When our Lord left his post on earth as the Master of his disciples, he said he would provide another leader who would guide their minds into the whole truth of his revelation and would direct all their activities. The Spirit of God is the real teacher and guide of Christian thought in the present era. It is the men who have been open to the Spirit's enlightenment and have been moved by His power who have brought in the newer and nobler experiences of men. But the natural tendency is for men to settle into their own creeds or try to sustain their own ecclesiastical systems or value their own cherished portions of truth so that they cannot appreciate anything else. There should be confidence in the presence and activity of the Spirit of God

Digitized by Google

in the kingdom of heaven on earth to preserve it and promote it among men. If there were this reliance upon Him, there would be less apprehension of changes and more openness of mind to see what the Spirit of truth and grace is doing.

[*Christian Work and Evangelist.*]

In industry we face a commercial order that encourages unfeeling competition, that expects a man to work primarily for selfish reward of his labor, and that teaches him that what he controls in property is his own to do with as he pleases provided he does not break the laws of the land. Industry dominated by such ideals is perhaps the greatest producer of selfishness in the whole world. It is the task of the Christian to substitute commercial ideals inspired by the Spirit of Jesus; to insist that cooperation supplant unfraternal competition; that no one shall work primarily for the rewards he receives in wages or profits or fees or power or fame, but for the joy of ministering to the real needs of men; and that no one shall consider that which he personally controls as his own property, but as the possession of the brotherhood which he is charged to administer as their trustee.

[*Living Church.*]

Nicodemus is interesting as a type of the timid Christian so familiar in modern life. There are many who have a certain relation to the Christian faith—thin, we suspect, because of their timidity. Jesus Christ takes his place in their consciousness as an ideal and beautiful figure; they would know more of him; learn his secret of the mystery that presses close upon them. And so, as it were, they come to him by night—a little afraid of compromising themselves in the broad daylight before family and neighbors; too careful to commit themselves unreservedly to the faith and practice of the church. Jesus has little to give the souls that fear to give him much.

[*Advance.*]

The vital question today is, What have we to produce Christian experience? Are we getting away from the great beliefs which created it in the past, and if so, are we discovering new truths which will be more effective in giving us the needed experience? We cannot too highly value Christian experience, but for that reason we must all the more emphasize the causes which produce it. Certainly the negative position so common in current theological discussion will not give us positive experience. Nor will too much emphasis on the intellectual aspects of religious problems.

[*Christian Register.*]

Theology had no part in the simple command, "Feed my sheep." It implied a tender, human relation carried a step higher into the spiritual sphere. It seemed to involve a very intimate companionship between the shepherd and his flock. It must have meant something more than a weekly appearance and the preaching of one sermon, however brilliant. Peter, we may infer, was not a distinguished pulpit orator, nor did he preach over the heads of his congregation; but he understood his people through loving them.

[*Christian World.*]

The Christianity which is to win in Japan will have to be, through and through, a scientific Christianity. Japan will reject a great deal of our old theologies. It has none of the prejudices which have fostered and protected them in our own minds. Here the east, which has accepted the science of the west, will react upon our own faith in insisting upon a scientific basis for all it is going to believe. Singular interchange! The east, which gave us our religion, will, in accepting, be one of the most effective instruments in its reformation, its purification.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

For some time the postage required for subscriptions outside of United States territory has exceeded the amount added to the regular subscription price for this purpose, and an increase in rates sufficient to cover this deficiency is now deemed necessary.

Beginning April 1, 1912, therefore, the rates on all subscriptions outside of United States territory will be as follows: For Canada, *Journal* $2.25, *Sentinel* $2.45; for all other countries, except those to which the domestic rate applies, *Journal* $2.65, *Sentinel* $2.95.

Renewals for all subscriptions terminating before April 1, 1913, and received by us prior to July 1, 1912, will however be accepted at the old rates.

The pamphlet "Causation" by Frederick Dixon has been translated into Swedish—"Kausal-lagen"—and is now on sale; 40 pages and cover at the prices of the regular pamphlets.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Entered at the Boston, Mass., postoffice as second-class matter.

ITEMS OF INTEREST.

National.

Eight railroads controlled, in 1907, 78.04 per cent of the entire production of anthracite in the United States, says *New York Tribune*. The proportion today is, if anything, greater than that. This figure, however, does not present the complete story of the grip which these eight railroads, with their tonnage and price "understandings," exercise over the anthracite industry. The reason why the independent coal operators, even though they mine only 21.96 per cent of the anthracite supply, do not inject a semblance of competition into the trade may be found in the existence of what are known as the "sixty-five per cent contracts." Through these contracts the alleged "independent" operators dispose of more than a third of their total output to the coal departments or subsidiary companies of the eight railroads. The "independents" who are parties to them have agreed that the contracts should run for the life of the mines. The control of the eight railroads over these sixty-five per cent contract operators is, therefore, only less complete than their control of their own subsidiary coal mining companies. And as these contract operators produce a third of the coal mined by the independents, or, roughly, seven per cent of the total production of anthracite, they swell the percentage of production over which the eight railroads exercise sovereignty to eighty-five.

The Boston Chamber of Commerce has been asked to help the interstate commerce commission in its coming investigation of the New York, New Haven & Hartford, the Boston & Maine, and the Maine Central railroads. The order to investigate follows the resolution recently adopted by the chamber, in which it asked the Legislature that Governor Foss' merger bill be postponed until the railroad situation in Massachusetts and New England should be studied by an impartial board. "Complaint having been made to this commission," says the order received from the interstate commission, "that the carriers hereinafter named and each of them have filed with this commission certain rates, classifications and regulations, the enforcement of which has been unjust, unreasonable, unjustly discriminatory, unduly preferential and prejudicial, and otherwise in violation of the act to regulate commerce, and that the practices of said carriers and each of them in the conduct of business subject to said act are unjust, unreasonable, unjustly discriminatory, unduly preferential and prejudicial, and otherwise in violation of the provisions of said act: "It is ordered that an inquiry be and the same hereby is instituted by this commission on its own motion into the rates, classifications, regulations, and practices of the carriers named."

The system of coast defense fortifications which protects the maritime cities, harbors, and important waterways of the United States proper is probably the most extensive and complete in existence, says *The Scientific American*. It was planned in 1885 by a special army board, known as the Endicott board, and after two decades of continuous construction it may now be considered as practically complete. The total cost of the work to date is one hundred and forty million dollars. It includes at present 388 twelve-inch mortars, 113 twelve-inch guns, 130 ten-inch, 74 eight-inch, and 531 guns of smaller calibers than eight-inch. Also there are yet to be mounted in the various batteries two sixteen-inch guns, 163 twelve-inch mortars, 31 fourteen-inch, 45 twelve-inch, and 98 guns of calibers less than eight-inch. A single one of the twelve-inch guns costs forty-nine thousand dollars, and hence the 113 guns of this caliber alone represent an expenditure of some five and a half million dollars. Every time a twelve-inch gun is fired with an armor-piercing, high-explosive shell it costs the country six hundred dollars.

Attorney-General Wickersham declares that the government's suit against the Southern Pacific companies for the recovering of valuable oil lands in southern California has developed "sensational and startling disclosures." Testimony by witnesses subpœnaed by the government, he says, "presents a remarkable picture of criminal conspiracy among high officials of the Southern Pacific Company to acquire from the United States under an agricultural grant oil lands valued at fifteen million dollars."

By a vote of thirty-five to ten, the Massachusetts House passed to be engrossed the bill to make Salisbury beach a reservation, the expenses of the same to be borne by the cities and towns in the Merrimac river valley.

International.

The county of Surrey forms the southern boundary to London and its ever-extending suburbs. At the present time an effort is being made to stem the encroachments of the builder and so secure to the public the right of access to the summits of the whole of the North Downs from Reigate to Guildford, including Hetchworth Clump, Box Hill, and the ridge, which after crossing the country in a westerly direction, terminates in the Hog's Back. It is probable that a bill to this effect will be laid shortly before Parliament, but meanwhile Colley hill, from which is to be seen one of the finest views in the country, is threatened with building operations, and to prevent this a subscription has been opened to raise the seventy-five hundred pounds required for the purchase of the hill. Of this sum sixty-five hundred pounds has already been obtained. The scheme for the acquisition of the Chalk Downs will, also it is thought, meet with success, for already one of the six landowners between Reigate and Guildford has offered to sell his property for the furtherance of the scheme.

The minister for works in western Australia announces some elaborate proposals for the construction of irrigation works in the southwest of the country. In the locality in which he was speaking it was proposed to construct two reservoirs, the first of which was to impound three hundred and fifty million gallons of water and to cover an area of seventy-seven acres. This would provide that the people who now have orchard land could get three waterings of two inches each during the drier season of the year. This reservoir would cost about fifteen thousand pounds to construct. The second reservoir was estimated to impound eight hundred and fifty million gallons, which would be used for lands at present not occupied. Authority has already been granted by Parliament for the construction of the first reservoir, the plans for which are now completed, and the work will be put in hand almost immediately. Other comprehensive schemes of irrigation in various parts of the southwest are under consideration.

On behalf of the Rural League a party of twenty English farmers has been visiting Ireland to study the facts of land purchase in that country with a view of estimating the value of the land purchase bill of Jesse Collings, M.P., president of the league, which has been before Parliament for the last two years. The secretary and leader of the party of farmers stated in his report that as a result of unbiased investigation it was found that purchase by state aid was being taken great advantage of in the country by farmers and peasants, and that in consequence land that was formerly valueless was being transformed and rendered productive.

Revised estimates of the Chinese budget for 1912 show a revenue of $207,000,000 and an expenditure of $403,200,000, including extra army expenditure of $22,400,000 and provisional administrative expenditure of $77,000,000. Premier Tang Shao Yi has sent in his resignation in consequence of the violent attack by the National Council on his alleged prodigal expenditure of the recent small loans. The cabinet is endeavoring to persuade him to withdraw his resignation, but in some quarters it is thought that the retirement of Premier Tang Shao Yi will tend to remove the growing disgust of both foreigners and Chinese.

The Peking correspondent of the *Daily Telegraph* says that a stringent anti-opium bill is now before the advisory council. It aims at the total suppression of the traffic before Dec. 31.

During the month of April six hundred and sixty-eight portions of land, representing 1,142,447 acres, were made available for selection near Brisbane, Australia.

Industrial and Commercial.

The foreign trade of the United States in the fiscal year which ends with this month will show that in both imports and exports the totals for the fiscal 1912 will be the largest on record. Imports seem likely to approximate sixteen hundred million dollars, exceeding by between forty and fifty million dollars the high record import year 1910, when the total was one billion five hundred and fifty-seven million dollars. Exports seem likely to approximate twenty-two hundred million dollars, or about one hundred and fifty million dollars more than those of the previous high record of two billion forty-nine million made in the fiscal year 1911.

Official tests of the many valuable hardwoods native to western Australia have made known the extraordinary properties of jarr, held to be the strongest of all known woods, says *Harper's Weekly*. Its average tensile strength is twenty-four thousand pounds to the square inch, equaling that of good cast iron. But many specimens are much stronger, and one was tested up to seventeen and one half tons to the square inch, which is equal to the tensile strength of wrought iron. The sawn timber of jarr is probably the strongest in the world.

More than one third of the two and one half billion pounds of coffee annually entering the international commerce of the world is consumed in the United States, its imports of that article being twice as much as those of Germany, three times as much as those of Netherlands, four times those of France, nearly ten times those of Great Britain, and half as much as those of all Europe.

The annual report of the White Star Steamship Company shows that the profits for the year amounted to $5,172,760. The dividends amounted to sixty per cent.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

ANNUAL MEETING OF THE MOTHER CHURCH.

FULLY three thousand members of The First Church of Christ, Scientist, in Boston, Mass., were present at the annual meeting held in the church edifice on Monday afternoon, June 3. Judge Clifford P. Smith, the retiring president, presided at the opening exercises. The officers elected for the ensuing year are: President, James A. Neal, C.S.D.; treasurer, Stephen A. Chase; clerk, John V. Dittemore. Judge Smith in his introduction of the new president paid fitting tribute to Mr. Neal's service to the cause and the high esteem in which he is held by all who know him. Mr. Neal then spoke as follows:—

Friends:—The Board of Directors has elected me President of The Mother Church for the coming year. I appreciate the honor and accept the duty. Before continuing the business of the meeting, I would like to say a few words about the general prosperity of the Christian Science movement; and by prosperity I mean the growing desire on the part of men and women to become Christian Scientists. This growth is shown to some extent by the increase in the circulation of our literature: and right here let me emphasize the fact that the Christian Science Publishing Society is not a business enterprise run for commercial purposes. It was established many years ago by our beloved Leader, Mrs. Eddy, for the purpose of distributing authoritative Christian Science literature, with the hope of helping mankind to a better understanding of God. Mrs. Eddy foresaw the good that could be accomplished by launching the various publications of this society, and under her guidance they have been established on a foundation that is enduring.

By way of comparison I will speak first of the ever increasing demand for Science and Health. You will recall that during the years when Mrs. Eddy was constantly revising this book, many Christian Scientists, eager to keep up with the latest and best expression of this Science, frequently purchased new copies. During the past year and a half there has, of course, been no revision of Science and Health, not even a word of its text has been or ever can be changed. Notwithstanding this fact, the sales of this book have been greater during the past twelve months than in any other consecutive twelve months since its original publication.

Comparisons taken from the records of the Publishing Society show that during the past year two hundred times more filing space was required for its current letters than was necessary for the same period of time twenty years ago. They now employ more people, exclusively for the work of filing current letters, than were then occupied in all departments of the publishing work. In the past year the amount paid for second class mail matter, which means for periodicals delivered by mail, shows an increase of twenty-six per cent over the year just preceding.

I am sure you will welcome a word about the sense of harmony and loving cooperation among our workers throughout the field. The good will and loyalty to this movement which exists and is constantly being expressed to the Board of Directors and the Board of Trustees, has never been greater than at this time.

The notion that the works of Jesus were miracles, in the sense that they were contrary to natural law, is a mistake. It is also a mistake to believe that the law of God was temporarily suspended for the purpose of allowing Jesus the privilege of healing the sick. Jesus possessed no mysterious power by which he could heal the sick independent of the law of God. He was impelled to do what God sent him to do; he did nothing of his own will, but he did heal the sick, destroy sin, and raise the dead; and today whoever is impelled, as Jesus was, by a pure sense of divine Love to do the will of God, will do the works that he did. Following Jesus' example, his disciples and some others did these works. These men had no virtue or power in themselves, independent of God, equal to the performance of such works. It is clearly set forth in the Bible that the only power they exerted was of God, and this forces the conclusion that such work not only is in harmony with the law of God, but is the natural expression of His law!

God is unchanging good, "the same yesterday, and to day, and for ever;" and Jesus said, "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also." Again he said, "Lo, I am with you alway, even unto the end of the world,"—that is, to the end, the extinction, of all sin, sickness, and death. These statements warrant our expectation that the law of God which destroys sin, sickness, and death will continue to be ever available and in full force; that this healing will go on until the whole world is filled with health, harmony, and eternal life.

Mrs. Eddy discovered and has given to the world the scientific rule by which to work out these problems, not only in harmony with the law of God, but by the application of that law. The students of Christian Science who had the privilege of instruction from Mrs. Eddy felt the assurance that the sick could be healed then as surely as in Jesus' time, and those students carried the healing message to others, with the result that many thousands of sick people were healed. Many of those who were healed gained enough understanding of this Science to extend the message still further, and now we have many thousand men and women who are actively engaged in the healing work throughout this country and in other countries.

The number applying to Christian Scientists for healing is constantly growing. It is also a fact that a larger percentage of the present-day patients are of the so-called incurable class, yet never before in our experience has the proportion of those who get well been so great. This very happy condition is most encouraging to our practitioners. As a result of the increasing efficiency of the work done in behalf of the sick, the students of Christian Science are getting much joy out of their work, and are able to look forward with high hope and confident expectation to the time when all mankind through their acceptance of Christian Science will come into possession of their rightful heritage,—the present-day fulfilment of God's promises, the realization that the kingdom of heaven, harmony, is indeed within us.

The treasurer's report for the year ending May 31, 1912, both for the church and for the publishing house building fund, showed excellent conditions. Some of the most gratifying details of the clerk's report were as follows:—

In the history of the Christian Science movement no year has furnished greater evidence of progress than has the one just past. There has been much to indicate that the year's growth and development have been largely due to an increased understanding on the part of Christian Scientists of their individual responsibility,—a clearer realization that the problems, both of the individual and of our church organizations, can only be solved through the impersonal, unselfish demonstration of God's unerring guidance.

The growth in membership of The Mother Church during the past year has greatly exceeded all previous records in the history of our denomination. In our large correspondence incident to the acceptance of these new members, we have seen encouraging evidence of greater care and conservatism in connection with the endorsing and countersigning of applications.

Membership in The Mother Church is a sacred trust,—an inestimable privilege, and carries with it a profound obligation. Therefore, membership by no means consists merely in having one's name enrolled on our records. True membership can be attained only as we discern what the Church of Christ, Scientist, stands for in this age, and come into at-one-ment with its aims and purposes. In proportion as this point of view is maintained, our responsibility to The Mother Church in connection with applicants for membership becomes clearer, and necessarily results in raising the standard of membership.

Sixty-five new organizations have been added to our movement during the year. Included among these are several in Europe and also in South Africa, South America, Australia, and New Zealand. In seventeen localities, where there have been unnecessarily two separate organizations, the members have during the year solved their problems to a point where they have all joined in strong, united churches.

The prosperity of our movement being dependent upon the work of healing and regeneration, the increase during the year in the number of persons devoting themselves solely to the practice of Christian Science is both interesting and significant. One year ago we published in the practitioners' directory of *The Christian Science Journal* the names of 4,870 persons throughout the world devoting themselves exclusively to Christian Science healing. At the present time the number is 5,193, making an increase for the year of 323, which is a greater increase by 86 than that shown by our records at our annual meeting one year ago.

Our publications continue to grow and develop. The enlarged and changed form of *The Christian Science Journal* seems to have met with universal appreciation and approval. As to our international daily newspaper, *The Christian Science Monitor*, there are many unmistakable evidences that not only Christian Scientists, but the public at large, are each day learning to appreciate more fully its mission and to realize more clearly the great wisdom of our beloved Leader in providing a medium for disseminating the news of the world's legitimate activities,—one which must ultimately become a world-wide clearing-house for recording the constructive development of the human race.

In the Senate of the United States, in November last, and again in April, was the truth about Christian Science courageously but lovingly set forth in the two great speeches of Senator John D. Works of California, against the Owen bill and other similar proposed legislation. The importance of these events cannot well be overestimated, and Senator Works has earned the gratitude of every Christian Scientist for so clearly declaring before our nation's highest legislative body the mission of Christian Science and its practical application in our present human experience.

At the annual meeting one year ago a word was said in regard to the pending litigation concerning our Leader's will. The statement was then made that there did not seem to be the slightest reason for believing that Mrs. Eddy's intentions and desires in regard to the disposition of her property would not be fully carried out. We can now repeat this statement with even greater assurance. In the mean time, let us again say that no attention need be paid to newspaper articles emanating from unauthorized sources and intended to prejudice the public and alarm Christian Scientists.

It may not be out of place here to say a word in regard to the many expressions of loyalty which the officers of The Mother Church are constantly receiving, and for which they are most sincerely appreciative. Conspicuous among the present fruits of this scientific sense of loyalty may be mentioned the promptness with which Christian Scientists now discern the indications of personal ambition and self-seeking and defeat their misdirected efforts. Our Leader has said (Messages of 1902, p. 3), "Right is the only real potency, and the only true ambition is to serve God and to help the race."

The officers of The Mother Church are very grateful for the growing tendency to refrain from referring to them the many questions arising in every field, but rather to seek the solution of each problem through the demonstration of Christian Science. No question can arise in connection with our church work which cannot be answered by our Church Manual, our Leader's other writings, and the Bible, provided we are willing prayerfully to seek our answers and abide by them. A still greater dependence upon these sources of supply will, moreover, bring a greater blessing to all and save much of the time so greatly needed in these days for the constructive work necessary to the progress and development of our great movement. We record our blessings without pride or exultation, but in humility and gratitude for the divine wisdom and guidance which has brought us to this hour.

Reports from the field were then called for, and in response William D. McCrackan, C.S.B., who recently completed his round-the-world lecture trip, told of the marked progress he found everywhere. Mr. McCrackan lectured in Honolulu, Hawaiian Islands; Hongkong, China; and in Australia, twice in Brisbane, three times in Sydney, twice in Melbourne, and once in Ballarat. In South Africa he lectured in Durban, Maritzburg, three times in Johannesburg, once in Pretoria, Potchefstroom, and Cape Town; in The Hague, Holland; Florence, Italy; and in England and Germany.

Bicknell Young, C.S.B., told of the steady progress in the places visited by him. He had lectured in England, Ireland, Scotland, Norway, Sweden, Denmark, Germany, Russia, Italy, Switzerland, and France.

Frederick Dixon, C.S.B., of London, England, gave a graphic account of the great growth of Christian Science in the British metropolis. Other reports from the field, all equally enthusiastic and encouraging, were given.

VICTORY OVER TEMPER.

M. G. KAINS, M.S.

CHRISTIAN SCIENCE is now enjoying the tardy though almost grudgingly bestowed recognition that it heals disease of all kinds. Its greatest function, however, is not as a panacea or cure-all, efficient in this direction though it is, so far as it is at present understood. No, its specific purpose is not merely to ameliorate or improve, but to rectify whatever is amiss. In accomplishing this end, the healing of disease, while characteristic of its ministry, is strictly speaking the incidental evidence that the work of rectification has begun or perhaps has been carried further than upon some previous occasion. The patient or the

Digitized by Google

student thus becomes aware of the work as actually having been done. These statements are supported by many passages in Science and Health; notably, "Christian Science acts as an alterative, neutralizing error with Truth. . . . The effect of this Science is to stir the human mind to a change of base, on which it may yield to the harmony of the divine Mind" (p. 162).

Perhaps no more convincing proof of the "alterative" effects are vouchsafed to the individual than in cases of the "healing" of temper. If it were possible or necessary to present an array of cases, doubtless thousands could be cited, but mere number is not necessary in order to make the proof convincing; one is sufficient. A man who in his youth had acquired and even unwittingly cultivated the habit of losing his temper, or getting angry upon the slightest provocation, or even when there was no provocation, became interested in Christian Science, not so much because of any physical advantages that he hoped or even thought he might get out of it, as because he wanted to discover what the new philosophy might have for him as a basis of conduct or perhaps as a religion. From time to time he had slight, often almost unexpected healings, which at first seemed as if they would have occurred anyway, but which came in such numbers that they could not be explained away or set aside. Shortly before beginning the study of Christian Science, he had had an altercation with another man and had been obliged to resign a good position in consequence. He had been studying Christian Science for six months when he was suddenly brought face to face with his former opponent, but such a radical change had come over him that he was able to greet this man with honest cordiality. More than that, there was no return of the old-time animosity, though the two men were frequently thrown in each other's company through business interests.

Here is a healing which only those who know the man most intimately can possibly have any way of estimating. Yet, so far as the man himself can determine, it is a complete and permanent cure, for under far more trying circumstances than ever characterized the case just specified he has not discovered the slightest symptom of the old malady, for temper may justly be called a malady. The "alterative" has done its work, quietly but effectively. Prior to his gaining a working knowledge of Christian Science, this same man had grappled with his enemy, for such he recognized this bad habit to be. He tried all the ways and means suggested to him, among others the exercise of will-power; but after struggling long to control himself, he would at last reach the breaking-point and the passion would burst from him with a resistless overflow which sometimes led to serious consequences to others as well as to himself, and always with remorseful reflections on his own part. Another method which proved futile was to go away from the person or persons, or even from the scene which aroused the sleeping lion; but this was useless, because the fight was continued with as much fierceness as when the tormentors were actually present. Equally useless was the effort to think of other themes; the malady apparently had to reach its climax and then subside more or less gradually. Every attempt to control his temper by will-power, no matter how applied, proved an utter failure because, as he now sees, that is not the proper way to gain the victory.

Victory, real victory, can come in only one way; namely, by annihilating the enemy. But who is the enemy? Not a person! Then what is the enemy? Not a thing! What then? Only the rule of a false sense. This fact in itself suggests the remedy; namely, the acceptance of the true concept and the entertainment of none other. But how is one to do this in the midst of a fracas? Strictly speaking, not in, but before the advent of any fracas; not by seeking to control oneself while indulging a fit of temper, but by preventing any such sort of disturbance; by being forearmed against the mental foe in oneself—knowing that there can be no disturbance because there can be no misconception on one's own part first of all; and second, that the suppositional opponent is equally fair-minded and therefore ready and willing to come half-way in an amicable adjustment. To reach this vantage-ground one must not wait until an occasion for a possible temptation arises. No, indeed! He must destroy as much combustible material as possible in his own mentality before the appearance of the enemy. Then the hot shot from without will have nothing to set on fire. Like an able general he must also fortify himself against attack from without; but, more important, he must guard against every possibility of weakness within, every chance for surprise, and every hint of lurking treachery. How? By gaining and maintaining so clear an idea of what God and man are that there can be no room for anything else. (See pamphlet, What Our Leader Says; also the article Taking Offense, in Miscellaneous Writings, p. 223.)

This doubtless sounds too simple to be of even the least service, but the truth gained by this study is no less profound than simple. To the man who has to overcome any fault, it may not be so easy of actual accomplishment as it sounds. The truth cannot be applied or gained by will-power or by force of any kind. Neither is erudition either a help or a hindrance to its conception, acquisition, or application. It comes as an intuition,—the admission to oneself that there is a possible basis for harmony, call this basis divine Principle, cause, creator, God, or what we will; that all things dependent upon and in harmony with this Principle must necessarily be in harmony among themselves, and that such being the fundamental facts, misconception can have no basis in Truth. By thinking calmly and frequently upon this line, the process of elimination of the hateful way of thinking will proceed until at length losing one's temper, in the popular application of that phrase, will be an impossibility because it will have been lost in a better sense, it will have been dissolved "with the universal solvent of Love" (Science and Health, p. 242).

The course of thought in any case may be outlined as follows: If I am in the right in any position, the man with whom I have to deal will see the correctness of my attitude and will in due time come to my way of thinking. In that case I have no occasion or need to lose my temper, only to be patient. On the other hand, if I am in error and he is right, I will be only too glad, as a fair-minded man, to accept his correct point of view. In that case also I have no occasion to lose my temper. The whole matter resolves itself into the acceptance of the true and rational way of thinking. Whosoever adopts and conscientiously applies this method will have frequent occasion to rejoice, because of his progress toward final emancipation not merely from a fiery temper and from all the penalties such a tyrant imposes, but from countless other annoyances which are more or less closely related to taking offense, accepting insults, making mountains out of mole-hills, and so on. In due time, when the foe has been destroyed, he can bear testimony to the truth of the psalmist's statement, "Great peace have they which love thy law: and nothing shall offend them."

THE LITTLE CHILD.

LOUISE F. D. SPOOR.

IN Article XX, Sections 2 and 3, our Manual lays down very clearly the course of instruction to be followed in the Sunday school; but the clause, "The next lessons shall consist of such questions and answers as are adapted to a juvenile class," seems to require a broader interpretation than is often given it. What method of teaching is best adapted to a juvenile class? What appeals most to the child mind? What method did our Master use to instruct the infant thought of the world? The answer will be found by looking in a Bible concordance under the word "parables." Our Leader refers to this method of awakening interest on page

Digitized by Google

363 of Science and Health, in her reference to the parable of the two debtors.

All mothers and teachers who have lived and worked with children will testify that a story arouses the interest, concentrates the attention, enlists the sympathy, and renders the listener wide awake. Who that has been in touch with childhood does not know this, and that we very much need to beget this alertness in our Sunday school classes? To illustrate, let us suppose that the class is studying the first commandment and that the teacher, in trying to bring out the thought of obedience, asks, "Did Jonah keep the first commandment?" If this question has been asked the previous Sabbath, the children have probably been begging their parents during the week to read them this story, and are prepared to answer the question. Perhaps another Sunday they discuss how Moses kept the first commandment, etc. Here the result of disobedience and self will is contrasted with the power of obedience, and the real meaning of the first commandment is impressed indelibly upon the child. Or, if the class is studying the sixth commandment, perhaps the story of Cain may be brought up, and the question be asked, "What killed Abel?" Then the child who has been made familiar with this Bible story realizes that Cain surely did not "stand porter at the door of thought" (Science and Health, p. 306). He let envy enter consciousness, and the little ones will be made to see that when they let envy enter their thought they may be tempted even as was Cain. Suppose the ninth commandment is being considered, and the story of Elijah's raising of the widow's son is taken as an illustration. Elijah knew that God's reflection could be manifest only in life, and knowing this he could not bear false witness against God's child, for he loved him as his own; and through love's eyes he could see only the perfect reflection. This thought is brought out in our Leader's poem on "Love" (Poems, p. 7), where we read: "For Love alone is Love."

[illegible]

"NO CONDEMNATION"

[illegible]

Woman, where are those thine accusers? hath no man condemned thee? She said, No man, Lord. And Jesus said unto her, Neither do I condemn thee: go, and sin no more."

When Jesus lifted himself above the evidence of the material senses to the Christly view-point, he not only did not condemn the woman as a sinner, but this exalted state of consciousness, seeing man as the pure image of God, also banished all evidence and testimony to the contrary, and Jesus beheld a woman who could "sin no more." When a man beholds himself and the universe from God's view-point, all self-righteousness, self-condemnation, and illusion will disappear, never to reappear.

Jesus again declared: "Ye judge after the flesh; I judge no man. And yet if I judge, my judgment is true." When the sick, sinful, and even the dead were brought before him, they left his presence healed, purified by his exalted thought and raised into a sense of Life divine, and thus was demonstrated the all-power of divine Truth. After one has experienced the purifying and healing effects of the Christ-mind, in order to remain free one must conform to and live by the law of Life and Love; and if one should through weakness err again, then one needs to know that the arms of divine Love are ready to lift him up, and he will learn finally that the real man is incapable of experiencing evil; that he has never fallen; that the tempter and tempted are one, and neither has power or presence, since God is All,—then he will not only be permanently healed himself, but possessed with that understanding of infinite Love which heals others.

God's child can never make a mistake, can never lose an opportunity, never cause a regret; his life is bright with abundant goodness, hope, promise. Love has a plan and purpose for each and every one to fulfil, and none can escape it or fail to perform the will of God. The secret of a situation is the spiritual truth that which is seen from God's view-point only. "For God sent not his Son [his spiritual idea] into the world to condemn the world; but the world through him might be saved."

[illegible]

SELECTED ARTICLES.

[Editorial in *Chicago* (Ill.) *Post.*]

Most unprejudiced people will note with satisfaction that the New Hampshire supreme court has upheld in one most important particular the legal validity of the will by which Mrs. Eddy left her personal fortune to the Christian Science church. The attack made on the will, after there had been *ante-mortem* settlements, has never been regarded with public sympathy, irrespective of any religious question involved.

[Editorial in *Malden* (Mass.) *Evening News.*]

The decision of the supreme court of New Hampshire to allow the will of Mrs. Eddy, which gives the bulk of her fortune for the promotion of the cause of Christian Science, seems to us to be a sensible and satisfactory one. The charge that Christian Science was against public policy was answered by the declaration that nothing in Mrs. Eddy's teachings ran counter to the laws of the land. It was declared that the fortune was not a gift to a church, which is limited under New Hampshire statutes, but a gift to religious purposes. Mrs. Eddy's vast fortune was the result of the labors for the cause she established, and it was the most natural thing in the world for her to bequeath it to that cause. Every effort to turn it in other directions has now failed, and the money will go where Mrs. Eddy intended and where we believe all unprejudiced people will agree it should go. Christian Science has been a wonderful agency to make the world better, and Mrs. Eddy's bequest is therefore not to that cause alone, but to every one who comes in contact with those who have been helped by her teachings.

[Editorial in *Boston* (Mass.) *Times.*]

Not only Christian Scientists but members of the community at large have been gratified by the decision of the New Hampshire supreme court, which upholds the will of the late Mary Baker Eddy, or rather the clause by which she bequeathed the bulk of her fortune to the Christian Science propaganda. The liberal and just views incidentally expressed in this decision will please all liberty-loving people. The whole decision is in keeping with the constitution of our country, and has the ring of true Americanism.

It has been said that the law restricting the amount of money which may be accepted by any given church organization is intended to provide against giving undue power to church denominations, but in this case, as we understand it, the money can only be used for spreading the gospel of Christian Science. It cannot be used in the interest of the church either individually or collectively. The opinion rendered in this case, that "Mrs. Eddy had the constitutional right to entertain such opinions as she chose and to make a religion of them, and to teach them to all others, and their rights of belief are as extensive as hers," and that "her legal right to teach was not ended with her death," settles a very important question and one which involves not only the religious liberty of Christian Scientists, but that of the community at large.

This decision makes it plain that it is not for the state to decide what sort of religion we shall embrace. Since Christian Scientists depend upon their religion as a means of preserving and restoring health, the decision also incidentally safeguards the individual privilege of depending upon divine power as a means of preventing and curing bodily ills as distinctive from other means.

[Frederick Dixon in *Truth*, London.]

Your note on the Christian Science publishing house in the current number of *Truth* should be interesting to those who are capable of understanding what it means. For years Christian Science has been growing under the eyes of people in this country, but these eyes seem to have been most securely closed. As long as a large section of the public is content to take its information from impertinent little articles in religious papers, this is likely to be the case, though it cannot be said that the great papers have always been more enlightening on the subject. May I give you a specimen of the sort of nonsense which is industriously circulated through the papers, and which people are taught to believe represents the Christian Science movement? For some time past certain people in Switzerland have been imprisoned for practising medicine irregularly. These people are what are known as nature healers—that is to say, they employ various drugs and means of manipulation which are far nearer to orthodox medical practice than to Christian Science. Into the bargain of this, there have been certain other questions connected with the prosecutions which it would be impossible to go into here. Of course, none of this has anything to do with Christian Science; on the contrary, Christian Science healing is covered, in certain instances at all events, specifically by the Swiss law. Yet, one after another, the cases of these people have been produced in the English press as prosecutions of Christian Scientists.

Take, again, another case which has recently gone the round of the papers. The Christian Scientists, wishing to help the prisoners in the state prison at Trenton, New Jersey, obtained permission to hold a Sunday service there. The prisoners are, of course, not bound to attend it, but some ninety-eight of them immediately took advantage of the offer, and though they had previously not attended services, elected to attend the Christian Science service. This is at once copied into the English papers, though, *mirabile dictu*, it changes its appearance like a chameleon, and the readers of these papers are informed that ninety-eight of the convicts in Trenton prison are Christian Scientists. Is it any wonder that the world should be under some misapprehension as to what Christian Science is doing?

I am sending you herewith a copy of the *Graphic Arts*, an art publication in America, which has nothing to do with Christian Science, but in which a series of pictures of the Christian Science publishing house is contained. You will see from it that what you have said in your paragraph is, if anything, very short of the truth. The fact is, Christian Scientists work very quietly, but they work none the less surely.

[Editorial in *Albuquerque* (N. M.) *Journal.*]

This paper is neither an advocate of nor an apologist for Christian Science, but we cannot refrain from protesting against any medical legislation in this state, the effect of which would be to prohibit Christian Science practice. Such protest is based, not on any sectarian or prejudiced grounds, but upon the broad principle of human rights. We believe in liberty of conscience and in the right of every man to his own religious opinions and convictions. As we understand it, the religion of a Christian Scientist teaches him to rely upon prayer to almighty God for the relief and cure of bodily ills. However much we may dissent from this view, there can be no doubt but that the citizen who conscientiously holds to this opinion is entitled to practise his belief, provided, always, that by so doing he does not endanger the well-being of his fellows. There is, upon this point, credible evidence to prove that the practice of Christian Science has not been a menace to the community. Christian Scientists declare that they report contagious diseases and submit to established sanitary and quarantine regulations, and in confirmation of this statement they point to a published interview not long ago with Dr. Ernest Lederle, health commissioner of New York city, who said he had no fault to find with Christian Scientists, because he knew they were reporting their contagious cases, just as the doctors were doing.

The Medical Society of New Mexico has introduced a bill

Digitized by Google

in the Legislature which the Christian Scientists believe would prevent them from resorting to their peculiar mental or spiritual method of healing. Whether this interpretation of the bill is correct or not we do not undertake to say, but if there is any doubt as to the probable effect of the proposed law, that doubt should be removed by making the language of the bill perfectly plain. It must go without saying that any legislation which would make prayer for the sick a criminal offense would meet with the hearty disapprobation of all right-minded men and women, no matter what their personal, religious, or medical beliefs may be. The Christian Scientists have a right to fair play from the rest of us. There is no justice in an attack on their religion or upon their healing methods. The Legislature should make it clear that it is not in sympathy with such an attack, whether that attack is made with or without deliberate intent.

[Warwick L. Tyler in *Goodwin's Weekly*, Salt Lake City, Utah.]

In your editorial of recent date, entitled "Mind Over Matter," you pay one of the greatest tributes to the perfect faith of Christian Scientists it has ever been my pleasure to read. Will you, however, permit me to point out a difference which exists to every Christian Scientist between "belief" and perfect faith? On page 23 of "Science and Health with Key to the Scriptures," the text-book of Christian Science, its author, Mrs. Eddy, states: "Faith, if it be mere belief, is as a pendulum swinging between nothing and something, having no fixity." It is therefore evident that faith to be effective and available must be other than mere belief, and it must have fixity or stability. Christian Science teaches it is not belief but understanding, and it is necessary not merely to believe in God, but to understand God. The apostle James wrote, "Faith without works is dead," and Jesus said time and again that results would be according to the individual's faith, *i.e.*, his understanding of God. Unquestionably Jesus proved his faith by his works, and we are commanded, "Let this mind be in you, which was also in Christ Jesus." Jesus said: "I can of mine own self do nothing;" "the Father that dwelleth in me, he doeth the works." As the necessary essential for the accomplishment of anything is the intelligence or knowledge with which to do it, the Father dwelling in Jesus must have been the divine intelligence or Mind. And this is what Christian Scientists apprehend as the Mind of Christ.

It is quite true, as you say, that we know very little about ourselves. Is it not true, also, that the average man knows little or nothing about God? Yet, in order for man to know about man, it is essential for man to know God, for did not God make man in His own image and likeness? Mrs. Eddy writes: "We know no more of man as the true divine image and likeness, than we know of God" (Science and Health, p. 258). Through constant study of the Bible Christian Scientists are gaining a more thorough knowledge of God, and they are able to demonstrate it by their dominion over all conditions of inharmony and evil.

[Olcott Haskell in *Santa Cruz* (Cal.) *Sentinel*.]

Christian Science is not based upon the human mind as a source of healing, but it employs the method taught by Jesus, who showed that God, the divine Mind, is the healer of both sin and sickness. If the teaching that God's healing can render unnecessary any resort to the surgeon's knife, is to be styled "dangerous" and "pernicious," would the one who makes this assertion regard the works of Jesus and his disciples as "dangerous" and "pernicious"?

Our critic generously admits that Christian Science can cure those diseases which the patients "have not got." This is a distinct gain, for this method of cure elevates the morals of the patient, while at the same time saving him from the dangers of surgery and from the risk of contracting injurious drug habits. But Christian Science goes much farther than this, and has so established its claims by well-authenticated cases of cure of cancer, tuberculosis, and other so-called organic diseases, that the evidence of its efficacy cannot be refuted.

[E. M. Ramsay in *Edinburgh* (Scot.) *News*.]

Much passes under the name of Christian Science which is diametrically opposed to it, and I must again repeat that hypnotism, mesmerism, mental suggestion, and anything which can be classed under the name of psycho-therapeutics has no connection whatever with Christian Science, and is, we are convinced, highly injurious to health and character. Christian Science is simply primitive Christianity; its healing is effected through the realization of the perfect love which casteth out fear, and so gets rid of that mental perturbation which frequently leads to insanity. It not only bids men lead a better life, but shows them how to do this, how to get rid of evil thoughts, desires, and passions, and thus it enables them to gain that normal, natural self-control which is the foundation of all true sanity. It destroys the fear of evil and the attraction of evil, and gets rid of belief in selfishness by turning thought from self-consciousness and self-pity to find health and peace in the wholesome activities of good.

[Royal D. Stearns in *Nebraska State Journal*, Lincoln, Neb.]

In the issue of the *State Journal* for Jan. 29 appeared a criticism on Christian Science which I beg leave to answer. The critic vigorously attacks the alleged claim of Christian Science "that there is no such thing as disease, sickness, death, or sin," etc. There is nothing original or new in the attack of the critic, as the path over which he travels is well beaten from the tread of many pilgrims.

The teaching of Christian Science is, that God, good, infinite Spirit, is the only cause and creator, and realizing that nothing can be found in an effect which is not to be found in its cause, the Christian Scientist recognizes that sickness, death, sin, etc., can come from no part of God's creation; that the material body and carnal mind represent a false sense of man which must be cast out by the knowledge of absolute Truth; that perfection does not contain imperfection. "God saw every thing that he had made, and, behold, it was very good." If evil in any form was God-created, it would enter into divine consciousness and so become a part of divine concept and purpose, and thereby establish the house divided against itself which Jesus said could not stand. It is logically inconceivable that God could create evil. The Bible declares that God cannot look upon evil; moreover, if disease, sin, etc., were of the "very good" things that were wrought through the exercise of His creative fiat, then there would be no available relief from them, for "whatsoever God doeth, it shall be for ever: nothing can be put to it, nor any thing taken from it." "Doth a fountain send forth at the same place sweet water and bitter?"

Mrs. Eddy says on page 460 of Science and Health: "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction." Again she says, "To mortal sense, sin and suffering are real, but immortal sense includes no evil nor pestilence." "Christians must take up arms against error at home and abroad. They must grapple with sin in themselves and in others, and continue this warfare until they have finished their course" (pp. 210, 29).

As to the unreality of death, Mrs. Eddy says in "Unity of Good": "To say that you and I, as mortals, will not enter this dark shadow of material sense, called *death*, is to assert what we have not proved." Jesus said, "If a man keep my saying, he shall never see death." Paul states that the Christ "hath abolished death;" furthermore he declares that "the last enemy that shall be destroyed is

Digitized by Google

death," clearly demonstrating that death is no part of the divine order of things; that it is not a friend but an enemy, and that it is to be destroyed. While Christian Scientists accept the Bible teaching as above stated, and that it is possible for man to arrive at such a degree of spiritual understanding that his passing out of this earthly experience shall not be through the gateway of death, but through the unfolding portals of eternal Life, they admit that centuries may pass before this exalted state is attained.

[William S. Campbell in *Washington* (D. C.) *Post.*]

The admonition which the Master gave is still in force, "Search the scriptures." To search implies careful and painstaking work.

The interpretation given to the Scriptures by Mrs. Eddy was the result of diligent and long-continued search, combined with a keen sense of discrimination. On page 139 of Science and Health she has written: "The decisions by vote of church councils as to what should and should not be considered Holy Writ; the manifest mistakes in the ancient versions; the thirty thousand different readings in the Old Testament, and the three hundred thousand in the New,—these facts show how a mortal and material sense stole into the divine record, with its own hue darkening to some extent the inspired pages."

On pages 320 and 319 of the same volume the author has added: "The one important interpretation of Scripture is the spiritual." "The divine Science taught in the original language of the Bible came through inspiration, and needs inspiration to be understood. Hence the misapprehension of the spiritual meaning of the Bible, and the misinterpretation of the Word in some instances by uninspired writers, who only wrote down what an inspired teacher had said."

The appropriateness of calling the Christian Science textbook a "Key to the Scriptures" lies in the fact that its careful study enables the student to apprehend the view-point of the author and thus to acquire for himself the understanding which came to her only through long years of prayer, perseverance, and pondering. It has not been her purpose to supplant the Bible, to add to it, or to subtract from it. Her purpose has been to make so plain the deep spiritual import of the sacred writings that all may understand and profit by them. The first tenet of Christian Science is this: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life."

The Christian Science interpretation of the Bible differs from former interpretations by bringing into prominence the present possibility of overcoming sickness as well as sin through the recognition of spiritual power. It is an interpretation that demands proof of its correctness in the improved mental, moral, and physical condition of every student who gives to it an unprejudiced investigation.

[W. C. Williams in *Baltimore* (Md.) *Sun.*]

In a well-written article in the Sunday *Sun* some prescriptions for pain were given. The writer gives his idea of the treatment of pain by Epicureans, Stoics, and Christian Scientists, and then presents as his theory that "we must not run away from pain, because it is educative." "We are not to be delivered from pain, but to glory in it, for God sends it and intends it for our good." We agree with the writer that his theory is not the Christian Science one, and from the universal fight for health we do not believe that there are many others who believe with him that it is sinful to desire to be liberated from pain.

Jesus brought men to the Father by healing them of "all manner of disease" and of suffering and lack of all kinds, and commanded his disciples and all others who believed on him to go into all the world and follow his example. If these tribulations were sent by God, Jesus would not have spent his time and efforts in taking them away or have bidden his followers to do likewise. Christian Scientists believe that the heavenly Father, who is infinitely above the human, would be much less desirous of inflicting sickness and suffering on His children than would the earthly father on his little ones; and a man who would deliberately do this would receive little consideration in the treatment accorded him.

Christian Science contends that it is not the law of omnipotence that we should suffer, but that it is the breaking of God's law, or ignorance of it, that causes all our physical as well as mental troubles. Pain is educative, if it makes us realize this to the degree that we cease sinning. Our critic in quoting Christian Scientists as saying, "You simply can't have any pain," and making the deduction that this denial is the Christian Science treatment, is wide of the mark. It is not claimed that pain is unreal to mortals until it is made so through being free from it, which freedom is gained from the understanding and realization of the true man and his relationship to the Almighty.

[John L. Rendall in *Waterloo* (Iowa) *Courier.*]

It is stated that our critic in her arraignment of Christian Science said "she did not wish to offend any one, but her warning was given to those who may be wavering toward that faith, for she felt they should investigate and understand before casting aside the old established forms of religion." Christian Science welcomes investigators. It is made up of people who have thoroughly investigated for themselves, who are thinkers enough to determine for themselves what they want, and who are won to the truth when they see it. Its teachings are so clear and definite and satisfying to those who have investigated them, that the surprise to them is that the whole world is not anxiously striving to understand their import, for they supplant discord with harmony, they give peace, happiness, and contentment where the opposite conditions seemed to obtain; they beget health and strength and that spiritual understanding of God's infinite ability, presence, and power, of which the wise man said, "Understanding is a wellspring of life unto him that hath it." No Christian Scientist could by any means be induced to relinquish that which Christian Science has brought to him by way of good, for he recognizes it to be in the highest degree Christian and scientific in that it affords demonstrable proofs of "ascertained facts" relating to God, man, and the universe, and is therefore the most satisfactory religious teaching that has been presented for the consideration of mankind.

[A. W. Mainland in *Voice*, Winnipeg, Man.]

A leading article in a late issue, on the women's page, contains a kindly reference to the work of Christian Science in healing the sick, but makes a statement that shows a misapprehension of its healing work. It says, "The Christian Scientist, taking Christ as his pattern, would have depended on personal magnetism and prayer." The practice of Christian Science has nothing in common with personal magnetism, hypnotism, or suggestion. It is the earnest endeavor of every sincere practitioner to eliminate these entirely from his work. Science and Health by Mrs. Eddy says, "The physical healing of Christian Science results now, as in Jesus' time, from the operation of divine Principle, before which sin and disease lose their reality in human consciousness and disappear as naturally and as necessarily as darkness gives place to light and sin to reformation" (Pref., p. xi). A Christian Scientist would no more expect correctly to heal a case of disease through personal magnetism than a teacher would expect to teach the basic law of mathematics through suggestion.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"HE THAT SEEKETH FINDETH."

CHRISTIAN SCIENTISTS have become such largely because they have had proved for them the availability of righteous prayer as the most efficient means of healing the sick, and from this starting-point they have progressed to a knowledge and understanding of God which they have found to be the only trustworthy guide for human action and endeavor. They have found that through the practice of this knowledge and understanding "whatever is wrong in social, civil, criminal, political, and religious codes" (Science and Health, p. 340) must be and is being annihilated; and that to the extent to which they apply this knowledge of God to their every-day affairs, are they and the whole world blessed.

Mrs. Eddy taught this in her classes, through her writings, and ever sought to impress its truth in her conversation with those who were brought into immediate contact with her. She believed implicitly the saying, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you," and she taught her students and followers to believe it as implicitly as she did. Her seeking of the kingdom included much study of the Scriptures, and she tells us in Science and Health that for three years after her discovery of Christian Science she read little else. In this constant, persistent, and prayerful study of the Bible she set a splendid example to her students, for those who would emulate her understanding and demonstration of divine Science.

It has been the experience of the oldest and most successful students of Christian Science that systematic daily study of the Bible and Science and Health is a necessary preliminary to the proper practice and demonstration of this Science, and it cannot be too strongly urged upon all students—whether old or new—that this daily study be not neglected. We find in every line of human endeavor that the successful person is the one who has most thoroughly prepared himself for the task to be performed, and the rule is the same whether the task comprises mental or manual labor. On page 495 of Science and Health Mrs. Eddy answers the question, "How can I progress most rapidly in the understanding of Christian Science," in part as follows: "Study thoroughly the letter and imbibe the spirit." This answer implies that there is no royal road to the complete understanding of divine Science, and that progress is made only through the understanding which comes from faithful study.

There is no more important business or pleasure which we can have on hand at any time than that of seeking first the kingdom of God, and it should be our unswerving purpose to let nothing interfere with our study of how to seek this kingdom. We should remember that the earning value of the talent, as well as the talent itself, is dormant so long as we fail to make use of it; also that only through study and practice of Christian Science can we hope to arrive at the place where our work will be certain and effective. God requires of us no unreasonable service, only that we improve to the utmost the talents bestowed upon us, be they many or few,—"redeeming the time," as Paul expresses it. It is the faithfulness with which each opportunity for service, no matter how small or humble it may be, is perceived and improved, that will bring the "Well done" of the Master, the guerdon which awaits those who, patiently, persistently seeking, find.

ARCHIBALD MCLELLAN.

THE LARGER INDEPENDENCE.

THE life of a people should be found at its best on great historic days, and for the reason that they are commemorative of that truth which stands for eternal freedom, and that freedom which stands for eternal Truth. Every "Patriots' day" is sure to bring keen emphasis to our thought of the rights of man, of the struggle for escape from injustice, or imposition, and of the triumphs of world-advancing ideas. Moreover, it exhales that fragrant sense of brotherhood which in crucial moments always proves itself to be heroic, capable of ignoring physical danger as well as the caste and conventionalities which beget social cleavage,—capable of being unselfish to a divine degree.

To the more thoughtful and Christian-minded, these commemorated days open, furthermore, the door to a spirit of great thoughtfulness, gratitude for the men and the deeds in all the past, such as they would like to be and do. They make it easier for us to entertain the broader, nobler view, to cherish the finer purpose, and thus their best influence is always arrayed on the side of human betterment. Indeed one cannot worthily celebrate the bravery of the fathers, their splendid daring and sacrifice, without being lifted at once to a higher plane of living. Thought of human emancipation, and of human possibilities, is enlarged; and if one is truly Christian, he will not fail to gain the strength and peace of knowing that every genuine protest against an unjust human condition is a vote for God and commands His unfailing support. Thus one sees that every wrong, every unideality of human experience, is to find its date of passing in an independence day with whose speedy or tardy approach he has immediately to do, and Mrs. Eddy voices the call of Christian Science to the realization of this vitally essential freedom when she says, "Citizens of the world, accept the 'glorious liberty of the children of God,' and be free! This is your divine right" (Science and Health, p. 227).

In the embrace of this nobler thought of freedom, one may rejoice not only over the righted wrongs of the past, but over his unreserved enlistment in the divine endeavor to right all wrongs, to bring into human consciousness the sublime verity of Love's eternal rule. The largely unrecognized fact of the solidarity of men, their common interests, common handicaps, common sufferings, and common hopes for happiness, comes home to one, and he begins to see that any narrowness or exclusiveness of devotion to what he may think of as his own problem, is out of keeping; that no man can find his own true freedom until he becomes impellingly interested in the freedom of every man and every creature. Said Jesus, "First be reconciled to thy brother, and then come and offer thy gift," and we have not obeyed his injunction so long as we remain indifferent to our brother's enslavement to sickness, injustice, or sin. This is the complaint of the many today respecting professed Christians (and in large measure it is quite legitimate); not that they do not give their gold, but that they do not give themselves—they are not brotherly. Brotherliness means practical identification with every man's righteous struggle, and this has come home to Christian Scientists as they have been led to see the oneness of the unnumbered phases of serfdom, as well as the singleness and simplicity of the means of emancipation; that there is but one enemy to be overcome, false belief, and but one weapon for its dethronement, the truth.

In keeping with this realization they truly celebrate human freedom who consciously participate in its most vital expression, who prove as did the Master the present sovereignty of divine Love. The days when sickness is overcome, when suffering is allayed, when fear is dispelled by the dawning consciousness of a life "hid with Christ in God,"—these are our celebration days, and through Christian Science they are speaking ever of divine Love's "independence for all."

JOHN B. WILLIS.

THE RIGHT ANSWER.

STUDENTS of Christian Science are often asked to explain its teachings as found in the Bible and Science and Health, or to give a reason for the apparent failure of some one to demonstrate these teachings, a task which calls for great patience as well as a clear understanding of the subject involved. It should not be forgotten that on the part of the questioner there are often deep-seated prejudices and solidified beliefs which practically amount to convictions, and yet the spirit of inquiry points to a channel by which the truth may enter the human consciousness with its healing and inspiring influence. The inquiry may be crudely shaped, it may even be offensive to the Christian Scientist, but the fact remains that an opportunity is offered to tell what Truth can do,—in brief, to be an ambassador for Christ, and we may be sure that if we do our part God will not fail to do His, nor can the word He gives ever return void, it must accomplish that whereto divine Love sends it.

It sometimes happens that the student forgets what the office of ambassador stands for, and so he may express some shallow personal opinion charged with petulance or impatience, when the command is to honor God,—"not doing thine own ways, nor finding thine own pleasure, nor speaking thine own words." The wise man says, "A word spoken in due season, how good is it!" And again, "Pleasant words are as an honeycomb, sweet to the soul, and health to the bones." Sometimes a rebuke to error may be greatly needed, but it is well to be sure that we are speaking "in due season," when the one addressed is ready to be benefited, not merely hurt by sharp words. Paul exhorted the Colossians to pray that God would open "a door of utterance;" then he commends wisdom toward "them that are without," and adds, "Let your speech be alway with grace, . . . that ye may know how ye ought to answer every man." Our revered Leader counsels charity, and the privilege of maintaining silence "whenever it can substitute censure" (No and Yes, p. 8). The instructions to her followers, given at the beginning of the chapter "Christian Science Practice," should often be pondered by the workers in our ranks. Here she urges upon them the deepest Christian courtesy and tender human sympathy. She says, "The poor suffering heart needs its rightful nutriment, such as peace, patience in tribulation, and a priceless sense of the dear Father's loving-kindness" (Science and Health, p. 365).

We should never forget the command given through Isaiah, "Comfort ye my people, saith your God. Speak ye comfortably to Jerusalem,"—even to those who have not yet emerged from "mortal belief and knowledge obtained from the five corporeal senses" (Science and Health, p. 589), but who may be hungering for the truth of being. This should recall the Master's instructions to Peter at that wonderful morning meal after his resurrection. Peter was somewhat given to rebuking people, he had even presumed to do this to Jesus on one occasion, sincere and loyal though he was; but now he was told to feed both sheep and lambs, not drive them or rebuke them, but just feed them, and this as the best proof he could give of his love for the Master, who did not hesitate to say, "Love one another, as I have loved you." Doubtless the apostle thought upon that morning meal when he wrote in his first epistle, "Feed the flock of God which is among you, . . . not for filthy lucre, but of a ready mind; neither as being lords over God's heritage, but being ensamples to the flock." Mrs. Eddy says, "No reproof is so potent as the silent lesson of a good example" (Miscellaneous Writings, p. 126), and we should be very sparing of any other, especially in our efforts to answer the questions which may be asked by weary wanderers in the desert who have begun to seek the way home. Perhaps, after many days, our reward for the right answer will come in the benediction, "I was thirsty, and ye gave me drink,"—yes, gave the cup of cold water to "one of the least of these" and gained thereby a welcome into the heavenly kingdom.

ANNIE M. KNOTT.

AMONG THE CHURCHES.

RICHMOND, IND.

At a special meeting of the members of First Church of Christ, Scientist, Richmond, Ind., May 6, 1911, a building committee was chosen and empowered to purchase a lot and erect a church. This committee on Sept. 28, 1911, purchased a lot sixty-five feet long and fifty feet wide for fifteen hundred dollars. On Oct. 9 the contract was let for a building in bungalow style to cost thirty-four hundred dollars, and the corner-stone was laid Nov. 8. The auditorium seats two hundred and eight people, and the first services were held therein on March 24 at 11 a.m. and 7:45 p.m.—*Correspondence.*

POMONA, CAL.

Work will be begun this week [April 1] on the enlargement of the edifice of First Church of Christ, Scientist, on West Center street. The improvement will not only add to the size of the church, but will conform to the growth in that section of the city. It is understood that the general appearance of the building will be changed considerably, but that the same artistic effect will be maintained. During the process of the work the church will hold its services in the Ebell clubhouse on North Garey avenue.

Pomona Progress.

KINSTON, N. C.

With grateful hearts to God, also to their dear Leader, First Church of Christ, Scientist, held the first services in its new edifice on Easter Sunday, April 7. The structure is of brick with opalescent glass windows, and the auditorium, which seats one hundred and twenty-six, has a reading-room attached. The finish and furnishings are of mahogany. The church is indeed an ornament to the town, and is a manifestation of God's love to man.

Correspondence.

RIDGEWOOD, N. J.

The auditorium of the new Christian Science church at Washington place and Franklin avenue was filled on Sunday [May 5] by members of the church and their friends, assembled to attend the first service given in the new building. They found a very attractive edifice and auditorium. Following the simple and impressive service, many lingered to congratulate their friends on the completion of this really beautiful house of worship.—*Ridgewood Herald.*

MITCHELL, S. D.

The members of First Church of Christ, Scientist, of Mitchell, S. D., have purchased two lots on the corner of 6th avenue, West, and Rowley streets, and are planning to build themselves a church home this spring. The basement is completed and work on the church proper will begin soon. The building will be twenty-six by fifty-eight and will be a frame structure built on the bungalow order.

Correspondence.

MORRISON, ILL.

The members of the Christian Science church of this city have purchased a lot situated just north of the Meyer residence on Wall street, with a view of building a church. They state that they do not expect to build before another year. This lot is an ideal place for a church site, as it is in the center of the city and is located in a beautiful residence district.—*Whiteside Sentinel.*

NOTICE.

It has been found necessary to postpone the date when copies of the German translation of Science and Health can be delivered, until some time in July, owing to the amount of labor involved in the composition and proofreading.

Digitized by Google

THE LECTURES.

EVANSTON, ILL.

On Thursday evening, March 14, in the church edifice, Virgil O. Strickler delivered a lecture on Christian Science. The speaker was introduced by Frank C. Hills, who spoke as follows:—

The Bible tells us that Jesus was once asked if he was the expected Messiah. We all remember his answer, that unanswerable answer: "The blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up." Clearly the great Founder of the Christian religion believed we should be judged by our works, and I want to repeat tonight the opening words of a testimony given in this room one Thanksgiving morning. Out of a full heart, and in grateful acknowledgment of his debt to Christian Science, a gentleman said: "I was a drunkard, but now I am a man." Friends, this is not an exceptional case. The members of this little church, and the members of Christian Science churches all over the world, have listened week after week and month after month to just such songs of thanksgiving and freedom as this. Is it any wonder they want others to hear them? Is it any wonder they want others to know something of this truth which makes free today, and here, just as it did nineteen hundred years ago in Palestine?

Will you charge them with proselyting because they would share with you the joy and peace and sunshine this freedom has brought? It matters little to them what you do tonight, whether you accept or reject the message which will go from this platform; but to you it matters much, to you it means everything. It means life, it means the break of day. It means light in place of darkness, hope in place of despair, freedom in place of slavery, happiness in place of wretchedness, health in place of sickness, joy in place of sorrow, harmony in place of discord. It means heaven in place of hell. Christian Science has meant this to thousands upon thousands, and this it will mean to you. Thousands upon thousands of the heavy laden have come unto this Christ, Truth, and the promise has been kept; it has given them rest. It will give you rest, and if you leave this room conscious of a little less fear, of a little more love for God who is Love, a little more love for man who is His image and likeness; if one little ray of sunshine has found some darkened corner, this lecture will not have been in vain.

Correspondence.

WELLESLEY, MASS.

Prof. Hermann S. Hering delivered a lecture at Wellesley Hills on the subject of Christian Science April 15. He was introduced by Prof. Marshall Livingston Perrin of Boston University, who said in part,—

The time has passed when even the devotees of a religion can believe that all good is summed up in their own creed and doctrine. Man's nature is manifold; and since we are made in the image of God, how much more abundant and manifold must be the nature of Him who is divine! When we study Him, it is as if we directed a telescope of great power to the sun. Unless we followed the direction of some former observer, the probabilities would be that no two of our telescopes would point to exactly the same spot upon its surface; and the more exactly we study any one portion, the more we must limit its extent to the smallest possible area.

So it is with the study of Truth. The heart of each human being goes out toward the great giver of all good, as the telescope points to the source of heat and light, and the great spiritual Sun is so abundant in His response that there can be no yearning of the human heart which does not find its needed source of strength. Now those of you who have come in through curiosity, or to criticize, may find something that appeals to you; you certainly will; and if it does, take it to your heart and cherish it as a new discovery in your thought of God. By all means do not let us drop our telescopes and fall to wrangling, as our fathers did, over what we see and find in answer to our thoughtful study; but let us thank God for every new revelation of the divine nature to the human soul.—*Correspondence.*

GRAND RAPIDS, MICH.

A lecture was delivered here April 18 at Powers theater by Clarence C. Eaton. Earl F. Phelps, county prosecuting attorney here, who introduced the lecturer, said:—

Man without a religion is like a ship without a rudder. It matters not whether the rudder be wood or metal, so long as it holds the ship to its course toward the harbor on yonder shore. And so it matters not what particular faith we profess, as long as it keeps us in the pathway leading to life eternal. The different forms of religion, as I understand them, are only different means to the same end, that end being to make our lives purer and better here and to assure us of the divine blessing when we shall have passed out of this material world. Men have differed, and perhaps always will, as to the best method of attaining that life which nearest reflects the Spirit of our God.

While we have been earnestly endeavoring to solve the problems of our own individual life, perhaps we have overlooked many essentials which would make for us the golden dawning of a grander day. So, in listening to the lecturer of the evening I feel we should not place ourselves in the mood of the men of Athens, who were eager to hear what Paul had to tell them only that they might gather material for new disputes; but in a spirit of reverence for the truth, wherever found, may we listen to catch whatever message his words may have for us. From its inception, a little over a quarter of a century ago, the Christian Science church has enjoyed rapid growth. It is founded upon Truth, and the beautiful lives of thousands of its members have shone forth so brightly, as a true beacon-light in the great storm of life, that many daily are seeking its gentle lessons of divine Love.—*Correspondence.*

AUSTIN, TEX.

A lecture on Christian Science was delivered Friday night [April 19] at the Hancock Opera house by Frank H. Leonard. The lecturer was introduced by J. Bouldin Rector, city attorney, who said:—

I profess but little more than a casual knowledge of the basic facts and exact claims of Christian Science. Along with the rest of you I am here to listen, and with many of you to get what insight I may into the faith upon which this church is founded. Truth has always been and will be always. The honest pilgrim who would seek it must command the attention of every intelligent soul. The bigot and the scoffer will never disturb the things that come straight from God. If we believe our Bible, we must believe that prayer is answered and that rewards await an intelligent understanding. If the practice of the faith of these people has uplifted men and women, brought happiness and peace to the tired soul, and health and strength to the body worn with sin, if it be a religion that may be practised and utilized in our lives each day and not theorized upon by conflicting theologies, then it must have its place among us and God will prosper it. I know many men and women who are trying to lead the life this faith inculcates, and I have always been impressed with the influence of trust and peace they give. I have known of the working of miracles even in our midst, and this tells me that God has not withdrawn from His children the healing of His word that He gave so freely when Jesus walked his sweet and comforting way from Bethle-

Digitized by Google

hem to Calvary. Any influence, no matter whence it may emanate, that brings you and me into closer touch with God, that opens our eyes to a more perfect understanding of our spiritual and mental possibilities, that helps you and me to comprehend human sympathy and the good we may do through the medium of a properly directed mentality, is entitled to our most serious thought and consideration.

I have never been particularly impressed with any religious belief founded principally upon the fear of future punishment or the hope of future reward. The man who obeys either the civil or the religious law through fear rather than through choice, or from the hope of reward rather than from a sense of right, is of little value to the well-being of society upon earth and less to the dignity of heaven. The religion that makes us better men and women, that cleans our hearts and clears our intellects, should be good enough for this life and eternity. It is my information that the faith which this gentleman would teach you leads to such a conclusion, and for this reason I would bespeak for him your best attention.—*Austin Statesman.*

JUNCTION CITY, KAN.

The Rev. William P. McKenzie lectured at the Opera House last night [April 19], under the auspices of First Church of Christ, Scientist, to a fair-sized audience. He was introduced by Mrs. C. K. Raber, who said in part,—

It is a well-worn saying that comes to my mind, but better than any other I know it expresses my necessarily superficial understanding of Christian Science, "As a man thinketh, so is he." We all accept it as a fact that every person is the incarnation of the thoughts and deeds of all his yesterdays; that on no two days of his life is he exactly the same being, but is forever changing; and so it is the most important thing in his life that his thoughts shall early seek out and find and follow those channels which lead to the making of every tomorrow a little finer, a little better than the day before, so that all the days of all his years shall be a triumphal march.

From some such fundamental truth as this, I apprehend that Christian Science, this new-old faith, is reaching out toward, explaining, putting into practice, and quickening into life the world-old moralities. It is making a world-wide crusade, with peace and joy and good will and courage and charity and health and strength written large on its banners. It is taking the main traveled roads and gathering new recruits daily. It is faring on and on, the herald of an uncompromising optimism. What such a faith has to offer must of necessity be of interest to any one who has a mind open to new impressions; for it deals with hope and not fear, it is striving after truth and not superstition, and what do any of us want or need but the truth?

Junction City Union.

INDEPENDENCE, MO.

At a lecture delivered April 22 by the Rev. William P. McKenzie in the new City Hall, the lecturer was introduced by the Hon. Samuel H. Woodson, who said:—

I do not deem it necessary for me to offer an apology for my presence or service on this occasion. I am not a member of the organization known as Christian Scientists, and my knowledge of its precepts and tenets is confined to only a superficial investigation of its claims. From what I have learned, I am willing to concede it to be a sincere movement in the field of religious activity, and a factor in the moral advancement and spiritual progress of the times. I am also willing to attribute to those who have cast their fortunes with this potent and militant organization, an honest and sincere desire to solve correctly the great problem of life and destiny and man's relation to the infinite. I believe that every genuine movement for the moral and religious development of our nature should be encouraged and cultivated, so that each may be put to the great and final test. I am not willing to concede that the ultimate end of Truth has been attained or embraced, and comprehended in its fulness and completeness by any sect or propagandism, but I do believe that a true and correct solution of this great and profound and world-engrossing problem will yet reward the struggles of mankind. I do not believe the immutable laws of nature are ever suspended, but I do believe the law of evolution to be manifest in every material evidence of existence, and to me the sequence of logical reasoning is revealed in the irresistible conclusion as to the universality of that law.

I am inclined to believe that one of the most hopeful signs of the times is the fact that the spirit of intolerance is gradually fading into the dim vista, and man is no longer striving to bolt the door of his intellect against the admission of truths to which he may be unfriendly, but he has opened wide the door and is reaching out to welcome these inspiring visitors. He is willing to concede to others that which he claims for himself. He is willing to respect the opinions of those who may differ from him, and accord to them the approbation and encouragement which develop the spirit of true achievement. When we contemplate these facts, let us not forget the law of evolution in comparing such triumphs over self with the days of Torquemada. In this process of our evolution we are laying aside the prejudices of the past, and are eager and willing to welcome the coming of any message which bears the stamp of truth and promises hope and encouragement and solace to us in reckoning with the great problem of life and Deity and destiny.

TESTIMONIES OF HEALING.

It is with deep gratitude that I tell of my wonderful healing through the reading of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I had received an injury to the spine from lifting my husband during an attack of fever. So severe was this injury that soon after his recovery I was taken very ill, suffering from this, also from heart and stomach trouble, pronounced by the best medical doctors to be incurable. After being confined to my bed for several weeks, I was able to get up, only to find myself a semiinvalid. Then came the constant use of different remedies, my husband not being satisfied if there was not something being done for me; but each remedy left me worse than I was before. Three years prior to my acceptance of Christian Science I seemed to lose strength and courage daily. I had reached the extreme point of experience where human theories are impotent to save. Everything that love and persistence could do had been done, but I felt as one set adrift on an unresting sea, where the waves of pain and suffering tossed me to and fro without hope or God. I had found no saving power in the church of which I was a member, but I forced myself to attend the services until this became a mockery to me, and my very being, as it seemed, rebelled. I then decided to search for God elsewhere, but all the beautiful promises of the Scripture faded into the weakness of asserted medical and health laws which seemed to clutch me in an iron grasp.

For eighteen months I had not eaten a meal or spent an evening with my family. I had become almost a physical wreck. I was not able to be up over four hours a day, and some days not at all. But at last a ray of light gleamed from between the pages of a magazine in the expression of gratitude for Christian Science from a gentleman who was telling why he was a Christian Scientist. I read and reread this article, fearfully hoping that the way would open up for me to get that wonderful book of which he told. My desire was soon to be fulfilled, for in a few days a young lady asked me to try Christian Science, and also borrowed Science and Health from the public library for me. My husband and I started to read it on the seventeenth day of January, 1907, and in a few days I was able to be helped down-stairs. In two and a half weeks I was well, the healing coming instantaneously one morning while I was reading this book. When my husband came home that evening and found me down-stairs he seemed very anxious, but I told him not to be uneasy,—that I was well, and did not believe I would have to go to bed again for that trouble; and I have not.

Since then we have had many opportunities to prove the healing power of Christian Science, and it has never failed us. Words cannot express my gratitude for the literature, and for membership in First Church of Christ, Scientist, of this city, also for class instruction from one of Mrs. Eddy's students, which has proved a great source of help to me. I have been enabled to understand God as the divine Principle that heals.—MRS. MILDRED WILLIS KELLEY, Quincy, Ill.

The above testimony of my wife is absolutely true and is not overdrawn in any way. Her condition for thirteen years prior to reading Science and Health was beyond the power of medical means to aid. I, too, have received many benefits, both physical and spiritual, through reading the Christian Science literature.—EDWARD NILES KELLEY, Quincy, Ill.

Christian Science has helped me so often and in so many ways that I could not, without taking up too much space, relate all it has done for me. I did not come to Christian Science for physical healing, although at the time it was presented to me I was suffering day and night from a severe liver complaint for which the doctors could give me no further help. I had seemed to be relieved for a time, but as I was unable to retain food it seemed as if I could not live very long. This did not trouble me, however, as I always felt so miserable that I did not care to live. The misery and suffering which I saw everywhere around me and the apparent impossibility of ever knowing the truth about anything seemed an unbearable obsession, and I had no religious faith to comfort me.

As a small child, when the concept of a God who sends trials and punishment was presented to me, I promised to myself that I would never obey or serve that God; and soon after, hearing that there were people who did not believe in God, I thought I would be one of them, as it was easy to admit the hypothesis that the Bible was a work of fiction. This did not prevent me from having a great longing for the beautiful, the good, and the true, which later on made me turn again to religion and try desperately to reconcile reason and revelation; but my attempts were vain. How could the omnipotent God of love for which my soul was longing, tolerate evil and suffering? Why did He create us imperfect? There seemed to be but one answer to these questions; that there was no omnipotent God, only an imperfect universe, evolved by chance and hastening toward annihilation; and yet, whence came the human longing for something higher and better? I did not wish for health or even deliverance from suffering, but my whole thought was, If there is truth anywhere, may I have it, however painful its revelations may be; even if it confirms the dread fear that death and annihilation end all? Let me know that which is!

Then came Christian Science, and I now know that that which is, is Life, Love, health, joy unspeakable. The revelation came in a very simple and natural way. A friend who was living in Switzerland, and who did not know how ill I was, but who knew that I was mentally wretched, asked if I would like something to read. I wrote and said I would, and soon after I received "Science and Health with Key to the Scriptures" by Mrs. Eddy. Seeing it was a book based on the Bible, in which I had completely ceased to believe, I was much disappointed; however, for the sake of my friend I resolved to read it, with the result that my critical attitude of mind soon vanished. It was replaced by the joy of finding at last the one true God, Love, whose creation is as perfect as He is perfect; it was like being brought from dismal darkness into light. Of course I knew that if the teachings of Science and Health were true, my illness was not real and could not trouble me any more, and I gave it no thought whatever, but as soon as I was convinced of the truth I began to eat whatever was set before me, feeling no longer any ill effects. My healing was not instantaneous, but as I continued to read the book I got steadily better, and in about three weeks was in a perfectly normal state of health and happier than I had ever been before. This was several years ago. Ever since, I can say that I have been well and strong and have never stayed one day in bed for illness, although since childhood I had always been weak and ailing, never free from aches and pains, never able to eat what other people did.

After resting in green pastures beside the still waters till I was thoroughly refreshed, I have had to walk in the strait and narrow way, but every difficulty has been overcome. I have learned that there is no cause for grief in the consciousness of Love, even when our loved ones seem to be taken from us, and that even now God can and does wipe away all tears from our eyes. Also a sense of lack and limitation which had possessed me all my life has left me and we have been blessed with plenty in proportion to our seeking first the kingdom of heaven. As we journey onward, God gives us more difficult tasks to do, but it is my experience that He gives at the same time the strength and intelligence to perform them; so, with a heart filled with gratitude for Truth and Love, also for our dear Leader,

Digitized by Google

Mrs. Eddy, who has shown us how to make practical use of Jesus' teachings, I gladly echo the sentiment of her words (Poems, p. 14):—

I will follow and rejoice
All the rugged way.

MARGUERITE MARIE DEUTSCHENDORFF, Tunbridge Wells, Kent, England.

I fully corroborate the above testimony, and most gratefully acknowledge that Christian Science has thus been the means of saving the life of my only child.

MARY C. DEUTSCHENDORFF, Tunbridge Wells, Kent, England.

I am very thankful to our heavenly Father for His message of love, as it is given us by Mrs. Eddy, who heard the "still small voice," and listened eagerly and prayerfully for the words which not only bring comfort but healing, and that she was guided in giving it to the world. Thousands are becoming better acquainted with God and His Christ, who is today saying to the troubled heart, "Peace, be still."

One of my lower limbs, from the knee up to the thigh, became numb, like the first stages of paralysis. I tried medicine and doctors, but all failed. I then went to a Christian Scientist, who told me that it is God who does the healing. I said that if this were so I would take a treatment, which I did and got well, thanks to our Saviour, the Christ who is come to redeem us from all the ills of the flesh.

W. J. MCLEAN, Everett, Mass.

It is with a grateful heart I send this testimony, wishing that others may know what Christian Science has done for me and in our home. This blessed truth has healed me of severe stomach trouble from which I had suffered all my life. It has also made me a better woman in every way. I love the Bible and can understand the meaning of much in it which was obscure before this truth was brought to our notice. It has helped me not only physically but spiritually, and I cannot be too thankful to God, also to Mrs. Eddy for this wonderful blessing to mankind. I rejoice that I live in this age, when it is possible for me and each one of us to have that Mind in us "which was also in Christ Jesus."

MRS. KATE PHILLIPS, National City, Cal.

For a long time I have felt that I should express my gratitude through our periodicals for the many ways in which I have been helped in Christian Science. I have received much help through the *Sentinel* and *Journal*, and realize what a great blessing they are. Christian Science has removed many doubts and fears, also a dread of the hereafter by showing me that God is Love and that He cannot change. Through the understanding of Christian Science we experience, in a measure at least, the peace which God bestows.

Through Christian Science I have been helped several times out of quite serious troubles. While visiting a friend in Delaware, I fell and could not get up without help. I also found that I could not walk without severe pain. My friend, though not a Christian Scientist, was most kind to me and helped me all she could in every way. I worked for myself at once and soon was quite free from pain, although my ankle swelled and became stiff. At night I crawled upstairs to bed, but the next morning could walk down-stairs and improved steadily each day. On Sunday (the fourth day) I went to church and walked to and from cars, making the change from one line to another. In one week I took quite a trip and the following day went shopping and made a return trip, gaining each day, and gradually all discoloration and swelling disappeared. It was a trial to me, at first, that it should occur while I was away from home, but through the experience I was made glad, as it proved more than any words of mine could, that God is a present help in time of trouble, and this gave me a deep sense of gratitude to Mrs. Eddy for making the way so plain to us in "Science and Health with Key to the Scriptures."

MRS. ALIDA A. BAXTER, Revere, Mass.

When I first became interested in Christian Science I was a nervous wreck, besides having a serious kidney trouble, and the doctors had sent me to southern California for a change. There I met a Christian Science practitioner from Chicago, who treated me, and in a very short time I became much better and returned to my home in Washington. After my return I still received absent treatment and am now comparatively well. I have not taken any medicine for over two years, always relying on Christian Science whenever I have needed help.—E. L. BENFORD, Hollywood, Cal.

I can never feel too grateful for what Christian Science has done for me. I know it is of God, everlasting Truth. I first heard of it about fourteen years ago and also had treatment for an ailment and was healed. I then sent for our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and read it somewhat, but could not get an understanding of it, so put it aside and drifted back to doctors and medicine again. I kept this up, off and on, till in May, 1907, when I was taken with what the doctors called gall-stones, and also female troubles. I had three different doctors, but they could do me very little good. One of them told me I might have to go through an operation before I could be well, and as I was afraid of this, and in despair, I wrote to a Christian Science practitioner, asking for treatment. From that time I was healed, and ever since I have been well and strong. I can do my housework where before then I needed to have hired help most of the time. I have been making demonstrations of the truth for myself and family, also for others, and I find my greatest joy in helping others to come into this blessed truth. I love to read the Bible now, although it was always a sealed book to me before I came to Christian Science. Now, in studying the Lesson-Sermon, it is my daily companion.

I also read the *Sentinel* and *The Christian Science Monitor*. I trust in God for my health and all I need, and I find Him an ever-present help in trouble. I have received benefits in Christian Science too numerous to mention, for which I am very grateful to God, and also to Mrs. Eddy for revealing this healing truth.

MRS. LOUISA GROTFELD, Hildreth, Neb.

I wish to tell of a demonstration which was recently made for me, and which to me seems wonderful, although I have studied Science for a number of years and have had many proofs of what it can do. I was in a hurry to get a piece of silk cleaned, so I heated some gasoline (which I had never done in the house before), and had almost finished the work when I noticed a small flame burning in the gas-plate. I immediately started to turn it out, not thinking of the gasoline on my hands. Just as I did so the fire leaped and caught my hands, and a great flame shot across the room, causing an explosion which knocked me down; but I at once declared that God's child could not be hurt. A dressmaker who was here at the time rushed to the kitchen and found me lying on the floor, my hands, hair, and clothes all on fire, and also the window curtains. She immediately put the fire out by using a woolen blanket which was at hand, and then dragged down the blazing curtains. As quickly as possible I went to the telephone and called a Christian Science practitioner.

Right here I wish to tell how divine Love kept my thought so clear that I knew what to do, for at that time I seemed to be suffering terrible agony. My eyebrows and lashes were

Digitized by Google

almost burned off, but my eyes were not hurt, for as soon as I saw the flame shoot out I closed my eyes and declared the truth. My whole face was badly scorched, but the treatment overcame that very quickly and I never suffered from it. My hands were however burned dreadfully and presented a terrible appearance. My arms also were burned to some extent, the wrists very badly, but I never looked at them until I could realize the spiritual facts of being. For about three quarters of an hour I felt like the Christians of old who were burned at the stake, and in the old way of thinking I could not have stood it all; but having had many proofs of God's power before, I was enabled "to stand," and this left the practitioner free to do her work.

At first the fear of death had to be met, and in fact for almost a week, since the shock seemed even worse than the burns on the hands; but divine Love was good and I am completely healed, without a mark or scar on me. After that first hour I did not have any more pain until about midnight, when a reaction seemed to set in, and during the rest of the night I seemed to suffer greatly again. But these comforting words suddenly came to me: "To those leaning on the sustaining infinite, today is big with blessings" (Science and Health, Pref., p. vii). If I did not fully realize their truth then, I surely realized it afterward, for in less than twenty-four hours I was free from all pain, and I never had any more.

It seems to me I never can be half grateful enough to God for this healing, and to Mrs. Eddy for bringing us the truth which sets us free, and to the one who so faithfully worked for me and enabled me to see God's word made flesh. For three days I did not use either hand, but after that I commenced using the tips of my fingers to handle things. In one month new flesh and even muscles had grown, so that I had as it were a pair of new hands. Thus was God's word proven to be "quick and powerful."

I had with me for five days one who had been a trained nurse before coming into Christian Science, as I was helpless when it came to doing anything for myself. She said afterward that according to medical opinion my hands could not have been saved, and that it was wonderful I had lived through the ordeal. If further information is required, I can give the nurse's name and address and also that of the dressmaker who was here at the time, and who was not a Scientist. I hope this testimony may help some one else to realize the power of Truth more clearly, as demonstrations often do.—Mrs. W. W. Fogg, Oakland, Cal.

I desire to express my gratitude for what Christian Science has done for me. It is now over five years since I became interested in this truth. I had suffered intensely for several years with severe headaches, supposed to be caused by the growth of a tumor. The physicians of Los Angeles said that nothing but an operation would give me relief. I then was advised to try a physician who did not believe in operations for such cases as mine. He told me that with three or four months' treatment I would not need to go to the hospital. I went to him for treatment every other day for nearly five months, but got no better. I then decided to have an operation as soon as I got out of bed again.

About this time Christian Science was brought to my notice by a friend who advised me to go to a practitioner in Los Angeles, and I did so. I had relief with my first treatment, and after seven weeks I was entirely healed from the severe headaches, a bowel and stomach trouble, and, best of all, I was free from the fear of any such thing as an abnormal growth.

Later my mother passed on, after suffering with mental trouble caused by my father's death and other worries, over five years ago. During the last twenty months my mother had spent most of her time with me, and I found Christian Science a great help many a time in quieting her during the spells of illness. At one time she would have been sent to an asylum but for Christian Science coming to her rescue. She suffered with dizziness, and many a time she was glad to get help, and recognized the truth as being the cause of her relief.

I am grateful for the privilege of receiving class instruction, which has enabled me to have a better understanding, and also to be able to help others. I am also grateful for the Christian Science literature, especially Science and Health and other works by Mrs. Eddy, who has done more for humanity than any other woman.

Harriet Raby, Redondo Beach, Cal.

I wish to express my gratitude to God, also to our dear Leader for the many beautiful demonstrations and blessings that have come into my life through Christian Science. It has been my only source of comfort and healing for seven years. I first came to it for physical healing, after several physicians had decided that I would never find relief from severe pain in my head and back without undergoing a serious operation, which would keep me in bed from four to six weeks and be very expensive and painful. This I decided I would never consent to, as I had undergone several smaller ones, each one leaving me in a worse state than before. I suffered in this way for three years, till finally a dear student directed me to a practitioner, and relief came instantaneously. In a week I was as well as ever.

Since that time I have seen the power of Truth overcome an attack of measles for my baby in one treatment, also a serious throat trouble for myself, and have had many other demonstrations. I cannot find words to express my gratitude, and my only desire is that each day I may prove worthy of these blessings in deed and word, by humbly following the teachings of our dear Master and our loving Leader.—Mrs. Sarah A. Brooks, Oakland, Cal.

Four years ago Christian Science healed me of eye trouble which was supposed to be hereditary. After the second treatment I had no further use for my glasses and have had perfect sight ever since. With this healing came the beautiful spiritual awakening which nearly always follows in Christian Science. Having been raised in the Jewish faith, my changed concept of God as ever-present divine Love filled me with great joy and happiness. Many minor ailments left me gradually, as I kept on studying the Bible with Science and Health,—such as headaches and other recurrent troubles. Many times I have had perfectly painless work done for me by a dentist, through my own understanding gained by the study of our literature. But the greatest of all blessings has been a most comforting relief from grief and loneliness through the help of one whose understanding of God unfolded to me the unreality of death. Truly I have tasted of "the peace of God, which passeth all understanding." May my life-work show forth the gratitude which words cannot express.

Mrs. Minnie Sachs, Fresno, Cal.

About eight years ago I experienced healing in Christian Science. I was at that time practically without religion, being able to think of God only in a vague way as an unknowable "great First Cause." Physically I was wretchedly ill and unhappy, and casual conversations with friends who professed to have been cured in Christian Science determined me to ask the help of a practitioner. I did so, and in a short time I was healed of nervous exhaustion in an extreme form. At the same time I was cured of a chronic stomach difficulty, and very soon permanently laid aside glasses which I had worn for about twelve years. The healing has remained, and I have never since had any return of these troubles.

These physical results seemed wonderful, but the measure of understanding of God and man which Christian Science

Digitized by Google

has bestowed is the great and ever-unfolding marvel. The mental recognition of Love as Principle,—the underlying, causative, and eternally sustaining energy and substance,—is soon achieved. Then comes the Christian Scientist's daily miracle,—the application of this understanding in daily life, by which it becomes a practical working knowledge through which we actually prove that the universe means universal good.

I know that I, with all other Christian Scientists, am as yet only beginning to walk in the way; only beginning to know how to love my enemies, whether they seem to be persons or circumstances. But I have already learned to criticize much less and appreciate much more, learned something of how actually to make friends of foes and ladders of stumbling-blocks, and am correspondingly happier and more useful. However ineffectively I am able to apply the lesson, it is none the less mine to live toward; and I know that this growing spiritual illumination is the progress "from glory to glory" which Paul promised. Nothing but Christian Science could have convinced me that happiness lies in self-restraint and self-abnegation, for nothing but Christian Science could have proved it.

As my comprehension of Christian Science grows, my reverence for and appreciation of the Leader who was so greatly unselfish that she could discover and transmit to us this truth grows also; and in her book, "Science and Health with Key to the Scriptures," I know that we have the greatest gift bestowed upon mankind since our Bible was compiled.—MARTHA GISH, Kansas City, Mo.

It is a blessed privilege to testify to the healing power of Christian Science. I experienced all the symptoms of acute illness one evening, and as my profession occupies so much of my time I felt it necessary to ask for help from a practitioner, and absent treatment was given. It seemed on that night as though it would be impossible for me to continue to suffer so and live. The throat was in a bad condition, and yet I was enabled to play my part and even sing. My associates did not notice any change in me, only one who asked if I was tired. The next day I was feeling so well it seemed as though I must skip along as the children do, for very joy. The throat, however, remained in the same condition, although there was no pain or soreness. The practitioner was then notified of this, and the following day the ulcers had entirely cleared away.

My husband and I owe everything we have to Christian Science. I appreciate more and more our beloved Leader's great gift to mankind as I daily prove my understanding of Truth. During the years I have known of Christian Science there has been a continual overturning in my consciousness, old errors passing away, Truth making all things new. This overturning I know will continue till he comes "whose right it is."—MRS. FRED C. HOUSE, New York, N. Y.

[Written for the *Sentinel*.]

"I SHALL BE SATISFIED."

VIOLET RHODES.

O GLORIOUS day, when I awake to know
  Myself, as e'en the Father knoweth me,—
His child, in His own image made,
  Reflecting naught but Spirit's purity.

Teach me Thy way, O God! so that each day
  Be one step nearer to that heaven above;
And then, through cloud or sunshine, come what may,
  I'll know naught but Thy guidance and Thy love.

Grant me the priceless gift of grace, that I
  May know and do Thy will as daily bread.
A heart at leisure from itself I crave,
  To comfort as I have been comforted.

FROM OUR EXCHANGES.

[*New Church Messenger.*]

No one can get out of the domain of spiritual law. Yet by cultivating a love for things true and good, he may become unmindful of commands forbidding evil. He can come into such life, interests, and love as never to hear the commandments say to him, "Thou shalt not," as a command. The only possible way to come out from under the law is to come into such a state of life as to be led by love for the good. If one finds his chief joy in doing as the commandments teach, he practically forgets the commands. The law is then written on his heart, and what formerly he did from command, he then does from love. Thus he comes into a state of life above the law, within the law. He then is under grace in the sense that he is led not from thought of what is right, not from commands, but from the love of doing right and from the consequent happiness. The only way to come out from under the law and under grace is so to love what is true and good as to do it without thought of what is true or commanded, and from the affections of the heart. The law is ever present, and ever will be present. Law cannot be suspended for a moment, for the divine law is nothing other than the way that divine love acts. The law is as perpetual and unchangeable as the Lord's life itself. But it is possible for one to come into the essence of the law, which is love; and then, having no desires contrary to the law, he is free to do anything that he wishes. Commands and the law are then no restraint, for his inmost life is become the essence of the law.

[*Christian Commonwealth.*]

Sometimes an enthusiastic intellectual reformer expresses the belief that in order to "get the people in" you have only to throw overboard a certain load of traditional lumber, to preach in accordance with modern ideas, and they will flock to hear you. Whatever amount of cogency there is in this, the experience of "advanced" preachers is by no means universally corroborative. Of course (although we doubt whether every one will admit it), there must be such a reconstruction of the intellectual framework of religious teaching, such an honest and enlightened use of Scripture and of science, that no self-respecting man or woman will feel repelled by the obscurantist and superstitious notions that, unhappily, still cling about the gospel as ordinarily presented. But we are persuaded that a new spiritual ardor is required today even more than a fresh statement of doctrine. We live in an age when the seductions of pleasure are enormous, when the desire of gain is intense, when men concentrate their energies more and more upon the present rather than the future. How can the preacher make that actual present to palpitate with spiritual meaning? How will he break a way through the armor of selfishness and fire the soul with a passion of love for mankind? Who has the secret of that touch of personal greatness which is in the final resort the compulsive and attractive power in the pulpit? Here are some of the themes waiting to be handled, whether in common council or individually. However we grapple with the problem, it must be grappled with, and at once.

[*Universalist Leader.*]

It is true, indisputably true, that changes of religious faith affect the very basic conditions of civilization; that is, material values fluctuate as man's faith and reliance upon spiritual realities change. Decline of faith will end in decline of material civilization. The disappearance of faith will cause that most magnificent social fabric to decay and fall. Greece and Rome fell when a living faith died. When life is not worth living, the road to death is short. If this life here, if this world only is all there is, if man has no preeminence over the beast, then the end is riot and excess, with death as a relief.

So the most important issue before the American people

Digitized by Google

is a renewal of faith; a renewal of belief that man is more than a lump of clay, sensitive to hunger and thirst, to sensual pleasures, to worldly display, . . . This renewal of faith is our master issue. Not the tariff, not banking that is panic-proof, not more equitable taxation, not regulation of trusts and monopolies, not race problems,—none of these are fundamental, though important. The all-important issues are the spiritual issues.

[*Churchman.*]

The need of the hour is to throw off the burden of prejudice and partizanship and for Christians of every name to put themselves to the test, by cooperating with others to secure a loyal following of Christ's direct command that they must work together before they can fit themselves to become doctrinal experts. His teaching would suggest that accuracy in dogmatic expression, or even in the estimate of the value of dogmatic pronouncements, has long been paralyzed by the failure of Christian brotherhood. When this principle has been once learned, it will be seen that the basis of fraternal work is the only one on which communions can consolidate doctrinally. Examination of claims, the allotment of errors, and the discrimination of grievances can be put aside as part of the inheritance of the past, which must be transcended before comity and concord can be realized.

[Rev. John F. Carson, D.D., in *Advance.*]

The truths of divine revelation are the forces with which the church is to build His [God's] house. In proportion as these radiant truths are incarnated in the life of the church and proclaimed by it the church lives and flourishes and accomplishes results. The history of the church will sustain the statement that when the great evangelical doctrines are set forth, in a way that has the sanction of intellectual and moral integrity, the world is invaded and souls are won to Christ. The church must plant herself firmly on the old faiths. Then the Bible as the revelation of God's truth, and as the authoritative and sufficient rule of faith and duty, must be given a larger place in the life of the age. I plead for a larger place for the Bible in our American life; in our homes, our churches, our schools, our legislatures.

[*Christian Register.*]

The history of religion is in a large degree the history of the development of humanity. God is the same yesterday, today, and forever; but man is a child of growth, and the history of religion is the record of his growth into the thought of God. The universe is ablaze with revelation, but man can receive only so much light as enters the eye of his soul. Yet the fundamental character of religion is seen in the fact that its germs appear so early in the life of the race. The elements which religion involves are as ineradicable from human nature as intelligence itself.

[*Christian Work and Evangelist.*]

Such is the world's unrest. We are not unduly pessimistic, for much of the unrest is due to the seething of good forces in the heart of the world. A mighty and new impulse of human brotherhood is making itself heard even above the clangors of wars. . . . Underneath all the unrest, some new, universal, and, we believe, transfiguring social impulses are being born. There is always a great seething of the waters before the new island rises from the sea.

[*Watchman.*]

There can be no confidence in the truth without faith in God, for God is behind all righteousness as its sustainer and reward. Nor is it simply fear of God and His judgment which promotes the speaking of truth, for to have faith in God is to know Him, and to know Him is to love Him, and to love Him is to love what He loves. The path of piety is straight to truthfulness.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by *Mrs. Eddy* to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

For some time the postage required for subscriptions outside of United States territory has exceeded the amount added to the regular subscription price for this purpose, and an increase in rates sufficient to cover this deficiency is now deemed necessary.

Beginning April 1, 1912, therefore, the rates on all subscriptions outside of United States territory will be as follows: For Canada, *Journal* $2.25, *Sentinel* $2.45; for all other countries, except those to which the domestic rate applies, *Journal* $2.65, *Sentinel* $2.95.

Renewals for all subscriptions terminating before April 1, 1913, and received by us prior to July 1, 1912, will however be accepted at the old rates.

The pamphlet "Causation" by Frederick Dixon has been translated into Swedish—"Kausal-lagen"—and is now on sale; 40 pages and cover at the prices of the regular pamphlets.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, the First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 15 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $3.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *VERSUS* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Associate Editors.

SUBSCRIPTION PRICE

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage.

For subscriptions in quantities please refer to our catalogue.

TERMS OF SALE

	United States, Mexico, and Cuba	Canada	All Other Countries
Single copy . . .	$ .05	$ .05	$ .07
Twenty-five copies .	1.00	1.15	1.70
Fifty copies . . .	1.80	2.05	2.40
One hundred copies .	3.00	3.50	4.25

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numerals XII indicate the year 1912; XIII, 1913. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription. A numeral "1" is added to the notation for each annual renewal.

Bound volumes: Current year or two years previous, cloth, $1.00; half calf or half morocco, $1.50. On earlier volumes write for prices.

Equivalents of United States money:

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

A congressional investigation may result from the startling facts relating to live stock receipts at the western markets. The governmental figures show that the live stock receipts at the seven principal markets in April, 1912, were greater than for any April since 1907, and furthermore, that the aggregate receipts of live stock at these seven markets for the first four months of this year were greater by far than in the same four months in any year for the past decade. The question which has been brought to congressional attention is: Why, in the face of these facts, are the packers putting up prices, and why are they ascribing the unprecedented rise to "shortage of cattle due to scarcity of corn"? The report of the bureau of statistics shows that there is no such shortage.

The federal government has filed a civil anti-trust suit in the federal district court of New York against steamship interests alleged to have monopolized the transportation of passengers and freight between the United States and Brazil. Sweeping charges of granting rebates, fixing arbitrary and unreasonable rates, and entering into conspiracies, combinations, and agreements in violation of the Sherman law are made against several lines.

The state department recently issued some statements showing its interest in the movement which aims to aid farmers to secure loans at a low rate of interest with their crops as security. A joint resolution drafted by Senator Gronna of North Dakota providing for the appointment of a commission to investigate European cooperative credit unions has passed the Senate and is before the House committee on agriculture.

The bill of Senator Page of Vermont contemplates cooperation by the federal government with the states in promoting instruction in agriculture; trades and industries, and home economics in secondary schools; the education of teachers for these vocations and the maintenance of extension departments of state colleges.

The striking feature of the statistical returns from the college office at Harvard is the apparent growth in popularity of the classics in particular and languages in general. It seems that the number of men specializing in these departments this year is more than twice as large as it was last year.

Federal machinery for three distinct attacks upon the beef trust has been set in motion with an alleged expose of the reasons for the high cost of living in view. Two House committees and the department of justice are preparing to attack the meat packers.

Omitting any appropriation for the tariff board, but allowing seventy-five thousand dollars for the President's economy and efficiency committee, the sundry civil appropriation bill, carrying a government budget of $10,577,414, has been reported to the House.

Because the House failed to pass the bill giving the House committee on banking and currency more power to investigate the "money trust," its chairman announces that no testimony will be taken until autumn on the main branch of the inquiry.

International.

In many villages in the shires of England there have been built during the last year cottages for the special purpose of providing homes for pensioners from the army, navy, and civil service. One of the objects of this scheme, organized by the Land Union in conjunction with the *Daily Mail*, is to encourage men to settle in the country by securing for them a small freehold. It has been ascertained that many men who now emigrate to the colonies would prefer to remain in England if there were any possibility of securing a cottage home at a rate within their means. The "pensioner's homestead" consists of a cottage and one acre of good land for which payment is made in twenty-five years at the rate of ten shillings a week rent. The rent includes instalments for purchase, and every penny that is paid by way of instalment is reckoned to the credit of the homesteader, whether he leaves or remains.

The Kaiser has just enrolled himself among the farmers of German Southwest Africa. His majesty has long entertained the wish to own a sheep farm in his African territory, and orders were given to purchase as soon as a suitable opportunity occurred. Two farms in the district of Gibeon have now been sold to him for the sum of ninety-six thousand marks, the late owner remaining on for the present as his majesty's tenant. The sheep on the farms are kept for wool, an industry that is in its infancy in the district.

The Reichstag has passed the third reading of the bills increasing the German army and navy. The contention that part at least of the cost of the increases in the army and navy should be borne by new taxation imposed on the wealthier classes prevailed. The Reichstag adopted the two laws first on the condition that it would grant the necessary funds upon the introduction by the government of legislation providing for some form of general property tax and its enactment. Its second condition was that the government should reintroduce the inheritance tax bill.

The meetings of the bankers representing the United States, Great Britain, Germany, France, Russia, and Japan to discuss the terms of the Chinese loan have been suspended, as the conditions submitted by Russia are not acceptable to the original group of four powers. It is understood Japan has concurred in the Russian proposals, but the others say they are unable to agree to them. Further meetings will be held after Russia has given further consideration to the matter.

Russian papers have been discussing the question of the closing of the Dardanelles and point out that the present trend of events is toward the neutralization of the Dardanelles in order to prevent their continuing to be the theater of war that they have been for many years past. Russia, however, does not want warships to be allowed to get into the Black sea, where she at present has only a small fleet.

The problem of communication between the city of Venice and the mainland is about to be solved by the construction of a tunnel under the Lagoon with openings at St. Mark's square and in the islands of Giudecca and Lido. The tube will be from seventeen to forty feet below sea level and will cost two million four hundred thousand dollars.

The Douma of Russia has adopted a bill permitting women to practise law.

Industrial and Commercial.

Twenty thousand automobiles will be the export record of the United States in the fiscal year which ends with the present month, and their value, including parts and accessories, will approximate twenty-seven million dollars. Approximately twenty-five per cent of the automobiles exported from the United States are shipped to Canada; about forty per cent to Europe, chiefly Great Britain; about twenty per cent to British Australia; about eight per cent to South America, and smaller proportions to Mexico, the West Indies, and various countries in Asia, Oceania, and Africa. Of the automobiles imported into the United States, France supplies about one half. Of the eight hundred and forty-five machines imported during the ten months ending with April, three hundred and thirty-nine were from France, one hundred and seventy from the United Kingdom, one hundred and fifteen from Italy, one hundred and eight from Germany, and one hundred and thirteen from other countries.

All Russian cotton in central Asia is irrigation grown. Upon one million twenty-six thousand of the total of three million five hundred thousand acres of irrigated land there has been produced, roughly, half of the cotton Russia now needs. In addition there are five million acres of suitable land, available for irrigation from the waters of the Syr Darya and the Oxus, but various hindrances prevent their development. Russia desires to be independent of America not only for her supply of cotton, but also in the supply of the necessary machinery to conduct the cotton industry. The agricultural committee has submitted to the Douma a bill appropriating sixty thousand dollars to be used in testing British, German, Canadian, and other agricultural machinery "with the aim of freeing Russian agriculture from the American monopoly."

A standard barrel and standard grades for apples when packed in barrels is provided for in a bill reported favorably from the House committee on coinage, weights, and measures. The object of the bill is to prevent fraud and deception in the apple business. It establishes a standard barrel of the same dimension which is now established by law in many states, and which is in customary and general use throughout the country. It establishes, for the purpose of interstate and foreign commerce, three standard grades of apples. It provides that barrels marked within the meaning of the act shall also show the identity of the packer and the locality where the fruit is grown and its grade.

Costly competition in the business of manufacturing and exchanging moving picture films and other accessories of the moving picture industry has brought about the formation of the Universal Film Manufacturing Company. Forty-nine factories and exchanges, obtained at an outlay of five million dollars, make up the new combination.

Indiana coal miners and operators have signed a new wage contract for two years, and the strike condition of the last nine weeks which has affected eighteen thousand workers has been broken.

More than five million five hundred thousand words in full rate messages passed over the transatlantic cables in the last three months.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE BOW OF PROMISE.

IRVING C. TOMLINSON, M.A.

In consonance with the declaration of the psalmist, "He sent his word, and healed them, and delivered them from their destructions," the true understanding of the Scripture must heal all manner of disease. Earnest effort is therefore incumbent upon all, that they may receive the fullest possible benefit from the study of the Book of books, and a question that each may profitably ask himself is this: "How readest thou?" Mrs. Eddy has said in Science and Health that "the Bible teaches transformation of the body by the renewal of Spirit. Take away the spiritual signification of Scripture, and that compilation can do no more for mortals than can noonbeams to melt a river of ice" (p. 241). The account of Noah and the ark, as found in chapters six to nine of Genesis, illustrates this point.

We know that among all peoples water has been a significant symbol. When clear and calm, it stands for purity, and for life eternal; when disturbed, it is the type of discordant mortal mind. The flood pictures mankind as submerged in the waters of mortal mind, and Noah's experience portrays the escape from unreality into the reality of being. Science and Health gives us the following spiritual interpretation of ark: "Science showing that the spiritual realities of all things are created by Him and exist forever" (p. 581). Noah's spiritual sense having led him to turn from sin and seek safety, he and his family went into the ark. His truer sense of being lifted him above the turbulence of error, and through faith, obedience, and spiritual understanding he was at last rescued from the discords of false belief. We remember that forty days after the rain had ceased Noah freed a dove which, finding "no rest for the sole of her foot," returned to the ark bringing no sign that the flood had abated. When sent forth the second time it returned with a single leaf; and the third time it did not return. The lesson is evident. Our grasp of spiritual verity sometimes dawns slowly. When Mrs. Eddy first projected Christian Science into the world there was not one to welcome it. Then, by reason of the wonderful healings which she accomplished, her hope and faith found its "olive leaf," and finally, as we see today, Christian Science has gone forth into all the world.

The ark rested upon Mount Ararat. To the highest peaks of thought divine revelation first comes. Those who are most removed from materiality and nearest the clear sky of spiritual harmony are the ones in whom spiritual consciousness is first awakened. It was to such a one that Christian Science was revealed in this age, and with her the ark of divine Science first found its home, because she above all others was fitted to welcome this argosy, freighted with its store of heavenly riches. When the waters had subsided, Noah and his family no longer made their home within the ark. That haven of rest symbolized the abiding presence of the Father, the spiritual sense of which Noah was to give to others. His experience was similar to that of the disciples on the mount of transfiguration. The impetuous Peter would build a home and abide there, but Jesus commanded his followers to descend from the mountain to the valley, and transform the material thoughts of others with their own transfigured experience. This is the true sense of religion, whereas the false sense desires to retain for self the blessed experience of exaltation. Those individuals who would seek communion with God through isolation from humanity, forgetful of its needs, have not fully imbibed the spirit of the Master. Jesus knew better than the disciples that those in the valley needed the result of their experience. So today Christian Scientists do not live apart, but reflect their beatified experience in the home, in the church, in the business realm, and in the affairs of state. We may return to the ark for strength; we may ascend at times the mount of transfiguration for inspiration, but the gifts of love and truth which God has bestowed we are to give to others, since the promises of God are for all times and peoples. Those who truly have fellowship with God and receive His blessing, rejoice to transmit that blessing by sharing it with all the needy who are ready to accept it.

As a result of Noah's escape from the turbulent waters, he found for the first time the promise in the rainbow. Perhaps he had beheld this bow of beauty many times before, but now it spoke to him of a waiting blessing from God the Father. It voiced to him the message which Shakespeare in a measure repeated when he spoke of "books in the running brooks, sermons in stones, and good in every thing." In Science and Health is fully unfolded the truth that every single thing of beauty enshrines a promise of better days to those who have eyes to see: "Beauty is a thing of life, which dwells forever in the eternal Mind and reflects the charms of His goodness in expression, form, outline, and color. It is Love which paints the petal with myriad hues, glances in the warm sunbeam, arches the cloud with the bow of beauty, blazons the night with starry gems, and covers earth with loveliness" (p. 247). To those with the open eye, then, every dewdrop which glistens on the petal of a rose, every star that shines resplendent in the night, every smile that illumines the face with spiritual joy, is a promise that evil is not to prevail, but that in God's own time right will triumph and good reign supreme. "So we must reverence the highest; have patience with the lowest," wrote a great man; and one with kindred feeling counseled: "Are the stars too high for thee? Then stoop, and study the pebble at thy feet."

Among all the forms of beauty there is none which so significantly enfolds within itself God's promise as the rainbow. This perfect arch of beauty, lifted high above the earth, and radiant in its many-hued splendors, easily makes its wondrous appeal to every eye. It comes when the storm is over to gladden us with its beauty, a fair harbinger that peace and harmony are to rest upon the purified earth. As the segment of a circle it is a symbol of eternity, a sign of life without beginning and without end. True, it is but a segment, but one half of an arch proclaims the entire circle, even as the life which we see here foretells the eternal life which is the heritage of all. The rainbow is but a reflection;

Copyright, 1912, by The Christian Science Publishing Society.

Digitized by Google

it is not the mist upon which it seems to rest, neither is it the sun. But it expresses the beauty which lies enshrined in the golden sunshine. It hints at the truth which Science reveals, —that man is the reflection of God, that the light of divine Love shines for all. The body which we see is no more man than is the mist the rainbow, but the outward form which the eye beholds may reflect the perfect attributes of the Father. The arch which spans the heavens is the glorious gift of the sun, upon which it is dependent for its existence. So man has his being in divine Mind, and is as eternal as that Mind.

The watery elements which overwhelmed the earth and from which Noah was saved only by the ark, now in the form of mist reflect this glorious symbol which stands as a bow of promise. Herein is typified that activity of divine Mind which is so transforming in its influence that the one who under false conditions seems to be the instrument of warring elements, under Science may reflect the truth and love of God. Before his illumination St. Paul appeared to be the instrument of evil, but after his awakening he became the servant of all good. Thus the rainbow in its beauty proclaims the message which Paul declared when he said: "Put off . . . the old man, which is corrupt according to the deceitful lusts; and be renewed in the spirit of your mind; and that ye put on the new man, which after God is created in righteousness and true holiness."

God gives us our bow of beauty, with its promise that error shall no more overwhelm us, that because Love rules evil is powerless. We find that when we respond to the call to seek the ark of safety, as flowers obey the call of the sun, the waters of mortal mind will be assuaged, and eternal Truth become our heritage. We learn that all error is unreal, without presence or power; that God and His creation are the only realities, and therefore peace, health, and life are our eternal possession. These are only hints of the spiritual verities enfolded in the story of Noah and the ark, teaching mankind to rest on the sure promise, "Lo, I am with you alway." These words from "Miscellaneous Writings" (p. 206) may well be to every Christian Scientist as a guide and inspiration: "As you journey, and betimes sigh for rest 'beside the still waters,' ponder this lesson of love. Learn its purpose; and in hope and faith, where heart meets heart reciprocally blest, drink with me the living waters of the spirit of my life-purpose.—to impress humanity with the genuine recognition of practical, operative Christian Science."

CHRISTIAN SCIENCE IN THE COLLEGES.

SALLIE B. TANNAHILL.

In a great university, where at first everything is new and strange, it means a great deal to a student leaving home, perhaps for the first time, to meet very shortly after his arrival a number of people who are in sympathy with his way of thinking. It is a great help to know that others are facing the same difficulties, working out the same problems, and to hear how this has been accomplished through the knowledge of God as learned in Christian Science. Testimony is often given by graduates as to the help received while at college from the close fellowship made possible by the Christian Science college societies.

The purpose of the Christian Science college organizations is to bring together once or twice a month, for mutual benefit, members of the faculty, instructors, and students who are interested in Christian Science; also, when it is possible, to give a lecture once a year before the members of the university or college who are interested to know more of what Christian Science really is. The meetings are conducted like our regular Wednesday evening meetings; selections are read from the Bible and Science and Health, chosen with the desire to meet the specific needs of students and teachers, and testimony is given to the efficacy of Christian Science in solving the problems of academic work aside from the general daily problems of ordinary life. These meetings, however, are not supposed in any way to take the place of nor to interfere with the regular Sunday and Wednesday evening services in our organized Christian Science churches.

Ten colleges and universities in this country have already formed organizations which are advertised in *The Christian Science Journal*—the societies of the universities of California, Illinois (two), Kansas, Michigan, Minnesota, Cornell, Harvard, and Columbia, and Smith College. Only members of the university or college are invited to attend these meetings; therefore the society does not hold "public services," and one may unite with a college organization and a local church without infringing upon Article XXIII, Sect. 10, of the Manual of The Mother Church. The following testimonies have been written as expressions of gratitude for the benefit derived from the Christian Science college societies:

"Last year I went almost a total stranger to a university. It was not long before the notice of the university Christian Science society on the college bulletin attracted my attention, and I attended the meeting. There I found, at the beginning of my college year, those who proved to be my truest, most helpful friends as time went on. It might have been months before, among the hundreds of students and many departments, we had found each other, had it not been for the university Christian Science society. The fellowship of those kindred in thought and in aim was delightful. Each meeting seemed to draw the members of that little group closer together, and as each told her experience, our student life being in a large degree similar, the help derived by those listening was immediately personal and directly driven home. It would be impossible to measure all the helpfulness and inspiration I received."

Another reads: "I felt so strange for the first few weeks of my college year, before finding the Christian Science society. But that first evening, when other strangers told how the realization of the presence of God helped them to feel at home and kin with all, because of the all-fatherhood and motherhood of God, then my burden rolled from my shoulders, and I too felt at peace."

"Last year, in a certain eastern college, I found the Christian Science society soon after my arrival," a student testified, "and became identified with it. For several weeks my work at the college seemed hard and I was in a very confused state. I was expecting to receive a diploma at the end of the year, so to drop any of the subjects seemed out of the question. In fact, I felt it would be limiting the power of Christian Science to carry me through, even to consider it. But one evening at the Christian Science college society a member gave an experience of ambition overcome, and told how much greater the things of God were than anything we could possibly receive from material knowledge. I at once recognized my difficulty. I had determined to work for the diploma, thinking that through this I would secure a certain kind of position I had long desired. The experience of that member of the society made me see that it was not a question of whether I should receive a diploma or even a position, but it was a question of whether God, Truth and Life, was more to me than anything else; whether I was daily growing in a knowledge of God and the things of God; whether I was daily reflecting good. If so, then it mattered not whether I received a diploma or not, I would always be in my right place, for 'no good thing will he withhold from them that walk uprightly.' It might not be in the place that I had picked out. It was not my place to pick it out. The Bible says, 'In all thy ways acknowledge him, and he [God] shall direct thy paths.' Then this came to me from 'Miscellaneous Writings' by Mrs. Eddy: 'Have no ambition, affection, nor aim apart from holiness' (p. 154). It took a struggle, but I dropped two studies in face of the fact that I would not receive my diploma. A great sense of peace and a deep

Digitized by Google

feeling of the nearness of God came to me and remained throughout the year. I had no fear. My daily prayer was that which Mrs. Eddy has given us in 'Miscellaneous Writings' (p. 400):

Father-Mother good, lovingly
Thee I seek,—
Patient, meek,
In the way Thou hast,—
Be it slow or fast,
Up to Thee.

At the end of the year, I secured just the kind of a position I had started to work for, except that it was under better conditions and surroundings than those which I had planned for myself—and this without a diploma and because some one in the Christian Science society at college opened my eyes to the dangers of human ambition."

Christian Scientists who are working in colleges and universities, therefore, have cause for deep gratitude to Mrs. Eddy for her wisdom and foresight in authorizing the college organization, as set forth in the following by-law (Manual of The Mother Church, p. 73): "Members in good standing with The Mother Church, who are members of the faculty, instructors, or students in any university or college, can form and conduct a Christian Science organization at such university or college, provided its rules so permit. Also members in good standing with The Mother Church, who are graduates of said university or college, may become members of the organization by application to, and by the unanimous vote of, the active members present, if the rules of the university or college so permit. When called for, a member of the board of lectureship may lecture for said university or college organization."

PROFITABLE SERVANTS.

HELEN FRIEND-ROBINSON.

In Smith's Bible Dictionary we find this definition of the word servant: "This word often denotes a man who dedicates himself voluntarily to the service of another. Thus, Joshua was the servant of Moses. The servants of God are those who are devoted to His service." Surely the test of every student who has subscribed to the tenets of the Christian Science church should be that he is ready to dedicate himself voluntarily as a servant to God, and his aim should be to become a more "profitable servant" in this great cause. Like the Master, he has come "not to be ministered unto, but to minister," and in the ratio of his spiritual understanding, his life and works should be in accord with this vital precept.

Mrs. Eddy says: "God selects for the highest service one who has grown into such a fitness for it as renders any abuse of the mission an impossibility" (Science and Health, p. 455), and centuries ago pride and arrogance in Christian service were rebuked forever in these words of our great Wayshower: "Ye call me Master and Lord: and ye say well; for so I am. If I then, your Lord and Master, have washed your feet; ye also ought to wash one another's feet." It therefore behooves the earnest student so to study and live as to make himself approved of God, that he may become a servant who need not fear to enter the highest service in this movement for the redemption of mankind, nor be too proud to stoop to the lowest service, if necessary, in ministering to the needs of others.

While every student knows that he has not yet attained the ultimate of Science, yet this one thing he can do: he can strive to make each day a higher tribute of gratitude to God, by doing better and more profitable work than he has done before. In true humility, esteeming others better than himself, as having nothing, yet possessing all things through Christ; like the apostle Paul, taking pleasure in persecutions and distresses, if by such means he draws nearer to Truth and Love: thus will he daily prepare himself for greater usefulness and become diligent in making his calling and election sure.

The gospels are replete with useful lessons to all who desire humbly and faithfully to follow the leadings of Truth. In the parable of the talents, found in the twenty-fifth chapter of the first gospel, the Master has given some graphic lessons which every Christian Science student would do well to ponder carefully. The importance of making the most of our opportunities is here very clearly illustrated. We are all familiar with the story. A master called his servants to him, and to each he gave "according to his several ability" the talents which they were to increase for his benefit. The servant who received five talents doubled his portion, and likewise the one who had received two; while the servant who had received but one talent, fearing that he would lose what he already had, went and digged in the earth and hid his lord's money.

Then we read that the lord of these servants came and reckoned with them. To those servants who had made the most of their talents in the ratio of that which had been given to them, he gave to each this well-merited commendation: "Well done, thou good and faithful servant: thou hast been faithful over a few things, I will make thee ruler over many things: enter thou into the joy of thy lord." But when the servant who had been given the one talent came cringingly forward and began to make excuses for his failure to "make good" his opportunity,—in his fear even trying to shift the responsibility and blame upon his master,—we note that this servant was given a most stinging and pointed rebuke. His master denounced him as a wicked and slothful servant, his one talent was taken away and given to the one who had made the most of his opportunity, and the unprofitable servant was cast into "outer darkness."

The lesson is obvious. First we learn that the talents which we seem to possess are not ours, but have been loaned to us by the Father, to be used in His service, and we must make the most of our every opportunity to double our channels of usefulness in serving our cause if we would win the "well done" of ancient promise. Mrs. Eddy has given us this unfailing rule for our guidance and protection: "Never absent from your post, never off guard, never ill-humored, never unready to work for God" (Miscellaneous Writings, p. 116). And we surely cannot learn too soon that when God calls us to serve, whether it be to read in church, to write, to teach, or to heal the sick, our only safety lies in heeding and obeying this call, if we would make the most of our opportunity.

As students we are sometimes confused, not knowing whether it be Truth or error which has called us to serve; but if we examine ourselves at every call to go forward, trying honestly to ascertain what have been our motives of action, we cannot long remain in doubt when a summons reaches us. When called to do any specific task, let us ask ourselves these searching questions: Have we sought this position? Have we had any ulterior motive? Has there been any pride of place or power hidden under a meek guise, waiting for some external expression? any seeking for recognition of a personal talent? any covetousness? If not, then we may know that it is the Master who has called, in order to give us our opportunity according to our "ability," and that with Truth's sanction we can stand at our post of duty during our allotted time in perfect assurance, girded about by "the whole armor of God," through which nothing harmful can penetrate. In fact, it is only by so standing that we can become more profitable servants and double our opportunities of increasing our Lord's store, and neither sickness nor any other error can take from us our rightful place when we once understand our divine rights.

Next we learn that if we are given but one talent, we must not become wicked and slothful servants by burying our one talent in the ground of any phase of fear, if we would escape the rebuke and penalty of having our opportunity taken from us and for a time be cast into the "outer

Digitized by Google

darkness" of disobedience and unrest. Do we shrink from sight, fearing the call to "go up higher" may add to our daily work of overcoming self? Then we deserve the most scathing rebuke our Master could bestow upon us. Are we fearful that we shall not be able to fill a position acceptably? Then we forget that our sufficiency is of God and that we are able to do all things through Him. And why should we fear? He that has called us is abundantly able to keep our feet from falling, and He will never ask us to go where Love is not already there before us, leading and illumining the way. It is well to remember, too, that the servant whose "ability" entitled him to but two talents, received the same commendation after he had made the most of his opportunity, as the one who had received five. Are we waiting for a more convenient season? Then we must remember that to be always ready and willing to work for God is our key-note to harmony, and that obedience is better than sacrifice. Finally, we may turn to the right hand or to the left of pride and fear in a vain endeavor to shirk responsibility, but we shall learn that sooner or later our Master too will come to reckon with us, in divine Science, and the call for more profitable service will come so imperatively that we cannot longer neglect our one talent.

In this age we have a wonderful illustration of one who dedicated her life voluntarily in service to God and His Christ, to emancipate humanity from its bondage to sin and disease. Because of Mrs. Eddy's consecrated life and unceasing labors in our behalf, we owe her a debt of gratitude that can only be paid by a lifetime of service to the cause which she served so faithfully; and we should be ready and gladly willing to follow her as she followed Christ by giving our "talents and loving hearts free scope only in the right direction!" (Pamphlet, Personal Contagion, p. 6). As St. Paul so tersely expresses it, "To whom ye yield yourselves servants to obey, his servants ye are to whom ye obey;" and it rests absolutely with ourselves whether we shall be servants "of sin unto death, or of obedience unto righteousness." Happy indeed are they who yield themselves servants to this righteous cause and are able to stand unflinchingly at the post of duty. What a recompense of reward it will be to hear the "Well done" of the Master, as understood in Christian Science, which must eventually rest with a halo of benediction upon all his faithful and profitable servants!

A CHILD'S LOVE FOR THE BIBLE.

NELLIE T. SHAW.

ONE day my little son, seven years old, climbed into my lap and asked me to read him a Bible story. I told him to bring me his book of Bible stories, but he said, "Please, mother, read me a real Bible story from your Bible."

I at once saw that he was longing for a good story from its original source, and I gladly and gratefully complied with his request. He chose the account of the raising of Lazarus, that being one of his favorites, and I read the beautiful story as related in the eleventh chapter of St. John. When I had finished he sat lost in thought for a moment, then said, "Mother, it seems to me that Jesus knew the truth about Lazarus better than you and my Bible stories do." This awakened me to the fact that children love the truth in its purest and most spiritual setting, free from the coloring of mere human opinion. The Bible language is simple and beautiful, and the stories are so interesting that children love them and are often able to grasp their spiritual import more readily than do older people. As they get the message directly from God's Word, it makes a lasting impression of Truth's power, which they get only in part when the story is reconstructed.

This little experience brought home to me this lesson, that we all need to become more childlike. Children love spiritual facts, and accept them without doubt as the truth and endeavor to make them part of their lives. Those same Scriptural statements should be as plain to us, for they are no less true and beneficial to the adult than to the child. As we make them a part of ourselves, so shall we turn more readily to the divine source for guidance, realizing that "no wisdom is wise but His wisdom; no truth is true, no love is lovely, no life is Life but the divine" (Science and Health, p. 275).

LIFE ETERNAL.

RUTH INGRAHAM.

THE sun had sunk behind a heavy bank of fog which covered the hills and extended along the entire horizon, shutting away the last bright rays. Bits of cloud were continually breaking away from this dark mass, and as they rose they came into the sunlight, which but for their reflection would not have been perceptible to the observer. Here they were, illumined into indescribable beauty and brightness, and still ascending, they became rarefied, transparent, until they finally vanished from human sight, leaving the pure sky unclouded.

To the writer this scene was beautifully symbolic of "a far more exceeding and eternal weight of glory," to quote St. Paul. The sullen fog-bank typified mortal mind in the aggregate; the detached and floating clouds were the individual thoughts ascending through the degrees indicated by Mrs. Eddy on pages 115 and 116 of Science and Health. It was clearly seen that there must first be the aspiration to go higher, to leave the dark mists of error for the light which it seems so effectually to obscure. Then, as thought rises to the perception of spiritual realities, it becomes glorified, and reflects this glory upon its former surroundings, thereby inspiring others to a like attempt. The human consciousness is ultimately so purified that all materiality disappears, no longer obtruding itself upon one's sense of the spiritual universe.

The Bible record of those who have passed into the perfected state of consciousness numbers Enoch, who "walked with God: and he was not; for God took him;" Melchisedec, "having neither beginning of days, nor end of life;" Moses, of whom it is written that "no man knoweth of his sepulcher unto this day;" Elijah, who to the sense of his disciple "went up by a whirlwind into heaven;" and finally Christ Jesus, our Wayshower, who, in the years preceding "his mighty, crowning, unparalleled, and triumphant exit from the flesh" (Science and Health, p. 117), made known the Principle of this demonstration.

To Christian Scientists it cannot seem improbable that there have been others who have understood their way into eternal life, though it has gone unrecorded because of the ignorance or unbelief of their contemporaries. The day is approaching when their experiences will be more generally recognized as scientific and divinely natural, and be as confidently expected as the least manifestation of the one Truth. The fog-bank of error must finally vanish into nothingness, that the spiritual creation may appear in all its perfection; but whether that time be near or far depends for each upon his individual effort to apprehend perfect Principle and perfect idea.

Slowly have I learned
Not to hurry,
Not to worry.
Also slowly learned
While I'm here,
Not to fear.
All is in God's hands.

ANON.

SELECTED ARTICLES.

[Editorial in *Portland* (Ore.) *Oregonian.*]

The confirmation of Mrs. Eddy's will by the New Hampshire supreme court places the sum of two million dollars at the disposal of the Christian Science Church in Boston. The court bases its decree on the distinction between a gift to a church and a charitable trust. It appears that, if the bequest had been a gift to a church, it would have been void. As a charitable trust it stands good in law. The distinction is a fine one, but in this instance it happens to work for good. The Christian Scientists know how to make excellent use of the funds which are at their disposal and of any others which they may happen to receive. Their work is, broadly speaking, for the general welfare of the world. It does not agree precisely with the plans and notions of some others, but that is of small consequence. Happily, doing good is capable of many variations. It is an employment sufficiently flexible to suit all sorts of tastes. The taste of the Christian Scientists is one of the most useful and fertile there is.

[Alfred Farlow in *Montgomery* (Ala.) *Times.*]

In the *Times* appeared a report of a discourse by a clergyman which contains the following statement: "Today, with a truer knowledge of law, order, unity, miracles are regarded neither as a violation nor suspension of law, but as a manifestation of a higher law." The gentleman further declares, "At no time have men ceased entirely to believe in miracles, not only as a past historical fact, but as a present reality." Thus far, he agrees with the teaching of Christian Science, that healing the sick and overcoming the discords of human life by spiritual as distinctive from material means, is not supernatural, but, as Mrs. Eddy puts it, "divinely natural" (Science and Health, Pref., p. xi).

In spite of the foregoing admission, the gentleman criticizes the proposition that the overcoming of sin and disease is considered of "evidential value to attest the truth" of the teachings given forth by those through whom such healings are effected. We think we are justified here in asking the question, Does the gentleman consider it important to seek the manifestation of the "higher law"? If so, by what evidence, then, would he hope to realize that he is acting in accordance with the "higher law," and how would he dispose of the saying, "By their fruits ye shall know them;" and what explanation would he give of the Master's conduct when asked by the disciples of John the Baptist whether he was the Messiah, in bidding them to tell John what they had seen? He did not answer the question by yes or no, but told them to mention to John what they had observed,—that "the blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised." Our Saviour confidently believed that the most convincing evidence of his Messiahship was the overcoming of sin and disease.

We agree with the gentleman's sentiment that mere physical demonstrations do not always evidence the correctness and worthiness of the means employed. Jeremiah once said: "They have healed the hurt of the daughter of my people slightly, saying, Peace, peace; when there is no peace." Since all disorders are at bottom mental, there may be an apparent healing result which consists merely of exchanging one belief for another, and in consequence of which the second condition may be no better, but, on the contrary, may even be worse than the first condition; but the fact still remains that there is a genuine method of overcoming discord, a method which consists of destroying error with truth, in keeping with the Master's injunction, "Ye shall know the truth, and the truth shall make you free."

Every pupil of mathematics is aware that it is possible by a peculiar accidental or unscientific manipulation of figures to obtain the right answer to an arithmetical problem, but our critic would not admit that on this account there is not a genuine method of demonstrating the scientific rule of obtaining the right answer. In the ancient days, the Egyptian magicians followed Moses to a certain extent, aping the wonders which he performed, but the time came when the power which he employed consumed the supposed power of the magicians, and the latter were unable to produce further results. The exercise of the "carnal mind" presents results which to a certain extent appear to compare favorably with those results which are effected by the power of God, and thus they deceive not only those who witness them, but those who perform them. Some are unable as yet to distinguish the difference between the delusive results of belief and the genuine results which are effected through the purely spiritual method of Christian Science. Hence the necessity of patient waiting that experience may work out correct conclusions.

Our critic calls attention to the fact that unusual results, such as healing the sick by divine power, enhance the influence of this teaching tremendously. This is as it should be, for it is quite as true in this age as it was nineteen centuries ago, that a "tree is known by his fruit," and no religious belief or theory is of value to us except in the ratio of its results. The question in these latter days is not what you believe, but what results you get from your faith.

It is quite true that Christian Science calls attention to the "force" or power of God, but at the same time it maintains the understanding that God is our infinite, eternal, heavenly Father. It teaches that the personality of God is infinite, that God is infinite Spirit, Love, good, as the Scriptures teach. If our critic believes the Scriptural definition of God as infinite Spirit, he thereby accepts the major premise of the Christian Science syllogism; and if he accepts the minor premise that infinite Spirit is the only cause, he will find the entire teaching of the Christian Science text-book consistent with the fundamental lessons of Christianity laid down by Christ Jesus.

The gentleman declares that "the element necessary to all healing, New Testament and otherwise, is faith—faith on the part of the individual." In keeping with this logic it may be said that any scarcity of divine healing is attributable to a want of faith. The next question is this, What is essential to increase the waning faith of the age? Our critic will agree that one's faith in God is dependent upon his understanding of God, his comprehension of the infinitude, the omnipotence, the goodness of God, his understanding of the divine characteristics and attributes. Here Christian Science comes to the rescue and supplies the needed understanding.

Far from being "avowedly anti-Christian," Christian Science stands unreservedly upon the Christ-teaching. Its mission is not to supplant primitive Christianity, but to render it more practical. The mission of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker Eddy, is not to supplant or add to the Scriptures, but to reveal the science and demonstrability of Scriptural teaching.

Christian Science is in strict accord with the following text of St. John, quoted by our critic: "Every spirit that confesseth that Jesus Christ is come in the flesh is of God." Jesus was indeed the Wayshower. He destroyed sin and sickness by an unreserved reliance upon God. He said: "The words that I speak unto you I speak not of myself: but the Father that dwelleth in me, he doeth the works." He did not produce these results by the exercise of human will. He said, "Not my will, but thine be done."

While Christian Science recognizes that sin and disease exist in erring human experience, it maintains that these evils are no part of the "very good" things which God created, that the real man is the image and likeness of God and is incapable of sin. Hence it insists that each indi-

Digitized by Google

vidual shall be his true self, that he shall be a man, and cease to be less than a man, in order that he may be free from sin and disease. Christian Science teaches that "the judgment-day of wisdom comes hourly and continually" (Science and Health, p. 291); that as the individual advances spiritually, he is judged fit to rise higher in the scale of manhood, and thus he continues in his onward course until he finally overcomes all things and rises to the full stature of manhood in Christ Jesus.

I desire to state in unmistakable terms that Christian Science does not advocate that "marriage may be dissolved by mutual consent," but is in strict accord with the Scriptural teaching on this subject. Mrs. Eddy declares that "separation never should take place, and it never would, if both husband and wife were genuine Christian Scientists" (Science and Health, p. 59).

