theories or philosophical concepts that antagonize old ideas. The persistent, tireless, and many-sided opposition would have crushed any one not sustained by an invincible living faith. In an hour when the creeping paralysis of materialism was taking hold of conventional Christianity, making it increasingly blind to the spirit and correspondingly concerned with the exterior manifestation, Mrs. Eddy gave forth her message, which has transformed hundreds of thousands of lives.

One does not have to be a Christian Scientist to recognize the wonderful work it has already wrought. If it had done nothing more than heal tens of thousands of hopeless invalids, thousands of whom were resting under the death sentence from conventional medical scholasticism, it would have done much. If it had done nothing more than transform and ennoble with a vital faith hundreds of thousands of lives to which God and religion had come to mean nothing, it would have been one of the greatest positive upward-impelling forces of the age. That this message should appeal in a compelling way to a million or more intelligent men and women in the most searching and critical age and among the most mentally acute peoples of earth, is one of the most significant historic facts of the present.

[*Argus-Leader*, Sioux Falls, S. D.]

There are few women of this age whose names are more familiar in the average home than that of Mrs. Mary Baker Eddy. There are few who have been the object of such extremes in the expressed opinion of the public as has this able woman, who in middle life, after a long period of seclusion, emerged with a wonderful system of religion, that within a few years has extended its influence to the uttermost parts of the earth.

Her faith has weathered the taunts and the gibes and the persecution of the majority, and has brought peace and comfort and usefulness to an ever-increasing minority of her fellow-beings. We who know the least of the woman and her work have perhaps been their severest critics. It has been easy to follow up the recital of cures effected by Christian Science with the remark that it was a wonderful thing, and it was accomplishing a great work among people who were ailing only in imagination. We have delighted in recounting cases where Christian Science patients have died for want of medical assistance. Perhaps they have; but in order to have been just, we should have struck a balance with the fatalities due to too much surgical and medical experiment.

Leaving the subject of physical healing to the discussion of the learned and wise, let us simply look into the faces of the pupils of Mary Baker Eddy. There we read the message of "On earth peace, good will to men," and bask in a momentary reflection of the radiant joy that seems to illumine the lives of all her followers. The strained, hurried, worried, hunted look characteristic of our modern existence has been smoothed away as completely as the hand of death erases all trace of physical suffering on the faces of our dear ones, filling us with awe at its mystery and its sublimity. As light hearts and happy faces are as infectious as their too numerous antipodes, the influence of Mrs. Eddy's teachings reaches far out beyond the pale of her following and, regardless of religious or scientific belief, sends shafts of warm light into thousands of shadowed lives.

Surely she has not lived and wrought in vain! We may neither understand nor accept for ourselves her teachings, but in recognition of her efforts and of her success, as we must see it, in humanity's cause, we tenderly lay a wreath of laurels on her bier and carve her name on the tablets of memory among those of many other brave women of this century, who have blazed the way through dark forests of public disapproval and tangled thickets of persecution into the clear light of Truth as seen by them.

[*Short Hills* (N. J.) *Item.*]

Mrs. Eddy's greatness came from rediscovering and restoring the method of Christ's healing. Her book, "Science and Health with Key to the Scriptures," contains the rule by which to find one's relation to God and the resultant freedom from every evil that flesh is heir to. It is a book that must be studied to be understood, and hundreds of thousands today claim that it has introduced them to better morals, firm health, and a satisfying religion of the "I know" quality. To understand is to know. Understanding changes blind faith to realization—to knowing. Wisdom, godliness, and health may be attained by the practice of the teachings of Science and Health in connection with the Scriptures, and all, if they will, may demonstrate it. This happy consummation can be brought about not by retaining in consciousness old-time cherished but erroneous theories and beliefs, but by dismissing them, and putting in their place Mrs. Eddy's demonstrable truth as taught in the Bible and in her writings. This is not mere assertion,—it is fact—fact that may be stubborn, and yet gloriously so. Multitudes are proclaiming most solemnly and happily these facts. These multitudes are composed of intelligent, progressive persons in search of ultimate truth,—who do not want unsubstantiated theories, but who do want religious facts scientifically demonstrated in the Christ-way right in their own consciousness and experience. The remedy for all sin and error and all discord and all disease, as taught by Mrs. Eddy, is Truth, and Jesus said, "Ye shall know the truth, and the truth shall make you free."

We thank Mrs. Eddy because she demands as did her Master the perfect life, and because she shows us how it can be accomplished. We thank her for reinstating the Christ-religion and proving it such by practical demonstration. We thank her for a religion that knows one God only. We thank her for founding and establishing

Digitized by Google

a church scientifically Christian. We thank her for her "Key" that opens the spiritual Bible. We thank her for steadfastly continuing her studies in humanity's behalf under inhuman persecution; for her genuinely Christian life, without which it would have been impossible for her to become great in humanity's service.

The pages of the world's history fail to reveal a greater woman either in one or in many accomplishments. Mrs. Eddy was without a superior among her sex for spiritual insight, organization and leadership, and in capacity for indefatigable labor. Her writings, including hymns and poems, are permanent literature, ever refreshing, ever sought, growing more and more appreciated. Rejoicingly affirming "God is my life," she entered upon her higher consciousness, beautifully, triumphantly.

[*Beacon*, Cannon Falls, Minn.]

Those things that we call character in the individual are expressed in the sum total of the life-work; and the ability to work in this sense is also measured by the ability of the individual to lose himself in his work. Work to be of lasting value must be a share of the general work to be done; the lasting good one does, a part of the general good. History shows this to be the one true measure of greatness, and since Mrs. Eddy's work, both as a system of healing and as a religious philosophy, long since passed the experimental point and has become an institution, so Mrs. Eddy's place in the history of her country and of all countries, of the religion of her time and of all times, is defined and certain.

Mrs. Eddy was a great soul rather than a great intellect; though as a philosophical thinker and writer she looms large, it was in the realm where the philosophical and the spiritual commingle, in the philosophy of the spiritual, that she specially shone and where she was specially strong and effective. And this expresses, too, the most striking feature of Mrs. Eddy's work; it was effective,—widely and amazingly effective. Though her thought, as expressed in Science and Health and her other writings, was often involved—as is often unavoidable in dealing with subjects that do not accommodate themselves to the foot-rule system of elucidation—her language was always most simple and even her most earnest controversial style was kindly. Nothing was ever more clearly demonstrated in the life-work of an individual than was the spirituality, the kindly nature and the human understanding of Mrs. Eddy demonstrated in her work. This, too, was one of the obvious causes of her effectiveness as a leader and teacher. No one at all familiar through Christian Science publications with the tone of the many letters addressed to her from Christian Scientists from all parts of the world where civilization has gained a foothold, could doubt that Mrs. Eddy was deeply beloved by a great multitude of people, whom she had won to her by the wisdom, the sincerity, the sympathy, the forbearance and what might we think be called the keen spirituality evident in her written work. That Mrs. Eddy's life, energies, and talents were devoted to the general good is evident, not only in the million or more who are identified with the Christian Science church, but in the millions more who through contact with the movement have been restored to health, through its system of healing, and strengthened, blessed, and comforted by its spiritual philosophy.

[*Sawtelle* (Cal.) *Veteran-Enterprise.*]

No other woman in this age—or even in the history of the world—has ever accomplished such a beneficent work for humanity as the dearly loved Leader of the Christian Science movement. Mrs. Eddy will rank in history as one of the world's greatest women; as one of the world's greatest benefactors. The growth of the Christian Science church has been phenomenal, and today there are hundreds of thousands of her followers in every portion of the world who can testify to the wonderful good brought to them through the study of Christian Science. Mrs. Eddy's life-work was to restore to humanity primitive Christianity, with its saving power, here and now.

Mrs. Eddy's mission is fulfilled. The work she began will go steadily forward. The passing of the loved Christian Science Leader will only serve to unify the faithful followers, and they will strive the more earnestly to carry forward the work of the great church that she founded. There will be no successor to Mrs. Eddy. There can be none. And she will ever live in the hearts of her loving students as their revered Leader.

[*New Amstel Magazine.*]

To sum up Mrs. Eddy's teachings, plainly she realized to the full that there is but one right way to do anything, and to do this one right thing always—not part of the time—will ultimately lead to harmonious conditions, thus proving the Master's statement that "the kingdom of heaven is within you." Following this ideal doctrine to its logical conclusion, if every one simultaneously set about learning exactly the right thing to do, then doing it literally, how soon do you suppose it would be before the entire world would lose its sense of fear, of hate, of selfishness, and of imperfection? Mrs. Eddy simply thought and lived the Master's gospel of love—of non-resistance; and, by the way, it is generally conceded that all orthodox Christians also embody his teachings in their creeds.

Is it quite the correct thing to condemn either man or woman for not only knowing the truth, but also putting it into practice? This is what Mrs. Eddy has done, and she has done it successfully.

[*Piqua* (O.) *Leader-Dispatch*].

Founder of the Christian Science cult, it cannot be denied that her life, her work, her faith have done untold good, and doubtless it will be admitted that in the church she founded, fostered, and furthered, her good works shall go on. Thus, even in that aspect it cannot be said that Mary Baker Eddy is dead. Death nowadays has come to mean so little to the broadened mind of advancing civilization that, when a great mind and a pure spirit pass beyond the ken of our limited vision or expression, we have begun to dimly realize that death could mean no cessation of usefulness.

Thus with Mrs. Eddy. Agree with or admire her as we may; disagree with or scoff at her as we will, she leaves behind a feeling of power, of purpose, of accomplishment, and of a faith so strong that we are forced to admit that death is but a fleeting breath that has passed over the flickering light of human life, or a shadow that has passed between our vision and the object of our comprehension. The great souls are still here, and, but that our eyes are dimmed, our vision limited, we should still be in touch and communication with them.

That she died does not in any way detract from the seriousness of the teachings of Christian Science. Other great Christian disciples have died, but their religion goes on, and so may the teachings of Mary Baker Eddy. Much more than the peace of mind of the Christian Scientists—which even the greatest enemies of the cult confess exists among her followers—must lie in this belief. The church has grown too large and has too many eminent thinkers in its congregations for any general acceptance that the belief merely eases the worries of life. However, if it did nothing more, and is accepted for only this, what a great boon to mankind has been this woman, whose life, lived in our time, may a hundred years hence seem as marvelous as that of some of the other greater teachers that made the worship in the Christian religion one of the great institutions of civilization.

[*Jewish Review and Observer*, Cleveland, O.]

The death of Mary Baker Eddy, the Founder of Christian Science, removes from the world a great leader of superior ability, and while we do not agree with her in her religious doctrines, we must acknowledge that she was one of the greatest women of modern times, and that it was largely due to her remarkable powers as a leader that Christian Science has secured the large number of followers. Although Mrs. Eddy is dead, Christian Science will live.

[*Aroostook Pioneer*, Houlton, Me.]

In the death of the Founder of Christian Science, America has lost another of its greatest women. However much we may have disagreed with her or have criticized her utterances, we can but admit her greatness and the remarkable power she had of leading. She founded a religious sect that has shaken the foundations of every evangelical church in the country. Her life has added one more proof that humanity longs for a belief in the spiritual, for trust in a higher power, and for visual evidence of its agency. Mrs. Eddy's religion appealed to the sick, the afflicted, and the hypochondriac, where others appealed to the outcast and the forsaken. She won largely, and the force of her character will be felt in her church for all time. Regardless of the merits or demerits of Christian Science, it has become an unmistakable influence of the century. Mrs. Eddy built a church which has drawn to it persons of culture, education, and property, and we have no doubt that it will go on, accepting what we call the death of its Leader as only one more demonstration of her greatness.

[*Saratogian*, Saratoga Springs, N. Y.]

The public may well heed the very useful and desirable lesson emphasized at the recent funeral of Mrs. Eddy, Founder and Leader of the Christian Science church—that of simplicity and lack of show and ostentation at such ceremonies. Mrs. Eddy was the Leader of a following of many hundreds of thousands of persons. To her as the Founder of their religious belief they naturally gave great love and veneration. Naturally they would desire to show at her death some measure of their grief and sentiment. The opportunity was presented for much of display and ceremony and fulsome tribute. But it was not utilized. On the contrary, there was no parading of grief, no array of eulogy disbursers, no costly ostentation, and little of the outward show of paraded grief and funeral trappings.

All of which was eminently sensible and proper. The average funeral eulogy is a farce. The usual display at such a time is grossly out of place. A burden of debt is habitually incurred that is wrong in every sense and often a great hardship to those who are directly concerned in meeting it. Such display and expense assuage in no way the sorrow of mourners or the peace of the departed. If Christian Science teaches the more sensible way, it is doing a great service to humanity.

[*Hibbing* (Minn.) *Tribune*.]

The death of Mary Baker Eddy, Founder of the Christian Science church, is an event of interest throughout the civilized world. Mrs. Eddy, whatever may be our varying opinions concerning her creed, was one of the world's benefactors. There is that in her teaching which has given, and is giving, hope, purpose, and uplift to thousands, and few there be in all the roll of the world's inhabitants from Adam down of whom that can be said. Few, indeed, of whom it can be said in equal measure. We may theorize, and dispute if we will, of the future of Christian Science, but we cannot deny the great good that Mrs. Eddy has done. Peace to her ashes, honor to her memory, and may her spirit live after her to be as great a blessing to mankind as she was herself in her life-work.

[*Martin County Independent*, Fairmont, Minn.]

The papers speak of the death of Mary Baker Eddy. The good book says "there is no death." What is commonly called death is but a change or transition from one sphere of life or activity to that of another. Mrs. Eddy had reached the good age of ninety years. The Saviour of man, who said there was no death, also taught the change when one's sphere of work was done on this earth. Mrs. Eddy has passed to a higher existence. She is not dead. She lives by her example, her precepts, and the good work she has accomplished.

[*Sabula* (Ia.) *Gazette*.]

Although opinions differ in regard to the Christian Science faith, there is no denying that it has brought peace of mind, happiness, moral and physical uplifting to hundreds of thousands of people, living in our country and abroad. The greatest monument to Mrs. Eddy's memory will be the hearts that are filled with gratitude to the one whose illumination of the Scriptures has brought them spiritual contentment and a more implicit faith in God.

[*Boston* (Mass.) *Courier*.]

Whatever may be the prevailing opinion as to the tenets of her faith and its lasting benefit to the great cause of religion, none can deny that Mrs. Eddy was a remarkable personality, one of the great characters which stand out in bold relief in the history of the nineteenth century in spiritual affairs. Long after many who have won renown in literature, in art, in social and political advancement shall be forgotten with the passing years, her name will live as the Founder of a great religious cult which has taken firm hold of the souls and consciences of millions of the human race and has extended to the farthest limits of civilization. To her genius, her inspiration, her mental and spiritual powers alone the world owes the great religious movement of Christian Science. From humble origin it has risen in the short space of thirty years to include in its devotees some of the most intellectual and wealthiest among the English-speaking people. Her leadership was accepted without qualification or rivalry, and most graciously she has exercised the control and spiritual direction so freely accorded to her. She has brought to herself the power of concentration and a devotion which alone would have marked her as a character of eminence.

The record of Christian Science has been phenomenal. What a rise and progress it has had! No other faith in the world's history, as far as human annals go, has risen and extended so rapidly, so quietly, so persistently. The cause projected by her, nourished patiently and almost despondingly amid the misgivings of friends and reproaches of enemies, triumphed in the moment of despair. It was an individual triumph. It showed the implicit confidence in the germs of truth at the base of her belief, and the stability of her faith. The fact that the cause has extended so far, that it has drawn so many adherents, that her precepts and sayings are regarded as an inspiration to her followers, is an acknowledgment of her great individuality.

[*Evening Tribune*, Des Moines, Ia.]

In the death of Mrs. Eddy the United States loses one of the most remarkable women of her time. Whatever may be thought of the faith she founded, the fact that she founded a faith, intelligent people by hundreds of thousands profess in these intellectual days of scientific caution, marks her a prodigy. Moreover, her faith, instead of being gross or materialistic, has been idealistic to a degree, so much so that to the unbeliever it has seemed fanciful, a remarkable faith to gain adherents for in a practical age, when belief is confined very largely to things seen.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

[Reprinted from *Sentinel* of July 7, 1906.]

PERSONAL CONTAGION.

MARY BAKER EDDY.

At a time of contagious disease, Christian Scientists endeavor to rise in consciousness to the true sense of the omnipotence of Life, Truth, and Love, and this great fact in Christian Science realized will stop a contagion.

In time of religious or scientific prosperity, certain individuals are inclined to cling to the personality of its leader. This state of mind is sickly; it is a contagion—a mental malady, which must be met and overcome. Why? Because it would dethrone the First Commandment, Thou shalt have one God.

If God is one and God is Person, then Person is infinite; and there is no personal worship, for God is divine Principle, Love. Hence the sin, the danger and darkness of personal contagion.

Forgetting divine Principle brings on this contagion. Its symptoms are based upon personal sight or sense. Declaring the truth regarding an individual or leader, rendering praise to whom praise is due, is not a symptom of this contagious malady, but persistent pursuit of his or her person is.

Every loss in grace and growth spiritual, since time began, has come from injustice and personal contagion. Had the ages helped their leaders to, and let them alone in, God's glory, the world would not have lost the Science of Christianity.

"What went ye out for to see?" A person, or a Principle? Whichever it be, determines the right or the wrong of this following. A personal motive gratified by sense will leave one "a reed shaken with the wind," whereas helping a leader in God's direction, and giving this leader time and retirement to pursue the infinite ascent,—the comprehending of the divine order and consciousness in Science,—will break one's own dream of personal sense, heal disease, and make one a Christian Scientist.

Is not the old question still rampant? "When saw we thee a stranger, and took thee in? or naked, and clothed thee? Or when saw we thee sick, or in prison, and came unto thee?" But when may we see you, to get some good out of your personality?

"In the beginning was the Word, and the Word was with God, and the Word was God" (St. John). This great truth of God's impersonality and individuality and of man in His image and likeness, individual, but not personal, is the foundation of Christian Science. There was never a religion or philosophy lost to the centuries except by sinking its divine Principle in personality. May all Christian Scientists ponder this fact, and give their talents and loving hearts free scope only in the right direction!

I left Boston in the height of prosperity to *retreat* from the *world*, and to seek the one divine Person, whereby and wherein to show others the footsteps from sense to Soul. To give me this opportunity is all that I ask of mankind.

My soul thanks the loyal, royal natures of the beloved members of my church who cheerfully obey God and steadily go on promoting the true Principle of Christian Science. Only the disobedient spread personal contagion, and any imaginary benefit they receive is the effect of self-mesmerism, wherein the remedy is worse than the disease.

FORWARD.

At the beginning of the year all earnest thinkers are listening for marching orders, and in this mental attitude the divine command to the children of Israel is of special interest. They had fled from Egypt and were encamped by the Red Sea, which apparently barred the way to further progress. In this hour of darkness and seeming peril, with their relentless foes pressing hard upon them, they began to reproach the one who had led them thus far, but Moses' response was, "Fear ye not, stand still, and see the salvation of the Lord." It would seem as if their fear had caused them to look back toward their house of bondage, if not actually to turn thitherward; hence the command to stand still. Then came to Moses the direct order from God, "Wherefore criest thou unto me? speak unto the children of Israel, that they go forward." They did so, and found that infinite wisdom had bidden them advance, and in all their subsequent history we find the eternal law of progress voicing itself through their spiritual leaders, up to the time of Christ Jesus. The pity is that it should ever have been written of any human beings that they "walked in the counsels and in the imagination of their evil heart, and went backward, and not forward."

Christian Scientists usually take their first steps out of Egypt (which has always typified sense domination) when aroused by suffering to seek freedom. They have learned that all attempts to gain freedom from the enslaving senses, by material means, have but added to their fetters,—the recourse to drugging, dieting, etc., making the mortal mind an abject slave to the body, until the well-nigh hopeless sufferer cries out, as did St. Paul, "Who shall deliver me from the body of this death?" Then Christian Science comes to the rescue, and before long the erstwhile captive and sufferer joyfully declares, "I can do all things through Christ which strengtheneth me." He tells how he can enjoy his food, how he can sleep, and brave the elements without fear. This is well, if the heart is filled with thankfulness to the giver of all good, but even then, and at every step of the way, the divine order is, "Go forward." It is not enough to know that we are freed from the belief in sickness, we must also be freed from the belief in sin, and the delusion that happiness is in anywise dependent upon materiality.

It is said that a courtier once told Robert Bruce that he should bestow rich gifts upon his faithful followers when he came to the throne, but he wisely responded that this would only be to deprive them of the hardihood which had enabled them to achieve their country's freedom, and to burden them with enslaving luxuries would not add to their happiness, but would merely lessen their sense of independence. Well said St. John, "Love not the world, neither the things that are in the world." Even the beauty of a flower must be seen spiritually if we are to advance from the mortal and perishable sense of things to the spiritual. It is not enough that we can, to some extent, quell the fear of disease for ourselves and others. We must go forward if we are ever to reach the goal of Christlikeness. Shall it ever be said of Christian Scientists that they are "lovers of pleasures more than lovers of God;" or that, like Demas, they have forsaken Christ because of "having loved this present world"?

Students of Christian Science need to ponder oft their Leader's counsel, as given in "An Allegory" (Miscellaneous Writings, p. 323), especially her warning respecting the folly of laying down a few of the weights which hinder progress and then taking them up again; or the folly of tarrying "in the habitation of the senses, pleased and stupefied, until wakened through the baptism of fire." To all who would reach the "liberty of the children of God" the command of Truth is ever the same, that they go forward and reach the promised land.

ANNIE M. KNOTT.

ANOINTED OF GOD.

"BEFORE your letter reached me relief came, and now I am nearly free. I am thankful every minute."

As the telegram, with these grateful words witnessing to Truth's appearing in answer to prayer, was read, a great wave of humility and of joy broke upon the heart of the practitioner. A week before a letter had come from the distant friend, telling of most distressing conditions, and of pain that had seemed unendurable for months. It had closed with a pitiful plea for help, and thought was immediately centered upon God, upon the truth of being as our only refuge and strength. The Scientist had declared for God's rule upon earth, that His hand "is not shortened, that it cannot save; neither his ear heavy, that it cannot hear," and a great expectancy of good had been born in his heart. Nevertheless the immediateness of the return rebuked his past reserve and doubt, and awakened a new realization of the meaning of the words in which the prophet voices his quickened sense of the scope and efficiency of the ministry to which the Christ-man is called: "The Spirit of the Lord is upon me, because he hath anointed me to preach the gospel to the poor: he hath sent me to heal the broken-hearted, to preach deliverance to the captives."

On page 592 of Science and Health Mrs. Eddy defines "oil" as a symbol not only of "consecration: charity; gentleness: prayer;" but of "heavenly inspiration," the enduring activity of Truth in human consciousness, God working in us, and St. John was surely moved by this thought when he wrote, "The anointing which ye have received of him abideth in you, and ye need not that any man [personal sense] teach you: . . . as the same anointing teacheth you of all things, and is truth." In keeping with this idea of individual privilege Christian Science teaches that every disciple of Christ Jesus is to present to the world his unquestionable credentials as the ambassador of Truth. The demonstration of the presence and power of the Christ-idea in the healing of the sick is to be the seal of his authority to stand before men as a Christian believer, and whatever human call and authorization may come to him, without this his commission does not bear the Master's seal.

The anointing of God is a "purification of sense and self" (Science and Health, p. 324), an illumination of consciousness, an assimilation of divine Truth. "What has been learned of truth," as one has well said, "must destroy, by reason of its own lawful activity, both sin and sickness." Thus is every true disciple to establish his dominion over the asserted powers of evil. This is the unequivocal spiritual democracy inculcated in Christian Science. Recognizing no sacerdotalism, it insists upon the spiritual freedom and responsibility of every individual to become a king (ruler) and a priest (minister) unto God. While sedulously respecting the religious beliefs of others, it has dared to support the contention of St. Paul, when he declared, "Now he which stablisheth us with you in Christ, and hath anointed us, is God;" and this concept is enlarged and completed when the spiritual awakening which has enabled one to find freedom for himself makes it possible for him to bring freedom to others. This is the genius of Christian Science. It meets every honest man upon the way, even as Saul of Tarsus was met, and says to him, "Rise, and stand upon thy feet: for I have appeared unto thee for this purpose, to make thee a minister."

The anointed is he in and through whom God is accomplishing His will; and who can measure the world's need today of such men, those who have seen the vision and are obedient thereto, who have a demonstrable apprehension of truth and who are proving it by their works? Christian Science calls its every representative to fulfil this ideal, to be neither fearful nor foolish, neither superstitious nor sleepy, but to be alert and joyous, "strong in the Lord, and in the power of his might," the anointed of God, a minister of Christ.

JOHN B. WILLIS.

AMONG THE CHURCHES.

SAN DIEGO, CAL.

Free from debt, the beautiful new Christian Science church, erected and equipped at the southwest corner of Second and Laurel streets, at a cost of $85,000, was dedicated with appropriate services at ten o'clock yesterday morning [Nov. 24]. The services were impressive in their simplicity and elevating in effect, being witnessed and participated in by a congregation which taxed the seating capacity of the spacious auditorium.

Charles L. Kirtland, First Reader, delivered a short address, giving a sketch of the growth of the congregation in San Diego. His remarks were in part as follows, —

Christian Science was introduced into San Diego in 1887, the first public services being held in Good Templars Hall on Third street: afterward services were continued at the residence of Frank Gale, and later at 1907 E street. The Sunday School was organized in 1890 with twenty-two children. In December, 1892, the church was formally organized under the name of "Church of Christ, Scientist," with twenty-five charter members, and legally incorporated, in 1897, under the laws of the state, as "First Church of Christ, Scientist, of San Diego, Cal." In 1898 regular services were conducted in the Jewish synagogue on Second street and a reading-room was established. About this time a building lot, located at the corner of Third and Ash streets, was purchased for $1500. The corner-stone for the new church home was laid on the last day of the year 1904, the opening services being held just one year later in 1905, and the church formally dedicated Sept. 30, 1906, at a total cost of about $9000.

The need for much larger quarters was very soon apparent, and after careful consideration the land upon which this building stands, valued at $8000, was selected and lovingly donated to the church by one of its members. On July 21, 1909, ground was broken on this building site, and on the morning of Oct. 25, 1909, just as the bright morning sun rose over the mountains in the east, the corner-stone was laid, with simple and sacred ceremony.

San Diego Mirror.

DETROIT, MICH.

Through growth and loving unity, Second Church of Christ, Scientist, Detroit, was formed early in 1910. The contracts have now been let for a beautiful structure, costing in all $60,000. The location is central for the eastern part of the city and on the boulevard, as it starts from the river and island park, a most sightly and convenient spot. It is expected to be ready for services by July next, and will seat eight hundred persons.—*Correspondence.*

LITTLE ROCK, ARK.

Second Church of Christ, Scientist, Little Rock, Ark., has completed a chapel on Twentieth and Louisiana streets, with a seating capacity of two hundred and forty-eight. Two years ago a corner lot was purchased and paid for. Oct. 1, 1910, the contract for building the chapel was let, and the edifice was completed Nov. 15, the first service being held Nov. 20.—*Correspondence.*

NEW BEDFORD, MASS.

The last payment has been made by First Church of Christ, Scientist, of this city on a mortgage of $2500 on its lot at the corner of County and Mill streets. The lot was purchased a year ago for $6000, and the money has been raised entirely by voluntary contributions. Enough money remains in the treasury to form an excellent nucleus for the building fund.—*Standard.*

THE LECTURES.

BRIGHTON, ENGLAND.

Bicknell Young delivered a lecture on "Christian Science" at the Hove Town Hall on Friday evening, Nov. 4. The speaker was introduced by Clement Carpenter Gatley, Esq., M.A., LL.D., B.C.L., barrister-at-law, who spoke in part as follows,—

We have assembled here tonight to listen to a lecture on Christian Science, a subject which, while vitally interesting to some of us, is somewhat new to others who are present. Among the latter class I may place myself. I am not a Christian Scientist; I know but little of the system of faith about which we are to learn something this evening. But this is one of the reasons of my presence here.

All systems of faith are striving for the same ideal—to honor the great creator. They teach their members to do so by setting before them a certain course of conduct. The Roman citizen found a religious ideal in the three great precepts of the civil law: "to live honestly, to harm nobody, and to give every man his due;" the Christian in the ten commandments and the sermon on the mount. Just as I think that prayer is something more than words—rather an intense soul-question or soul-aspiration, so I think that religion is something more than a mere set of forms or dogmata. The word is derived from the Latin *religare*, "to bind back," and means literally a binding back of mankind to the Spirit of the great creator. Whatever be the form, that is the spiritual idea which underlies all the great systems of faith. It is interesting to know that our late illustrious laureate, Alfred Tennyson, who urged men to cling to faith, held the same view when he expressed the thought that, beyond the forms of faith, although "the essential feelings of religion subsist in the utmost diversity of form, different form does not always imply any difference of real faith."

Christian Science places before its followers an ideal. We may differ from its fundamentals, but the ideal is there. I have known more than one person who has received consolation from the system of faith that it offers to the world, and many of you who are present doubtless know of others. The knowledge of this fact alone must lead us to listen with interest to what the lecturer has to tell us. It must be admitted that the world is the gainer by any belief which tends to make its followers hopeful, helpful, and cheerful in adversity as in prosperity, to the development of that which is best in themselves, and to make them an influence for good in the circle in which they move and wherever their influence extends. And be this doctrine true or false, the liberality of thought of one age and the religious tolerance of our time, two characteristics which will ever make this England of ours preeminent among the nations, constrain us to hear with respect the exposition of the Scriptures by any earnest and able man, whatever be his sect or creed.—*Correspondence.*

OLEAN, N. Y.

A lecture on Christian Science was given by Willis F. Gross on Nov. 4, at First Church of Christ, Scientist, in Olean, N. Y. The church was well filled, and the lecturer was introduced by Robert Wharton Russell, secretary of the Young Men's Christian Association, who said in part,—

It is a delight to me to introduce the speaker, who represents one of the new religions of the world, because it is a religion which has always stood, throughout its short career up to the present, for what is beautiful and what is good. As I have come into touch with the personal lives of these people, I have been struck with one particular thing, which can be expressed by one word—serenity. The Christian Scientists always seem to wear a calm countenance, even in the midst of the most distracting circumstances, even in the midst of the worries of daily life. Then, when temptation comes to them, when evil is done, they seem to think that the only way in which evil can exist is by entertaining it or by permitting it a place in their own minds, and that evil must be overcome by love; it must be overcome by the beautiful and the good. The greatness of Christian Science is that by it men and women are being healed and made glad.—*Correspondence.*

NEW YORK, N. Y.

A lecture was given in Second Church of Christ, Scientist, of New York city, on Monday evening, Nov. 7, by Francis J. Fluno, M.D., of Oakland, Cal. The lecturer was introduced by Mrs. Laura Lathrop, whose remarks were in part as follows,—

I have no doubt that you will all remember the time when the condition of the human body was the most prolific subject for conversation. I picked up an article the other day in which the writer said, "It is no longer the fashion to be sick; people no longer talk about it—they have become ashamed to say they are sick; consequently the death-rate has been rapidly decreasing for the past few years." Now this man may be an optimist,—you know they say we Christian Scientists are optimists,—and I have no doubt but that the whole human race is becoming the same thing. Whether it be true or not, certainly the signs of the times point that way.

No doubt you all have seen the editorial announcement of a journal published in a neighboring city, to the effect that the more euphonious and truthful statement "passing away" was to be substituted for the words "die," "dying," and "death." Then, too, only a few weeks ago a doctor took up fully a column and a half in the daily press to show why it was utterly impossible for anybody to catch cold; that there is no longer any such thing as catching cold. Of course people who read these things immediately say, "Well, it is because we have better sanitation; the fresh air craze is doing a vast amount of good; we have better educated, more skilful physicians." But the Christian Scientists, looking back now over forty-five years of their history, know it is because God is coming nearer to the heart of mankind that sickness is becoming unpopular. You cannot talk about sickness and talk about God as omnipresent and omnipotent, the one creator of the universe, the one Mind of the universe, at one and the same time. It is an utter impossibility. We have watched the growing belief in the power of right thought, and we know a great Principle has come to human consciousness, which, if understood, will banish forever all inharmonious beliefs, both mental and physical.—*Correspondence.*

DETROIT, MICH.

The Rev. Arthur R. Vosburgh delivered a lecture on Christian Science, under the auspices of Second Church, before an audience of more than two thousand people in the Detroit Opera House, Nov. 13. The introduction by Frank T. Caughey was in part as follows,—

This splendid audience indicates in a measure the interest taken in Christian Science in this city; and just such audiences as this, throngs of earnest, thoughtful men and women, may be seen attending Christian Science lectures in every city in our land and in many cities of other lands. It may be asked, Why this wonderful interest in Christian Science? The answer is, Because tens of thousands of reputable men and women from every walk in life and from nearly every country in the world, testify that through the ministry of Christian Science they were brought out of sickness into health, out of misery into happiness, out of bondage into freedom. You have heard these stories. You may think they are too good to be true; yet you are here hoping they are true; and if they are true, this is the most important business in the world for you and me.—*Correspondence.*

SANTA MONICA, CAL.

The Rev. William P. McKenzie delivered a lecture on the subject of Christian Science in Ocean Park Auditorium last evening [Nov. 28] to a large and appreciative audience. He was introduced by Attorney Force Parker of Ocean Park, who said in part,—

Christian Science has become one of the most potent influences in modern religious thought. From one end of this country to the other, people are gathering together, even as you are here this evening, intent upon hearing this new interpretation of the teachings of the gospel. No matter what our individual opinions may be upon the subject of Christian Science or the efficacy of its doctrines in healing the sick, we are all frankly bound to acknowledge that Christian Science has now surely and firmly established in our modern life a new, practical, working philosophy of human conduct.

It has been often said by religious skeptics that Christianity is simply an ideal religion and that it is impossible to determine whether the teachings of Jesus Christ constitute a practical religion; for the reason that, although these teachings have been promulgated and preached for almost two thousand years, they have never been actually practised. But this is no longer true. The Christian Scientists are actually living the teachings of Christ. They heal their sick, even as the apostles healed theirs, by the divine immanence and presence of God. To deny that they do this is practically to assert that the followers of Christ in these days, who are leading pure and unselfish lives, have less power than the followers of Christ two thousand years ago, and we hardly wish to assert that those teachings are on the wane. So it seems that, if we are to accept Christianity, we must accept Christian Science. One is the necessary sequence of the other.—*Santa Monica Outlook.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Antigo, Wis.—Frank H. Leonard, Jan. 16.

Brookline, Mass. (Under auspices of The Mother Church).—William D. McCrackan, M.A., Beacon Universalist Church, Harvard street near Coolidge Corner, 8 p.m., Monday, Jan. 16.

Cape Girardeau, Mo.—Frank H. Leonard, Elks Hall, Jan. 8.

Dixon, Ill. (Society).—Frank H. Leonard, People's Church, Jan. 17.

Fort Dodge, Iowa.—Prof. Hermann S. Hering, Armory Theater, Jan. 17.

Fremont, Neb.—Frank H. Leonard, Jan. 20.

Hoquiam, Wash.—Clarence C. Eaton, Hoquiam Theater, Sunday afternoon, Jan. 8.

Long Beach, Cal.—Francis J. Fluno, M.D., Congregational Church, Third street and Cedar avenue, Jan. 12 and 13.

Mansfield, Ohio.—Frank H. Leonard, Memorial Opera House, 2:30 p.m., Jan. 22.

New London, Conn.—William D. McCrackan, M.A., Lyceum Theater, 3 p.m., Jan. 22.

Phœnix, Ariz.—Prof. Hermann S. Hering, School of Music, Jan. 23.

Prescott, Ariz.—Prof. Hermann S. Hering, Elks Theater, 3 p.m., Jan. 22.

Wakefield, Eng.—Bicknell Young, Music Saloon, Wood street, Jan. 28.

West Newton, Mass. (Under auspices of The Mother Church).—William D. McCrackan, M.A., Players' Hall, Washington street near Highland street, 8 p.m., Thursday, Jan. 19.

Winthrop, Mass. (Under auspices of The Mother Church).—William D. McCrackan, M.A., Knights of Columbus Hall, corner Pauline and Fremont streets, Winthrop Center, 8 p.m., Tuesday, Jan. 17.

TESTIMONIES OF HEALING.

It is with great thankfulness that I send my testimony to tell what Christian Science has done for me. For many years past my eyesight had been getting steadily worse, and the eye specialists whom I consulted in various places were agreed that it was absolutely necessary for me to wear glasses. As I am a sailor, and at that time was captain of a steamer, the wearing of glasses at sea was out of the question, so I had made up my mind that I should have to give up my profession, and the question of what I could do for a living gave me many an hour of anxious thought.

On my last voyage I went to Australia, and when at Newcastle, N.S.W., I heard a great deal about the wonderful healing work that was being done through Christian Science, and learned that a brother of mine living at Brisbane had been healed from worse eye troubles than I was suffering from. I thought a good deal about these accounts, but I felt that it would be too much for me to expect to have such a wonderful thing happen to me as to have my eyesight restored after so many doctors had told me there was no hope that my eyes would ever get better. I am, however, thankful to say that I wrote to my sister who is a Christian Science practitioner in Brisbane, and asked for help. Before I sailed from Newcastle I received from her some Christian Science literature, a letter full of helpful truths, and a promise that she would do what she could for me. I was bound to Valparaiso, and when about half way across the Pacific ocean, some two thousand miles from Australia, I was sitting in my cabin one evening, reading a copy of the *Sentinel*, and it seemed that the glasses I was using (which I had got at New York a few months before) were not clear. It was difficult to read with them, although they had suited me first-rate. I took them off and cleaned them, but they were no better. The thought then came to me that perhaps my eyes were all right again and that I did not need the glasses, so I took them off and went on reading. I found after two hours' reading that my eyesight was perfect, and I have never used glasses since.

I cannot attempt to tell of the joy, the gladness, that I felt when I found that I too had been healed. It seemed too good to be true, but there was no doubt about it. The healing of this physical trouble gave me great joy, but the uplifting thoughts that came to me at that time caused far greater joy than anything else. I had given up all attempts at trying to lead what is called a religious life, because I was taught that God had sent all my troubles for my good, and I had others besides the bad eyes; therefore I thought it was no use to try to get clear of them, but that I must put up with them as best I could. There were many times when I felt so despondent and weary of it all that I would have been glad to have had the end come. I am now striving daily to understand more of Christian Science and to put into practice all that I learn. I find the errors of many years' standing are not easily overcome, but when I get a bit discouraged I have only to think of that memorable evening when the truth set me free, and I am then encouraged to keep on with the fight, for I am certain that God, divine Love, will meet my every need.

I send this testimony in the earnest hope that some other sailor (as well as those living ashore) may be encouraged to get help from Christian Science, and that they also may be able to say, "Whereas I was blind, now I see." I cannot close this without saying that I am thankful to Mrs. Eddy for what she has done for humanity in bringing to light the real meaning of Christ's teaching, and for her example to us all.—F. S. Iliff, Coombe Bissett, Salisbury, England.

At the time Christian Science was brought to my notice I had been a hopeless invalid for twenty years. I had been subject to severe headaches from childhood, the least excitement sending me to bed for several days. As I grew

Digitized by Google

older I united with a church, and prayed constantly to God to give me strength to bear what I then thought was a cross given me, although it seemed dreadful to think that God sent such suffering to mankind. After coming from church I would often have to call a doctor, but they were never able to relieve the pain, and many times I have prayed God to let me die, thinking I should find relief beyond the grave.

I now thank God that through the teachings of Mrs. Eddy I am better able to understand the Bible, and know that God never sends suffering to His children. I shall always have the most loving gratitude to our dear Leader, Mrs. Eddy, for giving to the world "Science and Health with Key to the Scriptures." It has taught me the allness of God, and that He can and will help His children today as surely as He did the children of Israel. I knew nothing of Christian Science healing at the time I was advised to visit a practitioner, but I had one week's treatment and was healed of the headaches, nervous collapse, a growth in the left side, and many other ills. I went home well, and few can realize what a happy woman I was to know that I was free—that I could "run, and not be weary." It was truly wonderful to feel the buoyancy of youth after so many years of suffering. I had traveled to many places, and had visited many noted doctors, only to find what I now know to be within our own consciousness.

I did not at this time take up the study of Christian Science, and after several years another trouble manifested itself in the shape of a malignant condition of the abdomen. After having dropped Science, I turned back to medicine, as my husband and friends were very much alarmed. I was examined by a specialist, who said if I was not operated on at the end of three weeks my case would be hopeless. At this time I had heart trouble, and was unable to sleep or lie down. I was then taken to several specialists, who gave me no hope. One said the X-ray possibly might help me, so I began the treatment and continued it for eight months. While I rested better, the other conditions were not improved, and I was suffering both bodily and mentally, nearly beyond human endurance, when the thought came to me that Christian Science had healed me once, and why could it not again? I asked my husband what to do, and he agreed with me; so I immediately consulted with a practitioner and started treatment. I had treatment two weeks, and was healed—a well woman.

I thank God that through the teachings of Mrs. Eddy I have learned that the law of divine Mind, when used understandingly, will heal all diseases. I am now an earnest student, striving to obey the command of Christ Jesus, "Follow thou me."—Mrs. Belle La Point, Petaluma, Cal.

[Translated from the German.]

The following instance of healing may speak for the many blessings which I have experienced through Christian Science. Last May I sustained a serious injury to a bone in my foot. I immediately realized that God was with me, and that the accident could not affect me, and after having resisted the error for about fifteen minutes, I resumed my work without looking at my foot. When, after a couple of days, however, the condition of the foot suddenly grew worse, so that I had to cease from work, I asked a Christian Science practitioner for treatment. After ten days I was able to resume my occupation, during which I had to use my foot a great deal, and a couple of weeks later it was sound and whole.

During the ten days' absent treatment it became clear to me that the only remedy for all ills and errors is divine Love, which never fails. We cannot too highly appreciate the work of Mrs. Eddy, in bringing us this glorious revelation, and her faithful obedience to the teaching and example of our great Master.

Carl Ebbinghaus, Mülhein a/Rhein, Germany.

Since childhood I had suffered greatly from headaches, which became more frequent and severe. In March, 1909, I called on a Christian Science practitioner for help, and the disease has never manifested itself but once since then. Last spring our little boy was bitten by a dog. We had company at the time, and their fear was so great that I felt unable to do much, so I called on the same practitioner who had treated me, and there was never any trouble from the bite in any form. I am certainly thankful to God for all the benefits we have received in Christian Science, as all of the ailments have yielded so readily. Space would not permit of my telling what Christian Science has done and is doing for us all the time.—Mrs. Will Brattain, Muncie, Ind.

It is with heartfelt joy and thankfulness that I testify to the healing power of Christian Science and all that it has done for me and mine. It is over twenty-one years since I first heard of this truth. I was led to investigate it because our good family physician had told my husband that nothing would save me but an operation. To this I would not consent, and told the doctor that I would try Christian Science. He said to my husband that I was losing my mind and that he had better take me on a long trip. We did take a trip, but it was to Detroit, Michigan, where I went to see a Christian Scientist and began treatment. My healing was slow but sure. I was healed twenty years ago and have never had a return of the illness in any form.

God has never failed me once during these years, and the realization of the allness of Truth and Love has enabled me to overcome sin, sickness, and sorrow for myself and others. I have seen the demonstration of this great truth in the destruction of nearly all the ills that flesh is heir to,—yes, all forms of disease healed by this grand Science. Divine Principle, as revealed anew in this age by our beloved and revered Leader, is now known as our refuge from all error. Words are indeed inadequate to express the love I feel to God, my gratitude to our dear Leader, and my appreciation of our noble cause.

Mrs. Louisa J. Richardson, Kansas City, Mo.

I am grateful for this revealed truth, Christian Science. Its application has made me stronger and more healthy than I ever could have been otherwise, but it is for the understanding, even in a small degree, of God as ever-present, omnipotent good, that I feel most grateful.

A few months ago I had a practical demonstration of the ever-presence of good. My little boy, three and a half years old, had his foot and leg badly scalded. I picked him up immediately and began walking about with him, declaring meanwhile that as God is ever present there was no reality in pain, also repeating the scientific statement of being and the spiritual interpretation of the Lord's Prayer as given in our text-book (pp. 468, 16). In about ten minutes he stopped struggling, and I was able to sit down with him, and talk to him quietly about our heavenly Father's love and care. In about half an hour he sat up and ate a good dinner, and then got on the bed by himself and went to sleep for a short while. When he waked he was able to walk with but a slight limp. During the afternoon he went to see his aunt, who lives near by, and when he came home about five o'clock, to my joy he came running to me and commenced to show me how he could jump, using both feet equally well; and we had no further trouble. The blisters dried up and the child did not even notice they were there.

I have been helped many times and in many ways by this wonderful healing truth, and feel more grateful than words can express to our dear Leader for the selfless love that enabled her to break to us this "bread of life."

Mrs. N. Petty, Brisbane, Queensland, Australia.

[Translated from the German.]

A feeling of deep gratitude to God impels me to testify to the healing which has come to us through Christian Science. Some time ago our daughter showed symptoms of mental disorder which caused us to be greatly alarmed. Christian Science was called to our attention, and we immediately turned to it for help, with the result that in three weeks' time the trouble was completely healed through the treatment of a kind practitioner and through the reading of the Christian Science literature. Since that time we have experienced a great sense of blessedness and happiness.

JOHANNES SCHNEIDER, auf der "Rüttmatt," Oberdorf, Baselland, Switzerland.

I have been interested in Christian Science ever since I was a child, but never enough to practise it or try to live it. There came a time, however, when I felt that I needed it right away. I was at that time attending the summer school at the Duluth Normal. When I awoke one morning I found I had a severe attack of hay-fever. I had had it before, and it had lasted several weeks, but never in such a severe form as now. My eyes were so bad that I could scarcely see, and I not only looked but felt miserable. As I was unable to help myself, I went to a practitioner as soon as possible. I had a treatment, and from then on I began to feel better, so that by the next morning not a trace of the trouble was left.

After this experience I became more interested in Christian Science and I have had a great many demonstrations of the truth. I am indeed grateful for the knowledge I have received of this truth and each day am trying to live nearer to God through its teachings.

GERTRUDE KNAPP, Chisholm, Minn.

Nothing could equal my pleasure in testifying to the healing power of Christian Science. I could not tell all it has done for me, but a tumor was dissolved and acute lung trouble was overcome, besides a stomach disorder, which was healed in one treatment, after I had suffered for three weeks. I was also healed of such mental conditions as despondency, timidity, sensitiveness, etc.; in fact, I am not the same person that I was when Christian Science found me. It is my only remedy for every sense of ill or disorder.

At one time my husband snored so that it was almost impossible to sleep near him, and one night I felt that the truth must destroy this annoyance. I began to wonder how this could be accomplished; then, as I realized that God's man is always harmonious, the breathing grew less laborious, until finally all was quiet. From that time on he has slept as quietly as a child—not even a long, hard breath.

How grateful I am to divine Principle, that solves all our problems in Christian Science,—and quickly, too, when we look to Principle and not so much at the problems. Our beloved Leader points us to Principle by her own stability, and I love and appreciate her more and more as I see my own lack of it. Surely I know that God loves me in making me to see this blessed truth, Christian Science.

MRS. ANNIE E. HAMIL, Geneva, Ind.

Over a year ago I received healing in Christian Science, for which I am very grateful. A felon formed on my right thumb, and in two days the inflammation and pain became very great. During the third day I was away from home, and by the time I reached it at night the suffering was intense. On arriving there, I remarked to my sister that I should remain dressed so that I could walk the floor. She began at once to declare the omnipotence of divine Love, and after a few minutes I felt that it was placing no trust in God to make preparations for a bad night, and went as usual to my room. The truth which had been reflected to me helped me so much that I had a quiet night.

In the morning the suffering was far less, but at night the pain again became so great that I telephoned a practitioner for help. Through the telephone came back the message to go quietly to bed, knowing that divine Love would meet my need. This I did, and was rewarded, for I went to sleep immediately and knew nothing more until the morning. I have seen very speedy relief from Christian Science treatment, but up to that time had scarcely thought it possible that even Christian Science could relieve instantaneously such acute inflammation and pain as I was then enduring. It did so, however, and from then on I suffered no more pain, although the growth continued to develop and it did not discharge until two days later. I should like to state here, that after having had treatment, and while my thumb was quite enlarged, I was able to bend it and write a letter. It was a very complete proof to me that matter has really no sensation.

In Science and Health (p. 579) Mrs. Eddy writes that "Abraham illustrated the purpose of Love to create trust in good." A month or two later it was illustrated to me how much trust in good this demonstration had created in my mind. A growth of the same description commenced to form on the other thumb, but I had been so much strengthened and helped that I began to work for myself at once, so that the trouble got no time in which to develop, and within a week it died away. Several times error tempted me to think that I had not sufficient understanding to do the work for myself, but throughout the week I kept my thought steadily to a sentence in "Unity of Good" (p. 22), "Thou shalt not admit that error is something to know or be known, to eat or be eaten, to see or be seen, to feel or be felt." The demonstration was easily and naturally made and with very little suffering. I was very grateful for this help, as it prevented a loss of time during a busy part of the year, which would have been serious.

Christian Science has been of very great value to me. The interpretation it gives of the Scriptures is indeed the "pearl of great price," and in proportion to my application of its teachings am I benefited by them.

FLORENCE MAKIN, Brisbane, Queensland, Australia.

As I have been helped in many instances by Christian Science, I feel it a duty which I owe to the cause to make acknowledgment of the same. Christian Science has surely helped me and my family, spiritually and physically, in the more than seven years since I first heard of it. Early in the spring of 1902 I had a severe attack of illness, which resulted in heart failure, stomach trouble, and shattered nerves. My eyes were affected so that I could not see to read. I was unable to eat without suffering much distress, and very seldom had a night's sleep. By the advice of a physician I put on glasses, and received some relief.

Time went wearily on, with matters going from bad to worse; but at last a friend told my wife about Christian Science and asked us to try it. As for myself, I knew nothing about it, but one morning, a few days later, I was worse and my wife wanted me to go to the lady of whom we had been told. I did not feel like making the trip, and even after we started I wanted to turn back; but my wife insisted, and we went on. When we had arrived and were seated, I told the practitioner about my condition, and she began to talk about God. She told me that if I was willing to lay aside material remedies she would give me treatment. I agreed to this and was given a treatment.

We then went home, and I ate a hearty supper, went to bed, and slept well all night. I awoke next morning feeling like a new man; the sun shone brighter, and life seemed sweeter, with a clearer, freer sense of understanding than I had ever known. If I remember rightly, I received but two treatments, and have never had the help of a practitioner

Digitized by Google

since. We have met and overcome many ills in our family, and all of us have been benefited through Christian Science. I do not use glasses, can eat anything I want, and sleep well. Our little girl, three years old, has never tasted medicine.

With the many proofs of healing, I also find that to the degree I live this truth, does it benefit me. With great thankfulness to God, and to that good and pure woman, Mrs. Eddy, I desire to be a worthy Christian Scientist.

C. A. BARLEY, Eaton, Ind.

One morning not long ago, as I arose from my bed and looked out upon the rising sun, the thought came to me that only two and a half years ago I had given up all hope of enjoying such a sight very long. I was reminded of the power of God working through Christian Science, as taught by our beloved Leader, Mrs. Eddy. Since this truth came to me the world has taken on a different aspect to my once narrow vision, for when I returned to my home, after consulting a physician and listening to the dread verdict, to tell my wife that I was suffering from a malignant disease of the stomach, all hope had vanished.

I was asked to try Christian Science, but would not consent at first. Finally, to rid myself of those who were talking of it, I consented, but I did not believe that it could do me any good. A practitioner gave me absent treatment, and after this, when I had a fair night's rest, the morning found me more willing to investigate further, and by the time (according to material belief) that I should have been resting under the sod, I was preparing to get back to my business, which was that of a carpenter. Over two years have passed with no return of the malignant disease, or of the heart trouble, which was of seventeen or eighteen years' standing, during which time I suffered numerous severe attacks. These ills of the flesh have been overcome by a knowledge of the truth that makes free.

Not only have I this physical healing to be grateful for, but many other miracles have taken place. Before taking up the study of Christian Science I was a confirmed atheist, not believing in any God and with hatred in my heart for more fortunate men. I was convinced that there was no justice in the world; I saw nothing but dark clouds and ignored the silver linings, and I had never a good word or pleasant smile for any one. But the whole world has changed, and now everything is bright and beautiful, for the true light has dawned. I now see around me a world full of splendor, radiant with love, and I owe to Christian Science a debt of everlasting gratitude for all these manifestations of a living God, who is ever present, surrounding us with everything that brings happiness when we know the blessed truth of His constant love.

My heart is filled with thanksgiving for the teachings of Mrs. Eddy, for as I have put these teachings into practice I have been enabled to conquer the many trials that have come to me. Words are inadequate to express all the gratitude I feel for Christian Science and for our Leader. Today I know no other physician than the truth spoken of by Christ Jesus and so beautifully translated by the Founder of Christian Science.—H. G. DEMERRITT, Hutchinson, Kan.

It is now over three years since I first became interested in Christian Science. I was then a physical wreck, having undergone three operations within two years. After the last operation I had a continual pain in my side, from which I could get no relief until I called upon a Christian Science practitioner and took treatments for a short time. The pain in the side entirely left me, also hemorrhage and bowel trouble were overcome. I have had no need of material remedies, nor taken any since my healing in Christian Science. For this I am deeply grateful to God, also to our dear Leader, Mrs. Eddy.

MRS. EDWARD LOYCE, Chicago, Ill.

For the past three years Christian Science has daily been to me a guide and comfort. I was led to it when weary and heavy laden,—physically without comfort, spiritually without rest. Out of many experiences which have helped me to realize the divine Principle on which this Science rests, I wish to relate one, in gratitude to our beloved Leader and perhaps as an encouragement for some one who is beginning to travel the straight and narrow way.

I awoke one morning with a feeling of oppression in my head, usually a forerunner of an old enemy, which for a time made it difficult for me to rise; but I dressed and went about my usual duties, denying the reality of the pain as I worked. At about three o'clock I had finished, so that I could go to my room for quiet, and I closed the door and remained undisturbed for an hour. I treated myself silently, and soon realized that the tense feeling was leaving me. I then opened Science and Health at page 410, and as I read, the fear which is an element of all discord left me. Even before the pain was gone I felt that like Jacob I had "prevailed." Such a sense of peace and joy and assured rest came to me, that I knew my demonstration was made.

With this assurance there also came a feeling of gratitude to God, and of awe as if beholding the pure and holy, which impelled me to turn to the Bible. I longed for the words of Jesus, and I remembered how, even before he bade Lazarus come forth, he turned to God and said, "Father, I thank thee that thou hast heard me. And I knew that thou hearest me always." After Jesus' expression of gratitude came his expression of perfect trust, and again, because of this perfect trust, he made a perfect demonstration. Those are wonderful words; they show us plainly how to pray. I feel that the study of the Scriptures in the light of Christian Science and with the aid of Science and Health, brings me nearer and nearer to the attainment of that peace "which passeth all understanding."

MRS. META V. VIRTUE, Lincoln, Neb.

When Christian Science was first presented to me, I was not sick, but was eager for a more practical knowledge of God and His ways. I soon found Christian Science to be the truth indeed, and feel very thankful that there was one spiritually minded enough to discern and give it to us. I have found it a great help in a large family of children, all of whom have been healed of different diseases. I will mention one instance in particular in which I was healed of chills and fever after being unconscious for thirty-six hours.

I have since had class instruction, and I feel specially grateful for the wise guidance which our Leader has continually shown us. My greatest desire is to be a true Christian Scientist, for I know it is the way to eternal life.

REBECCA C. FEREBEE, Stonewall, N. C.

In gratitude for what Christian Science has done for me, I wish to add my tribute to the ever-increasing hymn of praise which is unceasingly going out to our heavenly Father. I have been healed of many physical troubles, one being an attack of throat trouble from which I had suffered since earliest childhood. Again, last summer, while away from home, I was taken with severe pain in the bowels and right side, attended with fever. I tried to treat myself, but the suffering seemed too real. So I telegraphed for help, which was immediately received. In three days the fever was gone and the pain and soreness very much lessened. In a short while the whole trouble had vanished into its native nothingness.

I can testify to the fact that Christian Science does remove all the hidden malarial poisons from the system. Even in the old days, when I took powerful drugs to remove these ills, it was never so effectually done as in Christian Science, and I feel better and stronger than ever be-

Digitized by Google

fore. From my heart I thank God for our dear Leader, Mrs. Eddy, and for Christian Science.

EMILY C. FEREBEE, New Bern, N. C.

It was in 1904 that my daughter first complained of pains in her hand. We sought the advice of a doctor, who said that in his wide experience he had never seen this trouble manifested in so young a person, she being then eleven years old. The doctor gave it as his opinion that she was suffering from the worst kind of rheumatism, that which leads to deformity; and he said that if the disease was not checked, it would very soon become chronic. Although she continued under the doctor's treatment, the malady manifested itself more and more in different parts of the body, which proved to us that his ability to cure was far below either his sympathy or his interest. After a while other doctors were tried, and as the impotency of each one became apparent, he was either given up or, as in one instance, the doctor gave the case up after an attendance of fifteen months.

All through this period my daughter went from bad to worse. The retirement of the last doctor seemed to leave us with a helpless daughter, who was suffering great pain, while as a family we realized that our inheritance was one of hopelessness. Strange as it may seem, just at this period of deepest darkness, a sister who resided at St. Anne's recommended Christian Science. Having had four years of disappointment and defeat in one direction, it was with very great reluctance that I came to Rochdale. When, however, I moved in this direction, it was first to ascertain what kind of people Christian Scientists were, and by what method the healing was wrought. Attracted by the kindness and nearness of the Christian Scientists I found on my first visit, assisted greatly by my daughter's practitioner, and guided by "Science and Health with Key to the Scriptures" by Mrs. Eddy, we have witnessed the dawn of Truth in our day. In our experience *materia medica* proved its impotency and finally collapsed; while Christian Science proclaimed God's omnipotence and Truth's absolute triumph. From a bed of pain my daughter has been raised to a life of happiness and usefulness. Twelve months ago our home might have been called a house of bondage, but today it is one of liberty, and we are rejoicing that through divine Truth the lame has been made to leap as the hart, and the tongue of the dumb doth sing.

Instead of being confined to her bed, our daughter is now going to work and earning a livelihood. When asked as to the reason of this tremendous change, we declare it to have come by Truth's appearing—what Truth itself hath wrought. In giving this testimony we would express our gratitude to God for having upraised such an apostle of Truth and freedom as Mrs. Eddy, who by her discovery of Christian Science has been able to lead my daughter, and thousands besides her, to the fountain of infinite Life.

JOHN LORD, Rochdale, Lancashire, England.

Courage! for thus and only thus—
As we are prompt and hazardous,
As we are rapt, religious, and austere—
We are victorious,
And find the strange, steep way, and hear
The airs rush into song before our flight,
And pass out of the night,
Persuaded by a single star,
And learn that where the soul's adventures are
The truth's discovery is near,
And the delight
Of liberty, and peans, and pageantries of light.

GEORGE CABOT LODGE.

FROM OUR EXCHANGES.

[*Universalist Leader.*]

While the faith of some inside the church is weakening and there is real anxiety at the seeming portent of loss of position and power for the Christian church, there are wise men outside who are coming back to the church as the only way of individual, social, national, or world salvation. The note of confidence which the pulpit has lost the secular press has caught. But recently in *Leslie's Weekly* there appeared a plea for church attendance. After exalting the sermon as an instrumentality of power, it says: "But, aside from the sermon itself, be it inspiring or otherwise, people ought to go to church to worship God. Should there ever arise a generation that forgets to worship at appointed times and places, moral advance will have received its death-blow. It is instinctive for man to worship a power higher than himself, and it is the Christian church which conserves the instinct. The church has always been too closely identified with the moral and intellectual progress of mankind to allow its influence to languish. Can there be an easier or simpler way for every man to lend a hand than to have a revival of the good habit of church-going?"

[*Standard.*]

Whatever we may think about the possibility of bringing together the different bodies of Christian believers, no one can doubt that there is, in this and other lands, a strong and increasing conviction that the present divisions of Christendom are harmful and unnecessary. There is an unselfish and genuine devotion to Christian unity which increases with each day. It is being generated on the distant mission fields as Christian workers of different denominations face the tremendous task of evangelizing the non-Christian world, and as the native Christian body expresses its perplexity over the divisions which exist among those who serve a common Lord and are committed to a common undertaking. The serious consideration of this problem by the Edinburgh conference was unavoidable. Thoughtful men could not come together for the consideration of the Redeemer's work in foreign lands without giving attention to that which hampers and hinders their undertaking. That the question is a most difficult and perplexing one does not excuse us from giving it thought. If present conditions are ideal, then agitation for closer relations among Christian bodies is a sin; but who believes them to be so?

[Charles W. Stevenson in *Christian Register.*]

Love and life are the measure of eternity and infinity. It is through these that we shall approach the understanding which will bring us into closer relation with the divine and which will make us like Him. But life in its abounding and love in its blessing have no measurements in time. That which we are and that which we would be are both divine. And we shall rise to the might and majesty of one who sent us through the exercise of life and love! Here, then, is the key to the redemption of the soul, to the fulfilment of the purpose, to the development of man and race. Live and love! It matters not that behind there stretch the slow ascending steps that we do not understand. It is from the summit of the present life that we shall look and discover the God who is leading.

[Rev. Robert W. Rogers of San Francisco, as reported in *Redlands (Cal.) Facts.*]

Men who are feeling the pulse of the religious life of our day cannot help but predict that the next awakening of the churches will be a return of vital faith. The pendulum is swinging from confidence in iconoclastic thought to a demand for constructive thinking. The people are rising

Digitized by Google

up and demanding the comfort of positive truth and tested light. They are seeking not so much the labeled man as the consecrated man who can illuminate and inspire faith. Romanes said: "Science is moving with all the force of a tidal wave toward faith in Jesus Christ." The next great era in the religious life will be when men shall rise up everywhere and say, "Christianity is true." The sense of the wonderfulness of Christian civilization and the startling uniqueness of the Christ is growing with such irresistible power in modern life that the spirit of trust is sure to break forth.

[Rev. Charles S. Lane in *Hartford Seminary Record.*]

There is need of an enlarged conception on the part of the Christian church of its educational mission and ministry. The church is not to stand barely as a lighthouse, sending its beams across the stormy waters of life to warn men from rocks and shoals, but rather a light to point out the road and to help men to keep walking steadily in it. The voice of the church is to be not barely the call to come to Christ, but to show all what following Christ means. If the religious life is to be conserved and deepened, if we are to present an intelligent and virile faith, able to grapple fairly and victoriously with the problems of humanity and society, there must be more definite, intelligent, and comprehensive religious training.

[*British Congregationalist.*]

That we are in the midst of a great revival of interest in religious ideas and beliefs is not to be questioned. Recent discussions and controversies have caught the ear of the man in the street, and have moved him to strike in and take a share. "Theological reconstruction" is as familiar a phrase to him as, say, "payment of members" or "limitation of veto." If a quickened interest, so far as the mind is concerned, were the sign of a real religious revival, then we should be in the midst of a revival indeed. No one will do anything but welcome this revived intellectual curiosity as to religious affairs, and as to the validity of religious belief, it is a preliminary, and probably an indispensable preliminary, to the richer religious revival still to come.

[*Zion's Herald.*]

The accreted charity, the collective sentiment, of the bettered and bettering centuries, is furnishing now a movement toward mercy which with every year is gaining increased headway and sweeping farther afield in all the earth. Jesus Christ is more and more getting his way with mankind, and we, in common with believers of every tongue and race, rejoice this Christmastide that, taught and impelled by him, the people of America are more generally and heartily converting their sentiments into services, and making of Christianity both a creed and a life.

[*Churchman.*]

The Son of God in giving life to the world did so in the most real and most effective way by showing what the divine life was under the common conditions of ordinary living. Jesus fully and entirely accepted whatever limitations were necessary, in order that his life on earth as man should be a really human life. In its various details of service for others, in its joys of companionship, in its disappointments, and in its apparent failure, the purpose of it was to reveal to men the ideal life, to stimulate in men the will to live that life and also to give them power to carry out that will.

[*New York Observer.*]

When the millennium comes it will arrive not just by force of bare, divine fiat, but because believing and repenting men have for generations been cooperating with God in the working out of the plans looking toward the consummation of that millennial bliss.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel.*

ATTENTION IS CALLED to the new volume, "Poems by Mary Baker Eddy," now on sale. Specially bound; 79 pages.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel.*

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

NEW PAMPHLETS.

Now on sale are four new pamphlets: "Seeking and Finding," "Prayer and Healing," "The Divine Nature," and "Upward Footsteps." Each pamphlet contains five to nine articles that have previously appeared in the *Journal, Sentinel,* or *Monitor;* and they are particularly suitable for handing and sending to inquirers or persons who are becoming interested in Christian Science.

Hereafter, the price of all pamphlets (except "What our Leader Says" and "Christian Science and Legislation") will be reduced to 5 cents a copy; 55 cents a dozen; $2.00 for fifty, and $3.50 for one hundred. Hereafter, also, the republication in the English language of single articles as "tracts" or "reprints" will be discontinued. It is believed that their place is better taken by the daily article on Christian Science in the *Monitor* and by these new pamphlets and others that may be issued.

NEW POST CARDS OF THE MOTHER CHURCH.

Post card photogravure, in sepia tint; an exact reproduction of the large photogravure of The Mother Church Buildings and Publishing House with parkway in foreground. Single copy, 5 cents; twenty-five copies, $1.15; one hundred copies, $4.25.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES." MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90; six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of *1900, 1901, and 1902*. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 72 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.20. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the month, and include all issues for the month named as expiration date on the wrapper. XI indicates the year 1911; XII, 1912. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25 — £0: 5 s.	2d.	Mk. 5.30	F. 6.45
2.25 — 0: 9	3	9.50	11.60
2.50 — 0: 10	3	10.50	12.85
4.00 — 0: 16	5	16.90	20.60

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Governor Bass of New Hampshire in his inaugural address, among other matters, recommended the ratification of the proposed income tax amendment to the federal Constitution, favored the nomination of United States senators by direct vote of the people, publication of campaign expenses, and creation of a public service commission. Governor Pothier of Rhode Island also recommended a public service commission. Governor Dix of New York spoke for economies in the business of the state. Governor Plaisted of Maine urged the adoption of business methods in the administration of the affairs of the state, the abolition of unnecessary offices of the state and a wise consolidation of departments, a direct primary law, the ultimate election of United States senators by direct vote of the people, a corrupt practice act, and approval of the income tax law. Governor Foss of Massachusetts favored direct nominations in primary, popular selection of United States senators, people to have the right to start legislation and to stop it, a "Greater Boston," abolishment of the railroad, gas, and electric light, Boston transit and highway commissions, and the creation in their place of a board of public utilities, state and city cooperation in the ownership of docks and terminals, removal of all duties from food products, Canadian reciprocity, immediate installation of vocational and trade schools, ratification of a constitutional amendment for income tax, speedier action in superior court dockets, paying judges higher salaries, prevention of delays in criminal cases now an outrage, development of inland waterways, initiative and referendum, workmen's compensation law.

Tide lands, constituting about fifteen miles of harbor frontage and long held by the Southern Pacific and other transportation companies, have been declared public property by Superior Judge Bordwell in a decision in a suit filed more than a year ago by the municipal harbor commission of California. An appeal will be taken. The present value of the land is estimated at more than five million dollars. The judge held that the state was trustee of the people and that the granting of patents to tide lands was a violation of the trust.

The United States government has brought suit against the Southern Oregon Company to recover 96,676 acres of land in southern Oregon, valued in the millions. The grant stipulated that no tracts greater than one hundred and sixty acres were to be sold to any one person. According to the federal authorities, all of the grant, save 6963 acres, was sold on June 22, 1875, to Joseph Miller, agent for Collis P. Huntington, Charles Crocker, Leland Stanford, and Mark Hopkins.

Some of the most important cases for many years are now before the supreme court of the United States, and upon the character of the decisions handed down in many of the cases will hinge the future policy of the Government in its campaign against trusts, in its regulation of railroads, in its enforcement of the pure food law, in the employers' liability act, and in the enforcement of the commodities act.

To prevent deforestation in the Crawford Notch section of the White Mountains, the Society for the Preservation of the Forests of New Hampshire is advancing a movement which has for its object the acquiring of the forests by the state. Experts have found that most of the timberland owners are agreeable to the state taking over the forests for a suitable consideration.

Title to hundreds of thousands of acres of land in Kentucky was affected by a decision of the supreme court of the United States holding against the Eastern Kentucky Coal & Land Corporation, which claimed the property under the so-called Virginia grants.

A supplemental brief is to be submitted by the Government in the Standard Oil dissolution suit in the supreme court of the United States. This case was first presented to the court last March. It is understood that no new brief will be filed by the Standard Oil counsel.

That the federal Government has been defrauded out of more than a million dollars in import duties at New Orleans through false weights and improper grading of sugar was developed by the grand jury investigation which has been in progress there.

A civil suit in equity is pending against the so-called "bathtub trust," and some thirty-seven individuals are under indictment on criminal charges for violations of the Sherman anti-trust law.

The annual race for motor boats from New York to Bermuda will be started this year by the Motor Boat Club of America on Saturday, June 17, from some point in Gravesend Bay.

More than three million dollars has been saved to the city of New York during the past year by the department of water supply, gas, and electricity.

During 1910 the United States mints sent out more than $111,500,000 in coins, of which nearly $105,000,000 was in gold.

International.

The single tax theory of Henry George has worked admirably in Edmonton, Alberta. Under the old system Edmonton suffered all the customary evils of arrested and unequal development, such as are found wherever a premium is placed on buildings and speculators are encouraged to hold on to their unimproved land until high land values have been reached through the improvement of adjoining properties. Now the owner of unimproved land must pay a tax equal to that of his neighbor, who may have on his lot a building worth a very large sum of money.

Edmond Thery, the French economist, figures that the maintenance of Europe's armed peace footing in the last twenty-five years cost approximately twenty-nine billion dollars, which involved an increase in the public debt of the European states of from twenty-five to thirty billion dollars, and constantly excluded from productive industry one hundred and ninety-five thousand officers and three million eight hundred thousand men.

Statistics of the legacy duties paid in 1909 show once more how small are the majority of fortunes in France. There were 379,418 successions, causing the disposition of $1,158,000,000. Four fifths of these successions varied from $200 to $2000; forty-six exceeded $1,000,000, ten exceeded $2,000,000, and only two exceeded $10,000,000. The amount of duty paid was $54,250,000.

A decree governing the operation of mines in Morocco, which the Sultan of that country proposes to issue in pursuance of the provisions of the Algeciras convention of 1906, has been approved by the United States. The assent of this Government and of all the other Powers which participated in the Algeciras meeting is necessary to the promulgation of the firman.

Maurice Tabuteau, contesting for the Michelin cup at Dax, France, Dec. 30, broke the then existing world's aviation record for distance, covering 362.6 miles in a continuous flight of seven hours and forty-five minutes in a Blériot monoplane.

The Panaman Assembly has approved the bill authorizing President Arosemena to receive bids for the construction of the Panama-David railroad. The cost of this work is not to exceed ten million dollars, for which the government may issue five per cent bonds.

Industrial and Commercial.

The directors of the Calumet & Hecla Mining Company have unanimously agreed upon a plan for the consolidation of twelve Lake Superior copper mining companies. It is proposed to organize a new Michigan corporation with ten million dollars capital, divided into four hundred thousand shares, par twenty-five dollars, the shares of which shall be exchanged in varying proportions for the outstanding shares of the absorbed companies. The present average cost of production is something over ten cents a pound. The consolidation is expected to make possible ultimately an annual saving in operating costs of between eight hundred thousand and one million dollars, or between three fourths of a cent and one cent per pound on the combined output.

Louis C. Brandeis, senior counsel for the traffic committee of commercial organizations of the Atlantic seaboard, has filed an exhaustive brief in opposition to the proposed advance of freight rates by the railroads east of the Mississippi and north of the Potomac rivers. As to the argument of the railroads that they need additional revenues on account of required increases in wages, he submits three propositions: namely, some railroads, at least, do not need additional income; in some railroads any existing need of additional income is due to causes other than wage increases or acts of Congress; every railroad which is properly undertaken and financed can meet any existing needs without rate increases, through the introduction of scientific management.

Patents have been issued covering an important discovery in telephony, made by an army officer, who dedicates his invention to the people of the United States. The discovery may be described broadly as wireless telephony guided by a wire. As many as ten conversations or more, it is said, may be held over one wire. The theory is that the vibrations of the ether surrounding the wire become the vehicle by which conversation is held, not by the wire, as in ordinary telephony. The instruments to be employed are those now commonly used in ordinary wireless telephony.

The public service commission has received a comprehensive plan for the reorganization of the Metropolitan Street Railway Company of New York city, which has been in the hands of a receiver since Sept. 27, 1907; also a petition for approval of the plan from a joint committee representing the bondholders.

The two hundred million-dollar cement trust, organized two years ago, has, after a stormy existence, been split wide open and gone out of business. Prices have already dropped to the level prevailing at the time the trust was formed.

SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"HE THAT LOVETH NOT."

CLARENCE W. CHADWICK.

THE chief concern of the student of Christian Science is how to express Love in thought and act. To accomplish this holy purpose he must first gain a right idea or concept of God. Early in his experience in Christian Science he is very liable to be forcefully impressed with the unmistakable meaning of the Scripture, "He that loveth not knoweth not God; for God is love," and he finds enough in this text to occupy his thought day and night. Turn in whatever direction he may, he encounters this word love, standing out in bold relief against the clouds of sense, which would ever turn thought into opposite channels where human selfishness holds sway.

Before he sees that Love is "the King eternal" in the mental realm, he may query, Why do I have to love everybody before I can be healed by Christian Science? Or, thinking to justify his own uncorrected sense of justice and love, he may ask, Why can't I have my likes and dislikes, so long as I do not really hate any one? If he is honest and sincere, however, he soon learns that divine Love never ceases to be Love, but is unchanging in its manifestation toward friend or foe. Then there begins to dawn upon him a sense of his own mental poverty; he sees that his own limited sense of love has been as far removed from the Love that is God as the east is from the west. He begins to think of God as Love, but this is found to be insufficient to heal the deep-seated wounds of malice, hatred, anger, personal censure, and condemnation. He must receive and assimilate the love of God in his own heart, and express it in daily life, if he would lay the axe at the root of all troubles and be able to overcome the human hatred of Love and Truth.

Since Love is "of purer eyes than to behold evil," and cannot "look on iniquity," and since it "thinketh no evil," Love must be and is the divine Principle of all right thinking. It therefore follows that all wrong thinking, under whatever guise it may appear, is opposed to divine Love. To think wrong about anybody or anything is not then a manifestation of Love. Rather is it, in varying degree, a manifestation of human hate, or, to express it differently, whatever does not manifest Love is necessarily tainted with some opposite quality. Jesus made it very plain to his students that they were either for or against the truth; that they could not express both love and hate. Human likes and dislikes are born of the flesh; they are not the offspring of Spirit. Whatever is born of Truth and Love has no dual capacity to love and to hate. It can love only, and its love will destroy malice and hate and all kindred errors.

"He that loveth not" is not related to Love and cannot reflect Love. Lip service may fall far short of reflecting Love. Saying with the lips that God is Love, while believing that man is a sinner, fails to establish in consciousness the spiritual fact of unity existing between Love and Love's idea. Until such unity is recognized, the true reflection of Love is not in evidence. Until the spiritual oneness of Principle and its idea, God and man, is understood in Science, human likes and dislikes will clamor for divine recognition and justification. Human love, claiming the right to love one and to hate another, will argue up to the eleventh hour to maintain its own selfish inclinations. When it is willing to deny—forsake—these human tendencies and to acknowledge the allness of divine Love, it will begin to become a transparency for divine Love to shine through, and when this sign of spiritual awakening is manifest, the mortal has begun to love his neighbor, and not before; he has begun to think as God would have him think, and to do as he would have others do.

When the great Wayshower remarked, "Without me ye can do nothing," he knew that divine Love was the only power of the universe, and that without a scientific understanding of man's identification with this power, all human effort would be in vain. He was obeying the divine will, not the human. In no other way could he reflect that Love which heals and reforms. If Jesus worked through the power of Love alone, so must his true disciples in every age. Christian Science is here to demonstrate to the world the practical availability of divine Love in every detail of human activity. He who touches the hem of its Christly garment soon recognizes his own lack of Love, and the untold misery, unhappiness, and unrest that have entered human consciousness through the channels of hatred, selfishness, envy, and cruelty.

"Father, forgive them; for they know not what they do," is a meaningless abstraction to him that loveth not. "It was easy for Jesus to forgive, because he was perfect," the materialist will argue. He, however, who would justify the thought of personal animosity or resentment, betrays not only an ignorance of Love, but also of man's true selfhood, which is necessarily a reflection or manifestation of divine Love, and this debars him from utilizing the power of Love either for himself or for others. It debars him from exercising any conscious control over matter and its assumed laws. It makes him a prisoner in the belief of life and intelligence in matter, a slave to false appetites, a bond servant of the human will or carnal mind. He may entertain a desire to be good and to do good, but "how to perform that which is good" he finds not, for when he "would do good, evil is present" to suggest all manner of excuses. Finally he can say with Paul, "O wretched man that I am! who shall deliver me from the body of this death?" And then it is that he begins to learn something of the Love that demands the correction of all wrong thinking; he begins to understand the healing power of divine Love and the *modus* of its application in the correction of human discords.

"He that loveth not" is he that murmurs, criticizes, condemns, and maligns his fellow-man. In his darkened sense of what is right and needful he may say, "Away with Christian Science; I will none of it," little realizing that it is his best friend, patiently waiting to point him the way to heaven. His lack of love shuts the door on his own progress and makes him an object of pity rather than of condemnation. Christian Science is an open door to him who is ready and anxious to love and to be loved.

"I BRING YOU GOOD TIDINGS."

M. LOUISE BAUM.

WHAT Solomon called "good news from a far country" is today becoming, in the light of Christian Science, the record of things at hand. That God is ever present, hence that He does dwell with men, is the word which Christians have heard from the beginning, and Christian Science demonstrates this. In the light of divine understanding all things are become new, and therefore it is with a deep sense of the essential sacredness of every least act of men done in the name of good, that *The Christian Science Monitor* is publishing good news.

True religion is not only something which lifts us to hope for better things in a far-off time and place, but it is the understanding of Life, working in us here and now to bring to pass the kingdom of God. All down the centuries men have prayed, "Thy kingdom come. Thy will be done in earth, as it is in heaven." The interpretation which Mrs. Eddy puts on these words, "Thy kingdom is come; Thou art ever-present;" "Enable us to know,—as in heaven, so on earth,—God is omnipotent, supreme" (Science and Health, p. 17), coincides with Jesus' own, "Know that it is near, even at the doors;" and, "The kingdom of God is at hand." There is no place where good is not, and this must become apparent to dwellers on earth if they are faithful to the divine Principle of being which Jesus revealed. He taught and lived this Principle. He showed how earthly discords of every sort become harmonized, till peace and beauty appear where the opposite seemed to be, for him who knows God.

Therefore, when the progress of the cause of Christian Science brings it about that a daily newspaper is published, it is evidence that there are glad tidings of good things to be published to the world. All things must become new before the kingdom of heaven can be brought to pass. We must rise daily into higher and higher sense of the reality that lies back of all these feeble human efforts at right doing. It is not by disowning human endeavors toward rightness that we rise, but by translating them into the pure language of the kingdom.

Nothing on earth today is so complete an expression of mankind as the daily newspaper. Here all human activities, what the people think of, what they and their neighbors are doing, what they hope and purpose besides, and what they actually achieve, find record. The printing-press is admittedly the chief avenue of influence on earth today—reaching farther than any personal power, or pulpit or political oratory, or oral teachings; and in the daily newspaper, reaching the people as it does almost every hour of the day, this influence of print reaches its height. We have become a race of readers. What comes through the eye reaches us more surely and effectively than anything that is spoken. In the old time the drama was held to be the strongest expression of the national life, and therefore the strongest influence upon the people for good or ill. Today a complete summary of the national, even of the world life, is given in the papers. The printed word and pictured scene together tell the story. Is it not therefore of paramount importance that the ideals thus imparted should be of things pure and of good report?

If evil communications bear fruit after their kind, far more surely does good bear its own fruit. To "do good and to communicate" is the Scripture command. To communicate the good deeds of men is to inspire all men to goodness. To set forth these good doings of mankind in such clear guise as shall persuasively declare their beauty, this is a noble task for any to engage upon. That a religious organization has set itself this task should not be thought a thing presumptuous. To preach good tidings, the gospel, is the work of the church; and to show the beauty of holiness gleaming upon the common round of human endeavor is the only way to lift mankind's better into best.

Mrs. Eddy has elucidated these things very clearly in the Christian Science text-book (pages 115 and 116 of Science and Health), where she gives the scientific translation of mortal mind. She classifies the evil beliefs of mortal mind, such as passions and appetites, hate, sin, and disease, in the first degree. These are the things with which the publishing work of newspapers has been far too much concerned. These are the evil communications which corrupt, the pitch that defileth, and which no man should touch except in the immediate effort to cleanse it. To take up evil does not cure it. Good alone can heal humanity of its wickednesses.

It is the second degree of mortal mind with which the daily newspaper should have concern. Here we find the moral nature declared. Here appear the virtues of humanity, "honesty, affection, compassion, hope, faith, meekness, temperance." These are termed the transitional qualities, and these are steps in human progress which cannot be skipped. The daily newspaper, the teacher of the masses, should inculcate these virtues, both by precept and example. Whatever men are doing in the light of these ideals should be spread all abroad. And when the whole thought of the daily paper, the hourly aspiration and endeavor of every writer, every worker thereon, dwells in the third degree, which Mrs. Eddy calls understanding, then the paper goes out to the world to inspire and save all to whom its lightest message may appeal. Even as in human contact each with each the innermost thinking is what gets transmitted, over and above the mere words of greeting or the exchange of chat, so when "wisdom, purity, spiritual understanding, spiritual power, love, health, holiness" (Science and Health, p. 116), are the ideals back of a newspaper, it is these things which will in some degree reach the most careless reader.

One of the important purposes of a newspaper is to bring tidings from afar, making indeed the far near. We may know more or less of what our immediate neighbors are thinking and doing, but only through the press can we learn of the hopes and joys and progress of our brothers in distant places. Modern invention in many ways is bringing the ends of the earth together, uniting all in the circle of a great family tie. And all of these inventions are pressed into the service of the newspaper. The telegraph, the telephone, the wireless, the mail service, the swift automobile, even the sky-men who tell the world what they have seen in cloudland,—the action of all these things is concentrated upon the pages of the newspaper, and for a penny or two is placed within the reach of every one.

So too the paper which puts us sympathetically in touch with the lives of foreign peoples is enlarging our horizon for the coming of the full light of understanding, heralded in what humanity calls culture, education, and brotherhood. For culture is only love, learning to love what is beautiful and good everywhere. Culture helps to break down those limits of selfish absorption which bar out joy, but which are little suspected by those who build themselves into such a prison-house. Furthermore, nothing so makes for universal peace as the daily press, when its purpose is peace and not war. If it is true that newspaper "jingoism" has stirred up many a war, then it is far more true that the influences of the press for peace and harmony are effective. To love men we must know them, and they must be presented to us in their true, best light. The old-time exchange of editorial discourtesies is happily everywhere giving way to the opposite thing, and writers from over seas strive to understand and present intelligently sympathetic reports of the work and progress of other nations. The paper that looks most to such a federation of the world is the paper that is doing most for world peace.

And it is to the homes that all these tidings of good are brought at last, to the homes where the children are. If the hand that rocks the cradle rules the world, then the hand which indites what children read is most surely a governing hand. Education for the child is more and more concerned

Digitized by Google

with current events. School men are beginning to see that to delve into the musty past is of little avail, if the relation of the lessons to the living present is not made clear. It is of little use to teach a child the ideals of Washington, if he is not also learning to have for himself the same lofty patriotism. To study assiduously about the Magna Charta and know nothing of the present-day discussion over the English House of Lords, to learn about the Boston tea party and be ignorant of our present cry for tariff reform, is not to be educated.

What a right study of the right newspaper may do in the direction of specific education, training for citizenship, and also general culture, is as yet only partially realized. The daily press is really university extension on a tremendous scale. As facilities increase for carrying out this idea, all the world will exemplify what was expressed of Boston, as a place where "everybody goes to school." We shall all go to school to our daily paper, and never cease learning good tidings of every sort and of infinite scope therefrom.

Again, the current of pure and uplifting thought which is pouring into human consciousness through the medium of the press, is something to be properly valued. Service to the world, service to those whom we may never meet in person, is involved in the slight act of sending out a copy of a good newspaper. Here is food for the many, food that is as important to the life of men to-day as is bread. Such bread cast upon the waters must return to us in double measure. For with the right spirit of appreciation our own eyes are opened to what is offered for ourselves in pages that we had perhaps before skimmed lightly. Here are things worth thinking about, something bigger and broader than petty personal concerns; here is the union of good thinking all over the world, flowing together along the same lines. Here is effective work done for all the peoples of the earth. The government of God, of divine Love, is affirmed for them all. The daily paper then becomes a daily common prayer for the uplifting and peace and good of every man, woman, and child the world over. Is it not worth while to publish such tidings as this?

PERSEVERANCE.

MABEL S. THOMSON.

In furnishing a house, how charming it is to dwell upon the finishing touches which make the drawing-room a thing of beauty, which give such character to the library that every one who looks in exclaims, "Here is a room where I could read in comfort!" But, alas! experience has taught that no matter how artistically furnished the home may be, it is by no means satisfactory if the kitchen stove be out of order; no amount of embroidered cushions in the drawing-room will make up for a deficiency of hot water in the bathroom.

It is much the same with character: the essentials lie, not in the graces of speech or the perfection of manners or accomplishments, useful though these be in their right place, but in the common virtues of patience, humility, perseverance. The importance of the last of these qualities in the practice of Christian Science cannot be overrated, and no one can tell how many times the student has failed to gather the full fruition of his work, just through this lack at the eleventh hour. "Let us not be weary in well doing," says the apostle, "for in due season we shall reap, if we faint not." The trouble with so many of us seems to be that we think the "due season" must be the moment we begin to do our necessary work, forgetting that possibly the trouble may have arisen just through lack of fidelity in the past, and that before we can reap we must have sown. In "Miscellaneous Writings" (p. 127), our Leader reminds us that we only gain the blessing when the heart is "conformed to a fitness to receive the answer to its desire," and in Science and Health (p. 492), we read that "self-denial, sincerity, Christianity, and persistence alone win the prize."

Among the heroes of the old Bible stories there are many examples of perseverance and of the lack of it, with the corresponding results. Abraham, who in the Glossary in Science and Health stands for fidelity, seems to have possessed the quality of perseverance in a marked degree. Moses, on the other hand, at a critical moment failed to persevere in the well-doing which had distinguished him, and falling under an impulse of the human will he lost his right of entrance into the promised land. Peter, of course, is another notable instance of the lack of perseverance, and so in a moment of extreme fear he began to sink; whereas, perseverance would surely have enabled him to reach the place where his Master stood, dominating the waves. Again, in the garden of Gethsemane, there was a lamentable lack of persistence among the apostles, every one of them failing to watch even the "one hour" the Master had asked, while he alone "held uncomplaining guard over a world" (Science and Health, p. 48).

But perhaps the history of St. Paul's work brings out most vividly the contrast between perseverance and the lack of it. If, at the most critical point of his career, he had persevered in well-doing, and had not made the appeal to Cæsar, the history of the whole Christian church might have been different. "Then said Agrippa unto Festus, This man might have been set at liberty, if he had not appealed unto Cæsar." This one incident is sufficient to bring home to us the stupendous necessity which is laid upon each one to continue in the right course. Thank God! that in this age one has been found willing and able to manifest the sublime quality of perseverance in well-doing in the highest degree.

Perhaps Paul learned his lesson through that one experience, for on the journey to Rome he certainly rose to a very great height in the matter of perseverance and under conditions which make his example of supreme importance to all those who are practising Christian Science. During the storm which drove the ship on the coast of Malta, Paul worked, as we should say in our practice, incessantly, abstaining apparently from both food and rest, until he felt certain that the demonstration of safety was made for all who were with him. Sometimes the Christian Scientist stops praying before that point is reached in consciousness, and so error robs him of the fruition of his labors.

There is a story told of Paul and Thekla which illustrates the same point. During one of the waves of persecution of the Christians which broke out in Nero's reign, Thekla was subjected to torture, Paul, so the story runs, being at the time hidden by his disciples in a cave. There he continued in prayer for Thekla, and when she was finally rescued and went to assure him of her safety, she found him still engaged in prayer for her deliverance. In other words, he did not cease to persevere in well-doing until he was convinced that the fruit of that right thinking and right action was assured.

"A WEALTHY PLACE."

J. THOS. MUMFORD.

THE Christian Science ideal is one of never-ending interest to those who have entered its inner chambers. It is indeed, to use the psalmist's phrase, "a wealthy place" to the weary traveler who has entered and found an abundant supply. I, for one, feel as though I had ended a long, weary journey over barren wastes and desert sands to find a blissful resting-place in the bosom of our Father, God. I have no words to express my appreciation of the joys and pure delights of this place to which I have been led by the unerring wisdom of Spirit. To me now the old beaten paths of what people choose to call orthodoxy are worse than jungles compared with this bright, joyful, ascending

Digitized by Google

way, whose light grows brighter and brighter, even "unto the perfect day."

The old beliefs which I once entertained were like the stone at the door of the sepulcher of Jesus, placed there by superstition and ignorance, and held there by the seals of intolerance. The angel, we read, at the break of day, rolled the stone away and sat upon it,—the attitude of victory. To me the old ways of thinking and preaching are the feeble attempts of mortal sense to hold Christ, Truth, within the narrow limits of finite sense by placing around the religion of Christ Jesus doctrines that would dishonor an earthly potentate. These thoughts, as old as historic time, are thoughts of fear, the fear that "hath torment." I believe that every time a person gives expression to such thoughts he sins against his own life and that of his fellow-man. True, he may do so unwittingly or ignorantly, as I did for so many years, but it is the sowing of evil seed that is sure to produce a bitter harvest. The "wealthy place" I occupy today is more to be desired than all the material wealth of earth, and far more honorable than that conferred by the favor of kings.

I was for many years a minister in the Congregational denomination, but on account of failing vocal organs had to relinquish that work and seek a support for myself and family in other ways. I am convinced that God has led me from that time to the present to bring me into this place of spiritual joy and complete satisfaction. The growing discontent I had experienced for years toward old religious ideas and methods, prepared my thought for the reception of the truth and made it fertile to rapid growth. I started from small beginnings, but did not despise "the day of small things." The first step in this glorious awakening came to me in a resolve to do away with prejudice, so far as possible, and to accept the truth from any source. The hungry man wants bread, and he does not care whence it comes if it will satisfy his hunger. I, like many others, had kept the truth from entering my mind by harboring prejudice, and my soul was starving, with our Father's storehouse of infinite supply wide open before my face. Because I thought that no good thing could come out of Nazareth, I closed the door in the face of waiting and proffered blessings.

To prepare myself for the reception of the truth, I swept the church, the ministry, the old way of thinking, the opinions instilled into me from early life—everything—aside, and said to the God I had begun to know as Truth, Life, and Love, "Now lead me into the truth, no matter what it costs me, no matter where it may lead me, no matter what others may think of me for it. Lead Thou me, now and always, and I will follow." This was the open door to all that I have of blissful life, and no other was needed. I have found it at last, and am now eating the fruit from the true vine in God's own vineyard. All this has been brought about by the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. Other works were read with more or less interest prior to the reading of Science and Health, but all were swallowed up by this remarkable book.

I am powerless to express my opinion of the Christian Science text-book! Like the Holy Bible, it may be read many times, but the last reading is the most interesting and profitable. I began to read it with pencil in hand to mark words and passages that impressed me as of special interest, but soon discovered that to follow this plan well-nigh all words would have to be underscored. To me it is the light which reveals the hidden manna of God, and points the way to the tree of life "which is in the midst of the paradise of God" that is here and now. It points the way to complete healing of body, mind, and condition, shows how and where to find the fountain of inexhaustible supply. It teaches salvation from sin, sickness, and death,—a whole gospel for the redemption of the whole man, now and forever.