The gentleman criticizes the teaching that there is no death. May we call his attention to the fact that the Master made as strong a declaration concerning the unreality of death as occurs anywhere in the teaching of Christian Science when he declared, "The damsel is not dead, but sleepeth." He proved the truthfulness of his declaration by awakening the damsel out of that peculiar condition. Death is referred to in the Scriptures as an enemy, as a condition which is opposed to life. In Christian Science the term reality is applied only to that which is of God and which is eternal. Solomon referred to death as belonging to the "error of life." Error as distinctive from Truth is properly named falsity, and belongs to that sense of existence which will disappear as mortals waken up to the spiritual facts of being. David said, "I shall be satisfied, when I awake, with thy likeness," thus indicating that he had a glimpse of the fact that man is already God's "likeness," but needs to waken up to a consciousness of that fact and cease to think and act according to a belief that he is something less than God's likeness. The sinner does not do wrong because he believes there is nothing in evil, but because he has a false belief that there is something in it. Destroy this false belief, and the incentive to sin will be destroyed and the sinner will naturally reform.

"Blasted hopes, unnecessary suffering, family discord, disrupted homes" could never result from the unadulterated teaching of Christian Science, which demands unbounded faith in God and an absolute abandonment of all that occasions suffering and discord.

[Frederick Dixon in *Chelsea Mail*, London, England.]

I sometimes wonder if all anonymous correspondents are merely one chameleon. They seem to be all instinct with the same instinctive incivility, the same inability to argue, and the same tendency to fiction. Again, the chameleon lives long on nothing, and the anonymous letter writer carries on a voluminous correspondence with an unblushing paucity of ideas; as a rule, indeed, he is engaged in showing that his opponent has no right to think either. "Theosophism," for instance, begins with a few choice flowers of speech from certain self-constituted biographers of Mrs. Eddy. He takes two American ones, and ignores the whole torrent of appreciation which rolled across the entire breadth of that continent when Mrs. Eddy passed away, and to these he adds one English one, who has simply picked up the grains of sectarian bitterness which have fallen from the American table. As a matter of fact, any one who wants to read a biography of Mrs. Eddy by some one who knew Mrs. Eddy and knew also what she was writing about, can get Sibyl Wilbur's book. Miss Wilbur was one of the journalists sent to interview Mrs. Eddy on a famous occasion, and was so disgusted at the treatment at that time shown to Mrs. Eddy by the press, that she sought from Mrs. Eddy and obtained the information to assist her in her undertaking.

Finally "Theosophism" winds up with the usual statement that everybody understands Christian Science better than Christian Scientists who have been studying it carefully and patiently for years but who are absolutely mistaken in it and are being deceived; while "Theosophism," who has not devoted a tithe of the attention to it which they have, can explain it to them. And so he ends with the usual bag of texts torn out of their contexts, and, in the way he uses them, devoid of any meaning at all. Any one of these taken at random will prove this. "Take heed," he quotes from Matthew, "that no man deceive you," as if this had not been used by every sect in the past and would not be used by every sect in the future. That is exactly why Christian Science insists that the people who quote texts should go a little farther and obey the command of Jesus to demonstrate their knowledge of them. "He that believeth on me, the works that I do shall he do also." The critic will impress people a great deal more when, instead of writing to the papers to attack his neighbor's religion, he devotes himself to showing that he can heal the sick, and so obey the command of the Founder of the Christian religion more successfully than Christian Scientists. A negative criticism which attacks other people for doing what you are not attempting yourself is neither particularly intelligent nor particularly convincing.

Joined with "Theosophism" is "Ecclesia." His attempt to dispose of my answers consists of about equal proportions of lack of courtesy, reasoning power, and humor. He begins by attempting to get rid of my arguments by the device of presuming that I am one of the paid officials of the movement. Of course he knows nothing at all about it, but he does, in this very first sentence, succeed in getting himself into very deep water indeed. Are the archbishops, the bishops, and the clergy of the Church of England debarred from defending the teaching of the Church of England on the ground that they are paid officials? A writer signing himself "Ecclesia" should really not talk quite such nonsense as that. One begins to have a shrewd suspicion that there may be more wisdom in "Ecclesia's" insistence on anonymity than was at first apparent. In his present letter he has strayed from his usual reticence, with the result that not only in the first sentence but in very many others he has got himself into a hopeless position. He says, for instance, "From the earlier editions of Christian Science and Mrs. Eddy's miscellaneous writings, which can be seen in the British Museum Library, and not at their reading-rooms, it would appear that there is a difference with the work of the present cult of Scientists." Now exactly what that sentence means it might puzzle many people to know. Christian Science for one thing is not a book, and therefore what the earlier edition of it in the British Museum may be it would puzzle most people to say. If by Christian Science he means Science and Health, the simple reason why the earlier editions of Science and Health are not in the reading-rooms is that they are immensely valuable, and quite unattainable for such a purpose. "Science and Health with Key to the Scriptures" is the Christian Science commentary on the Bible, and there is no difference at all between the teaching in the last edition and the first edition of it.

The idea based on this, that what is known as absent treatment was developed out of Mrs. Eddy's teaching by Christian Scientists, and was not part of her teaching, is of course ludicrous. It was absolutely and entirely her teaching, and it had a natural place in Science and Health, seeing that this book is a commentary on the Bible. The healing effect of Christian Science is, as I have shown, absolutely unconnected with mental suggestion, and the fact that absent treatment is employed in it is a very strong proof of this. Mrs. Eddy took the practice of absent treatment, as she took everything else in Science and Health, from the Bible. It may surprise "Ecclesia" to learn this, but perhaps he may be able to call to mind the case of the centurion's servant or the son of the nobleman at Capernaum, and this will convince him that absent treatment is simply a part of the

Digitized by Google

attempt to carry out the declaration, "He that believeth on me, the works that I do shall he do also." This is why Christian Science insists on the famous saying of James, that faith without works, theory without demonstration, is dead.

"Ecclesia" now explains that a Christian is, generally speaking, a person who has been baptized, and specifically, a person who accepts the prayer-book of the English, Romish, or Greek churches. Now anything more absolutely chaotic or absurd than such a definition it would be impossible to conceive. A Christian, in the words of the greatest English dictionary in the world, the Oxford dictionary, is one "believing in, professing, or belonging to, the religion of Christ." If people think that all that is necessary to make a person a Christian is being baptized when an infant, it is little to be wondered at that the sect of the Baptists arose. The world indeed must be full of a great many very peculiar Christians, no matter how orthodox they may be. Then the declaration that specifically a Christian is one who accepts the prayer-book of some church, cuts out the whole of the non-conformist churches of the world, and it is to be suspected that "Ecclesia's" personal definition of a Christian would be far nearer than his more general definition. Furthermore the Greek church is in every bit as strong opposition to the church of Rome and to the Anglican church as the Anglican church and the Roman church are to one another and to the Greek church. Nor is this the end of the perplexities; the acceptors of the teaching of Jesus of Nazareth were first called Christians at Antioch. At that period the books of common prayer of neither the English church, the Roman church, nor the Greek church were in existence, nor, I imagine, had infant baptism been heard of. What had been heard of was healing the sick, and what Jesus had described as a Christian was a believer who could do his works. This is why Christian Science insists on a definition of a Christian which, if I may borrow the term of "Ecclesia," is a little less verbose and a little more practical.

Then says triumphantly this critic, Jesus, as well as healing the sick, raised the dead, quieted storms, and so forth. Of course he did, but when the critic goes on to say that Christian Scientists do not say much about these things, he forgets that he will find them alluded to again and again and again in Science and Health or any of Mrs. Eddy's other works, whether the editions are those in the British Museum or out of the British Museum. A Christian Scientist is a person who has accepted the definition of Christian in Jesus' terms, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." The Christian Scientist does not pretend that he can walk upon the water. He does not know enough of the truth that is to make the world free to do that, but he does maintain that he can know enough of the truth to heal the sick now, and that as sin is overcome it will be possible to know enough of truth to walk upon the water. The argument of the critic is just about as sensible as it would be to maintain that nobody was a mathematician except a senior wrangler. Acceptance, however, of the various theories contained in all the text-books on mathematics does not, without any knowledge of how to demonstrate the problems contained in them, make a mathematician, any more than the acceptance of the prayer-book of the English, Romish, or Greek churches constitutes a Christian. You might accept everything that Todhunter ever said, and yet not know your multiplication table, and you would not be a mathematician: you may accept anything the books of Common Prayer contain and yet not be a Christian in the definition of a Christian as a believer who is able to do in some measure the works of Jesus the Christ.

Finally, "Ecclesia" arrives at the statement of all these critics that the Christian Science movement is composed of people who do not think for themselves. The audacity of such a statement from an anonymous writer to the press is self-condemned. Here is a person who declines to disclose his own identity but asks his readers to believe that he knows all about Christian Science, while the hundreds and thousands of Christian Scientists who make no attempt to conceal their names are people "who will not think for themselves." They certainly will not think along the lines of this critic, and that is why he is so dissatisfied with them. It is abominable that they should differ from him. It is abominable that, instead of being satisfied with the Christianity which comes from infant baptism, you should demand the proof of the Bible, "He that believeth on me, the works that I do shall he do also."

["Wise Guy" in *Waterbury* (Conn.) *American*.]

A school principal from one of the up-valley towns was discussing the question of newspapers as he journeyed up on the train the other day, and rather astonished his overhearer by saying that the nicest, cleanest paper he was in the habit of seeing was *The Christian Science Monitor*. He went on to explain that he was not in sympathy with Christian Science as a religion, and he did not subscribe to the paper, but received it from an unknown source. His reasons for liking it above other sheets were that the dirtier side of life was not constantly thrust before the eye in large head-lines. In this paper murder, divorce, and other forms of crime are not mentioned except they contain some special significance. He said that he supposed sewers were needed, but that usually they were well underground, hence he was distressed to see the dregs of humanity constantly paraded in the prints. "Who wants to read about such things?" he asked. There is much truth in the implied answer, "Nobody."

The metropolitan papers have well-deserved reputations for brilliance and even charm, because they are prepared by the highest paid men in the service, of whom a correspondingly high average of efficiency is required. Hence the smaller town dailies, getting much of their general news from these sources as they must, are influenced by them, unconsciously without doubt, and form their judgment of what constitutes news by the standards there set up. There is no need of this. Hartford or New Haven or Waterbury are not like New York. Specialists of brilliance and unrest do not predominate in the population, and the appetites of all the people are more restrained and broadly human. Murders and divorces appeal to the man on the corner, but they do not appeal to the man in the street and the housewife in the home, and it is a mistaken idea to think that the paper sells better for giving such things prominence.

[Willis D. McKinstry in *Ottawa* (Kan.) *Republic*.]

Christian Science healing differs fundamentally from all other methods of practice; its activities are mental, it deals wholly with spiritual cause and effect, therefore its basis is divine, not material. All Christendom accepts Christ Jesus as the master physician; his treatment of disease was metaphysical; his knowledge of existence was divine, his anatomy and physiology were spiritual; thus he said: "Therefore I say unto you, Take no thought for your life, what ye shall eat, or what ye shall drink; nor yet for your body, what ye shall put on. Is not the life more than meat, and the body than raiment?" And again he said, "It is the spirit that quickeneth; the flesh profiteth nothing."

The ministry of the Master was one of healing. The gospels record many instances of his healing the sick, the dumb, the blind, the lame; of casting out devils and raising the dead. Then he said: "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." Christian Science is the Word of God spiritually understood and demonstrated; it is an exact science because it has a Principle and a rule for its demonstration.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

STEPHEN A. CHASE, C.S.D.

THERE is no more ringing call to the Christian warfare than that voiced by the apostle Paul, who knew whereof he spake when he exhorted: "Fight the good fight of faith, lay hold on eternal life, whereunto thou art also called, and hast professed a good profession before many witnesses." Few indeed have heeded this call more loyally than our brother, Stephen A. Chase, C.S.D., whose twenty years' service as a member of the Board of Directors of The First Church of Christ, Scientist, has been one of unswerving devotion and fidelity to the cause in which every loyal Christian Scientist enlists, "to lessen evil, disease, and death" (Science and Health, p. 450).

Our brother has not laid down his arms defeated; he is continuing in that grander warfare at whose close the "crown of righteousness" awaits the victor, since "rising above the false, to the true evidence of Life, is the resurrection that takes hold of eternal Truth;" it is the knowledge that "coming and going belong to mortal consciousness. God is 'the same yesterday, and today, and forever'" (Unity of Good, p. 61).

It was during the early years of Mrs. Eddy's residence in Boston that Mr. Chase, though his home was always in Fall River, became interested in Christian Science, and in 1885 he took a course of instruction with its Discoverer and Founder. Born and reared in the faith of the Society of Friends, his quiet, unassuming demeanor gave but little hint of the sturdy determination and fixed purpose which made him a bulwark of strength in the years when the followers of a dauntless Leader were truly "defenders of the faith."

In his capacity of treasurer of The Mother Church, together with the various funds entrusted to his care, Mr. Chase became widely known throughout the field, and to those who were privileged by a more intimate acquaintance the passing years but strengthened the appreciation of his sterling character and knit more closely the bonds of friendship. Ever "fervent in spirit; serving the Lord," there are few whose life-career can be so truly summed up in the one word "trustworthy."

ARCHIBALD MCLELLAN.

CHICAGO CONVENTION EDITION OF THE CHRISTIAN SCIENCE MONITOR.

IT is characteristic of Christian Scientists to be alert to an opportunity to serve the cause, and to lose no time in grasping it and turning it to account. It has remained, however, for the splendidly organized forces of the Christian Science churches in the great metropolis of the middle West and its enterprising suburbs to set a new mark even for that progressive city.

When Mrs. Eddy inaugurated an era in the newspaper world by founding an international daily whose fixed policy is "to injure no man, but to bless all mankind" (*The Christian Science Monitor*, Nov. 25, 1908), and requested Christian Scientists everywhere to support it, nowhere was the work of extending the paper's field of usefulness entered upon with more loyalty and enthusiasm than in the city of Chicago, and there has ever been a ready response to any call from headquarters for cooperation in the work of introducing the *Monitor* to new readers. Consequently, when it occurred to a group of workers in that city that the national Republican convention, which opens in Chicago June 18, would afford an unusually cosmopolitan constituency of readers, and the Publishing Society was asked if it would issue a Chicago edition of the *Monitor* during the convention, provided a suitable plant could be installed and the expense therefor guaranteed, the Society could but do its part toward putting the plan into effect.

On the face it was a stupendous proposition to fit up within two weeks a complete printing plant, even to the gold-lettered sign which marks the temporary quarters of the *Monitor*, simply to publish a paper for the few days of the convention; but prompt action on the part of the churches secured the necessary funds, a large store on Michigan avenue just back of the Coliseum was rented, a fully equipped printing plant installed, and everything is in readiness, beginning with next Monday afternoon, to give Chicagoans and their guests an opportunity to see how a modern up-to-date newspaper is made. It is safe to say that many thousands of people will stop to watch the huge press which occupies the show window, as its wonderful mechanism with almost incredible rapidity transforms the roll of paper at one end into piles of printed and folded *Monitors* at the other.

It will be a busy week, but the happy workers are eager to sow the seed, to put into the hands of thousands of new readers the paper which stands as the pioneer exponent of clean journalism among the English-reading public, and they count this privilege as one of the things that is well worth while.

For the benefit of our readers who might unthinkingly suppose otherwise, it is proper to say that the fact that a convention edition is to be published in Chicago and not in the cities where the conventions of the other parties are to be held, has not the slightest political significance. *The Christian Science Monitor* is and always has been strictly non-partisan, and this attitude will be maintained, not only as to parties, but also as to those seeking a nomination at these conventions.

ARCHIBALD MCLELLAN.

PROGRESSIVENESS.

THE law of eternal progression was stated by Christ Jesus when he said, "Be ye therefore perfect, even as your Father which is in heaven is perfect." The spiritual man by his very nature is conscious of the ceaseless operation of this law, and, as the psalmist tells us, he delights in it, as well he may. To feel in one's self the perpetual stirrings of that which makes for greater and greater good, and to be ever conscious of a glad response to its high demand, is to live in the truest sense. Even a sense of unrest and dissatisfaction is far better than content with wrong conditions, and yet, when spiritual sense prevails over the material the disturbed condition ceases, for the real and true is given its rightful sway, which leads to health, happiness, and prosperity. On the other hand, we are wise to remember that humanly speaking we have much to overcome before we can justly claim to be fully responsive to the divine law which demands perfection. Our beloved Leader tells us that "mortal man is the antipode of immortal man in origin, in existence, and in his relation to God" (Science and Health, p. 215).

Why, it may be asked, should any one cease to respond to the law of growth, which is surely operative at one time as much as another? Is it not because of an entirely false sense of man's origin and nature which has come to pervade all of the thinking and doing of mortals? It is true that some strive after high ideals in art, and others who make great efforts realize marvelous results in the world of business; but all this is mainly external to the individual and does not extend to his real selfhood. To be truly progressive, which means advance in all things and all the time, we must recognize clearly and constantly man's relation to Him of whom it is written, "Thou art the same, and thy years shall not fail."

Digitized by Google

The healing which comes to most Christian Scientists with their introduction to Christian Science awakens in them at once a new sense of progressiveness, and this is well; but they need to guard their spiritual treasure from contamination through the prevailing mortal belief. The Christ promises are all "to him that overcometh," and this overcoming must be wrought out at every point. All our work must be better done than it was a year ago; better than it was a month ago, or even yesterday, and this because we are exercising man's spiritual faculties and infinite capabilities. However humble the task, it should be done from the standpoint of true progress. If our work is the all-important task for which Christ Jesus commissioned twelve men, and later seventy, and still later the whole world in his promise to "them that believe,"—the work of healing and saving mankind,—each day should bring us clearer views of Truth, greater skill in dealing with self-deceived and suffering mortal mind, and greater power in breaking all the chains of sense that the captive may go free.

Paul's counsel was, "Study to show thyself approved unto God, a workman that needeth not to be ashamed." This calls for progress of the highest type, which unfolds both character and activity until the blessedness of doing God's will in God's way is known as the richest reward.

ANNIE M. KNOTT.

HIS PLACE, THE FIRING LINE.

EVERY type of human nature is sure to be subject to tests which will disclose its weakest point, and in the instance of those who have splendid capabilities—good judgment, good sense, fine ideals, and forcefulness, this weak point is not infrequently found to be a willingness to turn away in silent weariness, if not disgust, from a church or social problem, instead of standing by and courageously working it out. Their fault often discloses their peculiarly valuable equipment in other respects to serve precisely where they are. They may have the discernment, the breadth of view, the analytical sense, and the convincing address which are requisite to the illumination of the innocence or obtuseness that is being preyed upon and led about by some self-assured, dominating mortal thought, and yet their modesty, their perception of the inherent antagonism between the way things are being done and the way they would do them, or their averseness to the parliamentary quibbling, the finicky superstition, and the fussy narrowness which sometimes seem to characterize and constitute the ruling factors in a given situation, lead the big busy man or woman to say, "I can't follow their lead, and for the sake of peace I guess I'd better stay away." And so, while paying their dues, they keep out of it and do not attend the business meetings. They may even congratulate themselves over their self-command and their consideration for the peace of all concerned, while in fact they are robbing the cause with which they are known to be identified of that which it greatly needs, viz., those who, knowing the right, are willing patiently to work and wait for the right.

These good people need to be reminded that humanity's every prized privilege and possession has been the direct fruitage of resistance to this temptation. The men of vision and of parts who have been wise enough, unselfish enough, and strong enough to stick to the problem in hand, and patiently endure a lot of things, have been the channels through which our best blessings have come. Every hero of history, Washington, Mazzini, Lincoln, and all the rest of them,—especially Mrs. Eddy,—has steadily refused to exercise the privilege of letting things alone. All have had to refuse to play into the hands of an established order and have become non-conformists, and this is the supreme call of Christian Science today, that we "be not conformed" to the reign of unideal mortal thought, but be "transformed by the renewing" of the mind, which certainly means not the shirking of duty, but wakefulness to and readiness for its every demand. "Never absent from your post, never off guard, never ill-humored, never unready to work for God," —thus in her "Miscellaneous Writings" (p. 116) has Mrs. Eddy defined the worthy attitude of the men and women, whatever their caliber, who are sincerely interested in the success of the cause to which she consecrated herself in such a splendidly unreserved way.

It is trying, exceedingly so, sometimes, to get on with the pettiness, bickering, and false zeal of some mortals, but to steal away or stay at home to avoid the trial is often to play directly into the hands of the self-seeking and the reactionary, and there is absolutely no worthy course to take save that of the man who holds on to his ideal and knows mightily that "one on God's side is a majority" and will win, not today perhaps—and that's where the patience of the saints comes in—but it will win.

Another thing men of breadth and capacity do well to remember, viz., that Christ Jesus was able to relate his largeness to the commonest thought and condition. He was a good deal of an opportunist, in the best sense. He could "wait on God," on the working out of divine law in human affairs. He was an exponent of peace, but error never succeeded in inducing him to choose an easy, undutiful path, in order to escape a disagreeable experience. And in this he, and all who have been truly great in his strength, have become our "ensamples." The twelfth chapter of Paul's first letter to the Corinthians provides no place in "the body of Christ" for the men of ability who are willing to evade responsibility in order to escape discomfort.

JOHN B. WILLIS.

AMONG THE CHURCHES.

BRADFORD, YORKSHIRE, ENGLAND.

In October, 1902, five friends met for the purpose of hearing something about Christian Science. In 1903, earnest seekers of Truth joined them, holding services every Sunday evening, and one of the friends opened her home for a monthly testimony meeting. Two years later the services were transferred to Belle Vue schools, and on April 16, 1907, First Church of Christ, Scientist, was organized with a membership of twenty-seven. In July of that year the church rented Cunliffe villa on a two-years lease; at the expiration of this (in 1909) Unity hall, Rawson square, was taken for a church and reading-room. In March of the present year, owing to increased interest in Christian Science and consequent growth of congregation, the church purchased Eldon house in Eldon place. The house stands detached on a piece of ground consisting of about twelve hundred and fifty-four square yards, and the intention is to use it at present for reading-room, Sunday school, and other offices necessary to a church. On the ground at the back a church to accommodate about four hundred people will be built. In time this building will be devoted to the Sunday school, and the church proper will be built upon the site of the present structure.

Correspondence.

CHICAGO, ILL.

The free public reading-rooms which have been maintained for ten or more years by the Christian Science churches in Chicago in the Willoughby building, 81 East Madison street, have been moved to the new Monroe building, 104 Michigan avenue. The new rooms occupy thirty-five hundred square feet of floor space on the Michigan avenue front on the seventh floor. The rooms are supplied with eight large library tables, upon which are found Bibles and the works of Mary Baker Eddy and the other Christian Science publications. Visitors will be received daily between the hours of nine a.m. and nine p.m.—*Chicago Tribune.*

THE LECTURES.

LANSING, MICH.

Virgil O. Strickler delivered a lecture on Christian Science before a large audience in the church edifice March 12. He was introduced by Prof. Victor T. Wilson, who said:—

Christian Science has brought peace, happiness, and health to many thousands of people throughout the civilized world; yea, to many thousands in our country alone, and in many instances it has brought these blessings when all other means that were tried had failed. There are many other thousands who are deeply interested, but are not enrolled church-members, who are in sympathy with the cause and receiving benefit from it spiritually and physically, and there is a constant and substantial growth in numbers everywhere. As a consequence, Christian Science is a potent factor in the religious world today, and there is promise that in the future it will exert an untold influence for good upon all religious orders as well as upon the civic life of the people. It stands as an exponent of the revival of spiritual life.

Yet, notwithstanding all that Christian Science is today and promises to be to those who will but look, it is not appreciated or understood by the world at large. Very few, indeed, aside from those who have accepted it in whole or in part, know for what this comparatively new faith stands. Sometimes those who have understood it least are those who have openly attacked the cause and misconstrued the motives of its adherents; those who would go even so far as to deny its adherents, if possible, the liberty of religious worship and practice which is the inalienable right of every citizen under our constitution. Such as these have failed to understand not only the faith, but the handwriting on the wall. The truth cannot be crushed. Such as these make charges in their antagonism that are completely unsupported by the facts. No sect, founded upon the teachings of Jesus Christ, has been represented by a more peaceful, loving, religiously uplifting and law-abiding people.—*Correspondence.*

KANKAKEE, ILL.

Last evening [April 19] at Huling Hall William R. Rathvon delivered an address on "Christian Science: The New Light upon Old Truths." The speaker was introduced by the Rev. Ira O. McCullough, who said:—

As a minister of righteousness I am endeavoring to be ethical in character, practical in presenting the gospel of Jesus Christ, and I trust broad and honest enough to be a progressive thinker. From the day when the great omnipotent God looked out upon a mass of chaos and spoke the world into existence, light, life, truth, and love have been in evidence. "And God saw every thing that he had made, and, behold, it was very good." From the dawn of consciousness all thinking individuals have been longing to know who, what, where is God.

Philosophers, in search after God, have proved the human reason, unraveled the intricacies of thought, guessed at the mysteries of mind, and have left us only a dim impression of His footsteps. Scientists have probed and analyzed and experimented with all things, and come with their messages from earth and sea and air to tell us that God is law; but this also is inadequate. The Hebrew prophets claim that they have found God and heard Him speak and also that they possess His oracles; but the voice comes through the flames of the belching volcano, it is heard in the earthquake, and in the rolling thunder, and this view causes our souls to cower in fear of a glimpse of His holiness. The Greek scholar, with youthful grace in his face and gifts of culture in his hands, stands before us, and we ask him what he knows about God. He answers, God is beauty. But loveless beauty can never cheer my heart or cure my sin or heal my body.

The Bible tells me that God is Spirit, God is Love, God is everywhere—"in him we live, and move, and have our being;" God is omnipotent, omnipresent, omniscient. Christian Science stands upon this premise: "God is incorporeal, divine, supreme, infinite Mind, Spirit, Soul, Principle, Life, Truth, Love" (Science and Health, p. 465). Personally my knowledge of Christian Science is very limited. My friends are among those representing nearly every sect of religious thought. I will say that among the Christian Scientists I have found some of the most intelligent, refined, cultured, unselfish, loving, healthy, sunny, optimistic, uncomplaining, consistent Christian men and women whom it has ever been my privilege to meet.—*Kankakee Republican.*

LOVELAND, COL.

A large audience gathered at the Majestic Theater Sunday afternoon [April 28] to listen to a lecture on Christian Science by Frank H. Leonard. He was introduced by Ezra W. Palmer, the Christian Science state committee on publication, who spoke as follows:—

I take great pleasure in welcoming you here this afternoon, because in so doing I feel sure that I am contributing somewhat to the sum total of the peace and happiness of humanity. We do not hesitate to share with our fellow men that which we have found to be a source of blessedness to ourselves, and Christian Science has been so helpful to mankind that I do not hesitate to commend it to you. Christian Science has met and destroyed many of the ills of mortal existence for a great multitude of people, and has in addition brought the affirmative blessings of health and peace, joy in knowing the love of God, and an abiding sense of fulfilment of the wonderful promises of the Bible. This great spiritual awakening was brought to the world through the selfless labors and prayers of a clear-minded, noble, and great woman, Mary Baker Eddy.

In the time of Jesus those who heard him were divided into two classes, those who heard him gladly and those who refused his message and scoffed at the healing power of God which Jesus so abundantly manifested. Human pride, human dogma, and human bigotry have ever darkened men's minds and arrayed them against the truth. On the other hand, meekness and a sincere yearning for the truth have been characteristic of those who have found favor with God and have demonstrated His power in healing and saving humanity. Therefore, I ask that you hear the message of the lecturer this afternoon with an open mind.

Loveland Herald.

FINDLAY, OHIO.

A lecture on Christian Science was delivered in the Majestic theater, May 5, for the Hon. Clarence A. Buskirk. He was introduced by J. Frank Axline, first reader, who said:—

Christian Scientists have been characterized by an outside observer as "that rapidly growing army of earnest men and women who by their daily demeanor appear to have made happiness a business and trouble a lost art." And why should they not be optimistic? Believing implicitly in one omnipresent, omniscient, and omnipotent God of infinite goodness, who made all that was made, and without whom was not anything made that was made, and who beheld all that He had made and saw that it was good, there remains to them no conceivable ground for pessimism, except it be in a misconception of this creation, or of its creator, whom to know aright is life eternal.

The first church ever built for Christian Science worship was erected a little over twenty-five years ago. Now, the denomination, if such it may be called, is a multitude of almost every kindred, tongue, and nation,—Jew and Gentile, rich and poor, high and low, learned and unlearned,—men and women of every profession, business, and vocation, all

Digitized by Google

coming together, in their respective places of worship, in one common brotherhood, to study and listen to the reading of the Bible and the Christian Scienec text-book, which since 1895 have been their only preachers. It has been our experience, after having tried both plans, that the reading of the Word of God and the exemplification of His commands, so far as we are able, in daily living, is a more efficient preaching and more conducive to permanent growth than much speaking. And so it is that the only authorized public speakers for Christian Science are the members of a board of lectureship, appointed by The Mother Church, who lecture from time to time, as they are invited, under the auspices of local churches and societies. It is not the purpose of these lectures, as I understand it, to take the place of preaching, to proselyte for members, or to criticize or find fault with other churches or denominations, but simply to explain our tenets, and so far as possible to correct and remove such misapprehensions as seem inevitably to arise concerning any new society.—*Correspondence.*

CLEVELAND, OHIO.

Under the auspices of First Church of Christ, Scientist, the Rev. William P. McKenzie lectured, May 2, in the Hippodrome, to an attentive audience of three thousand people. The speaker was introduced by Wayne C. Jones, first reader, who said:—

Ages ago, in the land of Judea, came one Jesus of Nazareth, proclaiming the kingdom of heaven on earth. He came in the quiet of meekness and humility, preaching a gospel of salvation that not only saved from sin but healed all manner of disease. He proved the omnipotence of God, and his healing work was the result of his perfect understanding of divine law.

Today, through the same understanding of God's law, the power of Truth is again being demonstrated in the healing of sickness and sin, through the teachings of Christian Science, and thousands all over the world lovingly bear witness to its healing efficacy. The mission of Christian Science is to give to the world a practical, scientific knowledge of God. It is the same truth that Jesus taught and demonstrated and commanded his followers to preach and practise, the truth that heals sickness and sin, the truth that leads us out of darkness into the light of the glorious liberty of the sons of God.—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice it is assumed that the lecture will be given in the evening.

Boulder, Col.—Virgil O. Strickler, Curran Opera House, June 25.

Brooklyn, N. Y. (Second Church).—Judge Clifford P. Smith, Prospect Hall, Prospect and Fifth avenues, 3:30 p.m., June 16.

Cripple Creek, Col.—Virgil O. Strickler, Lyric Theater, June 28.

Denver, Col. (Fourth Church).—Virgil O. Strickler, Woodman Hall, 3 p.m., June 23; First Church Edifice, 14th avenue and Logan street, 8 p.m., June 24.

East Aurora, N. Y.—Frank H. Leonard, Universalist Church, June 21.

Eaton, Ohio.—Frank H. Leonard, Opera House, 2:30 p.m., June 23.

Goldfield, Nev.—Francis J. Fluno, M.D., Ross Holly Hall, Main and Hall streets, June 17.

Kansas City, Mo. (First Church).—William R. Rathvon, Church Edifice, Ninth street and Forest avenue, June 24 and 25.

Puyallup, Wash.—Clarence C. Eaton, Palace Theater, June 25.

TESTIMONIES OF HEALING.

From my earliest recollection I was not considered strong or healthy; there seemed to be almost constantly something wrong. I was very susceptible to colds on the lungs, scarcely ever being free from them, and many times was not able to speak above a whisper. As time passed, my lungs developed decided weakness, and when I was about fifteen the lung trouble had developed to such an extent that I frequently overheard the remark that I would die from this disease. At the age of about eighteen years I began to do for myself in every way, and desiring so much to be well and believing that medicines would cure me, I was seldom without them; but instead of curing me as I had hoped, other diseased conditions arose. I had stomach and bowel trouble, also liver, kidney, and bladder difficulties, and the more I doctored the more diseases seemed to be my lot. At length when I had a bad case of piles, and then appendicitis, it appeared to me that I could not keep up such an unequal struggle much longer, so in September, 1903, I gave up, greatly discouraged. I sold out my business (that of saw-milling) with the thought that I would never again be able to engage in it, and started with a course of treatment from a specialist. I continued with this until the last day of December, 1903, on which date I took the last dose of medicine; and being then in much worse condition than when I commenced the course of treatment, I was utterly disheartened, in the belief that medicine could do me no good, and that there was nothing left for me but to drag out a miserable existence till death should end it all, which I hoped might come soon.

In February, 1904, while visiting a relative at Anderson, Ind., I was asked why I did not try Christian Science. I had never heard of it, and asked what it was and what it could do for me; but the one who mentioned it to me, not being a Scientist, could tell me nothing more than that people were being healed by it, and I was earnestly urged to try it. For several days I contended that I could have no faith in it, as I believed what was taught in the churches, that the day of miracles was past. I also felt my condition was too serious to be helped in any way or by anything.

As I was still urged, I went to have a talk with a practitioner, just to hear him tell what he would of Christian Science, but with no intention of having treatment, as I did not know what the treatment was and I reasoned that I had paid out so much money in doctoring that I did not care to throw away any more. The result of that talk with the practitioner was a treatment, and a wonderful change in my whole feeling. A pain in the head, the effect as the doctor claimed of heat stroke several years before, and which at times would, it seemed, drive me insane, left me and there has never been any return of it since. My thought became clearer, and as I was leaving the practitioner's house he said to me, "When you go home, sit down to your dinner and eat anything you care to eat; and it won't hurt you." I had not done such a thing for months, even years, as I was almost afraid to eat anything, but as I went from his house thinking that he did not know, I began to be hungry. The result was that I ate such a meal as I had not in years, and there was no fear with the eating. I ate very heartily, but no trouble followed, and I have had none in that way since.

In some respects my healing has been slow, but as I gain more of the understanding of the truth as given to us in "Science and Health with Key to the Scriptures" by Mrs. Eddy, I can see why it has seemed so. After the first treatment I bought a copy of Science and Health and began its study in earnest, and my problems, which were many, have all been solved by the rule of Truth as given therein. After having had the privilege of class instruction, and under conditions which in the old way of thinking I could not have undertaken for want of means, I again engaged in the saw-milling business. For nearly three years I con-

Digitized by Google

tinued in it, and though I had passed middle age I did more and harder work than ever at any time before, with more than double the amount of business and with much greater profit in proportion to the amount of work done. I owe all that I am today and all that I have to Christian Science. It has been proven to me that there is no problem in human experience too difficult to be solved by it. All that is needed is patience and a firm trust in Truth.

At the time I came to Christian Science I had been a member for a number of years of one of the older churches, and had tried to be consistent according to its teaching, but do what I would I was not satisfied; there seemed to be something lacking, for which there was a constant yearning. What it was I could not tell; still the desire for that something was not satisfied until after I had Christian Science treatment; then I was at rest. I am thankful indeed for what I have learned through the study of Science and Health and all the other writings of our revered Leader, Mrs. Eddy. I have learned that it is the spiritual uplift, the spiritualization of thought, which satisfies the longing for something that cannot be expressed in the old way. "The spiritual demand, quelling the material, supplies energy and endurance surpassing all other aids, and forestalls the penalty which our beliefs would attach to our best deeds" (Science and Health, p. 385). For the privilege of class instruction by a faithful and patient teacher, which has enabled me to see the way to devote my time to the work in Christian Science, for the *Sentinel*, *Journal*, and *Monitor*,—messengers that are carrying the healing truth to the whole world, the "leaven" that is leavening the whole lump, the light that shines in darkness,—I am more than thankful. I hope that my words will reach others who may be in such extreme need as I was and be the means of leading them to the light of Truth, —Christian Science.

CHARLES A. KINKEAD, Lancaster, Ohio.

Christian Science causes us to exclaim with the psalmist, "Bless the Lord, O my soul: and all that is within me, bless his holy name." In August, 1900, I took my first treatment in Christian Science. I had been a great sufferer all my life and had become a nervous wreck. I was praying that God would in His kindness let me die. At this time some dear friends presented Christian Science, and I felt it was indeed the power of God to heal. I listened to them while they told of so many clear cases of healing, and as I watched them I knew they enjoyed in religion something that I did not understand. In two weeks after my first treatment I was much better, and in a few weeks I was healed of many physical ailments, including organic heart trouble, lung and stomach disease, catarrh, and severe headaches. I had suffered intensely with my eyes and had worn glasses for six years, but after I had treatment in Christian Science for a few weeks I was enabled to leave off glasses, and have never needed them since. My eyes grow stronger every day.

My heart overflows for all this physical healing, and for the spiritual uplift I have not words to express my gratitude. As the stone was rolled away from the sepulcher of material sense, the beautiful sunlight of Christian Science shone in upon my darkened thought and revealed God as Love. Then I was like Saul of Tarsus,—for a short time I was confused; then like Jacob I wrestled until the break of day, until I received that "peace of God, which passeth all understanding." It is being proven to me every day that God directs our steps, and if we trust Him and obey Him our every need will be met. "Underneath are the everlasting arms." I thank God that I was ready and willing to accept this truth which brings us into health and harmony and teaches us how to live and love. Since then my greatest joy has been that through my understanding I have been able to help others to be healed and to live better lives.

MISS MARY APPLEBY, Eaton, Ohio.

Two years ago we were living in New York city, and my little son, ten years of age, was attending a public school. The discipline was very rigid, and the board of health had a physician and nurse examine every child once a week. One day my little son brought home a printed notice which read as follows: "The physical examination of Sidney S. Wheeler reveals the following defects: Defective vision. Defective teeth. It is recommended that he be taken to the family physician for treatment." My thought at once turned to the "great Physician," knowing that He would take care of the child. I made no reply to the notice, and in a few days I received another, requesting my presence at the school on the next day. I went there at the appointed hour "in fear and trembling." As we were entire strangers in that great city, I felt very timid and inwardly resolved not to say that I was a Christian Scientist unless it became necessary to give a reason for the hope within me.

The physician was not in the office, but the nurse who was in charge said, "Your child's eyes need treatment, and he must be fitted to glasses. What are you going to do about it?" I replied that if he needed glasses we would certainly provide them, but before doing so I would like to ask a favor, which was that we be granted one week first, in which to have his eyes treated. She then asked what sort of treatment would be given, and I answered that we were Christian Scientists and would like to have Christian Science treatment. She said, "Your child's eyes are in a very bad condition, and they need attention right away. It seems to me that you are only wasting time; but we will grant you this, and you must report here one week from today." I agreed to this, then went to see a Christian Science practitioner who was treating another member of our family, and in talking with her I mentioned this experience. She declared the truth, and I went home and commenced to treat my son, but said nothing to him about it. It was on the third day, I think, while I was getting him ready for school in the morning, that he looked up at me with a beautiful smile and said, "Mama, I won't need glasses. I can see the board all right now," and I noted that his eyes were round and bright as before. I kept on with the treatment, and the "still small voice" of Truth was with me, with such utterances as this from Science and Health, "Only through radical reliance on Truth can scientific healing power be realized" (p. 167), to encourage me and offset the arguments of error.

On the appointed day I made my appearance at the school, feeling confident that our Father was with me and that it was His "good pleasure" to give me the promised dominion. The physician was there, and the nurse introducing me said, "This is the lady who wanted to have Christian Science treatment for her son's eyes." The physician said, "Have you had this done?" To which I replied simply that I had. He then turned to the nurse and told her to send a messenger for the boy in order to examine him again, and soon the little lad appeared, smiling as is his wont. The physician gave him a thorough examination, and was forced to admit that his eyes were then in a perfectly normal condition and that he did not need glasses. It is needless to say that I went on my way rejoicing, giving God the glory and our beloved Leader my heartfelt gratitude, and I am trying to let my life attest my sincerity.

MRS. MARY COIT WHEELER, Chicago, Ill.

It is with great pleasure that I am able to give thanks for healing in Christian Science. In January, 1911, while hastening to catch a car, my foot caught in a frozen rut in a country road. Being in haste, for the car passed only once an hour, and not aware that my foot was caught, I must have given it a wrench, as I found difficulty in walking. It seemed imperative for me to reach the car in order to keep an appointment in town; therefore I declared the truth, and in spite of what had occurred, I was in time to take my place. The pain was distinct for a few minutes,

Digitized by Google

then it faded from consciousness. On reaching Fitchburg, I had to walk several blocks before arriving at home, and did so without much discomfort or limping. Presently, however, I found that I could not put my heel to the ground. I therefore telephoned to a practitioner in Boston, and in a very short period all pain left me. There was no swelling or inflammation and I slept well that night.

Next day, except that I could not put my heel to the ground, there was no trouble. It occurred to me that it might be a good case for medical corroboration. I asked a friendly physician to come and diagnose the case. She came, and said that a small but very important muscle had been torn away; that with most women she would prescribe a plaster cast, but that as I was a Scientist, she supposed I could keep still long enough for the healing to take place without it. She seemed surprised that there was no swelling, no inflammation, no blackness, saying that there would be a good deal later, "with most people." She was also surprised to see that I could walk about on my toe without trouble, and advised me not to do so. She was exceedingly kind, and much interested in the demonstration.

I never had any fever, swelling, or discoloration. I walked as much as was necessary on my toe all along. The accident had happened on Saturday. The following Thursday I could walk on my heel. A week from the next Sunday, I went down-stairs; in ten days I went out of doors and walked up hill. I took reasonable care, but all that was necessary to do I did without discomfort. There has been no relapse.

But the greatest part of the healing came with an increased sense of divine protection. I had been suffering from depression, a feeling of my own shortcomings amounting to grief; but that vanished, and I learned that there is nothing real apart from infinite Mind, in whose ideas there can be nothing amiss. Under the clear thought of the practitioner the days were full of progress; always the thought of infinite Mind and its ideas was present with me. The days of healing were those of pleasantness and peace. The fear of human imperfection that had troubled me faded away. I saw that there is nothing permanent but God's ideas and they are always good. The rest did not signify. And that is the reason why the good work of Truth healed the wound, leaving no scar, bruise, or sense of weakness or break.—SARAH J. E. SOLLEY, Fitchburg, Mass.

One Fourth of July, several years ago, I went with friends to spend the day at Terminal Island, and took along a *Sentinel* with my lunch. The morning was very warm and we were rejoicing in the prospect of the delightful sea breeze. The usual crowds filled the cars and we had a merry "run" to the beach, but our disappointment was great to find the expected wind missing, and by noon the air seemed intolerably warm. Several persons had fainted and many seemed almost overcome by the intense heat. At last, when I discovered myself to be in a fainting condition, I remembered my *Sentinel*, and getting it and settling myself against a tree, I was soon absorbed in its pages and utterly oblivious to my surroundings. When I looked up from its last page I heard a voice exclaim, "A breeze has sprung up," and I received its cool breath as a benediction. I had been reading about an hour, and while the others had passed through a most uncomfortable time, I, sitting near them, knew nothing of it. My thought had not been absorbed in materiality, but was in touch with the brave thinkers who live so near Truth that we may well heed their messages. The thought came to me of our beloved Leader, whose mental purity enabled her to discern the light of Truth and who with ceaseless vigilance, turning neither to right nor left, guided, warned, and protected us until we became spiritual enough to see it also.

When this light first reached my darkened consciousness I was a physical wreck. A dear Scientist, recognizing my need of help, urged me one day to go with her a few blocks from my house to see a practitioner. Most reluctantly I consented, as I did not believe that "words" could reach my illnesses of twenty years' standing. Tenderly this friend led me over the rough road, for there were times when walking seemed torture, and when I sank into a chair in the practitioner's home I really longed to die then and there, my body was so full of pain and I was so tired of suffering. But at the first words of the practitioner I sat upright with wide-opened eyes. What was she saying? And as she talked on in what to me seemed an utterly foreign language, her face shone with such light and love that I felt myself in a holy place and bowed my head in deepest wonder and awe. Oh, the rapture of the hope given me so freely that bright afternoon! And yet she was talking of God, to whom I had always turned instinctively, but without seeming response, when my burdens seemed more than I could bear. Presently the practitioner placed in my hands a copy of Science and Health, bidding me read where she indicated, then closed her eyes and remained quiet. And I? I drank in greedily the wonderful words which were to teach me how to reach the heart of prayer. The spiritual interpretation of our Lord's Prayer, so beautiful and comforting, was in itself a healing draft, and when I arose from that chair I was lifted to the mountain-tops,—I was a new creature. The practitioner loaned me a copy of the book and asked me to come to her the next day. I would have flown home, but my friend laughingly reminded me that she could not fly. Her joy was unbounded to have been the means of helping me to reach such a transformation, to have been permitted to lead to the living fount one who needed its healing waters so badly. I wanted the whole world to know what had happened, confident that to know the truth would be to accept it; but I met opposition and ridicule even in my own family. I however undauntedly pressed on in the new road, watching the light shine through our wonderful text-book, though at times I was ready to despair of changing the thought around me; but help was given by practitioner and friend, and soon sweetest peace and content were mine.

The whole of the physical manifestation was long in yielding, though I was being regenerated and many wonderful proofs of Love's ever-presence came in response to my eager, earnest study of a religion which not only brought a happiness I had never before known, but returning health and vigor, filling my days with purest joy, that of helping others to find the light that never faileth. There is a song of deepest gratitude and love in my heart for our beloved Leader, and I will strive to let the light irradiate my consciousness, that the seeming gloom may be forever dispelled. Joyfully and gratefully am I striving daily to clear thought of all that is not of good, and am gaining every hour sweet assurance of ever-present Love in many beautiful demonstrations. I love the truth and am striving to be a channel for Love and Truth only. I could write a volume, my thought traveling faster than pen, but will only add that my love and gratitude are breathed daily for the faithful, tireless workers at headquarters, and all the writers who are helping us onward by their example and counsels.

Can we prove our gratitude for our Leader's guidance better than by following her in the shining path she has opened for us? It is only in seeming that it narrows, for as we tread it we find enlarged capabilities, purer affections, a surer footing as we advance. It behooves us to keep our vision clear, that nothing may come between us and that "true Light, which lighteth every man that cometh into the world." If the radiance is ever obscured, we need only to turn to our wonderful guiding chart, "Science and Health with Key to the Scriptures."

MRS. KATE L. CRUMP, Los Angeles, Cal.

It is with a very grateful heart that I write of a few of the many benefits and blessings which Christian Science has

Digitized by Google

brought into my life. Having had no sense of health since childhood, and being driven almost to despair by continued sick spells, my extremity surely became "God's opportunity." Nervous exhaustion, heart trouble, severe headaches, and all the ills attendant upon nervous disorders kept repeating themselves until I was finally forced to remain three months in a hospital, eight weeks of that period being spent in unconsciousness, said to result from inflammation of the brain.

Although physicians did all within their knowledge for me, they claimed that my recovery at this time was miraculous. I was, however, in a very weakened condition, and severe attacks of headache became so prevalent that I even said I could not see why my life had been spared. *Materia medica* relieved these attacks, but they reappeared at short intervals, sometimes of only ten days. Then it was decided my only salvation was in an operation. I determined never to resort to this means, so when the last severe attack occurred, in May, 1910, my husband and I decided to try Christian Science. We called a practitioner, and upon her arrival I was suffering such excruciating pain that it was necessary for me to remain in a darkened room, but in less than two hours after the work was begun I realized the fulness of that blessed promise, "Ye shall know the truth, and the truth shall make you free." All pain was gone and I was able to rise and walk down-stairs. After sleeping peacefully all night I arose the next morning with only a feeling of soreness in the back of the head and spine. In fifteen minutes this was entirely overcome through the absent treatment of the practitioner, and I was able to take up my household duties as if no inharmony had existed; whereas in former days I would scarcely recover from the effects of one attack before another would overtake me. By learning to realize that we have an infinite source upon which to draw, for strength to meet our daily needs, I have been able to accomplish more than I was before knowing the benefits to be derived by the application of the truth as taught in Christian Science. For this healing I am extremely grateful, and still more grateful for the spiritual joy and inspiration that came into my life at this time, which can best be expressed by the words in Revelation, "To him that overcometh will I give to eat of the hidden manna, and will give him a white stone, and in the stone a new name written, which no man knoweth saving he that receiveth it."

It is needless to say that our entire family at this time accepted Christian Science, not only for healing but because by the study of Science and Health, together with the Bible, we find it to be such a practical every-day religion. It has helped us and is daily helping us to solve problems which without the knowledge of Christian Science would be almost overwhelming. It has healed my little girl, four years of age, of an intestinal difficulty and fever, which under *materia medica* would return every afternoon for three days. With the help of a Christian Science practitioner this was overcome the first night, and what seemed so beautiful to me in this healing was the child's consciousness of how the work was accomplished. So confident is she that God is Love and All-in-all, that when any form of error manifests itself she asks for Christian Science help. We have used no medicine and have had less sickness in our family since turning to Science than we have ever before experienced; and my only regret is that I allowed ignorant prejudice to keep me these many years from investigating this wonderful truth which is an ever-present help in time of need, a religion which satisfies the longings of every heart for some sustaining power, and makes all the promises of that blessed book, the Bible, a personal reality if we obey the Master's commands.

We can but have the deepest reverence for our beloved Leader, whose years of consecrated thought have resulted in so inspiring a book as "Science and Health with Key to the Scriptures," and we can prove our appreciation of her wonderful work only by living such a life that we may be worthy to be called Christian Scientists. I am also exceedingly grateful for the spiritual uplifting received under the inspired thought and earnest prayer of devout practitioners, who are ever ready to help us on our way, reminding us that "the vesture of Life is Truth" (Science and Health, p. 242).

We as a family are inexpressibly grateful that we have sighted this wonderful "star of Truth," and are earnestly praying and striving to live each day so that we may never lose sight of its radiance; that it may be a light unto our feet, whereby we may be led unto that perfect day; each day desiring to do some good to others, and to remain so steadfast and faithful that we may be worthy of the blessing, "Well done, thou good and faithful servant." I never can be grateful enough for Christian Science.

MRS. E. E. WEAVER, Portland, Ore.

I can no longer refrain from expressing my gratitude for the blessings I have received through Christian Science, which meets every need in my household, solving business, social, and servant problems as well as keeping the family in perfect health. Through Christian Science I have learned that right thought is reflected in right conditions. Our beloved Leader, Mrs. Eddy, says, "Hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thoughts" (Science and Health, p. 261). As we learn to reverse the testimony of the senses with the facts of Science, material sense testimony proportionably diminishes.

I first turned to Christian Science for the healing of severe headaches, which at that time were so frequent that I was seldom free. I was healed in one absent treatment, and almost instantly I felt my thought rising above the ailment until I was completely free. The next need I had for treatment was when my second baby was born. The first one had been born in a hospital with the best physician in the city in attendance, but the conditions were such that I was told another like experience would mean death.

In the mean time I learned in Christian Science that all things are possible to God. I began the study of Science in earnest and studied diligently. When the second child was born I was alone, but was without pain. My husband returned about ten minutes later with a physician to give the necessary attention. I sat up in bed for a few days and then went about my household duties as before. I had absent treatment for one week. The baby is now over three years old, has never taken any medicine, and he is a healthy, robust boy.

Through Christian Science treatment, and even before I knew much more of Science than to get the text-book and read when there seemed to be a physical difficulty, many ills have been overcome, including the diseases supposed to attack children,—colds, fever, etc. One child was healed of acute lung trouble, and I might also mention the fact that I was stung by a scorpion, but after the first sensation of the sting it was quickly overcome. The happiness which comes to the life of a Christian Scientist is beyond the comprehension of only those who have not experienced it. It brings peace to the Scientist and peace to the home, "the peace of God, which passeth all understanding."

I am indeed grateful to God for what Christian Science has brought me, and grateful to our beloved Leader for the unselfish way in which she has so faithfully given us the truth as it was revealed to her. I appreciate greatly our church services, also the bountiful way in which we are supplied through the *Sentinel*, *Journal*, and *Monitor*, as well as the provision for the daily study of the Lesson-Sermon.

MRS. MABEL BROSTROM, Bisbee, Ariz.

When I took up the study of Christian Science I was not very sick or very sinful, and was not always a happy Christian, but I was so far away from Christian Science

Digitized by Google

that I never heard it mentioned and did not even know that there was a text-book. While suffering greatly from backache, I was asked by a lady, not herself a student, why I did not try Christian Science, since it could do me no harm even if it did no good. She then told me of her own healing of a fistula, and I went perhaps three or four times to a practitioner, and was almost elated to think that it had not touched me, although it had the lady who had been healed, and who had always been so far above me mentally. Later, it occurred to me that if a disease had disappeared under Christian Science treatment it must be because Christian Scientists understood Jesus' teachings better than the members of my own church did, since they could claim more of the promises. I also saw that since God is just, I, too, could with earnest seeking gain this understanding; and I am finding the "pearl of great price."

During the three years since then, my little boy and myself have had many instantaneous healings in cases of burns, stings of insects, etc. Besides this, whooping-cough, hives, earache, and an abscess have been overcome without pain, although it seemed necessary to have the abscess lanced by a surgeon, since the other members of the family are not interested in Christian Science. This boy had been considered delicate, and the year before I commenced the study of Christian Science he had been at school but six weeks. According to *materia medica*, bronchitis and fever are supposed to leave the system weaker, but he is now almost free from colds, while before I took up this study he had frequent colds and also attacks of croup.

To me this means much more than my own physical healing, although eye trouble, backache, headache, and nervousness have almost entirely disappeared; but the physical healing seems very small in comparison with the understanding of Truth gained, to know how to follow the master Christian. I am very grateful to our heavenly Father, to our Wayshower Christ Jesus, to our dear Leader, the lone woman who stood for divine Truth against the whole world, and to all who have helped to clear the way for me.

MRS. MAUDE C. FORSYTHE, Chicago, Ill.

I wish to express my gratitude for having been cured of the smoking habit through Christian Science. I was a heavy smoker for fifteen years, but three treatments were sufficient to overcome the habit. I am truly thankful for having had the truth brought to me in such a practical way. I also acknowledge my gratitude for the explanations given me, and the opening of my understanding of God and man through Christian Science.

A. DE SEGESSER, Bird Rock, Pacific Beach, Cal.

[Written for the *Sentinel*.]

THE LARK.

MABEL GORDON-INGLIS.

HE sang of life and liberty
And joy he could not speak,
He sang down in the valley
And he sang up on the peak.
He sang among the sunbeams
And he sang amid the snow.—
He sang because his heart was full
Of only good, you know.

He sang while soaring upward
Of the thoughts he could not speak—
Of the glory of the sunbeams
And the light upon the peak;
Of the peace found in the valley,
And the radiance of the snow,
Telling of Love, and Life, and Truth,—
Of only God, you know.

FROM OUR EXCHANGES.

[*Universalist Leader.*]

Respect for spiritual reality is a supreme demand at present. Insistence that the formulas of worship shall be interpreted in terms of righteousness and character is the true watchword of faith. God may be outside, or inside the formulas; let us study the facts and see where He is. And when we find Him, when we see men brought under His influence into communion with the highest, let us insist that the question of how it came about is secondary, incidental, relatively unimportant. It is because special claims and special pleadings have obscured from both inside and outside revealed religion the spiritual contents within or without, that we have the present anarchy of religion and the world-wide quarrel in the camp of the followers of the most High. The moment we get within sight of the divine truth that religion is life, and that the supreme test of all faiths is in the soul's free citizenship under God, that moment we have a norm or standard by which and around which to gather all of the spiritual forces at work in the soul of humanity into one great interpretation of human experience and into one great energy for reshaping the history of the human race.

[*Western Christian Advocate.*]

The age is ripe for some one to smite pharisaism in these days even as Jesus condemned it in the days of old. It is such a subtle form of sinfulness—so insidious in its approach, so self-assuring as to righteousness—that it is difficult for the afflicted ones to know their own malady, or for others to detect it in them. It eats the real spiritual heart out of men, destroys the fiber of their souls, and yet they still go on summoning others to holiness. Not only so, but oftentimes the less vital piety they have, the less of truly spiritual aims and purposes, the more insistent are they in professions of righteousness. They do the kingdom more harm and breed more distrust toward religion when once they are known than either theological heresy or open worldliness. The heretic with clean life may still be respected, and the worldly-minded brother makes no pretense of being religious. No man hurts the church of God like the man who uses sanctity in speech, in worship, in action, not only to cover up his material designs, but to further them. These men are the great prophets of cant phrases and hollow experience who trade on piety for worldly and ecclesiastical gain.

[*Advance.*]

It is not beauty, but power, says St. Paul, which distinguishes the Bible. It is not to Paul a "sweet story" or a "charming lyric" or even a "noble epic," but "the power of God unto salvation," to the Jew first but not the less to the Greek. The Bible is worthy to be called "the world's noblest literature," but he who knows it only as literature does not know it at all. Just what literature lacks the Bible has—and that is power. Literature does not recall the prodigal from the field of swine but the Bible does. Literature does not redeem the drunkard from his slavery but the Bible does. Literature does not cast the devils out of the Magdalen's life but the Bible does. Beauty, whether of the sun or the waterfall, is only a phenomenon. Power lies down deep and belongs to the essential being. Let not a man flatter himself that he knows the Bible because he admires its beauty. To know that is to know only its surface. To know it as the power of God for the redemption of a world from sin is to know its essential being as Paul knew it and as saved souls in every age have known it ever since.

[J. H. Jowett in *Christian World*.]

Some people carry too vivid a remembrance of their beneficences. They are continually rehearsing to themselves the detailed story of their benefactions. In memory they

Digitized by Google

pass them from hand to hand and back again, letting their right hand know what their left hand doeth. They had much better forget them. It is spontaneity that gives our ministries their worth, and a spontaneous character quickly throws off the remembrance of past services. The well is ever bubbling up anew, and the waters of yesterday are forgotten. Yes, it is spontaneity that makes our services fresh and refreshing. But self-consciousness, especially when it wears the smile of self-satisfaction, seeks to win commendation and reward, and so its real beneficence is stricken at the heart. When we begin to gloat over our goodness men begin to see that it is a trick and they will know that it is not the fruit of the tree of life. "Take heed that ye do not your righteousness to be seen of men," and we surely may add, "nor to be seen of self." Forget them!

[*Watchman.*]

If as much work were put into study by hearers as has been put into preaching, there would be great and manifest results. The common tendency of hearers is to become mere hearers. It is the easy way. This is undoubtedly the case with many good people who are regular church-goers. Hearers hear for personal satisfaction and become critical of what they hear. If they heard with an earnest purpose to do something with the word, there would not be so great a strain upon the preachers to make the word acceptable in manner and style. The sensational preacher works harm in appealing to the taste for hearing. He develops a crop of hearers and tends to make superficial believers. The mere hearers have no deep principle or substantial character. They seek after preaching as men do after amusements. They go from place to place according to fancy. They are not fruitful and are ever learning and never able to come to the knowledge of the truth in experience and influence and service.

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth.*]

If the religious leaders of Jerusalem had only been clear-sighted and spiritually-minded, if they had only set themselves to evangelize the world instead of insisting on their own privileges as a peculiar people, the religious history of mankind might have been very different from what it has proved to be. Jesus saw this plainly when he wept over the doomed city and declared that the kingdom of heaven should be taken therefrom and given to a nation bringing forth the fruits thereof. Christendom might have been looking to Jerusalem today as the visible center of their faith, the spiritual metropolis of the world, if only her people had had vision enough and soul enough to rise to the ideal set forth by Haggai and the other prophets of the restoration.

[*Christian Register.*]

The drift of the times is full of hope. People very speedily get out of sight of the medieval standards, and very readily forget to quarrel over non-essentials. The world is so full of obligations that a well-united lot of Christians will soon get absorbed in their work, and in that alone. As for the minutiæ of organization, we are confident it will work itself out in many different ways, according to local conditions. We presume that in many cases the church resulting from emergement will remain substantially sectarian, praying and believing somewhat according to its pastor. We shall have to breed a lot of teachers who can find in the golden rule a measuring rod for piety.

[*Continent.*]

Christ is the full, complete revelation of the character of God. If you need more than your heart can obtain from study of God's Word, seek it by personal appeal and surrender to Christ.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

A new pamphlet, "Christian Science Healing *versus* Mental Suggestion," by Frederick Dixon, reprinted from the *Weekly Budget*, London, England, is now on sale; 36 pages and cover, at the prices of the regular pamphlets.

For some time the postage required for subscriptions outside of United States territory has exceeded the amount added to the regular subscription price for this purpose, and an increase in rates sufficient to cover this deficiency is now deemed necessary.

Beginning April 1, 1912, therefore, the rates on all subscriptions outside of United States territory will be as follows: For Canada, *Journal* $2.25, *Sentinel* $2.45; for all other countries, except those to which the domestic rate applies, *Journal* $2.65, *Sentinel* $2.95.

Renewals for all subscriptions terminating before April 1, 1913, and received by us prior to July 1, 1912, will however be accepted at the old rates.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy. Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large sized book), single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 40 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 29 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

SUBSCRIPTION PRICE

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00. For Canada add 45 cents and for all other countries 95 cents annually for postage.

For subscriptions in quantities please refer to our catalogue.

TERMS OF SALE

	United States, Mexico, and Cuba	Canada	All Other Countries
Single copy	$ .05	$ .06	$ .07
Twenty five copies	1.00	1.15	1.30
Fifty copies	1.80	2.05	2.30
One hundred copies	3.00	3.50	4.25

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numerals XII indicate the year 1912; XIII, 1913. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription. A numeral "1" is added to the notation for each annual renewal.

Bound volumes: Current year or two years previous, cloth, $2.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

4.25 "	0:	17:	5;	17.95;	22.10

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

Arbuckle Brothers have written a letter to Senator O'Gorman asking him to help pass a Senate bill placing sugar on the free list and saying that the present tariff costs the people of the United States between one hundred and one hundred and fifty million dollars a year, while it enriches the Havemeyers, the Mormon church, the American Sugar Refining Company, and speculators in the common stock of the American Beet Sugar Company. Arbuckle Brothers operate a cane sugar refinery in Brooklyn with a capacity of seven thousand barrels of refined sugar a day. They say that the lower prices which free raw sugar would entail would increase consumption and more than offset any importation of refined sugar; that the cost of canned goods would be reduced and that "tons of fruit rot every year which, in farm houses, would be preserved if the price of sugar were lowered by free raw sugar." They charge that the price of beet sugar in the West, controlled by the American Sugar Refining Company, is kept artificially high on a par with imported sugar protected by the tariff, and they assert that the argument that a high tariff encourages domestic industry is fallacious.

For the purpose of destroying the alleged substantial monopoly of the so-called aluminum trust, an agreed decree was entered in the United States district court at Pittsburgh, Pa., last week, against the Aluminum Company of America. Following closely the prayer of the federal government in its civil anti-trust suit filed a week ago, charging the corporation with monopolizing the industry, the decree abrogates alleged unlawful contracts and restrains the defendant company from negotiating similar pacts or pursuing unfair methods toward competitors. The decree was agreed to by the Aluminum Company as a result of protracted negotiations with Attorney-General Wickersham prior to the filing of the suit. The company is forbidden to participate in any combination or agreement to control the output or prices of aluminum. It is enjoined from combining, by stock ownership or otherwise, with other manufacturers for this purpose. The decree places a long list of specified unfair methods to competitors under the ban of the court.

With the declaration that the commerce court was not to substitute itself for the interstate commerce commission, the supreme court of the United States, in decision after decision last week, reversed the commerce court and upheld the commission. The principal decisions were announced by Chief Justice White and concurred in by the entire court. Jurisdiction of the commerce court over complaints of shippers, denied by the commerce commission, as well as over those recognized by the commission through affirmative orders for relief, was denied by the supreme court.

Judges Gray, Buffington, and MacPherson of the United States district court have handed down the decree approving the plan for the dissolution of the powder trust. Under the decree the companies making up the E. I. Dupont, De Nemours Powder Company must be distributed among three companies. No arrangement relative to the price of explosives can be entered into between the three corporations and each must be conducted entirely independent of the others and with separate clerical forces.

Governor Foss of Massachusetts has signed the Grand Trunk bill admitting the subsidiary of that Canadian system, the Southern New England railroad, into Massachusetts and Boston. "The entrance of the Grand Trunk into Boston," says Governor Foss in his statement, "is necessary for the future development of the port, and desirable as a means of controlling, through competition, the dominant railroad interests in this state."

The supreme court declares railroads cannot carry railroad supplies at rates lower than charged the public. It annulled reduced rates made by railroads on their own coal where they are lower than the public tariffs. The decision reverses the commerce court.

International.

According to the *Peking Daily News* a corporation to be known as the Mongolian & Tibetan Communication Company will shortly be established. The premier, Tang Shao-yi, is said to be in full sympathy with the movement, which owes its inception to the initiative of Dr. Wu Ting Fang and other prominent republicans. It is the intention of the company to build a railway from Kalgan through Urga, Kobdo, Sin Kiang, and Lhasa to Chengtu, and to construct hotels and cities along the line. Nor is the activity of the company to be limited merely to these efforts, for it will undertake other enterprises, such as education, forestry, reclamation, and mining. The aim of the company is described as the promotion of the moral and material welfare of both Mongolia and Tibet, so that these provinces may soon be on an equal footing with the other constituent parts of the republic.

A sale of any of the great auk's eggs always arouses considerable interest in natural history circles. Two of these interesting eggs were sold recently in London, the one fetching one hundred and fifty guineas and the other one hundred and forty guineas. It appears that there are now only seventy-three eggs of this extinct sea bird known to be in existence.

The London *Nation*, commenting on American courts of law, says: "The criminal procedure of America today is very much as ours was in the time of the Stuarts. It is hopelessly entangled in technicalities, and neglects justice and common sense to chase after an impossible infallibility of form."

The present time in Tasmania is the apple export season, and it is expected that there will be a larger quantity shipped than during any previous twelve months.

Industrial and Commercial.

The natural graphite mined and concentrated in the United States is variable in amount, principally because the process of milling flake graphite, the most abundant type of domestic material, is still in an experimental stage. Because of this unreliability of the domestic supply most of the large consumers of graphite prefer to depend for their supply on imported material. In 1911 the quantity of graphite imported into the United States for consumption was 20,702 short tons, valued at $1,416,739. In contrast to this the total domestic production was 3,618 short tons of natural graphite, valued at $288,468, and 5,072 short tons of manufactured graphite, valued at $664,000. The great bulk of the graphite imported into the United States comes from the island of Ceylon.

The *Journal of Commerce and Commercial Bulletin* says: "Promoters of the proposed forty-five-million-dollar cement combination are likely to give up their efforts in this direction. Considerable opposition, it is understood, has been encountered in various directions for the past few weeks, so much so that the trade does not look for the scheme to be carried forward to a successful conclusion, at least for some time. The effort to form a cement combine in the West has grown out of oppressive competition in that section, which has roused manufacturers to concerted action looking toward the reestablishment of the cement business upon a profitable basis."

Fully fifty thousand automobiles will be registered in Massachusetts this year, and the state's income from this source will be in excess of six hundred thousand dollars. Already the registrations of cars are within a few hundred of the total for the whole of last year and the money derived from fees is less than four thousand dollars under the grand total for the whole of 1911. All the money, with the exception of about sixty-three thousand dollars that is used for the expenses of the automobile department of the highway commission, goes to the maintenance of state highways and the improvement of other through routes.

The United States leads the world in the exportation of typewriters. In the month of April its exports under that head exceeded one million dollars in value, as compared with one hundred and thirty-eight thousand two hundred and thirty-two dollars in April, 1897, while for the complete fiscal year which ends with June the total will be about twelve million dollars, or eight times as much as in 1897, the earliest year for which a separate record of this trade was made by the bureau of statistics. The growth in exports of typewriting machines has been steadily maintained during the fifteen years covered by the official report.

The Carolina, Clinchfield & Ohio Railroad Company has awarded a contract for the construction of a forty-mile extension from its present terminus at Dante, Russell county, Va., to Elkhorn City, Ky., connecting with the Chesapeake & Ohio railway. This extension will cost six million dollars and will give a trunk line from the middle West to the south Atlantic seaboard. The extension will require nineteen tunnels, the longest being eight thousand feet through Big Sandy ridge.

Fifteen hundred carloads of strawberries from the fields of southwest Missouri and North Arkansas will be shipped to metropolitan markets this season, as a result of their greatest yield. Fifteen hundred cars of berries means that approximately eight hundred thousand dollars will be realized by the growers of this district.

Favorable report has been made by the subcommittee to the full committee on railroads on a Grand Trunk bill to extend the corporate powers of the Southern New England railroad corporation so that this road can come to Boston by amending the general railroad law.

Ground has been broken at Woodstock for the St. John Valley railway, chartered to run from St. John, N. B., to Grand Falls, two hundred and twenty miles up river in the northwestern portion of the province.

Extensive terminal improvements at Portland, Ore., to cost three million dollars are contemplated by the allied Hill lines on property recently acquired. The plans provide for an eight or ten story freight terminal.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

LIMITATION.

SAMUEL GREENWOOD.

THE way we look at things is largely responsible for the courage or the fear, the confidence or the doubt, with which we meet the demands or the difficulties that arise in human experience; hence to have the right point of view is an essential factor in working out one's problems. Elisha, beset by the Syrians in Dothan, knew that the chariots of divine help surrounded him, and he was therefore undismayed at the presence or the number of his enemies; while his servant, seeing only the material side,—their own apparent weakness and the encircling host of foes,—was afraid. When the prophet caused the young man to look from the spiritual point of view, and he realized the presence of God, his fear of the threatening evil departed.

We are all too prone to be influenced by the appearance of things, to count the number of persons as representing the strength or weakness of a cause, forgetting that "one on God's side is a majority." Even the Master's disciples were deceived by the material evidence when they counted the loaves and fishes and said, "But what are they among so many?" They looked from the point of view of limited sense, not of infinity; therefore they could not see as did Jesus that God's spiritual supply, the substance of Mind, was there to be used according to the need. Neither was it divine wisdom, but human reliance upon material strength, which prompted the numbering of the Israelites; and the greater the number of personal units the less apparent seemed the necessity to trust in God; hence the sin, and its self-punishment, of looking to the human and personal instead of to the divine source of good for one's strength and defense.

Personal sense, not discerning the infinite nature and resources of being, limits itself in every direction. The student, looking from this point of view and seeing only his own shortcomings, fears that his understanding is too small to work out his problems or to meet Truth's spiritual demand. Thus a little band of workers, looking at the fewness of their numbers and the seeming largeness of the demand, may lack the courage to go forward in the assurance of God's unfailing supply. On every hand is the temptation to look to personality instead of to infinite, divine Principle, which is ever supplying the smallest as well as the greatest need of its ideas; and this turning from Principle to person is the error that prevents the recognition of man's boundless possibilities and resources.

God is as present with the few as with the many, with one as much as with a thousand; but whether the student is struggling on alone or is accompanied by a multitude of fellow pilgrims, the work is always with himself. "The Christian Scientist," writes Mrs. Eddy, "is alone with his own being and with the reality of things" (Message, 1901, p. 20). Each individual, therefore, must demonstrate man's unity with his divine origin, and neither husband nor wife nor closest friend can do this work for another. It is pleasant when students are privileged to work together harmoniously, uniting for the common good and marching shoulder to shoulder in the overcoming of evil, but the lonely worker is not less blessed by reason of his loneliness, for it is the students' good work as individuals that makes the real joy of fellowship, and Love rewards this good work and blesses the individual without respect to his position or environment. All who are loyal to the Principle of Christian Science are united in spirit, though perhaps separated in person, and this oneness of devotion and fellowship of purpose is what most concerns the individual and the cause.

When we limit our intelligence, health, or strength, we are attempting to limit God, who alone is their source. When we limit our capability, we, in our belief, limit the creator, who endows man out of His own being. When we admit the lack of goodness or love, we admit that God is finite and imperfect, for He has made man in His own likeness. Instead of accepting the material evidence, we should know that God's children have all they need from day to day. It is not by human wisdom or by human power, but by the divine Spirit that all right things are done and all good accomplished; and Spirit, God, being everywhere, universally abounding, no one need lack the ability to do his work and to be righteous and true. Whether it is the solitary student, the little church, or a great movement, there is always enough light for the way if the lamps are kept filled, always enough strength for the work if reliance is placed unreservedly upon God, always enough grace when the heart is ready to love.

We sometimes make the mistake of looking to what is materially visible as one's supply, and limit thought accordingly, instead of looking to the unseen source of all good. One should not judge by the little he receives, but by the sufficiency from which it comes. That we do not receive more is not due to a lack of supply, but to a lack of receptivity. We do not measure our supply of water by the quantity flowing from the faucet, but by the great reservoir that feeds it. Neither should we limit our supply in other directions to what is visible to the senses, and declare lack because we do not see more, but we should turn our thought toward "the open fount, which is pouring forth more than we accept" (Science and Health, p. 2).

That which meets the need of one meets the need of all, for supply is not measured by numbers but by need, by capacity and not mere desire. God is all power to the two or three that are gathered together in His name, as much as to a multitude, and the few accomplish as much and sometimes more, in proportion, as do the many. The little band of students working lovingly together, having but one mind for the establishment of Christ's kingdom in human consciousness, is a greater factor for good and is doing more for the cause of Christian Science than the larger organization where self-interest is allowed to distract attention from the spiritual Christ-ideal for which the Church of Christ, Scientist, stands.

We should be well aware that there is nothing whatever in the human material sense of things which can supply the place of the spiritual and divine, nothing in person which can

Copyright, 1912, by The Christian Science Publishing Society.

Digitized by Google

take the place of Principle; on the contrary, mortals must look beyond and outgrow the finite sense of things before they can fully discern and apprehend the spiritual reality and harmony of immortal being. Limitation in any direction of right thought is an argument of the carnal mind, and should not be accepted, much less advanced, by the student who desires to rise above it. It is the thought underlying all sin and discord, all that is comprised in the belief of life or intelligence separate from God. Good is never limited or finite, but infinite, and we can think correctly only from this standpoint. Man, being God's reflection, as our text-book teaches, can lack no good thing; and this fundamental truth must be laid hold of and brought into the detail of daily living, if we would have the sweet assurance, as did the psalmist, that divine Love is preparing a table before us in the presence of our enemies.

The command of God to the Israelites was to "go forward," even though the way seemed impassably blocked by the Red sea; and this command remains for all mortals journeying from the material sense of things to the spiritual, for divine Love always opens the way when one is willing and obedient. Daniel went forward into the den of lions, the three young Hebrews into the fiery furnace, and our Master into the grave itself, when to human sense there seemed no possible deliverance. Then what are Christian Scientists, with their declared faith in God, to do but to go forward in their work, taking no counsel of personal sense and refusing to be turned back or dismayed by the difficulties or the limitations this false sense would hold out. The sense of limitation is the shibboleth of evil, the watchword of the so-called material senses, and its design is to frighten the timid pilgrim and turn his attention from the goal before him. Limitation is not the fact but the falsity concerning God and man, and Christians must go forward to that realization, remembering that they are "heirs of God."

"OUR ONLY PREACHERS."

MARY TRAMMELL SCOTT.

THE Christian Science church is unique among churches in discarding personal preaching. There is probably no other organization which is so entirely based upon and held together by the teaching upon which it is founded, rather than by the personality of any of its followers or any representative of its cause; and no one act of its Founder and Leader, Mrs. Eddy, affords greater proof of her inspiration and divine leading than her ordination of the impersonal pastor for all Christian Science churches.

Every Sunday the announcement is made to friends who visit our churches that "the Bible and the Christian Science text-book are our only preachers" (Explanatory note in Christian Science *Quarterly*). These words fall gratefully upon tired ears and hungry hearts, as it gradually dawns upon the waiting thought that here at least there is to be no display of oratory; and St. Paul's sermons are called to mind, whose speech and preaching "was not with enticing words of man's wisdom, but in demonstration of the Spirit and of power." A large part of the world is weary of being preached to. They welcome gladly the inspired "sermon undivorced from truth, uncontaminated and unfettered by human hypotheses, and divinely authorized" (Explanatory note).

Notwithstanding this wise ordination of our Leader, and the satisfaction the Christian Scientist finds in this pastor, the habit of preaching seems to be deeply embedded in human thought, and it is difficult for the practitioner or teacher or follower of Christian Science not to feel that he is sometimes called upon to preach. Especially at a Wednesday evening meeting, when testimonies come forth slowly and a pause is feared, some one feels responsible for the going forward of the "ark of the Lord," and this self-constituted preacher thinks that because the meeting has been slow there is error abroad. He generally begins by making the silence more real in alluding to it, and then proceeds to tell the congregation not what Christian Science does, but what Christian Scientists should do and be. The visitor is reminded of the old orthodox preaching when he hears the Christian Science members admonished to be loving, obedient, and grateful, etc. He feels disappointed. His immediate need is to know if Christian Science heals the sick, and if the Master's teaching, with "signs following," has been rediscovered. His hungry heart calls out for a crumb of comfort and his aching body begs for surcease from pain. He has heard that Christian Science is a healing religion, and he has come to this meeting to find out what its followers have to say about it. Has he not a right to feel that we are giving him a stone for bread when we give a sermonet instead of a testimonial?

It would be well to keep these facts before us,—that the mid-week meetings were designed to give the Scientist, or the beneficiary of Christian Science, an opportunity to tell those who attend of the work that this practical religion does for suffering humanity in the healing of every human ill and abnormity, whether physical or mental, and to remember that our fellow Scientists and coworkers are all studying the same lessons, reading the same literature, enjoying the same opportunities, and are probably taking advantage of them as best they can. The most important thought for us to carry through the meeting is that at every midweek meeting there is some one who comes for the first time, and he always comes needy and questioning. If we remember the stranger in our midst, surely we will eagerly and earnestly give him bread from our little store, and answer as best we can his heart's questioning. Will we not even think of this visitor before we go to the meeting, and pray that his need may be met by some word which will be spoken, and that he may return to his home comforted and healed?

We are finding that it is the practice of Christian Science which does the preaching. Mrs. Eddy warns us that "the error of the ages is preaching without practice" (Science and Health, p. 241). She also says (p. 201) that "the best sermon ever preached is Truth practised and demonstrated by the destruction of sin, sickness, and death."

DISCRETION.

COL. W. E. FELL.

THE word "discretion" is explained by Webster as meaning "wise conduct and management; cautious discernment, especially as to matters of propriety and self-control." The words of the wise man should often be pondered when he says, "Discretion shall preserve thee, understanding shall keep thee: . . . That thou mayest walk in the way of good men, and keep the paths of the righteous." The Christian Scientist should preeminently be possessed of the virtue of self-control and propriety. An example must be set to the whole world, for the Christian Scientist continues to be an object of wonder and close scrutiny; if he fail not, he is as a beacon set on a hill to all beholders. Jesus said, "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven." Courage is required to handle the serpent. At God's command Moses grasped the serpent by the tail, the suppositional basic error. Thus its undesirable nature is detected, and its impotence, yea, its nothingness, is demonstrated, and there remains a staff to lean upon, the all-inclusive nature of purity, the one Mind.

Evil has sought out many inventions, and the serpent of mortal sense approaches its would-be victims with as much subtlety today as when it first inaugurated its attack upon the human race. Its approach, however, must be in harmless guise to gain admission to the consciousness all unaware of its propinquity. The Christian Scientist, alert at the post

Digitized by Google

of duty, dismisses the trespasser with short shrift, detecting at a glance the insidious nature of the attack. The less experienced may stop to parley with error, and error being a special pleader has a ready answer every time. "What am I? A triviality; I pray you let me in." "You insist? Well, I am called sentiment, or human affection, personal or sex attraction, what you will. I am perfectly natural, and to question me thus is to cast a doubt upon human affection. You, as an avowed follower of Christ, must surely know that love is expressed in loving." And thus, perhaps, the seemingly inoffensive stranger is given house room. "Alas," says our Leader, "for those who break faith with divine Science and fail to strangle the serpent of sin as well as of sickness!" (Science and Health, p. 569.) Nothing is easier than to deceive ourselves, but man is not a hopeless victim in the toils of the serpent of lust, that he should obey its mandates. One vigorous effort toward purity, one answering gleam from Truth and Love, when meekness takes the place of pride and righteousness of self-righteousness and hypocrisy, is sufficient to dissolve the hallucination of pleasure in physical sense and matter.

Love surely meets our every need, and Christian Science, with tenderness unspeakable, recalls and awakens the wanderer from the dream of sense, and placing his feet upon the road bids him take fresh courage, showing him how to retrace his steps and in future to choose the path with greater care. Surely we may always regain what we may seem to have lost. Jesus tells us that Love comes running to meet the prodigal when resolve is put into practice.

The divine Principle of man being purity, man is pure. Man's infinite Principle knows no opposite, and the real man can have no knowledge of that which omniscience knows not. Consciousness must be kept steadfastly turned away from sensual suggestion. St. Paul says, "Let it not be once named among you," for, as the Master tells us, only the pure in heart shall see God. Without this constant watchfulness of thought purity is unattainable. Our Leader says, "Vibrating like a pendulum between sin and the hope of forgiveness,—selfishness and sensuality causing constant retrogression,—our moral progress will be slow" (Science and Health, p. 22).

It is striving which brings release, an alert and watchful mentality which refuses to be mesmerized by the sinuous seductions of mortal mind. It is a radical reliance on the absolute, on the spiritual, which the Bible tells us knows "neither male nor female: for ye are all one in Christ Jesus." The swift annihilator of mental suggestion is an honest determination to regard neither man nor woman in any other light than as brother and sister in Christ. "Beloved children," says our Leader, "the world has need of you,—and more as children than as men and women: it needs your innocence, unselfishness, faithful affection, uncontaminated lives" (Miscellaneous Writings, p. 110). When sensuality is dead, death will be dead.

It behooves Christian Scientists, in dealing with the question of human relationships, to strive daily to realize that pure love can only run in its right channels, for Love is infinite. It is related that the fathers came to St. Anthony and inquired of him what virtue led direct to perfection, so that a man might shun the snares of Satan. He invited each to give his opinion. One said "watching and sobriety," another "fasting and discipline," a third "humble prayer," and so forth. When each had spoken, St. Anthony said that those were excellent graces, but that discretion was the chief of them all.

We owe it to humanity to hold the right concept on this question of such vital importance to the world's salvation, so that nothing which offendeth or maketh a lie may enter in. One sin consciously indulged opens the door to a swarm of evils. Illicit thoughts and actions, not in accord with the moral law as expressed in Jesus' teaching and example, invariably lead to other sins,—duplicity, secretiveness, hypocrisy, cruelty, and every offshoot of these abominations. These are the constant companions of the impure in heart, and they bring a galling sense of ostracism from our fellow man. We cannot too often remember our covenant with the great cause of Truth, as accepted and signified by each one who becomes a member of The Mother Church: "We solemnly promise to watch, and pray for that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us; and to be merciful, just, and pure" (Science and Health, p. 497).

OVERCOMING.

CHRISTIAN ANDERSEN.

CHRISTIAN SCIENTISTS who formerly belonged to some one of the other religious denominations, or to the unorganized body of unbelievers, speak and think of the time when they "came into Science" as the great turning-point in their lives. At that time their view of life underwent a change so radical that it cannot be understood by outsiders. In many instances the latter thought that their friends on becoming Christian Scientists became to some extent queer. Perhaps this "queerness" manifested itself in the abandonment of the drink habit or of some other more or less obnoxious trait.

Could the outsider but know what this change really means he would hasten to become as "queer" as his Christian Science friends. What really takes place to cause this change is that the awaking thought discerns, sometimes slowly and sometimes suddenly, that religion is a science to be studied and demonstrated; a science in comparison with which all other sciences and all other knowledge are as nothing. The transformation which then begins to take place constitutes a complete change of mental base but faintly reflected in the outward change of habits above noted. The command of our Master, "Be ye therefore perfect, even as your Father which is in heaven is perfect," is seen to be not a vague request for improvement, but a thing that can and must be done. The statement that man is created in the image and likeness of God is seen to be true, and this likeness is not to be manifested some time in the future in some other existence, but now.

Christian Scientists do not flatter themselves that to human sense perfection is gained at one bound, but they begin to see that evil can be overcome on the basis of its unreality, and at once begin to divest themselves of everything that is unlike God. As they discern one thing after another which is unideal, they at once set about to overcome them. They are like one who is ascending a mountain; each little elevation of ground as it is approached appears as if it might be the summit; when this is reached it is found to be merely one of the many rises in the road leading to the summit. But no discouragement follows the discovery that one is merely passing successive elevations; each one is higher than the one just passed; as one ascends, the horizon widens. The Christian Scientist who has commenced the ascent in earnest does not have to pass the same portion of the road twice. After he has once overcome some particular phase of that which is unlike God, he does not usually have it to do over again. Perfection beckons him onward, and as he learns that overcoming evil is indeed a science he settles down to the steady work which counts. He is like the student who gradually masters the propositions of mathematics one after another. If he has been thorough in his work and reached say as far as logarithms, he does not have to go back to the multiplication table; on the contrary, he is eager to go on to the higher branches of the study, using what he has already learned to speed his progress.

In the thirty-second chapter of Genesis we read of the struggle of Jacob, and that the next morning after his victory "as he passed over Peniel the sun rose upon him."

Digitized by Google

So with the Christian Scientist, after each victory over some phase of error the glory of God shines upon him and he gains the "spiritually clearer views of Him" spoken of by Mrs. Eddy on page 504 of Science and Health.

It is impossible to convey to one not a Christian Scientist what this constant overcoming means, how it is a steady, systematic, scientific activity. Like the mathematician, the Christian Scientist deliberately "states the problem" to be solved; perhaps he has to "review" some of the rules of Christian Science; perhaps he gets several wrong answers before he succeeds, but he knows that solve that problem he must and can, or it would not have been presented to him. He has found that as he goes on and gains skill in applying this Science of God, the problems are changing in the same proportion, requiring all his knowledge for their solution. Why not? What student of mathematics would complain because the problems keep getting a little harder as he advances or because they keep coming? Men are rapidly learning that the knowledge of God can, nay, must be scientific, and that only through such knowledge can God-likeness be reached.

But, says one, if evil is unreal why does it have to be overcome? The Christian Scientist is overcoming evil in the same manner that the student of mathematics is overcoming ignorance,—by increased knowledge of the truth. Is ignorance real? If so, what is it, and on what is it based? Can it overcome knowledge? Can an ignorant person instruct a knowing one out of knowledge into ignorance? Of course not. The fundamental difference between knowledge and ignorance is that knowledge is based on the truth—it is real; while ignorance is based on nothing, it is the mere absence of something, of knowledge—it is unreal. As ignorance is unreal and is overcome by knowledge, so is evil unreal and it is overcome by good.

THOUGHT EXTERNALIZED.

FRANK L. ROBINSON.

WHILE meditating recently upon the familiar statement that as a man thinketh "so is he," a little occurrence of several years ago came into my mind, as if to help me to a better understanding of both the immediate and far-reaching import of the foregoing words. The occurrence in question had not been recalled to memory for a long time, though all the incidents are vividly remembered and now serve the good purpose of illustrating the truth of the words quoted.

After dinner one day, in a little southern city, several young men left their boarding-house in a group and walked in the street together until they came to a certain store, which one of them entered to make a small purchase, the others waiting for him on the sidewalk. As he disappeared in the store one of his companions observed a thermometer hanging at the side of the door, and after noting the temperature he blew his breath against the instrument, with the result that the mercury ran up in the tube from about 70 to near the 100 mark. When the young man came out of the store his attention was directed to the thermometer, and as soon as he saw the temperature as there registered he took off his hat and began to wipe the perspiration from his face, exclaiming as he did so, "It is getting hot!" His companions had a good laugh at the success of the experiment and his evident discomfiture, and then told him of the prank played on the thermometer in his absence. A look of chagrin passed over his countenance and, shrugging his shoulders, he said: "I feel all right now."

The lesson of the incident lies in the fact that the young man while ignorant of the truth respecting the temperature was as much affected by his false belief as by the truth regarding it. Within a very short space of time—perhaps not more than three minutes—he was transported, so to speak, from a normal condition into a most unpleasant one, the false belief immediately manifesting itself in a sense of great discomfort. As soon, however, as the illusion was destroyed and the truth was reestablished in his mind, he was again comfortable. This young man was of that type which one might describe as supersensitive, with keen responsiveness, one of high-pressure receptivity. This fact, however, does not alter the law that according to human sense thought externalizes itself, but rather affords an unusual opportunity for an illustration of the truth that our beliefs—whether false or true—manifest themselves upon our bodies. They may manifest themselves quickly, as in the case above cited, or more slowly, but there is no dodging the effect of a mental cause.

In thinking further along this line, I am helped to an understanding of the false beliefs which primarily brought to me a large assortment of miseries that material remedies failed to cure, and from which, after twenty odd years of suffering, I have found complete relief in Christian Science. As a child, I recall that my mother was a victim of stomach trouble. Even then I realized that she suffered greatly, and her suffering caused me to fear that I should be similarly afflicted. The passing of time brought me to youth and young manhood, and in looking about I saw that nearly every one was more or less afflicted with some sort of disease. It seemed to be almost a normal condition with mortals, this well-nigh universal misery,—apparently something to be endured but seldom if ever entirely cured, and I began to wonder what particular brand of suffering would attach itself to me. The fear of stomach trouble having been planted in my child-thought and never eradicated, was the seed which a false belief in the necessity for human suffering watered and cultivated until there came to me years of suffering—much of the time acute misery. My healing from the stomach trouble was a beautiful experience, as it was entirely impersonal, the practitioner having been called for help in another matter and knowing nothing of the stomach derangement or of its cure for many weeks after the disease ceased to trouble me.

Having spent some time during the past fifteen months in studying the Bible in conjunction with Science and Health, I have learned something of God, and therefore of man, of which I was ignorant before. I have come to understand that my human consciousness was filled with false beliefs, for one thing. I did not reject the truth of being because I was not seeking it, but because I entertained false beliefs to such an extent that there was no room for the truth. As I weed out these false beliefs through the understanding thus gained, there is room for truth, and I am striving to apprehend more and more of it each day.

The human mind cannot be a vacuum. If it is not occupied by the truth, it will be occupied by error and false belief. In making this one point understandable, Mrs. Eddy performed a service for the race which is of incomparable value. This, however, is but a fragment from her teaching, from which I have derived inestimable benefit, and for all of which I am profoundly grateful. While I would not minimize the importance of the physical healing which is available through Christian Science, the greatest blessing lies in mental regeneration, which is followed by that tremendous spiritual uplift which results in the healing of all our iniquities. Truly, "as he [a man] thinketh in his heart, so is he."

Bright morning star, pure herald of the day,
Thy loving beams are seen from pole to pole;
Man lives forever in the realm of Soul,
And tears are wiped away.

Bright morning star, thy rays will ever shine
In atmosphere of Love; O guiding gleam!
The mists of sense are but a passing dream;
Truth's tender peace is thine.

EDMUND K. GOLDSBOROUGH.

SELECTED ARTICLES.

[Alfred Farlow in *Salt Lake City* (Utah) *Telegram.*]

In the course of events, when critics had about exhausted the epithets at their command and it was still desired to continue "calling names," it occurred to some one to apply the words "modern witchcraft" to Christian Science, but unfortunately for the one who chose the epithet, as well as for those who borrowed it, it does not in any sense apply to Christian Science. Witchcraft was based upon pure superstition, while the teaching of Christian Science with regard to animal magnetism is a scientific, sensible description of the evils resultant from a false belief concerning the action of "the carnal mind," and a Christian and scientific method of guarding against such deception by being spiritually awake. It was not Mrs. Eddy who invented the false belief that one human will may be exercised to the detriment of another. This superstitious falsehood has been in vogue for ages, and though presumptuous, it can deceive only the unwary.

Mrs. Eddy's study of metaphysics quite naturally brought her in contact with that peculiar mental exercise which psychologists have denominated "pernicious mental evil," and she has taught her students how to defend themselves against this superstition by the simple act of being awake to the truth. A lie can have no influence whatever upon those who are well enough informed to know that it is a lie, notwithstanding the fact that a lie whispered mentally or audibly may find a response with the uninformed. Every evil suggestion is based upon a false belief in the carnal mind, which according to Scriptural teaching is not a product of the will of God, and for that reason has no foundation in fact. Such evils are destroyed in Christian Science by the understanding that God is the only real cause and that therefore evil has no power; that the very omnipotence and omnipresence of God preclude the possibility of an evil power. Far from having originated pernicious mental evil, which because of the fitness of the term she designates as malicious animal magnetism, Mrs. Eddy has simply exposed this evil, shown its fallacy, thus disarming the true Christian Scientist of the fear thereof. Her discovery and exposure of this error should not be mistaken as an endorsement thereof. It is not Mrs. Eddy who believes in such a power, nor her students. Christian Science destroys all false belief by its clear and demonstrable understanding that God, good, is the only real power. Mrs. Eddy never believed in the power of evil and never practised or attempted to practise such a belief.

If our critic is at all informed on psychological subjects, he is aware that a belief in evil mental suggestion has existed for ages, and there are cases on record where the courts have been called upon to consider a condition of this kind. Thus it may be seen that Mrs. Eddy did not originate this belief, but the world owes to her a debt of gratitude for having provided a remedy for the superstition. We agree with our critic that if a man exhibited a belief in peculiar superstitions which had been advocated from time to time, he might be charged with at least being deceived, but Mrs. Eddy's situation relative to the matter is entirely different. She has exposed and denounced the superstition and shown the world how to guard against these deceptions by being conscious of the truth, which is necessary to offset and nullify the superstition.

Christian Science teaches that the universe as it appears to physical sense is not the universe of God's creation, and scientific men long before Mrs. Eddy's time have declared that physical phenomena are but "a mode of consciousness," a "mode of energy," etc., while most modern physicists agree with Mrs. Eddy in regard to the constituency of matter. Therefore our critic need not confine his quarrel exclusively to Mrs. Eddy. She has many world-renowned physical scientists on her side of the question, whether they agree with all her teachings or not.

If our critic proposes to hold Christian Science responsible for the destiny of those who depend upon it, he should be consistent with this sort of logic and hold medical practice responsible for those depending upon it. It is said that fifty million people die on the globe every year, the most of whom are dependent upon some sort of medical practice. One has only to deduct the small number that die under Christian Science treatment to discover the number of deaths that occur under medical treatment. To this may be added the fact that most people die soon or late, a large majority in childhood, a large percentage in early womanhood and manhood, after having had medical treatment first, last, and all the time. Another interesting point is that about seventy-five per cent of those who have applied to Christian Science for treatment have done so after having exhausted their hope in other remedies, and a large percentage of these have been healed or permanently relieved. If perchance a few of these incurables, after turning to Christian Science as a last resort, should continue in their downward course even unto death, no just charge could be brought against Christian Science, since they were already dead, to all intents and purposes, before they turned to it. Again, inasmuch as Christian Science has healed a large percentage of those who had failed to recover through other means, it is reasonable to suppose that thousands of people die every year who might possibly be rescued by Christian Science, and that a large percentage of those who die after having adopted Christian Science treatment might have died sooner if they had been left entirely to medical treatment and had not had Christian Science treatment. The fact is that no class of practitioners has even approximated to a sure cure, or has proved itself sufficiently successful to point the finger of indignation at the failures of others.

Christian Science does not deny that evil and disease exist in erring human experience. It does not ignore these errors, but recognizes that they must be grappled with and overcome. In Christian Science the term reality is applied only to that which is of God and is eternal.

[Royal D. Stearns in *Comstock* (Neb.) *News.*]

Christian Science stands for the scientific elucidation and explanation of primitive Christianity, and adheres to the divine law of life inaugurated by the Master. This Science as taught by Mrs. Eddy rests entirely upon divine Principle, the foundation of all spiritual healing revealed in the Bible.

The first record of healing mentioned in the Bible is where Abraham sought to benefit Abimelech: "So Abraham prayed unto God: and God healed Abimelech, and his wife." Numerous instances of healing by the power of God through prayer are recorded in the Bible, during the ages from Abraham to the date of the active ministry of Jesus, the "great Physician." The healing power as taught and practised by Jesus continued in vogue among his followers for some three hundred years after his time, until the idolatry and materialism of the dark ages so clouded the minds of men as to hide the spirit and power of the teaching of Jesus, and the world has suffered from this bondage, this medieval ignorance and superstition, for centuries. Nor, indeed, could further progress be made along spiritual lines until the rediscovery of all that had gone before, even the life-giving element in Christianity which heals and saves. These successive stages of spiritual discovery have bound the ages into one consistent development of truth, until its spirit and force are now well understood.

Christian Scientists never assume a militant attitude toward any religion or healing system, granting to each one the fullest opportunity of individual selection, knowing that in the fulness of human experience, under divine guidance, the standard announced by Jesus will determine the one of greatest efficacy: "By their fruits ye shall know them."

[Henry Deutsch in *Albert Lea* (Minn.) *Tribune*.]

I am quite willing to concede "that neither man's wisdom nor man's vain philosophy can change or remove the great eternal truths of God." And I trust that our friend will agree with me also that neither men's excuses nor theological doctrines can change, alter, or substitute the imperative commands of the Master. "If ye love me, keep my commandments." "Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give." Neither can any human excuse or mere belief, expressed in profession instead of practice, satisfy the human heart that rightfully demands and is entitled to receive the fulfilment of the Master's promises: "Come unto me, all ye that labor and are heavy laden, and I will give you rest." "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." "And these signs shall follow them that believe; In my name shall they cast out devils; . . . they shall lay hands on the sick, and they shall recover."

Christian Science is indeed the gospel of freedom, our friend to the contrary notwithstanding. If any would test it, he need not accept my words, nor those of any one else, but let him fairly and justly apply to all the affairs of life, whether sickness, sin, or any other discordant condition, the truths as taught by Mrs. Eddy in "Science and Health with Key to the Scriptures," and he will find that the truth does indeed make free,—free, not in the vague hereafter, undefined by time, space, or condition, but free right here and now, with the quickening and illuminating sense of that freedom which is spoken of in the Scriptures as the "glorious liberty of the children of God."

The world has had preaching for centuries,—heathenism was succeeded by Judaism, Judaism by Christianity, Christianity by sectarianism: and so for numerous centuries poor humanity has been buffeted about from pillar to post by the hundreds upon hundreds of doctrines and philosophies which have served as exploitations of human opinion concerning God, rather than a human practice that makes toward God. It is astonishing to note that in this age of tremendous progression and enlightenment men still stumble and fall in blind refusal to gain the right perspective; the preacher today condemns, and persecutes, if he dares, those who differ from him in their religious or philosophical views, and wilfully blinds himself to the fact that he is following in the footsteps and imitating the example of those who did likewise to the Master, and finally accomplished his crucifixion, for the same reason and upon the same ground that professed followers of the Master today criticize and condemn those who cannot agree with their views as to the fatherhood of God and the brotherhood of man.

The Master laid down certain great commandments which were the basis and ultimate of his teaching. He prescribed one rule by which man might attain eternal life. "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind; and thy neighbor as thyself." He imposed upon his followers certain demands above expressed which have never been repealed. In no place in the Scriptures do we find any excuse for failure to obey those commandments, or warrant for any modification thereof. That they have been neglected is due to the fact that the church has been so busy expounding its theology—its opinions about God and man—that it has not had time to practise its religion and establish daily life on a scientific or Christlike relation between God and man.

[Ezra W. Palmer in *Fort Morgan* (Col.) *Times*.]

I have read with considerable interest the attack on Christian Science recently made by a lecturer in your city. In all discussions of religious matters it is well to bear in mind the words and works of Jesus as a standard by which to measure the good accomplished by individuals or organizations. Jesus said, "By their fruits ye shall know them." What were the works which Jesus did to prove his divine mission to save humanity? The reader is referred to the four gospels of Matthew, Mark, Luke, and John for the answer. In these gospels we find that Jesus went about healing the sick of all manner of disease by the power of God. He stilled the tempest, raised the dead, walked on the waves, by the exercise of the same power he employed in healing the sick. Not only did Jesus thus prove his sonship with God, but he taught that all who believed or understood his teachings should manifest the same power.

He commanded his disciples to "heal the sick, cleanse the lepers, raise the dead, cast out devils;" and in another place he said: "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." In another place Jesus, referring to the unbelief of the people, said, "Though ye believe not me, believe the works," showing the stress Jesus laid, not on words, but on works in proving man's sonship with God in healing the sick and overcoming evil in all its myriad forms.

Is it not apparent that they have the best right to be called Christians who do the mighty works Jesus told them to do in his name; who heal the sick by the power of God, who rescue the drunkard, the libertine, the poverty-stricken, and the sinner by the power of prayer to ever-present Love? This is what Christian Scientists to the best of their understanding are doing all over the world today. What have these critics who denounce Christian Science to show that they are entitled to the term Christian? Can they prove their understanding of God by healing the sick as Jesus commanded them to do? Yet this test of works performed was the one laid down by the Master they profess to follow. Can they truly be called Christians who do not implicitly obey the great Teacher, Jesus Christ? Would it not also be well for those who attack Christian Science to ponder the words of the Master on another occasion, when he said, "Judge not, that ye be not judged."

Instead of undermining Christianity, Christian Science teaches men to rely wholly on divine power for relief from all ills of the flesh, from ignorance, poverty, hate, sin, disease, and death. Christian Science deceives no one. Its message is a clear statement of primitive Christianity, a message whose healing power had been lost to humanity since three hundred years after the ascension. The testimony of Christian Scientists all over the world is that they love God and their fellow man better, understand the Bible more clearly, and are more free from sickness, sin, and evil than they were before they studied Christian Science.

Christian Science does not deny the term Deity as applied to God. It accepts the definition of the Deity as given in Webster's Unabridged Dictionary as follows: "God; the Supreme Being." To show how absurd the charge is that Christian Science denies the term Deity as applied to God, attention is called to the fact that the word Deity, meaning God, the Supreme Being, is employed forty-eight times in Science and Health, the text-book of Christian Science. Christian Science teaches that Mind rules man, if by the term Mind the divine Mind, God, is meant. But if the mortal mind is meant, then Christian Science repudiates it. Mortal mind is not a healer of disease, neither does it in reality control man or his body. Christian Scientists prove this when through prayer to God, infinite Mind, the body is controlled and the sick healed.

The further charge by the lecturer that Christian Scientists suggest that only the "brainy" understand Christian Science, implying that Christian Science flatters one by stimulating his pride of intellect, is equally misleading and false. Christian Science makes no distinction between those who are educated or intellectual and those who are not. Christian Science rests on the broad basis of the brotherhood of man. It recognizes as fundamental a God who

Digitized by Google

is Love and all men His children. It accepts unreservedly St. Paul's statement regarding those who have put off the carnal mind: "Where there is neither Greek nor Jew, circumcision nor uncircumcision, Barbarian, Scythian, bond nor free: but Christ is all, and in all." Christian Science appeals to men in all walks of life, be they learned or ignorant; and because Christian Science has a message for all humanity, it levels artificial class distinction of wealth, pride, or intellect, so that all men who desire, whether rich or poor, can rejoice in the true wisdom and never fading riches of God, "who healeth all thy diseases."

[Lloyd B. Coate in *Dayton* (Ohio) *News.*]

In a late issue reference is made to a sermon by a clerical critic on "Christian Science and the Christian Religion." People are fast learning that, whatever the subject, if they desire a correct interpretation of it they need to go to those who have made it a study and proven by demonstration that they understand its fundamentals, rather than seek information from its opponents.

It would seem that the embers of religious persecution have not entirely died out. History repeats itself. The learned doctors of divinity in Jesus' day attempted to prove that the Master's idea of God was wrong, because it healed the sick and they could not, and they brought the accusation against him that he did his works through Beelzebub and not through the power of God. Nevertheless, Jesus insisted that it was through the Father that the wonderful works were wrought. Likewise Christian Scientists insist that it is through the Father, in the way pointed out by Christ Jesus, that they have been able to do many good works.

Our critic has raised the question as to what Christian Scientists believe God to be. It would no doubt be well and result in good if every person in our city would consider the question, What is God? On page 587 of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, she defines God as "the great I AM; the all-knowing, all-seeing, all-acting, all-wise, all-loving, and eternal; Principle; Mind; Soul; Spirit; Life; Truth; Love; all substance; intelligence."

Writing to her church in 1901, Mrs. Eddy says: "The loyal Christian Scientists absolutely adopt Webster's definition of God, 'A Supreme Being,' and the Standard dictionary's definition of God, 'The one Supreme Being, self-existent and eternal.' Also, we accept God, emphatically, in the higher definition derived from the Bible, and this accords with the literal sense of the lexicons: 'God is Spirit,' 'God is Love.' Then, to define Love in divine Science we use this phrase for God—divine Principle. By this we mean Mind, a permanent, fundamental, intelligent, divine Being, called in Scripture, Spirit, Love. . . . We understand that God is personal in a scientific sense, but is not corporeal nor anthropomorphic. We understand that God is not finite; He is the infinite Person, but not three persons in one person. . . . Those who misjudge us because we understand that God is the infinite One instead of three, should be able to explain God's personality rationally" (Message for 1901, pp. 3, 4).

We are informed that Christian Science was classed as non-Christian and anti-Christian. Because of this statement it will be interesting to learn the real meaning of the word Christian and what Christian Scientists really do believe. The Century dictionary defines a Christian as one "having adopted or believing in the religion of Christ; in accord with or exhibiting the spirit of the teachings of Christ; a believer in and follower of Jesus Christ; specifically, one who possesses the spiritual character proper to a follower of Christ; one who exemplifies in his life the teachings of Christ." Webster's dictionary says in substance that a Christian is a believer in the religion of Christ, a real disciple of Christ; one who believes in the truth of the Christian religion and strives to follow the example and obey the precepts of Christ.

According to the Bible record, Jesus both healed the sick and reformed the sinner, and commanded his followers to do likewise. However imperfectly Christian Scientists keep this commandment, yet it can be said of them that they are striving both to preach the gospel of Jesus Christ and to heal the sick in his name, and today in almost every English-speaking city witnesses may be found. We believe the time will come, as the result of the teachings of Mrs. Eddy, that all the churches will heal the sick in Christ's name.

We believe every one should have the right, vouchsafed in the federal constitution, to worship God according to the light he has, free from molestation or denunciation from others.

[John L. Rendall in *Ottumwa* (Iowa) *Review.*]

In a recent issue I find mention of a religious meeting at which one of the speakers took occasion gratuitously to criticize Christian Science, stating, "No, sir; I don't believe in any of that stuff. I believe in Jesus Christ and his salvation, but not after the Christian Science way."

It is clearly evident that this speaker was not thoroughly informed as to what "the Christian Science way" is, or he would have at once recognized the fact that the Christian Science way is the way established by Christ Jesus. One who really believes in "Jesus Christ and his salvation" must accept those practical teachings which were an integral part of Jesus' mission. It may be said without fear of refutation that Jesus not only pointed out to his followers the necessity for reforming the individual, but also the necessity for the healing of the sick, and in almost every instance the command "Heal the sick" was inseparably associated with the injunction "Preach the gospel."

"The Christian Science way," as understood by Christian Scientists, is the way of pure essential Christianity; the way of health, happiness, peace, and brotherly love; the way which recognizes the rights and privileges of each individual to worship God in accordance with the dictates of his own conscience, unrestricted and undisturbed by any one whomsoever. It is a way which if followed means the practice of the golden rule in its completeness, and it is a way which has resulted in the reformation of the sinner, in the healing of hundreds of thousands of cases of what seemed to be hopeless sickness, and in bringing these people into a clearer apprehension of the fact that God governs man and that His laws include infinite good for each one who chooses to place himself in right relationship with God. The adherents of Christian Science have found "the Christian Science way" to be the best way that has ever been pointed out to them, and they will continue to think so, notwithstanding some opposition from those who do not understand this way.

Forth like a rivulet flows love unfeigned
From lofty summits of a pure desire,
Where snows are softened by a radiant fire,
Then dews celestial on the steeps have rained
And springs from hidden depths the light have gained:
Down from the lonely peak where souls aspire
And see and hear the hosts' victorious choir,
Down with the joy of freedom well attained.
Love clothes the hillside with a living green,
And at this height on which the Shepherd taught
The best blessed homesteads of the earth are seen:
From whence, with fuller, deeper service fraught,
Love flows resistless through the peopled plain
To the vast knowledge of th' eternal main.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

TREASURER OF THE MOTHER CHURCH.

THE Christian Science Board of Directors announces the appointment of Adam H. Dickey to the office of treasurer of The Mother Church, and he has also been appointed treasurer of the fund for a memorial to Mrs. Eddy.

THE LECTURE SERVICE.

IN the report of the clerk, read at the annual meeting of The Mother Church, June 3, was this significant paragraph: "Our records show that during the year approximately 740,000 persons have attended lectures on Christian Science given by the various members of our board of lectureship. These figures indicate an approximate increase in attendance at lectures during the year of 50,000."

The importance of the lecture work as an authorized means of disseminating in a community, aside from the regular church services, an accurate knowledge of Christian Science and the facts pertaining to the life and work of its Discoverer and Founder, Mrs. Eddy, is emphasized by these figures. It is, therefore, with the desire to impress upon the branch churches the need for even more earnest and thoughtful cooperation, that attention is directed to the list of lecturers for the coming year on page 852 of this issue; also to the necessity of arranging for the lecture or lectures which are to be given, as soon as possible after July 1, the beginning of the lecture year. If before the end of July the lecturers are able to make up their schedule for the year, they can plan their trips to the advantage of all concerned, and this is often an important consideration with the smaller churches and societies.

The annual circular of the board of lectureship has been mailed to the clerks of all branch churches and societies having cards in the *Journal*, and the instructions therein given should be carefully followed, that the best possible results in every particular may be secured. Seemingly unimportant details ofttimes make for or mar the success of a lecture, and the experience of years in the lecture work has shown the importance of scrupulous care in this direction. Especially should the proper advertising of the lecture have attention, the date, day of the week, place, and hour of the lecture being plainly specified. The local advertising need not begin more than four or five days beforehand, but it should continue in some form to the day of the lecture. Suitable ways of accomplishing this are detailed on page 4 of the circular. The announcement in the "Lectures to be Delivered" column is also important because it reaches many outside the local field, but to insure insertion it must reach the *Sentinel* not later than Monday of the week in which it is desired that it shall appear.

Another point to be remembered is that in the work of a church or society incident to a lecture, much will be or must be done through the officers or committees, but the complete success of a lecture calls for the united effort and demonstration of the entire membership, that no avenue through which the lecture may be brought to the attention of the general public, for whose benefit it is primarily given, will be neglected. The lecturers are grateful for the cooperation shown by the workers throughout the field during the past year, and we bespeak for them in the weeks and months to come the same spirit of helpfulness and understanding in the carrying on of this important branch of the Christian Science movement.

ARCHIBALD MCLELLAN.

"HOW DO YOU FEEL?"

THAT the realm of physical feeling harbors all mankind the bulk of the time, and the bulk of mankind all the time, is no less true than that the teaching of the Master and the hope of eternal life demand that we shall learn to live not in the feeling which registers the rule of material sense, but in the knowing which speaks for the dominion of spiritual sense. More than this, when instructed in Christian Science one not only perceives the necessity of moving his residence from the plane of feeling to the plane of perception, but he learns how to begin to bring this about.

Immersed by human belief in the world of sense, men have grown accustomed to think of themselves, and of life as witnessed to by its testimony, and pleasure thus becomes a matter of nerve-excitation. This explains the whirl and hurry of modern times. It is the phenomenon of this mistaken sense of pleasure. The brevity of its satisfaction, however, always begets that restless pursuit of the unattainable which was never more persistent or more pitiful in human history than it is today. This devotion to the life of the senses is not only incited by fleshly appetites and hereditary predisposition, it is authorized and upheld by the largely accepted religious belief that the realm of material sense was divinely instituted, and is therefore wholly legitimate. Human consent is thus given to that common concept and address which fosters our enslavement to the unspiritual. When most Christian believers say, "How do you feel?" they have no thought but that the man of ailing flesh and blood before them is God's man, and they thus find and in so far fix his place in matter. This is the well-nigh universal attitude, and Christian Science corrects it by awakening men to the true concept of life as a manifestation of Mind. It makes clear the fact that life is not understood, and not entered upon, so far and so long as we identify it with material sense experience.

On page 77 of Science and Health Mrs. Eddy writes: "Existence continues to be a belief of corporeal sense until the Science of being is reached;" and the fundamental declaration of this Science is that matter and all its phenomena are unreal. True spiritual progress is therefore measured, negatively, by the extent of our escape from all thought of life as determined by or related to physical feeling. Very many of the experiences which we speak of as temperamental, sentimental, or emotional are largely material in their origin and explanation; they belong to this same realm of mortal sense; and when we come to understand that the giving up of our false belief about life means escape from the mental turmoil and tragedies which this belief brings to all sensitive people, we begin to realize something of the extent of the transformation which the rule of Christian Science immediately begins to effect. Human feeling is not ignored, it is redeemed.

True feeling is the joy and exhilaration of spiritual perception, apart from which feeling is material and essentially weakening. The fitting interrogation, or salutation, is not, "How do you feel?" but "What are you knowing?" or "To what voice are you listening?" True feeling is not the experience of material touch, or the consciousness of a material status, but rather the consciousness of illumination, of divine Love, and in its nobler manifestations it reaches the heights of intuition and prophecy. The practical significance of the acquisition of a habit of scientific thought, and of scientific address, in so far as it can be used with due regard for the apprehension of those about us, is manifest. In counseling Christian Science practitioners, Mrs. Eddy has said, "Make no unnecessary inquiries relative to feelings" (Science and Health, p. 396); and it is to be seen what a rebuke to laxity and indefiniteness of thought, the backsliding tendency of our human nature, our nobler appeal must become. It is what we think, know, and mentally declare, that counts most for our progress and triumph.

JOHN B. WILLIS.

PROOF *VS.* OPINION.

IN our text-book we read that "in Christian Science mere opinion is valueless" (Science and Health, p. 341). Mrs. Eddy goes on to say, "Paul alludes to 'doubtful disputations.' The hour has struck when proof and demonstration, instead of opinion and dogma, are summoned to the support of Christianity" (p. 342). There are few students of Christian history who fail to see that mere opinion, finding expression in endless discussions, was largely responsible for the loss of primitive Christianity, and the rapid and increasing multiplication of sects, with their unfortunate variances. Well might Paul ask, "Is Christ divided?" The remarkable thing is, however, that after long centuries of dogmatism the vital truth of Christianity has again been brought to humanity in Christian Science, and its power is seen in that its teachings appeal to all classes and conditions of men, whatever their religious affiliations; that is, to those who are willing to stand by the statement that man is not material but spiritual.

Nearly all professed Christians, outside of Christian Science, believe that man is both material and spiritual and that he was thus created by God; but whenever material belief is admitted, the spiritual fact is mainly lost sight of. For example, in a case of illness, is not the belief in a material condition and in material law the first consideration? Is there any serious attempt to think of man as a spiritual being, to base his chances for recovery upon this fact, and from this view-point to achieve his freedom? No, indeed, as the many published criticisms of Christian Science go to show; but in spite of the almost universal belief of mortals that man is material, the splendid healing work of Christian Science is done on the basis of spiritual law as stated in the Scriptures and explained in Science and Health.

It is, therefore, of the utmost importance that students of Mrs. Eddy's writings should keep close to the fundamentals of Christian Science, ever keeping in view the divine Principle, and remembering the Master's promise that "the Spirit of truth" would guide us "into all truth." We shall undoubtedly know "all things," when human thought has been sufficiently spiritualized to be a transparency for Truth, and we may rejoice that even now, in the earlier stages of our progress, we do not lack the practical understanding required to work out each problem as it presents itself. Our Leader counsels us to begin our treatment always by "allaying the fear of patients" (Science and Health, p. 411), and those who have faithfully followed this rule find that it is not only applicable in the overcoming of disease, but to all the discords of mortal existence as well, for it is based upon the teachings of Christ Jesus; indeed upon the spiritual teaching of the Scriptures from Genesis to Revelation.

It is neither wise nor profitable to raise the question whether man exists in the universe, or the universe in man. This and similar questions have no direct relation to our present-day problems, although we learn from Science and Health that the universe including man exists in the divine Mind. There are many statements to this effect in our text-book, and it is both interesting and helpful to study them with the aid of the concordance, but of little value to discuss them with others, since the all-important consideration is to get rid of material sense, which does not admit of spiritual premises or conclusions. (See Science and Health, p. 337:20-22.) Whatever the seeming difficulty which presents itself, whether it be an uncertain sense of the teachings of Science or imperfect results in our own demonstration of these teachings, a clearer sense of spiritual reality will solve the problem, and the purified thought will see God, good. Paul says, "He that is spiritual judgeth all things." This being admitted, our best efforts should be directed to the spiritualization of all things, a process which begins for us in our own consciousness, wastes no time in "doubtful disputations," but offers the unassailable evidence of "proof and demonstration" at each step of the way.

ANNIE M. KNOTT.

AMONG THE CHURCHES.

MEDFORD, ORE.

The dedication of First Church of Christ, Scientist, on North Oakdale avenue, occurred Sunday [April 21] and was attended by a large and attentive congregation. A dedication message written some time ago by Mary Baker Eddy was read and the following brief history of the church was given:—

The first service was held in May, 1906, in the home of one of the members, with six people in attendance. The steady increase in numbers soon made it necessary to find larger quarters, and the Commercial Club room was secured, where the services were continued, July, 1906. The members of the Commercial Club generously gave the use of this room for one year, and their brotherly kindness was deeply appreciated.

On Sept. 14, 1908, with nineteen members, Christian Science Society of Medford, Ore., was organized. At this time it was decided that the collection taken the first Sunday of each month should be set aside for the purchase of a building site. In November, 1908, a lot on North Orange street was purchased, which was sold about a year later and a payment made on two lots on North Oakdale avenue, the site of the present church edifice.

From the fall of 1909 to Jan. 15, 1911, services were held in the more commodious quarters of a hall on North Grape street, where payment on the lots was completed, followed by a business meeting held for the purpose of considering the advisability of erecting a church building. A building committee was appointed and the work immediately begun. The building was completed and the opening service held Jan. 15, 1911. On Jan. 10, 1911, this society received a charter and incorporated as First Church of Christ, Scientist, of Medford, Ore., a branch of The Mother Church in Boston, Mass. The reading-room, a very important factor in the church work, was opened to the public Jan. 27, 1911. The Sunday school was organized Sept. 14, 1908.

Medford Sun.

ST. LOUIS, MO.

The formal opening of Third Church of Christ, Scientist, of St. Louis, was held on Sunday, May 12, with two services, the regular morning service at ten forty-five and a special service at three fifteen, p.m. The edifice occupies a terraced lot one hundred by two hundred and twenty-five feet on one of the finest thoroughfares and facing one of the city's handsomest parks. The cost, including lot, approximates one hundred thousand dollars. The auditorium has a seating capacity of eight hundred. The reading-room is comfortably located in a room opening off the foyer. A magnificent organ, costing over eight thousand dollars, was presented to the church by an unnamed donor, in gratitude for blessings received through Christian Science.—*Correspondence.*

CORONADO, CAL.

The Christian Science Society of Coronado has purchased a valuable corner building, seventy-five by one hundred and forty feet, and in the rear a temporary hall, thirty-four by forty feet, containing audience room and reading-rooms. We held our first service on May 12, and are proving our beloved Leader's assurance that "divine Love always has met and always will meet every human need" (Science and Health, p. 494).—*Correspondence.*

NOTICE.

It has been found necessary to postpone the date when copies of the German translation of Science and Health can be delivered, until some time in July, owing to the amount of labor involved in the composition and proofreading.

THE LECTURES.

BOARD OF LECTURESHIP.

APPOINTED FOR THE YEAR JULY 1, 1912, TO JUNE 30, 1913.

Hon. Clarence A. Buskirk, C.S., 5548 Page Boulevard, St. Louis, Missouri.
Clarence C. Eaton, C.S.B., 409 South L Street, Tacoma, Washington.
Francis J. Fluno, M.D., C.S.D., 1732 Franklin Street, Oakland, California.
Willis F. Gross, C.S.B., 505 Berkeley Building, Boston, Massachusetts.
Judge Septimus J. Hanna, C.S.D., 803 Oakland Avenue, Pasadena, California.
Prof. Hermann S. Hering, C.S.B., Post Office Box 385, Concord, New Hampshire.
Bliss Knapp, C.S.B., 4 Denmark Street, Boston, Massachusetts.
Frank H. Leonard, C.S.B., 81 E. Madison Street, Room 608, Chicago, Illinois.
William D. McCrackan, M.A., C.S.B., Post Office Box 779, New York, New York.
Rev. William P. McKenzie, C.S.B., 10 Concord Avenue, Cambridge, Massachusetts.
William R. Rathvon, C.S.B., 1756 Grant Street, Denver, Colorado.
Judge Clifford P. Smith, C.S.B., 16 Corey Road, Brookline, Massachusetts.
Virgil O. Strickler, C.S., 1 West 85th Street, New York, New York.
Bicknell Young, C.S.B., Whitehall Court, London, S. W., England.

Letters and telegrams sent to the addresses given above will be duly forwarded. Use these addresses, unless for a special occasion a different address is given.

BANGOR, ME.

Last evening [March 28] Frank H. Leonard lectured in City Hall to perhaps the largest audience ever furnished by Bangor on the occasion of a Christian Science lecture. The speaker was introduced by George C. Eames, first reader of the local church, who said in part,—

You have been invited this evening to listen to a lecture on Christian Science, a subject which, I presume, is attracting more attention than any other subject before the world today. Thousands are Christian Scientists because this truth has unfolded to them health and happiness; thousands are interested in Christian Science because of having seen its wonderful works, and yet there are those who are asking, "Art thou he that should come, or do we look for another?"

Christian Science is not a new theory or invention, as many believe; it is the revelation of truth that always was and always will be, the truth of man's being and his relationship with God, as taught and demonstrated by the Wayshower.—*Bangor Commercial.*

DOVER, N. H.

The lecture on Christian Science under the auspices of First Church of Christ, Scientist, at the City Opera House last evening [March 29] was attended by a fair-sized audience, nearly three hundred being present. The lecturer, Virgil O. Strickler, was introduced by the Rev. Dayton G. Vogt, pastor of the Peirce Memorial Church, who said in part,—

We hear much of the achievements of the nineteenth century in every sphere of life, but especially in the scientific field. Yet nothing, I venture to say, has this remarkable period given that is greater than Christian Science. I believe that to be a fair statement of fact.

This form of belief dates back less than fifty years, when Mrs. Eddy began her work. Since 1867 there has grown up a powerful organization with nearly a million communicants and over fourteen hundred churches. It has extended its work to all parts of the world. Surely there is something in such a movement that deserves attention. Yet it is remarkable how little the average Christian knows about Christian Science. The general idea seems to be that it is some sort of mind-healing system. Even that is vague. Others who investigate the philosophy hastily consider it not worth much, that it is altogether impossible.

Judging from the attitude of the Christian Scientists whom I have known, all they ask is that critics inform themselves before they express opinions adverse. These men are confident that after a thorough understanding of their position it will receive a fair judgment. Surely that is the least an intelligent person can do. While I do not understand all the philosophical grounds of this religion, I have a great deal of sympathy for it because I have seen some of the results that a belief in its doctrines has brought about. It has made men smile who frowned before, it has cured bodily ailments and mental diseases, it has taught men to see life from a new and brighter point of view. It is an endeavor to make this world brighter. It is helping to solve the problem of translating religion into terms of daily life. It claims no monopoly of truth that we cannot overlook. We need to know more about it, so I am glad that First Church of Christ, Scientist, of Dover has arranged this lecture. The address will be an authoritative statement of the position of The Mother Church, under whose direction the lecturer comes to us. I feel sure that you will have a more thorough knowledge of an important topic after listening to the speaker of the evening.—*Foster's Democrat.*

MOLINE, ILL.

This branch church gave a lecture April 8 in "The Barrymore." It was attentively listened to by between seven and eight hundred people. Willis F. Gross delivered the lecture, and he was introduced by Orr W. Lee, first reader, who said in part,—

Jesus, the master metaphysician of the world's history, awakened the slumbering thought from its dream of materialism with a light that shines unto the present day, when he declared, as in the records of the New Testament, that "no man can serve two masters; . . . ye cannot serve God and mammon." Twenty centuries later, a revelator of promise, a woman, Mary Baker Eddy, under the name of Christian Science, reawakened Christendom after the sleep of the dark ages and proclaimed the divine Principle by declaring that in Truth there is no error, and in good no evil, "no matter in Mind, and no mind in matter" (Science and Health, p. 113).

The lecture this evening has been arranged for in order to strengthen those who already know that it is not wise to halt between two opinions, or to have or to believe other than the infinite Mind, as well as to encourage and show those who do halt how others have learned not to do so.

Correspondence.

UNIVERSITY OF CHICAGO.

Prof. Hermann S. Hering lectured on "Christian Science: The Science of Salvation," before a good-sized audience last night [April 18] in Mandel. The lecture was given under the auspices of the Christian Science society of the university. Professor Hering was introduced by Mr. Coulter, of Fifth Church.—*Daily Maroon.*

Digitized by Google

LOS ANGELES, CAL.

Virgil O. Strickler delivered two lectures on Christian Science April 18 and 19. At the first lecture in Third Church edifice he was introduced by J. T. Fitzgerald, who said:—

One who finds the time, amid the exigencies of a strenuous existence, to live the good, the pure, the noble, the moral, the Christian life—that man or that woman or that child is making the world better for having lived in it, and is exemplifying the highest type of American character and American citizenship. The worth of a state is the worth of the individuals composing it. The worth of an individual is not determined by any process of mathematics, as applied to stocks, bonds, houses, or gold, but by the quality of thought which governs and actuates his daily living. Thought is the activity of Mind—Mind in the highest, holiest sense—about which, including other phases of divine metaphysics, the speaker of the evening will tell us something. Doubtless he will have something to say about a faith and trust which is as simple as that of a little child, who places its hand in the hand of a father, to be led forth into a field where the flowers blossom and the birds sing.

At the second lecture in the same place Mr. Strickler was introduced by John F. Manning, who said:—

It is fair to assume that many in this audience tonight are inquirers into those great truths for which Christian Science stands. It is fair to assume that every one in this audience has at some time read in the gospels those most beautiful word-pictures of events which men have agreed to call miracles and which portray the tender, compassionate loving-kindness wherewith the Founder of Christianity ever met and answered the appeal of all who came to him for aid and relief in sickness and distress. We can imagine the joy and gratitude, too deep for words, which must have filled the hearts of those whose great privilege it was to experience that wonderful help, either in themselves or for their loved ones.

There was, without doubt, no more striking feature of the brief history of the earthly career of Jesus of Nazareth than that same ever-ready willingness and ability to relieve from their suffering, as shown by the Master to all who were awake to their opportunity to come directly to him for help; and this help was never denied to any one. To those of us whose lot it has been to watch at the bedside of some loved one, some little child perhaps, weary and worn with suffering and pain,—our best efforts bringing them no relief,—must have come at such times the thought of and longing for those happy scenes on the joyful shore of the Galilean sea. How gladly, it seemed to us, would we have welcomed such an opportunity, no matter what difficulties might be in the way, to bring such sufferers to the feet of him whose whole life was voiced in that invitation, "Come unto me, all ye that labor and are heavy laden, and I will give you rest."

Did you ever stop to ask yourselves why or when that loving invitation ceased to be good? Christian Science comes to answer that question, and the simple answer is that it never has ceased to be good. The Master's promises were such as these: "He that believeth on me, the works that I do shall he do also;" and, "Lo, I am with you alway, even unto the end of the world." This help and healing which you and I have longed for, Christian Science teaches is just as available today as it was in the Master's day.

Correspondence.

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship.

Blaine, Wash.—Loma's Hall, 4 p.m., June 30.
Brighton, Col.—Opera House, 3 p.m., June 30.
Florence, Col.—Opera House, June 30.
Leadville, Col.—Elks' Opera House, 8 p.m., June 27.

TESTIMONIES OF HEALING.

[Translated from the German.]

Eight years have gone by since Christian Science found me in a wretched, hopeless condition. I had consulted various physicians without success, and for fourteen years had suffered with severe and often-recurring cramps in the stomach, which made life miserable. I prayed much at that time, but also believed that God had afflicted me with this disease. My health was declining when another internal trouble manifested itself, to which was added severe inflammation of the bowels. Besides these ills, I had been suffering from the heart for quite a while and was unable to perform any kind of work, the suffering being so intense that I longed for death, as I looked upon it as a deliverer. The physician in attendance gave up all hope. He said I had so many diseases that he did not know with which to grapple first, and was unable to help me besides, the ills all being in too advanced a stage. I had no appetite, and my friends believed death to be the only alternative.

While in this pitiful condition doubts came up in my mind as to the existence of Love divine,—which I had failed to experience,—yet in my extremity God's help did come. A friend from Berlin who was here on a few days' visit called my attention to Christian Science, of which I had never heard before. She told me among other things that it was not God's will that a mother should be taken away from her four minor children. This sounded like heavenly music from afar off, and at the same time like a fairy-tale. She left a copy of *Der Herold der Christian Science* with me, the contents of which I understood but little, being very much used to material modes of thinking. In a letter she advised that I take Christian Science treatment. As my condition was unendurable, and my dear husband and children were uppermost in my thought, I clung to the hope held out to me and applied to a Christian Science practitioner whom I did not know then and do not know personally to this day, but who lovingly took up treatment while we corresponded with each other. She was very kind and showed great patience with me. She sent me some literature, which I read carefully, as well as the Bible, and the light dawned upon me; I had found that which I had been seeking after,—a correct concept of God, "with healing in its wings." It seemed like a wonder to me when my appetite returned, often taking the form of hunger, a thing which I had not known for a long time. Then the pain disappeared at intervals, and with five weeks' treatment vanished altogether—I was freed of the diseases and my suffering! What this means can only be understood by one who has been in a similar condition.

Since then I have been entirely free from the pain which had tortured me so long. I often fell on my knees and gave thanks for the great love, goodness, and omnipotence of God which are being revealed to us through Christian Science. Words fail to express how far above the physical healing is the spiritual awakening and inspiration which comes through this recognition of divine power! I experienced a sense of peace and joy, and also wish to state here that three years later, when our youngest child was born, the delivery was painless, whereas the former births had always been attended by great suffering. I mention this to show that the curse "in sorrow thou shalt bring forth children" will also disappear from the face of the earth. I tried to realize that God has only good things in store for His children, and thus all sense of fear which tried repeatedly to creep in was eliminated.

I further wish to tell of how I was healed of poisoning caused by an injury to the right hand, which was very much swollen and very painful and presented a highly inflamed appearance. My husband and acquaintances advised me to go to a physician, as it was believed that I might die within a few hours, but I could not acknowledge any other

Digitized by Google

power than God's; it would have been idolatry for me to do so. The error was, however, overcome by Truth; in three weeks' time the disease disappeared without leaving any trace on the hand.

I could cite many more instances of healing, and am glad to be offered the opportunity of giving this testimony. I do so with the hope that it may bring encouragement and hope to many a one who is vainly seeking for deliverance and healing, and cause them to turn to the truth which delivers from sin and all its consequences. I thank God, and am grateful to Mrs. Eddy, who had enough courage and persistence to give anew to humanity the whole truth in its purity as taught by our great Master, Christ Jesus. The Bible and *Der Herold* have become very dear to me and are a source from which I daily draw strength and comfort. Progress is slower than I expected at first, but nevertheless it is steady. The goal must be reached and all error overcome.