I have often wondered why I had been compelled to traverse a desert for so many years, going in a circle, as it were, when I could have entered the open door to green pastures and living waters by simply turning toward God's waiting presence. But I went on and on, bearing the burden, keeping my eyes on the beaten path under my feet, thinking that this was all of life, and that I should get over into God's beautiful world after death. The voice of reason, the moving of Soul upon the waters, said, "Look up, see and enjoy now, have these blessings now;" but I went on. I had to be prepared in some way. I had really to get very hungry, like the prodigal, and when that time came, lo! I was there in my Father's embrace, and He was pressing me to His heart. I cannot tell the joy of that moment when Truth dawned upon me.

Let it be remembered that I did not receive the truth through any healing of the body. It was sought and found for the truth's sake. Mrs. Eddy tells us that "outside the material sense of things, all is harmony" (Science and Health, p. 489); because, when outside of these, we find the real,—Life, Truth, Love,—God. I have not words to express my gratitude to God for giving to the world this wonderful discovery through Mrs. Eddy. I can only echo the angels' refrain, "Glory to God in the highest, and on earth peace, good will toward men."

THE "SUBSTANCE" OF THE COMMANDMENTS.

CLARA LOUISE POANE.

WHEN Jesus was assailed with the question, "Which is the great commandment in the law?" he, knowing that one is not greater than another, and that to break one is to break all, answered, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind. This is the first and great commandment. And the second is like unto it, Thou shalt love thy neighbor as thyself." Then he added, "On these two commandments hang all the law and the prophets." He thus emphasized the fact that the first four commandments reveal man's relationship to God, while the other six show his relationship to his brother man. Through the spiritual interpretation of Scripture gained in Christian Science, the characteristics of the first four commandments may be defined as follows: Thou shalt have one God, one image, one name, one remembrance, one honor. We may say, therefore, that the "one God" is Mind, and man has no other; the "one image" is perfect man—idea or reflection; the "one name," or character, is the "I AM," not reflected in "I am sick," for evil has no name; the "one remembrance" is the Sabbath-day consciousness of good—evil cannot be remembered. Herein we shall love God with all our heart, with all our soul, and with all our strength.

When it is seen that man is not material, idea is perfect, and its outline cannot suggest flesh, blood, and bones, for it is a manifestation of spiritual consciousness. Herein we love our neighbor as ourselves. Having gained a concept of the perfection of Principle and its idea, having shown honor to whom honor is due, man's relationship to his brother man is perfected, and the joyful "shalt nots" follow: Thou shalt not kill, nor adulterate, nor steal, nor falsify, nor covet. Not to kill is to refuse to believe in death, since to spiritual consciousness all is Life; not to adulterate is not to add anything unto God's spiritual creation, which is good,—yea, "very good;" not to steal is not to take anything away from the perfect concept, God's idea; not to falsify is always to affirm the truth about God and His universe, including man; not to covet is to know that the real man already has all that belongs to God, good, and that we need "not want," but are to "lie down in green pastures," and be led by "still waters," wherein spiritual being—Mind and Mind's idea—is forever reflected.

In the keeping of the ten commandments is fulfilled, through Christian Science, the "law" and "prophecy" of the "new covenant" which saith, "I will put my laws into their hearts, and in their minds will I write them."

EXCERPTS FROM EDITORIAL COMMENTS.

[*Billings Journal*, Billings, Mont.]

With the passing of the acknowledged Founder and Leader of the Christian Science church organization, there departed from this life one of the most remarkable women the world has ever known. It is not necessary to be a believer in the religious tenets she propounded to realize this fact, nor does appreciation of her stupendous labors depend in any manner upon acceptance of their verity. Call her inspiration by whatever term you choose, it is still undeniably true that her teachings were accepted without question by a very large number of unusually intelligent men and women upon whose lives was exerted as powerful an influence for good—both material and spiritual—as has ever been recorded in the history of civilization.

Apart from and independent of any doctrinal feature of the Church of Christ, Scientist—a discussion of which would not be proper in a secular newspaper—there towers the supreme personality of its Founder. Forceful, and dominating by the power of spiritual strength, she won and held a loyalty seldom accorded the pioneer in a religious movement. The persistence of her thought was a mighty force that convinced where doubt existed and broke down the barriers erected by mental opposition to a degree that has been the marvel of the age.

Coupled with a positive genius for organization, there was a depth of sincerity and a profound earnestness which illumined the written word as much as the spoken sentence and brought heart and mind of her followers captive to the central precept she sought to inculcate, and she believed no more implicitly than did they in the essential quality of its divine origin. Such power to sway others is seldom met with in all the records of all times, and its effect cannot be other than vital upon the life and destiny of the human race, in the history of which few personalities have been more impressive than that of the aged woman from whose mortal frame the masterful spirit has finally departed.

[*Harlem Local*, New York City.]

Whatever difference of views may be entertained by those who are not connected with that great and growing religious organization as to its merits and benefits to mankind, there can be no doubt as to the sincerity of the remarkable woman who originated and promulgated the principles and doctrines of that faith. The movement which Mrs. Eddy began less than forty years ago has increased in its influence and power to an extent that has surprised even her followers, notwithstanding the virulent assaults that have been made upon it, and within the past few years many of the most cultured and eminent men and women in this country have become closely identified with the Christian Science church. The fundamental basis of the new-found faith is that God is omnipotent and omnipresent good, and where He exists evil cannot prevail; that man was created in His image and likeness, and that Jesus Christ was the perfect and immaculate incarnation of His character.

Mrs. Eddy announced, as she doubtless believed, that "divine Love always has met and always will meet every human need" (Science and Health, p. 494), and that the man who loves God will also love his fellow-men under all circumstances and conditions. Christian Scientists believe that if their faith were universally accepted there would be no need of battleships, armories, fortifications, hospitals, almshouses, prisons, police, nor criminal courts, and that Mr. Carnegie's admirable system to encourage temperance would be entirely useless and unnecessary; all of which is only another reawakening of the spirit of the teachings of the holy Scriptures.

[*Utica* (N. Y.) *Press.*]

The death of Mrs. Mary Baker Eddy, the Leader of the Christian Science church, removes a remarkable woman, whose activities were continued till her ninetieth year. Whatever anybody may think about the doctrines she taught or the church she founded, it must be conceded by her severest critic that she was a woman of exceptional ability in several directions, and that her equal has been seldom seen.

It is a great achievement to have built up in practically three decades a church as large as that founded by the deceased. She wrote Science and Health in 1875, began preaching in 1878, and organized The First Church of Christ, Scientist, at Boston in 1879. Since then the growth has been phenomenal, till now there is scarcely a community of any size in the country where this denomination is not represented. One need not subscribe to it or agree with it to accord honest respect to those who do believe in it, for this is a free country in which everybody is entitled to absolute personal freedom in matters of this sort. Surely the Christian Scientists are good citizens, honorable and upright, and that is as far as the public has any concern. To Mrs. Eddy must be paid the tribute of exceptional ability as a leader and an executive, and those who have faith in her regarded her with an affection that knew no bounds.

[*Times*, Eureka, Cal.]

Whatever may be said of Mrs. Eddy by those who oppose her Science—and they are legion—it must be, and by fair-minded persons it will be, admitted that the influence of her work has operated tremendously toward the ennoblement of the popular conception of life. Thousands of her disciples fail to understand what she taught; but there are many, many thousands who have managed, because of her, to come closer to divine Principle; to shake themselves free of the shackles of the grosser carnalism and sensualism that blind us to the beauties of Spirit; to glimpse, even though it be dimly and distantly, the glory of God.

It seems to us that, when stripped of the prejudice and the bigotry and the personalism and the mysticism and the ritualism that surround them, and when we reach their pure essence and vitalizing principle, all the great doctrines of spirituality that cognize the Christ-idea come to one. Form and formula and the selfishness of organization which so oft pervert the true expression of a vast idea are at the root of all human differences respecting the divine. It is impossible to energize the understanding of spirit without moving into the realm of metaphysics.

[*San Diego* (Cal.) *Herald.*]

The passing of Mrs. Eddy removes from the world's stage the most wonderful woman in all the world's history. As the Founder of a great religion, she lived to see her adherents swell to greater numbers than was every known in the lifetime of one (except Mahomet) who preached a new doctrine. As mourning for departed friends was not favored by the great Leader, she will be missed more and mourned less than any prominent leader in the world. The people of this sect have enjoyed more practical and satisfactory benefits from their religion than have those of any religion ever promulgated.

[*Weatherford* (Tex.) *Democrat.*]

With the death of Mrs. Eddy, head of the Christian Science church, another rare and splendid character has passed away. Her faith was not our faith, though that is not to say she was wrong. In groping through the fogs and mist she may have come nearer to the truth than we. Anyway, it was her mission to do nothing but good, and the world is better because she lived. In the sweep of the centuries, there are few such souls that come to dwell on earth.

[*Mercury*, San Jose, Cal.]

Mrs. Eddy's death comes at a time when the church is not only vast numerically but potential financially. She carried it through the days of its childhood, on up to its present comparative maturity, and passed away idolized by thousands and with the knowledge that a monument is left to her memory such as has been the privilege of few women. It is inconceivable that Christian Science has been able to satisfy its thousands of devotees with a simple panacea for mental derangements. Had it not restored large numbers of bodies to normal health, it could never have had an indefinite lease of life and the ability to attract to its fold intellectual people of all races.

Mrs. Eddy was one of the most remarkable women of her day. In the face of bitter persecution and the almost unanimous opposition of society, she held fast to her faith until finally her sect became so formidable that her traducers either quit the conflict or joined her followers. Whether her Science is what it claims to be still remains a matter of opinion. But that those who believe in it have the same right to their faith as those who believe in other forms of worship there is no denying. In this country religion is left to a man's own choice. What is helpful to one may be destructive to another. It all depends on the view-point, and perhaps a little on the temperament.

Mrs. Eddy's Christian Science is here, and, we should say unhesitatingly, to stay. Like other religions it will have its defenders and its critics until the end. In the mean time, no just man or woman will withhold from Mrs. Eddy the meed of praise which her great accomplishment as one of the world's most brilliant executives and organizers deserves.

[*Goodwin's Weekly*, Salt Lake City, Utah.]

Mary Baker Eddy was a great woman. Foes as well as friends must admit that. She kindled a new light on earth. Some said it was a bale-fire, such as robbers build upon the seashore to lure passing ships upon the breakers; others that it was the real star of Bethlehem, signaling a closer walk between the children of men and the dwellers in the clear light in the realms where light had its birth. Thousands and millions believe her a new prophetess; millions peace and serenity and health to tens and hundreds of thousands who were afflicted have been comforted and healed by the ministrations she prescribed. It is not for one who does not comprehend her to judge of her, but it is only justice to say she wrought a marvelous work on earth; gave peace and serenity and health to tens and hundreds of thousands of homes. She was a priestess of a faith which was broad enough to encompass all the children of men; she was as self-contained as a second Hypatia, and one sovereign proof of her power was that when assailed she not only met the assaults with a superb serenity, but so impressed her followers that they, too, had nothing but pity for her assailants.

She lived here on earth twenty years beyond man's allotted time, then, unafraid, and with faculties undimmed, without a sigh, sank peacefully into her final sleep. The impression she leaves is perhaps the most profound that any mortal, putting on immortality, has left in this age.

[*Rochester* (N. Y.) *Times.*]

The death of Mrs. Mary Baker Eddy marks the passing of a woman who is probably the most notable of this generation; certainly none other has had more widespread influence or is regarded with greater reverence by more people. The church or creed which she founded has spread to all parts of the world, has millions of followers, and among those followers are included some of the most intellectual and cultured persons of every community.

Personally, Mrs. Eddy was a woman of a most lovable character. Abuse of all sorts had been showered on her at different times in her career, but she bore it with a patience which ultimately disarmed many of her critics. She had been termed an impostor by many persons, but in recent years the world had come to take a fairer view of her. Whatever may be said of the tenets of the creed she taught, one thing is certain—no man or woman ever founded such a creed, which spread to all sections of the world and has made millions of converts, who was not absolutely sincere in her own belief in that creed or religion.

[*Evening Journal*, Wilmington, Del.]

Mrs. Mary Baker Eddy, who passed away on Saturday night, may be regarded without exaggeration as the most remarkable woman of her times. Her hold upon her followers was indeed wonderful. In a day when all questions of a religious nature are subjected to the most critical tests, when some boast that the statements and influences of men of regular science have great weight and tend to demolish religious theories and principles of the past, Mrs. Eddy founded a religious denomination which has grown and prospered in a very remarkable manner. Her adherents have been and are of a type of high intelligence.

One thing evident about the true Christian Scientists, which shows the powerful and beneficial influence that Mrs. Eddy has exerted in the world, is that they are firm in the faith, energetic and relentless in upholding it, and to all outward appearances in their lives are most happy. The religion founded by Mrs. Eddy has brought peace to many a distressed soul. After all, what higher benefit could it confer?

[*Waterloo* (Ia.) *Times-Tribune.*]

The passing of Mrs. Eddy removes the most remarkable woman of many generations. Whatever may be said of her teachings, there remains a grand life, full of peace and benediction to all mankind.

For many years she was the target of sectarian vituperation; yet she bore it all with a fortitude that could only come of a thorough belief in the righteousness of her views; and thus furnished an exemplification of Christian fortitude that might well serve for an example to her detractors. Throughout it all, no retaliatory word escaped her; no reprisals were made.

Whatever may be said of her teachings from the standpoint of the theologian, yet it remains that she taught hope to the despairing, love to the misanthropic, and faith to him who was weary of the technicalities of creeds.

[*Morning American*, Creston, Ia.]

The death of Mrs. Eddy has removed from earth one of the greatest characters that the world has ever produced. This wonderful woman in the course of a few years has organized one of the greatest Christian organizations of the country. She was a leader of strong personality. She was an organizer of remarkable ability. She built up a church having as its leaders and expounders men of great minds and strong characters. Whether we agree with her doctrines or not there are thousands of men and women who will testify to the efficacy of curing by prayer, so that the Christian Science church is not merely a church of belief, but it is a militant church that brings to its believers physical as well as spiritual regeneration. We believe Mrs. Eddy has done a great work in the world for good.

[*Kansas City* (Mo.) *Journal.*]

Thousands of women who do not believe in Christian Science feel proud of Mrs. Eddy's achievements. Few men have wielded so great an influence over the minds and lives of so many people as this philosophic woman.

Digitized by Google

[*Springfield* (Ill.) *News.*]

Mrs. Mary Baker Eddy lived long enough to see the Science which she founded become one of the permanent and uplifting forces of Christendom. It is about thirty-five years ago that Mrs. Eddy published her now famous book, known as "Science and Health with Key to the Scriptures," and it was four years later that the first Christian Science church was formed with seventeen members. To-day there are nearly a thousand chartered churches, nearly four thousand recognized practitioners, and a total church-membership of a million souls.

Something of an achievement to be accomplished in thirty-five years, and all within the lifetime of the Founder.

[*Eagle*, Wichita, Kan.]

Probably no other American woman by her own efforts ever performed such stupendous work. The vehemence of controversy which has been heaped upon her labors indicates the genius of the leadership which has overcome such vast opposition.

Mrs. Eddy rallied disciples around her until the followers of her teachings have spread over the world, numbering not thousands but hundreds of thousands. Even the layman of controversial bent who finds in Mrs. Eddy's work much that is intangible and to him meaningless, grants that he has tangible evidence of work for the good of mankind in the thousands of persons who credit to Mrs. Eddy's work their rescue from direful experiences.

[*St. Paul* (Minn.) *Dispatch.*]

There may be two opinions upon Christian Science: there can be but one opinion on Mary Baker Eddy. She was unquestionably one of the dominant influences of the age, one of the most remarkable of its women, perhaps the most remarkable, certainly the most efficient. And she so represents and permeates the cult known as "Christian Science" that to give her important rank is to give her teaching important meaning.

It must also be admitted that the sweeping influence of this "Science" could not have been had not the "Science" itself contained the truth and answered what was plainly a very large human need. It is entirely possible, notwithstanding the adverse criticism, the mirthful criticism, that Christian Science has within it truth, whether new or old, which shall withstand contemporary criticism and the neglect of time. If so, then the personal triumph of Mary Baker Eddy will be great and lasting.

[*Lincoln* (Neb.) *Daily Star.*]

One of the most remarkable women of this or any other age passed from the scene of worldly activity when Mary Baker Eddy went to sleep to wake no more to mortal consciousness. There may have been women whose personality stood out in more marked contrast with her kind, who were more spectacular, and made more noise in the everyday life of a somewhat noisy world; but for far-reaching and enduring effect upon mankind, the work of this woman who has just passed away at her home in Boston is unparalleled by that of any other woman of ancient or modern times.

Christian Science owes to Mary Baker Eddy the hold it has secured upon the devotional spirit of mankind, and every adherent of its church holds her in reverential memory. Her death will occasion world-wide regret and sorrow, although her span of life has been as long in years as her usefulness could survive. Her work will live after her indefinitely, possibly until the end of time. Her life has been a lesson of what her teachings can accomplish.

Among the great women of the world there has been none who has left so great an impress as has Mrs. Eddy.

[*Harper's Weekly.*]

The tone of the newspaper comments on the death of Mrs. Eddy indicates a decided increase of respect in recent years both for her character and for her achievements. Nor is it a case of "*de mortuis nil nisi bonum*," but a taking of one consideration with another, and giving a judgment of net approbation. Thus, to quote two of our more thoughtful and mentally exacting contemporaries, the *Sun* speaks of "the astonishing influence she exerted in thousands of homes for the amelioration of life and manners in some of the details of family and social intercourse," teaching cheerfulness of spirit and charity in judging deeds and motives. The *Springfield Republican* says her life was a marvel, and that having stumbled upon the truth that the influence of mind over the body is really profound and far-reaching, the credit cannot be denied her of having forced, however extravagantly, the valuable qualities of this principle of therapeutics upon the world.

Certainly Mrs. Eddy, and the theories, and practical applications of them, with which she is so closely associated, have had a notable influence on certain phases of the thought of her time. She was a pioneer—one of the most extraordinary of whom there is a record—and there are few now who doubt that the body of facts and experience which has resulted from her pioneering is a valuable gain to knowledge.

[*Christian Advocate*, Dallas, Tex.]

After all, newspaper reports to the contrary notwithstanding, the late Mrs. Mary Baker Eddy, Founder and conservator of Christian Science, did leave considerable money to her son, his children, her adopted son, and several other beneficiaries. However, the bulk of her great fortune was bequeathed to the church founded by her genius and ability. Her fortune came to her largely through her book "Science and Health with Key to the Scriptures," and numerous other writings. During her life she was liberal with her means, and in no sense can she be said to have been a woman of penurious nature. In various ways and to various humane institutions she opened her hand and scattered much of her annual income, and now in death it all goes largely to sustain the cause set upon foot by her life-work.

[*The Alaska Citizen*, Fairbanks, Alaska.]

All over the world are homes which have been brightened by the doctrine taught by this truly great woman. Through her works a new religion has been established, and has taken root wherever Christianity is practised. While by no means universally accepted as all-embracing, even its opponents are compelled to admit that it achieves with thousands that uplift they have vainly sought through other teachings. And there is little doubt that this new religion is sufficiently well founded to insure of its enduring for all time. In the earlier period of the era of Christian Science, Mrs. Eddy found her task a heavy one; for, like the Saviour, she was reviled and discredited by the scoffers. It was then her Christian fortitude was evidenced to a marked degree, and her calm refusal to be goaded into reprisals undoubtedly won many thousands to her cause.

In the death of Mrs. Eddy the world has lost a teacher whose doctrines have become, in two decades, more widespread, and have been adopted to a greater degree, than those of any man or woman who has lived in the past hundred years. That those teachings have been for the world's betterment will be most eagerly acknowledged by the many followers who today mourn her death.

[*Syracuse* (N. Y.) *Journal.*]

Mary Baker Eddy has done that in this world which will make her live and live. Her work is the greatest monument. She has given a calm to many lives which has surpassed that of many philosophies.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"OUR SUFFICIENT GUIDE."

THE first religious tenet of Christian Science, on page 497 of Science and Health, reads: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life." Not only in this clear and concise declaration, but throughout Mrs. Eddy's writings, we find her continually advising Christian Scientists to turn to divine Principle, God, who is infinite intelligence, for the solution of the problems which often confront them.

It is true that this counsel of our Leader is but a reiteration of the Scriptural teachings with which Christians have been familiar for centuries: "He shall call upon me, and I will answer him: I will be with him in trouble; I will deliver him;" "If any of you lack wisdom, let him ask of God, . . . and it shall be given him;" "Ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you;" "In every thing by prayer and supplication with thanksgiving let your requests be made known unto God,"—promises for whose fulfilment one might well strive if thereby he should attain to the realization of their glorious hope. In the old way of thinking, however, it was difficult to do this, because of the many and largely imperfect concepts of God held by mankind, and because of the tacit belief that it is much easier to follow the broad road of human will and human desire than to tread the straight and narrow way which Christ Jesus pointed out for his followers; hence the supposition that pleasure and profit were to be found only in the ways of the world, while bondage and loss attended those who conformed to good.

One of the great results of Mrs. Eddy's ministry to mankind has been the change which has come about in the popular thought about God, an apprehension which has made Him more accessible to mankind. Through her teachings Christian Scientists have learned that He is not "a God afar off," but truly "a very present help in trouble;" not a God of wrath and vengeance, but the loving Father-Mother of man; that they who "seek of him a right way," as did the prophet of old, find that His ways are ways of pleasantness and peace. They find that by conforming their lives to His will they lose nothing of value, but gain the kingdom of heaven.

Sometimes, however, we forget that to turn to God with all our problems does not mean that we shall plead with Him through the medium of some other human being. To Christian Scientists, both as individuals and as organizations, there may come problems which seem impossible of solution. There is an honest desire to settle them in the right way, but strangely enough the infinite intelligence whose unerring wisdom is ever available for their need is ignored. They forget that the burden of decision is theirs and not another's,—that they are to work out their own salvation; they must themselves seek communion with God, divine Principle, to the end that they may have in them the Mind which was in Christ Jesus, and do the works which the Master promised they should do.

On this requirement of the Master, our Leader lays special stress. She writes: "First in the list of Christian duties, he taught his followers the healing power of Truth and Love:" and she goes on: "It is the living Christ, the practical Truth, which makes Jesus 'the resurrection and the life' to all who follow him in deed" (Science and Health, p. 31). To Christian Scientists, therefore, as "adherents of Truth," but one course is open: they must "search the Scriptures," and in the light which Science and Health throws upon the sacred writings they will find therein a sure foundation for their faith in the one God,—in Him in whom, to those who come to know Him aright, there is life eternal.

ARCHIBALD MCLELLAN.

PREACHING AND THE PREACHER.

THE omission of the personal preacher from the Sabbath service in Christian Science churches may seem a surprising innovation to some, but when one recalls the nature of the ministry to which Christ Jesus appointed his disciples, when he comes to understand the purposes actuating Mrs. Eddy in providing the Lesson-Sermon, and when he familiarizes himself with the good results accruing therefrom, he can but realize that this sermon is no less commendable than unique.

All will accept the definition of the meaning of the word ministry which is embodied in the apostle James' pregnant counsel to the early Christians, "Be ye doers of the word." They will agree, also, that the supreme end and aim of all preaching is to awaken and establish that apprehension of Scripture truth which will enable Christian believers to fulfil this injunction. To this end, those who have felt called to expound the Scriptures have provided for a hearing at the hands of those interested, and they have addressed all that have come or that could hear.

As the result of her healing and teaching, Mrs. Eddy was called to preach to a hundred times more than could be accommodated in the largest practicable auditorium, and after a long-time endeavor to meet the demand by other means, she devised and provided an order of service which makes it possible for her teaching to be heard each Sabbath by ten thousand or ten hundred thousand. The sermon she has thus supplied is wholly devoted to the enforcement of that interpretation of the Master's teaching which she found to be demonstrably true, and while her plan is novel, it is to be remembered that progress always demands new methods as well as new ideas.

Although the personal preaching is thus eliminated, it is to be noted that effective preaching has not been abolished thereby, but vastly increased, since the specific function and effect of the Lesson-Sermon is to stimulate and equip every aspiring hearer of the word to become a doer of the word, a true "minister of Christ," the Scripture study and interpretation of the Sabbath being but a preparation, a schooling for the practical preaching of the entire week. By the substitution of the impersonal for the personal preacher, Mrs. Eddy has utilized a means by which the unnumbered thousands in all the world who have found spiritual illumination and physical betterment through her ministry may profit by it every Sabbath. This does not lessen the freedom of any who may have the ability and disposition to voice their sense of truth, since the Christian Science periodicals supply a world-wide forum for the expression of wholesome and helpful ideas.

In answer to unauthorized criticism, Christian Scientists can speak unhesitatingly respecting the fruits of the order instituted by their Leader. They attest that the Lesson-Sermon focuses attention upon Scripture truth as the one thing which nourishes the spiritual life, and thus begets the habit of daily Bible-reading; that, having studied this Sermon every day of the week, they hear it read on Sunday with increased interest and profit. Moreover, it has removed the most serious difficulty attending the satisfactory provision for the Sunday service, especially in the instance of small and isolated gatherings, while preserving the integrity of Christian Science teaching, and thus saving the movement from those distractions and divisions which are likely to grow out of the emphasis of personal opinion. The demonstrated value of an idea is its sufficient commendation.

JOHN B. WILLIS.

"HID TREASURES."

THE wise man sets forth with many strong reasons the necessity for spiritual understanding, and tells of the rewards to be gained by its possession, among which are named health, long life, peace, prosperity, safety. Need we wonder that, with all these as the result of the understanding which comes from God, we should be bidden to search for it as for "hid treasures"? The wise man indeed tells us that it is more to be desired than silver and gold; more precious than the rarest ruby. He tells us that God Himself established the earth and the heavens by His understanding, and that the one who possesses this kind of understanding shall walk safely and not stumble, that he shall lie down and not be afraid, and that his "sleep shall be sweet." Well might he add, "With all thy getting get understanding."

We find that the great Teacher was no less insistent upon the need of acquiring spiritual treasures at any cost, making it a condition of discipleship that one should be willing to forsake all that he had in order to become his follower. He reproached the people for their lack of understanding which kept them from being healed by him, but he said to his disciples, "Blessed are your eyes, for they see: and your ears, for they hear." Then he went on to give one parable after another (see Matthew xiii.), among others the one which declares that the kingdom of heaven is like unto treasure hid in a field, to gain which a man would sell all that he had. Again it was likened unto a "pearl of great price," for which one "sold all that he had, and bought it."

All through the Master's teachings we find him directing thought to the spiritual treasures which were so clearly perceived by him, but which were hidden from those who believed that the material senses were the avenue through which they could be cognized. Again and again he healed the sick in the presence of the scribes and Pharisees, but so blinded were they by prejudice that when the little children joined in loud praises of all the "mighty works" which had been done by him, these men could only say, "Master, rebuke thy disciples." Need we wonder that he wept when he beheld the city which was the very citadel of their pride, as he said, "If thou hadst known . . . the things which belong unto thy peace! but now they are hid from thine eyes."

The things which belong unto our peace! Alas, that they should ever be hidden from our eyes, for they are the only treasures, and they are to be found only in the kingdom of God which Christian Science tells us is here and now. It matters not whether the need be health and happiness, peace and plenty, or whether it be to have the deep heart-hunger for God satisfied: the supply, the treasure, waits to reward our diligent search. What if it be hid to mortal sense? This only demands more diligent seeking, for there is no possible uncertainty in the assertion of Christ Jesus, "Every one that asketh receiveth; and he that seeketh findeth; and to him that knocketh it shall be opened." The trouble with so many is that they do not really seek. They spend their time and energy in trying to get others to do the seeking for them, which is a serious mistake. Others,—not a few, but unnumbered thousands,—have found the once hid treasures of health, strength, and peace, and they have found them through the understanding gained from the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy.

This, in turn, has opened up the Bible to them, until they can say with an aged Christian who had searched long and it seemed in vain, until this great light came to her, "Now I can find nothing in the good old book but life, abundant life, on every page." We can help each other (and even to do this effectively we must search for the hid treasures), but sooner or later all must seek God with their whole heart, cheered by the Saviour's word, "Where your treasure is, there will your heart be also."

ANNIE M. KNOTT.

THE FEBRUARY COSMOPOLITAN.

CHRISTIAN SCIENTISTS will read with much pleasure the most excellent article, "Mrs. Eddy: Her Purpose and Accomplishment," by Frederick Dixon of London, England, which appears in the February number of the *Cosmopolitan Magazine*. It is difficult to write adequately on such a subject as this within the compass of a magazine article, but Mr. Dixon has accomplished the task in a most satisfactory way, and our readers, we are sure, will want to circulate widely among their friends this admirably comprehensive and appreciative review of the wonderful achievement of our beloved Leader.

An interesting feature of the article is a reproduction of Mrs. Eddy's favorite portrait, which has never before been published. It is to be regretted, however, that the publishers inadvertently used as the second illustration a picture which is not a likeness of Mrs. Eddy and was never approved by her.—EDITOR.

AMONG THE CHURCHES.

PASADENA, CAL.

Absolutely free from debt, First Church of Christ, Scientist, on Oakland avenue, was dedicated yesterday [Nov. 20], at the time when its auditorium was first occupied. The great ivory hall, seating fourteen hundred, was filled, and the announcement by the Reader that all indebtedness had been paid off, created great enthusiasm. As late as Friday there was $14,000 to be raised, and this sum was freely poured into the treasury of the organization by its members, when the situation was made known, without the individual solicitation of a cent.

The growth of the Pasadena church shows progress from the very beginning. In 1895 meetings were held in various private houses until, in October, 1897, removal was made to the G. A. R. Hall. In January, 1898, the first steps were taken to organize: at this time there were twenty-two members. The organization was completed in March, 1898. In September, 1899, the church moved to the Auditorium. A building fund was started at once, and the record of the proceedings at this time shows a high plane of scientific understanding; the foundation for the future was well laid. In April, 1902, the arrangement for the purchase of the lot on the corner of Oakland avenue and Colorado street was completed. The first chapel was built there and occupied in March, 1903: this seated two hundred and fifteen. In October, 1905, this chapel was enlarged to seat five hundred and fifty. The necessity for larger quarters soon became apparent, and in the winter of 1907 it was decided to sell the corner lot and in a more quiet location build a church that should be a permanent home. The present lot was purchased, a building committee appointed, and in November, 1908, the work of construction was begun. The corner-stone was laid March 30, 1909, and the building was finished, ready for decorators, etc., in May of the present year.—*Pasadena Star.*

GENEVA, ILL.

First Church of Christ, Scientist, of Geneva has recently purchased a building lot. After it was decided to make the effort, the opportunities were abundant, and most of the required sum was raised between the first of September and the last of November.—*Correspondence.*

A NEW PAMPHLET.

Attention is called to a new pamphlet, "Causation," by Frederick Dixon, issued by The Christian Science Publishing Society and now on sale. Forty-two pages. Price, single copy, five cents.

THE LECTURES.

MONTREAL, CAN.

A lecture was delivered by Willis F. Gross Oct. 24 at the Windsor Hall, Montreal. Walter J. Stethem, member of the Anglican Cathedral, introduced Mr. Gross, and said in part,—

It is generally conceded that the world of religious thought is awakening to the importance of knowing just where it stands, and those who have closely followed the trend of this thought must come to the conclusion that the thinking men and women of the day are very much interested in that momentous question which Pilate put to Christ Jesus nearly two thousand years ago, "What is truth?" But, in contrast to Pilate, these inquirers are hungering for the answer, and will not turn away with indifference ere they receive it.

This evening we are the guests of an earnest band of Christians working for good in this city, who in providing this lecture upon Christian Science do so, not with a view of proselyting, but rather as a means of replying to much unjust criticism and to remove misconceptions regarding their religion. This religion they claim to be the same as that preached and practised by our Lord Jesus Christ and followed by the early Christians, and they take the inspired word as their full and sufficient guide. Surely, then, if other religious bodies cannot see their way to extend the hand of brotherly love, the least they can do as professed followers of Jesus is to judge Christian Scientists, if they will judge, by that test given by the Master by which his true followers should be known in that and all future ages: "Ye shall know them by their fruits."

It has been my privilege during the last year or so to be intimately associated with Christian Scientists in England, the United States, and Canada, and without a thought of detracting from the credit due the great orthodox body of which I am a member, or any other religious denomination, I can clearly declare that never in my experience have I come in contact with such sincere, cheerful, practical Christianity, nor such earnest striving to live up to that standard set forth by our Lord in his sermon on the mount, as I have witnessed with profound respect in the daily life of these faithful followers of Christ.—*Correspondence.*

FRESNO, CAL.

The Rev. William P. McKenzie lectured to a large audience at the Barton last night [Nov. 22]. The lecturer was introduced by Henry Hawson, a well-known attorney of Fresno, who said in part,—.

To me, and I think to most seekers after truth, it has ever been a cause of speculation and wonderment that the real, vital elements of the teachings and the work of the Nazarene should have been lost to mankind all these centuries. If I read the New Testament and the life of Christ Jesus aright, if I understand his teachings to the disciples and their messages to the early Christian church, then it seems to me that the gospel he taught two thousand years ago embraced the truth that physical well-being, not less than spiritual happiness, is attainable by the individual who is in harmony with the divine Principle. If that divine Principle be in all, and through all, then harmony is real and discord is unreal.

The world has outgrown many superstitions, and it seems that the time cannot be far distant when we shall discard the idea that physical suffering is in consonance with the divine will. If the works that Jesus did may be done by others who believe in the Christ, and yet through all these years humanity has lost sight of the truth of the divine Principle, then the world owes a great debt of gratitude to the Discoverer and Founder of Christian Science for the restatement of the truth.

I have had occasion many times to contrast the cheerfulness and contentment of Christian Scientists with the querulousness and discontent of many so-called religionists. I have had occasion sometimes, when addressing audiences to the constant accompaniment of more or less distressing coughing, to wish that every audience was as free from that audible expression of illness as the audience in the Christian Science church seems always to be. For many reasons I am constrained to believe that if Christian Science be not all the truth, it at least embodies so much of the truth that the world is the better for its teachings and a debtor to its Founder, Mrs. Eddy.—*Fresno Republican.*

CONCORD, N. H.

Frank H. Leonard gave an address on Christian Science to a large congregation at the church in this city on Tuesday evening [Nov. 29]. He gave an interesting exposition of the basic truths underlying the faith. The speaker was introduced by Charles B. Jamieson, First Reader of the local church, who said,—

Nearly three hundred years ago the Pilgrims landed on our New England shores in search of a haven of refuge from religious persecution. From that nucleus was evolved the spirit of religious tolerance that resulted in the provision of our Federal Constitution guaranteeing to every citizen of the United States absolute liberty of conscience in matters of religion. There should be the same constitutional guarantee of freedom in regard to medicine.

Mrs. Eddy, the Discoverer and Founder of Christian Science, the author of its text-book, "Science and Health with Key to the Scriptures," and a native and citizen of this Puritan state, has expressed that religious and medical independence by discarding drugs and forms and superstitions of religious beliefs, and by boldly advocating the practical application of the fundamental teachings of Christ in reforming the sinner and healing the sick by spiritual means rather than material. That the promises of the Bible are being fulfilled by this system is evidenced by the thousands who are being healed and saved throughout our land. Gradually other schools of religion and medicine are acknowledging the worth of Christian Science and are reaching out for it.

Toleration of each other's religious and medical views results in more or less investigation of the different theories. As publicity of the doings of our great commercial enterprises tends to restore public confidence, so publicity of the teachings and doings of Christian Science tends to remove the fears and prejudices concerning it, due to unfamiliarity with it; hence the establishment, by The Mother Church, The First Church of Christ, Scientist, in Boston, of a board of lectureship, of which the gentleman who is to address you is an honored member.—*Concord Monitor.*

CATLETTSBURG, KY.

The court-room was practically crowded last night [Dec. 2] with persons who were anxious to hear the subject of Christian Science discussed by William D. McCrackan, M.A. The lecturer was introduced by the Hon. J. B. Wilhoit, of Ashland, the commonwealth's attorney for this district, who said in part,—

The question that Pilate asked Christ, "What is truth," has been answered by Christian Science. It is the truth that makes us free. Christian Science comes to the world with the message of "on earth peace, good will toward men." It reveals to us the relationship of man to his God, that man is a spiritual being, and that all men are brothers and that God is the Father of us all; that man is immortal, and that God never made anything that is finite or mortal.

Digitized by Google

It teaches us how to escape from mortality and put on immortality, by turning away from the unreal to the real, from the perishable to the eternal, and from the finite to the infinite. We learn that God is good, and all that He has made is good; that goodness makes its own heaven and evil its own hell.

It teaches that Christ, Truth, heals disease now the same as nineteen hundred years ago; and that man is not governed by material laws, but by the law of Spirit. Truth is God, and God is omnipotent; therefore God is all power and error has no power. Truth is everywhere present and error is nowhere present. The truth as explained in Christian Science is within the reach of all men, and whosoever will can lay hold of it and obtain the great blessing which God bestows upon the children of men. Forty years ago this truth was revealed to Mrs. Eddy, and while at first mortals opposed the truth, it has quietly and silently gone all over the world, until now in every country and every clime you will find living witnesses for it.

To those who do not believe that Christian Science is the truth, or doubt it, and desire to know whether or not it is the truth, the same answer is given now that was given the disciples of John by Christ. He said: "Go your way, and tell John what ye have seen and heard: how that the blind see, the lame walk, the lepers are cleansed, the deaf hear, to the poor the gospel is preached. And blessed is he, whosoever shall not be offended in me."

Catlettsburg Tribune.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Austin, Minn.—William D. McCrackan, M.A., Hirsch's Auditorium, Jan. 31.

Chicago, Ill. (Fifth Church).—Bliss Knapp, Church Edifice, 4840 Madison avenue, Jan. 24, 26, and 27.

Dallas, Tex.—Hon. Clarence A. Buskirk, Dallas Opera House, 3 p.m., Jan. 22.

Great Falls, Mont.—Clarence C. Eaton, Grand Opera House, 8:30 p.m., Jan. 23.

Helena, Mont.—Clarence C. Eaton, Helena Opera House, 8:30 p.m., Jan. 24.

Houston, Tex. (Second Church).—Prof. Hermann S. Hering, Beach Auditorium, 3:30 p.m., Jan. 29.

Kansas City, Mo.—Hon. Clarence A. Buskirk, First Church 3 p.m., Jan. 29; Second Church, Jan. 30; Morton's Hall, Jan. 31.

Lincoln, Neb.—William D. McCrackan, M.A., Oliver Theater, Jan. 29.

Lockport, N. Y. (Second Church).—Frank H. Leonard, Temple Theater, Walnut street, 3 p.m., Jan. 29.

Madison, Minn.—Bliss Knapp, Opera House, Jan. 30.

Marinette, Wis.—Willis F. Gross, Church Edifice, Stephenson and Liberty streets, 3 p.m., Jan. 29.

Montevideo, Minn.—Bliss Knapp, Opera House, 8:15 p.m., Jan. 31.

Plainfield, N. J.—William D. McCrackan, M.A., Hartridge Auditorium, Jan. 24.

Sacramento, Cal.—Francis J. Fluno, M.D., Church Edifice, 23d street, between K and L streets, 3 p.m. and 8 p.m., Jan. 29.

Saginaw, Mich.—Willis F. Gross, Masonic Temple, Washington avenue and Johnson street, 8:15 p.m., Jan. 23.

Superior, Mich.—Willis F. Gross, Grand Opera House, Jan. 27.

Tucson, Ariz.—Prof. Hermann S. Hering, Church Edifice, 20 East Pennington street, Jan. 24.

Waterbury, Conn.—William D. McCrackan, M.A., Buckingham Music Hall, Jan. 23.

Watertown, S. D. (First Church).—Prof. Hermann S. Hering, Church Edifice, Maple avenue and First avenue Southeast, Jan. 16.

Wheeling, W. Va.—Bliss Knapp, 3 p.m., Jan. 22.

TESTIMONIES OF HEALING.

Words cannot express my gratitude to our heavenly Father, nor to the one who has been sufficiently Christlike to have become the channel through which such indescribable good has come to all mankind. Those like myself who have been raised from the depths of discouragement and from great physical suffering can best understand what it means to be grateful to our beloved Leader, Mrs. Eddy, for Her immortal discovery.

About three years ago I found myself a broken-down music student in Berlin, Germany. A sense of overwork had crushed my ability to progress, and I found myself in deep despondency, while the physical suffering resulting from this mental state seemed insufferable. Christian Science was brought to my attention at that time through one of my sisters, but notwithstanding the self-sacrificing efforts of a practitioner in Berlin, and some improvement in my physical condition, I was as one having eyes, yet seeing not, so I returned to *materia medica*. One of the best physicians in Berlin then took my case in hand, and urgently advising my return to my home in Los Angeles, Cal., wrote at once to my parents, discouraging all thought of my ever being able to continue with music as a profession. I had yet to realize the truth of my practitioner's constant and loving assurance that "God is ever present," so I acted upon the physician's advice and returned home. My mental state was such that I did not wish to live, believing death to be the only sure means of relief. I reached home the first of February, 1906, and continued in this condition until early in March.

One day my sister, who had been greatly benefited in Christian Science, brought me a copy of the *Journal* of December, 1905, and gently urged me to read an article therein. I had told my sister a few days before that if I could only understand what was meant by the "unreality" and "nothingness" of evil and matter, I might become interested in Christian Science. At first I refused to read the article, which was on these subjects, but I finally began, with meager interest, and mostly to please my sister, as I thought; but after the first few lines I forgot my disinclination to read, and soon became completely absorbed in the article. As I read, a glorious revelation of Truth was experienced by me, and all my suffering did indeed prove to be "nothingness" (its native state). The next day I went to my work again, a happy and well girl, and commenced the study of our text-book, Science and Health, with the utmost joy and careful attention.

Since that memorable day in March, 1906, Christian Science has been my only physician, and I have missed but two or three days of work on account of physical disturbances. These were always promptly overcome by Christian Science, and have never returned. I have worked harder in my music than ever before, and am witnessing ever improving conditions in every department of my experience. Success in music, as well as in all other professions, I find to be absolutely dependent upon one's obedience to God; not to personal ambition.

It is often said that musicians consider it necessary to be nervous, moody, subject to discordant emotions and to financial limitations, arguing that these states of mind combine to form the artistic temperament; but Christian Science is enabling people all over the world to rise out of all such false beliefs, and as a result they are finding that it is in reality the opposite of these wrong thoughts that produces real artistic temperament. Right thinking is based upon the teachings of Christ Jesus, and revealed to us anew in Christian Science. We are beginning to experience a desire for purity in every line of professional work, which every one in his heart of hearts always longs for, and we have Christian Science to thank for this marvelous improvement.

I am deeply grateful to those who labor to fill our peri-

Digitized by Google

odicals with such helpful articles, and to all who are serving our beloved cause. I am grateful for the inspiring privilege of membership in one of the Christian Science churches of Los Angeles, and for being able to take an active part in endeavoring to help our cause along. I have Christian Science to thank for all the harmony which is being expressed in my life, and my deepest desire is to become worthy of the name Christian Scientist.

FANNIE DILLON, Los Angeles, Cal.

When in an almost helpless condition, as a result of overwork and worry, I was urged to try Christian Science treatment. The medical schools had been carefully tried and at great expense, but without avail. With little faith in Christian Science a practitioner was sought and treatment begun. There was immediate relief, and in a short time it was possible for me to go to work again. From that time on there was a steady improvement and a return to a normal condition.

One of the things about Christian Science which from the first impressed me most was the statement of several business men and women whom I had met, that they were finding the application of the true teachings of Christian Science to be of great assistance in working out their business problems. This seemed rather strange at first, as ordinarily we do not think of a religion as containing any fixed principles that may be applied to business transactions; but as we advance in the understanding of Christian Science and start in to apply this knowledge, even in a small way, we are greatly helped. Christian Science teaches that honesty and truthfulness are absolutely imperative to real success. It shows us that it is not necessary to misrepresent in order to secure a sale, and that if we expect to succeed in any field of activity we must stick fast to the truth. Christian Science develops better mental conditions and shows us how to bring out the good qualities in ourselves and in others. It helps us to overlook to a great degree the faults of others, and as we see more clearly that the error manifested by a person is the result of a lack of truth in that person's consciousness, it is much easier to see the error as impersonal. We also discover the foolishness of judging from appearances, as these are generally deceptive.

Of all the help that we receive in Christian Science there is none greater than the destruction, even in part, of the many fears and worries of a business man. Many people who have no knowledge of what Christian Science really is wonder at its rapid growth all over the world, but the Christian Scientist knows from personal experience that the reason why the membership of the Christian Science churches is so rapidly increasing is because the world is finding therein a most beautiful and practical religion, which appeals to mankind because it is not composed of creeds and philosophy, but of demonstrable truth.

PERRY H. HASBROUCK, New York, N. Y.

It is with a great sense of gratitude for what Christian Science has done for me that I give this testimony. I had been a sufferer from liver, kidney, and bowel disorders since infancy, these being supposedly hereditary. I also suffered greatly from headaches three to four times a week. Life was indeed a burden from the health standpoint, and there was no outlook for relief from medicine, as I had tried so many remedies with only temporary gain. I was a nervous wreck when, about three years ago, I visited a Christian Science practitioner by the advice of a friend. I knew nothing about Christian Science, but we talked matters over and she loaned me a copy of Science and Health, which she asked me to read. She agreed to give me treatment for a week, but I think one treatment did the work. My cure was instantaneous, and I have never taken a dose of medicine since, nor have I had the least return of my old troubles. I am enjoying perfect health for the first time in my life.

At the time of this great demonstration of the power of Truth, I was not a member of any church, but had been tossed about upon the sea of doubt and fear for a number of years, always looking for some religion that would satisfy; but I never found it until I began to read "Science and Health with Key to the Scriptures," in connection with the Bible. What a different light is thrown upon the Bible teachings by Christian Science! Besides all these blessings, the truth has helped me in many other ways. It has cured me of the fear and worry habits, and given me a God I can trust at all times. I am deeply grateful to God for all these blessings, and also to Mrs. Eddy for unfolding this great truth. I am studying diligently to get a fuller understanding of this practical religion.

MRS. CELIA M. WEBB, Douglas, Ariz.

I wish to express my gratitude for what Christian Science has done for me. It has revealed to me a God who is an ever-present help. Before I knew anything of this truth I denied the existence of a supreme power and was opposed to all forms of religion, as they seemed to me to be mere superstition without proof.

The understanding of Christian Science has proven to me the ever-presence and all-power of God, good, and the unreality of evil. I am grateful for Christian Science, because it is teaching me to love all men as brothers, and in doing this it is overcoming egotism, selfishness, and all uncharitableness. I am also grateful for this teaching because it is the Science of Life, and through the understanding gained from the study of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, every attack of illness is quickly overcome; it has revealed to me something of eternity, the spiritual existence apart from material phenomena and a limited sense of life, and has indeed unlocked the Bible which before was to me a closed book.

Among other blessings is that of class instruction, which has raised me to a higher plane of thought and action, and turned me from personality to Principle, both in the seeking of good and in the overcoming of evil. For our Lesson-Sermons, our literature, including the *Monitor*, our lectures and reading-rooms, I am daily filled with gratitude toward our Leader, who has made all of this possible.

GEORGE M. LONG, Dorchester, Mass.

In the hope of benefiting some one else, I wish to offer the following testimony of my healing through Christian Science. I was a sufferer from a severe case of stomach trouble for over five years, and during this time had spent hundreds of dollars in trying the best physicians of the city, with little or no relief. I had reached a point where I was not allowed to eat solid foods, and had become so nervous and irritable that life was indeed a burden.

It was at this dark hour that Christian Science was presented to me, and I immediately decided to give it a trial. I called on a practitioner, and to my surprise was greatly benefited by the first treatment and found myself completely healed after the second one. Through my healing my husband became interested and took up the study of Science and Health, with the result that he was enabled to lay off his glasses, although he had been told a short time before by an oculist not only that he would never be able to do without them, but in time would require stronger ones.

Through the understanding of the Bible which Christian Science has given us, our home life has been entirely changed, and God has become indeed a very present help. Having been members of a church for twelve years, we were much gratified to find that Christian Science taught the same God, but made plainer the way by which we can turn to Him for our physical healing. Because of this en-

Digitized by Google

larged understanding of God taught by Christian Science, we later became members of Ninth Church of Christ, Scientist. We are indeed grateful for the many blessings which Christian Science has brought to us, and words cannot express the gratitude we feel toward Mrs. Eddy for her many sacrifices and unselfish patience in pointing out the way for us.—Mrs. Anna Van Arsdale, Chicago, Ill.

I feel it a duty to express my gratitude for the blessings which Christian Science has brought to me. I have been helped out of a great many dark places, but to me the most wonderful was the healing of a serious case of throat trouble. I was taken very ill while caring for a daughter who had been suffering from this disease. I tried to help myself, but found I could not. A note was sent to a practitioner at noon, asking for help, and the next morning I awoke entirely healed. My healing was so sudden that I knew I had found the truth, and the truth had made me free. For this I am very grateful to God, and to our dear Leader, who has shown us the way.

Mrs. Eliza E. Lacasse, St. Johnsbury, Vt.

It is with love and gratitude to God, and to Mrs. Eddy, that I tell what Christian Science has done for me. It is two years since I took up the study. Christian Science found me a very unhappy woman, alone in the world, with the thought that I had nothing to live for; and the desire to end it all followed me continually. I was very melancholy, and dissatisfied with the doctrines of the churches. I had tried in the old way from childhood to be what the world calls a Christian, but I could never understand why God should punish His children with sickness and disappointments one after another, until they wished for death. But I am very thankful that God has led me into Science, where I find that God is Love and we have only to understand the divine Principle of being to be made whole. I am now living a happy life in truth and love.

When Christian Science found me I had been suffering with rheumatism over twenty-five years, and was sometimes helpless for weeks at a time. I also had heart and kidney trouble, which the doctors said could not be healed; and other internal troubles for which I had worn a supporter for over ten years. I had been treated by three different doctors, the last one saying I would never be well unless an operation was performed, to which I would not consent. I cried to God for help, but in February, 1909, I broke down and was helpless. I then sought help in Christian Science, and after the first treatment the pains were all gone. With two weeks' treatment and the study of the Bible and Science and Health I was a well woman. I was healed of weak lungs by reading "Science and Health with Key to the Scriptures," before having treatment. I never knew what happiness was until I came to Christian Science, for I did not know what it was to be without pain for one day.

Now I am well and happy, but the physical healing is not to be compared with the spiritual uplifting. Everything seems glorious, as I am able by my small understanding to help others. I am indeed grateful for having been led so patiently and lovingly into the paths of Truth.

Mary Pond, Alice, Ohio.

On Christmas morning, 1909, my little daughter, a year and a half old, was lying in a semicomatose condition and could not be aroused, which alarmed me greatly. I discovered later that she had swallowed some match-heads the day before, and I knew that according to *materia medica* this was extremely dangerous in the case of so young a child. I immediately called up a Christian Science practitioner on the telephone, and she took the case. Half an hour later, when she reached my house, my little daughter was noticeably better, and although the Scientist remained only a short time, the improvement during that time was marvelous. We went to my mother's house, half a mile away, and spent the day there, and when we departed for home at ten o'clock in the evening the child was in a normal condition.

It was a beautiful demonstration of Christian Science healing, and I feel so grateful for it that I want other mothers to hear of my experience.

Maude Richards Schmidt, Chicago, Ill.

[Translated from the German.]

Gratitude for Christian Science impels me to tell others of the benefits I have received. In my childhood I suffered from hip disease, and the material methods employed left me with a shortened and weak leg, from which I suffered terribly when walking or when standing any length of time, though I wore a boot with a thick sole as a support. Six years ago I was suffering so severely that I was scarcely able to work at my profession, and I was repeatedly advised to consult a doctor; but fear overcame me, for I dreaded the hospital, having already undergone two operations on my leg. Then, as guided by divine Love, I was led to the house of an acquaintance who knew of Christian Science, and on my complaining of my distress, I was advised to try it, to which I agreed with a thankful heart. From that time I attended the services, which made such a wonderful impression on me that after the service I could walk more and more easily, feeling as if I were being supported. I subscribed to *Der Herold der Christian Science*, began to learn English, and with great joy I daily study the Bible and Science and Health, which with the *Herold* is my only reading.

A practitioner of Christian Science, who with great love and patience directed me to its teachings, treated me for some time, so that the seemingly obstinate error gradually yielded to the understanding of Truth. Besides this, I had been troubled for years with other ailments,—stomach and bowel trouble, which disappeared during the treatment. I had believed these ailments to be owing to my sedentary mode of life, but though this latter has not been changed, my thought has been lifted above the material, so that the spiritual understanding of God has enabled me to overcome the temptations of error through divine Truth. I can take long walks, and also stand for a long time, and have never had a return of such troubles as those from which I suffered before Christian Science found me. I now wear an ordinary boot.

I should also like to tell of a demonstration which was reached through the understanding of Truth. A few months ago I felt in what seemed the weaker hip severe pain at times, and a few days later I found difficulty in walking. In the evening I observed that the scars were inflamed and one place open, but I went to bed and declared the truth. The next day I went with a quiet mind to my work, knowing that I could not be separated from God, good, and in a short time the seemingly severe trouble had disappeared into its native nothingness. It is not possible for me to express in words the benefits I have received through Christian Science, but I thank God, and also our revered Leader, with my whole heart.

Fraulein Christine Frick, Stuttgart, Germany.

Since my restoration to health, I have thought I should write the facts about my wonderful healing, in order that some poor sufferer might be benefited thereby. I was led to Christian Science through the kindness of a neighbor, who was not a Christian Scientist, but who knew of some of its beneficial effects in her own family. She sent me some literature, in which I found a remarkable instance of healing. I was not then able to read much, so my husband

Digitized by Google

read it to me, and after some discussion we concluded that what had helped another so much would surely help me a little.

We began at once to seek a practitioner, though not knowing where to look, and finally found one located about seven miles from us in a busy little town. My illness was nervous breakdown, with a complication of chronic diseases, among them a catarrhal affection of the stomach and bowels. I had been in bed most of the time for about seven months, during which time we had employed three medical doctors, also an osteopath, and had a nurse to care for me, as I was too weak to help myself and could not even see my friends, as every exertion caused such dreadful exhaustion. In having to suffer continually, and be obliged to keep such perfect isolation, I felt as though the cord would soon snap that seemed to hold me, but I was suddenly awakened from the gross materiality of it all to the fulness of Life, to the spiritual reality of all things.

When the Christian Science practitioner called upon me, she found me in bed, unable to sit up long enough to eat my scanty diet; but when she turned the search-light of Truth upon me, it revealed at once the unreality of it all. I was immediately healed, so that I arose from my bed and walked across the room several times without help, which I had been unable to do even once. From that time I gained very rapidly, and gave up all medicine and material help, looking instead to the all-power, all-presence of God for my sustenance and growth. The practitioner left me a copy of Science and Health, which I read almost continually, and on the third day I went to the table to eat with the family, much to their surprise and alarm; but I continued to do so, and felt like a culprit escaped from prison. When told that I could eat anything I wanted,—no medical laws to bar my way, but freedom,—then came the sense of dominion over all things. I gained very rapidly, and in six weeks from the first treatment I dismissed my help and have managed my own household ever since.

We have had many beautiful demonstrations of the truth in our family, since my own healing, and we are truly grateful to our heavenly Father for the bestowal of such a precious gift upon His children, and for that noble woman, Mrs. Eddy, we have only the deepest sense of gratitude. We say many times, "What would life mean to us without Christian Science!"

MRS. EMMA B. PRINCE, Galien, Mich.

I wish to tell others what Christian Science has done for us. My son, twelve years of age, was a sufferer from hay-fever since he was four years of age. We tried different physicians, and every remedy that we heard of, but without relief. As I had for some time been interested in Christian Science, I knew and felt that Truth was our only help. I took the boy to a practitioner, and on our way home he began to feel relieved. After two weeks' treatment the disease had disappeared; but as he still had attacks of coughing, we kept on declaring the truth, and in a few days this also was overcome.

I could scarcely realize what had been accomplished. Words cannot express my gratitude to God, and also to Mrs. Eddy in pointing out the way to all who are seeking the truth. I am striving each day to learn more of this truth, and know that with the help of the Bible and Science and Health my demonstration will be completed.

MRS. EMMA CONRAD, Blue Island, Ill.

I am writing this testimony in the hope that it will help some mother as the truth about God and man has helped me. My baby was born in June, 1907, when I realized in a wonderful way the power of Truth. Since then every ailment has been overcome for him in a few hours. In November, 1908, I was visiting a Christian Science friend in Michigan, when we were awakened in the night by an attack of croup. In one hour, however, it was perfectly met and I returned to my bed, while the Scientist sat by the side of the sweetly sleeping boy and declared the truth of the all-power and all-presence of God for an hour longer. When we arose in the morning it seemed as if this experience had been only a midnight dream, and our baby was as bright and happy as ever. There were none of the after-effects which often follow the use of material remedies for this disease. Divine Love had been manifested, and that was enough.

I cannot express my thankfulness to God, and to our dear Leader, Mrs. Eddy, for this beautiful truth that sets the captive free.—MRS. MADGE W. BALDWIN, Gary, Ind.

It is a pleasure to testify to my healing in Christian Science. I wrestled with the ills of the flesh for a year and a half, until my neighbors declared I could not live. They begged me to have a doctor, but knowing that all things are possible with God, I held to the truth, trusting in the laws of God to make me whole. Through absent treatment I was helped out of the seeming darkness, and enabled to reach a complete demonstration of the truth. I am now a stout and hearty woman, and this trial has given me and my family a better understanding of Christian Science. We have been interested for a number of years, and are the only Scientists in this locality. We study the Lessons in the *Quarterly*, and take the *Sentinel* and our other literature.

My son also was healed of an attack of illness last winter, and is now perfectly well. It has been surely proven in our family what Truth will do. I feel thankful to God for revealing this truth through Mrs. Eddy, who gave it to the world.—MRS. LIZZIE GRAY, Harlan, Mich.

Each year I am awakened to a fuller sense of gratitude to God for the many blessings which we have received in Christian Science, both spiritual and physical, but the greatest of all is the spiritual healing. I was healed of supposedly inherited headaches, and also laid aside glasses which I had worn for years, with the first treatment from a practitioner. At the time my baby was three months old an eruption appeared on his face and parts of the body. It was necessary to bind his hands to prevent him from tearing his face. The healing was slow but perfect, and in a few months the eruption all cleared away and left his face normal. He is now six years of age and has had no return of the trouble.

I am more thankful than words can express for even the little understanding I have gained from the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, of the one infinite God and His Christ.

ANNA M. WRAGG, Westbranch, Wash.

As I am desirous of testifying to the healing power of Truth, I send this testimony. Since taking up the study of Christian Science, over three years ago, I have been benefited in many ways, both mentally and physically. I have proved that divine Truth does heal. In June, 1909, I was suddenly taken very ill,—to mortal sense. I had a very high fever and my throat was in a bad condition. Being too ill to help myself, I sent for a practitioner, who promptly responded, and the condition was so far overcome at once that the chills and fever were all gone, and the throat trouble disappeared the next day. My suffering was very severe, but the overcoming was so clearly due to the truth that my gratitude for Christian Science cannot be expressed in words. My great desire is to show by my life how thankful I am to God, and to our dear Leader.

RENA M. CLAYTON, Chicago, Ill.

Digitized by Google

I gladly testify to what Christian Science has done for me. There have been some very beautiful demonstrations made, both for myself and son. My little boy was taken sick on Thursday, but was in no discomfort until Monday, when he grew suddenly worse and a severe throat trouble and eruption developed. There were several strangers in my home, and desiring to comply with the law, we called in a physician to diagnose the case. He examined the child and said he had evidently been very sick, but that all danger was over and that he could not diagnose the case. He became interested in the boy's condition and called several days later to see how he was. He found him greatly improved. When I told him that the boy's skin was peeling, he said it was from the disease, which was a fever with a throat complication.

I am truly thankful to God, also to dear Mrs. Eddy, for the help received in Christian Science during the last five years. I have had class instruction, which has been a great help.—Mrs. Eva E. Miller, Chicago, Ill.

For several years I have wished to write and express my gratitude for what Christian Science has done for me. I am profoundly thankful that Christian Science was discovered by Mrs. Eddy in this age, and that I am able to understand it even in a small degree. As the light of Truth begins to dawn in my consciousness, I can certainly see how Christian Science broadens one, especially when one realizes that man reflects the infinite Mind in which there is no limitation in all that is good.

As many others have said, I feel that the world owes to Mrs. Eddy a debt of gratitude for her untiring efforts to be faithful to Christ's teachings, and for giving us of all that she has received. Since I began to study this teaching I have not had any serious illness, but have been cured of headache, neuralgia, colds, and throat difficulties. I am grateful for the physical healing, also the moral regeneration, and more so for the spiritual interpretation of the Bible which our beloved Leader has given us through "Science and Health with Key to the Scriptures."

Mrs. M. C. Jackson, Los Angeles, Cal.

[Written for the *Sentinel*]

SCIENCE AND SOLITUDE.

ALVA B. AMMERMAN.

In the cool and quiet places,
In the wood's deep sylvan shade,
We may always find clear traces
Of the things that Mind has made.
Over verdant velvet grasses,
Sparkling bright with diamond dew,
Every summer breath that passes
Bids one here his life renew.

And, 'mid silence which so sweetly
Woos the weary one to rest,
Bids him cast away completely
Cares and fears which sore distress.
Then o'er troubled thought comes stealing
Sense of burdens laid aside;
Love divine has wrought the healing
Which His wisdom doth provide.

And the one who once was weary
Of a loveless life and vain,
Has in Science solved the query
How his loss can be his gain.
As he leaves the glade, rejoicing
In his new-found liberty,
Songs of feathered folk seem voicing
That blest truth which makes us free.

FROM OUR EXCHANGES.

[*Churchman.*]

The surest foundation for a sane optimism in our day is to be found in the fact that Christians and non-Christians are combining to force organized but divided Christianity to face the supreme test of a world fellowship in Christ. Christmas is a world festival of a world religion. Are those who profess the religion and claim the festival manifesting a world church? This, and this alone, is the witness to which we were and forever are committed.

Universal fellowship in Christ is Christianity, and nothing else is. St. Paul's words are a revelation from above, but they are also so perfect a revelation of what is in man that we understand and believe. There is no escape. Knowledge, power, sacrifice, and all the rest are powerless, empty, and meaningless without the binding and eternal law of fellowship—love, that love which is the fulfilment of all relations, the perfect expression of our religion, which cannot be acquired or maintained by an individual but presupposes and exists only in the family of God. Christianity is a relation. It cannot exist in isolation. The character of a Christian is in his relation to God and man, not in himself, nor even in his relation to God or to man, but to God and man. The at-one-ment is in the God-man. Is this the witness of Christendom today?

That it is not, is becoming the burdening consciousness of Christians of every name. That it must be the witness of our Christianity is coming to be the compelling conviction of increasing numbers of Christians and of churches. Christmas is the key to our hope. It tells of the family and fellowship in Christ, the sent of God to save the whole world.

[*Outlook.*]

The great giver brought no money, clothes, or food with him. No man ever had less at his command of those things of which men usually make gifts; he was, during the wonderful years of his active life, penniless and homeless; but he was incomparably the greatest giver who has appeared among men. No one of all the great benefactors of mankind has approached him in the reach, power, and eternal value of his gifts. The secret of his divine generosity is told in a sentence: he was himself a gift! It was not the separate and detached gifts he made by the way—the healing, the hearing, the speech, the loaves and fishes—that clothed him with compassion and beneficence like a garment, from the very hem of which life and peace flowed; it was the complete and perfect bestowal of himself that has begun to fill the world with light and health and love.

Here is the supreme reward of growth in purity, unselfishness, the wisdom of love: it so greatly enriches the spirit that he who comes to possess these beautiful and divine qualities gains the privileges of a great giver. Many men and women are perfectly sincere in desiring great wealth that they may use it generously for others. But great wealth comes to few, while the inward enrichment comes to all who invite and hold themselves open to it. Every man may become a great giver if he chooses; for every man may make himself rich in the vision, the moral strength, the peace of spirit, which are the supreme achievements of life, and the most inspiring, comforting, enduring things which a man can bestow on his fellows.

[Rev. J. J. Dunlop in *Hartford Seminary Record.*]

God does not need to be reconciled to man. "God is love"—He always has been and never can be anything else to all eternity. God is not angry with men and in His wrath turned to be their enemy. I know that the old-fashioned orthodoxy of not such a great while ago so pictured Him, and the sacrifice of Christ was presented as something done to appease Him and propitiate His wrath. God wants men to be reconciled to Him. This is for me, in part, the mean-

Digitized by Google

ing of the incarnation and the atonement. God is Love, and the loving heart is unsatisfied so long as the object of its love is estranged from it. Furthermore, Love desires the best for its objects, and God knows that man's highest interests are secured through coming into harmony with Himself. Therefore God wants men to be reconciled to Him. Jesus Christ in his character and life sets before men a pattern of righteousness. This awakens man to the realization of his possibilities. Then he arouses within a man a passion for righteousness. The pattern of righteousness does this in part. It makes him hunger and thirst after righteousness. But beyond that the love awakened in a man's heart for him by the manifestation of his love stirs within the strong desire to be like him.

[*Advance.*]

It is clear that the salvation which Jesus Christ came to bring was not directed first toward the state or society. It was the fatal mistake of his people that they persisted in expecting him to save the state. But he refused, just as he declined to take up the abuses of society. What Jesus came to save was sinners. He said so over and over, and so he is preached all through the New Testament. The Old Testament is an attempt to save a state, a society; the New Testament is salvation for sinners. But mark, it is personal salvation. Jesus Christ is a personal Saviour, and the sinner is personally saved. The union between himself and his disciples was a personal union; and when he had ascended, they went out calling upon men to repent of their sins and believe on him as a personal Saviour. To the agonizing question of the jailer Paul replied: "Believe on the Lord Jesus Christ and thou shalt be saved." What is meant by being saved also is made clear. Man is lost because he has lost the disposition to be right with God and to do right among his fellow-men. His heart is away from God, and being away, he is a lost man. He is not right for this world or for any other world. Jesus reconciles him to God by making him right.

[*Watchman.*]

Happiness is more securely based upon character than circumstances. This is independent of circumstances and is superior to them. The one legacy of Christ to his disciples was their inward peace of mind, or a tranquillity of thought which could not be disturbed by all that might be inflicted upon them. The Stoics found this basis and made themselves indifferent to the changes and reverses of fortune. Common wisdom and experience also find this basis and turn from the dissatisfactions of outward conditions to the state of mind which balances itself at all times.

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth.*]

Nothing that Jesus ever said was intended to apply to this world only; his spiritual perspective always took in eternity. He had an eye for natural beauty; Solomon in all his glory, he declared, was not arrayed like the lilies of the field; but he viewed natural beauty as the expression of Spirit, the unfolding of the Word, or manifested being, of God—"If God so clothe the grass of the field, which today is and tomorrow is cast into the oven; shall he not much more clothe you, O ye of little faith?"

[*Christian World.*]

The strange, the revolutionary fact of our time is that Jesus Christ is actually, here and there, beginning to be taken seriously. Locked up for long in the metaphysics with which theology had swathed him, kept in the skies to be hymned and chanted at, he is now by growing multitudes being accepted as having something really to say about the social order, about the true way of living.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains important changes and additions by the author.

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel.*

ATTENTION IS CALLED to the new volume, "Poems by Mary Baker Eddy," now on sale. Specially bound; 79 pages.

EACH NEW EDITION OF THE CHURCH MANUAL containing the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will have special notice in the *Sentinel.*

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

NEW PAMPHLETS.

Now on sale are four new pamphlets: "Seeking and Finding," "Prayer and Healing," "The Divine Nature," and "Upward Footsteps." Each pamphlet contains five to nine articles that have previously appeared in the *Journal, Sentinel,* or *Monitor;* and they are particularly suitable for handing and sending to inquirers or persons who are becoming interested in Christian Science.

Hereafter, the price of all pamphlets (except "What our Leader Says" and "Christian Science and Legislation") will be reduced to 5 cents a copy; 55 cents a dozen; $2.00 for fifty, and $3.50 for one hundred. Hereafter, also, the republication in the English language of single articles as "tracts" or "reprints" will be discontinued. It is believed that their place is better taken by the daily article on Christian Science in the *Monitor* and by these new pamphlets and others that may be issued.

NEW POST CARDS OF THE MOTHER CHURCH.

Post card photogravure, in sepia tint; an exact reproduction of the large photogravure of The Mother Church Buildings and Publishing House with parkway in foreground. Single copy, 5 cents; twenty-five copies, $1.15; one hundred copies, $4.25.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, BOX 56, Fall River, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES." MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90; six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing from Germany and America, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE: ITS RELIGIOUS PHILOSOPHY. By HON. CLARENCE A. BUSKIRK.

CHRISTIAN SCIENCE: A RELIGION OF DOING. By JUDGE WILLIAM G. EWING.

THE CHRISTIAN SCIENCE HYMNAL. Revised and enlarged. Cloth, single copy, $1.15; one dozen, $9; half dozen, $5. Half morocco, single copy, $1.40; one dozen, $12; half dozen, $6.50. Full morocco, single copy, $2.50. Levant, single copy, $3.50. Pocket edition, size 4 5-8 x 6 5-8. Full morocco. Single copy, $3; one dozen, $30.

MUSIC. Poems written by MARY BAKER EDDY and used by special permission, have been set to music as follows:—

"THE MOTHER'S EVENING PRAYER." By William Lyman Johnson. Arrangement for high and low voice in same copy. Single copy, 75 cents; one dozen, $7.

"CHRIST MY REFUGE." By William Lyman Johnson. Arrangement for high and low voice in same copy. Single copy, 75 cents; one dozen, $7.

COMMUNION HYMN.—"SAW YE MY SAVIOUR?" By William Lyman Johnson. Published in two keys for high and low voice. Single copy, 50 cents; one dozen, $5.

"BLEST CHRISTMAS MORN." By Frederic W. Root. Published in two keys, for high and low voice. Single copy, 27 cents; one dozen, $2.75.

"O'ER WAITING HARPSTRINGS OF THE MIND." By Frederic W. Root. Published in two keys for high and low voice. Single copy, 27 cents; one dozen, $2.75.

Please state when ordering any of the last three numbers, whether high or low key is desired.

Our Catalogue for 1910, containing description and prices of above named literature and a selected list of Bibles, will be mailed free on application. Remittances should always accompany orders, and be made by check, money order, or exchange on Boston or New York. Currency or coin should not be sent by mail unless registered. Please send no money or business letters to the Editor or Editorial Department.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. *607 pages, 10 x 7, and addendum*, bound in cloth, marbled edges. Price, single copy, $5.00; *six or more copies to one address, $4.50 each.*

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.20. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the month, and include all issues for the month named as expiration date on the wrapper. XI indicates the year 1911; XII. 1912. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25—	£0: 5 s.:	2d.;	Mk. 5.30;	F. 6.45
2.25—	0: 9	:3 ;	9.50;	11.60
2.50—	0: 10	:3 ;	10.60;	12.85
4.00—	0: 16	:5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

In an unusual address delivered before the New York County Lawyers' Association at the Hotel Astor recently, Samuel Untermyer advocated the absolute abolition of what he described as "the financial device known as 'the holding company,'" describing it as a "recent financial abomination" and one of the most prolific means of oppression of the investing public. He cited in detail what he called the "throttling" of the Kanawha & Michigan railroad by the six great trunk lines, the American Tobacco Company case, the Lehigh Valley case, and the cases of the New York Central in Vermont and the Union Pacific in Kansas and Missouri, as instances of holding company abuses, which, as he says, "have come under my observation during the last six months."

Restitution to the amount of one million three hundred thousand dollars and the surrender of warrants aggregating two hundred thousand dollars, upon which payment had been stopped, have been made by the men convicted or otherwise implicated by the state of Pennsylvania in the capitol frauds. In return the commonwealth agreed to drop all further criminal action against the defendants indicted. The new state capitol, a magnificent structure, with its rich furnishings, cost approximately thirteen million dollars. Of this sum the state alleged that it had been defrauded out of about five million dollars.

Activities of the geological survey in the classification and valuation of the Government's western coal lands, which were begun in 1908, have resulted in an increase of the price set upon the lands of more than four hundred million dollars, according to a statement issued by that bureau. Since the survey began its work it has appraised 14,682,839 acres, with values in some tracts ranging upward of four hundred dollars an acre. The work has been done on the basis of the actual tonnage under each forty-acre tract. The total price set upon the lands by the survey is $685,944,839.

The operator of the wireless telegraph station of the Mare Island navy yard on the Pacific coast recently picked up messages exchanged between Key West, Fla., and Norfolk, Va. The distance from the Mare Island station to Key West is nearly four thousand miles. The message was transmitted overland, and had to cross the Rocky mountains before reaching the antenna at Mare Island, and may therefore be considered a phenomenally long wireless transmission.

The United States circuit court of appeals has handed down a decision reversing a decision returned by United States Judge Hough on Sept. 15, 1909, and overthrowing the suit brought by the holders of the famous Selden automobile patent against a number of firms and individuals concerned in the automobile industry, which sought to enforce a claim of infringement against all the defendants.

The states of Oklahoma, Kansas, and Nebraska have laws which establish a system by which banks are forced to contribute to a fund which is used to guarantee bank deposits. The supreme court of the United States, in a unanimous decision, holds that such laws are not contrary to the United States constitution nor inconsistent with its principles.

The House has passed the Sulloway general pension bill, which grants pensions to all soldiers who served ninety days in the United States army in the civil war, or sixty days in the Mexican war, and who have reached the age of sixty-two years. It adds about forty-five million dollars to the pension bill.

Two resolutions have been introduced in the Senate declaring the election of Senator William Lorimer of Illinois fraudulent, and therefore void, and one speech was delivered and one detailed minority report was read in support of the same contention.

Of the 92,000,000 people in the United States, more than 28,500,000 reside in cities exceeding 25,000 in population. There are 228 of these cities, nineteen of which have a population exceeding 250,000, and fifty of which exceed 100,000.

Some fourteen hundred men in Adams county, Ohio, found guilty of selling their votes in recent elections, have been fined in various sums or disfranchised for a term of years or both.

Prosecution has been begun by the Government against the combination of transatlantic steamship companies under the Sherman anti-trust law.

The Longworth bill, providing for the creation of a permanent tariff commission, has been introduced into both houses of Congress.

Seven hundred thousand unleased acres of the Osage nation are to be thrown open to oil men.

The federal treasury has received $26,872,-270.26 from the corporation tax.

International.

The Chinese National Assembly, which met on Oct. 3, was dissolved Jan. 11, after a session that has been stormy and characterized by frequent clashes with the throne and the grand council, but which nevertheless has been productive of good in its special mission of preparing the way for a general Parliament in 1913. The throne has been made aware that the people are determined to have a voice in the government. On the other hand the radical element has been given to understand that ill-advised legislation by movements designed to undermine the central government will not be tolerated.

More than six hundred miles of track were added to the railways of Canada last year, bringing the total mileage to the twenty-five-thousand mark. Already a thousand miles of the Grand Trunk Pacific is in actual operation, and the Canadian Northern is now winding through the passes of British Columbia. The northern wilds of Ontario will shortly be traversed by the eastern divisions of these two roads, and branch lines will tap the mains from the older district to the south.

The Krupp works of Essen, Germany, declared a dividend of ten per cent last year. The gross profits were nine million dollars, half of which was written off and the rest devoted to surplus account and dividends, and to contributions to the invalid and pension fund for its seventy thousand employees.

A land tax bill has been introduced in the Australian legislative assembly by the state treasurer. A flat rate of three farthings in the pound on unimproved value is the most important feature of this bill.

The authorities in Pekin have sanctioned the construction of a telegraph line into Lhassa, the capital of Tibet, and to the residence of the Dalai Lama, the supreme head of the Tibetan hierarchy.

Australia is ready, according to her prime minister, to spend ten million pounds or any sum that may be required for the formation and maintenance of an efficient navy.

Industrial and Commercial.

The Pullman company has notified the interstate commerce commission that it is prepared to submit a sweeping revision of sleeping car rates calculated on the basis of the decision in the Loftus case. This was the case wherein the commission said that if the charge for a lower berth was two dollars, only one dollar and fifty cents should be charged for an upper.

After seven years' work on the part of the commissioners of inland fisheries of the state of Rhode Island at their Wickford experiment station, a scheme has been devised and put in operation which promises to save the lobster from extinction and revolutionize the methods employed in its artificial culture throughout the world.

A novel electric lamp is described in a recent British patent. It consists of a Geissler tube coated on the inside with phosphorescent sulphides. The tube is filled with rarefied gas, preferably helium. It is claimed that when a current traverses the tube it excites the phosphorescent coating, producing a white light of high efficiency.

Capitalists of Chicago and Butte have bought eleven hundred acres of cut-over timber land near Boyer, Idaho, for twenty-nine thousand dollars, and will expend two hundred thousand dollars in clearing the tract and setting it to apple and pear trees, making it the largest single orchard in the state.

A sugar refinery, to cost nearly a million dollars, is to be installed at Texas City, Tex. The establishment of the refinery means the importation of raw sugar and cane from the east coast of Mexico and Central America and will provide return freights for ships plying the Gulf.

A transaction has been put through in Kentucky involving an expenditure of more than fifty million dollars and the transfer of one million one hundred thousand acres of wood and coal land, the purchasers being B. F. P. Romer and Banker Boissevain of Amsterdam, Holland.

The Great Northern railroad, it is reported, is contemplating a departure from its past method of financing its needs by issuing stock, and hereafter will turn to bond issues for the new capital which is required for development. A similar policy may be adopted by other roads.

During the two hundred and eighty-seventh year of Gloucester, Mass., as a fisheries port, just closed, 121,984,355 pounds of fish were brought into the port.

Contracts have been given for the building of six large steamers to be used in the frozen meat trade between the Argentine, London, and European ports.

There is invested in municipal tramway undertakings in the United Kingdom $229,381,-280.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE CHRISTIAN SCIENTIST AND HIS CHURCH.

SAMUEL GREENWOOD.

A STUDENT'S love for Christian Science can safely be measured by his love for The Mother Church and its branches, and this love will find natural expression and activity in the particular branch to which he belongs. Loyalty to Christian Science includes loyalty to the movement which represents it. Indeed, a disloyal Christian Scientist is a misnomer, for even a partial understanding of Christian Science precludes disloyalty to its teachings, to its Discoverer, or to the church which she has established to declare and to demonstrate the Science of Christian healing. We are members of the Church of Christ, Scientist, because we are Christian Scientists; and our fidelity to Truth, and our love for one another and for mankind, will decide the prosperity, harmony, and helpfulness of our church.

The design of church-membership is not only for the member's individual benefit, but also to support the organization and increase its capacity for usefulness; hence the best church-member is one who thinks least of himself and most of the cause he professes to serve. Working to promote personal interest, without regard for the general good, is unworthy of one who "has enlisted to lessen evil" (Science and Health, p. 450). St. Paul admonished the Christians at Philippi to "look not every man on his own things, but every man also on the things of others." We do not live to ourselves. Man, all being, is expressed by reflection, not absorption; he shares with all men the bounty of infinite good, but he cannot monopolize it. This spirit of unselfed Love is the life of the Christian Science church, and it cannot thrive or exist except as it is nourished therewith.

The Christian Science movement has for its purpose the redemption of mankind from all that is unlike God, and for the fulfilment of this purpose each individual Christian Scientist is, in the degree of his capability, responsible. If one fails to support his church in every way essential to its success, he fails in that measure to receive the reward of faithfulness. Whether a student can derive the same benefit from a private Sunday reading of the Lesson-Sermon, as if he were in his place at church, must depend largely upon his motive. One who permits his course to be dictated by selfish desire, is not in obedience to the divine will, and is not, therefore, in a position to be blessed. Love of ease and love of pleasure do not compensate in their indulgence for that love of God and man which ever prompts true Christian self-denial and activity. Love for others necessarily accompanies the true understanding of God, hence to omit church attendance because not in fellowship with any of its members, or from any unworthy motive, indicates a lack of discernment of the Principle of Christian Science. The remedy for such conditions is not to remain aloof from the church, but to love more, to forgive rather than to resent, and to lose sight of human personality in the desire to demonstrate divine Principle. If we love the spiritual idea upon which our church stands, we shall love all who are associated therewith, as well as all whom it is intended to bless.

The right or wrong of any course can usually be determined by considering its effect if all others should adopt it. How would the welfare of mankind be affected if every one did as we are doing? That is the decisive question. If our way is nearest right, all the world would surely be benefited to walk therein; and if our way is not nearest right, why adhere to it? Other things being equal, the demands upon all Christian Scientists are essentially the same. If it is profitable for one Christian Scientist to absent himself from church, it would be profitable for all to do likewise. If it is ever excusable for one Christian Scientist to be at variance with another, it is so for all, but would such a course help the Christian Science church or benefit mankind? Would it forward the cause of Truth and Love among men? The only desire Christian Scientists should ever cherish is to become as their Master, to have the love that "thinketh no evil," and the answer to this prayer will be seen in the surrender of selfish ends and in willing service for the common good.

It should go without saying that one's church merits at least equal consideration in the matter of regularity and punctuality as one's business or social affairs, and when Christianity becomes one's chief business and pleasure, these requirements will be complied with gladly. To be Christians first, and business men and employees afterward, means that our church relationships and duties will receive as careful attention as do temporal things; but if one is habitually late or irregular at church services, while prompt and punctual in secular affairs, then earthly matters are being given precedence over the things of Spirit, a condition which is not conducive to spiritual growth. The only successful rule for daily living is given us by Christ Jesus, in which the seeking of God's kingdom is given preeminence over all worldly duties or pleasures. To be sure of being guided aright, the first question should be, not what one personally wishes, but what God requires; for though the way self points out may seem attractive and pleasant, in the narrow way of Truth alone can joy be gained and retained.

The prosperity of the Christian Science church demands the loving and loyal support of each member, but this support is not confined to attendance at services or to financial contributions. It is true that "God loveth a cheerful giver," and we are enjoined in the Scripture not to give grudgingly, but it is an evident mistake to interpret these passages as applying only to almsgiving or to the financial support of religious organizations. God's cause on earth cannot be sustained by financial means alone, for that would spell spiritual starvation and barrenness. Our Leader defines the church as "that institution, which affords proof of its utility," and goes on to show that this proof consists in "casting out devils, or error, and healing the sick" (Science and Health, p. 583). A fine structure or an overflowing treasury does not prove a church's utility, nor that it is receiving the loyal support of its members. To support the church is to devote one's best service toward making it what Mrs. Eddy describes in the passage quoted from, and when church-members do this liberally and heartily, their treasury will not only be full, and their edifices appropriately fine,

Copyright, 1911, by The Christian Science Publishing Society.

Digitized by Google

but they will "woo the weary wanderer to [their] door, win the pilgrim and stranger to [their] church, and find access to the heart of humanity" (Miscellaneous Writings, p. 155).

It is a libel on Christian fellowship to believe that church dissensions or divisions are unavoidable. The Christian Science church stands preeminently for love and unity,—love for God and one's neighbor, and the unity of divine Principle and idea,—and it is rightly demanded of Christian Scientists that they prove this before the world by so loving one another that all mankind shall feel the touch of Love's presence. Consecrated Christian Scientists, faithful to the rule of thought and action given them in their textbook, Science and Health, are indeed "the salt of the earth," and they will not only preserve the unity of their church, but will maintain its position in their community as a healing and uplifting power.

May all Christian Scientists be so moved by the desire to live worthily of their profession that the manifest disappearing of hatred and evil, and the incoming and radiation of love and goodness, will attract needy wayfarers into the fold of Christian Science. The beauty, harmony, and consistency of the lives of Christian Scientists, individually and collectively, must bear witness to the beauty, utility, and beneficence of the truth they espouse and the church they represent, if they would be approximately worthy of the use of that name which, in its true significance, implies that they have left "all for Christ" (Science and Health, p. 192).

THE RIGHT CONCEPT.

IDA BOGARDUS ZUFELT.

How often we hear a criticism of some so-called "doctrine" of Christian Science, and how often is the explanation given that Christian Scientists base their religion on the sayings and works of Jesus; that there is nothing in his whole life, throughout the years of his ministry, including his teaching and healing, which they do not accept. Christian Scientists know that the nearer they can come to the Christ-mind, in that degree is Truth manifested in their lives in the overcoming of error.

This plainly illustrates the fact that it is the spiritual concept of being which enables a student to demonstrate the Principle of Christian Science, and that there is a wide difference between this concept and mere belief. The lives of Jesus' disciples plainly show that under the same teaching one would reflect more of Truth than another, consequently that his consciousness was more open to the spiritual. This was especially true of the disciple John, who appears from the first to have won the special love and confidence of his Lord and Master, so that he was designated as the "disciple whom Jesus loved." If we contrast John with Thomas, who is sometimes called the doubting disciple, we shall see that the difference between them was due to John's greater spirituality.

For the records which we have of the Master's words and healing works, Christian Scientists give heartfelt thanks, and also for the exposition of them as given in our textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, an exposition so clear that all can gain at least some understanding of the truth. We all pass through periods of darkness in our journey from materiality, and at these times we cannot think that there is anything wrong with the Principle, if the light does not manifest itself as we think it should. We may recall that we were once able to meet certain conditions, and inquire, What is the trouble now? We have used all the understanding we possess, and have been persistent in our declarations. Then it may dawn upon our consciousness that we cannot progress without drawing on the infinite intelligence for more understanding; that a higher state of realization is required; that our perception must be changed, and as our consciousness becomes a transparency for Truth, the illusions of mortal mind are dispelled.

A few years ago the writer spent some time in the beautiful western city of Tacoma, and was very eager to see Mount Tacoma, or Mount Rainier, as she had heard so much of its grandeur and had scarcely any conception of its wonderful impressiveness. She was told that the mountain was not always visible, as certain atmospheric conditions were required in order to have a clear view. The first few days she spent in Tacoma it was not visible at all, although she scanned the sky early and late in the direction where it should appear; indeed she was beginning to doubt if there really could be a mountain of such magnitude, when there was only a dull gray sky to be seen. One morning, however, she was told to go to the third story of the house and look out of the window. She did so, and there stood Mount Tacoma, a magnificent mass of snowy white from base to summit, looming up more than fourteen thousand feet. The dull gray sky had disappeared entirely, and certainly a marvelous change had taken place.

Since the writer has been studying Christian Science this experience has often come to her thought. She sees that as the mists of mortal belief disappear, the spiritual concept is revealed. The mountain was there all the time, though hidden by the heavy atmosphere. So it is with divine Truth. God is always present, always the same, but we allow material beliefs to darken our consciousness, thus shutting out the light. When this shines out, the spiritual concept never fails to appear in all its beauty and majesty.

THE CORRECTION OF MISTAKES.

WALTER SHAW.

SOME one has said that "a wise man profits by the mistakes of others, the less wise by his own, but fools profit not at all." It is sometimes helpful to review our experiences in Christian Science, when we are willing to learn wisdom by the detection of a mistake in our course, but the writer has found that the application of Christian Science to any problem must be truly exact, otherwise the desired result will not be successfully attained. To be very nearly right when applying Christian Science is not sufficient, any more than it is in mathematics. This may seem hard to realize and appear something less than the attitude of a loving Father, but we ultimately discover that it is not loving kindness to condone mistakes. True kindness reveals them, and then they are self-destroyed. Some of life's great lessons cost us much, but if we are wise enough to profit by these experiences, we learn how many phases in human consciousness need to be eliminated, and we shall be grateful even for the bitterness we may have suffered, if it has advanced our understanding of Truth. This thought is beautifully expressed in our Leader's "Miscellaneous Writings" (p. 389), where she says,—

> O make me glad for every scalding tear,
> For hope deferred, ingratitude, disdain!

The world expects Christian Scientists to be perfect, and any apparent failure on their part is immediately considered the fault of Christian Science. It is impossible that failure in demonstration can be the result of Truth; it must come from our lack in the true knowledge of Science. After long and careful dissection of thoughts and analysis of motives, I found that my course in the pursuit of an important business transaction had been prompted chiefly by sentiment,—a human affection for one who had passed away, and during whose lifetime certain opinions and wishes had been expressed. I now see that such thoughts were given undue weight, both consciously and unconsciously, and that they were possibly mingled with a superstitious belief that such a course might have an influence for good. This false reasoning interfered with a clear judgment of the condi-

Digitized by Google

tions involved. Mixed with these thoughts was, however, a sincere desire to demonstrate Christian Science, and certain work in connection with it which came along seemed to indicate that a right course was being adopted. But the primal error was finally manifested in considerable financial loss. The subtlety of error which attempted to justify the course taken, merely because the motive was honest and the transaction fair, hid for a time the true cause of failure, namely, a consent that human sentiment take the place of business calculations.

We all have to learn, some time or other, the exactitude of Christian Science practice, which admits of no mistakes if success is to be achieved. Our text-book says (p. 167), "An error in the premises must appear in the conclusion," and this shows the great importance of careful and scientific reasoning from the start. The mesmerism of mere emotion has to be carefully avoided. True success, however, is not the attainment of financial gain, but of that exact knowledge of Truth which shall free us from the bondage of material sense, deliver us from all the varied phases of superstitious beliefs, and finally bring us to a clear realization of eternal life, which Jesus defined as the knowledge of God and His Christ. If we are ever disposed to indulge in grievous disappointment because of our temporary mistakes, we shall do well to remember the encouraging words on page 81 of Science and Health: "Though the inharmony resulting from material sense hides the harmony of Science, inharmony cannot destroy the divine Principle of Science." This is always absolute, unvarying, and true, so that, as we progress in our understanding of Principle, all errors will be effaced, and we shall realize man's God-given dominion.

Thus, with St. Paul, we may learn to "glory in tribulations also: knowing that tribulation worketh patience: and patience, experience: and experience, hope: and hope maketh not ashamed: because the love of God is shed abroad in our hearts by the Holy Ghost."

"KNOW THYSELF."

SAMUEL DAVIS.

THE philosophical injunction, "Know thyself," first met with in the school-day copy-books, always seemed particularly silly to me. Without understanding, I questioned in an unthinking way, Who knows as much about me as I myself? My likes and aversions, my hopes, ambitions, tastes, endeavors, defeats, victories, my unsuitable environment and the situation I would choose for myself had I control of my destiny,—how can any one not know more of himself than any other can know of him, no matter how wise?

Alas, how sure, how positive, how ignorant the uninstructed mortal thought can be! The things I could not possibly know of myself, until the light of self-examination should reveal them, were all important, while the absorbing acquaintance with personal desires, the never-ceasing study of means to gratify them, the continuous education in the line of pride of acquisition, and the development of artistic sensitiveness, all in a merely intellectual domain, were of little even relative value. Habits of invariable kindness, of scrupulous regard for the rights of others, the need of earning, and thus being rightly entitled to the possession of what we would have, consideration of one's position in the world and the duties arising from his place,—these important matters are not disclosed by the knowledge which is derived from self-centeredness; and it is clear that the supposed self-acquaintance which seems so obvious and certain is no knowledge at all, but ignorance,—ignorance so complete, so dense as to be quite unconscious and utterly unable upon its own initiative to seek enlightenment.

When the prophet Nathan related his parable about the misdoing of the rich man toward his poor neighbor, so far from recognizing himself as the offender, we are told that "David's anger was greatly kindled against the man; and he said to Nathan, As the Lord liveth, the man that hath done this thing shall surely die." Then, with Nathan's courageous "Thou art the man," came the awakening. In the beautiful language of the 51st Psalm, we see how comprehensive was the self-knowledge acquired at Nathan's hands. This prayer for the substitution of a rational self in place of the deformity which had been made plain to David, is a model for every mortal as he strives to escape from bondage to the carnally educated self. David's prayer, "Make me to hear joy and gladness; that the bones which thou hast broken may rejoice," was answered, for we read that he lived to "a good old age, full of days, riches, and honor."

Mrs. Eddy tells us that "anatomy, when conceived of spiritually, is mental self-knowledge, and consists in the dissection of thoughts to discover their quality, quantity, and origin" (Science and Health, p. 462). Again, she writes that "self-ignorance, self-will, self-righteousness, lust, covetousness, envy, revenge, are foes to grace, peace, and progress; they must be met manfully and overcome, or they will uproot all happiness" (Miscellaneous Writings, p. 118). In our quest of self-knowledge,—that we may uncover and destroy these foes so pernicious to our happiness and well-being,—we shall find much that demands faithful and persistent attention on our part before the victory is won, and we shall need to remind ourselves of the high incentive set forth by the apostle when he said: "Let every man prove his own work, . . . and let us not be weary in well doing: for in due season we shall reap, if we faint not."

"COMFORT YE MY PEOPLE."

CLARA A. COWLING.

FOR articles in the *Sentinel* which throw new light upon the deeper meaning of well-known words and passages in the Bible the writer has been especially grateful, and while studying recently the meaning of the word comfort, with Bible references and a dictionary, a much fuller sense was gained of the underlying meaning of many of the passages of Scripture which contain this word. To comfort is "to relieve from pain or distress; to cheer, to revive." Comfort means "ease, quiet enjoyment, freedom from annoyance; whatever gives ease." Isaiah is particularly given to the use of the word, and in the 61st chapter he declares that the mission of the Christ is "to comfort all that mourn." Again, we find that comfort means freedom, relief, cheerfulness, newness of life; to be revived, quickened; to experience peace, quietness, joy. Is not this what all mankind are seeking? The prophet well knew that God is the only source of such comfort, for he says, "The Lord shall comfort Zion; he will comfort [revive] all her waste places;" "I, even I, am he that comforteth you;" "For the Lord hath comforted his people;" "As one whom his mother comforteth, so will I comfort you."

Many more promises of a like nature may be found both in the Old and the New Testament, but to the writer the most helpful and practical reference is found in II. Corinthians, where Paul speaks of "the God of all comfort; who comforteth us in all our tribulation, that we may be able to comfort them which are in any trouble, by the comfort wherewith we ourselves are comforted of God," which gives such a clear sense of what Christian Science means to each one of us. Just as soon as we are "comforted of God," relieved from pain, distress, or sorrow, we begin to understand whence the comfort cometh, and then we can begin to comfort others with the comfort wherewith we have been comforted. Right where we are, while we ourselves are learning more of the "God of all comfort," can we help others to find comfort, and peace, and joy, and we help

Digitized by Google

them to know more of the God w .o is all love and tenderness and compassion.

Mrs. Eddy has made this possible for all who are willing to take up the cross and follow Christ, for does she not say, "This Comforter I understand to be Divine Science" (Science and Health, p. 55)? We do not need to do great things in order to know that this is true, for by small beginnings we "prove all things" and hold fast to the good, and our text-book shows us clearly and unmistakably the way.

APPRECIATION OF THE HEALING TRUTH.

HENRY COLBORN SMITH.

ALL over the world, thousands of people gather together on Wednesday evening to testify as to the saving power of God through Christian Science,—"the law of Truth, which heals the sick on the basis of the one Mind, or God" (Science and Health, p. 482). Mortals who have been in bondage to sin are being redeemed from their wrong thinking, many people apparently sick and diseased beyond the help of *materia medica* are being healed, and now have a sense of health instead of its suppositional opposite. In every country, in every language, people are testifying to this great change of consciousness,—from error to truth, from disease to comfort, from sorrow to joy. Weary of their heavy burdens of materiality, they are turning to spiritual joys.

As we listen to the relation of victory after victory, our hearts are filled with great joy and exaltation. But do we fully realize or comprehend why we are enjoying such an age of blessedness, and so many privileges unknown a hundred years ago? We may well wonder what our forefathers would have said to Edison's electric light, as they lighted their tallow dips, or to Marconi's wireless telegraph, and Bell's telephone, when they were obliged to send their messages by stage-coach, or by mounted servants. These and many other great conveniences and blessings to humanity are possible today because of the discovery and power of the tireless inventors to give these things to the world.

If, for instance, Marconi had withheld his discovery, we should not now be able to communicate with a ship in mid-ocean. Although his announcement that he could telegraph without wires was met with laughter and incredulity, he undauntedly continued his researches and experiments, until the "wireless" had reached its present state of usefulness. A generation ago, no one would have believed that a ship in distress could by means of invisible electrical currents signal to another vessel many miles away, and thus almost immediately receive assistance. Nor would we believe it today, if we had not had an actual demonstration of it. Let us, therefore, render "unto Cæsar the things which are Cæsar's," and thus express our gratitude to these benefactors of mankind.

Great as have been the material blessings bestowed upon us, infinitely greater are those of Spirit. That we now enjoy these benefits is due to the fact that, many years ago, a delicate, refined woman made the discovery of Christian Science and was healed by it. In order to deliver her message to a skeptical world, however, she was obliged to climb the steep hill of difficulty, though the truth had been fully revealed to her consciousness. As the master Christian "came unto his own, and his own received him not," so was she received with opprobrium and scorn. If we thus stop to ponder for a moment, we shall realize that we have been healed, and that we are receiving the wonderful blessings of Life, Truth, and Love, because this woman was not only attuned to receive the divine message from God to His people, but was given courage to persevere in its delivery, and thus through her an inestimable blessing has been brought to men.

As a person saved from imminent peril finds it difficult adequately to express his gratitude to his rescuer, so does our love for and thankfulness to Mrs. Eddy flow out in abundant measure.

"THEY SHALL BE FILLED."

EMMA K. S. SAWYER.

ONE Sunday it was my privilege to listen to a scholarly lecture on Christian Science given at Los Angeles. I reached the auditorium (which holds between three and four thousand people) at a quarter before two, yet, although the hour of the lecture was three o'clock, several hundred people had already assembled there and others were coming from all directions, an hour and a quarter before the time, in order to get a seat!

As I looked about me, there were some people with crutches, some had sad and careworn faces, and there were many with happy countenances, but all were eager to have the doors opened—for what? To hear a great singer? No! To hear a great orator? No! The Master's words, "What went ye out for to see?" came to my mind, and I mentally questioned, What went ye out for to hear? All these people had gathered to listen to a messenger with a message, one who would tell of the omnipresent power of the word of God (rightly understood) to heal all our diseases, to bring, as did the heralds of old, "good tidings of great joy."

I recalled the promise spoken by the great Teacher, "Blessed are they which do hunger and thirst after righteousness: for they shall be filled;" and I felt, as I took my seat in that great auditorium, filled to the galleries, how literally, today, through the means of the Christian Science board of lectureship, the words of the prophet Isaiah are being fulfilled: "Ho, every one that thirsteth, come ye to the waters, and he that hath no money; come ye, buy, and eat; yea, come, buy wine and milk, without money and without price."

[Written for the *Sentinel*.]

"WE HAVE SEEN HIS STAR."

ELLA CLEMENT DAVIES.

DOES this same star today
Illume for thee life's way
With ever brightening ray?

Has light so touched thine eyes
That straight before thee lies
The gate of Paradise?

Has life become so sweet
That thou with unsoiled feet
Canst traverse e'en earth's street?

Has Truth unbarred its gate?
Dost thou, no longer late,
Upon its errands wait?

Does Love to thee unfold
Its treasures pure of gold,
To thee its secret told?

Then rise to greet the day
Now dawning on thy way,
For Love with love must pay.

So shall thy sick be healed,
For Science thus revealed
Will its rich harvest yield.

EXCERPTS FROM EDITORIAL COMMENTS.

[*Overland China Mail*, Hongkong, China.]

Confirmation was received on the ninth in Hongkong, by private wire from Boston, of the death of Mrs. Eddy, Founder of Christian Science, which we announced on Monday. It was in 1875 that the first edition of Science and Health appeared, and Mrs. Eddy's followers now can be numbered by thousands in nearly every land. She was undoubtedly a wonderful woman, and one who won the unquestioning, whole-hearted support of those who believed in her teachings.

[*Morning Star*, Rockford, Ill.]

Mary Baker Eddy was a remarkable woman, one of the greatest the world has ever known. The daughter of plain New England parents, who were deeply religious and who bequeathed their stern religious views to her, she became the founder of a sect which in this country is estimated to have a membership of a million. This great following was built up within little more than three decades. Its corner-stone was "heal the sick," and that millions were healed is not gainsaid. She founded her faith on the Bible, on the teachings of the "great healer."

She knew the Bible as few knew it, indeed to her its meanings and teachings were as sure and understandable as the alphabet. From cover to cover it contained no doubt and not a line bore a misgiving. It was inspired and stood for the betterment of mankind. It not only healed the mind but the body. It was a sheet anchor, and clinging to it meant physical and spiritual safety. These were her teachings, and whether we believe in them or not, we must admit that she did measureless good. That she was actuated by good purposes and sought the ennoblement of her fellows cannot be denied

During all the years she wrought she was the subject of ridicule, denunciation, and obloquy. Yet she complained not, but calmly, confidingly, and confidently continued her mission. It may be said she was mistaken and was a zealot, but it can never be said that she was an impostor. She had faith in herself, faith in her teachings, and faith in the command to "heal the sick." That she built well is seen in the strength of her following. They are scattered throughout the land. They have an abiding-place in every community. They must be, from the teachings imposed, men and women of more than ordinary intelligence. They keep the faith, too, in well ordered lives and in living nearer the Saviour than ever before. Because of Mrs. Eddy they have opened the Book of books a thousand times, and each time they find solace and their faith in the lowly Nazarene renewed and strengthened.

Mrs. Eddy taught that life is beautiful as it becomes pure. She taught there is no death as the pagan saw it, but that to pass from this death was to pass into the land of the forever. Though she has gone, Truth, as she understood it, will never perish.

[*Arizona Sentinel*, Yuma, Ariz.]

Sunday there passed from the life of this world—not from its cares, for she had risen above them all—the greatest of all women—Mary Baker Eddy, the Founder of Christian Science. From the present day back to where disappear in the mists of tradition the initial mileposts of Aryan civilization, paralleling the achievement records of the world's super men, the pages of history are resplendent with the glory of earth's great women. Viewed from a broad perspective, however, they stand a sisterhood of similarity—all save one. Like her there was none.

Excepting her alone, the great women of history gained heritage to supremacy through lavish bestowals of nature in prodigal mood. Great beauty had they, or great wit, or overdominant will and mentality equal to masculinity. None of these had she. Notwithstanding the magnificence of Sheba's queen, the splendor of Semiramis, the passion of Cleopatra, the militant spirit of Maria Theresa, the brutality of Catherine, the grace of Marie Antoinette or the wit of Madam de Stael. Nothing was hers save the gentle force of love. Yet through it she founded a spiritual empire that shall live after her, shall grow after her, and whose not slaved, but freed, subjects shall revere her memory forever.

[*Peoria* (Ill.) *Journal*.]

The other day there passed away one of the most remarkable women of the past and present century. Her prototype has never been known in the history of the world.

She was the originator and the leader of a cult that is known all over the world, and that embraces in its membership some of the most intelligent people of this or any other nation. And therein it differs from any other cult of which we have any knowledge. Generally any movement like that of Christian Science takes in first the lower or at least the mediocre classes. The association of which Mrs. Eddy was the head took in the highest and the most intelligent.

Whatever may be said of Christian Science, there must be something about it to attract or such would not have been the case. There must have been something extraordinary about the head of that church, or she would not have attracted the clientage that she did. A few years ago there was an attempt made to "write down" Mrs. Eddy. It failed, and that was another demonstration of her great strength. The sincerity of Mrs. Eddy has been questioned, but we have never entertained the least doubt that she was perfectly sincere in all that she said or did.

[*Rockford* (Ill.) *Republic*.]

Mary Baker Eddy was a great woman. Living to a great age (she would have been ninety years old next July), she long outlived the ridicule her doctrines at first encountered, and she passed away the honored head of a great church, with a membership far up in the thousands, and churches of monumental architecture in many cities. There has been a growth of the religious body she founded seldom equaled in denominational history. It has attracted multitudes of believers, and they average high in character and intelligence. There must be something in the claims made for Christian Science, results accomplished by it for its professors, to attain for it the credence of the thousands, and probably millions, who secretly or openly are believers in the teachings of this wonderful woman.

[*Minneapolis* (Minn.) *Journal*.]

A leader to succeed Mrs. Eddy "never will be put forward," is the word unofficially emanating from the directors of The Mother Church in Boston. In this connection is recalled the fact that in 1895, Mrs. Eddy issued an order "ordaining" the Scriptures and her own Science and Health as "pastor" over The First Church of Christ, Scientist, in Boston, declaring that "they will continue to preach for this church and the world."

Higher criticism, so called, is supposed to have so far impeached for the majority of minds in this age the validity of a book as a medium through which God speaks, that the very props of the churches relying upon the book are considered by many to be broken. But here is a faith, new but as surely Christian in derivation and in sentiment as any Christian denomination or church, planting itself squarely on the written word, and considering that written word as so alive that it is spoken of as "pastor" and accepted as leader. A rather surprising commentary upon the alleged triumph of the higher criticism, to say the least! For Mrs. Eddy's own work is held not as in the

Digitized by Google

nature of a study and critical interpretation of the Scriptures, but as an inspired interpretation. Her interpretation is no more analogous to modern rationalistic criticism than are the institutes of Calvin. As Calvin, by those who heard and read him, was deemed something more than religious scholar and thinker, was felt to be inspired by the Spirit, and his interpretation of the Scriptures to share in the spiritual quality of those Scriptures, so the followers of Mrs. Eddy have conceived of her and her writings.

We are not here discussing the authenticity of Mrs. Eddy's inspiration, but merely noting its claim and its kind. It would seem that rationalism and science have no chance ever to persuade mankind that the Scriptures are history, literature, and legend, and that their spiritual worth is a matter of value and not of letter. It would seem as if every age interprets the Scriptures according to its vision, but that the Scriptures remain for many in every generation the inspired literal word.

[*Steamboat Pilot*, Steam'oat Sprirgs, Col.]

Quietly, gently, with the halo and lovelight of a sublime faith that was triumphant over material ills, a noble woman has passed into new spheres of action, into a wider consciousness. Mary Baker Eddy is now being everywhere acclaimed as the most noble woman of history, and, as one paper says, through unnumbered generations and by countless millions of people she will be revered as the most inspired woman of all time.

When she first gave out her beautiful vision of the new faith which teaches the perfection of every living thing, of man made in the image and likeness of God, of a perfect creation, she was scoffed and ridiculed. She lived to be the leader of a million peaceful, happy souls and to be accorded a permanent place in the thought and action of the day by even those who do not accept her teachings. Through her message thousands of world-weary, pain-racked, and discouraged souls have been brought from darkness into light Her story, which has been eagerly grasped by men and women in all parts of the world, tells of no death fear, of no sin or suffering, but of man as deathless, perfect, and eternal, the child of an infinite God, good. She has taught and found believers to the doctrine that the kingdom of heaven is not in some far-distant and mysterious land, but begins here, when man comes into harmony with his creator and manifests divine Love.

Coming into a materialistic age, she preached the doctrine of Spirit. Her mission was to banish grief and suffering, and the load she has lifted from human hearts entitles her to all the loving affection that she has received from her followers, and she has justly attained a fame that will be deathless. The whole world is seeking after truth. Thousands and hundreds of thousands believe, and have demonstrated to their satisfaction, that through Mrs. Eddy the truth has been revealed, and she has contributed in a greater measure than any other man or woman since Calvary to the sum total of human happiness.

[*Fairbanks Daily Times*, Fairbanks, Alaska.]

The brief telegraphic announcement of the death of Mrs. Mary Baker Eddy, the Founder of Christian Science, will cause countless thousands to mourn. No woman ever lived who did more to strengthen faith and direct the footsteps of humanity toward the Master. Had Mrs. Eddy lived in the days when Jesus was on earth, she would have been a leader among the disciples, and like her Master would doubtless have been crucified. Living in later times, she has been crucified over and over again according to the modern method, which crucifies the spirit instead of the flesh. Openly reviled by the scoffers, she showed the same fortitude and forgiveness manifested by him, and like him, replied, "Father, forgive them; for they know not what they do."

The religion of Christian Science is so spiritual that many mortals are unable to follow it to all of its conclusions; but it is certain that all men can live and practise Christian Science in part, and they are benefited and uplifted in proportion as they are enabled to comprehend its Principle and apply it to the daily problems of life. Neither the Science nor the church will die with Mrs. Eddy, for it is founded on the rock. It may never become the universal religion, but it will go on and on, sustaining the faith and lifting millions of mortals up into a spiritual life that will benefit not only them but all mankind.

[*Knoxville* (Tenn.) *Sentinel.*]

Mrs. Eddy was in her ninetieth year. Her old age had been serene and beautiful. Whatever may be the final word about her creed, its favorable influence on her own life can hardly be disputed. Mrs. Eddy suffered much from ill health until past the average of life. Her life-work began in 1866, when she was forty-five years of age, but it was ten years before the first Christian Science association was founded.

Mrs. Eddy has been a center of many controversies. It may be too early now to see her without partiality or prejudice, but few will deny that here was a unique personality, a buoyant courage, and an indomitable will. Her life differed from that of most noteworthy women. Its failures were in her youth, its successes were in her riper years. She found herself when approaching fifty. It was twenty years longer before she made the world admit her success. She will have no successor, for her position was that of a "founder."

[*Denver* (Col.) *Republican.*]

In many respects a remarkable woman was Mrs. Eddy. She had tenacity of purpose, a genius for organization, and a belief in herself. She had a message to deliver, and that message has had a profound influence on the thought of today in this country. In her lifetime the Founder or revealer of this peculiarly woman's religion or dogma saw it grow to a numerical standard greater than any of this country's religious outgrowths, larger in membership and adherents than the Society of Friends or Quaker faith, with churches and practitioners in every civilized land. And it is not a militant religion; it wages no wars; it appeals to the average middle class more than to the extremist. It requires individual thought and study; to a considerable degree it is an individualistic religion.

Christian Science has brought a high standard in newspaper publication. It has demonstrated at least that there is a respectable minority abroad that relishes decent journalism. All in all, Mrs. Eddy has been a power for good. She inculcated gentleness in every-day life; she strove to abolish the "fear thought."

[*Decatur* (Ill.) *Herald.*]

Whatever may be the final estimate of the life of Mary Baker Eddy by those without the fold of the church which she established, it must be generally admitted that in many respects she was a remarkable woman. Relentlessly criticized and even persecuted as she was, assailed by the keenest minds and the sharpest intellects, her beliefs attacked and her theology condemned, she nevertheless maintained her prestige and saw her church grow from one small community of worshipers to thousands upon thousands. Today Christian Science churches are represented in nearly every city in the land by stately edifices and loyal and devoted members. Mrs. Eddy had to a remarkable degree that ability as an organizer which is essential in any great undertaking. Once her church was established, she remained the recognized head of it.

Digitized by Google

She possessed a large amount of business acumen. This even her bitterest enemies stood willing to admit. Four years ago, when an attempt was being made to show that Mrs. Eddy was being unduly influenced by a "clique," a commission was sent to visit her at her Concord home. It was the report of this commission which largely influenced those behind the action to drop the case. Mrs. Eddy was then an elderly woman, who might have been expected to have lost touch with business matters, but her replies to questions as to how and why she invested her money, were worthy of the shrewdest banker. This is an age of tolerance, if not of the widest charity. Heretics no longer are burned, and we do not send to the rack those whose religious beliefs differ from our own. Mrs. Eddy's enemies have attacked her and attempted to riddle Science and Health, but beyond declaring that her followers were strangely deluded they have had little to say regarding those who accepted her beliefs. She drew to her not only women, but men—men of great intellect, business men, scholars, men prominent in the professions, and in everyone she found a defender.

It is probable that no leader or cause in history was ever more ably or systematically defended. Christian Science never antagonizes, but permits no statement against it to pass unquestioned. Its press system excites only admiration. It is altogether improbable that Mrs. Eddy's work will languish with her demise. It will be taken up by strong and willing hands and carried forward, and this the more easily for the reason that Mrs. Eddy had worked out her plans and left her house in order.

[*Beacon*, Cannon Falls, Minn.]

The tone of the press, as shown in editorial comments on the death of Mrs. Eddy, is a most encouraging indication of religious tolerance, as well as indicating the commanding position achieved by this teacher of righteousness. The attitude of the press in this instance shows plainly that any religious philosophy that has in it the elements of sincerity and of practical application to daily life, any religious belief or form that is helpful, is sure to be treated with toleration. It must, of course, stand the test of time to achieve permanent recognition as a distinct form, but toleration begins long before this point of recognition is reached. Mrs. Eddy's personality had perhaps something to do with the kindly expressions from every quarter of the globe on the occasion of her death, but the foundation of them was in nearly every instance the quality of her work. Mrs. Eddy's work and her philosophy of religion and of life is not as generally understood as we believe it should be, and we take pleasure in reproducing some of the many editorial comments that have come to hand touching her life and its influence on society. These excerpts are but samples of the wide-spread comment occasioned by the death of this great character, whom the world needs to know more intimately in order that she may meet with deserved appreciation.

[*Register-Gazette*, Rockford, Ill.]

The world has lost a remarkable woman in the passing on of Mrs. Mary Baker Eddy. Not lost her entirely, however, for an individuality so pronounced as to gather nearly a million followers in a devotion which left no room for doubt of its sincerity, cannot vanish with the mere opening and closing of the gates which to so many of us separate the known from the unknown. Whatever the judgment as to the foundations on which she built, the general verdict of Mrs. Eddy's life must be a kindly one, for she taught helpfulness, sacrifice, and the inspiration that comes from one's own efforts; in brief, a very human doctrine of happiness. She possessed to a great degree brilliance of mind, temperamental strength, and poise. She found her way unerringly over many rough places and through deep shadows, and her light seemed to glow with greater radiance because of them. The responsibility of right thinking would seem a very approachable ground for mankind indeed, and this Mrs. Eddy has urged with a gentle insistence which undoubtedly has contributed much to the sum of the world's happiness. It is not easy to believe at this time that the church risen on her discovery will crumble; it is far easier to believe its faith is sufficiently established to safeguard it against all the failings of jealousy and ambition.

[*Quincy* (Ill.) *Herald.*]

The clarified judgment of history will be that the world has been made better and purer by the ministrations and example of the sweet-faced woman who was the Founder of the Christian Science church. Those who scoff at some of her tenets must admit that her teachings and writings have made for higher and better living—for clean manhood and womanhood and for a better moral, mental, and physical status of humanity. She has been much misunderstood, sometimes maligned, but was always kindly, patient, and pure. Those who refuse to accept her doctrines cannot but admit the beauty and stateliness of the language in which they are clothed. Purely for the wholesome serenity of its diction, and the immaculate virtue of its thought, her life-work, Science and Health, will have an eternal place in English literature.

[*Cleveland* (O.) *Press.*]

Mrs. Eddy triumphed over death long before she passed away. Any person who gives to the world enduring good triumphs over death. Whatever objection any one can present to some of the particular or peculiar claims of Christian Science, it is truth that Mrs. Eddy turned the thought and lives of thousands of people toward the divine sunshine, taught thousands to turn from the gloom of past errors, to close the door upon remorse, regret, disappointment, and failure, and look upon God as all good, all merciful, all Love. To do such is surely to triumph over death, even before the immaterial material body goes to the tomb.

[*Washington* (D.C.) *Herald.*]

Mrs. Mary Baker Eddy was unquestionably one of the most remarkable women of her time. She must have possessed unusual qualities to inspire so large a body of followers as she controlled; she must have had a remarkable mind in order to formulate a new doctrine which should prove sufficiently powerful to cause Christian Science churches to be erected in practically every city in the United States. But we are quite sure that the great secret of Mrs. Eddy's success lay in the sanity and reasonableness of the doctrines she promulgated.

[*World's Crisis*, Boston, Mass.]

The death of Mary Baker Eddy at her home near Boston was a recent event attracting wide-spread attention. As head of the Christian Science church, the latter part of her career has identified her with what must be considered, in many respects, the most remarkable religious movement of modern times. However much criticism she may have suffered at the hands of those not favorable to her system, there can be no doubt as to the loyalty and devotion of her followers.

[*Herald*, City of Mexico, Mex.]

The general tone of the press in noticing the passing on of Mrs. Eddy is kindly and sympathetic. Many Jews have in the last few years become Christian Scientists, and the American Israelite, in noting the fact, praises Mrs. Eddy's tolerance toward non-believers in her teachings.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

THE CHRISTIANITY OF THE MASTER.

SOME writers who pose as critics of Christian Science have sought to differentiate between Christianity and Christian Science, but in doing this they have utterly ignored the best dictionary definitions of Christianity and at the same time have shown their ignorance of Christian Science. Webster defines Christianity as "practical conformity of one's inward and outward life to the spirit of the Christian religion." The Century Dictionary, which is equally clear in its definition, has this additional definition of "vital Christianity," namely, "the spirit manifested by Jesus Christ in his life, and which he commanded his followers to imitate;" and the Standard in its interpretation of this most important word, "the state of being a Christian or of living in conformity with the teachings of Jesus Christ," is entirely in line with both of these.

No more accurate definition of Christian Science and what it teaches can be found than that contained in the "declaration of faith," if we may so call it, to which every Christian Scientist has subscribed, as given on page 497 of Science and Health. From these tenets we may cite the first, second, and fourth as being particularly pertinent to the question under discussion. They are as follows:—

"1. As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life.

"2. We acknowledge and adore one supreme and infinite God. We acknowledge His Son, one Christ; the Holy Ghost or divine Comforter; and man in God's image and likeness.

"4. We acknowledge Jesus' atonement as the evidence of divine, efficacious Love, unfolding man's unity with God through Christ Jesus the Wayshower; and we acknowledge that man is saved through Christ, through Truth, Life, and Love as demonstrated by the Galilean Prophet in healing the sick and overcoming sin and death."

Surely there is nothing in these statements which is not in line with the accepted definitions of Christianity, and yet, strangely enough, it is the last twenty words of the fourth tenet above quoted which incline these critics to the belief that Christian Science is not Christianity; and still more strangely, they hold this belief in face of the fact that so large a part of the Gospel record of Jesus' ministry is given over to the healing work which he so evidently regarded as an important and inevitable result of his teachings.

Such being the status of the case, the most natural and certainly not unfair question arises, as to whether there can be any absolute Christianity without this healing work. That such a question has come home to many and is being answered in the negative, is proved not only by the large accessions to the Christian Science church, but also by the action which has been taken in other churches, with a view to the establishment of the healing work as an office of the clergy.

None other than the Master himself is responsible for the instruction to his disciples that they were to both preach the gospel and heal the sick, and his parting instruction, Matthew tells us, was that they were to teach, to hand down to his followers for all time, the observance of his commands. It is, therefore, in his endeavor to follow these instructions, that the Christian Scientist takes his stand as a Christian; and here again he is in accord with the definition given by the Standard, namely, "a disciple of Jesus Christ; one whose profession and life conform to the teaching and example of Christ."

We might rest our case here, but Mrs. Eddy tells us "we must prove our faith by demonstration" (Science and Health, p. 329), even as the Master's infallible test was the "signs" which should "follow them that believe." Just to the extent then, that we put into practice the healing work of Jesus are we following his example and thus proving ourselves worthy of the name Christian.

ARCHIBALD MCLELLAN.

ILLUMINATION.

ALL through the Scriptures light is presented as a symbol of the divine manifestation, from the fiat, "Let there be light," up to the statement in the Apocalypse that the city of God had no need of sun or moon, "for the glory of God did lighten it." Mrs. Eddy says, "Immortal and divine Mind presents the idea of God: *first*, in light; *second*, in reflection" (Science and Health, p. 503). Christ Jesus said, "I am the light of the world: he that followeth me shall not walk in darkness, but shall have the light of life."

Light and life have indeed seemed to be practically synonymous; nothing grows in darkness, hence light and life are seen to be inseparable. The awakening of spiritual consciousness has in many instances been signalized by a sense of light so vivid that even the physical senses acknowledged its presence, many such cases being recorded in the Bible and in the experiences of some men and women of modern times. In the case of St. Paul the light of Truth came to him with such power that he was blinded and "fell to the earth;" but his sense of Soul was "restored" by the ministrations of a faithful follower of Christ, and to him there came the light which "shineth more and more unto the perfect day."

Physical science has never been able to tell us what light is. The most that has been attempted by physicists is to describe some of the properties of light as cognized materially, modern discoveries having set aside many long-accepted theories; but all this is of little consequence to the one who understands that God is Life and the source of all light. The blind man does not see the objects around him, because he is not conscious of the light; yet it is there all the time. In the same way, one may be blind to spiritual realities and deem them absent because he cannot perceive them. One's greatest need may seem to be health, yet health in so far as it is real is the consciousness of life in God, or rather of God as the only real Life, and this Life can never be absent even for a moment, else would the universe become a dead thing.

It may indeed fill one with awe to think that his health is dependent upon the Life that gives life to all being, yet this glorious fact is the light which dispels all darkness and makes the sick whole. It is too often forgotten that the coming of the Christ-idea means the coming of a "great light" which reveals all that needs to be known as to present human conditions. The bringing of a light into a room reveals all that is in it, and as the light of Truth illumines human consciousness, everything will be made plain to us. Job says, "The thing that is hid bringeth he [God] forth to light." The wisdom of the wisest mortal is not equal to that of the divine Mind of God, who comprehends all there is.

It is not necessary to treat ourselves or others for material supply, but rather to declare for and seek spiritual illumination; then the lost will be found, and the unknown become the known, the illumination extending to the utmost limit of human consciousness, so that not only a way to do whatever is necessary and right will be shown, but the very best way. Paul must have seen this when he wrote, "O the depth of the riches both of the wisdom and knowledge of God!" Christ Jesus reflected this wisdom and knowledge, therefore he could say, "I am the light of the world," and the beloved disciple invites us to

Digitized by Google

fellowship with God, who is light and in whom "is no darkness [sickness, sin, or death] at all," and with His Son, who cleanseth us from all sin.

Walk in the light, and thou shalt own
Thy darkness passed away,
Because that light hath on thee shone
In which is perfect day.

ANNIE M. KNOTT.

THE REDEMPTIVE IDEA.

NOTHING becomes more manifest, as one studies the Master's life, than that from the beginning he was entirely sure of the adequacy of the remedy he offered for the healing of the ills of humanity, and that the impress of his words and works upon the open-minded about him was such as to beget in them the same positive assurance.

He said, "I am come that they might have life, and that they might have it more abundantly;" and there can be no question that this word "life" embraced in his thought all real freedom and possessions, opportunity for the exercise of every noble faculty, the acquisition of all that is true, beautiful, and good. He did not fail to apprehend the situation, to perceive the extent of the desecration and disaster which to human sense sin had wrought, and yet he named himself as the possessor of that which would meet every demand, solve every worldly problem, and thus establish on earth and among men the kingdom of God, even "as it is in heaven."

With every phase of mortal enslavement and wretchedness he had become entirely familiar, the blind, the paralyzed, the leprous, those who were suffering from nameless sicknesses and sins—all had crowded upon his sight until there was no horror of despair, no depth of misery of which he was unaware, and yet he bore to the world, as he unreservedly declared, that which would banish every pain and purge away every sin. And what was this universal panacea? Simply a right idea, a true sense of God, His nature and allness—that truth the knowing of which he said would make men free. How wondrous it was and was to prove, all healing, all comforting, all saving; it was a divine idealism, a light for every man coming into the world, the truth that destroys every error!

The logic of the materialistic point of view which has been so generally adopted, even by Christian people, would have authorized and anticipated his promise of something to the effect that while acceptance of the truth he taught would save men from sin, many sicknesses would remain uncured, many diseases incurable, until in the course of centuries, and as the result of study and experimentation with material things, men should discover the remedies which the Father had provided from the foundation of the world. Meanwhile, however terrible the suffering, and however innocent the sufferers, these ills must be patiently borne as a part of that divinely arranged schooling which would eventuate in good! Had Christ Jesus so spoken, or in any way authorized this thought of God's plan, the present beliefs of many of his followers would seem warranted; but how utterly incongruous with the Messianic prophecy, with the Master's sovereign thought and doing, and with human need, does such a suggestion seem!

Christian Science affirms that our Lord's reference to and use of divine truth, as the cure of the world's ills, involves the necessary inference that every disharmony, including sin, sickness, and death, together with their so-called material basis, is of the nature of error; that the whole fact and philosophy of salvation inheres in the universality of God, Spirit, and His manifestation,—that all-inclusive reality which interdicts the possibility of its opposite,—and that the appearing of Christ registers the activity of divine law in human consciousness, casting out even the claim of anything that is unlike or apart from God. In Science and Health Mrs. Eddy writes, "We can, and ultimately shall, so rise as to avail ourselves in every direction of the supremacy of Truth over error, Life over death, and good over evil, and this growth will go on until we arrive at the fulness of God's idea" (p. 406). This is the simple but supreme idealism which is brought nigh in Christian Science, and it is, as St. Paul says, "the power of God unto salvation."

JOHN B. WILLIS.

AMONG THE CHURCHES.

WICHITA, KAN.

First and Second Churches of Christ, Scientist, have united. Beginning Christmas day the two congregations will meet as First Church of Christ, Scientist, in Philharmony Hall. Second Church gives up its charter, and its members are to be enrolled on First Church records at once, although their legal change will not take place until the second Sunday in January. By the terms of the agreement between the two churches, officers of both organizations are to resign, and on Jan. 9 an election is to be held at which all officers are to be elected for the united church. Members of First and Second churches are to vote at this election. New Readers also will be chosen at the election Jan. 9. It has been agreed that the Readers of both churches shall resign.

First church has been in existence many years. Second church, an outgrowth of First church, was organized two years ago. Both churches have maintained reading-rooms in which Christian Science literature is sold. For a time, at least, both reading-rooms will be maintained, but it is the plan to secure larger quarters in a more centrally located building and unite the two reading-rooms in one. It is the expectation of the united church to sell the First Church building and at the proper time construct a handsome edifice in some other location.

For the past year there has been an agitation to unite the two churches. The resolution favoring one church was adopted by Second Church shortly after the passing of Mrs. Eddy. The resolution was presented after consultations between members of both churches.—*Wichita Eagle.*

BRACKNELL, ENGLAND.

The Bracknell Christian Science Hall was opened on Dec. 14, and took the form of the Thanksgiving service. The hall was full, and many helpful testimonies were given. A plot of land on the main road was bought and paid for, early in this year, and since then the building has been erected, consisting of a hall in which to hold the services, library, silence room, and readers' room.—*Correspondence.*

SACRAMENTO, CAL.

Years of dreams and patient striving will be crowned tomorrow morning [Nov. 27] when First Church of Christ, Scientist, on Twenty-third street, between K and L, will be opened for services for the first time. Until this time the Christian Scientists have been worshiping in the Odd Fellows' Temple.—*Sacramento Bee.*

SPOKANE, WASH.

Plans for the construction of a church building will be made after Jan. 1 by the congregation of Second Church of Christ, Scientist. The building of the Pilgrim Congregational church is now being used for the Sunday audiences.—*Spokane Chronicle.*

THE LECTURES.

IOWA CITY, IA.

Willis F. Gross lectured on Christian Science Sunday afternoon, Nov. 13, at the Coldren Opera House, before a large audience. He was introduced by S. K. Stevenson, formerly superintendent of Iowa City's public schools, who said in part,—

Whoever helps us to know what the truth is and to follow it, is a benefactor. Personally I know very little of the teaching of Christian Science, but this one thing I have observed, that its followers make daily and practical use of its teachings, and by so doing their lives are made more beautiful and more useful.

The Master said: "I am come that they might have life, and that they might have it more abundantly." This nation needs all the truth and light it can get, in order to solve aright the questions that are confronting it. A nation is made up of communities, and communities of individuals. That nation only can be great whose God is the Lord. As Christian Science leads the individual to study and apply the great truths laid down by the Master, thereby beautifying the individual life, so will it strengthen the community and the nation, and thus the life of the world.

Iowa City Press.

YORK, PA.

Frank H. Leonard of Brooklyn delivered a lecture on Christian Science before a large audience in the York Opera House, Dec. 1. He was introduced by Frank Bell, committee on publication for the Christian Science churches in Pennsylvania, who said in part,—

Doubtless you all remember the parable of the woman who recovered her lost treasure through lighting a candle and sweeping her house, and how her first impulse was to call in all her neighbors to rejoice with her. Thus Christian Scientists, having illumined their mental houses with a clearer understanding of Truth, and having swept away some of the accumulated rubbish of wrong thinking, are bringing to light again a long-obscured treasure, the Christianly scientific method for the healing of sickness and sin; and their natural impulse is to call in their neighbors, as we have been called here tonight, to hear the good news and to rejoice with them.—*Correspondence.*

ST. LOUIS, MO.

The Rev. William P. McKenzie lectured on Christian Science at Fourth Church, Dec. 2. He was introduced by Arthur T. Morey, who said:—

It is surely the great pleasure and privilege of the members of Fourth Church to welcome you to meet with them in this beautiful new edifice which has been erected as an expression of gratitude by those who have been healed and helped in Christian Science, and for the purpose of providing a meeting-place where others may also come to learn of the truth that Jesus said would make us free. All that Christian Science is, or professes to be, is simply that truth which Jesus taught. He himself gave us the test by which we should know his followers. He said, "By their fruits ye shall know them;" and that Christian Science is giving the Christly fruits of healing the sick, comforting the sorrowing, and uplifting the fallen, and doing those works he told us to do, is merely a matter of investigation—for those who have ears to hear and eyes to see.

Often have we thought of how wonderful it must have been two thousand years ago to stand on the shore of Galilee and see and hear Christ Jesus; to stand in the press about him and actually experience his healing presence; and how foolish and wicked and terrible it has seemed to us that they did not understand, that they rejected and crucified him! And when we have contemplated how we would have acted had we been participants in those scenes and that drama, we are confronted with the irresistible fact that God is "the same yesterday, and to day, and for ever;" that His law is eternal and changeth not, and that Jesus only taught God's truth, taught and demonstrated a Principle or law that Christian Science shows us to be as truly present and as truly operative today to heal and to save as it was in Jesus' time; and then we find ourselves in the very presence of the truth, just as the multitude were in its same presence in Galilee two thousand years ago, and we note that now as then some are touched by its healing presence, while others even now reject and would crucify the truth.

Correspondence.

VICTORIA, B. C.

Prof. Hermann S. Hering lectured on Christian Science to a large audience in the Victoria Theater Sunday afternoon, Dec. 4. He was introduced by Capt. Herbert J. N. de Salis, First Reader, who said in part,—

To Christian Scientists, their religion is demonstrably the religion of Christ, for in adhering to its teachings they are abiding in his word, following his instructions, so far as they individually understand them,—to heal the sick as well as preach the gospel; and in doing so they have the fulfilment of his promise, for the truth is indeed making them free from sickness and sin of all kinds; lifting them above the daily trials and troubles of this life; giving them a fuller, truer understanding of the Scriptures, and of God as an ever-present help at all times and under all circumstances.—*Correspondence.*

POTTSVILLE, PA.

The Academy of Music was well filled to hear a lecture on Christian Science yesterday afternoon [Dec. 4] by the Rev. Arthur R. Vosburgh. Senator C. A. Snyder introduced the lecturer, saying in part,—

I cannot express how much I appreciate the kind invitation of the good people who have asked us to be here this afternoon, and the privilege conferred upon me in introducing to you one who will tell you concerning the strength and beauty of an old faith, and plead with you to go with him "to Gilgal, and renew the kingdom" of that faith, to hear of its power to heal not only the soul, but the body of all mankind. I know the speaker will give you a new interpretation of that faith which helps men to struggle through the deeps of this life, as well as to bridge the gulf of death. I need no testimony to the Christian character of those who will bear witness to the things the speaker will tell you; their lives are the best proof of the truths spoken, and the number that have accepted them throughout the world are now a great host.

It is a rare privilege at this time to come and learn of sanctuaries from whose altars only the love of God, the love of good, the love of one's fellow-man is proclaimed; and where, in a renewed spiritual atmosphere, all may rise in the "unity of faith and of the knowledge of the Son of God, unto a perfect man, unto the measure of the stature of the fulness of Christ." I know it will profit you to hear of this renewed faith which harks back to the early days of the followers of Christ, and which marches at the head of progress today. The wonderful story of the Founder of Christian Science forms part of the religion of this age. The magnificent church in Boston, and the many kindred churches throughout the land, the countless number of men and women who are seeking, living, and publishing this faith, is indicative of its sweetness, its harmony, and its peace.

I pray you this afternoon to note closely what falls from the lips of the speaker, and learn of the religion of Christian Science and the faith which is "the hand wherewith we take hold of everlasting life."—*Pottsville Republican.*

Digitized by Google

STAMFORD, CONN.

An audience that filled the Casino to the doors, many people being compelled to stand, listened most appreciatively yesterday afternoon [Dec. 4] to a lecture on Christian Science by Bliss Knapp of Boston. The lecturer was introduced by Floyd Triggs of the *New York Press*, who is First Reader of the church. He said:—

I suppose none of us are so good we could not be better. I suppose none of us are so bad we do not want to be good. Now, this human desire to be and to do good—this restless, unsatisfied craving for something better in ourselves and our surroundings, this reaching out—seems to be a fairly constant and reliable trait of human character. Looking about us, we see men striving earnestly, giving up whatever they hold valuable, in the effort to earn the title "benefactor of mankind." Looking backward, we see that men have always done this. The desire to be and to do good, it appears, can never be quite suppressed. It crops up continually as a dominant trait, and I believe this desire has never been stronger than it is today.

Looking back, then, upon this sustained effort, extending through all time and in its entire effect nothing less than prodigious, why have we not succeeded? Why do we still stand in fear before sin, disease, and death? These constitute the immediate source of all sorrow and wretchedness,—sin, disease, and death. Is there no way to conquer them, or have we failed because we have not striven in the right way? There is a record—it is in the Bible—of one who gained a complete victory over sin, disease, and death, and on account of his work we call Christ Jesus the Wayshower. Is it possible, then, that in our own effort to accomplish good we have professed Christ's name and have not followed in his footsteps? Is it possible that we may begin today to direct our effort in the right channel and to lessen in Christ's way the power which sin, disease, and death seem to hold over mankind? With this thought in mind, I beg leave to introduce to you the lecturer on Christian Science.—*Advocate*.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Albert Lea, Minn.—William D. McCrackan, M.A., Library Hall, Feb. 2.

Altrincham, Cheshire, Eng.—Bicknell Young, The Institute, Feb. 7.

Asbury Park, N. J.—Frank H. Leonard, Library Hall, Jan. 31.

Belfast, Ire.—Bicknell Young, Ulster Hall, 3:30 p.m., Jan. 29.

Binghamton, N. Y.—Rev. Arthur R. Vosburgh, Stone Opera House, 3 p.m., Feb. 5.

Burlington, Ia.—Willis F. Gross, Y. M. C. A. Auditorium, 3 p.m., Feb. 5.

Carbondale, Ill.—Prof. Hermann S. Hering, I. O. O. F. Hall, Feb. 3.

Galveston, Tex.—Prof. Hermann S. Hering, Scottish Rite Cathedral, Jan. 31.

Hamilton, Ont.—Rev. Arthur R. Vosburgh, Temple Theater, 3 p.m., Jan. 29.

London, Eng. (First Church).—Bicknell Young, Queen's Hall, Jan. 31.

Los Angeles, Cal. (Second Church).—Clarence C. Eaton, Shrine Auditorium, 3 p.m., Feb. 5.

Manhattan, Kan.—Bliss Knapp, Wareham Opera House, Feb. 3.

Moline, Ill.—Willis F. Gross, Barrymore Theater, 8:15 p.m., Feb. 2.

Salida, Col.—Bliss Knapp, Osos Grand Opera House, 2:30 p.m., Feb. 5.

Sedalia, Mo.—Hon. Clarence A. Buskirk, New Sedalia Theater, Feb. 2.

TESTIMONIES OF HEALING.

My attention was first directed to Christian Science while searching after that great desideratum,—health. I had enjoyed a fairly robust constitution with good health, and as I advanced in years it completely disturbed my equanimity when my medical adviser told me that in all probability I should ultimately lose completely the use of one hand and arm, and never again be able to discharge any duties of an arduous nature. Primarily, the attack, which was quite sudden, was apparently that of a stroke, and after diagnosis and medical attention my left hand and arm were in a semisensationless state, so that everything I took hold of fell from my grasp. At night the pain was so intense that it compelled me to pace my room, and rendered sleep an impossibility.

It was in this condition, and after I had completely exhausted all medical skill and remedies, that I first turned to Christian Science, through the instrumentality of a very kind Scientist friend, who graciously presented me with a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. My efforts in this direction were, however, soon crowned with success, for a short time after, and while reading the text-book, the full use of my hand and arm was restored to me, and from that day (now three years ago) to this I have never had the slightest return in any shape or form of the old malady, and have never been prevented from discharging any duties that were required of me.

Words fail and are inadequate to express more particularly the spiritual regeneration that has taken place in my life. I had always been an ardent devotee of the orthodox church, but it remained for Christian Science to revitalize my whole being with wellsprings of divine Love and to help me to realize the inexhaustible source of supply for all our needs, which is meted out to each and every one of God's children; also to realize that we are all God's children, brothers and sisters in Christ. Christian Science has revealed to my consciousness the ever-present Father, Life, Truth, and Love, where before I had but a mythical image with a very vague sense of God. Daily I strive to realize how harmonious all things of God's creation are, when studied from a spiritual basis,—the rock, Christ Jesus, being the foundation stone. No reference of mine to our beloved Leader, Mrs. Eddy, could adequately convey my heart's overflowing gratitude. As in my case, so in countless thousands, it is solely due to her unswerving and Christlike attitude, in the face of a seething mass of worldliness, sin, and materialism, that this regeneration and healing has taken place.

I thank God that one should have been found so pure and so strong as to reflect these rays of divine Love to poor, suffering humanity, suffering from self-inflicted torture through turning away from the light of Life. It is my earnest prayer that I may be found worthy to engage in this daily harvesting, and thus express the gratitude I feel to God for having led me by such pleasant paths, while striving to realize that as God's idea I can reflect nothing but good to those with whom I come in daily contact, thus disseminating the gloom and darkness with the light of Love.—Mrs. M. Parkinson, Blackpool, England.

[Translated from the German.]

At the age of twenty-one I became ill, and at twenty-six severe asthma was added, which lasted up to the time when I became an adherent of the teachings of Christian Science. During this long period medical treatment as well as the water-cure were resorted to in vain. A physician declared that the trouble was incurable, but today I can state, with a heart filled with gratitude, that God has restored me to health through Christian Science. It has also brought me much comfort during the severe trials through which I have

Digitized by Google

had to pass, especially during the last few years, and which I could not have endured without God's help.

FRAU AUGUSTE LINDEMANN, Hannover, Germany.

[Translated from the German.]

It is with a heart full of gratitude that I wish to tell what Christian Science has done for me. Since childhood I was said to be of a weak constitution. I was short-sighted, and my eyes were very weak. I also found walking difficult, and I would often stumble. A few years ago I heard of Christian Science and was told that it was the Christ-healing as practised nineteen hundred years ago. I then applied to a practitioner, who took up treatment and explained to me that I would get just as well as others were. My joy was great, especially as I have to support myself by my work. Now I feel well; my eyesight is much clearer, and I have found Christian Science to be not only a religion which satisfies my yearnings; but which also enables me to rise above all physical ills. When in my school-days we were told of Jesus' healing work, I used to think, "If it only were so in our day!" Little did I dream that the same healing was being performed again,—a fact which gives me an indescribable feeling of joy. I can hardly imagine what my life would be had I not found Christian Science. I have also begun to learn English, with the help only of a dictionary, and am able to understand the text-book. Thus I know that nothing is too difficult with God, and that we may take everything out of His abundance.

Next to God, I thank Mrs. Eddy with all my heart for the great truth which she was enabled to give to the world through her great discovery.

OTTO LICHTFUSS, Peterfitz b. Fritzow, Reg. Cöslin, Pommern, Germany.

Christian Science was first brought to my notice more than eighteen years ago, when I occasionally read a copy of the *Journal*. Not receiving much understanding, however, or seeking it, I remained a devotee to surgery and medicine for all physical ills, until after a severe illness some ten years ago, when I was given up as incurable. Specialists who were called in refused to operate, and evinced great surprise that I was living a week later. At that time my father's cousin, who heard of the decree that I was soon to pass on, gave me treatment in Christian Science, my husband knowing of it. To the surprise of all—doctors, nurses, and the household—I rallied. I was almost a skeleton from lack of nourishment, but I was told by the doctor on his next visit (the day but one after the above verdict was given by him) that he found my physical condition so improved that I could have a regular dinner. Again my husband had told the cousin above referred to of my condition, and she had seen me a few days before, when her presence and words of love uplifted me. She again gave me absent treatment, and I gained quickly at first, then more slowly, as conditions came up outside of my illness which seemed to affect me.

I had passed through the loss of two of my family friends, having the entire care of one and a great deal in the case of the other, and under conditions which were very adverse to the effective help I was endeavoring to give. This with other sorrow, in the form of grief, fright, and wrongs, continued after my recovery from the acute illness. I was still under the doctor's care, and he predicted an early passing on if I neglected to have the treatment ordered by the specialist, although he said it was very improbable that I could survive the ordeal. During this time I asked the Christian Scientist who had helped me, for literature, and received copies of the *Journal* and *Sentinel*. The reading of these uplifted me, and I wished to know what the references to the text-book, Science and Health, meant. Some time after, while visiting my mother in Jersey City, I sought out the Christian Science church, and was impressed by the happy and healthy look of those present. As I did not receive relief from my illness, I asked the loan of Science and Health and kept it so long that I had to be reminded. I finally secured a copy of my own, now over six years ago, and the *Quarterly* soon followed. I then sought out the nearest Christian Science services to my home,—which was Winsted,—where after a time I became a member, as also of The Mother Church.

I experienced during my study of the Lesson-Sermons many demonstrations of the power of divine Love. Let me here say that I was led to give up *materia medica* before I asked for Science and Health. When conditions came up which heretofore had confined me to bed with threatened recurrence of my previous severe illness, under the reading of our text-book and the little understanding which I had gained, relief speedily came. It was marked enough to make my husband take notice; and again, when he himself was almost instantaneously healed of a spasmodic attack of asthma, with which disease he had suffered from infancy, and which was supposedly inherited. During the study of Science and Health a condition of my feet which had necessitated the wearing of bandages since the severe illness above referred to, and when it seemed that I could not rest day or night from the severe pain,—this condition was healed entirely during the study of a Lesson-Sermon on "Life." The next morning I did not use the bandages, and have been free ever since. That was also noticed by my husband and the help in the household.

Many so-called minor ills have been overcome without calling a practitioner, and I have also been the means of helping others,—my husband in a case of fever and protracted cough, also of a small growth on his face. A physician had burned it, but he became very much depressed with dread of a hereditary disease. He feared he would not survive long, but under the influence of the truth as found in the Bible and Science and Health, I was able to help free him from that dreaded disease, and in ten days more not a scar remained to tell the story of fear and suffering. The truth also brought about the removal of a disfiguring and annoying growth on my face, which I had neglected at first, but which was removed in one night, to the utter astonishment even of my husband, as can be attested to by him and others who saw it the day but one before.

I have better health than since a child, strength for varied duties, the enjoyment of raising flowers in profusion, along with other work, mental and physical, and the reading of our loved *Journal*, *Sentinel*, and *Monitor*; above all, the study of the Lesson-Sermons and "Science and Health with Key to the Scriptures" by Mrs. Eddy, with whatever work I can do for the cause. All this makes the days pass happily and swiftly, where once was sorrow, weakness, grief, and suffering, the most of the time for years. This change is due to Christian Science, brought to us by the faithful work of our beloved Leader, who under God became the Founder of this great movement.

MRS. ALZARIA BURWELL CASE, Barkhamsted, Conn.

In March, 1906, I became interested in Christian Science, and for the first time attended a Sunday service. On my return to Taplow, Buckinghamshire, the next day, I decided to call upon a lady who is a Christian Scientist. I received a warm welcome and was given as much literature as I cared to take. From then till August, 1908, I went to her for help. At the time I took up Christian Science I was in a most miserable condition with a stomach disorder from which I had suffered all my life and for which I had taken every kind of medical treatment, including massage, severe dieting, and a course of health exercises. All this was given up from the day I called upon the Scientist, and I now eat what is set before me without fear, where previously my food had been a terror to me. The lady gave me treatment

Digitized by Google

for some time, in which I gradually improved, and I would not return to old conditions for anything.

In August, 1908, we moved to London, and the following spring, a fresh trouble coming up, I asked help of a practitioner there, as I felt the need of present treatment. I am most grateful for the knowledge of Christian Science, and for the great kindness and help shown me at a time when I was unable to pay for treatment.

KATE MARY SARGENT, London, England.

I am much pleased to give a testimony of my healing in Christian Science. I had a very bad attack of cold, so that my ears became very much affected. I had a most unpleasant noise in my left ear, also pain, and my voice sounded unnatural to me. I was afraid to go to a doctor, fearing he would experiment and make things worse. Besides, I was convinced by what I had read in Science and Health that Christian Science could cure me. A Christian Science friend kindly said she would treat me, and I felt better two days after. The noises in my ear and the strange sounds seemed to leave me as by a miracle, and have not returned. This was in May, 1909. I am a singer, and am most grateful to God for what Christian Science has done for me.—FLORENCE SALTER, Glasgow, Scotland.

It is with a heart full of gratitude that I send this testimony to what Christian Science has done for me. Previous to my taking up the study of this truth, I was irritable and unhappy. I had suffered since childhood with severe headaches, which were supposed to be inherited, and I had no hope of ever being free from them. It is now about three years that I have been studying Christian Science, and the headaches have entirely disappeared and I am learning to be more patient and kind. I have been healed of severe colds, also of a bowel disorder, besides other ills that have presented themselves in that time.

I am very grateful to God, and to Mrs. Eddy for Christian Science. My only desire is to know more of this truth which frees us from all error.

MRS. CLAUDIA LINGEL, St. Louis, Mo.

Christian Science has been a great comfort and help to me for the past ten years. Among the blessings received, there was one very pronounced case of healing to which I have long desired to testify, in the hope that it might encourage others to try the same remedy. About three years ago I was taken sick one Monday morning, and continued to grow worse, so that by Wednesday morning I was forced to give up my office work. I feared to go home, because we had no telephone; so I went to the home of a cousin, who treated me that day. The symptoms, however, continued to grow worse, and as she saw that a fever had developed, she advised me to call an experienced practitioner. On Thursday I was extremely weak, suffered greatly, was unable to eat, and had all the suffering common to that form of disease.

The Scientist who took the case worked almost constantly for twenty-four hours, when I was able to get up, dress, go to her home for present treatment, walk about half a mile, and eat an ordinary meal. Saturday I was back at the office and attending to my regular duties, although weak. Surely no one who has seen friends or members of their family suffer from this disease for weeks, and sometimes months, under medical treatment, could fail to rejoice with me in the quick healing which I received through Christian Science.—MARY R. BROWN, Kansas City, Mo.

I wish to express my gratitude for what Christian Science has done for me. On Aug. 3, 1905, I had a stroke of apoplexy, and was under the care of one of the best physicians here for over two years. He did all that he could for me, but I seemed to grow worse. I was on crutches for over six months, and the doctor said that I would never be able to work again. The world looked very dark to me when, through the grace of God, I had a *Christian Science Sentinel* handed me to read. I read it all through, and although it was like Greek to me at first, for I had never heard of Christian Science before, I was willing to try anything, so I sent for a practitioner. She called on me, and in just four days from that time I laid the crutches away. I have not used them since, nor have I even used a cane. Since September, 1905, I had not been in a street-car, nor could I bear to stand near while one was passing, until the end of January, 1910, since which time I have had several rides. I thank God that I am now able to do a little work.

I wish to say that in April, 1909, my youngest son had his leg severely injured. After a doctor had set it, I called a Christian Science practitioner, with the result that he had no pain, and the swelling all went down. He got along fine, for which I am truly thankful. I am very thankful to God for all these blessings, and grateful to Mrs. Eddy for the God-bestowed power to give to humanity "Science and Health with Key to the Scriptures."

C. E. GLOYD, Toledo, Ohio.

For nearly six years my sincere desire has been to serve God and His dear children according to the teachings of Christian Science. During this time I have been able to depend absolutely upon divine Truth for my health, happiness, and supply. A proof of God's protection came to me when my boy, four and a half years old, fell out of the second-story window to the ground. I saw him go, but was unable to catch him. My thought turned directly to God for help, and by the time I reached the child I found him standing up, and crying a little. I could find no trace whatever of injury, and within an hour he was out at play as usual. I am glad to give this testimony, hoping it may help some other mother who is inclined to feel that her child is dependent upon her personally for his protection, instead of knowing that he is lovingly guided and protected by the true God revealed through Christian Science.

My gratitude goes out to God, and to Mrs. Eddy for the understanding which I am gaining each day through the study of our text-book, "Science and Health with Key to the Scriptures."—MRS. MABEL C. PHILLIPS, Dedham, Mass.

[Translated from the Swedish.]

I wish to give my testimony to the healing power of Truth. My son even as a little child was very nervous and weak; he caught cold easily, complained always of bad headaches, and never had a good appetite. He has through Christian Science been healed from all these sufferings and is now a most healthy boy, who takes great interest in his studies and gets along nicely with everything.

I am quite certain that Christian Science is not only a healer of the flesh, but it uplifts one spiritually, as I will tell in a few words. Since we became interested in Christian Science some years ago, our blessings have increased and daily we gain a clearer understanding of God as Love. I must express my thanks to God, and to our Leader, who has made plain to us the way out of all our difficulties.

SIGRID EWERLÖF, Rönneholm, Malmö, Sweden.

[Translated from the Swedish.]

It is now almost three years since I first heard about Christian Science and its wonderful healing power. From childhood I had suffered from several diseases, which had a depressing effect upon me mentally. Two years ago I had a very sudden and severe attack, said to be caused by

Digitized by Google

stone in the kidneys. I visited a great many different physicians, went through many "cures," and took large quantities of medicine, but without any benefit. At the physician's advice I decided at last to submit to that which seemed unavoidable, namely, an operation.

All arrangements for this ordeal had been made, when I heard one day through a good friend about Christian Science. I felt instantly touched by the idea, and so convinced about the truth of this religion that I immediately decided to try Christian Science as a last resource. I was told that there was a practitioner very near, and I went to her at once and commenced to take treatment. After the first treatment I felt so wonderfully strengthened and helped that all the fear which I had carried during many years vanished. My recovery was slow in the beginning, but that was really of great benefit to me, because I was thus obliged to study more, and I gradually received a higher understanding of the true meaning of Christian Science. My lesser afflictions have also gradually disappeared, and I am indeed grateful in being able to say that I am an entirely "new creature."

MISS SONIA EWERLÖF, Rönneholm, Malmö, Sweden.

[Translated from the Swedish.]

After many years of delicate health, I was very ill in the summer of 1908. Sleep and appetite were poor, and after every meal I had more or less excruciating pain in the stomach, as I was said to be suffering from a very malignant abdominal disorder. Having consulted many physicians in vain, I decided to try Christian Science, as I knew about its wonderful healing power. I applied to a practitioner at Stockholm for help, and after taking treatment for a short time my state of health improved very much; the sleeplessness decreased and the appetite increased, while the pain and the abdominal disorder gradually disappeared.

Having since then industriously studied Christian Science, I have learned to understand the true import of this new or rather old religion, and my mental and physical condition has been quite healed, so that life now presents itself to me in a different way. I have been enabled to understand the spiritual teachings of the Bible, where I find the comfort and confidence for which I had before looked in vain. Especially am I grateful to Mrs. Eddy for the spiritual healing which she has brought to humanity through her writings.

MRS. SIGRID EWERLÖF, Rönneholm, Malmö, Sweden.

I have every reason to be grateful for Christian Science. I was not considered strong, and had a doctor attending me very often. He said my heart was weak, and I was obliged to take a great quantity of medicine, besides using other material remedies. After I began to study "Science and Health with Key to the Scriptures" by Mrs. Eddy, and to realize the truth of being, I was able to give up all medicines, and have had good health since. Not only for the physical healing am I grateful, but for the beautiful peace I have gained and the brighter outlook on life. Before I knew of Christian Science life to me seemed dark, but now it is quite different, believing as I do that nothing is real but good, and that evil has no power. Now I know, as Mrs. Eddy writes on page 6 of Science and Health, that "'God is Love.' More than this we cannot ask, higher we cannot look, farther we cannot go." I feel deeply grateful to our Leader for this healing truth.

MAY DICKSON, Uddingston, Scotland.

Over six years ago, while on a holiday in the north of Scotland, I first heard of Christian Science through a casual and unexpected meeting with some friends from London. They were not Christian Scientists, but said that Christian Science healing was being talked of in London at that time, and they advised my sister to try it as a possible remedy for long and trying suffering from chronic illness, to endure which meant constant recourse to material means, with only occasional and temporary relief. We followed up our friends' information, and got the book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and by its first perusal my sister was cured, while to me it brought the glad tidings that reason and revelation are reconcilable and that Christianity can really be a practical help.

We were of a family brought up in the so-called orthodox faith, with strict adherence to consistency in living, so far as seemed possible with our strange views of God, from whom we tried to accept with resignation the sufferings and trials of which we seemed to have a goodly share allotted to us, and which seemed only to be bearable because of the teaching that "whom the Lord loveth he chasteneth," and that we should be made "perfect through suffering." These statements we now understand in a very different way in the light of Christian Science. I had always taken an active part in church work, and was constantly saddened by the sight of the throngs of church-goers who seemed to get so little lasting satisfaction from it all, and no solution to the enigma of life. In trying to have "a reason" for the faith that was in me, I sympathized with the sincere questionings and reasonings of such thinkers as Huxley, Drummond, and others, to all of whom creed and dogma were but a hindrance to religious experience.

To find in the light of Christian Science that the theology and healing of Jesus were one, was to me the "pearl of great price," to gain which the world were "well lost." I have myself experienced the healing power of Truth in having had continued health all these years. I used to be subject to very severe headaches, and at intervals would get "run down," sometimes with the climax of an illness, when, according to *materia medica*, I had to be "built up" by strong tonics. But, along with my two sisters, I discarded the use of all such means from the time we accepted the teachings of Christian Science, and with the knowledge that Mind is the only remedy, I have been able to keep at my work as a teacher without missing a day. Recently I had proof of the painlessness of scientific healing in the case of a wounded finger and hand. To the senses it seemed as if it would be very painful, but I tried to keep constantly in thought what Mrs. Eddy says in "Miscellaneous Writings" (p. 268), "God's preparations for the sick are potions of His own qualities. His therapeutics are antidotes for the ailments of mortal mind and body." I thus overcame fear and my hand soon became normal.

Like many others, I am deeply grateful for the new light shed on the sacred Scriptures, which become, indeed, a chart to Life, if rightly followed with spiritual understanding. I long for a higher and deeper knowledge, and daily strive to gain it. Though many problems of different kinds appear to be in the way, we know that harmony does prevail and will be made manifest if we truly wait upon God and faint not. I desire to emphasize our deep appreciation of the literature issued by The Christian Science Publishing Society. With the Bible and Mrs. Eddy's writings it is our chief means of progress, as we live at some distance from the church center and reading-room. I am grateful to God for all this good, and glad indeed that Mrs. Eddy was enabled to hold fast this wonderful revelation for those who have eyes to see and ears to hear.

MARY DICKSON, Uddingston, Scotland.

For a long time I have been impressed with a desire to tell what Christian Science has done for me. Through reading Mrs. Eddy's book, "Science and Health with Key to the Scriptures," I received my healing. About six years ago I became ill, and immediately sought all medical means available, but without receiving relief. The doctors pronounced the disease kidney and spinal trouble, which affected me in such a way as to render me unable to walk. After

Digitized by Google

several months' treatment with the various doctors, and not noticing any improvement, I became discouraged and gave them up.

Shortly after this, a friend brought me a copy of Science and Health, and after a time I was induced to read it, becoming more and more interested as I progressed. As the truth dawned upon me that physical suffering was due to mental conditions, I began to apply the truth in my daily life, and I grew, as it were, into peace and harmony. I realized with the psalmist, that "he that dwelleth in the secret place of the most High shall abide under the shadow of the Almighty." From that time I noticed a gradual improvement in my general health, and I am now able to do all my household work with ease and pleasure.

I cannot say too much for Science and Health and what it has done for me. It has restored my health and taught me how to keep well. I am grateful to God for all blessings, and to Mrs. Eddy for showing us the way out of mental bondage.—MRS. CARRIE PETERSON, Portland, Ore.

[Written for the *Sentinel*.]

"THE VINE."

BEN. HAWORTH-BOOTH.

BURDEN of beauty, joy of luscious leaves,
And purple fruits of rich caparison,
And honey scent and hum of honey thieves,
And sweet enchantment of the golden sun—
These are my dowry, and in every race
Men give me deference due, and pride of place.

They make them arbors of these boughs of mine,
And staves and stools and hundred household things:
My harvest horn of vintage nectarine
Is freely poured for peasants and for kings:
And men would drink, for better or for worse,
A boon or bane, a blessing or a curse.

My blood they bless in cups of burning gold,
And spill with incense on their paschal flame:
No marriage feast is made, nor tale is told,
Except they pledge me in good fortune's name:
But he who bade them live the life divine
Left them the loving cup of living wine.

. . . . . .

I am the vine, he cried, the branches ye:
My Father is the husbandman, and them
That bear good fruit He purgeth tenderly,
But fruitless boughs He breaketh from the stem:
If ye abide in me as branches true,
Ask what ye will, it shall be done for you.

And if He seek true grapes and findeth wild,
Thy branch He casteth in the cleansing flame,
Till thou shalt learn obedience as His child,
And bear great fruitage, as when Caleb came
With Joshua from the vales of Palestine,
And scarce could lift the load of Hebron's vine.

Then choose between the false wine and the true,*
The life of passion, or of inspiration:
The crystal cup of Christ contains for you
New wine of Spirit, Love's new consecration:†
Truth is revealed, and bids you pour aside
The dark material lees of lust and pride.

• Science and Health, p. 598. † Science and Health, p. 114.

FROM OUR EXCHANGES.

[Prof. George Cross, D.D., in *Watchman*.]

The astounding developments of modern science are sure to introduce, if they have not done so already, far-reaching changes in our theological view-point. Think for a moment how widely accepted are the ideas of the inner unity of man's whole nature, the unity of all existence, the competency of the human mind to arrive at valid judgments on all things. There is no part of our religious beliefs that is unaffected by these axioms of science. There is no part of our thinking that has not been invaded by them. It is not for me to say how far these ideas are valid, but their influence is unquestionable.

Please observe that I am not speaking of the worth of the conclusions people are drawing. The next generation will revise and correct many of the common notions of the present. Indeed it is to be expected that all our favorite theories will be superseded some day, and better ones take their place. I am not prepared to believe all the widely accepted current theories. I am not speaking of them. I am speaking of the method of reflection, the mental attitude they represent. Present methods may also be changed, but the important thing to remember is that the future will grow out of the present; and perhaps it is more important still to remember that the methods of dealing with problems in the universities and colleges are inculcated steadily in the minds of the children from the time that they enter the primary schools, and right on through their career. These methods are thoroughly ingrained in the minds of the rising generation. When the educated young people of our day approach a religious problem, it is simply impossible for them to reverse the whole course of their thinking. They will approach these questions from the point of view from which they have been trained to approach other questions.

[Rev. Minot Simons in *Christian Register*.]

For all the world, Jesus, the Son of man, shows how the individual life may be fulfilled. He was indeed far removed, we may almost say infinitely far removed, from summing up in his life all possible human experience. His experience was very limited. Countless human and social problems never appeared above his horizon. But this is the point: all that he could do, he did; all that he could be, he was. Hence, forever, he must be an inspiration for the moral and spiritual life of struggling humanity. Other lives have been fulfilled. All that they could be, they were; all they could do, they did. But I can think of no other historical figure that can ever be to the world such a permanent and adequate example of life's highest meaning; that is, of complete consecration to the divine will. Realize such an ideal among men, and the kingdom of God is realized. It is a universal and progressive ideal, because it challenges and inspires every human soul, in whatever time or circumstance.

[*Churchman*.]

The appropriation by the world of the Christmas festival shows how large, generous, and real can be the bond of union that grows out of the one primary fact that the Son of God appeared among men as a man, in all the conditions of human life and environment. There is a general response to the teaching of the incarnation, for the incarnation is itself the response of God to the aspirations of man's nature. The teaching of the incarnation answers directly, plainly, and simply the general demand of mankind that the power behind the laws of nature shall not be an enigma, an unknown quantity, but shall be related in familiar and expressible terms to the great human family which is ever anxious to show that its highest and best allegiance is owed to that which realizes on the largest scale the highest qualities and perfect capacities of man.

Digitized by Google

[*Christian Commonwealth.*]

Jesus is represented as saying, "My kingdom is not of this world," but the contrast is not what we make it in our popular religious thought, between the present and the future. It is between the without and the within, between the sense and the soul, between the letter that kills and the spirit that makes alive. The real meaning of Scripture, New Testament as well as Old, is interior or hidden, spiritual or mystical. As the Christ of the fourth Gospel declares, "It is the spirit that quickeneth, the flesh profiteth nothing. The words that I speak unto you, they are spirit and they are life." Paul declares that certain narratives of Genesis are "an allegory," and that "the natural man receiveth not the things of the Spirit of God: . . . neither can he know them, because they are spiritually discerned."

[*Congregationalist and Christian World.*]

The true prophet never lacks a hearing. Men may listen in anger and hurry him to the prison and the stake, or they may hear with a continuing enthusiasm; but hear they will. For in these prophetic voices speaks ever something of the power of the teaching Spirit of God.

If Christ is at the center, in all our thought he must have precedence. Men who are preaching science, philosophy, literature, social ethics, as the substance of their message, and God's word of life and redemption only incidentally, are on the wrong track altogether. The deep-felt needs of the human soul are not along that way. The light that illumines all is the light of Christ. Until that shines in us and through us we are no guides for the darkness of the path.

[*Christian Work and Evangelist.*]

The happiness of the new year will mainly consist in our endeavor to make it a happy new year to all with whom we have to do, and, so far as our influence goes, a better year for all the world. If we live for self, if we avoid our share of hardship and sacrifice, if we are cowardly and grasping, unsocial, malignant, covetous, overbearing, we cannot be happy. The loving heart beholds the beauty and the promise of human nature. It sees the best in life and character. There is much that is splendid and heroic in the lives of average men and women, but selfish eyes cannot see it. The poet and the artist see the beauty of nature, the loving heart beholds the glory that is in men.

[*Universalist Leader.*]

There will be glory to God in the highest when there is peace on the earth and good will among men. And Christmas, with its recurring suggestion every year of peace and good will, is a minister of the glorious vision. Particularly is the day we are about to celebrate significant in the history of the world's life and progress, for never before was the outlook for peace so encouraging as it is at this present time. A few successful steps forward which the movement for universal peace has made, has disclosed to eager eyes the sublimity of the goal sought, and more than that, has enlisted new forces in the campaign for its attainment.

[*New York Observer.*]

A man's life consisteth not in the abundance of the things that he possesses, but in the substance of the truths that he believes, the faith that he feels, the good deeds that he does, and the spiritual experience to which he attains. A man is made by what he masters and appropriates of Christian truth, and what he expresses and confesses of religion in life and conduct. We live not by the calendar, but by heart-throbs; not by shams and follies, or even by lawful gains, but by enjoyment of a heavenly manna, and exercise of a strong and workable Christian faith.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

ATTENTION IS CALLED to the new volume, "Poems by Mary Baker Eddy," now on sale. Specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

NEW PAMPHLETS.

Now on sale are four new pamphlets: "Seeking and Finding," "Prayer and Healing," "The Divine Nature," and "Upward Footsteps." Each pamphlet contains five to nine articles that have previously appeared in the *Journal*, *Sentinel*, or *Monitor;* and they are particularly suitable for handing and sending to inquirers or persons who are becoming interested in Christian Science.

Hereafter, the price of all pamphlets (except "What our Leader Says" and "Christian Science and Legislation") will be reduced to 5 cents a copy; 55 cents a dozen; $2.00 for fifty, and $3.50 for one hundred. Hereafter, also, the republication in the English language of single articles as "tracts" or "reprints" will be discontinued. It is believed that their place is better taken by the daily article on Christian Science in the *Monitor* and by these new pamphlets and others that may be issued.

NEW POST CARDS OF THE MOTHER CHURCH.

Post card photogravure, in sepia tint; an exact reproduction of the large photogravure of The Mother Church Buildings and Publishing House with parkway in foreground. Single copy, 5 cents; twenty-five copies, $1.15; one hundred copies, $4.25.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90; six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. X indicates the year 1910 and XI, 1911. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use, and should specify the size desired.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE: ITS RELIGIOUS PHILOSOPHY. By HON. CLARENCE A. BUSKIRK.

CHRISTIAN SCIENCE: A RELIGION OF DOING. By JUDGE WILLIAM G. EWING.

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. By FRANCIS J. FLUNO, M.D.

CHRISTIAN SCIENCE: THE RELIGION OF THE BIBLE. By JUDGE SEPTIMUS J. HANNA.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. By PROF. HERMANN S. HERING.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. Also printed in German.

CHRISTIAN SCIENCE: ITS ADVANTAGE TO MANKIND. By EDWARD A. KIMBALL. A London lecture. Also printed in French.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.20. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the month, and include all issues for the month named as expiration date on the wrapper. XI indicates the year 1911; XII, 1912. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25—	£0: 5 s.: 2d.;	Mk. 5.30;	F. 6.45
2.25—	0: 9 : 3 ;	9.50;	11.60
2.50—	0: 10 : 3 ;	10.60;	12.85
4.00—	0: 16 : 5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

An organization to be called the "Reserve Association of America," governed by forty-five directors, which will gradually absorb the privilege of issuing currency until it becomes the executive agency for that purpose, and have other large powers, is the plan of currency reform devised by Senator Nelson W. Aldrich, chairman of the national monetary commission, as made public recently for the first time. Features of the plan are: The authorized capital of the reserve association shall be approximately three hundred million dollars; its charter shall continue in force fifty years and the head office shall be Washington, D. C.; the country shall be divided into fifteen districts and a branch of the reserve association shall be in each district; the reserve association and its branches shall be exempt from state and local taxation, except in respect to taxes upon real estate owned by it. Three important features are: The Government of the United States and national banks owning stock in the reserve association shall be the sole depositors in the reserve association: the Government of the United States shall deposit its cash balance with the reserve association: the reserve association shall pay no interest on deposits.

Herbert Knox Smith, commissioner of corporations, in a report just issued, says: "The bureau of corporations ever since its creation has urged a broad federal system of corporate publicity, which shall give the public plainly the essential facts of our great businesses. The bureau itself has been steadily applying such publicity to interstate business though necessarily covering only a few corporations. If that work has given substantial benefit to the public and business, it has proved the case for a broader system. For the last seven years, with a staff of specially trained men, the bureau has collected complete information about certain selected corporations or industries; has stated plainly the meaning thereof, and published it in reports. This publicity has given surprising results for the limited number of industries and corporations which the bureau could cover with its small appropriation and is the best argument for corporate publicity."

Work in draining the Everglades of Florida has been carried on for four years by the state and about fifteen thousand acres have thus far been reclaimed. This reclaimed land is very fertile and is sold to corporations in large tracts at twenty dollars per acre. Over twelve thousand acres of it are now under cultivation. The entire section is at such an elevation that drainage can ultimately recover four million acres, more than five thousand square miles, an area more than half the size of Massachusetts. The productive soil lying upon a substratum of coraline limestone overlaid with sand and alluvial deposits, is from four to ten feet in depth, being formed of decayed vegetable matter. A complete drainage system will require about six hundred miles of outlet channels.

A bill drafted by Postmaster-General Hitchcock, after long consideration and discussion with officials of his department and other departments, and with members of Congress, provides that the postmaster-general shall furnish official postage stamps, stamped envelopes and wrappers for use by all officers of the United States and other persons authorized to transmit mail matter free of postage, and after July 1, 1911, no such office or person shall transmit any matter by mail without prepayment of postage by means of the proposed official stamps.

The first college in Connecticut for girls will be at New London and will be called Winthrop College in honor of John Winthrop, the founder of the city. The site chosen is north of the city, on a hill that overlooks Gales Ferry and the course on the Thames river over which the Yale-Harvard boat races are held. The land comprises an area of two hundred and forty acres and has been donated by the city at a cost of approximately one hundred thousand dollars. The city will also give an additional one hundred thousand dollars as an endowment.

As an alternative for the requirements now in force for admission to Harvard College, students of high schools and others may offer certificates showing the subjects pursued and their standing in them, and will be required to take examination on four subjects instead of eight as at present, one of which must be Latin, French, or German. This is a concession to the growing demand that high school curricula should be freer from the domination of the college requirements and allowed to shape their courses in more practical ways.

Physical valuation of all public utilities and the filing of rates and classifications at stipulated times are provided in a bill introduced in the Kansas House of Representatives and known as the "administration public utilities bill." The measure provides that one corporation may use another's equipment on paying reasonable rental under orders from the commission, and that all public utilities shall report accidents in which loss of life occurs.

The Providence board of trade says in regard to the proposed intracoastal canal: "The commercial value of the proposed intracoastal waterway in Rhode Island, by itself considered and also as a part of the great scheme of inland waterways, is indorsed by the manufacturers and merchants, and appreciated by those who are affiliated with the transportation companies doing business within the state."

The Massachusetts system of administering the construction and maintenance of state highways through an appointive commission, the members of which are named for terms of several years, is approved by the American Automobile Association and is urged as the model for other states.

William Cooper Proctor of Cincinnati, O., has made his gift of five hundred thousand dollars for the Princeton graduate school unconditional, withdrawing his stipulation that a like amount was to be raised toward the endowment of the preceptorial system before Jan. 1, 1911.

The interstate commerce commission has declared in a decision that small railroads with light business may properly exact larger earnings on shipments per ton per mile than their more important competitors.

International.

It is very difficult to start a war anywhere in the world today, says *Boston Transcript.* Peru and Ecuador concluded not to draw the sword after giving and receiving challenges. Now comes the news that Hayti and Santo Domingo have agreed to arbitrate. Great Powers hesitate to go to war because of the expense involved, and little nations must keep the peace because they are without funds to move their armies. The peppery Central Americans seem to be about the only people in the world who do not count the cost, and they are not important enough to give prestige to their bad example.

Prof. Dugald C. Jackson of the Institute of Technology, expert advisor of the Massachusetts highway commission in telephone matters and president of the American Institute of Electrical Engineers, has been retained by the British government to advise the postmaster-general in regard to the value of the great telephone property which the government is this year to purchase from the operating companies and make a part of the national post office organization.

Among the anniversaries to be observed this year in England are the tercentenary of the authorized version of the Bible, the tercentenary of the institution of baronetcy, the tercentenary of Charterhouse, the centenary of the birth of Thackeray and the establishment of the present mint, and the fiftieth anniversary of the introduction of tramways.

The ancient town of Richmond in Surrey, where the exiled King of Portugal is about to make his home, has long been intimately associated with royalty, and there has probably been no King or Queen of England who has not lived there.

The executive committee having in charge the plans in connection with the coronation of King George, have completed tentative arrangements, which will, if anything, be on a more extensive scale than at the time of King Edward's coronation.

The headmasters of the British secondary schools have asked the universities to remove Greek from the list of compulsory requirements for matriculation.

The Canadian forestry convention, called by Premier Laurier, opened on the 18th in Quebec, Que., under the auspices of the Canadian Forestry Association.

M. Urbain, in an address before the Academy of Science, announced the discovery of a new element which he calls celtium.

Algeria and Tunis are to adopt the method of "dry farming," so successfully practised in the United States.

Industrial and Commercial.

The Satsuma variety of orange trees successfully withstood the recent unusually severe cold spell that visited the Gulf coast and Rio Grande valley of Texas, and the tangerines and Marsh seedless grapefruit also passed through the cold period safely.

Maine is soon to see established within its borders, if present plans work out, a series of developments of water-power, for industrial purposes exclusively, involving an investment of ten million dollars and the ultimate development of one hundred thousand horse-power.

More than seven hundred thousand acres of land in the upper peninsula of Michigan have been acquired and will be placed on the market as farm lands.

The value of iron and steel products exported from the United States during 1910 amounted to over two hundred million dollars.

The Standard Oil Company has bought out the holdings of J. C. Trees Company of Caddo parish, La., for nine million dollars.

Cotton exports from the United States in 1910 aggregated five hundred and thirty million dollars in value.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE DAY OF THE LORD.

SUE H. MIMS.

WHEN Isaiah cried, "And the Lord alone shall be exalted in that day," he must have had in mind the dawn of the Christ Science, for when the spiritual sense of the Scriptures is opened and illumined thereby, we are filled with joy and gratitude to see how gloriously optimistic is the chain of thought that runs throughout the inspired writings. It is the breaking of that glad day when all are to know God, good, when universal peace and love shall reign, when slavery shall cease and all men awake to their birthright of freedom as "the sons of God."

This beaconing light has shone throughout the centuries, and in a burst of joy Isaiah wrote of it, "The Lord alone shall be exalted in that day." So, too, Paul in even clearer vision declares that "now is the accepted time; behold, now is the day of salvation;" and this, he further implies, is hastened by "casting down imaginations, and every high thing that exalteth itself against the knowledge of God," the "bringing into captivity every thought to the obedience of Christ."

The Scriptures counsel us, "In all thy ways acknowledge him, and he shall direct thy paths." As we realize in Christian Science that God is the omnipotence, omnipresence, and omniscience that is good, the divine Mind, we are saved from the inconsistency of forgetting to acknowledge His power and presence at the moment when sorrow, pain, or disease tempts us to believe in His absence. The realization of God's love and power and presence is the foundation stone of Christianity, and the results of this honoring of ever-present Truth are seen in the healing of sin and disease. It is the exaltation of God, good, which must be the culmination of the Christian life, when all "principalities" and "powers" are put under the feet of the true idea of God, the right consciousness of being, whose coming marks "the day of the Lord" for each individual.

The whole world, these last forty years, since Mrs. Eddy sounded the key-note of spiritual freedom, has been gradually awakening to the power of right thought, to the perception that not matter but Mind is causative and creative. Hence it is not sick matter, but sick thought, that is to be watched and guarded against. Only when this is recognized shall we be able to control and eliminate disease, epidemics, and death itself. Mankind is awakening to the folly of trying to eradicate disease by any other than this Christly method of meeting and remedying the sad plight of humanity. As the poet says,—

> Think truly, and thy thought
> Shall the world's great famine feed.

Mrs. Eddy writes: "It breaks the dream of disease to understand that sickness is formed by the human mind, not by matter nor by the divine Mind" (Science and Health, p. 396). Of contagion she also says, "Since it is a law of mortal mind that certain diseases should be regarded as contagious, this law obtains credit through association,—calling up the fear that creates the image of disease and its consequent manifestation in the body" (*Ibid.*, p. 154). Here we can see the glorious effect of Christian Science, which enables us to enter upon the Lord's new day, to put away the seeming and dwell in the thought of God as divine Mind, as infinite, omnipresent, omnipotent consciousness, embracing all reality,—spiritual, harmonious, immortal: that divine consciousness in which "we live, and move, and have our being," and from which all beliefs or thoughts of discord and disease are excluded.

This true consciousness affords a sure and divine protection, and in proportion as one reflects or knows and thinks this truth, is all humanity helped and blessed. Some time mankind will be startled, shocked, that under any circumstances they could have deemed it wise or helpful to inoculate the minds of the young with mental pictures of disease, as is sometimes done. The harvest will be most deplorable unless in some way such false mental pictures are obliterated by a higher sense of things, the truth of God's presence and power, as expressed by the psalmist when he says, "Who forgiveth all thine iniquities; who healeth all thy diseases;" "Who is the health of my countenance and my God."

The day of the Lord is the day of life,—aye, "life eternal,"—the day in which God is known. This culmination of life in Christ, or full redemption, is reached only as we know even as we are known; when earth, or consciousness, is "filled with the knowledge of the glory of the Lord, as the waters cover the sea." Isaiah refers to this, surely, when he is a voice for Truth, saying, "For, behold, I create new heavens and a new earth; and the former shall not be remembered, nor come into mind." Only as the false testimony of the fleshly mind is laid off and the divine Mind "which was also in Christ Jesus" becomes enthroned in individual consciousness, can sin, disease, and death be understood as nothingness and disappear, and God, infinite, eternal good, be understood and demonstrated in health, longevity, and immortality. Jesus came to bring to light the Life and immortality that always were and are and ever shall be the All-in-all.

The day of the Lord is indeed at hand. To Mrs. Eddy, our beloved Leader, we owe endless gratitude for the courage and fidelity which enabled her from the watch-towers of Zion to sound the bugle-call to lift us from the slavery of the false human sense of being into the glorious light and liberty of Love and blessedness.

A CITY SET ON A HILL.

ANNIE M. PAYNE.

THERE are some who in accepting Christian Science have experienced a haunting doubt as to the benefit of organization in connection with so spiritual a faith. Caught up to heaven, they have wondered whether the jarring notes of earth might not vanish sooner were love to God and man expressed in daily deeds, which alone are the outcome and guarantee of a truly spiritual religion. The thought vaguely occurs that since churches and sects have in the past been

responsible for much rivalry and persecution, this glorious Science should have a simpler setting; its healing work manifesting individual growth, and the pleasures of association being left to informality and intuition, or possibly to gather about a teacher's chair.

That this rebound from organized church life is not the voice of wisdom is surely provable, and in pointing to the following considerations the writer would testify anew to the God-inspired insight and energy of the Founder of this movement in organizing the Christian Science church. Glancing first at the relation of Christian Scientists as a body to the outside world, we may note that the present need of humanity is not so much the abolition of church organization as its existence as an emphatic expression of harmony and charity. Whatever discords the world may itself permit or foster, it insists that the church should carry out the Master's instructions in this regard. And here the Christian Science church should set an example that the world will not be slow to acknowledge. The Christian Science body leaves its neighbor Christians alone, except when it can do them a kindly service, and this is frequently commented upon by the press.

In fitting accord with the essential rule that our healing faith must not be forced upon those who have no desire for it, is the open invitation of the reading-room and the impersonal tone of the church service. These phenomena, to such as may not yet be ready to see a revelation behind them, often meet a special preparatory need: while to those "simple seekers for Truth," as our Leader calls them (Science and Health, p. 570), who, yearning for peace, are ready to accept all offered aid, these gracious means are as the very gate of heaven after long wanderings, it may be, in friendless paths of doubt and despair. Conceivably, a literature, reading-rooms, and lectures might proceed from some movement less than an organized church, but this would be a most misleading departure from the true historic sense and evolution, in which a strictly religious literature has always been connected with a church, the two affording to the world a guarantee of their mutual intent with which mankind is certainly not yet ready to dispense.

Within the pale of Christian Science there is the method of advance known as class instruction. This method, in various forms so natural and so dear to humanity, has a special and lofty mission in Christian Science, confirming the prepared thought in its scientific gains and carrying it forward to higher levels. Vitally connected in inception and continuity with The Mother Church, it finds itself, as it travels on its way over an ever-widening area, closely associated with the establishment of branch churches, and mutual benefit ensues to both institutions.

In the school, the pulpit, the lecture hall, wherever furtherance is sought in association with the human presence, lips, and voice, there is peril from the intrusion of personality. And the more spiritual the subject of instruction, the greater ofttimes is the danger to tyros, the emotions being ever too ready to pose as spirituality while playing their destructive part. To this tendency the impersonal pastor, democratic by-laws, and other methods of our church organization offer a continual foil most useful to class students, who generally form the basis and sometimes the bulk of its membership.

Here we reach the question of church organization as related to the individual Scientist, and may pursue the theme further. The enthusiastic beginner who fears loss to spirituality from continuance of organization, should note this, that even the desire to remain always in our best moments palls upon us, unless we have thoroughly worked up to its continuity. It is far from probable that any one of us, having but sipped of the diviner life, could cease at once to be dependent upon methods sanctified by the strivings and prayers of our fathers. "New wine into new bottles,"—yes, but still bottles! How few of us would make a true and firm advance by suddenly losing the anticipation, recollection, strengthening, rest, and peace of the Christian Science Sunday service, or midweek gathering for prayer and praise. And if we admit these as a present human need, we must also admit many accessories,—a building, managing body, rules, officers, and so on.

Involved in thoughts of the Sunday service is association with others of like mind with ourselves. Our true development demands not only the amenities and friction of family ties, business companions, or self-elected circle of friends, but also contact with those not of our choosing nor maybe of our choice, who are nevertheless also being led to the apprehension of Truth. Constant association, on the part of a beginner in Christian Science, with the members of his former church baffles rather than assists growth: and if one elects to remain outside church life altogether, he is probably at an equal disadvantage. To illustrate: Suppose a beginner, very strong in his enthusiasm for the discovery that God can and will heal disease without help from matter, yet at the same time weak in recognizing Him as Principle. If such a one should remain in his old church for want of a better, who is there to aid him in throwing off his anthropomorphism where all believe in it? On the other hand, if he stand outside the pale of church life altogether, his anthropomorphism may receive fresh impetus simply through the human need of association. It is indeed the shaping and polishing effected for each member of a Christian Science church, which in the nature of the case could be accomplished nowhere else, that sanctions a continuance of church organization.

On one occasion a Christian Scientist was witnessing the zeal of certain workers in seeking to safeguard the purity of their church as their dearest hope for its advancement. It caused her to reflect that her own sense of purity had been somewhat wanting; she remarked a danger of its being invested with something of a negative quality, like a snow-capped mountain, cold and aloof. But after that experience the word purity became to her a symbol of the most searching activity and alertness of saving love. The purity of a church was seen to be in proportion to each member's apprehension of the golden rule, in proportion to such Love-governed consciousness that error was handled naturally by the brotherly word and example, while Truth's unmistaking, yearning welcome passed continually to the outside to gather in every prepared thought.

In thus coming face to face with a higher meaning, the Scientist was ushered as it were into the presence of the Master, and could see much more clearly than before why purity is so especially ascribed to our Leader's life-experience, also why her followers in office in The Mother Church have shown themselves so patient and tender in rebuking sin. In thus unfolding her thought, what a service the church had rendered to the individual Scientist! Its further use in expressing Love's chastening and discipline cannot be overestimated. Those opposite forms of mentality, the sluggish and the too impetuous, receive plentiful correction from the mental friction which common work for a loved cause provides. In a scientific atmosphere the individual is constantly prompted either to greater alertness or a wiser waiting, as his case may require.

We have already alluded to the snare of personal egotism. Considered a tiresome but rather amusing characteristic, this trait will frequently remain unchecked by family, society, or even Christian church for a lifetime, scarcely interrupting the outwardly successful career. It is so subtle, so ready to pose as virtue, that the victim himself seems often unaware of its presence. Let it intrude, however, where the understanding obtains that personality, as the word implies, is but a mask and not the real man made in God's image, and its doom is certain. It is true it may, even in the Christian Science church, deceive for a time the victim and his friends, but it is certain from the beginning

Digitized by Google

to prove a fruitful source of strife and woe until, through Truth's uncovering, it is seen as the swollen red dragon ripe for destruction.

For all the good received by the individual from the organization of the church, he will gladly make return. He will strive to keep his own consciousness so pure that he may always see himself and his fellow-members as God sees them; and while never watching for error, he will be so alert that he cannot be blinded by it. In this way, according to his purity of thought and reflection of Love, will his opportunity for service unfold, both as regards mental work and outward activity.

"AWAKE THOU THAT SLEEPEST."

LAURA C. CONANT.

ONE may believe in the efficacy of Christian Science as a remedial agent; he may prefer to trust himself in the hands of a practitioner of this faith rather than to employ a physician; he may enjoy attending the church services, and yet not be a Christian Scientist. Some one has tersely said, "When I first came into Christian Science, I thought only of how much I could get out of it; now I am trying to see how much error I can get rid of. I now see that the individual who is trying to rise spiritually while clinging to the errors of mortal mind, is like a balloon with too much ballast."

A true Christian Scientist is one who is daily striving to destroy error in his own thought, and who through self-immolation is rising each day into a holier and more spiritual consciousness. The desire to show his gratitude for the benefits received through Christian Science is best expressed by his constant endeavor to help his fellow-men and to be of service in his immediate environment. One method of accomplishing this is to accept a responsibility which certainly rests upon every Christian Scientist, namely, the responsibility of helping to make the services at his church a success. He should go to the meetings with the idea of giving as much help as possible, rather than with the thought of receiving only.