FRAU AUGUSTE REESE, Herford i. W., Germany.

That the power of God heals the sick, as taught in Christian Science, I have had abundant proof. Many who know little about the Scriptures find, after beginning the study of the Christian Science text-book, that the Master's words and works no longer belong to a bygone age, but are as truly available and applicable at the present hour as in his day. I wish to express my gratitude for Christian Science and my love for the one who has given to a long-suffering world this perfect Science through which may be gained the knowledge of Him "who forgiveth all thine iniquities; who healeth all thy diseases." Like many others, I did not take up Christian Science until it was the last resort. When all "other gods" had failed me, I turned to the one true God and was healed.

After more than a year of failing health, in the fall of 1907 my illness became more serious and I was confined to the bed for several weeks. Although I was under the care of a most faithful physician during all this time, I received no permanent benefit, but rather grew weaker, suffering from extreme nervousness, a very disturbed heart-action, and a serious cough. Fearing tubercular trouble, my physician advised a change of climate, in order to avoid the trying cold of February and March. The change was planned and I started for Florida, accompanied by a friend who cared for me during our stay of two months. Soon after arriving at our destination I was again confined to my bed, and a physician was called who diagnosed my trouble as a form of goiter, characterized by enlarged eyeballs and inordinate action of the heart. These symptoms were manifest in a serious degree, and in addition to these were nervousness, sleeplessness, extreme exhaustion, and great loss of flesh. I was receiving no benefit from the change of climate, and my husband came to Florida to accompany me back home, which I reached in a much worse condition than when I left it, two months previous. I was then under the care of a trained nurse for eight weeks and gained slightly, but soon all the symptoms assumed a more aggravated form, and it was then that Christian Science was brought to our attention. We immediately sought the aid of a practitioner, who commenced to treat me in September, 1908. At the end of four months I was so much improved in every way that treatments were discontinued. Christian Science had done for me that which no doctor could do, for I was free from the goiter and all of its distressing symptoms. Each day I gained in strength, and in one year I found myself well and able to endure as much as ever in my life before, and I have had no return of the former disease.

I send my testimonial to what Christian Science has done for me, that others who are suffering may know they can get help through divine Truth, and as in none of the testimonials given in our periodicals have I ever read of a healing of this disease. We have had many other proofs of the truth of Christian Science, as we have relied absolutely upon it during these years, and every ill that has come to our family has been completely overcome.

I am indeed grateful for the physical healing, and for the stand taken by my husband side by side with me in the search for the better understanding of God and man's relation to Him. This understanding is daily bringing to us peace, joy, and happiness. Our desire is to show our gratitude to God, also to Mrs. Eddy, who has shown us the way to health, peace, and happiness and pointed us to Christ, by faithfulness in the daily study and practice of this truth, and to live so "that we may be able to comfort them which are in any trouble, by the comfort wherewith we ourselves are comforted of God." I can truly advise all those who are sick or in trouble, to try Christian Science, for it brings the peace and rest which "passeth all understanding."

MRS. B. E. COOK, Ypsilanti, Mich.

This testimony, which I offer of my own free will and accord, includes the blessings and benefits received through Christian Science. When I first heard of it, about nine years ago, I was sitting by a table with cards in my hand and a bottle of whisky by my side. Its name annoyed me for a moment, but I was silent; then I asked some questions, but did not care to think of it any more. I continued to frequent bar-rooms and gambling-tables for about two years longer, and became a drunkard, which was to my wife and family the cause of much unhappiness and misery. I tried many times to overcome this condition with material means, but always failed. Longing for relief with an earnest desire, the memory of the sweet words, Christian Science, came to me every morning when I awoke, but I heeded not.

Over four years ago my brother and wife (this I witnessed) were raised from a dying condition, but I did not know what had healed them. They told me it was Christian Science, and I asked them a few questions, and their answers touched my heart. I then asked my brother the price of a Bible and of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and I gave him money to get these books for me. I did not then know what the two books contained, but I never got drunk from the day I ordered them. When I received the books I first read Science and Health, and when I had read the first thirty-five pages, I declared to myself that henceforth Truth would be my only doctor and source of supply. From that day the appetite for liquor, card playing, and gambling left me forever.

About three weeks later, when unloading some hay, my little daughter, three years of age, caught the rope when it was in motion and her hand was drawn into the pulley. She was badly hurt, but with a firm trust in the divine care, she was taken up, her hand was washed, and in a few minutes she was at her play. The hand was entirely healed in a few weeks.

In November of that same year my little boy about five years of age was skating, when the ice broke and he went into the water above his waist. Before he came home his garments were frozen, and the first day he showed a high fever. The second day it increased and he could not speak above a whisper. The third day his condition seemed very alarming, but with a firm and unceasing trust in divine power a change came; the child's eyes closed, his breath and color became natural, and soon he was enjoying a restful sleep. After about one and a half hours he awoke—well! He ate a hearty supper and has never been troubled with his lungs since that day.

Before coming into Christian Science I was a constant user of tobacco since I was a boy seven years of age. This appetite was so strong that when I lacked money to buy the weed and had a chance to steal it, I did so. Even after I became interested in Christian Science I tried several times to overcome the habit, but it was only temporary, until in June, 1911, when, in thinking how I could gain my freedom,

Digitized by Google

I remembered that the uttermost farthing must be paid, and I was willing to do this. Then there came to memory this dishonesty in boyhood's days, which disturbed me very much; but I saw plainly the way to go, so I at once wrote the man from whom I had stolen the tobacco and enclosed ten dollars, also asked his forgiveness. Soon after I had a kind letter, assuring me that it was granted, and before long the appetite began to disappear, and July 30, 1911, was the first day that I enjoyed perfect freedom. I was healed through Christian Science of that appetite, and for this and many spiritual upliftings I express my loyal gratitude to God, also to His loving servant, Mrs. Eddy.

FRED DVORAK, Exeter, Neb.

I never can be grateful enough for what Christian Science has done for me. I know it is of God, everlasting Truth. One morning I went to my uncle's to help him with some work, and after finishing it I got on my pony and went to see a friend. I was talking to him when a team of horses near by ran away, so I got on my pony and tried to stop them. I went ahead of them, but they ran over me with a disc cultivator, which cut me very severely, my right leg being cut to the bone and my face badly injured. I went to my uncle, who is a Christian Scientist, and he gave me treatment, also gave me Science and Health to read. I opened it at page 414, and after reading for some time the pain left me. My uncle took me home and I went to sleep, and when evening came I was able to do my regular work. In three days I was in the field again plowing. I was healed and not a mark was left on any place.

I have seven brothers and a sister, and they are all interested in Christian Science. We have had many demonstrations of God's power. We keep on gaining and realizing the truth of Jesus' promise, "Ye shall know the truth, and the truth shall make you free." I love the Christian Science hymns and the *Monitor*. I am very thankful to God for His love and mercy to me, also to Mrs. Eddy for her understanding of divine Love that has brought the truth to light.

NATHAN A. DVORAK, Brainard, Neb.

Before taking up the study of Christian Science, I was a chronic invalid, suffering from many ailments, most of which were said to be inherited. I had been taken to various doctors, both in London, England, and in this country, but their methods, though temporarily alleviating, never cured. These doctors gave no hope of a cure, but stated that it would be better not to worry me with schooling, as I was not likely to live to maturity.

I was always religiously inclined, and as I grew older I became an earnest member of the Church of England. The minister of the church to which I belonged was a most spiritually-minded Christian, and he would often talk over with me the parts of the Bible which related to healing. I never could understand why the commands to preach the gospel were considered important as applying to this present age, and the commands to heal the sick were relegated to the past. He would urge a stronger faith in the possibilities of healing, but would also point out that God must know better than I did what was for my good, and I must submit patiently and lovingly to His will. I tried to do this, until Christian Science was brought to my attention as a healing religion. This appealed to me, and fresh hope and courage dawned upon my thought. Its beautiful truths supplanted the blind beliefs I had so long held to, and I learned that God's will meant freedom for every one of His children, not that they should be bound by fetters of disease or sin.

Though my way in Christian Science has not been thornless, and my progress has seemed slow, yet step by step I am being led out of the bondage of disease into the freedom which Christian Science tells us is our birthright. Some of my troubles have been entirely healed; in the case of others I am better than we ever thought would be possible, and I know all will be cured, as I gain more of the truth about God and man, as taught in Christian Science. I would not exchange even my slight knowledge of this Science for anything the world could offer, and I am deeply grateful to God; also to our Leader, Mrs. Eddy, for this wonderful revelation.—ISABEL A. MADGE, Virden, Manitoba."

I send this testimony to say that I thank God every day for the realization that He is ever present. I had many ailments when I came to Christian Science,—headaches which would last two days, and rheumatism so bad that I could hardly walk, also throat trouble and a bad cough, but in four weeks I was a well woman. I wish to tell of one demonstration. We had fish for breakfast one morning and a bone got into my throat. My husband spoke to me, but I could not answer. He saw at once what the trouble was, and ran to my sister's, about a mile away, and she and her daughter came at once. When they saw me their fear was so great that they asked him to go for a Christian Science practitioner. He said he would go for any one who could help me. In half an hour after the practitioner came I could swallow as well as ever. I am about seventy-three years old, and we are living in one of the suburbs, in which I have just planted without help a large garden and am doing my own housework and sewing without help or the use of glasses. I am striving to live as a Christian Scientist should live.—MRS. AMANDA VAIL, Scranton, Pa.

It gives me great pleasure to tell what Christian Science has done for me after a year's suffering from stomach trouble. I got instantaneous relief in seeking the truth. I had a number of the best physicians of the city, and I am sure they all did their utmost for me under their own school. I also tried a noted spring whose medicinal properties are spoken of far and wide, but to no avail. My only hope seemed to lie in Christian Science. I had lost greatly in weight during my sickness and was on a very meager diet, but after taking one treatment I was able to eat anything and enjoy it and to feel good afterward.

MARSHALL M. HOOVER, Middletown, Ohio.

It was through the healing of my mother that Christian Science was brought to my notice. She was healed in ten days of an illness of two years' standing, when the doctor said he could do nothing more and advised change of climate. In my search for truth I had gone from one church to another, hoping I might realize some benefit, and at least feel that I had a sure foundation on which to build my hopes. I prayed God each night to show me the truth, and when I found Christian Science my prayer was answered. Christian Science has given me more than I ever dreamed of getting from any religion. It not only satisfied my longing for truth but has given me a demonstrable understanding of it, that I may put the truth into practice at any time, anywhere; and it does accomplish the thing whereunto it is sent, when earnestly and honestly applied. It is an ever-present help in time of need.

Through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and two treatments from a Christian Science practitioner, I was enabled to make the following demonstration. In September, 1910, we leased a large house for the school term, but before two weeks had elapsed circumstances had changed so we no longer needed it. With the consent of the owner, we tried to sublease the house, and several came to see it, but no one cared to take it. After waiting a month, self-interest suggested that we move out, but I knew this would not be doing unto our neighbor as we would have our neighbor do unto us. My husband offered the owner fifty dollars to release us, but she refused. Then came the temptation to move in case we did not rent the house before the next month's rent was due, but Mrs.

Digitized by Google

Eddy tells us that "divine Love always has met and always will meet every human need" (Science and Health, p. 494), and I knew Love would meet this need if we would only do right; so I worked along, knowing that man as the idea of Mind must reflect justice. Our text-book also says that "Love is not hasty to deliver us from temptation, for Love means that we shall be tried and purified" (p. 22).

The time came for the third month's rent to be paid, and I am grateful that with it came a willingness to pay the rent. I am happy to say that the next day after we paid the rent we had two applications for the house. We were indeed grateful to God, also to Mrs. Eddy for making it possible for us to reflect divine Love to our neighbor. We have peace, the reward of right doing, whereas, if we had listened to the suggestions of error we would not have this harmony.

Truth has healed me and mine many times and showered many blessings upon my family. I cannot express in words my gratitude to Mrs. Eddy and to all who have helped me to gain some understanding of Truth. I pray I may be as a shining light which will lead some one to see and know the way to this practical understanding of divine Truth.

MRS. LETTIE HODGES, Oakland, Cal.

[Translated from the German.]

About two years ago I came to Christian Science and was healed within a short time of lung trouble of a year's standing. In the middle of last summer I was taken with a severe attack of appendicitis, and the physician who was called in declared that the case was a serious one and demanded an operation within twenty-four hours, and that it would have to be performed the following forenoon. I however neither took medicine nor followed the prescriptions of the physician, who had been summoned at my family's request. I felt too weak to work for myself in Christan Science and therefore asked a lady who formerly had done good work for me to take up treatment. I experienced more love than I am able to tell, and words are inadequate to express my gratitude. In this instance the words became true: "The effectual fervent prayer of a righteous man availeth much." I improved daily, although the operation had not been performed, and in about two weeks' time I began to help with the housework.

In the beginning of August I took a trip to the Black Forest with my mother and one of my children. I had engaged only one room, as I did not know that my mother expected to join us, and when we arrived we were told that it was impossible to get even a little chamber, that people had to go to near-by villages every day or leave again by train, as they were unable to find accommodations. Our efforts being of no avail, a similar fate seemed to be ours. I remained quiet, denying the error constantly, and declaring the truth voiced by Christ Jesus, "In my Father's house are many mansions." I held fast to that thought, and shortly before the last train left we were offered two rooms, which of course we were very glad to accept. I felt very grateful when going to sleep in that house, and during my sojourn there I had the opportunity of helping a sick child, who was bedridden at the time when we were staying there. The mother was very much troubled at the thought that God might possibly take the little one away from her, but after I had treated the child for several days in Christian Science all pain had disappeared, although one of her legs was still shortened. The child walked with us daily into the woods and was so full of joy that we all felt happy to have her around. Since the end of the summer vacation she is able to go to school every day and learns her lessons without difficulty.

I myself had a remarkable experience about the same time. One day while we were picking berries an insect bit me, and in a very short time I discovered that the place was very much swollen and discolored. The pain became unbearable, and a physician who was called at my mother's request stated that it was a case of poisoning. For a moment I was frightened, but when I caught myself entertaining such thoughts I felt ashamed. Had not God helped me before? Why should fear now try to creep in? I then immediately recalled the words: "Resist the devil, and he will flee from you." I believe that I took a long stride through the mere fact that I resisted the sense of fear. I worked all night and declared the truth of being, and after two days the error had completely disappeared, solely through the application of Christian Science. I could tell of many instances in which I and my children have experienced good during the past two years.

Christian Science is my comfort, my strength; it has become a blessing to me and mine, and is indispensible to me at all times and under all circumstances. When I look back, the past seems like an abyss to which I would never desire to return. I believe I could not be any more without Christian Science. My desire is that the blessings which I have received from this teaching may be a comfort to others hungering after the truth, that they may find help, if they are earnest seekers. I give this testimony with a heart filled with gratitude to our beloved Leader and to all the kind people who have helped me on my way to Truth.

FRAU EMILIE KERNKAMP, Stuttgart, Germany.

In February, 1911, I was suddenly taken ill with severe pain in my side and lungs, also in my head and neck. I could not speak above a whisper, and there was considerable sense of fever. My husband called a practitioner of Christian Science, who came to me about two o'clock in the afternoon, and sat by me, as I lay on the sofa, silently declaring the truth. I feel asleep, and awoke about an hour afterward. I sat up, feeling relieved, and then fell asleep. When I woke up again, I was much better, and lay down and went to sleep again. When I woke up about half past four the fever was gone, moisture was on my hands, and I could breathe much better. Next day I was able to move without pain. In two days I was up and in the next room; in two days more I was doing my own work, and in a week was back in the shop where I supervise the making of muslin curtains. Considering the intensity of the pain, I am most grateful for the relief given by Christian Science and the speedy recovery to health. The greatest benefit derived, however, was in my consciousness; that had been confused, but during the treatment all became clear. I learned from this experience that God's idea can never be separated for a moment from the one Mind, which is God, and the consciousness of divine Love took away all sense of suffering and left me at peace.

I have had many proofs of the efficacy of Christian Science in healing sickness and discord, during several years, and am very thankful for the blessing it has brought us all.

MRS. J. S. THOMPSON, Fitchburg, Mass.

With a heart full of gratitude for what Christian Science has done for me in the ten years that I have been learning to know God as "a very present help in trouble," I give the testimony of my daughter's healing. After a labored confinement, during which physicians and nurses, using every material remedy, did their best in the kindest way, but to no avail, the effects of poison became manifest and were treated medically. But only increased fever resulted, and when certain symptoms appeared the third time both doctors and nurses said further treatment was useless, as death was inevitable in a few hours.

At this point the family decided to turn to Christian Science. A practitioner twenty-five miles distant was called by telephone, and commenced treatment soon after four

Digitized by Google

o'clock, p.m. The improvement was rapid; the purple spots disappeared, and when night came on the patient, free from fever, went to sleep and slept all night. Awaking at dawn, she asked for something to eat and enjoyed a hearty breakfast—the first solid food taken in nearly three weeks. Every hour showed a decided gain; in a week she was up and around the house, and three weeks from the date of the first treatment she rode in a buggy twenty-five miles to hear a Christian Science lecture, looking and feeling strong and well.

I am indeed grateful to Mrs. Eddy for Science and Health, which has taught me to have one God, whose arms are underneath and around us, never failing us when we lean on them.—Mrs. Addie Glass, Fitzhugh, Tex.

It is from a heart filled with gratitude for what Christian Science has done for me that I give this testimony. Christian Science was brought to my notice at a time when I seemed to have about all that one could bear, and after investigation I very soon decided it was what I needed to relieve me of a load of care, responsibility, and worry. I had gone through a Bible normal class and had been active in different branches of church work, but found all of this little comfort in time of trouble. I find, however, that Christian Science is an ever-present help in solving the problems of each day, both physically and financially.

Mrs. Eddy says in Science and Health, "Divine Love always has met and always will meet every human need" (p. 494). We have but to know the truth, and this is accomplished by studying the Bible with our text-book, "Science and Health with Key to the Scriptures." After studying this book for about two months I was healed of a chronic disease from which I had suffered all my life. I was also able to lay aside glasses which I had worn for about fifteen years. And when a loved one passed from my sight it was comforting to know that there is no separation in divine Mind. I have a greater love for mankind than I ever had before, and I long to know more of the truth of which Paul speaks in the eighth chapter of Romans, when he says, "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death."

Miss Grace E. Morris, Cincinnati, Ohio.

[Written for the *Sentinel*.]

EVER-PRESENCE.

Archibald L. Van Antwerp.

Midst the sorrow and the pain,
Midst the murk and midst the rain,
Midst the pleasure and the joy,
Giving peace without alloy—
Thou art with me!

Through the dark and troublous night,
Through the horror and the fright;
Holding, guarding, guiding me,
'Neath Thy shadow hiding me,
Thou art with me!

Be there sorrow, be there pleasure,
Be I poor or have I treasure,
Truth's rod e'er supporting, chiding,
Love divine with me abiding,
Thou art with me!

In Thy presence, now and here,
Is the love that casts out fear.
Love divine my comfort, stay,
Ever near me, now, alway,
Be Thou with me!

FROM OUR EXCHANGES.

[Dr. J. F. Carson in *Christian Work and Evangelist*.]

The program of the church does not begin, nor can it end, with philanthropy. It must include that, but simply include it. To poor, tired, baffled men and women who have been drinking at the world's empty cisterns and finding no refreshment or satisfaction, the church must open up those springs of living waters that quench the thirst of the soul. Your "social question," in its last analysis, is a spiritual problem. Back of all the unrest that disturbs our day, whether that unrest is revealed in the discontent of the poor or in the feverish quests of pleasure or of wealth on the part of the rich, is the soul's cry for God, whether men know it or not. The church must answer that cry by bringing Christ and his love to the knowledge of men. The church should engage in social service, but she may not leave out of it or minimize the spiritual element that makes social service worth engaging in. While seeking to better man's outward condition, the church must remind man of the fact of sin, the need of forgiveness, the reality of the divine life.

This prophetic call to the church of today, as voiced in the spiritual content of Haggai's message, "Go up to the mountain, and bring wood," is a call to the heights where the resources of spiritual power are found. Too much do Christian folk dwell in the valley. Valley dwelling shortens perspective, enervates energy, narrows life, makes it merely human when it was intended to be divine. "Go up to the mountain." Look upon life and duty with the mountain-top perspective.

[*Universalist Leader*.]

There are millions of people outside the church today in whose plans for life revealed religion plays no conscious part. Many of these accept in a somewhat indefinite way the principles of natural religion minus a personal God. But they live in a world of ideas which is over against, and often in acute rivalry with, all forms of religious faith which claim any unique or special knowledge of God or of eternal righteousness. From where these people live that other world is a realm of legend, myth, or superstition.

This whole situation is most unfortunate. It results in a divided spiritual life for humanity. This wound must be healed, and this abyss must be bridged, and a reconciliation must be achieved before we can hope for a world-wide revival of true religious experience. Christ is divided today as never before, and yet as never before there are those among his loyal followers to whom the situation is intolerable. There is hope in this unrest, and there are signs of promise.

[Rev. R. J. Campbell in *Christian Commonwealth*.]

That man who has done you the greatest wrong you ever endured is not what he seems either to himself or you. He is a son of God whose good is buried deep and cannot easily get free; do not bury it deeper by hating him. You already name him man; ask the Lord of glory to touch your eyes with his sacred fingers that you may see him as the image of God. That dear one who dwells beside you in your home, and whom you love so much in spite of all his faults, is greater than you know; pray for grace to see the angel hidden in the flesh. And, above all, let that vision call you to the work of filling the world with the light and love of God in the full assurance that no task that was ever yet attempted in the spirit of Christ can fail of its object. "For now we see through a glass, darkly; but then face to face: now I know in part; but then shall I know even as also I am known."

[*Christian World*.]

The man, the group, the crowd! These are three of the stages through which a movement passes—these are three successive homes which are occupied by a truth as it grows.

Digitized by Google

Before the little one becomes a thousand, he must become "two or three." It is good to remember the first beginnings, but it may help us to recall, sometimes, the intermediate stages—not to leap from the man to the multitude, but to the little nucleus formed in quietness before the days of rapid growth. The Hebrew prophets had their groups of disciples—Isaiah, Jeremiah, Ezekiel by the river Chebar, each had his faithful few; "they that feared the Lord spake often one to another" in the days of Malachi, formed only one of the many little companies of the faithful by whom, as by a "prophetic remnant," the truth of the one man became incorporated in the heart of Israel. Nor can we forget the group in the upper room in Jerusalem. There, too, we mark a pause before the great expansion of the church.

[*Outlook.*]

It is a truism which is never true to us until it is a matter of experience, that the joy of life comes not from getting but from spending, and that the supreme moment in a man's career is not when something great comes to him, but when something great goes out of him. This is a disturbing but not a dangerous age. The danger passed when the church opened its eyes and found it had been blind to great new deeds; when society shook off its lethargy and began to feel that its vast prosperity was delusive and full of peril. The quietness of a dull conscience and of eyes heavy with sleep has gone; society is awakening and looking at its task with open eyes. There are disturbing years ahead, but the hour of supreme danger has passed.

[*Continent.*]

The young man who enters the ministry saying, "I will be a preacher of power; I will be eloquent; I will write in the finest English style; I will be sought by the great pulpits; I will be known as theologian, thinker, philosopher," would better lock his pen and paper in a strong box and go with pick and shovel to work in the ditch by the side of the common man and learn what the great, toiling, suffering, sorrowing, starving world needs. . . . What the world needs today is not great preachers but preachers of power, whose power results not from what they know but from what they are.

[*Western Christian Advocate.*]

The witnesses of Christ are the miracles of salvation that he performs in the lives of his friends. Jesus had nothing to say for himself. He caused his works to show forth the nature of his mission. He virtually said to John that he must take the Messiah as he was revealed. The time for prophecy and word-sketching had passed. The kingdom had come. The part of John the Baptist was now to see what God had done, and to learn the gospel with the humblest of the new-born spiritual children.

[*Christian Register.*]

There is a great deal of applied religion in the world which escapes people's attention. Indeed, it would be difficult to decide at the present time whether there is more religion inside the churches or outside their walls; before the altars or behind the social movements of our day; kneeling with humble awe within the pews on Sunday or facing with conscious resolution the duties and difficulties of life on the other six days of the week.

[Rev. Charles E. Corwin in *Christian Intelligencer.*]

As long as a man clings to his sin and refuses the nearest known duty, his path becomes more and more obscured and he must continually have a stronger faith in the worst and not the best. So soon as he leaves his sin and takes up duty his path becomes that of the just, "which shineth more and more unto the perfect day."

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

A new pamphlet, "Christian Science Healing *versus* Mental Suggestion," by Frederick Dixon, reprinted from the *Weekly Budget*, London, England, is now on sale; 36 pages and cover, at the prices of the regular pamphlets.

For some time the postage required for subscriptions outside of United States territory has exceeded the amount added to the regular subscription price for this purpose, and an increase in rates sufficient to cover this deficiency is now deemed necessary.

Beginning April 1, 1912, therefore, the rates on all subscriptions outside of United States territory will be as follows: For Canada, *Journal* $2.25, *Sentinel* $2.45; for all other countries, except those to which the domestic rate applies, *Journal* $2.65, *Sentinel* $2.95.

Renewals for all subscriptions terminating before April 1, 1913, and received by us prior to July 1, 1912, will however be accepted at the old rates.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE: ITS RELIGIOUS PHILOSOPHY. By HON. CLARENCE A. BURRIER.

CAUSATION: VIEWED IN THE LIGHT OF CHRISTIAN SCIENCE. By FREDERICK DIXON. Also printed in Swedish.

CHRISTIAN SCIENCE VS. MENTAL SUGGESTION. By FREDERICK DIXON. Reprinted from the *Weekly Budget*, London, England.

CHRISTIAN SCIENCE: A RELIGION OF DOING. By JUDGE WILLIAM G. EWING.

CHRISTIAN SCIENCE VS. FINITE SENSE. By FRANCIS J. FLUNO, M.D.

CHRISTIAN SCIENCE: THE GOSPEL OF FREEDOM. By WILLIS F. CROSS.

CHRISTIAN SCIENCE: THE RELIGION OF THE BIBLE. By JUDGE SEPTIMUS J. HANNA.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. By PROF. HERMANN S. HERING. Also printed in Dutch.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. Also printed in Dutch, German, and Norwegian.

CHRISTIAN SCIENCE: ITS ADVANTAGE TO MANKIND. By EDWARD A. KIMBALL. A London lecture. Also printed in French.

CHRISTIAN SCIENCE: MAN'S DOMINION OVER EVIL. By EDWARD A. KIMBALL. A Harvard University lecture.

CHRISTIAN SCIENCE: ITS DIVINE AUTHORITY. By BLISS KNAPP.

CHRISTIAN SCIENCE: DEMONSTRABLE RELIGION. By FRANK H. LEONARD.

CHRISTIAN SCIENCE: A RELIGION OF PROGRESS. By WILLIAM D. MCCRACKAN. Also printed in German and in Swedish.

CHRISTIAN SCIENCE: OR DELIVERANCE FROM EVIL. By REV. WILLIAM P. MCKENZIE. Also printed in French and in Dutch.

CHRISTIAN SCIENCE: THE CHRISTIANITY OF JESUS. By MRS. SUE HARPER MIMS. Also printed in Swedish.

CHRISTIAN SCIENCE: ITS PRINCIPLE AND METHOD. By DICKSELL YOUNG. Also printed in French, German, and Swedish.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science.

FULFILLING THE LAW.
THE DIVINE NATURE.
PRAYER AND CONFIDENCE. Printed in German only.
PRAYER AND HEALING. Also printed in German.
SEEKING AND FINDING. Also printed in German and in Swedish.
MARY BAKER EDDY: HER PURPOSE AND ACCOMPLISHMENT. By FREDERICK DIXON. Printed in German only.
THE DISCOVERER OF CHRISTIAN SCIENCE. By B. O. FLOWER. Printed in German only.
CHRISTIAN SCIENCE: ITS NATURE AND PURPOSE. By BLISS KNAPP. Printed in French only.
CHRISTIAN SCIENCE: THE COMFORTER OF PROMISE. By FRANK H. LEONARD. Printed in French only.
THE PROVIDENCE OF GOOD.
UPWARD FOOTSTEPS.

PRICE, POSTPAID: Single copy, 5 cents; twelve copies, ONE ADDRESS, 55 cents; fifty copies, $2; one hundred copies, $3.50. Orders for above pamphlets may be assorted as desired.

REPRINTS

(Not printed in English)

The following reprints are published in French, German, and Swedish:—

CHRISTIAN HEALING EXPLAINED.
CHRISTIANITY AND SCIENCE.
HELL AND HEAVEN.
MAN'S UNITY WITH GOD.
OUR WATCHMAN.
OVERCOMING OF EVIL.
REALITY.
SUPPLY.
THE GENIUS OF CHRISTIAN SCIENCE.
THE GOVERNMENT OF LAW.
THE MIRACLES.
THE NATURE OF EVIL.
"THERE IS A RIVER."
WHAT IS PRAYER?

The following are published in German only:—

CHURCH BUILDING IN CHRISTIAN SCIENCE.
LOVE IS LIFE.
PRACTICAL RELIGION.
THE IMPERSONAL NATURE OF EVIL.
"THE LAST ENEMY THAT SHALL BE DESTROYED."

PRICE, POSTPAID: Ten copies, 10 cents; one hundred copies, 75 cents; five hundred copies, $3; one thousand copies, $5.

MISCELLANEOUS

BIBLES. Clarendon Brevier (01483x), heavy faced, very distinct type, Turney morocco, size, 6 1-2 x 4 3-8 inches, corresponding in size and binding to pocket edition of Science and Health. Price, $2.75.

Morocco cases, to hold pocket edition of Science and Health, *Quarterly*, and above Bible, may be had at $1.25.

Text Bible, (01501x), pica square type, Alaska seal, size, 7 1-2 x 6 1-4 inches, 1 1-2 inches thick. Specially adapted for use of Second Readers. Price, $7.25.

Our latest Catalogue containing a selected list of Bibles will be mailed free on application.

EDITORIAL COMMENTS ON THE LIFE AND WORK OF MARY BAKER EDDY. 132 pages with index. Published in two styles of binding. Prices for paper covered editions: Single copy, prepaid, 15 cents; twelve copies to one address, $1.50; fifty copies, $5.75; one hundred copies, $10; Cloth binding: Single copy, 75 cents; by mail, 85 cents; six copies, prepaid, $4; twelve copies, prepaid, $7.50.

LIFE OF MARY BAKER EDDY (New Edition). By Sibyl Wilbur. Cloth edition: 425 pages. Cloth, single copy, prepaid, $2; six copies, $10.50; twelve copies, $20; edition *de luxe*, $5. Ten per cent discount to Reading Rooms on the *de luxe* edition.

CHRISTIAN SCIENCE AND LEGISLATION. 128 pages. Single copy, 10 cents; twelve copies, ONE ADDRESS, $1; twenty-five copies, $1.85; fifty copies, $3.50.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. New Edition. A History of the Building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Illustrated; 107 pages. Single copy, $1.50; six copies, $7; twelve copies, $12.

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

The comptroller of the currency has issued an order that no national bank shall after Sept. 1 have an excessive loan. The date is fixed two and one half months in advance so that the banks which have excessive loans may have sufficient time to have them immediately reduced or paid without much inconvenience. He feels that as the law has been pretty generally violated for fifty years, it is only fair to the banks that they may have a short time in which to adjust their affairs to new conditions. To show how generally this law was violated when the limit on loans was 10 per cent of the capital prior to 1906, the call for January of that year showed that thirty-three hundred and seven, or fifty-six per cent of the banks then in the system, reported excess loans.

The Strawberry tunnel, one of the largest and most difficult pieces of engineering work the reclamation service ever has been called upon to undertake, has just been completed. With one exception this underground waterway tunnel is the largest in the world. Many hard engineering problems had to be overcome in planning it. The tunnel pierces the solid rock of one of the highest peaks of the Wasatch mountains and will enable the waters of the Strawberry river to be transferred from one drainage basin to another forty-five miles away, and transform sixty thousand acres of exceedingly fertile land, now only partially productive for lack of water, into productive farm land.

The Armour, Swift, and Morris interests, owning the National Packing Company, the so-called "beef trust," have informed the department of justice that an effort would be made to dissolve the corporation by Aug. 1. Acting on this promise, Attorney-General Wickersham agreed to hold in abeyance until that date the threatened civil suit, which, it had been announced, would be instituted in the near future.

The interstate commerce commission has ordered a general inquiry into the rates, practice, and rules governing the transportation of anthracite coal by the railroads. The purposes of the inquiry are to ascertain whether coal is mined under the authority of common carriers engaged in transporting it, and to determine whether some of the practices of the roads are unlawful.

The Appalachian commission has authorized the purchase of 30,365 acres of virgin forest land near Berlin, N. H., in the White mountains, at an expenditure of three hundred and forty-three thousand dollars. This land is to be made into a national park and to be used for the conservation of the natural resources of New England.

President Taft's veto of the army appropriation bill may prevent this year's maneuver camps of the regular army and the national guard. The bill contained an appropriation of one million three hundred and fifty thousand dollars to pay in part the expenses of the encampments.

International.

As evidencing the determination of the government in South Australia to overtake the great demand for land, and also to provide areas for newcomers to select from, there are now open for selection in various parts of the state in serially-sized blocks, lands comprising in all 201,701 acres; and in addition, those in course of survey, or about to be surveyed, aggregate 1,233,000 acres. These latter will be available as soon as surveys are complete, at intervals from two months to sixteen months hence. The lands now open and those about to be made available vary in quality from good repurchased agricultural land to less valuable areas, of which a large proportion is arable and will, when cleared at a cost of about one pound per acre, grow good crops of wheat. Areas sufficient to enable a settler to make a comfortable living for himself and family may be taken up on agreement to purchase, at prices from about five shillings per acre to about six pounds per acre, according to quality. The purchase money is to be paid within thirty years in equal half-yearly instalments, or in the case of repurchased lands within thirty-five years, the first ten payments being interest only.

The Argentine government has introduced into the House of Deputies a bill to establish a wireless telegraphic service capable of sending and receiving messages to a distance of one thousand kilometers (about six hundred and twenty-one and one half miles), from the coast of the Argentine Republic, and which shall be exclusively under the control of the state. The bill calls upon the owners of all passenger vessels to instal wireless apparatus with a capacity of at least five hundred kilometers (about three hundred and eleven miles) on ships, and grants a period of sixty days for the work to be carried out.

The *Daily Mail* says it has reason to believe that as a result of the recent conference at Malta in which Premier Asquith, First Lord of the Admiralty Churchill, and General Kitchener took part, some arrangement will be made with France to share with Great Britain her responsibility for the defense of British interests in the Mediterranean. This announcement excites the more interest in view of the recent declaration in France that that nation has adopted a "two-power" standard for the Mediterranean, the two powers being Italy and Austria.

The closing of the Dardanelles, with the losses which this event in the Turco-Italian war has inflicted on Russian commerce, has revived the idea of the construction of a waterway between Riga, the great Russian port on the Baltic sea, and Kherson on the Black sea. The route of the canal has already been surveyed by engineers. Its estimated length is seventeen hundred miles, but this will not be by any means entirely constructed canal way, for the courses of both the Dwina and Dnieper rivers will be followed to a very great extent.

The returns showing the receipts of railways in three provinces of China, namely, Chihli, Honan, and Shansi, which were affected injuriously by the recent revolution, tend to indicate that the uncertainty and dislocation produced by the revolt against the Manchu dynasty are rapidly subsiding and confidence is rapidly returning.

At a session of the international radio-telegraphic conference, a resolution was adopted suggesting that wireless operators on ships at sea reserve three minutes out of each fifteen while they are on duty to listen for danger calls.

Italy has agreed to a conference of the powers for the settlement of the war with Turkey, according to a press despatch from Rome. If Turkey is willing, an armistice will speedily be arranged.

The Prussian ministry of railways has, after an exhaustive inquiry, drawn up definite plans for the electrification of the entire city and suburban railway system of Berlin.

Involving the expenditure of some forty million pounds, the so-called small shipbuilding program has been adopted by the defense committee of the Russian Duma.

Industrial and Commercial.

"Never in the last twelve years have American shipyards been as busy as they are today, and never in that period has the prospect of work ahead been as bright," said H. L. Aldrich, president of the company which publishes *International Marine Engineering*. "Since about the first of the year orders have been placed for one hundred and ten steamships of various classes. With one exception, these are all for coastwise trade. Building or under contract in the shipyards of this country are twelve tank steamships, twenty-two or twenty-three coastwise steamships, fifteen large lumber steamships, and seven large passenger and excursion steamships. . . . The present exceptional activity dates from last fall, and it has been on the increase ever since. Much of the tonnage now under consideration or construction is a direct result of the preparations for the opening of the Panama canal."

French manufacturers of artificial silk, notwithstanding great increases in production, are unable to supply the demand. The production of the artificial silk remains far below that of the real silk. In 1912, 70,547,600 pounds of real silk were turned out by the world's producing centers, but the spinning factories where artificial silk is made, were unable to deliver more than 2,076,000 pounds. The artificial product is made out of cotton. The cotton raw material only undergoes a mechanical change and an additional process is used to make it brilliant and incombustible.

The production of quicksilver in the United States in 1911 was the greatest since 1907, the total output being 21,256 flasks of seventy-five pounds each, valued at $927,983. California was the greatest producer in 1911, with 18,800 flasks, valued at $807,740, and the remainder of the quicksilver came from Nevada and Texas. Quicksilver is consumed mainly in the manufacture of fulminate for explosive caps, of electric lighting apparatus, of scientific apparatus, and in metallurgy in the recovery of gold and silver (principally of gold) by amalgamation.

Pittsburgh iron and steel manufacturers are interested in the new method of welding steel and copper or brass as invented by Karl Schwartz of Bristol, Conn., who is in Pittsburgh explaining his discovery. He claims that his new process permits the production of the finished product at a comparatively small increase over the cost of a steel product. It is the intention of Mr. Schwartz to locate a plant in Pittsburgh.

The total payment for iron and steel mill employees in the Turtle Creek and Lower Monongahela valleys for the week ending June 15 will be more than one million two hundred and fifty thousand dollars. It is estimated that over fifty thousand men are now at work in the mills in the two valleys. This number nearly equals that of 1907, the banner year in the Pittsburgh district.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE LAW OF PERFECTION.

CLARENCE W. CHADWICK.

A MATERIALISTIC concept of perfection finds humorous expression in the words of Josh Billings: "If a man should happen to reach perfection in this world, he would have to die immediately to enjoy himself." The authoritative word for every Christian believer is Christ Jesus' inspiring mandate: "Be ye therefore perfect, even as your Father which is in heaven is perfect."

Since the so-called "natural man receiveth not the things of the Spirit of God," they being only "foolishness unto him," it is not at all strange that we should find in all Christian denominations multitudes of individuals who are ready to wage war upon Christian Science when it insists upon a present-day obedience to this law of perfection. While professing to believe all that the great Wayshower has said, his one command relating to perfection is declared to be unreasonable, impracticable, and impossible of fulfilment in this present world. It is this belief on the part of professing Christians which keeps them in bondage to "the law of sin and death" and which clogs the wheels of progress in the world of religion. The evil one or one evil need ask no other admission from a would-be follower of Christ than that the law of perfection is incapable of present fulfilment, for such an acknowledgment most effectually bars the door to the kingdom of heaven for the one who makes it, and who keeps on dreaming only of *post-mortem* attainments.

Christian Science handles this subject in such a practical manner that no person who admits the need of a progressive life can consistently reject its teaching. It begins by calling attention to the underlying fact of existence, that God is the sole creator of man and the universe, and that the only possible relationship existing between the creator and the created is one of spiritual perfection, else there is no such condition possible as an eternal kingdom of heaven or harmony. The real man being thus indissolubly connected with his creator, there must be and is a universal governing Principle or law, obedience to which law will enable mortals to "put off the old man" or carnal mind, which is enmity against the idea of perfection, and to "put on the new man;" in other words, to let that Mind be in them "which was also in Christ Jesus."

Christian Science also calls attention to the important fact that this law of perfection, being the law of the infinite, has never ceased to be operative, and consequently that its demands upon mortals are just as imperative today as ever before. This leaves mortals no alternative but to awaken to that higher order of thinking which reasons from the standpoint of one great spiritual cause, the author of that only which is spiritual and perfect, of a perfect man and a perfect universe. When it is understood that "the demands of God appeal to thought only" (Science and Health, p. 182), no wide-awake Christian can refuse to think upon this all-important subject of spiritual perfection, and he will very soon see that if his own thoughts are in opposition to the fulfilment of the law of perfection in his own daily living, there is a certain amount of self-abnegation necessary before he can find himself in obedience to God's law. He will find that the ten commandments are just as much for him as for the Israelites of old, and that he cannot escape obedience to them and reach the kingdom of heaven on earth. More than this, he will know that the sermon on the mount was preached for him just as much as for the inhabitants of Galilee, and he will be inspired to study the Word of God more earnestly and to live in closer touch with spiritual things.

In all ages gems of spiritual thought have sparkled here and there through the crust of materialism, but it remained for Christian Science to reveal and make practical to the world the Science of Christianity, the religion of God and His Christ. Nearly five centuries before Christ, Xenophon voiced this truth: "The divine nature is perfection, and to be nearest to the divine nature is to be nearest to perfection." And from the pen of an eminent writer of two centuries ago we have these words: "Christian perfection is made up of perfect repentance, perfect humility, perfect resignation, perfect hope, and perfect charity." An historian of the same period has left this inspiring sentiment: "Perfection is the denying of our own will; . . . constant resignation to the will of God, and unwearied love for our neighbor; in a word, it is that love which thinks of nothing, seeks nothing, desires nothing but God."

There is nothing in these expressions to indicate that the carnal or mortal mind will ever reach a state of perfection, that evil will ever develop into good, that impurity will ever merge into purity, that mortality will ever become immortal, but that by overcoming all which tends to obscure the image and likeness of God in consciousness, that which is spiritual, perfect, and eternal will be revealed. No thinking person would admit the imperfection of God's law. Instead, he would declare with the psalmist, "The law of the Lord is perfect." Then must follow the admission that the law of perfection is supreme, and that it is making its unceasing demand upon individual consciousness to purge out the old "leaven of malice and wickedness" and to adopt perfect thought models or spiritual mind pictures, which alone point the way to heaven.

Obedience to the law of spiritual perfection means salvation for the human race, salvation from the belief that man has fallen from a state of original perfection and is wandering upon earth without hope and without God; salvation from the belief that man is no longer under the jurisdiction of God's law, but that he is the child of disobedience and is paying the penalty for his disobedience in the experiences of sickness, sin, and death.

The law of perfection is a standing rebuke to all false theories concerning God and man. Wherever and whenever it is obeyed, healing ensues, reformation takes place, and, "behold, all things are become new." Christian Science practice is based upon perfection. It acknowledges no other lawmaker but God, consequently no other law but the law of perfection. In unison with what is termed a diseased body, the scientific practitioner recognizes the false belief or claim of a diseased mentality, and when the perfect law of

Copyright, 1912, by The Christian Science Publishing Society.

Digitized by Google

health and perfection is allowed to operate in this mentality, improved moral and bodily conditions are in evidence. This means the restoration of mind and body to a relatively normal or healthful condition, but not to a state of absolute perfection, for no such state could exist in matter. The law of perfection does not spiritualize matter, it does not inculcate belief in the spiritualization of material organs, but so lifts thought above matter that the individual who is healed in Science contemplates forever after the eternal perfection of harmonious being, wherein life is neither organic nor structural. The belief that being is organic is surrendered, and in its place is the spiritual understanding of man's eternal incorporeal existence.

Men and women who have touched the hem of the Christly garment of righteousness and thereby experienced their true healing represent types of nobler and purer manhood and womanhood, but their experience has not made them the exponents of self-righteousness, nor do they lay claim to any absolute attainments. Their restoration to what the world recognizes as normal physical health is simply the first step on the long journey from physics to metaphysics. It is the first actual putting off of the old man and the putting on of the new. It is the inflowing of that spiritual evangel with the joyful announcement: "This is the way, walk ye in it." When the law of absolute perfection has been allowed to complete its holy mission in individual consciousness, corporeality disappears and perfect, incorporeal man is revealed as the image and likeness of God.

HAPPINESS.

STOKES ANTHONY BENNETT.

THERE is nothing perhaps in connection with Christian Science which attracts more attention from outsiders than does the happiness of its adherents. On nearly every hand, this happiness is talked about, admired, and wondered at. Not long ago a business man approached a Christian Scientist and remarked:

"I don't understand Christian Science, but I must confess that its followers are the most happy and optimistic people I have ever met. It would indeed seem as if they had been able to throw off most of the troubles and cares which burden the rest of us and keep us in deep waters. And why do I say this? Well, let me illustrate. I have a friend who used to be very melancholy, unhappy, and miserable. He has a friend whom he heard give a Christian Science testimony in church, and this testimony was the means of causing him to take up the study of this Science; and in a comparatively short time he has become one of the healthiest, happiest, and most delightful fellows anywhere. I don't understand his secret, but it's very apparent that he has one, and a good one, for he's just full of happiness, and to me this possession is the best on earth."

"Well," said the Scientist, "if you have been impressed in this manner, why don't you try to find out what it is that makes your friend so happy and free? Have you ever questioned him regarding the real power back of his transformation? Have you ever asked him to divulge his secret?"

"Yes, we frequently touch upon the matter, and he always insists that it is his understanding of Christian Science which is responsible for his changed condition. It all seems very strange to me, but still I can't help believing what he says, not only because he is a faithful friend of mine, but because his word is as good as his bond in our city."

"It would appear," replied the Scientist, "that you yourself are not as happy and free as you would like to be and ought to be."

"No, I'm not," was the quick response.

"Do you think that you are even half so happy and free as your friend who once was most unhappy and miserable?"

"I dislike to say it, but I don't believe that I am."

"Then why don't you try to follow in his footsteps? Why don't you do as he did—accept a friend's testimony and go and make a personal investigation of Christian Science? There is plenty of Science literature all about you, so why not get some and give it a careful and an honest reading? You say that you are greatly impressed by the happiness of Christian Scientists; you say too that you know intimately one Scientist who credits all his happiness and freedom to his understanding of this teaching, and that you have full confidence in his statements. Don't you believe that you could be made just as happy and free as he? Don't you believe that you could find out and understand his secret if you made a real effort to do so?"

"I might, but"—and then the excuses began to come.

"You see," he continued, "I am an exceedingly busy man. My week days are all occupied with office matters which cannot be laid aside for a single moment. In the evenings my wife and I are called upon either to entertain friends at our home, or to mingle with friends elsewhere, at their homes, at the theater, the club, or the dance. When Sunday comes I am so worn out that I am absolutely good for nothing, unless it be for a quiet automobile jaunt out into the country or to some near-by town. I must say that it strikes me that Christian Science is a downright hard study, and I feel it would demand more time and effort than I could possibly give to it just now. Some Wednesday evening, or some Sunday morning, when it is more convenient for me, I am going to attend a Christian Science church service. Then I shall be better prepared to take up the study of this Science in real earnest."

The business man went on his way, and the Scientist reflected. It did not take very long, however, for the latter to see that what the business man most needed was a genuine awakening out of his material methods of thinking and doing, an awakening which would bestir him and cause him to set his "affection on things above, not on things on the earth." He had declared that to him happiness was the greatest treasure in the world, declared also that this treasure had been found by one of his close friends, and that he felt sure Christian Science was responsible for the discovery. Yet, when pressed for a reason as to why he himself did not go to search for this treasure, he asserted that his time was too much taken up with worldly affairs. His own strong admissions relative to the transforming power of Christian Science, and his own acknowledged need of its benefits, followed by his flimsy excuses for not investigating it, had seemed to embarrass him noticeably, as well they might. In the brief conversation that took place, he was forced to see, at least in a measure, just where his interests lay, and that he was practically wrapped up in matter and its functions, its allurements and pleasures; that he was quite indifferent to the demands of Spirit, God, who holds in store so much of good, of happiness, and joy for each and every one who will strive intelligently and sincerely to obey the Scriptural injunction, which says, "Ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you."

The foregoing is but one of many similar illustrations which have been presented by human history. The fourteenth chapter of St. Luke's gospel tells a story which also shows how very difficult it sometimes seems to get men to accept what will best promote their growth and bring them what they really should have. We read that "a certain man made a great supper, and bade many: and sent his servant at supper time to say to them that were bidden, Come; for all things are now ready. And they all with one consent began to make excuse." One declared that he could not attend because he had just "bought a piece of ground," and that it was necessary for him to "go and see it." Another felt that he could not be present because he had "bought five yoke of oxen," and he wanted to "go to prove them." A third, like the business man in question, was inclined to lay a part of the blame on some one else, and so his excuse was, "I have married a wife, and therefore I cannot come."

The verses which follow do not inform us that there was

Digitized by Google

any disposition whatsoever on the part of the host to postpone the supper until his specially invited friends could arrange to be present. No, indeed! And what is more, he did not even urge them to reconsider their declinations with the view of dropping all else and attending, but instead he permitted them to go and carry out the plans which they had made and which they did not want to lay aside even for an hour or two. In other words, because they had not yet been able to "prove all things" they were allowed to push on in their chosen courses, courses which they fancied would strengthen and satisfy, for they were indeed unready and unwilling to "hold fast that which is good," that which is spiritual, and, consequently, far beyond the reach and embrace and sway of so-called matter.

But who finally did enjoy the supper, the good that had been provided? Were there others at hand who, if they but knew of the feast and were permitted to partake of it, could and would come in and be thankful? Yes, and this was grandly proved when the supper invitation was made general, for many who, notwithstanding the fact that they belonged to a wholly different social class, so called, were, nevertheless, more worthy than "those men which were bidden," more ready and willing to appreciate and enjoy what had been prepared, and so were more fitted to embrace a wondrous opportunity; thus demonstrating the verity of the apostle's words, "Behold, now is the accepted time; behold, now is the day of salvation."

And who were these who came so willingly, so gratefully? Ah, they were "the poor, and the maimed, and the halt, and the blind," they whom the asserted and cruel god of matter, the very same god which was blinding the eyes of their busy brethren, had both robbed and wrecked, and who in seeming distress and despair were languishing out in "the streets and lanes," "the highways and hedges." It was these poor suffering folk who had indeed proved all things, and who were now ready to accept and hold fast that which is good.

Spiritually interpreted, the whole story shows that these disappointed and weary ones were well prepared to begin to put away worldly things, and to seek and gain a demonstrable knowledge of the perfect Father, or divine Mind, and of man as Mind's "image" and "likeness," a knowledge which would gradually establish in consciousness the kingdom of heaven, harmony, thus freeing them from the claims of so-called matter and giving to them a true realization of "the glorious liberty of the children of God."

Christian Science is today proving itself to be a "great supper," a feast of good things, spread for men and women everywhere. All who come to it in the right way, honestly and sincerely seeking "the kingdom of God, and his righteousness;" all who are really desirous of beginning to lay down material things and to take up spiritual, are privileged to partake of its never-ending bounties, and to be satisfied. Many, many people, most of whom were either poor, maimed, halt, or blind when they came, are already at this feast, and it is they who are unhesitatingly and joyously bearing living witness to Truth's refreshing, renewing, and redemptive power.

May we all who call ourselves exponents of Truth, fail not to take home this lesson, and so do our full duty as we are given to see it, allowing nothing whatsoever to stand in our way. May we at all times and in all places listen for the "still small voice" of divine Life and Love, and, hearing it, may we go forth to righteous activity, putting away each and every excuse that would tend to stifle obedience and faithfulness, and that would therefore hinder real growth and progress. In a word, may we fail not to make the best of every opportunity to heal and save and bless. Then, as we behold the wondrous might and majesty and power of God, who worketh in and through us, may we rejoice evermore that there was one loving enough, pure and holy enough, to push through the seemingly impenetrable barriers of gross materialism, and to bring forth and offer to a struggling, needy world a sure, a scientific, demonstrable understanding of God and His Christ, an understanding which, notwithstanding its divine basis and potency and grandeur, is altogether individual, thus depending for its practical application and success upon the loyalty, fidelity, and steadfastness of Christian Scientists everywhere.

"THE WIDE CHANNELS OF THE MOTHER CHURCH."

CARL H. PIERCE.

WHEN Mrs. Eddy promulgated the by-law to the effect that "God requires our whole heart, and He supplies within the wide channels of The Mother Church dutiful and sufficient occupation for all its members" (Manual, p. 44), at least one Christian Scientist thought that whereas this by-law undoubtedly told the truth, nevertheless it would be a pleasure to see the truth manifested in an actual position somewhere within the "wide channels," little realizing at the time that such opportunity is open for every loyal Christian Scientist now and every day, if one is but receptive to grasp the opportunity.

One such Scientist, however, came to realize by degrees that the word "occupation" may mean a variety of things, and that one does not necessarily need to be working in the publishing house in Boston in order to have abundant occupation; he can find it right at home, in his own thoughts and in his own church field. Then the significance of the by-law began to dawn, as it was seen that in the activities of each local field there are endless opportunities for "dutiful" labor. There are the activities as officers of the church,—as readers, as members of house, library, or literary committees *ad infinitum*. There is always the privilege of attending to the distribution of the *Monitor* and our other periodicals; there is always the privilege of calling on people who are interested in Science and bringing the truth to them; there is always the opportunity of healing the sick. As these advancing steps dawned on this Scientist, he was given the desire of his heart, to heal the sick. Then came a realization of the truth of our Leader's words, for he was truly and consciously "busy" within the "wide channels" indicated.

It is not impossible that others would like to take such a step; that they have had it in mind for many years, but that some little fear of personal incompetency or something else keeps them from launching out upon the waters where God supplies every need and meets every emergency. Frequently it is found that neglect to take the first step has failed to make clear the second. One who had been versed for many years in Christian Science once declared that he had never seen the time when he could determine where the fifth step was going to land him, and from this he deduced that we needed to look but one step in advance. We know intuitively that if each step is wisely taken, there need be no concern about the outcome. But we may suppose for example that a man, like him who took his talent and hid it in the earth, feels that he has a talent for healing the sick and would like to do this work, and yet day after day, perchance, he neglects to send out his *Monitor*, as requested on its front page. This may be his first step, and failure to utilize it may be the seemingly little thing which obscures his vision of the more advanced steps in the line of his longing.

Every step of the way is required, as we seek to fulfil our God-appointed mission. Willingness to serve the cause, in whatever capacity, at whatever time; the devotion of time and energy to right doing; the putting away of error in ourselves; the willingness to uncover error in others when it is wise to do so; the active desire to glorify God and not self; these are some of the steps, and every Christian Scientist who takes them, realizing that it is Truth which heals through man, has no difficulty in proving that God does indeed supply "within the wide channels of The Mother Church dutiful and sufficient occupation for all its members."

NATURALNESS OF CHRISTIAN SCIENCE.

MARTHA SHOPBELL.

THE longer I study Christian Science, and the better understanding I gain of its teachings, as found in "Science and Health with Key to the Scriptures," the more natural it seems to me. It is with gratitude to our dear Leader that I say this, for it has taken me a long time to see it in just this way. Although I accepted Christian Science a number of years ago, feeling that it must be the truth, because of its fruits, and I was eager to understand it, yet there long remained a lurking sense of doubt that perhaps it was not just the natural and normal thing, so prone are mortals to believe in evil rather than good. The trouble, of course, was with me. I was expecting extraordinary things of Christian Science, but as a result of study and application I have found that one of the very simple and natural things which this Science does for us is that it reveals to us our inmost thoughts. It thus shows us what there is in our consciousness that needs correcting; and often do we have occasion to marvel at this searching power of Truth, for it uncovers the most hidden and subtle faults. Things which before had almost seemed like virtues, are shown in a very different light. Then, too, the truth reveals to us the grand possibilities which lie within the reach of every one of us, —our divine inheritance—which is now available to all who are willing to accept it.

In the story of the prodigal son we read that before the prodigal arose and went to his father, he "came to himself." This is the very natural thing which Christian Science does for us; it brings us to our real selves. It shows us what we are as God's spiritual children, that God's ideas are all perfect and perfectly governed. Naturally, as this realization comes to us, we do rise above the old tendency to disease or sin which has hampered and bound us. The account given in the gospel of St. John of the healing of the impotent man by the pool of Bethesda contains many helpful lessons along this line. This man, who for thirty-eight years had been in a helpless condition, was waiting by the pool, hoping that at the right moment, after the troubling of the waters, some one might lift him in and that in some miraculous way he would be healed of his infirmities. Jesus, seeing him and knowing that he had been for a long time in this condition, said to him, "Wilt thou be made whole?" Then we discover in the answer given by this long-suffering man many of the common misconceptions as to what healing really consists of, for he answered, "Sir, I have no man, when the water is troubled, to put me into the pool." Apparently all these years he had been waiting for some human aid to lift him bodily into the pool, from which action he expected to receive a miraculous healing.

In the last part of the impotent man's answer there is also that common note of self-pity, springing from the belief that perhaps others are receiving benefits which are denied him, for he goes on, "but while I am coming, another steppeth down before me." Jesus knew that no material means were necessary, and that there was no healing power in the water, but that on the very spot where the man now lay, the realization of what man really is could come to him. Jesus therefore said, "Rise, take up thy bed, and walk." That this realization did come to the man we know, for the record says that "immediately the man was made whole, and took up his bed, and walked." The command not only was given for him to rise above this condition, but even though he had been helpless for so many years he was asked to take up his bed, which to us would mean any burdens or duties which are ours to carry, and to know that our progress comes with obedience. Today Christian Science has come, bringing this same healing truth, and bringing it in such a form that every honest seeker may apprehend and be benefited spiritually as well as healed physically.

TRUE INDEPENDENCE.

WILLIAM BEARD.

As I sit quietly at home on Independence day, reading and otherwise enjoying my freedom, I am reminded that we as Christian Scientists have even greater cause for gratitude than we have as ordinary citizens. In addition to having been released from the political bonds imposed by a personal ruler, we have been freed from a much greater bondage, the bondage of sin, disease, and death, imposed by ignorance of man's "inalienable rights" (Science and Health, p. 106). At a time when humanity was well-nigh overpowered by these heavy burdens, our great Exemplar came on earth and showed mankind how they might be free from all these things. He demonstrated that the laws under which they were laboring had no power other than that which they themselves gave to them; he destroyed sin, healed disease, and overcame death, in support of his claims, and said that men in all times to come could do the same if they believed on him. He also said they might accomplish even greater works than he did, and gave them the final benediction, "Lo, I am with you alway, even unto the end."

For several hundred years, these commands were heeded and with success; but again men began to follow other gods, and finally seemed to lose sight of all that had been given them, till, within the past half century, a woman rediscovered these blessed truths and gave them to suffering humanity again. So positive was she that she had rediscovered the truth, that she stood calmly alone amid all the jeers and sneers of the world. She had, at first, no one to hold up her hands, but she stood in the strength of this great truth until sufferers began to reach out after it like drowning men, and when they were saved others followed, until finally hundreds of thousands stood at her side helping her to proclaim to the world that we have the truth which makes men free.

This great multitude has been freed from bonds such as no earthly hand could remove, and they celebrate every day as one of independence, and they are realizing that each day brings with it greater freedom; that God's kingdom has come, and that divine Love is ever present: that both ruler and subjects are ruled and governed by divine Principle, "the same yesterday, and to day, and for ever;" unchangeable and eternal. It is for these things that we as Christian Scientists have boundless cause to be grateful. We have been shown how we may be free and how we may begin to attain that condition which we are commanded to strive for in the words of Jesus, "Be ye therefore perfect, even as your Father which is in heaven is perfect."

[Written for the *Sentinel*.]

"GRACE FOR TODAY."•

NEMI ROBERTSON.

GRACE for today, O Love divine,
To understand and love Thee more,
To yield the mortal will to Thine,
Denying self that presses sore.

Grace for today, Thou Love divine,
The sick to heal—the hungry feed;
Blot out all fear—let Thy light shine
With tender warmth on each one's need.

Grace for today, Thou Love divine,
With patient steps to follow him
Whose nature pure, so like to Thine,
No wrong could stain nor sorrow dim.

Grace for today, O Love divine,
So when at eve alone with Thee
My waiting heart may be a shrine
For that sweet call: Abide in Me.

• Science and Health, p. 17.

SELECTED ARTICLES.

[Frederick Dixon in *Newcastle Weekly*, Newcastle, England.]

The ministry of Jesus was devoted to acquiring for himself, and so for humanity, that absolute knowledge of absolute Truth which was to make the world free. He was the Christ, in the peculiar sense that he knew more of God, more of Truth, than any other man, and, possessing that knowledge of spiritual law, was able to demonstrate it more fully than any other man. It was because of his knowledge of spiritual law that he was able to perform what are known as the miracles, for the miracle, so far from being a violation of law, is the object-lesson in demonstration of the understanding of law. The Greek words translated "miracle" in the New Testament have not, and never have had, any supernatural significance. They mean sometimes an act of power, and sometimes a sign or proof. To the people of Palestine, sunk in a belief in material law, they were acts of power of the most transcendental kind; to those capable in any way of grasping Jesus' teaching with respect to spiritual law, they were indeed the signs or demonstrations of the absolute truth of his teaching.

It has been said that Christian Science lays too much stress on physical healing. Christian Science lays no stress on physical healing that is not laid on it in the New Testament. Jesus used the healing of physical disease as the simplest means of convincing his listeners of the truth of his gospel or good news. Mrs. Eddy, acknowledging Jesus as "the way," has used the spiritual healing of physical disease in exactly the same manner. Nevertheless, she has written, on page 150 of Science and Health: "Now, as then, signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin,—to attest the reality of the higher mission of the Christ-power to take away the sins of the world."

A great English philosophic writer has said that Jesus' therapeutics were spiritual. This is true, just as true as that the pathology was mental. Nevertheless, this writer, faltering in the application of his own argument, has failed to see that, if there is a spiritual law, the miracles of Jesus were not supernatural, but supremely natural, and has taken refuge in an attempt to reject the more remarkable of them as an aftergrowth of religious superstition. As a matter of fact, Jesus raised the dead by a fuller understanding of the law which enabled him to heal the sick. He had grasped the all-important fact that causation is spiritual.

In learning this, Jesus put aside the law of material gravitation, centuries before it was discovered by Newton, and walked upon the water, just as he demonstrated the nothingness of the theory of space by bringing the ship to the other side of the lake instantaneously. He fed the multitudes with a few loaves and fishes, because he understood that substance was spiritual and mental, the faith, as the great Christian philosopher Paul puts it, in things hoped for. In Jesus' own case, faith had given place to knowledge, and so he was able to demonstrate the spiritual truth of every problem which came to him, instead of, like Paul, raising Eutychus to life one day, and failing to rise superior to his own troubles another day.

[Editorial in *Nashua* (N. H.) *Telegraph*.]

The supreme court has given a luminous setting forth of the grounds for sustaining the will of Mrs. Eddy. Upon the facts before the court a valid trust was created by her bequest, and although the legal right of further challenge is conceded in the possible amendment of the plaintiff's petition, it is altogether unlikely that any further facts can be laid before the court that will change its decision. The counsel for the plaintiff may be credited with the effort to leave no stone unturned for the breaking of the will, and if the application of the trust fund was illegal, the demonstration of this flaw would not have been weakly presented. From the common-sense standpoint Mrs. Eddy had the same right to provide for the propagation of her faith after her death that she enjoyed while she was alive. As the court remarks, her legal right to teach was not ended by her death. There is no legal restriction of any belief. It may upset gravity, but not the law to deny the attraction of bodies to the earth. Christian Science may differ from all other science without exposing itself to any prohibition. It is only when the application of a belief in practice runs counter to the common or statute law that any arm of the law will intervene as a bar.

There is nothing immoral in any tract of Christian Science. Many women have been founts of inspiration more objectionable than the revelations of Mrs. Eddy. If there was not a mingling of truth and comfort in her assertion of mental influence, it would be impossible to account for the growth of her following, in an intelligent state of this country. The Christian Scientists are to be credited also with general accord in compliance with the requirements of the law touching the only point in which their views risk conflict with the law, the treatment of diseases.

[Editorial in *Los Angeles* (Cal.) *Journal*.]

Mrs. Eddy was the founder of the church to which she left the bulk of her fortune, and nothing less was reasonably to be expected than that she would bequeath her fortune to this splendid organization which in its teachings has proven itself to be a true apostle of the Christ. It was in the work of founding the church and establishing it on a firm and lasting basis that her wonderful powers as an interpreter and teacher of the Scriptures became known to the world. Through the reputation thus earned and merited, she became enabled to accumulate, in the sale of her writings, the principal portion of her fortune. Her heart and mind were in complete sympathy with the gigantic project, the immense labor necessary to the realization of the successful issue of which she devoutly and gladly took upon herself as her life-work. Therefore all who understood the great depth of her spiritual nature, and all who appreciated the sincerity of her motives and believed that she labored in the cause of man's true amelioration, were confirmed in their respect for and in their faith in her by the fact of her bequest to the church, and all such will be glad to learn of the court's decision sustaining her will.

It is, distinctively, a world-gain that the large fortune donated by her to the Christian Science church should be allowed to go as she purposed it should go. Stripping the judgment of all prejudice in estimating the value of her services to humanity, leaves the conviction clear and compelling that the world has profited in no small measure in the work and in the example of her pure and exalted life. As time goes on, the immense value to humanity of her efforts in the direction of elevating the religious sentiment of the age up to the plane of highly advanced intellectuality, will be better and better understood and appreciated; and in the universal spread and the general acceptance of her teachings will in the end be perceived the complete vindication of her unselfish, unyielding, and intelligent devotion to the cause of the true Christ. After all, her faith is, and the faith she strove to inculcate is, in effect, nothing more than the taking of Jesus at his word.

[Editorial in *South Pasadena* (Cal.) *Record*.]

A copy of *The Christian Science Journal* for April has just come to our desk. In this connection we wish to state, in answer to whispered criticisms concerning the publication of extracts from *The Christian Science Monitor* in our columns once a week, that we are ready to give space to whatever movement is doing good for humanity, and we class Christian Science in this category. And further, we call

Digitized by Google

attention to the fact that we publish once a week—whenever we can get the copy—the sermon of one or more of our local ministers. The Christian Scientists have no preachers, and in lieu of sermons we publish extracts from their official organ. The April *Journal* contains a roster of churches and practitioners in practically every country on the face of the globe, which is taken to mean that there must be merit in their teachings, else the movement would not have spread so thoroughly over the universe.

[From *Boston* (Mass.) *Herald.*]

There is no prettier spot along Huntington avenue than the grounds owned by the Christian Science church. The green grass, closely cut, dotted here and there with flower beds, gives one a feeling of restfulness. The sight is a pleasing contrast to the long line of brick structures on both sides of the broad thoroughfare.

[Alfred Farlow in *American Israelite*, Cincinnati, O.]

An article entitled "Bible Sanity" raises the question as to whether the Scriptures teach that God is the creator or sender of evil. It is well to consider first the nature of God, which includes an understanding of the method and nature of His creation. Every question as to cause and effect should be answered according to such a fundamental proposition. St. John, assuming that God is infinite Spirit, Mind, declared that "all things were made by him; and without him was not any thing made that was made." In Genesis it is stated that God beheld His finished creation, "and, behold, it was very good," and that man was created "in his own image."

Thus the Scriptures harmonize with the generally accepted scientific truism that "like begets like;" that, since God, Spirit, Mind, good, created everything "after his kind," creation must be spiritual and good. The evidence of the material senses may discredit this proposition, but the fact still remains and we adhere steadfastly thereto, in keeping with the Scriptural teaching, "Yea; let God be true, but every man a liar," for the question in Science is not what seems but what is. Evil, being no part of the "very good" things of God, has no deific hence no accredited standing. It must therefore have only a seeming and not a real existence.

Christian Science does not deny that evil exists in erring human experience, in what Solomon called "the error of life," and that therefore it cannot be ignored but must be grappled with and overcome, even as a false belief must be destroyed by the exercising of one's understanding of the truth. This is in keeping with the Scriptural teaching, "Ye shall know the truth, and the truth shall make you free."

[David Anderson in *Church of England Messenger*, Melbourne, Aus.]

Christian Scientists will agree with your contributor in regarding evil as "an evidence of want of harmony in development," and also in his statement that "if the existence of evil is recognized, it postpones indefinitely the hope of the perfection of society," but they join issue with him in his assertion that in Christian Science is to be seen "an impudent attempt to ignore the fact of evil." In Christian Science no attempt of any sort is made to ignore evil and its evil effects. It is true that Christian Scientists regard both of these mortal experiences as unreal, but it is important thoroughly to understand and bear in mind what they mean by unreality. To the Christian Scientist that only is real which is God-created and eternal; and as God is unchangeable and His creation all "very good," evil is manifestly no part of that creation. Good cannot produce evil, and the unreality of evil is a corollary to the omnipotence of good. That which is eternal is indestructible, and if evil were real it would be indestructible. That which, in personification, Jesus characterized as "a liar, and the father of it," can have no place in God's creation.

Your contributor admits the unmistakable healing of Christian Science within certain limits, but the Christian Scientist remembers that there is no limit to infinity, and the omnipotence of God is infinite, otherwise it is no omnipotence. With regard to his positive assertion relative to cancer and broken bones, this critic is referred to a book dealing with Christian Science as a religious belief and a therapeutic agency, by a former editor of the *Twentieth Century Magazine*, who is not a member of the Christian Science fellowship, but who is a lover of fair play. *In that* book he will find particulars of many cases of organic disease healed through Christian Science, with all details necessary for verification.

The critic, again on his own authority, limits the scope of Christian Science to "respectable persons, not very strong in character, whether for good or evil." One wonders just exactly how many Christian Scientists he knows. But he apparently does not know that Christian Science numbers in its ranks clergymen of his own and other denominations, doctors both of law and medicine, university professors, newspaper editors, school-teachers, and hard-headed business men, some of whom may possibly be the critic's equal in strength of character and ability to judge of what is good for their spiritual and intellectual welfare. It is not necessary to follow your contributor in his effort to bracket Christian Science with Socialism, but every Christian Scientist is at one with him in his conclusions that "the hope of every scheme for social betterment lies in its alliance with Christianity," and that "human wisdom without the divine grace can only lead to most disastrous failure."

[Frank Bell in *Simpsons' Leader*, Kittanning, Pa.]

It is cheerfully admitted that Christian Scientists may look upon various vital questions quite differently from our friend. Some of us doubtless have ideas about God, man, the universe, life, etc., which this critic could not accept from his present point of view. That this is not peculiarly true of Christian Scientists, however, is manifest from the fact that hundreds of creeds and sects, each with a more or less satisfied following, exist throughout the world. We are all making progress, except, perhaps, some individuals who have conceived it to be their duty to discourse to the world on the shortcomings of their neighbors' convictions instead of demonstrating the practical value of their own.

Science and Health contains an entire chapter on the subject of prayer and another chapter on the atonement. These chapters have disclosed to thousands of earnest seekers the way by which they might solve the doubts and uncertainties of years, a practical method by which they might "prove all things" and "hold fast that which is good." A religion which proves itself and asks no man to believe that which it cannot enable him to demonstrate to his individual satisfaction, Christian Science is in accord with the frank, intelligent, progressive spirit of the age. Its manifest fruits include health, holiness, brotherly kindness, temperance, meekness, integrity, efficiency, good citizenship. Its adherents, though yet acknowledging many shortcomings, are invariably better with it than they were without it, for it works only good.

The fact that "throughout the civilized world men and women have been lifted from states of sin and suffering and restored to useful and honorable activity through the blessed ministry of Christian Science," is not inconsistent with any of the affirmations of Christian Science. On the other hand, the fact that good works such as these could not possibly result from the jumble of fantastic inconsistencies which this critic has described as Christian Science, should convince your readers that the description is

Digitized by Google

incorrect, and this should inspire many of them to examine into the subject at first hand instead of taking the word of somebody else concerning something so important to their individual well-being.

If one wanted a lucid understanding of mathematics, one would scarcely accept the views of an individual who avowedly professed to believe mathematics to be founded on ignorance and expressed in terms of confusion. Likewise, persons who wish to know what Christian Science is will study its text-book and inquire of those who understand its teachings.

[Harry L. Rhodes in *Topeka* (Kan.) *Capital.*]

Christ Jesus said that John the Baptist was "a burning and a shining light: and ye were willing for a season to rejoice in his light. But I have greater witness than that of John." "I am the light of the world: he that followeth me shall not walk in darkness, but shall have the light of life." Christ is "the true Light, which lighteth every man that cometh into the world."

Divine Love sent Christ Jesus into the world that the world through him might be saved; and as we recognize in him the perfect manifestation of God and allow him to take possession of the human consciousness, "the old man with his deeds" disappears and we "put on the new man,"—the man of God's creating. When man awakens to a higher sense of his moral obligation, he will be drawn to this Christ-ideal, allowing nothing but God's likeness to abide in his thought.

Christ stands today at the door knocking for admission, and as we open the door to receive him, we will find only that which expresses good. As darkness vanishes before the light, so the dismal objects of the human senses disappear and give place to the spiritual sense which expresses hope, faith, and love. "If a man love me, he will keep my words: and my Father will love him, and we will come unto him, and make our abode with him."

Mrs. Eddy says in "Science and Health with Key to the Scriptures": "What we most need is the prayer of fervent desire for growth in grace, expressed in patience, meekness, love, and good deeds. To keep the commandments of our Master and follow his example, is our proper debt to him and the only worthy evidence of our gratitude for all that he has done" (p. 4).

[Olcott Haskell in *Fresno* (Cal.) *Republican.*]

A clergyman, as reported, says Mrs. Eddy tries to tell us that the mind is God. Mrs. Eddy has nowhere made such a statement, but on the contrary she repeatedly affirms in her writings that the mind, if by this is meant the sinful human mind, is the very opposite of God; and she further explains in the Preface to her book Science and Health, that while various incorrect writings on mental healing regard the human mind as a healing agent, yet "this mind is not a factor in the Principle of Christian Science" (Pref., p. x).

The Old Testament describes God as the Almighty, and He is referred to in the statement of Moses as "I AM THAT I AM." The children of Israel recognized God as a lawgiver; but Jesus awakened human consciousness to the loving fatherhood of God, and St. John states that "God is love." Christian Science gives expression to this Scriptural teaching, where it defines God as "incorporeal, divine, supreme, infinite Mind, Spirit, Soul, Principle, Life, Truth, Love" (Science and Health, p. 465).

In the tenets of Christian Science (Science and Health, p. 497) are found these statements:

"As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life."

"We acknowledge Jesus' atonement as the evidence of divine, efficacious Love, unfolding man's unity with God through Christ Jesus the Way-shower; and we acknowledge that man is saved through Christ, through Truth, Life, and Love as demonstrated by the Galilean Prophet in healing the sick and overcoming sin and death."

While we agree with our critic that apparent success in the performance of "wonderful works" is not of itself a guarantee of the correctness of a doctrine, yet it should be remembered that when John the Baptist sent to Jesus to inquire if he were the Christ, Jesus referred to his works of healing; and again, he left this test to be used in all time to come: "Ye shall know them by their fruits." Christian Science shows the unreliable nature of evidence gained through the physical senses, yet it by no means teaches that the universe is unreal; on the contrary, it shows the importance of dropping our misconceptions of life and reality and of dealing with that which is truly permanent. Concerning man's ability always to discern the facts of the universe in which he lives, Mrs. Eddy says: "Sight, hearing, all the spiritual senses of man, are eternal. They cannot be lost" (Science and Health, p. 486).

[C. R. Munro in *London* (Ont.) *Advertiser.*]

The statement of a clergyman in a recent sermon that a study of the Bible would keep men away from such errors as Christian Science, etc., requires some comment. Mrs. Eddy, writing in the Christian Science text-book, "Science and Health with Key to the Scriptures," says, in speaking of her discovery of this Science: "The Bible has been my only authority. I have had no other guide in 'the straight and narrow way' of Truth" (p. 126). The first tenet of The Church of Christ, Scientist, is: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life" (p. 497). One of the first and most noticeable effects of the teaching of Christian Science on its students is their increased love and reverence for the Bible, and the greater diligence with which they study it. Many who used to look upon the study of the Bible as a hardship, now find it one of their greatest pleasures, because of the light thrown upon its truths by Christian Science, which proves indeed that the Word of God is a "sufficient guide" in all the affairs of life. Surely a teaching which produces these results cannot be such an "error" as our critic seems to think. Certain it is that a general study of Christian Science would bring about the very condition he wishes for, namely, a greater study of the Bible.

[Written for the *Sentinel.*]

THE STREET OF GOLD.

N. F. HOPKINS.

LED at our daily tasks,
Led when our tasks are done,
By one unerring Mind
From morn to set of sun.

Into the paths of peace
Now and forevermore;
All doubts and fears laid by,
All fruitless wrestlings o'er.

To work, to wait, to trust,
Ever Love's hand to hold;
This is the gate of pearl,
This is the street of gold.

Led at our daily tasks,
Led when our tasks are done,
By one unerring Mind
To victory bravely won.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

[Reprinted by request from the *Sentinel* of Sept. 24, 1904.]

"TESTIMONIES OF HEALING."

We are in receipt of a letter from a friend, a Christian Scientist, who calls attention to the unsatisfactory nature of the subject-matter and character of some of the testimonies given at our Wednesday evening meetings; "testimonies" which do not conform in any manner to the rules of evidence, and which fail to carry conviction to the sincere seeker for truth who, for the first time, upon the solicitation of some friend, has attended one of these meetings. We regret to say that there is considerable justification for this complaint.

The chief trouble with such talks as our friend refers to, is that they are what lawyers call hearsay testimony, and as such they would be ruled out of any court. What the inquirer wishes to know is that some person with whom he is brought into personal contact has been healed. A statement that some person of whom the speaker has heard through some other person has been healed by Christian Science, does not carry much weight with the man who is investigating, neither does the account of cases in which the speaker has acted as practitioner. The most valuable and helpful testimony is that of the persons who have been healed, and if those who speak at the Wednesday evening meetings will bear this in mind and express themselves accordingly, much will be added to the usefulness of the meetings, and the reasonable demands of the investigator will be met.

In this connection, we recall the case of a prominent lawyer who was almost persuaded in his own mind to take Christian Science treatment, but prior to doing so attended a testimony meeting in one of the large cities. It so happened that not one of the persons who spoke at this meeting told of his own healing: one told of the healing of a person living in another city, others told of remarkable cases which they had heard of, still others preached and exhorted, but during the entire time devoted to testimonies no one made a statement which he could accept as conclusive, or within that definition of evidence which he had been taught to use in the practice of his profession. Next day in recounting this experience to a practitioner he said that so far as the meeting was concerned not one word had been spoken which proved to him that any one in that great congregation had been healed by Christian Science, but, fortunately, he had entered into conversation with a gentleman who was in attendance at the meeting, and who, during their conversation, gave the particulars of his own perfect healing through Christian Science treatment of the effects of a wound which several years of medical treatment had failed to reach. This conversation had done the work which the meeting had entirely failed to do, and the lawyer was willing to trust his case to Christian Science.

In conclusion, let us urge upon those who wish to benefit their fellow mortals at these meetings, that the best thing any one can do is to give a concise and conservative account of his own healing, also to give this account in words which may be understood by the casual hearer who, perhaps, has known nothing of Christian Science other than its name. This is something which every Christian Scientist may do, and in the doing of it, more will be accomplished for humanity than is possible by recounting the experience of others, or by the utterance of words unsupported by works.

Archibald McLellan.

THE BIRTH OF A NATION.

In the prophecy of Isaiah we find this question, "Shall the earth be made to bring forth in one day? or shall a nation be born at once?" Then there follows the cheering response from the spiritual side: "Shall I bring to the birth, and not cause to bring forth? saith the Lord." We may well ponder these sayings at this hour when the natal morn of a great republic is celebrated with rejoicing, for which none can deny there is some just cause. Is it not indeed true that underneath the noisy demonstrations, in spite of them, perhaps, the vital fact which at the beginning of its history brought forth this great republic makes strong appeal to all its citizens—when they take time to think? Well may each ask himself what this nation—any nation—stands for, and then inquire of the muse of history whether anything worthy of the name has ever been realized in human experience.

The wise man said long centuries ago that "righteousness exalteth a nation." He might have said that it constitutes the nation, for unrighteousness would inevitably disintegrate and destroy any state. Truly may it be said of this country, in the words of the poet,—

> Here's
> A crowd to make a nation!—best begin
> By making each a man, till all be peers
> Of earth's true patriots and pure martyrs in
> Knowing and daring.

Mrs. Browning, who said this, also said, "If patriotism means the flattery of one's nation in every case, then the patriot, take it as you please, is merely a courtier." The one who talks most of his country's greatness must take heed that he is not attempting to build upon its strong foundations the "wood, hay, stubble" of selfish and ignoble purposes which would rob posterity as well as the present of the priceless heritage of past achievements. Here we need to remember also that the nation which attempts to live upon its past, however glorious that past may be, is entering upon a period of decadence which can be arrested only by the firm determination to

> Act, act in the living present!
> Heart within, and God o'erhead!

There never lived a purer patriot than Jesus of Nazareth, he who insisted that as men seek "first the kingdom of God, and his righteousness," all things which are needful under present human conditions shall be "added." On the part of mortals we see, however, a very general determination to seize all the other things within reach, quite forgetful of the fact that men and nations alike lose their way unless they begin every enterprise with the righteousness which exalts both, and keep it well in view at every step of the way. If we ever forget what we owe to our country it will be because we have forgotten the demands of God's law which bases all right law, and this would inevitably paralyze one's energies until he awakened to Truth and responded to its life-giving power.

Christian Science is doing much for all the nations of the earth in showing that the loftiest ideals are really the most practical, and that we need not wait long and wearily for their realization. God does not give a divine idea and then withhold the mental and spiritual strength to bring it forth. The healing work of Christian Science proves that good is natural and its opposite unreal; hence we find that in many cases evil habits and disease disappear as soon as the truth is recognized, since these are no part of man's being. That the truth can and will do no less for the nation than for the individual is certain, and it rests with Christian Scientists to prove this by each one doing his part. Mrs. Eddy says (Miscellaneous Writings, p. 235): "This movement of thought must push on the ages: it must start the wheels of reason aright, educate the affections to higher resources, and leave Christianity unbiased by the superstitions of a senior period."

PATRIOTISM.

THE condition of public thought today, as indicated by the general unrest of the people of the United States and many other countries, offers a forcible suggestion that nothing is more needed in all the world than a nobler concept and practice of patriotism. Despite all the trying experience imposed upon us by our modern patriot days, we all know that none but a cynic could have said that "patriotism is the last refuge of scoundrels;" that the sentiment which is usually so unfittingly expressed has brought a glint of light even to the darkest days of human history, and that he indeed is "little to be envied whose patriotism would not gain force upon the plain of Marathon."

Were the scenes of all past heroic deeds duly marked, the sun would never set on these crowded monuments of manliness, and yet who that has studied human history and is acquainted with human impulse can fail to realize how generally patriotism is tainted with some form and degree of selfishness, how narrow it is in its vision and hope for good, how wholly unlike that genuine all-inclusive and lend-a-hand spirit of brotherhood, that desire for all-good-for-all, which ever impelled the Master, and which finds such tremendous reemphasis in Christian Science.

To rejoice over one's possessions of good, and to keep ever green the memory of the struggles, the sacrifices, and the achievements which have insured the stability and perpetuity of these possessions, is indeed praiseworthy, but if my gratitude and enthusiasm is thoughtful only for the liberty and well-being of "me and mine," if it has little regard and less longing for the well-being of all mankind, then its unchrist-likeness and unideality appear. I have not yet attained that larger view without which my show of patriotism is but a parody, an expression of local clannishness, perchance, which at its best is but a sense of narrow nationalism.

To illustrate, the thought of the many respecting emigration is considerate only for those and their progeny who are said to have made, and who therefore as it is averred rightly own, the country. It has no interest in the possibilities of bringing freedom and opportunity to the millions who are enslaved by ignorance and want. It would rule out, and consign to perpetual poverty and degradation, those who have an inalienable right to the limitless good which selfishness is forever claiming as an exclusive possession. To be considerate for the limits of the nation's possible assimilation is right and just, since otherwise the good of all would be imperiled; but apart from this, any spirit of exclusiveness, of private appropriation, is unpatriotic because it is prompted by selfishness; it is wholly unchristian.

Christian Science knows no brotherhood that is not universal. Its thought of God and of man reawakens that sense which blossomed so fragrantly in the early church, and which found its normal expression in the love of St. John and the democracy of St. Paul. There is no true patriotism apart from the rule of that Love which is "universal in its adaptation and bestowals" (Science and Health, p. 13), and the seething turbulence of our times will find no abatement until divine Love is voiced in word and deed by those who profess to follow Christ.

True patriotism forever demands justice for every man, woman, and child, and that richness of privilege which measures the bounty of Love's provision. It knows no kin or country limits to its aspiration for good, and he alone who practises its precepts is finding the largeness of Love. The true patriot is the Christ-man.

JOHN B. WILLIS.

NOTICE.

It has been found necessary to postpone the date when copies of the German translation of Science and Health can be delivered, until some time in July, owing to the amount of labor involved in the composition and proofreading.

AMONG THE CHURCHES.

SAN FRANCISCO, CAL.

For some time past the overcrowded condition at the Sunday services, and especially the Wednesday evening meetings, of First Church of Christ, Scientist, in San Francisco, has been quite noticeable, and was freely commented upon by regular attendants and the public at large. To relieve the situation and meet a very evident need for another Church of Christ, Scientist, in San Francisco, a special meeting of members of First Church was called on Feb. 23 last, at which a resolution was adopted recognizing the urgent need and recommending the immediate organization of Fourth Church, with the further recommendation that it ultimately locate its meeting-place in the Richmond district of San Francisco.

A permanent organization was effected March 19, 1912, by the adoption of by-laws and the election of a board of directors and officers. As no suitable meeting-place was available at present in the Richmond district, it was voted to rent Elks hall at 540 Powell street temporarily, until arrangements could be made. The first Sunday service of Fourth Church was held March 31, and was most harmonious. The hall was filled to overflowing, the vestibule and stairs were crowded with people unable to get seats inside, and between fifty and one hundred willingly stood throughout the service.

Steps have been taken to establish an attractively furnished reading-room at 4295 California street in the Richmond district, and arrangements are also being made to conduct a Sunday school in the same building in which the reading-room is to be located. The reading-room will be open to the public from two to four and seven to nine p.m., with the usual exceptions of Wednesday evenings, Sundays, and holidays, and the Sunday school will convene at half past nine Sunday mornings.—*Correspondence.*

MUSKOGEE, OKLA.

The members of the Christian Science church at a meeting held Tuesday night [May 7] made the preliminary arrangements toward the erection of a new church at Seventh and Court streets, where the present place of worship stands. The new church will be a frame structure with a seating capacity of about five hundred. It will cost three thousand dollars or more and will be completed entirely free from debt. It is expected that the church will be finished within a very few months.

The Christian Science church has had a remarkable record since its establishment here about six years ago. With only a very small membership at the time of its organization the church has bought and paid for the valuable lot at Seventh and Court streets and the modest building in which the membership now worships. The money for the erection of the new church building is promised and the church-membership will not incur a cent of debt for its construction.

Times-Democrat.

DAVENPORT, IOWA.

First Church of Christ, Scientist, is to erect a new forty-thousand-dollar church edifice at the northwest corner of Kirkwood boulevard and Grand avenue, the contract having been let yesterday [May 8]. Work will be commenced immediately and the building will be completed by fall. The edifice will be of stucco construction. It will be one hundred and twenty by ninety-four feet in dimensions, and will include in addition to the large auditorium and Sunday school room, special rooms for directors' meetings, readers' rooms, cloak rooms, etc. Over seven hundred can be seated in the auditorium, which, however, has no gallery. The Sunday school room also has a capacity of several hundred.

Democrat and Leader.

THE LECTURES.

ST. LOUIS, MO.

Judge Clifford P. Smith, in his lecture on Christian Science, given at First Church of Christ, Scientist, April 22, was introduced by Mrs. Julia W. Thomas, who said:—

It has now become hardly necessary to define the purpose of these lectures on Christian Science. In character they may be said to be educational, and during the years since the board of lectureship was first instituted, so well have the lecturers done their work that to a great extent ignorance has been enlightened and prejudice destroyed. Many of the friends who now attend these lectures know that they are blessed opportunities to learn more about Christianity in its various applications to human need. And so it has come about that the lecturers have done a healing as well as an educational work, for they have comforted many sad hearts and restored not a few sick bodies by bringing again the gospel of good tidings, of peace on earth and good will to men, and the assurance that "now is the accepted time; behold, now is the day of salvation."—*Correspondence.*

SANTA MONICA, CAL.

The Christian Science lecture by Virgil O. Strickler was well attended last night [April 25], and in the absence of Mayor Dow, his secretary, Frank L. Edinborough, officiated in his stead. Mr. Edinborough said in part,—

I imagine that many of this audience are, like myself, not members of the Christian Science church, but I hope that we have lived long enough to have learned the valuable lesson of not passing censorious criticism upon ideas and principles that we have never taken the trouble to investigate. It should not be difficult for the lay mind to understand the philosophy underlying this faith, when we remember the words of Christ to his disciples, "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." So let us, with open hearts and unprejudiced minds, listen to the message that is to be delivered to us by the speaker of the evening, believing as all true believers must believe, in the ultimate triumph of truth.—*Santa Monica Outlook.*

WALLA WALLA, WASH.

Tuesday evening, April 23, a lecture on Christian Science was delivered by Francis J. Fluno. He was introduced by Prof. W. D. Lyman of Whitman College, who said in part,—

All who profess to believe in the name of Christian may well feel that there is a common bond in the view of improving the physical, mental, and spiritual conditions of men. Whatever may be our personal explanation of the troubles of men, whatever may be our philosophy of man's life here and hereafter, whatever may be our denominational preferences, we may all find a common ground in desiring to ennoble and enrich the human lot, to apply the light of Christ to darkness, to find clear and certain pathways in the midst of confusion and doubt.

It is sometimes asserted hastily that the world is growing worse. The remorseless grind of competition, the cruel treadmill of labor, the official dishonesty, the greed for gain, and the degradation of our crowded slums—these conditions are often cited to prove the world's degeneracy. But there is a brighter side, for the world is growing well faster than it is growing ill. One has but to open his eyes upon the broader tolerance and catholicity in religion, the abandonment of outworn forms and creeds, the earnest unity of all lovers of men in bringing into prominence and in recognition of these great means of human amelioration which characterize our present time. Science and faith have clasped hands as never before in a unity of purpose to cast out the malformations and blindness of life and to open the doors of hope to all men.

Whatever may be our individual views as to the practical application of means to ends, we must all recognize that the growth in numbers, in resources, in power, and in influence, the movement for which the Christian Science church stands, is one of the wonders of our day. It is no trifling matter which presents itself to us, but one that makes a great appeal to something elementary in human nature and life. It is therefore with a profound sense of the importance of a just estimate and candid consideration of the great question now to be presented, that I have the honor of introducing to you the speaker of the evening.—*Walla Walla Union.*

WASHINGTON, D. C.

That interest in the subject of Christian Science is on the increase in Washington, was evident yesterday afternoon [April 28], when the lecture by William D. McCracken, M.A., which had been announced for that time at the New National theater, drew an audience of representative citizens from nearly all walks of life. The size of the audience was limited to the size of the theater. The lecturer was introduced by William S. Campbell, Christian Science committee on publication for Washington, who said:—

In every activity of daily living that we chronicle in years we bear testimony to an event so momentous in the world's history that it has become the basis of a new calendar. That event was the beginning of the Christian era. It was ushered in with the glad announcement, "On earth peace, good will toward men." Nineteen hundred years have traced their way across the scroll of time, but the record has not been altogether a pleasing one. There is still much to be desired.

In this age there has come a new translation of this message of peace and good will, a translation in the "new tongue" predicted by the gospel writer. Thirty-three years ago a small and seemingly weak church was organized in the city of Boston to maintain and perpetuate this new translation of the divine message. Today that organization has a chain of churches that encircles the earth. The missionary evangel that has established these churches is the missionary evangel of healing.—*Washington Herald.*

UNIVERSITY OF KANSAS, LAWRENCE.

For the first time in the history of the University of Kansas, a Christian Science lecture was delivered to those in that institution interested in the subject yesterday afternoon [April 26] at four thirty o'clock. The lecture was given in Fraser Hall by Frank H. Leonard. Mr. Leonard was introduced by Claude Sowers, president of the college Christian Science society, who called attention to the existence of similar societies in other large educational institutions in the country, and remarked upon the growth of the religious movement of the present time, and the public thought nowadays which sought enlightenment and information rather than instruction along narrower lines.

Gazette.

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship.

Nyack, N. Y.—Church edifice, Broadway and Cedar Hill avenue, 8:15 p.m., July 11.

TESTIMONIES OF HEALING.

For about seven years I had serious and painful stomach trouble, which many physicians diagnosed as intestinal disease. A little over four years ago I was operated upon in one of the hospitals in New York and had temporary relief, but all the old troubles seemed to come back, even worse than before, about a year after this operation. Everything that I ate seemed to ferment; at night I was a great sufferer and had little natural sleep for some two years.

In December, 1909, my health gave way completely, and some physicians diagnosed the case as nervous collapse. I had about ten different physicians at different times, and they all did their best for me, but they could not get me on my feet again. After being absent from my business for six months, being physically unable to attend to anything during that time, and obliged to leave my business to the care of others, I despaired of ever getting back to it again. At this stage my wife, my mother, and my father-in-law all requested me to try Christian Science as a last hope, stating that they had heard of many marvelous cures through it. I did not take their advice, however, but six or eight weeks after this conversation with them I met a lady who told me of a case similar to mine, which she knew was healed through Christian Science, so I decided to try it, though I had no faith in it at the time. On the fifth of July, 1910, I called upon a practitioner, with the hope of being helped for the nervous trouble. I was scarcely able to walk more than a block without becoming greatly fatigued. The practitioner treated me, and told me to go back from his office to my store and attend to business and come to him the next day. This I did, and noticed a decided improvement in my condition. I kept going to the practitioner daily for about two weeks, and for the next two weeks on alternate days, after which time I was so well that I could stay in my store the entire day and attend to business. I was entirely healed of all my ailments; the stomach trouble, of which I never expected to get cured, also left me. Whereas, formerly, I could not eat the least thing without distress, I am now able to eat what is set before me without any ill effects whatever. This was very wonderful to me, and I have since become an earnest student of Christian Science, and I find that it is beneficial in every way, and especially in business matters.

For my healing and understanding of Christian Science I am very grateful to God, and I give this testimony with the hope that some sufferer may be benefited thereby.

A. WARENDORFF, New York, N. Y.

It is with deep thankfulness to God and gratitude to Mrs. Eddy for the teaching which has given us anew the word of Truth whereby we may be healed, that I seek to tell what Christian Science has done for me. To those who are still in doubt as to its efficacy and its divine healing Principle, I wish more than all to give a word of cheer.

In the summer of 1908 I was stricken with peritonitis in its most severe form. I was treated by *materia medica* and another material method, but with no results. I then succumbed to a relapse and my case was given up by my doctors, who had done all they could for me. Christian Science was then brought to my notice, but I had very little faith in it and it was with much reluctance that I consented to try it; but after my first treatment, which was given absently, I noticed a marked improvement, and in three months' time I was completely healed.

A remarkable demonstration was made in the case of my eyes, which were healed in a very few treatments. I could endure hardly any light on my eyes and was compelled to wear glasses to protect them, but I have discarded the use of glasses entirely. I was also healed of an aggravated abscess in my side, and although the healing was not so rapid, I obtained a much greater uplift morally and spiritually as well as physically, for which I am very grateful.

In all trials Christian Science is my strength, and each trial brings me nearer to God and the truth. Words cannot express my gratitude to God and also to Mrs. Eddy.

MRS. W. F. KIME, Oxnard, Cal.

[Translated from the German.]

When I first heard of Christian Science, about a year and a half ago, I was still laboring under the effects of a fever. At times pain would leave me neither day nor night, and medical prescriptions brought only temporary relief. I was sometimes in utter despair, as I had to contend with all manner of ills for years, and did not know what it meant to be in good health. On a bright winter morning a lady with whom I was acquainted sent some Christian Science literature to my home, after the reading of which I felt that as the sun illuminated my room so a ray of God's love and goodness had shone into my soul. But the light grew dim,—doubt and fear again tried to assert their seeming power, and several weeks went by before I fully apprehended the fact that God is all-inclusive good, and that evil is unreal. In March I again had an attack of illness, and I was greatly worried as to how I would be able to attend to the work connected with a change of residence which was impending. I applied to a Christian Science practitioner for treatment, which was given, with the result that on the second day I was able to get up. My strength returned, and the work attending the removal brought no discomfort. During the course of the year diseased conditions manifested themselves several times, but they were always overcome with a few treatments.

I have come to see more and more that above all, the sense of fear and anxiety must be successfully handled, and that we must constantly try to realize the omnipresence of God, good. What fills me with still greater joy is that I have found the true religion which I had been seeking after for years. The various religious systems brought confusion to my thought, but I could not help thinking that if somebody could only give me the proof of a religion, I would believe. In Christian Science I have found all I have longed for, and feel that I cannot be too grateful to Mrs. Eddy for having shown us the way to God and walked on before us in humility and in a self-sacrificing spirit.

FRAU ELSE KAISER, Vorderheide b. Liegnitz, Germany.

From my own experience I have found that Christian Science is practical because it teaches obedience to a divine Principle, whose law does not change with conditions and which does not yield to or conform with common custom or cherished desire. Through a continued effort to live in obedience to this divine Principle my thought is being purified, my desires are finding satisfaction in more spiritual things, and there is being made manifest to me an increasing capacity for both mental and physical activity, all of which is great cause for gratitude.

Having been raised in a state which had adopted prohibition laws, until I was seventeen years of age I had not seen a saloon and little knew what an awful impediment to progress is manifested through the use of intoxicating drinks. A few years later I decided that I would like to travel, and very unwisely kept pleading with my parents until they consented to my looking for employment in another state, where I fancied I would like to be. I was in my second year at college and my eyes caused me a great deal of trouble, and this served as a good excuse for my making the above-mentioned change. I had been in this strange city but a few days when I became associated with men who had lived a very sensual life for many years, and they took pleasure in showing me something of the ways of the world heretofore unknown to me. I became intoxicated, and the awful sense

Digitized by Google

of sickness, despair, and separation from good, which accompanied this experience, was such that I prefer not to dwell on it. Nevertheless, this was only the beginning of a few years of sensual living which I then thought necessary in order to be "friendly" with my associates. Smoking was considered one of the essential accomplishments, and when I had learned to chew tobacco without sickly results I began to feel somewhat proud of the various habits formed. All this influence, however, had come from outside environment, for liquor was never used in our home and my father is not a user of tobacco or liquor in any form.

While indulging in the above mentioned habits I became associated with some young folk who are interested in Christian Science, and I want to say that I can never repay them for the good they have brought into my life. Underneath all the worldly living I had always felt a desire for a purer life and hoped some day to find a calling or profession which would enable me to do more in a universal way than a mere business career had to offer. I attended a few Wednesday evening meetings, but had no thought of ever becoming interested in the teaching, and little thought that therein lay relief from the undesirable ways which I had been experiencing for about two years. However, some months later I was given some Christian Science literature, and the first paragraph I read brought the absolute assurance that the answer to every question which had ever occurred to me regarding the ultimate solution of the many problems confronting mankind was to be found in this teaching, and that such was the life-work I had long desired to find. I soon became a regular attendant at the services, and purchased a copy of "Science and Health with Key to the Scriptures" and a Bible. In a very short time I began to care less for smoking (although I was working in a cigar store mornings and evenings at the time), and in about three months I no longer had any pleasure in smoking, but found Science and Health a more satisfying companion. As to drinking, I felt so free from the bondage which had caused me to think it necessary to join in this common custom, that I was delighted to have an opportunity to refuse the invitation of some of my former associates to continue in the old method of living. A sense of firmness and a sure foundation had replaced my former sense of utter inability to refuse to drift with the current of worldly thought. I felt happy that I could do what I knew to be right and not what common custom would lead me to think was right.

Several young men with whom I had associated in the old way of living are now interested in Christian Science, and where formerly the glass of liquor, the cigar or cigarette, and the associations accompanying these indulgences, were used as a medium of friendly or business relations, we now find God, good, the only medium through which true brotherhood can be recognized. Our sense of friendship is certainly purer than before, and instead of spending our lunch hour by wasteful and detrimental evil speaking, we occasionally enjoy little testimonial meetings at the lunch table, wherein we all agree that we have found a friend who can be depended upon to be always true—so the topic of conversation is God and this grand teaching which has revealed the truth about Him. Any young man who realizes what must be faced and overcome before success can be won, must certainly admit that any teaching which enables one to stand steadfastly on the right under all conditions, is worthy of serious consideration. My gratitude I wish to show in works, and I rejoice that we are given so many opportunities to prove our stand.—FLOYD C. SHANK, San Francisco, Cal.

I am glad to certify with gratitude to the understanding of God, His Christ, and the Bible, which I have gained through the study of "Science and Health with Key to the Scriptures." I am grateful to our beloved Leader for her ceaseless labor for mankind, and for the courage which could present this truth to the world. I had an impediment, an affliction,—so-called stammering,—which was said to be hereditary. I had tried the best of physicians and material remedies; also several operations, spending between nine and ten hundred dollars for so-called cures; but all were ineffectual. I suffered from this trouble for thirty years. I could not sleep nights; and it was no pleasure to my friends to listen to my attempts to talk. At last Christian Science came to my relief. I am now thoroughly cured, and have been for the past three years. I feel like an entirely different person. My mind is clear; I sleep well, and have none but the best feelings toward humanity in general. I wish especially to express my gratitude for the sense of brotherhood in the Christian Science churches, for the great and lasting work which they have done in the past and are striving to do at the present time.

MISS MAGDLENA MARKEL, Toledo, Ohio.

Until about two years ago I was a sufferer from stomach and heart trouble, being so weak that I could walk only a very short distance, and I had severe pains around my heart. I tried many doctors, but got no benefit; indeed, I kept getting worse until it seemed that the end was near. I then tried Christian Science and was healed. I am now well able to attend to my farm and other business, and I thank God for the understanding of Him which I gained through Christian Science. We have had many demonstrations of the truth in our home and among our children, the overcoming of earache, acute throat trouble, etc., some of these being instantaneous healing. I expect always to trust in Christ and shall strive to grow in this understanding of divine Truth.—CHRIS. H. NASH, Kimberly, Ohio.

I want to tell others that I am one who has been wonderfully healed in Christian Science, first of typhoid fever and later of a goiter on the neck. I never took any medicine, but was treated by a practitioner, and I thank God for my healing.—MRS. MAGGIE NASH, Kimberly, Ohio.

It is with a grateful heart that I write to tell of what Christian Science has done for me. Four years ago I was healed of heart and stomach trouble, rheumatism, and an injured spine. My spine was so painful that I fainted when examinations were made by various physicians. I was for weeks in a hospital where I cried night and day with pain, and the physicians were powerless to relieve me; but, thanks be to God, also to our dear Leader, Mrs. Eddy, all this has yielded through the understanding of Christian Science as brought to me by a faithful practitioner.

MRS. REBA WARD, Huntington, W. Va.

It is with a grateful heart that I give my testimony, hoping it may help others as I have been helped. I can certainly say that I would not be here if it had not been for Christian Science. I was ill for thirteen years, and tried physicians without number, and had all kinds of medicine. About five years ago I first heard of Christian Science through a dear lady who came to our house one evening. I began to pour out my complaints to her, but she looked at me a few moments, then said that God could heal me of all my suffering. She then told me how she had been healed of a supposedly incurable disease through Christian Science; but I only turned a deaf ear, as no one in this community had then heard of it and it sounded strange to me.

During the next three months I suffered more than tongue can tell. I had two good physicians who did all they could for me, and I was taking their medicine every fifteen minutes night and day without any relief; indeed I seemed to get worse every minute. One night I cried to my husband to help me. He hurried to me and found that I had had a stroke and could not walk, so he carried me into the next

Digitized by Google

room and started to call a physician, but I said I would never take another drop of medicine; that if I lived until morning I would find out what Christian Science had to offer.

In this case "man's extremity" was indeed "God's opportunity." My husband thought I had lost my mind from my long-continued suffering, but in the morning he sent for a practitioner, through whom my healing came. When she came, the first thing she said was: "The main thing in Christian Science is to be ready for it. Are you ready?" I will never forget those words, and as I looked up into her face I said, "I am ready for anything." She then said there must be first a willing mind, then an obedient one, and she gave me Science and Health to read. I had worn glasses for five years, but had broken them the day before, so thought I could not see, but I kept on trying until at last I could read without glasses, and I have never needed them again. I now have normal sight.

The next day I walked out to the kitchen, and my husband was astonished to see me. He exclaimed, "Are you walking?" I replied with a grateful heart that I was. It seems that I have been healed of nearly all the diseases that flesh is heir to,—stomach trouble in its worst form, rheumatism, severe and frequent headaches, gall-stones, heart trouble, general breakdown, and many other ills too numerous to mention. I had been told by several physicians that my only hope was to go to a hospital for an operation, but thank God I have been healed without this; indeed we have all been healed by Christian Science.

My son, now over fourteen years old, has had many proofs of God's care and healing power. While visiting, in the summer of 1910, he and another boy were poisoned by eating sandwiches in a restaurant. Both became violently ill, and four specialists treated the other boy, who lay for weeks in a hospital. The relatives whom my son was visiting, not being Christian Scientists, were greatly frightened at his unconscious condition. They called two physicians, who gave him a dose of medicine, then they telephoned me. As soon as consciousness returned the boy refused to take any more medicine, and did his mental work. He came home the next day, walking a mile from the train, and went to work the following day.

Is it any wonder that we do not want to stop praising God? We feel we can only pay our debt to divine Love by living the truth and helping others to gain it. Christian Science has helped us spiritually, mentally, physically, and financially. We all join in thanking God, then our dear Leader for this healing truth.

MRS. PAULINE HOCH, The Plains, Ohio.

Through the power of Truth as made known in Christian Science I have been healed of sin. Truth has freed me from a belief in evil, the most relentless master, from which I seemed unable to extricate myself. Many times had I tried by the use of will-power to stop these evil practices, but with no effect. Having been reared in the West, on the plains of South Dakota among cowboys and rough associates, it may be readily seen that my surroundings were not conducive to moral and spiritual growth, to refinement or to culture of any kind, and my condition became even worse after I joined the South Dakota Volunteers at the time of the outbreak of the Spanish-American war. Later we were sent to the Philippine Islands, where I spent a year and a half of rough life among the soldiers. Eventually my health began to fail. I was very much troubled with what the doctors called asthma and heart trouble, the condition being a very distressing one.

While paying a visit to my relatives in Berlin, Canada, I became interested in Christian Science, and began its study. Locating in an adjoining town, I received treatment from a practitioner, and immediately began to improve. I noticed that my physical healing was in proportion to my moral reform. I found that the treatment was healing me of the liquor and smoking habits, also of the use of profane language. I learned that fear, hatred, malice, and all sensual habits were enemies which caused my miserable condition; that, as these were destroyed, step by step I gained my freedom, physically and mentally. I am thankful to say that, through a slight understanding of Christian Science, my thought is being elevated, my mentality clarified, my consciousness purified, and my character Christianized. After nine years of constant study of the Bible, Science and Health, and of all the authorized Christian Science literature, combined with the faithful and patient help of a practitioner, I am enjoying good health, and am now expressing what it had always been my great desire to become, a loyal Christian Scientist and a useful man in the world.

I cannot close this testimony without voicing my deep sense of gratitude to God, and my profound respect and love for Mrs. Eddy, through whose self-abnegation and faithful, untiring efforts to spread the gospel of Truth to all humanity, it has been possible for me to realize this wonderful degree of salvation.

MILTON A. SNIDER, Providence, R. I.

I wish to express my gratitude for what Christian Science is to me. In 1897 I was healed through its teachings of what many physicians had called a chronic stomach affection. I was healed in one treatment and have never had a return of it, have been able to eat and enjoy my food, and am grateful for the physical healing. I however feel more grateful for the understanding of the word of God that has been revealed to me through Christian Science. I have had many opportunities to prove the power of Truth. Several years ago a mother and little daughter of three years were stopping in my home. The child, who was playing with a little bottle, fell, breaking the bottle and cutting her lip so that the blood ran very freely. The mother, who was not interested in Christian Science, was so frightened that I asked her to let me have the child. I took her to my room, and then I was shown that God is ever present and a help in time of need. I took up "Miscellaneous Writings" by Mrs. Eddy, and read aloud the poem "Love" (p. 387). Then I asked the little one what had "chased the clouds away." She answered that Love had done this, and she ran and told her mama, then went about her play, well and happy. Some time after, this little one had her finger pinched by a door being closed on her hand. Her first cry was, "Aunty, get the book quick and read." It was indeed a joy to see such trust and confidence, and it was to me a beautiful lesson.

I feel that my experiences in Christian Science have brought to me, as to St. John, "a new heaven and a new earth." I am indeed grateful for this truth.

MRS. MARGARET E. ELLIOTT, Chicago, Ill.

I wish to tell my gladness for Christian Science. I can truthfully say that I have never turned to it for aid without receiving what I asked. My little girl, who weighed but four and a half pounds when born, was a miserable, sickly child for two years. At that time I took up the study of Christian Science, and she began to improve steadily and has been healed of all the ills that so-called premature birth had seemed to fasten upon her. One ailment was a chronic bowel difficulty, but as I studied Science and Health that gradually passed away. I had before then done all that human love could do, but with no result. The child has also had many other healings in cases of colds, severe falls, etc., and she has been protected from all the so-called children's diseases even while exposed to them. From a stunted child she has grown into big, strong, healthy schoolgirl, with a great love for the truth. Recently she said that the thing for which she was most thankful was having been taught

Digitized by Google

that "divine Love always has met and always will meet every human need" (Science and Health, p. 494).

Christian Science is our mainstay, not only physically but morally and mentally. The joy which comes when the mists of sense are lifted and fresh understanding enlightens all my thoughts, far exceeds the material benefits, although I give divine Mind the glory for all. Even before I can, to mortal sense, see the answer to my prayer, I am glad that I can understand what Jesus meant when he said he knew that the Father had heard him and had answered him.

We have had many proofs of the truth of Christian Science. One afternoon I seemed to be threatened by a severe cold, which in former times had often overcome me. My head and body ached terribly. I treated myself, but seemed to grow only worse until bedtime. But I knew I had declared the truth about it, so there was nothing more for me to do but trust Truth, and in the morning every symptom was gone. There is never an hour that the reality of the truth which Mrs. Eddy has explained in "Science and Health with Key to the Scriptures" is not borne in on my consciousness, no matter what I am doing. But the one demonstration over the pride of mere learning, of intellectual attainment, is the cause of my greatest thanks. The struggle was long and hard. Since taking up Science I had gone back to college to study for a master's degree, thinking I could be of greater use in the world, in Science and in other ways, by doing so. For a year and a half I struggled. Mortal mind had to be torn up by the roots in its beliefs in mental psychology, etc. I nearly lost my eyesight; but who could doubt the end? The potent simplicity and confounding clearness of Mrs. Eddy's interpretation of the first commandment, "Thou shalt have one God, one Mind" (Science and Health, p. 301), uncovered so much error that it nearly swamped me. But God's promise that the waters should not overflow held true.

I thank God for the clearness of Mrs. Eddy's spiritual sight and for the love which caused her to pass the truth she discovered to us.

MRS. FLORENCE MCCONNELL, Red Oak, Iowa.

Some years ago I went to a city in the middle West to take charge of a department in one of the large stores there. The department was said to be running down, and I soon realized that discord among the employees was the main cause. My arrival only aggravated this trouble, and my employers advised that I discharge some of the employees—all, if necessary—and begin anew. But this did not seem right, as many of them had worked there faithfully from fifteen to twenty-five years.

At the family hotel where I was living, I had become attached to a woman who was a Christian Scientist. We shared the same table in the dining-room, and one evening after a very discouraging day I told her my troubles. She was so very kind and sympathetic that when she advised me to have help in Christian Science I was at once interested. The next day things seemed to come to a climax, and I felt I must get help somewhere or give up and come back East. I left the store in the middle of the rush hours and sought a practitioner, and in my first brief interview with her she pointed me to the light of divine Love which has been to me a guiding star ever since. I went to her several times, with the result that my troubles were overcome and the business cares that had always weighed so heavily on me became a pleasure. When I married a year later and came East, it was with deep regret that I left my work and the dear friends in that city.

Previous to this I had many serious illnesses, and had been operated on a few years before for tubercular peritonitis. I had been warned by the doctors to be very careful, and to check any return of the trouble directly. In the spring of 1910, while visiting in Malden, I was taken with most acute pains. My mother was with me, and the old fear possessed us, but I felt that here was a test for me. I endured the pain over night, then called a Christian Science practitioner, who came to me early in the morning. Later, I got up, dressed, and came home to Roslindale, much against the advice of my mother and friends, but I knew that divine Love would care for me. It was a long trip, but when I got home I went to bed, read the chapter called "Recapitulation" in "Science and Health with Key to the Scriptures" by Mrs. Eddy, and went to sleep. The next day I got up and went to a practitioner for treatment. After that I had no trouble, nor has there been any pain to remind me of the old intestinal trouble. The fear of it is completely destroyed!

Since then, while my husband, who is a traveling man, was at home, I was taken ill. I telephoned the practitioner for help, but my husband insisted that I have a doctor. He came, said I had congestion of the lungs, that where my lung had been affected when I had the attack previously there were adhesions,—something that frightened my people; but I knew that my real selfhood had never been ill, and that this attack must be recognized as nothing and it would vanish. I felt that the practitioner should be told about the doctor, so my mother telephoned her. The next day I got up—surprised the doctor, but he said I was surely better, and that my husband need feel no fear in leaving me. My husband went away the next day, leaving word that the doctor was to continue coming until I was perfectly well, but I called the practitioner that day and she said she had realized my position and had treated me just the same. The doctor called once again, the next day, and since then I have never had occasion to feel that my lungs are not perfectly strong. I have gained in health and in weight, but this is little compared to the peace of mind, the joy and happiness I have found in the study of Christian Science. The daily study of the Lesson-Sermon, the periodicals,—all are helping me to realize the wondrous power of divine Love and to bring it into my daily life.

I want to prove my gratitude to God, and feel that by the little victories I am gaining each day I am realizing the allness of divine Love. I cannot close without a word of thanks to the dear woman who has made all this so plain. For her life and works I thank the Father who gives all good.—MRS. ELLA H. CUBBISON, Roslindale, Mass.

I am glad to add my testimony to the healing power of God's word, as taught in Christian Science. After having seen my wife restored to health by its means when the medical doctors had told her they could do no more for her, I was led to accept this divine healing power for an annual attack of illness. I was advised to go to bed (for under medical treatment I had always to be in bed for a week or ten days), but instead I called on a Christian Science practitioner, and the result was that the next morning I got up and went to work. I then took absent treatment for rheumatism, which had troubled me for twenty-five years, having been so bad at times that I had to take one hand to lift the other; but in three weeks it had disappeared. I am now entirely free from it, and for all these blessings I am truly thankful to God, also to Mrs. Eddy.

WILLIAM PFEIL, Seattle, Wash.

One evening in June, 1910, our three children were playing on our back porch, and one of them, aged six years, fell from it and injured his elbow joint badly. He was in great pain, but his father put the bone in place and then proceeded to treat him, as instructed in "Science and Health with Key to the Scriptures" by Mrs. Eddy. After a few minutes the child stopped crying and he slept well that night, also every night during that period. The next day while crossing the street alone he was knocked down by a fast-running team of horses. He came in the house very pale and full of fear

Digitized by Google

(his arm was never bandaged), but in a few minutes he was out playing again. He never had any fever; the only discord which manifested itself was swelling in the arm; and five days later he was using that hand and arm just as he always had. Last winter our youngest boy, our oldest boy, and myself had mumps, and my husband was our only practitioner. The ailment was overcome in four days. About two weeks before our little boy had his arm injured, our youngest boy, aged three years, was awake all one night and complained of toothache. His suffering was intense, and the next morning the whole side of his face was badly swollen. The following morning his eye was closed; but a neighbor thought it was due to a spider bite, and that was correct, for I found the spider in his pocket. My husband treated him faithfully, and in a week the difficulty was entirely overcome.

Thanks to God, and our gratitude to Mrs. Eddy for the great and wonderful truth she has taught us.

MRS. EVA E. NAPIER, Seattle, Wash.

Some years ago I believed that Christian Science was all a mistake and I would have nothing to do with it, having been prejudiced against it by the teachings of the church to which I then belonged. I was as devout a Christian as I knew how to be, and interested in the uplift of mankind to the extent that I hoped to be a missionary. In the mean time I was doing home work along that line, but became broken down in health and prayed earnestly that I might be healed, as I was suffering from sleeplessness, nervous exhaustion, and bowel trouble in an aggravated form. Finally I had to give up all work, after consulting a well-known physician, who said that not an organ in my body was working right and I needed change and rest as well as medicine. I went to stop with some friends who were Christian Scientists, because the peace and quiet of their home attracted me, but after following the doctor's instructions most faithfully I was not improving and could not sleep. My friends asked why I did not try Christian Science treatment, as a practitioner was to call there that evening. When I consented, my position seemed to me ridiculous, as I had no faith at all in Christian Science; but after the first treatment I slept all night like a child, and told it with joy in the morning. I then reasoned that if Christian Science could help me in one respect it could help in all, and after taking treatment for three months I was gradually transformed into a new being. The bowel trouble was healed and I was slowly but steadily gaining, mentally and spiritually.

I have continued my course with joy ever since the first treatment in Christian Science, over six years ago. The truth has been all-sufficient to meet every need, and my disposition and view-point have been so changed for good that others in the family have looked to Christian Science for help and have found it. We continue to find daily the correct view of the truth; and what joy it is to prove that God is so near, so good that there is nothing we need fear! We love Mrs. Eddy for the purified understanding which enabled her to find the key of scientific certainty which unlocks the treasure store of our Father's house. Christian Science not only leads us to the source of perfect health, but also brings happiness, peace, and plenty, with love to God and all mankind, which grows more luminous, unto the perfect day.

MISS FLORENCE M. SCHMIDT, Alameda, Cal.

Have you ever seen the good in some one, and his ability while he was still obscure, and prophesied the high place he would take; and then, when this was realized, and he had risen above you in your own sphere, were you still able to praise him? This is a test of character, and here it was that John proved his nobility. "Did I not tell you he was greater than I? And is he not great—greater than I thought?"

IAN MACLAREN.

FROM OUR EXCHANGES.

[*Advance.*]

The desire to prevent waste in religious work is one of the good signs of the times. The get-together movements ought to prevent needless competition and to distribute the efforts of the denominations in a way to establish the kingdom of God rather than to further ecclesiastical ambition.

But there is another kind of waste in religion which is far greater than that of putting too many churches in one town. The prophet Isaiah expressed it when he rebuked Israel for false practices and cried, "Wherefore do ye spend money for that which is not bread? and your labor for that which satisfieth not?" These pungent questions are directed against those who spend themselves on religion in a way that means no satisfactory return. It is neither bigotry nor want of charity to say that of all the religion of the ages, its practices, worship, ceremonies, sacrifices, costly provisions and appointments, beliefs and teachings, the greater part has been worthless or worse. Generations have cried to heaven in a voice that brought no answer; myriads of worshipers have come to altars and laid their sacrifices upon them only to see them turned into flames, smoke, and ashes. They accomplished no purpose but to deceive those who offered them. Other millions have cut off comforts and joys and shut their lives within the narrow bounds of austerity and poverty, with no good to man or God. And all generations have seen multitudes of men and women flocking after teachers who taught them only falsehood, and leaders who had no purpose but to make personal gain of them. Against all this kind of religion the verdict must be pronounced that it did not pay. Moreover, it gives rise to the feeling that in no other sphere or experience of life do human beings do such absurd, foolish, and unprofitable things as in religion.

[Rev. Louis G. Hoeck in *New-Church Messenger.*]

The example which the Lord himself has set before us is to live for others and not for ourselves, yea, to give up our whole life for the sake of others, lose our life—the self-life—that we may give a better life to all. And because the Lord is more intimately present among us today than ever before, therefore we know better what this means,—what it really means to be a Christian. We can no longer have mere types, or the semblance of Christianity, without the reality in the inner life. It is not enough that we have mere outward goodness or morality, the outward worship of the Lord in any form. Our righteousness must exceed that of the scribes and Pharisees. The thoughts and intentions of the heart, the very mainsprings of life, must be right before the Lord, as well as all outward action and speech. We must be true inwardly and outwardly in all things in this complex life of today, working out all our difficulties according to the example of the Lord himself, as seen in the light of his word.

[*Universalist Leader.*]

We all have to confess, as we get along in life, that we have missed a good many of the best things because we did not know them when we saw them or something else seemed better. This is an age of doing; the rush and rumble of activity, the getting of results, the winning of position, the manipulation of forces,—these all seem to be the real things, and we forget to think, to hope, to love. We miss these best things because we do not know them as best things if we know them at all. . . . You can scorn the sentiment of life, you may despise the poetry of the spirit you do not understand, you may exploit the meat and raiment, tear down your barns and build greater wherein to bestow your goods, you may think you have possessed yourself of all the best things, but the time is not far distant when your poor skeleton of a soul, starved in the midst of plenty, shall

Digitized by Google

ask the privilege of gathering the crumbs of best things which have fallen from the tables of those whom you refused to know and understand.

[*Christian Register.*]

The man who feels that his cherished creeds are crumbling about him, and cries out in anguish, "They have taken away my Lord, and I know not where they have laid him," finds that there is something better than a creed which can crumble, and that there is a living God of whom he may say in very truth, "Closer is He than breathing, and nearer than hands and feet."

It is the way in which we accept our mistakes and use them as helps to the truth that decides in some measure our progress. If we rebel and grow discouraged when we find that life and duty and God are other than our dreams had pictured them, we may lose the blessing of the larger vision and the wider knowledge. The truth that is, is always outside the thing we first imagine. That has been shown again and again in every department of thought. Perhaps it will some day be proved equally true in every experience of life.

[*Western Christian Advocate.*]

None too soon have the churches awakened to a conception of religion as dealing ultimately with the corporate salvation of the community; as being concerned with the happiness and well-being—physical, mental, and spiritual—of all men; with their right to life, liberty, justice, a living wage, reasonable hours of toil, decent homes, opportunity for rest, recreation, intellectual improvement, worship. Individuals are saved to serve—to cooperate with Christ in bringing in the kingdom of heaven on earth; and every church that would meet the demands of this age must break away from any narrowing, selfish, individualistic interpretation of Christianity. The religion of Jesus must be seen to be as wide as the multiplied cravings of humanity for higher things in every department of life.

[Rev. R. F. Horton, M.A., D.D., in *British Congregationalist.*]

In many forms and many voices philosophy prohibits the whole trend of thought of the last thirty years, and, strange to say, science itself comes in, making its confession, telling us it made a mistake. It thought it could explain, and finds it cannot. Science comes to join philosophy and to confess that we cannot explain the world apart from Spirit, apart from God. And with this decisive change of the whole trend of modern thought a new era opens, because before long it will be possible not only to reconcile but to identify religion and culture. It will be possible again, as it was in the middle ages, to see that the highest thought of the time is identical with the highest religion of the time.

[*Watchman.*]

Religious exercises rendered to God in behalf of men are subject to the peril of thinking too much of men and too little of God. Public prayers that include others in their petitions may defer too much to their approbation of the sentiments or the language. Praying to God for men easily runs into addressing men in the presence of God. The approval of God is forgotten in the desire to speak well before men. The Pharisees who offered public prayer in the day of Christ did so largely to be seen of men; in our day we are apt to pray publicly to be heard of men.

[*Christian Work and Evangelist.*]

It is impossible to escape the fact that the question of church union lies upon the minds of the leaders in all the denominations. The denominations are very rapidly moving toward a point, if they have not already reached it, where they wish commissions appointed to meet with groups from other bodies to discuss the whole problem.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

A new pamphlet, "Christian Science Healing *versus* Mental Suggestion," by Frederick Dixon, reprinted from the *Weekly Budget*, London, England, is now on sale; 36 pages and cover, at the prices of the regular pamphlets.

For some time the postage required for subscriptions outside of United States territory has exceeded the amount added to the regular subscription price for this purpose, and an increase in rates sufficient to cover this deficiency is now deemed necessary.

Beginning April 1, 1912, therefore, the rates on all subscriptions outside of United States territory will be as follows: For Canada, *Journal* $2.25, *Sentinel* $2.45; for all other countries, except those to which the domestic rate applies, *Journal* $2.65, *Sentinel* $2.95.

Renewals for all subscriptions terminating before April 1, 1913, and received by us prior to July 1, 1912, will however be accepted at the old rates.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large sized book), single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

ITEMS OF INTEREST.

National.

Julius Kruttschnitt, vice-president and director of maintenance and operation of all the Harriman lines, has announced a comprehensive plan to secure greater safety and protection for the men of the system, with special reference to the industrial department of the road's work. Beginning July 1, committees of the subordinate officers and men in the shops and along the line, division superintendents, master mechanics, and others, are to be formed to cooperate with the road in a systematic campaign to reduce accidents. Mr. Kruttschnitt said that the bulk of the accidents and injuries to men in railroad work come not in the operating of the lines, but in the industrial departments, and most of them through carelessness and in ways that can be avoided.

The Senate has made the first move to relieve the government from the embarrassing situation arising from the failure of Congress to pass many of the large supply bills. Despite its agreement to transact nothing but "morning business" during the Democratic convention, it appointed conferees to meet representatives of the House on the legislative appropriation bill. This carries the salaries and mileage of members of Congress, the judiciary, the President's salary and many other items, none of which can be paid after July 1 unless the bill is passed and signed by the President.

The Appalachian commission, which last week authorized the purchase of thirty thousand acres of land in New Hampshire, is investigating twenty thousand acres more near Easton, N. H., which has been recently offered to the commission. They have authorized the purchase of six thousand eight hundred and fifteen acres of land in North Carolina and eighteen thousand five hundred acres in Virginia. The former land drains into the Tennessee river and the latter into the Potomac. The price paid for the North Carolina block will be $43,250 and for the Potomac block $21,700.

Sale of old junk at the naval stations on the Atlantic coast since May 3 has netted the government four hundred and twenty thousand dollars. The Brooklyn navy yard turned in one hundred and fifty thousand dollars, Norfolk, one hundred thousand dollars; Boston, seventy thousand dollars; Portsmouth, sixty thousand dollars; Tompkinsville lighthouse district, fifty thousand dollars. It is estimated that over forty-five per cent of this amount has been saved by the system introduced through William Jacobus, the civilian expert on waste material.

The supreme court of the District of Columbia held that a retailer may sell a safety razor at any price he chooses, notwithstanding any stipulation to the contrary by the manufacturer. The case probably will go to the supreme court of the United States. Justice Wright, announcing the decision, said the ruling for several reasons was not in conflict with the recent patent monopoly decision of the supreme court.

The house judiciary committee has voted unanimously to report articles of impeachment against Judge Archbald of the commerce court, who has been under investigation for alleged misbehavior in office in connection with a "culm bank" transaction with the Erie railroad. The report will be made during the first week of July.

International.

As a result of last season's work in Egypt by the British School of Archeology, several monuments of enormous size and of great value have been discovered. Among them is the largest couchant sphinx ever found, unearthed at Memphis. It is twenty-six feet long and weighs eighty tons. Archeologists look upon it as a work of probably the nineteenth dynasty, about the year 1300 B. C. Another large sphinx was found in the temple of Ptah, also of Memphis, and inscribed with the name of Rameses II. This same king was also found represented in a group of red granite as standing beside the god Ptah, of whose temple he was a great benefactor. One of the most interesting features of the finds at Tarkah consisted of linen of the pre-Mena age, which was as clean and fresh as if it had just come from the loom. Many beautiful baskets and examples of plaiting were discovered.

The Bombay Central Cooperative Bank which was started in October last for the purpose of financing the cooperative societies which have been springing up of late years in the Bombay presidency, recently held its first ordinary general meeting. At this it was announced that in the four and a half months of its existence it had made a net profit of 4,098 rupees (about $1,600). This, it was explained, would enable the directors to pay a dividend equal to a little over six per cent for the working period. The loans to the societies rose from 341,202 rupees at the end of December to 522,108 rupees at the end of March. Members, who in their individual capacity had been obliged to pay interest at the rate of twenty-five per cent, were, it was explained, now able to get their loans for about one third of the previous rate.

The affairs of the Suez Canal Company stand on a somewhat different footing to those of other companies. The British government is the holder of a considerable number of its shares and on its efficiency depends the convenience of the trade between the Mediterranean and the east. A general statement of its finances during the past year shows that the total receipts amounted to £5,521,529, an increase of nearly a quarter of a million pounds over the previous year. The total expenditure amounted to £1,326,848. The total cost of construction of the canal, inclusive of the improvements carried out from year to year, is given as £26,481,342. Altogether 4,969 vessels of an aggregate tonnage of 18,324,794 passed through the canal. The Suez canal board has decided to reduce the canal tariff from Jan. 1, 1913.

The loan negotiations between the international bankers and the Chinese government have been neither concluded nor broken off, contrary to reports. A new proposal was recently submitted to the minister of finance suggesting a loan much exceeding three hundred million dollars. The minister of finance requested the bankers to communicate their terms, which the bankers then drew up in accordance with the original arrangement with Tang Shao Yi, which provided for foreign supervision of the salt tax and practically the appointment of the international bankers as financial agents for the Chinese government. Hsiung Hsi Ling, the finance minister, thereupon objected and declared that he would borrow only fifty million dollars.

An announcement was made in the House of Commons recently by Mr. Samuel, the postmaster-general, regarding a scheme for the carrying of mails and parcels by a system of underground tube railways. Some relief to the traffic in London streets has become an imperious necessity. This would be in order to the running of mail vans during the hours of the night and early morning and congestion in the streets would be relieved by fully one third of the yearly traffic, the parcels delivered in London alone amounting to two hundred million yearly.

Industrial and Commercial.

Flour and meal, together with many other food products, are now being made from bananas in Jamaica. The industry, still in its infancy, is making rapid strides. The food products manufactured are fig bananas or banana figs, cooking bananas, banana chips, flour, and meal. All the factories dry or evaporate the bananas whole without the addition of sugar, and yet they are sweet and palatable, like pressed figs, which they also resemble in color. It seems that all banana food products are wholesome and nutritious. The fig bananas, cut into small pieces, may be used like raisins to impart an additional flavor to cakes and puddings. The chips, after being well pounded, or ground in a coffee or other hand mill, may be boiled and then used as an excellent breakfast food or for making delicious puddings. Gruel, porridge, and other preparations may be made from banana flour and meal.