The real success of our meetings is not dependent upon good reading, good music, or good speaking. All these are contributory factors, but their influence for good may be greatly enhanced by harmony of thought among the members of the congregation. Few can be readers or musicians; not all feel themselves fitted to speak in public; but every one can keep his or her thought so filled with love that much impersonal healing will be done. In this way every member of the congregation may take a most important part in the services, for the Christian Science meetings are successful in proportion to the help which is given and to the healing which is accomplished.

In Mrs. Eddy's "Messages to The Mother Church" (p. 21), she says, "The right thinker and worker does his best, and does the thinking for the ages. No hand that feels not his help, no heart his comfort." In every congregation there are many who need this help and comfort, and much may be done toward the success of our cause by cultivating the helpful loving thought which tends to lift the burden from humanity. In contradistinction to this, there is a frequent temptation to criticize, especially the acts of those in authority, and if not repressed, the habit of criticizing others grows unconsciously. It should be recognized that criticism is often a surface indication of a subtle hidden evil, the evil which would separate one from his brother-man, destroy unity of thought and action, withdraw moral support from those who are serving our cause in any capacity, and thus tend to disrupt the various organizations. The thought which is filled with criticism can neither be helpful to others nor receive the good which divine Love has to give.

There is certainly no way in which our love, our gratitude, our reverence and obedience to our beloved Leader, can be better shown than by manifesting love to one another and to all mankind. Those who look for imperfections in others will find them, those who look for and expect good will find it. We are Christian Scientists only as we reflect love; not the love which expects an equivalent in return for what it gives, not the love which says, "I will love you if you love me," but the love which is a reflection of the divine—the love which "thinketh no evil," the love which never feels slighted or injured or hurt, which knows no resentment, which does not criticize or condemn, but which, like the Father's love, is kind "unto the unthankful and evil." Let each one examine his own consciousness and "dig up every seed of error's sowing" (Science and Health, p. 79).

Jesus said, "If thine eye offend thee, pluck it out and cast it from thee." Mrs. Eddy tells us in "Miscellaneous Writings" (p. 276), "In the dark hours, wise Christian Scientists stand firmer than ever in their allegiance to God." We should stand together now as never before, allowing nothing in our own consciousness to separate us from each other; then, standing shoulder to shoulder, we shall present a solid front to the attacks of evil. Nothing can resist the regenerating, sanctifying, mellowing influence of unselfed love, and when our hearts are filled with it, the sick will be healed, the sinner redeemed, those who mourn will be comforted, and our churches will be filled to overflowing.

"REVEALED . . . UNTO BABES."

ADELA LE PAGE.

THE lessons we learn from the children are often such as never to be forgotten, and frequently prove the turning-point in our decisions, uncovering in the consciousness of those years older in material wisdom, lurking errors and fears which would hinder demonstration. As the mother of two little boys who have never known any other religious teaching than Christian Science, I am deeply grateful for many a lesson learned from their childish lips.

At the age of three and a half years one child was smitten down with what seemed an alarming attack of illness. I called in a doctor, in accordance with the law of the land, to diagnose the case. He pronounced the trouble to be measles, and left certain directions to be followed, which, however, I ignored. All that night the child was delirious and the fever ran very high. I continually read Science and Health to quiet the fear which strove to assert itself, for I had been interested in Christian Science only a few months and hardly knew how to handle the case. Toward morning, however, he slept peacefully, and to my surprise awoke with no sign of rash or fever, and in the gayest spirits, hungry for his breakfast and ready to get up. While I was attending to his needs, he said to me: "Mother, dear, I talked to dear God last night all by myself." "Did you, darling?" I replied; "and what did you say?" "I told Him I knew He did not put me there." What wonder that the child was perfectly well, when such simple faith in God's loving care and goodness had been called up to defeat the lie that had attempted to fasten disease upon him!

At another time one of them was in great suffering, and again, in compliance with law, it seemed necessary to have a doctor's diagnosis, so I took the child to a neighboring physician, who gave a very serious verdict. Shortly after, a bottle arrived at my house, with imperative directions that frequent external applications be made. Tossed for a few moments by my mother-fear, between doubt as to how far I was bound to obey civil law and a desire to hold strictly to the truth I loved so dearly, I handled the bottle meditatively, when a small voice from the pillow said, "What are you going to do with that, mother?" I replied that the doctor had ordered me to use it for him, but that

Digitized by Google

I did not want to do so. All hesitation was flung to the winds, however, when his trustful eyes looked straight into mine, and a voice full of sweet conviction said, "What's the good of putting that stuff on a thought, mother?" What, indeed! Needless to say that mother was rebuked, the bottle was thrown away with its contents, and a lesson learned from the pure faith and understanding of a little child. Well was it said by the psalmist, "Out of the mouth of babes and sucklings hast thou ordained strength."

VICTORY THROUGH ENDEAVOR.

WALTER LINCOLN COLBY.

CHRISTIAN SCIENCE offers to mankind the greatest of all blessings, not alone in the regeneration of depraved consciousness and the restoration of health to the hopeless invalid, but also in awakening a sense of responsibility to prevent wrong conditions; and this responsibility cannot be overlooked or ignored by those who wish to exemplify the teachings and practice of this religion. Carelessness or indifference concerning wrong conditions is never excusable in the true Scientist, and those who desire most earnestly to understand divine Science must make the endeavor requisite to acquire such knowledge.

The definition of the word "endeavor" suggests not only the putting forth of effort, and the striving to accomplish a certain end, but includes the thought of "duty," and the French word *devoir* doubtless could have been translated as meaning "on guard" or "at duty." The faithful sentinel who received orders to "allow no living creature to enter the camp without giving the password," little suspected that beneath the shaggy coat of the huge St. Bernard dog, the pet of the regiment, was concealed a spy, who, thus disguised, under cover of darkness tried to pass the guard. Remembering the specific order, the password was demanded, and the failure to give it resulted in the discovery of the spy and a great vantage.

Christian Scientists are reminded that they must be watchful and vigilant to prevent the encroachments of error; that they must not endeavor simply to make the greater demonstrations, but also to keep diligently on the lookout for the first appearance of even a suspicion of evil. Whenever this is done, good results will invariably follow. While many have been drawn to Christian Science because of remarkable cures wrought within themselves or witnessed in others, it is none the less true that as they advance they will talk less and less about "remarkable healing" in their own experience. In fact, as we attain greater understanding of divine power and demonstrate its efficacy, healing will no longer seem marvelous, but natural—a simple proof that we are doing our duty, living daily and hourly in accord with God's will.

The most desirable victory over sin and sickness is the instantaneous demonstration of Truth's power to vanquish them at sight; and this being true, we perceive the necessity of being alert every moment, of standing "porter at the door of thought" (Science and Health, p. 392). Many of our greatest and most satisfactory demonstrations are those of which very little can be said, especially in public, for the reason that the victory was gained as the result of patient and persistent watchfulness in excluding the besetting sins which once held us captive. The exclusion of any one error might signify little, but when all have been barred out, then Truth will demonstrate its power and save us from all unrighteousness.

It is sometimes difficult to testify convincingly, in the Wednesday evening meetings, to the healing power of Truth, because in the limited space of time allotted it is impossible to state the circumstances connected with the case, which were significant at the time of the healing. The early training and environment of the one healed, his temperament and beliefs, inherited and acquired tendencies, education or its lack,—these and many other conditions have much to do with the value of a testimony. To testify that Christian Science had healed one of a sickening fear of thunder-storms would signify very little to those who had never experienced such fear, but to one who was trained in childhood to close every window and pull down every shade in the house, then to light a lamp, so that a thunder-storm should not be so noticeable,—to him the knowledge that the apprehension of God's presence has destroyed this sense of fear carries with it a corresponding conviction which can hardly be expressed in words but which is the occasion for much rejoicing. This may explain why it is that Christian Scientists who are known to have made remarkable demonstrations over sin and sickness sometimes remain silent in our Wednesday evening meeting.

The more advanced one becomes in the understanding of Christian Science, the more readily and easily the claims of error and disease are met, and the less likely he is, perhaps, to refer in public to his overcoming. In fact, the true Scientist knows that he most effectively testifies by his daily living, though this does not relieve him of the duty of witnessing for Truth upon suitable occasion. There is scarcely a conscious moment when error would not enter and take possession of our mentality if we did not endeavor to prevent it by standing, as Mrs. Eddy says, "on guard," by placing ourselves in a position to "exclude from mortal mind the offending errors," by rising "in the strength of Spirit to resist all that is unlike good" (Science and Health, pp. 392, 393).

A constant warfare has to be waged against evil, and daily vigilance is required of the followers of Truth. Throughout the Bible this is emphasized, and the Discoverer of Christian Science, both by example and precept, has urged upon all her followers the necessity of that forethinking endeavor which will win the victory by preventing the enemy's approach. The inhabitants of our great cities would be amazed if they knew how many incipient fires occur every day. Indeed, they might be alarmed if the number were known. Neither do the insurance companies know of them, nor are they recorded by the fire department, for the reason that they are instantly extinguished by some prompt action or by the use of the fire-extinguishers now required in all large buildings and factories. Thus too is the student of Christian Science called to meet the incipient claims of error, to destroy them by the immediate realization and declaration of the truth, and it is by this means that we can forestall and prevent the experience of human ill.

[Written for the *Sentinel*.]

THE WELCOME GUEST.

VIOLETTE KIMBALL DUNN.

To one in prison-house of hate,
T'was whispered from above,
"Thyself thy chains hast forged, O child,
The world is filled with Love!"

The eyes of one by tempests rent,
With bitterness were wet;
When soft the whisper fell, "Rejoice,
Thy brother's need is met!"

One peered from out his prison-house,
One turned from wound and scar,
And looking up, each one beheld
The glory of a star.

EXCERPTS FROM EDITORIAL COMMENTS.

[*Worcester* (Mass.) *Telegram.*]

Mrs. Mary Baker Eddy leaves the largest personal following of any woman in American history, and perhaps in the world history. She has been for many years a conspicuous figure in New England life, and today is the most illustrious dead awaiting the formalities of burial, in all the world of civilization. It is the claim of her followers in the distinct creed she established that she is revered by more human beings than any other known to modern life, and that her teachings and example have raised them to higher and more intelligent thought and method of living. It has never been disputed that her students have been enlisted from among the best products of civilization, and it is not at all improbable that they have improved by the tendency to concentrate their thoughts upon the new ideals. They have thus formed for themselves a new environment, and they have not been ungenerous in shedding their light among the people with whom they have come in contact in the activities of the world.

With all its faults as often mentioned in human converse and fought in various ways by opponents, it is to the credit of Christian Science that it has never used fear of a deity as one of its supporting pillars before the public. That at least gives it a high standing among the doctrines that have been spread before mankind in many ages, and in that one respect the highest. It may be said to have banished that condition of the mind from millions, and even with that accomplishment it has benefited the world. It may be the highest tribute that mankind can offer to the memory of one woman that she banished fear from their religions.

But the work that has been done among many people by the Christian Science organization is greater even than that. It has builded without fighting to destroy the good effects of other building. Nowhere has this Science taught or practised war, nowhere upheld war or any other form of slaughter of human life or character. Peace for all nations and conditions of people, and without sacrifice of principle or inherent right, is one of the tenets of the Science that formed the foundation for the organization, and it has thus far operated without making a class or pitting one existing class against another.

Its growth as a church, as a public order element, is noteworthy, and its growth as a beautifier of the living places of men is no less to its credit. And always as an organization it holds the strongest place, without having called forth public criticism because of methods of oppression in the monopoly of any article the people needed as an established necessity. It has presented a clean slate and a clean character, personal as well as in organization. It is an outgrowth of modern development, with less of the harking back to the dark ages than some others, and much if not all of that must be said to have been the result of mental efforts of Mrs. Eddy. Her long life was lived for a greater purpose than she has been given credit for in this materialistic age.

[*Springfield* (Mass.) *Republican.*]

Judged by her achievement, Mrs. Mary Baker Eddy was one of the extraordinary figures of the nineteenth century. It is difficult to present any estimate of her career without inviting controversy, and now that she is dead controversy will flame up again, as her work is freshly studied. For it is certain that her life was a marvel. It was a career from which every one may draw immense inspiration, furthermore. It is the inspiration that must come from the spectacle of astonishing achievement brought about by a woman whose whole life up to the age of fifty had been an utter failure, as the world viewed it and as many of her most intimate acquaintances estimated it. One may search history from the beginning and have difficulty in matching Mrs. Eddy's performance, between the ages of fifty and eighty, in making a million people accept her at her own valuation. No one can read the story of her career and say that a life which seems the dreariest of futilities in middle age may not contain the possibilities of large achievement in the remaining years. For the part played by circumstances in affording the requisite opportunity for the development of a remarkable personality was never more vividly shown than in this woman's late unfolding as the Leader of what is known as Christian Science.

Mrs. Eddy must be credited also with having done good. Whether or not the church she founded long survives her death, whether or not her system of healing the sick retains any considerable number of adherents, it must be said that she served a useful purpose in organizing an effective protest against the defective methods of the old schools of medicine and in forcing upon the attention of men of science as well as upon the multitude that careful consideration which the purely psychic element in disease so much deserves.

The criticism of Mrs. Eddy and of Christian Science, which is her monument, may be found in many books. At this time it is proper to recognize the dimensions of her practical achievement and the claims which her remarkably complex and subtle yet most forceful personality have upon the world's attention and regard.

[*La Crosse* (Wis.) *Leader-Press.*]

Mary Baker Eddy, Founder of the Christian Science church and its Leader from the days of its beginning, must be acknowledged as the most influential woman of her time, whether one agrees with her opinions or not. No queen in any land in the nineteenth and twentieth centuries exercised such sway over the minds of her people, and no other woman in her period, who led in other intellectual and spiritual movements, approached her in power. In about two score years she founded and built up an important church, one of which large numbers of the best people became members. It extended to all parts of the country and to other countries. Its members looked to her absolutely—her word was law.

Mrs. Eddy has been vigorously attacked by publications and by men not in sympathy with her movement, but one need not be a sympathizer with her to feel that her critics must have underrated her both as to ability and character, for no woman without the greatest force and sincerity could have won the number and kind of followers she did, and maintained herself unweakened through so long a course of time. No estimate of her which does not take account of her as a most extraordinary woman, one of the few who stand out through the centuries, is even approximately accurate.

With the death of Mrs. Eddy, clergymen of other denominations are expressing doubt that her church will last, or, at least, continue to grow. This is a question which time and the new authorities of her denomination will determine. There is reason to believe that authority has been left in strong hands. How they will exercise it none can yet know. But the Founder of Christian Science certainly did her part thoroughly, and she has left to those who come after her an organization which may be made a potent force for good.

[*Milwaukee* (Wis.) *Free Press.*]

Whatever may be the ultimate fate of Christian Science, whether it continues to wax in power and spiritual fruitage or eventually becomes absorbed or superseded in the religious evolution of mankind, Mrs. Eddy is assured of a permanent niche in that great gallery of seers and interpreters who have made clear the way of God to man. The most vital history of the human race is ever its religious history, and no chronicles of the epoch-making evolution

Digitized by Google

that has taken place in the conception and attitude of man toward the divinity, during the past three decades, can possibly leave out of account the teachings and the ministry of Mrs. Eddy.

One need not be a believer in Christian Science, one need not even be an admirer of its Founder, to appreciate this and to acknowledge this. For, remarkable as has been the achievement of this remarkable woman in giving renewed and beneficent potency to an ancient revelation, remarkable as has been her administration in building up a powerful church, both materially and spiritually, her achievement does not stop there. The influence of Christian Science has extended far beyond the confines of its church or the bounds of its adherents; it has in its essential spirit proved a leavening force both in other churches and among masses who confess to no faith or creed. Mrs. Eddy was ready with her interpretation of the Scriptures when the desire for a more immanent and spiritual conception of the Christian God began to stir the heart and mind of America, and in the great liberating, spiritualizing movement in religious thought that grew out of this, Christian Science has played its unquestioned part. It profited from this movement, to be sure, but in turn it also proved a source of sustenance.

The man or woman who has been healed in body or soul through Christian Science will naturally cherish a peculiar devotion for the author of this faith and its practice. While the significance and beauty of this phase of Mrs. Eddy's work need not be underestimated, the chances are that with the larger understanding of psychic healing which is rapidly coming to pass, the author of Science and Health will be celebrated less because of the therapeutic element in her teachings than for their aid in bringing about a closer, more spiritual, and efficacious communion between man and his Maker.

[*New Haven* (Conn.) *Journal-Courier.*]

There will be three judgments entered with regard to the character and life of Mary Baker Eddy, the Founder of the Christian Science church. By her large following she will be worshiped as a saint. By another large group of open-minded men and women she will be viewed as an extraordinary person, who possessed great spiritual insight and executive genius. By a smaller and more intolerant group, she will be condemned.

It is of little interest to us what the attitude of this third class is or may be. We have found it difficult to accept at its full face value the leadership of this remarkable woman. We have found it easy to accept her in the light the second group has accepted her. She has built up a church which has shown marvelous growth, and she has welcomed into it thousands of people of the highest personal character and spiritual earnestness. Others in this free country are at liberty to make what use they like of the activities and convictions of their neighbors as they relate to Christian professions. The mysteries of life, the magic of the beginning and the pall of its close, have not so revealed themselves to our eyes that they appear easy of analysis when applied to any given religious faith. They are rather so profound in their elusiveness that that form of belief which brings peace of mind and contentment of soul to its followers, compels our respectful consideration, at least, by whatever title it is known.

[*Battle Creek* (Mich.) *Daily Moon.*]

If history makes clear any one fact, it is that contemporaneous judgments often are inaccurate. The perspective of time is necessary to a calm analysis of the influences which shape thought. Posterity more than once has rejected those acclaimed prophets in a bygone day, and crowned those who were overlooked by their fellows. The axiom will hold good in the case of Mrs. Mary Baker Eddy, Discoverer and Founder of Christian Science. The world is too close to her life and her work to give an unbiased decision as to her significance. On the one hand are her thousands of followers, scattered in almost every civilized land, who believe she has given to the world a real message of peace, hope, and ultimate freedom from the ills to which flesh so long has been heir. On the other hand are her many critics, some bitter, some mild, but all denying her doctrines.

The storm of controversy which has raged about Mrs. Eddy personally and as the Leader of a faith, is not likely to cease at her death. It is predicted on one side that the church which she has founded will topple and fall without the cohesive influence of her captaincy, and, on the other, that she put it on its feet long ago and that it will move forward on its own momentum. Whatever the future has to tell of Mrs. Eddy and her teaching, and aside from whatever opinion one may have as to the tenets she preached, it is certain that she has been a powerful factor in current thought. The growth of Christian Science as the sincere belief of men and women of varied classes, the hundreds of magnificent churches which have been reared by her disciples, and, most of all, the enormous circulation of her book, "Science and Health with Key to the Scriptures," proves this.

If any one influence which she exterted should be remembered, it is that she taught optimism. Christian Scientists are sunny, hopeful, cheerful. The Leader taught that brooding on the ills of life is a sin, and this wholesome doctrine has remade chronic grumblers and fretful invalids, loaded under a burden of imaginary ills, into bright, active, and helpful men and women.

[*Evening Journal,* Wilmington, Del.]

Mrs. Mary Baker Eddy may be regarded without exaggeration as the most remarkable woman of her time. Her hold upon her followers was indeed wonderful. In a day when all questions of a religious nature are subjected to the most critical tests, when some boast that the statements and influences of men of regular science have great weight and tend to demolish religious theories and principles of the past, Mrs. Eddy founded a religious denomination which has grown and prospered in a very remarkable manner. Her adherents have been and are of a type of high intelligence. She has never been strong among what may be called the masses of the people, and in this Christian Science differs from any of the other religious sects which have been founded but which have gained their first adherents among what are termed the more lowly. Indeed Christianity itself had such a beginning, as the disciples, nearly all of them, were not from the wealthy or the aristocratic or the ruling classes.

One thing evident about the true Christian Scientists, which shows the powerful and beneficial influence that Mrs. Eddy has exerted in the world, is that they are firm in the faith, energetic and relentless in upholding it, and to all outward appearances in their lives are most happy. The religion founded by Mrs. Eddy has brought peace to many a distressed soul. After all, what higher benefit could it confer?

[*Commercial News,* Danville, Ill.]

The passing of Mrs. Eddy removes from the world one of the most remarkable women of modern times. She was the Leader of a religious movement which has greatly impressed the world, and which attracted more than a million followers to her. For the past quarter of a century she was the Leader of the movement which revolutionized her followers, their thoughts, and their methods of living. She believed in healing and saving power by divine right. She never preached that there is no material death, although she has predicted the ultimate conquest of death in time to come. There need be no difficulty in the minds of Christian

Digitized by Google

Scientists in reconciling the physical fact of her death with their disbelief in death itself.

Her work will continue. Her church will continue to live of its own momentum. She placed it on such an enduring basis that it can guide itself. She can have no successor, because no one can do the work she has done. Mrs. Eddy was a great leader. When there was dissension in her church, she proved what she was capable of by sweeping away all opposition. Her followers had faith in her which was almost sublime. When she has been dead a century men and women will better understand her work and her worth than they do at the present time. Her death removes one of the greatest figures of our day.

[*Rich Hill* (Mo.) *Daily Review.*]

By the "passing on" of Mrs Mary Baker Eddy there will be profound sorrow in the hearts of many thousands of good people on earth, but no mourning by her immediate followers, or at least no outward sign thereof. Whatever the opinion of those who could not accept Mrs. Eddy's theories either in a religious or rational sense, the fact remains that as the Discoverer and Founder of Christian Science, aside from all the rest of her life-work, she was one of the most remarkable and powerful women of the age.

To have possessed the will-power and ability to establish a cult or religion in a single generation that could beget the following of intelligent and cultured people which Christian Science has, not only in this country but in other lands, is a remarkable thing in itself, and in other ages would have been regarded as almost superhuman. Yet this achievement has been wrought by this woman from a very humble beginning, and today thousands of churches and schools have been established to teach and perpetuate this faith—and among them some of the finest religious edifices in the land—and hundreds of thousands of followers, embracing some of the best people morally, and some of the wealthiest citizens, are enlisted in the work begun by Mrs. Eddy.

The foundation upon which Mrs. Eddy based her structure, viz., that mind predominates matter, has been recognized among the philosophers of the past ages; but it was left to her, to systematize this vague truth and to develop and expand it, and to extend it far beyond any hitherto recognized limit. How well she has succeeded must be judged by the number, the character, and the fidelity of her followers. Whether her system has been fully perfected, whether there must be additions thereto or modifications thereof, still remains to be seen. Whether her theories appeal to us who are not among her votaries, or however irrational they may seem to us, Mrs. Eddy has made a wonderful demonstration in the last few decades of her lifetime, and all must accredit her with a wonderful force and power.

[*St. Louis* (Mo.) *Times.*]

It will be conceded very widely that with the death of Mrs. Eddy one of the most remarkable women of the age has passed away. A woman with the will and power to establish, in the period of a few decades, a religion, or cult, and place it upon an apparently unshakable foundation, must possess more than ordinary powers. The growth of the Christian Science movement, the establishment of churches in magnificent buildings, and the organization of hundreds of thousands of people in a faith which has become world-wide—this has been one of the extraordinary phenomena of the present and the past centuries.

Those of materialistic tendencies, and those who adhere to the simpler faiths, may withhold approval of what this woman achieved. But just as certainly there will be many thousands who will regard her as a genuine benefactor—a real healer.

[*Athens* (O.) *Daily Messenger.*]

Whatever one's theory about Christian Science, the career of Mrs. Eddy, who recently passed out in her ninetieth year, is without a parallel. At forty years of age, a confirmed invalid, she somehow came into possession of a power that made her into a healthy woman, and she so analyzed and systematized that power and set it forth in a wonderfully able book of philosophy on Christianity, that others are able to get her thought and use it for a broader life of health and happiness and freedom from dogmatism and creed, jealousies and hate. Her philosophy of life has been adopted by over a million followers in the civilized world, and Christian Science is today one of the most rapidly growing Christian organizations in the world.

The ideas of Christian Science are old, dating back before Christ, and the Founder maintained that the power of Jesus and his disciples to heal the sick is a living and universal power, everlasting and eternal, but for centuries lost to Christians. It remained for Mrs. Eddy to rediscover this power and reduce it to what she and her followers call a Science,—that is, a rational and demonstrable proposition.

[*Albert Lea* (Minn.) *Journal.*]

The death of Mrs. Mary Baker Eddy, the Christian Science Leader, removes from our midst one of the most remarkable figures of late years. A woman said to be possessed of the most lovable qualities, she exercised a tremendous influence upon the lives of thousands of people, not only in this country, but in different parts of the world. Whether we agree with her and accept her teachings or not, we must certainly admire those qualities about her which brought her to the forefront among the women and men of the day, and made her one of the leading persons of the world.

[*La Crosse* (Wis.) *Tribune.*]

It would be unwise for one not thoroughly conversant with Christian Science to attempt discourse upon the life-work of Mary Baker Eddy. Criticism of her creed has been bitter in some quarters, and she has been frequently denounced as an impostor. But no one now attempts to deny that she was one of the most powerful and most remarkable women in history. Her works are a monument to these things. She achieved wonderful success, and that she leaves behind her more than one hundred thousand followers whose confidence is implicit, is a fact calculated to rebuke sweeping accusations against her.

[*Jerseyman*, Morristown, N. J.]

Mary Baker Eddy, the Founder and Leader of the cult of Christian Scientists, was, in some respects, the most notable personage of the century. Whatever views may be held in regard to this belief, it cannot be disputed that its followers generally are of the cultured class, and they find in it that which gives serenity of mind and an optimistic spirit that suggests a life in that beatific land of the prophet's vision, the inhabitant of which shall not say, "I am sick."

[*Times*, San Juan, Porto Rico.]

The Christian Science church has lost its Founder in the death of Mary Baker Eddy—the most powerful religious leader of this age, and a woman who reached that position through a new interpretation of the Bible. Her appeal was made primarily to the sick and infirm, and "Life, Truth, and Love are all powerful and ever present" was her text. Regardless of the merits or demerits of Christian Science, the fact remains that it has a large and influential following, that its members are earnest and intelligent men and women, and that it has gained its following by appeal to the reason rather than through force and persecution. Never before in history has a woman founded so important a movement.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

A LIVING FAITH.

THE one great question in which Christian Scientists are supremely interested, the one which should interest every professed follower of the Master, the one which, however long delayed or ignored, comes home at last to every thoughtful man and woman with the sharp thrust of fear or despair, is the one which was asked of Paul and Silas by the Roman jailer; namely, "What must I do to be saved?" Their answer was both direct and explicit: "Believe on the Lord Jesus Christ, and thou shalt be saved, and thy house."

Every Christian will, of course, at once declare that he agrees with the disciples in their answer to this vital question, and that he fully endorses it: but this statement really means much or little, according to the individual viewpoint; that is, what he understands by the words "Believe on the Lord Jesus Christ." If to him they mean no more than the profession of a belief that Christ Jesus did live and labor in Palestine nineteen hundred years ago, and that he and his immediate followers did perform the works of healing with which they are accredited, but that these "mighty works" and this gift of healing were only for that time and generation,—if this constitutes his belief on the Lord Jesus Christ, it is not sufficient to save him from the evils which the Master promised should not hurt "them that believe."

Jesus' own words, as recorded by Mark, are perfectly clear on this point. Certain specific "signs" were to "follow," in token of the genuineness of their belief. Not only did he declare that in his name they should cast out devils (the sinning sense), and heal the sick, but they were to handle without harm the poisonous viper (as Paul did, not many years after), and if it happened that they drank some "deadly thing," nevertheless no hurt should come to them. "Them that believe"—not only in that day, but throughout all time! But theirs must be no passive belief, no mere acceptance of the Christ as the Son of God come down to earth for the redemption of mankind, but an active, living faith that should enable them to do the same healing works which he had performed, and the "greater works than these" which he had promised.

It is in their acceptance of the test thus imposed by the Master that the line of distinction is sharply drawn between Christian Scientists and other professing Christians. To him who takes "the inspired Word of the Bible" to be his "guide to eternal Life" (Science and Health, p. 497), to "believe on the Lord Jesus Christ" means much more than simply to profess loyalty to him, and he does not understand that the salvation desired by the jailer and promised him by Paul and his companion was something to be obtained after death; he believes that he gains the much desired salvation,—that he is "saved,"—only as he follows in the footsteps of the Master, doing the works which he did and that he commended to his followers. Through the wonderful discovery made by Mrs. Eddy forty-five years ago, a discovery which she verified and ratified by repeated demonstrations of the efficacy of the healing truth, he has learned that these works are possible now and in all time to come, and he too demonstrates his intelligent belief in the Lord Jesus Christ, not only that he may himself win salvation, but also that all who know him and who wish to be saved may thereby come to a knowledge of the truth which makes free.

One cannot become a Christian Scientist without experiencing in some measure the healing touch of Christ, and it is incumbent on each and every one to share with others the good news he has received. "Freely ye have received," said the Master; "freely give"—give, as did Paul and Silas, who shared their good news even with the one who had "thrust them into the inner prison,"—the captivity imposed by erring human sense, but from which they were delivered in answer to their prayers.

That which most concerns us, then, as Christian Scientists, is whether or no our belief on the Lord Jesus Christ is based on the true foundation, the whole gospel of the Master, for naught else will avail us in the time of stress. And our Leader shows us how we may gain the assurance of the truth of our faith, when she bids us put to ourselves the solemn questions: "Am I living the life which approaches the supreme good? Am I demonstrating the healing power of Truth and Love?" And she assures us that if we are doing these commands of the Master, then "the way will grow brighter 'unto the perfect day.' Your fruits will prove what the understanding of God brings to man" (*Ibid.*, p. 496).

ARCHIBALD MCLELLAN.

PREJUDGMENT.

WHEN one thinks of the unspeakable wrong which in all the ages has attended judgments that have been formed and expressed "without due examination," he no longer wonders at the abrupt, unqualified finality of the ninth commandment. Its positive "Thou shalt not" warns us not only against wilful misrepresentation and evil speaking, but against those exhibitions of prejudice which are the fruitage of hearsay or hasty assumption.

No plane of life and no realm of experience has escaped the blight of that false witnessing which is ofttimes as far removed from any ill purpose as it is from the truth. This unpremeditated offense calls for healing, however, no less than does malicious misrepresentation, and it is only as the Master's just law, "By their fruits ye shall know them," is permitted to govern not only our words, but our thought respecting every person and thing, that we begin to maintain an unprejudiced attitude and live a genuinely fraternal life. Even the predisposition that leads us to refuse to recognize the faults of those we love, wrongs in the end both them and us. The simple truth is that the prejudices which are born of human kinship and love are more likely to work injury than those which are born of jealousy and dislike, and for the reason that they are less easily detected and more difficult to eradicate. How frequently are unwise parents led to do their children a grievous wrong because of a seeming inability or indisposition to see their faults, while friends and lovers sometimes remain blind to weaknesses which, if but recognized and pointed out in a wise way, would be speedily overcome.

Christian Science places the strongest emphasis upon the Master's declaration that both teacher and teaching, men and methods, propositions and plans, friends and so-called foes, are all to be judged in the light of "the truth, the whole truth, and nothing but the truth." Eschewing no fair criticism, Mrs. Eddy unhesitatingly submitted her statements and her life-work to this test. In the integrity of her purpose she shrank not from the logic of her premises and performance, but asked only that she be understood and that Christian Science be judged in the light of its influence upon the health and morals of those who faithfully try to conform to its Principle and rule. This candid and creditable attitude on her part, together with the fact that Christian Science honors the Master and that its worthy exponents are seeking to be so conformed to the law of his life that they may fulfil his command to heal the sick, bespeaks for this movement the kindly

Digitized by Google

and sympathetic interest of all Christian people, since all that is asked for it is that it have a fair chance to prove again the richer meanings of the gospel.

The broad-minded and appreciative references to Christian Science and its Leader which have recently appeared in the secular press, prove beyond question that the great body of people regard as final the Master's test for truth and truth-seekers. The fact that Christian Science brings conquest over sickness and sin, that it is a great and growing beneficence in the world, is accepted as a satisfactory proof of its worth and right to recognition, and this registers a Christian advance which is a "sign of the times," and in which every free man will certainly rejoice.

Prejudgment is always unfair, hence unkind. It is always inconsiderate of some of the facts, hence unjudicial. It judges according to appearances, hence is unreliable. It is at war with the spirit of brotherhood, hence unchristian. Jesus prayed "that they all may be one, even as we are one," but apart from that common apprehension of demonstrable truth which disarms prejudice, this oneness cannot be realized among men. Knowledge of demonstrable truth is the only Christian basis of judgment, and Christian Science stands for this, and this alone.

JOHN B. WILLIS.

"GUARD THE LIPS."

THE psalmist prayed, "Set a watch, O Lord, before my mouth; keep the door of my lips," and surely without divine aid no mortal can avoid doing himself harm through unguarded utterance. Christian Science has come to teach humanity the power of Truth declared, otherwise the power of the word of God; and as this is recognized, the belief so long entertained by mankind, that evil is power, begins to disappear, with the ill effects which attend the belief. In Christian Science great emphasis is laid upon the potency of silent prayer, which means communion with God and the declaration, on our own behalf or that of others, of the might and majesty of God's law. These silent utterances of truth bring our thoughts and all their activities into conscious harmony with good, and establish health where it seemed to be absent because unrecognized. We cannot too often remind ourselves that "the Lord he is God; there is none else beside him," a sweet assurance often quoted by our beloved Leader.

Students of Christian Science should never forget that the only true foundation is the understanding of the divine allness, and the necessity of building thereupon: not the "wood, hay, stubble" of mortal opinion, but the enduring facts which represent divine Principle and its harmonious activities. To know these is of more importance than all the wisdom of this world, and to declare the truth of being, when thought is prepared to receive it, calls for "the wisdom which is from above." Christ Jesus warned his followers against casting pearls before swine, a warning which is too often unheeded at the present day, while our text-book tells us that "no loss can occur from trusting God with our desires, that they may be molded and exalted before they take form in words and in deeds" (Science and Health, p. 1).

Even in respect to the voicing of good undiscriminatingly, we need to guard our lips; but when it comes to the voicing of evil, no one is supposed to be in doubt as to what is the right thing, yet how few there are who could boldly face an enlightened conscience and plead innocence in this respect. How few there are who are actuated by the sentiment which Arnold so beautifully expresses when he says,—

Guard the lips as they were palace doors
The King within.

It is very evident that error must first find access to unguarded thought, be entertained as a guest (gossip is the fitter word); then, borrowing the guise of our personality, slip out through the unguarded doors to work havoc, to deny the forever truth that God is all and that there is none else.

We can never watch too closely against the belief that error is either person, place, or thing, and we should never admit any belief of evil to our mentality, whatever its plea. Mrs. Eddy was once counseling some students on this subject, and said that she refused to open the door even long enough to see what error wanted, as she knew without being told; and this would surely apply to every sincere student of Christian Science. What if the storm roar without, and beat upon our walls? They cannot be shaken if they rest upon the rock of Truth, and the belief in evil be denied the right either to enter or go out from our mental abode; but if error can secure the services of any one as its mouthpiece, then it need ask no more of him.

It is seldom indeed that an assault of ill cannot be quickly overcome if we go at once to God for aid and refuse to open the door. Christ Jesus said, "Watch ye and pray, lest ye enter into temptation;" and he also said, "Let your communication be, Yea, yea; Nay, nay: for whatsoever is more than these cometh of evil." Let us begin each day with a holy resolve to permit only messages of Truth and Love to go forth from us, that "the fruit of our lips" may become a perpetual sacrifice to God.

ANNIE M. KNOTT.

AMONG THE CHURCHES.

LONDON, ENGLAND.

On Sunday, Jan. 1, Third Church of Christ, Scientist, held the first service in the auditorium of their new church building in Curzon street, Mayfair. The auditorium, with a seating capacity of about fourteen hundred, is nearly completed, and the rest of the building, containing reading-room, etc., is in course of construction.

There was a large congregation, and many visitors and friends from the other London churches and from all parts of England attended both the morning and evening services. At the commencement of the service the First Reader read Mrs. Eddy's letter to Third Church on its formation, printed in the *Sentinel* May 13, 1905, and spoke as follows:—

"Out of full hearts we offer fervent thanks, that yet another 'structure of Truth and Love' is made manifest. May this Third Church of Christ, Scientist, London, builded of patient prayer and free-flowing love-offerings, built on the rock of Christ, in obedience to divine Principle and in loyalty to our Leader's teachings,—may this church be a beacon of light in the land, a haven of hope for those who, hungering and thirsting after righteousness, seek here the 'still waters' of peace and understanding."—*Correspondence.*

SANTA BARBARA, CAL.

The Christian Science church, since the renovations and additions made both inside and out, is exemplary of the beauty that artistic simplicity can impart to a sacred building. Two wings have been built on, one on either side of the old frame of the building, the pillars supporting the side porches matching those of the original edifice, which has been so enlarged within that more than twice as many can be seated in the assembly room as formerly.

Santa Barbara Independent.

DENVER, COL.

The corner-stone of the edifice of Second Church of Christ, Scientist, at East Bayaud and Grant streets, was laid Saturday, Dec. 31, at 9 a.m., in the presence of the Readers and board of directors.—*Correspondence.*

THE LECTURES.

WAGONER, OKLA.

Francis J. Fluno, M.D., delivered a lecture on Christian Science Dec. 4 at the Court House. He was introduced by Attorney W. W. Gresham, who said in part,—

The history of Christianity reveals a succession of errors, one fallacious theory abandoned for another, yet each succeeding system approximating more nearly the truth. But, amid all the confusion and conflicting opinions, this thing we know: that God is true and that His Word is a correct revelation of the truth. It is the part of wisdom to hear every one who comes to us with a message of truth. The speaker of the evening comes to us in the name of that God to speak of that truth. Shall we not hear him gladly?

Correspondence.

SEVENOAKS, ENGLAND.

Sevenoaks has received a visit from Bicknell Young, who lectured [Nov. 1] on the subject of Christian Science. Walter Wilding, M.R.C.S., L.R.C.P., in introducing the lecturer, said,—

My attention was called to Christian Science nearly eleven years ago, when my father, then living abroad, was healed by its means of serious organic disease. At that time I was a doctor, practising medicine in Lancashire, and was very skeptical of this new method of healing. But when, a few months later, I witnessed some very marvelous healing by Christian Science of so-called incurable organic disease among patients in my medical practice, and among members of my own family, I became convinced that the medical attitude of declaring and believing any disease incurable, was a mistake. I also realized that there was a higher healing power than medicine—that this power of the healing Christ was present today, and was doing healing work for the children of men along spiritual lines. My next step was to make a careful study of the Christian Science textbook, and to investigate the cases of Christian Science healing as I had opportunity. Gradually I became convinced of the truth of its teaching, and after nearly two years ceased to practise medicine.—*Kent Messenger.*

TOLEDO, O.

Willis F. Gross lectured at First Church of Christ, Scientist, last evening [Nov. 15], to a large audience, upon the subject, "Christian Science: The Gospel of Salvation." The speaker was introduced by Col. George P. Waldorf, who said:—

The growth of spiritual understanding is making it more and more clear that Christianity is the most profound knowledge or science that has been revealed to man. From Genesis to Revelation, the Bible teaches the absolute reliability of the promises of God and His Son, Christ Jesus. That their availability is certain and sure is being proved by the fast accumulating experience of those who sincerely seek to sound the breadth, and length, and depth, and height of God's love. Man is coming into the knowledge that he is a spiritual being; that real life is spiritual life, in the reflection of his creator; that other semblance or belief of life is error and needs to be overcome.

The life of Christ Jesus plainly proved that his mission was to reconcile man to God. He healed the sick as well as the sinful. He showed the way to eternal life in a manner that forcibly appeals to mankind. He plainly delegated his followers to exercise the same healing works. All honor and praise are due Mrs. Eddy for the beneficent work she has inaugurated, which brings the spiritual uplift of humanity through the healing of mind and body. I am rejoiced that it was a woman who searched out anew and revived the manifestation of divine healing power, inherited by man through the Master. The Christian church would have cut a sorry figure during the past nineteen centuries without the deathless zeal and fidelity of woman for and to the cause of Christ.

Christian Science teaches how the false testimony, or error, of mortal sense may be successfully denied, through the reflection of the truth of Spirit. It teaches that God is Truth, Life, and Love, the divine Principle that governs the universe; and that man, the real spiritual man, is in the image and likeness of God.—*Toledo Times.*

PITTSBURG, PA.

A lecture on Christian Science, under the auspices of First Church, was delivered yesterday afternoon [Dec. 11] in Memorial Hall by the Rev. William P. McKenzie. The hall accommodates twenty-five hundred persons, and fully twenty-two hundred assembled to hear Mr. McKenzie, who was introduced by James E. Patton, Jr., as follows:—

One of the remarkable signs of the times is the broadening scope of public educational work. Everywhere we hear of public lectures being given by those who have specialized in the various branches of learning. There is probably no subject of such general public comment, or about which prevails so little correct information, as the subject of Christian Science.

The world, in recent years, has seen in Christian Science the most wonderful religious movement since the days of Jesus the Christ. So efficacious have been its ministrations that hopeless invalids and sufferers have been healed by the tens of thousands, and hundreds of beautiful churches have sprung up all over the world, giving substantial evidence of a boundless gratitude. No wonder, with this record, that the subject is of great public interest, and that it is desirable for all to have a correct understanding of this healing ministry.—*Gazette Times.*

SHELBYVILLE, ILL.

A large audience heard the lecture on Christian Science, given by the Rev. Arthur R. Vosburgh at the Unitarian Church on Monday evening [Dec. 12]. The speaker was introduced by the Rev. J. L. Douthit, who said in part,—

We cannot afford to refuse such a movement a fair hearing, especially when judged by the Master's rule, that is, "by their fruits." By this rule Christian Scientists make a fairly good showing with other Christians; and may I not say, as to the special fact of healing the afflicted, that they also compare favorably in efficiency with some older and more fashionable schools of treatment. When Jesus walked the earth, some of his disciples once said with indignation: "Master, we saw one casting out devils in thy name; and we forbade him, because he followeth not with us." But Jesus said: "Forbid him not, for he that is not against us is for us."

When we see people brought to their right mind, and diseases healed by those who do not follow us, we must not forbid them. Rather, we must welcome them and accord them the same just judgment we would like them to give us. In simple justice, I am bound to say that the adherents of Mrs. Eddy have been more courteous to the views of others than the others have been to the views of Christian Scientists. It is true that many intelligent and good people think they see in the theory and some of the practice of Christian Scientists what they regard as "mortal errors." But in this respect most of us live more or less in glass houses, and should not be too ready to throw stones at others. Anyhow, it is always safest to get our information

Digitized by Google

from headquarters, and know what and whom we are condemning before we throw stones.

I would to God that all professing Christians possessed as happy and hopeful spirits as some faithful Christian Scientists I know. Like many we know in all other churches, they are bearers of "sweetness and light" to those who walk in darkness, sick and despairing. Would that all church-members were as faithful in attendance upon the church services of their choice as are Christian Scientists. Really, I would be willing that several of my friends and members of my parish were Christian Scientists, if it would make as favorable change in their lives and conduct as I have witnessed in some new converts to that faith.

I do not believe in all of Mrs. Eddy's doctrines, though I have studied the subject on all sides, and am ready to think it may be because of what existing churches have lacked that this wonderful movement has come. I believe Mrs. Eddy was a sincere and pure woman, and I believe that God has given health and new life to many bodies and souls through her. She and those who believe with her have cast out devils, and done good that I and others have failed to do.

Shelbyville Union.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Auburn, N. Y.—Frank H. Leonard, Burtis Grand, 3 p.m., Feb. 5.
Chicago, Ill. (Nine Churches).—Frank H. Leonard, Orchestra Hall, Feb. 6, 7, and 9.
Derby, Conn.—Frank H. Leonard, Library Hall, Feb. 2.
Edinburgh, Scot.—Bicknell Young, Synod Hall, 3 p.m., Feb. 18.
Exira, Ia.—Frank H. Leonard, Christian Church, Feb. 10.
Fairfield, Ia.—Willis F. Gross, Fairfield Public Library, Feb. 6.
Galesburg, Ill.—Willis F. Gross, Universalist Church, Feb. 3.
Girard, Kan.—William D. McCrackan, M.A., Court House, Feb. 7.
Glasgow, Scot.—Bicknell Young, Queen's Rooms, Feb. 13.
Hackensack, N. J.—Frank H. Leonard, Oritani Hall, Main and Salem streets, 8:15 p.m., Feb. 3.
Massillon, Ohio.—Willis F. Gross, City Hall, Feb. 9.
Montgomery, Ala.—Prof. Hermann S. Hering, Church Edifice, 14 High street, 3:30 p.m., Feb. 5
Provo, Utah.—William D. McCrackan, M.A., Opera House, Feb. 10.
Pueblo, Col.—Bliss Knapp, Grand Opera House, Feb. 7.
Richmond, Surrey, Eng.—Bicknell Young, Castle Assembly Rooms, Feb. 10.
Tampa, Fla.—Prof. Hermann S. Hering, Greeson Theater, Feb. 9.
Salt Lake City, Utah.—William D. McCrackan, M.A., Salt Lake Theater, Feb. 12.
Shellman, Ga.—Prof. Hermann S. Hering, Auditorium, 7:30 p.m., Feb. 6.
St. Louis, Mo. (Third Church).—Prof. Hermann S. Hering, Temple B'Nai El, Spring and Flad avenues, Feb. 2.
Wausau, Wis.—Willis F. Gross, Church Edifice, 8:15 p.m., Jan. 31.

"THE MOTHER CHURCH."

A new edition of Joseph Armstrong's book, "The Mother Church," is now on sale. In addition to the matter heretofore published, it contains two letters from Mrs. Eddy to Mr. Armstrong, in which she refers with approval to this book; also twelve photographs, illustrating the building of the extension to the church edifice.

TESTIMONIES OF HEALING.

[Translated from the German.]

I wish to testify to all the good which I have experienced during the last four years through the study of Christian Science, not only in the healing of disease, but in a spiritual uplift and the blessed sense of security in the bosom of our Father-Mother God. In August, 1906, I was suffering with a complication of diseases,—with heart and lung trouble, hay-fever, and incessant coughing which was so bad that my dear husband could stand it no longer, as he said. We had had the advice of four physicians, who did all they could in order to bring me relief; but it all was of no avail, and I had apparently been hovering between life and death for three weeks.

On or about the tenth of August a dear friend reminded me of the fact that my life was in God's hands, and that Christian Science could help me. This friend had called my attention to Christian Science a few years prior to this, and had given me a few copies of the *Sentinel* to read; but after having looked through one, I laid them aside with the remark that it had too much religion for me and was too good to be true, although I put all my trust in God (medicine included). We, however, now asked for the address of a Christian Science practitioner, and he was so kind as to call on the same day. He talked with me, and I accepted his statements readily. Within an hour I sat up in bed and had a talk with my husband. I told him that I knew I was healed. He said, "Be careful, don't be rash;" to which I answered that he need not worry, that I should be all right. On the following day I had another treatment, and immediately after it I got up, had a hearty supper, and went to bed at eight. On the following day I got up at half-past five and did not retire until ten o'clock in the evening. The practitioner came to see me only four times. Since that time I have been well.

I would also like to relate a few incidents connected with my healing. When I came into the kitchen I made the remark, "I am down here now, but how shall I manage to get upstairs again?" But I at once gave the answer myself: "I shall get upstairs just as I got downstairs,—with God's help." And so it was. The second incident was as follows: The practitioner came to see me on Thursday, and on the following day, just after he had gone, one of the physicians came to see whether I was still alive. I was in the kitchen just then, and my daughter went to open the door while I walked upstairs. I entered the hall at the moment when the physician stepped in through the center door, and he was so struck that he became speechless, then he said: "Oh, my patient!" He then asked me who the man was who had just left the house, to which I replied that he was the one who had saved me from death; whereupon the physician went away and never called again, nor even sent his bill. When my dear husband came home in the evening the neighbors called to him that I had been taken to the hospital on that same afternoon. He was very much distressed at this report, and entered the house in very low spirits, but as soon as he opened the door my daughter called to him that some one wished to see him. He stepped in, but stood with eyes wide open, unable to utter a word. When he recovered from his surprise, he took me into his arms and wept tears of joy, and we all thanked God, whose great love and goodness we had experienced. The following week I went to church with a heart overflowing with gratitude to God, and to Mrs. Eddy, who has given us understanding through her book, "Science and Health with Key to the Scriptures."

We have seen many demonstrations of the truth among our friends. I did not intend to give such a lengthy account of my own healing, but it was so wonderful that I could not help doing so. My friends still say that I was

Digitized by Google

practically raised from the dead at that time. I have been entirely well since, have gained in weight, and look much younger than I did four years ago; and all this I owe to God, and to Mrs. Eddy. I daily pray to God for more light, that I may walk in the path that Jesus trod.

MRS. BARBARA C. BECHTEL, Milwaukee, Wis.

In August of 1908, I was healed in Christian Science of a stomach trouble which had made life a burden to me for eight years. I had medical treatment without avail during this entire period, yet I grew steadily worse, and for six months before trying Christian Science I suffered very much after eating even the lightest food. I was in such distress that I feared to sleep at night, but after taking the third treatment in Christian Science I was entirely healed. Since that time, I have had many beautiful demonstrations in overcoming all that is unlike good. One I should like to mention was the birth of our last child, which was very different from former experiences,—no fear or suffering, but only a sense of great joy, although at that time I had very little understanding of Christian Science.

Words fail to express my deep love and gratitude for what Christian Science has done for me.

MRS. HATTIE WATSON, Indianapolis, Ind.

It is now four years since I became interested in Christian Science and was healed of what had been diagnosed as tubercular glands. For nearly a year I had been taking X-ray treatments of a specialist, but this had failed to heal or help me. My general health was impaired, and life did not seem to offer me much at that time. I had been prejudiced against Christian Science, but finally a dear friend persuaded me to try it, as it seemed to be the only thing left.

When I first called on the practitioner, she asked what she could do for me. I told her I thought she could do a great deal, and through her understanding of God as all-power and man perfect and eternal, she patiently led me out of the shadows into the light of Truth. I was relieved of pain with the first treatment, and in two weeks was entirely free of the pain in my head, and an enlargement under my ear had disappeared. One month after taking my first Christian Science treatment I went back to the doctor, and after he had examined my neck and shoulder he said I was well, that there was no trace left of the former trouble: nor has it since returned. At this time I was wearing glasses and had done so for over twelve years. I broke them one day, and when I told the Christian Science practitioner she gave me a few treatments for my sight. I have never felt the need of glasses since, or suffered from headache as I did while wearing them. One of my eyes was said to be defective, but through knowing what it means to be God's child my eye has become almost normal. I have also been freed from rheumatism and a weak back.

For eight years I was a member of an orthodox church, but since I began to read "Science and Health with Key to the Scriptures" and to study it in connection with the Bible, I have truly found health and happiness. I find I am gaining a little each day in the overcoming of error, and I try to follow our blessed Master's teaching. I am truly grateful to our dear Leader for all she has done for me and for the world through her writings, especially Science and Health. The light which has come to this world through her teachings is fast dispelling the shadows of sin, disease, and death.—VALERA I. KNOX, Ventura, Cal.

During the two years or more that I have been interested in Christian Science I have received numerous blessings, physical, moral, and financial. Taken singly, these might not excite much attention or thought, but taken collectively they constitute a mass of evidence that is to my mind conclusive of the truth of this great movement. I did not come to Christian Science for help, physical or otherwise, but because I desired to know more of the religion which had healed my wife of the ills from which she had suffered. After investigating Christian Science for about two years, I am firmly convinced that it is the only practical religion, because all that it teaches can be and is being demonstrated daily.—CLAY G. KNOX, Ventura, Cal.

I send my testimonial to what Christian Science has done for our son, that others who are suffering may know where they can get help from God through Christian Science. It makes me tremble to think what would have happened if we had not found the truth. In February, 1909, our son, thirteen years old, was taken with severe pains over the eyes and in the back of the neck. We took him to several eye specialists, but without help. He continued to get worse instead of better, until he became completely paralyzed and totally blind. We had several physicians, and finally decided to take him to a hospital. He was in the hospital twenty-two weeks, when the doctor told us he would be just as well off at home, so we brought the boy home. He improved somewhat physically, but he was mentally in a very bad condition. He had been at home about two weeks when he was taken with spasms so that it took two men to keep him on the bed. We had been told many times that it was a hopeless case, when a friend advised Christian Science treatment. We had tried everything else and this seemed to us like a line thrown out to a drowning person who is about to go down for the last time.

We at once sent for a practitioner and took up Christian Science with our whole heart, and in a little more than two weeks our boy was healed,—perfectly well. I cannot express my thankfulness for Christian Science, which has helped me and my family so much. I have often wished that I could go out into the world and bring all the suffering ones to God and Christian Science for help. I know that it has helped us not only in sickness but in other troubles. Before taking up Christian Science it seemed to be nothing but trouble. I was in the hospital myself while the boy was there, and my husband, who is a teamster, had lots of trouble, losing four valuable horses inside of a year; but since taking up Christian Science everything goes on all right. I shall always be thankful to God for the help we have all received, and I wish to learn more of this truth every day, that I may look to God in time of trouble.

MRS. NAPOLEON CASTINE, Brattleboro, Vt.

[Translated from the German.]

I, too, wish to give thanks for the good that has come to me through Christian Science. In November, 1909, I became very ill. I suffered severe pain in the abdomen, and lost much blood from the bowels. Being unable to sleep, my condition was a most distressing one. I was advised to have medical treatment at once, but as I was very much afraid of being sent to a hospital, I asked whether I might not be relieved in some other way; for I clung to the thought that God would help me, and my trust in Him led me aright. As I refused to have medical treatment, I was asked if I wanted help in Christian Science—if I wanted to be healed in the way that Christ Jesus healed. I immediately agreed, and a practitioner was requested to take up treatment for me. At first she declared the truth for me silently, and then said that God who is Love does not send disease to His children, that it is His will that they all should be well and happy; that we should bear this in mind, in order to be healthy and remain so. I felt as if all the disease had dropped from me; I immediately felt a change, and soon was able to sleep for several hours, but as I had taken no nourishment during all these days, I felt a sense of great

Digitized by Google

weakness on the following morning, although I had had a good sleep that night for the first time since I had been taken ill.

On account of the firm where I am employed, we had to conform to the law and call in a physician. When he came he stated that it was a severe case of appendicitis, and said that I must go to the hospital the next day. I trusted God, however, feeling that He was my physician and my only help, and that the disease would be destroyed through Christian Science. On that day I applied myself to the reading of the *Herold* and other Christian Science literature, and the last symptoms of physical discomfort gradually disappeared. When the physician came in the next day, I joyfully told him that I was well. He was very much surprised, and would not believe that I was well, but made an examination, as he deemed it absolutely necessary for me to go to the hospital and have an operation performed. He was astonished that this disease should have been completely healed within a few days. However, as he believed such quick healing to be impossible, he said that he would come again in a couple of days, and then decide as to whether I should go to the hospital or not.

I know that the work done for me in Christian Science freed me from the disease and kept me from being operated upon, and as the Bible says, "the prayer of faith shall save the sick, . . . The effectual fervent prayer of a righteous man availeth much." The physician was called only to conform to the law, and when he came again after a couple of days he could not help being convinced that I was absolutely well. During this time I had again read Christian Science literature assiduously, which gave me strength and courage and was my only medicine. I had not followed the prescriptions of the physician, neither had I taken the medicine nor applied the poultices. I took just one dose of the medicine after my condition had already improved, not with the expectation of being benefited thereby, but only in order to be able to give the physician an answer which would not embarrass me, in case he should ask me if I had taken the medicine. I know now that this fear of the physician was also an error, and today I would not take medicine for a similar reason.

Because of the help received in Christian Science through the work of a practitioner in Dresden, the gloomy prophecies of the physician as to the long illness which I should expect did not come true. Contrary to human expectations, divine Love healed me quickly, thoroughly, and permanently, without medical means or the surgeon's knife having been resorted to. About a year has elapsed since, and I now feel more healthy and vigorous than ever before. Through this experience of healing I have become a firm adherent of Christian Science, and it affords me the greatest joy to attend the German services and meetings regularly. During the past five years I would awake with headaches almost every day; but this trouble has entirely disappeared since coming into Science, and I am happy and grateful for having been freed from it. I thank God with all my heart for the help which I have received through the truth. A complete change has taken place within me, through attending the services and reading the *Herold*, and I am much happier and more contented than formerly. I therefore wish to give special thanks to God that our dear Leader, Mrs. Eddy, has shown us so lovingly the way to Truth, and also would express my sincere gratitude for the help received through the Christian Science church here, which helps me faithfully to walk in the way of Truth which I found through my healing.

EMMA SCHELLER, Dresden, Germany.

One has so much to be grateful for in Christian Science, that I find it difficult to begin to tell of what it has done for my little son and myself during the last six years. We have seen fever, measles, croup, etc., quickly disappear under Christian Science treatment.

One day a door suddenly slammed and caught my little boy's hand. His fingers were firmly held, and he could not get them out until I opened the door. He cried at first, and I at once took him to his room. I wrapped his hand in a handkerchief, and together we repeated the scientific statement of being from our text-book (Science and Health, p. 468). Harmony was soon restored, and we were able to go downstairs. About an hour and a half afterward his nurse put him to bed, not knowing what had happened. When I told her later, she said she had scrubbed his fingers in his bath, and he never mentioned that they had been hurt. The next day there was only the skin broken on one finger to show that anything had happened.

At the beginning of 1910 I did not seem able to overcome for myself what, speaking from former experience, looked like a bad attack of cold. I asked a Christian Science friend here to give me treatment, and I was quickly well, being able to do my usual work all the time. At the same time my friend helped me to get rid of a fear of croup which I was holding over my son.

Above all the physical healing is the spiritual quickening which one gets in Christian Science. At a time of great trouble, when everything seemed very dark, the small understanding of Truth which I have gained gave me "beauty for ashes, the oil of joy for mourning, the garment of praise for the spirit of heaviness." It is my one wish now to be able to help others and to show forth my gratitude in my life. I feel that I could join with Mary in her hymn of praise, "My soul doth magnify the Lord, and my spirit hath rejoiced in God my Saviour. . . . For he that is mighty hath done to me great things; and holy is his name." My feelings to Mrs. Eddy are of the deepest love and reverence.

It is my privilege to belong to the Christian Science society here. As a body we have much to be grateful for, as we have had many manifestations of divine Love. We are endeavoring to express our loyalty by following implicitly the Manual of The Mother Church in all our work.

BLANCHE E. LESTER, Reading, Eng.

It is with the sincerest gratitude that I subscribe to the following in behalf of what Christian Science did for me in time of need. Having come out of collegiate courses in nursing and *materia medica*, my path in Christian Science has occasionally taken me to serious bedside work in surgical and obstetrical service. After these experiences the success with the patient is most gratifying, but I would be the one to pay the price in a sense of overwork, anxiety, and doubt, and would be days and sometimes weeks in getting rested and back to a mental calm so that I could resume my usual duties.

Quite recently I have had three successive problems come up for solution, which were most insistent and meant days and nights of continuous service. I called on a Christian Science practitioner for support through these trials, and the answer came gently, quickly, and completely,—that God's work is done, and that I was only an avenue for the expression of that work; that I was taking the light of Truth into these places, and not body, nor past memories of hospital and college events. The result was such a complete realization of the omnipresence of God that I have been able to continue, without a break, all of my regular work, social obligations, also new work which has come daily, and all this without giving an extra hour of time to recuperation. This freedom, coming after eight years of struggle to hold my own after such experiences, has brought a joy and gladness and spiritual sense which I never dreamed of as possible to me.

I therefore most gratefully subscribe to this wonderful healing, and thank God for the infinite possibilities revealed to us by Mrs. Eddy's noble work in giving us the revelation of Truth, Christian Science.

ALTHA M. SMITH, Chicago, Ill.

[Translated from the German.]

I consider it a duty to tell my experience in Christian Science to others. Before I came to this truth I prayed that I might die, but now I thank God that I live, and for the recognition that God is our Life.

After an accident in 1904, I was ill for two years. The physician said I had suffered an injury to the brain and spine, also a shock to the nervous system. I could scarcely sleep without opiates; and sight, hearing, and memory seemed to be failing. In this sad state I could communicate little with others and could not continue my profession of nurse: but since I have been in Christian Science I have not taken a drop of medicine, and after a few treatments I was able to eat and sleep, and awoke feeling as it were newborn. Some troubles are not yet overcome, but I can partially practise as a nurse, and I hope by learning to know God better that these ailments also will leave me. I cannot express in words my thankfulness to God and my gratitude to our dear Leader.—BARBARA BOOZ, Stuttgart, Germany.

I am exceedingly grateful for the many benefits received from the understanding of Christian Science and the satisfactory results obtained through the application of its definite rules. Recently I was bitten by a strange cat while stroking its head. The hand and arm very soon began to swell and were very painful. I thought it wise to have help, so called a practitioner, and in two days the hand was normal. I have found Christian Science to be a great comfort in sorrow, and have applied it to all the discords that have appeared in my life for the past thirty years, and it has never failed to do its work.

For all these blessings, and for the spiritual understanding obtained through the study of the Bible, with our textbook, Science and Health, and for our Leader's faithfulness and loving care, I am profoundly grateful.

ANGELINE E. COLBY, Charlestown, Mass.

With a heart full of gratitude I wish to testify to Truth's healing power, as demonstrated in our home. Over two and a half years ago, our three-year-old boy was taken suddenly ill with convulsions, and after about a month's treatment by a physician, we were told it was a form of epilepsy and considered incurable, but that the child's age was in his favor and he might outgrow it. During the next year and a half we consulted first one physician and then another, including three months' treatment under an osteopath, at last placing the child in a hospital at Ann Arbor, Mich., where he remained six months under treatment. At the end of that time the physician in attendance told me he considered it a hopeless case. The child might, he said, live for years, but would eventually become helpless and probably an imbecile. In fact, at this time the child was apparently losing the use of both hands and feet.

It was then, through the suggestion of a friend, that we decided to try Christian Science, and placed the child in the hands of a practitioner. Today our boy is a strong, healthy child, mentally and physically. The healing was slow, but for this I am now grateful, for through the study thus called for I have myself gained much. Christian Science has given me a knowledge of God, whom I had never before known. I am very grateful to God, and to Mrs. Eddy, through whom this healing truth was revealed.

MRS. LUELLA F. CHAPMAN, Jackson, Mich.

In June, 1907, Christian Science came to me as a light that shineth in darkness. About one year before that time I had been taken sick, and my physician advised a change. For a while I was seemingly benefited, but after four months I had a complete collapse. Then for nine months I was in bed, being able to be up but little. My physician and two others did what they could, but I grew weaker each day, and was almost in despair.

Christian Science was then advised, and in our extremity, and as a last resort, we decided to try it. As there was no practitioner near us, we were directed to one in the adjoining county. She came, and brought "good tidings of great joy." She spent one week with me, and when she went away I was eating anything I wanted, and the extreme nervousness and a chronic bowel trouble had been overcome. Now I can truthfully say I am well and happy. I am indeed grateful to God for Christian Science.

LAURA F. WEST, Thompson, Ga.

In the summer of 1907 I became afflicted with throat and lung trouble. I visited a throat specialist, who informed me that the disease extended into the lung and was spreading. I began to take medical treatment, but grew worse all the time. A year later I visited another specialist, and received further treatment. He informed me that my case was incurable and advised change of climate.

About this time my sister was healed in Christian Science, and she advised me to try it. I finally concluded to do so, and called on a practitioner of this city. After one week's treatment the disease in my throat and lung had disappeared, and I have never been afflicted in any way since. It is far beyond my ability to express in words my gratitude for this healing. Christian Science has been a great blessing to me and mine, and I shall always endeavor to live its teachings.—MRS. HARRIET ISRAEL, Anderson, Ind.

I am glad to tell what Christian Science has done for me, if what I have to say can benefit any one who is suffering as I was. In the latter part of the summer of 1907 I suddenly found myself intensely nervous and depressed. In addition to the above-named troubles, I suffered from headaches, sleeplessness, rheumatism, kidney and bowel disease, and a heart affection. I was in untold misery when Christian Science found me, but through the efforts of a kind and patient practitioner I am now well, and no one has more reason than I to be thankful to God, and to Mrs. Eddy, whose teachings have made this healing possible.

MRS. JEANNETTE LOWREY, Neodesha, Kan.

Having received so much benefit from reading the testimonials in the Christian Science publications, I wish to express my gratitude for these, because, when all else had failed, these statements led me to this truth for physical healing. After a few weeks' treatment I found myself perfectly free from mental trouble, nervous exhaustion, and the effects of an operation which medical skill, in years, had failed even to relieve. Words cannot express my gratitude for the physical healing, but I am much more thankful for the spiritual illumination which is enabling me to perceive that the dear old Bible is filled with rich treasures for me here and now. This understanding is bringing me peace, joy, and happiness. I am truly grateful to God for leading me to find Christian Science, and to Mrs. Eddy for revealing it to this age.

MRS. K. J. DUNN, Medford, Mass.

I find it difficult to express what Christian Science has done for me,—indeed, no words are wholly adequate to express my gratitude. For five years I had been subject to colds, ending in acute lung and bronchial trouble, also sleeplessness, loss of appetite, and great weakness. I also had a throat affection, which in the opinion of two doctors demanded an operation, as I coughed incessantly.

At this time a dear friend brought me two copies of the *Sentinel* (the first I had ever seen). After reading them I went out, though with great difficulty, as I had to walk.

Digitized by Google

(I had received an injury in being thrown from a horse, which caused such pain in my neck that I did not ride on the street-cars any more than I could possibly help.) I bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and read it with no prejudice, but with no hope that it would heal me. I simply wanted to know what Christian Science was. When I had gone through the book once I knew very little about it; at a second perusal I was scarcely any wiser, but I read it five times in as many months. I also studied the Lesson-Sermon every day and attended the services.

At the end of that time I found myself completely healed, —strong, hearty, able to work and to walk a greater number of miles than I had been able to walk blocks before. (I should add that I had one treatment for the throat difficulty, as it did not yield readily.) Since then I have been able to keep well by making a practical use of our Leader's words in Science and Health, p. 418, lines 20-25. I hardly know what it is to feel fatigue. It is about six years since my healing, in which time I have not been laid up five days. I also laid aside my glasses at the time of my healing in July, 1904, and have not used them since, after having worn them about twenty years. The reading of the Bible in connection with Science and Health has become a source of strength to me. I have been helped in many other ways, —financially, in case of accidents, even where it was said that bones could not be set by a surgeon because so long a time had intervened before they were attended to.

For all the healing I am most thankful, and rejoice that God raised up our Leader to give this truth to the world.

MRS. E. AUGUSTA MCLENNAN, Vancouver, B. C.

[Written for the *Sentinel.*]

THE CHORD AND THE FLOWER.

MARY J. ELMENDORF.

THE gray mists rose from the river,
The white mists rose from the sea,
And, inland swirling in silence,
They swallowed the shore and the lea
Till they isled in their hungry billows
The lonely heart of me.

But a little white chord of music
And a little white flower of prayer
Came forth from my heart—from the garden
That God had planted there;
And they spilled their sweets like the roses
On the cold and somber air.

"Ye cannot stay," said the music,
"O mists, where the warm winds start!"
"Ye cannot blur," said the flower,
"The light that of love is part!"
And, lo, the wind, like a message,
And the sun uprose in my heart!

"Go back to your dearth and your silence,
O mists!" said the little white chord;
"Go back," said the prayer, "to your darkness!
Go back, ye powerless horde!"
And, lo, in my heart an angel
Stood guard with a flaming sword!

So the mists went back to the river,
The mists went back to the sea,
The blue unlocked the morning
With a turn of its golden key,
And the little white chord of music
And the prayer came home to me.

FROM OUR EXCHANGES.

[*Christian World.*]

Religion is immortal, because it represents the world's highest life. But its immortality does not mean the immortality of its forms. Their successive decay and disappearance are simply the preparation for newer ones which shall more adequately express its ever-growing vitality. Observe, as one illustration of this, what has been happening to the Bible. No instructed person now believes in its infallibility, in its verbal inspiration. It offers itself to us now as a human product, and thereby has opened for itself a fresh career full of new interests. Taken so, it comes to us as more than ever divine, because it is the deepest product of that humanity in which God seeks ever to incarnate Himself.

And what is true of the Bible is true also of the church. We have here, going on before our eyes, a change vaster in its character and consequences than that of the Reformation, or than any that has taken place in its previous history; changes of which it is impossible to forecast the issue. When we try to estimate what has happened in our own lifetime, the revolution in doctrine, in the general conception of life, we are staggered at the conception of what, in this sphere, is to happen within the next hundred years. Of this, however, we may be well assured. The movement will be not toward death but to a larger life. The church will be occupied with new applications of its central energy. In the loss of some of its old interests it will have gained new ones.

[*British Congregationalist.*]

God's opportunity lies in every thought and emotion that expresses holy discontent, that confesses ends unrealized and life unsatisfied. To the student who takes all his knowledge humbly, who is ill content with it as an imperfect thing, who carries it without arrogance, ready to lay down his most cherished presuppositions if the truth demands it, the glory of the Lord will come by the eastward gate to which his face is set. To the man who is dissatisfied with the attainment of his work, be it handicraft or braincraft, who sets forward saying, "I can do better yet," who is anxious to learn the finer play of the tools, the nobler use of mind and tongue and hand, God, the great artificer of perfect things, will come on the wings of the morning. Best of all, to the one who is dissatisfied with himself, who searches his whole character, who tries the springs of thought and action, to confess how far short he is of what he wills to be, who faces the new year with yearning desire for larger life,—to him the glory of the Lord will surely come, and its form will be like unto the Son of man. If you want God in any of the ways in which He cares to be wanted, as truth, as purity, or beauty, or righteousness, you will not miss Him. That is the great promise of life.

[Rev. George Batchelor in *Christian Register.*]

Paul standing there, overwhelmed by a sense of gratitude to Jesus, which in him became a commanding sense of obligation to other men, shows the proper attitude of the Christian church and of modern society today, and is a clear illustration of that lesson which, more than any other, we need to take home to ourselves,—the lesson that the great gifts which we have received from the past should in our hands become still greater things to be given to the future. We are bought with a price. We are not our own. We have no gifts which other men have not paid for. We have no rights which other men have not fought for. We have no privileges which other men have not won for us by toil and trouble and fidelity.

The new, the modern element which Christianity has brought into common life is a great respect for man and a profound gratitude to man as the giver of gifts. The Hebrew system exalted God, and did well. The Christian

Digitized by Google

system exalts man as the minister of God, and does better. What we have under God received from man, that under God is due to man and must by us be given.

[Rev. F. C. Aldinger in *Universalist Leader*.]

In a very real sense we create our own God just as we make our own heaven. God exists for us the moment we act upon the supposition that He is, and that He is a rewarder of them who diligently seek Him. He has no vital reality for us until we thus make Him our personal possession. When I say there is a God, stated as an intellectual proposition, it has but little meaning to me. But when I can say, "my God!" then He becomes vitally related to me alone. He comes into my conscious existence, as it were, in response to the yearning and outreaching of my own nature. My very craving for a personal God, for the ideal life that God represents, and the willing advance I make on the assumption that such an object is within my reach, are at the same time the creative activities that make such a satisfaction real and possible for me. God becomes real and vital to me only as I appropriate Him; He responds only to the will and the heart that trusts Him and believes it wide for His incoming. He reveals and verifies Himself only to the will and the heart that trusts Him and believes that He is.

[Joseph D. Wilson, D.D., in *Christian Intelligencer*.]

The moralists felt that wrong-doing must meet a requital, and they looked to see that requital in this world. Experience had taught them so to look. Nemesis was not a fancy, but a fact. When they saw punishment falling upon the wrong-doer, no matter how fully he had been forewarned or how carefully he was guarded,—punishment coming from unexpected quarters and coming relentless and resistless,—they saw that in the constitution of the universe was the principle of retribution, and that fundamentally justice ruled. Their conclusions must have been founded on experience. It was not simply that it ought to be so, but that it was so. The acts of a man come back upon himself.

[Rev. K. C. Anderson, D.D., in *Hibbert Journal*.]

True religion is the soul's increasing desire to realize the highest unity with its source, aspiration in every direction toward that sublime end. And the height of spiritual experience is to know and feel the real and true and perfect in every realm of existence. It is to enter the inner sanctuary, the sacred chamber of the soul, the beautiful world of peace and joy, the inner realm where all is well, that secret place where dwells the soul serene. It is the fulfilment of all the hopes of human life, the attainment of the peace that passeth all understanding, the joy unspeakable and full of glory. It is the attainment of Christhood, the finding of the universal self, which is our real self.

[*Christian Work and Evangelist*.]

The great majority of Protestant ministers are feeling more strongly than ever that to confine God to any ordinance, or denomination, or even church itself, is to belittle Him, and it is a dangerous thing for any church to try to confine the grace of God to its own channel. The grace of God is a great flood, and no church or sect is great enough to contain it. It will burst through any one sect and run through a hundred other channels. If anything is manifest in our day, it is this very fact. The grace of God is flowing through every consecrated group of men.

[Woodrow Wilson in *Congregationalist*.]

To my thinking, the Christian church stands at the center not only of philanthropy, but at the center of education, at the center of science, at the center of philosophy, at the center of politics; in short, at the center of sentient and thinking life. And the business of the Christian church, of the Christian minister, is to show the spiritual relations of men to great world-processes, whether they be physical or spiritual. It is nothing less than to show the plan of life and men's relation to the plan of life.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

ATTENTION IS CALLED to the new volume, "Poems by Mary Baker Eddy," now on sale. Specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

NEW PAMPHLETS.

Attention is called to a new pamphlet, "Causation: Viewed in the Light of Christian Science," by Frederick Dixon.

Also on sale are four new pamphlets: "Seeking and Finding," "Prayer and Healing," "The Divine Nature," and "Upward Footsteps." Each pamphlet contains five to nine articles that have previously appeared in the *Journal*, *Sentinel*, or *Monitor*; and they are particularly suitable for handing and sending to inquirers or persons who are becoming interested in Christian Science.

Hereafter, the price of all pamphlets (except "What our Leader Says" and "Christian Science and Legislation") will be reduced to 5 cents a copy; 55 cents a dozen; $2.00 for fifty, and $3.50 for one hundred. Hereafter, also, the republication in the English language of single articles as "tracts" or "reprints" will be discontinued. It is believed that their place is better taken by the daily article on Christian Science in the *Monitor* and by these new pamphlets and others that may be issued.

NEW POST CARDS OF THE MOTHER CHURCH.

Post card photogravure, in sepia tint; an exact reproduction of the large photogravure of The Mother Church Buildings and Publishing House with parkway in foreground. Single copy, 5 cents; twenty-five copies, $1.15; one hundred copies, $4.25.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90; six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. XI indicates the year 1911 and XII, 1912. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; *six or more copies to one address, $4.50 each.*

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

An additional endowment of ten million dollars to the Carnegie Institution of Washington has been donated by Andrew Carnegie, the founder. This brings his gifts to the institution up to a total of twenty-five million dollars. Coupled with the formal announcement was a declaration by Mr. Carnegie that the work of the institution had cleared from blame the captain of a British ship who ran his vessel upon the rocks, by proving that the British admiralty charts by which the captain was guided were two or three degrees astray. The discovery of sixty thousand new stars by Professor Hale at the observatory on Mt. Wilson, Cal., was also announced. This observatory, established by the institution, is to have a new telescope with a lens of one hundred inches diameter.

A special ruling permitting railroads to reduce rates on one day's notice, in cases of violations of the long and short haul clause of the railroad law, has been made by the interstate commerce commission. Hundreds of complaints have been made, and in many cases the railroads admit their justice, being willing to cut the rates. Heretofore, however, the changes have all been suspended pending investigation, and in some instances were held up for months. As the commission has repeatedly granted shippers reparation, the railroads wish to act quickly.

A knotty point of American bankrupt law has been settled by the United States supreme court, which holds that a secured creditor is not entitled to apply the proceeds from the sale of his securities first to interest on his principal accrued since the filing of the petition in bankruptcy, and then to the principal, and to prove a claim in a bankruptcy court for the balance of the principal. The rule, following the English usage, fixes the moment when the affairs of the bankrupt are supposed to be wound up, at the time the petition in bankruptcy was filed.

Based on the great discrepancy between the percentage of wrapper to filler and binder used in the manufacture of pure Havana cigars, and the percentage of actual Cuban importations on which duty has been paid as "wrapper," the treasury department has started an investigation of the tobacco importations from Cuba into the United States, which promises to unearth a larger loss to the Government's customs revenue than was disclosed by the frauds of the sugar trade in the recent investigations of that industry.

Organization of the Republican Progressive League by progressive Republican senators, representatives, governors, and others—an organization which will seek to "fight for the establishment of popular government"—was effected in Washington last week. Plans of the new league, which have been under way since the assembling of Congress, have been concluded, a declaration of principles signed, a constitution adopted, and officers elected.

The cruiser Detroit, which twenty years ago cost the Government $1,233,039, was sold as junk a few days ago for twenty thousand dollars. In the United States navy it is estimated that at the present time vessels that cost between one hundred and forty and one hundred and fifty million dollars are either in reserve, dismantled in navy yards, or admittedly of no further fighting value, and so soon destined for the scrap-heap.

In a quarter of a century the number of members enrolled in the national college fraternities has risen from seventy-two thousand to almost two hundred and seventy thousand, of whom thirty thousand are women. Of the more than seventeen hundred chapters of these societies, eleven hundred own or rent houses, which at a conservative estimate are valued at more than eight million dollars.

By a vote of nine to six the House committee on industrial arts and expositions decided to report favorably the Estopinal bill designating New Orleans, instead of San Francisco, as the city in which the commemoration of the opening of the Panama Canal should be held, and to appropriate one million dollars for a Government exhibit. When brought to a vote in the House, San Francisco was chosen by a vote of 259 to 43.

A joint resolution against the "trusts," providing an amendment to the Constitution enlarging the powers of Congress, has been introduced in the House and reads as follows: "Article 16—The Congress shall have power to prevent and suppress monopolies throughout the United States by appropriate legislation."

Retrials in federal, civil, and criminal cases, based on technicalities, will not be allowed, unless the technicalities are of such a character as to change the verdict, if a bill reported by the House committee on judiciary becomes a law. The bill is favored by President Taft and the American Bar Association.

The United States reclamation service has dealt with nearly four hundred million acres of land. This is being divided into small farms and is creating a class of independent citizens. The work is being paid for by the returns from the farmers to the reclamation fund.

The principal express companies of the United States have come to an agreement for reductions in rates. When two companies handle a package hereafter, the charge will be the same as if one company had carried the package from shipping point to destination.

A bill has been introduced in the Michigan Legislature which, if it becomes a law, will abolish all fraternities, sororities, and similar societies in the public schools of Michigan. Pupils who do not obey the law are to be expelled from school.

A jury in the United States circuit court at New Orleans returned a verdict of guilty against members of the New Orleans dock and cotton council, charged with conspiracy to interfere with foreign commerce through a strike.

The public service commission of New York has received a proposition from the Bradley Construction Company to build and operate the Triborough subway.

A postal card three by five inches and decorated with a profile of Lincoln in red ink, is to be put into circulation. It is intended for use in indexes.

A law has been passed by the House making it compulsory for the railroads to furnish steel cars for the railway mail service after 1916.

International.

The new labor movement which has recently assumed power in New South Wales, is strongly in favor of nationalizing the large primary industries. One of the first moves in this direction will probably be the making of bricks and tiles for the public works, which will result in an annual saving to the government of one hundred thousand dollars.

It appears that Professor Reisner, who has been carrying on the excavations for an American society on the site of the Israelitish capital in Samaria, has unearthed a hundred clay tables covered with inscriptions, which are believed to form a portion of the archives of King Ahab, a contemporary of the prophet Elijah.

Premier Katsura, in introducing the budget for 1911-12 in the Japanese lower house, congratulated the country on the greatly increased business reported during the past year. To the gain of two hundred and forty million dollars, the manufacturing industries alone contributed seventy million dollars.

The question of preserving intact numerous beauty spots of New Zealand has occupied the attention of the government for some time, and with this object in view it is expected that a new bill will shortly be passed forbidding the sale of geysers.

An extraordinary credit of eleven million dollars as a first instalment toward the construction of new war-ships appears in the Austro-Hungarian budget, which has been presented to the delegations by the minister of finance.

The land embracing part of Tara's hill, which is intimately associated with early Irish history, as it was in olden days the seat of the kings of Ireland, has been sold by auction in Dublin for $23,550.

The Egyptian cotton crop for 1910 is expected to exceed seven hundred million pounds.

Industrial and Commercial.

George Westinghouse has completed an invention by which, it is said, the danger to ships at sea in fog or darkness or under other unfavorable conditions will be greatly minimized. By means of the invention the officer on watch by simply turning a lever in an emergency can reverse all engines though running at full speed. The invention is designed specifically for use in vessels that are equipped with turbine engines.

Coal and coke exports from the United States in 1910 aggregated forty-five million dollars in value, and in addition to this more than twenty million dollars' worth was supplied to vessels engaged in the foreign trade, making a total of sixty-five million dollars' worth of coal passing out of the United States in the calendar year 1910.

Under normal conditions Lynn (Mass.) manufactures about forty million dollars' worth of shoes a year, employing in round numbers thirteen thousand workers in its one hundred and ten boot and shoe manufacturing concerns. To this should be added the manufacture of leather and other products allied to the shoe business.

If the consent of the Government can be obtained the Chelsea docks of New York will be extended one hundred feet farther into the harbor, in order to accommodate the increased length of new ocean liners. The docks now measure eight hundred feet.

According to the forthcoming Census Bulletin No. 110, giving cotton statistics for the year ending Aug. 31, 1910, the number of active cotton spindles in the world has increased from 105,681,000 in 1900 to 134,526,000 in 1910, or 27.3 per cent.

American sales to Argentina last year amounted to about forty-two million dollars. Sales in 1900 were $11,095,538.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE LAW OF RIGHT DESIRE.

W. D. MCCRACKAN, M.A.

THE desire of the human race to have dominion over all the earth is very pronounced in our own day. In this connection the term "earth" may well be used in its broadest sense, as including also the sea and the air, as well as the associated concepts of time and space. Within comparatively few years the last blank spaces on the map have begun to be rapidly filled in, the loftiest mountain-peaks to be scaled, the greatest ocean depths to be fathomed, and the once mysterious forest areas to be finally explored. The aspiring desire of mankind to conquer the air is being fulfilled, that desire which has pursued the ages from the semimythological Icarus down to our own time. There seems to be a general consensus of opinion that material obstacles must no longer be permitted to impede the progress of mankind toward freedom and power, or to limit legitimate capacities. Materialism and so-called material laws must not be conceded the right of riding roughshod over man's mental and spiritual requirements.

Coincident with the conquest of "the earth," with the apparent reduction of time and space by means of fast trains, fast steamships, and flying machines, there is observable also a keen desire to improve political, social, and economic conditions. This is the age of the acknowledgment of the rights of woman; of a growing love of beauty in city and country; of prison reform and of the proper protection of dumb animals. It is an age which demands an improved newspaper, better roads and better homes as consistent with the eternal fitness of man's dominion over all the earth. Such conquests and reforms, whether already completed or merely anticipated, repose upon desire, and in so far as they tend to break down the limitations which the human consciousness tries to place upon man's capabilities for good, they proceed from right desire. The overcoming of material obstacles in order to establish man's mental and spiritual ascendency is according to law,—the law of right desire. It is in agreement with the prayer of righteousness or right thinking which makes for the revelation of the kingdom of heaven on earth. In the chapter on Prayer in Science and Health, Mrs. Eddy makes the statement that "desire is prayer; and no loss can occur from trusting God with our desires, that they may be molded and exalted before they take form in words and in deeds (p. 1).

Christian Science teaches how this "trusting God with our desires" is to be accomplished, how to bring them into consonance with His will, how to measure them by His standard. Thus Christian Science points out the law of right desire, the method of true prayer which does not remain fruitless, but leads to the demonstration of God's omnipotence over every material obstacle. Christ Jesus gave profoundly metaphysical advice concerning prayer when he said: "What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them." He points out that desire lies at the basis of prayer and that prayer is more than a mere supplication. He who prays cannot simply address a request to the Almighty and expect an answer, without himself doing his duty; and his duty is first of all to desire. If he prays in a perfunctory manner, what right has he to expect that he will receive? Moreover, he must believe that he receives, he must know and understand the possibility of that good thing which he desires, it must be a metaphysical reality to him. He must apply the law of right desire which will produce the right result, namely, that conquest over so-called material error which leads to mental and spiritual victory.

It is of course needless to ask God for some evil thing, *i.e.*, to pray from the basis of wrong desire; for God has no supply of evil to dispense and takes no cognizance of false prayers. To pray ignorantly for evil under the impression that one is praying for good, can bring no divine response. Here Christian Science points out the infallible distinction between good and evil, traces a line of demarcation, and sets in operation the law of right desire which brings true happiness, prosperity, health, capacity, and dominion over all the earth. In its broadest sense spiritual healing means the attainment of this dominion, because man's divine rights are thereby established in the face of sin, sickness, and death.

To believe that adverse material laws have power over man, and then to pray God to rescue him from their operation and control, is to pray ignorantly and falsely. So, also, to believe that the human mind controls man, debars one from recognizing the supreme government of God, the divine Mind. There can be no compromise in Science. There is but one real power governing the universe, including man, and that power is neither material nor mortal, but is God, Spirit, Love, as defined in the Scriptures. Acting upon this basis, working from the understanding of God as Principle, Christian Science is proving to the modern world that the law of right desire is as truly operative today as it was when Jesus, his disciples and apostles, and the early Christians healed sin and sickness centuries ago. There is no warrant in the Scriptures for assuming that God no longer hears the prayer proceeding from right desire. It is not reasonable to suppose that the science of spiritual healing has visited the earth only once, or that God has left mankind today with no spiritual salvation from the ills of mind and body.

We do not gather from Jesus' own words that he expected the works which he did and commanded others to do were to be confined to the particular period in which he lived. Whoever will turn to his sayings as found in John xiv. 12 and in Mark xvi. 17, 18, will acquire the certainty that spiritual healing was to be for all time, for all men, and in all places. Christian Science, by explaining the nature of right desire, showing it as the true prayer and demonstrating its beneficent results, is fulfilling the promises made and the injunctions given by Christ Jesus in regard to healing both sin and sickness. According to their understanding, modern men and women are today carrying out his commands in this regard. They are eschewing material means as well as the exercise of human will-power, and following prayerfully the law of right desire to its inevitable victory over evil in all its forms.

GOD'S SEERS.

JEANIE C. E. ANDREWS.

IN the experience of all who have learned through Mrs. Eddy's teachings to ponder lovingly the records of the Scriptures, there are moments when some well-known Bible story is suddenly illumined with the glow and radiance of divine Science. With this illumination great lessons and a great joy pour into the waiting consciousness, and gratitude stirs an earnest longing to share this joy with others. Such was the writer's experience not long ago, while reading in the second book of Kings the record of the parting of Elijah from Elisha; and it is with the desire that it may help others as it helped her, that she offers the lessons gained.

Briefly the story is this. The aged prophet, after many experiences of strenuous work, of faithful conflict against the beliefs in false powers, false laws, false gods, had attained a time of comparative peace, had seen the false prophets and kings overcome, famine turned into plenty, and schools for sons of the prophets established in many towns. Realizing more and more his nearness to the Father, seeing that the younger students would be stirred and uplifted to greater individual activity when left to rely on God alone, he felt the time of his departure was at hand. He told Elisha, his student and companion, that God had called him to Bethel, and suggested that Elisha should stay behind. Elisha refused, wishing to accompany and serve his master to the last. On their arrival at Bethel, sons of the prophets came out and warned Elisha that God would take away his master; but, still unmoved, he journeyed on, though Elijah repeated his offer to leave him behind. At Jericho the same scene took place, with the same results. At Jordan, the sons of the prophets stood afar off, and Elijah and Elisha were left alone. Then Elijah asked his companion what good thing he should give him, and Elisha requested that he might receive a double portion of his master's spirit.

We know the rest. To the material sense of the sons of the prophets, a whirlwind arose which seemed to carry Elijah up with it, and to the spiritual sense of Elisha appeared a chariot of fire, from which fell the mantle of inspiration. Next we read the natural outcome of what each seemed to see. The students hastened out to seek a material body, and Elisha awoke to a great life-work. After three days' search, the former returned with their eyes opened to the barrenness of the land (the material state of consciousness) in which they were dwelling, and they requested Elisha to purify the waters which had made it so. This Elisha declared done, using salt as the symbol of purification. The Bible story is brief indeed, but illumined by divine Science its teaching is profound and full of hope and inspiration.

First we note the patient tenderness and wisdom of the aged seer. There was no stern requirement, no desire to force the unprepared thought into experiences too hard for it, into positions it was not ready to take. Gently he bade his student see whether he was ready to share with him Bethel, Jericho, Jordan.

Bethel! The scene of Jacob's lonely, weary sorrow, where he was brought face to face with the results of the sinful sense which had made him a homeless outcast, where he learned so to know himself that through repentance he could see a ladder of thought ascending to the Father. Was Elisha ready for such self-knowledge and ascension?

Jericho! The scene of the great trial of the Jews' capacity for humble obedience and unity, when for seven days they were bidden to march in steady order in the face of their enemies, without striking one blow for what they wanted, and finally to shout united praise and thanksgiving before the victory was outwardly theirs. Was Elisha ready for such obedient humility, thanksgiving, unity?

Jordan! To the Jews forever typical of the separation of the real from the unreal, of the necessity of consecration and purification. Was Elisha ready to stand in the midst of the waters (as the priests of old had stood), his trust consecrated to the unseen power of Spirit, the one God? Would Elisha dare to accompany his master through all these stages of ascending experience? Unfalteringly he answered, "Yes," and in his reason lay the certainty of success. "As the Lord liveth," he said, "and as thy soul [spiritual sense] liveth, I will not leave thee." Elijah knew this reason was all sufficient, "and they two went on."

The next lesson we notice is in Elisha's answer to the sons of the prophets, when they suggested to him that God would take away his master. He answered, "Yea, I know it; hold ye your peace. Elisha knew,—knew that what had led him and drawn his willing and obedient service was not the personality they saw, but the spiritual insight of Elijah; that it was the right thinking of the seer and not his bodily presence he had followed, and therefore no loss or separation was possible. Elijah would always go on thinking, and all right thinking blesses universally and eternally, and so he bade them, "Hold ye your peace." The belief in and fear of loss could not enter his heaven of Soul.

The third lesson comes after Elisha had proved his willingness and ability to share all these experiences. It was then that Elijah asked him what he could do for him. And Elisha answered, "I pray thee, let a double portion of thy spirit be upon me." What a lesson here for all of us,—a lesson in the understanding and unity of love that is real! Elisha knew that his desire was a right one, knew the limitless resources of good and God's law of progress. He had no fear of being misunderstood, of being rebuked for presumption or accused of rivalry. He knew that for them both there was one interest, one longing—to serve the Father. What a lesson in high hope and courage and brotherly love; and in Elijah's response there is no rebuff, no holding down, for he, too, knew no limit to the power and liberality of God. He showed nothing but the gentleness of the merciful teacher; he did not want his student to be discouraged or disappointed, and he admitted freely that the goal he had in view was difficult to attain, but he wanted Elisha to attain it, and so told him the way. "Thou hast asked a hard thing: nevertheless, if thou see me when I am taken from thee, it shall be so unto thee: but if not, it shall not be so."

How this action comes home to us and searches our desires and motives! It is not easy always to want those we have helped to receive a double portion. It is easy to want them to get on, but do not many of us want them to stay just a little bit behind us? Only the great-hearted have done or can do what Elijah did. The loving, generous shepherd-king could joyfully prepare what Solomon was to build, Elijah could show Elisha the way to surpass him, Christ Jesus could pray, "Father, I will that they also, whom thou hast given me, be with me where I am;" and promise, "Greater works than these shall he do." Our beloved Leader could write, "I long to see the consummation of my hope, namely, the student's higher attainments in this line of light" (Science and Health, p. 367).

It is only the great, loving hearts that can find their own in another's good, and so Elijah told Elisha the way. "If thou see me, . . . it shall be so." "See me"—not the flesh and blood of the corporeal Elijah, but the very essence of the man, his purpose and life-work, the meaning of that noble striving, watching, praying. Elisha knew that he could see. The man whose reason for following was "as the Lord liveth, and as thy soul liveth," could not know failure. As Elijah was parted from him, he saw his master's life-experiences as a chariot and horses of fire,—the fire of God which exalts and purifies; saw its meaning for his race,—that its example should be a mighty force, drawing all men with the swift strong power of thought ascend-

Digitized by Google

ing to the Father, and in a great burst of joy and thanksgiving he exclaimed, "My father, my father, the chariot of Israel, and the horsemen thereof."

As he thus cried, the mantle of Elijah, the holy spiritual thoughts which had clothed his master's consciousness, fell upon him. He too divided the waters, and so radiant was the joy and power and consecration he reflected, that the sons of the prophets with one accord recognized it as the power of Spirit, God, and bowed before it. This, then, to the spiritual insight of Elisha, was the meaning of the experience he had shared; but how different the same events seemed to the less awakened thought! The recorder says simply that Elijah was carried up into heaven by a whirlwind, expressing, no doubt, the general thought of that day, which was, probably, that Elijah had lost his life in a whirlwind.

The sons of the prophets saw beyond that. They felt that with such spiritual understanding as Elijah possessed there must be some other explanation. They were not cognizant of the fact that it is because God lives that there is no death; and so they wanted to see it proved in matter; they wanted to assure themselves, in their own particular way, that Elijah had not died, and they thought and they felt that the way in which they could be convinced would be by finding a matter body. That was their idea of the demonstration Elijah ought to make of immortality, and so we find them asking Elisha to let them go and look for one. At first Elisha refused, but as they urged him he gave in to their desire.

Perhaps he felt that if obedience was not willing, not the result of understanding, it was worthless; felt, too, that he ought to show something of the patience Elijah had shown him, and so he let them go and waited three days while they vainly sought. Those days of fruitless seeking, however, uncovered their error to them, and they gained so greatly in understanding through the experience that they were no longer satisfied with materiality. They recognized that, though they had been placed in a pleasant land, they were barren because the springs of their thought were tainted. Elisha saw the spiritual uprising taking place through this recognition of the fruitlessness of looking for spirit and life in matter, knew that the purification of the waters of human thought had begun, and calling for salt (the symbol of purification), he threw it on the water, declaring with prophetic insight, "Thus saith the Lord, I have healed these waters; there shall not be from thence any more death or barren land."

In this new-old story of two of God's seers, we see an example of the patient and gentle guidance we should give to those who seek our help in their journey from sense to Soul,—the consecration of thought along every step of the way, demanding of us the generosity and unity of those who truly love. We find that what we see materially is the phenomena of what we believe and nothing else, but that what we discern spiritually is the manifestation of what God thinks. We learn, too, not to be discouraged over our seeming mistakes. The error that made the sons of the prophets wish to seek a corporeal Elijah led, through its reversal, to a desire for more fruitful labor and consequent purification. The great Master has said to all his students, "Ye are the salt of the earth." Each one of us, then, can cast the salt of our thought, purified and strengthened by experience, on the waters of mortal mind; and if we do so in the daily ascension of consecrated, united, grateful obedience, the time will surely come when we too shall declare, "Thus saith the Lord, I have healed these waters; there shall not be from thence any more death or barren land."

This story of the prophets has a parallel in our experience today. In deepest gratitude we recognize that one of God's seers has been living and working among us, in tender patience pointing out the way of Bethel, Jericho, Jordan, and we are longing that a double portion of that pure, brave, loving spirit may rest on us. The mistake of the sons of the prophets teaches us that what helps us is not personality, but righteous thinking, and that in eternal Mind's infinite circle right thinking and great loving never cease. Let us seek to see our Leader as Elisha sought to see Elijah, and even as we are bidden: "In hope and faith, where heart meets heart reciprocally blest, drink with me the living waters of the spirit of my life-purpose,—to impress humanity with the genuine recognition of practical, operative Christian Science" (Miscellaneous Writings, p. 207). So shall we receive the mantle of inspiration as did Elisha and go forth radiant with love and joy and power, to help and heal.

WISDOM AND LOVE.

W. A. BONSHOR.

In one of Jesus' parables we read: "And I say unto you, Make to yourselves friends of the mammon of unrighteousness; that, when ye fail, they may receive you into everlasting habitations." For quite twelve months from the commencement of his study of Christian Science, the writer fought every step of the way; passages of Scripture would seem so shrouded in mystery that the feeling would come to give it all up. The verse above quoted was such a one, and an incident of recent date has brought him a much clearer understanding of its meaning.

A young man was sent to call on another with reference to a money affair, and on making his business known he was promptly shown the door and told not to call there again, which caused others who heard it to smile at the visitor's expense. Having learned something of the sermon on the mount, however, he "held his peace" and came away. A little resentment which tried hard to creep in was completely destroyed, and the visit did its work without any trouble whatever. The incident was almost forgotten, until some weeks afterward, when the young man was again passing that house. It was at a time when he was unable to realize fully that God was his strength; the day was cold and the roads were heavy with the passing winter, and there seemed nowhere that he could rest. At this moment he noticed he was close to the house, and the suggestion presented itself that had he not quarreled with its occupant he could have asked to rest there. He knew there had been no quarrel on his part, and instantly banishing the error, he stepped into the house. His former friend recognized him, and at once asked what was wanted, to which he replied that he would like to rest, and in response a welcome was given him to stay as long as he wanted to.

The one who called at the house made daily effort to serve God; the other served mammon. The writer drew from this incident the lesson that the passage above quoted was identical with the admonition to "love your enemies." Would the same result have followed had resentment been manifested instead of overcome, at the first visit? Would it have left the consciousness of good uppermost in the man's thoughts, had he been reviled again? No; and the seeming failure of the visit would have been complete, had the good done to another been withheld. He saw too that the "everlasting habitations" referred to in the parable meant much more than any material structure, and when the door was opened to him that cold day he realized that the goodness of God is indeed an everlasting shelter.

This presented another thought on the same passage: One does not have to accept the same views in order to be a friend; the schoolmaster who is teaching the older scholars Euclid does not have to depart from the principle of mathematics when he stops to teach the little one that two and two make four. He is lifting the child out of the bondage of ignorance, which is unrighteousness, into the true sense; and as the child advances step by step, by putting into practice what he has been taught he forever appreciates the good he has gained at his master's hands, though he may never see him again.

Digitized by Google

Jesus taught his disciples all he could possibly teach them in this world, but his difficulty was in lifting them to do what our Leader has been continually striving to do, viz., to make all students look to Principle. Jesus said, "The Father that dwelleth in me, he doeth the works." He also said, "I have yet many things to say unto you, but ye cannot bear them now." He had called the unrighteous to repentance, he had shown them the way of salvation; he made to himself "friends of the mammon of unrighteousness" by showing them the way out of their sinning sense; condemning none, healing all that came to him, not once departing from Principle, God. When his earthly mission was completed, the same thoughts which had prompted his life-work carried him above the material senses into the "eternal habitations" of Truth and Love. He said, "The works that I do shall he do also." We know, as we journey on the road he has mapped out for us, that we may meet obstacles and sometimes seem to fail, but the truth which found us while in sin, and lifted us above it, will eventually carry us into the realm of divine Love. We fail to find any relief from believing that life is in matter, but the true sense of life comes when we can say with our Master, "I and my Father are one."

EVER PRESENT.

MARY LOUISE GEER.

THESE comforting, sustaining words of the Master, "Lo, I am with you alway," a strong-tower in time of trouble to many a Christian throughout the years since they were spoken, have recently been unfolding in the writer's thought. As the light of Christian Science is thrown on the gospel story, we learn to know Christ as "the power of God, and the wisdom of God," as the perfect, spiritual idea of God and man, ever present in human consciousness, awaiting recognition. We learn also that to every mortal, be it soon or late, no matter what phase of belief in a life apart from God he is now manifesting, this recognition of the right idea, or Truth, will surely come.

Believing himself to be free, all unconscious that he is shut away from the light of Life by barriers of his own making, mortal man works and plays, laughs and cries, fears or admiringly studies his prison-house, making its walls grave or gay according to his own changing concept. But, whether it seems to be a gilded cage of sinful pleasure or dark with dread disease or mental anguish; whether a sleepy or lively satisfaction in physical and material well-being or in intellectual or moral self-righteousness, the realization will dawn that it is a prison, and the bars will become unbearable in some direction, and for this moment of awakening the radiant Christ has been waiting since the beginning of time. As the prison walls are really nothing, the final result is inevitable—even salvation, absolute and eternal, from all the mortal beliefs, fears, and suffering; and from this salvation there is no escape, though the prisoner is sometimes beguiled into believing that it is the prison from which escape is impossible.

Not infrequently, from some one of the dungeons of sense comes the cry, "I see it all, but I cannot grasp it! This wonderful Truth is the Christ, and I believe, but I cannot break down the walls." Jesus exemplified for all time the transcendent power to manifest the Christ, the unfailing ability to understand and demonstrate in human terms the truth about God, man, and the universe. This power is with us always, and as we recognize that it is within and not without, the first of the forbidding walls fades into nothingness, and we find that we are already one with the waiting Christ; that nothing ever has or can separate us.

From the darkness of another prison cell may come the suggestion that the walls, if not too unyielding, are yet too beautiful to be destroyed. We hear Peter saying, "Be it far from thee, Lord: this shall not be unto thee," only to be met by the instantaneous, "Get thee behind me, Satan: thou art and offense unto me: for thou savorest not the things that be of God, but those that be of men;" and again Jesus, the highest human concept, is Master, the walls vanish and the Christ is revealed.

Not only is this thought a help in dealing with the first feeble turning toward the light, when the mortal begins to loathe the husks and long for the Father's house, but it emphasizes again the daily lesson that we, as Christian Scientists, are all learning with gladness; that, no matter what the present problem presents, the sole limitations are of our own making and of "such stuff as dreams are made of," for ever in the sanctuary of right thinking stands the Christ, saying with loving assurance, "Lo, I am with you alway."

[Written for the *Sentinel*.]

LOVE'S ANSWER.

LAURA GERAHTY.

A WOMAN trod the outskirts of the city,
Hungry and lone, weary of want and stress;
And some who passed her cast a glance of pity,
Or checked their laughter at her loneliness.

She prayed for more—to satisfy the craving
Of hungry children waiting her return;
She prayed for less—of stint and pinch and saving,
The forced endurance of things, hard to learn.

She did not pray for death. No terror bound her;
No coward-sickness seized her hungry soul;
She longed to live, to work like others round her
With hope her anchor and success her goal.

Long thus she stood, while the soft breeze caressed her
And gently played around her brow and hair.
An all-absorbing heart-desire possessed her
To gain God's ear and pour within her prayer.

. . . . . .

Time was when Jesus came where one was sleeping,
And all around believed that she was dead;
"Arise," he said. Dispelled were woe and weeping
When at his word she rose and left her bed.

The lame man leaped with joy, all anguish fleeing;
"Take up thy bed, and walk," the Master said;
The light came at his word to eyes unseeing;
He brake the loaf and multitudes were fed.

Ah! she would close her eyes, and see Christ walking
Along the crowded streets by men unseen;
E'en through the clamor she would hear him talking
And catch his accents with the love between.

. . . . . .

The day-dream vanished; but the prayer rose, falling
Upon a heart wherein Love's image dwelt.
And there, while waiting for the Master's calling,
The knowledge of a sister's need was felt.

Then through the city, bent on comfort giving,
She hastened to that home of want and stress,
With work enough to make each day worth living,
And loving words that held the power to bless.

Next morn the sun rose on a plenteous table,
On busy fingers, children at their play;
And one glad heart from want secure and able
To prove the Christ is present here today.

EXCERPTS FROM EDITORIAL COMMENTS.

[*Denver (Col.) Post.*]

Mrs. Mary Baker Eddy, Founder and Leader of the Christian Science church, has gone to her reward. She needs no tears, no sobs, no grief. Her spirit has earned eternal rest, and has departed to claim its wage. This woman stood behind a new church, a new belief, a new creed. By her teachings she brought ease and quiet to many a tired, worn-out body, contentment to many a weary heart, and peace to many a soul in distress. If that be all she ever did, then her work was well done; but there was more, oh, so much more! She started out alone. She gathered around her a little circle. They believed—with her. The enthusiasm spread, until finally thousands—millions—were ready to embrace the teaching that brought joy and happiness, and nothing else.

Mrs. Eddy raised up an institution—and supported it—which promulgates the beautiful thought that every human being is graven in the image of its God, and that there is no evil in the world except that which has grown into the hearts of the people of the earth. Cast out that evil—according to her—and nothing but bliss remains. Take away the bickerings and revilings which have been the Christian Scientist's lot; forget the attacks to which he has been subjected, and you still have left a Principle that has aided a world to higher and better things. It teaches of a glorious world to come, where tired souls will find a safe haven. It tells of a hereafter where spirits worn from the world's strife will find eternal happiness. It depicts another existence that we should all be glad to go to. It whispers of no death fear; it voices no sick-bed alarm; it dismisses belief in bodily ailments; it cries that the world is good, that all is beautiful, that there is no wrong or evil except that which we ourselves create. Without argument, without defense, taken merely as an abstract proposition, the thought is exquisite. It has brought the smile to many a worn face, ease to many a body in pain, and contentment to many a sore-tried heart.

The church this woman reared will live on. Others will rise up to take her place. Many will continue the work which one had done before. But, remember, just as she taught there should be no grief in the world, she wants none now that she is gone. It came her time to go, and she went with the knowledge she was but journeying to the things she had laid up for herself in another world. If she could speak today, she would say to all her followers: "Let there be no heartaches."

[*Herald-Democrat*, Leadville, Col.]

It is not every generation that is permitted to witness the passing of the founder of a religion, nor is it every generation that produces such a unique character. In fact, the history of the world furnishes comparatively few individuals with the peculiar qualifications needed to lead a great movement of a spiritual character, and away from the orthodox standards of the period in which they lived.

Mrs. Eddy will probably stand alone in some respects. There have been great woman teachers and leaders, women notable in every walk of life, but no woman has ever before actually founded and established a powerful religious sect, and has so guided and directed its energies that its adherents are now numbered by the hundreds of thousands and its material wealth counted by the millions, and which is recognized by students of religious phenomena as one of the most remarkable manifestations of the kind the world has ever seen.

Mrs. Eddy makes the Bible the basis of her teachings. Herself an educated woman and a student of what science calls ultimate problems, or as it is termed metaphysics, she evolved that remarkable combination, the uniting of a difficult metaphysical abstraction, namely, the non-existence of matter and the reality of mind, with deep religious feeling. The philosophers had been disputing for centuries about mind and matter, good and evil, pain and pleasure. Mrs. Eddy boldly seized on a single proposition—God is all good, therefore there can be no evil, hence the things called evil are figments and imaginings of mortal mind—and a new religion appeared.

It appealed to thousands in the midst of the American civilization of the nineteenth century, because it offered to accomplish a definite purpose in this world, namely, the healing of disease. It won its converts, as all religions have won theirs, by demonstrations of its ability to cure, for no one can deny the fact that there have been cures accomplished.

It is not our purpose to discuss the arguments for or against Christian Science. It is not how the cures were made which Christian Science claims are made through the agency of its creed. The point is that the faith of this remarkable woman spread and grew, and it is now one of the recognized forms of religious belief. It has all the outward trappings and insignia of the church militant,—established churches, its governing bodies, its ritual, its missionaries, all things that form the fabric of the organized religious society.

Another interesting feature of the rise of Christian Science is that it is probably the only example of a religion coming into being about whose early beginnings there can be discerned none of the smoke from the fires of martyrdom. It is a religion that has never been persecuted. It was born into the world at a time when this method of exterminating heresy had happily gone out of fashion, and in a country where church and state were absolutely separated. Whatever fights Christian Science has had to wage have been the purely intellectual battles of theological controversy.

[*Lebanon (O.) Western Star.*]

Mrs. Mary Baker Eddy, the organizer of the Christian Science church, is dead, or—as the adherents of that faith more beautifully say—has passed from among us. In leaving this world, she leaves it the richer because of her life and her teachings.

We are not a member of that church, but for it we have words of commendation, just as we have for all branches of the church and all organizations, under whatever title they are living, that seek to alleviate pain and sorrow, whether physical, mental, or spiritual, and thus make this old world better. It is our pleasure to know many members of the Christian Science church, and it is also a great pleasure to say that—judged by the standards by which the world judges Christians—every one of them is leading a more worthy life than was led before accepting that belief. This might have been true had they united with any other church—we are not seeking an argument, simply stating a fact.

[*Current Literature.*]

The column on column of news despatches and editorial comment evoked by the death of Mary Baker Eddy, the Founder of Christian Science, may be said to reveal an important change in the psychology of this country. America, it is clear, is beginning to take Mrs. Eddy and her doctrines seriously. Where in past years bitter intolerance and a disposition to regard her as a charlatan have existed, the prevailing spirit is now one of interested inquiry. "Whatever the degree of faith or unfaith with which the individual may look upon what she taught and what was accomplished by or through her teachings," says the *Chicago Tribune*, in a mood that is almost universal, she was "one of the most remarkable women of her time." The *New York World* goes farther in characterizing her as "perhaps the most extraordinary woman of her century."

Digitized by Google

[*Seattle* (Wash.) *Daily Times.*]

Mary Baker Eddy is dead—and in her death one of the most interesting characters of modern times has passed away. Even an "unbeliever" must pay tribute to the force and influence of this wonderful woman. There are those who scoff at her death—claiming that she taught the doctrine that there was no such thing as death; but it will be remembered that there have been those in all times who have scoffed at those who could not verify in realism the theories of an ideal. This is not intended as a discussion of Christian Science in any of its phases. We are treating of the woman herself, rather than of anything which she taught or sought to teach.

Christian Science today is known all over the world, and it is safe to say that this fact is due almost entirely to the work of this wonderful woman. There are at least only two or three persons in a century of the history of the world who have developed such a following as this aged woman commanded. Most women, in similar conditions, would have arrogated to themselves a sort of regal authority and regal splendor. But this woman lived simply and quietly—not in poverty—not in luxury—but in comfort. Her pleasures were few and her wants—not many. Offered almost idolatry by some of her followers, she accepted little in the way of homage, and what she did accept she accepted rather as a vindication of her teachings than as a tribute to her personality. And yet it will be as a "personality" that at least the "unbelieving" world will remember her at the present. She was a wonderful woman!

[*Lima* (O.) *Times-Democrat.*]

Whatever may have been said in opposition to the teachings of Mrs. Mary Baker Eddy, by authorities in other religious denominations, it must be admitted that her followers are the cheeriest lot of optimists, as a whole, there are in the world today. They look upon the bright side of everything, and they see and know no evil. There is no room in them or among them for the man or woman who thinks evil. For that, if for nothing else, the Founder of The Mother Church should be and will be called blessed. It isn't a bad sort of a religion that, which makes people look on the bright side always, and forever and continuously instils the doctrine of love.

There is something more than ordinary in a life that by example and teaching has remade many chronic grumblers and fretful invalids into bright, active, and helpful men and women. There is something in a life which, in the face of a constant storm of controversy, such as has raged about Mrs. Eddy, can bring to it growing thousands of devotees of all classes, each with sincere belief in the truth of Christian Science. There is some wonderful force behind a life that can cause the building of hundreds of magnificent places for worship.

At this near view of the work of Mrs. Eddy it is certain she has given to thousands upon thousands a message of peace, hope, and ultimate freedom from the ills that have been their lot. What the future judgment may be, only the perspective of time as a calm analyst of the influences which shape thought can determine. Anyhow, the world is better, much better, that Mrs. Eddy lived.

[*Lowell* (Mass.) *Courier-Citizen.*]

The death—for let us speak as the world's people do—of Mrs. Mary Baker Eddy, head of the Christian Science church and Leader of that sect, will receive wide notice in due proportion to the importance of the position of this remarkable woman in the world of affairs. Of all the variants on the theme of the Christian religion, hers is the only one of very recent years which has attained to world-wide magnitude. Differing from other denominations of Christians in its attitude toward the visitations of disease and frequently misunderstood even there, it has achieved an uncommon degree of attention. Judged by the purely pragmatic theory, it must be acknowledged to have made its way and to have assured its position, at least for the present generation. That which, in its day, actually gives to its adherents comfort and joy in this world and a hope of the life everlasting in the world to come, is entitled on those merits alone to share in making up the "true" religion of mankind. All that helps has its place.

Whether one follow Mrs. Eddy's peculiar teachings or not as they affect certain details of her faith, it must be admitted that she set before men and women of the materialistic nineteenth and twentieth centuries a system of belief that has afforded to many hundred thousand much practical comfort and hope. Whether or not the practices of Christian Science, in the healing of the thousand natural shocks the flesh is heir to, or its maintenance of a belief as to the non-existence of pain and suffering for one in whom a proper frame of mind is induced by faith, are justifiable on the basis of actual science, the fact must remain undisputed that for such as do believe in them there has been a remarkable force.

[*Tuscaloosa* (Ala.) *News.*]

The passing of Mrs. Mary Baker Eddy removes from the world one of the most remarkable women of the last and present century, if not of all time. Practically all other religions or sects of religions have had at their head men, although women have always played a large part in upholding them and spreading their influence. Mrs. Eddy stands alone among women as a great religious teacher.

Regardless of the sanity of the doctrines of Mrs. Eddy, one cannot but acknowledge the power of mind and personality that enabled her to build up a powerful church. From a very simple beginning, Mrs. Eddy worked and studied constantly until today her followers are numbered by thousands and the property which the church owns is valued at millions. But Mrs. Eddy was not merely a religious worker in the narrow sense of the word. She not only gave her best thought to what she considered the spiritual and bodily needs of the world, but also contributed generously in money to philanthropic movements and to civic improvements. All in all, the ninety years of her life were well spent, for she no doubt brought both spiritual satisfaction and bodily comfort into many homes.

[*Telegraph,* New London, Conn.]

It is not our province to dwell upon the significance to Christian Scientists of the passing of their beloved Leader. Suffice it to say that while her departure is felt in sorrow and regret, her followers have no fear that the loss of her physical presence is to deprive them of the fruits of her life-work, nor will there be any attempt or tendency upon their part to deify her human personality, understanding her teaching to forever condemn idolatry. As a religious leader Mrs. Eddy is unique. History affords no parallel. The world accords to her the distinction of having been the most remarkable woman of her time, and for the most part is content that the truth or falsity of her teaching shall be tested by time and by its fruits rather than by the rules of logic or of orthodoxy.

[*Day,* New London, Conn.]

Mrs. Eddy certainly was a remarkable woman. She had the faculty of leading others, and the success of the movement that she originated is the greatest monument that could be reared to her memory. The growth of Christian Science has been one of the wonders of recent times, and the fact that it prospered in spite of the most violent opposition and abuse shows that there was something about it that appealed to the intelligence of its devotees, for it has attracted men and women of notable intellectual ability.

Digitized by Google

[*Times-Record*, Fort Smith, Ark.]

Whatever one's views as to Mrs. Eddy's teachings, she must be accorded rank as one of the greatest intellectual forces of the world's history. She won this distinction through the usual adverse influences which must be overcome by any one who advances a thought out of the beaten, well-trodden path—namely, ridicule, slander, calumny, and a persecution no less cruel for that it was not physical. Beginning with a handful of student followers, today the principle which she advanced is taught in approximately a thousand churches in this and other lands, many of them of the most costly and beautiful architecture. To have accomplished this in the span of one life, to see the humble beginning and the wonderful spread of one's thought, is something given to few mortals. Besides this, Mrs. Eddy had the satisfaction of knowing that the acceptance of her thought and interpretation of the Word of God had brought the blessing of health to many thousands sick in mind, heart, and body. This reapplication of the divine injunction to heal the sick through the teachings of Christ, although for many years it subjected her and her followers to ridicule and opposition, has at last, by its demonstration of truth, aroused the emulation of the older established sects so that they are seriously considering the formal recognition of a long neglected practice of the early Christian faith.

[*Phœnix* (Ariz.) *Democrat.*]

Probably no person during this century was subjected to a greater degree of criticism than was this patient, silent woman. While we are not wholly familiar with the teachings of Mrs. Eddy, yet we realize that she has accomplished a great work in her lifetime; and today probably not another individual in all this great country will be more sincerely mourned.

The charge that Mrs. Eddy was rich—that her gifts were utilized for the accumulation of wealth—is not well taken. Her wealth came from a grateful people; came from a grand army of men and women who loved their teacher for the benefits that came to them through her teachings. During the last forty years Mrs. Eddy has probably brought more sunshine into the homes of the poor—instilled more hope into the sinking, tired hearts of ailing humanity—than any one person in the last century. Her life was devoted to the uplifting of humanity; and, be her teachings as they may, hundreds of thousands of intelligent men and women will today drop a tear in kind and loving remembrance.

[*Portland* (Me.) *Express and Advertiser.*]

Through years of misunderstanding and misrepresentation, Mary Baker Eddy, the Discoverer and Founder of Christian Science, went serenely and confidently on with the work she believed herself called to do. She lived to see her faith adopted in many lands, to see beautiful and costly church edifices erected in many cities, both in America and abroad, lovingly dedicated to her and to her teachings. Only forty years have passed since she stood alone, the only exponent of her faith in all the world. Today thousands rise up to call her blessed, and in the Wednesday evening meetings of the denomination, clouds of witnesses testify weekly to the power of divine Love, as she taught of it, to heal from sickness and from sin. These followers constitute the monument to her memory which must most have contributed to her joy. Mrs. Eddy's place in history is secure. Her adherents are living examples of a vital faith. The church she founded holds an important place in the religious world. The voice of detraction should now be forever silenced.

[*News-Democrat*, Canton, O.]

The death of Mary Baker Eddy, the Founder of Christian Science, has closed the earthly career of one of the most marvelous women of modern times, if not of all time. That she was a profoundly good woman, teaching a gospel of truth and love, will be universally admitted. That the influence of her teachings—the philosophy she preached and practised—has been tremendous, must be acknowledged. Measured by the results it has accomplished for the thousands and tens of thousands of men and women who, understanding it and believing it, have made it a rule of their life, its potentiality cannot be doubted.

While the passing away of Mrs. Eddy has brought a sense of sorrow to her devoted followers, they insist that the church will not perish, but continue its growth, and the philosophy of Christian Science will be as enduring as time itself. Be that as it may, the death of Mary Baker Eddy removes from earth a woman of whom it can be said, The world has been made immeasurably better because she lived in it.

[*Coshocton* (O.) *Daily Age.*]

The passing of Mrs. Mary Baker Eddy removes one of the world's great women, no matter whether one agreed with her teachings or not. She filled her place in the world and filled it well. Her teachings, no matter what else they may maintain, worked for purity, honesty, and temporal concord, as well as the ever betterment of self. She held undoubted power over those who followed her faith, but mature study of conditions leads an outsider to believe it was the power of love rather than the power of fear. With a wonderful equanimity she withstood the bitterest assaults, and was an embodiment of the Biblical adage that "a soft answer turneth away wrath."

[*Pueblo* (Col.) *Indicator.*]

Mrs. Eddy is dead, but Christian Science did not die with her, and thereby is unfolded a tale of more stability than many supposed the cult possessed, for this remarkable woman was its originator, its Founder, and for long years one of its chiefest supporters. And now that she is gone, that the gospel which she expounded still remains is to be taken as one of the proofs that Christian Science is based upon something substantial. It must be that it affords great spiritual comfort and consolation, else so many men and women of high intelligence and well known good citizenship would not belong to that sect.

[*The Farmers Voice*, Chicago, Ill.]

Not merely one of the world's great women—one of the world's great personages passed away when Mary Baker Eddy died in Boston. She must be adjudged great if measured only by the extent of the influence she exerted over the minds and lives of men and women over all the earth. That influence was world-wide and strongly potent in its workings, guiding and controlling the views of hundreds upon hundreds of thousands of exceptionally intelligent disciples.

[*Temple* (Tex.) *Daily Telegram.*]

In the day in which a religion is born but few people realize it, and it takes generations usually to develop a following for great teachers. In Mrs. Eddy's case she lived to see her church and her doctrines adopted by millions, and who knows but that in the distant future those who knew her and were her companions will be held in the same veneration as are today the disciples of Christ, whose teachings she illuminated?

[*Yorkshire Evening Post*, Leeds, England.]

No one (says a writer in the *Outlook*) ever entered Mrs. Eddy's study who did not leave it not only a braver but a better man.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

[Reprinted from the *Sentinel* of Feb. 21, 1901.]

OBEY THE LAW.

THE following, from the pen of the Rev. Mary Baker Eddy, appeared in the *Boston Herald* on the 17th inst.:—

To the Editor of the *Herald:*

On the subject of reporting contagion I have this to say: I have always believed that Christian Scientists should be law-abiding; and, actuated by this conviction, I authorized the following statement, which appeared in the *Boston Herald* about one year ago:—

"Rather than quarrel over vaccination, I recommend that if the law demand an individual to submit to this process, he obey the law; and then appeal to the gospel to save him from any bad results. Whatever changes belong to this century, or any epoch, we may safely submit to the providence of God, to common justice, individual rights, and governmental usages."

This statement should be so interpreted as to apply, on the basis of Christian Science, to the reporting of contagion to the proper authorities when the law so requires. When Jesus was questioned about obeying the human law, he declared: "Render unto Cæsar the things that are Cæsar's," even while you "render unto God the things that are God's."

MARY BAKER EDDY.

Concord, N. H., Feb. 17, 1901.

[Reprinted from the *Sentinel* of Nov. 27, 1902.]

WHEREFORE?

MARY BAKER EDDY.

OUR faithful laborers in the field of Science have been told, through the alert editor-in-chief of the *Christian Science Sentinel* and *Journal,* that "Mrs. Eddy advises, until the public thought becomes better acquainted with Christian Science, that Christian Scientists decline to doctor infectious or contagious diseases."

The great Master said, "For which of these works do ye stone me?" He said this to satisfy himself whereof he spake as God's representative—as one who never weakened in his own personal sense of righteousness because of another's wickedness, or the minifying of his own goodness. Charity is quite as rare as wisdom, but when it does appear it is known by its patience and endurance.

When, under the protection of State or United States laws, good citizens are arrested for manslaughter because one out of three of their patients, having the same disease and in the same family, dies while the others recover, we naturally turn to divine justice for support, and wait on God. Christian Scientists should be influenced by their own judgment in the taking of a case of malignant disease, they should consider well as to their ability to cope with the case—and not overlook the fact that there are those lying in wait to catch them in their sayings; neither should they forget that, in their practice, whether successful or not, they are not specially protected by law. The above quotation stands for this: Inherent justice, constitutional individual rights, self-preservation, and the gospel injunction, "Cast not your pearls before swine, lest they trample them under foot and turn again and rend you."

And it stands side by side with Christ's command, "Whosoever shall smite thee on thy right cheek, turn to him the other also." I abide by this rule and triumph by it. The sinner may sneer at this beatitude, for "the fool hath said in his heart, No God." It is known that the good young student, Mr. Lathrop, after he was prosecuted for practising Christian Science, finished healing the cases of diphtheria that he had on hand. Statistics show that this Science cures a larger per cent of malignant diseases than does *materia medica.*

I call disease by its name, and have cured it thus; so there is nothing new on this score. My book Science and Health names disease, and thousands are healed by reading its name and learning that so-called disease is a sensation of mind, not matter. Evil minds signally blunder in divine metaphysics; hence I am always saying the unexpected to them. The evil mind calls it "skulking," when to me it is wisdom to "overcome evil with good." I fail to know how one can be a Christian, and yet depart from Christ's teachings.

THE DEMANDS OF TRUTH.

THERE are many who have a peculiar and quite unwarranted concept of Christ Jesus' moral teachings. They apparently believe that he manifested an easy toleration for wrong-doing, and differed from the Pharisees mainly by holding a more flexible standard than theirs,—an opinion which is indeed wide of the fact. It is true that the standard of the master Christian was different from that of the religious leaders of his time, but the difference was due to the greater spirituality of his ideals and teachings, which of necessity made a greater demand for righteousness than did their material requirements. Christ Jesus said that he had not come "to destroy the law, or the prophets: . . . but to fulfil;" and throughout all his teachings we find the demand for obedience to God's law in thought, word, and deed.

There is something almost startling about the test which the Master gave in his sermon on the mount, already quoted, when he said, "Except your righteousness shall exceed the righteousness of the scribes and Pharisees, ye shall in no case enter into the kingdom of heaven." He then proceeded to press the absolute demands of Principle for that righteousness which alone can meet the requirements of spiritual law. He declared that the indulgence of hatred is a violation of the command, "Thou shalt not kill," and that lustful looks and desires constitute adultery. At this point some one may ask, "What about the sinful woman brought to Jesus for judgment?" to which it may be answered that in this case the sin was admitted by the woman and condemned by her accusers; but the Master's condemnation of the sin went deeper than did theirs, for he pointed to its utter annihilation when he bade the woman "sin no more." No mere surface morality did he teach or live, but that which expresses in ceaseless endeavor the perfection of our Father-Mother God, and no lower standard than his can find any place in Christian Science.

Any plea for error, however disguised, is but the "thief" which the Master declared comes "to steal, and to kill, and to destroy." Any phase of error which would rob us of our sense of true and complete obedience to divine law would next rob us of health and even life, whereas obedience brings health, happiness, and long life. Our revered Leader declares that "chastity is the cement of civilization and progress" (Science and Health, p. 57), and this applies to married and single, and is above, not beneath, the moral standards of the scribes and Pharisees of our time. It does not trifle with temptation under the guise of "platonic friendship," or anything else which leads from the straight and narrow path of duty. The poet's note of warning may well awaken thought:—

Where lives the man that has not tried,
How mirth can into folly glide
And folly into sin!

Digitized by Google

We read that Jesus made such a demand for purity in the marriage relation that his disciples said it were good in such a case not to marry. Mrs. Eddy says "matrimony should never be entered into without a full recognition of its enduring obligations on both sides" (*Ibid.*, p. 59). Human affection at its best is not sufficient to meet our deepest needs, yet this is not an argument that we should love less, but rather that we should love more unselfishly, hence more divinely. Temptation usually assails mortals through the weakness of vanity and self-seeking. As Christian Scientists we surely desire to lessen the world's misery, and to do this we must make it better; which we cannot do unless we ourselves are better and ever aspiring for the best, the Godlike.

The "pure in heart" see God, and thus they see goodness and beauty everywhere; and they find joy, not sadness, in meeting the requirements of God's law. Nothing is more stupefying than the delusion that any one can trifle with the demand for spiritual purity, and there is nothing that gives such strength and elevation to character as the moral purity which results from whole-hearted obedience to the demands of Truth.

ANNIE M. KNOTT.

THE CONTRADICTIONS OF BELIEF.

SELF-EXTENUATING excuses never seem more out of keeping than when offered by Christian apologists, in an attempted justification of those educated opinions which are at variance with the plain statements of the Master and which are fully accounted for by the abiding disposition of mortal thought to adjust its philosophy to its acquired habits. There are those who have been taught to think of a miracle as involving the violation or annulment of cosmic law (an event which they rightly deem impossible), and consequently who do not accept the gospel narratives of physical healing, the raising of the dead, etc., as portraying actual experiences. These people are entirely consistent in maintaining that the dethronement of divine law would end in universal chaos, and until their understanding of the meaning of the word miracle is corrected, one can thoroughly respect their position. When, however, those who accept the New Testament miracles as veritable events in fulfilment of divine law, undertake to make it appear that there is no possibility of their recurrence, they make a striking exhibition of their inconsistency.

A notable example of this last has recently appeared in a prominent monthly magazine. The writer is an avowed Christian and unreservedly asserts his belief in the verity of the Master's healing works and those of his disciples. Nevertheless, he as unreservedly denies the possibility of the doing of these works today, and for a reason which awakens doubt as to whether he really wishes to be taken seriously. After arguing for the genuineness of the New Testament miracles, he avers that miracles cannot occur "now," since "God would not be the just judge of all the earth if He permitted one in our times"!

In support of this contention he argues that, since scientific demonstration is convincing and so compels belief, the veritable healing of an "incurable," or the raising of one from the dead, would render it impossible for any one not to believe, and thus interfere with the exercise of one's divinely given "freedom of the will." Men, he declares, "could not be praised or blamed for admitting what they could not help admitting, and God never compels a human being to be good"! In other words, the use of the means which it is conceded Jesus and his disciples employed to convince, heal, and save men is no longer advisable, since it would make us so sure about the truth that we would not be entirely free to go to the bad if we wanted to!

Jesus said that the knowing of the truth would set men free; but this writer declares, on the contrary, that to be fully convinced of spiritual truth through scientific demonstration would rob men of their freedom! Surely we have come upon strange times, and it is well that there appeared in our day one who dared to declare again the gospel of an ever-present and healing Christ, the law of God made manifest to prove that the freedom to do evil is a false belief and is no more a part of the true man's nature than it is a part of the divine nature of which he is the image and likeness. Christian Science teaches that the demonstration of spiritual truth is just as essential to its acceptance and authority as is the demonstration of mathematical truth, and as necessary to the advance of Christian faith today as it was in the first century; that all truth is one and that the highest freedom pertains to its perfect apprehension.

All this contradiction and confusion of thought upon the part of would-be apologists for a non-healing faith emphasizes yet more and more the value, the significance to all the world, of the teaching and demonstration of Christian Science, that the truth which Jesus taught and lived is scientific: that his kingdom expresses the rule of an unvarying and universal law, that law of God which is forever available for the world's healing and salvation in the measure of our spiritual understanding.

JOHN B. WILLIS.

NO LINCOLN DAY SERVICE.

In response to various inquiries which have come to this office, the general announcement is made that there will be no Lincoln day service held at The Mother Church

AMONG THE CHURCHES.

VENTURA, CAL.

First Church of Christ, Scientist, of Ventura, Cal., has recently purchased and entirely paid for a building lot in a very central and desirable part of the city. A building fund was started some time ago, before the little band of workers here had been organized into a church; but the major portion of the amount required to pay for the lot was raised by voluntary offerings to the building fund on the first Sunday in each of the months of October, November, and December, 1910, without the individual solicitation of a single cent. Our beloved Leader's words: "Progress is the law of God" (Science and Health, p. 233), are being demonstrated daily by this branch of the Mother Vine.

Correspondence.

MEDFORD, ORE.

The new church erected by the Christian Scientists of Medford will be used for the first time Sunday morning [Jan. 15]. The church, of bungalow architecture, stands on North Oakdale, and is an attractive building. The church building is the first erected by Scientists in the valley. The auditorium is furnished with two hundred mahogany opera chairs.—*Medford Sun.*

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be June 2, 1911. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 10, 1911.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 4, 1910, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
Falmouth, Norway, and St. Paul streets, Boston, Mass.

THE LECTURES.

SPRINGFIELD, MASS.

In a lecture on the subject "Christian Science: The Gospel of Salvation," the tenets of Christian Science were ably set forth to a large audience in Court Square Theater last evening [Nov. 21] by Willis F. Gross. The speaker was introduced by Stewart Anderson, who spoke as follows:—

That Christian Science is neither Christian nor scientific is a common charge. That Christian Science is a marvelously successful mental, moral, physical, and financial reformative agency, is a frequent and increasingly frequent admission. Foes and friendly critics alike make and maintain the charge; foes and friendly critics alike make the admission. The Church of Christ, Scientist, however, asserts that its doctrine is of God, and that the fruits of the doctrine prove that derivation. Other branches of the Christian church, together with many men and women who adhere to no creed whatever, ascribe some of those fruits to what they call "natural causes," and they deny the actuality of other of those fruits. But among all who dissent and all who oppose, comparatively few deny that Christian Scientists are a healthy, a prosperous, a happy, and a good people. And this phenomenon is visible to everybody, that Christian Science has in a few short years planted its churches everywhere in this country and has made disciples in almost all lands as far as the farthest seas.

The sudden and gigantic growth of such an apparent power for good should command the study of all whose hopes are fixed upon a happier mankind, of all whose lives are incurable by human remedy, of all who are seeking for truth. Truth may or may not be made apparent to them, the divine healing may or may not touch them, and the lover of mankind may or may not find in this phenomenon the elements of permanent betterment. Yet such is the asserted virtue of this doctrine, so plenteous are its reputed proofs, and so insistently does it claim to be both divine and scientific—scientific because divine—that it deserves a hearing before an open and a patient mind. And so, although I am not of this fold nor of any other, I account it a privilege to introduce to an open-minded Springfield audience an authoritative and eloquent voice of the new church, and to join you in listening to his statement of the doctrine, his display of the fruits, and his exposition of the logic of Christian Science.—*Springfield Union.*

ALHAMBRA, CAL.

Prof. Hermann S. Hering delivered a lecture on Christian Science last night [Dec. 15] before an audience that practically filled the High School Auditorium. The lecturer was introduced by William S. Deyo, First Reader of the local church, who said:—

Men throughout countless ages have been willing to endure almost inconceivable privation and hardship to secure what they supposed would bring them happiness. Some thought that real happiness would be won if they were able to find gold in sufficient quantities. Others supposed that happiness would be theirs if they discovered a fountain whose waters would increase their longevity; others that fame would bring them happiness.

But, through the study and application of Christian Science, a rapidly increasing multitude are coming into a realization of the fact that true happiness is only attainable through a right understanding of God and our relationship to Him. As the source of this understanding must be infinite intelligence, the supply is unlimited; consequently, instead of hoarding this treasure, those who have in a measure come into possession of this pearl of great price are willing to share it with you.—*Alhambra Advocate.*

BROOKLINE, MASS.

Under the auspices of The First Church of Christ, Scientist, of Boston, Mass., a lecture on Christian Science was delivered Jan. 16 in the Beacon Universalist Church, Brookline, by William D. McCrackan, M.A. He was introduced as follows by the Rev. George L. Perin:—

Ladies and gentlemen,—perhaps I may say, brothers and sisters,—there are several reasons why it is a pleasure to me to have been called upon to introduce the speaker of the evening. In the first place I have all my life been associated with a band of religious heretics, and naturally got used to the association and came to be fond of it; but in these later years the old orthodoxy has come so near my heresy, that it has given me the uncomfortable feeling that one of these days somebody might be calling me orthodox. And so, to be momentarily associated in this way with a later heresy carries me back to the good old days and makes me feel at home.

And then there is the pleasure that comes to every lover of freedom and truth who is big enough to say "God speed" to any honest man whom he doesn't wholly understand or agree with. It wouldn't mean anything or prove anything, except perhaps that I am stupid, if I were to say that I do not understand the terminology of your revered Leader, nor agree with her philosophy so far as I do understand it; for I recall that Pilate did not understand Jesus, Calvin would not have agreed with Channing, nor Jonathan Edwards with Hosea Ballou, nor Jefferson Davis with Abraham Lincoln. Now we all of us join in saying, "So much the worse for Pilate and Calvin, Jonathan Edwards and Jefferson Davis."

Moreover, there is a higher and better reason for my pleasure. It is that I have witnessed some of the splendid fruits of your work. I have seen the miserable, broken-down invalid of a quarter of a century brought back to life and health; I have seen the timorous, shrinking victim of fear, hovering on that border-land between sanity and insanity, clothed again and in his right mind. I have seen the smile of hope replace the shadow of fear and apprehension. I have seen a multitude of misanthropic, self-centered, ill-natured people, forgetting that they were ill,—in spite of all the doctors could do to make them remember it,—transformed by the gospel of good cheer and the contagion of health. But, more wonderful than even this, I have witnessed the reluctant concession on the part of the medical fraternity that there may perhaps be a soul of man bigger than the body and all its ills, and a God bigger than the soul. I suspect that you have had something to do with that concession.

Then again, I have been tremendously interested in a church that could hold a very large week-day evening meeting because the people seemed to like it, instead of a very small prayer meeting because somebody thought the people ought to like it. And as a clergyman I have been interested in a church that could successfully compete, without a preacher, with the automobile and the Sunday newspaper, when mine and my neighbors' churches couldn't do it with a preacher.

And finally, you have made us all your debtors, by calling us back to the most fundamental doctrine of the Christian faith, which all of us said we believed, but had forgotten to preach, namely, the great doctrine of the immanence of God. I may not be able to understand your terminology nor all of your philosophy, but you have so challenged my admiration by your definite achievements and by your cheerful mood, that I feel honored in having been asked to open this meeting of highly hopeful heretics. I have the pleasure of presenting one who needs no introduction, William D. McCrackan, a member of the board of lectureship of The First Church of Christ, Scientist, Boston.

Correspondence.

Digitized by Google

WINTHROP, MASS.

A lecture on Christian Science was given by William D. McCrackan, M.A., Jan. 17 in Knights of Columbus Hall, Winthrop Center. He was introduced by Walter E. Smith, who said:—

It is my privilege to welcome you here this evening, as guests of The First Church of Christ, Scientist, in Boston, under whose auspices this lecture is given. The size of this gathering is a fair example of the way in which these lectures are attended wherever given, and shows the great interest that is taken in the subject of Christian Science.

There are at this time, and the number is steadily increasing, over twelve hundred Christian Science churches and societies throughout the world, all branches of The Mother Church. The membership of these churches and societies ranges from a few to several hundred persons, and each one of these persons stands for at least one statement of Christian Science proved. It may be the healing of disease, it may be the overcoming of the drug or liquor habit, it may be the coming out of a sense of deficiency or poverty, it may be the healing of a great sorrow, or it may be the finding through Christian Science of a God who is Love,—not a God who sends sickness, sin, and death on His children, but one who delivers them from these discords; for Christian Science does heal disease, it does deliver us from discord of every nature.

A fair question to ask at this juncture is: Why, if Christian Science is all that is claimed for it by Christian Scientists, is it criticized? The fact is that the truth of Christian Science is never criticized. Those who attempt to criticize Christian Science do so either maliciously or ignorantly. Those who do so maliciously would not tell the truth about it even if they knew it, and those who criticize through ignorance criticize simply their false conception of what Christian Science is.

Correspondence.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Albany, N. Y. (Second Church).—Willis F. Gross, Harmanus Bleeker Hall, 3 p.m., Feb. 19.
Champaign, Ill. (Society).—Frank H. Leonard, Walker Opera House, 3 p.m., Feb. 12.
Cocoanut Grove, Fla. (At Miami).—Prof. Hermann S. Hering, Fair Building, Feb. 13.
Key West, Fla.—Prof. Hermann S. Hering, San Carlos Opera House, 4 p.m., Feb. 12.
Mason City, Ia.—William D. McCrackan, M.A., Wilson Theater, Feb. 5.
McAlester, Okla.—Hon. Clarence A. Buskirk, Feb. 5.
Modesto, Cal.—Clarence C. Eaton, Rogers Hall, Feb. 10.
Palm Beach (West), Fla.—Prof. Hermann S. Hering, Feb. 16.
Redlands, Cal.—Bliss Knapp, Contemporary Club House, Feb. 14.
Santa Cruz, Cal.—Bliss Knapp, Knight's Opera House, Feb. 16.
Stockton, Cal.—Clarence C. Eaton, Yosemite Theater, Feb. 9.
University of California, Berkeley, Cal.—Bliss Knapp, High School Auditorium, Allston way, Feb. 18.
Vallejo, Cal.—Bliss Knapp, Samoset Hall, Georgia street, Feb. 17.

NEW MUSIC.

Two of our Leader's poems, "Shepherd, show me how to go," and "Love," set to music by Frederic W. Root, are now on sale by the Society, and attention is called to the advertisement on the inside back cover page of this week's *Sentinel* for description and price.

TESTIMONIES OF HEALING.

I feel it a pleasant duty to write a partial list of the many blessings which Christian Science has brought to me, through kind practitioners and the understanding of God gained by the study of the Bible with Science and Health, and the reading of our periodicals. From childhood I had not been considered very strong; and about five years ago moved to a suburban town, because I believed I could no longer live in the city; but instead of deriving benefit from the change I grew gradually worse. I tried everything that promised any help, but without receiving more than temporary relief. I was suffering from a stomach disorder, and in consequence was very weak at times. Coupled with this was a great fear of the future and of everything in general.

Eight months before receiving treatment in Christian Science, I went to a sanitarium, and the doctor prescribed a course of dieting, which I followed faithfully all summer, without any other effect than to add a few more articles to the list of foods which I feared. At the time I went to the sanitarium I decided to have my nose operated on, it having been injured when I was a boy. One nostril was almost closed, and a number of doctors had told me that it would aid in the overcoming of a catarrhal condition if it were opened. It required two very trying operations to accomplish this end, and while breathing was easier after the nose had healed, still it did not help me in other ways.

During the summer that followed I lost a great deal of time from business, and looked for relief in a two-weeks vacation. Later, I went to the Adirondacks for another two weeks. Before going to the mountains I had been urged to try Christian Science, but I was reluctant and concluded that I would try it only as a last resort. I received some physical benefit from the mountain trip, but shortly after my return my mental condition, which at times had been almost unbearable, slipped back into the old rut, and I concluded that if Christian Science could not help me I should be left to choose between insanity and the grave. Once I had determined to try Christian Science, I lost no time in going to a practitioner. I had treatment for one week, the healing of the stomach trouble being practically instantaneous, and I soon learned that if I trusted God I had nothing to fear.

On my first reading of Science and Health I could scarcely read fast enough, and my condition changed for the better as fast as I read. I never had any religion before I became acquainted with Christian Science, and knew very little of the Bible, and when I learned that this truth is founded on the teachings in the Bible and that these teachings are of actual use to mankind here and now, it was indeed a revelation! For one who had been handicapped nearly all his life by a wrong mental and physical condition, this has indeed proved a blessing. Since my first experience I have had much help when needed and have enjoyed a degree of health and strength unknown to me before I found the truth.

I have both experienced and witnessed many wonderful demonstrations of the omnipotence and ever-presence of divine Love, and I wish to express my deep gratitude to God, also to our Leader, for all that I am today. As my understanding of Christian Science broadens, I marvel more and more at Mrs. Eddy's life and work.

H. E. Goan, La Grange, Ill.

I desire to add my expression of gratitude for Christian Science to that of my husband. I became interested in Christian Science through reading the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, from a desire to aid in the healing of my husband, as I had been told that harmony of thought in the home would expedite his recovery. I became so interested in the book

Digitized by Google

that, as we had only one copy at first, it seemed impossible to read it enough. I felt it was the truth, and proceeded to follow the teaching as soon as I assimilated the meaning. I threw out the contents of our medicine-case, which was becoming too small to hold what we had thought necessary, and we have proved since that Truth can be absolutely relied upon to make us free.

After having read the entire book, I realized that I had not worn my glasses during the time, and that the headaches for which I had used them had not menaced me. Christian Science has healed me of acute and chronic ills, and whereas I had never enjoyed an outing of any kind without returning home exhausted by headache, now if one threatens I can help myself with the understanding I have obtained from our text-book. Recently I was taken ill with what seemed a combination of acute lung and heart trouble. At the beginning of this difficulty I was lifted out of a condition of delirium, with chills and fever, within an hour after the practitioner whom we called reached our home.

Before becoming interested in Christian Science, the Bible was a closed book to me. With the aid of Science and Health, it is now a daily study, a comfort, and a very present help. Christian Science has destroyed fear to a great extent, and is daily helping me to overcome sin and disease to the degree that I understand and follow the teaching. I am grateful to live at this time when the truth is again brought to mankind in its entirety. The literature we are privileged to read in connection with Christian Science is a great blessing and help in the spiritual understanding of God. My desire is to show my gratitude to God, and to Mrs. Eddy, for these blessings, by faithfulness in the study and practice of this truth.

BLANCHE W. GOAN, La Grange, Ill.

A little over three years ago a dear gray-haired lady invited me to the Wednesday evening meeting of a small Christian Science society. I had for years been a victim of stomach and nervous troubles, also of sleeplessness, and I was miserable in body and stunned by a sudden turn in my affairs, as I had just suffered the loss of the mother of my two boys. I had been a successful business man for a number of years, but how had this success come about? By blind will-power and by rudely riding over everybody and everything that came in my way. I had grown morose and disagreeable to a degree that meant unhappiness for myself and others. There was no God in my thoughts except my own will. Mere words cannot describe my mental condition at the time when I attended this testimonial meeting. Surely it was "man's extremity," and now as I look back on it I see that this was indeed "God's opportunity."

For the first time in my life, the divine influence made a lasting impress on my thought, and I began to feel the impulse for better things, for the "deep things of God." A few days after this meeting I visited a practitioner, and this visit marked the beginning of my thirst for good. The stomach trouble left after a very few treatments, and I ate what and when I pleased. The sleeplessness began to give way to natural rest and sleep at the proper times. I literally devoured my copy of Science and Health; and gradually the Bible was opened up to me. From the first I studied the Lesson-Sermons. Faithful and wise Leader! How wonderfully every avenue of supply has been provided to meet our human need of means through which to understand the truth.

I am gradually learning what Jesus meant when he said, "Thy will, not mine, be done." In the past three years I have had many proofs that our God is "a God at hand, and not a God afar off." Christian Science is all in all to my boys and myself, not alone in my household but also in my business. That awful combination, worry and fear, has been displaced, and hope and confidence in God have come. We have had many healings from colds, asthma, bruises, etc., through our understanding of the truth as taught us in Christian Science. Some—yes, all—have been wonderful, and it has been my joy to tell of many of these at our Wednesday evening meetings.

On page 167 of Science and Health Mrs. Eddy has shown us the "Choose ye" that comes to each one who has named the name of Christ, and her summing up is splendidly expressed as follows: "Only through radical reliance on Truth can scientific healing power be realized." No half-hearted, half-way measures in that sentence! I have found this to be true, that when I have faltered, clinging to the old gods, I have had many weary hours of working out; but when I have accepted the demands of Truth, although the struggle may have been strenuous, what peace has come, following the right choosing!

I am grateful to our Leader; I am grateful to her wise and loving helpers in the Publishing Society, and I am glad to be known as a Christian Scientist.

J. C. BRAINARD, Pasadena, Cal.

I owe such a depth of gratitude for Christian Science, that I scarcely know how to express myself in words. It is over three years since I first heard of it. Up to this time my work had been mostly in a sick-room, doing all I could to help and comfort those who were in my care. I had not been in the company of a family of Christian Scientists many days before I knew that these people had a Principle in their religion, and I soon began to long to know what it was that seemed to lift them above anxiety, even when I thought they had great cause to be troubled.

I think the first thing that impressed me was an accident to one of the children. A little boy fell down and cut his face very badly—in fact, it rather resented its not being bound up. All that happened was that the child was taken into the house, the dirt was sponged off his face, and he was left with his father. To my astonishment, a short time afterward I saw him playing in the garden with the other children. The following day the place was quite dry, and two days later there was not even a scar left. It seemed a miracle to me, and I said so to one of the parents, and asked how the work was done. A copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy was lent to me, and I began to study it. I cannot express my gratitude and pleasure when I began to prove for myself a little of the truth it taught me. My first demonstration was over a bee-sting on the baby's hand. The back of the little hand was like a purple egg, but I sought to realize that if God created insects, He created them good, and that no evil effect could come from anything that was good; that man is not matter, but the spiritual reflection of divine Love, protected and governed by God. In about half an hour, all the swelling had entirely disappeared, and words cannot express the joy and encouragement this gave me. Since then I have had many proofs of the power of Truth in physical healing.

When I first heard of Christian Science, I was suffering from varicose veins. My legs were very bad, and three different doctors had advised me to wear elastic stockings. The trouble being considered hereditary, and the stockings not having proved successful, my mother persuaded me not to wear them, but to take as much rest as I possibly could. After studying Science and Health for about eight months, I discovered that I was perfectly healed, and I have remained so ever since. I had no treatment for this, as the work was done simply by trying to understand what God really is, and what man as His image and likeness does represent. My desire now is to prove my love and gratitude to God, and to our dear Leader, by trying to demonstrate more fully the power of Love, and thus to prove myself worthy the name of Christian Scientist.

ADA M. STARLING, Park Lodge, Binfield, England.

I feel as though it is my duty to express my gratitude to God for my healing in Christian Science, which has been marvelous indeed. In 1900 the doctor said I would not live a year, and I was thin, worn, and sickly; but after being treated by a Christian Science practitioner I improved rapidly, until in 1905 I was the best lightweight wrestler in the state, having sent out numerous challenges, but none were accepted. I also developed lung power enough to fill any auditorium with my voice.

My gratitude to God is inexpressible, for instead of a brief existence of one year, marred by illness, I have had over ten years of health and strength and have a good chance of staying longer than many others, provided I make the most of my understanding of this truth.

LEE ROY HENRY, Asheville, N. C.

I wish to express my gratitude for Christian Science, for what it has done and is doing for me every day. When it was presented to me I had been an invalid for more than a year. I had never seen a copy of Science and Health, although I had heard of the healing, but I grasped at it as one would who was beyond human aid, and I was helped at once. During the course of the last ten years I have seen many different diseases cured and discordant conditions overcome, by the understanding of Christian Science, and the spiritual uplifting which I have experienced helps me to realize that God is with me always.

My mother also had great trouble with her eyes, and twice in her life had been blind. She had suffered intensely, and asked for help in Christian Science at the same time I did. She was quickly helped and has been reading without glasses for over six years. For these and many other helpful experiences I am intensely grateful. I hope so to live as to prove the truth of Christian Science in my daily life, that others who are afflicted may be led to know the God who healeth all our diseases.

MISS ETTA HOFFMAN, Springfield, Mo.

My husband's father had what seemed to be a felon come on his finger in July, 1909. It broke some time in August, and continued to discharge, showing no sign of healing. Late in October, while visiting in a neighboring state, he had it examined by a physician, who told him it would never heal until a piece of dead bone was removed. He returned home soon after, and I wrote for him to a Christian Science practitioner, who immediately commenced treatment. In about three weeks the finger was entirely healed.

Our little girl had what seemed to be a serious attack of illness,—severe pain in her head, with gatherings and discharges from both ears, attended by high fever. I wrote to the same practitioner, and the child was healed in a few days. For these cases of healing and many other blessings we are most grateful, and I hope this may lead some other needy one to go for help to the one true source.

HATTIE WEBSTER, Whiting, Vt.

We desire to express our deep gratitude and appreciation for what Christian Science has done and is doing in our home. This healing truth has reached all three of our children and ourselves. One little girl, three and a half years old, was entirely healed of curvature of the spine, which without Christian Science would have left her a cripple for life. This same child, and also our oldest girl of six years, have been healed in a few hours of measles, fever, and other diseases to which children are said to be subject. Our little boy, fifteen months old, has been healed of acute lung trouble and minor diseases. The children have never taken any medicine, all ills being overcome scientifically through the understanding of God and man as taught in Christian Science.

We have both been healed of physical ailments, and the moral regeneration and spiritual uplift which comes with Christian Science healing is ours in abundance. The appetite for intoxicating liquors and the tobacco habit of fourteen years' standing entirely disappeared over five years ago. Why should we not be more than thankful? Our love for God, and our gratitude to Mrs. Eddy, for being able and willing to give us this truth in such a way that we can understand it, overflows continually. We also appreciate greatly all that has helped to lead us in the right path.

ELIAS T. SMITH, MAMIE B. SMITH, Kansas City, Mo.

I wish to tell of a very interesting case of healing under Christian Science treatment that I have recently experienced. I had a severe fall while roller-skating and sustained a serious injury to a tendon in my leg. I managed to walk home (which fortunately was near by), but very slowly, as it caused intense pain if I even attempted to bend the leg. As soon as I could get away alone I began to treat myself in Christian Science. I had such a clear realization of the truth that I at once felt relieved. As I was the only Scientist in the house, I thought it wise to get some one to help me, and I telephoned to London for a friend to treat me, with the marvelous result that in forty-eight hours the tendon was healed and I went out for an hour's walk! Although the demonstration was made, I received treatment for a few days longer, as the leg was somewhat weak, but my walking was not interfered with any more. All in the house were much impressed by the rapid healing, for only a few months before a brother had had exactly the same accident while playing cricket, he being under the care of doctors. His leg was in splints for over three weeks. He suffered much pain at first, and even after the splints were removed he suffered much from stiffness.

Aside from the above-mentioned healing, I have endless cause to be thankful for Christian Science. I have been cured of lifelong anemia, and before I came into Christian Science, some eight years ago, I had lived on tonics, the doctors putting the law upon me that I could never get on without them. I have never touched a drop of medicine since coming into Science, and instead of being dead, as in the old thought I should have been, the disease has vanished, and I have proved that my life is in God and not in tonics. I have also been healed of a sensitive condition of the lungs. I always dreaded the winter, as it invariably meant at least one bad attack. Though I now occasionally have colds, they are not severe and I do not trouble about them.

My little girl was healed in a few hours of concussion of the brain after a bad fall. I was frightened at the shivering, the sickness, and the pain in the head, and she could not see; so I put her to bed, and wired to London for help. Soon after the telegram was received the child fell asleep, and woke up in two hours, saying she was quite well and wanted something to eat. She was quite well, and only a mother can know the thankfulness that flooded my consciousness and how I thanked God for His ever-presence! A doctor to whom I related the occurrence said that the rapid healing was, without doubt, "none other than the hand of God." I quote his own words.

I have also discarded glasses since I have been in Science. When I began to wear them the doctor told me I could never be without them, and in a year's time I had to go to him again for stronger glasses. After a short treatment in Christian Science, I lost them, but I never thought of looking for them, and I have never used them since. But, in spite of all these benefits, it was not the physical healing that brought me to Christian Science; it was the hungering for a substantial, practical, every-day religion that made me look into it. I "tasted" and was satisfied. But I did not accept its truths easily. Mortal mind fought hard to have

Digitized by Google

its own way, and kept whispering that I was being deceived by a new doctrine. I went through deep waters of doubt, but thanks to the patience and love of my teacher I began to see my way out of the mist of wrong thinking and my footsteps began to get firmer. I knew it was the truth.

I wish to express my deep gratitude to Mrs. Eddy, our devoted Leader, for her love and courage in braving the world to bring to us this long-forgotten and deeply buried truth. She did not invent for us a new religion, as some think, but found again the oldest of the old, even the truth that was "in the beginning."

AGNES H. S. HARRISSON, Canterbury, England.

[Translated from the German.]

About four years ago a friend of my husband came to see us, and as he used to be silent and self-contained, I was very much surprised to find him so completely changed,—radiating joy, so to speak. He seemed to have become a new man, and I thought he must have had an indescribably beautiful experience. I could not help expressing my surprise, and he finally said that he had become an adherent of the teachings of Christian Science, and that this was what had produced such a change in him. I had never before heard of Christian Science, and was interested in what he had to say, but as we saw him only occasionally, the thought did not at first take root. Then came years of great sorrow, years of care, work, and need, which robbed me of my former strength. I felt I had reached the limit of my mental and physical endurance, and was utterly tired in mind and body; but I had to live on, for many duties held me.

One day I looked among my books for the copy of the *Herold* which our friend had given us years before. So far it had lain unnoticed, but now I read it through attentively; then with a heavy heart and in a state of great discouragement I asked for help in Christian Science. The practitioner who kindly took up treatment gave me a psalm to read while she was treating me. Had I not read it often before? "Yea, though I walk through the valley of the shadow of death, I will fear no evil: for thou art with me; thy rod and thy staff they comfort me;" I felt as if a bandage had been loosened from my eyes; and as if a strong hand had taken mine. Now I had found the true way which I had sought for so long, and I went home a new woman. Although the waves of earthly cares would often rage around me, I knew that no evil could befall me. All sense of unrest and worry had left me and was replaced by courage and buoyancy. Can I describe the blessings Christian Science has brought to me? Can I describe how God has firmly guided me as I walked, trusting that He would lead me over all rough and dark places?

On one occasion fear sought to confound me. I suddenly experienced a sense of great distress about my eldest boy, who is going through a practical course of farming far from home; but I realized that my child was in God's protecting arms even in that far-off place, that evil could not come upon him, and the words, "Fear not: for I am with thee," illumined the darkness of my sense, and I regained my tranquillity. A few days later I had a letter from my son in which he wrote that two days before he had been in great danger. The horses which he was driving suddenly became startled and ran away. He held the reins, but one of these gave way and the horses galloped all the faster. He believed himself lost, when the thought suddenly came to him, "No, I am in God's hand; He will protect me." The horses stopped running, and he was able to jump off the wagon safely. He added, "I thanked God for my wonderful escape." This is what my child wrote to me, and I gave thanks, for I knew it was the hour when I had been overcome by a sense of fear for him, but had regained strength by the words, "Fear not, I am with thee."

This is one of the many blessings which I have received during the short time I have been an adherent of Christian Science. I thank God for having led me to find the way which brings rest to all "that labor and are heavy laden," and I thank our revered Leader, Mrs. Eddy, through whom it has been revealed to us.

FRAU HEDWIG SCHWENK, Loschwitz b. Dresden, Germany.

I would like to express briefly my deep gratitude for all the blessings that Christian Science has brought into my life since I first became interested, fourteen years ago. I was living in America at the time, with a dear friend; but duty called me here, and it was perfectly right that I should respond to the call, yet when I came here a great struggle began and the work that lay before me was to adjust myself to environment. We all ought to know that environment is only a condition of thought, and as we think about it so it will be to us. I worked faithfully, as I then thought, in this direction; but it was not until two years ago that a complete demonstration was made, and then "the divine law of loving our neighbor as ourselves" (Science and Health, p. 205), was fully revealed to me. The awakening came gradually but surely. We have to do our part of the work, and reflect love in all we do and say, then there can be no inharmonies in our environment or anywhere else.

Today I am a happy, contented Christian Scientist, and with no desire to leave an environment which is becoming so harmonious. Above all, my heart is full of gratitude for our dear Leader, Mrs. Eddy, who has shown us the way to this blessed truth.

ANNA E. FREY, Heidelberg, Germany.

[Translated from the German.]

I wish to tell something of my experiences in Christian Science, which has been a great blessing to me in times of affliction. After having been for three years unable to work or to sleep, and obliged to spend many hours a day on my couch on account of severe heart trouble, for which I had used many remedies and consulted several doctors without avail, divine Love has restored me, so that I can work without fatigue and sleep well. In the winter my little daughter and I suffered much from catarrh and its attendant ills; but now that the fear of this has been overcome, the symptoms have disappeared. When this ailment seems to show itself, it has no longer any power in our consciousness, for we know that we are governed by God, divine Mind, and that there is no power besides God, good.

I have also had many proofs in my family that the truth rightly understood and applied always helps. In my domestic affairs I have much to be thankful for, as even when error seemed to assert itself very strongly and no way of escape was to be seen, the truth that as spiritual beings we reflect God's image and likeness triumphed at last. I am grateful for all that has helped me forward in Christian Science, and especially grateful to our faithful Leader, Mrs. Eddy. I am convinced that divine Love will continue to lead me and mine.

FRAU HELENE BENZ, Stuttgart, Germany.

I wish to tell others what Christian Science has done for me. When I called a practitioner, two years ago, to treat my child, I could not see to read or write without glasses. She advised me to study Science and Health, which I did, and in a short time my eyes were very much improved. When she advised me to take off my glasses, I laid them aside, after having worn them for three years. I can now see to read and write without them. I feel that I cannot be thankful enough to God for this truth, and I am grateful to Mrs. Eddy for what I know of Christian Science.—MRS. JESSIE BALL, Eureka, Cal.

Digitized by Google

I knew nothing of Christian Science until about two years ago, when a sister-in-law came to stay with us. I was very distressed on account of bad eyesight, and she persuaded me to try Christian Science treatment, though she herself knew very little about it. As the oculists had told me that nothing could be done for my sight, and that if I used my eyes too much I should go blind, I was indeed glad to avail myself of any chance of being healed. I went to a practitioner, and I cannot tell the joy I felt as little by little my sight became better, and I was able to use my eyes all day. I did not need to wear blue glasses to protect my eyes when I went out, and I am sure that as my spiritual understanding becomes greater I shall have my sight perfectly restored. With the returning sight has come wonderful spiritual healing. I had never cared to read the Bible, but by degrees the wonders of it have been revealed, and I see that God is indeed "a very present help in trouble," and that in every little difficulty as well as in greater troubles we have only to turn to Truth and we are helped.

I have also been healed of a stomach disorder. I used to be afraid of fruits and vegetables, but now I can eat anything, and I have been able to overcome great irritability, also the fear of being out alone in the dark, which had troubled me since childhood. We live five miles from a town, and if any one had told me that I should ever bicycle those five miles alone after dark I should have said it was impossible; but I do this now without the least fear, for I have realized that "perfect love casteth out fear." Another demonstration for which I am most grateful is the overcoming of seasickness. I had always suffered so much in this way that my husband used to say he was sure that if I went a long voyage I would die. In the summer of 1909, on going to the Isle of Man, I went out on the boat and was ill, but before my return I wrote to a Christian Scientist, who very kindly gave me absent treatment, so that during the journey I was perfectly well and had no fear; also in crossing to France and back again. Although the former passage was very rough and nearly every one was ill, I kept quite well.

My husband and I are very grateful that there is a service in Reading, our nearest town, and more so now that we are a society. We have five miles to bicycle, and people say sometimes what a dreadful ride we must have in the rain and cold; but we do not think of that when we know what it means to listen to the truth, the truth that makes us free from sin, disease, and death. Is any distance too far to go for that? It has been our privilege to have a lecture quite recently, which was well attended and the utmost attention was paid to the subject. Words cannot tell how deeply grateful I am to God for having given us Christian Science through Mrs. Eddy. It has made the world a new place for me,—a happy, beautiful world,—and I hope to be able to help others as I have been helped by loving and loyal Christian Science friends.

FANNY ETHEL GREATWOOD, Reading, England.

Every day is a golden day,
With golden blossoms along the way,—
  Sunshine kisses everything,—
  Music pours from bird on wing,
  The air with liquid gold doth ring
  (Blessings on his caroling!)—
And it's oh, to the winds all care I'll fling,
And it's blithe and gay that my heart doth sing,
  For all the world is created new,
  And all is good, and the good is true—
  There is gold for me and gold for you;
Friend, Love is gold and fills all space—
Surely, the Lord is in this place!

LAURA B. DOORLY.

FROM OUR EXCHANGES.

[From a sermon by Rev. H. C. Ledyard in *Everybody's Journal*, Newport, N. Y.]

"The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give." These were the words spoken by Jesus, in commissioning his disciples to go forth and preach the gospel. We cannot help but notice that everything said to have been performed by Jesus is here also expected of his followers. Jesus has never drawn a line which can in any way separate him from the rest of humanity. The same power nursed and developed by him lies dormant within each one of us, only waiting for us to arouse ourselves and realize our own divinity.

This power of healing which was so potent a factor in the ministry of the Galilean, and which he impressed upon the minds of his disciples as being of paramount importance, the church in general has allowed to pass outside of its jurisdiction. For some years the early Christians maintained this healing work, but gradually, with the spiritual decline of the church owing to the growth of the desire for commercial power, this great light seemed to be moving farther and farther away, until there seemed to be an impassable gulf separating humanity from Deity. This condition continued for years. Then there came a desire on the part of some to return to the Father and enter into the inheritance which belongs to man. These leaders were, as are all leaders in the search for truth, vilely slandered and abused. But recently, and especially today, there is a great desire on the part of man to come into full realization of a real God,—one who is tangible, one who is able to be a real source of help in this present life. Man today desires a God to whom he may go in complete confidence and trust.

[Rev. David Walters in *British Congregationalist.*]

Hesitation is never inspiring. I believe that we shall get out of this period of uncertainty, and that God will raise up in His own time, when the conditions are favorable, another Paul or Augustine or Calvin, who will interpret for us our great gospel in terms that will be real and convincing to the modern mind. It will be a newer theology than anything we have yet had, and yet it will be recognized as the old. The hearts of men will leap up in response to it, and will say: "This is true. This is what we have been waiting for," and we shall all preach it with a consciousness that we are in line with all the faithful preachers of the past, and yet that we preach in language that is understood by the present generation.

By a new theology I do not mean a new gospel, but a new interpretation, which shall take account of the new world into which we have passed. We have been trying to commend our religion to the people by emptying it of all that offends and perplexes the modern mind. But the people pass by on the other side of an emasculated religion, stripped of the supernatural and the mysterious. We want all the elements that made the old an inspiration to worship and prayer, a message of hope and healing to the sinful.

[*Living Church.*]

Humane people, those in whom the spirit of Christ has been a reality, have always been appalled by the horrors of war, but have been reconciled to war itself as being something so inevitable as to be a necessity of society in certain contingencies. While the growth of humane sentiment and the spread of a truly international public opinion has made the actual recurrence of war more and more difficult, there has, until recently, been nothing that seemed to make it a practical impossibility. No sentiment, however lofty, will prevent those who are prepared to fight from fighting, if sorely provoked. But there is a practical argument that

Digitized by Google

bids fair before long to make wars cease from necessity. The fearful waste of accumulated capital involved in war, and the increasing burden of taxation involved in being prepared for war, are fast breaking down the ability of nations to carry the double burden. When governments become bankrupt wars will have to cease.

[*Christian Work and Evangelist.*]

So long as this horrible specter of militarism, with its emphasis upon iron instead of good will, upon force instead of love, upon nationalism instead of human brotherhood, upon destruction instead of justice, overshadows all sweeter, finer things, all science, culture, and ideals, all happy, joyous life, in the Christian countries of the world, laying intolerable burdens upon peoples who have no enemies in the world, keeping hatreds, strifes, and jealousies alive, Christianity is not Christian. Think of so-called Christian nations going on today piling up huge warships by the half dozen or more a year, with which to destroy each other. What most impresses a Japanese or Chinese in his tour through Christian Europe as the most conspicuous product of our Christianity? Big guns. And all this the church could stop immediately were it Christian.

[*Universalist Leader.*]

Fortunate is he who can see the star of Bethlehem. It is shining just as clearly today as ever it did over the hills of Palestine, but we are mostly blind. The daylight which the light of the world has created has hidden but not destroyed the gleaming star. It is shining just as truly as those other stars are shining when the sunlight hides them. We need the right kind of instrumentality to see these every-day stars, and all we need to see the star of Bethlehem is that purity of heart which sees not only the star, but the God who is behind it.

[*Churchman.*]

The stern and at the same time hopeful examination by churches of their claims, their privileges, and their performances, is producing everywhere a readiness to acknowledge that the work of divided Christianity, even at its best, can only be successful if, and when, it leads to a common campaign done in behalf of a common Lord. The evils of division, even if they are not allowed to be paralyzing, are acknowledged to be obstructive to the richest development and diffusion of Christianity.

[*New-Church Messenger.*]

No one now of accredited sanity in spiritual matters expects the Lord ever to come in person upon the earth. Such a doctrine no longer has any power in Christian preaching. So far as there is any belief in the second coming of the Lord, it seems to be in believing that his second coming is into the hearts and minds of mankind, whereby we are entering into greater light, more perfect liberty, more righteous living.

[Rev. George Batchelor in *Christian Register.*]

That cry of liberty which rings all through the epistles of Paul is the exultant spirit of a man who has seen the moral possibility which wise men and good women had cherished in secret with fear and trembling, and had seen it suddenly brought out into the light and made the open law of life.

[*Continent.*]

It is a modern habit to talk about the salvation of society, but society will be saved in no wise except as individual men get enough of the understanding of God's will to do that will themselves toward all they touch.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel.*

ATTENTION IS CALLED to the new volume, "Poems by Mary Baker Eddy," now on sale. Specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

NEW PAMPHLETS.

Attention is called to a new pamphlet, "Causation: Viewed in the Light of Christian Science," by Frederick Dixon.

Also on sale are four new pamphlets: "Seeking and Finding," "Prayer and Healing," "The Divine Nature," and "Upward Footsteps." Each pamphlet contains five to nine articles that have previously appeared in the *Journal, Sentinel,* or *Monitor;* and they are particularly suitable for handing and sending to inquirers or persons who are becoming interested in Christian Science.

Hereafter, the price of all pamphlets (except "What our Leader Says" and "Christian Science and Legislation") will be reduced to 5 cents a copy; 55 cents a dozen; $2.00 for fifty, and $3.50 for one hundred. Hereafter, also, the republication in the English language of single articles as "tracts" or "reprints" will be discontinued. It is believed that their place is better taken by the daily article on Christian Science in the *Monitor* and by these new pamphlets and others that may be issued.

NEW POST CARDS OF THE MOTHER CHURCH.

Post card photogravure, in sepia tint; an exact reproduction of the large photogravure of The Mother Church Buildings and Publishing House with parkway in foreground. Single copy, 5 cents; twenty-five copies, $1.15; one hundred copies, $4.25.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90; six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. XI indicates the year 1911 and XII, 1912. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, *bound in cloth*, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

At least two hundred and eighty-two railroads throughout the country, representing 208,526 miles of track, have joined in the movement for better compensation for carrying mail. The tendency of the Government has been to reduce this compensation, and these railroads say now, through a committee which has just completed its investigation, that they are carrying the mail at a loss. There are three points in particular that these railroads recommend, namely: That authority be given the postmaster-general to allow compensation for apartment cars; that relief be given for performing messenger service between the railroad station and the post-offices on short-line routes; that adjustments be made annually of the weight of mail carried per day and payments made accordingly.

The executive committees of the Union Pacific and Southern Pacific lines have voted to complete the double-tracking of the lines from the Missouri river to San Francisco. They also voted to double-track the Oregon Short Line from the junction with the Union Pacific main line at Granger, Wyo., to Huntington, Ore.; also the line along Columbia river in Oregon to Portland, a total of sixteen hundred and seventy-three miles. The cost of the double-tracking will aggregate upward of seventy-five million dollars, which will be distributed over a period of five years. In a statement accompanying the announcement of the double-tracking project, President Lovett declared the belief of himself and his associates that present conditions considered unfavorable to the railroads were but temporary.

The movement to conserve the flood waters in the semiarid parts of Texas and to provide a water supply for reclaiming vast tracts of land now comparatively worthless, owing to the lack of natural moisture, has taken definite shape in the Legislature in the form of a proposition to issue fifty million dollars worth of bonds by the state for the purpose of carrying on the conservation and reclamation works. It is purposed that these water storage reservoirs shall in some instances also be available for the use of municipalities. It is conservatively estimated that there are not less than twenty million acres of land in the state which could be embraced in a reclamation service of the kind proposed.

At the request of the American Civic Association, Representative Davidson of Wisconsin has introduced in the House a bill for the establishment of a bureau of national parks. A similar bill has been introduced in the Senate by Senator Smoot. The purpose of this bill is to place the control and management of the several national parks and monuments, and reservations of like character, under one bureau, instead of having them controlled by various bureaus in different departments. President Taft, in his annual message recommended the creation of a bureau for this purpose.

Five of President Taft's appointments of United States circuit court judges have been confirmed by the Senate. They include William H. Hunt of Montana, Robert W. Archibald of Pennsylvania, Julian W. Mack of Illinois, and John Emmett Carland of South Dakota, who were named as additional judges to serve on the new commerce court. Representative Walter I. Smith of Iowa was confirmed to succeed Judge Willis Van Devanter, who was promoted to the supreme court. Frank Ruckin was confirmed as United States judge for the eastern district of Washington.

More public service commissions, with greater powers, enabling them to deal justly with corporations and by the people, were urged by President W. G. McAdoo of the Hudson & Manhattan railroad at the second annual dinner of the Boston Chamber of Commerce. Rudolph Spreckels of California, the man whose efforts were responsible, in the main, for the conviction of Abraham Ruef, asked for support in his life-work, which is that lawbreakers be punished, no matter how wealthy or influential they may be.

The rivers and harbors appropriation bill, reported out of committee to the Senate, carries all the appropriations and authorizations made by the House of Representatives, aggregating $29,202,978, and in addition appropriations in cash, $1,795,461; authorizations for continuing contract, $3,389,282. These are the chief increases made by the Senate committee: Connecticut river, in Connecticut, cash, $77,000; continuing contract, $100,000; Potomac river, near Alexandria, $50,000; St. Johns river, Florida, $500,000, continuing contract.

A bill has been introduced in the Maine Legislature for a public utilities commission, to consist of five, of whom the term of one shall expire each year, the chairman to be paid four thousand dollars and the others thirty-five hundred dollars per year. The commission is to have all the power of the present railroad commission and similar powers over other public service corporations, including the right to regulate capitalization, service, and rates.

A petition and bill from the district attorney of Suffolk county, to the Massachusetts Legislature would regulate the sale of firearms. The bill provides, among other things, that the sale of firearms shall be forbidden by any except licensed dealers, that every purchaser of a firearm must give his full name, residence, and occupation and that each dealer must make a detailed record of each sale and send a copy to the local chief of police.

J. A. D. McCurdy, the Canadian aviator, who attempted to fly from Key West, Fla., to Havana, Cuba, a distance of about one hundred and fifteen miles over water, reached a point within ten miles of his goal, when he was obliged to descend to the water because his supply of lubricating oil gave out.

A suit has been begun to have the ten thousand shares of common stock of the National Sugar Refining Company held by the late H. O. Havemeyer, returned on the ground that they were illegally issued as a gratuity at the time of the formation of the American Sugar Refining Company.

After considering the matter for more than seven hours under a special rule, the House, by a vote of 186 to 93, passed the bill providing for a permanent tariff board of five members.

International.

While several changes have taken place in the representation of constituencies, the results of the late election leave the various groups in the House of Commons much as they were last November. Before the dissolution the Unionists held 273 seats, in the new House of Commons they number 272. The coalition supporting the government is made up of 272 Liberals, 42 Labor members, and 76 Irish Nationalists. The Independent Nationalists, upon whose vote neither the government nor the opposition can rely, number eight; and leaving them out of account the government will have a majority of 118 in the new Parliament. Measures are in consideration which, if passed, will have the following effect: The House of Lords will have no word in the control of national finance; as regards legislative measures opposed by the House of Lords, the wishes of the House of Commons will prevail after a delay of two years; the maximum duration of a Parliament will be five instead of seven years.

No change in the Chinese empire within the next hundred years will be more complete than that which is being effected now by the extension of railway, steamship, and steam launch transportation, according to United States Consul-General George E. Anderson at Hongkong. Discussing Chinese railroads, he writes: "In some respects the Sunning railway, constructed with capital raised very largely from Chinese in the United States, is the most promising line in all China. It was capitalized, planned, engineered, and constructed by Chinese without any foreign help whatever. It is a standing example of what Chinese effort and Chinese talent will accomplish in China in the near future."

The government of Portugal has decided to pay a monthly pension of thirty-three hundred dollars to the deposed King Manuel. A check for the months of October, November, and December has already been sent to the former ruler, who is now living with the queen mother, Amelie, at Wood Norton, Faversham, England, where he was obliged to accept the hospitality of the Duke of Orleans.

Dr. Max Richter, who recently announced the discovery of the most ancient shrine of Aphrodite, or Astarte, at Rantidi, island of Cyprus, having continued his investigations in that neighborhood announces further important finds, of which he says: "I am perfectly justified in declaring this the greatest archeological and epigraphical discovery hitherto made."

The committee on foreign affairs of the Austrian delegations has adopted a resolution in favor of President Taft's disarmament proposal.

At the recent civic elections at Victoria, B. C., it was voted to adopt the single tax system and abolish all taxation on improvements.

According to the government census report, Mexico has a total population of 15,303,717, an increase of 1,696,458 in the last ten years.

Industrial and Commercial.

According to the report for the year 1909, steady and systematic progress has been made in the cultivation of rubber in the Straits Settlements. In 1908 the export amounted to 3,661,839 pounds, and in 1909 it had increased to 4,507,675 pounds. According to the report of W. Evans, acting colonial secretary, the increase of Para rubber in Singapore during the year has been phenomenal.

Preliminary statistics compiled by the director of the mint indicate that in 1910 the value of the total production of gold in the United States (including Alaska and the insular possessions) was $96,055,214, a decrease of $3,618,186 from the value of the output in 1909.

The annual report of the Hamburg-American Steamship Company shows gross profits for 1910 of ten million dollars. The directors propose a dividend of eight per cent.

THE ONE AIM.

CLARA A. COWLING.

SOME time ago the writer was most grateful for a quickened sense of duty which came to her during a conversation with a dear helpful friend. Seeming to have had much to overcome and to struggle with in the past, the remark was made that, but for the thought of loved ones who needed her, the struggle could not have been endured. Then came the quiet answer, "But it is our duty to reflect God, and to overcome all which is unlike Him." Nothing more was said, but since then thought has been filled with a much higher sense of duty, a fuller concept of what life really ought to be, and must be if we wish to grow into the likeness of the one "altogether lovely."

Human desires, affections, and aims, however unselfish they may be, are not sufficient; and Mrs. Eddy truly tells us that "not mere personal attachment should impel the motives or acts of the Christian Scientist" (Manual, p. 40). Our aim must be higher. We must know and understand that it is our privilege, our highest duty, our birthright, to manifest the Christ, our life-work to reflect God, to know without doubt or question that the one thing which we desire is to "dwell in the house of the Lord for ever," and to "enquire in his temple." If we have this uplifted ideal it will make us do our duty more lovingly than ever before, more faithfully, more patiently. In whatever position we may be placed, our light will "shine," we shall be truer friends, better citizens, kinder and more loving in our family relations; if we are employers we shall give better service; if servants, our work will be done to the glory of God, and not merely to win human love or approval; and each simple task will gain an added glory if brought into line with this uplifted ideal.

In Science and Health (p. 265), we read that it is imperative that our "affections and aims grow spiritual," we "must near the broader interpretations of being." If our motive is to win the "well done" of our Father, we cannot then fail to do our duty to our fellow-men; and as we follow this desire to be about our Father's business, we shall find that the painful struggles will cease, our heavy burdens will drop away, and we shall daily prove that His yoke is easy and His burden light.

A WORLD MOVEMENT.

MERCY M. GAGE.

CHRISTIAN SCIENCE has already encompassed the globe, has found its way among all civilized nations. The contemplation of this great world movement carried the writer back to her schooldays and the lessons in natural philosophy, and with this came the thought that Mrs. Eddy has been more successful in her researches in the realms of metaphysical science than was Archimedes in the realm of physics or mechanical science.

Archimedes is quoted as having said, "Give me a fulcrum on which to rest my lever, and I will move the world." Mrs. Eddy has thus moved the world, and it is still moving! She discovered the truth of being, and she found that it was a sufficient fulcrum on which to rest all the leverage that we can bring to bear upon it. She also found that divine Love reflected is the all-sufficient power that never fails to do its part in the operation of this metaphysical mechanism. The lever is the only conditional element. It must be of the right metal; no dross of mortal beliefs may enter into its composition. It must be like a bar of pure steel, wrought in the mills of understanding. Thus the real man, made in God's image and reflecting Mind, is the only agent or transmitter of the power of divine Love, while the weight that is to be removed is the mortal belief concerning substance, Life.

As already stated, Mrs. Eddy has moved the world—not all at once, but with untiring efforts, supported by her certain knowledge of the truth gained through demonstration as well as inspiration, she has enabled men to profit by their spiritual leverage—each one on his own plane of attainment adding his "lift," though it be only a pound's weight.

The chief agencies employed in this great enterprise are the Christian Science text-book, "Science and Health with Key to the Scriptures;" the lectures, which are personally addressed to large audiences wherever the English language is understood; the Lesson-Sermons, that are read to a thousand or more congregations every Sunday, and the periodicals which are being sent broadcast through the entire field. Taken as a whole, these agencies of Truth form a cumulative efficiency which is lifting thought out of that mire of materialistic belief in which it has for so many centuries been embedded, and it will continue to lift until human sense and its activities swing fair and free in the atmosphere of spiritual discernment, where no clouds of belief in sin, disease, or poverty can dim its vision. Was it not to this liberated world that Jesus referred when he said, "I go to prepare a place for you"?

"FOR SUCH A TIME AS THIS."

CHARLES A. BLAKE.

IN the book of Esther we read, "Who knoweth whether thou art come unto the kingdom for such a time as this?" Shortly after I came to Christian Science for help, I found employment on the railroad as a locomotive fireman. This position came in direct answer to prayer, and as such I gladly took up the work, performing the duties to the best of my ability. As I gained understanding, I applied Christian Science to the problems which came up in connection with my work, and many striking proofs of God's power were shown in demonstration.

Often I was enabled to prove the omnipotence of Mind, when confronted with adverse conditions due to defective motive power or a poor grade of fuel. Many times I was able to make the demonstration and bring my train in on time when it was seemingly impossible to do so; and in working with engineers who held the reputation of being ill-tempered and disagreeable I often realized the truth that Mrs. Eddy so beautifully expresses on page 389 of "Miscellaneous Writings,"—

> Wait, and love more for every hate, and fear
> No ill,—since God is good, and loss is gain,—

thus bringing out harmony. The understanding of God as the source of supply enabled me to meet the claim of lack of work in a time of panic, so that I had more work

Digitized by Google

and better pay than in all the rest of my railroad experience, although I was on the spare list.

In spite, however, of these proofs of God's watchful care, little by little I allowed discontent to come in and tempt me to leave the railroad and seek other employment; but, recognizing this as error, I worked on until at last it was destroyed. The consciousness that all work is God's work, and gives us opportunity of "doing service, as to the Lord, and not to men," gradually displaced the discordant thought, and instead of discontent there came a joy which I had never known before. Since that time the way has opened for me to enter the larger service of Christian Science, and thus I know from my own experience that God is "a rewarder of them that diligently seek him."

STONES FOR THE TEMPLE.

CARL BREDELL.

ONE day, while on the property where the building of our new church edifice, viz., First Church of Christ, Scientist, Johannesburg, South Africa, is in progress, I watched the masons as they chiseled the rough stones of different shapes into proper square blocks fit to be used in the construction of the building. Many of these stones were of very awkward shapes, and ever so much had to be chiseled away before they got dressed into a proper form of usefulness; while others were of better shape, and hence it took much less time to prepare them.

It then struck me how this process applies symbolically to ourselves. The grand architect of the universe, the eternal builder and unchangeable God, enables us through the recognition of divine Love to purify our modes of thought from erroneous or mortal beliefs into the understanding of divine Truth, though the progress may sometimes appear slow to our impatient sense. Some of us have many rough edges to be chiseled away, others are sooner ready to comprehend or grasp the truth; but ultimately we become fit stones as God's perfect idea, to serve in the construction of the main building, not made with hands, "the structure of Truth and Love; whatever rests upon and proceeds from divine Principle" (Science and Health, p. 583).

I am thankful to God for the knowledge of Christian Science, and the blessings and benefits that have come to me; also that I have been led to strive to obey the Master's command. I feel deeply grateful to our beloved Leader, Mrs. Eddy, as the great metaphysical architect and "wise master builder" of this age, to whom belongs the credit for having again made known to mankind that indestructible house, "whose builder and maker is God."

COMPASSION.

JOSEPH B. BAKER.

COMPASSION ever accompanies Love's mighty work, for it is an expression of Love, and the understanding and demonstration of this quality distinguishes the spirit of Christian Science from the mere letter. Mrs. Eddy says that she gave her discovered Science the name Christian because it is compassionate. Let us therefore entertain nothing that would stand in the way of the Christ-mind or obstruct its healing work. Compassion holds in check the argument spoken out of season. It is revealed in the tender word, the glance of sympathy. In its calm presence error is uncovered to be destroyed, and in its golden silences we displace personality and stand aside, permitting the good seed of the kingdom of heaven to take root.

It is better to demonstrate Christian Science than to talk it. People are not always disposed to listen, though social convention may cause them to appear to do so; they are not often ready to understand before they seek information of

[redacted]

of this manifestation of God. The very waymarks of Christian Science are in that splendid chapter. Love must be sought for, and compassion will evidence the finding. Who that has thirsted to do God's work has not felt the light breaking in on his consciousness in compassion for his brother? A mortal visiting another in sickness often brings no help, but a real visit of a child of God is a healing treatment: for whoso stands in the light must reflect of its glory, and where two or three are gathered together in Christ's name, there divine Love is in their midst, and there will prayer be answered.

[Written for the *Sentinel*.]

I SAW IN THE EAST A STAR.

MARY J. ELMENDORF.

I SAW in the east a star,
Faint, golden-fair, and far,—
Like a tremulant torch on an upland trail,—
And my heart to its Maytide sprang,
While the mist of its whitening branches rang
With the voice of the nightingale.

I made me a little prayer,
Honest and fervent and rare;
I robed it in meekness, I filled it with love,
I winged it with faith for its flight
Through the lonely reach of the velvet night
To the sentinel-beacon above.