Ten cement grain tanks are being erected for the Noblesville (Ind.) Milling Company. They are said to be the only tanks of the kind in the state and will represent an investment of forty thousand dollars. The total capacity of the ten tanks will be three hundred and fifty thousand bushels of wheat. They are twenty-seven feet in diameter and will be built to a height of eighty-five feet. On the top will be a cement roof, making the entire structure fireproof. When these tanks are finished the milling company will have a storage capacity for eight hundred thousand bushels of wheat. One elevator near the cement work holds three hundred and fifty thousand bushels.

In a letter addressed recently to the Earl of Crewe, secretary of state for India, a number of London merchants interested in the trade of India complained of the inconvenience and loss due to the inability of the Indian railways to cope with the volume of business. They urged that arrangements should be made for an immediate increase in locomotives and rolling stock; the doubling of existing tracks, and increased siding accommodations, where required, in order to facilitate and accelerate traffic, and new lines where necessary.

Proposed advances, ranging from two to three dollars a car, for the refrigeration of fruits and vegetables from shipping points in Maryland to destinations in Delaware, New Jersey, Pennsylvania, West Virginia, New York city, and Washington, D. C., were declared by the interstate commerce commission to be unreasonable. An order was issued that the advances should be canceled.

New farming lands representing a total area of seven hundred and sixty-eight thousand two hundred and one acres have been made available in New South Wales during the last seven years. These lands represent an extra farming population to the state of more than seven thousand people.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"OUR FATHER."

WILLIAM R. RATHVON.

A HELPFUL and impressive feature of Christian Science church worship is the repetition of the Lord's Prayer by the congregation in unison. It is prominent at each service, mid-week and Sunday, and offers to every one present, visitor or member, equal opportunity to join in an outward expression of devotion. Its position in the order of our services was fixed by Mrs. Eddy, and it was by her direction, too, that all are invited to join in it. This privilege is appreciated, and few indeed are the silent lips in our churches after the opening words of the Lord's Prayer are spoken. But a timely word of caution needs to be given, lest we unwittingly drift into a habit of serious delinquency that is already marked in a number of our churches. The writer has had occasion to attend Sunday and Wednesday night services in many places widely separated, and has found it a rule with few notable exceptions that the first two words of the prayer, "Our Father," are voiced by the reader alone, the congregation remaining silent, and only uniting heartily when the next words, "which art in heaven," are reached. This practice has grown to such an extent that apparently neither reader nor congregation looks for unison in repetition, until after the opening words have been uttered by the single voice of the reader. Should he, too, remain silent, the Lord's Prayer as repeated in many of our churches would become an unaddressed invocation, an incomplete, not to say mutilated, petition.

The two significant words with which this prayer begins may be regarded as credentials of man's divine sonship, the declaration of the divine fatherhood. They also proclaim the brotherhood of man; they indicate our at-one-ment with divine Principle. Jesus' use of the words "Our Father" reveals him as our elder brother, leading us tenderly and lovingly into the presence of the Father-Mother God,—his and ours alike. They are first in prominence and deep in significance, and a realization of all they carry for Christian Scientists will heal the sick and bind up the broken-hearted. They cannot be omitted or neglected without impairing the power and beauty of the whole prayer.

The omission of these two words by so many of our people is neither deliberate nor intentional, and to be corrected needs only to be pointed out. The readers can do perhaps more than any one else toward remedying this habit of remissness. If they will pronounce the first two words of the prayer more slowly, and pause before beginning the next words, the congregation will soon respond to the invitation and regain the privilege which many are now complacently ignoring. A marked pause before the words "which art in heaven" will soon be regarded as a kindly hint that some good thing has been left undone. The response will be prompt and general, and it will not be long before the reminder will be unnecessary. Then will be given in its completeness, as our Leader intended, "that prayer which covers all human needs" (Science and Health, p. 16).

WHAT IS MAN?

FRANK H. SPRAGUE.

FROM time immemorial mortals have sought light on the problem of existence by delving into material phenomena; but the learning thus acquired has only deepened the mystery of being. Materially developed theories begin by assuming that what is known as the human mind is an individual entity or organic unit, a component part of the universe as God has constituted it. But if there were, from the standpoint of Truth and reality, the godlike standpoint, such an entity, if being were, indeed, split up into finite particles or selves, each endowed with the prerogative of independent action, the integrity of being would be lost; for there is no escaping the conclusion that under such circumstances the characteristic feature of the finite type of mentality, viz., material sense, with all its self-conflicting, self-destructive tendencies and impulses, would have its place and purpose in the unfolding ideal of divine Mind.

Nearly half a century ago, while the controversy between theological and scientific opinion was at its height, a spiritually-minded woman came in the course of her investigations upon a long obscured point of view which shed an entirely new light on the problem of being. At a critical period, when human dependencies had failed, a momentary exaltation of consciousness to the level of spiritual sense enabled Mrs. Eddy to catch a glimpse of real being; to realize at first hand what God is and what man is. This experience gave absolute assurance that God is the only cause or Principle of being, and that man is neither more nor less than the pure manifestation of Spirit; that spiritual sense does not, therefore, merely belong to man as a faculty, function, or attribute, a part of his mental equipment as it were, but it constitutes man in his entirety.

This vision found expression later in the inspiring passages of Science and Health. Mrs. Eddy saw that the only revelator of God, Spirit, and that which emanates from Him, is spiritual sense, which she describes as "a conscious, constant capacity to understand God" (Science and Health, p. 209). The knowledge of God and man which developed from this illuminating experience presented what is defined as material sense in an altogether different light. It was found to be not a faculty, function, or attribute of a mind of any kind, but simply a point of view, abnormal and ungodlike in itself and consequently calculated to convey a wrong impression of things. It thus became evident that the material mentality, and its externalized expression, personality (in fact all materiality), representing as they do the projection of a point of view which leaves Principle out of the question, have no connection with the Principle of man, and are therefore transient and perishable phenomena without existence apart from the falsifying material sense from which they are evolved.

The view-point and view, like the dreamer and dream, are one; and that one is a negation of the truth of being, no more real than the minus quantity in mathematics, or

darkness, which is nothing in itself, but denotes the absence of light. Darkness is appreciable only from the standpoint of darkness. It is not an entity, is not produced by anything, is not the manifestation of anything, has neither source nor basis; in fact, cannot be conceived of except as the antithesis of light. Darkness ensues when the light is obscured; but it cannot be produced in the light, neither can it quench light. Light, however, does counteract darkness. Light is, therefore, the symbol of spiritual sense, man, that which proceeds from God, and so is real; while darkness symbolizes material sense, that which is devoid of Principle, intelligence, and legitimate means of expression. In the light of Christian Science the words of Jesus, "If I bear witness of myself, my witness is not true," are highly significant. This is precisely what material sense does,—it testifies of its own, but cannot give an intelligible account of itself; it is "a liar, and the father of it;" it always leaves the problem of being where mortal sense finds it,—involved in mystery and confusion.

In accordance with the oriental custom of clothing thought in figurative expression, Christ Jesus personified material sense as "Satan," "the devil," "the prince of this world," "the adversary," etc. Following this line, Paul and John furthermore characterized this same sense as "the prince of the power of the air," "Belial," "that old serpent," "a great red dragon," etc. From the material sense standpoint materiality, and its inseparable accompaniment, evil, are intensely and obstinately real; but the defectiveness of the standpoint itself invalidates the impressions which pertain to it. The essence of materiality is comprised in the interblending of beliefs which are contingent on this fundamentally false point of view. Although more persistent and fixed in their degree than the illusions produced by the mirage or the moving-picture exhibit, the phenomena of a materialistic order are equally unreal, since they, too, are the effects of deceptive sense perception. Jesus said, "Except a man be born again, he cannot see the kingdom of God."

Every attempt to reach through material research a basis from which to solve the world problem is handicapped by reason of the inadequacy of the point of view with which it starts. The materially developed world-concept, resting as it does on fiction and not fact, is relative and transient, phenomenon without noumenon. That which is embraced in spiritual sense alone has the elements of permanency and immortality. Although it may fool those who do not detect its status, the counterfeit bill is not real money because it is not backed by substantial values. So is it with the concept of being expressed in material personality, finite mentality, a self-centered ego.

To sum up, the effect or outcome of Spirit, the one and only cause, is spiritual sense; the effect or outcome of the material sense point of view is the mirage of materiality, including so-called mortal man. The spiritual sense man is real and immortal because he derives his existence from God; while the material sense man, having nothing to support the false claim to manhood, disappears as material sense yields to spiritual sense.

As the belief of finite, self-centered personality, the claim of intelligence and power apart from God, disintegrates and melts away, the oneness of man as spiritual sense is renewedly demonstrated. The walls of partition which, if real, would divide Mind into minds and furnish occasion for perpetual disagreements and contentions, are thus proven to be fictitious, not God-created. Christ Jesus recognized his identity in spiritual sense. "And now, O Father, glorify thou me with thine own self with the glory which I had with thee before the world was," he prayed. "And the glory which thou gavest me I have given them; that they may be one, even as we are one: I in them, and thou in me, that they may be made perfect in one."

Mrs. Eddy defines Christ as "the divine manifestation of God, which comes to the flesh to destroy incarnate error" (Science and Health, p. 583). This coincides with Paul's use of the term "Christ" in his epistles to signify spiritual sense in its relation to the human concept. "As in Adam all die, even so in Christ shall all be made alive." "Awake thou that sleepest, and arise from the dead, and Christ shall give thee light." "If Christ be in you, the body is dead because of sin." These epistles, read in this light, take on a vital meaning which brings them directly in touch with our own experience.

Material thought conceives of immortality as contingent on the perpetuation of a finite sense of self; whereas immortality is realized only through getting away from the material sense point of view and all it implies. The guarantee that the individual consciousness will not be extinguished or lost, lies in spiritual sense itself, that "true Light which lighteth every man that cometh into the world," which, however dimly recognizable in any given case, proves to be the integer of consciousness when all merely human elements of experience are stripped off by circumstances. The fact that our sense of selfhood increases, instead of diminishes, in proportion as we lose a narrow, selfish concept of self in larger ideals and a more selfless purpose, shows that the transition is made through continuity and not cessation of individual consciousness and experience.

The insect suffers no loss of identity when the larval state is left behind for the imago. "He that loveth his life shall lose it; and he that hateth his life in this world shall keep it unto life eternal," declared the great Teacher and demonstrator of the truth of being. It has been noted by a writer along the lines of New Testament exegesis that the wording of the Greek text from which our translations are made gives evidence throughout the gospels that Jesus uniformly made use of two distinct terms to differentiate between the real life of man, which is spiritual and eternal, and the transient mortal concept which from the material sense standpoint seems to be life; but the translators, unfamiliar as they were with the significance of the metaphysical distinction indicated in the language of the original, failed to discriminate between the two terms in such a way as to give their proper equivalent in the English rendering.

Because he located the fundamental difficulty in the world problem, the Founder of Christianity was able to prove with uniform success the reality of good and the consequent unreality of evil by making experience tally with the spiritual fact. Spiritual sense countervails, discredits, and disqualifies material sense, and causes normal conditions to obtain throughout the range of human experience. Christian healing is neither more nor less than the result which follows spontaneously whenever and wherever the darkness of material beliefs, externalized as discord and disease, is confronted with the light of spiritual sense. The outcome is inevitable when the issue is fairly recognized and met. Certain narratives in the gospels indicate that the very presence of Jesus was sometimes sufficient to heal the sick. The conditions which led him to point to spiritual healing as the test of true discipleship remain the same today; hence, "these signs shall follow them that believe" now as of old.

It is the mission of Christian Science to carry on to its complete fulfilment the work begun by the Master in guiding human consciousness to a recognition of spiritual sense, the consciousness and understanding of God. Apprehended in this light, the New Testament becomes luminous with meaning. The apostle John describes the growing realization of spiritual sense, or man, as the "new Jerusalem, coming down from God out of heaven;" and Mrs. Eddy writes (Science and Health, p. 573): "This is Scriptural authority for concluding that such a recognition of being is, and has been, possible to men in this present state of existence,—that we can become conscious, here and now, of a cessation of death, sorrow, and pain. This is indeed a foretaste of absolute Christian Science."

"FEAR NOT."

EMILY A. ASHCROFT

ONE evening when I was visiting a friend, the conversation turned upon a present which the lady of the house had received from her son. He had seen active service in the Boer war, and during his stay in South Africa had sent her interesting objects from time to time, among them being a bomb, made for use in the war. This strange present was accompanied by a letter from the son, warning his mother not to let the bomb come into contact with anything which could set it alight, for fear it should explode; so the lady put the dangerous article in the cellar.

The warning voiced in the letter, however, greatly troubled her, and as the days went by her anxiety increased. The fear of an explosion haunted her until the thought of the danger became a veritable nightmare. All kinds of evil suggestions arose in her mind. Suppose the house should get on fire and the flames reach the cellar! Suppose some one should break into the house and look for treasures in the box containing the bomb! For weeks she insisted on staying up every night until every other member of the family had retired. Her fear was that they might not turn off the gas properly and there would be an escape. What would become of the bomb then? None of the family was allowed to go near the box which contained it, and night after night the good lady prayed earnestly that the household might be saved from any accident through it. Still the fear remained.

A time came when the family removed to another house, and fearing for the safety of the furniture removers, the lady conscientiously told them where the loaded bomb was. They instantly refused to move the box. Here was a dilemma, for if the box were left behind it would endanger the safety of the next occupants, and yet it was too heavy for the lady to carry. At length a friend, who was a Christian Scientist, and who knew that no harm could come to her through a kind act, helped the lady's daughter to carry the heavy box. The incident afforded considerable amusement to the Christian Scientist, for being free from fear, the ludicrous side of it appealed to her.

Not long after this, the son who had sent the present came home. When he found out how distressed his mother had been, he was greatly surprised, and informed her that he had only sent the warning as a joke, and that the bomb was perfectly harmless, as it was unloaded. He said that if they had only paused to think reasonably they must have seen how totally impossible it was for him to have sent a loaded bomb by post. He asked to see the weapon, and, unscrewing the top of it, he turned it upside down, and thus showed that it was absolutely empty.

This incident serves to illustrate the fact that for generations mortals have been setting up evil as a tremendous force, capable of causing man's destruction. They have taken for granted what was told them concerning evil—sin, disease, and death—without pausing to think how impossible it was for God to send any evil in view of the fact that He is good, is omnipotent, and is the giver of all good and perfect gifts. The world has been deluged with warnings to fear this dreadful reality called devil or evil, and the effect has been to bind it closer to fearing mortals by upholding the belief in its reality and power. Thus has the fear of evil haunted mankind night and day, and though they have prayed to be saved from this terrible thing, the bondage to fear has remained undisturbed.

No arguments could have persuaded the owner of the bomb that she had nothing to fear, until she realized through demonstration the nothingness of what she feared. Neither will mortals ever escape from the fear of disease and death, the effects of a belief in the power of evil, until they realize its utter nothingness, through the demonstration of this fact in the presence of the healing Christ, Truth. Mortal man fears evil for himself and for all about him. He prophesies what it will result in, and these terrifying suggestions are permitted to control his thoughts; and yet, if he believes in God and will but think logically, he will speedily see the illogic and impossibility of the claim that evil is real and has power.

All is Mind, and the spiritual universe, which is the only real one, is the manifestation of Mind, of the infinite good; hence evil has and can have neither place nor power. To fear it, therefore, is but to exhibit our ignorance or forgetfulness of its true nature, namely, falsity, nothingness.

REGARDING THE MONITOR.

MARY H. DANFORTH.

QUITE recently the writer of this article spent a week in a small city of western New York, and as the friends whom she was visiting were not Christian Scientists, she ordered *The Christian Science Monitor* sent to the house for one week, from a local news-dealer, paying him ten cents for the paper for that length of time. As she walked out of the store, after laying her dime on the counter, she thought how much, how very much, she was to receive for that exceedingly small sum of money. Aside from the current news, the fine editorials, and the inspiring excerpts from the ablest writers of all times and countries, there is in each issue, on the Home Forum page, a short article written from the view-point of Christian Science by one who has proved the statements therein made to be true. More than once the writer has found these articles most practical in explaining some point in a way to meet a present need and to help with some demonstration then being made. The value of such help as this cannot be gauged by a monetary standard; indeed no sum of money could be so valuable as one of these enlightening little articles, coming at a time when needed to open thought more clearly to the truth of the situation. Solomon expressed it truly when he said, "Happy is the man that findeth wisdom, and the man that getteth understanding. For the merchandise of it is better than the merchandise of silver, and the gain thereof than fine gold."

Occasionally one is heard to say, "I would like to have the *Monitor*, but I do not feel that I can afford it." Of course a remark of this kind is always made thoughtlessly, because if one were to put aside only three cents a day, at the end of one year it would amount to ten dollars and ninety-five cents,—more than enough for two yearly subscriptions, one for one's self and one for some friend as yet unacquainted with this new impetus toward clean journalism. It is safe to say that any one who is really desirous of having the paper for himself and for at least one other, can lay aside daily this small sum, though he has as yet learned little of the infinite abundance of Love's supply, the "open fount," which is always "pouring forth more than we accept" (Science and Health, p. 2).

Further than this, we know that everything instituted by our beloved Leader is for the advancement, the good of mankind. Therefore, when we act in keeping with anything which she has recommended, we are sure to come into conformity to the law of God, and to receive the reward of peace and prosperity which follows obedience to divine direction. The psalmist says, "They shall be abundantly satisfied with the fatness of thy house; and thou shalt make them drink of the river of thy pleasures."

HIGHER MEANINGS OF LIFE.

WILLIAM H. PARKE.

As the patriarchs and prophets of old extricated the idea of God from a false material concept, so in this day Christian Science guards it from the abstractions of philosophy

Digitized by Google

and material conceptions of Deity which are little better than the idols of an earlier day. Christian Science affirms the knowledge of God to be the basis upon which this Science is understood and demonstrated; that to know God is the Science of Truth, Life, and Love. This statement becomes explicit when we realize the conscious fact that God is the only Life; and as Jesus associated life with eternality, so Christian Science teaches that a life bounded by death is without meaning; that the existence of man is identical with the existence of God, and that the belief of a life separated from God is unthinkable.

When we apprehend that Jesus knew God, we see that he must have known His laws and worked in accordance therewith in healing sickness and sin, and as omnipotence cannot exist in one place and be absent from another, this divine law must obviously be one of universal application. As God is Love and Love is divine Mind, it is essential to a better understanding of its healing power and beneficence that we know the only real thoughts to be the pure and perfect thoughts of God. In this way we entrench ourselves in the recognition of ever-present good, and through its infinity we are safe from the attacks of evil, in whatsoever form presented.

Christian Science proclaims freedom as the spiritual man's prerogative and birthright, but it is only as we emerge from the gloom of wrong thinking that we apprehend the higher meanings of life and can grasp the all-inclusive emancipating range of the Principle of Christian Science, which places no limit on the redemptive power of Truth. Even as the inspired Founder of this Science provided blessings for the many by realizing and reflecting divine Love, so we, if we follow her example, will help to awaken the world from its age-long sleep. If we realize the law of present opportunity, we will find that it is always harvest time in the world: "The time for the reappearing of the divine healing is throughout all time" (Science and Health, p. 55).

When Jesus said, "The truth shall make you free," he spoke to a people who had no true conception of spiritual freedom; even those who believed on him found it hard to rise above the materialistic view. This manacled people understood still less the means of emancipation he offered, although his words were a plain guide to freedom from sin. Jesus taught then, as his words teach today, that freedom means mastery of oneself, and that servitude to passion, temper, avarice, and selfishness is the most degrading form of slavery. He said to the people, "Whosoever committeth sin is the servant of sin;" but humanity has given itself the spectacle of holding up its hands to be shackled by its own laws and the false gods of erroneous thought.

In this age, pregnant with scientific conception and development, Christian Science in ever-broadening, ascending circles is revealing the availability of Truth to meet all our human needs. The world of scientific thought is being enlarged, the field of revelation more intelligently explored and better understood than in the days of our fathers, and, as Christian Science refuses to admit any break in the continuity of law, it discloses the fact that all good comes by way of discovery of that which has always existed. As Mrs. Eddy writes on page 11 in "Christian Healing," "We are in the midst of a revolution; physics are yielding slowly to metaphysics; mortal mind rebels at its own boundaries; weary of matter, it would catch the meaning of Spirit." Enabled as we are to look back over the stream of time, we realize that what is true today was true yesterday. The Science of Christianity has cleared away the sand-drifts of false thinking which for centuries obscured the columns of the ancient temple of Truth, and its eternal structure has risen above every system of religion and philosophy, standing as a grand edifice on the earth, which is becoming a city of God, with its gates open by night and by day.

The education of right thinking through the reading of the Christian Science literature, which is disseminating over the entire world pure food for thought, is enabling thousands to solve the higher meanings of life by subjecting their problems to an individual solution; they have perceived their nature through an understanding of spiritual truth. The study of Christian Science unfolds spiritual perception and reveals the true individuality of man as the idea of Spirit. Spiritual thought processes, emanating as they do from the realm of divine Mind, so far transcend material phenomena that they can be grasped only by coming in direct touch with the Spirit which imparts understanding, the Mind which governs the universe and man. Through this understanding we are enabled to apprehend the truth, which is not complex when we eliminate the element of false beliefs—for truth, like the great Exemplar, Jesus of Nazareth, comes to us clothed in the garb of simplicity.

The Discoverer of Christian Science gathered into the bosom of its teachings whatsoever things are true and honest and just and pure and lovely. The ideas matured in her spiritual consciousness are bursting into flower in every quarter of the world, in response to the universal needs of humanity, awakening in the hearts of her followers a sense of gratitude as well as the reign of joy and peace

SPIRITUAL-MINDEDNESS.

J. W. WRIGHT.

THE very fact that one's nature rebels instinctively at anything which calls for excessive effort, indicates that such effort is abnormal. An overwrought and overanxious condition of thought is neither natural nor effective of results. Discouragement sometimes comes to the person who is taking his first steps Spiritward, toward higher and nobler levels, and this through the mistaken belief that his progress will require deep and constant spiritual work of some sort—so deep and so constant and so complex that it will be beyond his modest ability; but this erroneous thought is dispelled by Paul's statement that "to be spiritually minded is life and peace."

If we can achieve "life and peace," we may well feel that we have gained all that can be desired or expected on this human plane; and Paul clearly points out a very simple and practical way, viz., to be spiritually minded. No vast task is set before us; no complex work is required of us; no overanxious straining to achieve is necessary. *Per contra*, we have only to be spiritually minded—then we advance quietly, deliberately, calmly, joyfully, in a wholly normal and natural manner. The wish to be right and just and pure, the quiet seeking for and progress toward the good, the beautiful, and the true, the occupancy of one's thoughts with wholesome things, which means daily right living according to our light,—these simple and joyous and uplifting efforts constitute spiritual-mindedness. This condition is not to be regarded as a distant goal to be reached only through strenuous and long-continued effort of some sort. It is to be a simple, every-day condition of thought and purpose, a mental reaching out "toward the imperishable things of Spirit" (Science and Health, p. 21).

[Written for the *Sentinel*.]

"CAPTIVITY CAPTIVE."

MARY HORNIBROOK CUMMINS.

O WONDROUS harmony! Where every thought—
That subtle, inner thing we cannot see—
A willing captive unto Christ is brought
And merged in God's immensity,
And thus, through broader use finds wider scope
In fields of richness, where it roameth free;
Borne up and on by one unending hope,—
Still to unfold in all eternity!

SELECTED ARTICLES.

[Frederick Dixon in *Chelsea Mail*, London.]

To a Christian Scientist doctors are a body of people engaged in the attempt to mitigate human suffering to the very utmost of their ability, and I will undertake to say that it is impossible to produce a case in which a Christian Scientist has rushed into print to attack the medical profession. All that has ever been written by Christian Scientists on the subject, has been in the form of necessary replies to attacks. As a matter of fact, what I did was to state with absolute historic accuracy something of what medical practice has amounted to in the past; and anybody with any knowledge at all of history must be aware that every statement I made is incontrovertible. "Spectator's" perversion of what I said is a delightful specimen of his method of discussion. He says that I described Lord Lister as the enemy of the human race. Now what I did say, to quote *ipsissima verba*, was this, "Lord Lister was a great man, but he knew less than Paul, who settled the question of blood-poisoning without antiseptics at Miletus." How does that prove that I said Lord Lister was the enemy of the human race? "Spectator" might as well argue that if I had said he was a great writer, but knew considerably less than the great writer whose *nom de guerre* he has borrowed, I had therefore argued that he was illiterate. As a matter of fact I do consider that Paul knew more about the healing of disease than Lord Lister, for, so far as I am aware, he never raised the dead, while Paul did. Of course, this critic may argue that he does not believe that Paul raised the dead or saved himself from the serpent's bite at Miletus. That, as Mr. Kipling would say, is another story, but then it brings "Spectator" into violent collision with another critic, who I am sure would never agree to such a statement. That is the weakness of the critics of Christian Science. Like the Kilkenny cats, if I may use the simile without offense, they destroy one another.

"National English Religion Catholic," whom for short may I describe as "N. E. R. C.," has quite different views to those of "Spectator." He raises a multitude of issues which it is absolutely impossible to reply to in a letter. If an argument against Christian Science could be sustained by a series of unrelated assertions, supported by unquoted references to a book which the readers of the letter are not the least likely to have at their disposal, this critic might be said to have made out his case. But then anybody could make out a case on such lines, so that it is scarcely worth while. The Bible, which he presumably values, has been disposed of time after time, by free-thought critics, in just this way. In short, he seems to have the haziest idea of what Christian Science does teach; though it must be admitted that he appears to be equally hazy on the subject of other teaching, for his definition of Manicheism is peculiar.

What Mani did exactly teach has always been a matter of some dispute, but I will give the definition of his teaching from the greatest dictionary in the world, the Oxford dictionary: the "religious system that represented Satan as coeternal with God." The teaching of Mani probably amounted to this, that God could not have created evil, since the Bible says He created nothing that was not good. To account for evil, then, Mani evolved a second creator, Satan, contemporaneous with God. Of course this did not avoid his own difficulty in the least degree, since though the Bible says that all God created was good, it also says He made all that was made; therefore He must have made Satan, unless Satan never was made. In plain English, Manicheism made evil very real, and did this in the most determined way. It so happens, however, that Christian Science denies the reality of evil. Satan, it explains, was merely a term used by the Hebrew speakers or writers to personify the human belief in evil as a reality. The Bible, as has already been shown, distinctly declares that God made everything that was made, and made it good. Either, then, there is something God did not make, or else evil is part of God's creation, and, *ipso facto*, good. It was this dilemma that gave rise to Gnosticism, and the dilemma which the Gnostics presented to the early church has never been answered by orthodox theology. For, if evil is real, and spirit is imprisoned in matter, then God created evil and imprisoned spirit in matter; and in creating evil and matter made them at once real and eternal. Christian Science denies the reality of evil and the reality of matter, so that about the last charge anybody can bring against it is that of Gnosticism and Manicheism. It is evident, consequently, that this critic has either not the faintest conception of what Christian Science teaches, or he has not the faintest conception of what Manicheism was, unless, which seems quite probable, he is equally in the dark on both subjects.

To go through the catalogues of chaotic extracts from Mrs. Eddy's book, Science and Health, which "N. E. R. C." seriously produces, in order to point out their fallacy, would be merely tiresome. To prove this it is only necessary to give a single example. "Matter," he writes, "is nothing but material belief; man is a compound idea of God." The critic has read Science and Health so carelessly that he has not discovered that in speaking of matter Mrs. Eddy is speaking of the negation of Spirit, whereas in speaking of man, in the place he indicates, she is speaking not of the material counterfeit of the image and likeness of God, but of the image and likeness of God itself. In a word, the gentleman who has undertaken to criticize Mrs. Eddy has not himself mastered the difference between the positive and the negative, and has simply succeeded in showing his own complete misapprehension of the entire argument. The statement is just about as sensible as if a reader of Professor Ostwald was to quote his statement that matter is something we have created for ourselves and therefore unreal, and argue triumphantly from this that the Marble Arch was invisible by the human senses.

Finally "N. E. R. C." rather unwisely asks for an authentic case vouched for by reputable physicians, Catholic, Protestant, Jewish, and infidel, of the cure of organic disease. I am afraid I cannot claim to be able to gather together such a comprehensive affidavit as he demands. If, however, he will permit me to substitute the word "or" for "and," and will be satisfied with the explanation of a reputed physician, I will give him what he desires. In the *Outlook* for the 28th of March, 1908, he will find the following statement by Walter Wilding, M.R.C.S., L.R.C.P.:—

"My own experience on these lines [Christian Science] has been most definite. As a doctor practising medicine, I had periodically under my care, for six or seven years, a case of valvular disease of the heart, complicated with diseased conditions in other organs; the ravages of each year left the patient in a worse condition—until a fatal termination appeared terribly near. At this stage of apparent helplessness and hopelessness the prayers of a Christian Scientist were called for, and through them the patient was healed. The healing was complete, has been permanent, and the life has since been one of great physical energy and activity, full of brightness, happiness, and joy.

"While still practising medicine, I witnessed the healing by Christian Science of several cases of disease in addition to the foregoing. One was that of a young man, whose knee joint was quite disorganized by disease to little more than a pulp, and the surgeons of one of our largest hospitals urged that the knee joint be cut out completely, as the only remaining hope of saving the leg. Dreading this, he turned to Christian Science, and was healed instantaneously. From previous experiences it was not difficult for me to see that it was possible Christian Science healing could improve on that of medicine in medical cases, and so dispense with the use of drugs, but to believe that it could equally well be applied in the place of surgery was too much to expect. I, however, had the privilege of personally exam-

Digitized by Google

ining the knee the day before and again the day after the healing, and finding the cure perfect, it brought me to a crucial conviction that Christian Science was able to improve on surgery as well as on medicine. Since then, after more than seven years spent largely in the study and application of the Principle of Christian Science, I have witnessed the healing of many other surgical conditions by Christian Science which would otherwise have had to submit to the knife.

"I have seen consumption healed in more than one case, failing sight in old age return, paralysis in various forms disappear, a fracture of the large bone of the lower leg, after being unmited for four months, knit firmly together without any splint, first the crutch, then the stick, and lastly the 'limp' being discarded, and all in a fortnight; also the drunken slave freed from his bondage and raised to manliness and work, and the immoral lifted right out of sensualism and sin. Christian Science has brought seven years of strength and freedom to my own daughter, in exchange for a condition of tubercular disease in joints and lungs which was rapidly carrying her to the grave."

[W. E. Fell in *Bradford* (Eng.) *Telegraph*.]

There is no religion on earth that is governed less by "belief" than is Christian Science. Very early in their study of the Principle and rule of this Science students discover that they must discard their old beliefs about God, man, and the universe, and substitute for them the facts of being. Christian Science insists that revelation must coordinate with reason, and reason with revelation, or one or both remain unsubstantiated. As a matter of fact, Christian Science accepts nothing that is not demonstrable.

Certainly Christian Science is a religion of faith, but not the faith that comes through blind belief. It is the faith that is based on the understanding of truth. A man's faith may be quite unimpeachable in twice three being seven, because he has been so taught, and he may conceivably refuse to believe you when you assure him that the product is six, not seven. This blind belief, however tenaciously held, amounts to nothing. Holding such a belief merely incapacitates him from working out a single problem in the science of numbers. The man who is aware that twice three is six has faith in this fact because he has proved its accuracy through demonstration, and his faith may now be said to be perfect, and in full working order, because founded on understanding.

Certainly the Christian world at large has "believed too much" and demonstrated too little. When the faith of Christendom is founded on understanding in place of blind belief, Christians will at once begin to do the works that the Founder of Christianity did. Christian Science is now supplying this understanding in support of faith, and the sick are being healed and the sinners reformed through the exact or scientific knowledge of God and the universe, including man.

[David Anderson in *Table Talk*, Melbourne, Australia.]

Appreciating the kindly reference to Christian Science in a recent issue of *Table Talk*, and in no sense depreciating the work and efforts of those who are seeking in metaphysics surcease for themselves and others from the abounding ills arising from the belief of life, power, and intelligence in matter, but who have not arrived at the full acceptance of the divine Mind as the only real power, may the writer crave space in your columns for brief discrimination between the healing of Christian Science and "mental suggestion"?

Christian Science, which may be conveniently defined here as the spiritual understanding or scientific knowledge of God in His relationship to the universe, including man, has its foundation in the demonstration of the omnipotence of God, good. It ascribes all power to the divine Mind, and recognizes no belief in the actuality of any power of evil. On the allness of this divine power Jesus Christ based the commission to his disciples when he sent them forth to teach all nations obedience to his commands, specific among which is the combined injunction, more than once given, to preach the kingdom of God and to heal the sick, an injunction which has never been abrogated, although for fifteen centuries these have been divorced in practise by the Christian church.

Christian Science healing is not effected through any reliance on human will, or through any operation of one human mind upon another. Christian Science teaches radical reliance on God, and its healing is effected through full recognition of the ever-presence and infinitude of Almighty God, good, a clear realization in consciousness of the truth about God, man, and the universe. Mrs. Eddy says, "Willing the sick to recover is not the metaphysical practise of Christian Science" (Science and Health, p. 144). Mental suggestion and all hypnotic agencies are explicitly and emphatically condemned in her teachings. Hypnotism in all its branches is a belief in two powers, good and evil, either of which may be exercised at the will of the operator. Christian Science teaches how men can be freed from all such despotic control. It shows that the results of erroneous thinking must be corrected by realization of the absolute truth, and not by the substitution of one belief or suggestion for another. The only mind which Christian Science acknowledges as having real existence or actual power is the Mind which Paul tells us "was also in Christ Jesus." In proportion as mortals advance in the attainment of this Mind they will gain that purity of thought and harmony of existence the external manifestation of which is physical health.

[Alfred Farlow in *Emanu-El*, San Francisco, Cal.]

In a recent issue there appeared an article entitled "American Loyalty to Judaism," in which it is said, "We sincerely believe that ninety per cent of the so-called Jewish Christian Scientists do not know that Christian Science and Christianity are one and the same, and that by going over to Christian Science they, strictly speaking, abandon the faith of Israel, the faith in the one eternal God who, as declared by the prophet Isaiah, is Israel's only 'Saviour.'" This declaration and many similar ones which have appeared in the public press lead us to believe that there is some misunderstanding with regard to the teaching of Christianity generally, as well as the teaching of Christian Science specifically, and we are inclined to believe that the situation is largely due to the misinterpretation of the Scripture on the part of some Bible students.

Jesus declared, "I am the way, the truth, and the life," but it should be noted that he did not claim to be God, although he declared the inseparability of the Father and himself. Again, he said, "I ascend unto my Father, and your Father; and to my God, and your God." He referred to himself as the "way," from the simple fact that it was his mission to point out God's way. He was aware that he understood the nature and essence of Deity and man's relation to Him. He had demonstrated the truthfulness of his understanding by unmistakable results. He never at any time taught contrary to "the law and the prophets," but expounded these. He made it his business to teach the hidden things of the Scripture and thereby make the religion of the prophets more practical. He was simply a man so completely dominated by the infinite Spirit, the one God, as to be an infallible expounder of the Mosaic law. He planted himself unreservedly upon the teaching that there is but one God.

Mrs. Eddy has sought out the Science of Truth, the Science of Spirit which governed the man Jesus, and has given to Christianity its new name, Christian Science, and all classes of religionists, including a goodly number of Jews, are proving that there is but one God by actual results in the healing of sin and sickness.

[Howard C. Van Meter in *Milwaukee* (Ore.) *Appeal.*]

In order to determine whether any teaching is in conformity with the Bible, an understanding of the meaning of both is necessary. There are as many interpretations of the Bible as there are teachings, and it requires more than literal treatment to justify such dogmatic assertions as to a lack of harmony. The teaching of Christian Science when understood will be found to accord perfectly with the plan of salvation contained in the Bible. The proof is found in the improved concept of God and man's relationship to Him, and the result is the improved conditions associated with human experience, which are in the nature of a fulfilment of the saying of Paul to the Corinthians, "Now is the day of salvation," which Mrs. Eddy declares to mean "not that now men must prepare for a future-world salvation, or safety, but that now is the time in which to experience that salvation in spirit and in life" (Science and Health, p. 39).

[From *Society*, Melbourne and Sydney, Australia.]

On account of some congratulatory remarks published by *Society* a few months ago on the remarkable cure, through Christian Science, of Charles Dawson, the English ex-champion billiardist, when opticians and other specialists had failed to remedy his blindness, we are now favored with the following letter:—

"I am a reader of *Society* and a lover of clean sport and fair play, but I am not a Christian Scientist. I do not profess to have any special or intimate knowledge of Christian Science, but, numbering in my acquaintance some members of the cult, I confess to a little interest in the subject, arising primarily from the manifest change which has come into their lives since their adoption of this religion. I know of more than one specimen of the *genus homo* who was formerly a miserable, querulous sufferer, rarely out of the doctor's hands and never well, who is now a happy, healthy, smiling citizen, with a cheery word for everybody who comes along. And so I have been led to peruse carefully the text-book of Christian Science, 'Science and Health with Key to the Scriptures" by Mrs. Eddy, and also to read such criticisms of her life and works as have come incidentally under my notice from time to time. I have read some pretty savage onslaughts on Christian Science and Christian Scientists, but I do not remember reading and I have never heard of any attack by a Christian Scientist on the religious beliefs of those from whom he may differ. I welcomed, therefore, a pamphlet entitled 'Should the Church Recognize Christian Science?' and looked to it for some valuable or at least original information on the subject, which might be of use to an unimpassioned lay investigator who, like myself, might be asking the question, 'Should I recognize Christian Science?'

"I have not sufficient knowledge of the subject to accept or reject some of the statements in Science and Health, but even a casual perusal of that book showed that it emphasizes right through only that which is good and elevating; that its basic declaration is the allness of God, Spirit, and that it regards man as made in God's image and likeness. These premises are claimed as strictly Biblical and Christian, and I have always considered them to be generally recognized as such. The head and front of Mrs. Eddy's offending, in the eyes of many opponents, appear to be that, having accepted these premises, she fearlessly accepted, insistently taught, and consistently practised the conclusions which she logically deduced therefrom. The pamphlet in question, however, argues from the fundamental but erroneous assumption, repeated over and over again, that 'the major premise of Christian Science is the non-reality, the non-existence of matter.'

"I cannot discuss whether Christian Science is 'Christian' or 'scientific.' That question may be answered according to the standpoint of the questioner and the meaning which may be attached to the words. But, as criticism of Christian Science, my little experience of such goes to show that this pamphlet is not original, but rather that it comprises the gravamen of three out of five of the clerical criticisms of Christian Science. It does, however, contain expressions of which the following are samples: 'mongrel God,' 'quintessence of imbecility and drivel,' 'philosophy fit for a madhouse,' 'absolute stupidity,' 'blasphemies,' 'unadulterated nonsense,' which are surely unusual in attacks on Christian Science. These expressions are not convincing arguments in a criticism which claims to be 'a fair, impartial examination of Christian Science,' by a writer who poses as a defender of the faith taught by Jesus Christ, whose religion was love. As applied to the religious belief of very many thousands of his fellow professing Christians, such expressions are unseemly. The price of the Christian Science text-book would not appear to have a bearing on the Christianity of its contents or the logic of its statements. If the buyer is willing to pay the price, who else need grumble? I have never seen a copy of Science and Health on Cole's second-hand book counters, on which are to be found nearly every book of Biblical commentary that was ever written, but I have heard a price of three figures having been offered for a copy of the first edition of Mrs. Eddy's book, and that during the lifetime of the author. This pamphleteer is doubtless honest in the conviction that he is doing God service by attacking and vilifying the religion of the Christian Scientist, but the advice of a wise counselor of old might be commended to such militant aggressors on Christian Science."

[From *Port Arthur* (Ont.) *Chronicle.*]

The splendid crowd at the Lyceum yesterday afternoon [March 17], when the lecture on Christian Science was given, demonstrated that people are prepared to give attention to the claims of this great and wonderful movement that is now world-wide. As we listened to the speaker yesterday afternoon we felt that he had what most of us have not, a confident grasp of a great truth. For two hours the audience sat and listened to one of the most splendid lectures that has ever been given in this city, and the speaker could have held them interested for another two hours had he talked that long. Such speakers seldom come our way, and those who attended the lecture yesterday came away richer and more enlightened than they had ever been before. The Christian Scientists of this city deserve the thanks of all who enjoyed the lecture yesterday, for giving us the opportunity to hear and profit by such a fine address.

[Written for the *Sentinel.*]

LOWLINESS.

KATHARINE T. PORTER.

THE happy primrose breathed a thought of gratitude to God—
Her prayer of grace, in sweet perfume, arose above the sod:
In looking up to Him, she said, Because I lie so low,
My sight includes all other flowers which high above me grow—
How beautiful, that I can always see my dear friends so!

The Master bade his followers take the lowest seat;
He surely knew the rest, the calm—that consciousness so sweet
Which is itself the summons, Friend, up higher come! No pride
Disturbs the thought that quiet serves, and seeks for naught beside;
The bread, the wine, in tender love are up the table pressed;
The loving heart, upturned to God, welcomes His every guest.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MATERIAL MEANS NOT NECESSARY.

DURING the past twenty years there has been a growing demand upon the part of certain physicians in an organized way, for the enlargement of the activities of their profession and the reestablishment of the waning prestige of their system through compulsory legislation. Perhaps this is not exactly the way in which they would state their case, but when we find so many medical societies giving their time to the discussion of how the average income of their members may be enhanced, and to such determined efforts as have been seen in the past few years to procure legislation which would add thousands and tens of thousands of physicians to the public pay-roll, and make criminal the practise of every system of healing but their own, there is no other conclusion to be drawn.

That which seems to help the physicians in their efforts to secure such legislation as they demand, is the practically universal belief of mortals that disease cannot be cured except through material means, and that when material means fail, disease is incurable. The strangest thing about this belief is that it exists notwithstanding the works of Christ Jesus, which proved beyond doubt that it is untrue, for we read that through the power of God, the Father that "doeth the works," he healed "all manner of disease," and there are several specific instances of the healing of so-called "incurables." It ignores, too, the continuance of these works in the practise of Christian Science, the unnumbered thousands of cases of healing, through spiritual means alone, which have taken place in the past forty years. On the strength of this general attitude of thought, however, medical bodies have become more outspoken in their claims to be regarded as arbiters in all matters relative to public health. One physician, speaking in a representative capacity, has said: "The public must be educated to take our advice in medico-political matters as they do our pills and powders, without knowing of their contents or effects, but with an abiding faith in their potency."

A similar statement made in behalf of his own business by a manufacturer of woolen clothing or a dealer in foodstuffs would be regarded as too ridiculous for serious consideration; but, strange as it may seem, the mystery and idolatry which have accompanied the practise of medicine for centuries, have dulled human perception so that it fails to perceive the arrogance of personal opinion which is expressed and the curtailment of individual liberty which is involved in such a statement. The history of the world is the history of privileged class after privileged class rushing to its doom through the arrogance of its claims to superiority, and the awakening of the people to the invasion of their rights which had already been accomplished or was in contemplation. It would seem, therefore, that those of the medical profession who act as though they believe the only salvation of their profession lies in their ability to obtain legislation in its behalf, have in so far failed to read history to advantage.

In the mean time, Christian Scientists are continuing to do the works which the Master declared they that believed on him should do, and daily are bringing to the attention of a larger and larger number of people the knowledge that disease is not incurable, and that material means are not necessary to its destruction.

ARCHIBALD MCLELLAN.

PUTTING OFF THE OLD MAN.

No moment in the life of a crawfish is more significant than that in which, with a seemingly tremendous effort and possibly some suffering, he breaks away from his encasing shell, the limitations of his old self, and finds the possibility of a larger life. The experience is absolutely necessary, he must go through it at whatever cost of pain and patient effort; and he who is so fortunate as to find the little crustacean at the interesting moment when he is about to unclothe, that he may be "clothed upon," will doubtless be reminded of St. Paul's insistence that our spiritual growth demands the putting off of the old man before the new man can be put on.

This phrase, to put off, presses home the thought of necessary separation; that the things of the past which are a hindrance to our larger living are really to be parted from, not consented to and retained with a view to their betterment, but recognized and dealt with as an unqualified disability which is to be given up without regard to any present sense of struggle or loss involved in the experience. Three things are manifest as we face this Christian requirement: first, that to separate ourselves from materiality, it must be seen for what it is—an enemy and not a friend, a source of pain and not pleasure; second, that "gladness to learn the false landmarks and joy to see them disappear,—this disposition helps to precipitate the ultimate harmony" (Science and Health, p. 324); and third, that this enabling willingness to give up error, this readiness to part company with spiritual hindrances, is the result of and measured by the clearness of our perception of the unideality and offensiveness of all that pertains to the old man.

As long as materiality is coddled and clung to as of value, because of our belief of pleasure in the satisfaction of physical sense, and as long as falsity impresses us as the truth, because of our ignorance, so long are we destined to enslavement. This is the serious fault of a great body of religious teaching which Christian Science has come to correct. It consents to the legitimacy of much of the old man as God-created and good. Professed Christians are not impelled to separate themselves from that which, as they believe, pertains to man in the divine order, and until a definite distinction is established in their thought between the mortal man and God's man, they are forever floundering in the vain effort to harmonize the spiritual with the material. Truth with error.

Christian Science awakens that keener sense not only of the exceeding sinfulness of sin, but of its parallelism and identity with all that is unspiritual, which moved St. Paul when he uttered a cry that has been reechoing in aspiring hearts all down the centuries, "O wretched man that I am! who shall deliver me from the body of this death?" The predispositions of material sense, and the teaching which stamps matter and its law as divine,—these are responsible for that hard shell of prejudice and inertia in which all of us are or have been encased, and until this shell yields to the assault of Science, spiritual illumination, the putting off of the old man is practically impossible. Said Jesus, "Ye must be born again."

A man differs from a lobster in this, that the one must accomplish by purposeful and patient determination what the other does through instinct. He must know what to do and how to do it. In a word, he must be a Scientist, and this was unconsciously voiced by Holmes in those splendid lines:—

> Build thee more stately mansions, O my soul,
> As the swift seasons roll!
> Leave thy low-vaulted past!
> Let each new temple, nobler than the last,
> Shut thee from heaven with a dome more vast,
> Till thou at length art free,
> Leaving thine outgrown shell by life's unresting sea!

JOHN B. WILLIS.

INTUITIONS.

MRS. EDDY tells us that spiritual sense "involves intuition" (Science and Health, p. 298). She also explains that this intuition has no relation to mortal and material belief, but is due to spiritual illumination. She says, "Such intuitions reveal whatever constitutes and perpetuates harmony" (p. 85). The dictionaries define intuition as "the perception or recognition of primary truth," this recognition being admittedly independent of sense testimony. It however happens that to most people intuitions are regarded as unusual mental experiences which come as warnings of impending ill, and strangely enough they are seldom associated with the unfoldments of good or of deliverance from evil. One of the poets makes an old Scotch seer say to a highland chieftain:—

'Tis the sunset of life gives me mystical lore,
And coming events cast their shadows before.

But dark and dreadful are the shadows which he outlines, till at length the chieftain flings back denial and defiance. The old soothsayer had taken the name of God as authority for his warnings, but even so the brave chieftain says, "I trust not the tale," and well were it if every Christian Scientist would as quickly dismiss the dark forebodings which would creep into the chambers of thought under the guise of spiritual intuitions. It is true that warnings may come to us, bidding us awaken from the lethargic sleep of material security, as in the case when Peter was in prison under sentence of death by the merciless decree of Herod, when there came to him an angel, God's thought, a spiritual intuition (see Science and Health, p. 581), and with this intuition came a light, spiritual illumination. We next read that the angel smote Peter on the side, then lifted him up, and at once the "chains fell off from his hands." He was still in prison, however, according to mortal sense, awaiting his inevitable doom, but divine Truth and Love did not leave him in this mental state. Love's warnings always awaken, then illumine thought and unshackle it. Love never foretells death but gives the victory over death.

We further read that Peter was bidden to gird himself for his passage to perfect freedom, and after so doing he followed the spiritual guide, and one gate after another, which seemingly barred the way to liberty, was opened by divine power, even that last "iron gate" which doubtless seemed the most forbidding of all. Then Peter was free, and it is little wonder that after such an experience he hardly knew whether he was awake or asleep. Even the faithful friends who were spending the night in prayer for him were not prepared for so great a deliverance. The knocking at the door brought only a fear of Peter's passing, till he stood before them and gave the proof of Love's infinite power to overcome the sense of mortal hate—a witness to Life divine!

As students of Christian Science we should think deeply upon these things, ever remembering that "the pure in heart" see God, good, and this seeing means the light which dispels deepest darkness. It also means perfect guidance and sure deliverance, whatever the human need. St. John's vision, as given in the Apocalypse, shows in a wonderful way the possibilities of intuitional spiritual unfoldment. He was able to see and record the disappearance of the dark shadows which to mortal sense portrayed life, and the appearing to spiritual sense of the divine ideas which forever represent reality, a process which has its fulfilment in the healing work of Christian Science. In Science and Health we read: "The spiritual intuitions that tell us when 'the night is far spent, the day is at hand'—are our guardians in the gloom" (p. 174), leading past the boundaries of sense, until, as St. Peter says, "the day dawn, and the day star arise in your hearts."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

BOSTON, MASS.

The First Church of Christ, Scientist. Services: 10:45 a.m.; Sunday school, 10:45 a.m. (the evening service is omitted during July and August); Wednesday, 7:30 p.m. In the new church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m.

JOLIET, ILL.

First Church of Christ, Scientist, of Joliet came into existence Nov. 15, 1895. In the beginning the services were held in the Fargo building; then a hall and reading-room were occupied in the A. O. Marshall building, next to the *News* bookstore. In April, 1906, the property at the corner of Sherman street and Second avenue was purchased. It was immediately overhauled and fitted up for church services, and occupied in August of that year. All the services of the church have been held there ever since. There is no debt on the property.—*Joliet News.*

SAWTELLE, CAL.

The Christian Science Society of Sawtelle held their first service in their new church edifice, corner Seventh and Colorado streets, Sunday morning [Feb. 18]. The new church home is one of the most attractive churches in Sawtelle, and was built at a cost of three thousand dollars. The building has two small Sunday school rooms, in addition to the main auditorium, and while the seating capacity is about two hundred at present, additional seats could be put in and there is ample room to seat three hundred.

The first Christian Science service in Sawtelle was held in Hanson's hall, on North Second street, Aug. 21, 1910, and the society was organized Jan. 19, 1911. Interest in the services has increased, and the attendance has grown until it is now the largest of any denomination in Sawtelle. The membership comprises many prominent business people and influential citizens. The beautiful church edifice reflects great credit upon the local Christian Scientists, and this strong church cannot be other than a great influence for good in our midst.—*Veteran Enterprise.*

MORRISTOWN, N. J.

The Christian Science society at Morristown has taken title to the Revere property in De Hart street, that place, for which negotiations had been in progress several weeks. The price reported is a shade under ten thousand dollars. The society has already taken possession. The house on the property will be remodeled and used as a meeting-room and for other purposes. The Revere or Sansay house is the dwelling known in history as "the house where a dancing master entertained a marquis," for there was given the dinner to the Marquis de Lafayette on the occasion of his visit to Morristown July 14, 1825. The house bears on its front the date 1807, but the records show that Louis Sansay acquired the property in 1810. He built the large house, and it is said he complained about the timber brought for its construction, demanding new and fresh lumber.

THE LECTURES.

SACRAMENTO, CAL.

William R. Rathvon lectured on Christian Science March 15. He was introduced by Don Earl Gilman, first reader, who said in part,—

Every new idea, every step toward the upliftment and enlightenment of mankind, has met with opposition and antagonism from those who were ultimately blessed by its application. Before the dawn of the Christian era the Jew and his conception of God stood for the highest spiritual understanding, yet the Hebrew was the most persecuted of peoples. For centuries following the advent of Christianity the followers of the Christ were compelled to worship in secret. To be known publicly as a Christian meant physical abuse even unto death; therefore those early martyrs dared not make known that they espoused the teaching and practise of Jesus of Nazareth. This persecution and intolerance did not arise from knowledge of the philosophy, teaching, or religion of the Jew or Christian, but rather from a lack of that knowledge and a subtle fear that cherished beliefs were in danger of being overthrown.

The eventual overcoming of these untoward conditions has made it possible for men to worship, in the manner of their choosing, at least without fear of physical violence; but even today advancing thought and human progress, which are of necessity mental, have to combat scholastic intolerance and moral antagonism. However, that which is truly progressive, which blazes the trail toward better things for the race, will prevail in the face of trial because of its very nature and because of its inherent quality of productive good. And its ultimate acceptance is proof sufficient that opposition was based upon false supposition.

A comparatively short time ago Christian Science was scarcely heard of. Today its adherents are to be found in every quarter of the globe. A few years ago Christian Scientists were called fanatics and impostors; their practise and teaching said to be antichrist. Today the good it has brought to suffering humanity is acknowledged on every hand, its teaching and practise is approved if not endorsed by ministers of the gospel. Why has all this come about? Because, primarily, its teachings are being exemplified in the works following; its followers are men and women of every walk of life, those with whom we mingle and know to be sane, sincere fellow beings.—*Correspondence.*

HUNTINGTON PARK, CAL.

An audience of over three hundred people, composed of representative citizens of Huntington Park, completely filled Jones' hall Friday night last [April 26] to listen to a lecture on Christian Science delivered by Virgil O. Strickler of New York city. The lecturer was introduced by Burwell O. Griffin, first reader of the local Christian Science society, who spoke in part as follows:—

In behalf of the Christian Science society of Huntington Park, I welcome you here tonight to hear the reason for the hope that is within the heart of every true Christian Scientist. We would not have Christian Science defended, but we would have it explained to our neighbors and our friends. We would offer a cup of cold water in Christ's name to the weary wanderer who may be athirst in the desert of human hope, who may be seeking the Father's house, or listening for the Father's voice. When every material aid had failed us, when "the whole head [had grown] sick, and the whole heart faint," we were led by our heavenly Father to the feet of the Christ, there to find surcease from the sorrows and sufferings of earth. That these "good tidings of great joy" might encircle the earth and enrich the hearts and lives of all mankind, there has been established a Christian Science board of lectureship, composed of men who have gained a demonstrable knowledge of this new-old religion of Jesus, and who speak with authority. We have such a one with us here tonight.—*Huntington Park Signal.*

NEWBURYPORT, MASS.

The lecture on Christian Science by Judge Clifford P. Smith last evening [April 25] in Griffin hall, was well attended by a highly intelligent and very appreciative audience. The speaker was introduced by the first reader, Mrs. Mary W. Carter, who said:—

However we may differ in points of doctrine, there are certain fundamental desires which we all hold in common as members of the great human brotherhood. We all want health and we want happiness, and we want to know the truth about ourselves and our relation to life. Some of us believe that we have learned the way to obtain these priceless blessings, and we are glad to welcome you here this evening to listen to one who is well qualified to speak on this subject.—*Newburyport News.*

SPOKANE, WASH.

Francis J. Fluno, M.D., delivered a lecture on the subject of Christian Science under the auspices of Second Church of Christ, Scientist, at the Auditorium theater, April 28, to an audience of about sixteen hundred people. He was introduced by Dr. H. Walton Hubbard, who said:—

We have come here this afternoon to listen to a lecture on Christian Science. We have all read articles telling us how we may change some discordant phase of our lives into a more harmonious condition, but unless we apply the remedy suggested we will not be benefited. We may listen to lectures on various subjects pertaining more or less closely to the problem of life, but without the application of whatever of truth they contain we will in no wise simplify our problem. Results must come through application, through action.

Today we are to hear of a wonderful Principle of healing,—a Principle that is sufficient for every difficulty that has come or can come to us. Thousands testify to its efficacy, and each individual present may receive benefits in physical and mental healing—in health and peace—to the extent that he applies the truth which he receives at this time. Results will come through application, through action; and so I bespeak your most earnest attention, that you may fully profit by that which you are about to hear.

Correspondence.

NEW YORK, N. Y.

William D. McCrackan, M.A., delivered a lecture in Second Church of Christ, Scientist, on Thursday evening, May 2. The audience was a large one, approximately fifteen hundred persons being present, and the lecture was given most earnest and interested attention by all. Charles T. Root introduced the lecturer, and said in part,—

If there is one characteristic or trait which is held by other nations to distinguish especially the American people, it is their utilitarianism; an intense practicality which insists upon efficiency, upon valuable results, as a test of the value of any person or thing. This opinion of us is probably not unfounded. I believe that, generally speaking, the first question which arises to our thought when confronted by any new proposition, whether it be a new mechanical device or process, or a new philosophy, is something like this: Does it work? What does it accomplish? What useful results does it bring about? And upon the demonstrated answer to this question is based our estimate of its worth. If it fails

Digitized by Google

to meet the test, if the advantages claimed for it are only theoretical and fail to work out in practise, it has no hope of receiving serious attention from an American community.

It was among this practical people, with their insistent demand for valuable results as a condition of their approval, that Christian Science, founded and discovered by an American woman, had its first presentation to the world. It is here, too, that it had its first and greatest growth. It has spread to the extreme confines of our territory. It has done more. It has reached across both oceans and has stretched its arms across foreign lands to the remote antipodes. In less than forty years, by its constantly extending chain of churches, societies, and outposts, it has placed a girdle of beneficence around the globe. This is a remarkable history, which could never have been recorded if Christian Science had not met the tests to which I have referred and to which it has been unsparingly subjected. If Christian Science were only another one among the myriad shades of religious beliefs, merely a slightly different presentation of academic philosophy; if it were not effective, able to reward with substantial benefits its faithful followers, the Christian Science movement could never have run the gantlet of prejudice, ridicule, and even active hostility, through which its early progress lay, and have emerged stronger for the ordeal.

Correspondence.

NAPA, CAL.

A lecture on Christian Science was given in Hayes theater Tuesday, April 30, by Virgil O. Strickler. The Rev. B. F. Bonnell of Sacramento introduced the speaker, and said in part,—

Since civilization began upon the earth, there have been many philosophies and many religions. As we look back upon them from the vantage-ground of today, many of them seem absurd and impossible of belief; but one thing can be said for all of them,—they were each and every one honest attempts on the part of some one to define the mystery of things; to know God and to determine man's relation to God and also to his fellow man. But honesty of intention was unable to overcome the material limitations under which they were held. The difference in religious systems is the difference in men's conceptions of God. The history of the world is the history of men's conception of God.

Jesus of Nazareth, through Christ, Truth, revealed a new conception of God, one hitherto unknown; but it was the light shining in darkness, and the darkness comprehending it not, so far as the consciousness of the age was concerned. His disciples comprehended it to the extent that they healed the sick and sinful and raised the dead; but as Christianity came in touch with neoplatonism, Greek philosophy, and Roman dogmatisms, their lofty concept was lost, and a long cold night of darkness and gloom settled down upon the consciousness of men. The Reformation failed to restore the religion of Christ Jesus in its fulness; Christianity was the "soul's salvation," but the body was given over to the pill and the plaster, and this consciousness had reached its zenith when our Leader, Mary Baker Eddy, sounded the note of freedom for all mankind.—*Correspondence.*

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship.

Dover, N. J.—Baker theater, 3 p.m., July 7.

Gloversville, N. Y.—Darling theater, Sunday afternoon, July 14.

London, Eng. (Third Church).—Church edifice, Curzon street, 8:30 p.m., July 16.

Vinalhaven, Me.—Christian Science hall, Main street, 8 p.m., July 18.

TESTIMONIES OF HEALING.

During my experience as an undergraduate in college, at which time I frequently attended different churches in the hope of finding a religion that would prove satisfying to the heart, I asked the different ministers in the university many questions which they did not answer to my satisfaction. One of the answers, I remember, was: "God's ways are mysterious and past finding out." At another time a question addressed to a beloved friend brought this answer: "What was good enough for our fathers to believe is good enough for us." Meanwhile, like Paul, there were evidences all around of those who wished to do right but found that though they had this wish the ability to do right was wanting. During the ensuing years before having heard of Christian Science I was like a ship at sea without a rudder. When I did first hear of it, through the report that a neighbor had taken it up, I derided it without knowing why, and said to myself: "It must be of the devil,"—a remark which I have frequently heard others make who knew nothing of the subject.

Subsequent years of mental and financial misery brought me to the pass where I was ready to accept anything that offered relief, and with this in view I searched through the creeds and beliefs of different drugless methods, but the necessity for the healing of a friend, and the failure of efforts in other directions, finally turned my attention to Christian Science. I shall never forget the sense of peace that came with that first service in Christian Science, to which I at last turned in the hope of finding out as to whether this was or was not the truth from God. And though past environment and education had led and was to lead me many a weary mile before some of the more pronounced errors and governing fears could be laid aside and proven false, yet I say it in gratitude that the truth, as given us by Mrs. Eddy, has healed me and my family and led us into the light. While I did not for myself seek Christian Science for the physical healing, I found that there are qualities of thought, temper, and impulse which are sadly in need of correction, among which might be mentioned self-love, self-justification, self-righteousness, self-pity, envy, jealousy, resentment, revenge, anger, irritability, selfishness, and the like. All these were dormant in my thought, one might almost say like a bed of snakes,—very much alive, but not wishing to be disturbed. Kind Scientists were loving enough to point these out to me, little by little as I was able to bear the uncovering, until they became very apparent to me, and I began to realize a sense of joy at the thought of their destruction. It astonishes one, as he looks back upon these errors, to see how much in bondage the human family has been to wrong mental conditions, and while no one perhaps would venture to say that they are as yet wholly destroyed in his thought, yet every Christian Scientist can truly say that they are being destroyed.

I also wish to testify to the change that has come into my life through the teaching of Christian Science in the awakening of a desire to glorify God. Past training was all toward that glorification of self to which human ambition, education, and accomplishment seem to contribute, but little by little Christian Science has begotten in my heart a love of work for God which brings a joy that the world and its attainments cannot give. Christian Science has also brought me a growing sense of the meaning of the Bible, including Jesus' statement that if a man seeks his own life he shall lose it, but he that loseth his life "for my sake" shall find it; also this: "There is no man that hath left house, or brethren, or sisters, or father, or mother, or wife, or children, or lands, for my sake, and the gospel's, but he shall receive an hundredfold now in this time, houses, and brethren, and sisters, and mothers, and children, and lands, with persecutions; and in the world to come eternal life."

I have found indeed that as one gives up the merely circumscribed sense of human love (not that this makes one

Digitized by Google

less loving, less law-abiding, less responsible as a parent or as a citizen), and comes into the realization of the fatherhood and motherhood of God and the oneness of His creation, brothers and sisters, described by Jesus as those who do the will of the Father, come into one's experience, and in the companionship of their pure love and satisfying friendship one finds an hundredfold, just as Jesus declared that he would do. Christian Science has given me a definite thought of God, which I never had before; it has solved sociological problems which had previously seemed complex to me; it has satisfied my heart as to the fact that we do not have to die to get to heaven, but may prove it to be a present possibility in proportion to our destruction of the thoughts which are unlike God; it has helped me, even as it is helping thousands of others that I see about me, to demonstrate Christlikeness; it has helped me to heal not only myself and my family, but others who have asked for help; and I realize in it the fundamental statement of the truth which Christ Jesus taught and demonstrated.

When I first came to Christian Science I was critical of it; I even criticized our Leader, the church management, everything; criticized the diction of Science and Health; questioned every step of the ground because the scientific statements were so different from those in which I had been educated; but after some five years of such criticism the false sense wore off; I began to accept the scientific statements in Science and Health as one would take axioms in geometry; and as I tried to apply the truth I had and knew—instead of trying to grasp the whole of it before applying it—the way grew easier. To any who may be investigating Christian Science, and who are wondering as to whether it is or is not the truth, I may say that if one will master discouragement, doubt, and criticism, and simply apply what he can at first easily comprehend, he will unquestionably find that Christian Science is the religion of Jesus, and that it is a positive rule for right thinking and living which satisfies alike the conscience and the heart.

CARL H. PIERCE, Cranford, N. J.

I wish to express my gratitude for what Christian Science has done for me. I became interested in it over three years ago, through the healing of my wife of rheumatism, for which healing I am greatly thankful. I have received many blessings since taking up Science. I was healed of a severe attack of illness through the understanding which my wife and myself had. The illness was overcome in one day.

I was also healed of a dislocated knee. I was injured about six o'clock in the morning, but with the understanding of the truth which I had, and its application at once, I was able to work all day, without any help. That night I was taken home in a buggy, for by that time the knee had become stiffened and I was unable to straighten it or to bear any weight on the foot. When I got home I had my wife send for a Christian Science practitioner, who came about eight o'clock and gave me a treatment. Some time that night I awoke and found that the knee was straight. I was so surprised that I got up to see if I could put my weight on my foot, and to my great joy I could not only put my weight on it but could walk and not limp much. By morning my knee was much better, and on the third day I was able to undertake much harder physical work than I had done in over a year, and felt no inconvenience whatever. About a month later I was taken down with fever, and again this blessed truth was the only resource I depended upon. With help from my wife and by reading Science and Health I was again relieved of suffering, and in three days I was back to work.

The physical healing is, however, as nothing in comparison with the spiritual uplifting, which is best of all. I might add that Christian Science found me an agnostic. I had no faith in religion and had no use for the Bible. I thought it was a waste of time to go to church or to read the Bible, but now this is all changed. I read the Bible and Science and Health and find much good in the study of them both. I have learned that they both lead us to health and happiness and teach us how to love our fellow men. I send this with deep thankfulness and love to God for His free and generous gifts, and with gratitude to Mrs. Eddy for showing us the way to this blessed truth.

JAMES C. LOPTIEN, Pueblo, Col.

It is over three years since some kind friends called my attention to Christian Science, and kindly told me what it had done for them and what they knew it had done for others, also what it would do for me. At that time I was a physical wreck, with several chronic complaints, one being rheumatism of five years' standing.

I took one week's treatment in Christian Science, but I want to say that before taking this treatment I had tried every material remedy I had heard of. I had four different doctors, and I think they each and all did what they could for me. The night before I took Christian Science treatment my husband had to give me an opiate to try to deaden the pain, and even then I cried out with suffering. I was, however, afraid to take any more of the drug, so the next morning I got up about nine o'clock, more dead than alive, as it seemed, and told my friend to get me a Christian Scientist, as my husband had told me that morning before going to work that we might as well try one of them, as we had tried everything else. So my friend telephoned to a practitioner, who told me that she would be out to see me in the afternoon. I thought it strange that she did not hurry out at once, as I was so ill, but I began to feel better after this message came to me, though I at that time thought it was the opiate beginning to have an effect on me and relieving the pain. By the time the practitioner came I was feeling good and had started to get supper. She gave me a treatment; and oh, the joy, the peace, the spiritual uplifting which I received when I had that first treatment in Christian Science! It was most beautiful to me to be lifted out of such utter darkness as I was in, for I had given up all hope of getting any relief in this world. My suffering had been great indeed, but now all was changed. I felt so free and happy. My thoughts were all filled with God. I could think of nothing but God!

After the practitioner left I went back to the kitchen, and the first thing I did was to burn my hand. I did not know anything of Christian Science, but seemed to realize that God had something to do with the healing, so when the burn occurred my thoughts turned at once to God and I whispered the name to myself, and put aside all thought of the hand as if it were nothing. I simply felt that God was all and that my hand was not worth thinking about; indeed I had no time to think of it for thinking of God and His goodness, and there was not even the mark of a blister left. I had said to the practitioner when she was leaving that I hoped I would sleep that night, as I had not slept for weeks. Well, I went to bed early and slept as I had not slept before in months—yes, in years; a sleep so sound, so peaceful, so undisturbed by any pain or discord whatever! I have not spent a day in bed from that day to this, whereas before then I spent a third of my time in this way. There have been error and discord to overcome, but they have been met entirely through Christian Science. My husband and I have had many beautiful proofs that God is a "very present help" in time of trouble.

I am truly grateful to God for Christian Science, and to dear Mrs. Eddy, who has labored so devotedly to teach humanity how to apply this grand and beautiful truth.

MRS. NELLIE LOPTIEN, Pueblo, Col.

[Translated from the German.]

As a result of an operation, severe inflammation of the veins set in which confined me to my bed for twenty-two weeks. I tried everything which was suggested to me, but

Digitized by Google

could see no improvement. Christian Science was then brought to my attention, and I immediately placed confidence in it. I read several copies of *Der Herold der Christian Science*, and in a very short while it became evident to me that I had found the true medicine. I sent for a practitioner, who took up treatment at once and explained the truth to me, and after a short time I was able to leave my bed. Several other ailments had still to be met, and after regaining the ability to walk I found that I could not ascend stairs or climb hills, until I realized that all our strength comes from God, infinite Mind. This error then disappeared, so that now I am able to go anywhere. I wish to say here that through realizing the omnipotence of divine Love I have had beautiful experiences both in my business and in my family. I have sufficiently recovered to be able to attend to my business every day, and my wife and I give thanks unto God daily for the truth as revealed to us through our beloved Leader, Mrs. Eddy. We know that God is our source of strength, and that we may rely upon Him at all times.—J. ENGERT, Stuttgart, Germany.

I am thankful for the opportunity afforded by our periodicals to testify to what Christian Science has done for me, and continues to do. I was healed of an abnormal growth, also of a malignant sore of six years' standing. These ailments had caused a complication of many severe troubles. I was constantly in pain and greatly depressed. I had almost given up God and the Bible, although I had tried to be a Christian since early childhood. I could no longer love a God who allowed me to suffer so, as I believed at that time, but I have since, through the teachings of Christian Science, learned that God, who is infinite good, divine Love, does not send these afflictions upon His children. Those were very dark months. I had often thought of ending my life, for I could see nothing in the future but an insane asylum or the grave.

My husband, himself an osteopathic physician, procured the best physicians for me. I must say in gratitude to them that they were kind and exhausted every means known to them to give me relief; but all material means failed. Then Christian Science came to me as a stranger, and I received it. When I was first approached on the subject I felt insulted and indignant, but through respect for my friend I accepted an invitation to attend the Wednesday evening testimonial meeting of Christian Scientists in another city, where I was staying for the purpose of taking treatment from physicians in whose care I had been placed by my husband. What I heard at that Wednesday evening meeting, however, inspired me with hope that the power of God as understood by the Christian Scientists could make me well.

I cannot find words to express my gratitude to God, or to dear Mrs. Eddy, whose teachings made plain to me the Christ way of healing the sick. I am indeed thankful for every trial, pain, and sorrow, if it needed all these weary years in the wilderness to bring me to what I am, for I am now learning to lay up for myself treasures in heaven. I rejoice daily in God's abiding love and care. Each trial that comes to me gives me an opportunity to prove what Christian Science is, and that it does heal. The spiritual uplifting of Christian Science is beyond expression.

The abnormal growth is gone. I do not know when it vanished. The supposedly malignant sore also left when I was lifted high enough for divine Love to shine into my heart and mind. These ills were slow in leaving, but I evidently had a work to do, a lesson to learn, and this was and still is to love,—to attend to my own garden of thought, to weed out selfishness, malice, jealousy, self-righteousness, and hatred; to learn to let others alone, and to see God's perfect child reflected in every one; to see and know only health, to refuse to make error of any kind personal. Christian Science has taught me how to fight discouragement. Christian Science teaches us that we are entitled to man's rightful inheritance—love, joy, peace, health, harmony, for God bestows only good.

Since gaining some understanding of Christian Science I have experienced more blessings than ever before, and I know I shall receive much more if I think and live right. There is nothing I would not give up for Christian Science, if it were necessary. This is a broad statement, but I have proved so far how dear this truth is to me. After my healing through Christian Science almost every friend and dear one turned against me, but I stood firm; and now they are returning, with more love for me than ever.

The highest tribute we can pay dear Mrs. Eddy is to live this truth as perfectly as we can every hour, growing, unfolding, expanding in the sunshine of divine Love. Oh, may we always be happy and rejoice, for the kingdom of heaven and health awaits the sin-sick and heavy laden. Jesus the Christ proved this when here upon earth, and now Christian Science comes reiterating the words and works of the master physician, who said, "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."

MRS. ANNIE M. GRAVETT, Piqua, Ohio.

I wish to acknowledge my gratitude for what Christian Science has done for me, although I hardly know where to begin to enumerate the benefits received, as scarcely a day passes without some proof of God's presence and power to heal and to save from material ills.

It is over eight years since I first came to Christian Science. I went to see a practitioner, as I was suffering at that time with partial paralysis of the bowels, and other serious difficulties. The first treatment brought relief. I felt a little stronger and was uplifted and happy. In a very short time I could eat anything I wished, and I have continued to do so ever since. The bowels resumed their normal action, and I have never taken any medicine from that day to this. Previous to this I doctored a great deal, but received very little benefit. I gained greatly in weight after I had been treated for a few weeks, and it was said that I had changed so much in appearance that I did not look like the same person.

I had never lifted my baby boy, then eight months old, and when I asked the practitioner if she thought I would ever be able to lift him, she replied: "You can do so any time that you wish to; it will not hurt you. You need have no fear." About two weeks after my first treatment I began to care for the child, and how grateful I was for returning health and strength! I am also glad to say that my healing has been permanent.

For these blessings, and for others too numerous to mention here, I acknowledge my gratitude to God; also to Mrs. Eddy, and to all who have in any way helped me onward from sense to Soul. I desire above all things to be worthy to be called a true Christian Scientist.

MRS. HANNAH M. IHLE, Eau Claire, Wis.

[Translated from the German.]

Although I had heard of Christian Science for quite a while, I did not investigate its teachings until the spring of 1911, when I had a severe attack of coughing and looked bad. My parents and friends urged me to go to a physician, and I did. He made an examination and stated that the lungs and throat were affected, and that there was a pronounced anemic condition. He also prescribed remedies and told me to come again after a while; but instead of following his advice I applied to a local Christian Science practitioner, who took up treatment. After three weeks had elapsed I called at the physician's office, and he now stated that to his great astonishment the affection of the lungs and throat had disappeared, while the bloodless condition had greatly improved. The blessings of Christian Science

Digitized by Google

were also evident to us in the case of my eight-year-old brother. He had a severe attack of fever in the winter of 1911, and was confined to his bed. We immediately applied to the practitioner, who took up treatment for him, with the result that the fever abated at once, and the boy was able to attend school again after five days. My brother had also suffered for four years with frequently recurring attacks of fever after going to sleep, it often being difficult to bring him back to consciousness. As these attacks kept growing more severe, we sought help in Christian Science. Following this the attacks became less frequent, and have not returned for quite a while. For all these blessings we are deeply grateful to God, also to our Leader, Mrs. Eddy.

KARL GLADE, Bern, Switzerland.

I feel it a privilege to tell what benefits myself and my family have received through the study of Christian Science. It is about eighteen years since I commenced the study of its teachings. I was then taking medicine three times a day, and had been taking it for fifteen years, but since this time I have not taken any material remedies, nor have my wife and children used any. We overcome all ailments through the truth, and are grateful for what the understanding of Christian Science has done for us.

A. A. CARLSON, Crawford, Neb.

In our desire that all the sick and suffering, the weary and heavy laden, may know that the power of God is present to heal them now, as in the days when Jesus the Wayshower walked among men, we who have felt the healing touch of Truth upon pain-racked bodies, feel impelled to publish the fact—to tell the good news, that others may be persuaded to turn to Christian Science and find, as we have, that it is indeed the power of God which healeth all our diseases and gives us a sense of man's unity with God. I have recently proved (as many times before) the truth of both these statements, for I was healed of a serious and distressing liver trouble and of mental depression, both conditions being soon overcome by Christian Science through the help of a faithful practitioner. Is not Christian Science indeed the promised Comforter, even the "Spirit of truth" which Jesus said should abide with us? Is not this Truth-healing the "signs" which he said should "follow them that believe"?

For this new-old message of God's love and power, I am grateful to Him, and to the one by whom He sent it in this our day and generation.

SARAH J. LIBBEY, Ashburnham, Mass.

About seven years ago, I was stricken with the then prevalent disease known to *materia medica* as appendicitis, of which I had three distinct attacks. With the aid of our well-meaning family physician, I managed, somehow, to pull through the first two attacks without the prescribed operation, but the third attack came about two months after I was freed from the second, and was the most serious. When the physician saw my condition, immediate removal to the hospital was ordered, which was to be followed by an operation to relieve me of the offending appendix, and all food was denied me except a tablespoonful of liquid every hour.

I recall, as though it were yesterday, the whispered conversations, the tear-dimmed eyes, the silent, strained movements, and the atmosphere of gloom which pervaded our otherwise happy home. After the doctor had gone, my mother remembered that she had heard of the healing of disease without the use of drugs, and she asked me whether I wished to try this method before having the operation performed. I replied that I knew I was going to die anyway, but I preferred going into the great beyond without having part of myself cut away, and so a Christian Science practitioner was called.

When he came, he spoke about my cheerful room, about the sunshine, flowers, etc., and he handed me a book which he said I might read. I made the remark that I was hungry, but was forbidden to eat; to which he replied that God made everything and made it very good, and that I could eat anything I wanted. After he left I mentally called him a fool, for he had neither sounded my lungs, felt my pulse, nor even asked me where I had pain. And yet, something about his cheerful manner appealed to me. On his advice, though with some concern, I ate everything I wanted. I slept well that night and was able to be up the following afternoon. Three days later I went to work, and I have not heard from the appendix since.

I learned later that the book recommended to me was "Science and Health with Key to the Scriptures" by Mrs. Eddy, and from it I have learned that whatever the ill may be called, whether tuberculosis, hay-fever, or a slender bank account, it amounts to the same thing, and the Christ, Truth, is able to save now and to the uttermost. I now have conclusive proof that Life is spiritual and that God is Love, and my heart goes out in gratitude to God, also to Mrs. Eddy for divine Science, which is indeed the promised Comforter, and for the health and peace that Life, Truth, Love impart.

GEORGE J. STROESSER, Milwaukee, Wis.

In the spring of 1910, my left eye, which had been left in a weak condition by an eruptive disease five years before, again, through annoyance and overwork, began to trouble me. The ailment became so serious that my sight was much impaired, and I could see only the outline of things but a short distance from me. My right eye could not be used on account of the strain on the left, so for several weeks I was unable to engage in any occupation in which the eyes had to be much used. When my eye began to trouble me, I witnessed a wonderful demonstration in Christian Science healing, and the thought came to me to turn to divine Truth for aid. I engaged the services of a practitioner, and slowly, but surely, my eye was brought to a normal state. After three weeks my eye was well, and I was realizing the power of spiritual understanding through Christian Science, in which comfort and peace are found as the fruits of Spirit.

MISS JULIA CRAMER, Mexico, Mo.

I send this testimony in the hope that it will give some one else an understanding of the healing and spiritual uplifting to be gained in Christian Science. I was sorely afflicted with catarrh of the head, throat, and stomach, also kidney and bladder trouble in a severe form, which caused a great deal of suffering. I had rheumatism so that I could not work at times for one or two weeks, also neuralgia of the head, which was very hard to endure. Besides these ills, I was a slave to the tobacco habit, used strong drink, and indulged in profanity. In the winter of 1908 I fell from the edge of a house roof, about twelve feet, and severely injured my back on the frozen earth, but I was healed without any drugs or material remedies. In the summer of 1910 I was kicked in my left side by a horse, and also had my wrist injured. Besides this I was severely injured internally and for a few days I suffered great pain, but I was healed through the understanding of Christian Science. I have been able to overcome a high fever, also toothache, in a very short time.

I know that Christian Science can heal all manner of diseases, as I have proved its efficiency after spending a number of years in suffering under material treatment at considerable cost. I thank God, also our dear Leader, Mrs. Eddy, for all the benefits I have received through her teaching.—PLATT A. REYNOLDS, Rochester, N. Y.

Digitized by Google

I am very glad to be able to give my testimony of the efficacy of Christian Science healing. I have been healed of both organic and functional diseases, so called, of long standing. I have also been lifted almost completely out of a sense of deep despondency due to continued suffering; but, great as had been the physical healing, I consider that the truth which I have learned about God, through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, is far more important. The knowledge that man's birthright is dominion, and not subjection to evil, has comforted me many times, and I rejoice that I can demonstrate even a little of this great truth.

CHARLES T. FISHER, Washington, D. C.

Jesus said, "Ye shall know the truth, and the truth shall make you free." It would be impossible for me to tell all the blessings I have received through a knowledge of this truth. I have been healed of a stomach and bowel trouble, rheumatism, colds, grippe, etc.; and such mental conditions as fear, worry, self-pity, and resentment have been overcome to a large extent. Christian Science has also given me a greater love for the Bible and for all that is good. It is teaching me what it means to be governed by Principle and to be the master of the body instead of its servant.

It is now over eight years since I became interested in Christian Science, and I have found that as we trust in God for the healing of physical ills, myself and others in the family have received help much quicker than in the old way, and at the same time we are helped spiritually, which is best of all. I also find that the more we trust in God the more we are protected and the less inharmony there is to be overcome. I am gaining a faith which cannot be shattered, and for this truth I am very thankful to God, also to Mrs. Eddy.

MRS. NELLIE HEWITT, Rockford, Ill.

[Written for the *Sentinel.*]

ENVISIONED.

GERTRUDE RING HOMANS.

HAVE you seen the vision? he questioned while at play,
And his mates in maddest merriment deserted him straightway,
But an elder one returning stroked his silky hair
And whispered, I have seen it, dear, and oh, 'twas wondrous fair!

Have you seen the vision? he queried still at school.
The rougher boys avoiding him surnamed him folly's fool.
But a lad of gentle lineage in secret came by night
And said, I've seen the vision and it blessed with peace and might.

Have you seen the vision? through his busy life he asked,
All undaunted by the scornful smile and insult thinly masked.
And here and there he met a friend with lofty purpose thrilled
Who had seen the royal vision and whose voice would not be stilled.

At last a snowy halo crowned the eager searching face,
When his poetry and art had won for him an honored place;
But the common people wonder yet why, passing, he should say,
O the glory of the vision—it is bright as endless day!

. . . . . .

Would you see the vision that no mortal tongue can name?
It is sought for with the inward eye and heart of love aflame.
And the woes of life material and fears all fade away
In the presence of the vision which endures to endless day.

FROM OUR EXCHANGES.

[*Christian Register.*]

This is not an egotist's world, but a social world. There is hardly anything beyond the barest personal belongings that a man really holds as his own. He is always living and working and spending and enjoying in society. He is, therefore, a sharer with others in all that he does, a sharer in his thoughts and his plans, which no single individual ever originated, a sharer by good right in every item upon which he pays taxes, since a whole group of neighbors and workmen, and, more remotely, the labor and invention of the world for ages have gone into the making of what he calls his business and his property. There is not a man living who, if a strict inquest were made, searching out where his money came from, could dare to claim that it is all his own and gathered by his enterprise alone. There is not a business which, if it could have the benefit of careful investigation, would prove to be merely the concern of the man or men at the head of it. It is the concern of the clerks and porters also; it is the concern of all its customers; it is even the concern of the wives and children of the men in command. Is it not a wife's or a child's concern whether or not any taint of fraud or dishonor or meanness comes into the house with the monthly allowance? The great corporation exists for the good of society. It is no private monopoly: it is a marvelous social responsibility. But so likewise is every business which may rightfully be carried on.

Why should not every business man rejoice that this is so? Why should he not see that he can do the service of a philanthropist, not merely by incidental kindnesses and gifts to charity, but much more by the singleness of aim, the integrity and scrupulousness, the humanity and democracy, with which he helps to carry on his business as his part of the vast industrial mechanism of civilization? At any rate, this is religion, and, as sure as this is a universe, and especially a divine or spiritual universe, this must be so. It is slowly and surely coming into general sight.

[*Christian Intelligencer.*]

A minister is an ambassador of Christ, commissioned to preach the good news of salvation. The opportunities to proclaim Christ from the pulpit are none too many. In these days, when so many Christians attend only one service a week and many others much less frequently, the hour of public worship is filled with solemn meaning for the preacher. In view also of the fact that at every service there are those needing salvation and many more hungering for comfort and guidance, how tragic it is that a pastor should face his people with a political speech or an ethical essay or any dissertation without the distinct note of the gospel. We are perfectly aware that the gospel is to be preached in its application to present-day needs, but this can best be accomplished by ministering to the needs of the soul. A man must be right with God first of all before the other interests of his life will be conducted with lofty motives. Small wonder that congregations are small if the husks of political harangue and social clap-trap are dealt out instead of the true bread of life. They have a great deal to answer for who so pervert their high commission as to make it a means of airing their pet theories of political and social amelioration.

[*Living Church.*]

It is strange how often, by a single incident at an unexpected moment, a character is brought out. We reveal ourselves in crises; at turns in the course of events that catch us unawares. An opportunity presents itself for immediate acceptance or rejection; an imperative passion calls for gratification or denial; a duty obtrudes itself in the way of our comfort; and by our action we reveal our character.

We know full well how sin, faults of character, weakness

Digitized by Google

of will, at times have clouded our lives, how often at least by deed if not by word we, too, have denied the Christ. That we live so complacently under the sense of our shortcomings is due to the self-deception that besets us. We continually make excuses for ourselves, for no love is so tender of the object of its affection as self-love; and we are prone to love self passionately unless the thought of self is driven out by love of others and of God. How many characters, weakened by self-deception, crumble under the force of temptation or slump into useless softness! Fortunately in the hour of our danger the divine Love turns and looks upon us. There is no substitute for the vitalizing touch of the hand of Christ upon our soul. We must see the vision of his face; breathe of his spirit; be united with him in his work of love for others.

[*Standard.*]

Nothing is more needed than that we shall keep our heads level and our vision clear as we look out upon the Christian world and its task at the present time. All sincere followers of Jesus Christ must rejoice that the church as a whole is awakening to a realization that the ministry which the Master asks of us is a ministry to the whole man. Too largely we have confined ourselves to preaching and teaching, ignoring his example of service to physical needs. But now that we have become conscious of the larger implications of his gospel we must take heed lest in our new-born zeal for social service, essential as that is, we be led to ignore or underestimate the vital importance of spiritual renewal. If social ministry is to be carried on in the name of Christ patiently and persistently, it will be done only by those who have the mind of Christ. There is no other secure foundation upon which social service may rest than that of souls born of the spirit of the loving Christ. To minimize the importance of either phase of Christian undertaking, whether for social ministry or for spiritual regeneration, is dangerous, and to ignore either of these is fatal.

[*Advance.*]

Paul could thank God for the hints of his real self which came when God called him "out of darkness into his marvelous light." But he still felt that he had not yet "apprehended." There was more in him than had ever come to the surface. He did not fully know what he should be, but he knew that he should be something larger, nobler, diviner, when he should, under celestial skies, come to the full possession and exercise of his own possibilities. Thus as conversion is a coming to ourselves, eternity to the saved will be a perpetual and eternal revealing of ourselves to ourselves, a constant unfolding of the real self which came into existence when we began to be, which emerged from the ruck of sin when we were converted, and which will be only fully understood when we know as we are known.

[Rev. F. C. Aldinger in *Universalist Leader.*]

The spirit of unrest which characterizes the present age is not a new thing under the sun. It is only the manifestation of an endless process, the sign of health and normality. Man is born to discontent "as the sparks fly upward" because he is born to conquer and to achieve. He is made that way morally and intellectually. It ought not to be otherwise. He is ever in the throes of liberating the inner forces of his life and of extending the horizon of his vision.

[*Pacific Baptist.*]

He who is content with lip-service will never hear Christ's "Well done;" he who is content with the eye-service that pleases men will never please God. "Faith without works is dead." We must have reality in our religion, or we are self-deceived in thinking we have any religion.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herald,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

A new pamphlet, "Christian Science Healing *versus* Mental Suggestion," by Frederick Dixon, reprinted from the *Weekly Budget,* London, England, is now on sale; 36 pages and cover, at the prices of the regular pamphlets.

For some time the postage required for subscriptions outside of United States territory has exceeded the amount added to the regular subscription price for this purpose, and an increase in rates sufficient to cover this deficiency is now deemed necessary.

Beginning April 1, 1912, therefore, the rates on all subscriptions outside of United States territory will be as follows: For Canada, *Journal* $2.25, *Sentinel* $2.45; for all other countries, except those to which the domestic rate applies, *Journal* $2.65, *Sentinel* $2.95.

Renewals for all subscriptions terminating before April 1, 1913, and received by us prior to July 1, 1912, will however be accepted at the old rates.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance to the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 80 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 194 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE. June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 70 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under those titles in this price list.*

ITEMS OF INTEREST.

National.

The federal government closed the fiscal year Saturday, June 30, with a surplus of thirty-two million dollars, according to estimates based on incomplete returns from the various sources of revenue the country over. Secretary MacVeagh a month ago estimated that the surplus would be only $10,250,000. The surplus at the close of the fiscal year 1911 was $45,082,000.

International.

The leading recommendations of the international radio-telegraph congress at London, Eng., adopted during sessions of the conference are:

Regulation to prevent interference in crowded areas and designed to make wireless telegraphy of the greatest possible use in saving life and property at sea and making it also more valuable commercially.

Every hour all ships must remain silent for ten minutes, listening for distress calls. The distressed ship shall control the magnetic field of her radius and should many ships answer her distress call she shall determine which is to remain silent, thereby avoiding confusion.

The following wave lengths were adopted for commercial business: Short and medium distances, three hundred to six hundred meters; long distances, eighteen hundred meters.

The military interests of Great Britain and France prevented the adoption of the American proposal for a general commercial wave length of eight hundred meters.

Weather observations are to be given the right of way over commercial despatches.

The congress adopted an elaborate code governing the interchange of business between rival wireless companies, which are no longer to be permitted to disregard each other.

A committee has been formed in connection with the Naval and Military Emigration League, of which the Duke of Connaught and Lord Roberts are presidents, to organize a movement for training ex-soldiers and reservists as farmers. The interest and cooperation of men of wide practical experience have been insured. Harry Samuel says "there is no career that soldiers can turn to at the expiration of their period of service more in harmony with the outdoor nature of their calling than farming." He criticizes the treatment meted out to men who have given so many years to national defense, and says that nothing can be more important than to have large tracts of available reversible property lying on the land in our home counties during times of peace.

President Yuan Shi Kai has accepted the resignation of Premier Tang Shao Yi. Tang has been a prominent figure in the Chinese reform movement for the past ten years. His present action is probably due in large part to the row that blew over the loan from the six-power group which has aroused such hostility in China because of the large powers of concession demanded by the foreigners. The premier was one of those who remained with the Manchu dynasty until its fall and then went over to the republicans. He rendered important service to the nationalists by his conduct in the negotiations between Yuan Shi Kai, acting for the throne, and the revolutionists in the conference at Shanghai, which resulted in the Manchu abdication and the agreement on Yuan for the presidency.

Chinese students are beginning to return to Japan for educational purposes. There were at one time as many as eight thousand of these students in Tokio, but a few years ago a question connected with their supervision created so much dissatisfaction that a large number of them left Japan altogether. Thereafter this exodus was still further increased by a proclamation of the authorities in Peking to the effect that to proceed to Japan for purposes of elementary education was superfluous, as such education could be obtained very well in China, and finishing education alone should be sought in Japan. Now since order has been restored, Chinese youths are beginning to make their appearance again in the Japanese capital.

Addressing a recent meeting at Adelaide of the South Australian Fruitgrowers and Market Gardeners Association, the minister of agriculture said that the quantity of apples exported during the present year was the largest for a number of seasons. Oversea markets were opening up, and there seemed no reason why the fruit industry in South Australia should not be vastly extended. South Australia possesses an immense area eminently adapted for fruit production. In 1910 the area of orchards totaled twenty-two thousand four hundred and ten acres, and there are thousands of acres of virgin land equally suitable.

China absolutely rejects the demands of the six-power group that the Chinese loan must be three hundred million dollars; that three European financial supervisors must be appointed, and that the group must have its financial agents in China for five months during which there should be no issue of bonds and no business of any kind involving the pledging of China's credit without the supervisors' signature. China's counter proposal is simply for a fifty-million-dollar loan.

A scheme for founding a self-governing community of boys and girls on the lines of the George Junior republics in America is approaching materialization in England. The colony will be established at Flowers farm in Dorset-hire, the lease of which has been given free of rent by the Earl of Sandwich.

The Emperor of Russia, accompanied by his family, arrived at Baltic port, Russia, on the 3d on board the imperial yacht Standart to await the coming of the German Emperor, who left Danzig in company with his third son, Prince Adalbert, and the imperial chancellor, Dr. von Bethmann-Hollweg. This will be the first meeting of the two emperors since August, 1909.

Industrial and Commercial.

Work on the foundation of the steel and terra cotta Woolworth building, New York, that has arisen on a two-hundred-foot plot at Broadway, Barclay street, and Park place, opposite the federal building, was begun on Nov. 4, 1910. The caissons went down to solid rock one hundred and fifteen feet. They were completed on Aug. 24 of last year. The foundations are sixty-six feet of reinforced concrete. The main building is thirty-two high and the tower, the framework of which has just been completed, is three hundred and sixty-six feet higher than the main roof of the building. The tower will [illegible] used as an observatory. A [illegible] have the twenty-eighth floor. In the [illegible] there will be a swimming pool, a gymnasium and a rath-skeller. There are to be [illegible] passenger elevators, twenty-five of [illegible] grouped near the Broadway entrance. [illegible] there will be four [illegible] proof stairways. The approximate cost of the building is thirteen million five hundred thousand dollars.

A consolidation of independent mining interests in the Pittsburgh district involving a capital and bond issue [illegible] dollars and an annual production [illegible] tons with an estimated acreage of [illegible] thousand acres, is in process of formation. The firms are included in the proposed [illegible] organization of the new corporation are both on the stock issue of [illegible] dollars and a bond issue of [illegible] dollars. On the side of the concern included in the proposed merger there remain only about [illegible] twenty individual coal mining companies in the Pittsburgh coal seam as compared with the bulk of the production in the Pittsburgh district would be left practically in the hands of two great corporations, the Pittsburgh Coal Company and the proposed new organization.

Having finished the necessary surveys, [illegible] fourteen months' work, the Southern Pacific officials decided recently to immediately begin a second track over the Tehachapi mountains at an estimated cost of seven million [illegible] hundred thousand dollars. All rights-of-way between Bakersfield and Mojave will be condemned or purchased outright. Half of the expense of construction and half of the annual cost of operating the new line will be borne by the Santa Fe because it is to have joint use of the road. It will be about ninety miles in length and will cost an average of a little over eighty thousand dollars per mile. It is to be a lower-grade line than the present one.

Fruit growing in Tasmania is said to be rapidly increasing, and before long there will be thirty thousand acres of apple orchards in the island. The total acreage producing in the season just ended, was 20,412 and the yield was 1,248,000 bushels of apples. This year has been a record. The total oversea export was over 915,000 cases, 658,300 of which were for the United Kingdom, and this will beat last year's by nearly one hundred and [illegible] thousand cases.

Water has been turned into the Lost river diversion canal to soak the lark preparatory to turning in the full flow of the river. It was built by the reclamation service to carry the full flow of Lost river into Klamath [illegible]. By doing this the water running into Tule lake will be shut off and result in materially lowering that lake. This will reclaim a large body of fertile land lying equally in California and Oregon.

The greatest fruit crop ever produced in the Yellowstone and connecting valleys will be gathered the present summer and autumn, is the opinion of those who have recently made an inspection of orchards in this section. Not only will the apple crop be immense, but the same will be true with plums, crabapples and all small fruit.

The shipping of the Georgia peach crop is well under way. At current estimates, with a continuously favorable shipping season, it will yield the growers direct about two million five hundred thousand dollars. The consensus of opinion centers around a production of five thousand cars.

It is announced that three hundred kilometers of the railway line which is to link up Bangkok with Singapore have been completed, there leaving eight hundred kilometers to be constructed. Work is already proceeding on two-thirds of the latter section.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

IS GOD SILENT?

ROBERT NALL.

THE student of Christian Science has not long been engaged in what becomes to him his life's work before he discovers to his surprise that his concept of God has undergone a remarkable change. It is one that brings a thrill of joy when first experienced, because the sense of separation from God begins to fade and the divine presence is known as a deeply conscious reality. The thought of the infinite distance of God "in heaven" may have been accompanied by perplexity as to why God is silent. "Why does not God speak audibly to us as He did to men in olden times?" How often this has been asked in querulous tones, as if God had hidden Himself and refused to acknowledge His children today. The thought is a burden not only to many who are yet in bonds of materiality, but even to many good Christians who claim to have found spiritual light and the way of life eternal.

The Christian Scientist knows by painful wanderings and waywardness how reluctantly mortal thought abandons its foundations of error, still wanting to ascribe human characteristics to the Almighty and persisting in mentally delineating Him in the likeness of man. It has even been argued at great length that God has really been silent for nineteen centuries, ever since the ascension of Jesus, but that we are on the eve of a revival of those wonderful days when He spoke to men in tones that could be heard, as He did to Abraham and Samuel and David and other of His servants of whom we read in the Old Testament. It is quite true, as Peter declared in the early days of the Christian era, that God did speak "by the mouth of all his prophets," but it is just as true that He has never ceased to speak. Not only does the Christian Science student soon come to know by the best of all proofs that God is always near as Life and Love and Truth, but that He hears and answers prayer.

This question of the divine voice is sometimes mixed up with that of God's immanence and transcendence, about which the Christian world is hopelessly confused. The Christian Scientist, having found the truth, which is always the spiritual mean and not human extremes, has ceased to puzzle himself over these difficulties. He knows that the spiritual man—the man of God's creation—is always with God, and can always hear His voice. There is a spiritual ear which can hear that of which mortal sense has no knowledge. The untutored ear is not attuned to divine things, and is dull of hearing. Mortal thought has a tendency to run into extremes and into utter fallacies. It says that because God does not "speak," therefore we cannot hear His voice; moreover, it begins to doubt whether God hears, and therefore it discourages prayer. How many poor souls have lamented because error has misled them into the belief that God either cannot or will not hear them, despite the fact that they have made abundance of material sacrifices and have pleaded and besought in tears for weeks and months. Oh, the pity of it! The writer remembers hearing good old George Muller of Bristol say that he had been praying for one special thing for forty years and yet God had not heard him. This, too, from a man whose prayers had been oftentimes wonderfully answered.

As with prayer, so in regard to inspiration. There was a time in Christian history, as we know, when men held that the little points in the Hebrew Bible denoting the vowels were inspired! and even today verbal inspiration finds its adherents. The antithesis of this is of course the ultra-rationalistic view which minimizes the divine element in the Bible and reduces the sacred volume to a merely human record. In olden times the "voice of God" was supposed to be heard in nature, as in thunder. In the days of Jesus it was so. At his baptism there was the "voice" which acknowledged him as the Saviour of mankind, "This is my beloved Son;" and on another occasion the voice was heard, but to the dull ear it was as inarticulate thunder.

This is in accord with much of the symbolism of the Old Testament, especially such portions as the twenty-ninth Psalm. The Israelites were accustomed to hear what was always described as "the voice of the Lord." Mrs. Eddy expresses the view that before human knowledge became so material, "it is possible that the impressions from Truth were as distinct as sound, and that they came as sound to the primitive prophets" (Science and Health, p. 214). The underlying idea of the book of Exodus is that God is everywhere, and always in the act of self-manifestation. It was the craving for an assurance that God did in reality take part in human affairs—a craving which sometimes expresses itself in somewhat startling language in the Old Testament, language which of course is not acceptable today with our more spiritual concept of the creator and the universe.

Now, while the precise method of inspiration may still be an open question, there can be no more doubt that God speaks to and through His children than there can be that He exists as the creator and governor of the universe and the Father of mankind. The spiritually awakened hear His voice and He knows the desire of the spiritually awakened. His voice is "the voice of Truth" which Mrs. Eddy says on page 308 of Science and Health the Soul-inspired patriarchs heard; and that they "talked with God as consciously as man talks with man." God is silent only to the carnal mind, just as He is unseen to the darkened mental vision or to the impure in heart. The word of truth is spoken to such in vain; but when the consciousness is aroused and the spiritual faculties become alert, there is a "still small voice," inaudible to the human ear, but heard clearly by those who are learning the secret of listening to His word. They are thereby encouraged to press on to greater attainments in the divine warfare against all the enemies of righteousness.

What is known as the "inward voice" is that which we can hear the most clearly as the material senses are lulled and we enter into that relation to the divine which reveals to us the true at-one-ment between God and His children. All through the ages men have witnessed to this voice and have been comforted and strengthened; it is thus that they have come to know the power of Truth. "My sheep hear my

Copyright, 1912, by The Christian Science Publishing Society.

Digitized by Google

voice," said Jesus, "and they follow me." It is a call that once heard the listener never forgets; it must be obeyed in all loving willingness, because it brings us into the heritage of peace and rest and means in its highest sense Christlikeness. In Job we read that "there is a spirit in man: and the inspiration of the Almighty giveth them understanding;" evidence this that Elihu, who spoke the words, knew something of the close relation which exists between God and the spiritual man.

It may be said that this opens up the question of divine personality, about which also the Christian world is divided, but Christian Scientists know that God is infinite personality or Spirit, not personality in the human sense: and they "do not believe there must be something tangible to the personal material senses in order that belief may attend their petitions to divine Love" (Message, 1901, p. 7). Our desires must be so purified and uplifted that when we wait for God's leading and listen for His word, we shall be worshiping Him and acknowledging Him "in spirit and in truth," and shall know that the Father who seeth in secret will reward us openly.

When our Leader wrote that her book, "Science and Health with Key to the Scriptures," was the voice of Truth to this age" (p. 456), she possessed the infallible conviction that God had called her to this work—called her to proclaim to a world rapidly drifting into materialism that the religion of Jesus was the scientific understanding of God as the divine Principle of the universe, which could be proved in the experience of every man who sought His help in sincerity and in truth. Think for a moment how marvelous have been the results,—the multitudes of men and women who know that the truth does indeed give freedom; the spiritual uplift; the clearer light; the restored love for the Bible and its illuminated pages in the light of Christian Science; the proofs, as positive as a demonstration in mathematics, that sin, disease, and death are not products of God, who is Love, but the phenomena of the carnal mind, amenable to the operation of divine Principle; the wonderful answers to prayer. Is it possible to doubt that God speaks today as ever He did, in tones that are strengthening, assuring, inspiring? "God hath spoken in his holiness," said the psalmist. His word is translated to us in spiritual activity and in the fruits of divine Love as manifested in those who have been physically healed and spiritually regenerated.

SPIRITUAL UNDERSTANDING.

RENETTE K. BUTLER.

WHAT boundless possibilities for helpfulness and happiness are opened to us when, through the teachings of Christian Science, we begin to find the spiritual interpretation of the Scriptures and to search for the spiritual idea back of every human concept or material thing! On page 16 of Science and Health, Mrs. Eddy gives the spiritual interpretation of the Lord's Prayer, and on the same page she says, "The highest prayer is not one of faith merely; it is demonstration. . . . It distinguishes between Truth that is sinless and the falsity of sinful sense." This spiritual interpretation not only frees thought from the petty, the sordid, and the disheartening, but, incredible as it may seem to the materialist, it actually meets specific needs, mental, moral, and physical; and it does so because it leads straight back to the one Principle of being, the absolute cause, God, who is Spirit. This fact has been illustrated for the writer by a few of her own experiences.

I used to say, "Our Father which art in heaven," with the thought of a far-off, mighty being, who was to be obeyed, also revered and loved, if it were possible to love where fear and awe were so dominant; one who might grant my plea and send good, if for some reason incomprehensible to me He saw fit; but never for a moment did God, as thus believed in, seem near and dear, or even necessary to me, as my earthly father did. Our text-book interprets this phrase, "Our Father-Mother God, all-harmonious;" and Christian Science has taught me to know God as infinite, unchanging Love, as my preserver, my guide, my source of being, supplying my every need lovingly and bountifully, often before I have felt it. Thus He has become so all-sufficient that in times of fear or suffering my thought turns to Him as naturally and confidently as that of a little child turns to its human parents. Many times the consciousness of His presence has been so clear as instantly to heal fear, pain, or resentment, so that I longed above all else to give Him loving and intelligent obedience.

Formerly, when I prayed "Thy kingdom come," I thought vaguely of a distant time that should follow a mighty upheaval called the judgment day, but Mrs. Eddy has given us a present realization of this phrase in the declaration, "Thy kingdom is come: Thou art ever-present." We are taught in Christian Science that the kingdom of God is the dominion of good, and that the recognition of the omnipotence and omnipresence of God, good, destroys the false claims of evil, as the acceptance of the correct thought must cancel the wrong thought. Jesus said, "The kingdom of God is within you." Hence this prayer understood and demonstrated enables one not only to stand, but to advance through the clamor and chaos of human theories and fears.

In the past, "Thy will be done" was always associated with moments of resignation, or even despair, when one was weary and baffled being had given up the struggle in the face of an "inscrutable Providence:" but now "Thy will be done" is the cry of victory over human woe. For God's will is only good, since He "is of purer eyes than to behold evil," and hath "no pleasure in the death of him that dieth." This petition as understood in Christian Science has helped me, also, to meet self-will in myself and in others. In my work as a teacher it is leading me out of the unsatisfying thought of the domination of personality or human will-power into the realization that man made in the image of his Father-Mother God must be governed by divine Principle, and cannot be bound by heredity, evil influence, or apparently inherent sin. For this reason no child seems a hopeless case, and the heart-sick feeling of human impossibility, allied to impotence, has given place to one of courage and joy in my work.

"Give us this day our daily bread" was hitherto a perfunctory prayer, but now I look beyond the material and find help and inspiration in the understanding that "our bread 'which cometh down from heaven,' is Truth,"—"the great truth of spiritual being, healing the sick and casting out error" (Science and Health, pp. 35, 33). In a material sense bread is often spoken of as the staff of life. The spiritual interpretation teaches us that the staff of life is really the right understanding of God and His creation. Jesus said, "I [Truth made manifest] am come that they might have life, and that they might have it more abundantly." And he also declared, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." As the spiritual interpretation of this phrase of the prayer, we have in our text-book, "Give us grace for to-day; feed the famished affections" (p. 17). This last clause, "feed the famished affections," has been to me the prayer of demonstration previously referred to, for it has healed me of an intense, indescribable longing, and a morbidly sensitive disposition: and, together with an advancing understanding of the first clause, it has greatly increased my capacity for loving and for finding joy in the giving of love.

When I now pray, "Forgive us our debts, as we forgive our debtors," I am so filled with gratitude for the gleam of an understanding of God which has brightened my life, that I feel I have no debtors to forgive. Anything due me in the way of love, or commendation, or even acknowledgment, seems too small for consideration. Therefore self-pity and

Digitized by Google

false ambition are giving way to a feeling of good-will and compassion, and I am gaining glimpses of what it means to pray, "And Love is reflected in love" (p. 17), which is the spiritual sense of this petition.

In Christian Science, "Thine is the kingdom, and the power, and the glory," means much more than a dutiful acknowledgment of God's sovereignty. It is a fervently grateful declaration of confidence. In moments of darkness it is a pillar of fire. It makes moments of success real milestones of progress by proving to us the eternal fact, "God is infinite, all-power, all Life, Truth, Love, over all, and All" (p. 17). This view of success brings much more happiness and growth than the fleeting satisfaction which arises from a sense of personal achievement, for it makes it clear that all success or progress results from the operation of divine Principle manifested to and through man, for the allness of the divine Mind becomes the one fact and it uplifts, inspires, and heals.

The spiritual understanding of the Lord's Prayer gained by thoughtful consideration of the Bible and the honest study of our Leader's interpretation of it in Science and Health, makes this prayer so vital and demonstrable that the Christian Scientist finds it always in his thought in time of need, an abiding consciousness, an ever-present help. It is for this reason that its audible repetition at Christian Science services is vibrant with gratitude and spiritual power.

THE EXPLANATORY NOTE.

CAPT. GEOFFREY WILKINSON.

IT has become the custom in Christian Science churches for Christian Scientists in some cases to share their copy of the *Quarterly* with strangers who come to the services, in others to lend it to these strangers, and the custom is certainly one to be commended, demonstrating as it does a spirit of friendliness and welcome. But just as there is a time for everything, so surely there is a proper time to offer the *Quarterly* to a stranger.

In the church of which the writer is a member it is the custom for the first reader to make a pause after the reading of the explanatory note, to enable those who have *Quarterlies* to share them with those who have none; and if no movement is made before this pause, there is nothing to disturb the reading of the explanatory note, which surely is most desirable. When Mrs. Eddy arranged for the reading of the explanatory note to precede the reading of the Lesson-Sermon, it is reasonable to assume that it was her desire that all present should receive it with thoughtful attention; but do we all really appreciate the tremendous import of its contents?

First the attention is drawn to the fact that the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures," are the "only preachers" in the Christian Science church. The impersonal nature of the sermon is thus immediately intimated, a point that would hardly fail to impress itself upon the stranger who has been accustomed only to personal preaching. But is he likely to note this point if some one, albeit with the best of motives, is handing him a *Quarterly* at the moment? Attention is next drawn to the fact that the passages from Science and Health are correlative with those from the Scriptures, that they are in fact analogous to or explanatory of them. This impels the listener to direct his attention to this correlation, and he thus gains a new light on passages of Scripture which he may often have heard, but which before have meant little or nothing to him.

The second paragraph of the explanatory note calls attention to the fact, stated by Mrs. Eddy on page 320 of Science and Health, namely, that "the one important interpretation of the Scripture is the spiritual." It then goes on to assert the applicability of the Bible promises to all ages. This, perhaps, is the climax of the introduction to the reading of the Lesson-Sermon. How many of those who find their way to our churches come with the regretful feeling that "the day of miracles is past;" to how many must the affirmation of the present applicability of the Bible promises have come as a ray of hope, to be confirmed later by the healing and regeneration sought so long in vain.

The above is a rapid survey of some of the points which are brought to the notice of those present by the reading of the explanatory note. Would it not therefore be well to sit quietly where we are while it is being read, and then, if necessary, offer our services to the stranger? Due attention would thus be devoted to what, after all, is an integral portion of the service, and one which our Leader certainly never intended to be regarded as a perfunctory formula.

IMPERSONAL DISCERNMENT.

JOHN D. FRANCE.

MRS. EDDY says, "To impersonalize scientifically the material sense of existence—rather than cling to personality—is the lesson of today" (Miscellaneous Writings, p. 310). To the writer it seems that there are three distinct steps to be taken in reaching the height of understanding and realization to which this statement points, the attainment of which would prove to be the consummation of the highest human hope, namely, permanent health, peace, and happiness.

The first step is the awakening of human consciousness to the truth of being, in which God is recognized as all-inclusive good, not having a finite or anthropomorphic personality, but an infinite spiritual personality. The impersonalization of good thus begets a nobler, richer concept of it, while the impersonalization of evil, the devil, reduces it to nothingness; it exists only in the evil thinking of mortals. In this step, as in those following, the letter is more readily grasped than the spirit, possibly because the long-established belief in an anthropomorphic God is so frequently suggested by the use of a personal pronoun in referring to Deity. Evidently the only remedy lies in closely following the teachings of our text-book, with its illumined concept of God as the Principle of good, governing the universe.

The second step is golden with promise, since when taken it enables one to put "all things under his feet." It is the escape from self-consciousness, the feeling that "I" have done, am doing, or may do good or evil or both. It is to see the good as evidence of God, working in human consciousness and destroying the belief in evil, with the realization that it has no part in man's true being, since God is All. Pride of place and power, pride in our own ability and understanding,—these are a few of the thoughts which tempt us to locate good in the human personality and rack us with all their evil following of envy, selfishness, deceit, and the like. The thing which seems to have excited the resentment of mortals toward Jesus was his impersonalization of good. The Pharisees said, "For a good work we stone thee not;" but "because that thou, being a man, makest thyself God." It is evident that had he claimed some power of his own, he would have excited only the wonder which hypnotism produces today. The fact that the demonstrations of Christian Science are attributed to divine power, seems to arouse the same resentment which the Master's teaching awakened.

Mrs. Eddy writes, "To prove scientifically the error or unreality of sin, you must first see the claim of sin, and then destroy it" (Science and Health, p. 461). The Scripture avers that there is nothing that shall not be uncovered. To describe the evil which is seemingly personified, the Scripture uses the term "possessed with devils." Jesus constantly pointed out that it was the good flowing from God which did the work, yet he insistently claimed the acknowledgment

Digitized by Google

due him as the exponent of God's power. Regardless of the ingratitude of mortals, he seemed confident that he would reap as he had sown, for he is quoted as saying, "I have finished the work which thou gavest me to do. And now, O Father, glorify thou me with thine own self with the glory which I had with thee before the world was."

Until one has attained in a measure the impersonalization of his own thought, there is little hope of his attaining to the third step, namely, an impersonalized sense of the thoughts of others and their subsequent manifestations. This is the state of consciousness which can truly love the fellow man, "not rendering evil for evil, or railing for railing: but contrariwise blessing,"—the blessing of separating the tares from the wheat, the evil from the individual. This step brings us to deal with the truth that God's children are avenues for the manifestation of good only, and enables us to correct the belief that they can be avenues for evil, or for both good and evil. Mortal mind is ever critical, a condition which would be hopeless had not Christian Science taught us the truth of being. How vital it is that we learn to impersonalize even the good expressed by others. Honor and love are its due, yet should we see it as personal and follow it as such, we unavoidably include the human frailties of the person also. Or, perhaps, when these frailties present themselves, or when a time of trial comes, we fall away because we never understood what we really were following.

A clear perception of the impersonal nature of evil is needed for one to bless and love those who seem deep in the mire of sin and discord, but inasmuch as it may affect us, we have the promise given by the psalmist for those who acknowledge the omnipotence of God, that "only with thine eyes shalt thou behold and see the reward of the wicked." To hold evil as personal breaks the Scripture commandment concerning the bearing of false witness, by holding man to be unlike his source and support, namely, his Maker. To see evil as personal and then to seek to overcome or flee from it, either physically or mentally, means only to obstruct the heavenward progress of others as well as ourselves.

It is evident that we cannot afford to appropriate to ourselves the tares in others' thoughts, but let us be sure that the refusal of them be according to God's plan and not that of material sense. "O God, to whom vengeance belongeth, show thyself." Paul writes that "we wrestle not against flesh and blood." Let us grasp firmly the good in mankind and accept it gratefully as the evidence of the underlying reality.

ACKNOWLEDGMENT.

GEORGE R. HAPP.

THE following is an acknowledgment of benefits received from *The Christian Science Monitor*. The writer had a legal matter upon which he wanted honest and competent advice, and on looking up the Thanksgiving number of the *Monitor* (this was eight months after this number was printed) he found the name of an attorney to whom he went and received satisfactory advice and information. At the same time he had been asked by friends to attempt to locate or get information about a property that could be purchased. On advising this attorney about the further information desired, he called up a firm known to be reliable, from whom the property was purchased. It was in a most desirable location and the price was satisfactory. All this was the result of an advertisement of only a few lines, but it showed clearly the advantage of advertising in the *Monitor*, a newspaper with a permanent value.

The writer has had much experience in business, and can recognize the possible benefits to be gained by both the advertiser and the reader. When we stop for a moment to think that the *Monitor* is the only periodical issued by The Christian Science Publishing Society which carries advertisements pertaining to matters outside of the Christian Science movement, is it any wonder that there should be splendid returns not only to the advertisers, but to the readers as well; hence its value to those who have something to sell as well as those who wish to purchase. It is well known that nearly all periodicals depend largely upon their advertising columns for their support. May this not also be true of the *Monitor*, which is practically upon the same basis as other daily papers as to price, news, method of circulation, etc.? This being admitted, are we as Christian Scientists doing our duty by only subscribing for this most valuable paper? Should we not also be interested in its advertising columns, and even read its advertisements? In this way we may give our loving help to very many, and thereby carry forward our beloved Leader's efforts to help all mankind. The information which we gain from the *Monitor* pertaining to buying or selling, renting or locating, information as to professions, arts, or what not, we should gladly pass on to others, and also be ready to inform advertisers of the fact that we had learned of them through the leading daily paper of the world.

The value of the *Monitor* in giving reliable information in the way of dependable news about business and politics, and thereby quieting the fears frequently caused by pessimistic and non-dependable information sent out by those who may be interested in the circulation of such news, is inestimable. It gives us the best about men, movements, and national interests, to say nothing of the many other good things too numerous to mention, thereby strengthening our trust in God and man. Hence the writer, for one, is resolved not only to continue as a subscriber, but also to continue to read the paper and follow its advancing thought, helping thereby the continuous growth of interest in *The Christian Science Monitor*.

[Written for the *Sentinel*.]

NO MORE SEA.

EVELYN GAGE KNIFFIN.

THE sea ever speaks with its billows,
Of restlessness, tumult, and strife;
And mysteries vast and unfathomed,
O'erclouding the sunshine of life.

And sadly it murmurs of sorrow,
Drear watching and agonized fears,
Of ships that have vanished forever,
And heartbroken women in tears.

Our lives, bound by darkness and error,
Are like the tumultuous sea,
With partings and peril and discord,
Keen anguish and deep mystery.

But Truth comes, proclaiming man's birthright,—
Possession and safety and peace,
Great joy and a full understanding,—
And all our old turmoil shall cease.

There shall be no death, neither sorrow,
Nor crying, nor any more pain;
For God wipes away all earth's tear-drops,
And Love shall forevermore reign.

Behold, the new earth and new heaven!
The first heaven and earth cease to be!
The spirit of peace reigns triumphant!
And, lo, there shall be no more sea!

[Editorial in *Los Angeles* (Cal.) *Journal.*]

In a sermon preached in this city on a recent Sunday from the pulpit of one of the orthodox churches, the announcement was made that Christian Scientists and Unitarians are *en route* to hell. We hope some mistake has been made by the learned gentleman who voiced this view of the matter.

The argument is made that Christian Scientists and Unitarians are Christless, and hence that they are, spiritually, outlaws. This, of course, assumes the correctness of the premises from which the gentleman draws his sweeping deductions, and, at the same time, excludes entirely from consideration the possible correctness of any other view of the matter. But is Christ to be comprehensively and intelligently understood from any one exclusive point of view? There are wide differences of opinion among thinking people as to the correct doctrinal interpretation of the teachings of the New Testament. To be of Christ a part, is to be so influenced by completeness of faith in the superiority of his leadership over that of all others as to act and move and live in loving obedience to all the behests of that leadership. To some his crucifixion has one meaning, and to others it has still another meaning. To some it means vicarious atonement for the sins of the race. To others it symbolizes the fact that in the sacrifice of the flesh, the yielding up of all allegiance to error in human life, is to be found complete redemption from the bondage of sin. Again, in the crucifixion of Jesus is to be seen, in its most complete and august expression, demonstration of the fact that good and evil—God and sin—are absolutely and eternally irreconcilable, and that in order that our daily lives may be truly interpretative of the Christ, of the meaning of his message, it is as inexorably mandatory on man to destroy, crucify, the evil, the sin in his life, in order to be in harmony with the will of God, as it was inevitable that Jesus should submit to be crucified in the flesh rather than yield one iota in his allegiance to Truth.

Accepting Jesus in a sense that enables one to meet the facts and experiences of every-day life in the same spirit that determined his attitude toward the sin, the misery, and the joy of this world, is to become endowed with power to overcome the temptations which are ever crowding upon us to yield to the debasing influences of life. Can it be justly said of a man who so accepts Christ that he is Christless because, forsooth, he may not believe in the doctrine of the vicarious atonement?

Christian Science and Unitarian teaching no more deny the sovereignty of the Christ in the life of man, than does that of Methodism. In the teaching of the latter the supreme event is in the fact of the crucifixion, but for which, it is claimed, man would be irreclaimably in the perpetual bondage of sin. In the teaching of the former the supreme fact lies in the absoluteness of God, in His infinite, never-changing love; and the argument is that in exemplification of the sublime and perfect attributes of God and in order that man might realize the fact of the entire possibility of his own complete reconciliation with Him, came Jesus, the perfect type of the divine man; and in this view, his crucifixion becomes a demonstration of the absolute supremacy of mind over matter. In the one view of the matter, but for his crucifixion man would be hopelessly lost in sin. In the other view of it, his crucifixion was the supreme event in his life; but his power to keep us in the way of light and lead us unto God continues unabated in spite of his crucifixion, and not because of it. We think it can be truthfully said that both Christian Science and Unitarian teachings have wrought a mighty work in demonstrating, as they have, to the world that the gospel of Jesus is addressed with as much force to the mental, the intellectual, as to the emotional side of man.

[Editorial in *New Castle* (Ind.) *Times.*]

The opening at Indianapolis on Sunday [April 7] of a seventy-five-thousand-dollar edifice by the Christian Scientists is another reminder of the rapid and substantial growth of this religious organization. A few years ago, less than ten, Christian Science was regarded by outsiders as a religious fad that would soon wear out. Instead of that, its growth has been faster than that of any other religious organization, and its adherents are gathered from the most intelligent classes, people who read and think. Christian Scientists do not hold revivals, do not work on the emotions or gather recruits while under mental stress.

The million or more adherents of the movement form a militant organization that is exerting an immense influence on the religious thought of the country. Church extension is carried on largely by lectures and literature, both highly successful, judging by results. In this city of New Castle the little society, started three or four years ago, has maintained a steady growth, and nobody need be surprised to hear of a church building here in the next few years. The writer is not of this society, but their methods must command respect and their growth the admiration of fair-minded people.

[Editorial in *Adrian* (Mich.) *Times.*]

We are not familiar with the details of the Owen bill and therefore cannot speak by the card as regards its salient and more important features. It has been reported, whether erroneously or not we do not know, that parts of the Owen bill are aimed against certain religious and medical cults, and that those who were instrumental in framing the bill had in mind more particularly the Christian Science healers and the osteopaths. If it is true that the Owen bill comprehends any such restraints as would interfere with the religious and medical freedom of the Christian Scientists, we predict that it will never become a law, or, if it should happen to pass both houses and receive the signature of the President of the United States, it will never have popular support and sympathy, two elements which are absolutely necessary to make any law effective and binding.

We make the above prediction for two reasons. First, it is repugnant to American principles of religious freedom and liberty as per the constitution. Anything that will interfere with man's freedom in the exercise of his religious or non-religious belief is un-American, intolerant, inquisitorial, and oppressive. No bill that embodies such features can become an effective law in the United States.

In the second place, Christian Scientists are not engaged in any profession, practise, or occupation that demands any restraining laws whatsoever. Their practitioners, at whom no doubt the restraints, if any, are aimed, are not practising medicine at all. Therefore the charge that they are operating without a license, contrary to law, is not only false but ridiculous. Any one at all familiar with Christian Science and its methods is either a charlatan or a fool, or both, who would make the charge that Christian Science practitioners are a menace to the community and should be restrained. We hold no brief from Mrs. Eddy's followers, nor do we belong to the Science church, but we know a great many Christian Scientists throughout the United States and have attended their church services very frequently, and are therefore prepared to say here and now that no religious people, if they may be called such, are more entitled to pursue the even tenor of their way, unmolested and unrestrained, than the Christian Scientists. We could write column upon column about the culture, refinement, intellectuality, patriotism, and high standing of the true Christian Scientists, and that such a class of citizens should need a special law for their restraint and suppression is absurd, and would seem humorous were it not so far-reaching and serious.

We do not believe, as some have been heard to say, that the Owen bill was conceived in the brains of the allopathic

Digitized by Google

school of physicians and hatched for the purpose of suppressing possible competition in their chosen profession. We are rather inclined to think that the sincere physician, one who glories in his profession and honors it by his work in ameliorating the suffering conditions of mankind, would not stoop to such chicanery, chauvinism, and craftiness in his attempt to achieve any ends whatsoever, no matter how meritorious.

[Frederick Dixon in *Occult Review*, London.]

In your issue for the month of April there is a reference to Christian Science which is, it seems to me, unnecessarily discourteous in tone; but it is something more,—it shows an ignorance of Christian Science so overwhelming that at first it seems scarcely worth while correcting. The writer produces from an anonymous publication what she fondly imagines is this dilemma: "If prayer can heal diseases, why should it not also bring business? and, if so, why trouble to work? Why not only pray?" Anything more foolish than this it would be difficult to conceive. Let me put the method of argument a little differently. If thought can produce a book, why trouble to go to the publisher, why not only think? Supposing that prayer would produce business, you would still, presumably, require an office in which to transact your business, just as if thought produces a book you still require a publisher to print it.

What, however, the critic has not grasped is the fact that prayer not only heals diseases, but it does bring business, though not perhaps quite in the way she imagines, and that for the simple reason she has not the faintest idea what Christian Science means by prayer. By prayer Christian Science does not mean making petitions to an anthropomorphic God for something for which the material senses create a desire. Prayer, in the words of Mrs. Eddy, on the very first page of Science and Health, is "a spiritual understanding of Him." Now the "Him" being God, and God being Spirit, prayer is a spiritual understanding of spiritual things; in plain English, it is what Jesus meant by that understanding of the truth which was to make men free. Exactly in proportion as man understands absolute Truth he frees himself from the domination of the material falsehoods which have previously fettered him. He frees himself from sin, from sickness, from those limitations which constitute poverty and misery; and in doing this he realizes the truth about substance.

The ministry of Jesus was devoted to teaching men the truth which was to make them free, the truth not only about health and substance, but everything else in the material as in the spiritual universe. He showed the sick how they might be healed through prayer, and he showed, in the temptations, how man might live without bread. He did not, however, in any single instance, suggest to those who were slowly and painfully following his steps, that they should fling aside their daily occupations. He does not appear to have suggested to the disciples that they should give up fishing, and we know that Paul, who certainly knew something about the teaching of Jesus,—or ought to heal the sick and raise the dead,—worked at his trade of tent-making, in Corinth. The work of Christian Science is to teach people how to make practical in this century what Jesus taught in the first century. In proportion as humanity gets rid of sin it may attain a spiritual insight, as a result of which it will not need to buy bread or to go a-fishing. Until then it is best for it to go on doing its business, only doing it honestly, as Paul did in Corinth. On the whole, I think that this critic, in following in the steps of the anonymous "X," has followed the blind and has been led into the nearest ditch.

[Samuel Greenwood in *Vancouver B. C. News*.]

My attention has been called to the report of an address by the Rev. Principal McKay which appeared in our weekly issue of March 23, in which he is said to have severely criticized Christian Science, claiming that it is "nothing less than a recrudescence of the great central thought of Buddhism." Just what Christian Science has to do with a lecture on "The Development of British Columbia" is not made clear, and we are left to wonder at a man in Principal McKay's position going out of his way to attack any religious denomination that is working for the betterment of humanity, even though its view-point may be different from his own. Christian Science has attained its present growth and prosperity solely through the good it has done, and the Master's question might be aptly repeated, "For which of these works do ye stone me?"

The writer of this letter has been investigating the effect of Christian Science for upward of twenty years, for he has found nothing in its teachings that bears the remotest resemblance to Buddhism. In the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, Christian Science is described as "the reappearance of the Christianity which heals the sick and destroys evil" (p. 98), and this is the only possible "recrudescence" in the case. The critic himself admitted the great need of this reappearance of primitive Christianity when he said, "Christianity must be raised to the level of today's needs." Today's needs are as great as were those of the first century, and the Christianity of the first century is necessary to meet them. That Christian Science is demonstrating the great possibilities of Christ's teachings to overcome both sickness and sin should be cause for thankfulness rather than for criticism. If the religious belief which the critic favors is better than Christian Science, why, it may be asked, is it not doing better works?

The charge as to Buddhism may be effectually disposed of by quoting again from Mrs. Eddy. She writes: "It [Christian Science] absolutely refutes the amalgamation, transmigration, absorption, or annihilation of individuality," and she adds, "Surely the people of the Occident know that esoteric magic and Oriental barbarisms will neither flavor Christianity nor advance health and length of days" (Miscellaneous Writings, pp. 22, 29).

It is a remarkable thing that the critics of Christian Science have declared it to be well-nigh everything but what it is. If these critics were of the same mind, if they were a unit in their criticisms, one might be led to believe there was some truth in their conclusions; but while its critics are giving out their widely differing opinions, Christian Science is bringing healing and reformation to the sick and sinful, and this is the best answer to its critics' misstatements.

[W. E. Fell in *Yorkshire Post*, Leeds, England.]

In an admirable article redolent with common sense in a recent issue with the heading, "Healthy, Wealthy, and Wise," a kindly reference is made to Christian Science in the following words: "There is a psychological fact at the bottom of it—the fact that the mind has a powerful influence on the body."

This I heartily endorse; but to leave the matter there would give the impression that Christianity relied for its healing, and for the prevention of disease, on the human mind, or "carnal mind," as St. Paul called it. Now carnal mind is "enmity against God." The human or carnal mind is not a healer, but the procurer of every discordant condition—sin, sickness, poverty, and worry. On the other hand, the divine Mind, or universal intelligence governing all things harmoniously, heals these conditions, lifts men above them, and must at some time infallibly destroy them. To acknowledge no other mind or intelligence, is to have that Mind which was also in Christ Jesus."

Christendom will return to its "first love" and acknowledge no other power, presence, or intelligence than the divine Mind; that is, God Himself. This is the true Christian mind; there can be no other. With the destruction of the belief in "mind's many" and the acknowledgment of the

Digitized by Google

one Mind governing the universe, including man, sin will cease to claim to be a power or a presence, and with the destruction of sin as the cause, disease, the effect, ceases to be. Evil is not power; God, good, is the infinite power.

[Jno. M. Dean in *News Scimitar*, Memphis, Tenn.]

Your courteous editorial reference to the recent prosecution of a Christian Scientist in New York for practising medicine without a license should remind us that under such laws Jesus and the apostles would have been required to exhibit a medical license before healing the sick by the purely spiritual means which they employed. Iamgine, if you can, Jesus the Christ taking a course in a medical college before he could go about his "Father's business"! Such sacrilege is unthinkable, and yet the political doctors of our day do not hesitate to attempt the enforcement of such views upon those who are simply trying to obey the Scriptural command, "Heal the sick."

Christian Scientists have great respect for the noble practitioners of the medical school, and only take issue with that active minority of the profession which seems afraid to stand on its merits and is constantly seeking to abridge the rights of others. This tendency is more or less active all over the country today and is culminating in the present agitation for a national department of medicine which is intended to create a medical monopoly. No one objects to the doctors' regulating the practise of medicine to suit themselves; it is only when they attempt to apply their rules to others that objection is made. A proven system of medical practise needs no monopolistic laws to protect it, and certainly until the infallibility of some given system has been demonstrated no special governmental recognition should be given it.

[Ursula E. Haydon in *Hobart* (Okla.) *Republican*.]

At a local church recently the clergyman, in his review of Mrs. Eddy's book, "Science and Health with Key to the Scriptures," showed clearly that he had entirely failed to grasp the great spiritual import of her teachings, and yet he presumed to take the unreasonable position that because he saw nothing in it there is really nothing in it to be seen. Now, if Christian Science was what he conceives it to be, no others would be louder in their denunciation of it than Christian Scientists themselves. The fact that Christian Scientists have found in Mrs. Eddy's teachings what he failed to find, a logical and demonstrable religion which has sweetened their lives and, in the words of Isaiah, has given to them "beauty for ashes, the oil of joy for mourning, the garment of praise for the spirit of heaviness," a religion of love and good works,—this is their sufficient reason for their faith.