Swift it arose and strong
As the meteor-notes of a song,
Beckoned by many a scintillant spark
From the star's great garden of flame,
Drawn by the primal power of its aim—
The light beyond the dark.

When the quiet was prescient of day
And the purple paling to gray,
My prayer came back, like a luminous dart,
And sank with its message of gold,
With its billows of radiance, fold upon fold,
Into my longing heart;

Sank with its limitless lease
Of promise and healing and peace,
With its guerdon of glory no shadow can mar
Into the hush of my heart,
Into its depths where, anchored, apart,
It burns—a Bethlehem star.

EXCERPTS FROM EDITORIAL COMMENTS.

[*News-Signal*, Middletown, O.]

One of the remarkable characters not well understood by the world at large was Mary Baker Eddy. Her religious zeal, her claims, and her work would make a good subject for a sermon. In the first place, she built up a larger following than any other woman who has ever lived has built up. It has been given only to men in the past to become leaders of large classes of people, the organizations founded upon the teachings of women having always been limited in numbers.

In the next place, it is doubtful if any other person has lived in modern times who has had a more loyal following, those professing the doctrines she taught not only making those doctrines a part of their daily lives, but passing to eternity without fear of the future while embracing them. In other words, they have found Christian Science not only a religion by which to live, but also a religion which comforted in the last hours. In no other church today is there more implicit faith than in the Christian Science church, and that faith is centered in the words of this one woman and her interpretation of the Scriptures.

[*Arizona Journal-Miner*, Prescott, Ariz.]

The average intelligence of Christian Scientists ranks far ahead of the intelligence of any other creedal membership, and in its ranks are found many talented and intellectual people. It is only the uninformed who attempt to deny these facts. To have founded such a faith, whether it last ten or a thousand years after her death, is a wonderful and glorious work. They who did not know Mrs. Eddy personally have no means of judging her save by her work, and this was only good. She found a large body of intelligent, broad-minded, unorthodox men and women, who still demanded a set and limited religious belief, and she gave them one the like of which the history of the world has never seen. She found ailing, nervous, and diseased men and women who, being unable to cure their own ills, were as unsuccessful in securing health from orthodox sources, and she healed them—thousands of them. Only the uninformed will care to deny it. Mrs. Eddy was in many respects the most remarkable figure in all the nineteenth century and in the first decade of the twentieth.

[*Index-Republican*, Bellefontaine, O.]

One of the most remarkable women of the age, or of any age, has ended her career in the death of the Founder of Christian Science. The most bitter hostility to Mrs. Eddy and the most complete rejection of her doctrines and her church organization cannot, if honest and intelligent, deny that she has been a far-reaching and vital force in the thought and life of her times. The religion which she founded and completely dominated has more or less colored and permeated very important phases of existence for a multitude of men and women who do not call themselves Christian Scientists and are not, in fact, connected with the Christian Science organization.

[*Westmount* (Que.) *News*.]

The world has had many women of great deeds, and among the modern women of achievement and fame not one has stood with us and approached nearer the zenith of her hopes than Mrs. Mary Baker Eddy. We in Westmount do not know as much as we should of the Christian Science movement, but although it has hardly passed its thirtieth mile-stone its power and influence is being greatly felt. Across the border, from The Mother Church in Boston, have gone forward crusaders with stout hearts, and today there are over one thousand branches, scattered across two continents.

[*News Scimitar*, Memphis, Tenn.]

Mrs. Eddy's text-book, "Science and Health with Key to the Scriptures," accepted the statements of the Bible that God made all, and all He made was good; that He was Spirit; and then concluded that, being Spirit, He could create nothing so unlike Himself as matter, and further, He being Spirit, man made in His likeness and image must be spiritual. She also rested her case on the other statement that God, while all wise, all powerful, and all present, was of purer vision than to behold evil, and she contended that evil was only a lie from the father of lies, a negation, the absence or denial of good, or maybe ignorance of good.

Mrs. Eddy's church, in the forty years of her ministry and leadership, probably grew faster than any other religious body in the same time, and it is a monument to her that its membership embraces people of culture and of the best type of citizenship, in the ordinary affairs of life. As to her doctrine or her interpretation of the Scriptures, it is difficult to see how her carrying the inconsequence of the material to the ultimate of its actual non-existence, could be other than helpful to civilization, as all wars, large or small, between different nations, or the frictions of individuals, are over the possession and enjoyment of the material, because in the world of Spirit there is no limitation or lack. One man's unlimited possessions in the field of Spirit in no sense diminish any other man's possessions. On the material plane, every man's holdings in some degree diminish other men's holdings.

Mrs. Eddy finally won her way to the respect of the country, of the world, among believers and non-believers particularly, so far as this could be learned from expressions of the press. As to the attitude of her following, probably no other leader has attained such distinction of unqualified deference and influence, not only on their professions and outer conduct, but on their lives.

[*Daily Times*, Leavenworth, Kan.]

Whatever condemnation or praise may be accorded the creed of Christian Science—and it receives its meed of both—Mary Baker Eddy in giving it to the world performed a worthy service. Christian Science, putting aside any discussion of its specific tenets, teaches right living, and any instruction which encourages us to live wholesome lives, even according to lay judgments is good. The creed, enlisting some of the best minds in the country, must by that very evidence, have a preponderance of virtue in it, a quality which Mrs. Eddy supplied.

[*Ottawa* (Kan.) *Daily Republic*.]

The death of Mrs. Mary Baker Eddy removes from the arena of human activity one of the brightest and strongest minds that the world has produced. Believers in the doctrines of Christian Science revere Mrs. Eddy as almost divine, while unbelievers are compelled to acknowledge the force of her wonderful personality. The Founder of a new religious system who can in a single generation mold the thought and win the allegiance of nearly a million intelligent people must be accorded credit for exceptional genius. This Mrs. Eddy did. She established a religious society noted the world over for its sincerity and zeal, and one which, in all probability, will be a monument to her name for many generations to come.

[*Marshalltown* (Ia.) *Daily Herald*.]

The death of Mrs. Mary Baker Eddy has removed from life perhaps the most unique woman character known to history. This much may be truthfully said, and there are none who are familiar with the church she founded who will question this, whether her doctrines appeal to them or not. The fact stands out clearly that her teachings have taken hold in a most remarkable way on the lives of many thousands of people, and these people are among the very best of the country.

Digitized by Google

[*Success Magazine.*]

The Christian Science church has lost its Founder and Leader in the death of Mary Baker Eddy—the most powerful religious leader of this age, and a woman who reached that position through a new interpretation of the Bible. Regardless of the merits or demerits of Christian Science, the fact remains that it has a large and influential following, that its members are earnest and intelligent men and women, and that it has gained its following by appeal to the reason rather than through force and persecution. Never before in history has a woman founded so important a movement.

[*Parsons* (Kan.) *Sun.*]

The death of Mrs. Mary Baker Eddy removes from life one who has blessed life in the living. She gave to the world a new creed and a new guide of action, and whether you believe that creed or follow that guide, no one will doubt but that each has been for the betterment of humanity. The Church of Christ, Scientist, which she established, has grown in less than a half century to one of the great organizations of the world, embracing millions within its membership. Few founders of a sect have witnessed within their own life so great a growth of the organization of which they were the founder. Her death, while regretted, will cause no break in that growth nor take from her followers any of their faith and loyalty to the creed she gave them. One of the wonderful statements she has made was that her followers were to forget personality and work for the cause of Christian Science.

[*Daily Colonist*, Victoria, B. C.]

Mrs. Mary Baker Eddy was a remarkable woman. While she was the Founder of what is known as Christian Science, she made no claim to be its originator, for the fundamental Principle of it is as old as the human race. This is not the time to discuss the tenets held by those persons who looked to her as their Leader; but it may not be out of place to express the hope that what is best in her teachings will survive. And there was much that was good in those teachings; more possibly than many of us are prepared to admit. A storm of controversy has raged around Christian Science and Mrs. Eddy. She was the victim of many bitter attacks and much misrepresentation. Shafts of ridicule were discharged against her and those who held as she did; but no one who knows the facts will venture to deny that what she taught has been a source of hope and comfort to thousands.

[*Calgary* (Can.) *Herald.*]

With the death of Mary Baker Eddy, one of the most remarkable figures of this or any age passes from the world's stage. To have been for half a century the head of a great movement is a lot conferred on few. To have been for the same length of time the center of heated controversies, of bitter attacks, of religious and philosophical arguments, is a record that few would have survived. To die at the age of ninety, leaving a devoted following that numbers millions of souls, with their churches scattered throughout the world, is but the climax of a wonderful career.

That Mrs. Eddy's death will have any marked effect on the Christian Science church is unlikely. Her work was done. To her, and to her alone, is due the foundation of the faith she taught, and during its earlier history her presence and her personality were no doubt essential to its progress, if not to its very life. In recent years, however, she relegated to others many of her former activities, though she had not altogether retired from work. Today her church is so fully organized as to be independent even of her personality, and it may be assumed that the machinery of the organization will continue uninterruptedly.

[*Republican Picket*, Red Lodge, Mont.]

Mary Baker Eddy, Founder of Christian Science, author of a book which has had a phenomenal sale during the last two decades, scholar, teacher, and a genuine Christian, has passed away. Death brought to her no sting, the grave claims no victory. The life of this great and noble woman was as nearly Christlike as that of any person of modern times. Her severest and harshest critics must admit that she was a good woman and that her teachings were not calculated to harm any one. Mrs. Eddy, by her work, her expression of religious thought, her writings, and her life's devotion to the cause she believed to be a just and good cause, attracted the attention of the civilized world, and that world today is better because she lived in it. It would be a difficult task to find one who has analyzed the Scriptures as thoroughly as she, and brought them into plainer view, into a clearer light and meaning.

Putting aside all considerations of the healing power said to have been held by this remarkable woman, the plain fact that she taught people how to understand many things in the Bible, which contains so very, very many which the average mind is unable to comprehend—the fact that she accomplished even so much commends her life-work to the earnest, pious consideration of all thinking peoples.

The fact that a mighty army of Christians, intelligent, thinking, practical, conservative men and women in all parts of the world, followed her, respected her, even revered her, should, it seems, be accepted as competent material evidence of the woman's influence for universal good. Unfortunately there is no one to take Mrs. Eddy's place, although the well established, firmly planted church of Christian Scientists is bound to grow—it is and will continue to be a tremendous force for good.

[*London* (Ont.) *Free Press.*]

To the long list of women who have been leaders in religious movements of the world, death has added the name of Mary Baker Eddy, Founder of the Christian Science church in America. Born in a farmhouse overlooking the beautiful Merrimac valley, she is described as having been "a very delicate and a very religious little girl." Yet that delicate little girl was destined to become the Founder of a sect which in her own country alone has well on to one hundred thousand communicants, and that has spread all over the world.

There has been a tendency to joke about the teachings of this woman, but a movement that has spread as has Christian Science, including in its ranks men who are leaders in all walks of life, must be viewed as of importance. Particularly is this so when it is considered that it has all been brought to pass in a period of thirty-five years, and that during all of that period the teachings have been criticized and in many quarters strongly denounced.

The world has seen the rise and fall of many new religious movements, but it does not seem as if a better test has ever been devised by man than that which Gamaliel proposed nearly nineteen hundred years ago, when Christianity was first on trial: "If this counsel or this work be of men, it will come to naught; but if it be of God, ye cannot overthrow it."

[*Madisonian*, Virginia City, Mont.]

Mrs. Mary Baker Eddy, Discoverer and Founder of Christian Science, is dead. That announcement carries grief to thousands of people who have been her followers and who have been her pupils throughout the civilized world. There have been scoffers at the belief she taught and the principles she followed, but there are tens of thousands who have benefited by following the lesson of life as she gave it, and there are better men and women today than there would have been had she not lived her allotted span of life upon this earth. The world is better for her having lived in it.

Digitized by Google

[*Cedar Rapids* (Ia.) *Evening Times.*]

Mrs. Eddy is the Founder of a society that has its followers in every part of the world. They have gathered themselves together in all the cities of America, and many of the finest edifices for religious purposes have been erected by the Christian Scientists. Whatever some may think of Mrs. Eddy, or of the nature of the influence she has exerted, it must be admitted by all that that influence has been wonderful as well as far-reaching. She touched many of the springs of human activity, and she must have reached the heartstrings of humanity, satisfied some of the quests of the human soul, or she would not have gathered such a world-wide following. It is also to be noted that her followers have not been among the ignorant, but among the great middle class of American intellectual life. Christian Science has flourished most among those classes which are able to think for themselves.

The effect of Mrs. Eddy's death upon the church will not be momentous. That great body is well disciplined, and Mrs. Eddy has provided for the continuation of the organization, as well as she did for its founding. We are told there will be no successor in the church. She will stand alone.

[*Butte* (Mont.) *Tribune-Review.*]

With the passing of Mrs. Eddy, at the age of ninety, the world has lost one of its remarkable women. Her writings and her teachings will continue to live. This truly wonderful woman really commenced the work of her life when the average woman is about to give up. No one can charge that Mrs. Eddy used her great powers to further her own personal interests—and her powers for organization were remarkable. As an observer of human nature she possessed great insight, and had the faculty of gathering around her men and women who carried out her wishes to the letter.

If Mrs. Eddy had accomplished nothing more, she did a great work when she founded *The Christian Science Monitor*, which in a very short space of time has risen to tremendous proportions in the journalistic field. By this alone her influence for good is difficult to estimate. All other things were as nothing compared to her life-work of founding the new thought of Christian Science, and it will not be found wanting in the elevation of the human family to a higher plane. It is now exercising a world-wide influence, and her followers have been recruited from every avenue of life. The most learned and cultured have accepted her teachings, while the humble and unlettered have found comfort therein. Her teachings were the very extreme of some of our other Christian churches, and might be summed up in one word—repose. Her life was a shining example of her own doctrine. No matter from what point of view her life may be judged, her success must be counted as one of the wonders of the age.

[*Davenport* (Ia.) *Democrat and Leader.*]

The death of Mary Baker Eddy, Founder of Christian Science, is the most notable event of the past few days. To her followers, she has simply passed on a little way ahead. They declare her presence with them as much as ever, and it is officially announced that she will have no successor as the head of the church.

It is a remarkable career that has closed. In a third of a century the church that she founded has increased until its services draw together weekly the members of more than a thousand churches, and the church is estimated to have a million adherents. There is no more remarkable fact in the past thirty-five years than this, and it was Mrs. Eddy who gave the movement its original inspiration, and who guided it to its present status. Now, say the members of the church, it has become so well established that her going will affect it not at all. "Science" will go on just as if she were still visibly at its head.

[*Manitowoc* (Wis.) *Daily Herald.*]

The passing of Mary Baker Eddy, head of the Christian Science church, is an event of more than ordinary moment, and many are the predictions as to the future of the faith which is now professed by over a million people in all lands of the earth. These, and there are many in this city, believe that she has given a real peace message to the world, hope, and ultimate freedom from the ills that flesh is heir to. On the other hand are bitter critics, who deny all her doctrines. The storm of controversy that has raged about Mrs. Eddy and her faith will not cease with her death. It is predicted on one side that the church will topple and fall without the cohesive influence of her captaincy, and on the other that she put the church on its feet long ago and that it will move forward of its own momentum.

Whatever the future of the church—and we are inclined to think that it will flourish and propagate—the tenets Mrs. Eddy preached and taught have had a powerful influence on current thought. Through her, thousands believe they have found the way to health. Whatever it is, there are many, even in Manitowoc, who are sincere in their belief of Science healing and have their own experience to convince the doubting. It should be remembered even by her severest critics that Mrs. Eddy at least taught optimism. Scientists (take those in our midst for example) are sunny, hopeful, and cheerful. The Leader taught that brooding on the ills of life is a sin, and this wholesome doctrine has made chronic grumblers, fretful invalids loaded under a burden of imaginary ills, into bright, active, and better men and women.

[*Daily Tribune*, Chanute, Kan.]

Whatever one may think of the teachings of Mary Baker Eddy, there is no one but who must concede that she was one of the most remarkable women this country, or any other country, has produced. The growth of the organization of which she was the Founder is one of the remarkable happenings of the last fifty years, and it has given her a place in history at least as enduring as that held by Brahma, Confucius, Mohammed, or any of the other historical founders of religious cults.

In addition to her wonderful powers of organization, Mrs. Eddy was a woman of remarkable sweetness and purity of character, because of which she has been greatly admired and respected by thousands of others than her immediate followers.

[*Keystone* (Ia.) *Bulletin.*]

The passing away of Mrs. Mary Baker Eddy brings to a close the earthly existence of one of the greatest women, if not the greatest woman, that has been known to history. Surrounded as it were by opposition on every side, and having had heaped upon her head calumny and ridicule, she kept steadily onward, until today the adherents of the Christian Science faith are to the million mark. We may not all agree as to the teachings of Mrs. Eddy, but all broad-minded people are willing to admit that hers was a pure, noble, and lofty life. We can say of Christian Scientists that they are pure, honest, and a happy people. The good that Mrs. Eddy has accomplished can never be estimated.

[*Hamilton* (Can.) *Times.*]

Mrs. Mary Baker Eddy, Founder and Leader of the Christian Science church, is dead, in her ninetieth year. Mrs. Eddy was a remarkable woman, and the influence which she exercised over the hundreds of thousands of her followers make her a unique figure in religious history. She was more than priestess and prophetess. She was an administrator of great power and capacity, and she possessed to a remarkable degree the gift of dealing with men and women in individuals and in the mass, and winning and retaining their respect and devotion.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"LIVES OF GREAT MEN."

It is scarcely possible to overestimate the influence upon others of the records of great characters, whether these records are found in Holy Writ or in secular history. No man was every truly great who did not at least attempt to right some wrong; and to do this effectively one must go against the current of popular opinion, which permits if it does not actually sanction the wrong. It may be that after many years have gone by we can see that the highest results might have been achieved by reformers without the great sacrifices made by them and sometimes demanded by them of others, but this does not in the least alter the fact that the truly great have always done better than any of their contemporaries could have done, else would some other one have carried the burden and brought to men the light of freedom.

Longfellow's beautiful lines,—

> Lives of great men all remind us
> We can make our lives sublime;

readily suggest themselves as we read the Lincoln day proclamation recently issued by the Governor of Massachusetts. He says, respecting Lincoln:—

> It is right that one day should be thus dedicated to that well-loved name. And the best use we can make of that day is to draw from the exalted character of Lincoln an inspiration to help us, each and all, in the discharge of duty. . . . We cannot honor such a man by public proclamation or by firing cannon to his memory, but on the day we honor his name, let every one take measure of his own citizenship by those ideals which grew to form and substance in the personality of Lincoln. . . . I also urge that every one within this commonwealth take earnest thought of Lincoln as a man and citizen, so that we all may learn from him how best to meet the obligation which, as citizens, we owe to town and state and nation.

These sentiments are wonderfully in accord with the teaching of Christian Science that the sense of personality must give place to the recognition of Principle, which means so much as understood in Christian Science. In so far as one is truly great, he expresses Principle, the source and foundation of all righteousness, law, order, and justice; hence he is vitally related to all that makes for human progress, and he lives on in the hearts of men because the truth for which he contended is an eternal fact. A reformer may seem to be striving for personal recognition and power, when, instead, he is contending for the demands of Principle, as he understands them, and for this reason he is ready to sacrifice all personal considerations, so that wrongs may be righted and justice prevail. It is, however, undeniable that the truly great are so closely linked with the cause for which they labor that the future does not separate them, but identifies them, as cause and effect are forever related; but no man ennobles a great cause, rather does it make his life "sublime," give him a place among the immortals.

Our revered Leader says, "The history of our country, like all history, illustrates the might of Mind, and shows human power to be proportionate to its embodiment of right thinking." To this she adds, "The despotic tendencies, inherent in mortal mind and always germinating in new forms of tyranny, must be rooted out through the action of the divine Mind" (Science and Health, p. 225). Every freer breath that we draw has been dearly bought, and it rests upon each one of us to maintain and pass on to posterity the liberty which we enjoy today because others were great enough to sacrifice all that we might be free. In the very nature of things we can do little or nothing for those to whom we owe most, but we can all show our gratitude by doing the one thing which they would consider a fitting meed for their achievements.

ANNIE M. KNOTT.

LOVE'S MINISTRY.

ONE'S experience with men leads him speedily to divide them into two classes, those who are ever planning to get and those who are ever planning to give. The one class may be defined as radiant, the other as absorbent. One gains his chief joy in distribution, the other in accretion. One has an impelling sense of abundance, the other an anxious expectation of want. The life of one is endogenous, it wells up from within; the life of the other is exogenous, it is never increased save from without.

With an appeal to his every follower that is the more touching because of its indirectness, Christ Jesus said, "The Son of man came not to be ministered unto, but to minister;" and the beautiful interpretation which his daily life gave to these words brings a rebuke not only to the grosser, more repulsive forms of indolent and unfeeling selfishness, but to those habits of personal requirement, of imposition, and of indifference to others, which so frequently come to dominate a large part of conduct, when perchance the individual is planning and working for some one thing or cause in an altogether unselfish way.

Some men are very large-minded and kindly in their home relations, but narrow and exacting in their business; some are very zealous for their church, but leave the care of city and state, the communal interests, wholly to others; some are uniformly courteous to their clubmates, but cruelly inconsiderate of their help; some are kind and thoughtful of everybody save those nearest to them, and it may be a long time after one has consecrated his life to something very much nobler than the mere saving of his own soul before he comes to know his human self well enough even to undertake to bring every word and act into subjection to the spirit of Christ. His sense of Love has measured but a little arc of duty's full circle, and though a vision of the sweetness of a ministering life has sometimes appeared to him, he has not known how to attain unto it. To all such Christian Science comes as a great revelation of the eternal fact that Love alone can fulfil the law of right living, and "uncover," as Mrs. Eddy has said, "the myriad illusions of sin" (Science and Health, p. 572).

The world is full of unlovable persons and things, and the possibility of loving all and of loving where and when we are unloved, dawns upon one only as he begins to see and to think God's perfect kingdom and man. Then all unlovableness is reduced to what it is, an impersonal falsity, and the saddening aspects of the human tragedy begin to awaken and enlarge that spirit of true compassion which is the human handmaid of divine Love. The blessedness of thus loving all is realized in a conscious impulsion to minister to all, and it is just here that one begins to understand and experience something of the joy of him who came "not to be ministered unto, but to minister." He who lovingly remembers these words "to do them," begins at once to experience a sense of separation from the exactions of personality, the weakening demands for human sympathy, and to realize the passing of those unideal impulses which in the hours of honest self-inventory have so often stared him into a consciousness of his own unchristlikeness.

To an unfailing, all-inclusive ministry of right and true loving, every Christian Scientist is called today, and in so far as he responds to it in the spirit of one who has received a legacy of good, and enters upon it as a great, lifelong privilege, in so far is he assured the experience of an unfailing joy.

TWENTIETH CENTURY MAGAZINE.

OUR readers will be interested to note that, beginning with the February number, the *Twentieth Century Magazine* is to publish a series of articles on the life and work of Mrs. Mary Baker Eddy, under the title, "The Founder of Christian Science." The trend and purpose of the articles is fully set forth in the following editorial note by the writer, B. O. Flower, which accompanies Part I. in the February number:

"In this outline sketch of the Founder of Christian Science, it is the purpose of the writer merely to give the American people a brief, fair, and trustworthy account of the life of one of the most remarkable women of modern times; a sketch that shall be free from the slander and calumny born of prejudice, the sinister constructions placed upon perfectly natural incidents, and the distorted and exaggerated statements introduced for the purpose of pandering to popular prejudice, which have marked so many of the sensational articles dealing with the Founder of Christian Science which have appeared during the past twenty-five years.

"The writer is not himself a Christian Scientist, and before making any personal investigations he had shared much of the general prejudice due to the long and persistent attacks against Mrs. Eddy and her teachings. But having many friends who had been cured by Christian Science, after failure to receive relief through orthodox medical channels, he was led to make a study of both the life and teachings of Mrs. Eddy, and though prepared to find such gross exaggerations and misrepresentations as are the common lot of all pioneers and reformers who promulgate religious thought that is at variance with the conventional ideas of the time, he was not prepared for the amazing exhibitions of slander, calumny, and gross distortion of facts which he encountered in this investigation.

"It has always been the boast of the American people that they were big enough and fair enough to hear both sides of a question; and in the presence of a religious movement that during a quarter of a century has grown from a few score members to a following probably numbering a million, and a following conspicuously characterized by the high grade of intelligence of its members, no fair-minded or intelligent citizen can afford to allow preconceived opinions or personal prejudice to destroy that judicial spirit and intellectual hospitality which are essential to a knowledge of the life and movements of any age."

AMONG THE CHURCHES.

SALEM, MASS.

First Church of Christ, Scientist, Lynde street, was dedicated yesterday [Jan. 1] with impressive services. The church was crowded to the doors. George P. Bonney, First Reader of the local society, gave an historical sketch of the church, in which he said in part,—

The first Christian Science service in Salem was held in Charles F. Whitney's studio, March 12, 1896, eleven persons being present. The First Reader was Mrs. Sarah W. Shepard, and the Second Reader was Miss M. Frances Allen. These two ladies were the pioneers of the work in Salem. It is interesting to know that to these ladies came the idea of starting a church in Salem without their having talked to one another about it, and while they were in different localities from one another, this exemplifying the working of the one divine Mind, which in all ages and in every clime speaks to the listening ear of man. The interest steadily increased, and Sept. 25, 1898, we removed to the First Unitarian Church chapel on Lynde street, the attendance on that day being thirty-one.

The inauguration of the Wednesday evening meetings as well as the establishment of our Sunday services in the quiet and beautiful quarters at the chapel were occasions of great rejoicing and thanksgiving in our little band. The church was regularly incorporated Nov. 29, 1898, with seven charter members. The first lecture on Christian Science under the auspices of this church was delivered Tuesday evening, April 25, 1899. A most notable case of instantaneous healing from depraved appetite was one of the many blessings of that occasion. Our first reading-room was opened Monday, Jan. 22, 1900. June 7, 1901, we began to raise a building fund. During this past year, 1910, blessings have fallen thick and fast upon us, for in June our entire church debt was liquidated through the loving-kindness of one of our church attendants, and in July a fine pipe-organ was presented to us by the same party and by another member of the family.

In reading the records of this church one notes with pleasure the expressions of gratitude for every service rendered. Her bountiful giving is a thing of mark. The gifts of the Sunday School are worthy of note. Ofttimes the first suggestion that the church give to some special object has emanated from the Sunday School, which was eager to give where it had sensed a need. The church, including the Sunday School, has given largely to the building funds of The Mother Church and of The Christian Science Publishing Society, the church having sent her own building fund in a time of need, besides taking numerous collections for that purpose, and also a large sum from her treasury. She has realized that the branch certainly cannot flourish and bear fruit except it abide in the vine, recognizing the interests of The Mother Church to be the interests of her branch churches as well.

May it be recorded of our beloved church that her works are known; that she has been found faithful before God; that before her is set the "open door which no man can shut;" that she has not been lukewarm, but ardent for the truth, and that to her, through her overcoming, has been given power over the nations—over mortal belief, the testimony of material sense.

May she be "terrible as an army with banners" to all error; may she see that "the vine flourish and that the tender grape appear," and may she ever, as a member of the church universal, "be holy and without blemish," "feed among the lilies" of pure thought and see good.

AKRON, O.

First Church of Christ, Scientist, has purchased of the Commins Homestead estate a building lot, situated on the northeast corner of Buchtel avenue and Fir street, on which will be erected a Christian Science church edifice. This property has a Fir street frontage of one hundred and thirty-three feet and a Buchtel avenue frontage of one hundred and seventy-eight feet, and is bordered with stately elms and maples. It is located in the most beautiful and improved residential section of Akron.—*Akron Times.*

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be June 2, 1911. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 10, 1911.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 4, 1910, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

THE LECTURES.

AMARILLO, TEX.

Frank H. Leonard gave a lecture on Christian Science in the Grand Opera House, to a large audience, Sunday afternoon, Oct. 16. He was introduced by Judge J. L. Penry, who said in part,—

The mission of Christian Science is to call men out of material darkness into the marvelous light of the spiritual realm, demonstrating the truth of the Master's promise that a restoration of the race from sin, disease, and death should follow his teaching; thereby bringing immortality to light. Our purpose today is to discuss this most important question that is demanding the attention of the leading thinkers of this age, and the heretofore deaf ear has been turned toward the "star in the east," to catch the refrain, "Whosoever will, let him take the water of life freely."

Correspondence.

PARIS, TEX.

Francis J. Fluno, M.D., delivered a lecture on Christian Science Nov. 22. He was introduced by Judge W. S. Moor, who said in part,—

Some may ask why I, well known by many of you to be a stanch churchman, or, as we are more frequently called, Episcopalians, render this service. To such inquirers, if any, I reply that I am neither the champion nor the critic of Christian Science, for I do not understand it, and know but little if anything about its teachings. And yet, this might be a good reason for criticism, for persons who understand least and know least often set themselves up as the boldest critics; but this great movement has made too much progress, and too many good men and women believe in it, to be met by ridicule or treated with disrespect. We can only say that the least we can do is to let it be, as Gamaliel advised of old, for "if it be of men, it will come to naught: but if it be of God, ye cannot overthrow it." And I would further reply, that I believe it is the duty of all good citizens to assist and encourage, in every possible manner, any and all organizations, sectarian and non-sectarian, religious and non-religious, that are trying to make this world better, and I believe that the Christian Science church is making better and happier men and women of thousands of the people of this great land of ours, and doing much to make this a better world for all of us to live in.

I know that some professed Christians and Christian ministers criticize most harshly and cruelly the teachings and practices of this noble body of Christian workers. To such critics I would say, that if they but emulated the example and practised the doctrine of saying something good, which must be a part of the Christian Science creed, both they and the world would be the better for it. I say the doctrine of saying something good must be a part of the Christian Science creed, for I have noticed that the members of this church seem to be looking always for the best in others, for the good in life. They are optimists; and if there is anything we need more of in this world, it is people who are blessed with the optimism which helps us over the hard places, which not only sees the silver lining to every cloud, but helps one's neighbor to see it.

I am a lover of sunshine, of happy thoughts, of kindly words, and of smiling faces. Nothing can give me greater pleasure than to be in the company of those who put forth their best endeavors to banish unkind words, critical speeches, and rasping tones from daily life. Many of my friends and acquaintances are Christian Scientists, and I have been greatly impressed by the fact that without exception they seem to be happy, contented, generous, and hopeful. I do not now call to mind one of them who, like the old farmer, "enjoyed being miserable." I do not remember one of them who ever bored me with long stories of his aches and pains, or of any of the ills of the flesh that man thinks he is heir to.—*Correspondence.*

MARQUETTE, MICH.

In introducing Prof. Hermann S. Hering at the Marquette Opera House on Friday evening, Jan. 13, Prof. John E. Lautner of the Northern State Normal School said:—

From the earliest ages man has been face to face with problems which demanded some sort of solution. Among these problems which are perennial in the history of our race are, What is life? Whence are we and whither are we going? What is the purpose of this life? What is the nature of God, who created and governs this universe? What is the nature of man and his relation to God and the world? How did sin and suffering enter this life and how can they best be overcome? What is the relation between mind and matter, the soul and the body? What is the right road to real happiness? These and similar questions haunt man until he has found some kind of an answer to them, and the nature of this answer determines very largely the happiness or misery he experiences in this life.

Many and varied are the answers given to these questions by both great and small. The most satisfactory answer yet presented is the one given by Christ Jesus. This is also the solution of life's problems accepted by the Christian Scientists; for Christian Science is only a new-old religion. In essence it is only a logically systematized, spiritually scientific restatement of primitive Christianity. It accepts the whole Christ and maintains that his words and his deeds are inseparable. By demonstrating his teachings, Christ proved that life in this world may be made whole and harmonious.

A misguided theology has often assisted man to build for himself a paradise in the past and another one in the distant future, but Christian Science attempts to realize this paradise on this earth, here and now. The real Christian Scientist knows that man can never be more in the presence of God than he is this very moment, for "in him we live, and move, and have our being." Just as the magnetic needle feels the attraction of the magnetic pole in the north, so the human soul, no matter how far it seems to stray, can feel the attraction of God's love; and just as the magnetic needle comes to rest only when it points to the center of its attraction, so the human soul trembles and quivers, sways from one experience to another, sometimes is even seemingly lost in the giddy whirl of worldly pleasure, and finds its peace only when it turns to God. And God, according to the Christian Science view, is good. He is Life, Truth, Love, and man is His image and likeness. God, therefore, is no more the author of evil and suffering than He is of sin. Hence the Christian Scientist can labor with added joy and renewed courage for the establishment upon this earth of the kingdom of God, which is "on earth peace, good will toward men."—*Correspondence.*

SEATTLE, WASH.

A lecture on Christian Science, under the auspices of Fourth Church of Christ, Scientist, was delivered by Clarence C. Eaton at the Moore Theater Sunday afternoon, Jan. 15, and was attentively listened to by an audience which taxed the seating capacity of the theater. A feature of the occasion was the free distribution of twelve hundred copies of the *Sentinel* of the issue of Dec. 17, and a like number of *Monitors* of the issue of Jan. 9. The speaker was introduced by William K. Sheldon, who said in part,—

Six weeks ago, there passed forever from mortal view a woman to the record of whose life-work, a record of un-

Digitized by Google

exampled, benevolent, beneficent achievement, there was paid such a tribute by the public press as has never been accorded to the work of any private individual at the close of an earthly career; and pulpits which do not accept her system of theology, and individuals who do not accept her system of therapeutics, unite with the press in saying that this is a better world today because Mary Baker Eddy lived and labored and loved.

After having, through the spiritual illumination of her consciousness, perceived and experienced the underlying Principle of the Science of being; after having studied and tested and demonstrated this Principle for nine years and then embodied a statement of it and its practice in the Christian Science text-book, "Science and Health with Key to the Scriptures," for thirty-five years Mrs. Eddy, with unfaltering faith, with unflagging energy, with patient persistence, with loving insistence, with unerring because God-given wisdom, directed the activities of the great religious system known to the world as Christian Science,—Christian because it is of the Christ, the truth; Science because it is demonstrable knowledge; and as the result of her discovery and of her labors, throughout the entire world today unnumbered thousands rise up and call her blessed.

Correspondence.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Abilene, Tex.—Bliss Knapp, Lyceum Theater, 8:30 p.m., Feb. 24.

Austin, Tex.—William D. McCrackan, M.A., Opera House, West 6th street, Feb. 16.

Bakersfield, Cal.—Bliss Knapp, Bakersfield Opera House, Feb. 20.

Cheltenham, Eng.—Bicknell Young, Town Hall, 3 p.m., March 4.

Cornell University, Ithaca, N. Y.—Frank H. Leonard, Barnes Hall, Feb. 17.

Jacksonville, Fla.—Prof. Hermann S. Hering, Duval Theater, 3 p.m., Feb. 19.

Mexico, City of, Mex.—William D. McCrackan, M.A., Stilwell Building, Ave. Cinco de Mayo 6, 8:30 p.m., Feb. 24.

New Britain, Conn.—Frank H. Leonard, Ruswin Lyceum, 3 p.m., Feb. 26.

New York, N. Y. (Fourth Church).—Willis F. Gross, Church Edifice, West 82d street, between Broadway and West End avenue, Feb. 25.

Parkersburg, W. Va.—Frank H. Leonard, Y. M. C. A. Building, Eighth street, 8:15 p.m., Feb. 24.

Ridgewood, N. J.—Willis F. Gross, Opera House, 8:15 p.m., Feb. 27.

San Antonio, Tex.—William D. McCrackan, M.A., Beethoven Hall, 3:30 p.m., Feb. 19.

Sault Ste. Marie, Mich.—Frank H. Leonard, Soo Opera House, Feb. 20.

St. Augustine, Fla.—Prof. Hermann S. Hering, Jefferson Theater, 5 p.m., Feb. 20.

Tallahassee, Fla.—Prof. Hermann S. Hering, Munro Opera House, Feb. 24.

Toronto, Ont.—Frank H. Leonard, Royal Alexandra Theater, 3 p.m., Feb. 19.

"THE MOTHER CHURCH."

A new edition of Joseph Armstrong's book, "The Mother Church," is now on sale. In addition to the matter heretofore published, it contains two letters from Mrs. Eddy to Mr. Armstrong, in which she refers with approval to this book; also twelve photographs, illustrating the building of the extension to the church edifice.

TESTIMONIES OF HEALING.

In September of 1900 I was suddenly and unexpectedly healed by Christian Science, through the reading of not more than three chapters of "Science and Health with Key to the Scriptures" by Mrs. Eddy. From childhood I had been an invalid, and my troubles gradually increased until, just before this healing occurred, my family had almost given up hope. The last physician I had diagnosed my case as a chronic disease of the stomach, which was supposed to have been inherited. I was obliged to diet, and at times could scarcely eat anything; and in addition to this disorder of the stomach, I was subject to catarrh and rheumatism. For years my physician was of the allopathic school, but as I was growing worse under this treatment I went to a homeopathic physician, and up to the time I commenced to read Science and Health I was taking his medicine regularly.

I was advised to try Christian Science by a woman who was merely an acquaintance, and not a Scientist, though her mother had been healed and she knew what Christian Science would do. I knew absolutely nothing about it, but she told me that Scientists believe that God is ever present, all powerful, and good. I had heard these words from childhood, but they took on a new meaning as I heard them at this time. The following Sunday I attended my first Christian Science service. I was greatly impressed by what I heard, and especially by this quotation on the wall, from Science and Health: "Divine Love always has met and always will meet every human need" (p. 494). I was visiting my aunt in Chicago at the time, and when I announced my intention of buying a copy of the text-book she told me she had had one in the house for years.

The next morning I commenced to read the book, but I then thought I could not adopt Christian Science, for I understood that I would be obliged to reject medicine, and I fancied I could not do without it for a day. I did not read a great deal, but I thought almost constantly of what I read. Thursday of the same week I stopped taking medicine and ate whatever was on the table. I gave up medicine when I saw that it was merely my faith in it which had affected me. The truth dawned on my consciousness that God is Love, is All, and I saw that a realization of this was all that was necessary. I changed so rapidly in appearance, growing so much healthier and stronger, that at times I was compelled to meet a feeling of its strangeness. For a short time, however, I would waken in the morning early, with the old feeling of depression and weariness, but I would persistently think upon this, to me, newly discovered truth, until the feeling disappeared; and I nearly always arose and went to the window to watch the sunrise, for to me it typified the change that was taking place in my own consciousness; in the words of the prophet, "Unto you that fear my name shall the Sun of righteousness arise with healing in his wings."

The physical healing, however, was as nothing compared to the spiritual quickening. I saw everything with new eyes, as indeed I was a new person, both mentally and physically. With this healing came also the spiritual interpretation of the Scriptures, and since then the Bible has been a new book to me. I have never been tempted, during these ten years, to use any material remedy, my sole reliance having been on God, and my health and happiness have steadily increased. Returning home, shortly after my healing, I found my mother in an unusually distressing condition on account of a chronic stomach affection, similar to the illness from which I had suffered. When she saw my improvement, she too studied Science and Health faithfully, had some treatment, and in a very short time was greatly benefited. She has taken no medicine since then and her improvement has been as great as mine. This truth has

Digitized by Google

revolutionized our family of seven, each and every one of whom has been directly benefited. My deep gratitude and love to God, and to our beloved Leader, Mrs. Eddy, can be expressed only in daily striving to be of more service in the truth.—GERTRUDE M. BARNES, Lafayette, Ind.

It is with a deep sense of gratitude that I send the following testimony, coupled with the hope that it may help others who are struggling to free themselves from the fetters of sickness and sin. It is some six years ago that I first entered a Christian Science church, not daring to hope for healing, but thinking possibly that Christian Science might bring me a little peace of mind, a thing I had not known for years. I was suffering from an illness contracted over twenty years ago and for which *materia medica* admits that it can offer no remedy. This illness was accompanied by a badly ulcerated tongue, from which I often suffered a great deal of pain and discomfort, together with other symptoms which it is unnecessary to describe in detail.

I had been under the care of many doctors, including one of the best specialists in London, and had gone through the various treatments prescribed without getting any real benefit. When I found that they practically admitted their inability even to afford me any relief, I gave up medicine and practised various systems of hygiene, exercises, etc. Then, in desperation, I tried what was known as a "starvation cure." For two years I lived on one meal a day and during that time made several very long fasts, on one occasion abstaining from food entirely for thirty days. This drastic treatment seemed to bring me some relief, but it was only of a temporary nature, and when I recommenced to take nourishment all the old symptoms returned.

It was about this time that, although I was in no sense what one would call a religious man, I began to pray for help—to a God who seemed only an enigma. I could never understand why such a dreadful punishment should be meted out to me, a punishment that no human father would inflict on the most disobedient child. And then, as if in answer to my prayer, Christian Science was first brought to my notice. I went alone to a Wednesday evening meeting and heard several testimonies of healing given by people of an intelligence and education that commanded respect. After the service I obtained an introduction to a practitioner and decided to take treatment.

It is unnecessary to go closely into the following months. My healing was by no means instantaneous, and I am now glad that it was not. Since that day, now six years ago, I have taken no medicine of any description. I have been able to resume all my regular habits, and all the symptoms that caused me so much distress have disappeared. But far greater than the physical healing is the knowledge that I can again look out upon the world without that awful fear of dishonor hanging over me. No words of mine can express my debt to Christian Science, or the gratitude that I feel to our Leader, who rediscovered the underlying reality of all true being.

If I may add one word more, it would be one of encouragement to those who find the way long and difficult. Since commencing the study of Christian Science, I have had to go through many severe temptations and trials, but I have always found that a sincere and honest effort to adhere absolutely to the truth of being has never failed to bring me through them unharmed.

S. A. HARDING, Ewell, England.

With the kindly assurance that "God is no respecter of persons," the truth of Christian Science was presented to me about four years ago, at a time when I was in great need, mentally, financially, and spiritually. Through a dependency on material things for success and happiness, my condition had become one of great sorrow and discouragement, and I was penniless after years of hard work. With the coming of the gospel of Christian Science, a new but old way was opened up to me, and gladly did I turn to God, whom I had never known aright. With earnest application to the study of the Bible and the Christian Science text-book, the discordant conditions of material thought were slowly but surely overcome, and I gained the spiritual realization that God is Love and Truth,—an ever-present help in trouble. I have proved this over and over again, with the grain of understanding which I have of the truth. I was long afflicted with severe headaches, always keeping at hand a supply of material remedies for the same; but, since knowing God's way, I have never had to resort to any other. My work requires long hours of mental and physical exertion, but often I have gone two days and a night with perhaps only an hour's rest, knowing that I was sustained by divine Love, and that I could do this without exhaustion.

At the end of a year, after having received many physical blessings, I still carried the burden of belief in limitation. I was trying to work out my problem as I thought it should be done, but one day, while reading some of the Christian Science literature, I was shown where I was unconsciously using mortal methods to get rid of this burden. Was I resigned to the will of God? Was I rightfully seeking the rest Jesus promised to the heavy laden? With this awakening, which proved another appearing of the truth, I resigned myself to God's will, and in a short time all was changed for the better, and in a few months all the debts of years of adverse circumstances were paid.

Words cannot express my gratitude for this wonderful truth, but I earnestly desire to live the life of a Christian Scientist. My little boy was beautifully healed from the effects of a very severe accident, and I am indeed thankful to God for His never-failing help to all who turn to Him. I am also grateful to our dear Leader, who has shown us how to know God aright.

HENRY L. LORION, Worcester, Mass.

I wish to acknowledge what Christian Science has done for me, and I am sending this testimonial with a prayer that some who read it may be led to investigate the marvelous truths found in "Science and Health with Key to the Scriptures" by Mrs. Eddy. For many years I was a church member, but my concept of God was that of an anthropomorphic being whom I feared more than I loved. In this inharmonious mental condition I drifted away from the church and wandered through the labyrinth of many isms, honestly, earnestly seeking for the truth. I took up philanthropic work, and was crying "Peace, peace," when there was no peace. To a casual observer our home was a happy one, but within all was mental discord, until at last I cried out from the depths of my soul to know God aright. About two years ago I was most graciously led to the study of Christian Science, and as the search-light of Truth began to beam upon me, I discovered in my own thought many errors which had kept me from knowing God aright. Almost in despair, I asked where I could find God, and my eyes fell upon these words in Mrs. Eddy's "No and Yes" (p. 11), "Revelation shows this Principle, and will rescue reason from the thrall of error." Through the study of the Christian Science text-book and Mrs. Eddy's other works, with our periodicals, and from the excellent help which I have had from a practitioner, my teacher, and others, I am learning that "the essence of this Science is right thinking and right acting" (*Ibid.*, p. 12).

I was formerly governed by fear of sickness, poverty, disaster, sorrow, and failure of every kind; but today my heart goes out in a deep sense of gratitude to God, and to our beloved Leader for what she has given us in her life-work of a practical, demonstrable understanding of Principle, whereby we may gain the truth and know that fear

Digitized by Google

cannot govern in our lives. I did not come to Christian Science for the physical healing, but have had many beautiful demonstrations of Truth's power. A bowel disorder of over twenty years' standing has been completely met; liver complaint, female trouble, rheumatism, neuralgia of long standing,—all these ills have disappeared through Christian Science. For this I am indeed grateful, but these physical healings seem small compared with the overcoming of discordant conditions that could not be related in detail. For these overcomings, and especially for the spiritual uplift and understanding of omnipresent Love which is being gained each day through the study of Christian Science, words fail me to express the gratitude I feel.

MARY A. HOYT, Los Angeles, Cal.

I have been positively cured of rheumatism and a skin disease, of ten and six years' standing respectively, through the truth of Christian Science teaching. I had been treated by some of the best medical men in the state, at a great deal of expense to me, but without success. Hearing of Christian Science, I asked a practitioner of this city for treatment, and although I was not a believer at the time, I gladly say that I am one now. What better proof can one ask of the loving-kindness of God and the divine power to heal than to be delivered as I was, brought back to health and strength from bondage to disease that was making life a torture?

The course of treatment in Christian Science covered only about four weeks, and today I am sound and well. If any one doubts this statement, I can and will, gladly, furnish abundant proof to all who ask.

DAVID KIRKWOOD, Youngstown, Ohio.

In the hope of helping some one in a similar case, and also as an expression of gratitude for what Christian Science has done for me, I send this testimony for publication. When about seventeen I was vaccinated, and later, perhaps a year, an eruption appeared on my hands. I went to a doctor, who said it had come from the vaccination. He gave me a remedy to use, but it had no good effect, and from that time on I was constantly trying other remedies. As they were applied, the disease moved from one place to another, and appeared in different forms. At last it came out on my forehead, about ten years ago, so that I could not wear a hat without great discomfort.

In the winter of 1908 a Christian Science friend came here from Chicago to visit her parents, and I asked her if she would try to help me. She said she would do all she could, but in a short time she returned to Chicago, so that the treatments were nearly all absent. There is no trace of the disease left, and now I am seventy-three years old. I would also say that my husband's health was very poor, but he has been treated by a Christian Science practitioner and is so much improved that he can work a good deal and the swelling has gone out of his limbs so that he wears shoes, something he had not done for years. He also sleeps and eats well.

We surely have reason to be thankful to God for Christian Science, and to our dear Leader, Mrs. Eddy, for making clear to us that God heals our diseases. I am very grateful for this understanding of God and the Christ-healing.

MRS. GEORGE MANN, Independence, Ia.

Sincere gratitude for all the good that I have received through Christian Science prompts the writing of this testimony. I can truly say it would be impossible for me to tell all that it has done for me, spiritually and physically. Five years ago I was taken ill without a moment's warning. I lay down on the couch, thinking I had a malarial chill, and that was the last I remembered. During the night my condition seemed so serious that my son called a physician, who pronounced the attack acute lung trouble in its worst form, and said that my age was against me. The following morning he said I was so low that nothing more could be done for me.

At this time complications had also developed. My son knew that if I could speak I would not call upon *materia medica*, for my trust was in Christian Science. So he went in haste to get a practitioner, and she so promptly responded to his call that it gave him some courage. I knew nothing of her first visit, but the next day I recognized her. Within a few days I could raise myself in bed, and in two weeks I was up in a chair. Words are inadequate to express my thanks to God, also my gratitude to Mrs. Eddy.

Since then, I have been able many times in my own family to prove the power of Truth. I shall cite one instance. According to the physician, my son had three fistulas which were very serious and which required an operation. He was entirely cured through Christian Science.

MRS. LUCINA ODELL, Bridgeport, Conn.

It is with the hope that my experience in Christian Science may be of some benefit to others that I cheerfully give it. It is now over two years since I first witnessed the power of Truth in my own family, in the healing of my three-year-old son of a fever in a few hours. I was also greatly helped at the birth of a baby two years ago. Though baby has been sick several times, all his ailments, including a rupture, have been healed through Christian Science, and now he is a large, healthy child.

My husband and I are also gradually getting over severe headaches, supposed to be hereditary, the attacks becoming less frequent and less severe. For all this help, and much more, we are grateful to Mrs. Eddy, whose teachings have made it possible for a sinning, sick, and sorrowing world to understand the true import of the Master's life, and to know that his teachings were not only for the benefit of the age in which he lived, but for all ages. He himself said, "Heaven and earth shall pass away, but my words shall not pass away."

KATHERINE G. TIEGS, High River, Alta, Can.

Gratitude for the many blessings that have come to me through the knowledge of Christian Science, as given to the world by Mrs. Eddy in her book, "Science and Health with Key to the Scriptures," is my reason for sending this testimony. All I have today I owe to Christian Science, and mentally, physically, and morally it has been my regeneration. Fear of all kinds has been overcome; severe headaches, rheumatic gout, and many other ills; but, above and beyond all this, I rejoice in the knowledge of God, of Life, Truth, and Love, thus given to me.

At the time Christian Science was presented to me by a friend, I had no God and the Bible was a sealed book to me; in fact, I never read it, and all was darkness and loneliness. When I remember the untold blessings that have been mine during the past seven years, I can indeed say, There is no God like unto ours,—He who forgives all our iniquities and heals all our diseases.

I rejoice that I am living in this age which has witnessed the revelation of the healing truth to the world through Mrs. Eddy, whose ceaseless devotion, unfailing energy, and selfless love have given to us the opportunity of learning and living the golden rule, and of demonstrating the healing power of Truth and Love.

MOLLY T. ALLCRED, London, England.

Myself and family are not Christian Scientists and know very little of its teachings, but a gentleman in the employ of the same firm as myself had told me of some of its cures. What follows will tell others how I proved its power to heal. My youngest child had a hard attack of whooping

Digitized by Google

cough, and one day while in a paroxysm of coughing he fell over backward in such a way that a doctor said he had dislocated his neck, or that one of the ligaments was broken. The child lay in a state of coma for five hours, and having tried all physical means without any effect, the doctor gave him up and said he would pass away in a few hours.

I then telephoned to my friend, and appealed to him to have a Christian Science practitioner take the case. He did so, and a lady with whom he was acquainted gave the child absent treatment. In twenty minutes he came to, and in a few hours he seemed to be his natural self. I must say that no one was more astonished than ourselves, unless it was the physicians.—G. W. HIZER, Detroit, Mich.

The following statement was sent us in verification of Mr. Hizer's testimony, and we gladly publish it because of the light which it throws upon this remarkable case of healing—EDITOR.

Quite recently the three-year-old child of a fellow-employee, William Hizer, fell backward to the floor and lost consciousness. The family physician was summoned, but owing to his absence from his office a neighboring physician was called. This physician examined the child, but was non-committal as to his condition. At this juncture the family physician appeared, and the case was given into his charge. He made a careful examination, but advised the family of his inability to make diagnosis at that time, saying that he would await developments and return in the near future. On his second visit he refrained from making a diagnosis, but on leaving promised to return in one hour. On his third visit he assured the family, after carefully examining the child, that the spinal vertebræ had been dislocated and that final dissolution was a matter of but a few hours; that while the heart and respiratory organs were still functionating and might continue to do so for several hours, that the child was "practically dead;" and to further assure them he pricked the body and limbs of the child with a needle and rubbed his finger over the eyeball; but the child did not evidence any pain in response to either of these so-called "tests."

At this time the father telephoned me, asking if, in my opinion, Christian Science could be of any service; but having received a report of the child's death, I asked if this report was correct. On receiving a negative answer, I offered to secure the services of a Christian Science practitioner, and tendered my personal services, if of any value. On communicating with a Christian Science practitioner I was assured that she would take up the work at once, and I drove hastily to the child's home, to find him still unconscious and surrounded by the sorrowing family and friends. While intently watching him, I noted evidences of returning consciousness. I telephoned the practitioner to that effect, and requested her to continue the work to the fullest of her ability. Within the next half hour consciousness returned, the child sat up in bed, spoke several times, and was clasped in the arms of his joyful mother.

I then returned to my work, and gave the matter no further thought till late in the evening, when in answer to my inquiry I was assured that the little fellow was quite well. The following morning, meeting the father, I again inquired of his condition, and was advised that the child was quite well and was at play out of doors. The prompt recovery of this child was to me a most conclusive evidence of the healing power of infinite Love.

CLARK E. COLTON, Detroit, Mich.

I am truly grateful for Christian Science, because of what it has done and is doing for me and mine. The first time I ever saw a copy of Science and Health, by Mrs. Eddy, was at my brother's, a few years ago. After reading only a few pages I remarked, "Why did I not know of this before?" In the one evening's reading I had found something intensely interesting, but I was not quite ready to accept the healing. In a few days, however, a carbuncle appeared on my face, and after using all the remedies that a doctor prescribed, to no avail, I was asked by my brother to try Christian Science. After thinking it over seriously, I gave my consent, and called on a practitioner. My face was badly swollen, but after one treatment the pain ceased, and in a very short time every trace of the trouble was gone. I immediately became a student of Science and Health, and as I studied I gained an understanding of the Bible, a love for all mankind, and a peace never before possessed. I knew I had found the truth!

About this time a dear nephew was seriously ill with what the doctors pronounced an incurable kidney disease, and after they had done all in their power his parents were asked to try Christian Science. The little fellow's father bought a copy of the text-book and gave it to him. He was delighted; it seemed as if the book gave the boy a perfect assurance of his healing, and he said, "I am going to get well now." A practitioner was called to take the case, and after a struggle with the belief in medical laws about the fatality of the disease, the healing came. It was about four months; but from the day the practitioner came into the home the fear of death was destroyed. I am sure that her patience and her love for us (I was a member of the household during this time) was our great stay.

The error was not overcome instantly, but had it been instantaneous, possibly we should never have taken time to investigate Christian Science. Now, my sister and family, my brother and family, my husband and myself are all students; and how I do rejoice in this understanding of God as an ever-present help! Every day I realize that by seeking to know more of this blessed truth I find the way of Love, and I am so thankful for all the blessings that come to me with this study,—a spiritual uplift, such as I had never known; perfect health, unfailing supply, joy,—all this the right understanding of God gives to me. My heart continually goes out in gratitude to our dear Leader, Mrs. Eddy, for her help to us at all times; for having given us an understanding of Principle by which to work out our own life-problems,—our own salvation. In applying this understanding we find health, happiness, and all the good that belongs to God's children. I have not words to express my gratitude for this practical religion,—a religion that stands all tests. That my daily life may be spent in striving to know and demonstrate more and more of this truth, is my prayer. My thankfulness to God is beyond expression.—MRS. ENNA B. SMITH, Bridgeport, Conn.

I wish to express my gratitude for Christian Science and what it has done for me. Throat trouble, in almost all its forms, and many other inharmonious conditions, have all been overcome by the power of divine Love. I am realizing more clearly every day that our enemies are the inharmonious thoughts admitted to our consciousness, and that it is necessary to keep our mental world a place of purity where Love will reign supreme. In a business life, thoughts of criticism and condemnation at times creep into consciousness. Such was a recent experience of mine. The mental disorder stirred up an old physical ailment, which was, however, quickly met as soon as the obstructing thought was removed. This lesson proved to me, more clearly than ever before, that to live in an atmosphere of peace and love we must free our thought of all discordant elements.

I am thankful to God for the physical healing, and also for the purifying and elevating thoughts which come through the study of the Bible and our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

MAUDE A. NICHOLS, Somerville, Mass.

We feel that we owe a debt of gratitude for the light, comfort, and help that have come to us through Christian Science. In 1905 our little boy of five years seemed to lose the use of one arm and leg, which caused us much alarm. A consultation with the family physician proved unsatisfactory, but in time the trouble wore away. In 1906 he was attacked with nervousness which completely prostrated him, and for three winters consecutively we were heartbroken on account of his serious condition. No pains were spared in the effort to get relief, but everything the physician advised proved a failure. When Christian Science was brought to our attention we hesitated, but at last resolved to try it, and we were speedily relieved of our anguish, as the boy was able to go to school after two treatments and was completely healed in the fourth.

This is God's way of healing. God bless the Founder of Christian Science, Mrs. Eddy, through whose teachings healing has come to our son.

J. W. HENSON and LIDA HENSON, Terre Haute, Ind.

The words of the wise woman in II. Samuel, "Yet doth he [God] devise means, that his banished be not expelled from him," express what Christian Science teaching is to me. It is over three years since this beautiful exposition of truth raised me out of the deepest darkness and despair, and as my understanding of it grows clearer, my gratitude to the eternal Father for bringing me into the way of it goes out to Him more and more abundantly. Daily, too, my love and thanks flow out to Mrs. Eddy for that fidelity to the inner vision which has enabled her to restore to mankind the true meaning—in all its healing loveliness—of the one and only doctrine, the doctrine of Christ Jesus.

CLEMENTINA BLAKISTON, London, England.

I am very thankful to testify to what divine Love has done for me through Christian Science. I had been suffering with a stomach disorder for three months. It became so bad that I could not eat anything without its giving me great pain, so I went to see a physician, who gave me several different kinds of medicine. A week after I started to take medical treatment I commenced to vomit, and for two weeks I could not retain anything. I suffered terribly and was getting worse every day, when I decided at last to call a Christian Science practitioner. I did so, and improved wonderfully from the first treatment. I went to work in ten days after I began to take treatment in Christian Science, a stronger and happier man that I had been for months.—JOHN J. THOMAS, Youngstown, Ohio.

[Written for the *Sentinel.*]

ABRAHAM LINCOLN.

MINNA MATHISON.

HE loved much. From his rugged heart
A stream of warm compassion flowed;
He paid the debt his greatness owed,
And nobly played his hero-part.

To those in bondage and oppressed
He heralded bright freedom's day;
Followed the light in humble way,
And left to God and Truth the rest.

Now those from whom the shackles fell
Publish his praises through the land,
And those who knew him—touched his hand—
With reverent lips his virtues tell.

He loved much. Aye, and much is loved;
The memory he left behind,
Of loving heart and dauntless mind,
The years have tested and approved.

FROM OUR EXCHANGES.

[*Christian Register.*]

Brotherly love and loving-kindness has done more than we suspect to modify old creeds, expunge their harsh doctrines, so repugnant to upright minds, and bring in a reign of love which, still only in embryo, is growing and spreading everywhere by the contagion of example. And it seems not a Utopian and unreasonable belief that this reign of love, this kingdom of kindness and good will, shall accelerate its movement; and, as the spirit of democracy has spread to remote corners of the earth, so it, too, shall quicken its pace until the kingdom of God is no longer a vague and impossible dream, a vision of worlds unrealized, but an actual, tangible fact, a positive creation of the divine in the human. We await this manifestation of the sons of God in the world, not through miracle, not through new revelation or a new Messiah, but through the simplest yet noblest instincts of the heart of man. Here and now, just where we stand, in lowly place, in humble guise, we may begin to establish this kingdom, and to build the palace of the great king; and every act of unselfishness, every deed of true kindness, every thoughtful impulse for the good, the happiness, the delight of others, shall be as a shining stone in that palace, not builded by hands, but by that loving service to God that is self-forgetfulness, consecration, love, and obedience.

[Rev. Henry A. Atkinson in *Advance.*]

What can the church do? Books and lecturers on social science deal sparingly, not to say disparagingly, with the church as a factor in social reconstruction. Other agencies are gladly accepted. The church's work is conceded to be limited and its attempts are patronized or tolerated. Of course it is a good thing to have a church. It gives men's wives something to think about outside of the home, and it is not so expensive as bridge. The church offers an attractive service to those who want it. What a travesty! And the trouble is that it is too true to sound like comfortable doctrine. The absurdity of the church using its dynamic to keep its own wheels going is only matched by its lack of appreciation of the great power for righteousness it could wield if it would. The work of the church is not to save itself, but to save humanity. Its only just claim to sacredness is founded in the sacredness of its task—the establishment of the kingdom of God. The church saves not because it is an institution, but because it has at its command the forces which, when properly applied, will save men and the society which men form. There ought to be no good grounds for considering the church amateurish when it approaches social questions.

[From a sermon by Rev. H. C. Ledyard in *Everybody's Journal,* Newport, N. Y.]

There are a great many thoughtful people who really believe in the principles found in Science and Health, but because of prejudice are almost afraid to accept these principles as truths unless they be able to find them also recorded somewhere else. Because of this feeling which in many places is so prevalent, we shall not refer to books published in the defense of these movements to find our basis for believing the truths they furnish, nor are they the only evidence at hand. . . . Christian Science is only asking the professed followers of the Christ today to do that which he commanded the disciples of his own day to do; so, if these things are absurd, it is Jesus the Christ whom they are charging with absurdity. Remember, we are discussing the things which only Jesus himself did, but those which he bade his followers do, and these things were—what? To heal the sick, raise the dead, cleanse the lepers, cast out demons, for freely they had received and freely they were to give. Christian Science asks no more of a man than that.

[A. Lyle De Jarnette in *Christian Work and Evangelist.*]

The world is growing better, despite the complaint that the church is losing its grip on the popular mind. We are beginning to see that a man may be religious without being a member of an organized church. I am sure the church would lose nothing of value in recognizing this as a fact. It is often true that men who dislike that crystallization of conventional theology that is sometimes called "churchianity" love God, Christ, and their fellow-men. There never was a time like the present, when a cry for help from any part of the earth found such liberal and cheerful response; when men, regardless of church relationships, were so courageous in promoting political and social reform. Men are learning that God is as easily found in the sanctum of the editor, the counting-house, the office of public service, as He is in the congregation of worshipers; and from their hearts they cry unto Him daily for the courage that will enable them to bring to all the world the reign of right. As a churchman myself, I believe the church must be willing to surrender many of its conventional forms, its denominational lines, and awaken to the fact that the institution is not the end, but only the means, through which humanity may realize universal brotherhood and sonship to God.

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth.*]

If your fidelity to the ideal costs you the loss of your outer garment of self-protection, do not grudge the sacrifice; let the inner go with it, the coat follow the cloak, if need be. If your labor for God compels you to go one mile because of human ignorance and wrong, go two if two be required to gain your end. Life is such that no impersonal good is ever gained except at the sacrifice of the personal. If you serve, you must suffer; if you would overcome evil you must be prepared to endure its stings and arrows. And you must not be merely passive; you have to go to meet them, to carry the war into the enemy's camp, to demonstrate your mastery by accepting the worst that evil can inflict without swerving from your purpose. If you can do this, you will prove how puny and ineffectual after all are the odds against which faith has to strive.

[*British Congregationalist.*]

It is one thing to remove all that is merely formal, all tricks of speech which belong to an older day—to retranslate the doctrines of Christianity into the living tongue. This is a duty long overdue. It is quite another thing to modify the demands of Christ, as an ambassador might alter the commission of his king; to tone down prayer till it becomes only a season of meditation; to make of the church a society of men and women interested in religion, or, worse still, interested in theology; to regard the sacrament of the Lord's Supper as an hour of emotional introspection and nothing more. This is to betray the church and to win nothing by the betrayal.

[*Universalist Leader.*]

If there is one thing clearer than any other to all really modern religious thinkers, it is that the most stupendous failure in Christian history is the efforts which have been made to put the living spirit of the gospel of Jesus Christ into any creed. The human spirit has passed out of that stage in its religious evolution. Religion is the life of God in the soul of man. Christianity is the life of God in the soul of a man. That life is more than any creed.

[Rev. George Batchelor in *Christian Register.*]

The real wealth of the world consists in capacity, in culture, in social influence, in power to turn money and other material advantages into thought, into executive power, into social pleasure, into right living, into permanent institutions that shall secure the prosperity, happiness, and moral progress of mankind.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel.*

ATTENTION IS CALLED to the new volume, "Poems by Mary Baker Eddy," now on sale. Specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herald,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

NEW PAMPHLETS.

Attention is called to a new pamphlet, "Causation: Viewed in the Light of Christian Science," by Frederick Dixon.

Also on sale are four new pamphlets: "Seeking and Finding," "Prayer and Healing," "The Divine Nature," and "Upward Footsteps." Each pamphlet contains five to nine articles that have previously appeared in the *Journal, Sentinel,* or *Monitor;* and they are particularly suitable for handing and sending to inquirers or persons who are becoming interested in Christian Science.

Hereafter, the price of all pamphlets (except "What our Leader Says" and "Christian Science and Legislation") will be reduced to 5 cents a copy; 55 cents a dozen; $2.00 for fifty, and $3.50 for one hundred. Hereafter, also, the republication in the English language of single articles as "tracts" or "reprints" will be discontinued. It is believed that their place is better taken by the daily article on Christian Science in the *Monitor* and by these new pamphlets and others that may be issued.

NEW POST CARDS OF THE MOTHER CHURCH.

Post card photogravure, in sepia tint; an exact reproduction of the large photogravure of The Mother Church Buildings and Publishing House with parkway in foreground. Single copy, 5 cents; twenty-five copies, $1.15; one hundred copies, $4.25.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90; six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. XI indicates the year 1911 and XII, 1912. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

4.00—	0: 16	:5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

President Taft has approved a plan for the leasing by the Government of water-power sites on public lands. The principal points of this plan are that legislative authority be sought for issuing term leases for periods not to exceed fifty years; that these leases should contain stipulations to protect the public against the limitation of output of power through delayed or partial development; a yearly rental charge to be based on the amount of power available. There is provision that violation of the contract condition or persistency in charging consumers a rate declared excessive by a state supreme court shall be ground for the cancellation of the lease. The necessity for the framing of such a policy arose from the fact that power sites in the West are largely on public lands which at present can neither be taken up by power companies nor occupied except under a revocable permit.

The amount we have expended in preparation for war during the last ten years, including the current fiscal year, says the *Journal of Commerce*, is almost within four hundred million dollars as much as was the bonded debt of the United States on the 15th of August, 1865, at the close of the Civil War. It is four times the aggregate loss to the people of the United States and Canada on account of all the great fires between 1820 and 1905, or during a period of eighty-five years. Further, the amount we have expended during the last ten years in preparation for war alone would build more than five Panama Canals, and equals four times the amount expended on account of the Spanish-American War. The sum total reaches the imposing figure of $2,192,036,580, of which $1,105,586,807 is accounted for by naval appropriations and $978,254,973 for the support of the army.

A bill authorizing the Government to purchase or erect its own embassy buildings abroad was passed by the House under suspension of the rules, by a vote of 141 to 39. No trouble is expected in getting the bill through the Senate. The bill provides that the secretary of state shall proceed to purchase or erect suitable buildings for the use of American diplomatic representatives, not more than five hundred thousand dollars to be expended upon such buildings in any one year. It also provides that the limit of cost of any one embassy, including site, repairs, and furnishings, shall not exceed one hundred and fifty thousand dollars. The selection of buildings and plans is left to the discretion of the secretary of state. It is estimated that it will eventually require five million dollars to carry out the provisions of the bill.

Country boys make better students than their city cousins, according to an analysis of the fellowships and scholarships recently awarded by the Harrison foundation of the University of Pennsylvania. Out of thirty-one men holding these honors sixteen came from towns of less than six thousand population, four from towns of less than fifteen thousand, three from cities of less than fifty thousand, four from cities of more than one hundred thousand. Dean Fisher of the College of the University, in discussing this, declared that "men from the country are more observant than those from the city, and besides they realize and appreciate their opportunities more than their city cousins."

The plan of the Aluminum Company of America to dam the St. Lawrence river at Long Sault rapids and erect a forty-million-dollar plant in New York state at that point, was defeated when the House voted, 65 to 84, against the bill for this purpose, which had been unanimously reported from the rivers and harbors committee, on the ground that it did not conform to the new policy of the United States for the conservation of water-power and that it granted a ninety-nine-year lease when the general dam act fixes the limit in such cases at fifty years. It is estimated that five hundred thousand horse-power can be developed from the fall of the water.

Meetings on Washington's birthday in the large cities and towns are urged by the Postal Progress League, to consider the possibilities of a "United States of the World." Circulars ask that "representatives of the different nationalities, together with our own citizens," meet to consider the forming of such a brotherhood, with "all barriers to human intercourse between the nations—tariff laws, navigation laws, and immigration laws—abolished and the whole world bound together by a system of international postal cables, postal transports, and postal service covering the entire business of public transportation and transmission."

"To us, as to Henry Clay sixty years ago, there should be 'no South, no North, no East, no West,'" said Franklin W. Hobbs of Massachusetts, representing the National Association of Cotton Manufacturers, at a special conference held recently at Washington, D. C., by growers and users of cotton. The meeting brought together a large number of men identified with the National Association, also members of the American Association of Cotton Manufacturers, the Arkwright Club, and the Farmers Educational and Cooperative Union. New England cotton interests were represented by twenty-five delegates.

"If the necessary appropriation were available, I would establish postal savings banks at once in five hundred additional cities and towns of the United States," said Postmaster-General Hitchcock, as a sequel to his perusal of reports thus far received concerning the first month's operation of the postal savings system, which are very satisfactory and are regarded as conclusive evidence that the new system has passed the experimental stage. He therefore asks Congress for an appropriation of one million dollars for the purpose.

On Feb. 2, for the first time in the history of the Government, the Vice-President of the United States exercised his constitutional prerogative of casting a vote to break ties after three successive roll-calls in the Senate. By his first vote he saved from defeat the ocean mail bill, and by the third he forced an adjournment of the Senate on a vote having direct bearing on the resolution looking to the election of Senators by direct vote of the people.

The army appropriation bill just passed by the Senate carries an aggregate of $93,678,586.

International.

The drainage scheme recently carried out in the neighborhood of Diamond Harbor, some thirty miles to the south of Calcutta, took in hand an area of about one hundred square miles, consisting partly of swamp and partly of land which had formerly produced no crops. By the construction of a sluice it has been possible to cover the area with rice cultivation, and the crop obtained for the year was valued at Rs.3,850,000. It is said that the value to the tenantry of the crops on the reclaimed land in only one year approximated to twice the cost of the scheme.

The Australian land tax has now become law. The main object of the tax is to insure the land being turned to profitable use, that is, opened up for settlers, and not held for speculation. The process has already begun; three great land-owning companies, whose shares are mostly held in England, are engaged on schemes of subdivision that ought shortly to add thousands of families to the population.

Professor Sayce, who is engaged in digging on the site of Meroe in the Sudan, has just made a most important discovery. Many of the ancient inscriptions in the Sudan are written in a language that has hitherto resisted identification. He writes that he has obtained some Egyptian translations of Meroitic words and has thus found the key to these inscriptions.

The Russian Douma has adopted the government's financial proposals for obligatory elementary education. The new plans, it is announced, will involve an expenditure of five million dollars annually for ten years.

M. Lemartin, the French aviator, has broken the world's passenger-carrying record. Piloting a monoplane, he carried up seven passengers for a five-minute flight.

Industrial and Commercial.

By the introduction of a reduction gear it is hoped to operate steam-driven marine turbine engines at an economical speed which is not now possible. The new features of the invention are its rotor blades, which are flexible and easily removable, and a reduction gear giving at least thirty per cent greater efficiency for the same coal supply. The new machine can be installed with one half the propelling machinery weight now given to the direct connected turbine or reciprocating engine. With the turbines used in the British navy, ten hours is necessary to heat the machinery and enable it to start, while this engine starts immediately on the application of steam, even when cold. One of the merits of the machine is the perfect control possible from the bridge; by the use of electric-pneumatic apparatus, the engine can be started and stopped by the steersman.

The New York, New Haven & Hartford railroad and the Boston & Maine railroad, if satisfactory legislation is secured, propose to build and equip a double-track tunnel under Boston harbor, connecting the eastern branch of the Boston & Maine and the Revere Beach road with the South station, thus giving the North Shore, the country's most attractive and desirable summer resort, a most satisfactory service, as well as through service between New York and points north of Boston, so that through trains can be run to the Massachusetts and New Hampshire beaches, White Mountains, resorts of the state of Maine, and St. John, N. B.

Shipments during the past year of anthracite coal from the eastern producing territory amounted to 64,905,726 long tons. Almost one fourth of the total shipped was handled in and around New York for shipment to New York city proper, or to other Atlantic ports. The bituminous coal movement in the East, as reported by eight leading coal-carrying roads, totaled 120,214,819 short tons, and the 1910 coastwise shipments from the five principal Atlantic ports totaled 26,121,224 long tons. The coal tonnage originating during the year in the southwestern field, Missouri, Kansas, Arkansas, and Oklahoma, was in the neighborhood of 8,800,000 tons.

Reports show that the Michigan bean crop last year was 6,150,000 bushels.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE FUNCTION OF A TEXT-BOOK.

M. G. KAINS, M.S.

MANY persons, when they attend a Christian Science testimony meeting for the first time, are startled on hearing some one say, "I was healed by reading Science and Health." Such a statement is so foreign to the limited experience of these people that they often ridicule the idea and misjudge both Christian Science and the one who gave the testimony. I am free to confess that I was once much disturbed in this way, and very skeptical. While such hasty criticisms reveal an attitude of mind more or less distorted by former training and experience, if not by egotism, they do not arouse any antagonistic thoughts on the part of Christian Scientists to whom they may be uttered. They are the result of misunderstanding, and Scientists are quick to make allowances and correction whenever this is possible, because they understand the doubter's attitude. If corrections are not made, are not understood, or are not accepted, only those who hold the erroneous positions can be affected disadvantageously; for it is always to the disadvantage of any person to hold a prejudice either for or against anything whatsoever. Such an attitude prevents the holder from enjoying the freedom of the truth.

There should be nothing strange about the statement that reading Science and Health or other Christian Science literature has healed some one. That is exactly what it was written to do, and such statements prove the effectiveness of its mission; but some people seem to think that the text-book is regarded by Scientists as a sort of fetish or charm, though nothing is farther from the truth. Science and Health is the text-book of Christian Science, and contains an explanation of spiritual healing as taught and demonstrated by Christ Jesus. It shows how that healing was done; and when some sufferer reads these things and is healed, it is because he has apprehended the teachings and applied them so effectively that his ailment has disappeared.

There is nothing more remarkable about such results than about results secured by applying the rules laid down in other text-books, when once the reader understands the meaning of the terms used. We do not think it strange that the beginner in geometry should study a text-book and acquire thereby a demonstrable knowledge of the subject; it is necessary for him to do so in order to solve even the simplest problem. We do not think it strange that our mothers, wives, or daughters should read the cook-book in order to master culinary matters. Thus it is in every realm of effort; each has its rules and its basic laws, by following which definite results may be secured. Without due observance of these rules it is impossible to make advancement in geometry, physics, chemistry, or any other line of effort. We do not think it strange that one who studies the Master's moral precepts should overcome evil tendencies and sin, but few look for like results when it comes to the healing of disease.

The function of Science and Health is not to exploit some ancient or modern hypothesis, some speculative untried theory. It is to explain by precept and example the Principle whereby Jesus' healing mission was made effective. More than that, it is to make the rule, the *modus operandi*, so plain that every one may put it in practice, not only to heal his own diseases and the ailments of others; not only to prevent the occurrence of these maladies by eliminating their causes; but to establish and render practical in daily experience the code of ethics which Jesus of Nazareth laid down, a code which the intervening centuries have warped and twisted out of shape, a code which, as Jesus stated, has for its object man's perfection and the establishment of the kingdom of heaven on earth, though this seems to be a stupendous if not impossible task. The fact, however, that the work is left for the individual to do, coupled with the further fact that thousands who have made the beginning and obtained satisfactory results still continue to advance, is proof positive that the Christian Science text-book is actually accomplishing what is declared to be its mission.

In this day and age as perhaps in no other, the sovereign gage by which things are judged is achievement. So far as the individual is concerned, mere figures and statements count for far less than personal experience; for this reason, therefore, Christian Science offers through its text-book a mode of thinking that the individual may prove for himself to be good. It is often claimed by beginners that Science and Health is hard to read, hard to understand. This was the writer's own case. His training and experience had been very largely along the lines of the physical sciences, which had completely destroyed the conception of God as a far-away manlike being, as taught by the church of our fathers. The "great out of doors" and the laboratory taught him that there must be some "great First Cause" or Principle, whatever that might be named; but he was mentally at sea when he first began to read Science and Health, and page after page meant absolutely nothing to him.

He was fortunate, however, in being able to follow the advice of a friend, who suggested that even though he did not understand all or even perhaps any of what he read, it would be to his ultimate advantage to persist. On reaching the end of the book, he was advised to start at the beginning and read to the end once more. The book played havoc with many of his pet theories and flung the fragments to the winds; but this much must be said, it did not destroy one iota of truth which he had gleaned from any source whatever. On the contrary, it added and is continuing to add wealth to the store of knowledge, the knowledge that is really worth while. Compared to even a limited but working knowledge of truth, what is the value of all the speculative theories that the world has formulated?

The beginner, therefore, need not feel disturbed, nor consider himself more than ordinarily dense, nor judge Scientists to be either a specially "brainy" or an exclusive class, solely because he does not immediately grasp the full purport of Science and Health or other Christian Science literature. He should consider himself as belonging to the majority, and therefore in good company. If he is strictly honest with himself and can silence his prejudices, he can little by little prove to his complete satisfaction that Chris-

tian Science is just as much for him as for any one else. So small may some of his early proofs be that he may think they would have happened anyway; but when he sees that his application of the rules continues to be followed by uniformly favorable results, he will be justified in his conclusion that Christian Science is a religion of present-hour results, not of arguments for or against some future reward or retribution; and further, that so far as he is concerned the Christian Science text-book is fulfilling its mission by enabling him to experience these good results in his daily life.

THE CHEERFUL GIVER.

THE HON. MABEL ROWLEY.

No phase of the Christian Science movement causes greater surprise to the onlooker than the way in which funds are forthcoming for the building of church edifices and other expenses connected with the work, as from the standpoint of ordinary experience it seems very remarkable. There are no subscription lists published, the names of the givers generally being known only to the treasurer; therefore the element of emulation is absent. The intention of spending a sum of money on the purchase of a site and the building of a church edifice is arrived at through the decision of the members of the organization, and the announcement is made that funds will be received for that purpose. No other methods of raising money are suggested or required, and no pressure whatever is brought to bear upon the community.

We read many times in Exodus that the children of Israel were to bring a "willing" offering unto the Lord, that "they came, every one whose heart stirred him up, and every one whom his spirit made willing, and they brought the Lord's offering to the work of the tabernacle." We read also about those who were "wise hearted" and who worked for the tabernacle in various ways. As in those days, so now the building of a Christian Science church edifice calls not only for willingness, but also for wisdom; for true wisdom is love, and without love we can have no church. Every individual member of a Christian Science church feels that he is responsible for his share of the building, and it becomes a privilege and a joy to make the offerings. Week after week and month after month, and if need be year after year, money is poured willingly and cheerfully into the treasury, until every liability is met. In this way it is amazing to find how much has been given without any sense of deprivation on the part of the giver; rather does he find that "the heart grows rich in giving." Solomon said, "There is that scattereth, and yet increaseth; and there is that withholdeth more than is meet, but it tendeth to poverty."

There is another aspect of the money question with regard to which the wisdom of our Leader has been made very evident. In the building of the original edifice of The Mother Church, when sufficient funds had been subscribed to meet the need, the fund was immediately closed, at Mrs. Eddy's request. There was no inclination to create a fund for which no object was in view. To quote again from Exodus, "So the people were restrained from bringing." It has been said more than once that Christian Science would go the way of all other forms of religions when once the denomination acquired wealth; that endowment would follow, and with that decay would inevitably set in; but if Christian Scientists are faithful to the teachings and example of Mrs. Eddy, such a condition can never occur.

For a Christian Science church to accumulate funds would be an anomaly, and would inevitably lead to inertia; like the man in the parable, who said, "Soul, thou hast much goods laid up for many years; take thine ease, eat, drink, and be merry." We are also taught not to interfere with our brother's demonstration, but to let each one work out his problem for himself. To accumulate money for future needs would be to deprive our brethren of a great blessing; it would also be a lack of confidence in God. Let it not be supposed that the writer is advocating that there should never be a surplus in the church funds, for that certainly would not be in accordance with our Leader's assurance that "God requires wisdom, economy, and brotherly love to characterize all the proceedings of the members of The Mother Church" (Church Manual, p. 76).

St. Paul found even in his day that "the love of money" is the root of all evil, and certainly avarice leads to more calculated cruelty than almost any other form of evil. It behooves us, then, to strive to keep the financial side of the Christian Science organizations free from this fruitful source of danger, and to keep steadily in view the true meaning of substance, knowing as we do that in Christian Science the law of demand and supply is governed by divine Mind, the ever-present reality.

CHRISTIAN SCIENCE AND INDIVIDUALITY.

CHARLES H. S. KING.

TRUE individuality is always manifest in sincerity, earnestness, and humility. Without these fundamental qualities no one can reach the heights of true greatness and satisfy Jesus' requirements, "Whosoever will be great among you, let him be your minister; and whosoever will be chief among you, let him be your servant." Humility keeps the imagination within bounds. Sincere love for our fellows and earnest zeal for the establishment of good will among men, engender a magnanimity which is perennial and not dependent upon the attainment of personal leadership or glamour. He who has learned this lesson knows that only as he is true to the Christ-idea, the true individuality of man, will he be fitted to take a higher seat and become "ruler over many things." This has been amply proven in history. The greatest men were the most unselfish, and in proportion as they were true to the divine light within them and undeceived by the adulation of personality, have they been loved and heeded by the world.

This is illustrated by contrast in the lives of three historic figures who were leaders of their contemporaries, Napoleon, Lincoln, and Jesus, and who are severally consigned to ignominy, grandeur, and glory. Destiny entrusted Napoleon with a wonderful opportunity—to help realize a nation's ideal. No sooner was it in his grasp than he flung it away, and sacrificed not only his adopted nation but an entire continent to his own personal success. He had no principle. What he called the "star" of his destiny was his god. He was the personification of selfish striving, of human will which is not its brother's keeper, and his final downfall was fit reward for the deification of arrogant personality.

Lincoln had an opportunity similar to that of Napoleon, and he embodied a nation's ideals. How different was his conduct from that of Napoleon! Lincoln never thought of his own personal wishes. He had a wonderful vision of the right, and he stood for it with patient courage and with sincerity, earnestness, and humility. It was never his own way that he wanted done, it was always God's way that took precedence in all his great decisions; and today a nation points with gratitude and love to its selfless hero. Lincoln, like all truly great men, "illustrated the grand human capacities of being" (Science and Health, p. 200) bestowed by God. His success cannot be ascribed to personality. It was his noble individuality, seen in his high moral qualities, his sincerity, earnestness, and humility, which achieved Lincoln's success.

John the Baptist said of Jesus, "He must increase, but I must decrease." The reason that Jesus' followers are found the world over is because in his experience the material and personal aspects of life were completely swayed by the spiritual, in order that the divine and universal might have full expression. He taught that real success is achieved only through the activities of man's true individuality, and

Digitized by Google

he revealed that individuality as the Christ. Furthermore, Jesus made the distinction between the mortal concept and the spiritual idea clear to his followers. He said, "I can of mine own self [personality] do nothing." "My Father worketh hitherto, and I work;" that is, Jesus' whole being coincided with God's nature and activity. The personal Jesus retires that the Christ-idea may be presented. This enabled Jesus to say, "I am the way, the truth, and the life." It authorized John to say of Jesus, "As many as received him, to them gave he power to become the sons of God;" and it justified Peter in declaring, "There is none other name under heaven given among men, whereby we must be saved." If personality were the object of emulation or the test of discipleship, the revelation of divine individuality would be lost sight of, and mankind would be limited to the level of material personality.

True individuality is a spiritual quality, and is expressed by such men as Abraham, Moses, Luther, and Lincoln. To account for greatness by personality is to fall short of understanding human life and destiny. Personality has an arrogance of assertion which would center interest upon itself, perhaps unconsciously; it is foreign to the Christ. Individuality refers persistently to Principle. The one is dogmatic; the other authoritative. Because Jesus' example is so sweeping, his life so fundamental, the Christ-idea so universal, every individual must some time follow in "the way," accept "the truth," adopt "the life." In other words, proud, self-centered personality must decrease, and the Christ-idea, the true individuality, must increase.

In Science and Health Mrs. Eddy writes (p. 203), "The accusation of the rabbis, 'He made himself the Son of God,' was really the justification of Jesus, for to the Christian the only true spirit is Godlike. This thought incites to a more exalted worship and self-abnegation. Spiritual perception brings out the possibilities of being, destroys reliance on aught but God, and so makes man the image of his Maker in deed and in truth." She also prophesies that when the Science of being is better understood, the talents and genius of the nations will "sit at the feet of Jesus" (Miscellaneous Writings, p. 361), the greatest exponent of the Christ-idea. The advantage of Christian Science is that it educates this "spiritual perception," reveals the true individuality of man as the Christ-idea, and points out the snares of personality, thus enabling one to stand for the divine Principle of the Christ-idea—the only rule in the world for genuine success and greatness.

IS GOD ABLE TO DELIVER US?

EMMA JULIA NORTH.

Most Christian Scientists are asked at some time for an answer to the following question: "If God does not know evil, how is He to deliver us from it?" The writer has found the following thoughts especially helpful in replying to this question.

Suppose a little child to be very much afraid of the darkness. In his terror does he cling to another child who may be equally afraid? Does he not rather call out for mother or father to come to him? Either of them, having no fear, can smile at his trouble, and lovingly soothe him out of it. Suppose, on the other hand, the case of a physician who believes himself to be afflicted with an incurable disease. A patient comes to him for help, in whom he recognizes the symptoms of the same dread malady. Under such conditions has this physician the requisite understanding and courage to meet the trouble? Does the blind man ask another blind man to lead him? Nay! but one who sees, for otherwise will they not both "fall into the ditch," as the Master said?

So, when we are in belief afraid, or sick, or blind, we go to our heavenly Father, who has said, "Let him take hold of my strength,"—the strength of Him who knows no fear, no sickness, no blindness. In Christian Science we understand why God is able to deliver us, and how "divine Love always has met and always will meet every human need" (Science and Health, p. 494). These thoughts can but lead us to the inevitable conclusion that the Christian Science practitioner must strive to purify himself from the belief in evil, in order that he may be a transparency to reflect divine Love and its strength to his patients; that he may say with Sir Galahad:

> My strength is as the strength of ten,
> Because my heart is pure.

He gains in spiritual strength by understanding that as God is "of purer eyes than to behold evil," so must he know the nothingness of evil and the allness of God, good.

THE UNFOLDMENT OF TRUTH.

WILLIAM HART SPENCER.

THE problems which confront humanity in the inner realm of consciousness seem to have a single root-thought. Confidential confession inevitably shows that that which interferes with spiritual growth is easily traceable to a few generals. The coloring and minor movement of thoughts, with their false estimates, may be as changing as the figures in a kaleidoscope, but they are only indications of sporadic impulse, the main drift of mortal mind remaining unchanged. While each one assumes that his troubles are specific and unusual, analysis shows that false belief, the assumption of something apart from the true concept of God as All-in-all, is the starting-point of the difficulty with which he contends.

Mortal man has always had only a blurred mental image or sense of God, but since time was there has been a reaching out by awakening thought for a clear, concise, and withal reasonable concept of the Supreme Being. The human family as a whole lack mental concentration, and through deficiency of mental grasp men have ever been too ready to adopt the opinions of self-constituted leaders. Sometimes in a paroxysm of fear, often in a moment of ecstasy, humanity has built its hopes on this belief or that, with varying success as to the lasting quality of its interpretation, as is shown in the creedal statements of the many sects which have sprung up, and which in many cases emphasize some isolated feature of an imaginative man-made God. There are many today who have followed some special thought in theology and seem to be content in it, without perhaps realizing that their adherence to said doctrine is a fetish-like belief in a theological speculation.

While many have grown dissatisfied with their environment, and practically ceased from further agitation of the question of religion, there are still a larger number who might be designated as unsatisfied; and largely on account of these so-called hereditary beliefs. Many of them have a sense of discouragement, owing to their lack of success in arriving at a satisfactory conclusion, even after having, as they suppose, earnestly and carefully considered all aspects of the question. To have attempted the investigation of first one point of view and then another, as their attention has been called to them, does not necessarily imply that the investigators are changeable in character. Such efforts, intelligently made, show rather an honest desire to gain the basis of truth; but while, as is often the case, something helpful has been found in each line of thought, they have reached nothing which could logically be called basic. Thus, unsettled, and with a consciousness of an utter lack of trust in conventional thought, they are ever inquiring for a tangible exposition of the truth. Their desire is for a distinct thought which is discernibly based on Truth, and such desire evidences a purpose to go to rock foundation, if so be they may find it.

At first it may seem impossible to admit for an instant that there is such a thing as a law which is not circumscribed or controlled by the physical senses, but the honest

Digitized by Google

truth-seeker will soon realize the necessity of recognizing the entire separateness of the mortal and the spiritual, and that they cannot combine, it being impossible for the mortal mind to assimilate or even grasp the spiritual, for, as St. Paul has said, "the natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned." It is a difficult matter to expunge mortal thought from consciousness; indeed impossible, if we rely on mortal thought itself. There is but one way of escape from its tenacious grasp, namely, by feeding upon spiritual thought. We must strive to "put off," to drive out, the evil conditions, and right thought is the only available weapon. It is hopeless to undertake to adhere to both mortal sense and spiritual sense, since they have and can have no fellowship.

There is no difficulty in the truth; the difficulty lies in our inability to apprehend it, which is due to the fact that our written or verbal explanation makes use of symbols which are largely used in expressing material thoughts. We must acquire the "new tongue," attach a practically new meaning to an old phraseology. In Christian Science the truth is stated simply, but it is not weakened in an attempt to adapt it to the hearer. Sometimes it is necessary to use phraseology which is not at once clear to the listener, but in such case, if he is in earnest, he will endeavor to comprehend it,—take a mentally receptive attitude,—and sooner or later the truth will unfold.

Though Christian Science is sometimes misjudged at first, those who have learned that some statements quite beyond their apprehension at a given moment become perfectly clear as they meditate upon them, later come into a clear understanding of it. By accepting the teaching of the allness of God and the unreality of everything unlike Him, one can prove experimentally, in proportion to his growth in understanding, that dominion is given to man here and now.

OUR DAILY BREAD: THE MANUAL.

GRACE KEELER BURKE.

A CAREFUL and prayerful study of our Manual will reveal many gems of thought not to be discovered by an occasional reading of the book. A tower of strength to workers in every field, in every department of church work, it also contains many helpful lessons for every honest student of Christian Science. In the home, in the business world, in school and social life, we need the valuable instructions for guidance, protection, and wisdom that may be gleaned from its illumined pages.

May not a mother or a father find much food for thought concerning the government of children in Article I, Section 9: "Without a proper system of government and form of action, nations, individuals, and religion are unprotected." Is there not a gentle reminder of our duty to our children, that obedience, order, courtesy should be established in our homes? That children should be required to perform services "promptly and well" in the home, and thus become fitted for the work that lies before them, as home-keepers, church-members, as citizens?

In the administration of household or business affairs, in problems involving financial questions, in dealing with those who serve us, or those whom we serve in any capacity, let us daily, hourly remember that rule which every Christian Scientist should know by heart, viz., Sect. 5 of Article XXIV: "God requires wisdom, economy, and brotherly love to characterize all the proceedings of the members of The Mother Church." As we ponder the import of these words, errors of impulse, of selfishness, self-indulgence, extravagance, pride, and arrogance will be uncovered in our consciousness, then rebuked and cast out.

With the addition of each new rule, great blessings of growth and of freedom from bondage have come to us, as individuals or as churches, just in proportion as we have been prepared to discern and appropriate these priceless treasures. At every stage of our journey we find fresh inspiration and courage. On two different occasions one who had been working several years in Science passed through experiences of deepest sorrow and seemingly overwhelming defeat; but in each case, at the darkest hour, her sense was refreshed and sustained by the memory of a given rule in the Manual. Fear was removed, provision made for her need, and with a grateful heart she took courage, feeling she could say as surely as did the psalmist of old, "Thou preparest a table before me in the presence of mine enemies."

Gratitude which springs from the heart must, however, take form in more than words, and while we can at present but dimly appreciate the labor of love, the depth of human experience, the arduousness of endeavor, the wisdom from on high which inspired this work, this gift from our beloved Leader to her church, we can at least study the letter, and abide in obedience till growth in understanding and spiritual sense shall unfold to us, more and more, the spirit of Love which pervades this volume.

[Written for the *Sentinel*.]

UNITY.

AGNES FLORIDA CHALMERS.

I THANK Thee that Love's kingdom is at hand;
Yea, that all good is here, O Truth divine;
That health and peace are now at my command;
And that the Father's riches, too, are mine.
I am so thankful that earth's brotherhood
Is one, and that God's law is understood.
I thank Thee that Love's gifts are all for me;
And yet I know true gratitude must be
Expressed in giving all to Thine and Thee.

Father, I thank Thee for this work I do,
And that I must prove faithful to each new
And untried task. With Truth's strong armor on,
Rejoicing that Mind's victory is won,
I thank Thee; but true gratitude must be
Expressed in working more for Thine and Thee.

I thank Thee that I may become again,
Through Truth, a little child, who prays to speak
The healing words of Love that cause nor pain,
Nor bitter anguish to the worn and weak.
I thank Thee; but true gratitude must be,
Father, expressed through love for Thine and Thee.

I thank Thee that I bear no more the cross
Of loneliness; and that my home is now
The secret place of the most High, since Thou
Art with me; and that I feel no loss
At human failure or elusive gain.
Blest Truth, I know not now the sting and pain
Of friends whose thoughts are turned away from me.
I thank Thee that I am, O Love divine,
So satisfied, since Thy sweet ties now bind
Me close to Thee; this gratitude of mine
Must be expressed through friendship for mankind.

I thank Thee most of all that I now know
My home and church and consciousness are one;
Yea, that Love's universe, where'er I go,
Established is, since God's work now is done.
Father, at every glimpse of Truth I see,
I thank Thee for my union now with Thee.

EXCERPTS FROM EDITORIAL COMMENTS.

[While the supply from which the excerpts from editorial comments that have been published on these pages during the past ten weeks is by no means depleted, it seems unnecessary to continue them longer, as enough has been given to show how wide-spread and generous has been the tribute accorded to Mrs. Eddy. There has been no fulsome laudation, but a just recognition of what has been accomplished for humanity through the untiring efforts of the Discoverer and Founder of Christian Science.—EDITOR.]

[*Omaha* (Neb.) *Evening Bee.*]

Contemporaries should not write history, and their attempts at biography should be tentative rather than definite. For this reason no one should undertake to put a final value on the services of Mary Baker Eddy. In many ways she was the most notable woman of her time. It may easily be questioned if any other woman of modern times has wielded the influence and affected directly as many lives as did Mrs. Eddy, and this influence was of the most benign character. It does not matter what individual opinions we may hold as to the correctness of the teachings of Mrs. Eddy. Whether her premise was tenable or her conclusions sound, we are forced to admit that her followers found under her a peace of mind that does not exist elsewhere.

Mrs. Eddy's church brings to its people a message of peace and a promise of better things. It is unobtrusively militant along lines of doing good, and the woman who founded this cult will be followed to her last resting-place by the hearts of millions who looked up to her as the inspired head of a great school of religious activity. She will not be publicly mourned, at least, because her people believe she has gone on to a higher plane of existence, and in this there is no cause for sorrow. She must necessarily be listed among the remarkable women of her time, and the prediction is not unwise that sets down for her a verdict by history that she did good while living.

[*Des Moines* (Ia.) *Capital.*]

In reflecting upon the remarkable career which has just terminated at Newton, Mass., the ancient query of Pilate, "What is truth?" seems to come readily to mind. Was Mary Baker Eddy a prophet of God sent into the world to inaugurate a new dispensation? Did she usher in light where only darkness reigned before? Will the church which she founded demonstrate in the years to come that it is builded upon that rock against which the gates of hell can ne'er prevail?

These are questions which have been discussed with growing fervor as the Christian Science propaganda has passed from the day of small things into an era of unmistakable influence in the realm of religious thought. We cannot answer them. The present generation cannot answer them. Regardless of what our individual beliefs, doubts, or intellectual or moral conceptions may be, we are sooner or later forced to the conclusion which Tennyson has so happily expressed,—

> Yet I doubt not through the ages one increasing purpose runs,
> And the thoughts of men are widened with the process of the suns.

Here we have the philosophy of true growth. Thus does man's horizon broaden as the eyes of his understanding are opened. The quest for truth is rewarded according to our capacity to receive it—in the fulness of time.

[*Ft. Wayne* (Ind.) *Sentinel.*]

Mrs. Mary Baker Eddy, Founder of the Christian Science church, leaves behind her such a monument of achievement as no woman in any age, perhaps, had builded. The Christian Science church and its propaganda in a matter of some thirty years have gone almost literally around the world. Today in the United States there is hardly a community of notable size that has not an organized body of this sect, and doubtless none that has not one or more who have accepted and practised its doctrines. What the future of the church is to be, without its Founder and Leader, only time can tell; but it is true that today the Christian Science denomination shows such a spread over the earth and such proportions of growth as have been true of no other religious movement in like time in any age of the world. Millions of people acknowledge the doctrines formulated and spread by Mrs. Eddy and her followers. The movement has built magnificent cathedrals and churches, it has established centers for its literature all over the globe, it has enlisted men and women of the highest type of intellect in its teachings and in its propaganda.

This is the work of a woman whose nature was timid, whose disposition was modest, and whose tastes were retiring. Mrs. Eddy never sought the limelight. Where she might have made herself heroic, she was content to live as much out of sight as possible, and watch and direct the growth of the sect she had founded and the doctrine she had enunciated.

[*Hammond* (Ind.) *Times.*]

The death of Mary Baker Eddy marks the passing into the "great beyond" of the most remarkable woman who ever lived. In spite of the opposition she encountered, she founded a religion and built up a church that is the wonder of the world today. The ordinary mind, not in harmony with the tenets of Christian Science, is not qualified to pass judgment upon it nor upon the work of Mrs. Eddy *per se*. It is easy for the scoffer, in speaking of any religion, to point out that only the emotional, the susceptible, and the ignorant are swayed by religion. Can one do aught else but be amazed when considering that Mrs. Eddy's teachings and her faith have in the main been accepted by the people of the greatest intelligence and finest character? When one thinks of the noble men and women who have embraced Christian Science as children have faith in their parents, it is not hard to understand how the death of this splendid woman has moved the world.

[*Pioneer*, Bemidji, Minn.]

With no thought as to the right or wrong of the religious organization of which Mrs. Eddy was at the head, this much can be said: This Boston woman's life was as beautiful as it was devoted, and as sublime as were her teachings. Her church, The Church of Christ, Scientist, or as it is more commonly known, Christian Scientist, sprang from the mind of Mrs. Eddy. Her theory has been so convincing that men and women of culture and master minds in all corners of civilization have adopted it as the true doctrine—modern edifices in hundreds of cities bearing evidence of this fact.

The Christian Scientists publish a modern and, be it said to their credit, remarkably clean daily newspaper in addition to many other publications. The growth of the church has been phenomenal.

[*Ames* (Ia.) *Intelligencer.*]

In the passing of Mrs. Eddy the world will learn more of Christian Science and have a higher conception of the teachings of the grand, good woman who put sunshine into thousands of gloomy homes. Mrs. Eddy, as the world knows her, is dead, but for the followers of Christian Science and all enlightened Christian churches she still lives and will continue to live.

[*Hastings* (Neb.) *Daily Tribune.*]

Unquestionably Mrs. Eddy was the most remarkable woman of her day, as she founded a religion the influence of which is being felt around the world, and it gains in strength as it gains in age.

Digitized by Google

[*Rock Island* (Ill.) *Union.*]

The life of Mary Baker Eddy has come to a close. She was no ordinary person. Whatever may be your belief, or whether you make any religious professions or not, you must admit that she has accomplished great things, and her accomplishments have resulted in good. The facts—the proof of these two propositions—are apparent to all. Christian Science was "discovered" by her. She was its fountainhead, and today, thirty-one years after the first church was chartered, there are over a million adherents. That is proof sufficient of the first statement. The hundreds of men and women that are known by you, who have become better, morally and physically, after becoming adherents of that faith, is ample proof of the second proposition.

This world is filled with people of different religious beliefs and sentiments. With few exceptions the belief of one sect, church, or denomination, does not encroach upon that of another. Religious tolerance of the beliefs of others has come to be accepted by every form of worship. Indeed, the churches are even tolerant of those who make no professions of faith at all. And every form of religious organization of the present day has for one of its tenets the bettering of the condition, morally and socially, of its people.

After her discovery, Mrs. Eddy permitted nothing to stand in the way of its promulgation. Her life was given over to it. Her friendships were with those who became its converts and who adhered to its doctrines. She guarded and protected it during the struggling years when its adherents were few and those few needs must tread in the "straight and narrow way" to prevent its being confounded with mesmerism and other so-called "fallacies," which would have been fatal to it. Her sole purpose was to keep it uncontaminated by anything else, and to build it strictly upon the basis she had made plain in her book, "Science and Health with Key to the Scriptures." Naturally, as it developed and as its growth became phenomenal, there were those who sought to profit, personally, by the organization, and this she would not tolerate. That faith which was to bring, in her belief, relief to suffering and a salvation to the souls of many, must not be prostituted. She herself had sacrificed all for it, and others must at least refrain from diverting it from its good offices.

The life of Mary Baker Eddy was a wonderful life. The story of her struggles is filled with the power of will—at least will—over matter. Here was a master mind. It was wonderful to conceive and to carry into execution a conception so broad and of such magnitude. It was wonderful that she was able to resist the temptations, the flatteries of fawning sycophants, and adhere to the one great theme, the power "of the infinite over the finite," the "elimination of wrong" by the establishment—the eternal prevalence—of right.

Then there comes the third proposition, which also must be admitted by all. Christian Science has come to stay, and its growth for the future, if predictions may be based upon what it has done in the past, will be of considerable magnitude. Mrs. Eddy had found a place in the religious world that was not being filled, and an enduring fame has been established.

[*Portland* (Ore.) *Journal.*]

Mrs. Eddy was a wonderful woman. None but a wonderful woman could have founded an organization which placed her at the head of more than a million followers. They are followers in a sense that means far more than the ordinary relation between leader and disciple. It involves a consecration of faith and life, the absolute change in personal conduct, a complete reordering of daily life, and the investment of huge sums in buildings and activities related to the Science life. History reveals no other woman who has by personal force exercised such power. As Founder of the Science church Mrs. Eddy rose into position by personal achievement, and through the growth, spread, and perpetuity of the organization will have an enduring fame.

Every faith or creed has its opponents and critics, and Christian Science has its share. Many of us are not ready to go to the extreme length of faith that it involves, but we can all agree that the talents and achievements of its Founder are entitled to a wholesome respect.

[*Kokomo* (Ind.) *Dispatch.*]

Naturally enough, the death of Mrs. Eddy has revived wide discussion of the principles and the prospects of the religious cult which she founded. While the opening of Congress and the President's message are subjects for much editorial comment, in quantity and earnestness of discussion they give place to Christian Science. In this connection, it is due to that religious movement to emphasize the fact that its origin, its progress, and its present status have been marked by none of the elements of disorder and bitterness which have characterized the developments of other forms of faith.

It is a familiar saying that religions have caused more wars and bloodshed than all other elements in the world's history. Even the reformation was not free from hatreds and political elements. Official preferment and wide-spread disaffection attended the various contests between Catholicism and Protestantism in England. And so it has been in all religious history—till the faith taught by Mrs. Eddy came into the world. Whatever the individual opinions concerning that faith, and whatever may be its destiny, it is essentially a religion of peace.

[*Anderson* (Ind.) *Herald.*]

There are many who do not subscribe to the Christian Science doctrine, but there are few who do not realize that in the death of Mrs. Eddy one of the greatest women of this or any other generation has gone. Barring all reference to the value of her creed, and most people whether they subscribe to it or not will admit its great value, it is enough to know that in the space of one life she has created one of the great religious institutions of the period and counts her followers by the hundreds of thousands. Her influence on her own generation was great and all for good. It is more than possible that it will extend, through her books and disciples, to many generations to come, and be one of the great factors in the development of humanity.

[*Malden* (Mass.) *Evening News.*]

Mrs. Eddy brought happiness to thousands of people. Whether they are imagining that happiness, or whether it will be temporary or lasting, is begging the question. Through her writings and the creed she founded, people weary in body and soul and mind have found rest when they could not find it elsewhere. Therein she did a vast amount of good. Humanity is decidedly her debtor. There is no question about her being the most wonderful woman of her day and generation. She won the faith of thousands of intelligent people, and they found in that faith what they had been groping about for in medicine and other religions. That was enough for them, and the best endorsement she could have secured.

[*Pacific Commercial Advertiser*, San Francisco, Cal.]

Whatever may be one's religious views, it will be generally recognized that one of the great women of the world has passed away in the death of Mary Baker Eddy. That one person, and that person a woman, should have, practically through her individual efforts, built up an organization as solid and as deeply rooted as the Christian Science church, stamps such a person as great, in every sense of the word.

Digitized by Google

[*Evening News.*]

Whatever may be the individual opinions respecting that which Mary Baker Eddy professed, the fact stands out beyond the boundaries of dispute that she gave the world a confession of faith that has brought wondrous peace and happiness to mankind. To have made the world better for having lived in it is an accomplishment of which the greatest of men and women may feel proud, and that Mrs. Eddy did this will be generally admitted. Religionists have attacked Christian Science as being neither Christian nor scientific. Scandal-mongering publications have sought to destroy her hold upon her followers by old women's tales of her early life. Alleged impartial investigators have tried to prove that she borrowed her ideas from others and evolved her philosophy of life here and to come from the writings of eccentrics of a bygone period. Yet during all this time the Christian Science church has gone ahead, increasing its membership, multiplying its activities, and extending its benign influences.

All of which proves that, whatever the source of her inspiration or of her ideas, it was Mrs. Eddy's genius and her power that made of it a faith that appealed with tremendous force to many thousands of men and women. The mind that clings to dogma can never accept her ideas or beliefs; in fact, intelligences like that never get beyond the shell of any great principle. For centuries mankind has been groping in the dark after the great truths of existence, here as well as hereafter. Many prophets and leaders have risen up to point the way. If their doctrine embodied hope, they have found followers. If the light shone with steady radiance, their sects endured. Mrs. Eddy pointed out a way of relief from sin, sickness, and disease, and many have followed it with marvelous results. She banished a specter that haunts many lives, she made existence endurable to thousands groaning beneath its burdens, she made smooth the pathway of life to countless others.

[*Jackson* (Miss.) *Daily News.*]

Regardless of conflicting opinions concerning this new religious cult, the cold facts of history must be conceded. Mrs. Eddy enlisted under her banner nearly a million followers within a decade, and she must be accorded a unique place among the religious leaders and thinkers of this day and generation. The Christian Science movement has grown so rapidly and shown so much virility amid unusual storm and stress, that it may be expected to survive the death of its Leader, and continue to show strength and vitality among the creeds and cults of the day. Even here in Mississippi, where the people are slow to adopt new spiritual ideas, clinging tenaciously to the orthodox faith of their fathers, Christian Science has obtained a strong foothold.

Credit must be given where credit is due, regardless of your personal views. In summarizing the life of Mrs. Eddy, therefore, we must admit that a woman with the will and power to establish, within little more than ten years, a new religious cult, and place it upon such a firm foundation, must possess more than ordinary powers. The growth of the Christian Science movement, the establishment of its churches in magnificent buildings, and the organization of hundreds of thousands of people in a faith which has become world-wide,—this has been one of the extraordinary phenomena of the present and the past centuries.

[*Daily Traveler*, Arkansas City, Kan.]

Mrs. Eddy was a great and grand woman. We believe her to have been the greatest woman the world ever knew. She was the most loved and at the same time the most maligned woman of the age.

She gave to the world a religion that will be found eternal. Those who have espoused it have found it a great solace and it has made them better citizens. Its teachings have brought a good God closer to them and caused them to know that He is "a very present help." It teaches that God is Spirit, Life, Truth, and Love, and that "man is His image and likeness," and that the real man and the universe are spiritual, not material. It teaches that God is the only cause and creator and there is no other presence or power. Upon these principles is founded the religion which Mrs. Eddy discovered and gave to the world, and it is rapidly covering the face of the earth.

To Christian Scientists Mrs. Eddy was their beloved Leader. She was their wayshower to an ever-present salvation. They feel that her life-work was finished and that she has left a wonderful heritage to those who desire to accept it.

[*Meriden* (Conn.) *Record.*]

The passing of Mary Baker Eddy removes one of the most remarkable women of the present century. It matters little whether one subscribes to her creed or not, the fact remains that this woman became a potent factor in making people think and in compelling them to blaze the way either for her beliefs or for others which they themselves discovered.

There are many people who have no sympathy with Christian Science who have indirectly been greatly aided by the interest taken in it. All the theories of mental science, the effect of mind over matter, gained new impetus from Mrs. Eddy's teachings. The very extremes to which she went caused people to look up the subject, if for no loftier purpose than that of curiosity. Investigation led into devious ways. The result was a large addition to the sum total of human knowledge. And it must be admitted that if the general results of the knowledge gained by investigations made into the subject of Christian Science could be known, it would be found it had been for the good of humanity.

[*East Oregonian*, Pendleton, Ore.]

It is estimated that in the United States there are one million people who uphold the Christian Science creed—a creed that was first promulgated by Mrs. Mary Baker Eddy. For the most part they are earnest and cultured people. Without ostentation they worship God in accordance with their beliefs. Their interpretation of the gospel is somewhat different from the orthodox version, and this has brought forth criticism from those who follow the old-time faiths. Whether the Christian Scientists are at fault and their critics are right, or whether just the opposite is true, is an open question. If the Christian Science church is founded upon error, it cannot live; but the fact that the church has lived this long, and has grown in popularity until it now has a million followers, indicates strongly that there is much truth in the teachings of the departed Founder and Leader.

[*Jackson* (Miss.) *Clarion-Ledger.*]

The death of this famed woman removes one of the most prominent characters of the present century. However one may feel disposed to criticize the religious faith founded by her, all must admit that she was a most marvelous woman, whose life was devoted to the uplift of mankind. That she was possessed of an intellect far above the average cannot be denied, neither can it be questioned that she used all of her ability in her efforts toward the good of humanity. The world's highest meed of praise is bestowed upon those who have made the greatest efforts toward its good, and it is this fact that has assured for her a high place in the estimation of the world.

The preponderance in public thought which she attained as the Discoverer and Founder of the doctrine of Christian Science, and the tender mother love which finds a place for her in thousands of hearts, is a tribute to her unselfish love for her fellow-man.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

THE OMNIPOTENCE OF GOOD.

THE utter powerlessness and nothingness of evil is strongly emphasized in the writings of Mrs. Eddy. On page 102 of Science and Health she writes: "Mankind must learn that evil is not power. Its so-called despotism is but a phase of nothingness." Again, on page 192, she says: "The good you do and embody gives you the only power obtainable. Evil is not power. It is a mockery of strength, which erelong betrays its weakness and falls, never to rise." This emphatic declaration that evil is without power to harm, is for our comfort and encouragement, and in proportion as we absorb its real meaning and make use of it in our daily experience, to just that degree are we blessed thereby.

Previous to the discovery of Christian Science by Mrs. Eddy, mankind through countless generations were deceived and made to suffer by the self-conceived assumption that evil is as real as good, and that sickness, sin, and suffering are the sure and unescapable adjuncts of human existence. Fortunately, however, as Christian Science has become better known and understood, this false belief about man has been gradually giving way to a clearer realization of the omnipotence and allness of good, and of man's oneness with his creator. Christian Scientists, therefore, may well take home the lesson that to believe in the reality of evil is to believe that it has power, a mistaken sense which involves the consequent belief that God is not the only creator; in other words, that the One who is "altogether lovely" has so departed from His own nature as to be the creator of evil.

These beliefs are so foreign to the true concept of God as an all-wise, all-good, and all-powerful creator, so opposed to monotheism and Christianity, that it seems strange they should ever have influenced men and women of intelligence, spiritual aspirations, and discernment; but that they do find credence is so apparent that they must be reckoned with in every effort to put aside the "ills of the flesh" which mortals have heretofore so generally accepted as part of their religion and philosophy.

The effect of the belief that evil is power is to arouse alarm and fear in the breasts of those who hold this belief, and this is the one thing against which Christian Scientists should build a wall of sure defense. If we will but accept Jesus' declaration that "the kingdom, and the power" belong to God alone, and the correlative statement, "God is infinite, all-power" (Science and Health, p. 17); that consequently evil is not of divine origin, and is not and cannot be real in the sense that only God's creation is real, we shall then see clearly that in fearing it or its supposed consequences, mankind is simply fearing a self-imposed belief.

One of the best known and most encouraging sayings of the Master is, "Ye shall know the truth, and the truth shall make you free," and there is nothing quite so important to Christian Scientists, and to all others as well, as to know the truth about God, and man's relation to Him. This truth is that God is Spirit, and His creation is spiritual and like unto Himself. God is not a creator of evil, and there is no other creator. With the elimination of all belief in the reality of evil, the concurrent belief that evil has power is destroyed, and mankind awakes to that spiritual understanding which, once attained, is so enlightening that they will "never fear again except to offend God" (*Ibid.*, p. 425).

ARCHIBALD MCLELLAN.

THE PHILOSOPHY OF HEALING.

THERE is a sense in which it would be a mark of the highest presumption for any one to say that he apprehends and can explain the operations of Spirit; nevertheless, Jesus' teaching unquestionably warrants the conviction that we may know "the deep things of God."

That the Master had a clear understanding of the divine nature and activities is manifest, since this alone explains His marvelous power to still the waves, heal the sick, and raise the dead; yet, in his letter to the Ephesians St. Paul definitely indicates that, even as Christ Jesus apprehended the truth about his Father, so may we, for Paul speaks of a time when all believers shall come "in the unity of the faith, and of the knowledge of the Son of God," that knowledge which the Son of God possessed, "unto a perfect man, unto the measure of the stature of the fulness of Christ;" and this knowledge of Truth and its law is possible here and now, for the apostle adds that it is to equip us to "grow up into him in all things."

In thinking of this subject every one is sure to be greatly profited by a study of the inferential significance of Jesus' statement, "Ye shall know the truth, and the truth shall make you free," together with St. Paul's declaration, "Henceforth know we no man after the flesh: yea, though we have known Christ after the flesh, yet now henceforth know we him no more." Our Lord could not have made so definite an assertion as the above had he not been assured, first of all, that truth is the universal emancipator; and yet, if we accept his statement, we are thereby compelled to accept the idealistic interpretation of nature as a whole.

The one and only thing which truth destroys is untruth, and since Jesus repeatedly annulled the laws of materiality by the word of Truth, it is made clear that matter with its asserted laws is constituted of false belief and of this alone, which fact explains Christ Jesus' power over it. It follows, therefore, that in an important sense the process or philosophy of healing and of spiritual redemption is one and educational; it is correctly defined as a substitution of a right idea for a wrong one, of spiritual understanding for the material belief which is responsible for every phase of abnormality. The call of the prophet, "Awake thou that sleepest," is thus identified with the call of progress in all the centuries, namely, that men shall give up the errors of false sense and yield themselves heart and mind to the rule of demonstrable truth; *i.e.*, shall become Christian Scientists.

Paul's counsel that no man is to be known after the flesh, affirms this same philosophy with equal definiteness. It is a denial of the legitimacy of the material concept of reality. To know "no man after the flesh" is to regard man as wholly spiritual, Godlike; it is to deny and refuse to be subject to the belief in material selfhood, and when we truly assume this mental attitude we take command of the situation. If the asserted substance of matter were real, it would not be either wise or Christian to ignore it, since Truth must hold in honor all that is true, and all that Truth discards must be false. This is the key to the otherwise complex and confusing problem we are called upon to solve, and it opens the door to success.

St. Paul's insistence that even Christ is not to be known "after the flesh" gives rebuke, furthermore, to the long-accepted teaching that the tragedy of Calvary was demanded as an appeasement of divine justice, and thought is thus centered, not on the arbitrariness of an offended will, but on the compassion of an infinite Love. The falsity of the material concept is seen, and the idealism of Christian Science is recognized as being both logically satisfying and wholly in keeping with the teaching of Christ Jesus and his disciples.

JOHN B. WILLIS.

"THE BAGGAGE OF STERN RESOLVE."

It is not only interesting but very helpful to follow the unfoldment of spiritual ideas as explained in Science and Health. In a way that is both practical and poetical Mrs. Eddy gives a new meaning to some familiar passage of Scripture by throwing upon it the light of Truth; as for instance, where she says, "In the figurative transmission from the divine thought to the human, diligence, promptness, and perseverance are likened to the 'cattle upon a thousand hills.' They carry the baggage of stern resolve, and keep pace with highest purpose" (p. 514). This passage illumines in a wonderful way the parable of the talents as given in the twenty-fifth chapter of Matthew. Here the great Teacher explains that every one receives "according to his several ability," or as we should say in Christian Science, according to his receptivity. It is very plain that this parable must be interpreted according to a spiritual or metaphysical standard, otherwise we might fancy that there was a merely arbitrary bestowal of talents or opportunities, with an unvarying demand for perfect results.

Now in Christian Science we always start with perfect Principle as the inspiration of all endeavor. We do not merely hope that God is good and just; we must know it, be sure about it, in order to work rightly from the start. The two men first mentioned in the story evidently did this, and although they had to wait "a long time" for the final reckoning, the reward of their diligence and persistency was very likely far beyond their expectations, for St. Paul says that "the things which God hath prepared for them that love him" have not even "entered into the heart of man." They were made rulers over many things, which certainly must have meant in the kingdom within, and they were also made partakers of the joy of their lord.

All this is so cheering that we might well be content to leave the lesson at this point, but another and quite different mental condition has to be considered, and this for the reason that we, too, may be tempted to assume the mental attitude of the one whose narrow and self-centered thought only permitted him to receive one talent, and who attributed his failure entirely to the master, whom he does not hesitate to call "an hard man." He pleads guilty to cowardice (which is certainly not a spiritual quality),—he says, "I was afraid." He had not attained to the perfect love that casts out fear; moreover, his lord charged him with being "wicked and slothful,"—the very thing we need to guard against, lest we be robbed of the rich rewards of truth and its joys. Some may from habit find it easy to be diligent in a material way who are slothful when it comes to spiritual activity. It is not enough to lift up our eyes to the heights, we must climb thither, yoke for service the "diligence, promptness, and perseverance" which are essential to success on any plane of activity, and especially to "carry the baggage of stern resolve," the mental and moral activities which result in health, happiness, and prosperity.

If healing does not come quickly, one must be helped to realize the ceaseless yet tireless activity of the perfect Mind whom we call our Father, to know that it is the privilege of each child of God to reflect this activity and to possess all things, including health. Christian Science has come teaching that real health cannot be attained by material means nor yet by blind faith, but by intelligent obedience to spiritual law,—by actual demonstration. Jesus said, "My Father worketh hitherto, and I work." St. John's vision tells of perfect service as the ideal heavenly condition,—"His servants shall serve him." Indolence implies stagnation, death; whereas life implies intelligent activity, and Love sends "his angel to show unto his servants the things which must shortly be done,"—the high and holy resolves unfolding into high and holy deeds.

ANNIE M. KNOTT.

AMONG THE CHURCHES.

WINSTED, CONN.

Located on the corner of Fairview and High streets and opposite the end of Union street, the new Christian Science church will hold a conspicuous place among the public buildings of Winsted. The lot is to be so graded that the proposed building will show the whole front as one looks up Union from Main street to High street. The building is classic in design, and will be semifireproof in construction. The outside dimensions of the edifice are forty by seventy feet, and it will be so located as to leave a lawn of twenty feet on the street sides, with ample space for enlarging in the future, as the plans have been made with that purpose in view. The auditorium will be forty by forty feet floor space, seating two hundred and sixty-six. It is planned by the society to dispose of the dwelling-house now standing on the lot, so they can let the contracts and break ground during the coming summer. The approximate cost of the completed church will probably be about ten thousand dollars.

The building of this church home is the result of the works and growth of Christian Science in Winsted during the past ten years. The first service was held in December, 1900, and Jan. 1, 1901, a few organized into a society. In 1905 rooms were taken in the Wetmore Block, where services are now held. These rooms have proved too small the past few months to meet the needs, and in September, 1910, the society purchased and paid for their present lot on High street, known as the Perkins property. This lot is most centrally located, approached by streets in four directions and surrounded by some of the best houses of the borough.—*Winsted Citizen.*

BILOXI, MISS.

In May, 1906, the few Christian Scientists living in Biloxi began to hold their Sunday services in the home of one of their number, and, being encouraged by the attendance and interest, soon organized a Christian Science society, this being the usual method of beginning the work. The attendance increased rapidly and in June, 1906, the society leased the upper floor of the new Eistetter Building, where they remained for three years. In May, 1909, the society purchased the lot on the southwest corner of Howard avenue and Seal, and in June, 1909, held their first service in the comfortable chapel which they had erected thereon.

The society has had a number of accessions to its membership, but counts its usefulness by the number of one-time sick and unhappy people who testify in the Wednesday evening meetings to having found health and an increased faith in and love for God through Christian Science.

Herald.

OREGON CITY, ORE.

The members of First church of Christ, Scientist, although not many in number in this city, have worked diligently to build a structure of their own, where they may hold services, instead of in the hall which they are now [January] occupying. Two beautiful and sightly lots were purchased, and as soon as these were in the church's possession the members set to work and planned for the edifice. The auditorium is forty-two by thirty-five feet, and will accommodate about one hundred and fifty people. The work on the structure is now being pushed rapidly by the builders, and it will be but a few weeks before services will be held therein. When completed it will be one of the most attractive little houses of worship in the city.—*Enterprise.*

THE LECTURES.

ALTUS, OKLA.

Frank H. Leonard delivered a lecture at Odd Fellows Hall on Tuesday evening, Jan. 3. He was introduced by Horace W. Shepherd, editor of the *Altus Times,* who said in part,—

Personally, while never having studied Christian Science or having made any investigation of its claims, I have been strongly attracted to it by the very spirit of hopefulness, cheerfulness, and the brotherly love which seems to actuate its devotees. Did you ever see a Scientist who was morose, complaining, rebellious, or at war with all his fellow-men? I never did. With this spirit in our hearts, and in this frame of mind, let us listen attentively to the speaker of the evening, resolved that if from his doctrine we can gain anything which will tend to help us on our rough and thorny path through life, if we can by our presence lend encouragement and sympathy and help to these friends of ours who are seeking to establish a new method of thought and life in our midst and to show us a "better and more excellent way," we certainly owe it to them to do so. Let us hear, and reason, and try to understand, and if we gain any of these helps and uplifts from the discourse of the evening, let us apply them in our own lives, and seek to emulate, so far as we consistently can, the efforts of our friends, through whose unselfish efforts we are permitted to assemble here this evening.—*Correspondence.*

LONDON, ENGLAND.

Bicknell Young, on Jan. 5, at King's Hall, Hackney Public Baths, delivered a lecture on Christian Science. He was introduced by Capt. Douglas D. Baynes, who said in part,—

The board of lectureship was established some years ago with, to put it briefly, the twofold object of providing convenient opportunity for publicly correcting the misapprehensions and misrepresentations which have been spread about concerning Christian Science and its teachings, and at the same time to allow those who wish to gain a correct understanding of at any rate its basic ideas and leading points in its teaching, suitable facilities for so doing; and this it is quite possible to do even in the brief space of one lecture, provided the seeker after this knowledge will listen with attentive ear and open mind.

It does not matter what the views on religious subjects of any one here tonight may be, we are all, I venture to say, agreed on one point, in that we are all seeking for happiness; and no matter what each individual's idea may be as to what constitutes happiness, I am certain you will all agree with me when I say that if such a state as perfect happiness is attainable, it must be a condition into which fear does not and cannot enter. I know of nothing except Christian Science that really opens the way to complete freedom from fear, and naturally with that the way to perfect happiness.—*Correspondence.*

INDIANAPOLIS, IND.

Nearly four thousand people heard Prof. Hermann S. Hering when he lectured on Christian Science at the Murat Theater, both in the afternoon and evening of Jan. 8. The lecturer was introduced in the afternoon by W. H. Brown, who said in part,—

Christian Science is becoming a household word, and the cause of Christianity is receiving a remarkable impulse through the demonstration of physical freedom and that mental, moral, and spiritual reformation and enlightenment which is the inevitable accompaniment of an understanding of this healing truth. Through the influence of this work of Christian healing, men are becoming better and purer and are leading cleaner lives, and this purifying process will presently produce a higher and loftier manhood; men who will strive to approach that elevated stature of manhood manifested by the Master, men who will be guided and governed by rules of honesty and honor and purity, men who will stand valiantly for whatever is good and true and loving and holy.

That Christian Science is performing an important part in this regenerative work in the hearts and minds of men throughout the world is manifest. The Master said, "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven." It therefore behooves us—not only Christian Scientists, but all loving followers of the Master as well—to let the example of our lives be a constant reminder that much is expected of Christian Science in the direction of that moral and spiritual enlightenment which will free the minds of men from unholy thoughts and desires and from doubt and fear and error and discord, and thus lift them to that better and higher understanding of God which will finally lead all men unto Him.—*Correspondence.*

LONG BEACH, CAL.

Under the auspices of First Church of Christ, Scientist, of Long Beach, Cal., Francis J. Fluno, M.D., of Oakland, Cal., delivered two lectures on the subject of Christian Science, Thursday and Friday evenings, Jan. 12 and 13. In introducing the speaker the first evening, Robert W. Foyle said in part,—

About thirty-five years ago the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mary Baker Eddy, was first published. About three years later the first Christian Science church was organized in Boston, Mass,—"a church designed," as was stated in its initial meeting, "to commemorate the word and works of our Master, which should reinstate primitive Christianity and its lost element of healing" (Manual, p. 17). That this church has exemplified the purpose for which it was formed, is attested by its thousands of adherents, who each and all will testify that Christian Science heals physically, mentally, and morally.

On Friday evening the lecturer was introduced by Atty. Frederick A. Knight, who said in part,—

We may be of very differing schools of religious thought, but, regardless of our beliefs, no one here can fail to get some good from Christian Science, provided he is honestly searching for truth. Personally I have had many absolute proofs in my own body that Christian Science heals disease and banishes pain.

That for which I am most grateful, however, is the spiritual uplifting that has come to me through the study of this Science. This has completely changed my view of life, and has taught me a new measure of success. It has enabled me to see my work as a part of the great work, and to feel less keenly the apparent failures. It has given to me a keen appreciation of the Bible, which had been to me of little value except from possibly a sentimental standpoint, and now I find in its pages instruction and encouragement. It has given to me a God who is ever present, here and now, to show the way through each day's work, and to guide and uplift and direct now as well as for all time to come. I cannot begin to tell of the benefits I have received through the study of Christian Science, and I know I am only one of hundreds and thousands who have been similarly benefited.—*Correspondence.*

PORTLAND, ME.

A large audience was present in the Jefferson Theater yesterday afternoon [Jan. 15] to listen to a lecture on Christian Science by Bliss Knapp. George W. Foster, First Reader of the local church, in introducing the lecturer said,—

Christian Scientists feel so sure that the gospel of Christ Jesus is in deed and in truth a gospel of a full salvation, that they gladly and lovingly accept the command of the Master to preach the gospel. I think I may say that they feel absolutely certain that the great Teacher meant exactly what he said when he proclaimed to all men: "Ye shall know the truth, and the truth shall make you free." Now to be free most certainly does not mean to be in bondage, nor to be fettered by the limitations of fear or of evil, nor shackled by the chains of disease or of sin. Can we wonder, then, that they to whom such a sense of liberation has come, should ask all men to rejoice with them in, as one of our own Portland poets expresses it,—

> The freer step, the fuller breath,
> The wide horizon's grander view.

The study of Christian Science has proved to some of us that there is neither necessity nor occasion for separating the triple command of Jesus: "Preach the gospel," "Heal the sick," "Cast out devils;" and it is largely a sense of gratitude for the experiences growing out of these teachings that prompts the giving of these lectures.

Portland Express.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Augusta, Ga.—Prof. Hermann S. Hering, Grand Opera House, 4 p.m., Feb. 26.

Brooklyn, N. Y. (First Church).—Willis F. Gross, Academy of Music, 3:30 p.m., Feb. 26.

Fayetteville, N. C.—Prof. Hermann S. Hering, La Fayette Theater, 8:30 p.m., Feb. 28.

Kinston, N. C.—Prof. Hermann S. Hering, Court House, March 3.

Leeds, Yorks., Eng.—Bicknell Young, Albert Hall, 7:30 p.m., March 7.

Paterson, N. J.—Frank H. Leonard, Orpheus Hall, March 3.

Richmond, Va.—Prof. Hermann S. Hering, Academy of Music, 8:30 p.m., March 2.

Roanoke, Va.—Prof. Hermann S. Hering, Jefferson Theater, 3 p.m., March 5.

San Francisco, Cal. (First Church).—Clarence C. Eaton, Dreamland Rink, 3 p.m., Feb. 26.

Swansea, South Wales, Eng.—Bicknell Young, Christian Science Rooms, March 6.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be June 2, 1911. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 10, 1911.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 4, 1910, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

TESTIMONIES OF HEALING.

I have long wanted to tell of my great debt of gratitude to Christian Science, but the blessings have come so fast in the last few years that I did not know which to relate. As a child I was never strong, my earliest recollections being of attacks of various diseases, apparently inherited. Left alone while a very young girl, I came to North Dakota to make my home with an aunt who was a Christian Scientist. The atmosphere of this home at once appealed to me as being permeated with love, and I began to study and try to understand this truth. My health became much better, but, although I called myself a Christian Scientist and really thought I was one, I had not grasped the Principle, and did not see that I must give up a great deal of selfishness before I could gain this understanding. After completing my education I started to teach, but my old troubles came back with redoubled force. I tried different Christian Science practitioners, but received almost no help. Then I turned to *materia medica*, but got only temporary relief, the doctors finally telling me that, as the diseases were inherited, I must expect to endure them.

In the mean time I married, and all that love and good care could do to bring health to one was done, and for a short time I was better. But when my first baby was about three months old I felt the old ailments coming on, with all their tortures. How I fought them, and how kind the physicians were in helping me with the fight; but it was all to no avail! I suffered terribly in body, but that was nothing compared to the mental anguish. I could not accept the orthodox interpretation of God, and I had not grasped the significance of God as revealed in Christian Science. I thought I could not get the needed help from this Science, partly because it had seemed to fail in my case, but mostly because I erroneously believed it taught that the human mind controlled the body, and I thought that my mind was if anything in a worse state than my body.

One day, when I had been very ill, and my physician was very frank, this thought came to me: I had learned in Christian Science that God is good and is the only power; then good was all, and here I had been giving more power to evil than to God. Then and there, in the blackest night of material sense, did this light come to me which for so many years I had failed to see. I had a copy of Science and Health in the house, and I fairly devoured it. I was no longer afraid of the human mind, either my own or another's. I knew that there is only one Mind. Words are feeble to express the joy of those weeks when I was reading Science and Health, really reading it with understanding for the first time. It did not matter whether I was healed or not; I had found God, and nothing else counted.

I had a week's treatment and was helped so much that I began to do my own work, and I was able to eat what the others did. My entire healing, however, has been very slow. Five years have elapsed since this awakening to Truth, and some ailments have required months and even years of faithful work on my part for their overcoming. There was so much in my mentality that had to be cast out to make room for the truth, but my heart overflows with gratitude that I have been able to grasp this Christ-teaching. Most of the time I have been away from other Scientists, but I have earnestly studied the Bible and Science and Health, and the truth has unfolded to me just when I was ready for it.

My last baby was born under Science treatment, and the birth was almost free from pain. When the baby was six weeks old he had strangulated hernia, and a prominent physician in this city said that he would not live long without an operation. I left the decision to my husband, and he chose Christian Science treatment. The child was

Digitized by Google

healed in five days' absent treatment, no material remedy or appliance being used. I have also been healed of a painful rupture for which the doctors urgently advised an operation. Croup, colds, contagious diseases, and all the ills that are supposed to come in a family of three children have been met quickly and completely by Christian Science treatment, oftentimes by my own understanding.

I am deeply grateful for the understanding of God, His Christ, and the Bible, which I have gained through the study of Science and Health. I am also grateful to our beloved Leader for her ceaseless labor for mankind. I stand in awe before the courage that could present this truth to a world so much in need of it, but still clinging persistently to its cherished material beliefs.

DAISIE BURD PARSONS, Bismarck, N. D.

My heart is singing a song of praise and thanksgiving for the truth that has come to me through Christian Science. I am able to demonstrate with absolute certainty that Christian Science will heal all our diseases, if we apply its rules as we are instructed to do by our dear Leader, Mrs. Eddy. Christian Science came into my life over eight years ago, when material remedies had failed to restore me to health. I had been extremely ill for over two years, following a hemorrhage of the stomach. I was practically healed in one treatment, and in the years since Christian Science has never once failed me.

Words are inadequate to express my gratitude for my physical healing, and for what is much more, the spiritual teaching that has brought me near to God and made me fit to live and not afraid to die. I thank God more and more, as each day comes and goes, for the truth that He has given us through Mrs. Eddy.

ELLEN S. BEALL, New York, N. Y.

I wish to state that I have known Mrs. Ellen Beall of New York city for over ten years. We were coworkers in an orthodox church. I am the widow of a clergyman. I became interested in Christian Science through the healing of Mrs. Beall. She had been given up to die by the doctors, but Christian Science healed her. I can testify to this fact. I am a member of The Mother Church, and I was healed in Christian Science.

GERTRUDE DE WOLF WINDSOR, Peekskill, N. Y.

I wish to express my gratitude to God, and to Mrs. Eddy, who has shown us the way to demonstrate this healing truth. I have been healed of many ailments,—nervousness, heart trouble which was supposed to be hereditary, a throat affection, and jaws that were locked from the effects of the two other diseases. Christian Science has been our only physician for over three years. My little daughter was healed of ills that are supposed to attend a child's second summer, the worst being a serious bowel disorder. These were all overcome, and I am deeply grateful for the many benefits I have received and that divine Love meets our every need. Christian Science teaches that God is divine Principle, from which we can work out all our problems.

MRS. JANE TAFT KRAUSE, Canton, Ohio.

In the fall of 1907, while repairing a drill, my right hand was quite badly bruised and a large piece of the skin taken off. It was evident by the following morning that some impure matter had gotten into the wound, for my hand was badly swollen and inflamed. I then called on a Christian Science practitioner for help, and in less than an hour the swelling was all gone, the hand had resumed its natural color, and all soreness was overcome. I am deeply grateful for this and many other demonstrations which have come to me through the understanding of Christian Science.

FRANK MILLER, Jackson, Mich.

It is with sincere gratitude that I testify to the benefits I have received through Christian Science. Although I was not in great need of physical healing when I began its study, I was continually taking medicine for minor ailments. During the last four years these troubles have been met and overcome with Christian Science treatment, and I am in better health than ever before. For this I am very grateful, but I am still more so for the better understanding of God as infinite divine Principle,—"the same yesterday, and to day, and for ever,"—that the daily study of the Bible and Science and Health is bringing me.

I am indeed grateful to our dear Leader, through whose purity and unselfishness this message of Truth and Love has again come to mankind.

CICELY M. KENNETT, Putney, England.

It is with a deep sense of gratitude to God that I wish to tell how Christian Science helped me in a great emergency. My little niece, aged nine years, who had gone upstairs, had passed the first floor and was going up the next flight when I heard the sound of a heavy fall, and then all was still. When I went to her I found she had fallen over the banisters into the hall below, about twenty feet. She lay there quite still, with no apparent sign of life, but I at once declared the truth that our life is in God, not in matter, and that it could not be destroyed; then I quickly took her up to my room, and worked as I had never worked before in Science. I realized that there can be no unconsciousness in the divine Mind, that "man is not material; he is spiritual" (Science and Health, p. 468).

Then the thought came to me that she was not my own child, that her parents were not Scientists, and that the law requires a doctor for children. I felt that I was quite willing to have one, but I realized and declared that God is the only physician, and that He would heal her. In a short time she opened her eyes, and I knew I need not send for any one. As consciousness returned, I began to wonder what was the condition of the little body lying on my knees; and at once, with the strongest assurance, the words of the psalmist came to me: "He keepeth all his bones: not one of them is broken;" and I felt this was true. Before very long she was attacked by nausea, and I could tell by her movements not only that no bones were broken but that it did not hurt her to move. Very soon, however, she could repeat with me the words of the hymn,—

> Everlasting arms of Love
> Are beneath, around, above;

Also from the 91st Psalm, "He shall give his angels charge over thee."

For about an hour she lay in my arms, gradually getting better. Then I took her to bed, and going with her as she walked to her room those words of thanksgiving of the Master came into my mind: "Father, I thank thee that thou hast heard me." But I was yet to see how perfectly that work had been done, for when I undressed her, although she had fallen from what seemed such a great height, there was not even one spot on her body to mark an injury. No headache followed, only occasional nausea until the following morning, and then she was quite herself again. It seemed as though we have only to trust and stand aside, and we shall see God's perfect work.

I feel that it is only by a life consecrated to God that I can show my gratitude to our dear Leader, who has taught us how to understand and apply this great truth.

MISS ELIZABETH PICKRILL, Eastbourne, England.

This is to certify that my son was pronounced by different physicians to be afflicted with diabetes, which they said they could never cure. He was treated by a Christian Science practitioner and was entirely healed.

MRS. SARAH KING, Youngstown, Ohio.

Digitized by Google

It affords me great pleasure to tell others of the genuine happiness and perfect health I have gained through the knowledge of Christian Science. After suffering for years with severe and complicated stomach trouble, and weak eyes, besides being almost a cripple, I was asked one day why I did not try Christian Science. I was, however, discouraged with everything in general, so I did not at first care to give it a thought; but my second thought of Christian Science came after hearing and knowing of some very wonderful cures through its means. Then I began to reason that if one could be helped, why could not another? I had stomach trouble, with all the pain that accompanies it, and I could take only a limited quantity of food and only certain kinds. Medicines, which I took as regularly as I did food, afforded me but temporary relief.

After the first week of treatment with a Christian Science practitioner I left off my glasses, which I had always been obliged to wear whenever I read or used my eyes in any way, and a few days later my stomach was healed so that I was able to eat anything I wanted. My feet were in such a serious condition that I had no thought of their being healed when I first visited the practitioner, as I could not realize the possibility of a condition of that kind being overcome. It had been called by specialists flat foot in a very serious form, so serious that, after consulting several specialists, it was decided to put my feet into plaster casts up to my knees. After my feet had been crushed into the proper shape these casts were kept on for four weeks. They were then taken off, and plaster supports were made to fit under the arches of my feet and these were to be worn constantly.

I wore these supports three years, and my feet were then in such a condition and gave me so much pain that I little thought they could be healed, until I learned that we are governed by divine Mind and that there is no power apart from God. My feet soon began to feel stronger, and in three weeks I stepped out of the supports without telling any one in the family, put on my shoes without them, and walked wherever I wished. It has been over a year now since this wonderful demonstration of the power of Truth was experienced by me, through the teachings of our beloved Leader, Mrs. Eddy, and I can say with a grateful heart that I am healthier, stronger, and happier than I have been for many years.—BESSIE C. TEALE, Calistoga, Cal.

I should like to express my gratitude for what Christian Science has done for me and mine. I was led to investigate this wonderful truth through the illness of my little boy, some of the best doctors in our city saying he could live only a short time; others, that if he lived he would be afflicted for life. The child was having from five to fifteen spasms every day, and this went on for six months. I cannot tell what this little fellow suffered or what it cost me to have to sit by him and believe that nothing could be done for him. These attacks would come on without any warning, so that he received many distressing injuries. As these falls became serious, we had to have a brace made on wheels, so that he could go from room to room. Not long before I had lost a baby boy, and to see this one suffering so day by day seemed more than I could bear.

I had previously heard somewhat of Christian Science, but had no faith in it. The *Sentinel* lay on my table for a month before I decided to try the treatment. I was acquainted with two ladies, members of the Christian Science church, and often noticed their happy faces, and it was one of these that I called on to treat my darling boy. I saw a change the next day after the first treatment, and it was then that I searched the pages of the *Sentinel* with interest. My faith grew stronger each day. I got Mrs. Eddy's book, "Science and Health with Key to the Scriptures," and would sometimes find myself reading its pages as late as midnight and several times as late as two o'clock in the morning. When I returned this book I gladly purchased a copy for myself, and now I could not do without one. My boy is well now, and loves Christian Science, as does his mother also. He is only four years old, yet he understands that this "Key" unlocked the door that was between us and the true sense of health.

To say I am grateful does not express my feeling; my heart is running over with gratitude, and I wish I could adequately express my thankfulness for Christian Science, through which my child was healed, and for having gained a better understanding of God and His Word. My little boy was under treatment only six weeks, and though it has now been over a year since the treatment began, he has had no symptoms of the old trouble. He is so perfectly well that no one would ever think he had had a day's sickness in his life. As for myself, I had a trouble of fifteen years' standing, which was cured while I was reading the text-book. I can say to all those who are sick and sad of heart, to try Christian Science, for it brings the peace and rest "which passeth all understanding."

MRS. T. C. FITZGERALD, Jackson, Miss.

I would like to express my gratitude for Christian Science and my love for the one who through such consecration and self-sacrificing toil has given to a suffering world this perfect Science, through which may be gained the knowledge of Him "who forgiveth all thine iniquities; who healeth all thy diseases."

In March, 1901, the last physician of many who had tried to cure me of numerous ills of the flesh, organic and functional, said he could do nothing for me. With the loss of all faith in material ways and means, I turned hopefully to Christian Science, which had been urged upon me for nine months. During this time I had been reading the *Sentinel* and *Journal*, and other Christian Science literature sent to me by a kind friend. I applied to a practitioner for treatment, and immediately experienced wonderful relief. The healing was gradual; but now I can gratefully say that it has been six and a half years since I have lost an hour from my daily duties on account of illness. I cannot be too grateful for having been patiently and lovingly led out of the darkness.

Through spiritual regeneration and physical healing, life has taken on a new aspect for me, and I could never recount all the blessings which have come to me through Christian Science, for each day brings added ones. Not the least of them is the peace and harmony, and a higher and larger sense of love experienced at the Christmas season. Five years ago, after reading "A Question" and "Christmas as in Christian Science," by our Leader, and published in the *Sentinel* of Dec. 16, 1905, I realized that I could be free from the bondage of material giving, which had become very burdensome. The mad rush, anxiety, and excitement at this season had each year resulted for me in an attack of illness, and the Christmas season was anything but a holiday to me. When Mrs. Eddy's articles were published in the *Sentinel* I was so ready for them that I cannot express the joy and relief I experienced. Since then, the time I had formerly spent in the popular observance of Christmas I spend in realizing the allness of God and the nothingness of matter, and in trying to gain a higher sense of the peace and harmony and love taught in Christian Science.

ELLEN NEALE, Washington, D. C.

On going into the local Christian Science rooms, my eyes rested on these words of Christ Jesus, "Ye shall know the truth, and the truth shall make you free." I desired to be free from the bondage I was in, and as a last resort I had decided to give Christian Science a trial.

Digitized by Google

The practitioner to whom I went for help advised me to procure a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and read it in connection with the Bible. Following his advice, the next day (the fourth of April, 1907) I commenced to read. The deafness from which I had been suffering for nearly four years could only be temporarily relieved by the specialists, by removing the growth which seemed to be its cause, and at this time the surgeon had been unable to relieve me. I was very much discouraged, thinking that if the growth could not be removed I should become totally deaf. At first I was so prejudiced against Christian Science that I could not understand what I read; but feeling it to be my only hope, I read on, and soon the light dawned. By the latter part of June I realized that I was healed. On July 12 I took off the glasses which I had been wearing for thirteen years. A spinal trouble, which was the cause of severe pain, also has vanished. I find myself strong and able to endure more than ever in my life before. With a practitioner's aid, chapped hands and other ills have disappeared.

For these wonderful physical healings I am very thankful to God, but for the peace "which passeth all understanding," that peace which the world can neither give nor take away, words cannot express the joy I feel. My ideal is to grow in this blessed truth until I may help others to work out their problems.

MISS EDNA OSTRANDER, Salamanca, N. Y.

I would like to tell what Christian Science has done for me. As I was going after a load of wood, I had what to mortal sense was a very bad accident. I was sitting on the reach of the wagon, and when going down hill, the brake caught my legs and held me tight. As I had no control of the horses, I was dragged about five rods before I could stop them.

The first thought I had was, "God help me." I had to lift the weight of the wagon and work myself out, which took about a half hour. I then pulled the wagon to one side of the road and went home. After I had unharnessed the horses, I went to the house, and although my wife when she came to the door saw that something had happened, all the time she was declaring the truth for me. I sat down in a chair while my wife cut the felt boots off my feet, which were badly swollen and twisted out of shape; but all this time I had walked on them they did not pain me much, as there was a sense of numbness, and I knew that Truth was helping me. When the boots were removed I twisted my feet the way they should be, and as I turned them the bone seemed to snap like a pistol shot, and to my surprise went into its proper place; but I knew it was only natural for God's child to have every bone in its right position.

I read Science and Health and asked my wife to treat me, and we both read and reread the Lesson-Sermon together. The neighbors came to see me the next day, and told me I would not be able to walk for more than six months. They said I ought to have a doctor, but I told them I would rather depend on God, the great Physician, who, as it says in the Bible, heals all our diseases. I sat in the chair for two days, and then I could push a chair to the bed. On the third day a man made me some crutches, and I used them for about a week. I finally got so I could walk without them, and that was only two weeks later. Thanks be to God for this healing, and to Mrs. Eddy, whose book, Science and Health, makes everything so plain that the Bible can be understood in the right way.

About a month after this a piece of bone about an inch long came out of my leg, and three or four days after that another piece came out. The wound then healed up shortly, and I was completely well. I had no practitioner, except the treatments given me by my wife, and we read the Bible and Science and Health. I am indeed thankful for this wonderful demonstration of the power of Truth, although we have had many other proofs in our home which have seemed remarkable. My wife and I are very thankful to God for the true way which we find in Christian Science.

J. B. WATTERS, Marengo, Ia.

When Christian Science found me, in May, 1908, I was "down and out," as men say. I had suffered severely from the liquor habit for fourteen years, and the snuff habit for twenty-eight years; and had tried many times in the last eight years to get relief from medicines. I appealed to our family physician, who only laughed and said, "Don't take the first drink." Then I would pray, but instead of growing better I grew worse. My family and my friends forsook me and prophesied for me a drunkard's grave.

Upon the loss of a good position, I turned to Christian Science, and this is the result: I am now a man who does not drink or use snuff, who is respected, and who has been helped physically, financially, and spiritually. I was healed of those bad habits in one week's treatment. I firmly believe that all who desire may be helped as I was, and I pray that this testimony may benefit some one who needs such help. I am indeed grateful for what Christian Science has done and is doing every day for me and mine, and therefore I offer this expression of gratitude to God, and to Mrs. Eddy, for the many blessings I have received.

HENRY SCHWARZ, Los Angeles, Cal.

I can see how one who has never been brought under the direct influence of Christian Science, and whose only information regarding its teachings has been gained from those who know no more about it than himself, might not be very favorably impressed by these views; but how any one who has had an opportunity to see the work that is being accomplished in the line of healing and regeneration through Christian Science, can go on his way without stopping at least to investigate, is hard for me to understand. I was brought up in an orthodox church, and at an early age was taken into membership and active work in various departments. After trying for many years to live up to its teachings, there gradually grew up a doubt, till a question of the efficacy of prayer was presented, and being unable to believe the theory advanced, I gradually drifted away; till at last I awoke to the fact that the church was nothing to me, and I had no fixed belief in anything, except that there must be a God and that He must hear and answer prayer.

During the next few years I prayed to this unknown God, but there did not seem to be any answer to my prayers until in the summer of 1907 I had the opportunity of being brought in touch with a living witness of the power of Truth as revealed in Christian Science. This came to me just after two prominent surgeons had told me that an operation for the removal of the appendix was the only thing that would save my life. This witness was a friend who spent a week in our home, and as this was the first real experience I had with a Christian Scientist, the beauty of the spirit manifested changed my views from that of bigoted prejudice to one of respect. On leaving, this friend gave me a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, with the request that I read it.

The reading of this book marked a turning-point in my life, for before I had finished reading the chapter on Prayer I was healed of stomach trouble from which I had been suffering for nine years, and before the end of a month I had thrown away glasses that I had worn for fifteen years. The change in my physical condition has been great, and for this I am deeply grateful; but that for which my gratitude knows no bounds is the spiritual uplift and the opening of the Bible as a book for every-day use. I have found a

Digitized by Google

God who is Love, where before I saw only a mighty ruler. I am striving daily by my life to prove my gratitude to God, and to our Leader, Mrs. Eddy, for this wonderful revelation which has been given to us in this age.

FRANCIS W. ROBINSON, Dubuque, Ia.

I first learned of Christian Science in the fall of 1886. I was then suffering from a distressing nervous trouble, and had been for many years, being unable to get relief through material means. I also had other serious troubles, which the physician said only an operation could relieve. I was obliged to wear a support—had worn it five years. Besides these ills I was in bondage to colds and wore a large piece of flannel on my chest winter and summer. This and the support were removed after a talk of two hours with one who had been healed of a distressing stomach trouble by the reading of Science and Health; then many minor troubles also disappeared. My life was made miserable by many sins of disposition, and these did not yield readily; but now many are gone, and I know in due time the rest will disappear.

I am grateful for the physical healing, but even more grateful for the better understanding of God and man's relation to Him. We have had many proofs of the truth of Christian Science, as we have relied absolutely upon it during these years, even when the results seemed slow and required much courage and patience. We are grateful indeed to dear Mrs. Eddy. I know the deepest appreciation and gratitude for Christian Science is manifest in the daily living of it.

MRS. ALIDA D. JOYNES, Grand Rapids, Mich.

A number of years ago, through the healing of my mother from a very painful disease with which she had suffered many years, I began to read and study Science and Health, and to attend, whenever possible, the Christian Science services. Since that time, whenever sickness or trouble of any kind has come to me, I have turned with confidence to God as the only power, ever present to help and to heal.

In July, 1900, I became quite ill with a severe cold, which manifested itself with chills and fever. I was unable to sit up or do anything for myself, but after two treatments given me by a Christian Science practitioner, I was restored to my usual health. This was to me another proof of the healing power of Truth, as taught in Christian Science. For all the blessings Christian Science has brought to me, I am indeed grateful to God, and to our dear Leader, Mrs. Eddy.

CARRIE H. FLINT, Medford, Mass.

[Written for the *Sentinel*.]

LIFE'S UNSEEN HARMONY.

SUSIE C. MAXFIELD.

BEYOND the seeing of the mortal eye
Are pastures green and waters still,
Where all, in glad obedience to their Father's will,
Now calmly walk, and safely down do lie.

Beyond the hearing of the mortal ear
Floats music, sweet as when on that glad day
The morning stars sang, in triumphant lay,
The glories of creation, far and near.

Beyond all sense of mortal discord, free,
Stands God's creation, perfect, spiritual,
And there, secure, all His own children dwell.
There all is Love, and all is harmony.

FROM OUR EXCHANGES.

[Harold Begbie in *Christian World*.]

The Christianity to which men have become indifferent is that Christianity which has for its first postulate a human origin of evil, and which makes of sin so violent and terrible a mutiny against God that the sacrifice of Christ was essential to secure the salvation even of a moiety of the human race. Men reject this idea. They admit the seriousness of sin and deplore its consequences, but they cannot bring themselves to think that it was simply on account of sin that the Son of God became incarnate and suffered death upon the cross. It is the idea of sacrifice they reject. They feel that Christ came as a light to the world, and not as a victim; that his revelation lies in his teaching, and not in his death. Light of the world—yes. But "propitiation for our sins"—no.

Here, I feel sure, is the cause of modern indifference to religion. And here, too, if theologians will well examine themselves, is the root cause of all theological confusion. It is for a new definition of sin that humanity is waiting, and on that definition hangs everything that is precious to religion. There can be no reconstruction until it is finally settled between the theologian and humanity what is the origin and nature of sin, and what is the true meaning of the incarnation.

The church cannot move an inch from her position as regards the extreme seriousness of sin; and humanity will not take one step toward the altar where she offers Christ as a propitiation for sin. How, then, can church and humanity be brought together? Unity, I think, is to be found in a truer understanding of the revelation of Christ both by church and humanity. Into the darkness and chaos of these times it is necessary that the light of the world should shine: necessary, too, that we, dwelling in that darkness, should be more eager to comprehend the light than to exalt the tapers of our reason or the guttering candle of tradition.

[*Harper's Weekly*.]

Who would say that the slow and reluctant death of the doctrine of eternal damnation in the last century did not do much toward freeing and expanding the spirit of Christianity? Even today the slackening of the hold of set doctrines upon men's convictions is doing much to expand and spread the spirit of religion. One can almost see the prophecy that ultimately men shall worship in spirit and in truth coming to be fact. No longer a subscription to a set of articles, or a regular attendance at a given edifice, or ceremonies or cults proclaim a man a Christian; but he is literally a Christian according to the approximation of his thought to the thought of Christ. The spirit of his daily life makes or unmakes him a Christian. In measure as the letter of the doctrine fades, the spirit comes free. The Christian life is hardly seen today by any intelligent person as a subscription to any set forms; but it is the life of self-abnegation, large tolerance, and morals of which the example was given so many centuries ago. A real Christianity begets the Christian life, and the Christian spirit the sense of brotherhood and human solidarity.

[From a sermon by Rev. H. C. Ledyard in *Everybody's Journal*, Newport, N. Y.]

There is no such thing as a miracle and never has been. The things which Jesus did, and which many have done since his day, have caused wonder because man did not understand how to adjust himself to the higher laws. Instead of a so-called miracle being contrary to natural law, it was the ability on the part of the worker, whether Jesus of Galilee or some modern healer, to come into real harmony with the great law of the eternal Mind. I have heard many cultured and intelligent people discuss this modern

Digitized by Google

phenomenon. Some have begun by abusing it, but in the end they have been forced to admit there is a great truth in it,—some truth which enables the person to find freedom from the fetters of sense and passion, the power of soul over body; victory of the mind over its tyrants, fear and anger; to realize the presence of God, a real God, manifested with power, and above all the promise of an immense and immediate good as a result of a real faith.

[*Christian Work and Evangelist.*]

Christianity is not Christian while it sits supinely by in its great wealth—for it has most of the wealth of the world inside its churches—and lets little children, because of human greed, be dwarfed and stunted in mines and shops and factories, and lets little boys shiver on the streets through stormy winter nights with papers and messages, and lets thousands of little children go underfed, while one man pays one hundred thousand dollars for a dinner-set to use in his vulgar house three or four times a year to entertain already overfed people, and lets thousands more die from tuberculosis because they can get neither food nor air nor light. All this while thousands of its professed followers squander great sums on eating and drinking and living far, far beyond even extremest comfort, spending more on a ball or a dinner or sports than would suffice to run a business giving lucrative employment for a whole year. While Christianity permits this, without crying shame through all the streets of the land, it is not Christian.

[*Standard.*]

We may safely assume that where people of a community have the choice between a preacher who calls upon them to exercise their gray matter, and one who is sure to present a choice collection of funny stories, intermingled with more or less religion, a majority will select the latter. It is just because of this that some preachers systematically provide entertainment. Their contention is that people will come to be amused, and that having come for this purpose, small injections of the gospel may be administered without arousing serious opposition and much to the benefit of those treated. It seems to be a question of some gospel or none; for if it is all gospel, they will stay away. Of one thing we have become convinced, viz., the venerable theory that the majority of people are "hungry for the gospel" is not warranted by the facts.

[*Christian World.*]

Good and marvelous is the expressed, but the unexpressed is better. Behind all we see looms up that which is yet to be seen. The world's great wonders are yet to come. We see now all we are equal to seeing. But we are linked to a spiritual realm which is ceaselessly at work upon our soul and its faculties. With their growth our universe will grow. That is, it will reveal itself, opening up its mysteries, showing the wonders of its hidden beauty, exhibiting itself ever more clearly as the visible garment of God.

[*Watchman.*]

It may be said of Elijah that he drew out the power of God in a most marvelous manner, and this is the story of the whole Bible, in which man after man of God dared to do great things in the name of Jehovah, and succeeded because they could be done. But of all the men of God, our Lord was supreme, and through his fulfilment of every condition of power secured for mankind all the grace and gifts of God.

[*Congregationalist and Christian World.*]

There has never been a time when the leaders of Christendom have set their minds upon a kingdom of worldly power, but the king of peace has brought their hopes to naught. When the enthusiasts, in haste to end the confusions and distractions of the world, would take Christ by force and make him ruler of unwilling hearts, he withdraws himself. He is a king already, but only over those who freely choose him.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel*.

ATTENTION IS CALLED to the new volume, "Poems by Mary Baker Eddy," now on sale. Specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

NEW PAMPHLETS.

Attention is called to a new pamphlet, "Causation: Viewed in the Light of Christian Science," by Frederick Dixon.

Also on sale are four new pamphlets: "Seeking and Finding," "Prayer and Healing," "The Divine Nature," and "Upward Footsteps." Each pamphlet contains five to nine articles that have previously appeared in the *Journal, Sentinel,* or *Monitor;* and they are particularly suitable for handing and sending to inquirers or persons who are becoming interested in Christian Science.

"THE MOTHER CHURCH."

A new edition of Joseph Armstrong's book, "The Mother Church," is now on sale. In addition to the matter heretofore published, it contains two letters from Mrs. Eddy to Mr. Armstrong, in which she refers with approval to this book; also twelve photographs, illustrating the building of the extension to the church edifice.

NEW POST CARDS OF THE MOTHER CHURCH.

Post card photogravure, in sepia tint; an exact reproduction of the large photogravure of The Mother Church Buildings and Publishing House with parkway in foreground. Single copy, 5 cents; twenty-five copies, $1.15; one hundred copies, $4.25.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90; six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. XI indicates the year 1911 and XII, 1912. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of
Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Herbert Knox Smith, commissioner of corporations, in a summary of his findings in the investigation of the lumber industry, shows these facts: The concentration of a dominating control of our standing timber in a comparatively few enormous holdings, steadily tending toward a central control of the lumber industry; vast speculative purchase and holding of timber land far in advance of any use thereof; an enormous increase in the value of this diminishing natural resource, with great profits to its owners. This value, by the very nature of standing timber, the holder neither created nor substantially enhances. "The past history and present status of our standing timber," he says, "drive home upon us the imperative necessity of revising our public policy for the future management of all our remaining natural resources. Only forty years ago at least three fourths of the timber now standing was (it is estimated) publicly owned. Now about four fifths of it is privately owned. The great bulk of it passed from the Government to private hands through enormous railroad, canal, and wagon road grants by the federal Government; direct Government sales in unlimited quantities at $1.25 an acre; certain public land laws, great tracts being assembled in spite of the legal requirements for small holdings. Such laws were wholly inappropriate to forest regions; but, though vigorously condemned in several purports, they are still largely in force. In theory, they are intended to distribute the public lands in small tracts as homes for freeholders. In fact, they actually furthered timber concentration in vast holdings."

In a speech during his recent western trip, President Taft said: "There are those conservative protectionists who hang back from an approval of this agreement [reciprocity with Canada], on the ground that it is a departure from the principles of protection and is the opening wedge to let in free trade. My own view is that no step could be taken more in the interest of a reasonable policy of protection than the approval of this treaty. The very existence of the policy depends upon our abolition of the tariff where it is not really needed under the principle of the last Republican platform. If we persist in retaining it in these times of high prices and gradually exhausting food supply, and base our retention on protection principles, we shall rouse an opposition that will know no moderation, and will not cease radical economic changes until it has removed from the statute-book the last trace of a protective tariff."

Decisions handed down by the commissioner of general land office hold for cancelation thirty-two entries, embracing valuable coal lands in the Lander, Wyo., land district, upon the ground that those entries were made fraudulently in pursuance of a conspiracy and by means of "dummy" entry men. The lands were transferred to the Northwestern Coal Company, alleged to have been organized for the purpose of taking them over. If the decisions of the land office are sustained by the department of the interior, to which an appeal can be made, about ninety-five hundred acres of coal land, valued at about one million dollars, will be restored to the public domain.

Legislation to make the law and policy of Massachusetts regarding railroad security issues correspond, and a tribunal established by concurrent action of the New England states, to be initiated by the General Court or the Governor of Massachusetts, having ample and sufficient powers to draw up a standard of uniform policy and statute for New England, are recommended in the detailed report filed by the railroad commissioners, the bank and the tax commissioners, acting as a joint commission with the Legislature.

Should the Sulloway pension bill become a law as amended, it will raise the annual persion charge of the nation from one hundred and fifty-five million dollars, as it is now, to the neighborhood of two hundred million dollars. That is, the present expenses of a war which ended forty-five years ago, will call for taxation to an amount not very much below the annual cost of our present army and navy combined.

Thirty-two states out of forty-six have already gone on record in their Legislatures as in favor of an amendment to the Constitution that senators be elected by direct vote of the people. If the senators of these states now in Congress vote on the amendment in accordance with the expressed preference of their states, the required two thirds vote for its acceptance is assured.

A resolution introduced by Senator Clapp directs the attorney-general to make inquiry concerning the relations between the United States Metal Company and the Amalgamated Copper Company and the Anaconda Copper Company, with a view to determining whether the relation does not constitute an unlawful merger in violation of the Sherman antitrust law.

After more than ten years of agitation the bill looking to the creation of national forest reserves in the White mountains and the southern Appalachians has been passed by the Senate by a vote of 57 to 9. The bill was passed by the House last session and as it was accepted by the Senate without change, it lacks only the signature of the President.

Francis B. Loomis, former assistant secretary of the navy, predicts the completion of the six hundred miles of railway necessary to form a continuous line from New York to Panama within five years, and within twelve years the construction or completion of the links in the proposed railway from New York to Buenos Aires.

The construction of a permanent combined railway and highway bridge over the Panama canal has been recommended by the board of engineers. It is proposed to make the bridge one hundred and seventy-five feet above the surface of the water, so the largest vessel afloat could pass under it without inconvenience.

The House has voted to increase the salary of the chief justice of the United States from $13,500 to $15,000 a year, and the salaries of associate justices from $12,500 to $14,000. The increase was made by an amendment to the bill codifying laws relating to the judiciary.

John Hays Hammond has placed in the hands of President Taft his acceptance of the appointment of special ambassador to attend the coronation of King George V. of England in June. The last special ambassador to Great Britain was Theodore Roosevelt.

The mayor of Boston has submitted to the Governor of Massachusetts his views on the desirability of legislation that will permit the taxation of the unearned increment in land values throughout the state.

Chicago will spend $49,130,468 this year, according to the figures in the annual budget, which was completed by the members of the finance committee of the city council after six weeks of steady work.

The Senate has passed the Lodge-Lowden bill, appropriating five hundred thousand dollars for the purchase or construction of United States embassy buildings abroad, and it now goes to the President.

The per capita wealth of the United States as based upon the new census figures is $34.43.

International.

Details of the contract for the great dam which is to be constructed at the Hindie section of the Euphrates by John Jackson, Ltd., have just been made public. The dam is in connection with the Mesopotamia irrigation works and is to cost fifteen million dollars. The contracted work includes additions to existing barrages, as well as the building of a new one, larger than any that have been hitherto erected. It also provides for an alteration of the course of the river.

The draft of the bill for the separation of church and state in Portugal has been completed. It guarantees liberty of conscience, education, and propaganda, subject to simple control. The churches will be placed at the disposal of the clergy, the only stipulation being that the clergy must show they are able to keep them up.

Business men and transportation companies count upon an influx of something approaching two million visitors to London during the coronation season. A considerable proportion of these will be foreigners, Americans and colonials probably predominating. Hotels are receiving many orders for accommodations.

The French Senate has passed a bill modifying the legal time in France and Algeria, which is now nine minutes twenty-one seconds slower than that in use in western Europe. This action is to be taken so as to bring France within the same time section as England, Belgium, Holland, and Spain.

Great interest has been roused in France by the discussion of the compulsory old-age pension plan put forward by the government. This is designed to supplement the voluntary system which has been in effect since 1886. No less than twelve million workers would benefit under the new law.

The proposal for the construction of a trans-Persian railway has been approved by the council of ministers, on the understanding that it will not involve any serious damage to Russian trade.

The estate of Baron Albert von Rothschild, who passed away at Vienna recently, is estimated as amounting to between one hundred and fifty and two hundred million dollars.

According to the frontier correspondent of the *Englishman*, the Ameer is taking steps to improve communications in Aghanistan by extensive road-making operations.

Premier Asquith has announced in the House of Commons that he would introduce the government's veto bill Feb. 20.

Industrial and Commercial.

The output of gold from the Klondike region for the year 1910 amounted to four million one hundred thousand dollars.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

PLEASURES.

HON. CLARENCE A. BUSKIRK.

THE notion is generally held that many of the pleasures of this life, including those which we most keenly enjoy, are sinful; that is, they violate some law which governs man's being. This, of course, carries the correlated notion that such pleasures are followed by penalties, such as pain, satiety, disgust, etc., and that the measure of the enjoyment is the measure of the punishment. Many who try to convince themselves that the pleasures are worth the price, encourage themselves in the pursuit and indulgence of what they regard as sinful pleasures, and thus grow more and more accustomed to the thought of habitual wrong-doing. To such persons the lines of Pope too frequently apply:—

> Vice is a monster of so frightful mien,
> As to be hated needs but to be seen;
> Yet seen too oft, familiar with her face,
> We first endure, then pity, then embrace.

The transitoriness of pleasure is another correlated notion, as expressed in the lines of Burns:—

> But pleasures are like poppies spread,
> You seize the flower, its bloom is shed;
> Or, like the snow-fall in the river,
> A moment white, then melts forever;
> Or like the borealis race,
> That flit ere you can point their place.

From this the belief has frequently gained place that all pleasures are to be condemned as belonging to the same category; this is the scheme of many moralists. As a result the straight-laced Puritan has found himself face to face with the gay cavalier. For while "mortal mind" really has no laws, it falls into habits, and one of its habits is for opposites to produce each other. As a rebound from what its possessors would proudly condone under the name of excessive piety, although it is evident that none but a false brand of piety can be excessive, there has appeared throughout history the disposition to eat, drink, and be merry, on the ground that tomorrow we die. The mistaken piety which looks upon all pleasures as sinful has for its complement an equally mistaken epicureanism.

A current dictionary gives us the following definition of pleasure: "The agreeable emotion or sensation produced by the enjoyment or expectation of something good, pleasant, or gratifying." Is it not evident, upon careful reflection, that there are some pleasures which are good as well as many pleasures which are sinful? The pleasures which are good violate no law of man's being; they ought not, therefore, to be followed by any punishment; they ought not to involve any question of paying a price for their enjoyment; and they do not need to be transitory because evil. The pleasure derived from doing a good deed unselfishly is one of many that might be cited in illustration.

> Not "like the borealis race
> That flit ere you can point their place,"
> But like the sunlight's golden gleams,
> That visit us in kindling streams,
> Unquenchable through day and night,
> From the eternal source of light,
> The pleasures which irradiate earth,
> Endure because of heavenly birth.

When the overzealous moralist or ecclesiastic indiscriminately condemns all pleasures as sinful, he does an ill thing for mankind, for the denial of sinless pleasures too often tempts to sinful pleasures, because the impulse to find enjoyment is a law of our human nature, a law which is constant and universal. It is, therefore, our duty to search for and direct thought to the pure pleasures which involve no wrong-doing, and to cultivate their fullest enjoyment. How, then, shall we rightly differentiate between the pleasures which are evil and those which are good? Every pleasure which is in harmony with the law and manifestation of the Supreme Being is good, and every pleasure which is not thus in harmony is bad, whether sanctioned or condemned by human codes. Our guide in making the right classification is not to be derived from academic, medical, or ecclesiastical codes and dogmas. These have always been, as they now are, variant and contradictory. Our safest guide is in basic Christianity, which is so practically set forth in the writings of its great modern interpreter, Mrs. Eddy. The pleasures which do not conflict with divine good, with Life, Truth, Love, surely these are all open to our enjoyment; while their opposites are as surely to be avoided.

While the law of God cannot be infracted, because infinite and eternal, yet the false human belief in the existence and power of evil as an entity separates us, according to the extent of that belief, from the realm of Truth, and so exiles us in our consciousness from God. How clearly this lesson, this verity, is enwrapped in the garden of Eden narrative of the eating of the fruit of the knowledge of evil as well as of good! Mortal mind is constantly affirming that it is a creator and lawgiver. It seeks to ordain penalties and to inflict them, and its efforts are always perverted and perverse because it is not conformed to the eternal good; while its asserted pleasures bring that invariable disappointment and sorrow which led the psalmist to cry out, "I have eaten ashes like bread, and mingled my drink with weeping." As our Leader writes, "That there is no real pleasure in sin, is one of the most important points in the theology of Christian Science." "Truth will at length compel us all to exchange the pleasures and pains of sense for the joys of Soul" (Science and Health, pp. 404, 390).

THE VALUE OF TRUE EDUCATION.

EUGENIA BEATRICE MABURY.

DURING schooldays, while a nominal student of Christian Science and depending solely upon it for physical help, the writer found little time or inclination for religious reading, as the hours seemed filled to overflowing with college work and college play. However, a few years after leaving school, having become absorbed in the affairs of life, she experienced a sense of keen disappointment to find that the knowledge so eagerly as well as laboriously acquired seemed fast slipping away. Facts of history, names, periods, data in the fields of literature, art, and ethics, once carefully gathered and ticketed in memory, appeared as time went on less readily available, if not entirely obliterated.

Copyright, 1911, by The Christian Science Publishing Society.

Digitized by Google

This is, perhaps, a more or less common experience with the college graduate; but in the light of subsequent sore trials and spiritual awakening the writer views with a very different sense this seeming loss, as she begins to realize with Paul that the wisdom of this world is indeed "foolishness with God." To her mother, a devout Christian Scientist, she owes her escape from some of the more objectionable material studies, but many were the wasted hours (as she now reviews her course) spent in delving into the accumulation of philosophical dogmas and vague hypothetical theories based on mortal mind as premise, with which she sought to lumber up her mental storehouse. During the years which have since elapsed, many of these theories have become obsolete to mortal mind itself. Time and again do our Leader's words recur to thought: "Give to it [Christian Science] the place in our institutions of learning now occupied by scholastic theology and physiology, and it will eradicate sickness and sin in less time than the old systems, devised for subduing them, have required for self-establishment and propagation" (Science and Health, p. 141).

The feelings thus expressed as to the nature and futility of material learning seemed to culminate during a little incident a few years ago. The writer was visiting one of the world-famous observatories, where her friend, the professor in charge, explained the mechanism of the huge telescope which, like a superhuman eye, nightly swept the heavens. The clarity of the atmosphere in that particular latitude, the vast reach of the instrument, the distance and magnitude of the celestial bodies, and the still unexplored fathoms of space were expatiated upon, while the professor with pardonable pride—for his name stands among the foremost in the astronomical world—recounted the many, many months and even years spent in patient search of double-stars, their calculation and measurement. Hundreds had been discovered and tabulated, but there were yet many more, and the astronomer spoke enthusiastically of the years of work before him.

"But, professor," the writer had the temerity to ask, "after all this endless study and research, wherein does it practically benefit humanity?"

In answer her friend with the utmost kindness explained what to his sense was the incalculable value of the data thus added to the knowledge of mankind. But the writer scarcely heard him, for she was busy with her own train of thought. Of what use, she mused, would this material knowledge be at the bedside of pain? It could not heal a single disease, could not lift by jot or tittle the burden of sin, nor bring any surcease to sorrow and woe. Never more fully than at that moment did she realize the truth of the passage on page 209 of Science and Health, where Mrs. Eddy, with her spiritual vision fixed upon the reality of being, explains to us that all material beliefs and their externalization "must give place to the spiritual fact by the translation of man and the universe back into Spirit." And of what little relative value could be the results of the many weary hours spent in all these tedious, most painstaking astronomical calculations, since, as the Bible teaches, "the elements shall melt with fervent heat" and be consumed, to give place to the "new heaven and the new earth" of Spirit.

The lesson learned from the foregoing incident has never been forgotten. Our Leader tells us that "observation, invention, study, and original thought are expansive and should promote the growth of mortal mind out of itself, out of all that is mortal" (*Ibid.*, p. 195). For a student to pursue a practical, helpful course of study, without being enslaved to a prescribed curriculum, cannot fail to be of advantage. Nevertheless, we must not forget that in Science we can become truly educated only as we realize and demonstrate the fact of the one great intelligence, the one Mind, which comprehends all being, all law, all activity, to which past, present, and future are known, and which is reflected by man and the universe,—all that is beautiful, good, and true.

TRUTH UNVARYING.

JOHN O. BARTLETT.

ANY careful observer can hardly fail to see that the world's belief in causation is largely on the side of evil, and that its sense of effect is proportionately manifested in disaster, disease, and distress. It is, therefore, self-evident that the remedy for this seeming condition lies in that understanding and realization of the omnipotence and omnipresence of divine Love which ever brings forth the manifestation of health and harmony. It is the goodness inherent in the being of God, and the good which is found by all who seek earnestly and persistently, that commends His word to the needy as their source of comfort; as their strength for the overcoming of the false beliefs which are the enemies of health and harmony; and as their guide out of discord into peace. "Divine Science, the Word of God, saith to the darkness upon the face of error, 'God is All-in-all,' and the light of ever-present Love illumines the universe" (Science and Health, p. 503).

Christian Science presents an open field to each hungry and thirsty seeker, whether the seeker turns with confident or with timid steps toward the one loving Father. This field is in no sense one of competitive endeavor or strife, but a field where the contest is with self, and where the victory is gained through the yielding up of selfish interests and the human will, to the will of divine Love, the giver of all good. The Father's will toward His children is as kind and compassionate now as when the Master through his obedience to the divine will healed the multitudes of sickness, fed them when they had no means of getting food for themselves, and preached to them the gospel of a present-day salvation. Do the sick and suffering need to wait for God to become ready to bestow His good gifts? Or are they only closing the avenue through which the divine blessings would reach them, by not being willing to receive of God in His appointed way? In Revelation we read, "Behold, I stand at the door and knock: if any man hear my voice, and open the door, I will come in to him, and will sup with him, and he with me."

No one would think of listening to any suggestion to wait until the supposed law of gravitation was ready to act, or until a rule in mathematics was ready to be used. If we raise the gate at the reservoir and disturb the level where the water is resting, it will not cease its activity until it finds another level. And, however many there may be using the mathematical rule at the same time, the rule suffers no more strain than if it were used by only one. Is the divine Principle less potent or unceasing in its action to maintain harmony in man and the universe than is the law of gravitation? Is the operation of the law of man's being and of all creation less capable of demonstration in the affairs of men, or less universal in its adaptation than a mathematical rule? Our Leader says, "All reality is in God and His creation, harmonious and eternal. That which He creates is good, and He makes all that is made" (*Ibid*, p. 472).

Harmony prevails now, in all things that pertain to relationship with the Father, and we become conscious of this fact in the proportion that we understand that God is our only Father. Christian Science has brought to us the understanding that the unerring law of Spirit governs every circumstance that has any bearing upon our welfare. There is no place left open for uncertainty or chance with its category of dire results. Science recognizes only the government of Principle and denies the possibility of any chance action. All belief in uncertainty must yield to absolute certainty when divine law is recognized and its operation understood and demonstrated. We need to base our think-

Digitized by Google

ing upon the teaching of Christian Science, and keep thought in conformity with this Science, that the harmony of the divine Principle may continually strike a balance with our needs. The desire for personal comfort and ease, and the inclination to gratify selfishness or pride, should not be allowed to prevent us from attaining that degree of consecration and devotion necessary to the overcoming of all false beliefs with spiritual understanding.

Because mortals have been taught to believe that through physical birth and growth man has life, intelligence, and strength apart from God, thought inclines to turn to the body and its seeming conditions in order to determine what are one's prospects. This belief is in direct conflict with the teaching of the Christian Science text-book, where we are taught that all is Mind, and that man is made in the likeness of Spirit; that all have one infinite Father, in whom we live and have our being, and are thereby protected from all harm, blessed with all good, since our Father is divine Love.

THE ARMOR OF GRATITUDE.

VIOLET KER SEYMER.

THERE are moments when one is tempted to believe that fear and discord are besieging one very closely, moments when one's "Get thee behind me, Satan," is too feebly uttered to be of immediate avail, and indeed when it may sound more like an expression of fear that error may prolong its unwelcome visit. Perhaps the Christian Scientist has faithfully handled every aspect of the case as he sees it, and yet has not succeeded in dispelling the mist of false belief. May it not be said that in these moments gratitude is found to be the hyphen connecting human consciousness with its deliverer, divine Mind? When such baffling midnight experiences come, it has often been found that sheer gratitude for past blessings scatters the error all in a moment. Let the student try the experiment of dropping every other argument and line of thought and declaring with David, "At midnight I will rise to give thanks unto thee because of thy righteous judgments." It is just this righteous judgment that delivers the sick and the sinning from their bondage, and we do well to trust it as an infinite power available for each.

The effect of this gratitude, begotten of past blessings quickly enumerated in memory, is to engender confidence and banish the ghost of fear and apprehension. The entrance of divine Love at the same time provides the exit for fear, and harmony is restored. At midnight, in the inner prison, their feet made fast in the stocks, Paul and Silas rose above their false sense of environment and sang praises to God. The result of this unquenchable joy and gratitude was that they were immediately released. Escape from sickness and sin can be just as immediate. When the present hour does not seem to hold any cause for gratitude, it is well to remember that the God who is without "variableness, neither shadow of turning," is at that same moment blessing all creation without a single second's interruption. We have but to break away from the evidence of the physical senses and claim for ourselves or another the harmony which is always just at hand.

Homage and gratitude form part of the tithes which we are to bring into the storehouse incessantly, even in the darkest hour. So doing, we shall most effectively turn the tables on error and rise above the delusions of material sense, since it is evident that gratitude can neither suffer nor be afraid. Not the least delightful part of the disciples' midnight experience was that the other prisoners heard the unaccustomed sound of singing, and it must surely have given their thoughts another direction. How often has it been found that the individual, apparently made a prisoner in his body, has heard from the lips of another the account of his healing through Christian Science, and has at once felt his own heart leap with hope at the prospect of a similar release! Although good has now become such a natural factor in our lives, we should never take even a little blessing for granted. In what mortal belief calls "a dark hour," grateful recollection of past needs met often meets the present sense of need.

Gratitude is very clear-eyed and very fearless; it never believes in any mist, because it constantly rejoices in the fact of God's presence. This attitude of mind is the very best preserver of peace in our daily life and in our home. It even enables us to remain undisturbed when we seem to be in the company of those of whom David writes, "There were they in great fear, where no fear was." It is literally true that fear is never present as a fact or as an entity, since it is not a factor in God's plan of creation. Christian Science having once and for all revealed to us the reality of harmony and its perpetual availability, does it not seem almost like forgetfulness and ingratitude when we lapse from that harmony? When viewed in the light of a lapse from gratitude, seemingly stubborn forms of error are often quickly overcome, for mortal mind can do little to dupe or alarm the one who in his heart is perpetually giving thanks.

THE PASSING OF A PROVERB.

CLARA ISERMAN.

IN her "Miscellaneous Writings" (p. 155), Mrs. Eddy says, "Methinks, were they [students] to contemplate the universal charge wherewith divine Love has entrusted us, in behalf of a suffering race, they would contribute oftener to the pages of this swift vehicle of scientific thought." These words being my incentive, I pass on to others a helpful thought discovered while studying the words of Ezekiel, that prophet of good. Attention was arrested by the statement, "The fathers have eaten sour grapes, and the children's teeth are set on edge." This proverb evidently was intended to charge the blame of their present suffering upon their fathers.

Ezekiel answered first by a denial, and then declared that the righteous man lives, and that the wicked son of a righteous man dies; also that the righteous son of a wicked father lives, and then he stated the law that God deals directly with individuals. The sinner forsaking sin should live. The saint, if he turns to sin, must die. After which follows the appeal to Israel to "turn yourselves, and live ye," sounding like a loving call directed to the individual. In those days of persistent and wilful corruption, while idolatry possessed the hearts of the children of Israel, the only answer of God could be that men even as righteous as Noah, Daniel, or Job, could not prevent the working out of the law of justice, but only save their own souls by their own righteousness.

The truth of this thought recalled the knowledge gained through a study of Jeremiah, wherein he declared the salvation of Israel did not depend so much upon the condition of nation, state, or church, as upon individual knowledge that the only propitiation which would appease God was a return to the ways of righteousness—nothing short of a reformation of the individual could bring direct communication with divine Love and Truth. True religion then, as now, was and is an affair of the conscience, and the first requirement is a regeneration of the heart, according to Jesus' teaching. As to the way, Jesus said the "Spirit of truth" would be our instructor in all the truth, and this instructor is now known as divine Science!

As we review our knowledge of the prophets, we notice that each one took a step in advance of his predecessor in interpreting from time to time God's dealing with Israel. This advancement interests us, as also the fact that God made Himself known through men and women called at one time prophets. Mind has spoken through all the ages to the spiritual sense, and why should we think it a thing incredible today that "the pure in heart" see God? Surely God is "the same yesterday, and to day, and for ever." Truth's methods being ever the same, the pure-visioned

Digitized by Google

behold God today in proportion to their purity. Even so, more than forty years ago one was found pure enough to become a chosen channel of God to direct a weary, wandering people back to the Christ who is the truth and the way.

This wonder-working woman, "through revelation, reason, and demonstration" (Science and Health, p. 109) "saw the God of Israel," and entered into close communion with Him, to emerge finally, like Moses, with a vision of heavenly things, and bear to a waiting people the demonstrable truth which binds together God and man, proving link upon link, precept upon precept, that salvation is for the children of Israel (Spirit) as distinct from the children of the flesh. To understand all this fully one must have a knowledge of the Science of being, which is made so plain in the Christian Science text-book that the student reverently acknowledges, "Yes, I have indeed found the 'Key' to the Scriptures;" and the age-old question, "What is man?" is answered.

Then many of those "hard" sayings contained in the prophecies take on a new meaning, and every part of the sacred Scriptures becomes a delightful study. The eastern symbolism of the sour grape proverb vanishes, and we see in the application of the figure the truth which Ezekiel would teach, and which Mrs. Eddy has so clearly set forth in "Miscellaneous Writings" (p. 72): "It is cause for rejoicing that this belief is as false as it is remorseless." "As I live, saith the Lord God, ye shall not have occasion any more to use this proverb in Israel."

THE RIGHT SPIRIT.

FRED C. HOUSE.

A WORK of genius is so simple that a child may comprehend its message. The great artist has overcome personal presumption. He humbly obeys the behests of the principle of his art and admits its expression. Our beloved Leader names humility as the genius of Christian Science (Miscellaneous Writings, p. 356); and in our endeavor to follow her teaching we learn that when we do all lovingly and humbly, we may "stand still" and see God's glory in His expression or image,—His Son. Thus does His love radiate through a life consecrated to good work. There are elements of consecration in our hearts. They are the impulses for good ever seeking expression. Alertness to opportunity is one of our duties. The present moment's sacrifice may reveal the golden link in the chain which unites our privileged service with God's plan and purpose.

The gentle vein of mercy of which the poet writes brings forth the sweet perfume of justice in the earth beneath. The quality of mercy nurtures our judgments, so that the dispensations of wisdom in our office become living waters, imparting health, happiness, holiness—never suffering. Truly we are kings and priests unto God, as we come into the kingdom of righteousness through the gateway of Christian Science, and our priesthood becomes after the order of Melchisedec, "King of peace." The pattern showed to us in the mount is the justice which we as kings unto God have to uphold, and the new commandment, "Thou shalt love thy neighbor as thyself," is the sweet aftermath from Him who "so loved the world, that he gave his only begotten son, that whosoever believeth in him should not perish, but have everlasting life."