Our critic acknowledged he had failed to see what Mrs. Eddy teaches, that God is; then he proceeds to make the charge that her teachings are not orthodox. Webster gives this definition of orthodoxy: "Soundness of faith, a belief in the genuine doctrines taught in the Scriptures." Now, how are we going to know whose faith is sound, whose belief is genuine?

In the sixteenth chapter of Mark's gospel, beginning at the fifteenth verse, we read, "And he said unto them, Go ye into all the world, and preach the gospel to every creature. He that believeth and is baptized shall be saved. . . . And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

Mrs. Eddy says (Science and Health, p. 150), "Today the healing power of Truth is widely demonstrated as an immanent, eternal Science, instead of a phenomenal exhibition. Its appearing is the coming anew of the gospel of 'on earth peace, good will toward men.' This coming, as was promised by the Master, is for its establishment as a permanent dispensation among men; but the mission of Christian Science now, as in the time of its earlier demonstration, is not primarily one of physical healing. Now, as then, signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin,—to attest the reality of the higher mission of the Christ-power to take away the sins of the world."

That these signs and wonders are being wrought daily throughout the world is an indisputable fact and convincing proof that Christian Science is true, and that Mrs. Eddy has given in Science and Health a correct interpretation of the Scriptures. But this interpretation is a spiritual interpretation and cannot be discerned from the standpoint of the physical senses. As Paul says in his first epistle to the Corinthians, "The natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned." This accounts for the failure to comprehend the teachings of Science and Health and the consequent misrepresentation and misstatements of the same.

If the ministers wish to combat that which they believe to be wrong in the teachings of Christian Science, let them present to the world a higher understanding of God, a clearer and more practical view of the Christ as the savior and healer of men. If not, it would be well for them to heed Gamaliel's admonition to the high priest and his people: "Let them alone: for if this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God."

[Frank Bell in *Lebanon* (Pa.) *Report*.]

Contrary to the assertion of the author of a paper quoted in your issue of May 18, there is no important resemblance between prevailing Buddhism and Christian Science. One is a mystic philosophy, the other a practical rule of living. One demands the acceptance of doctrinal theories, the other asks to be believed only to the extent that it is capable of individual demonstration. One is grossly idolatrous, the other is founded upon the first commandment.

The supreme test in Christian Science is that which was laid down by the Founder of Christianity, "He that believeth on me, the works that I do shall he do also." The record is prolific of evidence that these "works" consisted of healing the sick as well as destroying sin. Men and women are Christian Scientists today to the degree in which they meet this test in their daily lives.

Christian Science is a restoration of pure primitive Christianity, a Christianity which, in the early days as now, was distinguished less by preaching than by practise; a Christianity "with signs following," demonstrating its power in the spiritual and physical regeneration of the victims of sin and disease. Its marvelous growth in this practical age is due to the fact that it is a demonstrable religion.

[Written for the *Sentinel*.]

FAITH.

FRANCES A. HALDANE.

FAITH scatters abroad in the fall its grain,
Covering it over with tender care;
Nor fears, though with north winds and hurrying snow
Fierce winter stalks forth from its icy lair.

Faith knows of a surety, when storms shall have ceased,
And the sunshine of love fills the earth with its sheen,
That 'neath blanket of snow, when the south winds shall blow,
The wheat will be springing, all tender and green.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"WITH GOD ALL THINGS ARE POSSIBLE."

PAUL followed up his question to King Agrippa, "Why should it be thought a thing incredible with you, that God should raise the dead?" with convincing proof that "with God all things are possible." Notwithstanding this, mortals have gone on believing that mortality is as real as immortality; that materiality is the sum total of being, and sickness and death are the inevitable and unescapable lot of mankind. Because of these beliefs, there has grown up the correlative belief that material means are necessary for the healing of sickness, and that the means which Christ Jesus employed are too transcendental for ordinary use.

Throughout the centuries, however, there has been a thread of faith which has kept alive the hope of salvation from all evil—from sickness and death, as well as from sin—through a correct understanding of God. From about the third century until late in the eighteenth, when Mrs. Eddy made that wonderful discovery which she named Christian Science, the rare cases of spiritual healing which occurred were regarded as miracles,—as something which had taken place in violation of law and because God Himself had reversed His regular course in dealing with humanity. Such was not the belief of the Son of man, however, for he declared that he came not to set aside the law of God, but to fulfil it, and it was because of Mrs. Eddy's perception of this fact that she was able to promulgate the Science of Christian healing as it was practised by Jesus and the early followers of his teachings.

A fundamental of Christian Science is that "man is not material; he is spiritual" (Science and Health, p. 468), and it naturally follows that man is not made either sick or well by inanimate matter. That this latter proposition is today admitted by many physicians, is proved by the number who believe that disease can be healed by suggestion. The basis of this belief is, however, far from being either scientific or salutary, because it is the supposition that one mortal mind has power over another mortal mind, and a necessary part of this supposition must be that the influence may be for good or for evil, as the so-called "operator" elects.

The mere belief that hypnotism or suggestion can be used for harmful purposes, forever bars it from possessing a divine, spiritual, or God-given basis, and stamps it as being foreign to the method which Christ Jesus demonstrated in his own ministry and commended to his followers. He demonstrated that neither material drugs nor suggestion is necessary to the healing of disease; on the contrary, that disease, not being of God's creation and therefore unreal, a false belief, is healed by the understanding of God, divine Mind, Truth, which destroys all error.

The fact that thousands and tens of thousands have been healed through Christian Science and without resort to drugs or suggestion, and that they have been morally and spiritually reformed, proves that faith is fast ripening into understanding,—that understanding which "is a well-spring of life unto him that hath it;" and materiality is slowly but surely giving place to spirituality in human affairs. It has been necessary for faith in God to be again aroused, and through the teachings of Christian Science this is being accomplished, heralding the approach of "that happy day, when man shall recognize the Science of Christ and love his neighbor as himself,—when he shall realize God's omnipotence and the healing power of the divine Love in what it has done and is doing for mankind" (Science and Health, p. 55).

ARCHIBALD MCLELLAN.

FIRSTFRUITS.

ALL Christian people are supposed to be familiar with the Master's admonition, "Seek ye first the kingdom of God, and his righteousness," but not all lay the needed emphasis upon the "first," which relates itself very naturally with the demand found throughout the Old Testament for the rendering to God of all the firstfruits. In the earlier time it was, "The first of the firstfruits of thy land thou shalt bring into the house of the Lord thy God." In Proverbs we read, "Honor the Lord with thy substance, and with the firstfruits of all thine increase." When we come to the New Testament, we find the command to give priority to spiritual realities, and we also find the assurance (in that wonderful eighth chapter of Romans), that those who possess "the firstfruits of the Spirit" are ready to press on to the redemption of the body. This surely means that those who become conscious of man's spiritual nature and origin must turn to God for healing, and that they must acknowledge His supremacy in this and every other respect by seeking His help "first," not after all other means have failed; although it is never too late to seek divine aid.

The Christian world has long since given up the belief that men can please or propitiate God by material sacrifices or offerings, but few would deny that there rests on all mankind an obligation to love and obey God, and to give this service priority over all other considerations. The student of Christian Science cannot plead ignorance as to how he can best show love and loyalty to the infinite creator, whom he is learning to know as Life, Truth, and Love; also as divine Mind. He knows that his offering must be mental or spiritual, and that it must be a perfect offering. It will not do to offer the "lame," the "halt," or the "blind," neither will it do to serve self and mammon first and then bring a tardy offering of the dregs to lay on the altar of God.

Strictly speaking, mortal man cannot rob God, but he can and does rob himself and his fellow mortals by forgetting what is due to God and His law. Let us make this an individual question; let each take account of his own thoughts and words for even one day, and let Principle be the arbiter to decide whether he has rendered unto Truth and Love the firstfruits of each hour, the "best of the oil," the corn and the wine, in the presence of that high demand, "Thou shalt have no other gods before me." If one fails to do this, if, when error presents its plausible arguments for consideration, its truthless and loveless arguments are heeded, there cannot fail to be a weary wandering in a pathless desert till the straight and narrow path of spiritual obedience is found and followed. Even Paul accepted the popular belief that the fleshly man was "first," but the great Teacher declared that the last should be first and the first last. If, when temptation to believe in sin or sickness presents itself, we would quickly realize and declare that "man is not material; he is spiritual" (Science and Health, p. 468), error could not be voiced, and needless suffering would be averted. Mrs. Eddy also says (p. 234), "You must control evil thoughts in the first instance, or they will control you in the second."

There are some who wonder why healing comes slowly to them, when, as a matter of fact, they never seek "first" nor declare first the spiritual fact, but admit the false evidence of mortality, which denies alike the goodness and all-power of God. If we always agree quickly to disagree with mortal belief, our position is simply impregnable—our feet rest upon the rock of Truth, against which the surges of error beat in vain. We thus present even the body "a living [not dead] sacrifice, holy, acceptable unto God." If we declare the truth first, it would be impossible to follow it up with error. As of old, the Christ says, "Fear not; I am the first and the last;" and upon us rests the demand to bow before this Saviour in true obedience, offering not alone daily, but hourly, the firstfruits of our lips.

ANNIE M. KNOTT.

Digitized by Google

IT IS WORTH WHILE TO BE WELL.

It may be assumed that all value the comfort and freedom of health, though many live and deport themselves after a fashion which they could not commend as conducive thereto. In the event of loss of health, men are more than ready to make every material sacrifice and put forth toward its recovery every effort which they have been led to think gives promise of success. Nevertheless, the great body of the people still look upon sickness as an unavoidable phase of human experience, and in no sense discreditable to Christian profession. Moreover, the generally accepted incurability of many diseases has begotten the habit of looking upon their conditions in a kind of matter-of-fact way which has no thought of betterment, and Christian Science is effecting nothing less than a revolution in awakening the Christian world to the unnaturalness and abnormality of all disease from the divine point of view. It is proving, moreover, not only that there is a spiritual healing for every human ill, but that this healing has immediately to do with the solution of the great human problems, with escape from limitation and dependence, from poverty and all its sequent ills.

All this was brought home to the writer upon the occasion of his visit to a beautiful little home, concerning which he had learned that it was designed and its building supervised from start to finish by the young lady who owns and occupies it; that she had saved and was saving from her weekly earnings the money involved, and that no inconsiderable part of it had been secured through the sale of artistic things which her clever craftsmanship had made after the regular day's duties were done. It was a pleasing story of clever pluck and womanliness and of bravely determined independence; and yet he had not heard the best of it. This active, happy girl, as he learned, was once a helpless invalid, condemned to the wearing of a steel frame, month after month, for ten long years, to make amends for what she had been led to look upon as an incurable deformity. From this pitiful enslavement her aspiring, life-loving nature had found its perfect freedom through Christian Science, and to it, therefore, as she afterward expressed it, she was indebted for "every blessed thing" she had.

Looking upon her buoyant, well-ordered life, so full of labor and achievement, and withal so encouraging and helpful to all who know her, a new sense was gained of the larger significance to human experience of this health-bringing faith, and of what it would have meant to human history, what it would mean today, if all the innocent, all the good, all who long to "be made whole," were free to fill out the full measure of useful living under the impulsion of a continuous reliance upon God's healing presence and power. A deeper sense of appreciation was also awakened of the brave woman, our Leader, who wrought in the night watches and in the day, regardless of the world's bitter comment and antagonism, to build her house upon the rock, and make it a haven for the suffering and storm-tossed of every land.

However rich one's other earthly endowments, without health of body and mind they surely profit him nothing, and Jesus' continuous healing work fittingly rebukes the philosophy of those who minimize the importance, if they do not deny the legitimacy, of the fulfilment of his promise, "The works that I do shall he do also," and who think that the torture of the good is an unescapable incident of the divine order. Evil thinkers and doers, having identified themselves with that which is lawless, experience the disharmony of its reign. Suffering is their portion because they have embraced its cause, and it may be that through suffering alone they are to be awakened to a better sense.

We are taught in Science that "either here or hereafter, suffering or Science must destroy all illusions regarding life and mind. . . . Mortal belief must lose all satisfaction in error and sin in order to part with them" (Science and Health, p. 296). At its best, however, this is being flogged into the kingdom, and every sense of fairness and justice revolts at the thought of its being imposed upon the innocent, and upon sincere seekers after righteousness, as a means of spiritual advance. Christian Science teaches that the freedom of health belongs to every lover of good, else how could Jesus have so freely bestowed it, and commanded his disciples to continue the gift to all who believe? It declares that it is not only worth while to be well, but since this is the will of God, that it is our privilege and duty to be well.

JOHN B. WILLIS.

AMONG THE CHURCHES.

STOCKHOLM, SWEDEN.

[Translated from the Swedish.]

Christian Science—most people have surely at some time come across this name in the daily newspapers or magazines, and most people think of it as a religious movement of American origin—is the teaching of absolute good, which believes in its world-conquering power; and what religion does not believe the same? Now Christian Science is about to establish itself and make its entry into Stockholm. As a matter of fact, it has been here for some time, although its existence has been unobserved. In Östermalm it has had its center for some time, with regular services and sale of its own literature. The services are well attended and Christian Science has won many adherents here in Stockholm, so we are informed by architect Count Cronstedt, who is for the present the most prominent worker here.

The Christian Scientists, with Count Cronstedt as their representative, are addressing the government, requesting permission to form a society in the capital, and there is surely no reason to suppose their request will not be complied with. "We have sent in our petition," says Count Cronstedt, "in order that our activities may have their footing upon a legal basis, that we may have a Sunday school, etc. But our intention is not to proselytize, it is not according to our teachings to do so. If any one has found in this teaching a solution to the great questions and problems of life, he gladly imparts his joy thereat to others; thus reason the Scientists, but they do not attempt to force others to believe in their doctrine."

The conversation passed on to the fundamentals of the teaching. The count entered with readiness into the subject, but referred repeatedly to the pamphlet, "Christian Science: Its Principle and Method" (sent out by the Christian Science Publishing Society), which he presented us for closer study. It was a short, interesting, philosophical, edifying discourse about the First Cause, whose activities must be unchangeable, infallible, and lawful. This Principle, being Spirit and creator, must be infinite intelligence, infinite good. Evil does not exist in any real sense—only relatively, as matter. How then explain evil, for example, illness?

"Well," says the count, "it may happen that a schoolboy says twice two makes five. For him it is five because he believes it. And he needs to be taken out of his error." "Besides," continued the count, "one can experience great suffering in dreams, one may drown, fall down a mountain, injure himself badly, or one may break a leg. During the short duration of a dream one can experience all these sufferings, which on awakening he finds were all illusions."

"But then, if I actually break my leg?"

"Yes, then of course one must use either spiritual or material means to cure it; whichever of these he believes in. Such a thing must no more be neglected than one's daily work."

"Spiritual means?"

"Yes, the Scientists entertain the idea that illness can be overcome by spiritual means, but they point out that their teaching does not include suggestion, human will-power,

Digitized by Google

hypnotism, or mesmerism. They emphasize the fact that their teaching, or rather their Science, lies in the power of the Christ-method, that is, the influence of the divine Mind." When touching on this subject, the count recalled to memory how it is related in the Scriptures that Jesus sent out his disciples to heal the sick.

"It is a fixed fact," said he, "that Christian Science has healed many diseases which by adherence to other methods were regarded as incurable; it has transformed thousands into good and useful men and women, and it is the same spiritual power which heals both the sick and the sinning. Christian Science is founded entirely upon the Bible, which Christian Scientists read in a special way; they read it spiritually, therefore its teaching can rightly be called Christian Science. There is logical accuracy throughout, in their way of interpreting the Bible. It is on this account that Christian Science has so many adherents among learned men, especially lawyers and such as are accustomed to logical reasoning. Of these it has attracted thousands. Christian Science clearly sets forth and illuminates the problem of being. The Scientist is happy because he has found an answer to his questions; he does not, however, consider himself better than other people, but he is glad that he has himself become better than he was. It can be said that Christian Science has already encircled the world, seeing it has adherents in all countries, and, as said before, it will have them in Sweden, too. Besides the gathering in Stockholm, it also has one in Göteborg."

"In the Scientist congregation there is no special preacher. We are in this respect very democratic," said Count Cronstedt with a smile. "We follow the methods of the early Christians in that we have no special preacher. We select two readers to officiate at our services."

The congregation in Stockholm has a board of directors consisting of five persons. Being one of the directors, Count Cronstedt will outwardly represent the congregation when the government shall have given its consent to the establishment of a society, because in accordance with Swedish law every society must have a responsible head. At present the Scientists have their services at Greftuegatan 24, also a reading-room where the literature may be read or purchased by those who are interested in Christian Science.

Aftonbladet.

VENICE, CAL.

The occasion of the completion and initial occupancy on Sunday next [May 26] of the new edifice of First Church of Christ, Scientist, of Venice (formerly Oceanpark), merits more than a passing notice. Though the building of this edifice more nearly concerns those who have spent years of effort and consecrated work to bring about its consummation, yet this entire community has a direct interest in it. Every manifestation of harmony and beauty of building, be it for a home, a place of business, a school, or a church, is of distinct value to a community, and is to be counted among its prized possessions. So Venice is to be congratulated on having within its borders such an architectural gem as is this church building, which is so well situated at the corner of Brooks and Second avenues.

The exterior is Roman Doric in design, carried out in a straightforward, simple manner, the portico alone being ornamented. From this portico, one enters a foyer ten feet by thirty in size, dignified and quiet in treatment, where lavatories and cloak rooms are provided. The auditorium beyond is forty by sixty feet in size, providing seats for three hundred and seventy-five people. The treatment here is somewhat more elaborate, columns, pilasters, and beams dividing the walls and ceiling in a reserved manner. Back of the auditorium, with an entrance on Second avenue, is the Sunday school room. For the accommodation of those who will wish to attend, three services have been arranged for the opening Sunday.—*Venice Vanguard.*

THE LECTURES.

CŒUR D'ALENE, IDAHO.

William R. Rathvon lectured on Christian Science March 31. He was introduced by Ralph Anderson, who spoke as follows:—

For the past nineteen centuries Christianity has been the greatest fact of the world's history. During these centuries the various civilizations have brought to the interpretation of that religion various ideas and forms which were parts of those civilizations. Thus we have had many and varied forms of Christianity during all these generations. We who have turned to Christian Science believe that we have found in this nineteenth century form of thought some new points of view, and also that we have returned to the original truth as presented by Jesus. In approaching the subject there are so many angles from which it might be viewed, and so many things that can be said, that I hesitate to say any one of them, for they would all take us too far afield for the purposes of these remarks. One thing I will say, however, that in coming to Christian Science I would ask on the part of each one of you an open and unbiased judgment of the truths which it presents. Approach it without prejudice and in the spirit to receive whatever of truth it holds.—*Correspondence.*

WELLINGTON, KAN.

The Rev. William P. McKenzie lectured on the subject of Christian Science April 21. He was introduced by M. C. Burton of the local church, who said:—

The lecturer of the afternoon will talk of a great discovery, the truth of which is being demonstrated daily in the lives of its followers, who have come to know God as unchangeable Love, and to understand that eternity is not a time set apart, to begin at some distant period, but that it is here and now, and "the kingdom of God is within you." Realizing this, it is but procrastination to postpone the joys of heaven until this life is spent. These golden moments should not be thus wasted, for, "behold, now is the day of salvation."

The students of Christian Science have been so benefited by its teachings, and have obtained so much help from the knowledge that God is all-power and ever-present good, that they desire to spread this gospel to all mankind, and it is for this reason these lectures are arranged.—*Correspondence.*

CORNELL UNIVERSITY, ITHACA, N. Y.

A lecture on Christian Science was delivered for the Christian Science Society of Cornell University by Prof. Hermann S. Hering May 7 in Goldwin Smith Hall. The speaker was introduced by Prof. E. O. Fippin, who said:—

In forty years the philosophy of Christian Science has spread to every quarter of the inhabited globe, bringing to those who have learned its truths increased peace of mind and improved health. This growth has brought about organization, and we find its institutions, so-called churches, distributed from England to New Zealand and from British Columbia to South Africa. A monthly, a weekly, and a daily publication, each carrying inspiration, are distributed over this entire territory from the central publishing house in Boston.

Like every movement of vitality, the Christian Science philosophy has an individuality which is distinct and which develops its own methods of operation. Thus its organization and church management have developed out of the functional necessity of the movement. In addition to established churches, provision has been made for associations of Christian Science students in institutions of learning, and

Digitized by Google

this lecture is held under the auspices of the Christian Science Society of Cornell University. To meet the need for reliable information of the teachings and methods of Christian Science further than is provided by the regular meetings of the churches and associations, a board of lectureship has been established by the central organization at Boston.

Five years ago, from reading a series of critical and unsympathetic articles on Christian Science, I was led by curiosity and by what seemed to me another view-point on the facts presented, to attend one of these lectures, the first on this campus, and the things which I heard there so appealed to my experience and met so many of the questions I had been asking for many years, that I have continued from that time forth to study the teachings of Christian Science with increased faith in their correctness.

The use of the word Science in connection with Christian has often been criticized. Science means knowledge gained and verified by careful reasoning, observation, and experience. Whether Christian Science will stand that test few persons are better qualified to say than the speaker of the evening, who had first achieved an authoritative position in the field of electrical science before he took up the philosophy of Christian Science.—*Correspondence.*

SAN FRANCISCO, CAL.

Virgil O. Strickler delivered a lecture on Christian Science in Dreamland rink yesterday afternoon [April 28]. The speaker was introduced by J. E. Orbison, second reader of Third Church of Christ, Scientist, who said: —

Thousands of people today are thankful that they have been led to investigate this Science, an understanding of which certainly heals the lame, the halt, and the blind. Throughout the New Testament we find the repeated commands of our Master to his disciples: "Go ye into all the world," "Preach the gospel," "Heal the sick." Christian Scientists are striving to obey literally these commands, which they believe were intended for all time. Restored health, peace of mind, true happiness, and a better understanding of God, are the "signs following" which attract the thinking and seeking people of today.

San Francisco Examiner.

COLUMBUS, OHIO.

Under the auspices of First Church of Christ, Scientist, Francis J. Fluno, M.D., delivered a lecture on Christian Science before a large and appreciative audience at Memorial hall, Sunday afternoon, May 5. Dr. Fluno was introduced by E. Howard Gilkey, who spoke in part as follows:—

On one occasion our Master said: "Ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you;" and then he added even more plainly, so that all might understand: "For every one that asketh receiveth; and he that seeketh findeth; and to him that knocketh it shall be opened." It is evidently a result of divine law, then, that he who does not ask will not receive; he who does not seek will not find; and he who does not knock will not be admitted to the temple of wisdom. Therefore, we find it to be in direct line with the teaching of the Master and a reasonable fulfilment of his promise and his prophecy that when men and women attend a lecture of this kind with an open mind, hungering for truth and desiring to be fed of it, they will find that which they seek, and the door at which they knock will open to them in answer to their prayer and in accordance with the pleasure of the Father. To such individuals, lectures of this character are events of no small importance, events long to be remembered, for they are mile-stones in a new career in which there appears a consciousness of a new heaven and a new earth whose sole government shall be that of God!

Correspondence.

TESTIMONIES OF HEALING.

It is a pleasant duty to give even a partial list of the many blessings which Christian Science has brought to me, through the help of a kind practitioner and the understanding of God gained by the study of the Bible and of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I have also been helped by the reading of our periodicals and the study of the Lesson-Sermon.

I was taken very ill about nine years ago with a stomach trouble, and everything was done to alleviate my suffering, but nothing seemed to benefit me much. The distressing attacks were liable to come on at any time, and cause me intense suffering, and this went on until I was a physical wreck. I was many times urged to go to a hospital, as it was believed I was suffering from gall-stones, but this I refused to do. I went from bad to worse and feared all kinds of food, till at last I was confined to a rigid diet; but I suffered just the same, until I had become a mere shadow of my former self, and my family and friends expected me to pass on at any time with one of these attacks. I had suffered for months from sleeplessness, also from severe headaches that seemed to prostrate me, although I always kept a supply of medicine on hand because I dreaded the attacks.

This was my condition when Christian Science was brought to my notice by a dear lady who had been healed by it. She came to my home through the invitation of a friend who was not herself interested in Science. I was at that time a member of another church, and she felt some hesitation about talking to me, but decided to come and give a cup of cold water in Christ's name. She lovingly told me of this wonderful truth; and as she talked to me I knew it was the truth, and I drank in all she had to give. She finally told me she would lend me her copy of Science and Health if I cared to read it, and I replied that I would be more than glad to do so. She very kindly brought it to me the next day, and I began to read it and found it was what I had been longing for. I read for hours and I began to improve from the first day, but finally I had to be tested so as to know whether my house was built on the rock, Christ Jesus, or on shifting sand. One night, about midnight, I found myself in the grasp of the old enemy, and I had not then gained sufficient understanding to help myself. We were unable to reach a practitioner, so a doctor was called and he administered the old remedy, an opiate. I was soon sleeping and was in a dazed condition all the next day, which was Sunday. On Monday I wrote a practitioner and asked for help. She lovingly responded and I was healed instantly. Health and harmony were restored and I have remained well since. This was over two and a half years ago, and it was my last dose of medicine, internal or external.

I have also been healed of headaches and sleeplessness, besides a derangement of the bowels of thirty years' standing. I have also been enabled through the understanding of the truth to overcome colds and burns and many minor ailments. Recently I had to mortal sense quite a serious fall. In stepping backward, I fell the whole length of a flight of cellar stairs, striking on my head on a cement floor. I got up at once, declared the truth, and came up-stairs. I found that my head was badly bruised, and my left hand was helpless. There were also a number of lacerations on my body, especially the hand in which I had a basin. I realized that I must have help, and my husband was called. He telephoned a practitioner for help, who responded at once, and in less than half an hour all pain and fear were destroyed. This was Friday, about noon, and on Monday I did a large washing alone. This shows how thoroughly Truth's work is done. I want to say that the blood did not start from any of the wounds, which seemed wonderful to me.

Digitized by Google

Before I came into Christian Science I had worked in the Sunday school for years, and in all good causes. Often I had prayed to God that I might be well, as I was very unhappy when unable to work. I often wished I knew how to get in touch with Christ as did the woman of old who was healed by touching the hem of his garment, for I believed in the Christ-power to heal, but I did not realize that God's child is always well. If I had I would have been saved much suffering, as I was at length when led to Christian Science, which I have found to be a practical religion, one we can apply to our every-day needs.

My gratitude for having been so lovingly led from sense to Soul is very great. My physical healing has seemed wonderful, but it is a small factor in comparison to the spiritual uplift. My heart overflows with love to God, also to our revered Leader, who has been so faithful to the cause entrusted to her in leading mankind out of mental bondage into the glorious liberty of the sons of God.

MRS. BELLE CLARK, Milo, Me.

This is to certify that I personally know the above testimony of my wife to be true in every respect.

F. A. CLARK, Milo, Me.

It is the deepest sense of thankfulness to God that has inspired me to write this testimony. The first blessing that came to me through Christian Science was the healing of my wife. She had been ill for over two years, and had been operated upon three different times, but with only temporary relief. She was preparing for another more extensive operation when we were asked to try Christian Science. We did so that very day, and as a result my wife was healed in two treatments.

I was interested, and curious to know something about this Science which had healed my wife so quickly and so perfectly. I therefore began the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and it was not long before I began to be greatly benefited, physically, morally, mentally, and spiritually. I know that Christian Science heals disease, and I also know that its healing power is divine, for when Christian Science heals disease there comes to the individual a spiritual awakening. This awakening was my first proof of the ever-presence of divine Love. My healing was from rheumatism, the cigarette habit, and an extreme form of nervousness, but it is for the spiritual awakening that I am most grateful, for it leads me day by day into the path of righteousness and is helping me to be a better man.

Christian Science has also been a great help to me in a business way. Before knowing anything of this Science, fear governed me and seemed to affect my business. Now I strive to govern myself and my business up to my highest understanding of God, as revealed in Christian Science. I have been able to prove in a small degree that God, good, is the only lawgiver, and I find that as I obey God's law I am protected by it and get the benefit of His goodness, whereas I formerly got the results of my own fear and ignorance. What a difference there is between knowing and not knowing God, as He is revealed in Christian Science! I have learned through the study of Science and Health that my business, and every one's real business, is to reflect divine Life, Truth, and Love, and in so far as we understand God's law and live in obedience to it, we become like God.

I am truly grateful to our dear Leader, Mrs. Eddy, for having made it possible for me and many others to know God aright.—CARL H. LAMPE, Chicago, Ill.

About five years ago I attended a lecture on Christian Science. At this time I knew nothing of what it taught, but because of repeated trials and cause for sorrow in our family, I consented to attend this lecture. The spiritual uplifting received was beyond expression, something that I had never before experienced in the religious training I had received, which as I then thought was sufficient for my spiritual welfare. A few days after this lecture, another member of the family passed away, and for a few days I experienced the darkest days I had ever known. After the sad services were over and all had gone to their homes but one brother, I began to speak of this lecture on Christian Science, and repeated parts of it. In doing this I forgot all grief and depression, and retired with a peaceful mind. On awakening the next morning I knew that I was healed, as I could not see or feel any sense of a vacancy in the home, nor could I feel a cause for grief. I knew that no human will or any former religious training could have so completely removed all traces of sorrow, but I instinctively knew that it must have been some truth told in that lecture. Time has proved this, and the healing has been permanent.

I began to study "Science and Health with Key to the Scriptures" by Mrs. Eddy and subscribed for the periodicals sent out by The Christian Science Publishing Society. The study of these, with the Bible, and some help from loyal Christian Scientists, enabled me to apply such knowledge as I had gained to other problems, and I soon found that Christian Science can and does meet every human need when correctly applied. I learned that in order to gain more knowledge of this truth I must practise according to my understanding of it, and apply it to the needs of others when called upon, as well as to my own problems. This I am striving to do, as I have learned that I can prove my gratitude for this grand truth in no other way. When trials, such as a sense of injustice, ingratitude, and other conditions of the carnal mind, tempt me with resentment, divine Mind has been and is the only remedy. I have often received the first ray of light out of such conditions, by remembering a part of the message sent out by our revered Leader, some three years ago: "When these things cease to bless they will cease to occur" (*Sentinel*, June 12, 1909).

My blessings have been many and my gratitude to God and our Leader is unlimited.

MISS MARTHA E. PIPKORN, Milwaukee, Wis.

I was sick with stomach trouble for a number of years, and several doctors here told me that all that would save my life was an operation. I went to a hospital in the city, where I was on the operating-table for nearly four hours. For a short time I felt somewhat improved, but soon the old trouble returned. I consulted the same doctors, and they told me I had a malignant growth in the stomach and that there was no help for me. The pain was so bad I felt obliged to take an opiate so that I could keep at work. I was getting worse all the time, so I thought I would try other doctors. I went to Omaha and was told by three of the best doctors there the same thing that I had been told in Lincoln, so I came back home to die. When my little boy asked me to try Christian Science at first I refused, but I went to a practitioner and he told me to come to his office the next day. I was too sick to go there, however, so called him over the telephone. He said he had taken my case up and that I should come to his office the next day.

Feeling somewhat better the next day, I went to his office and talked with him. He gave me the text-book to read, "Science and Health with Key to the Scriptures," and as soon as I commenced to study the book I saw things in a different light. In three days' time I was at work, and have not missed a day's work or lost a night's sleep since. It has been over a year since I commenced the study of Christian Science, and I can now say that I never felt better in my life. The old troubles are all gone and I am happy to know that I am healed both in mind and body. Truth has lifted me above all the little cares of this world, for I can see life in its true light now.—B. N. ADAMS, Lincoln, Neb.

Digitized by Google

I wish to express my gratitude for what Christian Science has done for me. I came to Christian Science for help in a case of rheumatism. I had tried everything that the best physicians could give me, and still I had pain and could hardly walk. I have not been entirely healed of this disease, but I can do my work comfortably, and many other ills have dropped from me, including stomach and bowel trouble, loss of hearing, sleeplessness, drawing up of toes, etc. My eyes have been much benefited and fear has to a great extent been overcome. I was also healed of acute lung trouble in one treatment. Best of all is the cleansing of my thought. I know that as I am obedient to God's law and heed our beloved Leader's counsel to "stand porter at the door of thought" (Science and Health, p. 392), I shall be healed of every discord.

I am truly grateful to our "Father-Mother" God for Christian Science, and I love Mrs. Eddy for giving us Science and Health.—Miss H. D. Cannon, Oxnard, Cal.

In my early childhood I had a fever which caused a serious impairment of my vision and also produced that condition which is commonly called cross-eyed. Gradually the sight returned to one eye, but the other never seemed to become normal. When I began to attend school, it was necessary for me to be fitted with glasses, which I wore for more than ten years, having to change them very often until they became a burden on account of the thickness of the lenses. During the fall of 1908 and spring of 1909, I found it necessary to consult a prominent oculist in one of the large western cities, who after careful examination, measuring of distances of sight, etc., prescribed various remedies and lotions. His instructions were very faithfully followed, but finally in April, 1909, he advised that it would be best to leave my work for two months or more; also that it would be well to secure other employment, such as would not require a constant application of my eyes to the reading, writing, and like work I was then doing, as my eyes were not fitted for it. I had received little benefit from the different medical treatments received, but on the contrary had become so fearful and hopeless that life did not seem worth living.

When the specialist advised me to give up my work and seek other employment, the outlook seemed very discouraging. As I learned later, however, divine Love is always present and ready to help and guide. On the Sunday at the beginning of the week during which I intended to leave the city to try some other kind of work, I heard about Christian Science from a dear friend. His was a plain and honest statement of benefits received, and it kindled a new hope within me. He gave me the address of a practitioner whom I went to see the next day. I received a treatment and was advised to purchase a copy of Science and Health and study for myself; I was also told that I could remove my glasses and go back to my work. I did not believe it possible, but when on my way to my room to get the money with which to purchase a copy of the text-book, feeling that all material props had been knocked out, I decided to leave my glasses at my room and go to my work that afternoon without them. I accordingly returned to my work and performed all that was necessary and required of me that afternoon, much to the surprise of those working with me. I received treatment for a short time after the first day, but was able to continue with my work and have not experienced any trouble whatever on account of my eyes since that time.

I have had many proofs of the power of Truth since that first experience, not the least being a better ability to work harmoniously with my fellow men, the overcoming of a bad temper, and the finding of a sure foundation. I know that in Christian Science I have found an understanding of God which is practical and applicable to all my work. This understanding has brought a spiritual enlightenment, giving a freedom and peace which are far more significant than the physical healing. Several of the men working with me at the time of my healing have become interested in Christian Science, and they in turn have received benefits which have caused others to investigate. I cannot fully express my gratitude in words, and realize that my best testimonial will be found in living this blessed truth which truly has come "to heal the broken-hearted, to preach deliverance to the captives, and recovering of sight to the blind."

Stephen J. Sametz, Winnipeg, Man.

It is with a heart full of gratitude that I give this testimony, to tell what Christian Science has done for me, hoping to bring cheer to others. Three years ago Christian Science was recommended to me by a dear friend. For eleven years I had been a great sufferer from nervous exhaustion, and at the time of coming into Science I was unable to attend to my household duties at all. A practitioner came to see me, and after talking with her I was completely healed with the one treatment of all the nervousness and of chronic bowel trouble.

One year before I took up Christian Science I had what the doctor called "black erysipelas" in the worst form. I became unconscious a few hours after its appearance and remained so for five days. I was without food during that time and was not able to leave my room for three weeks, having a nurse to take care of me, and was not able to leave my house for four months. Since coming to Science the same disease has appeared again, having the same symptoms as before. A Christian Science practitioner was called on Wednesday and she gave me absent treatment. The appearance was the same as before, with intense pain and fever, and on Friday and Saturday the pain was almost unbearable. On Sunday, about three p.m., the pain suddenly left, and in another hour the fever was entirely gone. On the next Wednesday I attended the mid-week meeting, all traces of the disease having disappeared.

At another time, in January, 1910, I was running to catch a car, and there was ice on the ground. As I came near the car I fell, striking on my right shoulder. The conductor helped me on to the car, and as I lived on the opposite side of the city it was nearly two hours before I reached home. I immediately had a practitioner called, but as she could not reach me for three or four hours (this being about five p.m.), she told me to call a surgeon. I did so, and he was here in a few minutes. After examining my arm he said it was completely dislocated at the shoulder, but he bound it up and said I must lie still and not try to move my arm or my hand. About seven o'clock dinner was ready, and when my family came to see what I would have to eat, to their amazement I was sitting up. I went to the dining-room and ate dinner with the rest of the family, then had the practitioner called, telling her not to come until morning as I was doing well, but that she should continue the treatment. On the third day I sewed all day, and continued to sew for three weeks, experiencing no pain after the first day. This showed me that "divine Love always has met and always will meet every human need." (Science and Health, p. 494). For this healing and many other blessings I am truly thankful to God, and grateful to Mrs. Eddy for teaching us this truth and how to apply it in every need.

Mrs. Eunice Whitney, Cleveland, Ohio.

I intended to send this testimony in long ago, but I was waiting for a physical ailment to be destroyed, as I knew it would be, and it is. To commence at the beginning, a man looking for board in a neighborhood near his business came to my house, which was large. I learned that his wife was a Christian Scientist, but I knew nothing about Science then, though my brother, who is a druggist, said some woman had gotten that religion up. In a few weeks I commenced to have some trouble with varicose veins, and I mentioned it to the lady, thinking I would not be able to

Digitized by Google

have them stay, although I liked them. She then offered to treat me in Science, and I consented. She treated me perhaps about two weeks, when I felt the limb getting better, but I did not talk with her. I did not want to know about Christian Science, as I was prejudiced, for I belonged to a church of high rituals and believed it was the only real church; but one day I picked up the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and commenced at the Preface. Some of it I did not understand, but what I did was very convincing to me, and when I got well into the book I commenced to be agitated. I put the book down, and felt sorry I had commenced it. I knew that if I wanted to live right I would have to live up to what this book teaches, and that meant a good deal for me at that time. I again took up the book and commenced to read. It took me several days and evenings to finish it, but enough was revealed to me at the first reading to prove the truth of it. I got the healing, though I did not come to Christian Science for that, but for the spiritual truths it contains. I do not think that any one who reads our Leader's books without prejudice could help being impressed. The teaching of this book is enough to make one wonder and wake up, and glorify God in spirit.

I have had many tests. I have had opposition in many ways, but I never took a backward step. I could fill the testimony part of the *Sentinel* with the good that Christian Science has done for me. I can help myself to some extent, and have had good results. Over a year ago I had a stroke of paralysis. I did not know what was the matter with me, as I could not get up out of the chair, and my hand looked and felt queer, and when I commenced to declare the truth I discovered that my tongue also was affected. I then tried to work more scientifically, and in about a half hour I was able to get up and walk about the room. I felt the effects the remainder of the day, but by the next morning it was all destroyed through my realization of the allness of God and the nothingness of evil. At another time, I seemed one morning to be losing my memory. A friend who was with me began to get frightened and went at once for a Christian Science practitioner, who came as quickly as possible, and when she had given me a treatment, I was well. More recently I have been healed of an ulcer on my limb, classed by *materia medica* as incurable. I never got depressed or doubted the allness of God or the power of divine Love to cure and destroy every ill. This last case would be called a slow healing.

I am sending this testimony to encourage the dear ones who are entering into the truth of being. I never waver or doubt that God will give us every good thing. I do not know how to express enough love to our dear Leader for showing me how to know God and to love aright, but I can live my best understanding of good.

Miss Elizabeth Brennan, Philadelphia, Pa.

I deem it a great blessing to tell what Christian Science has done for me. When a child of about eight years of age I had St. Vitus's dance, which seemed to be the starting-point for much suffering. As I grew to womanhood and was married I continued to suffer, it seemed to me then, in every possible way, mentally and physically. I spent the summer in one place and the winter in another, as the heat of summer seemed to bring nervous exhaustion, while the winter brought serious attacks of colds, coughs, etc. One of the last doctors that I had advised an operation. There were times when my mind was a blank and my sense struggled to free itself like a wounded bird. I prayed that God would be merciful and take me out of this world, as I then knew of no other release from pain and suffering.

It is now two years since a dear friend who had been healed through Christian Science heard of my state, and wrote asking if I would read some Christian Science literature. She mentioned her healing, and knowing of her previous condition, also feeling that all earthly help had failed, I said, Why should I not have this blessing, too? The literature was sent, and as I read I understood that with God there is no respect of persons, and the blessing was mine. The demonstration of health was perfect after reading and studying the Bible with Science and Health and other writings by Mrs. Eddy. As for the spiritual uplifting, I now feel that God knows my thought and knows that I am leaning on the everlasting arms for daily support and for understanding. I am trying each day to prove, by being honest, just, and pure, my love and gratitude to our heavenly Father and His beloved Son, Christ Jesus, also to the pure and gentle woman who was given the wonderful message of Truth for the redemption of all mankind in this age.—Mrs. Belle Knoblock, Shandon, Cal.

I feel it incumbent, if from no other standpoint than that of gratitude, to add my testimony of healing to the already long list. I contracted a severe cold in July, 1910, and when the acute stage had passed off, I found that my right eye, which had been badly affected since the commencement of the malady, had become worse, the upper eyelid being particularly involved. My friends, in fact all with whom I came in contact, made mention of it, the majority of them advising me not to let it continue. I tried to help myself in Christian Science, but the evidence before the material senses seemed very strong, and fear crept in. A medical diagnosis of the condition emphasized that state, but I felt that if I conquered fear through the proper understanding, the eye would be healed. In the mean time the sight was showing signs of impairment, and the spread of the inflammation was very great, the discoloration extending all around the cheekbone. I then went to a Christian Science practitioner; and in a short time the intense itching was relieved, although it took some time for the entire dissipation of the trouble. There has been no recurrence, and in over four months I had no results but good ones, though nearly every one whom I knew, except Scientists, predicted very gloomy things for me.

My unbounded thankfulness for this healing may be imagined, but if I could tell in words the greater healing of regeneration which talks with my practitioner helped to develop within me, I am sure every one who might read this would be convinced and turn to divine Truth at all times and for all things. What a debt we owe to Mrs. Eddy for putting this wonderful teaching in intelligible and practical form, and what immeasurable comfort do we establish in our own here and now, "the peace of God, which passeth all understanding," by putting into daily practise the great verities which are to be found in her book, "Science and Health with Key to the Scriptures."

N. M. Kellar, San Francisco, Cal.

The deepest gratitude fills my heart for Christian Science and the comfort and help it has brought to those near and dear to me. My mother and oldest sister were healed of serious nervous trouble. That brought my first awakening to the workings of Truth, and a great desire to know more about it. Over a year ago I was called home to be with my father, who was very ill. Through the long waiting hours I came to feel more and more a comforting sense of the supporting arms of divine Love. Slowly my father's healing came, and with it a realization to us all of how wonderfully and beautifully Love sustains us through every trial.

When a child, I loved the Bible stories, but always felt such a longing to have lived in the days of "miracles." Christian Science has, however, shown me that the Christ-healing is as much for us today as it was for the disciples long ago, and Jesus' command, "Follow thou me," is a call to each individual to take up the cross and daily "pray for that Mind to be in us which was also in Christ Jesus" (Science and Health, p. 497).

Digitized by Google

I am grateful that Christian Science has aroused me to the call, and that it furnishes a rule for the solution of every problem if we only seek for it diligently. Mrs. Eddy's spiritual interpretation of the Scriptures has made the Bible doubly dear to me, and her untiring efforts to prove the practicability of Christ's teachings is a living example to us all that we too should be about our Father's business. How few of us are willing to learn humility by cheerfully performing the homely tasks which come to us each day; and how often we complain when we see others called to higher duties, not seeming to realize that they must have already proven their worthiness. Christian Science is teaching me the necessity of humility and patience, and I earnestly desire that I may be so faithful over my few duties that when the call comes to advance I shall be worthy to be made ruler over the more difficult ones.

MRS. RAE AULDRIDGE, Centralia, Wash.

Having had so much benefit from Christian Science, I gladly send my testimony. In September, 1910, I was taken very ill, and my sister sent word to a practitioner, who immediately began treating me. At that time they were not aware what was the trouble, and a doctor was called who pronounced it typhoid fever. (My people did not believe in Christian Science.) The doctor said I could not live, and told a friend I would not last over a week. As I would not take medicine my husband dismissed him, and we then relied entirely on Christian Science. They notified the practitioner what the case was said to be, and she sent back the word to have no fear. The doctor had forbidden my eating many things, and also told them not to let me out of bed. I ate everything I desired, however, and not once did I suffer any bad effects from so doing. Many ills came up, but they were all overcome by absent treatment. The healing was so perfect that although I was told that I suffered terribly the first few days, it has all been erased from my memory. I was in bed about five weeks, but would not have been so long if I had had Scientists to care for me, as my people held much fear over me. I soon regained my normal weight and strength and am now a picture of health.

My hair all came out, but grew in thicker than before. Since having the treatments in Christian Science I have more love for friends than before and my disposition is much better. It seemed at first as if we had lost a great deal through my sickness, but divine Love is providing for us and the experience has given us more courage for greater trials. Our financial problems are all worked out with this truth. My husband joins me in giving thanks for Christian Science.—MRS. A. E. WILTSE, Wild Horse, Col.

[Written for the *Sentinel*.]

THE ETERNAL NOW.

MABEL GORDON-INGLIS.

LIFE knows no past.
Time has no power to change
The good that is and has been All-in-all.
The hours fly fast;
They span the infinite range
Of Love's unceasing call.

Love knows no future
But the joyous sense
Of liberty from every binding thrall;
And life is radiant
With the thought immense
That God is All-in-all.

FROM OUR EXCHANGES.

[*Continent.*]

"Business is business," "politics is politics," "religion is religion," are not talismanic aphorisms written over three separate and independent parts of human every-day life. A religious man should shape his business and his politics by the tenets of his religion. Religion in business? Yes! absolutely. Religion in politics? Yes! equally absolutely. On this threefold union must rest the future of the American republic. "In God we trust" must be not only a legend upon a coin, but a controlling fact in individual life.

What is the condition that we as a people are facing today? Unrest, dissatisfaction with existing conditions, and absolute distrust of men in their political professions who in private life display irreproachable character, are felt everywhere. On all sides one can hear it said, "We do not know whom to trust;" "We have lost our leaders;" "There is no imminent need made plain. We need something, but we do not know what." All these utterances are true, and they are true because religion has been remanded to a corner of life and has been told to remain there quietly until called out for a Sabbath, or for a dedication of a church, or for a funeral.

What is the remedy? Where shall we look for the remedy? "Not to the minister," answers the man in the pew. "I have politics all the week; I want the gospel on Sunday." "Not to the church," says the political leader. "The domain of the church is the world ecclesiastical, and not the world civil or political." By "gospel" the man in the pew means something that will not disturb conscience; something sleepy, innocuous, something that can be passed over to the other man easily. The utterances which are often heard when the functions of the church are the subject of conversation are absolutely absurd. The function of a Christian is that of a soldier. Paul was essentially a fighter, not against authority, nor against personalities, but against wickedness. One might as well tell the church and its pulpit to leave alone sin and the sinner as to leave politics alone. Politics as an American institution is a fair target for the arrow of the church. With party the church should have nothing to do. Party, when ideal, rests upon principles of government and administration.

[*Christian Intelligencer.*]

Many devout souls have been deeply impressed in our day by the disparity between the gigantic efforts of organized religion in our country and the results actually accomplished. The machinery of the church has been vast and efficient. Leaders and means have been plentiful. New movements have been inaugurated, ordinary and extraordinary channels of publicity have been utilized, gifted men have worked shoulder to shoulder regardless of denominational differences, interesting and informing facts and statistics have been compiled, a great deal of inspiration and uplift has been imparted here and there, but the flood has not come. The longed-for seasons of refreshing have been withheld; multitudes have not been swept into the kingdom by the fire of God.

Some reasons for the lack of results are near at hand. The missing factor has been the power of the Holy Spirit. And the Holy Spirit has not been present because the conditions of His coming in power have not been met. Some of the representative religious movements of the day have again and again impressed us as being monumental products of business enterprise and genius rather than humble instruments of the Holy Spirit in the salvation of souls. Great leaders have come from the ends of the earth to enlist their energies in the cause, famous singers have delighted the gathered throngs, splendid oratory has moved the multitudes, compendious facts marshaled in swift array to come

Digitized by Google

within set time-limits have stimulated the thoughtful, homes and churches have been deluged with literature, willing hearts have furnished all needed money, the science of management has had perfect expression in the expeditious conduct of infinite complex details—and yet no "rushing as of a mighty wind," no "tongues of fire," no thousands saved by the sweep of irresistible power. It seems as if the feeling has been that the same factors which build up a mighty business are sufficient also to convert the world. These movements, like many great individual churches, have been imposing spectacles rather than spiritual dynamics. Confidence has reposed in wealth, in machinery, in numbers, in men. The sighing and the crying of God's people have been wanting. And thus we have learned at once how much and how little we can do to bring about the glories of Pentecost.

[*Christian Register.*]

The future is filled with the hopes and imaginings of men. The limitations of life are about us all the time. Circumstances are insurmountable, and difficulties rise like hills upon every side. We cannot be what we would: we will not be what we can. In the deserts of our own desires we have many dreams. And the perfect day is just beyond: the life that is to bring joy and peace is over the hills of difficulty and far away.

The ideal that man should strive for is the spiritual. On this plane there is room for all. On this plane there is neither pain nor penalty. And he who conquers here is filling his soul with that which endures. Character continues after the very name of the man is forgotten, and this is possible to every man. But the secret dream that we have spoken of is usually a dream of personal aggrandizement. In this he lives and has his being. It is the matter of wealth with many. It is the matter of place with others. It is the matter of worldly success with almost all. And with a very few it is obedience to those laws of God which are revealed in nature and to that service which makes a man give his life for another, and in a way that is slow and sure, though not spectacular. And thus it is that a man may live too much in his dream. Everything is over the hills of his environment and far away. He ever aspires, but never reaches the goal. He is a dreamer all his days.

[*Western Christian Advocate.*]

The poet Young correctly declares, "The man that makes a character makes foes." And this is especially true if the character be radically different from the style most popular in the circle where we are compelled to abide. It is plainly our business to live above the multitude, even above the generality of nominal Christians, to have higher aims than theirs, loftier ideals, nobler standards of conduct. And they will not like the implied rebuke. They will call us prigs, Puritans, Pharisees, and cranks. They will be somewhat afraid of us if we are in earnest, and will do their best by false insinuations or open lies to destroy our reputations.

[Lilla B. N. Weston in *Living Church.*]

God holds in His mighty hand a lamp, that each one of us may clearly see the way. His program provides only for happiness and goodness and affection and peace. Perhaps not earthly happiness and affection and peace, but all of these blessed benefits spiritually. We all feel in our hearts what God's program is for our individual lives, and it is the best, the wisest, the happiest, and the safest. Let us not blot out its items in order to substitute empty, foolish ones of our own.

[Rev. Frank Oliver Hall, D.D., in *Universalist Leader.*]

The hour has struck when, if the church is to be the power for good in the future that it has been in the past, we must abandon the defensive and assume the aggressive so that no one shall ask, "What are churches good for?" but shall know without being told that the church in every community is the organized force of good fighting for the establishment of righteousness.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

A new pamphlet, "Christian Science Healing *versus* Mental Suggestion," by Frederick Dixon, reprinted from the *Weekly Budget*, London, England, is now on sale; 36 pages and cover, at the prices of the regular pamphlets.

For some time the postage required for subscriptions outside of United States territory has exceeded the amount added to the regular subscription price for this purpose, and an increase in rates sufficient to cover this deficiency is now deemed necessary.

Beginning April 1, 1912, therefore, the rates on all subscriptions outside of United States territory will be as follows: For Canada, *Journal* $2.25, *Sentinel* $2.45; for all other countries, except those to which the domestic rate applies, *Journal* $2.65, *Sentinel* $2.95.

Renewals for all subscriptions terminating before April 1, 1913, and received by us prior to July 1, 1912, will however be accepted at the old rates.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large sized book), single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE. June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 22 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under their titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00. For Canada add 45 cents and for all other countries 95 cents annually for postage.

For subscriptions in quantities please refer to our catalogue.

TERMS OF SALE

	United States, Mexico, and Cuba	Canada	All Other Countries
Single copy	$ .05	$ .06	$ .07
Twenty-five copies	1.00	1.15	1.30
Fifty copies	1.80	2.05	2.30
One hundred copies	3.00	3.50	4.25

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numerals XII indicate the year 1912; XIII, 1913. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription. A numeral "1" is added to the notation for each annual renewal.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $4.50. On earlier volumes write for prices.

Equivalents of United States money:

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

People who are trying to economize are to be shown how to save fifty million dollars a year when the report of the marketing committee of the New York state food investigating commission is out next month, according to a prediction made by the counsel for the committee. Distribution methods play an important part in the commission's plans for effecting a saving. "It is an anachronism," said he, "for New York city to continue the present haphazard and archaic methods of food distribution. Green vegetables have been occupying a great deal of our attention lately, and we find that of the consumer's dollar thirty cents goes to the producer, eight cents to the railroads, and sixty-two cents to defray the expenses of distribution within the city and to accumulate profits for from three to eight persons who handle the produce."

The city council gas, oil, and electric light committee of Chicago has recommended for passage an ordinance which is intended to prevent damage by electrolysis. If passed, the traction companies will be compelled to equip their lines with what is called a negative "booster." The city electrician, who drew up the measure, presented figures showing that the estimated cost would be three million dollars. Traction representatives who were present said that if the ordinance passed, the companies would have to go into bankruptcy, the cost having been figured by them at twenty million dollars.

The New York Telephone Company has been ordered by the public service commission to discontinue the use of the word "telegram" as a call word for the Western Union or any other telegraph company in the state. The telephone company is directed to assign to the Postal Telegraph-Cable Company and the Western Union call numbers, as is usual with other subscribers, and in addition that the word "Postal" be assigned as a call word for the Postal company and "Western Union" for the Western Union company.

The Massachusetts highway commission completed work upon 40.37 miles of state highway in the present fiscal year. Construction was commenced also upon nearly twenty-three miles. Forty-two miles of state highway were laid out in the year in thirty-seven cities and towns. The length of state highway at the end of the fiscal year was 870.00 miles. The expenditures by the commission for the construction of state highways since the work began, including the planting of trees, amounts to $8,012,055.

The Connecticut state commission on rivers, harbors, and bridges has passed the necessary vote by which the city of New London will receive the one million dollars appropriated by the last Legislature for the building of docks and sea walls to accommodate ocean liners. Work of building the docks and improving the harbor will commence as soon as possible. The committee stated that a number of steamship companies have announced their willingness to make New London a terminal.

Legislation requiring that adulterated silks sold in this country be branded as such, is urged. This applies to imported as well as domestic silks. Dress silks are sold daily that do not contain much more than twenty-five per cent of the pure fiber, the remaining seventy-five per cent being made up of adulterants. The most serious part of the whole matter is not the actual adulteration of the silk, but the selling of it to the average consumer as a pure silk fabric.

On Saturday, July 13, William Lorimer, by a vote of fifty-five to twenty-eight, was adjudged by the Senate guilty of obtaining unlawfully his election as senator from Illinois.

Texas is doing more than any other southern state for public education. Last year it built schoolhouses at an average of two a day at a cost of three million dollars.

The Chinook river (Ore.) hatchery recently turned loose two million young salmon, the largest number ever liberated from that plant at one time.

International.

Railway companies operating in the province of Alberta are liable for fires in forests and elsewhere starting within three hundred yards of their right-of-way, both sides, according to a new act, effective on the Canadian Pacific railroad, July 5, and on the Canadian Northern and Grand Trunk Pacific lines, July 15. It is provided under the regulations, given out at Edmonton on July 3, that in the event a fire gains control the carrier company must fight it to the extent of ten miles, being responsible for the cost of the damage. Railroad companies must patrol the fire districts regularly, going over the road from two to four times a day. The patrolmen must be employed and paid by the roads instead of by the department of the interior, and the latter will appoint an inspector to see that the work is carried on properly.

The Chinese minister of finance has submitted to the foreign minister a scheme to reorganize the salt monopoly, whereby it is hoped to raise a revenue of from seventy to one hundred and nine million dollars. The scheme provides for the eventual shutting down of all the salt mines and substituting therefor sea-side factories whereby a still larger increase in the revenue could be expected. Negotiations for loaning funds to the Chinese government for reorganization purposes have not been dropped by the six groups, although the indications now are that the loan will not be so large as originally contemplated.

The verdict in the Camorra trial was handed down last week. Nine of the accused were unanimously declared guilty of slaying a man and his wife. The remainder of the band were found guilty of belonging to a criminal association. The remarkably long trial of the Camorrists at Viterbo, Italy, which has stretched out for almost a year and a half, has now drawn to a close. Few have believed that the Italian jury and court would have the courage to condemn the criminals. It was on March 11, 1911, that the examination of witnesses began. This was preceded by a preliminary investigation of five years.

In his speech at the opening of the Australian Commonwealth Parliament the Governor-General referred to the intention of the government to ask Parliament to approve such an alteration of the constitution as would enable them to legislate effectively with regard to corporation trusts, combinations, and monopolies in matters of trade, manufacture, and production, and to extend the powers of the state with regard to industrial matters and navigation.

The scheme for the construction of a railway across Persia to connect the Russian and Indian railway systems has taken further shape by the formal constitution of the Société d'Études, which has appointed a committee to communicate with the governments concerned, with a view to the completion of the necessary surveys and to obtain from the Persian government a concession for the construction of the line.

The area under cultivation in the Argentine Republic now exceeds fifty-four million acres, and there are 10,843 miles of railway. The imports in 1911 amounted in value to $310,890,680 gold and the exports to $344,065,458. The extensive and increasing demands from foreign countries for Argentine beef left too little to leave the country without cattle sufficient to supply local needs.

The government of Queensland has introduced a bill which will make gerrymanders difficult, if not impossible. The measure provides for the secret ballot of all persons concerned, and makes it compulsory to give a fortnight's notice before striking.

The Russian Duma has passed the navy bill, which involves an expenditure of six hundred and forty-five million dollars in the next ten years.

Ireland has three million acres of peat deposits.

Industrial and Commercial.

The largest crop of potatoes grown in the Kaw valley since 1902 is being harvested this year. The Kaw valley potato field runs from Kansas City, Kan., west to Topeka, occupying the narrow strip of rich bottom land on either side of the Kaw river. In Wyandotte county alone about eighteen hundred acres were planted this year and the yield runs something over five hundred thousand bushels. The Kaw valley, once one of the great potato growing districts in the country, has only about twenty-five per cent of the acreage this year that it had in 1902. The great flood of 1903 covered many of the best potato fields with sand to the depth of a foot or more and only recently have the farmers begun getting it into shape again for potato growing.

The Cotulla Reservoir and Irrigation Company recently organized at Cotulla will construct a system of irrigation that will water about two hundred and twenty-five thousand acres of land in south Texas. Three large storage reservoirs will be formed by the construction of dams. The establishment of an irrigation district in the valley of the San Saba river, Texas, and the construction of a system of irrigation that will water about fifty thousand acres of land, is being promoted. The Mountcastle Land and Irrigation Company, recently organized, with a capital stock of six hundred thousand dollars, has taken over the holdings of the Griffin Orchard Company, near Toyanvale, Texas, and is preparing greatly to enlarge its irrigation system by pumps and other machinery.

On every side track of every railroad in western Kansas are long strings of box cars, waiting wheat which is beginning to pour into the elevators and improvised warehouses at every railroad point. It is estimated that there are fully forty thousand cars in storage in the railroad yards in the state and the number is being added to at the rate of a thousand a day. Kansas will produce close to ninety million bushels of wheat this year.

India produces twelve million tons of coal a year.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

CHRISTIAN SCIENCE A WORLD RELIGION.

WILLIAM D. MC CRACKAN, M.A.

A RECENT experience enabled the writer to see for himself that Christian Science is in truth a world religion. In all portions of the globe visited on a journey around the world he found the text-book of Christian Science interpreting the Bible to growing numbers, uncovering the falsities of belief in a mortal existence, establishing in human consciousness the reality of spiritual facts, stimulating righteousness or right thinking, cultivating peace and good will, laying the foundation for the brotherhood of man, and, through the renewing of the mind, wiping out sin and sorrow and healing the sick as in Bible times.

This growth must impress the world traveler as a striking sign of the times, as the reappearance of primitive apostolic Christianity. Christian Science now girdles the earth. Link has been welded to link until the chain has become a never-ending bond, uniting all nations and peoples. A glorious sense of brotherhood pervades the body of the faithful, fortified by the kindly and beneficent watchfulness of The Mother Church. Admitting and learning to obey only one God, one Life, using but one Bible, one text-book, and one Lesson-Sermon, recognizing but one Leader, Christian Scientists are in a position to follow Paul's advice and "be of one mind."

This unity of purpose and endeavor is so marked that the Christian Scientist everywhere finds himself quickly at home among those who are like-minded, though to human sense they may be strangers. He observes everywhere the same struggles, problems, difficulties, and delusions assailing the human consciousness. He sees recorded through Christian Science the same victories and solutions, the same conquests over sin, sickness, and death. The pretenses of mortal mind are similar the world over, at the antipodes, on the islands of the sea, at the equator, or in the frozen northlands. These pretenses may assume different disguises, but Christian Science uncovers them all for what they are, namely, nothingness. So in all latitudes, altitudes, and climes there is but one real Mind, one God, omnipresent, omniscient, omnipotent; one Father of us all, in whom "we live, and move, and have our being." Thus the experiences, trials, and tests of Christian Scientists are apt to be similar, although they may be living thousands of miles apart, separated by oceans and mountain ranges, differentiated according to the testimony of physical sense by the utmost diversity of race, education, environment, or speech. The world traveler finds this similarity of experience among students of Christian Science because as the divine Mind is one, so its supposed counterfeit also pretends to be one.

Christian Scientists who may be living far from their fellow brethren, perhaps in outlying portions of the earth, should take courage and rejoice that they form links in the great chain encircling the globe. Moreover, how the teaching of Christian Science concerning God as Mind inspires and comforts such distant brethren! It shows that God not only can be but is present everywhere. He is infinite and He is indivisible. Now, when we try to grasp the qualities of infinity and indivisibility combined, we find perfect satisfaction in the definition of God as Mind. No other definition can so well fulfil the requirements. God as Mind can be everywhere without relinquishing aught of His infinite and indivisible nature.

The fact that God is Mind also accounts for the wonderful ways in which people are constantly coming into an understanding of Christian Science though widely separated from the centers of Christian Science activity. The receptive thought everywhere is making preparations to know the truth. There is nothing more interesting than the steps taken by those searching for God. Perhaps they undertake a journey or some one suddenly sets out to find them, they meet old friends almost forgotten, they follow an impulse to perform some kindly service, they insist upon fulfilling some act of restitution, they are drawn out of their usual haunts and modes of living,—and then they hear the word or read the message which means the transformation of their lives by Christian Science.

It is significant that Jesus in sending forth his disciples admonished them to go "into all the world," to preach to "all the nations." Christianity is a universal religion. The claim that it could not meet the particular needs of certain peoples or nations would proceed from a misconception as to its real nature, which is scientific and is based upon understanding, not on blind belief. Truth is true for all men, everywhere, at all times. Science in order to be worthy of the name, must be not only exact but also universal. If a supposed statement of fact is found to be untrue under certain circumstances, that statement cannot be regarded as scientific. The multiplication table virtually amounts to a series of statements of facts. These statements are true for all men, everywhere. They are exact and universal in their application. So Christianity, when properly understood, is found to be scientific and therefore capable of proof in every age and clime, among "all nations," for "all the world."

To acknowledge Christian Science as an available religion for all men does not imply that there may not be particular groups of people who at the present time may show less readiness for its teaching than do others. The approach to Christian Science is regulated largely by receptivity. There may be nations, just as there are individuals, who through special trials and tests, through extraordinary experiences, have been prepared to dematerialize thought somewhat, to perceive a little of the allness of good, to abandon reliance upon mere brute force, to look to support from some nobler though possibly to them still inchoate and indefinite first cause. It may be said of some nations, as of some individuals, that they have been forced by their tribulations and humiliations to seek help from something outside of mere sense perception, to reach out for the protection of the invisible and indivisible God. Thus the progress of Christian Science around the world has not been quite uniform. It has entered and made its abiding-place where hearts will open to its message. It does not force itself upon humanity.

It is always the welcome guest, never the intruder. It is an angelic messenger, a bearer of munificent gifts, but there must be arms outstretched to receive, there must be ears that can hear and eyes that can see.

The "unlabored motion of the divine energy" (Science and Health, p. 445), expressed in Christian Science, is natural and joyous. No attempt to use it for selfish purposes can succeed, no self-aggrandizement can be furthered by its beneficent and selfless activities. Discovered and founded by a woman whose life-motive was to help and heal, Christian Science continues its stately progress into all the world, a friend to the friendless, a solace to the sorrowing, a cure for the abandoned and hopeless, an inspiration to the faint-hearted, fulfilling the promises of the gospel, establishing the law of God in human consciousness, blessing all the nations, all qualities of thought, and saving the lost, both Jew and Gentile, bond or free.

In considering Christian Science as a world religion it is profitable also to remember the unusual environment in which it had its origin. After a general survey of its present activities it is permissible to recognize the human conditions which were favorable to its birth. The atmosphere of New England, in which Mrs. Eddy grew to womanhood and in which she was prepared to make her great discovery, was deeply religious and withal free and open to the advent of new ideas. We find in it a position accorded to woman which makes for freedom and equality. The mental and spiritual conditions existing there toward the middle of the last century were eminently suited for the reception of a discovery coming through a woman.

The American Union had just been shaken to its depths by a terrific war waged on a moral issue, the question of negro slavery, when in 1866 our Leader's long search for the healing Principle culminated in the discovery of Christian Science. Surveying the whole field of the nations of the earth as they existed at the time, it is difficult to conceive of conditions more propitious to the birth of Christian Science than were to be found in New England at that time,—and these conditions were difficult enough, as Mrs. Eddy's career amply shows. Her hope embraced the whole world, but she saw the enormous work to be done. "I have never supposed," she wrote in Science and Health (p. 348), "the world would immediately witness the full fruitage of Christian Science, or that sin, disease, and death would not be believed for an indefinite time; but this I do aver, that, as a result of teaching Christian Science, ethics and temperance have received an impulse, health has been restored, and longevity increased."

As Christian Science is a world religion, so Christian Scientists naturally find themselves interested in the good which is being accomplished everywhere. Their sympathies are broadened by Christian Science to appreciate the conquests of right thinking among all nations. If there is anywhere a supposed law of limitation set at naught and being proven naught by human endeavor, this endeavor is of interest to Christian Scientists: it constitutes "news" in their opinion. Therefore one of the many services which *The Christian Science Monitor* is performing for mankind is to put on record the good which all nations do in their several ways. Every form of human activity needs to be healed of abuses which have grown around it through ignorance or malice. In addition to its daily article illustrating the teaching of Christian Science, the *Monitor* devotes its columns to worth-while news in the departments of politics, finance, commerce, manufacturing, literature, history, music, art, athletics, etc. It sets apart a whole page daily to "news by cable and correspondence" from all quarters of the civilized globe, news which does not as a rule find its way into the columns of other newspapers. Its editorial comments on world news also attract world-wide attention and are proving educational to many people whose knowledge of affairs perchance has hitherto been bounded by a narrow, provincial horizon.

It will not do to say, because politics are sometimes vitiated by dishonesty, and occasionally degenerate into a scramble for office, that therefore Christians should try to ignore them. Political life needs to be cleansed. It needs to be healed and saved from the false concepts which assail and would, if possible, destroy it utterly. So it will not do to say that because the stock exchange can be used for questionable purposes, therefore it should be eliminated from human consciousness. Literature and art may become evil tools in the grasp of evil hands, but they are also being used as good servants for noble ends. *The Christian Science Monitor* in recording the good which is being accomplished everywhere by human agencies and activities among all nations, is setting up a high standard, encouraging and inspiring right activities in all the world, enlisting the sympathies of those who are best able by their understanding of Truth to help in the task of reforming the world.

So the day of ample reward is at hand for those who, watching and praying, realize the universal nature of Christian Science. Its appeal to reason is for all men. No expanse of ocean or height of mountain range can cut off the good news of spiritual understanding from those ready to receive it. No racial prejudice or inherited tradition can lessen in the smallest degree the all-enveloping benefits which the teaching of Christian Science is conferring on the nations in its journey into all the world.

"AN OPEN DOOR."

HENRY E. HEWITT.

"BEHOLD, I have set before thee an open door, and no man can shut it." "These things saith he . . . that hath the key of David." Thus spoke the heavenly messenger to John in Patmos; and who is not, in some way, seeking this door to happiness and long life—a door which is open to all good? We read in the Bible of the "valley of Achor for a door of hope;" a place for those who sought God; also that "a great door and effectual is opened" unto man. This promise is for all time, and there is a place where harmony reigns, here on earth, for those who seek God in the way the Master made plain. There were many at the time of our great Way-shower, Christ Jesus, who followed in the way he pointed out and through obedience found the "open door" to life and happiness.

All that he and those who believed on him did is possible today, and one does not have to grope blindly through sin and suffering to this door of salvation, for the way which Jesus marked out is illumined in this age by divine Life and Love, with signs following. It requires only willingness and obedience to see the right way and go on to possess all good. Eternal life and true spiritual happiness are not to be found in worldly riches or achievement. The doors of human hope give no permanent happiness,—as the seeker often learns to his sorrow. Hate, lust, dishonesty, and selfishness lurk about them and they would hold men in bondage to sin, sickness, and death. The one door to freedom, here and now, is left open to mankind, for "Truth has furnished the key to the kingdom, and with this key Christian Science has opened the door of the human understanding. None may pick the lock nor enter by some other door" (Science and Health, p. 99).

How is one to reach this "door" and be let into the kingdom by this key? David's hope and trust in God, an absolute reliance upon Spirit, was the key to his inheritance of the word of God, in all Christ Jesus said and did, was the key to eternal life for him. Today the open door of hope, trust, and eternal life is reached through Christian Science which breaks down the barriers of ignorance, pride, and prejudice. Before this inpouring light of Truth everything unlike God is destroyed, and one gains a concept of God as the giver of all good—a door of hope to all who put their trust in Spirit and walk therein. This higher and better concept

Digitized by Google

of God as Mind and wholly good, reveals to the human understanding things spiritual and eternal. The human, with its seeming reality of worldly pain and pleasure, loses its identity and becomes powerless in the presence of divine Mind. The false and undesirable belief of sorrow gives way to the peace and happiness of Truth; sickness and suffering take their departure as one learns their nothingness, because the one Mind, God, is All and knows no such thing as sickness and suffering,—thus the body manifests the truth of being, health, and strength; sin loses its hold on man, for divine "Mind governs man" (Science and Health, p. 222), and no wrong desires originate in this Mind, which knows no evil.

Living in the consciousness of Spirit, man inherits the fruits thereof, and Love guards this "open door" to happiness and eternal life. Reflecting the attributes of divine Mind, which are love, justice, wisdom, goodness, etc., man becomes an influence for good and is about his Father's business in bringing to pass the deliverance of the world from sin, disease, and death.

LECTURES IN BRANCH CHURCHES.

HORACE SEELY.

THE Manual of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., Article XXXII, Section 4, provides that the "branch churches shall call on the board of lectureship annually for one or more lectures." There are other provisions in the Manual in regard to our lectures which may be studied with advantage to all, including the lecture committees or those in charge of lectures for the branch churches, thus being a help in awakening the field to the great opportunity to heal the sick and sinning offered through this channel.

It is specified that the branch churches shall have one or more lectures annually, and here it may be asked if we, in our respective fields, are doing our duty. Are we utilizing our great opportunity in this particular branch of the work that has been so wisely provided for us by Mrs. Eddy? Every lecture has in it not only the healing of individual cases but the healing of "the multitudes;" and this is evidenced in the localities where lectures are more frequent, by the greater activity and greater progress and growth to the cause of Christian Science, which is so dear to all of us. Is it not an expression of gratitude for this healing truth, and a mark of obedience, to use this great opportunity to the largest possible extent? The writer has attended many lectures, and does not know of a single one where he did not hear of some one being healed or helped, and sometimes there have been many cases of healing.

The earnest desire to express gratitude for what has been provided for us in this way will externalize itself in the increased number of lectures given by the branch churches. In many of the larger places where there are two or more churches, unity of action is brought about by establishing lecture committees from the several churches, which arrange together for the lectures, dates, halls, and other matters pertaining thereto, thus avoiding confusion, duplication of work, etc., and reducing the expense. If it were generally understood that some of the larger places arrange for their lectures at the beginning of the lecture year, as requested by the board of lectureship, the smaller places could arrange to have more lectures, as the expense could be made much less by securing the lecturer they wished when he was in their locality. The Manual hints at unity and reduction of expenses in Article XXXI, Section 3.

The lecturers reply publicly to incorrect statements of Christian Science, and are helping to place Christian Science and its work before the world in a way that nothing else at this time reaches. Very few people go away from these lectures in a critical condition of thought, but rather with the impression that if this is what Christian Science is, they want more of it, and they gladly accept the literature which is handed out after the lecture. Many go away from their first lecture healed of their false concept of God and man's relation to Him.

In each church and field the question might well be asked, Are unity and economy being utilized to the largest extent for the cause of Christian Science in this line?

"WHAT MUST I DO TO BE SAVED?"

WILLIAM LLOYD.

To the casual inquirer Christian Scientists must at times seem contradictory in their statements; for instance, when a stranger attends a Wednesday evening service and hears clear and impressive testimonies of healing, and then, perhaps next day, is told by a friend of "so and so" who "tried Christian Science" and it "did not do him a bit of good." He then naturally asks, "Why are some patients quickly healed, and some slowly, or not at all?" To this we might add, "Why do some who are greatly helped and who at first are enthusiastic and voluble, lose interest, neglect to call on a practitioner when need arises, drop their study, relapse, and possibly give up Science?" Each individual case must be considered on its merits, therefore no rule can be made to cover all; but it would be presumptuous to assume that all the responsibility rests with the practitioner, and it may be well to consider for a moment the patient's share in the work.

An explanation, at least in part, of the varying results attending Christian Science practise may be found in the parable of "the sower," and in the declaration of our Lord's inability to do "many mighty works there because of their unbelief," etc. But a yet more profound and pointed explanation is found in the fifth chapter of St. John's gospel, where we are told of our Lord's visit to the pool of the five porches. There Jesus found a "great multitude of impotent folk," and one is tempted to wonder why he did not heal them all. He healed only one. Why did he not heal the rest? He had sufficient understanding to raise the dead, he had love enough to surrender himself to the cross; he therefore lacked neither love nor power. Is it not manifest that even he could give only to those who would take, and that in that "great multitude" he found but one receptive heart?

Every practitioner has known persons who, having spent much time and money under medical care and implicitly obeyed their doctors' instructions, have come then to Christian Science, "to try it." I have known such persons to experience an immediate benefit, then neglect their practitioner's request to study the Bible in connection with its key, Science and Health, and in a short time and after a small expenditure of money and effort, give up treatment, thinking that they had "tried Christian Science."

In coming to Christian Science these people unwittingly paid it a great compliment, for they evidently expected instantaneous healing, and that without effort or sacrifice on their part. How much less did they once expect from *materia medica*, with which they experimented months and years, paid out large sums of money, drank quantities of evil-tasting specifics, and lived to a given rule? When, however, they come to a Christian Science practitioner, they may hesitate even to buy a copy of the text-book, or if one is loaned them they find it "difficult," or "impossible," to devote an hour or two daily to its study. Such a one may ask, "Why am I required to take such a course of study?" And Christian Science makes this reasonable answer, "Because all sickness and sin is first mental."

It is manifest that after the mentality of mortals departs, the body, although intact, cannot sin or suffer. So it is plain that sin and suffering are first mentally conceived,—either consciously or unconsciously,—to be manifested later on the body. In order then to effect a cure, a change of thought must first be brought about. If the disease is the result of

Digitized by Google

sin or fear, the patient's desire for one or dread of the other must first be destroyed. This is done primarily by the practitioner's clear understanding of the allness and power of God. It is, however, easily understood that the patient can make this task easy or difficult as he opens or shuts the door of his thought. This is why he is asked to spend some time each day studying the Bible and Science and Health. It is saddening to hear one say he has "tried Christian Science," when he has done nothing of the kind, but the rather has refused entrance to the sunlight of Truth.

If we take the Bible and study the stories of God's great deliverances, in every case we find that there was consecrated work, steadfastness, patience, obedience, and confidence. Suppose that Daniel, when he arrived at the lions' den, had turned to King Darius and said, "I am going to try [*i.e.*, test] God's power, but please leave the door ajar until I first make sure the lions will not bite me." If he had entered in that attitude of mind, how speedily would the lions have eaten him up! Instead, the door was shut tight and a seal placed on it. Daniel relied wholly on God and was safe. But it should be noted that this security was not the work of a moment. It was the culmination of long years of faithful work.

When the writer was twelve years old, scarlet fever went through our home—six of us had it; one passed on, and it took weary months of convalescence and change of air before the household resumed its normal condition. A few years ago a member of my family was taken with this disease, all the symptoms being present. With absolute confidence, we spent a large part of an afternoon and evening together, and having known nothing all her young life but to look to God and God alone for health, she received my ministrations with serene confidence and expectation of immediate recovery. We both knew that all power belonged to God, and that He is Love. Could then any suffering come to His child, when sin was absent? The following morning, the only symptom remaining was the sore throat, which was greatly relieved, and the second day she was entirely well. The trouble ended there, the sickness had been cast out.

When a patient comes to a Christian Science practitioner as the jailer came to Paul and Silas, asking, "What must I do to be saved?" then he does not come just "to try" Christian Science, he is ready to be patient and to try to do his share. He is not coming to a fellow mortal for human aid, but rather to learn how he may realize God's ever-presence, so that he may become conscious here and now, at least in part, of His power to heal and save. He is coming in reverent confidence, with a mind open and receptive to the greatest of all truths,—the truths of Christian Science.

EFFECTIVE USHERING.

JAMES L. RICH.

An important position in the Christian Science church is that of the usher. It is he whom the attendants first meet after entering the church, and it is through him that they are first welcomed to the services. All of us know how lasting are first impressions. I do not think I am overstating the facts when I say that frequently first impressions are so tenacious that no amount of subsequent argument or proof will change them. How very desirable, then, that those who attend, and especially strangers, should receive an agreeable impression on first entering our churches and reading-rooms.

It is well if the usher realizes that while he is on duty he is a sentinel for Truth, and he should deport himself as a true soldier of the cross. He should never assume a careless or indifferent attitude, but be dignified, and ever on the alert to detect anything that would affect the comfort of the people. This is his paramount duty. He may be following instructions in requiring each regular attendant to occupy a certain seat, and viewed from a methodical standpoint, the congregation may be faultlessly cared for; but if in achieving this result he has offended some one, then in so far he has failed to accomplish the purpose intended.

An usher should assume his duties with a fixed determination never to entertain resentment, no matter what may be said or done. He must remember that a gentleman always manifests gentleness. Possibly he may be thoughtlessly censured sometimes, though he follows his instructions implicitly and does his utmost to please, but under such circumstances he should keep his heart filled with love, and thereby make these trials stepping-stones to higher joys. There are no unimportant positions in our service of Truth, and whatever his position with respect to others, the true usher thanks God and is glad if he may but be "a doorkeeper" in the house of God. Love and service are the two words which form the foundation of success in this as in every other ministry. Loving to serve is a virtue, the presence or absence of which will determine our efficiency.

But, one may say, "I do not think I would make a successful usher because I do not feel that love for the office of which you speak." In answer it may be said, that any one may increase both his capacity to do and his joy in the doing if he will but try, and most of us will be agreeably surprised at the progress made and the spiritual uplift experienced, in return for our earnest effort. This service is a means to an end, namely, that the congregation shall be in the best position to hear the truth and in the most receptive frame of mind to receive it.

ONLY A DREAM.

EDITH M. INGPEN.

SOMETIMES beginners in the study of Christian Science ask, "If evil is not real, then how did the belief in its reality originate?" Although this question is so clearly answered throughout the text-book, Science and Health (especially page 281), many still seem to be seeking an answer through material reasoning, and thereby waste much time and thought.

Mrs. Eddy writes: "The history of error is a dream-narrative. The dream has no reality, no intelligence, no mind; therefore the dreamer and dream are one, for neither is true nor real" (Science and Health, p. 530). The meaning of this declaration was made very clear to me some time ago, by the following little experience, which may perhaps be of some help to others. One night, while sleeping at a bungalow in the country, I dreamed that I was lying awake, and suddenly seemed to be terrified at hearing heavy footsteps on the garden path outside, passing by the windows. Thinking at once of burglars, in my dream I instantly turned to Christian Science for help and began to declare the truth to overcome the sense of fear. The result was that almost immediately I awoke, and all fear disappeared when I found that it had been only a dream and that nothing had really happened to cause the alarm.

Is not this exactly what mortals appear to be doing? Are they not dreaming that they are awake, listening to the strange, startling sounds of error which seem to hold them down in the stupefying bondage of fear? But sooner or later the "still small voice" of Truth is dimly heard. It rouses the sleepers, and, as our text-book tells us, "all that to material sense seems substance, becomes nothingness, as the sense-dream vanishes and reality appears" (Science and Health, p. 312). The dreamer may still attempt to look back, may linger to inquire as to the origin of his dream, but only when he turns toward the light of spiritual understanding and awakes "in his likeness," the likeness of divine Mind, will he find his answer, and "be satisfied."

SELECTED ARTICLES.

[David Anderson in *Reporter*, Melbourne, Australia.]

Some weeks ago comment was permitted in your paper on an attack on Christian Science which appeared in an "inter-denominational religious monthly," reproduced locally for Australian circulation. A further attack appears in the current number of the same publication, and appeal is therefore again made to your impartiality for that opportunity of reply which is denied by the religious paper in question.

It would be more satisfactory if critics of Christian Science would substantiate their quotations from Mrs. Eddy's writings by reference to the book and page in which the quotation might be sought. Christian Scientists believe that the spiritual man of God's creating has an indestructible life, and that "as mortals begin to understand Spirit, they give up the belief that there is any true existence apart from God" (Science and Health, p. 283). Christian Scientists do not regard death as a kindly friend, through whose welcoming portals they are to be ushered into a haven of boundless bliss. They look upon death as an unrelenting enemy, "the last enemy that shall be destroyed;" and they believe that, if death is never to be overcome, such affirmation would never have been made regarding it. Jesus taught by precept and example that death can be overcome by spiritual life, and Christian Scientists believe his statement, "If a man keep my saying he shall never see death." He gave the lie to death by raising the dead, and finally by his own supreme victory over death and the grave.

On page 43 of "Unity of Good" Mrs. Eddy writes: "The achievement of this ultimatum of Science, complete triumph over death, requires time and immense spiritual growth. I have by no means spoken of myself, I *cannot* speak of myself as 'sufficient for these things.' I insist only upon the fact, as it exists in divine Science, that man dies not, and on the words of the Master in support of this verity,—words which can never 'pass away till all be fulfilled.'" This critic says that every other religious system but Christian Science at least claims progress. Mrs. Eddy says (Science and Health, p. 233), "Every day makes its demands upon us for higher proofs rather than professions of Christian power. These proofs consist solely in the destruction of sin, sickness, and death by the power of Spirit, as Jesus destroyed them. This is an element of progress, and progress is the law of God, whose law demands of us only what we can certainly fulfil." From Genesis to Revelation there is no sentence which the Christian Scientist accepts more fully in its simple letter than that which the critic asserts the Christian Science teaching directly contradicts, "The wages of sin is death;" and it is equally misleading to assert that Christian Science teaches that there is no sin. The higher mission of Christian Science is emphatically the destruction of sin, and Christian Science nowhere encourages its indulgence.

From start to finish the text-book wages uncompromising warfare with sin. It exposes and denounces it for what it really is. It shows the sinner that sin is contrary to the will of God, not created by God, and enables him to overcome and abandon it by destroying his belief in its reality, power, and pleasure. For instance: "They who sin must suffer;" "Sin kills the sinner and will continue to kill him so long as he sins;" "Grafting holiness upon unholiness, supposing that sin can be forgiven when it is not forsaken, is as foolish as straining out gnats and swallowing camels" (Science and Health, pp. 37, 203, 201).

The critic's belief that Christian Science is a delusion does not make it so; and those who find it consistent with their Christian profession to attack and misrepresent the religion of their fellows who are striving to follow and reduce to practise the teaching and commands of their common Lord, will surely admit, if only theoretically, that the divine charity which Jesus Christ inculcated and ever manifested, his followers should endeavor to imitate.

[W. C. Williams in *Hagerstown* (Md.) *Globe*.]

In answer to our critic, in his recent sermon, it should be understood that Christian Scientists do not entice any one from the churches; those who come from the churches have proved the truth in Christian Science for themselves, in the healing of moral or physical infirmities, and a large percentage of these have beeen healed after all other means had failed. Our critic in his sermon on his interpretation of Christian Science seems to ignore the spiritual teachings of the Bible and to treat everything from a materialistic point of view.

Christian Science is always from the standpoint of the spiritual, otherwise it would not be the Science of Life as taught by Jesus Christ; the error of the ages has been in trying to fit in material manifestations and conditions to the laws of God, which laws are spiritual. This does not mean that Christian Scientists overcome all their beliefs in materiality at once, for the problems in Christian Science, like all problems, have to be worked out by degrees until knowledge of the truth takes the place of belief in error, and it must be proved else it is not knowledge; and it is the daily proof that makes the Christian Scientist. The "signs following" show that he is obeying, as fast as he progresses, the command of Jesus to heal the sick and preach the gospel. Man is spiritual because he is the image and likeness of God, who is Spirit; and only from this standpoint is matter unreal. Jesus said that the spirit quickeneth, "the flesh profiteth nothing." Jesus showed the unreality of pain by healing it; but he knew, as every one who follows him knows, that each individual must work out his salvation according to the light that is in him, and this light grows as the individual grows in the understanding of the Bible.

Peter's faith in the truth that Jesus had taught him was not strong enough or he would have continued to walk on the water. But it is very natural to call for help when through lack of knowledge we are unable to do as Jesus commands. Jesus said: "Let not your heart be troubled: ye believe in God, believe also in me." "Or else believe me for the very works' sake. . . . He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father," and his principal works were the healing of disease and sin. His specific commands were to heal the sick as well as to preach the gospel. As Christian Scientists are obeying these commands to the best of their understanding, and are willing to be judged by their fruits, are they the ones who are marching under false colors?

An omnipotent, never-changing God has but one law for those who love Him, and it is therefore just as applicable to the present as to the past. The Bible states, "If thou wilt diligently hearken to the voice of the Lord thy God, and wilt do that which is right in his sight, and wilt give ear to his commandments, and keep all his statutes, I will put none of these diseases upon thee, which I have brought upon the Egyptians; for I am the Lord that healeth thee." It is also written that "Jesus went about all the cities and villages, teaching in their synagogues, and preaching the gospel of the kingdom, and healing every sickness and every disease among the people." He also commanded his disciples to "go, preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils; freely ye have received, freely give." "And all things, whatsoever ye shall ask in prayer, believing, ye shall receive."

Our critic insists that Scientists should demonstrate at once all that Christian Science teaches, and that they are illogical if they do not. As I said in another place, Christian Science is a matter of growth, and this growth is different even in each individual, as every step has to be proved. I do not know how many years our critic has been preaching against sin, but I should like to ask him how many absolutely sinless people he knows. The overcoming of sin is one of the necessary factors of progress in Christian Science.

Digitized by Google

Our critic says he would begin to believe if a Christian Scientist would "walk for a week, without stopping to rest, or to sleep, or to eat, or to drink." Many more wonderful things than this are being accomplished through Christian Science, but he does not "begin to believe;" and prayer is not made for a test. When tests were suggested to Jesus, he said, "Thou shalt not tempt the Lord thy God." Money, like all mundane things, is as real to one as he makes it, but nevertheless Jesus said, "Render to Cæsar the things that are Cæsar's." It is well to remember that God's wisdom begins where human logic ends.

[Alfred Farlow in *American Israelite*, Cincinnati, Ohio.]

In a recent issue there appeared a signed article which raises the question as to whether Christian Science and Judaism are one and the same thing. I do not understand that any Christian Scientist claims that the tenets and rules, the regulations, customs, etc., of the Christian Science church are identical with those of the Jewish people, but I have understood and believe that the salient points of the Jewish religion are maintained in the teaching of Christian Science; that is to say, Christian Science teaches that there is but one God and that men are to be saved from sin and suffering by understanding the true God and deporting themselves accordingly. I understand that Jesus was an adherent of the fundamental teaching of the Jewish religion, that he was a believer and an expounder of the Mosaic law, although he probably discerned and taught some things concerning the law which may not have been understood by the people of that time, not even by his countrymen.

Our critic declares that a "Jew to be a Christian Scientist has to 'in writing forswear all allegiance to Judaism,'" that "'in writing he has to promise never to attend a Jewish service, and in writing has to guarantee that he will never support the Jewish cause.'" I cannot imagine where the gentleman obtained this impression. No one who joins the Christian Science church is expected to guarantee in writing or otherwise that he will never support the Jewish cause or any other righteous cause. As a matter of course, the Christian Science church does not accept as members those who are members of other denominations. It holds simply that one should not undertake to be a member of two distinctive religious bodies.

[William J. Bonnin in *Two Worlds*, Manchester, Eng.]

Christian Science is scientific Christianity, or the Science of the truth expounded by Christ Jesus. On all sides may be seen the evidences of mankind's ceaseless effort to find the truth. Every religion, church, and sect, every school of moral and political philosophy, proclaims a doctrine it holds to be right, and offers to point the way. Still mankind is seen to fail in the search—the religions and philosophies fail to satisfy or convince. And yet, apart from all theories and conjectures concerning it, the truth exists; no one for a moment would doubt that. Now Christian Science comes to declare that Christ Jesus knew the truth and that his great service to humanity was to declare and demonstrate it, so that men might know the truth and be free; in other words, that the one cause and intelligence, God (His creation and His relation to and laws governing that creation), exist as substantive facts, and may be known by men.

"Ye shall know the truth, and the truth shall make you free," was Christ Jesus' promise; that is to say, the truth, when known, is to set the race free. Free from what? It must surely be from something that is not true, for truth or reality could not free from reality. The truth, then, is to free us from error, and from error believed to be the truth; in other words, from false beliefs. Moreover, the virtue of the promise lies in the fact that it is a promise of good, of happiness, so that the freedom promised is freedom from all that spells unhappiness—from evil in all its forms. Christian Science teaches us that we may begin at once to prove the truth and availability of this promise, and that as the truth and reality of good is realized, so is the unreality and nothingness of evil laid bare.

Christian Science insists that there is no power or intelligence apart from God—Spirit. That is absolute and inflexible truth, and not one hairbreadth will it depart from it. It follows then as a corollary, that anything which tells us there is reality, or truth, or power, or intelligence in anything apart from God, in matter, must be a false witness. The material senses are not witnesses to the truth of being. These senses cannot acquaint us with absolute truth as it exists in the sight of God, but only with the translation, as it were, of that truth into their own limited, material terms—the human, mortal mind's material concept. Now, just as Paul called this carnal mind "enmity against God," so Christian Science teaches us that the human concept is unreal, the denial, opponent, and enemy of reality, or the true, spiritual idea of God.

Thus Christian Science frankly declares its opposition to materialism and to every claim of the human mind to power. And just as the race has been largely enveloped in the materialistic education that has taught it to regard the material as the real, as opposed to the ideal, which it has been led to look upon as something vague, unreal, and unattainable, so now does Christian Science declare that such false education is responsible for all the misery of the world, to undo and destroy which we have to comprehend that the real and the ideal are not contradictory but synonymous expressions. It may be said there has never been a man with any degree of spiritual insight, aspiration, or vision who has not been forced in some way to a recognition of the unreality and vanity of the human, mortal mind and its concept of matter and evil.

It may be asked, What does Christian Science offer apart from a new theory, a fresh idealism? How is it going to prove it? How is it going to help? Questions quite legitimate and welcome, for they open up the essential characteristic of Christian Science, the feature which distinguishes—its demonstration of its teaching. The good news that Christianity had to proclaim to the world has again, through a woman's faith, purity, and devotion, been proclaimed to mankind. The message now as then is to assure humanity of the eternal fact that the power of good can and does destroy, here and now in our daily lives, the seeming but unreal power of evil; that Christianity is a plan of salvation ready at hand to deliver all, not from some fancied threatened torment of the future, but from the sins of every kind that are here today to harass and oppress.

Spiritual understanding constitutes a linking of ourselves to the omnipotence of God; a breaking down of all that the educated beliefs of the centuries have erected between us and His love. That may be said to be the province, the function, of understanding or knowledge,—science rightly so called, for it is the only true science, and is consequently Christian Science. Hence it is correct to say that God, who is all Truth, and Life, and Love, heals disease and sin through Christian Science (the understanding of Him and His perfect spiritual universe). And here, as all along the line of Christian Science, we find its teaching not merely authorized and supported by the Scriptures, but shedding on them in turn a light that renders them beyond measure convincing and precious. "Understanding," they tell us, "is a wellspring of life unto him that hath it." "Understanding shall keep thee: to deliver thee from the way of the evil man." Throughout them we find emphasized the eminent desirability of wisdom and understanding. The opening chapters of Paul's first letter to the Corinthians are well worth learning by heart.

The Christian Scientist has set out on the journey to the attainment of man's birthright. He is aware that as he accepts and believes the truth regarding the sin-

Digitized by Google

universe and man, he does not yet know it in its fulness, and that consequently his experience is largely a compromise between his material beliefs and his spiritual knowledge. His endeavor in this compromise is, however, to make the area yielded to his material beliefs a continually diminishing one. This he achieves by destroying those beliefs which, by reason of their being seen to be abnormal, useless, illegitimate, evil, present themselves as the more ready and easy to be overcome. And so he sets out to master his own false beliefs in sin and sorrow and sickness as having reality or power, and to carry to his neighbor a cleansed consciousness that shall for him avail to exorcise the demon of evil. He begins to learn something of what the psalmist meant by the words: "Bless the Lord, O my soul . . . who forgiveth all thine iniquities; who healeth all thy diseases," and to know something of the meaning of life, and love, and joy, and peace.

[L. C. Hough in *Sacramento* (Cal.) *Bee.*]

Your writer has been kind enough to concede some virtue to Christian Science, at the same time disclaiming for it so much as a "sisterhood with science." He not only impugns the Science, but questions the Christianity of those who claim to heal according to the Christ-method. He says also that this method was not original with Jesus of Nazareth. "It was in vogue under the ancient philosophers in the morning of history." Now, does not the fact that this method is productive of good, under certain conditions; that it has obtained from the earliest reckoning of history; that the Christ, who evolved the best way of correct living, taught it—prove its universal possibilities?

We are living in the Christian era, in a Christian country, and supposedly Christian lives. The fundamental rule of Christianity is the fact: "Ye shall know the truth, and the truth shall make you free." Free from what? Free from that which holds in bondage. Is it not the law of the flesh which holds humanity in its greatest bondage? Then, when we learn to know the truth of our existence, which is spiritual, we are no longer in bondage to the law of the flesh, which is material. This knowledge of the truth enables us to appeal to the "supreme court" for a final decision, which is: "Love is the fulfilling of the law."

The whole tenor of Christian teaching urges humanity to follow "in his steps." We are told: "Let this mind be in you, which was also in Christ Jesus." That "mind" epitomized the oneness of humanity with God. ("I and my Father are one.") Let a conscious union be established between the divine Mind and that inner something which is conceded to be spiritual, and men will invariably be lifted above the grosser material laws which have bound them.

Would it not be well for us all to study the teachings of Christ Jesus more closely, and see if there is not a less dangerous way of eliminating the ills that flesh is heir to? Is it not just possible that when we have reduced the higher laws, those of psychology, to a science, we shall be the better enabled to apprehend spiritual law? Then the things which seem supernatural (from a material viewpoint) will of course become the most natural, and humanity will hail the glorious dawn of that new day (of enlightenment and attainment) toward which men have striven for centuries. If we could only be large enough and broad enough to accept, with a degree of faith, anything which lifts us on to the plane of a higher and nobler living—just think how beautiful this world could become and how rapid would be its progress!

[Ezra W. Palmer in *Rocky Ford* (Col.) *Enterprise.*]

Christian Science recognizes that all power, all knowledge, all presence, all action, is vested in God, Spirit, and that therefore the real universe which He created is spiritual, perfect, and harmonious. Evil, sin, disease, poverty, death, are not therefore a part of the spiritual universe, because they are contrary to the nature of God. Relying wholly on Spirit, Jesus, the apostles and prophets, healed the sick and attained that poise and freedom which have made them true models for manhood ever since. It is interesting to note that throughout Bible history the wonder-workers, hypnotists, witches, magicians, and mesmerists attempted to emulate the genuine works of those who relied on God. Thus the magicians of Egypt strove to do the works of Moses; the prophets of Baal, the deeds of Elijah. In the Old Testament constant warnings by the prophets are given the people against false wonder-workers; and so clearly was this distinction known to the people that even in the time of Jesus the Pharisees attempted to discredit his works by imputing his power to Beelzebub, the alleged god of materiality. The human mind or carnal mind, which St. Paul declares "is enmity against God," is not a healer. In fact, St. Paul declares in another place that it is the "old man" (the carnal mind) which must be put off, before the "new man" (the mind of Christ) can be put on, "which after God is created in righteousness and true holiness."

The critic finds some fault with Christian Science because it emphasizes good to the exclusion of evil. I am quite well aware that some psychologists and philosophers have promulgated the theory that a knowledge of evil is necessary in order to appreciate the good; that it is necessary to know darkness in order to see light; that a man can gain knowledge only by comparing better with worse, and that evil is an inevitable and necessary concomitant of good. This seems to be the position of our critic when he states "we could have no apprehension or appreciation of 'good' except for the contrasting experiences that we call 'bad.'"

It will be remembered that this was the argument used by the serpent in the garden of Eden to our first parents. They were urged to eat of "the tree of knowledge of good and evil" and become as gods. But the penalty of attempting to mingle good and evil was then and now the same—death. Moses declared of man that he should "love the Lord thy God with all thine heart, and with all thy soul, that thou mayest live." Jesus ever declared that his power, his light, and his inspiration came from God. He repudiated any reliance on evil or negative conditions whatsoever. In fact, he declared that man must look to God only for wisdom and guidance. "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent," was his prayer. He also taught that knowledge of a dual universe was fatal to true living. "Ye cannot serve God and mammon," he declared. Christian Science accepts the Bible teaching of full and complete reliance on God and repudiates the doctrine that evil is in any manner essential or necessary.

[Written for the *Sentinel.*]

OMNIPOTENCE.

CHARLES C. SANDELIN.

Thou mayest not, perchance, a mount remove,
Or change the crystal water into wine,—
The dead restore, or heal through power divine
The multitude that seek this power to prove:
Yet think ye not such marvelous works behoove
A favored mortal or predestined line;
Nor, scoffing, give no credence till a sign
Thy faith awaken and thy doubt reprove.

Thine eyes, by Science taught, may Truth discern,
And scorn each claim of matter; not thy might
Shall triumph, but thy heart, a-humbled, learn
The mighty power of Mind that in thy sight
Shall error's towering mountain overturn,
And chase the blinding darkness with its light.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

UNIVERSAL APPLICATION.

FREQUENTLY at the Wednesday evening meetings we hear testimonies given in which the speaker includes a statement of his gratitude for the greater prosperity which he is enjoying in his business affairs, and to a stranger who is attending a Christian Science service for the first time, this statement may prove somewhat puzzling. This inquirer has heard, and may be willing to believe, that Christian Science heals disease, reforms the sinful, and brings comfort to the weary and heavy-laden, but that it is a panacea for business ills as well, seems almost too much for him to accept. The reason for this unbelief may be one of several things. He may have been educated to believe that the only measure of success in business is the accumulation of great wealth, and that in order to attain to this desirable condition it is permissible to and in fact he must employ a different code of ethics from that of which he makes use in his other relations with his fellows. Another belief which may influence him is that by which so many men are affected, namely, that business is a species of warfare in which he who would win can pay little regard to the rights or to the sufferings of others,—where might is right and the battle is always to the strong.

To one who holds these and kindred beliefs, it might and probably would appear, unless the right explanation as to how the success was brought about were given, that only through will-power or hypnotism could such results be attained, and he would very likely go away from the meeting either with an utter repudiation of the verity of the testimonies given, or confirmed in another prevalent but mistaken belief, namely, that Christian Science is but a variant of suggestion, and that its results are obtained through the domination of one mortal mind over another. Christian Scientists know to the contrary; they know it is through adherence to divine Principle, through yielding themselves to the guidance of the Mind which is supreme intelligence and wisdom, that success has come to them, and they know that true success can be won in no other way, but they sometimes fail to state this with sufficient clearness.

When we hear testimonies to business success given at these meetings, we often wish that they might be as lucid in this particular as is the testimony given on pages 643 to 645 of Science and Health. The writer of this testimony makes clear the reasons for his prosperity in business in these words: "I became more friendly, more honest, more loving to my fellow men; and I also acquired better judgment and was able to do the right thing at the right time." This statement is in line with Mrs. Eddy's words on page 192 of Science and Health: "The good you do and embody gives you the only power obtainable. Evil is not power;" and these words should be sufficient to stimulate to the utmost exercise of those qualities of thought which have their basis in immortal Mind and which cast their influence for righteousness in the working out of every human problem. There is another saying of our Leader of similar import, namely, "If mental practise is abused or is used in any way except to promote right thinking and doing, the power to heal mentally will diminish, until the practitioner's healing ability is wholly lost" (Science and Health, p. 410). It will readily be seen that in its application this statement of truth, like every other, is universal, and that only as mental practise is used "to promote right thinking and doing" is it of value either in the conduct of business affairs or in the correction of any other discordant condition of thought.

Christian Scientists have one unvarying and unchanging standard of right, namely, "perfect God and perfect man,—as the basis of thought and demonstration" (Science and Health, p. 259), and it should be their constant endeavor to measure their every thought and action by it. Success, whether in business or otherwise, will come to them in the proportion that this rule is followed, and our testimony meetings will abound in vital experiences of the power of Truth to meet every need.

ARCHIBALD MCLELLAN.

ALL GOOD IS.

THERE are few men, and none of parts, who do not erect and dream over their castles in Spain, who have not outlined an ideal of earthly circumstance and surroundings with which they associate the thought of happiness and satisfaction; and the difficulty of many a task, the weight of many a burden, has been temporarily lessened by this ministry of hope, the promise it gives of a sometime success. Castle building may thus relate itself helpfully to human experience, since it may lead us to live more largely in what we long for at our best.

Hope often rekindles the flame of wholesome ambition, and yet hope long deferred does makes the heart sick, as saith the proverb, and Christ Jesus distinctly avers that the mission of faith is the fulfilment of our best hope. "I am come," said he, "that they might have life." He taught that the longing for good witnesses to its abundant supply and availability in the provisions of Providence, and Christian Science is reaffirming this truth, that disappointment and limitation have no place in the divine experience or order. The true life is forever full and free,—this the Christian world has never questioned; its fault has been an educated and wholly unwarranted sense of content with the thought of futurity respecting this life, and Science is blessing all mankind in reuniting right desire and achievement in human experience through the beginnings of spiritual demonstration.

However varied our human concepts of the goal of life, they have all been at one in positing that goal in an indefinite to be. The Christ comes to declare and demonstrate that now is the day of salvation, that the designs of God, of good, are never delayed. He thus pronounces upon our whilom content with future possibilities as out of keeping. In rebuke of the well-nigh universal thought of spiritual overcoming and possession as a far-off event, he stood for the ever-presence of being and its manifestation. More than this, he not only taught the present actuality of Love's rule, he brought it nigh, in both time and space, when he said, "The kingdom of heaven is within you," within the reach, is yours to be, today; and this being true, spiritual consciousness becomes a "present possibility," as Mrs. Eddy has stated (Science and Health, p. 574).

The explanation of the pessimism and despair which attend unfulfilled hopes is found through Christian Science in the belief of man's separation from God,—that immutable and immortal "I AM" which includes the satisfaction of all right desire, the will of God and of man. The secret of Science is the secret of the first commandment, namely, that God is the source of all good; that all true satisfaction is found in Him alone, and that it is absolutely unquestioned save by our response to his query, "Lovest thou me?" Love's assurance to Israel is all inclusive,—"I am their possession." Nothing can be added thereto, and nothing taken therefrom. It is a present-tense fact.

Compelled to concede that it cannot bring content now, material sense is forever fooling men with the mirage of a promised joy, and they can but feed upon the bitter herbs of disappointment until through the appearing of the Christ, in Science, they awaken to the falsity of all material sense and turn to Spirit and the spiritual in every time and event of need. As long as men cling to the belief of life, intelligence, and substance in matter, so long do they consign their

Digitized by Google

experience to some mold of dissatisfaction and disease, and the pleading emptiness of their outstretched palms witnesses ever to a hunger which Spirit alone can satisfy.

Consciousness is an eternal now, and Christian Science begins to increase and enrich the compass of our present realization by multiplying our demonstrably right ideas, by linking thought persistently to the actuality of being, and under its tutelage Pope's "Man never is, but always to be blest," yields in our thought and experience to St. John's joyous assurance, "Now are we the sons of God."

JOHN B. WILLIS.

ABSTINENCE.

ALL thoughtful people discover sooner or later that self-denial in its broadest sense must be practised, if real and lasting progress is to be made in any direction, and some Christians have carried this form of self-discipline to great length, so far as outward indulgences are concerned, who clearly have not understood the Master's teaching on this subject. In the seventeenth chapter of Matthew we find an account of the healing of a lunatic and epileptic boy by Christ Jesus, after his disciples had failed to bring out this case. That the experience must have greatly impressed the disciples is evident, for we have, in addition to Matthew's account, further statements of it in Mark and Luke. These writers all tell us that the healing followed close upon Jesus' transfiguration, and Mark speaks of the unfavorable conditions under which the disciples had attempted to help the afflicted lad,—"a great multitude about them, and the scribes questioning with them." Jesus' inquiry elicited the information that the case was chronic, dating back to infancy, and Mark characterizes the belief as a "foul spirit," which agrees with Luke's statement. After the marvelous healing of the boy, the disciples very naturally asked why they had failed, and in response Christ Jesus made a demand for faith in God which it were well for us to remember every day of our lives. He said, "If ye have faith as a grain of mustard seed, ye shall say unto this mountain, Remove hence to yonder place; and it shall remove; and nothing shall be impossible unto you." This is followed by the significant words: "Howbeit this kind goeth not out but by prayer and fasting," a statement which has called forth much comment and inquiry on the part of Bible students, including Christian Scientists.

People ask what the fasting here referred to means. Does it mean abstinence from food on certain occasions, and also from worldly pleasures? St. Peter gives an illuminating answer to this query when he says, "Dearly beloved, I beseech you as strangers and pilgrims, abstain from fleshly lusts, which war against the soul." His Master and ours had said that even a look, with an impure thought back of it, constituted adultery, and how could any one heal a physical ailment resulting from "foul" thought, unless he himself abstained from all such thought? It is very plain that he could not, and it is equally plain that without the kind of "prayer" which Jesus demanded, the "fasting" would be impossible. This prayer is indicated in the words of our revered Leader, who says, "In the quiet sanctuary of earnest longings, we must deny sin and plead God's allness" (Science and Health, p. 15). If we do this "without ceasing," we shall abstain from all impurity of thought, word, and deed, also from doubt and uncertainty, and begin to express the faith which removes mountains and heals disease, whatever its name or nature.

Here it should be noted that the spiritual demand rests equally upon patient and practitioner. The poor troubled father said to Jesus, "If thou canst do any thing," to which Jesus responded, "If thou canst believe," and instantly the man reached out for help to do this, even with tears and great striving. Those who make materiality the basis of their calculations for health are like the people who surrounded the great Teacher, a "faithless generation," and all who desire "spiritual gifts" must cleanse their hands and hearts in order to heal and be healed. They must abstain from the "pollutions" of modern idolatry, with its intense consciousness of bodily pain and pleasure, which quite forgets the admonition "to be absent from the body, and to be present with the Lord." We must abstain from all that tends to hinder our spiritual growth, and so doing we shall find that God withholds "no good thing . . . from them that walk uprightly."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

WHITTIER, CAL.

Ground is being broken today [March 27] on the southeast corner of Bailey street and Washington avenue for the site of a handsome church building which, when completed, will cost fully five thousand dollars unfurnished. The structure is being erected by First Church of Christ, Scientist, and will be one of the most attractive of its kind in the city. The building is to be of classical style of architecture and will cover the entire lot, which is ninety by one hundred feet. The structure will face both Central park and Washington avenue, and will have a corner entrance at the intersection of street and avenue. It is expected that the new church will be ready for occupancy within ninety days. The first floor, which will practically be a basement, will be one large Sunday school room. The second or ground floor will contain the main auditorium, with a seating capacity of five hundred, offices, and a reading-room. The seats in the auditorium will be set in a semicircle and everything will be strictly modern and up to date.—*Whittier News.*

NEODESHA, KAN.

First Church of Christ, Scientist, has purchased a valuable lot of land with a frontage on 5th street of eighty-seven and one fourth feet and on Indiana of one hundred and twenty-five feet. The site is conveniently located and will make an ideal place for a house of worship, and as it is clear of debt it is understood on good authority that a new church edifice is to be erected in the near future.

First Church of Christ, Scientist, was organized in Neodesha a few years ago, and has been holding services in well-furnished rooms in the Hale building. The membership of the church and the attendance at services have steadily increased, and it will soon be necessary that they have larger quarters for the meetings.—*Neodesha Sun.*

ESCANABA, MICH.

Members of the Christian Science church have purchased the church building owned by the Swedish Mission congregation on South Fannie street, and will take possession of that property about October 1. The Swedish Mission congregation is constructing a new church building at Ludington and Sarah streets, and will turn over the old church property to the purchasers as soon as their new building is completed.

The Scientists will probably arrange to hold services in the newly acquired property within a short time, as at present regular services are being held at a private residence in the city.—*Escanaba Press.*

TAMWORTH, N. H.

Our Christian Science friends have converted what was known as the Carter blacksmith shop into a nice little chapel by the waterside, where they hold service every Sunday at 11 a. m., and will be glad to welcome all who will attend.

Reporter, North Conway, N. H.

THE LECTURES.

WEST CHESTER, PA.

Frank Eberman in presenting William R. Rathvon, who lectured on Christian Science Tuesday evening, April 30, said:—

The theme of the evening is not a new one. The divine mandate, "Let there be light," voiced with almost the first syllable of Holy Writ, is an indelible condition of consciousness, and surely, now as then, involves the human response, so quaintly recorded by the author of Genesis, "And there was light." "As it was in the beginning," so this glory "above the sun" shines with unchanging ray into the hearts of men to heal and to save. The inspiration of prophet and apostle, the stay of saint and martyr, none have added, none have subtracted. When Jesus of Nazareth enunciated a new commandment, "that ye love one another," he but summarized the intent of the Mosaic code. Likewise, when Mrs. Eddy declared that "'Love thine enemies' is identical with 'Thou hast no enemies'" (Miscellaneous Writings, p. 91), she but made another translation of spiritual truth and established a scientific and therefore demonstrable foundation for those intuitive precepts which in all time have gone to make up the religious experiences of a God-fearing race.

The results of this scientific religion, as seen in marvels of physical healing and moral regeneration, immediately and positively identify Christian Science, in the minds of grateful multitudes, with that silent majesty which parted the sea under the rod of Moses, healed leprous Naaman at the behest of Elisha, conquered the "king of terrors" at the grave of Lazarus; and these signs, recurring today according to the promise, prove beyond hazard that the last glowing, triumphant chapter of humanity's troublous love story is even now being written. Although this romance of the ages is not yet finished, it is our privilege this evening to glimpse its happy promise with one who has had exceptional opportunity to study the philosophy of its pages through personal relations with the great Founder of Christian Science.—*Correspondence.*

MINNEAPOLIS, MINN.

Judge Clifford P. Smith lectured on Christian Science to an audience that filled the Auditorium, including the top gallery, April 30. He was introduced by Prof. John N. Greer, who said:—

Scientific Christianity is here and now, and it has come to stay. Scientific Christianity or Christian Science has come to stay because it embodies in its practise and teachings the fundamental and vital laws of life. These vital facts include the healing of disease, the removal of fear, the destruction of sin, and the spiritual uplift of the individual; and because these vital facts are based upon the Principle of scientific Christianity, it has come to stay and it will last as long as Truth is.—*Correspondence.*

LOS GATOS, CAL.

On Thursday evening, May 2, in Ford's Opera house, a lecture on Christian Science was given by Virgil O. Strickler. The speaker was introduced by Alden F. Potter, first reader, who spoke as follows:—

When we stop for a moment and review the religious history of the past, and the next instant see the religious thought of the present, its constantly increasing spirit of tolerance and good-will, the advancing gospel of man's brotherhood to man, are we not justified in saying that today the great body of men and women are earnest seekers of reality and truth, and as such desire and strive to be impartial, fair, and honest? We are all becoming more tolerant and open-minded; our standards of ethics and morals are more than ever before leading us to the actual accomplishment of a lofty ideal. We are able, therefore, to entertain and investigate advancing ideas, and shun to an ever increasing extent the prejudice and dogma of the past.

The subject of our lecture this evening is Christian Science, and the lecturer will tell us at least a part of the message it brings to mankind. It is his mission to put us in possession of facts, and to give us a better understanding of the Science of Christianity,—of its healing and redeeming work for the human race. Christian Science is today offering the blessing of a complete salvation, not only from the sins of the flesh, but also from the sicknesses of the flesh. It has given health, happiness, and an active living understanding of God to hundreds of thousands. In answer to hasty and hostile critics, it points to countless happy homes redeemed from suffering, disease, and sin; and this evening Christian Science comes to you and me with a message of faith, hope, and love.—*Los Gatos Mail.*

CALGARY, ALBERTA.

Prof. Hermann S. Hering lectured on Christian Science in the Shriners' Temple, April 26. He was introduced by T. M. Tweedie, M.P.P., who said in part,—

Christian Science, from its small beginning some half century ago, is rapidly developing and obtaining a position of prominence among the Christian religions of the world. It has among its adherents people from all stations in life. Men of culture and intellect and wealth are to be found in its ranks; men who occupy the highest positions in professional and commercial life, throughout Great Britain, Germany, and the United States, are advocating its cause. So while this may be so, Christian Science, like all other religions, is not a religion for any particular class, but it is for the betterment of all mankind. As has been the case with other religions, strong adverse criticisms have been made concerning Christian Science, but these criticisms have been in a great many instances been made by those who are not familiar with the fundamentals upon which Christian Science has been founded, and are the result of a blind prejudice on the part of its critics.

The same consideration is due to this belief as to all others, and those who wish to criticize should first enlighten themselves in regard to the tenets of this new religion, and any criticism which they have to offer should first strive to be fair. Christian Science is making rapid strides in its numerical development throughout the world, and has no doubt come to stay. Were there no other reason for its existence, the mere fact that it has done great good throughout the world would be sufficient.—*Correspondence.*

LOS ANGELES, CAL.

Bicknell Young lectured on Christian Science at Simpson auditorium May 5. He was introduced by Charles E. Jarvis, who said in part,—

If any of you have come in a skeptical mood, the speaker may clear away some of the doubts and misapprehensions which you have heretofore entertained regarding this subject; those of you who have become slightly interested may be helped to a more conscious realization of the omnipresence of God and of man's relation to Him, while those of you who have advanced sufficiently in understanding to call yourselves Christian Scientists will rejoice in hearing such an interpretation of God and the Bible which means the eventual emancipation of human consciousness from the self-imposed thraldom of the ages. But, whatever your present attitude may be toward this subject, I know you will leave this room with a clearer understanding of Christian Science for having listened to the speaker, who will address you as one having authority and will give you a reason for our hope.

Digitized by Google

On the evening of May 7, at Third Church edifice, Mr. Young was introduced by S. Manson Abbott, who said in part,—

Mrs. Eddy says, on the first page of the Preface to the Christian Science text-book, "The time for thinkers has come. Truth, independent of doctrines and time-honored systems, knocks at the portal of humanity." This statement, made many years ago, has found its fruition in a universal awakening of thought along all lines, and in a general breaking away from customs, traditions, and dogmas which heretofore had fettered thought and were a bar to human progress.

We are never really conscious of our bondage to traditions and to the bias of false education until we see our past state of thought in the light of a present higher understanding. Christian Scientists rejoice in the better understanding which has come to them, and while they have but touched the hem of Truth's garment, they know that they have found the truth. Even the most captious critics admit that Christian Scientists are a peculiarly happy people, and this admission means much: it means that there must be valid reasons for a state of thought which can produce such manifest harmony. There are, indeed, reasons which appeal to intelligence, and as thinking men and women you have come here tonight to hear about these reasons, and to learn more of that great truth which underlies all real, permanent happiness,—that truth which, as our Leader says, "knocks at the portal of humanity."—*Correspondence.*

CHICKASHA, OKLA.

In his introduction of Bliss Knapp, the Christian Science lecturer, at Convention hall Monday evening [May 6], William F. Rainey, city superintendent of schools, spoke in part as follows:—

While we would not get away from the fundamental truths of the gospel, the present calls for a religion that does things, a religion that manifests itself in the lives of its professors, a religion that is an experience and a realization, a religion of convictions based on the teaching of the Bible. We do not want nor do we need something more or something different from the teaching of the blessed old book that has given its inspiration of love and hope to the unnumbered millions who have lived under its guidance and died in full triumph of the faith which it had enkindled, but we do want a correct interpretation and application of that word.

Much of the teaching of Jesus and his disciples is of a metaphysical interpretation. The key to this advancing thought is that the consciousness is the ground for the reception of the seed germs of truth which work to the liberation of self from the slavery of sin and disease. The sayings of the Master are being applied with a new realization of their meaning and power to the betterment of earthly conditions. Such applications are not confined to any one sect exclusively. The teaching of vital significance is that salvation is for the present and that the kingdom of heaven begins in the soul that truly confesses Christ. This religion is a mental and spiritual harmony with God and His truth.

I do not address you tonight as a Christian Scientist, but I do address you as one who is willing to know the truth. There is much in the doctrine of this people which is in common with the fundamental doctrine of other evangelical denominations, because Christian Science takes the inspired word of the Bible as the sufficient guide to eternal life.

Chickasha Express.

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship.

Los Angeles, Cal. (Churches and Societies).—Shrine auditorium, 3 p.m., July 28; Third Church edifice, 734 South Hope street, 8 p.m., July 29.

TESTIMONIES OF HEALING.

Unbounded gratitude urges me to relate some of the great blessings granted me since the truth was presented at a time when I was in great need. For many years I had experienced distress in head, also chronic stomach and bowel troubles. For a long time I had been living in wrong ways, and this finally resulted in my leaving my family. Then came financial reverses, remorse, inability to prosper in business as formerly, loss of courage, fear of insanity, and thoughts of suicide.

Christian Science was presented to me but I refused it. Two weeks later, when I was in the depths of despair, it was presented once more and I grudgingly consented to consult a practitioner, although only on matters of business. When the appointment was made I had little thought of talking of my physical troubles, for I had been an unbeliever in the Bible for many years and did not think Christian Science could effect physical cures. I felt foolish as soon as I had agreed to the appointment, but after being with the practitioner a few minutes it was a relief to tell all my troubles, and I completely unburdened myself. The truths of the Bible were presented to me in a new way, and I daily thank God that I recognized the truth. It came to me as a light from heaven; it comforted and surrounded me. I at once felt different: I was awakened spiritually. I realized the error I was in, and resolving from that moment to live a new life and to worship the only true God, I was given strength to further my resolves.

Two hours later I left the practitioner cured of all physical ailments; I had had an instantaneous healing, and with the exception of one or two minor ills, which have been promptly overcome, the physical ailments have never returned. Smoking, drinking, and other undesirable habits left me; I had no further interest in them. My one desire was, is, and always will be, to study and learn more of the great and good Principle of Christian Science, that brought to one who was very miserable a new sense of Life, Love, Truth, with peace, happiness, calm, and content. A month later, my wife and son learned of this same God-given truth, and it was not long before we together started to live a life of health, harmony, and happiness. I have experienced a complete reversal of all thoughts and actions and now realize what life really is. Christian Science brings wisdom and assistance every moment of our lives. This has been very marked in my daily business life. Fear of lack as well as fear of ill-health has been eliminated from my thought. In God I have all the counsel and support I need in my business. While a material sense of prosperity no longer interests me, I am blessed with greater prosperity and my business hours are hours of pleasure. The absolute truth and the golden rule can really and truly be practised in selling goods and in every business transaction.

No one could have greater cause than I for gratitude to our Leader for showing the way, and I try to prove it by continual endeavor to reflect God, good, in my daily life.

LEONARD W. LANGFORD, Chicago, Ill.

I wish to give my testimony to the healing power of divine Truth as taught in Christian Science. For two years I suffered from what were said to be the effects of ptomaine poisoning. My physicians did their best, but could not relieve me. Prior to the illness named I had been a sufferer from stomach troubles, all of which combined made me a mere wreck of my former self. I was unable to attend properly to business, and was unfit to do any physical work whatever. I realized that I must soon grow better or cease to exist altogether.

Up to this time I had read something of the healing done through Christian Science, and it was suggested to me that I might try the treatment, as it certainly would do me no

Digitized by Google

harm. I therefore consulted a practitioner and my first treatment was absent, but to my astonishment I began at once to grow better. I had three more treatments, when I realized that I was well again. It is now over a year since then, and up to the present time I have had no pain from the poison nor have I had even one symptom of the old ailment.

I rejoice and am glad that the words spoken by Jeremiah the prophet have become true: "I will restore health unto thee, and I will heal thee of thy wounds, saith the Lord." I am now sixty-seven years of age, but feel like a man of forty.—J. T. JACKSON, Kansas City, Mo.

After a fall on a polished floor in March, 1911, it seemed that there was a severe injury to the spine. I crept up-stairs on my hands and knees, and could not possibly stand erect, but after one treatment in Christian Science I was able to do so, and in forty-eight hours I was about the house as usual.

Words fail to express my gratitude to God for Christian Science. Under *materia medica* I would probably have been condemned to weeks of suffering, but I was spared all that through the knowledge of this healing truth which has come into my life. For this and many other demonstrations I am deeply grateful.

VINNIE L. WOODMAN, Atlantic, Mass.

So many times I have been helped and encouraged by the testimonies in the *Sentinel* that it has occurred to me I, too, might in this way be the means of helping some one else. Very many times I have been inclined to grow impatient and disheartened when various attacks of sickness have been slow in yielding to treatment in Christian Science, but I have always found that with persistent effort the truth finally heals the most stubborn forms of disease. Several times it has taken more than a year to heal some ailment, but the improvement has finally come.

I fear I have not always been as grateful as I should have been and that I have expected too much of the practitioner. It is very helpful, I find, to turn the search-light of Truth upon oneself—on one's innermost thoughts and feelings. It is quite a shock to discover sometimes the host of unlovely thoughts which one is harboring and which need to be rooted out before one has a right to expect every blessing to be poured down upon him.

Life has been a different thing to me since I first began to study Christian Science, and I am indeed thankful to the Discoverer of this wonderful religion, which has so greatly helped me. I wish to say to those who are ill and discouraged that they should look up and persevere, for the clouds will surely lift.

MRS. JESSIE C. HITCHCOCK, Omaha, Neb.

I feel it is time for me to give my testimony to those who need, as I did, what Christian Science has done for me and mine. I had been a sufferer since 1902 with what the doctors called rheumatism, partial paralysis, tubercular disease in my lower left limb. I was on crutches most of that time, and I had different doctors, but with little or no results. I went to Hot Springs one summer and seemed to get somewhat better, but went back as soon as I came home. In 1909 I began to take Christian Science treatment and in a short time was healed. I am now able to walk as much as any person and able to do anything which it is my duty to do. We have had other cases of healing in the family since then, and not only this but Christian Science has given us all a different view of life; it has helped us physically, morally, and spiritually, for all of which I am very thankful to God. I am also grateful to Mrs. Eddy for her patience and never-ceasing efforts to give this truth to the world in a way we can understand and prove.

MRS. MAGGIE HUNT, Independence, Kan.

I wish to express my gratitude for the benefits I have received in Christian Science. I had been suffering from chronic stomach and bowel trouble, headaches, and fear, for seventeen years, and had become almost hopeless when this Science was presented to me. I felt this would help me, though I could not tell why; but the proper application of the truth has always helped me to overcome error of every sort. I have relied upon it for about five years, and have better health than I have had for a long time.

My husband was healed of a severe pain in his side, also of colds and headaches which frequently attacked him. The outlook upon life seems so much brighter for me since I have found this blessed truth, and I hope to be able to overcome all error which may appear in my consciousness. I am grateful to our Leader for showing me the way.

MRS. A. F. BUERMANN, Los Angeles, Cal.

When Christian Science was first presented to me, twenty years ago, I grasped it with an eagerness that has never abated. I searched it as for hidden treasures, and my search has not been in vain. I had been a close student of the Scriptures, but had no understanding of the divine Principle which overcomes disease and fear. I had not possessed good health for some years, and was so dependent upon physicians and drugs that I had repeatedly refused to visit a dear relative who lived ten miles in the country, saying I could not go so far away from the doctors and drug-stores. I had tried many methods of treatment, and taken medicines in every form under the advice of skilled physicians; had sought different climates, and spent much time in sanitariums and health resorts, besides studying medical works, but since receiving the first ray of light through Christian Science, I have never consulted a physician or resorted to the use of material remedies.

I am now in the enjoyment of good health, although my healing was slow. There seem to be periods in the career of every human being when the heart cries out, "The darkness deepens, Lord, with me abide." These experiences may seem to the Christian Scientist to be retrogression, but we find that they compel us to wait on God, and we read in Science and Health, "Beholding the infinite tasks of Truth, we pause,—wait on God. Then we push onward, until boundless thought walks enraptured, and conception unconfined is winged to reach the divine glory" (p. 323). When the summons came to me to work in the Master's vineyard, my first thought was: Could I, a poor frail mortal, preach the gospel and heal the sick? The answer was, No, but God can do this through your ministry. Plant and water to the best of your ability, and God will give the increase. I was urged onward by these words of the Master: "There is no man that hath left house, or brethren, or sisters, or father, or mother, or wife, or children, or lands, for my sake, and the gospel's, but he shall receive an hundredfold now in this time, houses, and brethren, and sisters, and mothers, and children, and lands, with persecutions; and in the world to come eternal life." So I stepped out of social environments into the field of Christian Science work, and placed myself unreservedly in the care and protection of the loving Father; and now after a score of years I can reply as did the disciples upon their return, after having been sent out without purse or scrip. They were asked, "Lacked ye any thing? And they said, Nothing."

My efforts to bless others and to perpetuate our healing and reformatory cause were the tithes brought into the Father's storehouse. The windows of heaven were opened and there were poured out upon me innumerable blessings —renewed youth and vigor, physical health and strength, and an indescribable spiritual peace. I had been greatly reduced in weight, but I gradually gained flesh until I reached the normal condition which I enjoy at the present time.

MISS BELLE BLACK, San Antonio, Tex.

Digitized by Google

More and more do I realize what Christian Science is doing for me. When I see the trials of those who do not know the help and guidance of divine Love, I feel that I have been truly blessed, since I have missed many rough places simply because I have tried to realize that God is All. To a certain extent my mother has done a great deal of my work, but her help has been almost entirely in attacks of sickness. My first real struggle alone with error, in the form of sickness, was when I was attending school in town and my folks lived in the country. Every night I came home from school with a headache, and this, I discovered, was due to the belief that my eyes were becoming weak and that I needed glasses; but my parents had been healed by Christian Science when I was hardly four years of age, so I had never been taught to fear any so-called material law. I therefore studied the best I could at that time and decided to wait until the next Friday night, when I could get help from my mother. I did not think it best to telephone to her as we were on a party line, and on account of a storm I could not get home for help. I then knew that the best thing for me to do was to begin to work out my own salvation. I read Science and Health every available minute, and when I saw my mother in church the following Sunday I was free from all the discord and did not need to receive any more help. Since then my eyes have not troubled me in the least and I did not need to wear glasses. For this I am very grateful.

Besides this demonstration I have been helped in cases of colds, throat trouble, poisoning, and several attacks of so-called contagious diseases. In school I am wonderfully helped in knowing that there is one intelligence, God; in seeing my classmates and teachers as God's children, and in knowing that I, as a child of God, cannot be controlled in any way by error. Words cannot express my gratitude for this great truth, so I am striving daily to show it by my life.

Miss Florence Jones, Fairbury, Neb.

I came to Christian Science for something with which to sustain my life. I had spent twelve years in seeking help from climate, travel, and mineral springs, on account of throat and lung trouble. My voice was so impaired at times that I had no means of communication except by signs or writing. While these conditions grew somewhat better at times, other complications set in, until at length the physician pronounced my case paralysis of stomach and bowels.

Having spent most of the time at Colorado Springs, the physician thought that I had better go to a lower altitude, which I did. In a few months, however, I grew worse, and the physician there said the altitude was too low and the sun too hot. It being the first of June, I went to noted mineral springs in the mountains and stayed two months; then I returned to Colorado Springs greatly discouraged. My former physician said I need not expect to live much longer, as every kind of medicine had been used for me that was known to medical history; that the only thing I could do was to stay in the mountains during the summer, and perhaps I might live six months.

I said I would like to go to the place which he had recommended to me six months before, it being my sister's home. I was very weak, but thought that if I could go there and rest I might get better again. The physician said in reply that if I went there then I would not live six weeks. It was truly "man's extremity," and it became "God's opportunity." One who had been healed a few months before, heard of my troubles and wrote, asking me if I did not want to try Christian Science. I said I was willing to try anything that offered to sustain life, but that I did not know about Christian Science. She sent me the address of a practitioner, whose help I was not long in securing. I told her my troubles and how I longed to go to my sister's home, also how the physician had warned me of the danger of going there in the summer-time, it being then the first of August. In reply she said that God was my life and that the sun could not kill me. The fifth day I went there, and this truth came to me, that man made in the image and likeness of God cannot be sick or die. It was with me for many weeks and met every need. I was healed in three weeks' treatment, and I could eat anything that others ate and do anything that came to me to do.

I took up the study of the Bible and Science and Health with the aid of *The Christian Science Quarterly*. I had many fears and besetting sins to overcome, but I was not once touched by the heat of the sun or the low altitude, and I stayed there eight years. I am thankful to God for Christian Science, and I pray that I may ever stand as a monument to the healing power of the truth as revealed to us through Mrs. Eddy.—Miss Mary E. Hartzog, Denver, Col.

For over ten years I was afflicted with sleeplessness. I spent a good deal of money for doctors and medicine, but without the least benefit; the last physician I consulted told me (after asking me numerous questions and examining me thoroughly) that I needed more outdoor exercise, not knowing that for twenty-eight years I had been engaged in farming and gardening. He then did the same as all the others, prescribed some narcotic, which I promptly threw out of the window when I came home, making up my mind that I was incurable. When a friend suggested Christian Science, I had no faith in it, but finally I consulted a neighbor who, after explaining its teaching to me, told me she was sure I would have my health fully restored, and I am happy to say that Christian Science did what all material remedies failed to do. This was over four years ago, and I never had a relapse. I sleep as soundly as anybody, and though I am now sixty-two years old I am fully able to do the work of a man half my age, and am convinced that Christian Science is what cured me.

Louis Weste, Denver, Col.

I have been healed in Christian Science of eye, nose, ear, and throat trouble, which I had after a relapse in a case of fever when I was seven or eight years old. The lids of my eyes were very bad, also my nose. I had treatment from one of the best specialists on such cases in San Francisco, but was relieved only after going through a painful treatment. I did not come to Christian Science until about three years after this. Friends brought me to church and Sunday school. I was healed by attending those meetings, without even expecting it. It was probably three years before the healing was complete, as I did not study at that time. It has been about ten years since I accepted Christian Science, and words are inadequate to express my thankfulness to God, also to Mrs. Eddy, for having been helped to realize the truth, which makes us free from all that is unlike God, good.

The physical healing is but little compared with the spiritual understanding gained from the Bible and Science and Health. Christian Science is certainly a religion for thinking people, as one of our lecturers has said. I trust I may show by my life my gratitude for it.

Gladys Wright, Oakland, Cal.

I have just been reading the *Sentinel*, stored with its treasures of good news from thankful hearts, that are unable to utter all that they know and feel; and how can I tell of the many blessings which have come to me through Christian Science? It has been one blessing added to another all the time. When I first took up the study I was very miserable from a complication of diseases, said to arise from a weak heart, which was believed to be a family trait. The little work that I did was a great burden to me, but after a few days' study of Science and Health I learned that God is my life and strength, and then I saw that I could do all my necessary labor and did not have to listen

Digitized by Google

to the dictates of pain or weariness. With this in view I doubled my efforts, and the stopping of my medical bills was of great financial help to me. I was not healed all at once, but my acceptance of the truth was the beginning of health and prosperity. The casting out of sin and the learning how to be a loyal Christian Scientist is my daily task and my prayer. Of Mrs. Eddy I can say that she has been my best earthly friend, always brave and true, and the *Sentinel* and *Monitor*, which are always at hand, speak to me of health, purity, and love.—F. E. TURNER, Crescent City, Cal.

For a long time I have felt that I must in some way express my great debt of gratitude for Christian Science, and I know no better way to do so than to give an account through the *Sentinel* of some of the many blessings I have received. Within the last fourteen years I was compelled to undergo two very serious operations, which robbed me entirely of my health for twelve years; in fact, I was a total wreck. I was unable to sleep from the effects, also was subject to spasms which some days came on hourly. I often wished for death, but thanks to this blessed truth I can now say that omnipotence has all power, and this has been proved for me by perfect demonstrations. I wish to say that I was healed with a few treatments of a chronic bowel disorder, from which I had suffered since childhood; also many ills which have baffled the skill of *materia medica* have disappeared through my understanding of Truth.

Through reading the text-book and the Bible as explained in Christian Science, I learned that God gives us strength to do all we have to do, and that it is the things we should not do (the envyings, strife, emulating, vainglorying, and so on) which leave in their wake fatigue and discord.

Gratitude to God, also to our beloved Leader, Mrs. Eddy, can be expressed only by daily effort to put into practise what has been taught us in her writings. My greatest desire is that God may enable me to follow in her footsteps.

MRS. P. BERG, Cincinnati, Ohio.

I wish to express my gratitude for Christian Science, for what it has done and is doing in my daily life. One demonstration for which I am particularly grateful came to me recently. In the latter part of 1910, I had to go back to my work in the evening. The night was very dark and I wished to take a certain car. I was a block away when I heard the car coming, and forgetting that divine Love meets "every human need" (Science and Health, p. 494), I made a wild dash for the car, and just as I reached it I fell. I was unable to rise, but the conductor picked me up and I started for home. On reaching home a Christian Science practitioner was telephoned to and asked to help me; but the sense of pain was very intense. I did not sleep any, and my sister read to me from the Bible and Science and Health throughout the night. The practitioner was called up twice in the night, and it was morning before I fell asleep. When I awoke the intense pain was gone, but I still suffered. I remained in bed three days, and on the fourth day I arose, but my arm was out of place, and I was unable to move it. For two days it remained in this position, but the practitioner told me to be faithful and to study the Lesson-Sermon in *The Christian Science Quarterly*. On the seventh day, as I was standing perfectly still, a sudden pain seized my arm and it turned and went into place, dropping down by my side in its natural position. The following day I resumed work.

To me this was a wonderful demonstration, for it proved that divine Mind was the surgeon and that God is an ever-present help in time of trouble. For eight years my home folks have proved that Love is ever present and that we have nothing to fear so long as we abide in this consciousness. I am truly grateful to God for Christian Science, and to our Leader for her wonderful unfoldment of it.

FRED. B. CLINE, Spokane, Wash.

It has been my desire to express, at least in part, my gratitude for the blessings of Christian Science, through our periodicals. The efficacy of this healing truth was made plain to me last summer, when in camp in an isolated spot near the Olympic mountains. After playing a game of tennis, my wrist began to pain and to give evidence of having been injured. I read the Lesson for the week and tried to overcome the trouble with what knowledge I had of Christian Science, but in the evening, when my husband returned to camp, the pain seemed so intense that I asked him to help me. We are both young in the study of Science and were the only students there, so we took our books and went off into the woods, where he read to me from Science and Health and we worked faithfully to meet and overcome the testimony of material sense. In a short time I experienced a sudden relief from any sense of pain whatever, and although the wrist was badly swollen and was therefore inconvenient, yet I slept well that night. The next day this condition was greatly relieved and the second day it was entirely gone.

Knowing the long siege of suffering that generally accompanies an injury of this kind, I realize with joyful appreciation how potent the truth is to heal and save, as taught in our text-book, "Science and Health with Key to the Scriptures," and what a debt of gratitude we owe to Mrs. Eddy for this wonderful discovery.

MRS. ALICE R. KEENEY, Tacoma, Wash.

I wish to express my deep gratitude for the truth that has been revealed to me through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I commenced the investigation of Christian Science twelve years ago in order to learn something of the religion of the Bible. For many years previous to that time I had searched its pages faithfully for comfort and peace, but did not find it until Science and Health illumined its contents and revealed the deeper knowledge of God. The revelation brought also the physical healing, and I was freed from nervous headaches, a throat trouble, an unhappy disposition, also the need of an operation which the physicians had said was necessary. All this was accomplished through the reading of the text-book only.

I would like to tell of a demonstration which proves that God's grace is sufficient at all times and under all circumstances. My son had been attending a western college, and in the fall of 1910 it seemed wise to send him East to finish his course. In making the change he was several weeks late entering, and the change required work to be made up. He worked along until Thanksgiving, when he was taken ill with poisoning in his foot and limb. Unable to wait upon himself, he went to the school infirmary, and telegraphed for Christian Science treatment. This was given him, and in five days he was well and ready to resume his duties. This sickness, however, together with the late matriculation, seemed to have precipitated a big problem. He wrote that from a human standpoint he did not see how he could finish the back work and take the final mid-year examinations, but would try if he could have Science help. It was given, and in two weeks the back work was made up and examinations successfully passed. Then the finals were begun, and all went well until the last two days. In the morning I received a telegram that the trouble with his foot had reappeared, and it looked as if the finals could not be completed, but I am grateful to say that by knowing that divine Love has no elements of poison to impart, by night the inflammation had entirely disappeared and my boy's work continued without a break. Christmas eve we received his report, and on it was written, "No conditions." While we are grateful for these demonstrations, we are more grateful for the clearer sense of Christ, Truth, which had been born in our consciousness.

MRS. NELLIE S. ANDERSEN, Chicago, Ill.

It is about eight years since I became acquainted with Christian Science. Through a healing which occurred in my family I was led to study its Principle and also to apply the truth to my daily life. One of the first ailments which left me was a frequent attack of what the medical profession would call appendicitis. I do not doubt that had I not taken up Christian Science I would have been influenced by the general belief in this disease, which would either have landed me on the operating-table or else caused me to be in constant fear of the attacks. In the spring of 1909 I had an attack of acute lung trouble. This disease was considered fatal in our family. During my illness an uncle and his daughter had suddenly passed away with the disease and great fears were entertained by my non-Christian Science relations for me. I was frequently warned by letter and otherwise not to rely wholly upon Christian Science for my recovery, but with the help of a practitioner I was able to be up and about the house every day. Almost the only difficulty I had during my two weeks' illness was loss of appetite and of sleep. The former caused me no worry, and the latter enabled me to be awake to the truth. To be asleep meant to me what Jesus warned his disciples against, on the night of his betrayal, when he said, "Could ye not watch with me one hour?"

Christian Science has enabled me to see as never before that the one great study is Life as God. It has also taught me that this can be realized only by getting a better understanding of God as divine Principle. I am thankful to God, and grateful to our revered Leader, Mrs. Eddy, for having shown us the way.—ALEXANDER KENNEL, Trenton, Ohio.

I am indeed grateful for the many blessings which have come to me through Christian Science. Not only have I received physical healing, but it has given me a religion which is practical and can be applied in every problem that comes into our daily experiences. I thank God for this wonderful truth, and am grateful to Mrs. Eddy for the book "Science and Health with Key to the Scriptures," which so beautifully reveals it to suffering humanity. I am grateful for the life she has lived in demonstration of this truth, and for the assistance I have received from those in the work.

MRS. ELIZABETH A. HAYDEN, Kansas City, Mo.

[Written for the *Sentinel.*]

UNFAILING LIGHT.

LAURA GERAHTY.

OUT in the west I'd watched the red sun setting,
And fancied day was dying—light had fled.
My heart beat sadly, all the past regretting,
And only darkness brooded o'er my head.

The morn had been. The passing eve, how dreary!
And filled with fears the harbingers of night.
Bright noon was past, and oh, my life was weary
With disappointed plans and hopeless fight!

I turned to rest, in prayer, and not in slumber,
And closed my aching eyelids to the gloom,
While angel visitants in countless number
Unbound my fettered thought and filled the room.

Then from the casement every fold was shattered
Which hung between my thought-home and the night.
What need to fear it? Of the past, what mattered?
When, lo, the dawn-mists and the creeping light!

O heart that tremblest lest the way grow dimmer,
And know'st not Truth, our all-sufficient light,
Tear down the curtains of thy fear,—one glimmer
Of new-born day will vanquish all thy night.

FROM OUR EXCHANGES.

[*Christian Register.*]

It must not he for one moment forgotten that the church is a spiritual institution, and that the object of gathering together on Sunday is to sweeten life and inspire the week's action with noble motives. A church that turns itself into a Browning association or a pastor who gives lectures on the poets will soon have a very select audience. The people need on Sunday a sort of moral bath, something to help them meet the temptations of business life and the hardships of work life with a better spirit. We believe that ten minutes' talk right from the heart of the minister to the hearts of the people will be far better than a half-hour of well-worded discussion or eloquent passages. The orator has largely lost his place, and the platform no longer gives the commanding position that it gave the minister of one hundred years ago, or even fifty. But when life speaks to life, and love speaks to love, and there is a desire to do good and not to persuade, the road is open. We sincerely believe that, whether the poet is born and not made, surely the minister is born and not made. Theological training will not do the work, but a burning heart will fit the man to reach the people in this age just as well as it ever would. Let the minister come to his pulpit charged with a simple longing for those who will hear him, and let him say what he does say simply, and they will come again.

[*Living Church.*]

Our Lord had an infinite understanding of the conditions of human life, the keenest sympathy for those who have the hardest time. He knows too that his is the vision that if we can but catch it will transform our very elements of failure unto usefulness and fruitfulness. Just as beneath the waters of Gennesaret he discerned the great school of fish, so beneath the waters of life he sees with clear eye its possibilities and its opportunities for us. And so his command is: Launch out into the deep: get into reality; into the life of action where things happen and God's work gets done. Every life has its opportunities, and some of the greatest have come at the eleventh hour.

The waters of life into which he bids the weary and discouraged cast their nets are those spiritual deeps into which venturing they shall bring forth the precious things of character—kindness, sympathy, union with him in sacrifice, in work, in a self-forgetting love. And to those who are discouraged, not by material hardship or physical handicap, but by moral failure and trouble, he seems to say: Launch out from the little pool of personal difficulty, of keen personal desire, into the great stream of prayer and work and sympathy for others, which is the stream of self-forgetfulness that flows into the river of God.

[Rev. J. H. Jowett, M.A., D.D., in *British Congregationalist.*]

"And when they had prayed, . . . they were all filled with the Holy Ghost, and they spake the word of God with boldness." That is what happened. They received the gift of divine power, of spiritual power, and they set about the courageous prosecution of their mission. They preached the word, the very thing they were commanded not to do. They preached the word in spite of antagonism, in the face of threats, and multitudes were won into the discipleship of the blessed Lord.

It only remains to be said that this can happen today. No promise has been withdrawn. The arm of the Lord is not withered.

[*Watchman.*]

If all men were Christians and united in the love of God, there would be an easy and perfect settlement of their relations. Blind fighting for rights will not bring fair or happy settlement. "They that take the sword shall perish with

Digitized by Google

the sword." Men do not have faith or patience to take the divine method. They have no confidence in the kingdom of God secured by the spirit of Christ. They do not know the things that concern their peace. Blind and led by the blind, they plunge into a worse condition. Perhaps after bitter experience on both sides men will be willing to come to the school of Christ and learn the lessons of the adjustment of their relations in the spirit of Christian love.

[*Universalist Leader.*]

What the noblest and most penetrating Biblical scholarship is trying to do today is to trace the life of the Spirit in Israel, and to understand how it happened that here or there, in poetry, prophecy, preaching, biography, philosophy, or song, that Spirit blew where it listed on a human soul, until that soul uttered some half articulate desire or dream of his people. The unity of the Bible is the unity of flashes of lightning, of sunrises and sunsets, of mountains and rivers and seas, of seasons and of centuries. It is cosmic unity. It is the unity of life itself. On the surface each day, each peak, each flash, each sunrise, is unlike all the rest. But within, beneath, behind, around, is that unbroken soul of things. On the surface each book, each poem, each sermon, each prophecy, is a thing by itself. But within, and beneath, and behind, and above, like the enveloping atmosphere, is that spirit which flows like a river outward the infinite sea.

[*Christian*]

In his sermon on the mount, until Christ's arraignments of sin name is more clear cut and positive than his scornful condemnation of those whose good works are motived with the object "that they may have glory of men." Such, he says, with a startling finality, "have their reward" when they get that glory. They can expect nothing thereafter as compensation for their good deeds from the Father whose approvals are gladly on the strength of what He sees to see it.

[*French Congregationalist*]

The first concern of the religious journal is to come nearer to the historical proportion, for it is in the larger view of history that we come nearer to the divine standpoint. It has something greater to do than to reflect the mere average life of the religious communities for which it speaks. It should seek to reflect the best aspects of our common religious life, and also to set forth those better things to which we have not yet attained.

[*Zion's Herald*]

What is called the "modern" mind can never be so modern as to be able to neglect the elemental needs of the spiritual nature in man, to outgrow the yearning for help from a higher power, or to evade the moral duties of man ministering to man, in a social state guaranteed by religion. Men in America today are not so different as all that from Abraham, David and Paul. Sin, guilt is a perpetual need of the man, and a perpetual hope.

[*N. Y. Presbyterian Observer.*]

Faith, hope, and love, these three, become mirrors of the unchanging while the expressions of spiritual dogmas remain the test of religious unity. When doctrines about dogmas have become so set that they express a mental bias or a controlling attitude of mind, they are the more apt to obscure the truth they are intended to express.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local newsdealer, 12 cents a week, payable to the newsdealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $1.10; two to twelve books (cloth only) to one address, each, $1.00; twelve or more books to one address, each, $2.75. Full leather, stiff bevelled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large size book), single copy, $8.00; twelve or more to one address, each, $7.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1885-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1887, with revisions and additions. Price (cloth), single copy, $2.50; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 608 pages, 10x7, and a Pendom, bound in cloth, marbled edges. Price, single copy, $2.00; six or more copies to one address, $1.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $2.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science versus Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 60 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 99 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Christian Science, using Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 35 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 45 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 40 pages. Pebbled cloth covers. Price, single copy, 35 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science versus Pantheism and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 194 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE VERSUS PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Science are pantheistic. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 35 pages. Price, single copy, 30 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE. June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 70 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments to either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the case of Science and Health and of Miscellaneous Writings as given under their titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

The inter-state commerce commission has ordered an average reduction in the rates of express companies of fifteen per cent and the installation of a thirty-mile block system of charges, covering the whole country. The maximum charge per pound was fixed at twelve cents, the tariffs increasing in proportion to the weight and distance. An entirely new system of marking, checking up, routing, and waybilling was formulated.

Heavy penalties for dealing in cotton futures are provided in the Beall bill, passed by the House by a vote of ninety-five to twenty-five. The bill has yet to go to the Senate. The bill would prohibit all dealing in cotton futures, and fix heavy penalties for purchase or sale of cotton not actually in existence. Heavy fines would be imposed for the use of the mails or telegraph for the dissemination of cotton speculative information.

The long-disputed question of the extent of the federal government's liability for the overflow of the land along the Mississippi river through the construction of levees at certain points in the river's course, has been put before the supreme court of the United States. It involves millions of dollars of claims against the government. The question arises on appeals from decisions by the court of claims.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

PERPETUAL PROGRESS.

REV. JAMES J. ROME.

To every one working out the problem of life there come periods when the demand for progress is so insistent that the human sense shrinks from the task presented. There may even seem to be a loss of the assurance, confidence, and clear perception which had previously been experienced, accompanied by a sense of doubt, fear, and hesitation, lest there may have been some mistake in the course taken; and if one were to heed the arguments of personal sense at such times, he would undoubtedly experience a sense of discouragement. In such an event it is well to ponder these words of our Leader: "Beholding the infinite tasks of truth, we pause,—wait on God. Then we push onward, until boundless thought walks enraptured, and conception unconfined is winged to reach the divine glory" (Science and Health, p. 323). We thus find that so long as we are honest and sincere in our effort to attain righteousness nothing can hinder our advancement. Mrs. Eddy also says: "If honest, he [the disciple] will be in earnest from the start, and gain a little each day in the right direction" (p. 21). Having the requisite honesty and sincerity, we may press forward with hope and assurance, for if our progress is attained through understanding, it is impossible to retrograde.

It is well to know, also, that the condition of our feelings is no criterion by which to measure our growth. How much do I feel? is not of so much importance as, How much do I know? Our feelings may vary at every turn of thought, but our knowledge is constant. When a new rule of mathematics has been learned, the student feels elated, whereas he may feel puzzled and confused when a higher rule engages his attention; but this does not affect his understanding of the first rule, nor is it an indication that he has less understanding of mathematics than when he felt clear. Rather is it a sign of intellectual development, a call and hence an ability to grapple with more difficult problems, although his feeling would testify to the reverse. There may even be things to unlearn, and then our thought is still more perturbed. The unlearning of a misapprehension of things, in order to learn them correctly, is no pleasant task although a very wholesome one.

An experience the writer had when a boy may be useful by way of illustration. He started to climb to the top of a high hill, thinking it was a continuous ascent. He found, instead, that the seemingly unbroken incline was really a series of small hills and valleys; the top of one eminence was reached only to descend into a depression before beginning the ascent of the next higher peak. It seemed discouraging, after having climbed a steep elevation, to descend again into a hollow; still he made steady progress, for if he was not climbing up he was moving forward; each depression was never so low as the one before, and each peak was higher than the last, until the highest point was attained. So there was a continual ascending and advancement after all. To attain the accomplishment of our highest purposes we must all be willing to climb the hill of persistent endeavor. In doing so we may reach points of seemingly clearer vision and brighter views, but we must then patiently put ourselves to the test and prove whether or not we have gained the understanding thereof. The peak of perception may be inspiring, but the plain of demonstration is more satisfying and salutary.

There may be times when our progress is apparently so slow that it seems like stagnation, but this is only the false evidence of mortal sense, owing, perhaps, to our ambition and impatience. Though we may not always be able to recognize the growth we are making, we can always wrest a stimulus to more earnest endeavor from our shortcomings. Be it slow or fast, however, our progress is assured if we strive to continue in well doing. On page 74 of Science and Health Mrs. Eddy writes: "In Christian Science there is never a retrograde step, never a return to positions outgrown." Writing to the Galatians, Paul says, "Let us not be weary in well doing: for in due season we shall reap, if we faint not."

HONESTY.

CLARKE MC CUE.

After hours of random search through the Bible and Science and Health in quest of surcease from perturbed thought, the writer came across this terse sentence from our text-book: "We are not Christian Scientists until we leave all for Christ" (p. 192). The words stood out from the surrounding text as if in bold relief—a challenge that would not down; so striking in finality, so intense in meaning, so startling to the sense of self-satisfaction into which he had unconsciously fallen, that with open book before him he sat in mute introspection, stunned, yet without resentment. The quest for surcease ended at that point, and took another course impelled by a different motive.

"Have I been truly and am I now indeed a Christian Scientist?" he asked himself. The question was direct; evasion was impossible. The search now was for the depth of honesty with which to answer the question. In sounding for that depth what a multitude of unsuspected imps obstructed the way—hell seemed to be turned loose. Yet he did not fear, nor was his amazement at his sinister discoveries accompanied by anguish or chagrin. The scores of little things—each a deceit and deceiver in one—intruding themselves into his consciousness, gaped and grinned in mockery of his claims to ardent rectitude. Finally, with stalking approach, appeared the fiend of self-complacent belief that his concept of Christian Science was the really right one, and that although others might be blessed with "an understanding," "a clear thought," and the like, yet hitherto his understanding had met his own full approval and was unquestioned. He had considered it so profound, too! What wretched impudence! What ignorance!

For a moment he felt the sting of self-condemnation, but this was changed instantly by the thought of gratitude to God for His long-suffering, His infinite goodness. With the feeling of gratitude grew a peaceful fortitude to excavate farther into the depths. He marveled at the ease with which

Digitized by Google

he seemed enabled to put the demons down—to see their baseless claims of authority vanish one by one. This was his first appreciated proof of God-given dominion over evil —the divinely-derived ability to overcome error and destroy it with Truth apprehended. It then occurred to him to ask if his past attitude of smug complacency had not led him to hardness of heart, to an unconscious or unadmitted intolerance of others; and he was forced to admit that it had.

Then, "Am I any different from others in this regard?" was interposed, self-justification, doubtless, seeking an audience. "Am I the only one in my church who has thought his grasp of Christian Science the only satisfying and right one?" He let the question stand without entering into the phase pertaining to others. Suffice it, he had learned concerning himself. Let others do the same for themselves. That is their right, he argued. "Did this smug complacency impel me often to quote Scripture with glibness and the sayings of our Leader with familiarity? Did it breed pride in the perfection of the letter and ignorance of the spirit of Truth beneath?" Aye, and with what guilt! "Have I known what it is to be honest? Have I applied the acid test of honesty to what I thought I knew of Christian Science?" No. "Honesty is spiritual power" (Science and Health, p. 453),—a statement from the text-book which he had time and oft in the deadness of its letter lilted from his tongue, now recurred with gentle insistency. Little wonder he had sought surcease from disappointment over failure to prove the hypotheses of Science. Thanks be to God, he learned then what honesty really is! The fulness of apprehension is not yet possible, but the dawn is growing brighter.

What he thought he had known of Christian Science, forsooth! He could not resist a smile, not at the irony of it, but at his presumptuousness. What a stepping-stone is this to humility, he thought. Did ever a heart run so full of gratitude as did his? Was ever any man so thrilled with the burning spark of divine Love as was he? What a tremendous stride one makes, what an endless vista does one see, when he takes his first firm step of honest humility, freed from the fetters of self that did bind him. He would have burst forth into psalmody, if he could; but he could not. Spirit hath no words in common with mortal speech.

"Have I truly been a Christian Scientist?" he asked himself again. To be a Scientist means to be one who knows,—the literal meaning of the word. Ah, here was the test—to know. How many times had he repeated, heard, and read the Master's declaration, "Ye shall know the truth, and the truth shall make you free." Know the truth? Scientist? What else is a Scientist, then, than one who knows the truth, and knows it of a certainty, beyond cavil and doubt? What an infinitude is there! He had realized for the first time what it means to be indeed a "Christian" Scientist.

"Ye shall know the truth;" that is, one must know the truth, he thought, before the truth can make free or become operative in or through him. The "shall" is here an imperative form. Not only, therefore, does the Master pronounce a law in these words, but he utters a command, creates a proviso for us to observe absolutely before we can gain by divine Truth. That is it. We must know. To know means to understand. To understand Truth is to know that all things are possible with God, and how glorious it is! Our Leader says, "In order to apprehend more, we must put into practise what we already know. We must recollect that Truth is demonstrable when understood, and that good is not understood until demonstrated. If 'faithful over a few things,' we shall be made rulers over many; but the one unused talent decays and is lost" (Science and Health, p. 323). Never before had he apprehended what it means to understand and to progress.

To those who may be suffering from unsuspected or unacknowledged hardness of heart, intolerance, self-righteousness, as has the writer, he would say: Awaken to honesty, and taste of a joy ineffable. In learning and living honesty do we not help all around us,—our church, our cause? Awakening from the dream, for it is nothing more, of self-satisfaction, self-content, self-righteousness, self-justification, and with open-eyed and full-hearted knowledge that man is the image of God, Mind, seeking first His kingdom, we shall mount up as with wings, taking on the similitude of the stature of Christ. What a glorious consummation is the death of self!

As these words were being written, the first rays of the sun, like giant swords of burnished gold, darted over the eastern horizon, presaging a new day of glorious light; just as the rays of eternal light, dawning in his consciousness, presages life for him—for him a resurrection risen indeed!

"GRATITUDE."

DAISY BEDFORD.

THE writer was once asked when she most clearly realized or understood the fatherhood of God, and she answered, almost unconsciously, "When I am grateful!" The inquirer, however, did not seem satisfied with this answer, but appeared to think that most people's experience, including her own, was that they were able to get closer to God when in trouble. In times of joy and happiness they were satisfied with the temporary exhilaration thus afforded, and content to wait to inquire of God until a more troublesome season. The conversation then terminated, and it was not until much later that the writer had time to see yet more clearly the falsity of this point of view,—that we can only know God as good, in times of trouble, or, according to the argument, during the actual period of suffering. Suffering and harmony do not commingle, they are as opposite as darkness and light, therefore the experience of the one must mean the absence of the other. The consciousness and realization (the bringing into concrete existence) of the presence and omnipotence of God, infinite good, must beget in us a sense of harmony which nothing can disturb. In the measure we experience good, in that measure are we proving man's sonship with the Father, and are in the position to understand the meaning of gratitude.

Gratitude is the expression of filial homage, the seal of a complete understanding between Father and child, the realization of "I and my Father are one." Sorrow, suffering, sin, sickness,—all discord arises from the belief that man can be separated from God, ever-present good, and while laboring under this delusion it is impossible for the sufferer to understand in any appreciable degree what we mean in Christian Science by gratitude. Viewed in this light we can see how necessary it is for us to "wait patiently for divine Love to move upon the waters of mortal mind, and form the perfect concept" (Science and Health, p. 454), and not to demand from our patients a spurious gratitude which neither uplifts nor heals, for gratitude can only be expressed as we acquire the spiritual sense which is manifested in "a conscious, constant capacity to understand God" (Science and Health, p. 209).

TRUTH'S APPEARING.

JOHN R. HOOD.

THAT Christian Science has done much and continues to bless its adherents, is evidenced in the life of every faithful student of its teachings. The simple "word in season" brings a return of good to both giver and receiver. Its beneficiaries, when making their approach to Christian Science, sometimes contending for their opinions regarding its teachings, have been healed of painful diseases by a moment's entertainment of its high ideals, though they desired to get their material way.

This great truth unites all human kind in one common weal, and instructs each and all to work for local and uni-

Digitized by Google

versal salvation. No greater sign of the universality of its claim upon humanity, and humanity's God-given ability to rise in spiritual attainment, is evidenced than the willingness of high and low to abandon the material concepts of life, educated beliefs, class distinction, mortal standards regarded as essentials of their lives, and to learn to know life on a spiritual basis. In Science and Health (p. 239) Mrs. Eddy bids us "take away wealth, fame, and social organizations, which weigh not one jot in the balance of God, and we get clearer views of Principle."

Early in their experience the students of Christian Science endeavor to learn that the mere accidents of birth, ancestry, environment, etc., have nothing to do with their relation to each other. They comprehend measurably their spiritual origin, and are quickly on "their good behavior," emulating in daily life the spiritual teaching that Life is God, hence they must and do reflect and evidence this Life. In the light of this truth their moral and spiritual growth exceeds former hopes of progress in the understanding of God. The student endeavors to comply with the Scriptural demand, "Except your righteousness [right thinking] shall exceed the righteousness of the scribes and Pharisees [your former thinking], ye shall in no case enter into the kingdom of heaven." With the acceptance of a divine idea comes accompanying light, happiness, content, success in every good undertaking; in fact, the kingdom of heaven within.

Most remarkable in the lives of its adherents are the signs which accompany the adoption of a spiritual idea; a neglected Bible becomes a close companion; an incurable disease disappears; a bad temper is destroyed; neglected duties are resumed, and moral standards improve and approach the spiritual. The consciousness which has not been hardened by the grind of material living, where the sentinels of reason, justice, and honesty are watchful lest they be led to think the Christ has delayed his coming, quickly yields to the Love "whose measures bind the power of pain" (Poems, p. 12). No rude awakening by distress or disease signals the coming of the Christ to those who take good heed to the testimonies of Christian Scientists, whose lives give evidence that they are a God-fearing, confiding people who have tested this healing power and know whereof they speak. The signs following the appearing of Truth in consciousness should forestall unnecessary painful experiences to any trouble-bound heart.

No fear of contact with persons of other mold intimidates the earnest searcher for Truth, for neither the high nor low, brought together through Christian Science, in friendly association or church organization, adopts the other's standard. Both abandon their material concepts, idols, and find through the study of the Bible and Science and Health a new and right idea of God and man, wholly spiritual, and demonstrable up to the point of their understanding of it, in the conditions wherein it finds them. In the light of Truth humanity is seen to be knit together by the crude belief that all are "bone of my bones." The idealist, the Christian Scientist, dwells much in the consciousness of spiritual existence, and relates himself to others in thinking of them as partakers of the one Life, and finds that the quality of his love improves, for he seeks the highest good, namely, spiritual existence for himself and others.

It is undoubtedly true that Christian Scientists do not love less those whom human relations claim. The Master's teachings tended to enable the Bethany family to comprehend spiritual life. His simple affirmative statements in this humble home sufficiently elevated their thought to see that had he been present he could have proven this spiritual relationship and averted Lazarus' resignation to the belief of death. A spiritual basis is the foundation of our existence for time and eternity. In his teaching Christ Jesus did not condemn, he endeavored to purify, that he might find upon the earth vessels fit for a repository of the divine idea.

A teacher in a Christian Science Sunday school, endeavoring to sound the depths of the spiritual nature of the class, cited an instance of a big boy persistently hiding another boy's hat, abusing him, and getting other boys to believe things about him that were not so, and asked: "What would you do, if you were that boy?" A brown-eyed boy quickly answered, "Just love." "But how would you love?" With some surprise the little fellow replied, "Just love, and he won't do it." Alas, that adults should think that there was some other way to overcome. When disentangling mortal sense, the stir arising from the belief of life, substance, and intelligence in matter, seeming to hide a right idea, man's spiritual relationship has been prayerfully entertained, and the clear consciousness that his neighbor was life of his Life brought a satisfactory clearing of the matter.

Christian Scientists have proven over and over again that the spiritual fact is the inevitable, for, as Peter explained to the rulers and elders, "there is none other name under heaven given among men, whereby we must be saved." The truth is practical and available anywhere, any time, under any circumstances, to any person, as positively as the fact that two and two make four, on the earth, down in the earth, up in the blue sky, or at the antipodes.

Eventually, all seekers of Truth find, in their query after the nature of God's gifts to humanity, that they are spiritual blessings which cannot be materially appropriated. The corrected lives of Christian Scientists, resulting from their corrected thinking, bless all with whom they come in contact and invite others to contemplate the possibility of emerging from a meaningless mortal sense of existence to the soul-satisfying experience in which "we shall behold and understand God's creation,—all the glories of earth and heaven and man" (Science and Health, p. 264).

God is Love, the center and circumference of being, the only self-existence, and having made all, He surely knows all that exists, and He who is Love will reveal all to His children. Day by day to relate ourselves and others to God, Spirit, frees us from mortal beliefs and does much toward demonstrating a divine idea. This great truth finds credence among men and women everywhere, and this fact is a tribute to its brave Discoverer, who so well understood the divine idea that her life was brave and true, and whose royal nature endured much that humanity might be redeemed from the false belief of life, substance, and intelligence in matter, thus so indelibly stamping her name upon the centuries that she will never cease to be blessed of men

DIFFERENCES RECONCILED.

EMMELINE HASKELL.

It is not unusual to hear from inquirers the comment that "of course among Christian Scientists, as among members of other denominations, one must expect to meet with diverse interpretations of the truth, since people never all think alike." Such an utterance from a clergyman caused one who heard it to remember that among Christian Scientists he had found no such diversities of opinion; they were all striving to follow Principle, and necessarily arrived at similar conclusions. Individual needs and experiences might differ, but there was no essential difference as to the application of Principle in each case. One does not find opposing statements among mathematicians, then why expect them among students of Christian Science? The pathway of true science must always be straight and narrow, admitting of no divergences.

Our Leader's recognition of God as divine Principle unifies the thoughts and actions of those who understand Principle, as no human organizations or anthropomorphic sense of God could do, and this unity led naturally to the acceptance of the Bible and the Christian Science text-book as the only preachers. In place of diverse views, voiced in sermons from thousands of differing preachers, each with a personal interpretation of Scripture, and tending to awaken divergent beliefs among the hearers, Christian

Digitized by Google

Scientists have their Lesson-Sermon with its explanation of Truth, "uncontaminated and unfettered by human hypotheses." (See explanatory note in *The Christian Science Quarterly*.)

During the week this Lesson-Sermon is studied in the home in preparation for its perfect reception on the Sabbath; and thus all Christian Scientists are found "with one accord in one place," divine Mind, in an upper chamber of thought. They have come naturally into the expression of unity, studying the same Scripture, eating of the same spiritual bread and partaking of the same spiritual drink (inspiration); and thus, in a most interesting sense, they are fulfilling Christ Jesus' prayer "that they all may be one."

REPRESSION.

KATE WARFIELD BUCK.

REPRESSION dwarfs and warps the sunniest nature, interferes with one's freedom of thought and action, and though on the surface of things its victim may appear quite natural, in his heart of hearts he knows that he is very far from living up to his capabilities, and this in itself is a thought that stings. He has an uncomfortable feeling of limitation, as if dragging at his heels a ball and chain. Not realizing the cause, he seeks honestly, patiently, and persistently for freedom, in the best way he knows; but with small success, it needs must be, until the condition of repression is pointed out to him and the realization of its evil influence made plain.

Mrs. Eddy says: "Know thyself, and God will supply the wisdom and the occasion for a victory over evil" (Science and Health, p. 571). To fulfil this admonition will be to overcome many a troublous situation. If any are repressing forgiveness, let them know it and forgive, however great may seem the injury done them, else how can they say, "Forgive us our debts, as we forgive our debtors"? Surely the peace that passeth understanding, that "pearl of great price," cannot come to such a consciousness, however hungry for it. If any are repressing truth, let them speak fearlessly "to whom it may concern," knowing, rejoicing in, and using the power that in them lies. If any are repressing love, let them set free the imprisoned thing—give it wings, that its mission may be accomplished.

The list might be greatly enlarged, but each individual knows best what special good impulse he is at present stifling, and the recognition of the poor, crushed, half-smothered thing, the determination to set it free, allow it to do the work for which it has perhaps so long been struggling,—this will certainly bring a sense of relief and freedom which only those who have put the rule to the test can know. Mental freedom first; then, as a natural consequence, the physical. Many people are busying themselves in gathering together a handful of thorns to sit upon, and he who permits the repression of what are commonly called good impulses, however much he may be in the minority in his longing to yield to them, is indeed gathering thorns that will tear and pierce him at every turn, till he recognizes the bush upon which they grew and destroys both it and them.

"UNFATHOMABLE SEA."

MAURICE KENNEDY.

IN her book "Retrospection and Introspection (p. 57), Mrs. Eddy writes: "Divine Science demands mighty wrestlings with mortal beliefs, as we sail into the eternal haven over the unfathomable sea of possibilities." Of all the many joys and comforting assurances which we gain by the demonstration of Christian Science, perhaps none is more gratifying or more far-reaching in its beneficial effect than the consciousness of possessing a perfect, unfailing divine Principle and a clearly-marked chart of life. To gain at last an infallible guide by which it is possible with scientific certainty to distinguish what is true from what is false, is an unspeakable satisfaction to the disheartened, perplexed, and thought-weary seeker for Truth, who has struggled long in the "unfathomable sea of possibilities."

To the unguided human thought any theory can be made to take on the semblance of truth. Given a sufficiently strong belief in the truth of the false premise on which it is based, any course of human conduct, no matter how grossly distorted in fact, may become seemingly right and good. A process of mental argument with one's self may produce in experience certain looked-for effects, the logical outcome of the accepted belief, and these appear to the blind thought as "proofs"; but sooner or later comes the awakening to the fact of the delusion, and thought, retracing its steps, finds that its starting-point was but a baseless assumption. The endless multiplicity of such false premises, such wrong starting-points for unguided thought, leading only to disappointment, confusion, and despair, is aptly termed by Mrs. Eddy the "unfathomable sea of possibilities."

Unfathomable, indeed, are the deceptive possibilities of the fundamental error of mortal mind, which declares life, truth, intelligence, and substance to be in matter. Without the guidance of divine Principle it is impossible to navigate this unfathomable sea. Driving wildly ahead before the strong wind of some blind enthusiasm, striking against the jagged rocks of disillusionment, drifting rudderless with the currents of sensualism, or caught in the whirlpool of utter mental confusion, mortals are as a ship without chart or compass—"tossed to and fro, and carried about with every wind of doctrine," to quote St. Paul. What a delight then, to lay hold of the chart and compass of Christian Science! Though the "wrestlings" are not over, the confident assurance of ultimate victory places them in an entirely different light.

"Mighty wrestlings" are still demanded, but though the ship be tossed with the waves of mortal belief, and the wind be contrary, we know it cannot sink, for Christ, Truth, is ever present, and we know that, despite the mounting waters, the buffeting wind, and the blinding spray, we are sailing a straight course over the "unfathomable sea of possibilities," into the "eternal haven"—the perfect comprehension of man's unity with God.

[Written for the *Sentinel*]

TRUTH'S SEAMLESS GARMENT.

C. W. HASKINS.

WHY divide the seamless garment,
Worn by one who, long ago,
When on earth with simple grandeur
Banished sin and want and woe?
Why make spoils of Christlike virtues?
Why cast lots for truth and love?
These are jewels far too precious:
Trust not chance their worth to prove.

Has our therapeutic knowledge
Lessened sickness, death, or pain?
Have we learned through man's inventions
How we best can life maintain?
Have men's theories accomplished
Sin's destruction? Can they claim
Less of sin and more of virtue,
Without works done in Christ's name?

Have we listened to the tempter?
Have we builded on the sand?
In a napkin hid the talents
Given by our Father's hand?
Or preserved the seamless vesture
Jesus meekly wore on earth,
When he gave us joy for sorrow,
Gave us health for pain and death?

SELECTED ARTICLES.

[John L. Rendall in *Dubuque* (Ia.) *Times-Journal.*]

I was greatly interested in reading in your esteemed paper the views on mental healing which were set forth in a report from the British committee, including medical practitioners, physicians, neurologists, alienists, etc., "appointed to consider questions connected with healing by spiritual means."

The conclusions as stated are, (1) "That the essential factor in all forms of psychic healing is mental suggestion, which has been used from remote periods, although more fully explained by modern psychology." (2) "That there is abundant evidence of the efficacy of mental suggestion in the treatment of many disorders. No evidence has been forthcoming of any authenticated cure of organic disease."

Inasmuch as one member of this committee states: "I do not draw any marked distinction between the claims of such healing alleged by Christian Scientists, by Church of England healers, by faith-healers, by Mohammedans, or by members of other religions," and because there is a positive and marked distinction, in that Christian Science healing is utterly unlike the teaching mentioned, I will ask space in which briefly to comment on the above statements from the Christian Science view-point.

The ordinary individual can readily understand the position taken by medical practitioners, neurologists, etc., and the opinion set forth by them that Christian Science healing is akin to mental suggestion is due to misapprehension and is perhaps the only opinion they could give in keeping with the bias of their previous education. It is a little difficult, however, to reconcile this sort of opinion with the professions of Christian faith and of belief in the Scriptures entertained by most of the clergy. The Bible very clearly sets forth certain instances of healing through the direct power of God, and Jesus' practical example and his instructions to his disciples were fundamental to Christianity and certainly warrant all Christian people in their faith in God as the healer of the sick.

I desire to state unequivocally that the essential factor in Christian Science Mind-healing is the same manifestation of divine power which Jesus understood and demonstrated. This alone was the basis of the healing by the ancient prophets, and by the apostles and early Christians for three hundred years after Jesus' time. Mental suggestion as defined by modern psychologists does not enter into Christian Science healing in any particular. The so-called mortal mind has of itself no power to heal and never had. The only healing efficacy recognized by Christian Science emanates from divine Mind, and depends not upon suggestion, but upon the understanding of the omnipotence, omnipresence, and omniscience of divine Mind, which is infinitely good. This precludes the possibility of any power, intelligence, or action contrary or opposite to its beneficent influence. Christian Science Mind-healing is, therefore, the direct opposite to mental suggestion, hypnotism, mesmerism, etc., in that it does not dispossess the patient of his mind or seek to influence his supposed human mind by the alleged superior power in another human mind, but it places the patient in conscious possession of that Mind "which was also in Christ Jesus."

The statement "that no evidence has been forthcoming of any authenticated cure of organic disease" simply indicates the fact that the abundant evidence which Christian Science has presented along this particular line has been ignored, or at least has not been given the consideration to which it is fully entitled. The *Christian Science Sentinel*, a weekly publication, and *The Christian Science Journal*, a monthly publication, issued by The Christian Science Publishing Society, of Boston, contain in each number several pages of testimonials of healing which are absolutely authentic and can readily be verified by any one who cares to take the time and trouble to do so. Among these testimonies are to be found cases where so-called organic diseases of every name and nature have been healed in Christian Science. It must be remembered that Christian Scientists are not ordinarily recognized as diagnosticians. The cases which come to them have, however, in the main, been diagnosed by reputable physicians, and it is upon the assumption that the diagnosis of these physicians is a reasonably correct one that Christian Scientists base their claim that Christian Science treatment has been efficacious in the healing of organic diseases,—and why should this not be so? The Bible states very clearly: "He sent his word, and healed them, and delivered them from their destructions;" and it is said of Jesus: "He healed all manner of diseases among the people;" and Jesus' injunction to all Christians was: "Go ye into all the world, and preach the gospel;" "Heal the sick."

The fact of Christian healing is established in the mouths of many witnesses. Thousands of intelligent citizens of this and other countries willingly and gratefully testify to the healing, redemptive influence in this Christian teaching, which not only has healed them of physical troubles, but has lifted them out of the depths of despair and given them new-born hope and confidence in God, and the assurance and peace which inevitably accompanies a clearer understanding of the laws of God. The attempt to attribute all these good effects to a lesser power than that of divine Mind simply indicates the fact that these critics have not yet risen in thought to the possibilities contained in a more complete understanding of God and man's relation to Him. Christian Science in its practical teachings is unfolding more and more of what God's laws include by way of harmony and perfection for mankind. This is one of the reasons why its adherents recognize its teachings to be the greatest boon that has been bestowed upon humanity since the advent of Jesus the Christ, and all this constitutes good and sufficient reason for the hope that is within them.

[Henry Deutsch in *Albert Lea* (Minn.) *Tribune.*]

The great strength and unanswerable logic of Christian Science is based upon the fact that those who approach it are not asked to accept it because somebody else says so or because it is so written. If it were in that position it would never have attained its marvelous growth or accomplished its wonderful works as evidenced by its astonishing record within the limited period of forty years' existence. On the contrary, Christian Science lays aside mere theories, speculative sophistries, and doctrinal preaching, and says, even as the Master did, "These signs shall follow them that believe." And those who believe and follow the teachings of the Master, as interpreted by Mrs. Eddy in her writings, obtain the realization of their truth by demonstration and result instead of mere promises and hope deferred.

Christian Science does recognize the belief in evil and sin as a condition of mortal experience, but it does not attribute to it that power which makes God subservient to a devil of man's creation and belittles the omnipotence of Spirit by attributing to matter and a traditional hell the dominance over Spirit and heaven. Christian Science teaches the omnipresence of God and, since God is "of purer eyes than to behold evil," it says to the world "that when the consciousness of the individual is illumined by the realization of what God is" man obtains some idea of himself as created in the image and likeness of God; enters into his God-given dominion,—supremacy over evil and sin; liberation from sickness, discord, and slavery of all kinds, and catches a glimpse of that "holy city, new Jerusalem," in which there is no sin, as so beautifully described in the twenty-first chapter of Revelation.

[Edward W. Dickey in *West Coast Magazine.*]

One of the oldest questions in Christian history is, "What must I do to be saved?" It is certain that "there is none other name [way] under heaven given among men, whereby we must be saved." The answer is, "Believe on the Lord Jesus Christ, and thou shalt be saved." Christendom has been trying for two thousand years to determine what constituted an acceptable belief in Christ, or in other words the Christ-way, and in so doing has externalized itself into something like one hundred and sixty-five different sects with a widely divergent sense of creed and practise. This in and of itself constitutes *prima facie* evidence that none have discovered the Christ-way. It is not possible for the Christian to believe them all, nor to reconcile their different interpretations of Christ, as they are in many respects irreconcilable both as to statement and practise.

Quite apart from what critics may say in the matter, and apart from all discussion and debate thereon, there must exist and always has existed the truth about God, man, and Christ. In other words, there must be and always has been a Christ Science, or Christian Science. The very existence of being proclaims a truth about it, and the very existence of the Christ-way proclaims an exact truth about it, and this is of necessity a scientific way and a Christian way. Jesus said, "Ye shall know the truth, and the truth shall make you free." This Christ-knowing, or Science of Christianity, must from its very nature be infinite in scope and purpose and all inclusive. Again, this Christ-way cannot from its very nature be discerned from a material point of view. Being the way of Christ-knowledge, it must be built upon the everlasting foundation of demonstration, which emphasizes a correlative fact, that a person who has not tested and proved Christian Science is not in a position to pass judgment upon it. This is an axiomatic truth wherever and whenever Christian Science may be under discussion, as much so as though mathematics were being debated.

Christian Science, in stating what constitutes an acceptable belief in Christ, declares first that Christ came to do the will of God, which is in accord with his statement, "I came down from heaven, not to do mine own will, but the will of him that sent me." In doing the work of the Father, he therefore acted in accord with the changeless will and plan of God, whom the Scriptures declare is without "variableness, neither shadow of turning." When, therefore, he healed the sick and the sinner, he did it the only right way. Christian Science further shows that the one right way is a changeless way and extends throughout the cycles of eternity. Further, Christian Science declares that the evils which Christ came to destroy were not of God, or Truth, therefore not real. It is upon the basis of the unreal or fictitious claim of evil to power and reality that Christian Science destroys all that is not like God. It is doing what a writer once very aptly described as "turning things upside down in order to turn them right side up." Christian Science does not deny the need of a Saviour, the atoning power of Christ, nor the spiritual value of the resurrection and ascension. It is true that in many of these theological points it disagrees with the teaching of other churches, but Mrs. Eddy points to the fruits of her teaching as sufficient evidence of their spiritual source and worth.

Christian Science teaches that man is the image and likeness of God, and therefore spiritual. Man is the highest expression of the "very good" things that God created; man is coexistent with his creator, for the reason that he reflects and expresses Him. He is not a sinner, is never sick, and he does not die, for he is forever the image and likeness of God, who is infinite good, "the same yesterday, and today, and forever." Mortals are of the dust of the ground, and of the nature spoken of by Jesus when he said, "That which is born of the flesh is flesh." Critics must consider the distinction which Christian Science makes between "the sinning race of Adam" (Science and Health, p. 345) and God's spiritual and perfect man.

The basis of Christian Science practise is the first commandment, and the second which is "like unto it." "Love for God and man," writes Mrs. Eddy on page 454 of Science and Health, "is the true incentive in both healing and teaching." On page 366 she says, "The physician who lacks sympathy for his fellow being is deficient in human affection, and we have the apostolic warrant for asking: 'He that loveth not his brother whom he hath seen, how can he love God whom he hath not seen?' Nothing but spiritual affection, the physician lacks faith in the divine Mind and has not that recognition of infinite Love which alone confers the healing power. Such so-called Scientists will strain out gnats, while they swallow the camels of bigoted pedantry."

Every impress of Christian Science is compassionate and sympathetic. The student of this Science has daily to exercise the loving patience, charity, and selflessness of the Master. His sympathy is not of word merely, but of deed, and endeavor to raise his unfortunate brother above the conditions that need and require sympathy. The word science as used in Christian Science indicates the definite and systematic knowledge of Christianity. It is certainly true that there is such a thing as the truth about Christianity, and it must necessarily follow that a knowledge of this truth must constitute the science of Christianity, for the word science means "systematized knowledge." The knowledge possessed by Jesus was certainly Christian, and therefore this Christian teaching is scientific teaching. It is most surprising that a person having access to a dictionary should have such a vague notion of the word science. Christian Science has a fixed and definite rule whereby to prove its position. It is therefore a demonstrable thing, and in no sense of the word debatable.

The same fountain sendeth not forth "at the same place sweet water and bitter." Therefore it is not possible for Christian Science to produce both good and bad. That it has produced good is evidenced by the multitude who have been benefited morally and physically. To conclude, therefore, that the practise of Christian Science is susceptible of evil, proves that there has resulted a misapprehension of its nature and method. The basic proposition of Christian Science is that God is the only Mind. Its practise is therefore Mind-practise. It nullifies the belief of minds many. This practise is all through prayer, and right here I want to emphasize the fact that no Christian people rest in prayer more unreservedly than do Christian Scientists. Their religion is a religion of prayer, and they are taught to pray unceasingly.

Mrs. Eddy is nothing more or less than the Discoverer of Christian Science. Nowhere in her writings is there a scintilla of evidence that she claims to be the equal or successor of Jesus. She has written in the Preface of the book Science and Health, "Today, though reflecting in some progress, she still finds herself a willing disciple at the heavenly gate, waiting for the Mind of Christ" (p. ix). In refutation of the charge that Christian Scientists have no individual freedom, and are bound by arbitrary mandates, I quote from one of Mrs. Eddy's messages to The Mother Church: "Obey strictly the laws that be, and follow your Leader only so far as she follows Christ" (Message for 1901, p. 34). Mrs. Eddy's entire life-work has been one of becoming modesty, selflessness, and love for others.

Our critic asks, "How long will it last?" Just so long as there is sickness to be healed and sin to be destroyed. It will last until man possesses the full knowledge of God. It has come for the salvation of the whole world from every manner of evil. Its coming is the renewal of the glad song, "on earth peace, good will toward men," and to remain as a permanent dispensation among men" (Science and Health, p. 150).

[W. H. Penfield in *Oklahoman*, Oklahoma City, Okla.]

I am not a Christian Scientist, but a reader of everything that claims to be instructive, and some years ago I read Mrs. Eddy's book called "Science and Health with Key to the Scriptures." I do not know about the science and health, but as to the key to the Scriptures I wish to say that it is to me a key indeed. I had for many years given up Bible reading as to me not understandable which now appears clear and profitable reading. It appears to me that the orthodox world is in the same condition I was. This is evidenced by the acknowledged ignorance of Bible instruction through the formation of innumerable sects and creeds, together with the weekly Bible classes, and yet all acknowledge that they have hardly commenced to fathom its mysteries.

Mrs. Eddy has shown that the mysteries in the Bible are not in the Bible itself, but in the student; that a false concept of God lies at the bottom, and when one finds God and His kingdom, which is plainly within us, the door has been opened and all is clear. I wish to say that I have found this true. I now enjoy reading the Bible. What was to me bewildering now is clear, and I can say that I can think of Mrs. Eddy as one of the greatest benefactors to the world.

[Arthur E. Jennings in *Northern Echo*, Darlington, England.]

Permit me to thank you profoundly for your timely protest against newspaper sensationalism. The prejudice and misunderstanding between individuals, societies, and governments can be traced to the avenue which sends its erroneous concepts of persons and things through the consciousness and through the press.

The way to stop this evil tendency is to educate the people to love the good only, as the Bible teaches, and to make clean journalism a necessity in all countries. As you say, what mankind needs is fact (true statements), and then they can form their judgment for themselves. Your words come very near the hearts of the members of our denomination. Only this morning I was called upon to correct an item which appeared in some of the sensational journals to the effect that ninety-eight convicts in the state prison, New Jersey, were Christian Scientists. It was not only an untrue, but an absurd story. The only connection between the New Jersey state prison and Christian Scientists was this: the local church there got the permission of the prison authorities to hold a service in the jail, and ninety-eight convicts volunteered to attend it. The service is now being read every week, and this is a proof of its attractiveness to men who need comfort and help. If they ever become Christian Scientists, they will do so out of their own choice, and it will be because they are healed morally, and have repented and forsaken their sins.

[William J. Bonnin in *Rochdale (Eng.) Times.*]

Will you kindly allow me to say that the Rev. —— was entirely mistaken in taking the view that Christian Science is "a form of Buddhism"? In the first place, it might be well to point out, there are so many conflicting interpretations of Buddha's teaching, in the dogmatics of the various Buddhistic churches, in the western expositions of his philosophy, and in the endless speculations as to what thoughts were sealed up behind that dramatic silence, that it is quite impossible to assign to the term Buddhism any very definite meaning. This critic, according to your report, justifies his view that Christian Science is a form of this unknown quantity by reliance on the claim that the teaching of the unreality of the material world is common to both. Assuming that there is in this direction some resemblance in teaching (ignoring the charge of materialism that is commonly leveled at Buddha), it is surely a tremendous leap to the conclusion that one is therefore "a form" of the other. In what is considered his earliest and perhaps most explicit sermon ("To the Five Ascetics"), Buddha exhorted his monks to avoid the two extremes of asceticism and the life of pleasure, and to find the middle way, which, he assured them, would lead them to Nirvana. Now this clergyman's address was directed to show Christianity to be the "middle way." Indeed, the whole passage from Buddha's sermon might have been introduced into that address without seeming the least bit out of place. But would one on that account be justified in asserting that the critic's concept of Christianity was "a form of Buddhism"? I do not think so.

The way to settle such a question is, of course, to ascertain whether or not the positive, fundamental teachings of each are identical or analogous. And it may at once be said, however little may be known for certain of Buddhism, that there is in it no trace of that joyful and hopeful teaching which is at once the central and inspiring revelation of Christian Science, that a right knowledge of God, Truth, is an actual and present means of salvation from evil. Similarly, what are commonly held to be the distinctive Buddhistic teachings of reincarnation and final annihilation find, of course, no place whatever in Christian Science.

Christian Science is a ladder from earth to heaven. To mount that ladder is to acquire a changed consciousness, to gain, in place of the merely human and material, a relative view of things, a vision of spiritual truth, of the allness of God. It is that vision, or understanding, which discloses the actual nothingness of evil, of anything opposed to the omnipotence and omnipresence of God, and which thereby destroys its manifestations. And we may begin to mount that ladder now, and every step gained is a step toward peace and health and harmony. But as the ideal of Christian Science is perfection, the ideal the Master imposed, so is it concerned not to steer any careful middle way, but to leave farther and farther behind the evil and false and unreal, and to draw ever nearer to the real, the good, the absolute truth.

[Frank Bell in *Lancaster* (Pa.) *Intelligencer.*]

It is a fact susceptible of easy confirmation that while no people on earth as a class are more healthy, no people on earth as a class consider physical health of less relative importance than do Christian Scientists. One whose ideals rise no higher than to seek satisfaction in animal ease can find little or nothing in Christian Science to attract, but on the contrary, is likely to be repelled by its imperative demands for clean and pure living and thinking, and the scant value it places on the joys of the flesh. It is true that the great growth of the Christian Science movement has been recruited largely from among the ranks of those who have turned to it for the healing of physical ills after having vainly sought relief in other systems, but it is also true that at the very outstart these seekers for health have been confronted with the unalterable rule that the healing of sickness in Christian Science results from and is incidental to the healing of sin. The desire to be saved from evil of some sort has ever been an impelling motive of mankind in its approach to religion, but in proportion as the religion has been true has the individual discovered that to grow therein one must acquire higher aims than mere personal benefit. This is especially true of Christian Science.

"No one can doubt that God is all powerful."

"No one at all can question it who thinks consistently."

"Now, there is nothing which One who is all powerful cannot do."

"Nothing."

"But can God do evil, then?"

"Nay, by no means."

"Then evil is nothing," said she, "since He to whom nothing is impossible is unable to do evil."

BOETHIUS, A. D. 523.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

OMNIPOTENT, UNCHANGING GOOD.

OUR attention has been called to the following specially pertinent question and answer, which recently appeared in the editorial columns of *The New York Farmer*, published at Port Jervis, N. Y.:—

Editor New York Farmer:

A proposed subject for a debate is: "Should the Christian Scientists be permitted to practise medicine?" What is your opinion on the question?—DISPUTATIONIST, Vermont.

We are not aware that the Christian Scientists practise "medicine." Those of that sect whom we know are opposed to "medicine." They may be said to practise "curing" or "healing," but "medicine" is not one of their instrumentalities. Should they be "permitted to practise healing"? Why should not any person be "permitted" to heal or cure any other person who is out of health? If the Christian Scientists "lose patients," do the practitioners of "medicine," of all "schools," always "save" their patients? We know so little about the healing of the Christian Scientists that our opinion would be valueless. Your society should change the word "medicine" in the question to "healing" or some other word.

Christian Scientists out of their own experience will heartily agree with the answer made by this paper. The question is not one which in its present form needs to be discussed, for Christian Scientists neither practise medicine nor do they wish to do so. It is true that there has been an effort on the part of the medical societies which stand for the so-called "regular" school, so to enlarge the term "practise of medicine" by legislative enactment as to include every system of healing and thus to prohibit the practise of Christian Science, but in most instances these efforts have utterly failed of their purpose, and notably so in the case of the Canal Zone order issued by President Taft last winter.

The question as to whether Christian Scientists should be permitted to practise healing is more to the point, and one that gets down to the fundamentals of human liberty. It takes us back to the time of Christ Jesus, who healed the sick by precisely the same means as are now employed by Christian Scientists. The Master did this healing work as a necessary part and the natural outcome of his teachings and ministry; it was a demonstration of their truth which could not be denied though it might be derided. The same may be said of the healing work in Christian Science, which is but Jesus' religion in practise as well as in theory. Christian Science is essentially a demonstrable religion. Jesus himself declared that a tree should be known by its fruits whether it be good or evil, and Mrs. Eddy writes, "Subject sickness, sin, and death to the rule of health and holiness in Christian Science, and you ascertain that this Science is demonstrably true, for it heals the sick and sinning as no other system can" (Science and Health, p. 337). The practical results of Christian Science treatment are witnessed to by hundreds of thousands of people who have been healed through its ministrations, many thousands of them after they had been pronounced incurable by the physicians who had previously attended them.

The editor of the *Farmer* very wisely says that the word "medicine" in the question which it is proposed to debate, should be changed to "healing" or some other word. If this were done the question would be, in effect, Shall those who have exhausted every resource of medical practise, only to be pronounced incurable, be debarred by law from availing themselves of a system which has healed hundreds of thousands of cases of severe illness, including many thousands pronounced incurable by the doctors? There should be very little debate necessary to settle a question like this. Both common sense and justice demand that freedom of choice be preserved, and the most ardent disclaimers of Christian Science and its method of healing may yet come to the proof in their own experience, as have so many others before them, that God is omnipotent and unchanging good, with whom "all things are possible."

ARCHIBALD MCLELLAN.

THE SECOND COMMANDMENT.

THE second commandment is the subject of much study on the part of Christian Scientists who cannot accept any Scriptural teaching "in the oldness of the letter," to quote St. Paul. The first commandment raises no question, admits of none! It is an unequivocal demand for allegiance to the one God, the one Mind. The second commandment, however, seems to present some difficulty in that the term "the Lord thy God" appears in this as in some of the other commandments.

It is therefore asked by some students of Christian Science whether the same authority is represented by this term as that which is expressed by the word God. To this it may be answered that the term "Lord God" seems to convey a somewhat humanized sense of Deity, a dimmed concept of the perfect Lawgiver; but no mortal belief can lessen the moral obligation to obey the ten commandments, for it is the same authority which is expressed in the second as in the first, whatever be the human concept of the one who demands our obedience. It may be said that our obedience to divine law will be in proportion to our intelligent understanding of the Lawgiver. Christ Jesus said that he came to fulfil the law, not to destroy it, and he did this in healing the sick and reforming the sinful by one and the same method, and in following his example, as taught in Christian Science, we learn that God's law annihilates evil as light dispels darkness.

The second commandment has been to a large extent ignored by modern religionists, on the ground that it related specifically to the poor heathen who "bow down to wood and stone." There has, however, been a growing tendency, outside of Christian Science, to find in it authority for belief in hereditary disease, and this without taking account of the conditioning statement that the penalty rests only upon those who "hate" the Lawgiver, and which stops short of God's gracious promise of "showing mercy unto thousands of them that love me, and keep my commandments." Here, as in all other things, we have but to grasp the spiritual fact, and then we realize the truth of that life-giving promise in Revelation, "There shall be no more curse."

We should never forget our beloved Leader's words: "The Scriptures are very sacred. Our aim must be to have them understood spiritually" (Science and Health, p. 547). When the spiritual sense is gained, we shall agree with Paul when he says, "The law is holy, and the commandment holy, and just, and good." Now let us consider briefly the theory that children inherit certain things from their parents. This rightly viewed means that if ideals of order, purity, justice, and truth are held in a family, these perpetuate themselves in health and harmony, the seed yielding fruit "after his kind," as we read in the first chapter of Genesis; or, as physical science would express it, in conformity to type, which divinely created type is never less than "very good." At this point some one may ask whether continuity does not apply equally in the case of good and evil. No, for evil of any sort tends to destroy itself, while the law of good, understood and obeyed, leads to self-perpetuation, to immortality.

Christ Jesus said that the "Comforter" would "reprove the world of sin," and it is cause for joy, not sorrow, if this process goes on "unto the third and fourth generation," or until the last vestige of sin vanishes, and with it disease and death. This is surely divine comfort, and, what is more, we need not wait for it until one generation succeeds another in bondage to the asserted dominion of evil, but today we

Digitized by Google

may prove that all of the commandments are radiant with "the law of the Spirit of life in Christ Jesus," and that they are sure weapons of defense in every hour of need.

ANNIE M. KNOTT.

"BE OF GOOD CHEER."

THE one condition of thought from which the efficiency of the Christian worker imperatively demands he shall be free, is a state into which he is constantly tempted to fall, namely, discouragement. To many the world problem seems stupendous indeed when they think upon it, but having health and every comfort and perchance the luxuries of life, and being removed most of the time from any immediate touch with human wretchedness, they have little sense of the mortal struggle and suffering with which the settlement worker or the Christian Science practitioner is constantly brought face to face, and it is these latter who feel the need of that confidence and courage which a vast and rapidly increasing body of ministrants are gaining through Christian Science.

He who centers his attention upon the apparent rapidity with which evil impulses and tendencies are multiplied, and the seemingly slow growth of moral strength even under the most favorable circumstances, and who notices withal the steady down-pull of the belief in hereditary bias, and of the degrading atmosphere with which the many have been surrounded from their birth, is likely to be so impressed with the number of the disadvantages to which the seeds of truth are subjected, as to become a prey to doubt and discouragement. These are the beginnings of pessimism, and from the point of view of the Christian worker who believes that the handicaps to the growth of virtue are real, and who judges of the possibilities of divine grace by the slowness of his own spiritual advance, though his surroundings and educational influences have all been helpful, it is not surprising if a sense of the utter hopelessness of Christian effort to redeem mankind comes upon him, until the burden of his heart saps his energy and his efficiency is at an end.

Nevertheless, it must be conceded that the human conditions presented to the early disciples were not less discouraging to human sense than those with which we are familiar, and yet their note of joyous assurance was always clear and unfaltering. In the midst of unnumbered trials and with a resistance to overcome such as only a sensualistic paganism and an embittered pharisaism combined could offer, St. Paul's exultant voice is heard in a continuous pæan of praise, and to the Christian Scientist the explanation is clear. He had simply awakened to the allness of God, good, and the nothingness of the claims of evil,—he had come into the light of spiritual apprehension to which there is no darkness at all, and in his mental and moral regeneration the eternal fact was again proven, that the redemptive agencies of Spirit are not subject to the material *modus;* that the healing power of Truth is not amenable to the slow pace of physical evolution, and hence that a Pentecost may come, a nation may be born in a day.

This gospel truth Christian Science is bringing convincingly nigh in the immediate release of many a long-time bondsman to sickness and sin. The fetters forged and heartlessly applied by the fateful working of material law, have been struck off by the power of the Word, and thus the reassurance of "God with us" to save men in keeping with their need, is being brought to the heart of humanity.

> God moves in a mysterious way,
> His wonders to perform,

and it is an abiding source of inspiration and strength to know and to prove again and again that His way is not that of material law and order. On the contrary, as it is written, we may be changed "in a moment, in the twinkling of an eye," and this because all human problems are solved in the acceptance of Truth. "Be of good cheer," said the Master; "I have overcome the world."

JOHN B. WILLIS.

AMONG THE CHURCHES.

LONDON, ENGLAND.

In making their semiannual report for 1912 on the work at the city reading-rooms, the joint committee of First and Second churches, who are responsible for the maintenance of these rooms, state that the rooms have now undergone enlargement twice since they were opened in January, 1910. The latest enlargement has proved to be a great improvement, and the reading-room with its attendant office and salesroom now occupies the whole of the first floor at 15 Queen street, Cheapside, E. C., and provides ample accommodation for present needs.

Situated in the heart of the business section of London, this reading-room is calculated to offer a great advantage to business men and others who are becoming interested in Christian Science. Many of these much appreciate the opportunity of complete withdrawal, if only for a few minutes, from the business environment which the reading-room affords as a means of gaining that spiritual refreshment which our literature has to offer. The reading-room is located at a point where five streets converge, and its prominent sign is a gentle reminder to all and sundry that here is an opportunity to step aside for a moment from the busy thoroughfare. To those who have ears to hear it seems to say, "Wherefore do ye spend money for that which is not bread? and your labor for that which satisfieth not? hearken diligently unto me, . . . and I will make an everlasting covenant with you."—*Correspondence.*

LOS ANGELES, CAL.

Contracts have just been let and work will be started immediately on a new church edifice for First Church of Christ, Scientist, Los Angeles. The site is the corner of Alvarado street and Alvarado terrace. The lot is shaped somewhat like a kite with the pointed or tail end of it facing the intersection of the two streets. From this point Alvarado terrace slopes away rapidly, and this condition has been taken advantage of by placing the Sunday school room with its entrance at the low end of the lot on Alvarado terrace. The main auditorium is ninety-five by ninety-one feet in size and seats eleven hundred and twenty-five persons. Over the foyer is a balcony easily reached by two flights of stairs and seating one hundred and seventy-five additional persons, making a total seating capacity of thirteen hundred people. The Sunday school room will seat nine hundred.

The building will be constructed of solid brick faced with a gray tapestry brick laid up in Flemish bond with darker headers. The roof will be tiled with red mission tile. The Italian Romanesque style of architecture adopted was the outcome partially of the shape of the lot.

Los Angeles Tribune.

RUTHERFORD, N. J.

The corner-stone of First Church of Christ, Scientist, in Rutherford, was laid on Thursday morning [July 4] at eight o'clock. The service was brief but impressive, and was opened with a silent prayer followed by the audible repetition of the Lord's Prayer. At the close of the formal exercises the corner-stone was put in place, and in a cavity in its center was placed a sealed box.—*Rutherford Republican.*

GLENS FALLS, N. Y.

Nearly four hundred persons attended the opening services in the new First Church of Christ, Scientist, yesterday [June 2] and listened to a very inspiring address by Virgil O. Strickler, member of the board of lectureship of The Mother Church of Boston, Mass., he having laid the corner-stone of the church on Oct. 18 of last year.

THE LECTURES.

DANVILLE, ILL.

Judge Clifford P. Smith lectured on Christian Science May 5. He was introduced by Frank M. Ferris, who spoke as follows:—

Jesus the Christ said, "Ye shall know the truth, and the truth shall make you free." If to mortal sense man is not yet free from the thraldom of those things from which Jesus came to free him, an earnest question to ask would be, Is it because the truth is unknowable, or can it be because in some way man has failed to understand the truth about God and His creation? If understanding be necessary to a practical working knowledge about anything, and if such knowledge be science, as the dictionary defines it to be, it follows that to understand the truth about God and His Christ is indeed Christian Science. It is to learn of this purely Christian and wholly spiritual teaching from the Bible which has brought so great moral and physical blessing into the consciousness of so many throughout the world, that we have assembled today.—*Correspondence.*

MADISON, N. J.

James assembly hall was filled Monday evening [May 6] with Madisonians and visitors, many out-of-town people coming a long distance to hear William R. Rathvon, who spoke eloquently on Christian Science. The speaker was introduced by Mayor Arthur S. Pierson of Morristown, who said in part.—

Christian Science is interesting the world today. We all remember that when Jesus and his disciples sat down to eat and the publicans and sinners came and sat down with them, the Pharisees of that day rebuked the disciples for such action, but Jesus said unto them: "They that are whole need not a physician; but they that are sick. I came not to call the righteous, but sinners to repentance." These are two specific statements which show beyond a doubt his mission on earth, namely, the healing of the sick and the sinning. Therefore the claim for the growth and success of Christian Science is based on the fact that its adherents are doing his work as the Master taught they should.

When Christian Scientists are asked about their healing, they invariably use the same statement which the blind man used, because it answers the question and gives the reason why they are Christian Scientists, and it expresses the faith within them.—*Madison Eagle.*

SAN JOSE, CAL.

A crowded house last evening [May 6] greeted Virgil O. Strickler, who delivered a lecture on Christian Science. He was introduced by R. C. Sheppard, first reader, who said:—

The lectures on Christian Science, which are being given practically all over the civilized world, are inspired by the gratitude of thousands of people, many of whom have found surcease from suffering and sorrow through its beneficent ministrations. These lectures serve a twofold purpose: the correction of the many erroneous impressions of Christian Science which have gone out to the world through certain elements of the press and through statements made by some who have criticised what they supposed to be its teachings without an adequate understanding of their subject; and also this is one of the methods by which a grateful people freely offer for your consideration an interpretation of being which is practical and demonstrable, and which they understand to be that knowledge of the truth which Christ Jesus said should make men free.—free, in the degree in which it is understood, from the limitations of material sense—from evil, disease, and eventually from death itself.

Jesus proved man's right to freedom, and stated, you will remember, as the great test of discipleship, "He that believeth on me, the works that I do shall he do also." Who among you that are Bible students have not at some time wished that the promises therein contained might be realized and made practical today—perchance as you saw some loved one sinking under the man-made sentence of incurable disease? Christian Science has come to show us that these promises are available for all time; that the power of Truth has lost none of its vitality, and that God can be depended upon for our health as well as for everything else. It has come to give us an understanding of Jesus' words and works, together with a faith in God which will enable its possessor to emulate in some degree the example of our Lord and Master.—*San Jose Mercury.*

CHARLESTON, W. VA.

Francis J. Fluno, M.D., delivered a lecture on Christian Science at the Burlew opera house Tuesday evening, May 7. The lecturer was introduced by Frank Conklin, a former first reader of this church, who said in part.—

To those wearied with the discords and trials of mortal existence, Christian Science comes as a message of love and peace and joy. The great Wayshower said, "I am come that they might have life, and that they might have it more abundantly." This abundance of life, as manifested in the destruction of sin, disease, and discords of every kind, and a fuller realization of God, omnipotent Mind, is seen on every hand where the teaching and practise of Christian Science has been established. Thousands are learning through the study of the Bible and "Science and Health with Key to the Scriptures" by Mary Baker Eddy, how to avail themselves of the Principle which makes mortal discords unreal and harmony and health dependent upon the spiritual; which enabled Jesus to still the tempest, walk on the waves, and raise Lazarus from the dead. That this Principle which heals the sick is operative today is proven by Jesus' words: "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." By the application of the rules which demonstrate this great Principle, discovered by Mrs. Eddy and given to the world in "Science and Health with Key to the Scriptures," these works are being accomplished.—*Correspondence.*

NEW YORK, N. Y.

A lecture on Christian Science was delivered in Columbia hall, Richmond Hill, New York, by the Rev. William P. McKenzie, on May 7. He was introduced by Henry Lye, who said in part,—

As I understand it, the aim of Christian Science is to do what the name implies; that is, to give us an understanding of Christian truth by interpreting the Bible spiritually, and it undertakes to support this interpretation by demonstration. Nothing could be fairer or more scientific than this. The importance of any religion which gives to people a better knowledge of the creator, is sometimes lost sight of, but on reviewing the world's history it is evident that nations have been great only in so far as and so long as their government reflected good or God, and the mighty ones have quickly fallen when they failed so to reflect Him, the source of all good. This being so, we should welcome Christian Science, as it is evidently our patriotic duty to learn more of God, so that this great country may reflect Him in its government.

And if the national life depends on our knowledge of the creator, how much more so does the individual life. Many people cannot see why they should trouble about spiritual or unseen things, not knowing that unseen things are the prime mover of the universe. They even forget

Digitized by Google

mortals live and move and have their being in an immense volume of invisible air, without which they admit mortal existence to be impossible, in the same way as Paul says of the unseen God, that "in him we live, and move, and have our being," and without Him life is impossible.

And while the presence of the air may be demonstrated by a fan, the presence of God is demonstrated by the coming of Christ in our hearts,—him of whom John the Baptist said, "Whose fan is in his hand,"—separating the chaff from the wheat, or the evil thoughts from the good thoughts, for all of Christ's teaching refers to the hidden thoughts. And who that has experienced the coming of Christ, Truth, in his heart, can doubt the ever-presence of God? How much the more could we realize the unseen presence if not only our sins but our physical infirmities also have left us before the gracious words, "Thy faith hath made thee whole."—*Correspondence.*

SCRANTON, PA.

Before a large audience Prof. Hermann S. Hering delivered a highly interesting lecture in the Lyceum theater last night [May 9]. Attorney Laurence H. Watres was chairman of the meeting and introduced the speaker of the evening. In doing so the chairman said:—

In the gospel of St. Matthew we find the command, "Be ye therefore perfect, even as your Father which is in heaven is perfect." It is unnecessary to dwell on the statement that probably no one on this plane of existence has reached the full degree of spiritual perfection which is enjoined upon us by this command. What we have a right to look for and to expect to find, however, is the most direct, practical, and unerring path along which to work to attain this perfection, which will give us an understanding of what our God-given birthright really is and what it means to us now.

It is true that the Bible contains all the teaching which is necessary to gain this perfection. It is also true that the majority of people find these teachings most difficult to apply in a practical manner to all the varied and complex difficulties which arise in human experience. To make it possible for us to interpret spiritually and unfailingly the teachings of Jesus to meet our own needs and conditions in every phase of experience, is the true function of religion, and a religion which successfully does this can truly be said to be scientific.—*Scranton Truth.*

[Written for the *Sentinel.*]

ASSURANCE.

MINNA MATHISON.

PAIN, I know thee not;
Get thee behind me.
Darkness, I fear thee not;
The light will find me.

Error, approach me not;
Truth guards the portal.
Flesh, thou enchain'st me not,—
Transient and mortal.

Strength fills me day by day,
Truth doth renew it;
Mine eyes have seen the way,
My steps pursue it.

I know the only One,
Truth that endureth;
Light more than stars or sun,
No cloud obscureth.

Answering the Spirit's call,
Truth faileth never;
Life, substance, All-in-all,—
Love reigneth ever.

TESTIMONIES OF HEALING.

A great many mortals are looking for the truth, although not all of them know it. Heartsick and weary of the husks of materialism, they would fain return to the Father's house, if they only knew how. To those weary and heavy-laden ones who are looking for the light, I would speak a word of hope and cheer.

Brought up in an orthodox church, I was taught to read the Bible, which I could not understand, and I prayed to a God who never seemed to answer my prayers, but I was told that I must love God and bear all that He sent without murmuring, and that if I wandered from this straight and narrow way God would punish me, and I would endure everlasting punishment. Finding it impossible to practise what the Bible seemed to teach, I became a so-called backslider, but occasionally when attending a revival meeting, or when some of my religious friends would interest themselves in my welfare, I would try again.

I continued to try and fail and then be sorry, but no matter how hard I tried I could not be a Christian for any length of time. The Bible taught that the followers of Christ must be stanch and firm, and swerve not, and I became disgusted with myself for being so unstable and changeable. This went on for years, but hidden deep was an undercurrent of fear of punishment from God, so firmly had my early teaching taken root. From time to time I investigated various religions, also so-called faith-healing, but whatever interest or enthusiasm I had soon wore away. At one time I heard the words Christian Science and asked a friend what it was, but was informed that it was the work of the devil and to have nothing to do with it. I would like to have been good and to have been at peace if I had only known how, but as I looked around me and on all sides saw sorrow, trouble, and poverty, suffering, injustice, and deceit, I became hardened and skeptical. I argued that if there were a God I did not care to know anything more about Him. I was a wanderer without hope or God in the world. In the mean time I married one whose concept of God was similar to my own, who also had tried, become disheartened, and had no use for religion. As the years went on I became a physical wreck, a great sufferer, evidently beyond hope of doctors, as they could do nothing more for me. Discouraged, and in a hopeless condition, I would gladly have died only for a sense of fear of what the future held.

With nothing left, and dreading the final outcome, a copy of Science and Health was placed in my hands. I read, fairly devoured the book. It was food for a hungry heart, I knew it was the truth, and I felt like shouting for joy. I was healed of my physical troubles in almost no time, and have been a well, strong woman for four years. The book was a revelation, a "key to the Scriptures" indeed, as it claims to be. I found a God whom I could love with heart and soul and mind, and I learned how to love my neighbor as myself, as the Bible demands. I found that God does love us, and does not punish or destroy, or send want and woe; that He is perfect, and that His children, and the universe created by Him, are perfect also. I can understand the God that Christian Science reveals and I can read and understand the Bible as explained in Christian Science.

I have found a God who answers prayer, for I have learned how to pray. Like the "prodigal son," when I turned from seeking life and help and God in matter, and started on the return journey back to "our Father," who is Spirit and must be seen and worshiped spiritually, I found Him, and my own true selfhood as a child of God in His image. For the first few months I sometimes wondered if I would continue to be interested in Christian Science, having been so fickle with everything else, but my hope and faith were built on the rock this time, and so have stood

Digitized by Google

firm. Although not at first interested, in less than a year my husband accepted the teaching of Christian Science for himself, after being healed in one treatment of the tobacco habit of years. Since my first reading of the book we have never employed a doctor or used a material remedy for ourselves and two children. Christian Science has healed during this time acute lung trouble, coughs, fevers, and various minor ills which come to all mortals to be destroyed. It has also helped us in business and in every way.

My heart overflows with gratitude for the revelation of Truth which Christian Science has brought to me. For this reason I would say to my sisters and brothers, Awaken from the Adam-dream and follow the light of Truth which "lighteth every man that cometh into the world." God is good and forever true, and nothing but good can come from Him.—MRS. PAULINE ARCHIBALD, Haverhill, Mass.

An overwhelming sense of gratitude prompts me to tell what Christian Science has done for me. Two or three years ago I passed through what seemed great sorrow and disgrace. The week before this incident I told a member of my family, who was seeking help in Christian Science, to leave it alone, as it was the work of the devil. Little did I then know that I was rejecting the corner-stone of Christianity.

In my great anguish I asked a friend, who had called to see me, to direct me to a Christian Science practitioner, for, as Job said, "Even today is my complaint bitter: my stroke is heavier than my groaning." I saw the kind practitioner, who listened patiently to my story, and she spoke with such assurance that I was relieved of pain and was able to sleep that night, which I had not done for some time. She loaned me a copy of "Science and Health with Key to the Scriptures," and I was eager to know what that book contained. I felt a great sense of hunger come over me, and I persisted in searching for the truth. Many years had been given to church and philanthropic work, yet I never had been satisfied. I had even gone to my Sunday school superintendent and told him that I would have to give up my class of boys, for I was not instructing them aright. I could not accept some of the teachings which that church was giving. My experience, however, proved that "man's extremity is God's opportunity." I knocked and the door was opened. Unceasingly I was seeking, and with the aid of a faithful practitioner the clouds swiftly passed away, and I was gaining each day, until great floods of the truth were pouring into consciousness. Later, the way was opened for class instruction, which was a great help to me.

I can surely repeat the words of the man whom Jesus healed, "Whereas I was blind, now I see." I am truly grateful for the way shown us by the Master, and for the rediscovery of the same truth by our beloved Leader, Mrs. Eddy. I am also grateful to all who so kindly assisted me.

MRS. ETTA C. BAILEY, Detroit, Mich.

I wish to express my gratitude to God for a wonderful healing I received in Christian Science. I came home from my ship in May, 1910, to spend my vacation in Columbus, Ind., and just before my furlough expired I was taken with a severe attack of measles, there being an epidemic at the time. A physician who was called said I was very ill and would not be able to return to my ship for three weeks, and wrote the captain of the ship to this effect.

My mother, who is a Christian Scientist, came down the next day and asked me if I would be willing to take Christian Science treatment. I consented, and she at once sent word to a practitioner to treat me. The night before I had been delirious all night and had been strongly influenced by the devil to eat any and all food, or leave my bed. The next night after my treatment began in Christian Science I rested well all night, the following morning the eruption had about all gone, and I ate a hearty breakfast and continued to improve. The third day I dressed and went out of doors, and remained up until eleven p.m. Three days later I left for my ship at Philadelphia, and have been well ever since.

I am deeply grateful for this healing and for the great spiritual understanding which I received through the experience. I now own a copy of "Science and Health with Key to the Scriptures" and love to read it.

E. C. WHITESIDE, U.S.S. Georgia

I have for so many years silently accepted the help which Christian Science has brought me, that I think it is high time I expressed a word of gratitude. During my recent mid-year examinations, I became rather excited over the prospect of examinations occurring on five successive days, and the night before the first of these I seemed to be very sick indeed. I received help from a practitioner, as well as from my mother, and the next day I was much better, but it did not seem advisable to take my examinations for that day. I was, however, able to take all the rest of them, and I am very thankful for this and for the many other times that I have been helped through Christian Science.

An inspiring Wednesday evening meeting which I recently attended brought me something very sweet and helpful, after the rather material studies of the day, and has made me look to my blessings and has impelled me to put into words a little of the thankfulness I feel for the life of our Leader and for her wonderful book, "Science and Health with Key to the Scriptures."

MISS FLORENCE E. ADAMS, Somerville, Mass.

It gives me great pleasure to testify to the excellent healing work done for me in Christian Science. I had been ill for about five years, suffering severely at times from stomach, liver, and bowel troubles, also rheumatism; but I was healed in eight treatments given by a Christian Science practitioner.—MRS. MARY K. BECK, Bloomington, Ill.

I was healed in Christian Science through treatment by a faithful worker. I had suffered for several years from stomach, liver, and bowel troubles. I had read Science and Health somewhat, but failed to apprehend its teaching sufficiently to get relief. Later, one treatment brought me the healing, and it has been permanent.

DAVID W. BECK, Bloomington, Ill.

For years I have been the recipient of many blessings brought into my life through a slight understanding of the truth as taught in Christian Science, that God is Mother, universal cause, the only creator," and that "real is the Mind" (Science and Health, pp. 331, 297). This revelation of Truth has brought such a sense of divine protection to my heart and home that mere words fail to express my gratitude. Of demonstrations over physical ills I have had many, but to me the spiritual uplift has been far greater. The continued cleansing of consciousness, although seemingly slow, affords daily proof that I am in the right way, and remaining physical ills will disappear as I am faithful in my effort to cast out all that is unlike God.

In the old way we were taught to be good and to do good, but to me it was in such a vague, impersonal manner that there was danger of becoming lost in the air, mere sounding brass, preaching with little practise. Such was my experience and thought when our Leader's books were brought to my attention, and her teaching I eagerly accepted, for the reason that it pointed the path which led to God. My progress seemed very slow until I received class instruction at the hands of Mrs. Eddy's students, which enabled me to understand better how to apply the truth to daily needs. Since that time I have had many trials and disappointments to

Digitized by Google

increasing joy through finding that every difficulty overcome is a step onward and upward.

Thanking God for the life-work of our revered Leader, and for the many blessings which fill the present hour, I make this grateful acknowledgment of the benefits bestowed upon me and mine by divine Love as revealed through Christian Science.—MRS. NELLIE DIETLER, Denver, Col.

About the last of August, 1910, I met with an accident, an experience which has fully proven to me the value of Christian Science as an ever-present help. While cutting a piece of siding with a knife, the tool slipped and cut the end of my finger off about half-way down the nail. The men with whom I was working at once suggested material remedies, and also mentioned the danger of blood-poisoning, and I will admit that their talk aroused in me a slight fear; but by striving to realize that there is only one power, even God, good, I wrapped a cloth around the cut and went home. There I read for some time in Science and Health, and tried to make the demonstration myself. After dinner my finger felt much better, but not feeling sure of my own understanding I called that evening upon a Christian Science practitioner and asked for treatment. My finger at once lost the painful throbbing sense, and I left much enlightened. I continued the treatments for a week, and at the end of that time removed the bandage from my finger. The cut healed very quickly, and I now have a perfect finger.

I am truly thankful for a knowledge of Christian Science and all that it has done for me, and I look forward to the day when every one will awake to know the power of Truth.

JOHN L. FREEMAN, Kearney, Neb.

For over sixteen years I had suffered with a severe chronic ailment. I tried many remedies and had undergone a surgical operation in the hope of getting relief, with but little benefit. I think it was in 1901 that a copy of *The Christian Science Journal* was sent to our home by a lady who had received some benefit from Christian Science. I had never even heard of it before this time, and the copy was sent especially to my sister, but I took it up and read it. The testimonies given in it led me to send for a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, with the hope that I, too, might get relief from the ailment from which I had so long desired to be free, and after reading the book a number of times I was not only free from that trouble but my general health was very much improved. Many times since, in cases of slight accident I have escaped painful results by realizing the truth taught in Science and Health.

I am thankful to God for all the help which has been given me, both directly and indirectly, in Christian Science.

SARAH WOLFE, Union Bridge, Md.

Many years ago I was requested to read Science and Health and pass my opinion on it. When I did so my verdict was that I could see nothing in it, but every time an opportunity occurred I again took up the book and read it. I finally consented to be treated for the tobacco habit, and to my surprise the appetite was entirely destroyed and has never returned. This opened my eyes, and I took up the study of Christian Science.

Truth had plenty to do in my case! I had suffered from asthma from infancy, and heart trouble had developed in later years, so that in the opinion of a reputable physician who examined me my stay on earth would be short. I received no encouragement that any material remedy would do anything more than afford temporary relief. By this time I was in earnest and commenced to study thoroughly "Science and Health with Key to the Scriptures" by Mrs. Eddy. I found relief at once. I do not know when the heart trouble left me, but it went, and in five years the asthma and every other physical trouble was absolutely healed. Not one of the ailments has ever returned.

For all this I am truly grateful, and I recall our Leader's words: "Glory be to God, and peace to the struggling hearts!" (Science and Health, p. 45.) The spiritual uplifting that has come to me with its absolute proof, in being able to overcome the propensities to evil of the so-called "natural man," to be baptized in divine Love and feel our dear Father's care, is, however, as far beyond physical healing as the genial sunshine is ahead of moonbeams to promote the growth of plants. My supreme desire now is to hear God's voice and obey.—JOHN H. PARK, Billings, Mont.

More than twenty-two years ago myself and husband became greatly interested in Christian Science by the healing of his mother and sister. We had become afraid of material medicine, for in trying new remedies we would be made worse. With much appreciated kindness our sister sent us a new copy of Science and Health, and by carefully reading this text-book, ignorance of God was no longer a hindrance to our progress. We could see clearly that the teaching in Science and Health was the truth of which we read in Jesus' saying,—"Ye shall know the truth, and the truth shall make you free."

I took two weeks' treatment of a Christian Science practitioner, and was healed from rheumatism and other ills which had held me in bondage continually. Later I had the privilege of taking class instruction, and while in this class a burden fell from my body. My mentality was emptied of error, while a new experience came gradually into my life and home.

I wish to add this demonstration, as I hope it may be of benefit to some one. I stepped on a board and a large rusty nail penetrated my foot, so that my daughter had to pull hard to get it out. Trying to realize the ever-presence and all-power of God, I walked to the house, but I became sick with pain in my foot and limb. I had to go to bed, my foot swelling very badly, and great fear seemed to be creeping upon me. My husband and son helped me to declare the truth, and in an hour I was better, but not until next day did the pain entirely leave me. On the third day I could put my foot to the floor,—the swelling was all gone. Surely the saying of the Lord shall come to pass, "Every knee shall bow to me, and every tongue shall confess to God." The greatest of all the blessings which this truth brought to me was the light thrown on the Scriptures. Spiritual understanding has made the Bible a new book to me.

I daily thank God for the precious gift of the wonderful book, "Science and Health with Key to the Scriptures," by our dear Leader. Through all these years, the study of the Bible with the aid of Science and Health has been our only means of support and strength in overcoming weakness, sickness, obstacles that seemed insurmountable at the time, fevers of the worst kind; but all these trials were overcome by the understanding that God is a present help in time of trouble.

MRS. AGNES RODOCKER, Durant, Okla.

The above happened just as stated by my wife.

N. C. RODOCKER, Durant, Okla.

In August, 1907, I went to the Christian Science reading-room in Washington, D. C., at the request of a gentleman whom I had never seen before, but I was suffering intensely and willing to try anything to get relief. I was wearing dark glasses at the time, my eyes being very sensitive to the light, and was suffering from sleeplessness and nervousness, as a result of hard drinking and fast living. I had tried two doctors, but got no relief, and when the eye trouble came on I did not consult any more physicians, as I did not believe they could do anything for my eyes, having failed to relieve me otherwise.

Digitized by Google

The lady in charge of the reading-room loaned me a copy of Science and Health and I gave me some good advice, but after making several attempts to read I became afraid lest my eyes should grow worse, so I gave up the reading and took treatment from a practitioner, which seemed to have no effect. I left Washington about this time (this all happened in about two weeks) and came to Philadelphia. As time passed, my condition became worse. I had tried glasses without getting relief and was still suffering from nervousness. Finally, in December, 1908, I again turned to Christian Science and took up the study of Science and Health, but did not go to a practitioner. It took about ten days to overcome the fear that my eyes would get worse by reading, but remembering the kind advice of the lady at Washington, I kept on, and while my eyes were not healed, they felt much better, and my condition improved otherwise. I was therefore convinced that if I was faithful I would finally get the healing.

Some time about January, 1910, I forgot all about the eyes, and have felt no trouble since. I had called on several Christian Science practitioners for treatment, but it seemed that I must do my own work. I have therefore decided to put all my trust in God, good, and remember what our beloved Leader says. I am, however, learning to feel more kindly toward everybody, and no longer judge others as formerly. I am truly grateful for the spiritual uplift which has come to me.—F. CAMPBELL, Philadelphia, Pa.

The reading of a testimony in the *Sentinel* has made me realize that I have been neglecting my duty in not offering my own before this time, so I send it with the prayer that it may be the means to lead some other sufferer to the source of all blessedness.

From childhood I was troubled with what the doctors pronounced an internal form of neuralgia. I did not know one day free from pain, and often my left arm was helpless. Three or four years ago the disease developed into an affection of the heart, for which three of the medical profession told me there was no known cure. Christian Science was brought to my notice in the summer of 1908, and in the fall of that year I purchased a copy of Mrs. Eddy's book, "Science and Health with Key to the Scriptures," and began reading it to see if there was anything in Christian Science which I could accept. I was willing to believe, and read with such interest that I completely lost sight of my trouble until one day, after I had been reading two weeks, I opened the book and as I read page 392 (lines 15-17) I suddenly realized that I was healed. I did not know just when the trouble had vanished, but I could look back on three days free from pain of any kind, and I have had not the slightest return of the trouble.

I am truly grateful to God for His loving-kindness, and to Mrs. Eddy for her life of self-forgetfulness which made possible the reappearing of the great light of Truth. This light shows us unmistakably the path we must travel, and Truth lifts us out of the mortal dream and enables us to attain the "glorious liberty of the children of God."

LENORA L. CRICHTON, Wright, Cal.

On the 16th of April, 1909, a few days after the ice had gone out of Minnehaha creek, my little boy, not yet four years old, went down to the creek alone and fell in. The water was deep and the current very strong, and he was carried more than a mile down stream, over rocks and under two barb-wire fences. His coat caught on the third, and a man working in a field saw a child sitting, as he supposed, on the edge of the bank fishing. After some time he concluded that no child would sit still for so long a time, and he went to see if anything was wrong. He found the child in the water caught on the fence that crossed the creek, and he had to swim to get to him. He thought the child was dead, but in carrying him to a cottage some little [illegible] from the place he saw some evidence of life. They commenced to rub him and put warm things about him, not knowing whose child it was, but when on their way to a telephone they met my mother looking for him. A neighbor came for me, but she did not know whether he was alive or not. I telephoned to a Christian Science practitioner at once and told her the conditions as I knew them at the time—that the child had been gone an hour and the last time he was from home when found. The practitioner assured me that she would do all she could to help.

When near the cottage where the child was I heard his cries, and men who were standing about the door asked if I had brought a doctor. I answered that I had not, and was said that if the child had more convulsions he would not know anything if he did survive. I went into the room where he was, but he did not know me. (My mother had gone home to telephone to the practitioner about the child's condition.) He was in great agony, and in a few minutes asked to be left alone with him. I told him mother was with him and that God would help him; that he had nothing to fear, that God had always helped him. He was much easier, and after a little he answered "Yes" to my next statement that God was his help, and he God's child. The lady who had been so kind came in, and I put warm clothes on him, and he soon fell asleep for a little. Several times he seemed to be in distress, but it soon passed, and in two or three hours I took him home. Three different times he threw up a quantity of water, but at ten o'clock he was very comfortable. I put him to bed, and he slept until six o'clock next morning, when he dressed himself and ate a hearty breakfast. When friends came to ask about him, he met them at the door, smiling and happy. He had a cut, but this soon disappeared and there was not a mark on him.

The child has been changed entirely in disposition since then. Before this occurrence he was timid and full of fear and subject to frequent colds, but that tendency has disappeared and he is free and happy now. Through the blessed work of Mrs. Eddy our understanding of God has changed, and our house was not a house of mourning but of rejoicing. I am very thankful for Christian Science, for it is my help at all times and under all circumstances.

MRS. L. R. DENNING, Minneapolis, Minn.

Jesus said, "Ye shall know the truth, and the truth shall make you free." I know positively that it has made me free—not from a material prison, but from what is worse, a mental prison which held me in bondage to such cruel masters as stomach trouble, "tobacco heart," nervousness and fear of lung disease. My one wish in writing this testimony is that it may lead some one who is in bondage to seek the truth, for when it is sought in the right way it enables each one to prove for himself that the truth will make him free and give him that peace which passeth all human understanding.—W. HOLSTEIN, St. Louis, Mo.

My heart is so full of gratitude to divine Love, and also to Mrs. Eddy, for what Christian Science has done for me that I feel I must send this statement to the *Sentinel*. When I was five years old I had a severe fall, and this supposedly brought on a form of epilepsy from which I suffered until I was about twelve, when I seemed to outgrow the attacks, but they returned with redoubled force at the age of forty-five and for more than three years my suffering increased with little hope of relief. In the early nineties my sister-in-law came out from Buffalo, N. Y., to our home in Iowa to reside. She brought with her a copy of Science and Health, and this was the first I had ever heard of Christian Science.

Digitized by Google

At first I would not listen to her, but she convinced my husband and children that there was something in it, and after a good deal of persuasion, to please them, I consented to take absent treatment. I had no faith in it myself, but a practitioner in Buffalo was written to and during my treatment I lost all consciousness of the body and seemed to be lifted above materiality. That one treatment healed me completely, with no return of the malady, and from that time I have understood that God is All-in-all, and He has been my physician, my very life, ever since. I am now sixty-seven years of age and do all my housework, as well as look after other duties on our farm.

MRS. HANNAH COLE, Forest Grove, Ore.

Being a son of Mrs. Cole, I can witness to the facts as stated in the testimonial of her healing.

MILTON COLE, Forest Grove, Ore.

For fourteen years I have lived in and near Mill Valley, and during all this time, with the exception of the last year, when I took up the study of Christian Science, I was a sufferer from colds and throat trouble. Never a winter before has passed when I have not been laid up four and five times, and some years as often as once in ten days, with severe colds. For three years I did not dare go out at night for this reason. My throat was in a bad condition most of the time, and the swelling extended into the ear, causing deafness.

I consulted and was treated by seven of the best specialists in San Francisco. The first told me that the disease had progressed so far that he could do nothing for me; the next, that the only way I could retain what hearing I had left was to lay aside so much money each month as long as I lived to be used for forcing air into the ear passages to keep them open. The third told me I must go to a warmer climate if I ever expected to be better. Another said the whole trouble was due to a growth, and he refused to treat me unless I would submit to an operation. This was performed, and for the entire winter following my throat was burned with an electric wire, first one side and then the other as soon as it was healed over. The torture of these treatments resulted in nervous collapse and facial paralysis, and it took three months to get over this. All this time my throat was as bad as ever and my hearing growing worse. Next, my eyes gave out and I was forced to wear glasses, then the strain from using them produced such violent headaches that every week or so I had to give up my work and go to bed—the pain seeming almost unbearable.

In utter despair I went to a Christian Science practitioner, having little or no faith, but my mother had been most wonderfully healed in this way. I told the practitioner of my condition, and she answered by telling me that as I had faith enough to bring me there, this was all that was necessary. She told me to lay off my glasses, which I did, and my eyes were healed. All the nervousness disappeared, all the throat trouble, and the wretched fear of colds. Even my hair, which had nearly all fallen out, started to come in again. The noises have about ceased and my hearing does not trouble me as it did. I am most thankful for all this help I have received. The peace and comfort and spiritual help I have obtained from my study of Christian Science have made me happier than I thought could ever be possible. Try as I would, there was no satisfaction for me in the beliefs which I had held, so I had learned to love nature as my God and the only God I ever expected to know.

Words cannot express my gratitude that I have been led into the way of Truth and have been able to demonstrate Truth's power in some measure for myself and others. It was one year in March, 1911, since my last cold. For this alone I feel repaid for the efforts I have made to understand Christian Science.

EDITH M. POOLEY, Mill Valley, Cal.

FROM OUR EXCHANGES.

[Bishop Rhinelander, Pennsylvania, in *Living Church.*]

First think of the blessedness which is promised to the pure in heart, namely, to see God. What does that mean? I think we are too apt to put off the idea of seeing God into the far-off future, as if it meant only a vision that was to come to us after death, in a strange life, full of new powers, where we shall not have to walk any more by faith. That indeed is our hope, because it is Christ's promise, but that hope must have some sort of foundation to rest on. Unless an earthly foundation is laid for it, there will be nothing on which the heavenly superstructure can be built. And Christ is thinking and speaking primarily of this earthly foundation. He means a present vision of God which shall be a preparation for the future. What then would it mean for us all to see God? You know the difference between looking at and seeing things. You know how we can get vague impressions of things without really seeing them at all; how we can be out in the glory of a sunset and be so absorbed in other things as to forget it; how we can witness a great act of sacrifice and not understand it; how we can kneel in prayer and not in the least realize what we are doing. That is looking at things but not seeing them. And so many men and women walk about this world just touching the appearance and not the reality of things. They move about as in a dream, as if they were present at a play.

Now to see God is to see through things to truth, to understand what things really mean. It is very practical; a matter of every-day experience. In everything, seeing God means simply realizing Him everywhere and at all times,—at His altar, at our bedside, in our prayers, in our dealings with our family and friends. It means bringing heaven down to earth, seeing our life as God sees it, walking by His side. You see faith does not mean trying very hard to believe things which do not seem true. Just the opposite. It does mean seeing the things which alone are really true. God is really there, whether we see Him or not. Faith simply means having our eyes wide open to the real facts. Faith for us means really seeing God.

[Rev. S. G. Barnes, D.D., in *Hartford* (Conn.) *Seminary Record.*]

What is theology separated from life? It is a substitution of talk about God for the knowledge of God; of a philosophy of salvation for the experience of salvation. Instead of bread it gives us a stone; it denies the inmost needs of man, and leaves his heart starved and his will atrophied. And it is a piece of presumptuous intellectualism, the intrusion of a proud science and an audacious philosophy into the region where faith is fain to bow down and to worship. How amazing it is that rival schools of religious philosophy have shut the doors of heaven against each other, and used the most sacred doctrines as clubs wherewith to break each other's dogmatic heads! The whole series of religious persecutions, in the name of Him "the weapons of whose warfare are not carnal," shows that theology when exalted above life can become the most virulent of poisons. It was the "theologians" of Christ's day, the men that substituted dogma for obedience, who crucified the Son of God. Theology and life,—God has joined these two by the most sacred tie; let no man separate theology from humble and thorough obedience to the God it declares, from full and free-hearted acceptance of the godlike qualities it analyzes. Theology, human thought about God, needs life's constant test and training and shaping, if it is to be an adequate representative of that God whose supreme quality is that He gives eternal life.

[*Christian Register.*]

The highest virtue is not with those who have it, but with those who out of failure win it back, or who, having it, make their virtue productive and contagious. The reason

Digitized by Google

why Jesus said of the worst kinds of sinners that they would enter the kingdom of heaven before the best kinds of saints was that to climb up from the depths of iniquity exalts more moral quality than to remain a natural goodness. To combat a temptation successfully calls on more of a man than not to have it, and to rise out of a fall, however direful the specific instance, is a test of moral strength that angels may not pass. The most godlike thing in this world is not to be godlike, but to change the fatality of a lower world into the freedom of the "sons of God;" not to be conformed to this world, or, in fact, to any world, but to be transformed by the renewing of the mind, to prove through changed lives "what is that good, and acceptable, and perfect, will of God."

[Rev. John R. Hunter in *New-Church Messenger*]

The Lord has taught that the new doctrine must not be merely as a piece set upon the old garment of our former habits, nor as the new wine seeking to accommodate itself to the old sinful forms of thought and action, but it must be rather the new, warm, living spirit of love and truth embodied in a new, strong, consistent, outward life.

Unless the doctrines we accept intellectually, unless what the church teaches concerning purity of thought, the surrender of the self life, the keeping of the commandments in the spirit of love, the duty of service—unless these things become a part of the very warp and woof of life, wrought into its fiber through the prayer and toil and struggle of every-day experience, our religion is like a vestment, world made and worn, whose rents are not repaired, whose fabric is not strengthened by the cloth of a new doctrine.

[M. M. Pattison Muir, M.A., in *Hibbert Journal*]

To live in the world of theological dogmas is to live in a world of unrealities. The acceptance of these dogmas protects a man from the great trouble of life—the trouble of thinking. Contact with new religious experiences produces in many theologians a feeling of irritation, which finds vent in querulous protests and impassioned denunciations. When new religious facts are discovered, some disagreeable hypothesis has to be grafted on to the dogma which used to fulfil its function of "protective resistance." The result is unsatisfactory. There is an emotional and intellectual gap between the old dogma and the new guess. This must be so if it is taken for granted that the reality of the religious facts is to be tested by their agreement with the dogma which is more real than they.

[*British Congregationalist*]

The church today is a depressed and discouraged church. Christian folk are disheartened by the seemingly impregnable strength of the evil persons confronting them. They talk of "reaction" and "arrest." They begin to doubt and fear as to what the issue of things is going to be. And their doubts and fears in time cripple their energies and paralyze their efforts. A recovery of courage is our sorest need. Churches, like individuals, are saved by hope. And courage is born of faith in a mighty Lord. It is back to that mighty Lord, that divine Christ, we need to come. When we recover our vision of Christ in his glory, another vision will gladden our enraptured eyes—we shall see "the holy city, new Jerusalem, coming down from God out of heaven."

[J. Herman Randall, D.D., in *Christian Work and Evangelist*]

Real religion is the power which enables a man to see not the thing, but the soul of the thing; not the external surface of life, but the essential spirit beneath the surface. Many so-called "religious people" today are really materialists, because they are blind to the soul of things, to the essence of life, to the heart of truth. "Having eyes, see ye not?" Religion must lead men up to the plane of the ideal. It must open the eyes to catch the new vision of truth. It must help men discern the spiritual significance and deeper meaning of all that goes to make up our life.

SPECIAL ANNOUNCEMENTS

FROM THE PUBLISHER OF MRS. EDDY'S WORKS

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket-size editions. Description and prices will be found on inside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is cloth bound; 79 pages.

In accordance with instructions given by Mrs. Eddy her publisher on Sept. 13, 1910, an edition of "Science Divine Science," printed in the New York point system type for the blind, has been prepared and is now ready. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the pamphlets by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or notices, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

Catalogue No. 20, June, 1912, has recently been issued and will be supplied to reading-rooms upon request. The catalogue contains complete lists of all publications issued by the Society, and of the works of Mary Baker Eddy published by Allison V. Stewart.

Orders for aluminum markers, which are listed in the catalogue No. 20, June, 1912, have not been filled owing to delay on the part of the manufacturers. It is hoped that the markers will be on hand for delivery early in August.

A new pamphlet, "Christian Science Healing: Mental Suggestion," by Frederick Dixon, reprinted from the *Weekly Budget*, London, England, is now on sale. Price and cover, at the prices of the regular pamphlets.

FROM THE CLERK OF THE MOTHER CHURCH

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist.—The Mother Church.—printed on linen sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their branches, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DILLAMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE: ITS RELIGIOUS PHILOSOPHY. By HON. CLARENCE A. BURRITT.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large sized book), single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

A forestry conference was held recently at Bretton Woods, N. H. Cooperating with the Society for the Protection of New Hampshire Forests, under whose auspices the meeting was held, were the New Hampshire Forestry Commission, the American Forestry Association, the Association of Northeastern Foresters, and the New Hampshire Timberland Owners Association. At the annual meeting the report of the natural forest reservation committee was issued, including the purchases approved by the committee. The list follows: Georgia area, Georgia, 81,676 acres; Massanutter area, Virginia, 19,322 acres; Mt. Mitchell area, North Carolina, 18,701 acres; Nantahla area, North Carolina, 27,816 acres; Natural Bridge area, Virginia, 24,000 acres; Smoky Mountain area, Tennessee, 50,213 acres; White Mountain area, New Hampshire, 72,252 acres; White Top area, Virginia and Tennessee, 33,614 acres.

One hundred and twenty million dollars was filched from the American people during the last fiscal year by swindlers who operated largely through the United States mails, according to a formal report to Postmaster-General Hitchcock. This was an increase of approximately fifty million dollars in the aggregate of the previous year. Of those who are alleged to have operated the fraudulent schemes, one thousand and sixty-three were arrested by post-office inspectors. They included persons in all walks of life. During the year which ended June 30 last, four hundred and fifty-two persons were convicted and sentenced, and five hundred and seventy-one cases are awaiting final disposition. The report says that these fraud manipulators, who usually exploit bogus mines, fake remedies, and worthless lands, constitute a distinct class of law-breakers.

Not less than five separate reports will be embraced in the Stanley steel trust investigating committee's statement to the House as a result of its investigation of the affairs and operations of the United States Steel Corporation. The Democratic majority will file two reports. Three will come from the Republican members.

In response to a resolution calling for a statement of the total cost of the Philippines, the President sent to the House a special message in which he said that the islands have actually paid for themselves, with the balance in their favor in all items except the increased cost to the army and navy on their account.

There are now 1,744 organized bodies of the Y. M. C. A., with a total membership of 563,479, in North America. The value of the new buildings opened is approximately five and a half million dollars, making a total value of about seventy-three million dollars.

The grand total of excavation on the Panama canal to July 1 was 173,280,815 cubic yards, leaving to be excavated 22,053,564 cubic yards or less than one eighth of the entire amount necessary for the completed canal.

Anti-saloon interests won a victory before the Senate judiciary committee when Senator Cummins was authorized to report favorably a bill giving to "dry" states power to intercept shipments of liquor from "wet" territory.

Final drafts of the three bills amending the Sherman antitrust and the interstate commerce acts, which will be recommended for enactment into law by the Stanley Steel committee, are completed.

It is confidently expected that there will be parcels post legislation before the adjournment of the present session of Congress, and it will be of such a character as to give the system a thorough trial.

International.

The majority of the civilized world will rejoice at the decision of the French Chamber with regard to the disfiguring advertisements with which the railway routes and highways of France are lined. The owners of land which fringes the principal thoroughfares have lent themselves to the destruction of the beauties of their country, but the government has now imposed what is practically a prohibitive tax on these advertisements. Unfortunately those which have already gained a footing will be allowed to retain it for three years, out of consideration for the people concerned in the contracts. Advertisements on the walls of houses will for the present escape destruction, but the Chamber holds out the hope that soon these will also be taxed out of being.

According to the new Egyptian law all antiquities found in Egyptian territory will in future belong to the state. Dealers in antiquities will have to provide themselves with a license from the antiquity department, and every one who discovers an immovable antiquity will have to give notice of the fact immediately. Finders of movable antiquities will be entitled to receive half the objects discovered or their value in money. No one will be allowed to excavate without a license from the minister of public works and the consent of the director of the antiquity department. A special authorization from the department is also necessary where the export of antiquities is contemplated.

Lord Strachie, until recently the representative of the board of agriculture in the House of Commons, delivered an important presidential speech on rural housing at the conference of rural district councils held at the Guildhall. He contended that it would be greatly to the advantage of the peasantry in England if cottages could be built on the same principle as in Ireland under the Laborers Act (Ireland) of 1906. In spite of the Housing Acts and the last Housing and Town Planning Act of 1909 there was still a great demand for more and better housing with land attached in English rural districts, and in his opinion no country dwelling should have less than a quarter of an acre of land.

Winston Spencer Churchill, first lord of the Admiralty, in introducing the supplementary naval appropriation of five million dollars in the House of Commons last week, said the direct cause of the increase in expenditure on the British navy was to be found in the new German navy law, the main feature of which was the increase in the striking force of ships of all classes. Mr. Churchill announced the British ship-building program for the next five years, saying that five battleships were to be constructed next year and four in each of the following years.

The Chinese government is contemplating offering to Dr. George Morrison, the correspondent in Pekin of the London Times, the post of general adviser to the Republican government. Earlier advices from Pekin stated that Prof. Jeremiah W. Jenks, who recently resigned the professorship of political economy and politics at Cornell to assume special charge of the department of politics at New York University, had been offered the post of financial adviser to the Chinese government. Other advisers were to be appointed also.

Industrial and Commercial.

The management of the New York, New Haven & Hartford Railroad has decided to electrify and four-track the Boston & Providence Railroad. The work may be started this fall and could be completed before the close of 1913. The cost will be between six and a half and seven million dollars, and it will be the first piece of electrification of a steam road out of Boston. The entire electrification will be overhead trolley and single-phase alternating current, corresponding to the type employed on the New York end, and one great power-house to supply the current for running both southbound and northbound trains will be put up at Providence.

A new plan has been adopted by the city of Melrose, Mass., for the building and rebuilding of streets throughout the city which, it is believed, will result in much longer wear to the streets and a consequent saving of money to the city. Under the new plan, on all streets where there are undeveloped building lots, plans are obtained from owners of the property which are filed with the city. Then the gas, sewer, and water mains are laid, and connections are made from the mains to the street lines of the abutters' property, providing for connections being made at such times in the future as the houses or buildings are erected.

Australian meat exporters are alarmed at the news that an American concern is setting up big meat-packing works at Brisbane, and ask the government to interfere to protect trade against American trust methods. The Melbourne correspondent of the Chronicle learns that while Attorney-General Hughes is satisfied that the American beef combination is establishing itself in Australia, the government is powerless to intervene in the present state of the law.

The success of the cooperative credit movement in India has led to the proposal to start departmental cooperative credit societies in the larger telegraph offices throughout the country. Societies of this nature have already been established by the Calcutta port trust and the customs service, and in each case have been found most successful.

One hundred and forty kilometers of new railways have been opened recently in the Eifel district between the Rhine and the Belgian frontier. The construction of these lines has taken place during the last two and a half years at a cost of about two million seven hundred thousand pounds.

The first all-Ceylon exhibition, covering thirty acres of ground in Victoria park, Colombo, was opened recently. The exhibition contains exhibits illustrating the arts and crafts of the island and its industries.

In his recent report, Lord Kitchener of Egypt refers to the fact that a much larger proportion of the finer varieties of cotton was grown in 1911 than in previous years.

The value of exports of apples from the United States to the United Kingdom in 1911 was $2,429,060. In 1909 the exports amounted to but half this sum.

The length of railways in Brazil at the end of last year was 13,750 miles, an increase of four hundred and seventy-one miles over the total for 1910.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

NO OLD AGE IN TRUTH.

IRVING C. TOMLINSON, M.A.

UNIVERSAL testimony concerning Christian Science is summed up in a remark recently made by an old friend who is not a Scientist to one who is: "You look younger than you did twenty years ago." And why not, since we have these words of the psalmist respecting God's power to heal and bless: "Who healeth all thy diseases; . . . who satisfieth thy mouth with good things; so that thy youth is renewed like the eagle's." Mrs. Eddy assures us by well-authenticated example and proof that "decrepitude is not according to law, nor is it a necessity of nature, but an illusion" (Science and Health, p. 245). Before the realization of the truth of this teaching, old age is retreating into the background, and eternal Life is in some measure finding visible manifestation. This is vastly different from the way of the world, for mortals expect to grow old, plan to grow old, are entirely content with it, and as a result they bear upon themselves the marks of age and decrepitude, forgetting that though material things change and are put off, that which God creates is forever perfect and enduring.

The message which Christian Science bears is a clarion call to abandon the false position of the world, and to take the ground of Christ Jesus when he said: "I am come that they might have life, and that they might have it more abundantly;" and again, "Whosoever liveth and believeth in me shall never die." Christian Science teaches that God is Life, without beginning and without end; that man is Life's idea, and since Life is unchanging, the idea or expression of that Life must of necessity be unchanging too. In Science and Health we read: "Never born and never dying, it were impossible for man, under the government of God in eternal Science, to fall from his high estate" (p. 258).

Because God is Life, and man the eternal reflection of that Life, those rightly instructed do not in their thought dwell upon difference in ages. One idea of God is no older than another, and when we are abiding in Truth and Love we have everything that is real in common, conscious that time and its limitations are not real and that eternity is. It is therefore no more scientific to dwell upon difference in ages, than it is to think of discord or suffering as something real. This of course does not mean that children are to be treated like "grown-ups," but it does mean that those whose consciousness is awakened have a common basis in Life, in God. Truth makes them one in being, and Love knows only the divine image and likeness untouched by times and seasons, and manifested in friendship, kindliness, purity, gentleness, and affection. We find help for these inspiring thoughts even in the world about us, where the signs and thoughts of age are gradually disappearing, being replaced by a happy tendency to break away from a sense of being compressed within the narrow limits of something we call time. Those who are "along in years" do not think it necessary to parade the fact in garments or practises which would proclaim the falsehood of old age; and this is a very helpful sign.

Science and Health utters no uncertain sound upon the subject of abiding life. It says to us, "Hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thoughts" (p. 261). Those who have the true understanding of God and man are dwelling only in the thought of Life, and consequently they are manifesting it in activity and appearance. It is expressed in wide-spread sympathy for the truest and best in being. Christian Scientists insist upon freedom. They declare for the supremacy of Spirit, and for the supremacy of the childlike thought which contains no hint of age. They know that "with God all things are possible," and with each day they affirm that "this is the day which the Lord hath made" and declare for every moment that "the joy of the Lord is their strength." This thought is beautifully expressed in the Christian Science Hymnal (p. 98):—

Eternal Mind the potter is,
And thought, the eternal clay;
The hand that fashions is divine;
His works pass not away.

Man is the noblest work of God,
His beauty, power, and grace,
Immortal; perfect as His Mind
Reflected, face to face.

HEAVEN'S FAVORS.

LUCY HAYS EASTMAN.

As the tyro in Christian Science imbibes the milk of the Word he finds its sweetness divine and frequently becomes as impetuous as the dust-stained traveler who emerges from a dreary desert to revel rapturously in the cool brooks of the forest. Enthusiastically the traveler would, perchance, make for the distant mountain-top in the heat of the day, vainly expecting to reach it quickly, and if the tyro yields to a similar longing to scale instantly the lofty heights of divine Science, self-will and blind impetuosity may bring him serious and regrettable experiences before he learns in Christian Science to advance through a clearer understanding and the practise of the truth which he knows.

On the other hand, if he subdues his overzealous aspirations and wisely leans upon the promises of God, he will indeed receive his "meat in due season," being led gently amid green pastures. Moderating boisterous enthusiasm and subjugating the spirit of human propaganda, the ardent beginner will discover what it means to be a recipient of heaven's favors. Then he will yield his thought to a systematic effort to apply what truth he already understands, and thus replace former fragmentary and theoretical opinions with demonstrable facts. Thus he learns the truth of Mrs. Eddy's statement that "heaven's favors are formidable" (Christian Healing, p. 1) and that for each spiritual blessing there is a battle to be fought and a cross to be carried. The gifts of divine Love are not showered into the arms of one who is begging for more while idly sitting still, nor bestowed upon the busybody who is promiscuously scattering pearls before swine.

Heaven's favors are jewels of boundless wisdom and haloed purity. By their very nature they impart holy in-

Digitized by Google

spiration and spiritual strength to humanity, while to the carnal mind they are the weapons that are "mighty through God to the pulling down of strong holds." Consequently this mind at once wages war with them. Hence the struggle and the cross, the victory and the crown, for those who on bended knee are seeking the things of Spirit. The human mind is the arena for the suppositional conflict between good and evil, and the more an individual becomes a conquering soldier on the side of right, the more surely he comes within range of the direct fire of the enemy. The more of heaven's favors he merits, the more of error's darts he must avert. No man ever received greater spiritual blessings than did Christ Jesus. No man ever bore a greater cross. No one was ever more unselfishly true to his kindred and country, and yet no one was ever so hated and persecuted by the members of his own race and religion.

We read in Science and Health (p. 455) that "God selects for the highest service one who has grown into such a fitness for it as renders any abuse of the mission an impossibility. The All-wise does not bestow His highest trusts upon the unworthy. When he commissions a messenger, it is one who is spiritually near Himself." If then we feel that our brother is receiving more of heaven's favors than we are, let us avoid asking why we seem deprived of equal benefits, and let us turn a deaf ear to the self-justification that would unlawfully whisper, "Have not I just as much right to those favors as another? Have not I been striving to live the best life I know how?" The rather let us searchingly question, "Am I willing to forgive the wrong; to place the happiness of others before my own and unflinchingly to bear the heat of error's battles; to carry the Master's cross and drink of his cup uncomplainingly?" If the heart can affirmatively answer these questions, heaven's favors will be seen as universal, for Love never limits its bestowals, neither is divine Mind a "respecter of persons." The light of the sun and the beauty of the stars are for all who place themselves within reach of these blessings. In the same way the spontaneous gratitude and unselfish desire which are melted in one divine impulse to glorify God, place us within receptivity of heaven's favors and reveal the multiplied blessings ever at hand for all; whereas ambition, rivalry, self-pity, envy, and jealousy of another's talents are the doors which we ourselves shut upon the very favors we so desire.

Heaven's favors are wholly spiritual and therefore invisible to the material senses, and yet while an individual is still in the realm of human belief these favors assume the form which can best manifest the tender relationship of Deity to His "only begotten Son"—man. To illustrate, the invisible Christ assumed the form of the man Jesus, who "took not on him the nature of angels; but he took on him the seed of Abraham" that he might bless with the true sense of life "them who through fear of death were all their lifetime subject to bondage." It was indeed a divine privilege to associate with the Master, not for the personal pleasure and comfort it afforded, but because it was an opportunity to learn more of God, and in those days human association was the only means that afforded metaphysical instruction. Nevertheless spiritual sense, as it ever does, pointed beyond this human concept of good, beyond the great joy of personal association with the man Jesus, to conscious union with the incorporeal Christ who was not born "of the will of the flesh, nor of the will of man, but of God." Patiently, to all who had hearing ears, did the Master endeavor to point out this true selfhood and attainment, the recognition of which is one of humanity's most ennobling possibilities. Yearningly he asked, "Have I [the divine interpreter of Spirit] been so long time with you, and yet hast thou not known me [the spiritual idea of divine Love]?" The desires and aspirations of mortals have been so clogged with the beliefs of fleshly pleasure that the tangibility of heaven's blessings are hidden from their sealed eyes. The healing for such misplaced desires was clearly pointed out to Peter, who, eager for the same blessings that the love-filled John had earned, asked jealously, "What shall this man do?" Sternly yet lovingly came the answer, "What is that to thee? [What have mortals to do with the impartation of the divine blessing?] follow thou me." In other words, Look to Christ, Truth, and all cravings will be satisfied. Had the disciples followed this instruction, their growth out of dependence upon the personal Jesus into reliance upon divine Truth would have caused them less anguish of loss, and bitter experiences would have been forestalled.

The divine favor of witnessing the victory of Life over death found the faithful Mary the first ready to receive it. Dimly she beheld the reappearance of the crucified Jesus as a supposed gardener, and then becoming more fully illumined of the Spirit she saw that he was indeed her beloved "Rabboni." Later the disciples, according to their degree of spirituality, also received this heavenly blessing. But not until "they were all with one accord in one place," in the consciousness of the one Mind, did they experience the greatest of all heavenly blessings, the influx of the Holy Ghost, whereof the Master had said, "At that day ye shall know that I am in my Father, and ye in me, and I in you." What more could be desired?

This same forever Christ-idea, with manifold blessings, has again been revealed to the world. Today it assumes the form, to humanity, of Christian healing, and we will find and cherish this divine idea to the degree that we apply ourselves in diligently learning through the Bible and our text-book, Science and Health, how to know one God and how to overcome evil through loving and understanding good. Then indeed will heaven's favors have come down to earth, and we will cry out with Jacob, "I will not let thee go, except thou bless me," while with the shepherd king we will sing, "Bless the Lord, O my soul, and forget not all his benefits: who forgiveth all thine iniquities; who healeth all thy diseases; . . . who crowneth thee with lovingkindness and tender mercies."

"I GIRDED THEE."

MAUD DUNN.

LATELY it came to me very clearly how true these words of our Leader are: "Divine Love always has met and always will meet every human need" (Science and Health, p. 494); and as I dwelt upon the first affirmation I realized how in the past my needs had been met according to my understanding, divine Love being with me even then, although I knew it not. One especial instance of this fact comes into my thought and fills me with gratitude. When but a child of about twelve years old I was seized with a fear of immediate death, although I was well. I said nothing to any one about this fear, but it seemed to haunt me and morbid pictures presented themselves to my mental vision. Just at this time my father, who is a clergyman, invited a neighboring curate to preach for him. I went as usual to church, and when the text of the sermon was given out I felt as if a direct message had come to me, for it was the verse, "I shall not die, but live, and declare the works of the Lord." I was then and there healed of the fear, and have never forgotten the relief I experienced. Again, when quite a child, I lost a little pearl ring which my mother had given me, and I did not know whereabouts it had been dropped. Again I said nothing to any one, but instinctively I went to God in my trouble and I prayed incessantly that the ring might be found. At the end of a few days the ring was brought up from the village smithy; it had been stepped on by a horse and become embedded in the soft part of the foot, where it was found when he came to be shod. The owner of the horse said, "Perhaps it belongs to one of the young ladies up at the rectory," and at once brought it there. I looked upon the event as a miracle, and for many years wore the little battered ring on my watch-chain in order to be reminded of the answer to prayer.

Digitized by Google

As the years rolled on I however grew more and more discouraged, until the light of Christian Science came to me. Looking back I now see how true the verse is, "I girded thee, though thou hast not known me," and as I advance in understanding I realize more or less clearly that as the errors of the past were met and trials overcome by divine Love, they are being met today with the fuller understanding gained from our revered Leader's writings, and always will be met as the future unfolds more of Truth and Love.

THE GOOD AND THE TRUE.

CHRISTIAN ANDERSEN.

THE statement is sometimes made that Christian Science is too good to be true. Incredible as it may seem, even Christian Scientists, in unguarded moments, are assailed by this preposterous suggestion. That evil should attempt to legitimatize itself through a fraud as transparent as this, only emphasizes the words of Jesus that the devil is a liar and the father of lies. Even the materialist, who professes to believe that the universe and man have come into being through material causation, and that spiritual phenomena "so called" are the result of special organizations of matter, has no warrant for believing that anything can be too good to be true; to do so he would have to assume that matter has a tendency to organize itself in a manner to produce evil rather than good.

But what of those who profess to believe in the existence of an omnipotent, loving God and yet say that Christian Science is too good to be true? That, from their standpoint, anything might be too bad to be true or too true to be bad would be logical, but that anything could be too good to be true would be nothing short of the unthinkable; it would necessitate the supposition that if God were Love he could not be Truth, and *vice versa*. It is impossible for man to conceive of anything too good to be true; to do so he would have to conceive of something better than infinite Love, for surely infinite Love is true. In the proportion that man is like God does he realize good, and not only is Christian Science not too good to be true, but since no Christian Scientist has yet arrived at a full realization of man's likeness to God, his concept fails as yet to reveal the full measure of the goodness of God.

Every time it is denied that the sick can be healed by the understanding of God through Christian Science, such denial really amounts to this iniquitous claim that Christian Science is too good to be true. Every Christian who makes this denial says in effect that, while the healing of the sick would be one of the greatest proofs of the love of a good God, yet he has failed to provide such proof; says it in spite of the plain statement of the Master: "He that believeth on me, the works that I do shall he do also."

When the suggestion that Christian Science is too good to be true presents itself, we do well to remember the Scripture which saith, "Eye hath not seen, nor ear heard, neither have entered into the heart of man, the things which God hath prepared for them that love him." No other theory or philosophy can usurp the place of Christian Science as the truth of being, since to do so it would have to offer something better than Christian Science offers, and this is impossible. The only way to improve on Christian Science is to understand it better.

"QUICK UNDERSTANDING."

CASSIUS M. LOOMIS.

To have our knowledge of the Science of being where we can make instant use of it in time of need is a most praiseworthy attainment. All along our way, from the mere act of mentally denying an unsavory report about our neighbor to picking oneself out of a wreck and instantly affirming the nothingness of mortal evidence, we find much to do if we are consistent Christian Scientists. He who has put these things to the test knows that being constantly clad in the full armor of righteousness insures victory daily, hourly. In the eleventh chapter of Isaiah we read concerning the divinely inspired man that "the spirit of the Lord . . . shall make him of quick understanding," so that he shall not "judge after the sight of his eyes, neither reprove after the hearing of his ears."

It is somewhat disappointing to learn, after an accident or bodily injury, that we have overlooked our privilege of denial until the error has wound its mischievous tentacles about us. How watchful seems mortal sense, and how ready it is to strike us dumb or take away our remembrance of the truth! Can we not become much more alert in affirming the good—our one unfailing defense—and thus, from habit, more effectively fight off evil? The skilled workman strikes the glowing steel while it is hot; it may take its time to cool. No outburst of human passion is ever so glowing but that a prompt denial chills it to a point of harmlessness. If the word we use is silent, it may be all the more effective.

The native ability of a good lawyer to assure his client by prompt denial that a vicious rumor about his case has no power whatever, may be the means of winning a suit at law; whereas, should both lawyer and client truckle to an unjust report, and thereby accord it a measure of reality, the opponent in the case might win by the mere default of negative thinking, and not through the rightful workings out of justice. A friend once told the writer of his early acquaintance with a Christian Scientist, before he had made a study of metaphysical teachings. When, perchance, he had spoken unguardedly about his fellows, some sort of mental denial seemed to be given back to him; he knew not what it was. He felt it to be a rebuke, though tendered him with the utmost kindness, while not a word was spoken in response. Since then he has learned why his unwary remark fell flat. His friend's mental resistance was instant and effective. We might suppose, then, that had this Christian Scientist injured a wrist or an ankle, he would out of habit and the training of his thoughts have been able to reduce the injury in a very brief moment. Such are the "signs following" that come to the devoted student of the truth.

It is the same with our aches and pains, sicknesses and sorrows. One ounce of prompt denial is better than a pound of belated cure, of whatever name or nature. On page 393 of Science and Health our Leader writes: "Exercise this God-given authority. Take possession of your body, and govern its feeling and action. Rise in the strength of Spirit to resist all that is unlike good. God has made man capable of this, and nothing can vitiate the ability and power divinely bestowed on man." What excellent authority for the seeker after truth! When our ability for speedy declaration of the truth and denial of error is more fully developed, we shall indeed be masters of every seemingly unfortunate condition, and what a very good proof of our professed Christianity this will be!

The Christian Science practitioner has taken upon himself a responsibility which is twofold. He must do his own work wisely, uninterruptedly, and with a clean heart. And he must so emphatically and scientifically affirm the truth for his patient and deny all seeming errors, that every hour's accomplishment will furnish him added proof of God's answer to prayer. Scarcely can there come into his days time for recreation; he is a veritable sentry ever on duty, and, being thus equipped for momentary action, he is never without the true idea which negatives every false premise made known to him. Meantime he, too, is growing in his realization of the better way.

Who can estimate the far-reaching effect of a gospel thus lived and practised? Let our thoughts run into infinity; the very truths we daily affirm are there. Let our hearts beat in unison with God's beneficence, and the denials of error which we make must and will efface every shade of belief in error, leaving Truth in absolute possession of the field.

A BAR TO PROGRESS.

IDA CLARK ALLINGHAM.