This is the hour of liquidation, when our debt of gratitude to the giver of all good may be paid. Christian Science has come to us as a gracious gift, and in the lives of those who have accepted its teaching are appearing the fruits of Spirit: "Love, joy, peace, long-suffering, gentleness, goodness, faith, meekness, temperance." Christian Scientists love God and His message, and they love His messenger and can say from their heart of hearts the words with which John closed his writing of the revelation: "The grace of our Lord Jesus Christ be with you all."

"TAUGHT OF GOD."

W. K. PRIMROSE.

WHEN we first heard of Christian Science in our home, the remark was made to us by a friend, "But how can you become Christian Scientists, when there is no reading-room where you live, and no one to explain the text-book to you?" True, at that time there were no other Scientists in our small town in Scotland; but we had learned in Science and Health that "Truth is revealed" (p. 174), and the following experience will show how we progressed.

Of the many questions which arose out of my first studies of the Christian Science text-book, none perplexed me more than that of sight, and the question and answer by Mrs. Eddy, as found on page 58 of "Miscellaneous Writings." The question begins, "How does Mrs. Eddy know that she has read and studied correctly, if one must deny the evidences of the senses?" To this she answers: "Jesus said: 'Having eyes ye see not.' I read the inspired page through a higher than mortal sense. As matter, the eye cannot see; and as mortal mind, it is a belief that sees. I may read the Scriptures through a belief of eyesight; but I must spiritually understand them to interpret their Science."

To me the answer then seemed quite incomprehensible; but I pondered over it, and its meaning was revealed to me in a very remarkable way. I was traveling in a railway carriage with the window open, when a speck of coal dust blew into my eye and for the time being blinded me. My first inclination was to extract the particle, but I was unable to do so, nor could the other occupant of the carriage assist me. I then tried to help myself with the small understanding of Science which I had,—I found myself silently repeating the answer given by our Leader to which I have referred, and which I knew almost by heart. After a second or two the answer to that question was explained to me far more clearly and conclusively than any human tongue or pen could have done, when the obstruction was removed and I was able to see.

Where we live we have few opportunities of attending the Christian Science churches and meeting other students, and the answers to questions such as perplex all beginners have not infrequently been brought to us in ways somewhat similar to this, thus encouraging and enabling us to pursue ever more diligently and intelligently the study of our text-book and the other Christian Science publications. We have found, as Mrs. Eddy says, that "each successive stage of experience unfolds new views of divine goodness and love" (Science and Health, p. 66).

THE READING-ROOM.

RUTH INGRAHAM.

IT is the chamber o'er the city gate,
The watch-tower, whence the tidings of good cheer
Or earnest warnings sound, for those who hear
The call of Truth, and for its coming wait.

It is the upper room: the feast is spread,
And those who hunger in this place may find
The solemn, joyous meeting in one Mind,
The holy, sweet communion with their Lord;

Here drink the wine of purified desire,
Here may they break the very bread of Life;
From hence go forth into a world of strife
Their souls alight with pentecostal fire.

It is the tabernacle holiest,
Which sacred presence glorifies always.
Those who may serve within these gates, with praise
And true humility, how are they blest!

[Frederick Dixon in *London* (Eng.) *Sunday Times.*]

Christian Science is, as a matter of fact, the effort to reestablish primitive Christianity, and primitive Christianity consisted not merely in preaching the gospel, but in healing the sick, and by healing the sick is understood, in Christian Science, not simply the overcoming of disease and pain, but the destruction of poverty and misery, of sorrow and sin,—in short, of all conditions which are inharmonious and so contrary to divine law. This law the Jews represented as largely the observance of ceremonies, and their view was summarily dismissed by Jesus in his simile of the outside of the platter. To him ceremonies were mere opportunities for losing sight of Principle. He expressed law in very different terms, in terms of persistent spiritual activity. To Jesus divine law was expressed not in the variability of an anthropomorphic God, dominated with the passions of His own creatures, but in the harmonious action of divine Principle, "with whom is no variableness, neither shadow of turning."

Even the student of natural science demands as dignified a definition as this for law. Law, he declares, is that in which no variation ever occurs, and so law can only be defined as absolute Truth, since for absolute Truth alone can such a claim be made. Now, a knowledge of absolute Truth is without question the most scientific knowledge any man can ever hope to acquire, and this is undoubtedly why the writers of the epistles make use of a phrase rather unfortunately translated knowledge of God, but which should, of course, have been translated exact or scientific knowledge of God, and so of Truth.

This scientific knowledge is comprised in the word theology, which itself only means the word of God. The meaning of the word itself has, in the course of the centuries, become strained, just as a certain theological writer, speaking of the word atonement, calmly declares that its original meaning of at-one-ment, or unity, has been very properly deepened into a theological sense of expiation. The theology of Jesus was the simplest and most direct religious teaching ever known. It was absolutely devoid of dogma and was supported by demonstration, and so was entirely scientific. Some realization of this was no doubt present in the mind of the greatest of the medieval schoolmen when he described theology, in the *summa*, as the only absolute Science, dismissing all physical sciences as purely relative. The theology of the schoolmen was itself very far from being simple, and consisted largely in layers of Aristotelianism and chopped logic. Nevertheless, in writing this, Aquinas did perceive something which had been perceived by the apostle John, by Peter, and by Paul, and expressed by them in their writings; something which was made concrete, by a writer of our own times, in the words that either Christianity is scientific and Science is Christian, or that one or the other is unnecessary.

The theory of Jesus' theology, if it may be put that way, was the fact that there is only one God, one first cause or Principle, divine Mind, who made everything that was made, and declared that it was very good. The practice of Jesus he himself explained in the words, "Abide in me, and I in you." Now, it was not, of course, the physical Jesus of whom he spoke in these words, but the Mind of Christ, the possession of which made him Jesus the Christ. Consequently, in the exact proportion in which man abides in Christ he, in the fullest sense, realizes the atonement, man's at-one-ment with the divine Mind. The demonstration of Jesus was expressed in the miracles, themselves the necessary scientific results of the knowledge of God contained in the possession of the Mind of Christ. That which a man knows he is able to prove, and in the proportion, consequently, in which a man gains the Mind of Christ, he gains the exact or scientific knowledge of God spoken of in the epistles, and, gaining this knowledge of God, gains simultaneously the knowledge of the truth which Jesus said should make the world free. This knowledge Jesus demonstrated by means of the miracle, for the Greek words translated miracle do not mean, and never have meant, anything supernatural, but mean sometimes something wonderful, and, even more commonly, simply a sign or proof.

The ministry of Jesus was devoted to preaching the gospel, to explaining to his hearers the allness of God and the at-one-ment of God's creation with the divine Mind. This he expressed in the words, "Believe me that I am in the Father, and the Father in me:" believe that, in the exact proportion in which I reflect the divine Mind, I possess the Mind of Christ. When, however, the material sense of the people shrank from this, he returned to the miracle, telling them if they could not believe for anything else they must believe for the very works' sake, and so the miracle became to them the demonstration of the truth of the theology. To people burdened with a sense of materiality and by its limitations, the miracle was exactly what the first Greek word implies, something wonderful; but it was no more supernatural than wireless telegraphy is supernatural because it is wonderful to the man who does not understand how it is brought about. In addition to this, the miracle was the sign or proof, because it was the means Jesus took to prove to those who could not otherwise understand that he possessed the knowledge of the truth which constituted him the Christ. So, when the Baptist sent his disciples to demand if he was the Christ, it was to these works essentially that Jesus pointed them: "Go your way, and tell John what things ye have seen and heard: how that the blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached." In this way he made the power to heal the proof of a Christian's understanding of his religion, and he made this perfectly clear in the often-quoted words in which he declared: "He that believeth on me, the works that I do shall he do also."

This, as Christian Science teaches, is primitive Christianity, and in this way healing, whether of sickness, of sorrow, or of sin, takes its natural place in that theology, and without it, in the words of James, that theology is but a lifeless theory.

[E. M. Ramsay in *Glad Tidings*, Edinburgh, Scot.]

We are absolutely at one with Mr. ——— when he declares that the knowledge of man's origin and future is not attainable by the inductions of philosophy, but by an acquaintance with the mind of the creator. But we go farther than he is inclined to do when we assert that the mind of the creator can be known if we approach in the right way. Our Lord said, "Ye shall know the truth, and the truth shall make you free;" and it is plain that he knew God's will and God's intention, and was guided by it in the smallest affairs of life. St. Paul tells us to let that mind be in us which was also in Christ Jesus; and expressly speaks of the scientific knowledge of God (*epignosis*), and we maintain that it is this same scientific understanding possessed by the Saviour, and to a lesser extent by his followers, which is now presented to the world as Christian Science.

What, then, does revelation, or the Mind which was in Christ, tell us of man? The first chapter of Genesis says that he was made in God's image. The Saviour exhorted his followers to be perfect as the Father in heaven is perfect; and St. John said, "Now are we the sons of God." On the other hand, the material or carnal mind, which in Romans is declared to be "enmity against God," gives a totally different report of man. The physical senses know no more of a man made in the image of God than they know of God. Neither God nor God's creation can be discerned materially. According to sense testimony, man is mortal, imperfect, sick, and sinful.

Digitized by Google

Again, the first chapter of Genesis declares that God made all that was made, and speaks of beasts, birds, trees, sun, etc., as very good, while to mortal sight the animals are mortal, imperfect, and express the same evil passions that we see in material man. I may also remind your readers of the rebuke our Lord administered to the lawyer who called him good, while he himself declared he was the Son of God, and that he did nothing but what he saw the Father do. How does Christian Science reconcile these seeming contradictions which are to be found throughout the Bible? It shows us that the essence of all creation is good and the outcome of God's holy nature, that what is not like God cannot be God's image, man, that it is not like God's creation; it shows us that what is organic, structural, and material is not the essence or reality of man, beast, or flower. This teaching does not confound the creator with His creation, but upholds the Biblical statement that God's creation is like God.

Every true thought which a man holds is of God, since God is Truth and the only creator; all God's thoughts are perfect and therefore immortal. On the other hand, every incorrect or untrue thought is not of God, the only creator, therefore it cannot be a real part of man, and can have no reality or permanence. As long, however, as men cling to evil and think evil, will man's true nature be hidden from them, and they will suffer the misery which is the inevitable accompaniment of wrong thought. Once let one connect himself with true thoughts and part company with evil thoughts, and he will become conscious of man's immortal nature as the image of God. When we see ourselves and the rest of creation as God sees us, we shall appear, not as vague, shadowy impressions, but as spiritual beings, individual, intelligent, seeing, hearing, understanding to a degree at present inconceivable, for Spirit, not matter, is substance. This we believe to be the correct interpretation of the teaching of Jesus Christ.

[W. C. Williams in *Baltimore* (Md.) *American*.]

Christian Science teaches that spiritual power, reflected from God, is amply sufficient to overcome all beliefs in the power of matter and the actuality of disease, but the demonstration of this truth is measured by the growth of the individual consciousness in the understanding of the real man and in the disappearance of the fears and false beliefs of generations back. The works of Christian Science consist of the healing of disease, the overcoming of sin, and the elevation of the ideals in the direction of God, all of which are manifested in a pure and healthy mind, which is imaged in the bodily expression. The work of Christian Scientists is so to live that evil has no abiding place in them, and that their "faith with understanding" will gradually bring this ideal manifestation. But this work is all mental.

In the present state of human thought Mrs. Eddy has advised that in the case of a broken bone it were better to have it set by a surgeon, but this does not detract from the fact that many such cases have been healed without the aid of a surgeon. God is Spirit, and His agencies must be spiritual. His power to heal transcends the use of "bright sun, fresh air, and pure water," and the manipulation of the body, as much as it does pills and powders. If more faith to heal is placed in sun, air, and water, no matter how much we may appreciate them, than in God, then faith in God would be superfluous; but Christian Science gives all power to God and to God alone, and this faith becomes knowledge when continued positive results are attained by the application of God's laws to the solving of all problems.

As the churchmen are working for the betterment of mankind, and as that also is the particular work of Christian Science, Christian Scientists appreciate and honor them for their good works and the noble sacrifices that so many of them have made.

[George Shaw Cook in *Kankakee* (Ill.) *Democrat*.]

Some one has said that "prayer is the soul's sincere desire, uttered or unexpressed;" and it is true that the honest desire to know God, good, is a necessary precedent to that knowledge of the power and presence of divine Mind which Christian Science reveals as the only real power and presence. "But," the inquirer may say, "if God is, as Christian Science teaches, infinite intelligence, immutable Truth, unerring wisdom, unchanging Love, why desire, supplicate, or petition such a God to do what of necessity He must do without being asked?" An answer to this question may be afforded by the following illustration: Suppose a student of arithmetic attempts to solve a given problem. It is evident that he must understand to a certain extent the laws of mathematics and that he must correctly apply the mathematical rule governing the case if he is to obtain the desired solution. It is likewise evident that any petition or supplication, however fervent or eloquent, to the basic law of mathematics would be of no avail. Yet it will be easily understood that a humble, earnest, honest desire on the part of the student to understand said law and the rules involved and to be obedient thereto, would make him more receptive to the desired knowledge and better able to apply it correctly. This, as the writer understands it, illustrates the office of "sincere desire" as the stepping-stone to the prayer of faith, understanding, and demonstration.

Prayer has seemed to be unanswered, and the effort to pray aright has been hampered in all ages, by the belief that man is separated from God and must reach Him or get into communication with Him in order that prayer may be heard and heeded. God is not a far-off being to whom man must project his thought in prayer. God is ever-present good, the all-inclusive, all-pervading, divine intelligence, or Mind, by whom man was created and in and of whom man exists. Then true prayer must consist in receiving and entertaining the good ideas which express God and in bringing them into manifestation in thought, word, and deed. The spirit of such prayer, lived in the daily life, will enable Christians to comply with the Scriptural injunction, "Pray without ceasing."

In order to pray scientifically one must acquire a better understanding of God as omnipotent and omnipresent good. True prayer is the realization of this fact, the silent, sacred, conscious spiritual communion with divine Truth and Love which heals sickness and destroys sin. Such prayer in the time of the ancient prophets and of Jesus and his disciples raised the dead, and will do so again when vitalized and empowered by the faith and confidence in the eternity of Life which revived the son of the Shunamite and brought forth Lazarus from the tomb. That such scientific prayer is today being attended by increasingly satisfactory results in the experience of thousands, is evidence of the truth of the first words in the chapter on Prayer in the Christian Science text-book, where Mrs. Eddy has written, "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love" (Science and Health, p. 1).

[Editorial in *San Marcial* (N. M.) *Standard*.]

Every now and then some individual or paper uses the word "imagined" in connection with a remark about Christian Science, implying that the members of that church "imagine" a great many things. One day, while working in a busy office, a fellow laborer made a light remark along the line above mentioned. Going to the speaker, we quietly asked: "Have you ever attended a service in the Christian Science church?" The answer was, "No." Then we asked: "Have you read the Christian Science text-book, 'Science and Health with Key to the Scriptures' by Mrs. Eddy?" Again the answer was, "No." Then we asked the individual to go with us to church that night, as it was Wednes-

Digitized by Google

day. The result was another regular attendant at services and later the investigator, having gone elsewhere to work, wrote for an address where Christian Science literature might be obtained, for use in further study of the subject. Invariably it is the misinformed who criticize this religion, doing so from hearsay, not having made a personal investigation of the subject.

In II. Corinthians Paul says: "For the things which are seen are temporal; but the things which are not seen are eternal." In Christian Science the words "unreal" and "real" are used in somewhat the same manner as Paul uses the words "temporal" and "eternal"—the real meaning that which cannot be destroyed, and the unreal implying mortality or that which decays. Thus the object which appears to mortal eye, or the sensation which is manifested on mortal body, is in no sense "imaginary," but both are unreal in the sense that they are temporal (unreal); that is, not eternal (real).

Often the word "imagined" is unthinkingly used as though it were identical in meaning with "unreal." No well-informed individual makes this mistake, and when it is voiced, one may know at once that the speaker is not well versed in the teachings of Christian Science.

[Maurice Kennedy in *Sunday Times*, London.]

As one reads the variety of opinion expressed by your many correspondents in their assaults upon what they quite honestly believe Christian Science to be, and notes how much of this criticism is clearly contradictory,—one writer objecting, perhaps, to Christian Science for being just the very thing which another has assailed it for *not* being,—one feels a deep sense of gratitude that through it all, like some stately liner on an angry sea, the law of good, Christian Science, pursues her unswerving course, and that one has the good fortune to be even a steerage passenger upon that boat.

The grateful thought looks out over the troubled waters into the blackness of the night of human conjecture and weary experiment from which it has escaped, and with a keen sympathy throws life-lines of hope and encouragement to "some strong swimmer in his agony;" calling in the teeth of the swirl the pilot's words, "Fear not, little flock, for it is your Father's good pleasure to give you the kingdom."

[George S. Powell in *Charlotte* (N.C.) *News.*]

Christian Scientists accept Jesus Christ as the divine Son of God and are striving to follow Him in all his teachings and commands. They believe in one omnipotent, omniscient, omnipresent, universal, eternal God, that changeth not; "who forgiveth all thine iniquities; who healeth all thy diseases; who redeemeth thy life from destruction."

The statement of an honest, intelligent Christian Scientist as to what he believes is entitled to just as much credence as the statement of any other honest, intelligent citizen. It is impossible to take from the teachings of Jesus the command to heal the sick, and Christian Scientists accept without reserve the obligation imposed to strive faithfully to overcome disease as well as sin, and to do this by one and the same divine power. This is in accordance with what Jesus meant when he said, "It is the spirit that quickeneth; the flesh profiteth nothing."

Mrs. Eddy has spent the larger part of a long and useful life in working unselfishly for the good of mankind, and the good she has accomplished is being universally recognized. Christian Science teachings, as set forth in her book, "Science and Health with Key to the Scriptures," are based on the fundamental teachings of the Bible from a spiritual standpoint; and in respect to matter, sin, disease, marriage, divorce, evil, etc., are strictly in accord with the teachings of Jesus and the apostles, and therefore in accord with the highest moral law.

There is absolutely nothing in the teaching of Christian Science to justify the charges made by the critic, and the lives of Christian Scientists, as a rule, disprove all of these charges, which were evidently based on prejudice and not on facts.

[Royal D. Stearns in *Merna* (Neb.) *Postal Card.*]

There seems to be a very strong inclination on the part of many who know nothing about Christian Science or its *modus operandi*, to charge up to it, with very little if any investigation, all occurrences that happen out of the ordinary course of events. It is further stated in the same article that "Christian Science never yet has been of benefit on a sickbed." The results of Christian Science are so well established and so pronounced that the time has long since passed when it is possible by means of denunciation or disparagement to hinder or discredit the positive and ample beneficial achievements it is accomplishing. There is an abundance of indisputable proof that a very large number of people, afflicted with almost all kinds of so-called "incurable diseases," have been healed by Christian Science, and thereby restored to usefulness in all the different walks of life. This, notwithstanding the fact that the great majority are those who come after they have exhausted all the resources of *materia medica.*

Christian Science is not a blind faith simply; the healing is effected by means of a demonstrable rule which involves an understanding and acknowledgment of the omnipotence of God. The Christian Scientists believe in the infinite power and goodness of God and His willingness and ability to heal all our diseases, and have unmistakable evidence that the "effectual fervent prayer of the righteous man availeth much." The teaching and practice of Christian Science is based entirely upon the Bible and the teaching and works of Jesus. Mrs. Eddy's whole teaching is to elucidate the power of Spirit to heal not only sin but sickness, as it did in the time of Jesus and for several hundred years thereafter. And healing is being accomplished through the agency of Christian Science, with gratifying success, throughout the civilized world today.

[Written for the *Sentinel.*]

A BENEDICTION.

CASSIUS M. LOOMIS.

GIVE to God His crowning glory,
Love tells thee how.
Lisp again the old, old story,
Love's hour is now.
Sing thy songs of praise forever,
They will cheer thy lone endeavor;
Yield to Truth, to error, never;
Love shows thee how.

Have thy days grown dark and dreary?
Stand firm and know.
Ye shall run and not be weary,
Love tells thee so.
Know the truth, and in thy knowing
Reap the harvest of thy sowing;
Unto thee all good is flowing—
Stand firm and know.

Out upon the sea of gladness
Christ walks with thee.
Love hath borne away thy sadness;
Peace comforts thee.
In the morning's radiant beaming,
Far beyond this mortal seeming,
All thy fondest hopes redeeming,
Good waits for thee.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"DEEDS, NOT WORDS."

To the student of Christian Science there is food for reflection in the method adopted by the Master when the disciples of John questioned him to know if he really was the long-expected Messiah. Though John had been cast into prison, word was brought him of the wonderful works that were being wrought in Judea by that "one mightier" whose coming he had himself foretold, and he sought to know if this was indeed the Christ. The disciples came and delivered their message, but the Master, busied with the healing works that filled his days, answered them not. But as they stood there, waiting, they saw the blind receive their sight, the lame walk, the lepers cleansed, the dead raised, and heard the gospel preached to the poor and lowly.

The Master made no wordy claim to his right to be accredited as the Messiah—he was too much engaged in his Father's business for that. He simply bade the messengers go and tell John of the things which they had seen and heard. He knew that mere words were not sufficient to carry conviction to these earnest seekers for truth, but there was no gainsaying the proofs of the healing of the sick and the sinning, the works which they had witnessed. The formalism and dogma which preceded the advent of Jesus and prevented the universal acknowledgment of his divine origin were the outgrowth of unfruitful preaching, a slavish adherence to the observance of the letter of the Mosaic law, but with no concept of its spirit. It was because he recognized the barrenness of this preaching that the Master substituted the works, those wondrous proofs of his understanding of the allness of God, omnipotent good, and the nothingness of evil.

Mrs. Eddy saw the need of proving the power of Christian Science to heal, before she could be sure of the truth and value of her discovery, and the thoroughness of the test to which she submitted her system is shown by the nine years which elapsed between her discovery and the publication of her book Science and Health, in which she made it known to the world. Just as the Master let his works attest the truth of his teachings, so Mrs. Eddy believed that practice must demonstrate the truth of the message which she had received and which had made an entire change in her view of life.

As Christian Scientists we profess to be followers of Christ Jesus, to have the same understanding which he possessed; that is, it is our endeavor to be able in some degree to evidence to the world our right to be known as his followers by the same proof which he gave of the truth of his teachings, and it is useless to try to deceive ourselves or others by believing that anything less than what the Master knew to be true in this regard will be accepted,—that the truth of our profession will be shown by the Christ-like works we are able to perform. This lesson should not be lost upon the students of Christian Science today, for in their enthusiasm over their liberation from sickness and despair, they are apt to talk of this new-found truth in season and out of season and to urge its acceptance upon all who will listen to them; and then they wonder that their friends are not immediately converted to their way of thinking. Later they learn the reason of their failure, that they have failed to show the "signs following" their preaching which the Master declared should be a token of "them that believe."

If we are truly Christian Scientists, if in our daily walk we are constantly striving to be true to the tenets to which we have subscribed,—"to do unto others as we would have them do unto us; and to be merciful, just, and pure" (Science and Health, p. 497),—if we put in practice what we have learned of this new-old faith, those with whom we come in contact will know, without any words from us, the change that has been wrought in us. The sooner we learn the lesson that it is not talking Christian Science, but living it, that convinces others of its truth, the more potent will be our efforts for the advancement of the cause, the establishment of God's kingdom in the hearts of men.

ARCHIBALD MCLELLAN.

"A SERVANT OF THE CHURCH."

THE sixteenth chapter of Romans opens with an injunction from St. Paul respecting a woman of whom he speaks as "a servant of the church which is at Cenchrea." He asks the brethren to receive her lovingly, and to assist her, and he speaks thus of her qualifications: "She hath been a succorer of many, and of myself also." This kindly endorsement is followed by similar references to others, which surely ought to offset Paul's supposed prejudice against women as Christian workers. That this prejudice did not penetrate very deeply is evident from his statement, that to those who have "put on Christ" there is "neither male nor female:" to which he adds, "For ye are all one in Christ Jesus." It is not, then, a question of sex but of service, and as we read the various epistles we see how exalted was the concept of Christian service among the early followers of the great Galilean Prophet. The Master himself had taught them, both by precept and example, what divine service meant. He also said, "Whosoever will be chief among you, let him be your servant."

The nature of the service which all Christian Scientists should be prepared to render to their cause (which of course includes their church) is pointed out in Mrs. Eddy's statement, "It is sad that the phrase *divine service* has come so generally to mean public worship instead of daily deeds" (Science and Health, p. 40). The "great commission," as it is often called,—the authorization of Jesus' followers to preach the gospel, heal the sick, cast out devils, and raise the dead,—should often be pondered by Christian Scientists. They do love the loving Master, and would fain prove their love by obedience to all his commands, which are so wonderfully illuminated by the teachings of our text-book. He taught his followers how to pray with "signs following;" he also taught them to abstain from judgment of others, one of his final lessons being his rebuke to Peter, "What is that to thee? follow thou me." On another occasion he had reproved James and John, who wished to call down fire from heaven to consume some who had refused to receive him; but he said to these disciples, "Ye know not what manner of spirit ye are of. For the Son of man is not come to destroy men's lives, but to save them."

This rebuke should be a warning to any who may be tempted to pass judgment upon the acts of others, and to predict calamities as the result of certain sayings or doings. Such predictions do not constitute true service to our cause, nor do they come up to the standard of its practice as a healing religion. In "Miscellaneous Writings" (p. 283) we read: "It is the genius of Christian Science to demonstrate good, not evil,—harmony, not discord." To be in any wise a prophet of evil proves that one is more influenced by the dogmas of the past than he is aware of. The old doctrines of a God of wrath and retribution have never healed the sick nor reformed sinners, though they may have terrified both. It is true that sin tends to suffering, but it is our bounden duty to serve by succoring mankind from bondage, and to do this in humility and love, declaring and demonstrating the ever-presence and all-power of divine Truth and Love. Nothing uncovers sin as does the clear light of Truth; nothing destroys both sin and sickness like the consuming fire of divine Love. In his epistle to the

Digitized by Google

Colossians, Paul speaks of a faithful servant of Christ whose service is thus defined: "Always laboring fervently for you in prayers, that ye may stand perfect and complete in all the will of God." Can we do better than to serve, with this ideal of perfection ever before us?

ANNIE M. KNOTT.

TRANSPARENCY AND GROWTH.

IT was a clear, cool day without, so that an overcoat and a brisk gait were called for, and yet the atmosphere of the conservatory we had entered was summerlike and we found ourselves in the midst of a revelry of bloom. Flowers of every name and hue were voicing as best they could their fragrant welcome, while the place was simply overrunning with a tangle of luxuriant growth. In talking with the keeper we incidentally inquired as to his coal consumption, and to our surprise he said, "It is much lighter than you would suppose, in view of the fact that on sunshiny days like this we need no artificial heat at all."

We had come upon a new realization of the practical value of a glass roof—and, as well, of a spiritually transparent thought. Both freely admit that which means life and growth, and both exclude that which means decay and death. Though the phenomenon is commonplace, it is far more difficult to understand how glass should be an open door to light waves, and quite impenetrable to air waves, than to explain how an alert and rightly educated thought may be hospitable to everything that ministers to a true and beautiful life, while interdicting even the near approach of the things that blight one's spiritual growth.

The above phrase, "alert and rightly educated thought," is used advisedly, and every mature Christian Scientist knows full well that its terms cannot be overemphasized. An active purpose in the line of spiritual growth is sometimes as unwise and self-defeating in its way of doing things as is the man who puts abundant windows in his conservatory and yet allows them to become and remain so begrimed with coal-dust that most of the sun's rays are excluded. It is a very easy matter for mortals to enthuse over an ideal and yet do very little toward bringing it into practical, healing touch with their personal problems.

We do well therefore to remind ourselves continually that transparency to the light of Truth is distinctly a matter of "home-provision." It is not the business of the sun to wash our windows, but rather and simply to flood every place and part where a welcome, an open door, has been provided for the reception of his radiant messengers. The significance of Jesus' question, "Wilt thou be made whole?" deepens daily in the thought of every true Christian Scientist. He can never forget the imperative demand of this teaching for purity, a purity which signifies not only faultless moral conduct, but that cleanliness of mentality which presents no impediment to a continuity of divine revelation, to the life-nourishing, life-beautifying light of Truth. Under a different figure, Mrs. Eddy drives this teaching home when she says, "The corner-stone of all spiritual building is purity" (Science and Health, p. 241).

Let us not forget, moreover, that this pure thought medium not only serves us by transmitting heaven's light, but that through it we gain clear visions of the without, acquire that true sense of proportion, of experience-values, which is essential to poise and right judgment. Pure thought, as we learn in Christian Science, is not only ethically clean, but logically, scientifically true. It is based on divine Principle, it is a divine idea and hence efficient in casting out the doubts and fears of false sense which tend to obscure our spiritual perception and thus prove the forerunners of sickness and suffering. Blessed indeed, therefore, are they of transparent thought: their hearts are sure to be flooded with an unfailing sunshine, and their lives to abound with both flowers and fruit.

JOHN B. WILLIS.

AN ATTEMPTED SWINDLE.

THE circular letter recently sent to First Readers of branch churches and societies throughout the country, signed with the name Eli N. Dow and purporting to be an authorized movement to solicit funds for The Mother Church, was a fraudulent scheme by which some one hoped to swindle Christian Scientists out of large sums of money. The fictitious Mr. Dow, however, sadly underrated the alertness and intelligence of those whom he expected to catch with his crafty bait, and it has been gratifying to note that Christian Scientists, with all their loyalty to the interests of The Mother Church, were not deceived by his scheme. The would-be swindler is now under arrest.

It is perhaps unnecessary to add that the statements in regard to the affairs of The Mother Church, which were so dramatically set forth in the circular letter, are absolutely false. The Mother Church is in a prosperous condition and well able to take care of all its affairs, including the defense of pending litigation which has no legitimate foundation and which should cause Christian Scientists no uneasiness.

THE BOARD OF LECTURESHIP.

William R. Rathvon, C.S.B., has been appointed a member of the Christian Science board of lectureship, to fill a vacancy. Mr. Rathvon's address is 1756 Grant street, Denver, Col., where all correspondence with him in regard to lectures should be addressed.

AMONG THE CHURCHES.

BERKELEY, CAL.

The corner-stone of First Church of Christ, Scientist, of Berkeley was formally laid at seven o'clock this morning [Dec. 26], simple services being conducted in the presence of twenty members of the church, including the board of directors, the building committee, and the two readers of the church.

The new edifice is being erected at the northeast corner of Bowditch street and Dwight way, at a cost of about $53,000. It is bungalow in style, simple in structure, and to be constructed of concrete, wood, and glass. It is expected that the church will be ready for occupancy about May 1.—*Berkeley Independent.*

STAMFORD, CONN.

Ground was broken yesterday [Jan. 13], at noon, for the building of the new Christian Science church, on Prospect street. This is an important event to the local Christian Scientists, who are outgrowing their present quarters, their growth in the past year being the largest since their organization. The building will have a seating capacity for between four hundred and fifty and five hundred. The Sunday-School room connected with the rear of the auditorium seats about one hundred. The edifice is expected to be finished and will be occupied about the first of June.

Advocate.

LITTLE ROCK, ARK.

First and Second Churches of Christ, Scientist, of Little Rock, Ark., have both dissolved and their respective congregations have assembled and organized as one church, to be known as First Church of Christ, Scientist. The officers have been chosen from both the former churches, and the union established in the conscious love of divine Mind. Services are held in the new chapel, located at the corner of Twentieth and Louisiana streets. The reading-room is maintained on the eighth floor of the elegant new State Bank Building, Main street and Capitol avenue.

THE LECTURES.

FORT WAYNE, IND.

The theme of the lecture of William D. McCrackan, M.A., at the Majestic Theater Sunday afternoon [Jan. 8] was "Christian Science: A Religion of Progress." The audience was a large one. The speaker was introduced by Mrs. O. N. Guldlin, one of the prominent clubwomen of the city, who spoke in part as follows,—

When I was asked to introduce the speaker this afternoon, the question came to me, "What has Christian Science meant to me?" Since it has come into my life my greatest help has been that it has enabled me to live on an entirely different basis. The next greatest help has been that it has straightened out many of my theological conceptions. Immanuel Kant says something like this, "Man has many delusions. He can only remove those delusions as he gains more knowledge, and then the delusions fall away." So it has seemed to me that one delusion after another has gone down. In the first place, I am grateful that Mrs. Eddy saw fit to call this "Christian Science." Music has its science; arithmetic has its science. We can never evade this science and arrive at correct conclusions. We can never evade the science of life. It will not permit us to do an injustice to any one else and arrive at the science of living. If in the solitude of our home life we meditate and study on these problems until we realize the divine Principle, then can we realize the solution. As we look at the world's standard of morality, the ordinary concept of man, we are liable to be deluded.

Last summer, up in Canada, I was riding along watching the trees, looking for a perfect specimen. I saw an overcrowded condition, not one tree that apparently realized the concept of a perfect tree. Yet we all know how magnificent a tree is when it reaches its full growth. And so I realized that man did not realize his spiritual concept. The licentiousness of the nation reveals the worldly concept of man, and I turned in eternal gratitude to Mrs. Eddy, since she had raised my concept to a more spiritual standard, to realize that, even if all else failed, yet that standard remained true, above the average concept which we see realized. Bearing this concept eternally in mind gives us something to work toward, and we begin to realize that God's creation is spiritual, it is harmonious, it is eternal. If we do not see this wonderful majesty of being, it is because something is wrong in us, and the greatest work of our lives is, after all, self-regeneration—that evolution which starts for perfection.

Fort Wayne Sentinel.

CAPE GIRARDEAU, MO.

Frank H. Leonard on Jan. 9 delivered a lecture on Christian Science. He was introduced by Atty. Benjamin F. Davis, who said in part,—

Perhaps no century in all the world's history has ever produced so many great women as the last century. Queen Victoria among rulers, Elizabeth Barrett Browning among poets, Julia Ward Howe and Harriet Beecher Stowe among antislavery agitators, Frances Willard among temperance advocates, and many other great women who lived and worked for the advancement of mankind and the freedom of the human race from the bonds of slavery and of intemperance.

It did not "just happen" that these great women appeared to the world in the nineteenth century. Nothing ever "just happens" in this world. There is a cause for every event, and results follow causes as day follows night. It was a part of the divine causation and divine planning that these great women should appear to help solve the great problems of the nineteenth century, and they did their work well. But in the divine planning another great woman, Mrs. Eddy, was raised up to begin a great work in the last century which bids fair to grow into a greater work in this. Following the abolition of African slavery in the last century, came a period of great material prosperity and an era of materialistic activity when men turned away from spirituality; and Mrs. Eddy's life and work came as an outcry, a protest against the materialism of her times. Her interpretation of the life and teachings of Christ Jesus has brought a great spiritual uplift into the lives of her followers; and of many who are not consciously her followers. I have seen in others some of the results of her teachings, but I cannot myself understand all of them.—*Correspondence.*

GREAT FALLS, MONT.

An audience, the larger part of which was composed of men, assembled at the Opera House last night [Jan. 26] to hear Clarence C. Eaton lecture on Christian Science. In introduction of the lecturer, William C. Kaufman spoke as follows:—

Mrs. Eddy's discovery of Christian Science has made it possible in this material age for Christians to heal the sick through the power of Spirit, as did Jesus nineteen hundred years ago. Christian Science has made it possible, in a degree, for a man to realize this saying of our Master: "The kingdom of heaven is within you." This kingdom of heaven is realized as we find and know that man is God's image and likeness, manifested through right thinking and right living. Christian Science shows man to be God's image and likeness, and that this Godlike image or likeness is realized only as man lives above the sensual, sinful senses and walks in the way as pointed out by Christ Jesus. We feel grateful to Mrs. Eddy for this discovery. We have never worshiped her personality; we loved and revered her for the great good which she taught and which inspired us to lift our thought above crumbling materialism.

Great Falls Leader.

HOUSTON, TEX.

Prof. Hermann S. Hering delivered a lecture on Christian Science for Second Church at Beach Auditorium Jan. 29. He was introduced by Capt. R. G. Ashe, who said in part,—

Over nineteen hundred years ago the Master, our Lord and Saviour, enjoined his followers to preach the gospel and heal the sick. Christian Scientists of today are following his injunctions,—preaching the gospel, healing the sick, and bringing comfort to the broken-hearted. With its outstretched hand of benevolence, Christian Science has led many from the midnight darkness of sin into the bright and sacred light of divine Love. Through its holy influence the manacles of sin, sickness, and disease have been broken and many victims set free. From its inexhaustible storehouse many have been lifted from penury and want to relief and plenty. It has healed the inebriate, and thereby converted many hovels of wretchedness and misery into beautiful homes where happiness and pleasure now nestle together.

Christian Science is a religion founded on the rock of Christ. It is a reenaction of the teachings of our Saviour, and its beneficence is felt in almost every land and clime. Christian Scientists have massed themselves into a great army and are engaged in a grand battle for the relief of humanity; they are united, their castle is Love, their fortress is Truth. Their wise Leader, like Moses of old, has successfully led her people from that land where sin, sickness, and disease have held them in bondage, to another and a better land, where Love holds sway and where freedom and liberty prevail. Because of her beautiful, pure, unsullied life, and her devotion to the cause of humanity, her fair name is immortalized.—*Correspondence.*

MARINETTE, WIS.

An audience representative of the twin cities, which filled the Scientist church, assembled Sunday afternoon [Jan. 29] to hear the lecture by Willis F. Gross. Harry Emerson, mayor of Menominee, presided, and introduced the speaker in the following words:—

There is no question that is agitating more the civilized world of today than is Christian Science, which goes to show that the thinking people of this age are not satisfied with the religions that acknowledge sin and sickness as part of the creation of God. To us who are not students of Christian Science there are many thoughts that are difficult for us to understand, and it is only through study, investigation, the testimony of those who have been healed in Science, and the example given us by the lives of those who are endeavoring to live what they believe, that we may be brought to see the truth. This meeting, the fact that we are gathered here this afternoon to listen to a lecture on Christian Science, demonstrates that we are seeking the truth and anxious to find the correct solution for the perplexities of life.—*Eagle-Star.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given at 8 p.m.

Cincinnati, Ohio (Second Church).—William D. McCrackan, M.A., Music Hall, March 7.

Dublin, Ire.—Bicknell Young, Rathmines Town Hall, Feb. 28.

Geneva, N. Y.—Frank H. Leonard, Smith Opera House, 3 p.m., March 5.

Honolulu, Hawaii.—Prof. Hermann S. Hering, Opera House, 7:30 p.m., March 26.

Houston, Tex. (First Church).—Bliss Knapp, Beach Auditorium, 3:30 p.m., Feb. 26.

Jacksonville, Ill. (Second Church).—William D. McCrackan, Grand Opera House, 3 p.m., March 5.

Meriden, Conn.—Rev. Arthur R. Vosburgh, The Auditorium, 3:30 p.m., March 5.

Monroe, La.—Frank H. Leonard, City School Auditorium, March 9.

Monrovia, Cal.—Francis J. Fluno, M.D., Woman's Club House, 3 p.m., March 5.

New Bedford, Mass.—Hon. Clarence A. Buskirk, Y. M. C. A. Hall, March 7.

Newburgh, N. Y.—Hon. Clarence A. Buskirk, Academy of Music, March 5.

New York, N. Y. (Fifth Church).—Prof. Hermann S. Hering, Church Edifice, 228 West 45th street, March 6.

University of Minnesota, Minneapolis, Minn.—Prof. Hermann S. Hering, Chapel, University Library, March 11. Open to members of the university.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be June 2, 1911. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 10, 1911.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 4, 1910, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

TESTIMONIES OF HEALING.

The question, "What shall I render unto the Lord for all his benefits?" comes to me with the energy that Truth alone creates, and in an earnest hope that Love is leading me to write for the help and encouragement of a brother in need, this is sent. My experience furnished a striking example of that subtle form of weakness ordinarily called strong will-power, otherwise self-will, and it was some months before my thought so yielded to Truth as to "let patience have her perfect work," and to realize the healing of the holy. For this seeming delay I am now grateful, because there is beginning to dawn upon me some measure of the promise found on page 96 of Science and Health: "Love will finally mark the hour of harmony, and spiritualization will follow, for Love is Spirit . . . all discord will be swallowed up in spiritual Truth."

My gratitude is increased by recalling how Love gave me a foretaste of the joys to come, by early awakening my thought to the consciousness of what Christian Science means, and that this awakening led to hope, and greatly mitigated the physical suffering whose destruction was to be realized later. It is my high privilege to express my gratitude for the fact that, although to some extent a student and worker in young people's lines of church work for about forty years, a few months' study of the Christian Science text-book, in connection with the Bible, filled my consciousness with entirely new concepts of God, and for the first time I really began to love God and the Bible from the standpoint of intelligence and harmony, and to see that it was possible for me to begin to know them aright.

Prior to hearing of Christian Science, some three years ago, a condition of semiinvalidism, covering a period of over twenty years, had necessitated two abdominal operations, and two on my eyes, the former on account of recurrent peritonitis, hernia, adhesions, etc., the trouble with the eyes resulting from a severe injury to the retina. While in 1908 there was very little pain in the eyes, special glasses had to be worn constantly, and there was some headache; but the abdominal condition was causing great distress, and seemed again to be in the condition existent at the time of the second operation, a condition aggravated because of my earnest efforts to conceal it. In addition to ills above enumerated were chronic stomach and bowel trouble, liver, kidney, and bladder trouble; a serious affection of one lung with resultant weak heart, also a complete nervous breakdown, etc. Medicine, surgery, and osteopathy had been faithfully tried for many years, but neither of these had effected a cure, and lately had even failed to afford relief, notwithstanding the faithful attentions of the sympathetic workers whom I am still happy to count among my friends. I was also in bondage to stimulating medicines, to tea, coffee, and tobacco, and a desire for whisky which often led to serious and disgusting excess.

Today those once diseased organs seem to be perfectly healed and their functions are regular and harmonious; my eyes have been freed from the need of glasses, and even the corns have disappeared. The desire for drugs and all other stimulants has long since vanished, and enmity has been turned to love. Shortly before our beloved Leader's letter entitled "Men in our Ranks" was published (*Sentinel*, Feb. 12, 1910), I had made the best professional connections during my entire career as an accountant and auditor. I now know what it is to love wife, children, and family, and to be loved by them, as never before, and constantly I thank God for the revelation of Christian Science and its adaptability to all human needs.

I wish to express my deep gratitude and love for Mrs. Eddy, whose purity of thought and consecration of purpose were fitting preparations for her divine call to be the revelator to and Leader in this advancing age. I desire to know

Digitized by Google

God, to be counted faithful, to be full of grace and good works. I also desire to acknowledge with deep gratitude the loving work done for me in Christian Science, the love of the brethren, and the great good constantly derived from the spiritually helpful periodicals of The Christian Science Publishing Society, and last but not least, the tender interest and continued friendships of former church and medical associates.—ALBERT MARSHALL, Clarksburg, W. Va.

It is with the greatest of pleasure and deepest gratitude that I certify to the wonderful healing power of Christian Science. My wife suffered from a serious affection of the knee for something like eighteen years, during which period she was from time to time under the care of two different medical men, also a bone specialist; but their several treatments resulted only in hopeless despair. The specialist's last resort was to encase her knee in a steel appliance specially made, and which she wore for about two years, but with no effect as far as a cure was concerned.

By some means she heard of Christian Science, and was fully determined to try it, being her last resource. She placed herself in the hands of a practitioner, and during the course of only a few weeks she was entirely healed and has had no signs of any return of the complaint. We therefore conjointly give our thanks, and are deeply grateful to God, and wish for the Christian Science workers all the success it is possible to obtain in their endeavors for the relief of suffering humanity.

ALEXANDER WILSON, NANCY WILSON, Liverpool, England.

I have tried many times to express my deep sense of gratitude for the blessings I have received as the result of an earnest study of Christian Science. I was brought up to read the Bible and attend religious services. The New Testament appealed to me most, especially the Christ-teaching, but ignorance kept me from knowing how to practise it. As I grew older I became restless, and in spite of criticism I tried one church after another, going to those called the liberal, and then to the philosophies of other times and nations. Then I tried to study alone, but I had only the letter minus the spiritual interpretation.

Up to the age of nineteen I had no sickness or physical ailments, but shortly after marriage my physical ills began, and I had an attack of organic trouble which I was told would require an operation. I preferred death to this, and had come near to its realization when I was prevailed upon to try other means. I was not satisfied, however, and sought still other avenues. Finally Christian Science was presented, but unfortunately it came to me in a way which antagonized me greatly, and I was kept in ignorance of this blessed truth and in darkness for ten years. I made the grossest mistakes in all my affairs, became tangled mentally and disturbed physically, until about four years ago, when I came to a sudden stop, threatened with a nervous collapse. I had tried everything I ever heard of and felt I would rather die than go back to *materia medica*.

In my anguish I cried out for wisdom to know what to do, and a friend told me of a Christian Science practitioner, and with this information came the unveiling of my secret sin—prejudice. I lost no time in finding the Scientist's office, and in a very few moments I was shown the error of my thinking. My pathway back to the road was thorny, but I felt and knew it had to be trod. I worked faithfully for a year and a half, read nothing but the Bible and Science and Health, and called for help when I could not go alone. The old dogmas, creeds, and beliefs did not yield readily, and for three years I plodded along without realizing much progress, but after I had class instruction I felt the death-struggle of the error and knew I was free.

Every need, physical and mental, has been met when I was faithful and obedient, but these are of minor importance compared to the blessings that come daily through the spiritual awakening. The uncovering of secret sins and unrecognized errors has brought to my hungry sense an unspeakable feeling of joy, peace, and harmony. From a morbid sense of disappointment, resentment, discouragement, fear, distrust, I have risen into an atmosphere of trust, contentment, equanimity, hope, and courage. While I have been blessed with exceptionally good health, I have with Christian Science overcome severe toothache, accident, and poison, chills and fever, headache, and many minor ills that could have assumed large proportions.

The greatest blessings come from a realization of the ethical and spiritual worth of the truth. I am daily learning the value of obedience, love, honesty, fidelity, justice, integrity, and how to interpret and execute the commands of Scripture—how to know the same Father and God that Jesus knew; how to deal fairly and honestly with myself while about my Father's business; how to love unselfishly and impersonally; how to purify the channels of my mentality that the truth may be poured in unchecked; how to love my seeming enemies; how to seek righteousness in humility and meekness; how to cease struggling and lean upon God; how to trust Love with the simplest duty; how to realize the might of intelligence; how to live so that homes darkened by fear and ignorance may receive sunshine by my presence; how to be patient, forbearing; how to think, see, hear, speak only good, that I may reap righteousness; how to guard my thoughts that the kingdom within may not be desecrated; how to look for blessings even in seeming infirmities. For these and many others I am indeed more than grateful to God, and it is my pleasure and privilege to express my gratitude for Mrs. Eddy, whose life of consecrated, faithful service has made it possible for me to make practical the inspired words of Truth, so freely given to humanity today. I desire to be obedient to the tenets and by-laws of our church, humbly following in the footsteps of the great Wayshower, whose words and works we failed to understand until we had the search-light of Christian Science.

MRS. MAY W. MANCHESTER, Long Beach, Cal.

I came to Christian Science solely for physical healing. I had been pretty well through the medical mill, and I may say in passing that I had gone pretty well through the mill of sin, too. I am glad and thankful to be able to state that Christian Science has healed me of some of the sinful inclinations which I formerly had, and though perfection has not been reached as yet, some progress has been made, and "progress," our text-book tells us, "is the law of God" (Science and Health, p. 233). Since God's law is supreme, and having made some progress, we have good reason to know that by patient continuance in well doing still farther advance can be made.

Christian Science healed me in three days of what *materia medica* had failed to reach in about three years; that is, a bowel disorder. And yet I was not satisfied. I had received the "sign" in this short time, but because one who is not a Scientist had told me that the healing was quick, I expected to get rid of all my ailments at once. Fortunately for me I was not healed instantaneously; if I had been healed in that way I do not believe I would now be offering this testimony, because at the time that I sought Christian Science treatment religion interested me very little, if at all. The healing of other ailments seemed to me to be very, very slow; so much so that I discontinued attending the Sunday services and the Wednesday evening meetings for a while. True, I continued to read to some extent, and usually went over the Lesson-Sermon Sunday morning about the time services were being held. Generally, though, I took care to be smoking a cigar while doing this. I am glad to be able to state that I have also been healed of this habit. I stopped smoking several times without attempting

Digitized by Google

to apply my understanding of Science, and I went back to the habit just as often until, one day, I lost my position and felt somewhat disgusted. When I got home I lighted a cigarette, but the odor seemed so offensive to me that I sat right down and declared the truth for myself for about fifteen minutes, and have not smoked since that time, nor have I had any desire to do so.

My mother passed on, supposedly from lung trouble, and it appeared at one time as if I were going the same way. It was some years after I came into Christian Science before this phase of the trouble was wholly overcome. Science and Health (p. 410) tells us that "every trial of our faith in God makes us stronger," and while these trials at times seemed to be very hard, my faith became stronger, and the trouble was finally obliterated.

Some years ago I was healed, in two days, of an acute attack of illness, when I had but a slight understanding of Christian Science. It came to me that I had nothing to fear, and a feeling of confidence seemed to possess me that I had never experienced prior to that time. I applied myself very diligently to the reading of the Bible and Science and Health for the better part of these two days, and the discord vanished. I wish, in concluding my testimony, to express my gratitude to God, to Christ Jesus the Wayshower, to our beloved Leader, and to the loyal workers in the field.

WILLIAM BRANDT, Baltimore, Md.

Christian Science healed me when all material means had failed, and it has given me the joy and brightness with which my life is now filled. In 1895 I passed through a severe operation for the removal of a very large abnormal growth. The nature of the operation was such that I did not regain my strength, and I suffered constantly from pain and weakness in the abdomen. I had to crawl up and down stairs, and could walk only a short distance. Five years after the operation I made a misstep and hurt the side on which the operation had been performed, and for two years I went about the house with a crutch, but could not so much as walk across the street.

I kept growing weaker, until, two years later, I collapsed entirely. I was not raised from my bed for eight months, during which time neither my friends nor the physicians had any hope of my recovery. At the end of the eight months I was beginning to sit up a little, when I became worse and for eight weeks could scarcely be moved in the bed. After many weeks I could sit up again, but could not walk; then another relapse brought me as low as at the first sickness. A specialist was sent for, who ordered a treatment that seemed to help me for a while, when I took a fever, which almost brought the end. I did not sit up over a half hour at a time for a year and could not walk at all. At the end of this time I had been in bed most of the time for three years.

During all my sickness everything that could be done for me was done. The best physicians in the state of Indiana attended me, and every method of treatment suggested was tried. During the last year my family took me in the summer to a lake in northern Indiana, hoping the change might benefit me. I was helpless and utterly hopeless, and I am sure none of my friends ever expected to see me walk again. At first the change seemed to help me, but at the end of three weeks I became so much worse that it looked as if this was the end. A party of young people from Ohio came to the hotel where we were stopping, and we were told that they were Christian Scientists. When they first suggested that I try Christian Science, I was very antagonistic to it, but when I became so much worse I knew there was nothing else for me, and I decided to try it as a last resort.

A practitioner who was with the party came to see me on Tuesday morning. I was then so weak that they could scarcely hear me speak, but by noon I was much stronger and was able to be taken to a cot on the veranda. The next day I took a walk around the veranda and went to the dining-room for my supper. Sunday I walked from one hotel building to another, a distance of a block, and in a week I was walking this distance four times a day. In two weeks I came home, and two weeks later I walked twenty-two squares. This was five years ago, and now I walk any distance I wish, and have never been in bed a day since the second day of my treatment in Christian Science.

No one was ever bound by chains more strongly than I was bound to my bed for three years by this belief of weakness and disease; yet Christian Science was able to release me from this bondage, and for this wonderful healing I am truly grateful. The release from spiritual darkness and doubt has been the greatest blessing of all, and for this my gratitude is even greater. I shall always hold in grateful remembrance those who brought this truth to me, as the practitioner came to me in a crowded hotel and had to face the curiosity of one hundred and seventy-five guests. My healing was so quick and wonderful that she was looked upon as queer and supernatural; yet she did not falter or turn back, but held to what she knew to be the truth in the face of all difficulties. It was only through the knowledge of the truth that makes free that she could do this for a perfect stranger. Yet the world wonders why we are so grateful to Mrs. Eddy, who has revealed God to us in such a way that we are able by striving for right living and right thinking to realize what it means to become "the sons of God" and have dominion over all evil. Every moment of liberty I enjoy I know I owe to her demonstration of the truth that makes us free, and for this my gratitude to her will never cease.

MYRTLE M. PENCE, New Castle, Ind.

I wish to give my testimony regarding the process of my recovery from sickness in 1908. After treatment by a medical physician in 1907 for an eye disease, and from which I was said to have recovered, the same symptoms appeared about a year later, and I was afraid of the return of the old disease, because in the mean time one side of my nose had become painfully affected, while on the right side of my head I suffered severely after prolonged attention to administrative business.

A Christian Science practitioner in this city, at my request, helped me in the way taught in Science and Health, with the result that the headache disappeared rapidly; and the nose was very soon restored to a normal appearance. The redness of the eye diminished gradually, so that after three months the treatment was no longer necessary. The symptoms never reappeared, and I was convinced that the illness had disappeared forever.

It is a pleasure to me to express my great thankfulness for the kind and tactful way in which I was treated during my experience in reaching the perfect healing. I now feel that this truth is an excellent and sure possession. I thank divine Love, who has given to humanity a better understanding of God, in the Christ Science revealed again through Mrs. Eddy.—S. HOEKSTRA, Amsterdam, Holland.

I am one of the many who have found relief through Christian Science. For a number of years I had been a constant sufferer from stomach and other troubles, which doctors failed to relieve; and in a time of great need, having been sentenced to go to the operating-table, I was suddenly healed by the application of this truth. This may seem strange to those who know nothing of Christian Science and its healing power, but Christian Scientists know that it is the truth promised by Christ Jesus and which we find explained in our text-book, Science and Health, that makes us free. I have realized the power of this truth, and hope that my experience will help some one else to find it. I feel very grateful to God, and to our Leader, for all the benefits received.—MRS. N. J. BROWN, Tewksbury, Mass.

Digitized by Google

I would like to tell others how I was cured through Christian Science of catarrhal trouble. I had to stop work, as I was feeling so bad, and a doctor said if I was not careful I should probably have acute lung trouble. I had heard of Christian Science, but did not rightly understand it. I was, however, persuaded to call a Christian Science practitioner, and after one treatment I went to work the next day, perfectly well.

Nor was this all; my wife was suffering from swollen feet, and she also was cured at the same time. We are both very grateful for our healing, and praise God for the revelation of Truth and Love through Christian Science, which through its teaching has been the means of lifting me from a mental and physical drone into the living of a life I did not know was possible; and I have learned to know that God is All. It is my hope to live nearer to the example our Master gave us, and my thanks are due to Mrs. Eddy for having given us Science and Health.

J. F. STARBUCK, Manchester, England.

I first heard of Christian Science about three years ago. I was at that time suffering from varicose veins, and had the advice of two doctors, one of whom ordered an operation, to which, however, I would not consent. The other said I must on no account walk any distance without having my leg tightly bandaged. About that time I heard of Christian Science, and at once decided to have treatment. Within three weeks I was able to do without the bandage, although I had been obliged to wear it for years. I can now walk any distance without the slightest inconvenience. Christian Science has removed all fear of any evil effects, for which I am most thankful. I hope this testimony may be the means of bringing others into a knowledge of this beautiful truth.

My heart is full of gratitude to God for His great goodness to me, and to Mrs. Eddy for the revelation of this healing truth, which has done so much for me. I am daily striving to live the life of a true Christian Scientist, and I am very grateful for having been led into a better understanding of God, who is all Life, Truth, and Love.

MRS. F. DAVIES, Liverpool, England.

I wish to express my gratitude for Christian Science and the benefit I have received from it. I consider the help given me at the time of a runaway accident a wonderful demonstration of the power of divine Truth. I have scarcely a scar on my forehead, where I received a deep wound, caused by being dragged on my head so far and striking against a tree; besides receiving other severe injuries when the buggy passed over my body. My recovery seems wonderful indeed to me, and for this I am very grateful.—MAE HARRISON SCHWINGER, San Fernando, Cal.

I want to express my gratitude for what Christian Science has done for me. Over nine years ago, while visiting the Pan-American Exposition at Buffalo, N. Y., I slipped on a flight of polished stairs and fell heavily, injuring my spine. I weighed about one hundred and eighty-five pounds at that time, and the fall seemed to paralyze both legs for the time being. I suffered for about five years without medical attention, but at the end of that time two physicians, one of whom was considered among the best in Pasadena, Cal., pronounced my trouble a well-developed case of fistula and other rectal trouble.

I doctored for over three years without a cure, but finally my wife, who had been healed in three days by Christian Science of a very serious attack of throat trouble during January, 1909, persuaded me to try it in my own case. I did so, and in about two months' treatment all trace of my former trouble had entirely disappeared. I am enjoying the best of health, and never felt better in my life, for which I am most thankful to God, and grateful to our dear Leader, Mrs. Eddy, for this great truth which sets men free.—E. H. SCHWINGER, San Fernando, Cal.

It is with a very grateful heart that I write this testimony for the *Sentinel*. First, I should like to say that there are very many here in this town who have been helped and healed in Christian Science. Some give their testimonies at the Wednesday evening meetings, but very few write them for our publications; though they would do so, I am sure, if they only knew the help it is to others to read of this wonderful healing truth and of the many lasting benefits it brings to one and all.

Some time ago, when suffering from a severe form of blood-poisoning, I went to a doctor, who gave me medicine to take and said that I would require great care and many months of medical treatment. The medicine I took for three days very reluctantly, and never having had much faith in drugs, I decided to go to a friend in Maritzburg, a Christian Scientist, and find out from her if anything could be done for me. She at once kindly offered to help me, and lent me a copy of Science and Health, which I eagerly studied, and soon realized the wonderful power of Truth and the allness of God. I cast away all medicines and trusted implicitly to Him to heal me, and although at the time I was suffering acutely, I had no fear. In a very short time I was quite healed.

Words cannot express my gratitude for the many benefits I have received from Christian Science. I was also a great sufferer from rheumatism, having had a severe attack some years ago, and always periodical attacks. I could never venture out in wet weather, nor get my feet damp, without suffering terribly for days. Several times lately I have been out in heavy rains and got wet through, but I have never had a twinge of pain. I had also suffered with a delicate throat since I was a child and was continually in the hands of doctors. My throat is now quite well and strong, for which I am most thankful; also for the greatest blessing of all, the spiritual understanding,—to know that God is an ever-present help in trouble, and that "divine Love always has met and always will meet every human need" (Science and Health, p. 494).

I am truly thankful for the unselfish kindness which has helped to bring me into the understanding that God is All-in-all, and I shall never cease my striving to help others to know this wonderful truth. I earnestly give thanks to God, and to our dear Leader, Mrs. Eddy, that I have been so wonderfully helped both spiritually and physically. I trust this may help others.

HELENA E. YONGE, Durban, Natal, South Africa.

About three years ago I found it necessary to go to a dentist, who after an examination said that two teeth needed to be extracted. Ever since I had become a student of Christian Science, I had always made my own demonstrations at such times, but after being seated in the chair the thought came to me that I should ask for help, and I immediately telephoned to a practitioner, stating what was about to occur. I speak of this as a proof that divine Love is always ready to "meet every human need" (Science and Health, p. 494). The first tooth came without any difficulty, but when the forceps were placed on the second, the dentist explained that the roots were interlocked with a sound tooth in such a manner that the operation would be extremely trying and painful, and he urged me to go to a specialist and have an anesthetic administered. Much to his surprise I refused, telling him it was not necessary, as I had something far better. I asked him to go on with the work, which he finally consented to do. The dentist feared greatly that the roots would break instead of unlocking, but it was not so, as the tooth was removed intact. I shall

Digitized by Google

never forget his look and manner as he said, "You have had a divine dispensation, a divine dispensation." During this trying time I seemed to be lifted far above the sense of suffering, and fully realized that God's idea could not be hurt.

This is just one of the many proofs I have had of the all-power of God and the powerlessness of evil, and this understanding is made available to every one by the teachings of Mrs. Eddy in that wonderful book, "Science and Health with Key to the Scriptures." The longer I study this Science, the more I am impressed with the rare wisdom and great spirituality of our beloved Leader, and stand in awe as I gain a clearer sense of the magnitude of her life of self-sacrifice and toil, which has again made Christian healing possible. Christian Scientists cannot be too grateful to God for the ministrations through which these great blessings have come to our age.

MYRTIE A. TENNEY, Boston, Mass.

I have read Mrs. Tenney's testimony, and would add that when the tooth was extracted there was no sound from the patient, neither were there any indications of discomfort about her to show suffering from shock or pain. To say I was astonished is expressing it but faintly. Such a demonstration is certainly food for the unbiased mind, to say nothing of its effect upon skeptics.

DR. WALLACE SNOW, Boston, Mass.

[Translated from the German.]

With a thankful heart I speak of the benefits which Christian Science has brought me. I suffered for years from a severe nervous disorder, being so much affected that the least excitement caused violent headache, which was always accompanied by distress in the stomach, while the neuralgic pain would last for months. Many different medicines and tonics were tried, but they were of no use, as I was only temporarily relieved. Then other trials were added, which had to be quietly submitted to; but I did not despair, and my trust in God supported me.

During this sad time a relative drew my attention to Christian Science and invited me to go with her to a practitioner, and I did not long hesitate, for I had lost all faith in material means. The practitioner kindly gave me a treatment; and after having been treated three times the pain had all vanished. I am now quite well, and capable of more exertion than ever before. Through Christian Science I have learned to pray aright, and I study the precious spiritual truths, as explained in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, with a joyful and grateful heart toward God and our beloved Leader.

FRAU LINA LIESCHING, Stuttgart, Germany.

[Written for the *Sentinel.*]

FIAT LUX.

ABBY BEECHER ROBERTS.

THE eyes of new-born babe, first opening,
See not the world, the forms of man and beast,
Distinguish not the distances, but bring
One thought by which the new life is increased;
"Let there be light."
And on that light the eyes rejoicing feast.

When one, in searching for the light of Truth,
In new-born consciousness of being, cries
Out in sight, it is no world uncouth
He looks upon,—he sees but light arise—
"And there was light"
On which to fix his newly opened eyes.

FROM OUR EXCHANGES.

[*Watchman.*]

There is a critical state of mind which characterizes many of the scholars of today and prompts them to dismiss at once, as legend or as impossible under the unvarying continuity of nature, all extraordinary or supernatural events as recorded in Scripture. But they may be lacking in that personal experience of divine power in their own life, and lacking in that spiritual insight into the presence and illimitable exercise of divine energy which comes through communion and realization of the spiritual side of life. The man who draws near to God in prayer and life grows more and more aware of the inner power of Spirit in the world. Faith becomes developed to a high degree and dares to do great things in the name of God. This is the religious and peculiarly the Christian point of view in life. This is the aspect of life from which Christ looked upon human experience.

Men of this aspect of life, who have come from the presence of God, are the men who have changed the world in a manner that seemed impossible to those who saw the natural condition of things. It is men of faith who have had the spirit and power that have made the great epochs of human experience. The wonders that they have wrought are in the same line as those of Elijah and have been accomplished through the same sort of experience on their part and through the same kind of exercise of power. The cool, critical man does not know it all. There is a spiritual side of life which he does not penetrate or appreciate. He knows nothing of the power of Spirit in man or in the world. The man of Christian experience does know and understand in some measure this fact of life from his own personal experience of divine grace and power. What if that experience is analyzed and tabulated by psychologists and the elements that enter into it are traced to their sources? This no more disproves their spiritual character than an analysis of the elements of the human body disproves the spiritual character of the intelligence and force that coordinates and cooperates them all.

[*Universalist Leader.*]

Whatever the spiritual losses may be which result from the transfer of the conduct of the universe from will to law, it has brought with it one grand result. Everybody is equal before the law. There are no insiders and there are no outsiders. One can find out the law as well as another. One can obey the law as well as another. No one can do more than this. No one can do less and hope for right results. Nature's laws are democratic. The king must work if he would eat, the same as the common man. The priest must be righteous if he is to find peace, the same as the rest of us. Before the law and in the assizes where moral and spiritual compensations are measured out, a hoe is as good as a censer, a dusting-cap is as valuable as a miter. It is not a question of insignia. It is a question of rectitude. The integrities count. The moral realities abide. The principles of condemnation and commendation are open to all, and so plain that a common man may read them as he goes his way. With one right royal decree the moral law sweeps out of doors the whole vast pile of sacerdotal accumulations and says to every man, "Come, let us reason together." Instead of counting this transformation a spiritual loss, we should consider it the preparation for such an understanding of the universe and such an intimacy with the living God as the old order denied to most of mankind. Sometime we shall get closer to God under the reign of law than the world was ever able to get while depending upon the arbitrary and uncertain action of an infinite will in which were all sorts of shadows as of one turning about constantly.

[*British Congregationalist.*]

Religion is too often a handling of mental concepts rather than a revelation of the supernatural. Men come to the fire to be warmed, and they will seek and enjoy its life-nourishing properties so long as it burns brightly and cheerfully. But when there is substituted for fire a description of a fire, however brilliant it may be, men feel the deadly chill and hold aloof. What we mean is this: We have too little witnessing within the churches, both in pulpit and pew, to the renewing and transforming power of Jesus Christ. We often hear God spoken of and written about as though He depended for His existence and operation upon our treatment of Him. The emphasis, in short, falls almost exclusively upon man and not upon God; and the inevitable result is the creation of a sense of unreality.

Our business is not to apologize for or to describe religion, but to interpret it. We have to be men of one Book, and to live with it and expound it until all men feel its divine power. We have to live with God until our mind is filled with the awe and wonder of His being, until our prayers and testimony thrill with His Spirit, and men not merely hear and know, but actually feel the presence and spell of the eternal. The Christian is to be a witness for Christ, and a witness is a medium through whom the facts and powers of redemption operate. Men must forget the witness in his story. Until that happens with the churches, and man is lost in God and in the marvel of His redeeming grace, we shall have cause for anxiety.

[*Cleveland* (O.) *Plain Dealer.*]

A Mohammedan could pray the Lord's Prayer, as well as a Catholic, a Presbyterian, a Jew, or a "free thinker." It sums up in a few brief sentences the inarticulate aspirations of the immature mind, and at the same time is so comprehensive that he who can pray it from his heart has reached a stage of spiritual growth than which there is none higher on earth. It is the prayer that lifts us above the low earthly region to which our minds naturally gravitate, and carries us into a spiritual world which puts first the thought of God and His kingdom; which seeks not to change God's will, but to be in harmony with it; which perseveres in spite of toil and discouragement, and which is finally purged of all selfishness because it seeks no good apart from the good of others.

[*Churchman.*]

The progress of science and the scientific spirit, the progress of democracy and the emancipation that it is bringing with it from the barriers of race and caste, have been preparing the way for the highest form of unity, that unity of which the gospel of brotherhood is the watchword and the church the divinely appointed outward sign and symbol. The preparation of the world for this fuller revelation of the church is just as real as was the preparation of the world in the first century for the Christian mission. The vital question is whether the leaders in the church today and the great body of the faithful will have the same conception of the church and of its mission that those first missionaries had and achieve the same emancipation from hereditary tradition and prejudice that those followers of the apostles achieved.

[Rev. R. J. Campbell, M.A., in *Christian World.*]

"I am the way, the truth, and the life; no man cometh unto the Father, but by me." Exactly; every soul that finds God comes by that way, expresses that truth, and lives that life; there is no other way, no other truth, no other life that will lead you home to the full realization of what you are in God. You may try a thousand other ways, but you will have to come back to that one, the way of the life laid down. This is the truth, and to live that truth is to live in the life eternal.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS have recently been published as pocket and library editions in new bindings. Description and prices of these will be found on the outside cover page of the *Sentinel.*

ATTENTION IS CALLED to the new volume, "Poems by Mary Baker Eddy," now on sale. Specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

Attention is called to the following reprints printed in Swedish: "Hvad Ar Bön?" "Lagens Välde," "Det Ondas Natur," "Helvete och Himmel," "Människans Gemenskap Med Gud," "Verklighet," "Det Ar En Ström," "Förklaring Af Kristligt Helande," "Den Yppersta Egenskapen I Christian Science," "Underverken," "Det Ondas Ofvervinnande," "Var Väktare," "Riklig Tillgang," "Kristendom Och Vetenskap." Ten copies to one address, prepaid, 10 cents; one hundred copies to one address, 75 cents; five hundred copies to one address, $3.00; one thousand copies to one address, $5.00.

NEW MUSIC

Two of our Leader's poems, "Shepherd, show me how to go," and "Love," set to music by Frederic W. Root, are now on sale by the Society, and attention is called to the advertisement on the inside back cover page of this week's *Sentinel* for description and price.

NEW POST CARDS OF THE MOTHER CHURCH.

Post card photogravure, in sepia tint; an exact reproduction of the large photogravure of The Mother Church Buildings and Publishing House with parkway in foreground. Single copy, 5 cents; twenty-five copies, $1.15; one hundred copies, $4.25.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of testimonies to spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. Ten copies, ONE ADDRESS: each, one year, $1.90; six months, $1.15; 25 copies, each, one year, $1.80; six months, $1.10; 50 copies, each, one year, $1.60; six months, 95 cents. In all other countries additional postage at the rate of 40 cents yearly for each subscription is required.

SALE PRICE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, 20 cents. Ten copies, ONE ADDRESS, $1.70; 25 copies, $4; 50 copies, $7. In all other countries, single copy, 25 cents. Ten copies, ONE ADDRESS, $2.10; 25 copies, $5; 50 copies, $9.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

THE CHRISTIAN SCIENCE MONITOR

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. 100 copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; 50 copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; 50 copies or more, 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper. XI indicates the year 1911 and XII, 1912. Subscriptions and orders should reach us two months or more before *Quarterlies* are needed for use.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged for 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; 12 copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; 12 copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; *six or more copies to one address, $4.50 each.*

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; *six or more copies to one address, $2.50 each.*

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing *Dedicatory Sermon* delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, *cloth binding.* Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; *twelve or more copies, 20 cents each.*

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.20. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the month, and include all issues for the month named as expiration date on the wrapper. XI indicates the year 1911; XII, 1912. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25	£0: 5 s.: 2d.;	Mk. 5.30;	F. 6.45
2.25	0: 9 : 3 ;	9.50;	11.60
2.50	0: 10 : 3 ;	10.60;	12.85
4.00	0: 16 : 5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Not for years have so many far-reaching principles relating to interstate commerce been decided by the supreme court of the United States as were established last week. Among the questions decided were these: That the passenger has no right to buy tickets with services, advertising, releases, or property, nor can the railroad company buy services, advertising, releases, or property with transportation; that a state law regulating the size of crews on trains within the state is not an obstruction to interstate commerce, but is enacted rather in aid of interstate commerce, and may be passed by a state for the public safety; that the supreme court will review the validity of an order of the interstate commerce commission, even though the two-year limitation on the life of the order has expired; that a railway system may not escape regulation as an instrument of interstate commerce because one of its constituent parts is a wharfage company, and its dominating power over the wharfage company rests in the fact that it is a holding company; that the interstate commerce commission does not possess the power to reduce a rate as "unjust and unreasonable" merely because the rate is inequitable under some circumstances, as in cases where railroads induce shippers to enter a field by offering rates so low as to be unremunerative, and later increase the rates; the court also held constitutional a state statute providing that no contract of relief, benefit, or insurance should be a bar to the right of a railroad employe engaged in the operation of a railroad to sue the employer for damages resulting from injuries received in the course of his employment.

The National Economic League has decided by a poll of its eight hundred members in all parts of the United States that the answer to this question, What are the subjects of greatest public importance in the United States, is: First, direct legislation, including primary nominations, the election of United States senators by the people, and the initiative, referendum, and recall; second, the inefficiency and delay of the courts in administering justice. From a preliminary ballot of fifty-four subjects, eleven were chosen by a process of elimination. Those considered of the greatest importance to be taken up by the league this year besides the two already named are as follows, in the order of their importance: Regulation and control of corporations, centralization of power in the federal Government, conservation of national resources, the tariff, the public school system in relation to physical, intellectual, civic, moral, and vocational training; efficiency and economy in federal, state, and municipal administration; corporation influence in politics; taxation; relations between employers and workmen. The council of the league represents equally, in proportion to population, every state in the Union. In its membership are presidents of universities, professors of political economy, judges, lawyers, bankers, merchants, manufacturers, etc. The intention has been to make it inclusive, so far as possible, of all classes, interests, and opinions.

"Modern American lawyers have made a fetish of procedure and have created a mass of artificial rules which in some states present as great an obstacle to reaching the judgment-seat as did the common law rules of pleading before the English judicature form acts," said Attorney-General Wickersham at the dedication of the new law department building of Georgetown University. He said it was the privilege of young men now entering the profession to contribute in the work of clearing away this mass of worse than useless machinery, and of substituting a few simple regulations. "To the effective accomplishment of such reform," said Mr. Wickersham, "an accurate knowledge of conditions and requirement is indispensable. More harm is done by ill-considered reforms than by a continuance of existing evils. It is always important, too, that changes in law or procedure shall be developed along lines of established and well recognized principles, rather than across the grain, as it were, with no continuity between the new regulation and the old."

In the annual report to the president of Harvard University, Dean Le Baron R. Briggs, chairman of the Harvard athletic committee, severely scores modern tendencies in organized athletics. The cost, he says, is scandalous, and he deplores extravagant expenditures from funds obtained as gate receipts. He says that taxicabs as the sole means of getting about, costly dinners with wines and cigars, "give a handle to the enemy of athletic sports, and pamper and even pauperize strong men."

The cost of the field work for collecting the statistics of population and agriculture in the United States for the census of 1910 was $5,855,500. This does not include the expense in this country's insular possessions, nor the cost of the clerical work in the census bureau at Washington. Seventy-one thousand four hundred enumerators were employed in continental United States.

After twenty weeks of struggle the garment workers of Chicago are forced to submit to what they have dreaded for the last four months, a starvation agreement. Forty thousand workers were involved. The estimated loss in wages has been three million dollars, in trade four million, and in strike benefits one hundred and fifty-five thousand.

The House committee on interstate and foreign commerce is expected soon to report the bill of Representative Sims of Tennessee designed to break up race-track gambling by prohibiting telephone and telegraph companies from transmitting news of horse races maintained for gambling purposes.

The sundry civil appropriation bill, carrying a total of $140,500,031, including $3,000,000 for fortifying the Panama Canal, has been reported to the House.

The Senate committee on industrial expositions has given a unanimous vote in favor of San Francisco for the Panama Canal exposition.

International.

The terms of the treaty between Canada and the United States for the cessation of pelagic sealing in the Pacific for a term of not less than ten years have been announced. By the terms of the treaty made at Washington, the United States Government may still continue its present system of taking each year a limited number of seals from Pribyloff islands. To compensate Canada for the withdrawal of all sealing privileges on the high seas, the Dominion will be given an equity based on a percentage of the total annual take from the islands. It is believed in the course of a few years of absolute protection of seals in the north Pacific, the herds will again become as large as ever.

"The most powerful help to social reform in India," says the *Leader* of Allahabad, "will be the Hindu women when they have received the blessings of education, just as at present they are the greatest obstruction to progress. . . . Women are not regarded as independent units of society at all, they are accorded no rights, the dignity of womanhood is not recognized. All this will have to be changed before there can be any real social progress." That this state of affairs will not be allowed to continue much longer, there is every reason both to hope and to expect. India is going forward, slowly, it may be, but surely.

The Reichstag has passed the third reading of the government's unearned increment tax bill and reversed its recent decision subjecting the princes to a tax. The German sovereign houses, by the new ruling, are now entirely freed from taxation.

Industrial and Commercial.

A new process, according to *Shoe Retailer*, has been invented which will overcome the objections to the three processes in the manufacture of patent leather—varnishing, baking, and sunning. Leather made in this way is said to be as soft as kid, as bright as patent leather, and will hold its finish much longer and better. The grain is flexible and strong because it has not been baked, and it has all of the natural strength and fiber that any unfinished leather would have; consequently adding a great deal to its wearing qualities. In the severest tests that it could possibly be put to in shoe factories, in wearing, and in cold tests, it has in every instance come out without a check or a crack under any conditions. This leather can be made in black and in colors as well. The shoes do not change color in wearing, and it is more easily cleaned than the ordinary colored leather. The finish is so thin that it leaves a beautiful grain effect, much handsomer than can be obtained in any varnished leather.

Material reductions are made in the cost of pre-cooling of citrus fruits from California to eastern points of destination, as far as the Atlantic coast, by a decision handed down by the interstate commerce commission. The present charge of the defendant lines for pre-cooling citrus fruits is thirty dollars a car. This charge is found by the commission to be unreasonable to the extent that it exceeds $7.50 a car. It is ordered, therefore, that, beginning April 1, 1911, for a period of at least two years, the charge for pre-cooling shall not exceed $7.50 a car, provided that the pre-cooled cars be loaded with boxes of oranges seven tiers wide and two tiers high through.

The new fifty-thousand-ton Cunard line steamship which is being built at Clydebank, Scotland, will be named Aquitania. It is estimated that the vessel will cost ten million dollars. Her dimensions are eight hundred and eighty-five feet length and ninety-five feet beam and she is to have a speed of twenty-three knots. She will be two and a half feet longer with ten thousand more tonnage than the White Star liners Olympic and Titanic. She will have accommodations for six hundred and fifty first class passengers, seven hundred and forty second class, and twenty-four hundred steerage.

With incorporation of the Studebaker Corporation, capital forty-five million dollars, of which thirty million dollars is common and the balance seven per cent cumulative preferred, the final step has been taken in merging the Studebaker Manufacturing Company of South Bend, Ind., and the Everitt-Metzger-Flanders automobile concern of Detroit.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

[Reprinted from *Outlook*, London, England.]

MARY BAKER EDDY.

FREDERICK DIXON.

THERE is a sentence of Abraham Lincoln's, occurring in his famous address on the battlefield of Gettysburg, which comes instinctively to memory in reading the multitudinous articles which have been contributed to the press of the world, during the last few weeks, with respect to Mrs. Eddy. "The world will little note nor long remember what we say here," he declared, "but it can never forget what they did here." These articles have been, on the whole, extraordinarily appreciative. Here and there some writer, with little knowledge and less wisdom, has indulged the passion to wound, here and there sectarian bigotry may have shown that intolerance which never knows when to be silent, but the columns of remarkable tributes, printed in the *Christian Science Sentinel* for Dec. 17 last, are witness to the respect and admiration felt for Mrs. Eddy by the press of her native land. Still, these are words: and words, unless indeed they are the expression of some mighty purpose, are not apt, in Lincoln's phrase, to be much noted nor long remembered. That recognition is reserved for deeds; and when the story of the world's achievement in the nineteenth century comes to be written, the foundation of the Christian Science church will occupy, in the perspective of the ages, an importance very different from that so frequently assigned to it by the prejudices of contemporaries, who, testing all things on the touchstone of their own ideals, demand with wearisome monotony, "Can any good thing come out of Nazareth?"

To those who have known Mrs. Eddy personally, she has always been a very different figure from that conjured up by critics who had never seen her face, nor held her hand, nor listened to her voice, but who wrote or spoke with all the foolish dogmatism born of ignorance. I remember her now as I last saw her in the workroom of her house, on the outskirts of Boston, one day in the year which has just closed. She was sitting in a low chair beside a table piled with papers in the bow window with its glorious view of the Massachusetts hills marching with the coast on which the Pilgrims landed, the gentlest, sweetest, and most refined lady I have ever known. Yet with all that gentleness she possessed the fire of a great reformer; with all that sweetness she was none the less the deepest of thinkers; while her innate refinement did not prevent her from being the foremost leader of men in the world-battle of good against evil. "No one," once declared one of the "great Commoner's" great officers, "ever entered Mr. Pitt's cabinet who did not leave it a braver man;" and no one, it may fearlessly be said, ever entered Mrs. Eddy's study who did not leave it not only a braver but a better man.

Fear, indeed, had no resting-place in Mrs. Eddy's presence. The greatest debt perhaps that humanity owes to her is that she has shown it that it need not be afraid of fear. It is impossible for an observant person to go about the world today without discovering that men and women are crushed beneath a load of fear. Half their activities are devoted to taking precautions against fear—fear of sickness and death, fear of sorrow and want, fear of man's inhumanity to man. In the midst of this medley, standing like some tenth legion in the throbbing *sauve qui peut* of physical existence, there is an ever-increasing army of people which, in the light of Mrs. Eddy's teaching, is learning to understand, and understanding to prove, what Christ Jesus meant when he said, "Fear not, little flock; for it is your Father's good pleasure to give you the kingdom." The kingdom of God is within men, and where that kingdom is there is peace and not fear.

Nothing perhaps has struck those who have come in personal contact with Mrs. Eddy more than the immense strength of her character mingled with her extraordinary tenderness for humanity. This strength was itself the expression of an entire absence of fear, for when a man's fears are aroused there is commonly little tenderness shown for those who have aroused them. With Mrs. Eddy the one paramount impulsion has ever been the good of mankind, in every thought and deed she has lived the gospel which she preached, and consequently the more bitter or brutal the attack, the more she has striven to help those who most needed her assistance.

One other thing which must have struck immediately any one who had occasion to talk to Mrs. Eddy was her capacity for packing the maximum of information into the minimum of words. What she could do in this way in writing may be discovered by any one who will read the tiny volume known as "Unity of Good," but the faculty here expressed was even more noticeable in her conversation. Curiously enough, one of the commonest objections taken to Science and Health is its diffusiveness. As a matter of fact, no criticism could be wider of the mark. Science and Health is not a text-book for a specially trained cult; it is a text-book for humanity, and a commentary on the entire Scriptures. It has to meet the needs of people of all nations and of all manners, the scholar and the working man, the idealist and the materialist, and those who are burdened alike with sorrow, or sickness, or sin. It is a library in a volume, for it contains between its covers the essential literature of a movement. Many books might be made out of it; and, as the necessity has arisen, Mrs. Eddy has taken the material for several volumes from its pages.

The real object of the book however was to give the world of today a vision of how the Christianity of the first century might be made practical in the twentieth. During all those ages the voice of Christendom had prayed for light in puzzled wonder, until its hopeless expectation had become articulate in the words:—

> Dim tracts of time divide
> Those golden days from me:
> Thy voice comes strange o'er years of change,
> How can we follow Thee?

To those with eyes to see, Science and Health made the way plain, and there grew up a new church, which accepted as a fundamental requirement the command of Jesus not only to preach the gospel but to heal the sick. For forty-

Copyright, 1911, by The Christian Science Publishing Society.

Digitized by Google

four years that healing has continued without a break. The witnesses to it are to be found on every countryside, and in the villages and cities of the world, in the shape of hundreds of thousands of happy, healthy men and women rescued from disease and death, and from fates more terrible than these. It is futile to tell this ever-increasing throng that it is not really Christian Science which has healed them. That old argument had some force forty years ago, when the number of Christian Science patients could be counted by tens. But now that the cases of healing have risen from tens to hundreds, and from hundreds to thousands, and from thousands up to millions, those who have benefited are apt to smile as they reply, in the words of the man born blind, "One thing I know, that, whereas I was blind, now I see." In this way the divine command to preach the gospel and to heal the sick has been obeyed; in this way the world has been given the answer to the cry, "How can we follow thee?" and in this way a practical proof of the value of Christian Science has been offered to humanity which far transcends the import of the famous epitaph to Wren cut on the wall of his great cathedral of St. Paul's, "*Lector, si monumentum requiris, circumspice.*" Mrs. Eddy's audience is humanity, her cathedral the world, and in whatever corner of it we may wander there is some case of sickness healed, of sorrow banished, or of sin overcome, and the Christian Scientist can repeat to that audience, "*Si monumentum requiris, circumspice.*"

No wonder Mrs. Eddy was an ever-inspiring Leader to work for, and no wonder there grew up round her a body of devoted assistants. No matter how hard they might work, she worked harder still; and for months and years, while they were receiving her constant and incisive instructions, they read with mingled amusement and amazement the stories of her mental incapacity and the failure of the movement, which then, very much as now, constituted in the press the news of Christian Science.

Of all the many achievements worked out in this way, none was more remarkable than the foundation of the daily paper known as *The Christian Science Monitor*. It is a story which the world would describe as a romance, but Christian Scientists as an instance of practical Christianity. For twenty-seven years Mrs. Eddy had planned this paper, in the columns of which all sensationalism was to be eschewed, which should never give to party what was meant for mankind, and which should contain no paragraph which should not be read by any one in the families of its subscribers: and for all these years she had waited, with the calm deliberation and patience which were so characteristic of her, for the right moment to give it to the world.

It came in the summer of 1908, when she was already in her eighty-eighth year. That August she wrote a note one day asking in how short a time an ordinary daily paper could be brought out. Not one of the heads of the Christian Science Publishing House had ever had any connection with a daily paper. Mrs. Eddy had however taught them many things, among others that she never asked anything impossible, because nothing that is right to do ever is impossible. They took counsel together, then told her, in three months, and they kept their promise. The land on which the buildings had to be erected was then covered by a block of flats occupied by numerous tenants. These tenants had to be arranged with and the site cleared before the actual work of construction could be commenced. When all was ready, operations were continued so rapidly that the printing-presses were placed in position wrapped in tarpaulins while the building operations were still being carried on. Within the three months the offices were built and equipped, the staff brought together, and the first issue published. Mrs. Eddy herself took the utmost interest in everything, and, from the moment the first number was issued, actively guided the policy and destiny of the paper as it rapidly grew into an organ with a great circulation embracing every country in the world.

There never was a greater organizer than Mrs. Eddy, because she had the courage to build on Principle, unmoved by anything policy might seem to dictate. A famous English journalist once declared that in every great decision she had ever been called upon to make she had taken the course which human judgment would have declared suicidal, and that on each occasion she had been justified by the result. Her critics, blinded by their own prejudices, have never been able to grasp this. They have gone on, year after year, repeating their own falsified prophecies of failure, almost without shame. While they have raged, Mrs. Eddy has been true to the message she sent to her church in the year 1900: "Work—work—work—watch and pray," with the inevitable result that the rain may descend, and the floods come, and the winds blow, and beat upon that house; and it will not fall, for it is founded upon the rock.

THE TRUTH.

LOUISE FANNY BODMER.

For many centuries men have been seeking salvation from the misery caused by sin, sickness, poverty, and death. Some have turned to God for help, others have tried to solve the riddles of life by their own ability and power; all have sought health, peace, and happiness. But have these earnest endeavors brought mankind sensibly nearer to the kingdom of God, the realm of harmony?

Jesus Christ, who is revered by all Christian believers as the Saviour, said: "Seek, and ye shall find;" "Ye shall know the truth, and the truth shall make you free." That much seeking has been done, is evidenced by the many religions and sects in existence. Why then has not mankind come nearer to the truth which makes men free? Is it not a fact that many of our religious theories have led us away from spiritual freedom? And yet we have the Master's promise, and his mighty works in proof that the power of Truth does make free, even as he said,—free from the fetters of fear, free from sickness, want, and woe, free from sin, whose helpless prey men seem to be.

Jesus the Wayshower and Teacher "went about . . . preaching the gospel of the kingdom and healing all manner of disease among the people." It was not his own power that enabled him to do these works, for he said, "Verily, verily, I say unto you, The Son can do nothing of himself, but what he seeth the Father do: for what things soever he doeth, these also doeth the Son likewise." He also declared that those who believed on him should do the same works that he did, and even "greater works."

Many professed Christians claim that God has created sickness and sin—the former to bring us closer to Him, the latter to try us, and then to punish us if we do not resist the temptation. If this were true, would men be justified in attempting to forestall what they believe to be their fate? Would they have a right to resist sickness and sin and to try to escape death? If death is in accordance with the will of God, if it is something good, if it is a deliverer, why do not people hasten to die? The Bible calls death an "enemy" which came into the world "by sin." It therefore follows that when sin has ceased, death will be overcome. Sin is not the work of God but of the devil, and Jesus called the devil "a liar, and the father of it." Webster defines the word lie as deceit, falsehood, deception, etc. The devil or evil is therefore a deceiver, who lies about God and His creation; but when these lies are recognized, they lose all power, for man then realizes the truth, the omnipotence of God. When we see sin—the belief in other powers or gods—as a deception, we shall not fear it; and to the extent that we trust God and learn to know Him, we shall get rid of sin, all evil.

Jesus, who was always about his Father's business, healed the sick. He said, "My Father worketh hitherto, and I work." If it were God's will that men should suffer and be sick, would His Son have healed the sick and cleansed

Digitized by Google

the lepers? Would God have assisted in destroying His own works? God created man in His own image and likeness, and Jesus recognized this more clearly than did any one else. Mrs. Eddy says, "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick" (Science and Health, p. 476). He proved that sickness is a deception of material sense; that "the only reality of sin, sickness, or death is the awful fact that unrealities seem real to human, erring belief, until God strips off their disguise" (*Ibid.*, p. 472). In the degree that we claim our inheritance and put our trust in God, we bring peace and happiness into our own lives and into the lives of our fellow-men.

Christian Scientists have learned to understand somewhat the omnipotence, goodness, and love of God, and this understanding has brought them peace and harmony. Is it a wonder that they are grateful to the one who by virtue of her faithfulness and firm trust in God moved on courageously in the face of scorn, calumny, and opposition, in order to bring to mankind peace and comfort? She pointed us to the truth that makes man free,—free from fear and sickness, want and woe.

BEGINNING AT JERUSALEM.

A. B. FICHTER.

In the Gospel of Luke we read that Jesus commanded his disciples, on the day of his glorious demonstration over the power of death and the grave, "that repentance and remission of sins should be preached in his name among all nations, beginning at Jerusalem." Sometimes one hears the view expressed by Christian Scientists, that they feel hindered in their best efforts and endeavors to demonstrate their understanding, on account of the opposition or indifference of those about them. They say that they feel isolated, that they are disheartened because some members of their circle are not receptive, and they are tempted to feel that they might render better service to the cause if in some way they could separate themselves from their old environment and find pastures new, where receptivity and more apparent needs might offer ampler opportunities for the outpouring of the truth and bring greater results to earnest and faithful endeavor.

Jesus' command to his disciples, however, was that repentance should be preached, "beginning at Jerusalem." When one considers that the people of Jerusalem had just witnessed his crucifixion (his ignominious defeat, as it must have seemed to the world); that this was the seat and stronghold of pharisaical pride and rabbinical prejudice, it hardly seemed in keeping with common prudence for the disciples to undertake the establishment of his kingdom in such a place. Yet fifty days later, on that memorable day of Pentecost, Peter was able to deliver his sublime speech before multitudes of people from all over the known world, with the result that about three thousand converts were added to the number of the faithful. What an encouraging lesson is this to all of us, an incentive to be obedient, to use what we have of understanding right where we are, to live it without reference to discouraging surroundings, and never to mistrust the heavenly guidance nor the power of Truth over error.

In Science and Health (p. 589) Mrs. Eddy gives the spiritual definition of Jerusalem as "mortal belief and knowledge obtained from the five corporeal senses; the pride of power and the power of pride; sensuality; envy; oppression; tyranny." And are not these the attitudes of thought which many Christian Scientists meet and complain of in their immediate surroundings, perchance in their homes? And are not these the conditions which most evidently need the gospel of repentance and the promise of the remission of sins in his name? What hope is there of ever overcoming these beliefs which are opposed to the understanding of Christian Science, unless right among them the truth is poured in "through flood-tides of Love" (*Ibid.*, p. 201)?

With the knowledge that evil has no power, the Christian Scientist may dauntlessly begin to grapple with sin at home and abroad. He can begin at home by purifying his own concept and erroneous judgment about surroundings; at home by reflecting love, and more and ever more of love; at home by lovingly, faithfully, and hopefully working, watching, and praying, as we are taught; at home by a life that is itself the demonstration of the power of Truth, that those about him may see his good works, and glorify the "Father which is in heaven."

"YEA, YEA; NAY, NAY."

DAISY BEDFORD.