UNREASONABLE criticism and complaint darken one's dawning sense of spirituality and stunt one's own growth in Christian Science. The children of Israel were brought through the water on dry ground, but up to that time, although Moses proved to the people that God was leading them, they were afraid to take the next step because they could not see how God would lead them over that expanse of water. And when Moses would have cried unto the Lord because of all the doubt and fear, God said, "Wherefore criest thou unto me? speak unto the children of Israel, that they go forward." To stand still with a sense of lack and limitation does not give one a sense of progress, but rather just the opposite sense, and the complaint will be voiced that he is not making a demonstration over the false claims arising from lack of understanding. A sense of need is experienced which, if not guarded against, may be passed on to others and possibly a whole church or community be influenced by it.

Miriam and Aaron criticized Moses, who had risen to a higher plane of thought than they themselves had done, and they were punished for their sin and foolishness, but the whole congregation were at a standstill until this thought was healed, and no progress was made until the error was eliminated from the camp. This should teach us to avoid the mistake of criticizing and condemning others, who may possibly have risen to a higher plane of thought than that which we ourselves have attained. It is the complaining and limited thought which leads one to criticize and thus bring himself and others into darkness.

Criticism and complaint are often a cause of lack and limitation. Giving fluctuates where these errors sometimes seem to predominate. Our divine supply is not intermittent, and why should our giving be so? "Freely ye have received, freely give," has no limitations, and nothing but wrong thinking can divert our supply of any good thing or our giving out that good again. We are told that if we keep the commandments to do them, we may go in and possess the land which the Lord sware unto our fathers; "a good land and a large, unto a land flowing with milk and honey;" yea, and "a land of wheat and barley," but we are not to forget the divine giver when we have eaten and are full, when the herds and flocks have multiplied and the silver and the gold abound, but we are told to "remember the Lord thy God: for it is he that giveth thee power to get wealth, that he may establish his covenant which he sware unto thy fathers, as it is this day."

In "Unity of Good" (p. 11) Mrs. Eddy says, "Jesus taught us to walk *over*, not *into* or *with*, the currents of matter, or mortal mind. His teachings beard the lions in their dens. He turned the water into wine, he commanded the winds, he healed the sick,—all in direct opposition to human philosophy and so-called natural science. He annulled the laws of matter, showing them to be laws of mortal mind, not of God. He showed the need of changing this mind and its abortive laws."

There is no limit to the good to which we may attain if only we keep our thought clear and unclouded by doubt, fear, and fault-finding.

OBEDIENCE.

JOHN E. FELLERS.

OBEDIENCE is a tuneful note that vibrates through the universe and sings its song to every world. Obedience is a fountain of living water; disobedience is a dead sea, stagnant, lifeless, still. Obedience is harvest; disobedience is blight. Obedience is a flower, the answer to the sunshine and the rainfall; disobedience is the ugly thorn, pricking each friendly hand and helping none. Each willing service rendered makes obedience easier for every other struggler along life's road. Each temptation we overcome not only strengthens us for future trials of our faith, but on the basis of Mrs. Eddy's teaching that "whatever blesses one blesses all" (Science and Health, p. 206), it prepares all who follow or journey by our side better for the test.

Obedience is answer, response, decision; disobedience is debate. He who will not obey, cannot direct, construct, or command. If authority sometimes seems exacting, responsive obedience will soonest win respect, and fit us better for considerate favor. The tree that bends easiest, withstands best the wildest storm. Obedience is a voiceless challenge to selfishness, self-ease, egotism, and pride. It is resolution, rising out of discipline, chastened, purified, redeemed, ready to support a call and a cause that deserves answer and service. It is the prodigal, homeward bound. It is the road heavenward. It is Abraham, leading his only son away to the mountain.

If we would win prosperity, health, happiness, recognition, we must deserve them through obedience. Obedience is the pole-star that guides through the night of doubt into the dawn of understanding. It is the story of Gethsemane finding its way to the heart of humanity. It is the Word "made flesh," carrying the cross up Calvary. It is the risen Saviour, not yet ascended to the Father. It is Mary at the open tomb. It is Christian Science, blessing the world with the comforting assurance, "Lo, I am with you alway."

EVIL REVERSED.

MARY HORNIBROOK CUMMINS.

WHEN reading the ninth chapter of Acts, thought turns involuntarily toward the little group of Christians at Damascus. We cannot help picturing what their mental attitude must have been when they knew that Saul of Tarsus—the persecutor who had watched and consented to the stoning of Stephen, Saul, the lawyer who could pick to pieces any defense which they might make, Saul with the power and authority of the chief priests behind him—had actually started for Damascus with the avowed intention of bringing them bound unto Jerusalem.

It would be difficult to imagine a more unpromising outlook for that little group of disciples! Viewed from a human standpoint, there was not one hopeful thing about this episode, not a single loophole by which they might escape. That they loyally trusted in God to deliver them we may safely conclude, but that there was some fear is shown by Ananias' answer to the angel, "Lord, I have heard by many of this man, how much evil he hath done to thy saints at Jerusalem." We see reluctance on the part of Ananias to come into any personal relation with Saul, until reassured by the voice of God. But Ananias need not have feared, for the Saul of Tarsus who left Jerusalem never arrived at Damascus. In his place came "Paul, called to be an apostle of Jesus Christ through the will of God."

How often, today, we seem to see some "Saul of Tarsus" journeying toward us. It may be in the form of a definite ordeal from which we would gladly escape, were it possible; or it may be a vague fear, in our work as Christian Scientists, of human law, of the authority which is apparently able to take us "bound to Jerusalem." Let us remember, however, that error never arrives at its destination. No matter how auspiciously it may seem to have started, no matter what the asserted authority behind it, Christ, Truth, appears to demonstrate God's law of annihilation to all that is unlike Love, as we are so often assured in our revered Leader's writings. Relying wholly upon the Christ as our protector, we shall hear, as undoubtedly did those disciples at Damascus, the promise given in the ninety-first Psalm, "It shall not come nigh thee." Nay, more, the threatening of disaster will prove to be—as in their case—that which ministers unto us spiritually.

SELECTED ARTICLES.

[Editorial in *Los Angeles* (Cal.) *Tribune.*]

The Christian Science Monitor of Boston got out a complete daily edition at Chicago during the Republican convention. In order to do this it had established at Chicago a complete plant, and secured a staff of competent men, many of whom must have been Chicago reporters, for the local work was as thoroughly covered as the political field. The reports of the convention were profuse, yet well ordered and without partizan color. Editorially the paper was at the high standard already made familiar through the Boston publication. Typographically it excelled any of the Chicago dailies of which it had become the sudden contemporary.

[Editorial in *San Bernardino* (Cal.) *Sun.*]

To send the paper instead of the news is a most unusual journalistic feat. Ordinarily, the news is gathered and sent to the home office of the newspaper for publication. But *The Christian Science Monitor* took another plan at Chicago. It absolutely moved itself, or a part of itself, from Boston to Chicago, during the Republican convention, and issued a Chicago edition. A new and complete newspaper plant was installed for the purpose, although only used a week.

The big journals spend thousands to score news "beats," but this move made by the *Monitor* has the virtue of being absolutely original. Typographically the edition was a replica of the Boston paper, while a staff of writers was sent from Boston to Chicago to watch the convention and report it according to the *Monitor's* somewhat unusual standards. The feat is absolutely unique in up-to-date and down-to-the-minute journalism.

[From *New Orleans* (La.) *Item.*]

Noticing in the *Item* of Saturday [June 22] the stories of suffering in the direction of Barataria by victims of the Hymelia overflow, the Christian Science publication committee for Louisiana has delivered to the *Item* checks to the amount of $315.85 for use in immediate relief of stricken people. The checks received were from banks of the following cities: Canajoharie, N. Y.; Malone, N. Y.; Peekskill, N. Y.; Johnstown, N. Y.; Montgomery, Ala.; Newark, N. J.; Geneva, N. Y.; Lowville, N. Y.; Fort Edward, N. Y.

The *Item* diverted $110 of the above amount on Monday to the purchase of two thousand sacks for the people of Gretna, who are now fighting the water lapping over the back levees of their thickly settled community.

[From *Truth*, Buffalo, N. Y.]

Henry Deutsch, a Jew, who some years ago became a Christian Scientist, believes the Hebrew may do this without losing hold on the fundamentals of the old faith. This does not puzzle us nearly as much as that a contrary impression should exist. Because the ancient Jews rejected Christ as a miracle is no reason why the modern one should fail to recognize in him the symbol of all good and wisdom, as the beauty of his life and teachings undoctored by men prove him to have been.

Christian Science weaves no wonderful stories about his comings or goings, that he was and is being the important factor to this sect, as it must be to all thinking men; and as most Jews are this, there is nothing strange or miraculous in the fact that every Christian Science church has its quota of Hebrews.

[Frederick Dixon in *Hampstead Advertiser*, London, England.]

The address on Christian Science, given by a clergyman and reported in your paper, may be said to have been directed to two issues: first, to a repudiation of the theology of its teaching; and, second, to a criticism of its practise. Now it may be said, without any hesitation, at the outset, that it is as impossible to separate the theology from the practise of Christian Science as it is cause from effect. It is, indeed, largely because the orthodox churches have been, for centuries, in a more or less degree endeavoring to do this, that they have been steadily losing ground and that there has been a corresponding increase of infidelity. If Christianity is to be defined in any of its phases, it can only be defined from the Bible, and if we turn to the Bible for some illumination on the question of cause and effect, we shall find it summed up in the remarkable utterance of Jesus to the Pharisees, in the court of the women, in Jerusalem, "Ye shall know the truth, and the truth shall make you free." One of the greatest of churchmen and scholars, speaking of these words, has shown how the Greek text manifestly refers not to any relative sense of truth, but to the absolute, to "that which is;" and this may help to make clearer, to those who have not studied the subject very deeply, the meaning of a not uncommon phrase in the New Testament, translated, usually, knowledge of God, but which should, of course, be translated full, exact, or scientific knowledge of God, and so of Truth. There can obviously be no more scientific knowledge than an exact knowledge of that which absolutely is; and so we see that any knowledge of Truth which is to free the world, must not merely rid the world of ignorance, but enable it to demonstrate that knowledge.

The gospel of Jesus constituted his theology, a theology which was essentially practical, inasmuch as it was essentially demonstrable. No teacher, indeed, ever bound practise to precept with such "hoops of steel." Preach the gospel, he said, and heal the sick; and in order that there might be no mistake that the two were coincident, and that he meant, preach a gospel which will heal the sick, he referred the disciples of John, who came to demand whether he was the Christ, not so much to the preaching as the practise, not so much to the theology as the miracle; while when he wished to define a believer in the theology, he did so in the terms of one who was able to demonstrate practically the truth of it. However the critic may regard the subject, the Christian Scientist accepts the obvious meaning of Jesus' words, that a Christian must prove his Christianity, not by words, but by works; not merely by preaching the gospel, but by healing the sick; and this leads to the second question of how that healing is accomplished. Now it is perfectly certain that Jesus never made use of any material means. The Bible is quite clear on this point; he healed the sick by a word. Sometimes this word was spoken, sometimes it was silent; sometimes those healed were present, sometimes they were absent. The remedy, consequently, was no phrase or formula, it was Jesus' knowledge of Truth mentally expressed, and the mentality which expressed it was the Mind of Christ.

Perhaps no more outrageously anti-Christian position has ever been taken up than that of those orthodox believers who argue that this mental treatment was a form of mental suggestion. Any one familiar at all with the Old Testament must remember how the efforts of the eastern wonder-workers called forth the strongest denunciation of the prophets. And any one familiar with the New Testament will call to mind how naturally the Pharisees brought this charge against Jesus, when they wished to discredit the healing done by him. To any one with ears to hear, the reply of Jesus settled once and for all the plea for mental suggestion as a factor in Christian healing. Jesus realized that the claim of the human mind, full of impurity, to do good, was inseparable from its claim to do evil, and dismissed it in the simile of a kingdom divided against itself, doomed to destruction. But Jesus was never satisfied with a mere negation, and so he went on to state the absolute, in the simile of the power of God. Knowledge is power; and there is no more powerful knowledge to be gained than the knowledge of the absolute, which in casting out the ignorance contained in the belief in the reality of evil, brings about the freedom of spiritual understanding.

As a man "thinketh in his heart, so is he." The writer of Proverbs had a clearer perception of the philosophic idealism of today than the materialists of the Christian era. Christian Science accepts the idealism of the natural science of today, inasmuch as it regards matter as a subjective condition of the human mind, or a result of energy. At this point, however, it parts company utterly with it, and plants itself on the idealism of Jesus, "That which is born of the flesh is flesh; and that which is born of the Spirit is spirit." It remembers that that which is born of the flesh is of its father, the devil; but it does not forget that this devil, or personified evil, abode not in the truth, for there is no truth in him. Exchange the eastern metaphor of the first century for the western directness of today, and what does it mean but this: evil never was real, for there is no reality in it.

This was the truth taught by Jesus, and as one grasps its meaning he gains, little by little, the Mind which was in Christ Jesus, and begins, naturally and necessarily, to do his works. This, too, is the theology and practise of Christian Science, summed up by Mrs. Eddy in that wonderful passage on page 476 of Science and Health: "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick."

[Frank Bell in *Reading* (Pa.) *Telegram*.]

For the information of those who may have read the summary of a sermon reproduced in a recent issue, permit me to state that Christian Scientists recognize the phenomena of sickness in human experience as clearly as do other persons, and that they fully agree that "the sick have need of physicians" (healers). So far as Christian Science is concerned there is no occasion for sermonizing on the presence of suffering in the world and the need of healing the sick, because the very existence of the Christian Science movement is an acknowledgment of these things. Christian Science is a religion of healing, and while it makes the alleviation of physical ills subordinate to the overcoming of sin, a large proportion of its members publicly profess to having been attracted to it through the healing of diseases that had baffled other methods of treatment. In virtually every town and city in our land, and in many places throughout the civilized countries of the globe, are to be found Christian Science practitioners who heal the sick, and all these gained their knowledge of healing through the Christian Science text-book referred to in this sermon. How could a book teach one to heal if it taught that there was no occasion for healing?

Mrs. Eddy in her writings does deny the "reality" of sickness, sin, and death, but she states distinctly and repeatedly that this denial relates to the spiritual creation, and not to the mortal beliefs about life. It is unfair and misleading to quote her as to this phase of the subject without citing the distinction here mentioned. Those who persist in trying to make people believe that the practise of Christian Science consists in a silly attempt to ignore facts, are without excuse for this misrepresentation.

Christian Science is indeed a rebuke to any system of belief that would exalt sin or sickness by giving it place or part in the divine plan, thus impiously presuming that God is its author. By offering an explanation of evil that is not inconsistent with the acceptance of the Biblical assurance that God is Love, Christian Science has made it possible for large numbers of thinking people to eschew unbelief. It is difficult to conceive of anything more depressing than for the victim of wicked tendencies or bodily suffering to believe that in some mysterious way divine purpose is being accomplished by means of his enslavement. Show him, on the other hand, that his Maker is no party to his undoing, and there will result a mental attitude of rightful resistance to the encroachments of evil, which attitude aids mightily in the healing of both sin and disease.

"They that are whole have no need of the physician, but they that are sick," is only half a quotation. The remainder of this statement of the Master is: "But go ye and learn what that meaneth, I will have mercy, and not sacrifice: for I am not come to call the righteous, but sinners to repentance." Even accepting the far-fetched assumption that the term translated "physician" means only a drug doctor, it is evident that Jesus is merely citing a familiar simile to illustrate a spiritual truth as to his mission. Manifestly the simile itself means simply that it is the sick and not the well which need a healer, and it is used in this instance clearly to clinch the thought that the sinner, not the righteous, needs to repent.

Christ Jesus was "the great Physician," but it is not on record that he ever administered or prescribed drugs or ever taught or advised any one else to do so, though drugs had been used as medicine for centuries before his day. It is recorded that he sent forth his immediate disciples and "other seventy also" with instructions to "preach the kingdom of God, and to heal the sick," but nothing is said of pills or plasters or serum or diet. In fact we are told they returned rejoicing in the demonstration of their ability to do these good works, not with material means, but "through thy name." Luke may have been a drug physician before his discipleship, but there is no evidence that he ever resorted to the old methods after having sat at the feet of him who healed the multitude of all manner of diseases by the power of God alone, and who said that all who believed in him should do the works that he did, without restriction as to time or place.

Our friend's definition of "science" as dealing "solely with the material universe and its laws," is designated by the Standard dictionary as "narrow." In its broader sense science is synonymous with knowledge, and the use of the term is properly applicable to spiritual facts. Christian Science, reinstating the Christ-method of healing the sick and sinning on a basis of demonstrable knowledge of divine law, is in the strictest sense both Christian and scientific.

The "logic" of Christian Science does not "declare that the incarnation, the crucifixion, and the resurrection of Christ are false," but on the contrary affirms and explains these to the satisfaction of rational inquiry.

[R. Stanhope Easterday in *La Porte* (Ind.) *Herald*.]

It is strange to us that the reverend gentleman, after making such sweeping concessions as he does in admitting "multitudes in every communion have been marvelously healed by more or less direct coming into the presence of God," and knowing, as he must know, something of the all-power of God, should object if the church is "challenged to abandon all other means and depend solely upon the method of Jesus." We fail to understand, furthermore, how such reliance upon divine power can possibly be construed "neglect," how any better "skill" could possibly be conceived than that of the divine Mind, or how it can be considered in any sense "presuming" to look to God exclusively for surcease from human ills, in the light of the Scriptural assurance that it is God "who healeth all thy diseases." Neither can we appreciate what use God could possibly have for the mediation of human or material methods or means in His inscrutable exercise of the healing prerogative. It cannot be denied that Jesus, who did the most and the best healing that was ever done in the world, and who came into the world to "destroy the works of the devil," among which he classed disease as well as sin, did not use or recommend drugs or manipulation, did not diagnose disease or recommend the study of anatomy.

When his students on one occasion failed to heal a case, the great Teacher assured them that it was lack of "fasting

Digitized by Google

and prayer," not of anatomical knowledge, that prevented them. It would logically seem then that "fasting," *i.e.*, abstaining from the material that the higher and spiritual may be brought into evidence, and "prayer," *i.e.*, intelligent communion with God, constituted the entire pharmacopœia of the "great Physician." Coupling with this our Lord's dual command to "heal the sick" as well as to "preach the gospel," and his insistence that certain "signs following" should constitute the only criterion of true discipleship, and the preponderance of healing in his own earth ministry and during the activities of the early church,—all these would seem to justify the Christian Science contention that it was our Lord's theology that healed the sick and that the followers of the great Teacher should heal by their preaching and preach by their healing.

There is absolutely nothing in the Bible or in history calculated to bear out the idea that Luke, the "beloved physician," practised medicine after he affiliated with Jesus, or that anything other than a growing knowledge of spiritual truth is essential to healing all manner of diseases. It is, to say the least, unjust to insinuate that an intelligent reliance upon God and faith in prayer on the part of any individual in a community renders that individual an unsafe member of society, and facts do not bear out the contention. On the other hand, there is slight evidence to bear out the insistence that vaccine or antitoxin effectually and unfailingly prevents and safeguard. As a matter of fact, there is considerable evidence that these serums are both dangerous and fatal, in too many instances.

[Jno. M. Dean in *Memphis* (Tenn.) *News Scimitar.*]

One does not have to accept Christian Science in order to grasp its view-point, and yet this is logically deduced from Jesus' declaration, "God is Spirit" (Revised Version), a premise which no Christian thinker will presume to deny. If God is Spirit and man is made in His image and likeness, as the Scripture says, there can be no escaping the conclusion that the real man is spiritual, however transcendental this may appear to our human sense of things. And let it be said here that no critic has yet dared attempt to show that Mrs. Eddy in her book, Science and Health, even for an instant departs from her premise of God as Spirit. Science of whatever nature must be absolute to be science, and the science of Christianity is no exception to this rule. It hews to the line and takes no note of human opinions and beliefs, however deeply rooted, and never judges "according to the appearance," well knowing that the true creation is spiritual and therefore must be "spiritually discerned."

The pitiful inadequacy of human judgment is shown by the fact that mortal ignorance deemed this little earth the center of the universe around which our own sun and myriads of other worlds revolved until astronomical science upset these false conclusions, although sense evidence would still declare them true. In like manner Christian Science overturns prevalent notions regarding God and man, and submits every statement to proofs which should open the eyes of earth-blinded materialists who can see no farther than their own self-circumscribed horizon. Thus it comes to pass that one critic, from his lack of understanding, presumes to deride a system which commands the loving and loyal allegiance of tens of thousands of his fellows who are, no doubt, as capable of clear thinking as is he.

It must be borne in mind, however, that while Christian Science is absolute in its statements, it recognizes a relative condition of human experience which must be remedied instead of ignored. Erroneous conceptions of man and the universe, with their resultant sin, sickness, and death, are not alone individual, but universal, and it is this universal thought which must be combated and overcome before man arrives at the truth of being. The individual must recognize the wrong conclusions in universal consciousness in order to eradicate their effects upon himself, and it is only by individual effort that the whole will be made perfect.

No one recognizes more than Christian Scientists the fact that this attainment is a matter of immense growth, but a beginning must be made some time and they know no better time than now. Paul called this process a daily dying and the putting "off the old man with his deeds." An ancient philosopher reasons thus: "If you tell me that you want a fig, I answer you that there must be time. Let it first blossom, then bear fruit, then ripen." This is in line with the Scripture: "First the blade, then the ear, after that the full corn in the ear." When critics remember that the acme of spirituality emphasized by Jesus in his command, "Be ye therefore perfect" is no more binding on Christian Scientists than on themselves, they will perhaps withhold harsh censure of those who are at least striving to attain, while their critics are arguing from the standpoint of matter and proclaiming the ridiculous impossibility of even approximating a spiritual life.

[H. Farmer Hall in *St. Leonards Observer*, Hastings, England.]

"Science and Health with Key to the Scriptures" by Mary Baker Eddy, the text-book of Christian Science, takes as its fundamental proposition the omnipotence, omnipresence, and omniscience of God, as taught by Jesus the Christ, who working from this very basis healed the sick and the sinning more successfully and more certainly than any method of healing that has ever yet been, or ever will be, presented to mankind. The Master not only practised this truth-healing himself, but taught his followers how to do the same, and accompanied his teachings with the promise that "he that believeth on me, the works that I do shall he do also."

Now Christian Scientists, while accepting with other Christian people the fact of Christian healing, have, however, been taught that the healings performed by Jesus were in accordance with a law of God which is today as applicable to human needs as it was nineteen hundred years ago. They further recognize that any method demonstrated by Jesus and recommended by him to his followers must have been a strictly scientific method in the truest sense of that word, that which is based upon a correct apprehension of God the creator and His creation. Jesus himself said, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." It was the teaching and demonstration of this statement that formed the basis of Jesus' mission, in the performance of which he suffered for mankind and finally triumphed, demonstrating the truth of all his contentions. The aim, then, of every Christian Scientist is to gain and apply this true knowledge of the creator and His creation, for in this knowledge they believe that there is to be found that dominion over sin, sickness, and death which will result in their absolute extinction, and which, when realized, constitutes eternal life as promised by Christ Jesus.

Christian Science is daily giving evidence of its right basis, in the numberless cases of healing which even its critics are bound to admit, yet Christian Scientists would not for one moment claim that they have attained to that degree of understanding, the absolute gain of which will destroy all sorrow and suffering; nevertheless, they "press toward the mark for the prize of the high calling of God in Christ Jesus," and in so doing they recognize something that the world has not yet perceived, that in order to progress along the line of true scientific knowledge, it is profitless to continue the search by delving into that which pertains to the material, but rather must they concentrate all their efforts in the direction that leads to a clearer perception of spiritual cause and effect, to a deeper knowledge of that "law of the Spirit of life in Christ Jesus" which Paul declared has made us "free from the law of sin and death."

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

LOVE EVER THE THEME.

MANY of those who have since become Christian Scientists were much surprised when they first attended a Christian Science church service, to find there was neither personal preacher nor sermon, in the common acceptance of those terms. That such large congregations could be brought together and their interest retained, without the eloquence and so-called magnetism of a minister, was astonishing to these people, but as they continued to attend they began to realize the meaning of the correlated passages from the Bible and Science and Health, and not only saw the beauty and grandeur of the Lesson-Sermons, but also the reason for the statement that these sermons are "undivorced from truth, uncontaminated and unfettered by human hypotheses, and divinely authorized" (*The Christian Science Quarterly*, explanatory note). At first, too, it may have seemed to them that only certain passages from the Scriptures were used, but as they continued to attend these services they found that this was not so, and that the whole Bible, from Genesis to Revelation, was drawn upon for instruction. They began to perceive that the purpose of the Lesson-Sermon was to elucidate the spiritual meaning of the Bible text, and that in the church services and in their home study Christian Scientists were consistently endeavoring to follow the first tenet of Christian Science as given by Mrs. Eddy on page 497 of Science and Health: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life."

In time, we all come to a realization that in appointing the Lesson-Sermon for use in the Christian Science churches, thus making the Bible and Science and Health "our only preachers," Mrs. Eddy must have intended, among other things, that the churches of this denomination should be saved from what has often been a feature of personal preaching, namely, the use of so-called "proof texts" as a dogmatic form of condemnation or theological argument. The committee which prepares the Lesson-Sermons has been singularly successful in keeping them free from everything of this kind, and in making them broad, generous, and loving in their presentation of the various phases of the subjects which were selected by our Leader for this purpose. It is equally important that this breadth of view, this loving guidance, and this freedom from personality should be expressed in the selections from the Bible and Science and Health which are read at the Wednesday evening meetings. Unfortunately, there have been times in some of our churches when it was apparently thought necessary to make these selections fit what seemed to be looked upon as the sins of omission and commission of the congregation, and to use the Bible texts especially as not only in condemnation of these sins, but also in condemnation of the members of the congregation. This mode of selecting the readings cannot, however, work for the good of the Christian Science cause, since it is not in keeping with our Leader's purpose in instituting these meetings, as shown in a message to The Mother Church on page 149 of "Miscellaneous Writings," from which we quote as follows:—

"Invite all cordially and freely to this banquet of Christian Science, this feast and flow of Soul. Ask them to bring what they possess of love and light to help leaven your loaf and replenish your scanty store. Then, after presenting the various offerings, and one after another has opened his lips to discourse and distribute what God has given him of experience, hope, faith, and understanding, gather up the fragments, and count the baskets full of accessions to your love, and see that nothing has been lost."

"Accessions to your love,"—this is what the Wednesday evening meeting is to afford us. We are to bring "love and light," and distribute what of "experience, hope, faith, and understanding" we have been blessed with, that all may go away richer than they came,—richer and happier for the love so generously outpoured; encouraged and strengthened in their faith and hope and better able to meet whatever the days to come may have in store for them. There is no error that can withstand "the universal solvent of Love" (Science and Health, p. 242), and there can be no truly Christian Science service which has not this Love as the dominant theme.

ARCHIBALD MCLELLAN.

"THY TESTIMONIES ARE VERY SURE."

EVERY intelligent person has some sense of the significance of testimony to our asserted knowledge of the past, and to our judicial attitude toward men and movements today. In the administration of justice, in all civilized countries, it has ever been a determining factor, and it contributes very largely to the shaping of our opinions and convictions on well-nigh every subject which is not within the embrace of personal consciousness. Cumulative testimony not infrequently becomes so convincing that its rejection involves far more credulity than its acceptance, especially when concurrent evidence is supplied by those who are not in collusion, and who could not have given it had they been subject to hereditary impulse or been actuated by personal interest. All this is particularly true with regard to the historic data and the spiritual teachings of the New Testament. These have been accepted as true by millions of intelligent people, though there are no existing records dated prior to the fourth century, and though many of the events narrated are so strange and unusual as to be thought of as lying entirely without the plane of present demonstrability.

Proof is thus supplied us of the readiness of mankind to accept human statement, even when the most vital subject is at issue, and yet it is true that in our day some Christian people have shown the most obdurate disregard for the testimony which Christian Scientists have offered in support of the truth of the Master's explicit and oft-repeated statements. It is clear that those whose faith is so largely grounded in human testimony cannot consistently deny its worth, and the only explanation of their attitude toward the vast amount of testimony given by unquestionably sane and sincere Christian Scientists is found in that blinding religious prejudice which sealed the fate of pharisaism and which has made the history of Christian progress so contentious and sanguinary.

The world has become so accustomed to religious prejudice, however, that its appearance seems less surprising than is the hearing of the representatives of empirical science, which has always been thought of as welcoming and giving due consideration to every ascertainable fact. This has been especially true of the so-called science of medicine. The asserted material panaceas for human ills have not been disclosed through revelation, nor have they been discovered through intuition; their values have always been based on experimentation, on testimony respecting test cases, and it was fair to assume that when any new means of relief was witnessed to by thousands and tens of thousands of people, physicians would follow the course of the truth-seeker with respect to them, instead of which they have, as a body, certainly treated them as of no value. This altogether self-contradictory and discreditable attitude assumed by many Christians, physicians, and physical scientists, has utterly failed of its purpose, and for the simple reason that the testimonies of God, of Truth and Love, "are very sure." He who has voiced demonstrable truth may rejoice in knowing that he has spoken for all time; that his word will be heard

Digitized by Google

unto the ends of the earth, and that "the gates of hell shall not prevail against it."

In the presence of the contradictory facts that human belief has for the most part been based on testimony, and that both religionists and scientists are today practically declaring that testimony has no convincing value, it is interesting to note that Christian Science, while recognizing the helpful service of personal testimony, insistently teaches that essential spiritual truths are to make their convincing appeal through personal demonstration, so that testimony shall be worthy of credence. While there is much to learn of value which lies without the embrace of the individual consciousness, it remains true, as St. John has said, that "if we receive the witness of men, the witness of God is greater. . . . He that believeth on the Son of God [apprehends spiritual truth] hath the witness in himself." He therefore who in the understanding of that divine Science which Jesus taught, has proved for himself what is true, can speak to others with the confidence of the great apostle, and say, "That which was from the beginning, which . . . our hands have handled, of the Word of life . . . that . . . declare we unto you."

JOHN B. WILLIS.

"LOOK UNTO ME."

IN the prophecy of Isaiah we read these beautiful words: "Look unto me, and be ye saved, all the ends of the earth: for I am God, and there is none else." This text has been dear to Christian people at all times, but to many in this age it has taken on a larger meaning in the light of Christian Science. To many of these, this passage at one time meant that they must look to God for salvation from eternal punishment, but Christian Science has a more inclusive and more practical sense of salvation than this, namely, "Life, Truth, and Love understood and demonstrated as supreme over all; sin, sickness, and death destroyed" (Science and Health, p. 593). Christian Science also teaches that it is worse than useless to look to any other than God for salvation from any of these evils, that omnipotence alone is to be trusted in the depths of human need, and it gives the comforting assurance that none can ever trust God in vain.

There is, however, one important point which many overlook in their efforts to find help in Christian Science. They forget that looking to God, who is Spirit, involves looking away from matter, which is the supposititious opposite of Spirit; yet no one can deny the truth of Mrs. Eddy's statement: "If we look to the body for pleasure, we find pain; for Life, we find death." This is followed by the profound counsel: "Look away from the body into Truth and Love, the Principle of all happiness, harmony, and immortality" (Science and Health, pp. 260, 261); in other words, Look to God, and be saved.

In view of all this, how pitiful it is to remember that mortals instinctively look to the body for the knowledge needed to gain health,—even the dead body being examined for this purpose, when the words of Truth come ringing down through the centuries: "Look unto me," for "there is none else." No, truly, there is none other than God that can give life, or health, or happiness; and yet mortals look in every other direction for these and fail utterly in their quest until they turn to divine Truth, look to God in "every need." An old hymn has this line,—

There is life in a look at the crucified one,—

and these words assume a deeper meaning in Christian Science than ever before. They tell us of a look at the great victor over sin, disease, and death, the one who did not shrink even from the drear shadow of the last enemy, whether in the case of Jairus' daughter, or of Lazarus, or in his own experience. He had ever looked to Life for life and pointed others to Life with such absolute assurance that he could declare, "If a man keep my saying, he shall never see death." Alas for the eyes of sense that peer into the darkness of matter and grow more and more frightened at the shadows therein. And yet one of the old Puritans, in commenting upon the words of the psalmist, "Yea, though I walk through the valley of the shadow of death, I will fear no evil," wrote, "The shadow of a dog can never bite; the shadow of a sword can never kill; and the shadow of death can never destroy life."

It is true that one may help to guide the feeble footsteps of another, but this can best be done by helping that one to look away from the body or matter to the infinite and only Life. If the helper allows the gaze to rest upon himself, he will be needlessly burdened and his patient will miss what he most needs, and that is to look to God,—to lift up his eyes to "the Holy One of Israel," known of old, and known today through the inspired teaching of Mrs. Eddy, as the Life and intelligence of all being. It matters not what one's condition may be, mentally, morally, or physically, how far one may seem to be from God, for even "the ends of the earth" are called to look and be saved by Him who is "a just God and a Saviour."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

BOSTON, MASS.

The First Church of Christ, Scientist. Services: 10:45 a.m.; Sunday school, 10:45 a.m. (the evening service is omitted during July and August); Wednesday, 7:30 p.m. In the new church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m.

WHITE MOUNTAINS, FABYANS, N. H.

Christian Science services for the season were opened July 28 at the White Mountain chapel, located just west of Bretton Woods and Fabyans, near the White Mountain House, and will be conducted regularly at eleven o'clock each Sunday, up to and including Sept. 8. As there is no local congregation, it is announced at each service that "these services are maintained wholly by the voluntary contributions of visitors and kind friends." The earnest Christian Scientists whose devotion to the cause about twelve years ago placed this beautiful chapel in such close proximity to this group of summer hotels, will be pleased to know that the building has withstood the weather remarkably, and still more, that the work they planned is now going forward.

The advisory board which has the work in charge is striving in every way possible to make of this an opportunity to praise God by carrying His word to suffering humanity, for nowhere will a more metropolitan collection of people be found, when the season is at its height. If the work is intelligently and faithfully carried on, the present promises to yield a rich harvest in the future, as indications point to greater developments for this section with the coming years.

CORONADO, CAL.

The Christian Science Society of Coronado, Cal., has purchased a lot seventy-five by one hundred and forty feet at the corner of Eighth street and C avenue, and has built a temporary hall on the rear of the lot, in which they will hold church services until the erection of their new church building.—*Correspondence.*

THE LECTURES.

PORTLAND, ME.

Before a large audience Virgil O. Strickler of New York city lectured on Christian Science in the Jefferson theater. Mr. Strickler was introduced by George W. Foster, first reader of the local Christian Science church, who said in part,—

Christian Science,—is it of God or is it of man? To arrive at the correct answer is of supreme importance. The Master, who said "Beware of false prophets," at the same time said "By their fruits ye shall know them." May we not safely conclude that a science which has brought healing and redemption and happiness to thousands, as Christian Science has, cannot be based upon a contradiction? A science which contradicts itself is no science. Science is knowledge,—exact, systematized knowledge, that can be applied.

Portland Press.

FRANKFORT-ON-MAIN, GERMANY.

Under the auspices of the local Church of Christ, Scientist, a free lecture to elucidate the teaching and purpose of Christian Science was delivered by William D. McCrackan, M.A., in the Masonic hall Socrates, to a numerically considerable and closely attentive audience. The lecturer was introduced by Frau Consul Vintzens of Wiesbaden, who said in part,—

Christian Science is becoming more and more widely recognized as a movement which is reaching to every part of the world, drawing to itself people of all races and creeds. It is therefore right that the public be accurately informed of its real nature and purport, and of what it is doing for humanity, and this can best be done by an experienced adherent of Christian Science.—*Correspondence.*

UNIVERSITY OF CALIFORNIA.

The high school auditorium was crowded to the doors at the lecture on Christian Science given by Prof. Hermann S. Hering, under the auspices of the Christian Science Society of the University of California. Long before the hour advertised for the lecture, the big auditorium was filled; many people stood throughout the evening, a number who could not find seats or standing room were turned away, and extra chairs were placed on the stage to accommodate some of those who could not find seats elsewhere. It is estimated that probably fifteen hundred people heard the lecture, and the audience was composed in large part of university students, professors, and instructors. Mr. Camm introduced the speaker with the following words:—

A professor in one of the largest universities stated recently that twenty odd years of careful study and observation had shown him conclusively that there existed in this universe of ours two great powers, the spiritual and the physical. The statement, coming as it did from a purely material standpoint, was interesting and enabled one better to apprehend how Mrs. Eddy with her clear spiritual understanding could look through and beyond this so-called physical force and see only the true force,—Spirit, God.

The great Master, Christ Jesus, knew more than any other the absolute nothingness of this physical or material force, and knew more than any other of the absolute operative force of the spiritual power. This knowledge was shown by his every act. Though we are induced to class his works as miraculous, we have his promise that should we but know of this one power, we could do all he had done, and more. For three hundred years after his departure his disciples successfully followed and practised his teachings, and then for many generations the true spiritual fact was lost sight of and the material seemed to be the real. Mrs. Eddy's spirituality enabled her to see through this, the result being that thousands have been and are being healed, physically, morally, mentally, and spiritually. It is indeed rarely that we find a person who does not know of some one who has been thus benefited.

Any thinking person must admit that when we seek happiness or contentment in a material way, the result is disappointing. The students of Christian Science are learning by actual experience and demonstration that the only true happiness, the only true contentment, the only true beneficial results, are obtained through the study and knowledge of God.—*Berkeley Courier.*

ALTON, ILL.

A lecture on Christian Science was delivered in the Temple theater by Frank H. Leonard, to a large and attentive audience. The speaker was introduced by Major Wilson G. S. Lowe, commandant of cadets of the Western Military Academy, who said in part,—

The lecturer comes to tell us something of this new-old religion, known as Christian Science. New, because only within recent years has it been revived as a practical, every-day working religion; old, because the good Master taught it, and bade his disciples give it to the world for the healing of the nations. We come, I hope, with open minds and receptive hearts to hear something of this great teaching which is attracting the attention of so many of the world's best thinkers of today; to hear something of this wonderful truth which is having such an uplifting influence and whose power is binding together the hearts of men and nations into a broader and better fellowship of men; to hear something of this all-wise, all-powerful, and ever-present God, good, whose beneficent influence is giving strength to tired hands, making light the steps of weary feet, giving courage to the disconsolate, and binding up the wounds of the broken-hearted.—*Correspondence.*

PITTSBURG, KAN.

There was a large attendance at the City Hall auditorium for the illuminating lecture on Christian Science given by Willis F. Gross. The lecturer was introduced by A. L. Scott, who spoke in part as follows:—

A little over five years ago, Christian Science found me in a condition of suffering and torture that would beggar description even if such a portrayal were desirable. The usual material remedies were applied through the greater part of one year, but were not found effective. Although at this time a member of a church that I loved, and whose people I now love even better than before, yet I feared and dreaded God almost as one would an impending calamity or an irresistible evil. I feared the Almighty, believing Him to hold the issues of both life and death, and feared that He might at any time sever the "silver cord" that gave me existence. In this distressing condition, there entered into my life the most blessed story ever borne to mortals. It was the message of scientific truth, of the good God of Love as All, and in all.

It was the new-old truth expounded upon the Judean hills by the great Teacher whom our Leader has fittingly described as "the best man that ever trod the globe" (Science and Health, p. 52). He it was who declared his mission was not "to condemn the world; but that the world through him might be saved;" that the Father willed not that any should perish, but that all should come unto him and have life. Jesus also declared that he had come that we might have life and that we "might have it more abundantly." His teaching is found, now as then, healing the sick, binding up the broken-hearted, reforming the sinner—indeed, bringing heaven down to earth—and is, in this material age, proving by works the divine ministration of Christian Science.

From a patient study of this wonderful truth as relis-

Digitized by Google

covered and rehabilitated by Mrs. Eddy, I have experienced a most wonderful transformation. While grateful for my physical healing, this is not to be compared with the spiritual uplifting—to the unspeakable peace that comes with this new consciousness of the good God who is Love.

Pittsburg Headlight.

PASADENA, CAL.

At the lecture on Christian Science by Bicknell Young in First Church of Christ, Scientist, he was introduced by C. P. McAllaster, first reader, who said:—

As physical healing is the most obvious result of the teaching and practise of Christian Science in the eyes of the world at large, it is that phase of it which looms largest in the popular concept concerning it. Consequently, when the Christian Scientist says to the inquirer that physical healing is but a phase or incident in the unfoldment of this truth in the consciousness, the question very naturally arises and is very often asked, "What then is the place and meaning of this healing, and why does it assume so much importance in the thought of Christian Scientists themselves?"

This question, as is the case with practically all questions concerning Christian Science, is very fully and completely answered by a simple reference to its text-book, "Science and Health with Key to the Scriptures," in which, on page 117, Mrs. Eddy says, "Our Master taught spirituality by similitudes and parables. As a divine student he unfolded God to man, illustrating and demonstrating Life and Truth in himself and by his power over the sick and sinning." In practising healing, therefore, the Christian Scientist is not claiming for himself a power which has in it any element of mystery; he is not arrogating to himself any special or exclusive prerogative; he is simply illustrating and demonstrating a Principle, the understanding of which is open to all, and the practise and demonstration of which is the privilege of any one, just as far as he or she will follow understandingly in the footsteps of the Master.—*Correspondence.*

PETOSKEY, MICH.

A clear and comprehensive exposition of Christian Science was the lecture delivered by Clarence C. Eaton in the Christian Science church. Mrs. Ida J. Mesick, first reader, introduced the lecturer, saying in part,—

This is an age of great unrest—social, political, and religious. Men and women are not so much dissatisfied as unsatisfied. This is a practical age. The day is past when any one can stand before an audience and gracefully and beautifully theorize about life. The world is not asking so much what you believe, or what you think, or even what has been your training, but what you can do. This test is also being applied to religion,—not the creed of the church nor the historical claims of the church is of value, but what it is doing to benefit mankind.

Today more than ever the question of Pilate is being repeated, "What is truth?" The gentleman who is with us this evening will answer that question, will tell us what Christian Science is and what it does.—*Petoskey News.*

KEOKUK, IOWA.

The lecture on Christian Science by Judge Clifford P. Smith was well attended. The lecturer was introduced by A. Hollingsworth, who said in part,—

If all the people of this city thought that it was within the power of any man living to demonstrate that through a proper understanding of the facts of life or being all sorrow and suffering would vanish from our lives, this opera house would hold but a small fraction of the people who would flock to hear those precious words. However, a feeling of skepticism as to this being possible prevents a vast majority from even giving a patient and attentive hearing to any philosophy that so professes. A considerable proportion of those who do give it a hearing do so with a mental attitude which if not hostile is at least wedded to preconceived opinions. It has seemed to me, while listening to Christian Science lectures, that we were being asked to revise not merely our philosophy but to revise even the data of our philosophy. We are no doubt overconfident of the testimony of our physical senses and believe them with implicit confidence at the very time they are deceiving us. Such has been the history of science.

Those who believed in the flatness of the earth did so because their every-day observation showed them that it was flat. Likewise it was against well-known laws of nature for human beings to live upon the other side of the earth and walk with their heads hanging down like a fly on the ceiling. Such a thing to those good people seemed impossible and absurd. All that was the matter with them, however, was that they were a little overconfident of what appeared to them to be the testimony of their senses. There were principles involved which they had not seen, but which demonstrated how deceptive appearance might at times be. It may be that we are still, in spite of these lessons, overtenacious of opinions based on the testimony of the physical senses, and do not have a full enough understanding properly to determine the true inwardness of the phenomena of life.

Daily Gate City.

VENTURA, CAL.

A large and attentive audience, which filled nearly every seat in Lagomarsino theater, greeted Judge Septimus J. Hanna and listened to his address on Christian Science. He was introduced by Mrs. Myrtle Clark Hovey, first reader, who said in part,—

We are assembled here this afternoon to consider a question of vital import to all mankind—a question which has come echoing down the ages ever since it was propounded by Pilate to the Master, nearly two thousand years ago, and which has lost none of its interest with the lapse of time—"What is truth?" We who are students of Christian Science believe we are finding an all-satisfying answer to this question, and we are indeed glad for this opportunity to share the good news with others, by inviting your close attention to the lecture of the afternoon.

Christ Jesus said that he was "the way, the truth, and the life," and when questioned by John's disciples as to whether he was indeed the Messiah, or Wayshower, he did not reply by giving them a mere theory or doctrine upon which to pin faith; but he said, "Go your way, and tell John what things ye have seen and heard; how that the blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached. And blessed is he, whosoever shall not be offended in me." He also said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do;" "Wherefore by their fruits ye shall know them."

Christian Science is teaching its students how to obey the commandment of the Master, to "preach the kingdom of God, and to heal the sick," and that this teaching is correct is attested by its fruits, as manifested in the countless thousands of cases of healing of "all manner of sickness and all manner of disease among the people," throughout the world, and in the regenerated, purified, happy lives of its adherents, who are learning that righteousness means right thinking as well as right doing.—*Free Press.*

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship.

Randolph, Vt.—Du Bois and Gay's, evening, Aug. 12.

TESTIMONIES OF HEALING.

It is with a heart full of thanksgiving to God and gratitude to our dear Leader, Mrs. Eddy, that I give my testimony, in the hope that some one may be benefited by it. All my life I had attended a church, but at the time that I first became interested in Christian Science I did not attend any; in fact I had become so hardened that I did not even believe in God and I ridiculed religion. But my extremity was God's opportunity, for one Sunday I was suddenly taken very ill. Our family physician (a grand, good man) was called and he said it was a severe case of gall-stone colic. This was in July. I continued to have the attacks and they came nearer together, each one being more severe than the former. They left me weak and discouraged, after having done all the doctor could advise and trying everything that was recommended. The doctors then decided that I would have to be operated upon, as at the last attack the opiate given had no effect and then chloroform was used. The next day I was told that I would have to go to the hospital in three or four days.

Previous to this a very dear friend wanted me to try Christian Science, but I refused, as I had no faith in anything pertaining to God and did not want to have any, but at the time of the last attack the friend again talked to me and said I surely need not be afraid of Science, for its medicine is love and truth and God is the "great Physician." She said it would be better to try Christian Science than to go through an operation, not knowing whether I would live through it or not, so I asked my husband if he cared whether I tried Christian Science. He was as bitter toward it as I, but he said I should try anything if only it would help me.

The next morning I went to the Christian Science reading-rooms and asked for help. I was so weak when I got there that I became faint, but I will never forget the lady who came to me with outstretched arms and a look of love and welcome on her face. I explained all to her and asked for help, and she told me that all things were possible with God, that He was a God of love and that I was His child. I told her I was afraid to eat, as all food caused me such pain, and I could not sleep lying down. She gave me a treatment and told me to go home and eat whatever I liked without fear. I did so, and at supper time I ate so heartily that my husband warned me of the consequence. I then became sleepy, excused myself, went to bed and slept all night. I even forgot to sit up to sleep, but lay down and slept. My husband did not take off his clothes, for fear I would be much worse and he would have to go for help. I went to the practitioner's home the next day and took another treatment, and asked her when I should come again. She said, "You won't have to come again; you are healed."

I could not quite believe her, as I was still in some pain, but it was not steady pain any more; still I had fear of its returning, so the next week I went and told her, and in one treatment that fear was overcome, making three treatments in all. About ten days after this my husband said that he never heard me saying anything about the pain, and I replied that I had forgotten all about it. I was free indeed! My physical healing was wonderful, but nothing compared to the spiritual awakening which came with it. We are truly thankful for Christian Science.

MRS. J. B. RICHEY, Eden, N. Y.

One afternoon during a recent epidemic of eye trouble in this city, one of my eyes began to be inflamed, and by evening it was manifesting such distressing and painful symptoms that I telephoned to a Christian Science practitioner for help, not forgetting, however, that there was work for me also to do. The next morning the condition seemed so much worse that I was advised not to go to the office that day. I went, however, as usual, but wore a pair of dark glasses to make my appearance less alarming. Although it was difficult and at times painful to do so, I continued to use my eyes all day for the almost constant reading and writing that my duties demanded, and I did not neglect to improve a half hour's opportunity to study Science and Health,—feeling all the time the conviction that divine Truth was my deliverer and would heal me. The eyes continued to improve throughout the day, and in another twenty-four hours almost every trace of the affliction had disappeared. Except for the dark glasses worn for appearance's sake no material remedy of any kind was used. I thank God for the quick healing, and feel confident that had I looked to any other source I should not have gotten along so well. While this is the most recent, it is by no means the only one of my deliverances through Christian Science. It has healed me of rupture (supposed to be hereditary), also of varicose veins in the throat; the desire to smoke has been overcome, and the truth has been my deliverer from many other troubles as they have arisen.

I am thankful for Mrs. Eddy's book "Science and Health with Key to the Scriptures." I understood very little of it when I first began to read it, but in the years since then I have found more and more in it, until now it is my daily companion. It has led me back to the Bible (previously little read and little appreciated), and has shown me that the Bible is in truth the inspired word of God. Both books now mean more to me than I can here set down, and for them and the many blessings that come to me from their study I feel very grateful.

MILO D. WEBSTER, Minneapolis, Minn.

After five months of suffering I consulted a physician, and his diagnosis was a malignant disease of the breast. I then consulted two other physicians with the same result, and the last one said that I must be operated on at once, that if I did not come to him in a week he would not take the case. I was in despair, but I decided to try Christian Science. I did so, and in five weeks I was healed. Two months after, I again saw the surgeon and he pronounced me sound and well.

This was over two years ago, and I am absolutely well. I am truly grateful to God, also to Mrs. Eddy for the many benefits I have received, and for the blessings that have come to me and mine.

MARGARET B. DAY, Los Angeles, Cal.

I am a trained nurse, and my home is in Chattanooga, Tenn. While on duty in the winter of 1910-11 in Jacksonville, Fla., I had a very severe and acute lameness in my back. As soon as I could leave my patient I went to the Christian Science reading-room and asked the young lady in attendance for help. She called one of the practitioners over the telephone and told her that I was coming to see her as I wanted help. I felt relieved immediately, and finding myself limited as to time I went back to my patient and talked to the practitioner over the telephone, telling her that I was much relieved and had been getting better ever since she had been called. She replied that she began to declare the truth for me immediately. I was so relieved that I could work with comfort. Later I felt a return of the trouble, after I had dismissed the practitioner, until I realized again through her help that God rules; then I was free from any sense of pain from that moment. I am truly thankful for the light that Christian Science has brought me, and especially for the spiritual uplift.

MRS. CATHERINE WILBUN, Chattanooga, Tenn.

Twenty-two years ago I first heard of Christian Science, and it found me when I most needed it. We were then living in Topeka, Kan., and I was healed of an internal

Digitized by Google

growth through the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I had been operated on once and was getting ready for the second operation when I heard of this teaching, and it came about in this way: After the birth of my second child, one of the physicians who had helped to perform the operation was with me at the time of the birth, and he told me that as soon as possible after confinement I must undergo another operation. I told this to a lady who was a near neighbor, and she assured me I did not need to submit to it; but I did not then see how I could get rid of the disease without the knife.

Thanks to our heavenly Father, the giver of all good, and to Mrs. Eddy, who lived so close to the Father that this blessed truth was revealed to her, I was healed. I can truthfully say that neither my husband, our two youngest daughters, nor myself, has ever resorted to medicine in the twenty-two years we have known about Christian Science, and only on three occasions have I had to ask help of a Christian Science practitioner in those years. Truth has always been a present help in times of trouble.

MRS. ALICE KIDNEY, Dillon, Mont.

I am glad to verify the testimony of my wife, Mrs. Alice Kidney, but the half has not been told, for the truth taught in Science and Health, by Mrs. Eddy, has been our life for the last twenty years.

CHAS. E. KIDNEY, Dillon, Mont.

I want to tell of my wonderful healing of severe stomach trouble and sleeplessness. In February, 1903, after I had been taking medicine constantly for ten years, growing worse instead of better, I said to my last doctor, a kind, conscientious man, "Do you think I will ever be well again?" He said, "No, you will have to take medicine all your life; we can relieve you but cannot cure you." He also said that there was not an organ in my body working normally. At that time I was living on liquid foods taken every two hours. After three or four weeks' time the doctor advised me to stop all medicine for two weeks and then start anew. At that time Christian Science was presented to me, and being thoroughly discouraged I said I would try it for just two weeks, although I had little faith in it; but "man's extremity is God's opportunity." At the end of two weeks there was such marked improvement that all my friends were talking about it, but did not know what was doing the work. They thought I had a wonderful doctor, and I thought so too, but did not tell them what I was doing, as I had been advised by my practitioner to say nothing about Christian Science for a time.

The day I started treatment I was invited out to dinner. For a minute fear crept in, but the words of the practitioner came to me, "Eat what is set before you, as the Bible tells us." I did so and felt no ill effects, and have eaten what I wanted from that time. When I went to pay my doctor's bill, he looked at me in surprise, and finally said, "Well, I don't know anything about Christian Science, but my advice is to keep on with it."

Words fail me when I try to express my gratitude to God, also to our revered Leader, who has through her consecrated life again made it possible for each and all of us to know God as He is, a God of love, and that we can have a practical religion which never fails and is always with us.

ALICE H. MURCH, Boston, Mass.

For a long time I have felt that I should publicly express my gratitude for the many blessings which I have received through Christian Science. During the last year and a half I have had to pass through deep waters, and it has been proven to me beyond the shadow of a doubt that God is indeed "a very present help" in time of trouble, and that Christian Science is the voice of Truth,—a revelation of God to this age. I have been healed of a sense of sorrow that was breaking my heart, of severe nervous trouble, sleeplessness, and stomach trouble, and an abnormal fear of death, brought on by the sudden passing of one very dear to me; but when another passed away suddenly a year and a half ago, I found Christian Science a great comfort and help, and my support and stay in every way. I am indeed grateful to God, also to Mrs. Eddy, and to all who have helped in any way to bring me a knowledge of this saving Truth.

I cannot close my testimony without a word of gratitude for the Bible, for the Christian Science literature, our invaluable text-book and Mrs. Eddy's other writings, also the periodicals. We are indeed blessed in having such helps in our daily struggle to be good and to do good. The constant cry of my heart is for a better understanding of this truth and the ability to help others. Thank God for Christian Science.—MRS. SUSA G. J. BARNSLEY, Pittsburgh, Pa.

I am very grateful for the healing power of Truth as manifested through Christian Science. The proof of God's all-power which came to me was the healing of nervous exhaustion, tubercular disease of the glands of the neck, and an ulcer which I had for four years, although under medical treatment almost constantly. A specialist in Chicago said that I would be troubled with it the rest of my life, but the healing was accomplished in one year, and during that year and up to the present time Christian Science has been a daily help. I had been subject to very bad colds, sore throats, and coughs as long as I can remember. At times I would lose my voice for two weeks, but I have been able to overcome these conditions in two days with the understanding I have gained through the study of the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy.

I came to Christian Science for relief from the nervous disease and received help at once; that is, I experienced great relief from the first treatment, which was given by a friend who is a Christian Scientist. Then I had help from a practitioner and was healed of this trouble very shortly. I had one operation for the tuberculous gland before coming to Christian Science, at which time the gland was very much enlarged again. The help for this came very slowly, but it is entirely overcome.

I am very thankful for all this healing, but I am most grateful for even the small understanding that I have gained of the truth about God and man, and for being able through this knowledge to overcome mental and physical discord. I know by the overcoming and rooting out of all evil in myself I shall every day reflect more of the divine intelligence, more love and more goodness. I deeply appreciate the self-abnegation and love of our dear Leader. I am also most thankful for the Christian Science literature, which always meets some need.

MRS. FRANK L. MCCURDY, Minneapolis, Minn.

I have a desire to express my gratitude for being healed of numerous ailments through Christian Science. While boarding a train I fell and broke my hip, according to medical diagnosis, and after months in a hospital I was only able to take a few steps by using crutches. Later, my leg shortened about one and a half inches, and I was obliged to wear a shoe with an extended sole and heel, and my health was entirely gone. Three years ago Christian Science came to my relief, and through its truth and its demonstration of divine power my leg has been lengthened so that I wear only a double-sole shoe. I have also been completely healed of a stomach trouble of many years' standing, and other ailments which at times caused me to suffer severely in very serious attacks. I seemed to have no strength, and could not endure any excitement or take any exercise. Now, although I am

Digitized by Google

eighty-three years old, I am thankful to say that through the teaching of Christian Science as found in the text-book "Science and Health with Key to the Scriptures" by Mrs. Eddy, I am a well woman. I am able to work, walk where I choose, and enjoy health, peace, and harmony.

ROSE L. COUCH, La Jolla, Cal.

I am very grateful for what Christian Science has done for me, as I had been an invalid most of the time since I was fifteen years of age. At times I would be very comfortable, then some disease would take hold of me and I would be in bed for months at a time. I tried change of climate and different doctors, but to no avail. My stomach gave me great trouble and for three years I did not eat any solid food. I was very thin and very much discouraged.

I was in San Francisco at the time, and while there met a friend who had been healed in Christian Science. He was very much shocked at my looks and asked me what I was doing. I told him that the doctors could not help me any more and I did not know what to do. He asked me why I did not try Christian Science, and offered to take me to a practitioner. I went with him, and after three treatments I could eat anything I wanted and my stomach did not hurt me. In two weeks' time I was entirely well.

I have been in Christian Science over seven years, and can truly say that there has been no discord or sickness which has not been promptly overcome by the truth. I am indeed very grateful to God for this light that has been given us. I hope this may help some one to know what God will do for us if we only ask Him and have faith.

MRS. A. Y. GALE, Reno, Nev.

Christian Science came to me over four years ago. I began to read Science and Health to see what it taught, and I had not read very far before I found a reference to Jesus' words, "Take no thought for your life, what ye shall eat." I stopped for a moment and realized that I had been thinking more about what I should or should not eat than anything else. I was so interested in the book that I kept on reading until supper time, when I ate heartily, something I had not done for several months, on account of stomach trouble, and I felt no bad effects from that meal or any other since then. I read the book every spare moment until I finished it, and thought it the best I had ever read. Since then the Bible and Science and Health have been my constant companions. When I first went to church it happened to be the first Sunday of the month. I enjoyed the peace and quietude, and the "Rule for Motives and Acts" (Manual, Art. VIII, Sect. 1) also impressed me very much.

Severe cold and headache, a skin trouble, and burns have been overcome for me in Christian Science, and I have felt the protection of divine Love in case of accident. I am grateful that the truth is crowding all sense of fear, worry, anxiety, and all wrong thoughts out of my mentality. My household work is much easier since I have gained some understanding of Christian Science.

I could not tell all the blessings I have had. I always enjoy the testimonies of others, and I rejoice to know that so many are being made happy. One member of my own family has been cured of the drink habit, another of appendicitis. I am thankful to God, also grateful to Mrs. Eddy for showing us the way in Christian Science. I am grateful to the Publishing Society for our good literature.

MRS. WILMOT DALY, Nevada, Mo.

If I could say something which would help any hungering and thirsting one, longing for rest and peace as I was at one time, I would be glad. I had tried many kinds of medicine and several different doctors before coming to Christian Science. At times I would be better, then worse than ever, one doctor calling the trouble neuralgia, another congestion, another stomach trouble, and so on. At this time a friend told me she had received great help from Christian Science and that it might help me. I wondered what Christian Science could be, so I read the literature that was given me. Then I came across statements that I could not accept, and I laid the book down, thinking I would never look at it again; but I could not leave it alone.

As time went on I received a letter from another friend, telling me that he was trying Christian Science and believed that it was going to help him. I then wrote and asked what Christian Science was, and the answer came telling me that it was the healing which Jesus taught. The friend also showed me that God, good, and devil, evil, were opposites, and that opposites could not both be real and true. This gave me my first glimpse of the truth, and then I was ready to look deeper into it. I became so much interested that I soon found I had not had one of my spells of suffering for quite a while. I had also asked this young Scientist for help, and I improved steadily and gained in spiritual understanding by my study. I feel that my life has been spared for the last twenty years by Christian Science.

At first I found it difficult to accept some statements which I found in Science and Health, but I reasoned that the Bible had always been a sealed book to me, and while it seemed difficult to accept some statements others were clear and beautiful and very interesting. As I studied on and on I gained a point here and there until I began to see that Christian Science was just what I had been looking for all my life.

I wish I could find words to express my thankfulness for the good I have received from the books written by our Leader, Mrs. Eddy. Science and Health has surely been a "key to the Scriptures" to me. I feel like praising God every day for revealing Himself to our dear, brave Leader, who has so faithfully worked for this needy world. I have found Christian Science the most wonderful help in raising my children, in overcoming fear, sickness, worry, sorrow, and want. It has brought me a more spiritual understanding of God and man's relation to Him; it gives proof every day of His presence and power. I have found comfort, happiness, and peace in Christian Science; it is an every-day religion to be used in every difficulty that crosses our path. I have found it a great help with my home duties, as well as in uncovering error in our mentality and how to destroy it.

One of the greatest blessings which Christian Science has brought me is the understanding of God as Principle and as Love, this understanding to be used in working out our problems, no matter what those problems may be. This is truth I had longed to know. Passages in the Bible which before were meaningless became clear and useful; those that once seemed mysterious became beautiful and grand and were so interesting that I loved to study them. This truth has so changed my thinking of myself and others that I see God's creation in a far different light than before. Through the teachings of Christian Science I have learned man's relation to God, and that man can no more be separated from God, his divine Principle, than the sunbeam can be separated from the sun. If it were not for Christian Science I feel that I would be a weary wanderer in the desert, seeking for light. I am truly thankful to our brave Leader for giving to the world her great discovery. The good she has done cannot be expressed in words; it needs only to be practised.

MRS. BELLE P. GLAZE, Colorado Springs, Col.

I am very glad to make public acknowledgment of the benefits I have received in Christian Science, in the hope that some one else may be led to the knowledge of the truth. Three years ago I was forced to seek physical aid through Christian Science, having exhausted every known material remedy for an intestinal trouble of over three years' standing. I had very persistently tried them all before I gave in.

Digitized by Google

believing like many others that I was very much opposed to Christian Science, something which I knew nothing about. I had even tried Chinese herb doctors, mental suggestion, and electricity, all to no avail. I then went to the dreaded surgeon, and after making an examination he pronounced the trouble chronic appendicitis. At the end of a two-weeks treatment with medicine and a strict diet an operation was performed, from which my recovery seemed slow.

Three months after this experience I was taken with more acute attacks of pain than I had before experienced. I was also unable to retain any food, scarcely even water, and medicine was having no effect. My strength was rapidly decreasing, and I was getting only temporary relief from hypodermics when I asked for my first treatment in Christian Science. I was amazed at being told to eat my dinner and to eat anything I wanted. I ate the first real meal I had had for some time, and with very little discomfort afterward, and after the second day all sense of pain and fear of eating had left me. I gained rapidly in strength, and since that time I have resorted to no other remedy than Christian Science for ills of any kind. I have had many beautiful demonstrations and witnessed many others in our family.

I have learned by constant study of our Lesson-Sermons that it is not enough to believe, but we must understand this healing truth which our Leader has given us so simply in our text-book, "Science and Health with Key to the Scriptures," for this enables us to demonstrate its teachings.

Words can never express my gratitude to God, also to our dear Leader, and to all who have helped me to know that God is Life, Truth, and Love. I only hope that by striving each day to live according to its teachings, I may be the means of leading others to the knowledge of this wonderful truth.—ZILDA WILLIAMS, Los Angeles, Cal.

Within the last three years I have found in Christian Science, as stated in Science and Health, the answer to Pilate's question, "What is truth?" It is this: that God, Mind, is the only substance; and that the human mind and body are one, consequently the state of the body is determined by the mental state. Basing thought on this truth, I have been healed without any treatment of kidney, bladder, and other ailments, which were so serious as to require an operation in the opinion of reputable physicians. With the help of one treatment from a friend, I was also healed of periodical headaches and eye trouble of seventeen years' standing, during which time I wore glasses fitted by a specialist who said I would always have to use them; but all difficulty has disappeared and I have used no glasses for over two years. With occasional help I am now overcoming a catarrhal difficulty involving the senses of smell and hearing. I send this testimony in grateful appreciation of the truth.—MRS. JESSIE CROWE, Janesville, Minn.

[Written for the *Sentinel.*]

WITH THEE.

LAURA GERAITY.

ONE moment, Lord, with Thee—
And I am whole!
To cast out self and all my sin efface,
To come so near Thee that I see Thy face
And feel the breath of Life and calm embrace
Of Love's control.

One moment only—and my limbs
Are free from pain!
One moment—but it must with Thee be spent,
Entirely, fully, with no stray thought bent
On worldly things. So find I sweet content
With Thee again.

FROM OUR EXCHANGES.

[Rev. Livingston L. Taylor in *Christian Work and Evangelist.*]

Thirty-five years ago the thought of the world, judged by its outstanding thinkers, was materialistic. A magnificent protest was maintained in behalf of man's spiritual nature, but the language of that protest seems to us now like a strange tongue. For the thought of the world today, judged by its outstanding representatives, is distinctly spiritual, and the protest in behalf of the soul, which so many found it difficult to take seriously a generation ago, has given place to a well-nigh universal quest. There will be very little dissent from any such estimate of the present situation as I have just cited. Men know in their hearts that no civilization, not even the civilization of the twentieth century, can give us what we want.

The life of the world must be built up from within, transformed by the renewing of the mind. The life that is more than meat must be reckoned with. "A spark disturbs our clod." Civilizations are meant to be outgrown and reshaped from within. There is a living God. Nothing is final so long as there is one sin, one wrong, one tear. To believe, as Professor Nash puts it, in "the possible stored up in God," is to be at war with things as they are, and yet at peace (if you will allow the paradox), at peace with God, at peace with ourselves—yes, at peace with the world. For those who know God are willing to wait on Him, and to be of good courage, and to do their part in their little day.

[*Hartford (Conn.) Seminary Record.*]

Thought about God is theology. Convictions about God are what give real solidity to life. The most alarming thing about many phases of modern interpretations of life is that they try to treat it as if God were not to be reckoned with; to consider that life has compacted significance with God left out of it. This Jesus never did. He saw life whole and square and solid, just because he placed love to God in indissoluble association with love to neighbor; because he saw that peace and quietness on the part of man in his association with his fellows rested on the fact that the heavenly Father cares for His children and for all His children. It is in this sense of the assurance that God is to be thought of, and to be reckoned with, in all firm conviction in respect to the whole field of human reality, that there is room for the theological dogmatist in every-day life. It is not his place to demand intellectual assent to his "dogma" on the basis of the authority of councils. Nor is it his desire to supplant the richness and versatility of the life of the esthetic and moral feelings by the pallid monotony of a life lived on the flat plain of a juiceless intellectualism. But he will assert, and the every-day man is more and more asserting it, that life is not to be realized in its strength and richness, unless the intimacy and reality of God's relation to it is incorporated as one of its constant elements,—an element potent all through individual and social concerns.

[*Christian Register.*]

The act which is spontaneous from the heart is the one which will do the most good to him who tries to help his fellow. The thought which is for another will be the best thought for the thinker, and the sacrifice which is made for mankind will best ennoble the individual making it. When the vicarious atonement is no more in the world, man will rise to the position of being his own arbiter.

So it is that with rewards and punishments gone from the world, with the man acting in his own behalf, there will appear a better way than if he does the righteous thing only as he is compelled. Compulsory morality, like compulsory religion, is of no good in the development of the man after he has attained to the point of perceiving the true human relations.

Digitized by Google

[*Universalist Leader.*]

The needs of the present, the needs of the modern man are being tremendously emphasized today. The old supplies will not do. We are living in a new world, we are a new people. We have new points of view, new conceptions of truth, new ideals toward which we bend. New forces enter in to complicate life. A new universe surrounds us. All this is true, and men are saying we must have something new from the churches, which is also true, but it must still be religion. It is religion, with that rare and invaluable quality of adaptability which enables it to supply every human need at any time, in any place, under any conditions. The needs of the present and the modern man call for something new in the way of inspiration, instruction, and activity, but still call for religion, and for the religion which finds its new as it did its old expression through the Christian church.

[*Watchman.*]

However small the cause that is established in God's name, it has a positive character like that of leaven in the meal. The truth of God's word has life, inspiration, judgment, and cannot be ignored or contemned. It makes the conscience uneasy and stirs the heart with hope. Old ecclesiastical systems and governments that are committed to established religions recognize at once, when the truth of Christ comes into action, that it is something to be reckoned with. Our Lord himself was marked as dangerous to the priestly system that had fastened upon Judaism. All truth is dangerous to ignorance and error, and Christian truth has the same positive character. To set forth the truth is like presenting a sword which has a point and a cutting edge Men are afraid of it in an active hand.

[Lyman Abbott in *Outlook.*]

I believe not only that God exists, but that He is the inspirer of a life which we do not create, but which is given. I believe that our invisible commander, the unknown I AM, is ever sending to His children a message from Himself, by the voices of the poets and prophets, by the vision of the artists and the musicians, by the heroic deeds of noble men and the pure lives of devout women, by the great achievements of the great leaders, by the humble lives of self-denying fathers and mothers, by the innocence of the little children, and most of all by the voice that speaks to us and the vision that is given to us in the hours of our silent communion with Him.

[Rev. Frederick B. Pullan in *Christian Intelligencer.*]

It is yet the conviction of Christian thinking that to discern the mind of Jesus is to learn the will of God. The testimony of Jesus is the final word. Whatever the revealing Spirit has made known or will make known must be in accord with the things of Jesus already known. Christian thinking still regards the New Testament literature as the Spirit's method of embodying and expressing the things of Jesus. The truth concerning that socialized preserver and propagator of the influence of Jesus, called the church, is to be sought for in the New Testament. There, if anywhere, the mind of Jesus and the will of God concerning it can be found.

[*Christian World.*]

The religion of the future will be a religion which holds as its first principle the freedom of every man to test to the utmost the truth or falsehood of all that is taught him. For just as an engineer is not made by a book of mechanics, or by saying "yes" to all its propositions, but by his own comprehension and mental assent to its proofs, so is a man made religious only to the extent to which his own mind and soul in the exercise of their fullest freedom have yielded assent to the truth offered him.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the inside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herald,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

Catalogue No. 20, June, 1912, has recently been issued and will be supplied to reading-rooms upon request. The catalogue contains complete lists of all publications issued by the Society, and of the works of Mary Baker Eddy published by Allison V. Stewart.

Orders for aluminum markers, which are listed in catalogue No. 20, June, 1912, have not been filled, owing to delay on the part of the manufacturers. It is hoped that the markers will be on hand for delivery early in August.

A new pamphlet, "Christian Science Healing versus Mental Suggestion," by Frederick Dixon, reprinted from the *Weekly Budget,* London, England, is now on sale; 36 pages and cover, at the prices of the regular pamphlets.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folio sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DILLAMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADDIE DICKEY, Treasurer, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass. Please do not send currency.

One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

ITEMS OF INTEREST.

National.

The administration is preparing to defend in Congress its policy of the conservation of water powers of the country. Secretary of War Stimson developed the issue when he upset the old policy of the war department of formally approving, without reference to commercial and other conditions, the bills annually passed by Congress for the erection of dams and the utilization of water-powers in streams under the control of the national government. The secretary instructed the army engineers to report in every case whether the project had any commercial value at present; whether that value was likely to enhance in the future; whether the particular stream was likely to be improved at the public expense and other such data. He wanted this information in order to decide whether the projectors of the various enterprises should be called upon to share their profits with the people in case they proved lucrative, or whether some of the profits derived from the water-power should not be applied to the improvement of the navigation of the stream at other points, thus relieving the general taxpayers. Immediately protests came from congressmen who are furthering bills for the development of water-powers. The secretary, backed by President Taft, served an ultimatum that no water-power bill would be approved by the war department unless in each bill a clause was inserted looking to the division of the profits with the national government.

Suit to dissolve the Poster Advertising Association, formerly the Bill Poster Association of the United States and Canada, is expected to be filed by the government in a few days. The accusation is alleged violation of the Sherman antitrust law. The organization, which is alleged to control the bill posting in more than three thousand cities and towns, has been under investigation by the department of justice for several months, it is said, and the civil suit for dissolution is expected to be filed in the federal court in Chicago within the week. To a great extent the prosecution, it is believed, will be based on the restrictions which are alleged to be in the constitution and by-laws of the association. These rules are declared to compel the members of the association to do their poster advertising through certain delegated advertising agencies, named by the board of directors as the only agents to receive and make contracts for such advertising. Through this system, it is asserted, practically the entire bill-posting business of the United States is controlled and certain fixed prices maintained in a classified scale according to the size and population of the city or town. The main headquarters of the Poster Advertising Association are in Chicago and its board of directors consists of members selected through local organizations in different parts of the country.

Senator Burton of Ohio explained to the Senate at length last week the reasons which, in his opinion, are responsible for the present high cost of living. The manifest and important causes, he said, were "the phenomenal progress of recent years, the striking inequality of this progress in different lines of human endeavor, and the tendencies to extravagance and waste, and to diminished productive energy by a large part of the population. Neither the Payne-Aldrich tariff law nor any other similar measure was responsible for the general high level of prices," he declared; for "the variations in prices have been so very considerable, both in the way of increase and decrease, as absolutely to disprove any inference that the change in prices has been due to the tariff of 1909, or to any other tariff act." He exonerated the "trusts and large combinations of capital" from responsibility for high prices, declaring that a complete monopoly in any particular article affords a chance to increase its price, but that the same result is apparent when separate producers maintain an agreement as to prices.

The report of the Stanley steel investigating committee approves the so-called Brandeis bill, which would transfer the burden of proof to defendant corporations, and recommends the legalization and regulation of big industrial concerns instead of their dissolution. The report advocates the creation of an interstate commission of industry, to be clothed with extensive powers of regulation and with power to fix reasonable prices for the output of corporations. The report would require that all corporations capitalized at fifty million dollars or more operate under a charter to be issued by the United States before engaging in interstate commerce. Smaller corporations might avail themselves of the federal charter at their own option. All corporations availing themselves of the United States charter would be recapitalized at their actual value. The report commends the work of the bureau of corporations. It approves the measures calculated to prevent interlocking directorates.

The dissolution of the beef trust has been informally accepted by Attorney-General Wickersham with the understanding that the terms of disintegration shall be presented to him formally at an early date for his ratification. Pending the receipt of the document, which the counsel for the trust promised to furnish, the department of justice will not institute the suit that had been threatened unless dissolution took place before Aug. 1. One of the striking results of this disintegration is that it restores the *status quo* of 1912 and brings the component parts of the trust back under the injunction issued that year by Judge Grosscup. It is believed that as a consequence of this condition, if further efforts are made by the separated company to reunite, the government will have recourse simply to contempt proceedings.

That the size of all United States currency and national bank notes will be reduced by one third and their designs revolutionized, for the sake of economy to the government, convenience to the public, and safety against counterfeiting, has been practically decided by Secretary of the Treasury MacVeagh. It is proposed to make the dimensions 6 by 2½ inches. The paper money now in circulation measures 7.28 and 3.04 inches. This move is expected to save the government about nine hundred thousand dollars annually, and the national banks, which pay for the plates for their notes and part of the cost of redemption, about two hundred thousand dollars. The economies would be effected in steel for the plates, in paper, and in labor.

Work of dredging the Neponset river from Foxboro, Mass., to the sea, under plans made by the state board of health, will begin very soon. The work will cost approximately one hundred and fifty thousand dollars and is to be finished by Oct. 31, 1913. The state in doing this work, which has been agitated for thirty-five years, will reclaim two thousand acres of meadow ground in Milton, Dedham, Westwood, Clinton, Norwood, and Sharon.

Investigation of the so-called "ice trust" by the federal grand jury in Washington was suspended last week when the American Ice Company agreed to open its books to a representative for an investigation as to whether the antitrust law is being violated. If, after a full investigation, it is found the company is violating the law, it promises to readjust its methods.

International.

The Peruvian consul-general at New York denies the reports that Peru has been dilatory in enforcing reforms in the gathering of rubber in the Peruvian forests. "Much misapprehension and confusion have arisen in the public mind in regard to these lamentable occurrences," says Dr. Paredes in a statement printed in the *Sun*, "largely owing to the widespread feeling of horror naturally created by Sir Roger Casement's reports—unfortunately correct—and by the incomplete statements respecting the measures adopted by the Peruvian government in its endeavors to prevent repetition of the crimes and to punish the perpetrators. Peru has established a service of river gunboats for the mobilization and transport of troops through the entire length of the rivers and their affluents flowing through the valleys of these wild mountains; and all these vessels are now on patrol duty to maintain order and to protect the Indians. It has also established, at enormous cost, wireless communication between Lima and Iquitos in order to have immediate contact with and more direct control over its officials."

At the annual meeting of the National Trust for Places of Historic Interest or Natural Beauty, held lately at Crosby hall, Chelsea, England, the chairman of the executive committee said that since their foundation seventeen years ago they had received from the public about forty thousand pounds and had been enabled to acquire nearly fifty properties of great variety. Five or six further properties are being negotiated for, and about one thousand pounds has already been invested for the maintenance of certain others. In connection with the report of the trust's work he mentioned that they were in the course of acquiring Minchinhampton Common, a wild, beautiful stretch of open land on the great hill above Stroud in Gloucester. They had just become possessed of a headland in Wales, and were about to acquire Coley hill, near Reigate. All this land they would hold as absolutely open spaces. Hundreds of acres in the Fens have been bought solely because this district is noted for its flora, and for its butterflies, some species of which were to be found exclusively in this neighborhood.

Industrial and Commercial.

As a result of an investigation conducted by the management of the Delaware, Lackawanna & Western railroad, following the recent disastrous wreck at Corning, N. Y., an order has been issued to the employees of the transportation service forbidding the use of intoxicants, either while off or on duty. All classes of employees directly connected with the movement of trains are prohibited from using their time while off duty in any manner that may unfit them for the safe, prompt, and efficient performance of their duty.

Last season the area under wheat in South Australia totaled 2,607,206 acres and the value of the wheaten grain and hay crop is set down at £5,410,005.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

NOT OUT OF THE WORLD.

SAMUEL GREENWOOD.

THERE is no time or place more favorable to the working out of our salvation than just where we find ourselves, for where we are, that is in our own thought, is the only place where God is available as our Saviour. We may persuade ourselves that it would be easier to be good in some other environment or with different associations, but these are not the arguments of truth, for if we look the question squarely and honestly in the face, we shall see that no moment is better adapted than the present in which to abstain from evil. To postpone it until tomorrow, to wait for a more convenient season or opportunity, is to acknowledge the claims of evil, and make them more difficult to overcome with each passing moment. In the midst of our greatest difficulties, in our darkest experiences, in the seeming presence of worldliness and sensualism, is the place to begin to know God, and the powerlessness of so-called evil to separate us from Him.

Jesus prayed, not that his followers be taken out of the world, but that they be kept from its evil, and Christian Scientists do not have to leave their home or friends or occupation, or their place and duty in the world's affairs, in order to be true to their ideal. They do not have to be ascetics before they can render acceptable service to God. It is not demanded of us that we shut ourselves in a "closet," or shun the society of congenial friends, or that we cultivate a sense of narrowness, self-satisfied intolerance, in order to make the most progress spiritually of which we are capable. We are taught that the tares and wheat are to be separated by progress (see Science and Health, p. 72), not plucked up by the roots regardless of the preparedness of human thought for such growth and development.

It is a misapprehension of Christian Science to suppose that it demands self-denial of the relatively good and enjoyable things in human experience because there is any virtue in that denial. Love of all things material naturally lessens with the apprehension of spiritual good, but without this spiritual advancement self-denial is apt to be in the nature of penance, rather than as the leaving behind of a thing outgrown. We must consider things from the relative as well as from the absolute standpoint, otherwise we are liable to become overzealous in voicing the mere letter of Christian Science, and repel rather than attract those whom we might otherwise bless.

So long as the human sense of existence continues, one's position therein cannot be ignored, nor his duty shirked on the plea of the absolute truth that man is spiritual; for if one is gaining in genuine spirituality, he will be found doing his work in this world that much more acceptably. Many things now considered normal and legitimate from the human point of view will undoubtedly be left behind in the course of progress, but until this progress is attained these conditions must necessarily be reckoned with. Not will-power, nor untempered zeal, but the transformation of thought, the spiritualization of the affections, effects progress and eliminates the sensual and unreal.

True spiritual understanding does not lead one into foolish experiments or into any erratic course. Real progress in Christian Science is accompanied by increased wisdom and modesty, as well as increased usefulness in all one's present relations. The foolish things that are sometimes said and done in the name of this Science, although with the best of intentions, spring from a lack of experience in applying its Principle, and a lack of appreciation of the immense distance between the present state of human belief and the perfection which is the ultimate goal of the student's endeavors.

Jesus knew the impossibility of a mortal's being taken out of his mortal concept of the world except as his nature is spiritually transformed and he gains the spiritual sense of being known as the second birth, but Jesus knew also, as do we, that it is possible, although remaining in a material environment, to keep oneself from its evil thinking and doing. One cannot force himself to be good, to be loving and Christlike; but he can through honest desire take each step upward as he comes to it. Only as the real nature of man as the divine idea or reflection is discerned in Christian Science, and this truth is appropriated in some degree through individual demonstration, can one be said to be leaving the material world; and this process of spiritual regeneration may be going on even while one is outwardly conforming to the normal customs and conventionalities of mankind.

While Christian Scientists hold consistently to the truth that man is and always has been spiritual and perfect, it is not in the sense that they have fully realized this truth in their own experience, but that by reason of the ideal they may uplift thought to discern more and more of that godlike being. Spiritual consciousness is not attained in its entirety suddenly. Hence, although they regard the material world and its affairs as an ephemeral sense of things, they do not feel absolved from the duties pertaining to that sense of things. If we are good Christian Scientists, it follows that we are that much better citizens, legislators, teachers, business men, mechanics, or laborers than we were before. We are better friends or counselors, husbands or wives, parents or children, and enjoy our work or our holidays better because of what we know and practise of Christian Science.

The business man who becomes a Christian Scientist does not, in consequence thereof, get out of his business if it is honorable and legitimate, but he proves that it is possible to remain in it and be honest and a Christian in the highest sense. And so on with the various professions, trades, or callings in which men find themselves and in which Christian Science finds them. It is not knavery, cheating, or lying that makes the best business; nor is it gossip, slander, or thoughtless small talk that makes the best social atmosphere; and it is right here that Christian Science is daily enabling its adherents to get the best out of both business and society, instead of going into retirement. Mrs. Eddy said of Jesus that the Christ, or spiritual idea, "made him an honest man, a good carpenter, and a good man, before it could make him the glorified" (Miscellaneous Writings, p. 166); and the case is not different with the rest of mankind.

The spiritual and the material are contrary states of

thought, and one cannot pass from one to the other at will, the transition from the lower to the higher being accomplished only through a better way of thinking. The old-time hermits, forsaking the work-a-day world, denying themselves its enjoyments and its duties, punishing their bodies by stripes and fasting, did not thereby become more spiritually-minded or better fitted for heaven. Regeneration must begin within the individual's thought, and the grosser elements of human belief drop away of themselves as that thought ascends to higher planes. It is our part as Christian Scientists to let our spiritual light shine before men right here in this present world, that because of our example others may seek and find the way of escape from its evil.

Seeking the so-called goodly things of human existence for their own sake is not the Christian Scientist's course, for he knows their value is only relative and transient, but no one is better qualified to appreciate the best in the transitional experience through which we are passing than those who are striving to keep themselves unspotted from its evil. We shall need to live a good human life before we can hope to attain fully the divine. One may talk as high as the heavens, but words do not make men spiritual; it is what one actually lives of goodness and love that measures his progress upward. All may serve God faithfully just where their duties find them, and doing our work well even along material lines, so long as it remains to be done, improving present conditions as best we may, is not the least of that service. When all our work has been done we, too, like our Master, shall have "overcome the world."

LEADING THE LITTLE ONES.

ANNIE DINSMORE MC CLURE.

In dealing with children and training them to right thinking and doing, no school-teacher begins with the expectation that they will never depart from the path marked out by love and wisdom, or never exhibit traits and tendencies contrary to the law and order which the guide is laboring to instil. These stumblings of the little untried feet are not, however, regarded as really defeating or even seriously retarding the progress toward the goal of knowledge and high character. The teacher expects these, knowing the temptations and inclinations of the human mind, and it is a part of the day's work patiently and lovingly to correct, forgive, and point out anew the better way, not yielding to discouragement even in the hardest cases. This courage is possible because of the adult's faith in the ultimate and inevitable success of the right, and the actual preponderance of good in the child's mentality. Once a teacher has conceded that a child is totally depraved, her helpfulness is at an end, so far as that child is concerned.

There seem to be, even among young children, some whose beginnings have been so unpropitious that they are pronounced mentally defective, inherently incapable of moral development, yet there are found teachers with faith and love so great that they willingly and patiently labor with these "least" of God's little ones, and the result is in proportion to their faith. Christian Scientists who are pledged to the work of bringing in the kingdom of God on earth as it is in heaven, are torch-bearers to this generation, and in a sense each one is a teacher to some one just behind him in the line of light. The first impulse when we perceive the light is to impart it to others, and every one of us has some one or perhaps many who are looking to us for a reflection of "that Light."

At first we have not learned that "Love is impartial and universal in its adaptation and bestowals" (Science and Health, p. 13), and we seem to have our own chosen disciples and, too often, perhaps we differentiate; but as we rise in understanding and grow toward the stature of Christ, our "little candle" throws its light still farther, and at last the rays reach even those who try to injure us. Thus gradually—always gradually—we approach the point where to us "man means all men" (Science and Health, p. 267). This is progress, and it is in exercising the patient, forbearing charity of the faithful teacher with her charges, the charity that "beareth all things, believeth all things, hopeth all things," that we progress toward the kingdom and are able to bring it "on earth."

Are we shocked and offended because one does or says something which to our sense (perhaps a higher sense—possibly not) seems "unscientific"? Do we condemn and censure, or do we look confidently to future development to show this "little one" the mistake, well knowing that to the sincere student Truth uncovers all error? Do we strive ever to "judge righteous judgment"? Our beloved Leader tells us that "we should blush to call that real which is only a mistake" (p. 92).

Sometimes we assume a superiority of understanding and righteousness even over those who are our seniors in Christian Science, but this claim is made valid only as we show greater self-abnegation and charity, a higher hope and a more spiritual sense of love. The nearer we approach the standard in Christian Science, the more closely we pattern after our great Exemplar, the less censorious we become, for we begin to see as our Father sees, and the psalmist tells us that "his mercy endureth forever."

SIMPLICITY.

WILLIAM E. BROWN.

One of the first results of Christian Science which is manifested in the consciousness of the beginner, is an appreciation of simplicity in all departments of life. The natural outcome of conformity to Principle is seen in the simplicity of mental operations, for adherence to Principle necessarily inculcates that direct, positive, and accurate thinking which of itself excludes useless psychologic paraphernalia hitherto considered necessary. The average mortal does not think from the basis of fixed Principle, and consequently is compelled to do much floundering in his efforts to reach satisfactory conclusions. He is like a rudderless ship, at the mercy of every wind that blows. The student of Christian Science, however, begins to realize that his thinking processes are much more satisfactory and that successful results are more readily obtained. Following the simplification of thought methods, the student's attention is called to the fact that many of his material possessions are not so important or essential as he once considered them. Many of the books, for instance, which he deemed absolutely necessary in acquiring wisdom, are now recognized as valueless, inasmuch as they are at variance in their teaching with that of the Bible, and especially with the precepts of the only true Master, Christ Jesus. As illustrative of this point, Mrs. Eddy says, in "No and Yes" (p. 18), "If the schoolmaster is not Christ, the school gets things wrong, and knows it not."

Christian Science so enhances the mental faculties, so sharpens perception and perspicuity, so intensifies power of analysis, that one is enabled to pass correct judgment and to classify properly all things which enter consciousness as useful or useless, necessary or unnecessary. The exercise of this fine discrimination in matters pertaining to the material side of existence, such as food, clothing, and shelter, avoids much useless expenditure of time and money. Some one has wisely said that "our affluence is not determined by what we earn, but by what we spend." A philosopher who, after looking through an art and bric-à-brac shop, was asked how he liked the display, said: "I spent a very enjoyable hour; but my greatest pleasure in looking at so many beautiful and novel articles, lay in the realization that I did not need them."

Digitized by Google

The history of the human family shows mainly that its quest has been for happiness and contentment, but not knowing wherein these conditions were to be found, it has sought them in materiality at an enormous expenditure of time and money, only to say with the wise man, "All is vanity and vexation of spirit." In Christian Science the student quickly learns what it is that constitutes true happiness, and is shown a simple, direct method of obtaining it. From this point of awakening, the student's life and existence assume a much more hopeful outlook. He knows exactly what he desires; where it is, and how to get it. In place of being overwhelmed with the herculean task of wading through vast arrays of books in his search for truth, he realizes with gratitude that the grand old Bible contains all essential truth, and that the Christian Science text-book, "Science and Health with Key to the Scriptures," points out how this truth may be utilized in every circumstance of life. With this realization comes an appreciation of Solomon's saying that "of making many books there is no end; and much study is a weariness of the flesh." With the simplicity that accompanies the growth in Christian Science, time is saved which enables one to devote more attention to spiritual study and advancement, and like the sister of Lazarus he chooses "that good part, which shall not be taken away." True simplicity lifts the burden of life in every direction. It lessens the work of the patient housekeeper, who no longer is compelled to devote time and energy to concocting new dishes to tempt jaded appetites. It simplifies in the matter of dress and adornment, thus lessening the burden of the wage-earner, and all begin to realize what it means to come "out of the house of bondage" and to say with the Master, "My yoke is easy, and my burden is light."

The saving in time, money, and energy, due to the simple living that comes through an understanding of Christian Science, enables one to give substantial aid to the upbuilding of Christ's Christianity and its consequent, the saving of the sick and sinful. The generosity and unselfish labor of Christian Scientists have awakened surprise in the minds of those who are unfamiliar with what Christian Science really accomplishes for the individual. It is not so much that he has more to do with, but that in his new simplicity of life his wants are fewer. Doubtless in many homes, before the advent of Christian Science, the doctor and drug bill was the largest item of family expense. In other families, the profitless and unsatisfying amusement bill was considerable, and so in every department not only is the expense reduced, but greater satisfaction is enjoyed. True happiness and contentment are found to be within and can be gained without money and without price. A Christian Scientist fully comprehends Jesus' saying as recorded in Luke, "Take heed, and beware of covetousness: for a man's life consisteth not in the abundance of the things which he possesseth."

The true Christian life is a simple life, free from anxiety, worry, and care; it is an ever-consciousness of a loving Father's protection and provision. Christian Science extends to all the possibility of such a life, and in the words found in the prophecy of Malachi, says to him who is athirst on the desert of despair, "Prove me now . . . if I will not open you the windows of heaven, and pour you out a blessing, that there shall not be room enough to receive it."

DELIVERANCE.

WILLIAM BEARD.

WHILE studying a Lesson-Sermon on the subject "Are Sin, Disease, and Death Real?" the writer was led to read further into the account of the deliverance of the children of Israel from the bondage of Pharaoh; and as he read, he was reminded that the characters represented there are being portrayed today as well as they were then, from Moses' first sight of the burning bush, on down through all the wanderings of the children of Israel in the desert and over into the promised land.

When God called to Moses out of the burning bush, and told him to go down into Egypt and free the children of Israel, Moses hesitated, and said he was not a man of much eloquence,—"slow of speech, and of a slow tongue;" only to meet with the following rebuke: "Who hath made man's mouth? . . . Now therefore go, and I will be with thy mouth, and teach thee what thou shalt say." So today, there are those who, when they are called on to do some service for God, such as acting in some official capacity in the church or Sunday school, or are requested to heal the sick, hesitate just as Moses did, and say, "Oh, I cannot do that; I am not ready to do that; I do not know enough about Christian Science to undertake that;" or, "My time is so full that I cannot find any more to devote to this work; when I feel that I can do it more conveniently, I will volunteer and do my part."

If the procrastinators would stop and ponder, remove the shoes of self and approach the holy ground of God's service in the right way, they would see that it is the way in which divine Love is leading them on to higher and better things in the understanding of God, and be only too glad to accept the post offered them, knowing that if they are called to serve God in any capacity, they will be given wisdom and knowledge enough to meet every requirement. We are told that God is "the same yesterday, and today, and forever"; and if He promised to guide Moses and even to put words into his mouth, He will certainly do as much for us now. If, when one is called to do something, he would say as did Samuel, "Here am I," no greater impetus could be given to the cause of Christian Science. Just as Moses wanted some sign from God that he would be cared for and directed, many of us spend so much of our time looking for some spectacular exhibition of Truth, that when Truth really does appear we are too engrossed to see the divine manifestation and consequently continue to wait for some display; and some of us, alas, never get beyond the looking. Jesus said, "Except ye see signs and wonders, ye will not believe."

The character of Pharaoh is represented today in the many forms of evil which arise to beset us on every side. When we are healed of one form of error, and are about to go our way rejoicing, it sometimes seems to rise up again in a more frightful form to terrorize us; then we go to work harder than ever, and just when we think we are beyond the threatening danger we look back and behold the whole host of evil descending upon us. Then we cry out in despair, as did the children of Israel, and want to go back to our old way of thinking. It is then that our Leader's voice comes to us, bidding us look to God and see the deliverance which He has prepared for us. If we give heed to this voice, we can cross the Red sea of fear on dry ground, and can behold the self-destruction of all evil. Then, as did Moses and the children of Israel, we can sing, in gladness for our deliverance, "The Lord is my strength and song, and he is become my salvation."

It is further recorded, that after the great manifestation of God's protecting power and guidance in leading them over the Red sea dry-shod, and the destruction of their enemies, the children of Israel murmured against God and against Moses continually, because of a seeming want of bread and water and other comforts; and finally went so far as to wander off after other gods, and worship idols. This type is portrayed today by those who are never satisfied with the manifestations of divine goodness and love; and because they cannot sit idly by without constant watching and praying, they wander away and follow after material gods, and suffer as did the children of Israel.

As God was present to deliver His chosen people from all which seemed to beset them, when they turned to Him, so we know that whatever degree of fear manifests itself, how-

Digitized by Google

ever great the trial seems to be or however deep we are steeped in the beliefs of sin, disease, and death, the truth of being is always present to eradicate these false beliefs, and if we will only look to God, we can be and are saved and delivered out of all our supposed sufferings; and like Paul each can say, "I am persuaded, that neither death, nor life, nor angels, nor principalities, nor powers, nor things present, nor things to come, nor height, nor depth, nor any other creature, shall be able to separate us from the Love of God, which is in Christ Jesus our Lord."

EFFICACY OF ABSENT TREATMENT.

J. W. WRIGHT.

MANY persons marvel at the thought of instantaneous or other healing in Christian Science by so-called absent treatment, when the patient is separated from his practitioner. Any failure to comprehend absent healing is no doubt traceable to the fact that for centuries the world has been accustomed to a display of material means in cases of sickness—the excitement of the hasty summoning of a person from afar, the procuring and application of material devices, the constant attendance and attention of nurses, and all the well-known procedure of the sick-chamber. The elimination of these activities therefore tends to arouse a feeling that "nothing is being done" for a patient—and absent healing assumes a supernatural aspect instead of being accepted as supremely natural and normal. In reality, the term "absent treatment" is a misnomer. Treatment, as understood in Christian Science, is the knowledge and realization of the presence and power of God—therefore every treatment is a present treatment, because of the constant and unvarying presence and power of God.

The natural and normal nature of absent healing is indisputable in face of the procedure of Christ Jesus in healing the nobleman's son as recorded in John's gospel, and in several other instances, establishing its efficacy and sanctioning its use through all time. The Scripture referred to cites the case of the healing in language so terse and plain that it cannot be misunderstood: "The nobleman saith unto him, Sir, come down ere my child die. Jesus saith unto him, Go thy way; thy son liveth. And the man believed the word that Jesus had spoken unto him, and he went his way. And as he was now going down, his servants met him, and told him, saying, Thy son liveth. Then inquired he of them the hour when he began to amend. And they said unto him, Yesterday at the seventh hour the fever left him. So the father knew that it was at the same hour, in the which Jesus said unto him, Thy son liveth: and himself believed, and his whole house."

The boy was instantaneously healed—by "the word" spoken by Jesus and believed by the nobleman. The Master's spiritual understanding of Life and of the omnipotence of God, applied to an individual case in response to an honest appeal for help, wrought an immediate cure. The father of the boy "believed"—but he did not know the exact hour of the healing until his servants told him, and he then remembered that it was the same moment in which Christ Jesus had said, "Thy son liveth."

Divine Truth knows no limitations of space, time, or power. It is impersonal: it cannot be limited to any personality, nor can its efficacy be impaired by the lack of personal contact or communion. The truth is not a salve or a lotion, not a material agency, therefore its application is just as efficacious across miles of distance as it is across a few feet: and if the practitioner can heal a patient who is fifteen feet away he can, with equal ease and certainty, heal that same patient if he is many miles removed, "since space is no obstacle to Mind" (Science and Health, p. 179). In all Christian Science healing the impersonal truth is the remedial agency—and the more reliance is placed on "the word," the more sure we are of complete and perfect spiritual healing.

INFINITE SUPPLY.

HELEN S. BYRNE.

IN the old theological teaching, the thought of supply seemed to the writer to be a contradiction and an enigma, based as it was on the supposition that Jesus, a faithful son, was poor, while his Father was rich. Poverty and lack appeared as virtues, yet Christian people inwardly rebelled against them and many earnestly strove to overcome them, at the same time not knowing whether it was or was not God's will that poverty should have dominion over His children. It seemed as if God had plenty and to spare but for some reason which no man could fathom He was wont to keep His children in want. Great joy, however, came to the writer when she began to learn through the teaching of Christian Science that Jesus was the richest man who was ever on earth, that he understood God, his Father, to be good, and that he did not divorce himself from the goodness of the All-good.

In Christian Science we learn that we must follow Christ Jesus in his at-one-ment with the Father, because as the Wayshower he is our example. To be at-one with God it is necessary to reflect and express the qualities of good, and this can be done to-day, "here a little, and there a little," or step by step. In infinite, divine Life, Truth, and Love, which is God, good, there can be no finiteness, no limitation, and no evil. Poverty or lack, not being of or from infinite good, the Life, Truth, and Love of all, cannot be good, or part of man, the child of God, for man is God's image and likeness. To bring out our at-one-ment with our Father-Mother God, we need to watch lest we divorce supply from its real source. Supply is neither in nor of matter. Supply is in and of God, good: our supply therefore is infinite and it is good. At present we know but very little indeed of this great and good source of supply, which is ever available for our daily and hourly needs.

Paul states that the "love of money is the root of all evil," and that is correct: but this love of money can have nothing to do with the love of the good, beautiful, enduring and true in our lives. Surely the full supply of goodness or qualities of God, is right and should be brought out practically in our daily living. Light is inseparably connected with the sun in our minds: no thought is ever entertained that the light is to be found elsewhere. So Christian Science is teaching us to look alone to God for the full supply of health, wealth, and goodness, for divine Principle is our only source. As this truth is practised faithfully in our lives, the day will speedily dawn when God will be found the All-in-all, and there will be no thought of looking away from Him for good, but like our Wayshower we shall understand fully the statement, "I and my Father are one," and rejoice in the infinity, goodness, and affluence of our inheritance.

[Written for the *Sentinel*.]

JOY.

CHARLES C. SANDELIN.

Joy! What is joy? Each earthly pleasure fades
Like some illusive shadow, ere 'tis won.
E'en larger hopes, in earnest faith begun
And reared aloft, disquietude pervades:
Thus do we find that mortal sense degrades
And bringeth sorrow; perfect joy they shun
Who seek for joy beneath the light of sun,
And rest their hope in matter's fleeting shades.

Joy truly sweet, that joy which Love bestows,
When error's night gives place to Truth's fair day!
A tender warmth of heavenly peace that glows,
And lights the heart till fades all gloom away:
Let matter vanish,—Mind all being knows,
And only peace and gladness doth portray!

[Frederick Dixon in *Kent Messenger*, Maidstone, England.]

The letter of a clergyman on the subject of Christian Science in a recent issue of your paper covers a considerable number of theological dogmas, any one of which would require almost a separate essay to treat in full. The incarnation, the crucifixion, the resurrection, the ascension, the trinity, the sacrament, among others, are dealt with almost in as many lines, with the result that nothing transpires beyond a denunciation of the Christian Science teaching on the subject, but without any attempt to analyze it or to discuss it. To take a single instance, the critic writes, "Christ said he was the Son of God." The Christ, of course, is the Son of God; any reader will find that fact proclaimed from one end of Mrs. Eddy's book, "Science and Health with Key to the Scriptures," to the other. That, however, is not what the clergyman means. He means that Jesus was divine, was himself God. Now, can the critic make good his assertion? The only authority is the Bible, and the writer will look there in vain for the substantiation he requires. I am aware that the authorized version says so, but the authorized version gives many unjustifiable renderings, just as do the Vulgate, the Douay Bible, and other translations.

Supposing, however, that Jesus had spoken of himself as the Son of God, it would be about as reasonable to argue that he confined this sonship to himself, as his declaration that he was the Son of man constituted him the only son of man. As a matter of fact, the authorized version only once records Christ Jesus as describing himself as the Son of God, and that is in the tenth chapter of John. Unfortunately for the critics of Christian Science, there is no definite article in the Greek. What Christ Jesus did therefore describe himself as, was a Son of God, whereas he distinctly alluded to the disciples as sons of God. Perhaps before embarking on criticism of this nature, it would be well to read the words of the eighty-second Psalm, which, on this very occasion, Jesus himself quoted against the Jews: "I have said, Ye are gods; and all of you are children of the most High." The simple truth, of course, is that when Jesus spoke of the Christ manifested by himself, he spoke of the Son of God, and when he spoke of the true spiritual personalities of his followers, he spoke of them as the sons, or children, of God; and this explains the deep pregnancy of the demand of Paul to the Philippians, that they should let that Mind be in them which was also in Christ Jesus.

Now it was the Mind of Christ, and not the person of Jesus, which healed the sick in the first century and is able to heal them again today, and so we may realize how it was that when the Baptist sent his disciples to demand of Jesus whether he were the Christ, the answer was given in a reference to his healing works: "The blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them." The healing of the sick was ever coupled by Christ Jesus to the preaching of the gospel; he seems, indeed, to have regarded the one as the corollary of the other. When he sent out the disciples, it was to preach the gospel and to heal the sick. When he sought a definition of a believer, it was one who could do the works he did. And in the hour of the ascension, his final command to the disciples was to teach mankind to observe all things he had commanded them; and what were these things if not the preaching of the gospel combined with the healing of the sick?

Nevertheless, in the centuries which followed, the attempt was made to divide the seamless garment. The preaching was retained by the churches, the practise was relegated to the doctors. It was as a protest against this, as against many other things, that Christian Science arose, for Christian Science is the attempt to lead humanity back to primitive Christianity, and to restore to the world the Science of Christianity, demonstrable through its works.

The critic seems to regard it blasphemous to couple science with religion. If that is so, the crime must be shared with the writers of the New Testament and with Wycklif. Wycklif renders the phrase, "to show salvation to his people," to "show science and health to his people;" while the writers of the epistles use a phrase translated "knowledge of God," but which should rightly be translated full, exact, or scientific knowledge of God. If Christianity is not the exact, and so scientific, knowledge of the absolute, then there is some human knowledge higher than the knowledge of the Christ. Jesus, of course, taught that the knowledge of the Christ was the knowledge of absolute Truth, and showed that this knowledge of absolute Truth could be demonstrated to humanity through what have been termed the miracles. The words translated miracle in the New Testament have not, and cannot be made to have, any supernatural significance. They mean simply acts of power, or signs, and were precisely what is implied in this, the object-lessons employed in demonstration of the truth of the gospel. In proportion, then, as the Mind of Christ dwells in a man, he must gain that understanding of the absolute which it is possible for him to demonstrate as Jesus demonstrated it. Therefore, Jesus was able to say, "He that believeth on me, the works that I do shall he do also."

This is one phase of the teaching of Christian Science, and it is a phase that will last longer than any statements of dogmas, however learnedly expressed. The physical healing of Christian Science is, however, only the beginning of that understanding of the peace of God which comes to a man through its teaching. "Now, as then," Mrs. Eddy writes, "signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin,—to attest the reality of the higher mission of the Christ-power to take away the sins of the world" (Science and Health, p. 150).

[Algernon Hervey-Bathurst in *Newcastle (Eng.) Mail.*]

I have read the letter recently published under the heading "Christian Science," and I fail to see how it can be said that Christian Science is "seeking to press the teaching of Christ into its service," since Christian Science is entirely based upon and cannot be practised without an understanding of the teaching of Jesus. Also, it would surely seem, from the argument set forth in the letter referred to, that anything to which reference is made, however condemnatory, in the Bible could claim a Scriptural foundation. With regard to the critic's reference to the teaching of Christian Science, however, will you permit me to refer, briefly, to one or two of the points mentioned? As regards the personality of God, Christian Science does most certainly deny this, as must the Church of England, or any other church, if the word "personality" is used in the ordinarily accepted sense of the term. God is admitted to be the one infinite creator; but it is scarcely possible to think of God, Spirit, who is infinite, omnipotent, omnipresent, as a person; that is, a limited personality. "If," Mrs. Eddy writes on page 116 of "Science and Health with Key to the Scriptures," "the term personality, as applied to God, means infinite personality, then God *is* infinite *Person*,—in the sense of infinite personality, but not in the lower sense." This shows clearly the teaching of Christian Science on this subject.

With regard to the great question of the doctrine of atonement, or at-one-ment, our critic will find a whole chapter in the Christian Science text-book devoted to this question. In agreement with all Christians, Christian Scientists look upon Jesus the Christ as the Wayshower, and they maintain that in accomplishing all he did, he marked out the way for others, showing all who are willing and able to understand his teaching and to follow his example, that they must eventually overcome sin, sickness, and even death. With regard to the "miracles of healing," Christian Science

Digitized by Google

most certainly agrees that these were accomplished "by virtue of his divine power;" and there is surely nothing in the New Testament to show that the example of Jesus was never to be followed; there is, on the contrary, much to show that every Christian is bound, if he accepts the teaching of Christ Jesus, to prove his faith by his works. Why did the disciples and others heal the sick and do many "miracles," if others were not to do likewise? "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do," Jesus said, and that saying is so emphatic and clear that no room is left for doubt as to its meaning, although various commentaries and interpretations may affirm that such a statement could not be meant to apply to the conditions prevailing in the twentieth century.

"The sick, the sinning, and the sorrowful" are just as much in need of relief and comfort today as they were two thousand years ago, and the only remedy which was employed by Jesus and his disciples is still the most efficacious. While every Christian Scientist recognizes full well how far he yet is from a full realization of the spiritual or scientific meaning of what the Master taught, he who has experienced the healing and regenerative power of Christian Science knows that according to his willingness to let the Mind be in him that was also in Christ Jesus, will he be able to demonstrate more fully the proofs which must result from the understanding of the teaching of Christ Jesus.

I quite agree with our critic that the New Testament has never been lost. It is, however, clear that for centuries the teaching contained in that book has not been practised, and if what Mrs. Eddy has revealed to mankind was "common knowledge before," it is much to be regretted that some proof of it is nowhere evident. Clearly showing the practical nature of true Christianity, Jesus said, shortly after having delivered the greatest sermon ever preached—the sermon on the mount—"Wherefore by their fruits ye shall know them," and it is just on the necessity of being not merely hearers but doers of the word that Christian Science insists with so much emphasis. From this it is surely clear that Christian Science is essentially the reiteration of the teaching of Jesus, and if exception is taken to the fact that Christian Science proves the necessity of giving the practical proof, so frequently referred to in the New Testament, the question might legitimately be asked, What reason has any one to discriminate between which commands of the Master are to be obeyed and which are not? If it is not incumbent upon Christians to obey the injunction to heal the sick as well as to reform the sinner, why should it be considered incumbent upon every Christian to live according to the wonderful example given in the sermon on the mount, and on the various other occasions when Christ Jesus exhorted his disciples and the multitudes to turn from materiality to Spirit, to gain a knowledge of God which he described as "life eternal"?

[Edward W. Dickey in *Michigan Law Review*.]

Prominent among the expressions of religious thought in this country in recent years is that of Christian Science. Its teaching in regard to the healing of disease without any material agencies has called forth many comments on the question of religious liberty. As it has attracted to it a large and ever-increasing number of intelligent and law-abiding citizens all over the country, and as there have been several efforts to restrict partially or totally by proscriptive legislation its practise as a means of healing, we deem it proper to set forth in a general way some of the questions, with the conclusions of well-recognized authorities, that lie at the root of the matter.

While Christian Science is a healing system, it cannot be considered as a "school of medicine," but rather as a religion. It is defined by the Century dictionary as "a system of religious teaching, based on the Scriptures, which originated with the Rev. Mary Baker Eddy about 1866. Its most notable application is in the professed cure of disease by mental and spiritual means." For present purposes it may be said that Christian Science purports to be the re-establishment of the practises of primitive Christianity, and it is a historical fact, recognized by Gibbon in the "Decline and Fall of the Roman Empire," that Christian healing was practised down to the third century. It does its healing by virtue of divine law. Its "treatment" is but a mode of prayer in which this ever-operative divine law is sought to be applied to the sick and sinful; and this is all a Christian Scientist does, whether for himself or for others. It will be seen, therefore, that the practise of Christian Science is of a distinctly religious character. This being true, statutes passed with a view to the regulation of the practise of "medicine and surgery" cannot be said to apply to Christian Scientists, or others, who use a method of healing which is founded upon a religious belief.

Because of its religious character, the practise of Christian Science is protected in this country by ample constitutional provisions, both federal and state, so long as such practise does not imperil society or interfere with the rights of others. The first amendment to the constitution of the United States provides that "Congress shall make no law respecting the establishment of religion, or prohibiting the free exercise thereof." This provision, which is but a limitation on the power of Congress, does not protect the individual in the security of religious freedom, from the action of state government. All of the state constitutions have, however, provisions on this subject, and the following from the constitution of California is substantially the same in all the states: "The free exercise and enjoyment of religious profession and worship, without discrimination or preference, shall be forever guaranteed in this state; and no person shall be rendered incompetent to be a witness or juror on account of his opinions on matters of religious belief; but the liberty of conscience hereby secured shall not be construed as to excuse acts of licentiousness, or justify practises inconsistent with the peace or safety of the state" (Art. I, Sect. 4).

In these state constitutional provisions is to be found protection to religious liberty, as the security of all personal rights is a matter of state regulation. Should there be an abridgment of the "free exercise of religion" by any state, which would deny to the citizens of the United States these constitutional rights, we believe that the fourteenth amendment to the federal constitution, which has been termed "a hedge on the police power of the state," could be invoked to obtain relief. Section 1 provides: "All persons born or naturalized in the United States and subject to the jurisdiction thereof, are citizens of the United States and of the state wherein they reside. No state shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any state deprive any person of life, liberty, or property, without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws."

It cannot be too well emphasized at this point that religious liberty does not mean the doing of any act that may be sanctioned by a religious conviction. This is not and never was the legal import of the phrase, "the free exercise of religion." Society as well as individuals has rights that should be protected, and the law does not grant to an individual that degree of liberty which would be likely to prove injurious to others. Religious as well as civil liberty is something to be enjoyed equally by all, but this enjoyment must be in deference to the rights of all. Religious liberty has the sanction of the law only in so far as it does not violate the peace of society or infringe upon the rights of others. Liberty, says Justice Brewer of the United States supreme court, is "simply the right to do that which one deems best, subject to the limitation that it does not interfere with the equal rights of other members of the community" (American Citizenship, p. 87).

Hand in hand with the question of religious liberty involved in all legislation proscriptive of Christian Science, is that of individual liberty. The denial of the right to choose one's own physician, directly or indirectly, is a denial of the liberty which is the very foundation of our national life. All legislation of this character is a departure from the basic principle that gave this nation birth. Aside from the constitutional questions touching religious and individual liberty, here involved, is the admitted inefficacy of the prevailing schools of medicine. Dr. Oliver Wendell Holmes, in an address before the Medical Society of Massachusetts, once said: "If the whole *materia medica* were sunk to the bottom of the sea, it would be all the better for mankind and all the worse for the fishes." Dr. Mason Good, a learned professor in London, says: "The effects of medicine on the human system are in the highest degree uncertain; except, indeed, that it has already destroyed more lives than war, pestilence, and famine, all combined."

It is noteworthy that these comments express a growing sentiment among many physicians in regard to the drugging system. It is a well-known fact that medicine is not an exact science, but largely experimental, and added to this it has a list of diseases denominated incurable. Chief Justice Clark of the supreme court of North Carolina, in the case of State *v.* Biggs (133 N. C. 729; 64 L. R. A. 139), in speaking of this matter says: "An eminent medical authority in this state has said that out of twenty-four serious cases of disease, three could not be cured by the best remedies, three others might be benefited, and the rest would get well anyway. Stronger statements could be cited from the most eminent medical authorities the world has known. Medicine is an experimental, not an exact, science. All the law can do is to regulate and safeguard the use of powerful and dangerous remedies, like the knife and drugs, but it cannot forbid dispensing with them. When the Master, who was himself called the 'great Physician,' was told that other than his followers were casting out devils and curing diseases, he said, 'Forbid them not.'"

All will agree that to have a healthy government we must have healthy citizens, mentally, morally, and physically. To sanction present medical methods and suppress all others would make this impossible. When the practise of any healing system attains that point of proficiency which would warrant it in appealing to the law-making body for a monopoly, the necessity for any such action will have vanished. It would seem from what has been said thus far, that there would be no desire for legislation giving to certain medical schools a monopoly in the healing art, but as a matter of fact, during the past few years there have been introduced before the legislatures of about thirty-eight different states, bills proscriptive of Christian Science healing, under the guise of being for the benefit of the public health. Investigation has disclosed the fact that there has been no public demand for this sort of legislation, but that these bills have emanated directly or indirectly from medical societies, and that these endeavors have manifested themselves in years of political activity.

It is a fact, substantiated by thousands of cases of healing, many of which have been testified to in courts of law, under oath, and the witnesses subject to cross-examination, that Christian Science is the most effective curative agent known. So wide has been the range of this healing endeavor, that it is today a matter of public note that this system has healed every disease *materia medica* has ever healed, as well as those it has never healed. If human testimony is worthy of any credence whatever, these facts alone, aside from the constitutional questions respecting religious and individual liberty involved, should forever preclude the enactment or existence of any law calculated to forbid citizens from relying upon the Christian Science teaching, or upon Christian Science practitioners in case of sickness. Prayer may not be considered popular as a remedy for disease, but a scientific mode thereof, which gives to the world such results as the foregoing, cannot be ostracized by law.

Christian Scientists are not opposing any legitimate legislation calculated to regulate the practise of medicine. They are not opposing legislation now deemed necessary to the preservation of the public health, and it is but just to add that Mrs. Eddy, the Leader of the Christian Science movement, has always urged obedience to all such regulations. They are not practitioners of medicine in any sense of the word, and those who appeal to it know that no material agencies are used. They have no quarrel with the medical profession. It is a fact to be noted in this connection that an increasing number of physicians are turning to it, and quite frequently advise their patients to try it as a last resort. Moreover, Christian Scientists do not seek special privileges, nor do they seek to force their views on others, leaving every one to do as he chooses and extending this privilege to members of their own families.

[From *Los Angeles* (Cal.) *Tribune.*]

Real progress has primarily to do with the spiritual development of man and not with the improvements of material objects designed for his use. The contrary belief oftentimes mesmerizes men, and possessions frequently enslave Frankensteins who turn upon their creators. The man of Galilee saw this danger and gave warning in the words, "A man's life consisteth not in the abundance of the things which he possesseth," and then he adds, "I am come that they might have life, and that they might have it more abundantly." Since the Master came that "they might have life," the acquiring of this life constitutes the only true progress.

A tree may always be judged by its fruits, and when the question is asked of brick, mortar, and iron, "Have you added to man's spirituality, unselfishness, and morality?" the answer instantly comes, "No, we have not; on the contrary, we have usually increased worldliness, pomp, and pride." Not the piling up of matter constitutes progress, but the development of enduring character; the approximation of the human with the divine, and an enlarged sense of the brotherhood of man.

Real progress is manifested in every effort to be Christlike; in every effort to have God's will done on earth. These efforts will aid in establishing the kingdom of heaven on earth, a kingdom of much more importance than a kingdom of steel and concrete. Let mortals realize that "the earth is the Lord's, and the fulness thereof," and let them through the spirit of Christ recognize the equal rights of all the sons of God to live and enjoy life. Let all strive to do unto others as they would be done by. This is real progress, none other has right to the name. By this it is not meant to decry or belittle the wonderful invention, advancement, and improvement manifest everywhere in material affairs, but to point out the danger of confusing these with true spiritual progress, without which the former will come to naught, as did the glory of Rome.

[Written for the *Sentinel.*]

DAWN.

EDITH L. PERKINS.

As in the long, dark watches of the night
We fix our gaze to catch a beam,
However faint, of morning light,
And, waiting, see at last the sun's bright gleam,

So after seasons long of dark within,—
Of struggle for release in vain,—
We see the dawn of Truth, and win
At length the radiance full, for Love doth reign!

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

ONLY ONE WAY.

On pages 359 and 360 of Science and Health Mrs. Eddy makes two contrasting statements, which purport to express the views of a Christian Scientist and of an opponent of this teaching. In these two sayings she draws the line clearly between the thought of one who seeks Truth at whatever cost, and of another who is unwilling to depart from "old doctrines or human opinions," and she then asks of her reader, "Which mind-picture or externalized thought shall be real to you,—the material or the spiritual?" Jesus said, "No man can serve two masters," and emphasizing this necessity of making a choice, Mrs. Eddy continues: "Both you cannot have. You are bringing out your own ideal. This ideal is either temporal or eternal. Either Spirit or matter is your model. If you try to have two models, then you practically have none. Like a pendulum in a clock, you will be thrown back and forth, striking the ribs of matter and swinging between the real and the unreal."

While this question and the explanation which follows it seem to be addressed to the person who is reading Science and Health for the first time, Christian Scientists will make a great mistake if they do not keep the idea which is therein expressed well to the front in solving the problems they must solve if they are to win that "prize of the high calling of God in Christ Jesus," of which Paul wrote to the church at Philippi. It is also well to note that as a preliminary thereto, he was "forgetting those things which are behind, and reaching forth unto those things which are before."

The experience of a Christian Scientist is in one sense a series of temptations to believe as he had formerly believed, —that materiality is real and normal and spirituality unreal and abnormal; that the pains and pleasures of sense are the alpha and omega of mortal existence while it lasts, and that this temporal existence is to be followed by another in which mortals become immortals. It is also a series of temptations to believe that he must not be "so shockingly transcendental" in his ways and mode of life as to run counter to the views of those who would accept Christian Science if it were modified in some measure, or if the name of Mrs. Eddy were omitted. As to this Mrs. Eddy has said, "The author has not compromised conscience to suit the general drift of thought, but has bluntly and honestly given the text of Truth" (Science and Health, Pref., p. x); and Christian Scientists may well bear this in mind when tempted to compromise with or concede something to those whose pride of opinion demands "less self-abnegation." All these temptations are but wiles of the one evil to lure us from our new-found faith and hope and entangle us in the meshes of our former beliefs,—the things which are to be forgotten as we reach out for that "better hope . . . by the which we draw nigh unto God."

It is sometimes urged that if this person or that person could be healed, he would do a great deal for Christian Science, and sometimes these persons think they are conferring great distinction upon Christian Science by accepting its ministrations; but neither of these beliefs is true. The thirsty man who drinks from a spring of living water confers no favor upon the spring. He, himself, is the beneficiary; and so it is with those who come to Christian Science. Jesus said, "I am come that they might have life, and that they might have it more abundantly." But each one must accept this proffered boon for himself—he alone is the gainer or loser. Christian Science has come to make plain again the way to eternal life pointed out by the Master, and those who have found it indeed a better way can never forget their indebtedness to the Leader through whose untiring labors this healing truth has been given to those who, hungering and athirst, welcome the blessings it confers.

Archibald McLellan.

"ENDLESS LIFE."

The epistle to the Hebrews is read with deep interest by students of Christian Science, who discern in its teachings an effort to lift thought above a theology expressed in forms and ceremonies, up to a vital religion which makes known "the power of an endless life." The writer of this epistle deals reverentially with the beliefs of the fathers, the symbolism of the temple at Jerusalem and its sacrificial service, but he at the same time shows the inadequacy of all these to meet human need,—"the weakness and unprofitableness thereof." Then he tells of "the bringing in of a better hope," by which we "draw nigh unto God." Here, too, we find clear evidence that the Christ-teaching had not been wholly obscured by the mists of mortal belief, as in after years, when Christian people came to believe that death was at least a part of God's plan for taking men to Himself.

In the second chapter of this epistle the purpose of Jesus' life-work is boldly defined where we read that he took upon himself human conditions, even to the extent of tasting death "for every man," that by the overcoming of this last enemy he "might destroy him that had the power of death, that is, the devil; and deliver them who through fear of death were all their lifetime subject to bondage,"—the mightiest task ever undertaken on behalf of humanity, a task which could never be carried to completion apart from the renewing, life-giving influence of divine Truth. In simple yet forceful language, Mrs. Eddy tells us of the unfoldment of the idea of immortality in human consciousness, when she says, "Sin brought death, and death will disappear with the disappearance of sin" (Science and Health, p. 426). Mortal man can never rise above sin or its consequent, namely, death. This "old man" must be put off by knowing the unreality of the belief which constitutes the dream of mortal existence, and by the ceaseless realization of what man as God's likeness is and must of necessity be,—that he must at every moment reflect and express Truth and Love, and so realize the meaning of eternal Life.

The "power of an endless life" expresses a spiritual fact which Christ Jesus kept ever to the fore in his teachings and demonstrations. What if the veil of material sense should seem to obscure this fact, Truth is never affected by error, and if we would perpetually bear in mind the Master's oft-repeated words respecting eternal life, we would relate them naturally and readily to our Leader's statement, "Eternity is God's measurement of Soul-filled years" (Science and Health, p. 509). Surely it is worth while to pause ofttimes to ask ourselves whether we are living in this sense of existence, realizing each day more of the control of Soul, with its peace and deep joy! All our real problems must be solved in the realm of Mind, of Spirit, and if today we seem to be hindered in our efforts to work them out, eternity lies before us with all its opportunities to be and to do.

This is, however, no argument for delay, since every wasted hour must be redeemed by greater and more consecrated effort. An endless life means continuous living, not intermittent gleams of light and then the darkness of belief that evil has some power. Real living is an intense and conscious realization of the allness of divine Life and Love, and this may be maintained even when mortal sense is most clamorous and threatening; indeed it is then that we can best prove to ourselves whether we are alive to Truth and pursuing the shining pathway of light, remembering that the Son "ever liveth" and "is consecrated forevermore."

THE MOUNTAIN AND THE MOUNTAIN-TOP.

LOOKING ahead, one may see the mountain's top a long time before he sees the mountain, and though it may seem near and easily accessible, the experienced climber knows full well of the tortuous and ofttimes stony trail which must be gone over step by step before he can gain the summit. The question, therefore, of one's knowledge of the way up its slopes has everything to do with the success of his climb. If it has been opened up and well located, and if every now and then it affords a stimulating glimpse of the sunlit goal ahead, one can get on cheerily and not mind it, though there be some rugged places to pass over, and though occasionally he may seem to be going down instead of up. He knows that he is getting on, all the time, regardless of the seeming slant of the path, and that there is absolutely no question about his rejoicing in the crest's far vision if he keeps on going.

All these things serve to illustrate the fact that true Christian living is not an unprogressive passing through the years, but a day-by-day ascent to a higher altitude of perception and efficiency. It is not a contented entertainment of the hope of ultimately reaching spiritual exaltation, but the steady increase of that ability to deny self and heal the sick which the Master named as the genuine tests of true discipleship. The lack of spiritual advance is and always has been the bane of Christian profession, and we do well to remember that as in mountain climbing, so in life's supreme enterprise, the courage and confidence without which we make little if any progress, depend largely upon the definiteness of one's knowledge of the summit ahead, and his familiarity with the trail, and Christian Scientists have many and peculiar occasions for thankfulness in that they have been led to see the glorious goal to be attained, namely, perfect and sovereign manhood, and that they have been so carefully instructed respecting the course which Christ Jesus pursued and which he directed his would-be followers to take.

Nothing more surely and more continuously helps one to be, than an impelling conviction of what, with God's help, he may be, and the practical significance of Mrs. Eddy's teaching inheres in this, that in it the Christ is lifted up and so related to human thought that the following of the Way-shower's footsteps and the doing of his works is removed from the plane of longed-for events to the plane of present-day experience. To have proved, even in modest terms, that our Lord's healing consciousness of Truth is a present possibility, is to have gained an abiding inspiration, and practically to have solved life's problem. In an important sense, he who has set his face resolutely toward the mountain's top, and who has been made sure that the trail thereto is negotiable, has already overcome. In the midst of his humiliation to mortal sense, and far removed, as yet, apparently, from his exaltation, Christ Jesus could look Pilate calmly in the face and with a courage that was no less intelligent than sublime, assert his true kingship.

Christian Science brings a vision of the ideal, it awakens that true consciousness of capacity which is the beginning of greatness, which equips one to meet every difficulty of the trail, and which thus renders his ascension sure. It brings a knowledge of the Christ-way of ascent, and this fact explains its encouraging and invigorating influence. The true Scientist not only sees the glory to be revealed through his ascension, but he is able to prove that he is following the path which leads to his Olivet. He who finds sickness and sin disappearing before his apprehension and declaration of truth, is relieved of all doubt respecting the correctness of his course and the issuance of his spiritual endeavor. This demonstrated understanding of Truth gave the apostles that assurance of faith which was so manifest in their "acts," and in which Paul prayed that the Thessalonians and all others might be "stablished." The path of Christian ascent abounds with interesting situations and experiences. It is a joyous climb this, to which we are called, with a clear sky overhead and fragrant patches of privilege and opportunity all along the way, while its every overcoming is sure to yield a yet grander outlook. Moreover, we know that the steeps of today lie just beneath the mountain-top of tomorrow.

AMONG THE CHURCHES.

MITCHELL, S. D.

Starting from a small beginning of two people twelve years ago, First Church of Christ, Scientist, dedicated its new building, which has just been erected on the site at the corner of Sixth avenue west and Rowley street. The building was started three months ago and was finished just in time for dedication Sunday morning [June 16]. The building and grounds represent an expenditure of a little over five thousand dollars, and the money was raised by voluntary contributions. The foundation was built solidly, so that in the future a more pretentious structure can be erected.

The society is entitled to much praise for their progressiveness in erecting their own home, and they will have an attractive place in which to worship until they feel the need of a larger edifice. The church has grown steadily in numbers during the past few years, as the people have become impressed with the teachings and beneficial association of it.

Mrs. Kathryne Dodd read the dedication message and history of the local organization, in part as follows:—

It was in the summer of 1900 that two students began to read the Sunday lessons in their homes, being brought to realize the importance of this step through experiencing the physical healing. A little later the regular order of service was observed, and a few others met with us. On Wednesday evening, Dec. 26, 1900, we met and organized as a Christian Science society with nine members. A member kindly opened her home for the Sunday services, and we met there until March 10, 1901, when we rented the G. A. R. hall. Later we purchased an organ and the necessary furniture and began to hold the Wednesday evening meetings.

While but few in numbers, we received much good from these meetings, and the desire to press forward gradually became greater. The next step taken was to have a lecture, and Judge William E. Ewing of Chicago came to us on July 9, 1901. This lecture, which was held in the corn palace and was listened to by four hundred people, did much to correct erroneous opinions regarding Christian Science and was certainly an inspiration to those who were studying. Since that time we have had five other lectures. On Feb. 7, 1912, having met the requirements of The Mother Church Manual, we organized as a church, taking the name of First Church of Christ, Scientist, of Mitchell, S. D.—*Mitchell Republican.*

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be Nov. 1, 1912. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 16, 1912.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to May 31, 1912, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
Falmouth, Norway, and St. Paul streets, Boston, Mass.

THE LECTURES.

JACKSONVILLE, FLA.

Before a large and deeply interested audience at the Duval theater, Virgil O. Strickler delivered a lecture on the fundamentals and tenets of Christian Science. Mr. Strickler was introduced by Frank E. Jennings, a prominent attorney of Jacksonville, who said in part,—

The Christian Science church, not only in Jacksonville but elsewhere, has existed for so long and so honorably, the grade of intelligence of its members is so high, and the purity of the life and activities of its members, as a rule, is such, that certainly no one, at least in any representative audience, would need to apologize for being a Christian Scientist, but at the same time I feel that the churches of Jacksonville are working so much in unity, so much in harmony at the present time, that no one need apologize for not being a Christian Scientist. However, I am one of those who believe there is something radically wrong with the individual who does not care to hear the truth, in whatever form it may be presented; and there is something wrong with that individual who does not care to hear what other intelligent, strong-minded individuals believe to be the truth, and who will not take upon himself the task of determining whether or not it is the truth.

I believe every individual should be open to conviction. I have heard the story of an old man who said he was always open to conviction, but that he wanted to see the color of the man's hair who could convince him. We should not be that way. It is with pleasure that I am here this afternoon, and I expect to profit by it. Churches and religions would suffer materially if they actually believed what it is many times stated they stand for and believe, and if they were as represented by many of those outside of that denomination. In other words, it is very difficult indeed to judge of a church or denomination by what is said on the outside; and each religious faith very often suffers because the unintelligent members misrepresent their own faith; and much more so do they misrepresent the faith of other denominations.

The faith, the church that is perhaps the least understood, and that is more often misrepresented through ignorance, is the Christian Science church. It is, therefore, I think, of great benefit that we should have these public lectures. I consider the people of Jacksonville very fortunate to have, at certain times, gifted, broad-minded members of that church here to try to give us a message of what the real teachings of Christian Science are.

Jacksonville Times-Union.

MADISON, MINN.

Prof. Hermann S. Hering, at his lecture on Christian Science, was introduced as follows by the Rev. Mr. Wheeler, pastor of the Congregational church:—

I have been highly honored this evening in having been requested by representatives of the Christian Science church of this city to act as chairman and to introduce the distinguished speaker of the evening. It is highly significant that the days in which we are living, while strenuous and characterized by mighty events, some of them severely tragic, are making for individual and collective happiness and advancement along so many lines of achievement. Fortunately, we are living in a progressive age, in which the relationships of life are so rapidly becoming less strained that it does not shock one, as it once did, to behold a pastor of an orthodox church of this city acting in the capacity of chairman of a Christian Science assemblage, met for the specific purpose of listening to an authoritative explanation of its distinctive and characteristic tenets.

How many times we are reminded, in the actions and deeds of men, that this age is grossly materialistic. It is an age that is continually looking for practical results. It is therefore refreshing and invigorating to the thinker in the problems of life to reflect that the greatest forces of this world are not the material or even the ethical. These forces are spiritual, and thinking people abreast of the times are far more interested in the elucidation of the spiritual in its practical relation to life and conduct, than in learned and exhaustive treatises and expositions in which the materialistic is chiefly or wholly concerned. We remember that Jesus Christ taught men distinctively along spiritual lines. He directed men's thought to that which is spiritual. He said, in his teaching of the spiritual and eternal, "Ye shall know the truth, and the truth shall make you free." He came to give freedom to the individual as well as to the race, and in his life we are rapidly recovering that freedom which the world is today eagerly seeking.—*Correspondence.*

MEDFORD, ORE.

Frank H. Leonard addressed a crowded house on Christian Science at the Medford theater. He was introduced by B. R. McCabe, who spoke as follows:—

One bearing the message that is now being conveyed to mankind through Christian Science hardly needs an apology in this age and country, for man is looking higher than ever before. Doubtless, in the eyes of Providence, to whom, as we are told, a thousand years are as one day, all periods of human history are alike,—of equal weight or equal nothingness; but to man, who has fallen into the habit of being controlled by the events in which he lives, all periods of history are not alike. Each age has its distinct character, is adverse or propitious to him, pushes on or retards his civilization, his refinement, his progress in knowledge and art, and his practical conquest in the realms of space and mind. For this reason history is divided into epochs or eras, of which we speak as good or bad, as ages of light or of darkness,—as ages when our race seems to have been kept back in its course or is impelled onward and upward.

When the great clock of time ticks off the present era and its record shall be exposed to posterity, they will call it an age of great moment and significance; they will call it a destructive and yet a prolific period,—a time in which so many things have gone out and so many other things come in, so many horrible errors and prejudices have been destroyed, and so many new and beautiful truths born, that mankind, we believe, to the end of their days will rejoice in this period. They will turn to it in after ages as we now turn to the apostolic age, to the age of Shakespeare, to the Reformation, etc., as to a great fructifying season of the race, when humanity was more than ordinarily genial and shot up into new growths and burst into a more luxuriant bloom. It will mark the beginning of the period when mankind in general for the first time came to the realization of dominion over all things; and especially the demand for the constant exercise of that dominion by man himself.

This, in short, is the peculiar message of Christian Science, enabling men to see more clearly than ever that which only the prophet and sage saw before. Had the progress of this age taken place in the material world alone, it would already be a doubtful question whether the fact should be regarded as a cause of rejoicing or of sorrow. But the message of Christian Science comes and carries man into a consciousness unknown to him before,—a consciousness whose richness and vastness is yet unexplored,—and places him upon a pinnacle, not to view his material world with its manifold inventions, but to know its very source and supply. Christian Science, like other Christian churches, is laboring in the same great vineyard for the uplifting of humanity. More is required today than ever before of such laborers. The inquiring mind of today, as it looks out over the field of mortal man's endeavor and sees everything that he touches or hopes for an ignominious failure, says to itself

Digitized by Google

that the great Galilean Teacher never lived, or if he did live, he never did the things recorded of him. If he did do those things, they were done in accordance with a natural law, and if so, they could be repeated.

Christian Science claims to have discovered that very law, and comes offering it to humanity,—not in preaching, but in the demonstration of its truth. And the object of these lectures is, not to seek proselytes, but to correct or remove erroneous ideas honestly obtained by those who have made no special investigation of the subject. I therefore ask of you the same consideration for the speaker that we are always willing to accord other workers in the Master's vineyard.—*Correspondence.*

SAULT STE. MARIE, MICH.

Clarence C. Eaton addressed a large audience on Christian Science at the Soo opera house. In his introductory remarks, Judge Holden spoke in part as follows:—

I have at all times been keenly conscious of the great uplifting work being done by the various churches. I have no knowledge of any church which is not doing society and its members both moral and spiritual good. But somehow most of them are so hemmed in with creeds and dogmas that they keep me from their membership. They force me to keep in the middle of the road, so to speak; yet I fully realize the great good they are each doing for suffering souls,—for humanity,—and I have thought that they might do more good if they would cast off the shackles of creed and dogma and be as free therefrom as is the love of God itself. The Christian Scientist has come among us and seems to me to say: "To do good is my religion." I like that. I am not aware that Christ Jesus, whom they profess to follow, had any other creed.—*Evening News.*

JANESVILLE, WIS.

A large and very attentive audience listened to the lecture of Judge Clifford P. Smith, on Christian Science, at the Myers opera house. Judge Grimm introduced the speaker of the evening as follows:—

You have heard it said that as a man "thinketh in his heart, so is he." You will learn some day that this is true, that what a man thinketh in his heart, that is he. It ought to be patent to us all that the spiritual, mental, alone is capable of continuous existence, since evidently all else perishes. The spiritual, mental, is evidenced by thought, by conscious knowing; and the expression of conscious thought and knowledge is man. If that knowledge be knowledge of truth, it is as immortal as truth; wherefore Jesus defined knowledge of God and His Christ as eternal life, which knowledge he came to teach in order that mankind, as he said, might have eternal life and have it more abundantly.

How readily it follows that mortal man should be reluctant to relinquish his former thoughts, beliefs so long accepted as true, and adopt others which declare his former to have been "foolishness before God," since it involves the transformation of his very being, involves coming as a little child, involves being born again. We call such reluctance prejudice; in reality it is a mortal's instinct of self-defense. This so-called prejudice has barred the door of progress since the dawn of ages, and men have been powerless to remove the barrier. Here and there, however, the light is breaking through. Unbearable human afflictions, or the steadfast longing for the good and the true, are making openings through which the light streams in ever increasing volume, and glimpses of the limitless possibilities in the line of man's growth are presented to the startled gaze.

Five years ago there was none more prejudiced against the new and yet old teaching known to the world as Christian Science than was I. A good mother had taught me in my early youth to search ever for the good and the true and make them living forces in my life; but it was not until I had reached a crisis from which I saw no escape, that I was willing to let go my preconceived notions sufficiently to attempt to learn a little of the wonderful Science which is leavening human thought and lifting man to a recognition of his kinship to his Maker. Within six weeks after I began the study of Science and Health I awoke to the realization that I had been paralyzing my efforts to do right and blunting my better instincts. At the same time physical ailments from which I had been suffering disappeared, and I knew in my innermost consciousness that I was learning the truth which the Master said would make men free.

The eminent gentleman whom I am about to introduce to you may be able in the short period of time allowed him to arouse your interest in his subject, but he can no more present to you the sum total of all which this Science comprehends than he can measure infinity. Nor is this his purpose. The purpose of these lectures is to correct erroneous notions about what Christian Science is, in order that you may not judge amiss; it is not to teach Christian Science. But if, through God's grace, it will cause breaks in the armor of your prejudice and give you more light to "work out your own salvation," you will bless this coming hour.

Janesville Recorder.

LAWTON, OKLA.

Bliss Knapp, at his lecture on Christian Science in this city, was introduced by Attorney Charles Mitschrich, who said in part,—

In the opening statement of the introduction to the textbook of Christian Science, "Science and Health with Key to the Scriptures," Mrs. Eddy says: "To those leaning on the sustaining infinite, today is big with blessings;" and after forty years of application and demonstration, countless thousands of men and women in every walk of life are living monuments to the truth of this statement. Jesus of Nazareth taught its truth two thousand years ago on the shores of the Galilean sea. During his brief but eventful ministry, he stated his purpose to be the salvation of mankind, and in disclosing the divine plan of salvation he said, "Ye shall know the truth, and the truth shall make you free." In demonstration of the power of Truth to make free, Jesus fed the multitude, healed the sick, comforted the sorrowing, raised the dead, and caused the wind and the waves to obey his will. That these things were done pursuant to a divinely natural law, and that every one can, in the exact proportion as he comprehends and realizes this divine law, produce the same results by its proper application, is evidenced by his statement, "He that believeth on me, the works that I do shall he do also."

The mission of Christian Science is the salvation of mankind here and now. By the realization of the truth which it teaches, sin, sickness, suffering, poverty, and despair are forever banished, and in their stead purity, health, happiness, peace, and prosperity are triumphantly enthroned as the rightful heritage of man. To those who understand its truth and earnestly strive to live according to its teachings, the harpstrings of the heart and mind are filled with the divine melody of eternal harmony.—*Correspondence.*

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship.

Blackpool, Eng.—Palace theater (Promenade), 3:15 p.m., Sept. 1.

Cotuit, Mass.—Freedom hall, 8 p.m., Aug. 19.

Los Angeles, Cal. (Churches and Societies).—Pavilion, Avalon, Catalina Island, 3 p.m., Aug. 18; Third Church edifice, 734 South Hope street, 8 p.m., Aug. 19 and 20.

TESTIMONIES OF HEALING.

In the fond hope that there may be somewhere a reader of the *Christian Science Sentinel* to whom this story of my life—or a part of it at least—may come as a message, as it were, from the realms of infinite Love, I write this. A law which has been handed down to the children of men from time immemorial is to the effect that we all of us are to a very great extent the creatures of environment. Being under that law, buffeted roughly about on life's sea, away from home influences, I grew to manhood a wild, care-free, irresponsible individual, to whom I was my own worst enemy. I had been blessed with one of the sweetest mothers that ever lived, and a father whose whole life has been, for more than thirty-five years, devoted to carrying the gospel of Christ Jesus to men. But the prayers of my parents seemed unavailing. I went on from bad to worse, a slave to liquor. This habit seemed to hold me in its dreadful clutches as mercilessly as a great python holds a fluttering bird it has lured from the branches of a tree in the jungle. I prayed, but the wind seemed to blow my prayers away. I fought this curse with every iota of my human will, but still I remained in this pitiful, loathsome bondage. I had been trained for a career at the bar, but my time spent at another kind of bar took from me the ambition to become what I was told I was capable of becoming. I had been trained for literary work—and this I loved—but liquor seemed to have buried under the ashes of a wild despair all thought of using the talent God had given me.

I was never a drunkard of the gutter; but I was always a drunkard in the sense that an indulgence in liquor seemed utterly to deprive me of the ability to think and act rightly. My conscience became so seared that right seemed wrong and wrong all too frequently seemed right. Mine was a hideously distorted sense of things. Often I have gone to my room up-stairs, locked my door and thrown the key out of the window, to prevent myself from going to a saloon for an indulgence in the vile stuff which had so many years been my curse. I have pledged my word to my ever-faithful and patient wife and to my loving friends that I would never drink again, but these efforts at reform were as unavailing as the barking of the dogs of the Nile to overthrow the pyramids. I would slide down a water-pipe or jump out of the window to get to where I could buy liquor; and I have broken my word to her who has stood so faithfully and lovingly by me through the years, and to the dear friends, within an hour after that word was given.

I was little at home after I was eleven years old. My parents' hearts were all but broken by my wildness and lack of mortal stability. I lived my early years largely in an environment far from conducive to right thinking and right acting, and yet I was never what the world calls a "bad man,"—just a worthless, shiftless, moral nonentity. I was bound hand and foot by liquor. During the most of my life since I was fifteen years old, even while in college, I have made a livelihood as a newspaper and magazine writer; but liquor prevented me from accomplishing the most of which I was capable. At last there came to me the message of Christ's love for man, as demonstrated in Christian Science. It was a long time, however, before I would accept the message. It was a long time before I ceased to feel antagonistic to the teachings of our dear Leader, Mrs. Eddy, who has given to the world such a great spiritual legacy as is the text-book of Christian Science, "Science and Health with Key to the Scriptures." But finally, after one of the most terrible mental chemicalizations I have ever known, the victory was won. Thank God! And my heart was filled with a sweet peace which words of mine are inadequate to describe. Words are such little things!

Today liquor has no more power over me than the water in which the scullery maid washes the dishes. I am out of bondage. I am a free man—emancipated by the power of divine Love! And I want to say here and now that there is not a moment of my waking hours that I do not thank God for the great truth which has come to the world through Christian Science. I am indeed thankful for the meager knowledge I have of this great truth and my ability to demonstrate it.

I was once caught between two cars of a lumber train. My skull was crushed and my left arm was fractured badly just above the wrist. A piece of the large bone of the forearm protruded through the flesh; but after the accident, which happened in California, in the presence of nearly a score of people who know of the seriousness of my injuries, I walked a quarter of a mile up a steep hill to the home of a dear friend of mine, a farmer, who is a devoted Christian Scientist. Thanks to his understanding of Truth, in less than half an hour I was using my left hand to hold the food which I ate as I lay on a couch. In less than a week I was using the hand as if nothing had ever happened to it. I received no attention from a surgeon, nor did any one reduce the fracture of the left arm. At another time I was healed almost instantly of a severe attack of appendicitis. This occurred in Los Angeles, and several persons still live there who are familiar with my seemingly dangerous condition before my wife went to a Christian Science practitioner for help. I have seen every manner of problem solved by the application of the rules of divine Science. I have been enabled to accomplish, mentally and physically, what would otherwise be impossible, by clinging to the promises of Christ.

Whether it be the bondage of sin or of sickness, poverty, inability to do this or that, or what it be, I have seen demonstrated and am myself demonstrating every day I live, that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). And I love God that this is demonstrably true!

DWIGHT L. LOUGHBOROUGH, Chicago.

I am singing in the words of the psalmist, "Bless the Lord, O my soul, and forget not all his benefits: who forgiveth all thine iniquities; who healeth all thy diseases." When Christian Science found me, I had been to mortal sense a physical wreck for several years. I had taken medicine every four hours for three years; had been under the care of six different physicians for ten years, and these were the best in the country, one being a noted specialist. I underwent a surgical operation for female troubles, the physician saying he was going to make a well woman of me, but instead I grew weaker every day. My friends said they did not expect to see me alive three months longer. At this time I had about lost all faith in medicines. The greatest blessing that had come to me was when I moved into a flat near a Christian Scientist. She was always smiling and seemed happy at all times.

I had been living there about ten days when this good woman told me that it was not material remedies which I needed, and asked me if I would like to have a book to read. I said I would. I then began to read "Science and Health with Key to the Scriptures" by Mrs. Eddy. Three days later I threw all my medicine, mineral water, etc., aside, and in two weeks I did not seem the same person; indeed, I was not the same woman. The preface of this book begins, "To those leaning on the sustaining infinite, today is big with blessings." As I read those words, I cannot express the feeling that came over me. I seemed to be lifted up to where I had never been before. I read Science and Health through, then went to the Bible and read the New Testament, Psalms, Isaiah, and other books of the Old Testament, and what a revelation it was to me! I read on in this way for three months, saying nothing to any one, before I attended a Christian Science service.

I was then living in Parkersburg, W. Va. I was a member of one of the churches of that city, and during the

Digitized by Google

three months that I was reading Science and Health and studying the Bible in connection therewith, I continued to attend church and Sunday school, but at last I had to stop. I shall never forget the first Christian Science meeting I attended, every one looked so happy, all had such bright faces. They did not have that tired, worn, and troubled look which I had been so used to seeing, and I was happy, too, for I had begun to understand where they got it. On the 22d of June, 1909, I cast all material remedies away. When the time came for my tonic, it seemed that I could never get through my lunch. I had been depending on this tonic for strength, but that inward voice said I must choose between divine power and lifeless matter, and from that moment I went on without a fear or a doubt, and it has never entered my mind to go back to medicine.

As I read this healing truth the diseases vanished away, one after the other, although I had many. (I did not have over two weeks' treatment altogether.) The stomach trouble dated back for twenty years, but I am now entirely healed, and can eat anything I want or what is set before me. I was also healed of gall trouble, which had afflicted me for twenty years, also of very bad catarrh, rheumatism, and neuralgia in different parts of my body. I had worn glasses for three years, but I took them off in a little over a month after I began reading Science and Health. My physician had put me under treatment for tubercular disease of the bowels, but I was healed instantaneously of this trouble in Christian Science. I had great faith in some of my physicians, but everything failed. Ten years ago I had to part with our only child, and I never was able to forget my sorrow until I began to find my way in Christian Science and learned that in truth there is no separation.

The physical healing is blessed and beautiful to me, but the spiritual uplifting is greater than all. I cannot express the perfect peace that is filling my heart day by day, and the lessons that I am learning grow more helpful each day. Life wears a different face to me since I came to Christian Science; old things are passing away,—sin, sickness, worry, and fear and discouragement,—and in their places are health, joy, and gladness. I am truly grateful for the understanding I have of the Bible: I love the Bible, and with Science and Health it is my daily companion. I am also grateful for the *Journal* and *Sentinel*. Christian Science has given me a God that I can love and worship and not one to fear. I have understood more about the Bible in the year and nine months that I have been reading Christian Science than in all the rest of my life put together, although I was faithful to my church and Sunday school.

I could not mention all the blessings that have come to me through the study of this wonderful truth. I have had many beautiful demonstrations of God's love and presence; it helps me in all the problems in my home. I have been blessed financially as well as physically. The past year has indeed been a new year to me; I am a new woman in every way. Truth has helped me to overcome malice and resentment. I always knew it was wrong to hold malice, but I did not know it was making me sick and would kill me unless overcome, and my heart swells with gratitude to God for giving me a forgiving heart, that enables me to love my fellow beings. The Lord's Prayer and its spiritual interpretation, as given on page 16 of Science and Health, has been of much help to me.

I would like also to tell of the healing of my mother. In three months after I had been reading Christian Science, I went to visit my old home in Virginia. She did not know anything about Christian Science, and I had not understanding enough to explain it to her. While I had gained very little in flesh then, she never heard me complain, and I was eating what the rest of the family did. She said she could see a great change in me, and when the time came for me to start back home she asked me for my book. I hesitated for a moment; then it came to me that I could get another one, so I did without it two weeks until I could get one. She began to read Science and Health, and a bowel trouble of a good many years' standing vanished away. She was also healed of a stomach trouble that had caused her very much unrest. She had about two weeks of absent treatment for this trouble. I visited her again last fall, and while there she had an instantaneous healing of a trouble with one of her legs. She had worn a rubber stocking for thirty-five years, was not able to go without it, but she gave up the stocking and all pain and swelling stopped at once.

I am happy indeed in trying to live Christian Science, and my earnest desire is that I may be its worthy representative. My heart goes out to all who are still in the house of bondage, that they may know this truth that makes free. I am thankful to God, also to Mrs. Eddy, for all that this truth has brought to my life.

MRS. DONA DAVIDSON MERCER, Kenova, W. Va.

I cheerfully corroborate my wife's statement. She has nothing to complain of; everything is in perfect harmony with her. I can say that what has been a help to her has also helped me; I was always in bondage to medicines, but since Christian Science entered our home I have not taken any medicine and am well and have no desire for any material means of so-called help. I am grateful for my wife's healing.—C. F. MERCER, Kenova, W. Va.

[Translated from the German.]

Gratitude and love for Christian Science impel me to tell of the blessings it has brought me. About a year and a half ago my dear wife, who had been slowly pining away, passed on. Six months previous to this I had manifested the first symptoms of a serious disease, and was greatly weighed down mentally. I had pain in the chest and difficulty in breathing, and according to the physician's diagnosis I was suffering from asthma, but despite medical treatment my condition became aggravated. A specialist tried to remove the trouble, but the difficulty in breathing kept returning, while the sharp pain in the chest increased in severity. After I reached the stage when it became almost impossible for me to stand and breathe, another physician diagnosed the case, and some relief was afforded from time to time through aspirating the pleural cavity. I lay in this condition for three months, after which the breathing improved, but I could stand no physical exertion of any kind. The prospect of recovery had already been put off for years by the physician, and at this juncture swelling of the glands of the throat set in. I was operated upon several times, but conditions did not improve. After my return home from the hospital I was bedridden once more and suffered terribly, and as a result of the drugging a skin disease manifested itself and after a short time one of the toes had to be amputated. The physician then advised me to go to a sanitarium as soon as possible, and I entered the institution on July 12. The professor informed me that my condition was a very serious one, the lungs, blood, and bones being affected.

This verdict brought all hope of recovery to the vanishing point, but "man's extremity is God's opportunity." The next thing which occurred was this, I was sent some Christian Science literature, among which was also a volume of *Der Herold der Christian Science*. This reading now became my spiritual food. My hope was renewed, and the healing soon began, to the astonishment of the physicians. The wound of the foot healed in a short time, the difficulty in breathing steadily decreased, and the glandular fistulæ dried up. I longed to have help from a Christian Science practitioner, and on August 8 had my first treatment—I was in God's care. After a general examination the physician told me that the lungs were clear and that my chances of recovery were most favorable. The first of September I left the sanitarium and went to Hanover in order to meet my practitioner. During this time I attended the Christian Science services and Wednesday evening meetings, and every

Digitized by Google

morning met the practitioner, through whom I gained a better understanding of the divine Principle of Christian Science. These were the most beautiful hours of my life. Never did I assimilate so much truth as I did during that period. In operating on the gland of the throat a nerve had been cut which caused paralysis of the lower lip so that my mouth was distorted, but after a while the normal condition was established, and the whole body responded to the salutary influence. Years ago I sustained a severe injury of the shoulder through a fall from a considerable height, and since that time had been able to use the arm but little. I now began to experience pain in the shoulder, and when a few days later I tried to move the arm the difficulty was entirely gone, and the arm was supple as it had been before the fall.

I am unable to express in words how much I have to be grateful for, but I might best describe my frame of mind with the following words: boundless joy and happiness fill me for having been taught to draw from the inexhaustible depths of divine Truth.

W. TIEDEMANN, Hepstedt b. Bremen, Germany.

It is with pleasure I tell of my healing through the reading of "Science and Health with Key to the Scriptures" thirteen years ago. I feel that the time has come for me to acknowledge to the world my wonderful healing, for it may help some one who is suffering in like manner. For twenty-three years I had been under medical treatment continually, for a rectal trouble, but no cure came of it. I had been told by physicians here and elsewhere that nothing but surgery would cure me. But thanks to Christian Science, Truth and Love have made me free. I am well, and have been all these years. Before I was healed I could not do any of my heavy household work. I was sick and miserable all of the time, but now I am able to do all of my work, and I have had five in my family most of the time. With the understanding of Christian Science which I have I am able to meet and overcome all the difficulties that have made their appearance in my family, such as rheumatism, fever, and throat trouble. I am deeply grateful to God, also to Mrs. Eddy, who has shown us in Science and Health how to know God.

MRS. JOSEPHINE D. CLINTON, Lincoln, Neb.

I came into Christian Science in 1909, when in need of help for nervous exhaustion. I had been teaching school for one year, and it did not seem as if I would be able to teach again. I was very despondent and unhappy, a condition brought on, the doctor said, by overwork and worry at school. One day a poem was brought to my notice at the home of my aunt, who had been benefited by Christian Science. It appealed to me, and as soon as I had read it I went to see my aunt's practitioner and in one month's time was back at school, better than I had been for years. Since then I have had many proofs of the healing power of Christian Science, colds and fears of all kinds being speedily eliminated.

I now feel as though I could "run, and not be weary; . . . walk, and not faint." For these blessings I am very grateful to God, who has led me to this fount where all may drink, also to our revered Leader, Mrs. Eddy, for giving us our text-book, "Science and Health with Key to the Scriptures."—MISS ELSIE MEYER, Price Hill, Cincinnati, Ohio.

I wish to express my gratitude for my healing. In December, 1909, I was a total wreck,—morally, physically, and financially. I had been a very heavy drinker for twenty years, had lost my position from this, and was about to lose my home. At that time I was heavily in debt, and thought the only thing to do was to take my life. At this time a lady called at my home and I went with her, though under the influence of liquor, to see a Christian Science practitioner. From that day I have never had a desire for intoxicants of any kind. Inside of two weeks I had a position, then my debts commenced to disappear. In March, 1910, I took another position, the best I have ever held. Since coming to Christian Science I have also been healed of rheumatism in the feet and legs, a trouble of years' standing.

As grateful as I am for all this, I am far more grateful for the regeneration that has come into my life, and for the earnest desire which I have to know more of this truth and to live it daily so as to help all mankind. For all this I am truly thankful to God, also to our beloved Leader, Mrs. Eddy.—WILLIAM H. COLLARD, New York, N. Y.

That Christian Science can overcome every material law relative to a severe burn was proven for me in the winter of 1910. I was terribly burned by an explosion of gasoline on the range. My face was so badly burned that one eye seemed to be drawn. I asked for help in Christian Science immediately, and later in the day telegraphed to Chicago to a practitioner who was then treating me. This occurred at noon, and by three o'clock a feeling of relief came to me. At half past five the pain was gone, and by morning I could not have told without a mirror that anything had happened. The mirror, however, showed how serious had been the injury. The healing was rapid, the worst places healing first, and in just two weeks to the day the last piece of skin peeled off, leaving the flesh soft and clear as a child's, without so much as a red mark, which so often remains for a time after a burn has healed. I was afterward told by a friend that she had heard a dozen people say that if that burn did not leave a scar it would be a wonderful demonstration for Christian Science. Our gratitude is unbounded when such proofs as this come to us, and we can best show it in every-day living.

MRS. PAULINE A. PAGE, Kansas City, Mo.

[Translated from the German.]

Three years have elapsed since I found Christian Science, and I wish to add this testimony in token of deep gratitude for all the benefits derived therefrom. Four years ago I had a severe apoplectic attack accompanied by paralysis of the left side of the body, followed by an affection of the cerebral arteries. I was in a wretched condition, and the physician informed my family that there was very little hope of my recovery. I became weaker with every month, although a great many material remedies were resorted to, and I also spent all summer in the country, where I was well cared for, but the paralytic condition did not yield; on the contrary, it extended over the other side of the body, so that it became almost impossible for me to move or leave my bed. The affection of the arteries of the brain went on, my mind began to be clouded, and at times I seemed unable to understand the conversation of the members of my family. While in this state of great need, and to sense beyond aid, I heard of Christian Science, turned to its teachings, and was treated and helped by a dear Scientist. During the first visit of the practitioner I was enabled to move around the room, and after her third visit to attend the meeting. My strength returned in a very short time, and I was able through Christian Science to overcome quickly all the other troubles which used to manifest themselves, as gall-stone, inflammation of the throat, etc.

This wonderful proof of the healing power of divine Love caused my husband and three children to become adherents of Christian Science. They have already had wonderful demonstrations of the power of Truth and Love, and are striving to prove their gratitude through right living. Christian Science has brought to our home a larger measure of love, peace, and happiness, and has become a comforter and helper to us in times of trouble. I feel that I cannot be grateful enough to God for the many blessings which have come to me through Christian Science. I am also very

Digitized by Google

grateful to our beloved Leader, Mrs. Eddy, who has restored to us the Christ-teaching and shown us the way to Truth.

AUGUSTE ZÜHLSDORFF, Berlin-Friedenau, Germany.

It affords me great pleasure to speak of the benefits my wife has received from Christian Science. It is about eleven years since first we heard of it, and as my wife was suffering from a diseased stomach and getting no relief from her medical adviser, we decided to have Christian Science treatment. She did so, and in a few weeks was well, being able to eat any kind of food she fancied, and there has not been any return of the stomach trouble.

We obtained a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy and studied it along with the Bible. We moved into the West some years ago, and never had any sickness but what could be overcome until last spring, when my wife had an outbreak of eruptive disease on her face, neck, and body. We at once wrote to a practitioner in Ottawa, about two thousand miles from where we are living, and before the reply came the disease had disappeared, leaving only a new skin which soon assumed a normal appearance; thus proving the effectiveness of absent treatment. We are very grateful to God, also to our dear Leader, Mrs. Eddy, for the truth revealed to us, and for the book "Science and Health with Key to the Scriptures," which is a constant source of help and blessing.

CARL REYNHOLD, Granum, Alberta, Canada.

I wish to express my gratitude for the healing of a trouble with my ear, from which I had been suffering for over a week. I tried to apply my slight understanding of Christian Science, but did not seem to get any results. The suffering apparently grew worse, particularly at night, and I could not sleep. A member of the family then asked me if I would like some help, and I said I would. I received treatment that morning, but again in the night the pain seemed to grow worse, until I declared that I could not stand it any longer, and that I would have to see if a doctor could not help me, as I could not go through another night without sleep. The lady who had given me the treatment asked me if I thought I had given Christian Science a fair chance. I had had only one treatment, and what had I given to God that I should expect to be instantaneously healed? She said I was not trusting God, and if God had not helped me did I expect that a doctor could? She urged me to be faithful and trust God and that He would deliver me. She gave me another treatment then, and I was healed. The pain left me while I was being treated. I am very grateful to God for Christian Science, also to Mrs. Eddy for the revelation of Truth to this age which enables us to be delivered from all evil.—H. BLACKMAN, New York, N. Y.

[Translated from the German.]

I became acquainted with the teachings of Christian Science through my grandparents, who had been benefited by its treatment. I had been afflicted for several years with weakness of the eyes, which caused me considerable inconvenience. It often was impossible for me to see in doing needlework and in reading without rubbing my eyes previously; besides which I experienced great difficulty in learning my lessons for school. Our hope that this condition would change proved of no avail, and finally we applied to a Christian Science practitioner. The result was that with two weeks' treatment I was completely healed.

When doubts come I cling with a firm trust to God, who is ready to help us if we approach Him in the right way. We cannot be too grateful to God for leading us to Christian Science, for to it alone we owe our happiness. We herewith give thanks to God and express gratitude to our beloved Leader.

HELENE RAMPENDAHL, Ronnenberg b. Hannover, Germany.

FROM OUR EXCHANGES.

[F. Rhondda Williams in *Christian World.*]

The only real instrument for obtaining a message of authority in the spiritual realm is spiritual insight. Legal authority serves a purpose for a time, and is necessary for the childhood stage of the individual and of the community. External authorities are often useful and helpful if they are not too arrogant, which, however, they usually are. There is an element of authority in the church, and even in social convention, in tradition, and in the Bible, but these must never be absolute authorities; they must never be set up to crush the liberty of search, the right of judgment, and the alertness of conscience. We do not mean by this that every man is his own authority, but only that every man must be in the last resort the channel through which the supreme authority of God announces itself to him. If a man's moral nature were only his private concern, it could have no authority; its authority lies in the fact that it is the medium through which the supreme will presses into his life. In the face of a mighty organization of law to cover life, Jesus asked the people, "Why even of yourselves judge ye not what is right?" Jesus often threw man back upon personal judgment and personal communion with God. It is essential to spiritual progress that the individual should be free to make his own way to the primary sources, that he should have free access to the fountains of life in direct spiritual communion. If any creed, or law, or church, or person stand between him and that, it is necessary to remove the barrier. Spiritual fulness is only possible where there is spiritual freedom. Beware, however, of a spurious freedom, the mere negative kind which is only interested in breaking down barriers.

[*Christian Register.*]

The schemes of salvation and the elaborate systems of theology that battled with each other fifty years ago have strangely crumbled. Their authors are forgotten, and the wrangling is softened down almost to harmony. Let us look at God with childlike simplicity, and let us walk through this life without conjuring terrors for the future. It is not a sign of atheism that we cease to fear God, nor is it a lack of religion when we go happily through the world like children in a father's garden, looking before us without trembling. Do not the apple blossoms shimmer down upon us, and the strawberries look up at us from our feet? It is unnatural to be unchildlike, and to lose sight of the interpenetrating love of the world.

A recent writer says: "I cannot conceive of fear as between myself and God. The more I think and the more I feel the thought of infinite Love, the more do I go forward in childlike trust, my hand in God's hand, my heart full of peace. It is then that I understand also the atonement of Christ, the at-one-ing that brings together all who can work for the right and weaken the false. I am less of a boaster as I grow older in a world like this, but I am more of a child." With this sentiment we believe all good Christians should agree. It is a world for children and for the childlike spirit. It is not the world for either boasting or lamenting.

[*Christian Intelligencer.*]

The things of the Spirit are real. Men have had experience of their reality. They have found things in the world of the unseen that have corresponded to capacities within themselves—things that have inspired them to action with a power far beyond that of things seen to inspire, that have made them strong in trial, brave in danger, hopeful in all their striving for the best. And the sweetest songs men have ever sung are those in which they have tried to sing of these things of the Spirit; and the most beautiful pic-

Digitized by Google

tures are those in which they have tried to paint their visions of these things invisible, and their grandest edifices are those into which these ideals have been builded, and the noblest institutions those in which they have attempted to fashion the political and social life of the world after the pattern of a heavenly kingdom which they have seen in the mount. This discernment of things visible only to the eyes of the soul is about the most consequential factor in the production of the very best and most substantial achievements in the world today. Some very real results have come out of this belief that there is a world of spiritual facts with which men are in constant touch.

[Rev. Howard Arnold Walter in *Hartford* (Conn.) *Seminary Record.*]

A pastor can never lift his people above his own spiritual level. If his contact with spiritual reality in Christ be not intimate and vital, he may have a following of parishioners who admire his personal graces and praise his sermons and perhaps are satisfied with his ministry. But only a man in whom Christ is regnant will draw men above his own human personality to discern and desire to follow the Christ who "lives on his lips and beckons to his hand." The true sheep hear and heed the voice of the master shepherd speaking through his lips. He does not develop a succession of beautiful ideas in the hearing of his people. Him the truth of God has seized and swayed to the fulfilment, the forth-uttering, of its mighty mission. He is seeking to apprehend that for which he knows he has been apprehended of Christ Jesus. And as Christ's truth enlarges his heart, and as Christ's love glows in his face, men behold inevitably in his words and in his life the Master of the soul, and they are summoned by him to the higher life.

[*Christian World.*]

All that is around and behind, so much of which cramps and confines us—our laws, our institutions, our moralities, our theologies—are, be it ever remembered, man's work, and what man has made he can unmake and remake. The old dogmatic systems, which for long ages have had their iron hand upon us; what of them? They are all a human affair,—and we are human, as good as these old makers, perhaps better. What they had of truth in them we will take; but they shall tyrannize over us not for an hour. Our systems shall not be theirs, but ours, such as shall fit our wider knowledge and not their narrower one. Most of all, in making things we are making ourselves. The deeds we do, in obedience to the higher, the spiritual law, are forces projected into that unseen world to which our spirits belong. They may seem a failure here, but they are a success there. When we follow them into that unseen we shall find them again; find them and ourselves again, as part of a diviner order, an endless destiny.

[*Universalist Leader.*]

Ideals have the quality of life, and are never stationary. To reach an ideal is not to possess so much as to discover another. The ideals of yesterday will not do for today, and those which today serve as splendid incentive may lose their grip tomorrow. There are little ideals and big ones; there are high and low ideals. But power abides most in those which are high, those which appeal to the heroic and the adventurous spirit.

[*Advance.*]

Our creeds are matters of spiritual intuition rather than of logical deduction. It is not the most learned man nor the most accomplished scientist that sees God in the world, but "the pure in heart." As a mere matter of reasoning and deduction neither theism nor atheism has uncontested victory, but the spirit that lives the life of God possesses the conviction of His being, His presence, and His love.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

Catalogue No. 20, June, 1912, has recently been issued and will be supplied to reading-rooms upon request. The catalogue contains complete lists of all publications issued by the Society, and of the works of Mary Baker Eddy published by Allison V. Stewart.

Orders for aluminum markers, which are listed in catalogue No. 20, June, 1912, have not been filled, owing to delay on the part of the manufacturers. It is hoped that the markers will be on hand for delivery early in August.

A new pamphlet, "Christian Science Healing *versus* Mental Suggestion," by Frederick Dixon, reprinted from the *Weekly Budget*, London, England, is now on sale; 36 pages and cover, at the prices of the regular pamphlets.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges, 32 pages. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under those titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

National.

Before adjournment of Congress Aug. 17, it is likely that the House will pass the Lever bill, providing for the establishment of agricultural extension departments, and if this should be the case, the bill will be brought up for passage in the Senate at the session next winter. It seems certain that within the next year or two Congress is to take steps for the development of agriculture, as a partial remedy for high prices and also with a view to checking to some degree the rush of country boys and young men to the cities. The Lever bill supplements existing laws intended to encourage agricultural colleges, and greatly extends and enlarges the scope of those laws. Ten thousand dollars a year is to be given each state assenting to the provisions of the proposed law, making an aggregate of four hundred and eighty thousand dollars a year if all the states come in. The additional sum of three hundred thousand dollars is appropriated for the fiscal year 1914, which sum is to be increased three hundred thousand dollars a year for a period of nine years, or until the total appropriation comes up to three million dollars, at which point it is to stand thereafter.

Governor McGovern of Wisconsin has appointed a committee to investigate a proposition laid before the state board of public affairs which has to do with the solution of the land problem in Wisconsin. It has been proposed to that board that the state start a colony of its own on a new and original plan. It is also proposed that the state acquire land at its cheapest wholesale price, sell it to colonists for its fair market value, the entire profit to be converted into a communal fund for the benefit of the colonists. This is to cut out the petty speculator and place the land in the hands of *bona fide* settlers at wholesale prices. It is intended also to multiply the efficiency of individual savings by using them cooperatively and to encourage a community spirit, for the administration of the communal fund is left in the hands of the colonists themselves, subject to the veto power of the board of commissioners to insure against unwise action.

Capt. Thomas Fleming Day, editor of *Rudder* and a prominent yachtsman, arrived in Queenstown Aug. 7 in the thirty-five-foot power boat Detroit. The trip across the Atlantic took twenty-three days and five hours. Upon her arrival two hundred gallons of gasoline were left out of the twelve hundred and seventy-five gallons carried. The Detroit took fuel for twenty-five days. The only discomfort during the voyage was caused by the scarcity of the water. Provisions for ninety days were carried, so that the fuel supply was ample. The boat has a length of thirty-five feet over all, a beam of ten feet, draws five feet of water, carried two tons of lead ballast and is of one hundred and fourteen tons burden.

A new antitrust bill aimed particularly at steel corporation combines will be introduced in the House by Representative Stanley of Kentucky, chairman of the "steel trust" investigating committee. The bill would prohibit corporations engaged in interstate commerce from holding stock in other companies directly or indirectly, or buying or selling their own stock, and would prohibit interlocking directorates, executive officerships, and operation of common carriers by railroads or steamships. Heavy fines and long prison terms would be imposed for violations of the law.

The Interstate Commerce Commission has extended from Sept. 1 to Nov. 1 the effective date of its order to require oil pipe line companies found to be common carriers under the law, to file with the commission schedules of their rates for the transportation of oil. Several of the companies have been preparing before the Commerce court to restrain the commission from enforcing its order.

When the fifth annual convention of the Atlantic Deeper Waterways Association meets in New London, Sept. 4, 5, and 6, a session will be devoted to discussion of the report of the United States Board of engineers on the recent survey of the intracoastal canal from Boston to Brunswick, N. C.

"The United States has decided against letting Chicago bring any more water through its drainage canal. That was our recommendation in 1908, and it will be adhered to," said a member of the old inland waterways commission, which met at Buffalo recently.

Governmental control of wireless telegraphy probably will not be provided at the present session of Congress. The bill of Representative Alexander of Missouri for that purpose has been stricken from the House calendar.

Investigation of an alleged fire engine trust has been renewed in Chicago. Aside from Chicago, the companies being investigated are said to have principal offices in New York, Atlanta, San Francisco, and Boston.

The House of Representatives has appropriated ten thousand dollars for the investigation of the patent office by the economy and efficiency commission.

International.

A powerful French syndicate is behind a project to construct an underground electric tramway system in Montreal, Canada. This was learned when Treasurer Forget of the Montreal Financier Franco-Canadian asked the city council not to grant such new concessions to the Montreal Tramway Company as would prevent the carrying out of the projected subway. According to Mr. Forget's letter the company is being formed with one hundred million dollars capital and engineers have already been engaged to draw the plans. The company wants a fifty-year agreement with renewed powers. It proposes to run first and second class trains.

Much interest is being aroused by the announcement made by Lord Chichester that he intends to sell by auction the outlying portions of his Stamner estate in Sussex. The property to be disposed of includes Hastings castle, which is situated on a cliff two hundred and sixty feet above the level of the sea. The castle has been in the possession of the [illegible] family for some three hundred years, having been purchased in 1604. Here William the Conqueror made his preparations for the battle of Hastings, and it was also from here that King John declared the sovereignty of England over the seas.

The London *Daily News and Leader* says: It will be seen that in making the [illegible] subject of the next Liberal campaign [illegible] will be getting at the root of the evil that affects society to-day both urban and rural. It will not only restore the peasantry but relieve the excess of labor in the towns; it will not only settle the question of unemployment, but it will redound to the benefit of every class of the community in the decrease of taxation. It is a policy which [illegible] the interests of the community as no other policy has done or can do.

The Turkish government is [illegible] into peace negotiations with Italy. [illegible] conducted in a manner compatible with its honor and dignity and the rights [illegible] properly safeguarded. This has been agreed to in the Chamber of Deputies at Constantinople.

The Hoangho bridge, which the Imperial Pekow railway is building at a cost of [illegible] million five hundred thousand dollars, will be opened with elaborate ceremonies next October. It is the finest of its kind in China.

Emperor Mutsuhito of Japan passed away July 30. His son was immediately proclaimed as his successor.

Industrial and Commercial.

The Sevier orchard near Ivins, Utah, has just finished shipping to market twenty-five thousand boxes of peaches, and the owners will clear approximately one hundred and eighty-five dollars profit from the crop. Many hundred workers were required to [illegible] it, and inside of fifteen days, with the [illegible] of a single bushel of peaches, the [illegible] orchard was stripped clean. In all [illegible] the peaches shipped some fifty thousand barrels were sold at the orchard or [illegible] workers, who put in their extra time [illegible] and drying them for winter use.

More than forty-five million dollars [illegible] every year by American egg [illegible] dealers through improper handling, according to the experts of the department of agriculture. The department has addressed a letter to buyers and shippers, asking them to undertake to eliminate the enormous losses due to small eggs, cracked and [illegible] eggs, stale, heated, and rotten eggs.

The Southern California Mountain Water Company is the largest of its kind in the state, outside of the aqueduct system of Los Angeles. It has four reservoirs, which give a total storage capacity for San Dimas of twenty-nine billion one hundred and sixty million gallons as against twenty-four billion gallons, the supply of San Francisco for three hundred and fifty thousand people.

Utah's contribution to the production of the world this year will be one hundred and eighty-six million dollars, according to conservative estimates. The output is divided as follows: Manufactures, $80,000,000; mineral output, $20,000,000; farm products, $50,000,000; livestock and wool, $24,000,000; [illegible] construction, $8,000,000; coal and coke, $3,000,000; and fruits, $1,000,000.

According to an estimate made by the state fish and game commissioner about seven hundred thousand bass "fingerlings" have been taken from Indiana hatcheries this year and placed in the lakes and streams of the state. Under proper conditions this fish will be [illegible] length and weight for catching at the end of two years.

Materials valued at $21,000,000 were produced by the mines and quarries in New York state last year.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"THE DAY OF GOD."

CLARENCE W. CHADWICK.

THE apostle Peter speaks of "the coming of the day of God, wherein the heavens being on fire shall be dissolved, and the elements shall melt with fervent heat." Viewed from a material standpoint, one might not be inclined to wish for any immediate appearance of this day. Metaphysically interpreted, the suggestion of fear does not present itself, for the mental picture portrayed involves only the destruction of a false material sense and the restoration of a true or spiritual sense, called in Scripture "a new heaven and a new earth."

The old-time belief in a God of wrath and vengeance has suggested a judgment-day almost too dreadful to contemplate, but it is made apparent in Christian Science that the Christ never will make himself manifest in this way. The coming of Christ is a spiritual awakening; it is the appearing of the divine idea in human consciousness. Slowly but surely it is coming to the apprehension of mortals that there is only one way of getting out of the world here or hereafter, and that is by overcoming or destroying a mistaken or false sense of being. The Master said, "Be of good cheer; I have overcome the world." This could mean nothing else than that he had conquered or subjugated a matter sense of the world, having demonstrated the supremacy of spiritual causation. This conquest must have taken place in consciousness rather than in external environment, and it must take place in the same manner with every human being. The putting off of the old man is purely a mental process, and when it is completed, form, outline, and symmetry will be recognized as wholly mental and not physical.

Nature already appears a thousand times more beautiful to the Christian Scientist, because he has begun to look at the universe through the lens of Spirit. As he learns to do this, the law of destruction, dissolution, and decay is relegated to a dead past, and he thinks of all the glories of creation as spiritual, real, and undying. In this way only can he learn to love nature and nature's God. The materialist may think that his love of nature is most profound, but the fact remains that so long as he is looking through a material lens he can entertain only a perverted sense of that which he calls beautiful. If one's material concept of a flower or a tree is called symmetrical and beautiful, how much more beautiful the spiritual concept or idea of them! When nature is more metaphysically regarded, there will be less fear of loss and destruction, for one who is rich in ideas cannot lose what he possesses. His concept of possession will be mental, not physical or material. He will know that an absolutely right idea of anything constitutes true possession,—"an inheritance incorruptible, and undefiled, and that fadeth not away."

"The coming of the day of God" is the dawning of divine truth in individual consciousness, the right concept which always displaces the wrong. To illustrate: when one gains the true idea of health, he will lose the mistaken assumption that he is sick or in distress, and this is called Christian healing. A disease-laden consciousness assenting to the sense suggestion of the power and reality of disease, needs a savior; in other words, a mistaken mental concept needs correction. Since God alone is the author of right ideas, God must be appealed to for that right remedy, which is suggested in the words of the Master: "For he [the devil, or evil] is a liar, and the father of it." With the understanding that disease is an error of sense, which a coming to the knowledge of Truth dispels, the discord disappears, thus affording practical proof of the availability of metaphysics in the handling of so-called physical ills.

Precisely the same rule applies to the treatment of sin, and happy indeed "is the man whom God correcteth." Happy is he who welcomes the joyous advent of "the day of God," who is willing and glad to have his wrong thinking laid bare, to have right ideas come into consciousness. Mrs. Eddy has truly said that "no final judgment awaits mortals, for the judgment-day of wisdom comes hourly and continually, even the judgment by which mortal man is divested of all material error" (Science and Health, p. 291). This one scientific declaration of truth has already done wonders for mortals in destroying the merciless demon of fear concerning an imaginary judgment-day that would mean utter annihilation to the sinner. No more consoling thought could possibly come to a mortal than that divine Love is a law of annihilation to sin only, and that God shows His love and mercy through the destruction of sin. This punishment of sin is the corrective process through which individual consciousness must pass, before the day of God can fully come.

If the thought of Christian Science pertaining to the day of judgment could be accepted by the world at large, disease and sin would diminish, crime would lessen, and the fear of destruction and death would soon be a thing of the past. May professing Christians welcome the coming of the judgment-day of understanding; may they find in Christian Science the open door to a higher order of Christian thinking that will rid them of their illusive sufferings, which they have been educated to think are real and unavoidable; may they find within the inspired pages of Science and Health that Christ, Truth, the promised Comforter, wipes away all tears and reveals the eternality of the Life that knows no death. When they have thus opened their minds and hearts to the truths of Christian Science, they too will be led to say with their whole hearts, "Thanks be unto God for his unspeakable gift,"—"the coming of the day of God."

"LITTLE CHILDREN."

CHRISTINE H. BEALS.

JESUS said, "Suffer little children, and forbid them not, to come unto me." In the light that has come to the parents of this generation through Christian Science, this saying of the Master's is a very significant one. This "me" of which the Saviour speaks is the Spirit of truth, giving the

Copyright, 1912, by The Christian Science Publishing Society.

Digitized by Google

right understanding, the right knowing about God and His universe and His children. Jesus had an insight into life, a keenness of perception which came from an ever-present consciousness of man's oneness with the Father; and this keenness of vision enabled him to see in the child potentialities which very likely had escaped the parents and educators of his day. What a wonderful meaning his words and actions held for all generations and for all time, when he placed a child in the midst of the people and said, "Except ye . . . become as little children, ye shall not enter into the kingdom of heaven"! He knew that the child of God's creating is intrinsically good, that it is a spiritual idea born of Truth and Love; and that even to human sense, the child in its infancy, before the false claims of mortality assail it, reflects more of the things that pertain to the kingdom than in later years.

We have no slightest word or hint that the thought ever came to Christ Jesus, this representative of compassion and love, that there might be inherited traits in the child which would later in life mar its happiness or produce discord or inharmony in its being; or that he doubted the absolute freedom from sin which every child should express. He knew that sin, with its attendant chain of evils, comes only with the delusions and false beliefs about God and man, and so he said, "Suffer the little children to come unto me." That is, permit, or lead, the children in their tender years of purity and truth to know the facts of life, not its falsity; teach them the truth of being, which unfolds life and love, not the error of sin and death.

We have the clear teaching of Jesus that this instruction should begin very early in the child's earthly career, and Mrs. Eddy tells us that "if Christian Scientists educate their own offspring spiritually, they can educate others spiritually and not conflict with the scientific sense of God's creation" (Science and Health, p. 69). To educate the child spiritually should, then, be the first effort, the supreme aim of every Christian Science parent. And it should be thoroughly understood that to educate a child does not mean to give him a superficial knowledge, a vague indefinite understanding about a thing, but that it means rather to instil in him the actual demonstrable facts. The demonstrable facts about health will save the child from disease, the fact of evil's unreality will save him from sin, the right understanding of Love will save him from suffering, want, and woe.

We know that many parents have made sacrifices, and denied themselves much in a material way, in order to provide a material education for their offspring, that they might start them in a way of usefulness and honor; and that many times failure and disappointment have resulted. This failure in the rearing of sons and daughters has been laid at the door of various things, and many theories in regard to the training of children have been advanced. The belief in inherited tendencies has, perhaps, been resorted to as an excuse or explanation of failure more often than any other theory. And yet what is this belief in inherited evil, other than a denial of God's power and a repudiation of His love? Had the parent understood the allness of God and the efficacy of divine Love, and instructed the child from its infancy in the truth of being, his teaching could not have failed of its purpose.

All children are to a greater or less degree receptive, open to impressions. This receptivity makes it possible for the parent to teach the child in such a manner that evil cannot assail him and sin cannot tempt him. Children are naturally happy; it is only when sin and delusion begin to creep in that spontaneous happiness and the pure joy of life are dimmed. A child properly trained will know better—not merely theoretically, but in the actuality of his existence he will know better—than to believe that wrong-doing can bring happiness, or that evil in word or deed or thought can ever bring him good. The child who is taught the truth about God and man and the universe will have no disposition to worship at the false shrine of matter; when he knows the protecting power of Love and the beauty of purity he will have no desire to take unto himself grosser things, and with the unfolding of the child will come the unfolding of godliness.

"Of such is the kingdom of heaven," said the Master. To the child belong the qualities of heaven,—harmony, love, peace, purity, truth, and life. It is the gracious and high privilege of the parent so to teach and train his offspring that the passing years of human experience will not rob the child of the gifts and benefits which God, the loving Father, has bestowed upon him.

"LET A MAN EXAMINE HIMSELF."

STOKES ANTHONY BENNETT

CHRISTIAN SCIENCE has come into the world to establish both by precept and example the spiritually right concept of God and the universe, including man. Pointing first to that passage in Holy Writ which says, "God is a Spirit," or, as the revised version better states it, "God is Spirit," and then to those other passages which declare that "God created man in his own image, in the image of God created he him," and that "all things were made by him; and without him was not any thing made that was made," Christian Science shows its students in a consistent, logical, and sane way that all is Spirit and the idea, expression, of Spirit; or, as it is stated in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, that "all is infinite Mind and its infinite manifestation, for God is All-in-all" (p. 468).

With this brief yet plain and potent statement of the truth of being, the truth about God, man, and all that exists in creation, the intelligent, sincere, and well-meaning students of Christian Science enter upon the study and demonstration of its teaching. With this statement they come to see and know that because God is Spirit, or Mind, and man is the image, likeness, or expression of God; and because everything else is the direct outgrowth of His wisdom and power, there is and can be in reality only that which is spiritual, that which reflects God and is governed by Him. The Scriptures everywhere declare the goodness and love and perfection of God. We also read in Habakkuk: "Thou art of purer eyes than to behold evil, and canst not look on iniquity." To be like God, then, or, in other words, to be spiritual; to reflect His unerring wisdom, His omnipotent might, means that every man, woman, child, yea, all His ideas, must be (and in reality are) good and perfect, harmonious and beautiful.

As Christian Science students begin to ponder these glorious facts, as they begin to look out upon creation with a new, a brighter, holier vision, seeing things as they are and not as they seem to the material senses to be, they realize, as never before, that it is they themselves who have been entertaining wrong concepts, notions, and beliefs concerning God, man, the divine handiwork, purposes, and plans, and that it is they who must correct these concepts, notions, and beliefs, by working out their own salvation according to the example left by "the man of Galilee" and as correctly interpreted by Christian Science, if they would know the truth which really does make free and gain the peace that passes human understanding. They realize, too, that instead of being real, that is, God-made, all so-called material things and their belongings, discord, disease, and death, are unreal, unnatural, and unsustained. Thus they see that the preacher of long ago was quite right when he declared, "Lo, this only have I found, that God hath made man upright; but they have sought out many inventions,"—material inventions, "other gods," which on every side seem to oppose "the only wise God" and to make Him either the author or permitter of both good and evil, both plenty and poverty, concord and discord, joy and sorrow, health and sickness, life and death.

Digitized by Google

To be able to push upward and onward in Christian Science, to be able to imbibe its spirit as well as comprehend its letter, students must make practical in daily living their professed understanding of its teaching. As they begin to realize this (and here is the whole secret of progress and success in Christian Science), as they begin to consecrate themselves to this high and holy service, this service of demonstrating the all-power, all-presence, and all-intelligence of God, good, they recognize the full import of the rather exacting and rigid requirement as laid down by St. Paul, when he said to the Corinthians, "Let a man examine himself."

Now it is quite apparent that no one ever has known more than Paul did about what it means for a man really to examine himself. His first important test in this regard came when, as Saul of Tarsus, he journeyed on the road to Damascus, armed with authority from the chief priests to go into the synagogues there, arrest any Christians he might find, and "bring them bound unto Jerusalem." Bible readers are familiar with what happened as he was about to enter the city: "Suddenly there shined round about him a light from heaven," and, sinking down beside the road in wonderment and prayerful meditation, he "heard a voice saying unto him, Saul, Saul, why persecutest thou me? And he said, Who art thou, Lord? And the Lord said, I am Jesus whom thou persecutest." Like the prodigal son who had wandered far away from his father's house and protection, Saul came to himself,—began his first real examination of self, his first real analysis of thought processes. Then and there he beheld the awful wrongs which he was committing in the name of Almighty God, and for the first time in his life there was uncovered before him the utter inconsistency, barrenness, and hopelessness of the established religious beliefs and customs of his day, beliefs and customs which he was laboring to uphold and which were founded more upon pride, prejudice, bigotry, ignorance, superstition, and intolerance than upon anything else. Then and there he resolved to be born again and to be obedient unto the heavenly vision; to do his best to overcome carnal, material, unrighteous tendencies and desires, and to blot out the past, —to "let the dead bury their dead."

What a remarkable transformation that was! What strength of courage, what solid conviction it involved! There had come to him from on high a glorious inspiration and impulse, with which he was to seek and find a still clearer, a still more practical, more satisfying understanding of God, man, and all created things; and Saul began his new career in a manner which is indeed encouraging, impressive, and helpful beyond degree. In a meekness and humility that recommends itself to each and every seeker after righteousness, and which can never be forgotten while there is any need of individual correction and regeneration, "he took the new name of Paul" (Science and Health, p. 326), "and straightway," as the record says, "he preached Christ in the synagogues, that he is the Son of God."

Through the awakening, leavening, and transforming potency of divine Mind and Life, as presented by Christian Science, unnumbered thinkers today are experiencing much that this Bible character experienced, for they too are being brought to see and understand that real godlikeness, which the Book of books most emphatically demands of us all, is Truth-likeness, Love-likeness, good-likeness, and that nothing short of these will ever answer. After what in many cases were long, hard, and blind, though honest and conscientious, attempts "to kick against the pricks," these thinkers are now striving to put off the old man and to put on the new, by substituting for former unwittingly wilful, harmful methods and ways, the regenerative, redemptive methods and ways which Christian Science has revived and reestablished, and which are everywhere proving to be the very methods and ways approved of God and His Christ.

A sincere endeavor to renew, uplift, and upbuild one's mentality and spirituality always involves a full, free, and rigid examination of self,—a genuine looking within,—which cannot help uncovering and advancing toward ultimate annihilation every wrong thought and motive, every wrong desire and practise. Whatever of pride, envy, jealousy, hate, malice, injustice, selfishness, or unkindness there may be in consciousness; in fact, whatever therein is in the least unlike God and His goodness, His purity and holiness, unlike the perfect standards as set before mankind by the great Teacher and Wayshower, Christ Jesus, must first be detected, then uncovered, and finally destroyed; must be understood as only a falsity, a dream, an illusion, claiming to be something when in reality it is nothing,—nothing but "a liar, and the father of it."

"ONE ON GOD'S SIDE."

MARGARETHE PAWELITZKI.

THE erroneous view seems to obtain with some people that the evil thoughts of outsiders or of those with whom they are closely associated may prevent a complete recovery under Christian Science treatment. He who has made a close study of "Science and Health with Key to the Scriptures" by Mrs. Eddy cannot, however, have overlooked the passage which reads: "The transfer of the thoughts of one erring mind to another, Science renders impossible" (p. 211). Besides, are we not taught (p. 102) that "evil is not power"? The erroneous evil thoughts of those who oppose Christian Science and its adherents certainly cannot harm us when we realize that Truth reduces to nothingness every falsity. Wendell Phillips declared that "one on God's side is a majority." If I have the certain sense of being one with divine Love, and am convinced that I am a majority with God, how can evil, how can the evil thoughts of others which are a minority, do me harm? If I am one with invincible good, one with Truth and Love, is not the power given me to resist evil thoughts?

Christian Science would not be divine Science if it were not adequate to bruise the head of the serpent of evil in every form. The more we strive to realize good, to demonstrate Truth and Love, and the more we obey divine Principle, the more successful we shall be in overcoming evil of every kind. If we ever feel any doubt respecting this question, we have but to read the words of Christ Jesus as given in the tenth chapter of Luke's gospel, where he says, "Behold, I give unto you power to tread on serpents and scorpions, and over all the power of the enemy: and nothing shall by any means hurt you."

SALVATION.

JEANIE F. GIBB.

THE student of Christian Science becomes ever more and more grateful for the clearer understanding of the Scriptures that comes to him from the study of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Passages which in the old thought only became more puzzling the more he brooded over them, are now in the light of divine Science seen to be full of meaning—beautiful and practical. The writer had an instance of this a short time ago. The verse was that oft-quoted one in the first chapter of St. John's gospel: "Behold the Lamb of God, which taketh away the sin of the world."

An error of thought, a fault of character, which had clung persistently to me and had been only partially overcome with the help of Science, was through a chain of circumstances shown up clearly in all its hideousness. The consciousness of it was so overwhelming, and the desire to rid myself of it so great, that I determined to ask help from a practitioner. That same day I had occasion to talk over some matters with a fellow Scientist, and error of thought in another was brought before my notice. It appeared diffi-

Digitized by Google

cult to overcome, and my friend was greatly troubled about it. When alone I spent some time working on the problem in Science, with the result that all depression and fear about my friend's difficulty vanished. I saw that the error we had been discussing had no existence, because "error, Truth's unlikeness, is unreal" (Science and Health, p. 288); that the false belief in evil is all there is of it, and that "Truth is the light which dispels error" (p. 282). Then light flooded my consciousness, and I saw that the fault of character in myself which I had been mourning over was also unreal—without foundation, origin, intelligence, or strength; that God never created it, and therefore it had no real existence. Its seeming existence was a lie.

With this clear realization of Truth's allness there came into my thought that beautiful verse already named: "Behold the Lamb of God, which taketh away the sin of the world," and its meaning, in the light of Christian Science, stood out clearly before me—not that Christ Jesus came to suffer "in our room and stead," as one school of theology teaches, but that "Christ came to destroy the belief of sin" (Science and Health, p. 473), the belief in anything apart from God. Since this experience the error of which I had been so conscious has become a thing of the past, and my gratitude for the healing power of Christian Science is beyond expression.

"WITH WHAT MEASURE YE METE"

A. B. FICHTER.

THE golden rule is theoretically approved by many people who act as if the wording of it were, Do unto others as they do unto you. They meet an unkind remark with one less kind, a sharp word with a cutting rejoinder. They resent insults, criticize conduct of which they disapprove, judge without much consideration, and condemn on superficial evidence, although all this comes pretty near being simple "tooth for a tooth" morality. As long as men gage their conduct by the treatment they receive, the Master's words, so far as they are concerned, remain unheeded.

To many his demand that we overcome evil with good seems to call for the surrender of legitimate self-esteem, dignity, fairness, yes, even manhood. To be kind in return for unkindness, or loving in return for hate, seems not only the meekest but the weakest way. Only a knave, they argue, or a coward would allow an insult to go unheeded, unresented and unrebuked, and some have felt justified in refusing the gospel on account of what they believe to be its requirement,—an unmanly, unworthy, shiftless morality. True, some brighter intellects have penetrated deep enough to recognize the ennobling influence of self-control on character, that power results to him who has learned to govern himself, to resist self-assertion and self-pity; but the teachings of Christian Science alone bring out the scientific value of the Master's wonderful statements of the eternal law.

Not to encourage arrogance or to condone injustice, not to put a premium on insults or to allow cruelty to go unrebuked, but to state the law, and reveal the glorious working of the power of good, Jesus said, "Bless them that curse you, do good to them that hate you, and pray [affirm the truth] for them which despitefully use you, and persecute you." Not so much to demand unquestioning submission to unwarranted mandates, but to give loving and wise instruction, may we regard his words, "Whatsoever ye would that men should do to you, do ye even so to them." They seem uttered in explanation of the basic statement, "With what measure ye mete, it shall be measured to you again."

We have been familiar with these words ever since we knew anything, and have meant to put them into practise, believing them to be a demand simply for honest dealing, outward politeness, and possibly for considerate self-restraint. And thus thinking, even an arduous scandalmonger might believe himself to be innocent of offense against this requirement. When, however, we try to think what we really would like that men should do unto us, we find that we would like them to think well of us, not consider us stupid, proud, or inconsistent, not discussing our weaknesses or foibles, or enjoying our shortcomings and follies, or believing us capable of base motives, impure tendencies, evil conduct, and ignoble or criminal acts. This being true, we must refrain from all such thoughts concerning others, for with whatever measure we mete, with that measure it is measured unto us. If we believe any man, even the most uncongenial, animated by a desire to do wrong and to bring evil devices to pass, should we be surprised if our own motives, tendencies, conduct, and acts should fail of recognition, even though they be animated by uprightness of intent and purpose?

We may not look for just measure to ourselves, unless we are willing to mete first with just measure. If we desire candor, we should not believe men capable of insincerity; if we like honest dealing, we should know that our brother's aim is to be honest. How can we expect kindness from a person whom we brand as unkind, or love where we are unloving enough to look for hate? There is little room for love in a heart full of self-approbation, criticism, and sensitiveness; we must banish these and their activities from thought and replace them by the true estimate of our brother in Science. Thus little by little we shall find how we have robbed our brother and ourselves of the recognition of the good he stands for, allowing perhaps one single false impression to warp our opinion of him, meting injustice to him and thereby giving ourselves much needless pain.

Fairness, generosity of judgment, kindness, loving recognition, consideration, and a forgiving spirit are the attitudes of mind which are most akin to the realization of the brotherhood of man and which Christian Science imperatively requires of us. Since this is the true spirit, it can be put into practise and thereby much good come to us. The true observance of the golden rule can never fail of its healing result, because the law on which it is based is ever active to bless mankind.

OPPORTUNITY IMPROVED.

JULIUS E. HERONEMUS, D.D.S.

THE value of taking advantage of our opportunities to distribute *The Christian Science Monitor* was demonstrated by our experience at Maryland's Industrial and Pure Food Exposition, which closed on Oct. 7, 1911, after a duration of three weeks. The idea of a booth, in the interest of clean journalism, did not occur to us until one week of the exposition had elapsed. Space was then secured for the booth, two sessions being held daily, and the members of the local committee on the distribution of literature, assisted by our church-members, distributed free copies of the *Monitor*. A placard,

"Clean Journalism, Pure Food for Thought,"

which was placed above the booth, attracted many to our section of the building. Another sign made a complimentary offer of *The Christian Science Monitor* for thirty days to any one desiring a paper of this character. We also advertised the places in Baltimore where the *Monitor* could be purchased. A few cuts which had been published in the *Graphic Arts* were mounted, and gave an idea of the home of the *Monitor* in Boston. These were displayed and attracted much attention.

While we had only twelve days in which to work, seven thousand papers were distributed and five hundred and sixty-one names secured for the complimentary subscription offered. In addition to this, several visitors at the booth evidently became interested in our cause, as they were afterward recognized at the regular church services. "It is just the kind of paper for which we have been looking," was one of the many favorable expressions heard. The enthusiasm shown by our members has been wonderful, and the good accomplished by this step continues to increase.

SELECTED ARTICLES.

[Frederick Dixon in *Animals' Guardian*, London, England.]

I have read in a recent issue the reference to Christian Science, and, with your permission, would like to correct the impression there given, while gratefully admitting the sympathetic tone of the writer. First, then, Christian Scientists are opposed, root and branch, to experiments on animals, not [illegible] because, in cor[illegible] with a great number of medical men, they regard them as cruel and futile, but because they cannot conceive of omnipotent, divine Love as sanctioning so horrible a process, or of infinite intelligence as being compelled to resort to it. The very idea reminds one of the famous criticism of Newton's teaching, by no less a man than Leibnitz: "Sir Isaac Newton and his followers have also a very odd opinion concerning the work of God. According to their doctrine, God Almighty wants to wind up His watch from time to time; otherwise it would cease to move. He had not, it seems, sufficient foresight to make it a perpetual motion."

Secondly, your contributor maintains, and this quite correctly, that the thought of doctors, nurses, and patients, corralled within the atmosphere of a sanitarium, produces a suggestion of diseases, insidious and dangerous in its effect. How insidious and how dangerous, I think he has not yet begun to understand. Where he is wrong is in imagining that diseases so generated can be met, as he infers, in Christian Science, by another form of suggestion and destroyed. The simple fact is that Christian Science, so far from being a process of suggestion, is the deliberate repudiation of it. You cannot produce and heal disease by the same means; no fountain can send forth sweet water and bitter. The danger of mental suggestion is that it is the fruit of the tree of knowledge of good and evil, ultimating in death. If through suggestion you could take away sickness, you could as easily inflict it. Owing, however, to education through Christian Science, the risk of wrong-doers is increasing, and both in France and England, in recent years, innocent victims have been acquitted in the courts and the mental criminal who had instigated their crimes punished.

When an attempt is made to use hypnotism as a curative agency, all that happens is that, in the unblushing language of one of its exponents, a "paralyzation of the reasoning faculties" takes place, and the patient is induced to believe something which is not true. Exactly how much healing is incurred in such a process, a story told by Mr. Sinnett in his book, "The Rationale of Mesmerism," may explain. A lady, suffering from rheumatism, was treated by a mesmerist in Paris, and apparently healed. Four years later the rheumatism returned with all its old virulence. She sent to inform the mesmerist, and learned that, at the time the rheumatism had returned, he had passed away. In plain English, her mentality had been under control during these four years; the disease had never been healed, and the moment the control was withdrawn the inevitable collapse took place.

Christian Science healing is the exact antithesis of this. It denies *in toto* the claim of the human mind to power, and insists that this claim is founded on ignorance of the spiritual law of the omnipotence of good. Jesus of Nazareth typified this claim of the human mind to effect good or evil, as that of a house divided against a house, which could not stand; but he went on to show in what Christian healing really lay, and so to draw a perpetual distinction between Christian healing and healing by mental suggestion: the one, the actual healing through the Spirit of God, the other, the supposititious healing through Beelzebub. What the Pharisees termed healing through Beelzebub was, of course, healing by means of that more primitive form of mental suggestion known as exorcism: what Jesus meant by healing through the Spirit of God, was giving a man a knowledge of that absolute truth which will make the world free, the understanding of the omnipotence of good, of God.

[*The Inland Printer*, Chicago.]

Some remarkable "stunts" have been "pulled off" by American newspapers within recent years. But no more daring enterprise has been recorded than that of *The Christian Science Monitor* of Boston, which set up a metropolitan newspaper plant in Chicago within a period of seventeen days and issued a special daily edition during the Republican national convention. The Goss Printing Press Company, which concern installed the press, and Thomas Knapp, of the Typesetting Machinery Company, Chicago, who had charge of the extraordinary work of putting in the plant on such short notice, deserve high praise for the efficiency with which the work was handled.

The office was set up on Michigan avenue, near the Coliseum—the convention hall—in a rented store space. The press—a three-deck, straight-line Göss, capable of turning out twenty-four thousand copies an hour—was built up in the front room of the store. As the press weighs twenty-five tons, it was necessary to place brick piers to serve as a foundation, which was done without cutting the heavy floor joists. At one end of the back room an iron flooring was laid, on which was established a melting-pot, a casting-box, matrix-roller, double-headed steam tables, and other devices with which a newspaper is printed. While this machinery was being put in place, a thirty-horse-power motor was installed, four linotypes set up, and racks of type for advertising display arranged on one side. The two empty rooms were so quickly transposed into a daily newspaper printing plant, with business office and editorial rooms, that even Chicagoans—who are noted for their hustling ability—were taken off their feet with surprise and admiration.

It is not to be doubted that the enterprise and progressiveness of *The Christian Science Monitor* are as worthy of respect as the high standard it has set in the cleanliness and wholesomeness of its reading matter, which also featured its special editions for the convention.

[George Shaw Cook in *Chicago (Ill.) Post.*]

Judging by his letter printed in a recent issue, Prof. Irving Fisher seems to be experiencing considerable satisfaction in what he is pleased to regard as the "defeat of opponents of health legislation." The *Journal* of the American Medical Association takes the Republican party to task for failing to insert in its platform a satisfactory medical plank. So it would seem that there is another opinion than that of Professor Fisher as to the strength of the plank. As to the Democratic platform, the plank included is evidently modeled after the Owen bill, which its author claims, I believe, has been amended in such a way as to meet the objections of those who are in favor of medical freedom. If this claim is true and the criticism of the official organ of the American Medical Association of the Republican "health plank" is, from its point of view, well founded, it would seem that the two great political parties have at least paid some attention to the advocates of medical freedom.

Whether this be true or not, it is certain that friends of medical freedom have thus far succeeded in presenting their case before congressional committees in such a convincing manner as to have prevented the passage of so-called health legislation which is inimical to the rights of citizens in matters pertaining to their personal welfare. Not having had any opportunity to examine the pockets of Senator Works while he was in Chicago during the Republican convention, I am not able to say positively that they did not contain a plank condemning the "doctors' trust," which Professor Fisher accuses him of having concealed about his person at that time. I feel sure, however, that Professor Fisher is mistaken in this assertion, for I happen to know that the senator and others associated with him were not interested in securing the insertion of any plank, but simply in prevent-

Digitized by Google

ing the Republican party from making a political issue of something which really has no place in politics.

Senator Works' opposition, in Congress, to the passage of the Owen bill and similar measures was not made as a representative of the Christian Science church nor of the League for Medical Freedom. He spoke as a senator from California, who, being a Christian Scientist, is in favor of medical freedom. Having some familiarity with the long-continued efforts of a certain political wing of the medical association to secure legislation ostensibly relating to public health but really intended to advance the interests of the doctors, he scarcely could have done less in his capacity of United States senator than to oppose vigorously such efforts. Permit me also to say that no true Christian Scientist could be other than an advocate of medical freedom, viz., the freedom of the individual to have the system of healing and the practitioner of his choice in the time of illness.

Furthermore, it seems to me that Christian Scientists, in common with other law-abiding citizens, have a perfect right to oppose legislation which they have reason to believe is in the interest of special privilege while claiming to be for the public good. Let it be said in this connection that Christian Scientists are not opposed to such health regulations as at present seem to be necessary and desirable. They are not opposed to reasonable quarantine measures. They are not opposed to sanitation, to pure food, pure water, or pure air. They recognize that a large number of people believe in drug medication, and therefore they favor pure drugs for those who wish to depend upon drugs. They have no quarrel with physicians, the majority of whom they believe to be conscientious in their efforts for the relief of human suffering.

They are opposed to the endeavor of a certain class of citizens to secure legislation which will in effect enable one school of medical practitioners to regulate, control, and dominate other schools of healing and thereby force the views and opinions of the majority upon a minority who differ from them. They will be likely to continue to oppose fairly and openly, in nation and state, measures which, although they may look harmless on their face, would in operation restrict the constitutional right of the citizen to medical as well as religious freedom. Christian Scientists believe that this position is consistent, and that when their position is correctly understood they will have the sympathy and support of a fair-minded American public and press.

[E. M. Ramsay in *Montrose* (Scot.) *Standard*.]

As the words "Hypnotism and Christian Science" appear coupled together in a paragraph in a recent issue of *Standard*, I feel sure you will allow me to state that Christian Science is the very opposite of hypnotism, and to give some of the reasons for this statement.

At the present moment a great change is taking place in the thought of the world, one of the manifestations of which is the increasing popularity of systems of healing in which no visible material remedy is employed. Although these systems are many in number, and although their adherents attribute the cures obtained to very different agencies, their indisputable success certainly proves the mental origin of disease. It will come in time to be recognized that there can be but one scientific mental system of healing, that employed by our Saviour and enjoined by him on his followers. This system we maintain to be Christian Science. Christian Science teaches that all the sin and sorrow, want and disease, in the world is the direct result of incorrect thinking, conscious and unconscious. It shows that all evil is mesmeric, hypnotic, and of the nature of suggestion, a belief not founded on the truth, but on the supposed activity of that carnal mind which is characterized in the Bible as being enmity against God. We do not for one moment deny that many upright people, actuated by a sincere desire to benefit others, use hypnotism and suggestion, but we are convinced that before many years have passed the danger of these practises will have been abundantly proved, and that they will no longer be regarded as legitimate methods to employ.

In order to get free from the ills which oppress the race, Christian Science teaches that men must strive to have that Mind which was in Christ Jesus, that is, must learn to think as the Saviour thought; it shows that all true thought must be founded on and proceed from a right understanding of God's nature as Life, Truth, and Love; that true thought must be loving and compassionate, since Truth cannot be separated from Love, God's nature being indivisible; that thus he who thinks truly, lovingly, is necessarily adding to his own store of health, and helping to free his neighbor from sin and illness. Science and Health presents this subject in such a way that the little child can understand and love it, and learn by its means to order his steps aright, and yet the teaching is so profound that it will enable the statesman to grapple successfully with the problems of a world.

[Alfred Farlow in *Reporter*, Melbourne, Australia.]

Dr. Bernard Hollander of London, England, has given out a statement alleging that his investigation has shown him many patients who have become insane on the subject of Christian Science. In the same breath the doctor declares that Christian Science can "make a certain class of people happy." Who ever heard of persons becoming insane because of an influence which made them happy? "Doth a fountain send forth at the same place sweet water and bitter?" According to a report which appeared in the New York *Times* just subsequent to Dr. Hollander's statement in the London press, Dr. Albert Warren Ferris, who for four years had been president of the New York state commission in lunacy, when asked whether he had found that Christian Science had been a factor in insanity, replied that he had never found a case in his state that could be attributed to Christian Science. He said: "The few cases where we have found Christian Science in connection with forms of insanity have been those where the patient took up Christian Science after insanity had come upon him." He also said: "I have never found it a cause in a single case. There are forms of insanity that are accompanied by religious enthusiasm of an abnormal type, and Christian Science is sometimes the form this takes. I should not call Christian Science in any way a cause of insanity, and during the past few years we have studied causes very closely." It should be noted that Dr. Ferris is a man with experience and ability equal to that of Dr. Hollander, and that his testimony is directly opposed to that of Dr. Hollander.

In April, 1910, Dr. F. H. Packard of Boston, in an address before the Harvard Medical College, said that "numbers of individuals, probably naturally of somewhat unstable mental make-up, are totally upset mentally through their efforts to understand and practise Christian Science and other unscientific things." On April 21, 1910, the following answer to Dr. Packard was published in the *Boston Post*:

"I am glad the gentleman qualified his remarks by the term 'and other unscientific things.' I have watched the effect of Christian Science for many years, during which time I have come in contact with many persons more or less 'unstable' mentally who have been entirely healed by Christian Science and who are well and happy today; but in all that time I have not known of a single instance where it could be said that the derangement of the individual had been produced or 'precipitated' by Christian Science. It is not at all unlikely that some persons in weak mental condition who have turned to Christian Science, as is intimated by Dr. Packard, have not been faithful to this teaching, but have mixed it up with 'other' and 'unscientific' things. Knowing the wholesome influence of Christian Science, and the dan-

Digitized by Google

ger of those mental methods of treatment which are more or less hypnotic and more or less dependent upon human will, I have unbounded confidence in Christian Science as a remedy for insanity, although I would not be willing to vouch for the safety of those who have a mixture of mental theories.

"I am also glad that Dr. Packard qualified his statement concerning the cases which have come under his observation by the phrase 'probably naturally of somewhat unstable mental make-up.' It is decidedly unfair to credit the growing dementia of persons who have been partially insane for years to Christian Science, simply because in their extremity some of them have turned to Christian Science and in their insane moments have talked about it. It is not unusual for an insane person to talk on the newest or latest thing that possesses his mind. One might make too hard work of anything, but it is not the problem over which he wrestles, nor is it necessarily the wrestling; it is the needless worry of the student which burdens him. A patient of a Christian Scientist is usually instructed how to keep out of worry, and usually makes rapid recovery from his strained mental condition. I dare say that if Dr. Packard had a patient who grew worse under his treatment, he would be loath to say that his treatment had caused it. There are thousands of insane persons who have grown worse, and many of them 'precipitately' worse, under medical treatment. To be consistent, Dr. Packard should attribute such insanity to medical treatment.

"There is no more evidence to prove that insane folks who have experimented with Christian Science have been made insane thereby, than there is to prove that the growing disease of a person under medical care has been precipitated by medicine. One is not justified in drawing such improbable conclusions simply because he may be prejudiced. There are thousands upon thousands of persons in the insane asylums who never heard of Christian Science. One would surely not be justified in attributing their insanity to the particular philosophy, religion, or medical theory which they had attempted to understand. It is quite true that persons worry themselves into insanity over hard problems, but it is also true that the world in general is constantly wrestling with difficult propositions. It is not the proposition which injures them, but the worry which they permit to accompany their strivings. It is quite evident that the understanding that God is Love, which furnishes the basis for every idea of Christian Science, could never worry any one into insanity. Otherwise it would become the duty of Christendom to remove immediately the Bible from the hands of all persons of 'unstable mental make-up.' In any event, it may be said that there are thousands of persons who bear testimony to the benign influence of this Science as a wholesome mental influence."

[Algernon Hervey-Bathurst in *Chelsea* (Eng.) *Mail.*]

A correspondent expresses the opinion that Christian Science is not in accordance with "the true Christian faith." Every one is certainly free to think as he pleases, but the fact remains that many thousands of men and women throughout the world are daily proving that, thanks to the Christian Science text-book, they are now able to apply the teaching of Christ Jesus to their every-day life and to every problem with which they may be confronted, whereas, in many instances at least, the Bible was previously a sealed book to them. I would like, also, to repeat what has been stated so frequently, namely, that Mrs. Eddy was able to give Christian Science to the world solely because of her own clear discernment of the spiritual or scientific meaning of what Jesus taught his disciples. And in view of all that is being accomplished through the understanding and application of the teaching of Christian Science, it is difficult to understand how any one possessing even slight knowledge of the subject could believe that it is not in accordance with "true Christian faith."

With regard to the question of the unreality of evil, such a statement by itself is apt to be misleading. Much necessarily depends upon the way in which the word "reality" is interpreted. If the word is used in the absolute sense, as Mrs. Eddy uses it on page 468 of "Science and Health with Key to the Scriptures," where she states that "Spirit is the real and eternal," then indeed there is no reality (speaking absolutely) in evil. This does not, however, mean that evil does not seem real to the human consciousness, and it was just this belief in the reality of evil, this belief in the power and operation of a law which was not of God, that Jesus came to destroy, for, as he so emphatically said, he had come not to destroy but to fulfil the law of God, and in so doing he healed the sick, reformed the sinner, and did many mighty works, which he surely would never have accomplished had he by so doing been acting in contravention of that law. The great example given to humanity by Christ Jesus was clearly the outcome of his knowledge of Truth, and it was this knowledge which his disciples, as well as those who gave practical demonstration of their understanding of the doctrine of the great Teacher, possessed in some measure.

That same knowledge is available for all mankind today, and thanks to the spiritual discernment of the Discoverer and Founder of Christian Science, humanity has been reminded that they need no longer accept as inevitable the suffering and discord under which they have been laboring so long, but that they can and indeed must relegate it to the realm of unreality and powerlessness as did Jesus himself, who declared also that all who understood his teaching would do the same works and even greater works than he did.

[Lloyd B. Coate in *Dayton* (Ohio) *Herald.*]

The hundreds of thousands of people who constitute the rank and file of the Christian Science movement had given the laws of hygiene and *materia medica* a fair trial before turning to Christian Science; many of this number had been pronounced incurable by physicians. Strict observance of the so-called laws of health failed to heal them, but the understanding of God's law and how to apply it to the destruction of both sin and disease, restored them to health. The Church of Christ, Scientist, is built upon the healing of the sick and reformation of the sinner through the gospel of Jesus Christ, as understood in Christian Science. There are now more than twelve hundred churches of this faith throughout the world, and each year witnesses a greater growth. The honest seeker after truth need not go outside the city of Dayton to find many people who have been healed through Christian Science.

The admonition of Christ Jesus to heal the sick is no more binding upon Christian Scientists than upon Christians of other denominations. It can be said of Christian Scientists that they are striving to obey the commands of the divine Exemplar, although they do not claim to bring out the perfect demonstration of Jesus' teachings at this period. Christian Scientists do not boast of being better than other professed Christians, but they do claim that Christian Science has made them better men and better women than they were before knowing of Christian Science, even though many of them came from evangelical churches. The teaching of Christian Science has increased their faith in God and love for the inspired word of the Bible; it has awakened a greater desire to follow in the footsteps of their Master. Jesus said, "Every good tree bringeth forth good fruit; but a corrupt tree bringeth forth evil fruit. . . . By their fruits ye shall know them." The disciples who lived and practised Jesus' teachings left the best record of his life and works. Those who live and practise the teachings of Christian Science are best able to judge as to whether its teachings are Christian and scientific.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

ENDURING HAPPINESS.

MUCH has been said about the unassumed air of happiness and prosperity which is distinctive of Christian Scientists, and while it is true that jocose critics have jeered at what they have been pleased to term "smug complacency," it is also true that these critics are in such a minority that their sayings are of little consequence. All that one need do who really desires to find the reason for this outward show of peace, is to listen to the testimonies given at the Wednesday evening meetings in the Christian Science churches throughout the world, or read those published in our periodicals. From these he will learn that in every case the healing work which is a necessary part of Christian Science, even as it was a necessary part of Jesus' ministry, has resulted in manifold blessings not only to the person healed, but also to all those in close association with him. Why should not the members of a family, one of whom had been for years a hopeless invalid, rejoice in the healing of this loved one? Why should they not rejoice in the restoration to usefulness of the breadwinner of the family, who perhaps through something worse than sickness had dragged them down to poverty and misery? And above all, why should they not be happy in that understanding of God which enables them to help others as they themselves have been helped?

As to the seeming prosperity of Christian Scientists, the reasons for it are obvious. Those who advocate the establishment of governmental agencies which they endeavor to assure the public will check the waste of human efficiency through sickness, assert that this waste runs into hundreds of millions of dollars each year in the United States alone. In every Christian Science family this waste has been either eliminated or curtailed, and this without governmental paternalism and through the method employed by Christ Jesus in his ministry. And what shall be said of another great waste which has been cut off by Christian Science in many families! Who does not know of families in which the "drink bill" would comfortably clothe the whole family, and who does not know of families to whom this same evil has brought abject poverty, sickness, and death! Would not any sociologist agree with the statement that the elimination of the liquor habit would largely do away with poverty; that it would make prosperous on the same income those who are now in poverty through indulgence in this habit? There are those, too, who have been delivered from the blighting bondage of fear, who have gained the freedom which Paul voiced in his exultant declaration, "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." The frank testimony of thousands of people is that Christian Science has brought about these reforms in their affairs. Why, then, should they not express in their irradiated faces and in their regenerated lives the thankfulness which they feel?

Happiness is an inalienable right of mankind, and he who has it not should rouse himself to secure its possession; but he who would know true happiness must seek it aright. Christian Scientists rejoice that through Mrs. Eddy's teachings they have learned its inexhaustible source, that "Soul has infinite resources with which to bless mankind" (Science and Health, p. 60), and that enduring happiness cannot be found elsewhere. They rejoice and are glad that for them the darkness of doubt and despair, of sin and suffering, has fled before the light of divine Truth and Love; that upon them, as was foretold of old, "hath the light shined."

ARCHIBALD MCLELLAN.

EFFECTIVE DENIAL.

THERE are not a few of those unacquainted with the teaching of Christian Science who are disposed to refer to its so-called "denials of fact" in terms designed to amuse their hearers. In their uninformed and therefore prejudiced opinion, it amounts to a silly repetition of words, or a more silly disposition to refuse to recognize actualities, and they sometimes, in their discussion of the subject, give expression to a sense of patronizing pity.

Among those who have indulged in this "gentle raillery" are not a few ministers, who are or ought to be familiar with one of St. Paul's much-in-little phrases in which he counsels Titus and all others to deny "ungodliness and worldly lusts," a phrase which evidences that he thought this spiritual activity no less sanely Christian than important. No student of the life of this "great apostle" can fail to realize that the dominant note of his character and teaching was positive, and that the denial which he commends is the fruitage of this positiveness. To say, "I don't believe it," or "It isn't so," may signify nothing more than a skeptical or negative state of mind; it has no corrective or healing power whatever. The only denial of error which counts is that which expresses a mandate of Truth.

On page 113 of Science and Health, Mrs. Eddy says: "Life, God, omnipotent good, deny death, evil, sin, disease." The realization and declaration of the truth of being is the ever-present though perchance unspoken ground of every true denial, and this relation of truth to the negativing of error is familiar to us all. The teacher's condemnation of faulty work is but the pronouncement of the terms of demonstrated propositions, the true concept established in his understanding. The decision of a judge on the merits of an appeal is but a delivery of the statutes, and neither teacher nor judge can speak with any hope of commanding respect or obedience unless he thus voices an unquestionable authority.

Thus, too, in the practise of Christian Science the specialized and effective denial of the claims of error is that consciousness of truth which measures our attainment of the Mind that was in Christ Jesus. It thus means very much more than mere contradiction, it means intelligently to refuse to accept as real that which does not tally with Truth and Truth's manifestation. The practitioner utilizes the divine search-light by presenting the conditions under which its mighty beam naturally and invariably dispels the darkness of material sense.

The Scripture assures us that the word of Truth is "quick and powerful," and the denial of evil, which effects its destruction, is but the realization of this word in consciousness. Upon the possibility of this effective standing for God, Christ Jesus based his definite command to his disciples that they should do his works, and Christian Science is but repeating his behest that we deny sin, disease, and death "in this present world" by maintaining a consciousness which is filled with their opposites.

JOHN B. WILLIS.

STRENGTH, HOW ATTAINED?

THOUGHTFUL people all discover, sooner or later, that strength is an indispensable factor of health, harmony, and success. It is therefore of the utmost importance to know how it is to be gained and maintained. Few would deny that weakness of character leads inevitably to mental and physical suffering on the part of the one who yields to it, while many others whose early tendencies are by no means evil, may become channels for wrong-doing because they have not the moral strength to resist the suggestions of error at each step of the way, until they arouse themselves to the demands of Truth and a final victory is gained, when evil ceases to assail them. Those who have moral and spiritual strength are equal to any emergency which

Digitized by Google

may arise, whether it be mental or physical, and according to promise such as these "go from strength to strength."

It is deeply interesting to "search the Scriptures," in order to find therein, especially in the Psalms, the many references to the divine source of strength, from the solemn warning which tells of "the man that made not God his strength" up to Isaiah's joyful assurance respecting those who wait upon the Lord,—that they shall "mount up with wings as eagles; they shall run, and not be weary; and they shall walk, and not faint." Then when we come to Paul's writings we find some new and vital lessons on this subject. It is, however, more than likely that in spite of his close acquaintance with the Scripture, he had not thought of making the Bible statements practical until after he had felt the quickening influence of "the Spirit of truth," and the same may be said of those who are awakened to spiritual being in Christian Science; but when this awakening comes, the spiritually-minded instinctively turn to God for strength to live, to think, to resist every temptation to yield either to sin or sickness.

Paul, as a prisoner in the Roman garrison at Cæsarea, had been closely associated with the soldiers there, many of whom became Christians under his teaching, while he, on his part, learned from them of the courage and faithfulness needed in order to be a true soldier. In his epistle to the Ephesians he writes: "Finally, my brethren, be strong in the Lord, and in the power of his might;" then he goes on to outline the steps which must be taken to insure perfect victory. He does not hesitate to uncover the wiles and subtleties of the carnal mind, which vainly arrogates to itself the right to rule amid mortal darkness, and the further menace of "spiritual wickedness in high places." This is explained by our revered Leader, who says, "The serpent is perpetually close upon the heel of harmony. From the beginning to the end, the serpent pursues with hatred the spiritual idea;" but she goes on to say that this has "only impelled the idea to rise to the zenith of demonstration, destroying sin, sickness, and death, . . . to be found in its divine Principle" (Science and Health, pp. 564, 565).

Paul counsels us to wear "the whole armor of God," and above all, to "stand." He has no uncertain sense about our being able to stand if we are girded with divine strength, which is inseparable from "the breastplate of righteousness." Without this defense,—"a heart untainted,"—one is a coward, ready to turn and flee. Then, that the way may not be too hard for the human sense, the feet are to be "shod with the preparation of the gospel of peace;" and again, there is the strong assurance that "all the fiery darts" of evil will be quenched if the shield of faith is faithfully used. Doubt is a deadly foe, and it should be denied entrance to consciousness, for our trust is in omnipotence, and who would dare to doubt divine Truth and justice and then hope to win in any conflict with evil?

The words of our text-book offer divine inspiration in telling us that "Truth and Love come nearer in the hour of woe, when strong faith or spiritual strength wrestles and prevails through the understanding of God" (p. 567). Shall we not, then, go fearlessly forward, our strength daily renewed by waiting upon divine Love!

ANNIE M. KNOTT.

AMONG THE CHURCHES.

GLASGOW, SCOTLAND.

About the end of 1903, four Christian Scientists started services in a private sitting-room. Later on, in the autumn of the following year, a small hall was rented, where services were held every Sunday morning, with a testimony meeting once a month. A reading-room was taken at 141 Bath street, in 1905, and in March, 1906, a church having been organized, services were held in a larger hall in the same building. Although leased for three years, the number of those attending increased so rapidly that at the end of two and a half years it became necessary to move into the Midhall, St. Andrew's halls, where services have been held for the last four years.

It is now a cause for rejoicing that still larger premises are required for both church and reading-room. For the former, the entire building of the Queen's Rooms has been acquired, for the Sunday and Wednesday services. These rooms, situated in a residential part of the town, are quiet and dignified, and afford ample accommodation for church and Sunday school. The new reading-room at 45 Renfield street is situated in the most central part of the city, in one of the leading thoroughfares, and is easily accessible from all parts.—*Correspondence.*

SPRINGFIELD, MASS.

First Church of Christ, Scientist, has grown so much in membership during the past year that it finds its present State street edifice too small for comfortable accommodation, and is seeking a solution of the problem. The church has not decided whether it would be better to erect a new structure or to divide into two churches. In the mean time, while that question is pending, a place must be found in which to hold the church meetings. The church has approached the city property committee with a request for the use of high school hall in the central high school building. The hall is more than ample to accommodate the congregation, and would furnish a good place for the meetings to be held.—*Springfield Republican.*

NEWARK, N. J.

After having used the Masonic temple at 16 Hill street as their place of worship for three years, the members of First Church of Christ, Scientist, have purchased a plot of ground and will erect an edifice in the near future. The new church will be located on the southeast corner of Clinton and Hillside avenues. The ground was secured for twelve thousand dollars. It has a frontage of one hundred and thirty feet on Hillside avenue and a depth of sixty-two feet. The congregation now has a membership of one hundred and twenty, and according to a report by the trustees of the church is constantly growing.—*Newark Evening News.*

ATCHISON, KAN.

The ceremony incident to what would be called the corner-stone laying in an edifice was held yesterday [July 17] at half past three o'clock at the new Christian Science church building, a copper box being sealed into the brick wall at the southeast corner of the auditorium section of the building. A full force of brick-layers will be put on at once, and the work will proceed rapidly. It is planned to finish the work by Jan. 1, 1913.—*Atchison Champion.*

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be Nov. 1, 1912. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 16, 1912.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to May 31, 1912, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
Falmouth, Norway, and St. Paul Streets, Boston, Mass.

THE LECTURES.

OAKLAND, CAL.

At a lecture on Christian Science given at the Macdonough theater by Virgil O. Strickler, the speaker was introduced by Orrin W. Jackson of First Church of Christ, Scientist, of Oakland, under whose auspices the lecture was given. Mr. Jackson said:—

Humanity is slowly awakening to the unalterable truth that there is an omnipotent, omnipresent, omniscient force controlling and governing the entire universe; an intelligent, constructive force, without beginning or end; a force absolutely good, without a destructive element in it; the supreme cause of all existence; the creator of all that is. Jesus the Christ taught man's true relationship to God, and gave to all a God who is Love, a God who is Spirit, a loving Father who is ever tenderly caring for His children. He proved by his works, in the healing of the sick, restoring of sight to the blind, raising the dead, and in many other wonderful demonstrations of power, the truth of all he taught, and commanded his disciples in all ages to come to make practical their religion by their works.—*Oakland Tribune.*

CHESTER, PA.

An audience that filled the lower floor of the Family theater listened with the utmost attentiveness to a lecture on Christian Science by William D. McCrackan, M.A. Mr. McCrackan was introduced by E. Burdette Smith, managing editor of the *Chester Times*, who spoke as follows:—

Whoever has observed the trend of modern religious thought, and particularly those who have studied the direction of its undercurrents, must have been convinced that we are standing on the threshold of a new era. The old creeds, with their heavy burdens of dogma and their incrustations of theological abstrusities, are slowly but none the less surely being relegated to the storehouse of the past; and their place is being taken by a religion whose dominant notes are love, faith, confidence, and encouragement, and in which fear, doubt, and despair have no place. The splendor of the day that is to be is not yet upon us, but it will come as surely as God is Truth. The mists still linger above the lowlands of life, but they whose eyes are turned toward the east, where rise the billowy hills already tinged with the glory of the dawn, know that the night is passing and that it will soon be numbered among the things which were and will never be again. Such a religion as the one to which allusion has been made, the Christian Scientists believe they have found. Following the wise counsel of the great apostle, they have proved their faith not once, but many times, and have found it good. They know from personal experience that it has banished sickness and suffering and pain from countless thousands of homes; that it has driven the hideous specter of fear from myriads of human hearts; and that it has solved for them the most perplexing problems of life. That they will continue to hold fast to the faith they now have, there is no reason to doubt.

Many, probably an overwhelming majority of those who are present this afternoon, are not Christian Scientists. Neither am I; but I have seen in my own home so many demonstrations of the efficacy of Christian Science in the healing of sickness, that I should be recreant to every law of justice and honesty did I not take advantage of this occasion to bear witness to its beneficent influence. I take it that you have come here with open minds, and that you are prepared carefully to weigh every word that shall be spoken; and on behalf of the members of First Church of Christ, Scientist, of Chester, I give you a hearty and sincere welcome. We can all remember that there were times in our student days when the language of our text-book was obscure, its problems unsolvable, its theorems undemonstrable, and that we frequently encountered basic rules which, though they may have seemed axiomatic to those who wrote them, were for us difficult of comprehension. At such times the assistance of a teacher was necessary. And so it is in Christian Science. Few there are, I fancy, who have the keen prevision, the mental clarity, and the profundity of thought which were characteristic of the wonderfully calm, perfectly poised woman who first enunciated the fundamentals of Christian Science to the world; and to aid those who are endeavoring to come into a perfect understanding of her teachings, the Directors of The First Church of Christ, Scientist, of Boston, Massachusetts, lovingly designated as "The Mother Church," maintain a number of lecturers who are qualified to speak with authority on the tenets of the church, and who from time to time visit the branch churches and give such instruction as seems to them to be needed. One of these lecturers we have with us this afternoon. He comes from a tour that has encircled the globe and from carrying a message of hope to all the nations of earth. We are glad to welcome him to this old city of Chester, and I bespeak for him your earnest, thoughtful, and undivided attention.—*Correspondence.*

ALBUQUERQUE, N. M.

At Elks' theater Bicknell Young in a most convincing manner presented the cause and teachings of Christian Science to a large and extremely representative audience of the very best and most enlightened citizens of Albuquerque. Dr. E. McQueen Gray, president of the University of New Mexico, introduced the lecturer as follows:—

We are all of us seekers after truth, and truth presents itself in many guises, under many different aspects. From the first beginnings of his existence on earth, man has been more or less consciously striving after the realization of the connection betweeen the human and the divine, and to give expression to that realization. God being divine, and His revelation of Himself a revelation of the infinite, the human concept, being finite, must be partial and incomplete. The sum of all the finite human concepts cannot measure or express the terms of the divine, infinite revelation. So each of us must recognize the incompleteness of our concept. Some of us here tonight are in sympathy with the concept which the speaker of the evening will present, some probably are not; but whether we agree with him or not, let us receive his message as another sincere endeavor to express in finite human terms man's concept of the relation between humanity and God as an addition to the sum of human endeavor to realize the divine, in the spirit of sympathy and brotherly love.—*Albuquerque Journal.*

CINCINNATI, OHIO.

Judge Clifford P. Smith lectured for Second Church of Christ, Scientist, on Christian Science at Emery auditorium. He was introduced by Dr. W. W. Totheroh, who said in part,—

Christian Science, lowly and obscure in its modern discovery, entered upon its career without noise or pomp of ceremony, and it has made a history which has served to silence hatred, prejudice, ridicule, and intolerance. It has welcomed the Master's test, "By their fruits ye shall know them;" it has healed humanity of all manner of physical infirmities, but more than all else it has afforded a wonderful moral and spiritual uplift. It has brought to mankind light, hope, cheer, and comfort, so that today all over the world not only the adherents of Christian Science, but multitudes who have yet to accept it, give forth only praise for the wonderful work of its Discoverer, Mrs. Eddy.

In the estimation of an innumerable and ever-increasing throng, the paramount question of our times is, "What is

Digitized by Google

Christian Science?" By the side of this question all those problems of industry, commerce, economics, politics, trade, medicine, and religion, which are causing differences and chaotic conditions throughout the world, pale into insignificance, because it is recognized that in Christian Science can be found the ultimate satisfactory solution for these subordinate questions, on the divine Principle given forth by the original discoverer of Christian Science, Jesus Christ, when he announced, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you."—*Correspondence.*

TORONTO, ONTARIO.

At a lecture on Christian Science, delivered in Massey music hall by William R. Rathvon, the lecturer was introduced by Jack M. Jackson, first reader of First Church of Christ, Scientist, who said:—

Paul, we are told in the Acts of the Apostles, observed on one occasion in Athens an altar dedicated "to the unknown God." Perhaps in reading of this incident we may have been tempted to entertain a sense of complacent pity at the condition of a people that could be in such ignorance of God; but have we ever asked ourselves seriously how far we have progressed since then in our understanding of God? Can it be possible that any one today is still worshiping and serving an unknown God?

If we expect to be saved and delivered from the bondage of mortality by the one God whom Christians everywhere unite in worshiping and serving, is it not natural and reasonable that we should endeavor to learn as much as possible about this God whom we expect to save and deliver us? No one is saved from anything through ignorance, but we are saved through right understanding. Ignorance, mystery, and superstition would, if it were possible, bar our progress and prevent access to the one God whom to know aright is eternal life, as we are taught both in the Scriptures and in the Christian Science text-book, "Science and Health with Key to the Scriptures." Christian Science comes to you with a demonstrable knowledge of God, and departs not one iota from the teaching of the Bible in respect to God. We are fortunate this afternoon in having with us a gentleman who is a member of the board of lectureship of The Mother Church, The First Church of Christ, Scientist, in Boston, Massachusetts, who has come to tell us something of the wonderful truths about God, man, and the universe which have been revealed through Christian Science.

Correspondence.

ESCANABA, MICH.

Frank H. Leonard delivered a lecture on Christian Science in Peterson's opera house to an attentive audience. He was introduced by Attorney I. C. Jennings, who said in part,—

I am not a Christian Scientist either by profession or by practise, therefore my language probably will be unscientific and my thought may be at variance with the faith, but the little knowledge of Christian Science which I possess has been gained by close observation and honest investigation. Probably I know more of what it is not than of what it really is. The subtle, secret, eternal truths of religion are thoroughly explored and comprehended only by the few. However small my understanding of Christian Science, it is sufficient to compel my profound respect and admiration. The attitude of the public mind toward Christian Science has changed wonderfully. For many years the public accorded it only jeers, ridicule, contempt, vilification, and abuse; then curiosity was aroused; but now, after the marvelous growth and progress of Christian Science, curiosity has been succeeded by wonder and deep interest, and the world asks for information.

In learning something of the truth concerning Christian Science, I was obliged to discard practically all I had previously heard, read, or assumed to be true concerning it. A talkative ignoramus is the greatest disseminator of misinformation. Ignorance and prejudice have lodged in the minds of people a great mass of misinformation concerning Christian Science. This is possible only because of the intellectual indolence with which most of us are afflicted. One peculiarity of Christian Scientists is that they think they know their own belief and the basis of it much better than outsiders can tell them. Christian Scientists know and Christian Science literature emphatically avers that the Bible is the foundation of their religious faith and belief. They believe in the New Testament, and they believe in and rely upon all the promises and assurances, and endeavor to comply with the demands and requirements contained and set forth in the Scriptures.

If the New Testament is Christian, if the teachings and practise of Jesus of Nazareth were Christian, then is Christian Science Christian. Christian Science is Christianity stripped of myth, tradition, and dogma, and untrammeled by creed, theological doctrine, and ecclesiasticism. The most striking characteristic of Christian Science is its logical reasoning. It emphasizes the importance of right thinking. The premises upon which all Christian Science reasoning is based are those fundamental and eternal truths stated in the Scriptures. Making all its deductions from those Scriptural truths which all Christians profess to believe, its course of reasoning is so accurate, its logic so irresistible, that no sophistry, no fallacy, can be detected, and the irrefutable conclusions of Christian Science may be denied only by the skeptic and agnostic who question or deny the premises. Logic has been defined as the science of all the sciences; it is therefore difficult to see why Christian Science is not most scientific, as well as most Christian.—*Correspondence.*

CAIRO, ILL.

The Hon. Clarence A. Buskirk, lecturing on Christian Science at the opera house, was introduced by Reed Green, who said in part,—

Christian Science is a comparatively modern teaching. It has taken hold of the thoughtful, educated people all over the world, and especially in America. I do not confine it alone to the educated, but to the thoughtful people whether educated or not. Some of you who are not in any way affiliated with the Christian Science church have a meager knowledge of the works accomplished, which are a part of the Christian Science teachings. Some of these have been marvelous and some of them have been ordinary, yet what has been accomplished has challenged the attention of the people of the world.

I heard a remark recently of a prominent lawyer on an occasion like this. He was not a Christian Scientist, but he said that Christian Scientists were the most light-hearted, the most sincere, the most cheerful, and most courageous of any people he had ever known. In this connection he made another remark, and I want to make it a part of what I have to say. He said the teaching of the Christian Science church is not so much to put men into heaven as to put heaven into men; and if this is the result of its teaching I believe Christian Scientists deserve credit of all classes and of all denominations, and it is of this subject that you are to hear.

Cairo Bulletin.

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship.

Blackpool, Eng.—Palace theater (Promenade), 3:15 p.m., Sept. 1.

Paw Paw, Mich.—Longwell's opera house, 8 p.m., Aug. 30.

Digitized by Google

TESTIMONIES OF HEALING.

I wish to relate as briefly as possible the reason why I believe in Christian Science. I had reached "man's extremity" and had to ask God for help. I had a severe case of stomach trouble and my heart had been in a bad condition for a great many years. I had not been able to lie on my left side for over eighteen years. I also had ringing in the ears and constant pain, and was partially deaf. Besides all this my left hand was crippled so that I had not been able to use it for thirteen years,—the result of a wound. In spite of all that the best doctors in these parts could do, the ligaments and tissue of the inside of the hand were destroyed so that the fingers were drawn back until they very nearly rested on the back of the hand and the ends of the fingers were bent forward and rested on the inside of the knuckle joint. I had not been free from pain and a vise-like grip all of this time, so that I had become a nervous wreck. I did not expect Christian Science to do anything for this, but strange to relate, through the help of a kind friend and practitioner, Truth has overcome all of the diseases, even to the crippled hand,—inasmuch that I can do any kind of work almost as well as I ever could.

But this is not all! I had one enemy that caused me more suffering than all the others combined, and that was a depraved appetite for liquor and tobacco. I had been a slave to the tobacco habit for forty-five years, and I cannot remember when I did not have a desire for liquor, but it did not get the mastery over me until about twelve years before I was healed in Christian Science. In these twelve years, however, there were not many days that I was not under its influence. I wanted to be a sober man, but could not seemingly let the drink alone. It did not seem that I could live without it, yet I did not want to live with it and suffer the pain and the disgrace.

It had come to the point where I asked God more than once to take me out of the world or take the desire away from me, and my prayer was answered. I had a friend that was a friend indeed, who was interested in Christian Science and not afraid to speak the truth on all occasions. He knew what I needed, and recommended Science and Health to me. He let me have a copy of the text-book, and I began its study. I followed Mrs. Eddy's instructions as nearly as I could. When she affirmed the truth I affirmed it. When she denied error I would deny it, and it was not long before I began to see and understand truths that I never heard or thought of before. Every time that I understood a truth, and would make it mine, it would have a quickening effect on the body that nothing else ever had. This went on for about three weeks, when one day I realized that I had found the truth. I was free from the liquor habit! I was the happiest man in the state of Iowa. The tobacco habit has left me, and the desire for tea and coffee has gone with the rest.

To say that I am thankful would be a very tame expression. I have been interested in Christian Science over four years. I have six copies of Science and Health doing missionary work, and I wish that I could do more. Every word of this testimony is true.

VAN HARRISON, Sibula, Iowa.

A short while after my marriage (more than forty years ago) I found myself a sick woman. I could never nurse my children, and I did not improve as years passed by; instead, new diseases were added, and I became a helpless and a hopeless sufferer. I had bladder and female trouble, also dropsy. At last I took my bed, with no outlook but sorrow and suffering. My only daughter was then married and away from me, so that my husband and sons had to do for themselves and me, and our home was truly a sad one.

I had heard that a lady some distance from me had been healed by Christian Science, and the practitioner was not far away, so my son said he would go for her if I was willing. This was five years ago. I can never forget the Saturday evening in November. She arrived at [illegible] and sat by me and talked as I had never before heard any one talk. She told me about a God who is Love, who sends no evil upon me or any one. I sat up in bed and said, "This is the kind of God I want; but is it true? I was taught that God sent these ills upon me. Oh, how happy I am!"

The next morning I was up and about my household duties. In a few hours, the table where stood my bottles of medicine, had the Bible and Science and Health which I bought at once. The next day the water began to come through the pores of my skin, so that I sat with towels around my body, which were changed every few minutes; but after a little while this stopped. A few days later I rode fourteen miles to see my daughter and to show her what God had done for me. I went to my old church again. The pastor saw me, and after service he came down the aisle to meet me. I told him that God had healed me. He said, "I had sent for a Christian Science healer, and he said, 'Tell sister, praise the bridge that carried you over.'" I could not be still; I had to speak out my joy. Some said I talked too much, but I could not help it.

I have never been sick a day since I was healed. I do my work and feel younger than I have in more than twenty years. I love God and man, and trust I am a "living epistle." I love the Bible and Science and Health, and cannot help telling people how good God is. For five years I have been sound and well. Life is a joy! My home is so different now, for I can do my part as never before. I was a burden to myself and my family. I ate anything I like, and now it does not hurt me. I thank God above all for the spiritual light, and I am grateful to Mrs. Eddy for giving us Science and Health.

MRS. MARTHA GILL, Washington.

I wish to express my gratitude for Christian Science. It is over three years since a knowledge of the truth, as revealed in our text-book "Science and Health with Key to the Scriptures" by Mrs. Eddy, first came to me. I was restored through its treatment after dietetic methods had failed, and as I was unconscious at the time I had to prove the Principle for myself, so that I could explain how it was done.

Christian Science means so much to me that I have no words with which to give expression to my gratitude. I have had and still have somewhat of family opposition to meet, as we were of the Jewish faith and those of us who find it hard to accept Science on account of its name "Christian." Many will not even look into it, but this has not prevented me from proving the truth of it, though not through mental conflicts so great that I put the book down many times in despair, but after severe and [illegible] I was gently led to the light. No amount of [illegible] could pay for the clear understanding and [illegible] spiritual uplifting that has come to me through the study of the Bible and Science and Health. I have prayed [illegible] to be enabled to hold fast to this blessed truth and be influenced to turn away even by dear ones.

Since my first healing I have received [illegible] of God's loving care for His children. The way [illegible] for me to see more clearly the guidance [illegible] my daily life. I know that the application [illegible] of Christian Science, applied so far as we understand it does bring us into harmony with God's universe, and [illegible] mortal thoughts have lost their power to make me [illegible] Christian Science has cured all my ills and has set [illegible] thoughts in the right direction, toward God instead [illegible] from Him. I have proof of this in great peace [illegible] and a more prosperous way of living all my needs [illegible] met without worry. I am more and more grateful [illegible] light thrown upon the Scriptures by the teaching [illegible]

Digitized by Google

and Health. I am grateful to God for placing this book within reach of all who seek relief from ills of any kind. All doubts and fears are now at rest, and I can obey the Principle of our ancient faith better by knowing that God is Mind, Life, Truth, and Love, and by having no other gods.

It is with heartfelt gratitude that I think of the noble woman who remained so steadfast against the opposition of the world. We cannot be thankful enough to God for giving us this blessed truth through our dear Leader, Mrs. Eddy. To any filled with doubts and fears I say, Profit by another's experience and "hold fast that which is good."

MRS. ETHEL GOODMAN, Boston, Mass.

In corroboration of the above testimony I would like to state that when the sad news of my sister's illness came over the long-distance telephone, I immediately asked a practitioner for help, and as she knew that my sister had been a student of Christian Science and very receptive to Truth, she consented to treat her. On account of the opposition to Christian Science on the part of the other members of our family, I did not mention it to them. I knew that no human power could heal in this case, and though but a very young student of Christian Science I had proved the power of divine Truth and knew, no matter how dark seemed the way to our sense, the light of Truth was ever shining. During the days that followed I was greatly helped and comforted by knowing that "we have nothing to fear when Love is at the helm of thought, but everything to enjoy on earth and in heaven" (Miscellaneous Writings, p. 113).

Very faithfully the practitioner worked on the case, although the letters reported conditions which to mortal sense seemed very bad, and particularly one day about four weeks after the first telephone call. I was again called to the telephone to hear that the fever had spent itself, and that the patient was now in her right mind, but in such an exhausted condition that the doctors said there was "no hope." The truth was declared at once and a report made to the practitioner, with the result that two days thereafter news came of a wonderful change in the patient's condition, and after that the recovery was rapid.

I am unspeakably grateful to God for this healing and for all the good that has come to me since I took up the study of the Bible with the Christian Science text-book as its key. All my life the teachings of Christ Jesus attracted me and I longed to follow him, but thought I could not without being disloyal to my Jewish training. It was clearly revealed to me, however, that Jesus was the best Jew that ever lived, for he constantly directed thought toward the worship of the one true God, and that he was in fact the promised Messiah. It was while I was praying for light on the New Testament that I was led to the Christian Science church. It has proved all and more than I expected!

Praise God for His Son, the Wayshower, Christ Jesus, and for our dearly loved and faithful Leader, Mrs. Eddy.

MINNIE GOLDSMAN, Boston, Mass.

The truth as revealed unto "babes" was made very plain to me one night many months ago, when my small son, then but five years of age, called from his room at midnight, asking me to come and read for him. He had an attack of asthma, and being quite bad during the day I had read from the Bible and from Science and Health by Mrs. Eddy, a good deal, but on looking for these books I found that I had left them on the first floor, so I picked up a small book of Bible texts, topically arranged, went to him, and sitting at his beside began to read, silently, which we were accustomed to do if reading when the rest of the family were asleep. I had only begun when he rose from his pillow, shading his eyes, which were badly swollen from the long siege of coughing, and complained, "Why, mother, you are not reading the Bible or Science and Health." I replied that I was reading Bible texts. I was too intent upon my work to think much about it until he again said, "Mother, won't you read aloud to me tonight?" I did so, and had read only a few lines when he interrupted me with, "Oh, that's all right, now you may read to yourself," and with such a peaceful smile he turned away from me, over on his side, and in a few minutes was fast asleep. He slept peacefully the rest of the night, was out at play the next morning, and has never been troubled with asthma since, this being over a year and a half ago. This proved to me that he knew the truth when he heard it, and that his insistence upon having the truth, and his perfect faith in its healing power, brought its perfect reward.

I have received many blessings through the Christian Science teachings, for which I am most grateful to God, and also to Mrs. Eddy for showing us how to apply them, and for her patience and her love for God and man.

MRS. CLARICE MILLER BRUHN, Portland, Ore.

I awoke early one June morning and went out on the porch. It was yet dark, and the air fresh and fragrant from the breath of clover. As I sat watching the clouds slowly rolling away, and the deep, beautiful blue of the sky appearing between them, the darkness gradually disappeared, the daylight came, and I could not help comparing this with the dawn of a new life, the light and peace that come with Christian Science. Thus the heavy clouds of sorrow, grief, and ill health pass out of our lives, and a new, bright, and glorious spiritual light shines for us, as we earnestly study "Science and Health with Key to the Scriptures" by Mrs. Eddy. How grateful I am to God for revealing anew the healing truth which is life eternal, and which opens the pages of the Bible with a new meaning! This is an every-day solace to our awakening consciousness. The old days of worry and disease are being submerged in the truth, in the understanding of God and man's relationship to Him.

For years previous to my healing in February, 1905, I was a disbeliever in a future state. I thought we were as the flowers,—that we lived and bloomed, and faded away,—but as I watched by the bedside of my son, seventeen years old, who passed on under medical treatment, I learned that there is something beyond this earthly existence, and as we study the life of Christ Jesus we know that there certainly is no death. I commenced to study Science and Health for the religion, the spiritual understanding, and I was indeed helped and my grief was overcome. At that time my health was very bad, as I was said to have an enlarged liver and suffered from all the symptoms which develop with that disease. I would become faint and fall, no matter where I happened to be; but I have been healed of that trouble, and during my six or more years in Christian Science I have been healed of several attacks of different diseases.

I am truly thankful to God for Christian Science, and also grateful to Mrs. Eddy for all my blessings—for my spiritual understanding and physical help. My only desire is to be a good Christian Scientist, to follow and live the teachings of Christ Jesus as interpreted by our Leader.

MRS. CARRIE C. SHELTON, Kansas City, Mo.

[Translated from the French.]

Sincere gratitude for Christian Science, the manifestation of divine Truth, impels me to give the following testimony: In August, 1911, a friend who had been sick, in bondage for three years, and left without hope after a serious operation, had a visit from a Christian Scientist, who lovingly gave her a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. My friend immediately began to study the book, and became convinced of God's omnipotence. She informed me every week of her progress, and after five weeks I received the glad news that she was

Digitized by Google

perfectly healed. She came to see me, as she knew that I myself was suffering with headaches, that I could not eat, and was very deficient in strength to do my work; in short, in a deplorable condition, without any hope of recovering my health, while every new drug instead of relieving me seemed to aggravate my troubles, so that no part of my anatomy was free from suffering.

I was filled with joy to hear of my friend's complete healing, and attended the Christian Science church. After the service, which impressed me very much, I inquired from a member of the church where I could get a copy of Science and Health. After studying this book two weeks I was free from suffering, and may say with a joyful heart that I was not only healed physically but benefited spiritually.

I give thanks to God from the depths of my heart, and also to Mrs. Eddy for having given to humanity a statement of truth which heals all manner of physical and mental disease. Trust in God is right, and where it reigns supreme nothing else is needed. I hope that these statements will benefit those who, like myself, are reading the Christian Science literature.

MARTHA PERLMAN, Warren Point, N. J.

After suffering for almost two years with what physicians pronounced organic heart trouble and a chronic stomach affection, and having tried remedies to such an extent that I despaired of getting well or finding relief through that source, I went to a Christian Science practitioner. I was led to do this by friends who were at that time little interested in it, but who had proven of an acquaintance of three having been healed. I had heard very little regarding the power of healing, and having nursed in a hospital I was very skeptical, and perhaps more so than those who did not have similar obstacles to overcome. But my first treatment convinced me that I was on the right path. I continued with the treatments for a few months, all the time getting better. My healing was not instantaneous, but it led me to that wonderful truth which makes free.

Words but feebly express my gratitude to God for the help received. Only by living more and more as a Christian Scientist, every day and hour, do I feel that I can in a way repay our dear Leader for her labors, which are glorifying God.—H. J. MASSEY, San Francisco, Cal.

Christian Science as taught in "Science and Health with Key to the Scriptures" by Mrs. Eddy has brought the "great Physician" close to me; it has anchored my faith to an unfailing Principle, God, the healer of all our diseases; it has taught me to worship a God who is Love, full of compassion and tender mercies, a kind and loving Father that giveth every good gift to all mankind and withholds from none. It has unlocked the Bible and opened to me its treasures of truth and love, and has given me the peace "which passeth all understanding." For this truth my heart bows in deep reverence to God and in grateful love to our beloved Leader, Mrs. Eddy.—MRS. MARGARET D. ENGLE, Quincy, Ill.

I wish to express through the *Sentinel* what Christian Science has done for me, in the hope that it may be a help to some suffering soul as I was. Four years ago childbirth left me suffering terribly, owing to internal troubles, and the following year I was induced by friends to go to a hospital for treatment. My troubles were becoming hopeless, and I was told that if this were not attended to I should never walk again. After three weeks' nursing and taking medicine, after which I came out no better, six months later my second child was born. I was again operated on by the doctor at another hospital in Birmingham, where I underwent an operation performed by the leading physician, which however left me in an even worse condition, as internal pains intervened. Also having terrible headaches. After the birth of the third child I was again under the knife, five different operations being performed and an abnormal growth removed.

Six years after, when another child was expected, in great misery, but in my distress I was divinely led to Christian Science. A *Sentinel* was given me by a stranger, to whose house God had led my footsteps. On reaching home, and on reading the *Sentinel*, I knew I had found what I wanted, and knew I could be cured by Christian Science, although this was the first time I had heard of it; but before the child could be born I was to have another operation had to be performed. This was done, but it left me in the same condition as formerly. When my child was over three months old I was daily getting worse, and had an operation facing me again. I decided on Christian Science treatment.

I did so, and thanks be to God, in less than a month after the practitioner was called all pain had left me, although before this I could not walk or sit for the intense suffering. I had a month's treatment, and was healed of that time of headaches from which I had suffered almost daily for eleven years; my nerves were completely restored, but now I do not know that I have nerves; my sight greatly improved; my hair is coming again—in fact I am a new creature, regenerated through Truth, which is the only healer. All my scorning ills have vanished, and in their place I know this great truth which makes free from sin, disease and death!

Words cannot express the joy that Christian Science has brought into our home, or tell what it is to our children. We have had many demonstrations of the power of Truth. Our baby was healed, in less than two days, of a skin disease; also the other children have been healed of complaints, etc., and also every symptom of fear has been overcome by Truth. I used to have dreadful fears as to what might happen to the children when away from me, but now I can truly say that fear has given place to love, and I can rest in God, through the knowledge and practice of Christian Science. I have also had proof that my home is guarded from fire.

I wish to express my thankfulness to God for the blessings I have received in Christian Science and for its saving services. I am daily striving to gain more of Christ, that I may have my whole consciousness filled with good.

MRS. HANNAH D. MURRAY, Darlington, Durham, Eng.

I have every reason to bless and praise the name of God for Christian Science. It has brought me blessings innumerable. It has healed me of serious illness. One attack of pleurisy was overcome almost instantly, and after the message was received the pain and many other ills have been healed very quickly. Nearly three years ago two painful chronic troubles from which I had suffered more or less for over thirty years, and for which I had been frequently told were incurable, were healed, and they have never returned. Surely I have every reason to bless the loving Father for the blessings of the Christian Science teaching, and for our dear Leader. Many a time since I passed through very severe trials, and sometimes sickness, but I have been able to prove God's promises to be true, and to rejoice in the victory through our Lord Jesus Christ.

Mrs. Eddy says, "Divine Love always has met and will meet every human need." Science and Health is my text-book, and I am reading the truth of these words daily in my experience and in others. I came into Christian Science through being told that I was perfectly well, but that my mind had been so affected by the use of drugs that I had been an invalid for many years. After two months' study of Science and Health, its literature and practice, the effects of drugs disappeared, after a time that great as was the physical change that had resulted, the spiritual was still greater. I had never before realized in its fulness what was meant by the words of great price." I have found Christian Science

Digitized by Google

religion unmixed with a belief in evil, and one that heals the sick.

During my professional life of nearly fifty years I had gods many, but did not realize it until I found the truth that makes free, and I am indeed "glad for every scalding tear" (Miscellaneous Writings, p. 389), ill health, and other obstacles that compelled me to abandon my profession and seek the truth. I am rejoicing, and have been for several years, as a member of The Mother Church and of a branch church, for which I am indeed grateful. I also want to express my deep gratitude for our literature, which is so wonderful and helpful, and I feel that the *Monitor* is our home and foreign missionary, helping to prepare the way throughout the world for the reception of Christian Science.

I owe an unspeakable debt of love and gratitude to God, and to our dearly beloved Leader, for what this blessed and healing gospel has done for me and my own dear ones and dear friends, and which is also redeeming the world from sickness and sin. Christian Science is indeed "the pearl of great price," and our inspired text-book, Science and Health, is truly a "Key to the Scriptures." It has already unlocked them to the world, and the world has risen to call its author blessed. My heartfelt desire is, so to live Christian Science that I may be able to help others and be worthy the name of loyal Christian Scientist.

MRS. KATE J. BRAINARD, Webster Groves, Mo.

I have been brought out from the dark sense of mortal existence through the understanding of Mrs. Eddy's teachings. I might say I have been born again, and my one desire is to help others to see the light of Truth.

When my little niece was about two and a half years old, she fell from a swing, striking the end of her spine on the pavement. She was brought into the house and soon she seemed to be only semiconscious. Her mother was very much frightened, for she had known of similar cases which had been under medical treatment, and she feared that the child would either pass on or be helpless for life. She knew nothing but Christian Science could save the child, and although she did not understand this wonderful truth she wanted me to care for the child that night.

I did the best I could, but by morning I felt that the case needed some one with a higher understanding of God's law than I seemed to possess, and I advised that a practitioner be called. A short time before, the child had become wholly unconscious, and her mother being greatly alarmed, I immediately telephoned for help. In less than half an hour the practitioner was at the home, and before he left the little one was sitting at the table eating lunch. At night fear again came up, but it was quickly overcome and the child was perfectly healed. This healing took place over three years ago, and though up to that time the little girl had always been delicate, now she is a picture of perfect health.

I am truly thankful for all that Christian Science has done for me and the whole world. In Christian Science we learn that God is ever present, and that when all material means have failed we need not be discouraged, for God is "the same yesterday, and today, and forever." He heals not only sickness and sin, but sorrow and all discordant conditions, giving us the peace which the world cannot give and does not understand.

MISS JENNIE M. EXFORD, Salt Lake City, Utah.

I thank Thee, God our Father,
For visions yet unseen,
For nature's joys—earth's promise
Of spiritual joy serene.
For heaven-sent thoughts—Thy angels;
For Life's unending day,
For Love, which melts mortality,
And Truth that lights our way.

JULIUS B. COHEN.

FROM OUR EXCHANGES.

[Samuel A. Eliot, D.D., in *Christian Register.*]

It is always in the little things of life that there is discord. In the big things there is unity. Whenever, in or outside of the churches, a great truth emerges, whenever tragic disaster stirs a common emotion, whenever new ideals are lifted before a nation, whenever the zeal of uplifting the downtrodden or serving human kind kindles in men's hearts, there unifying and energizing forces are let loose. Then men speak a universal language. It is when we lend ourselves to such movements that we are swept into cooperative efficiency. It is the recognition of the comprehensive unity of the intellectual and social and religious life of humanity that will restore our patience and brace our endeavors. We shall give up looking for short cuts to the millennium and steady down to sober, persistent, effective work. For that same unity is the justification of our confidence. It may seem that our individual or collective efforts must count for little or nothing in the face of such a vast and complex organism as the world in which we live; but the fact is that, because of these interlocked relationships, a good stroke anywhere counts everywhere. Each step in personal discipline is a step in social progress. Each private burden borne makes one stronger to bear the burden of the world.

[*Public.*]

Church-going persons and those who sneer at churches are alike in danger of confusing genuine religion with mere piety, the spiritual grain with its external husks. Easier than being religious is it to go to church regularly, to attend prayer meeting occasionally, to be reverent in conversation, to say grace perfunctorily, and to subscribe money in amounts you won't miss to works of mercy respectably endorsed. Also is it easier, on the other hand, to sneer at churches and penitents and leaders in prayer and financial supporters of church enterprises, than to be vitally averse to mere piety. There is no difficulty in spotting either kind of paganism, however tempting the line of least resistance it offers to lazy souls. Inasmuch, however, as no man has ever seen universal fairness and rightness and justice, how shall any man love them, except by bringing his wish to love them to bear as best he can upon his behavior to his fellow men—not alone as individual to individual in personal neighborliness, but also as social unit to social unit through social adjustments?

[*Watchman.*]

The Christian faith has more than mere endurance of the ills that imperil body and soul, for it is supplied with the power of Christ in which to subdue those ills themselves. It is not obliged to keep itself in patient waiting for relief, but is capable of providing a full remedy. Christian faith has power to meet "spiritual wickedness in high places" and possesses "those wrestling thews that threw the world." Christian faith makes peace in human experience. It accomplishes those changes in government, society, and hearts which remove persecutions and all the ills of life. It works for healing the passions and excesses of human nature. It attacks the spirit of war in the heart of man. It is today bringing its power to bear upon disease, poverty, intemperance, and all the forces that disturb the health and happiness of human beings.

[*Christian Advocate.*]

No amount of care for his body could account for Jesus' intense enthusiasm. His energy was not born of perfect health alone. His spiritual resources gave him the chief sustaining power of life. He confirmed in advance the psychology of our day by showing that the inner man upholds and impels the outer man. The sharpest contrast

Digitized by Google

between himself and his disciples appears in the supremacy which he gave to the life within. They were principally concerned with what they should eat and drink, and wherewithal they should be clothed, the contemplation of which, to the disregard of higher things, will reduce any man to the lowest stature compatible with human life. Jesus exalted the interior life to the utmost.

[*Zion's Herald.*]

To be desirous that the kingdom shall advance is right and proper; to strive to this end, to work in all manner of ways for this purpose, and to recognize the dangers that beset the church, is necessary. But to fear for the future of the religion of Jesus Christ—that is different; that is irreligious solicitude for God. Let it be acknowledged that there is much of it at the present time. These are trying days through which we are passing. The social unrest that is so marked, the estrangement that has taken place to such a large extent between the working classes and the church, the flood of worldliness that is keeping so many away from the sanctuary, the meager gains, and at times the actual losses that are recorded by the various denominations,—all of these make us think long and seriously.

[*Universalist Leader.*]

Christ Jesus did preach pointedly to his day, as he would have his followers preach pointedly to their day. He rebuked the rich for their selfishness. He rebuked the Pharisees for their pride, called them hypocrites, called them whited sepulchers, preferred a helpful Samaritan to them. He rebuked the publicans for their extortion, and led Zacchæus and Matthew to throw up their jobs. He rebuked the spirit of caste, and allowed a repentant harlot to bathe his feet. He rebuked the spirit of graft, and with his own hands whipped the money changers from the temple. Even in the meager reports of his sayings and doings that we possess it is made clearly evident that he fitted his gospel to his times. He intended it to be applied as faithfully to all times, and it fits them all.

[Rev. H. J. Wood, B.D., in *Pacific Christian Advocate.*]

Christianity itself is forever on trial, submitted continually to test. The non-Christian world doesn't read its Bible very much, but it reads you and me all the time. If our daily conduct is right, Christianity will be considered a success and people will be led to it. But if your life and mine are empty of the things we talk about, then Christianity will also be considered an empty claim and people repelled from it. The fact that Christianity makes as much headway as it does in the world is largely because of the faithful lives of thousands who claim to have the love of Christ in their hearts, and make good.

[Rev. David Baines-Griffiths in *Christian Work and Evangelist.*]

To most of us the spiritual life means a consciousness of the presence and power of God in His grace. To the believing mind there is no reality so profound as that of divine nearness. Given this sense of the real presence, and all life takes on a heightened dignity and preciousness; the common day is "bordered with the pale edge of fire." Yet the spiritual life does not disdain the plain tests of moral utility, and moral forwardness is of its essence. It takes the eternal principles of righteousness, applies them relentlessly to the case in hand, and it bends to the burden of the hour.

[Rev. S. G. Barnes, D.D., in *Hartford* (Conn.) *Seminary Record.*]

The true life must be nourished by the truth. The perfect life will require all the truth in proper relation and emphasis. The Holy Spirit conducts us into a life of holiness by guiding us into all the truth. By as much as we reverence the Christian life, we must reverence the truth by which it is to be sustained and developed. If we are seeking to secure in ourselves, and in those whom we influence, the life which shall match the life of Christ, it will have to come from such a knowledge of God as Christ possessed and imparted.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudiments of Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herald,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

Catalogue No. 20, June, 1912, has recently been issued and will be supplied to reading-rooms upon request. This catalogue contains complete lists of all publications issued by the Society, and of the works of Mary Baker Eddy published by Allison V. Stewart.

Orders for aluminum markers, which are listed in Catalogue No. 20, June, 1912, have not been filled, owing to delay on the part of the manufacturers. It is hoped that the markers will be on hand for delivery early in August.

A new pamphlet, "Christian Science Healing versus Mental Suggestion," by Frederick Dixon, reprinted from the *Weekly Budget,* London, England, is now on sale; 36 pages and cover, at the prices of the regular pamphlets.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folio sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DENTMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE: ITS RELIGIOUS PHILOSOPHY. By HON. CLARENCE A. BUNKER.

CAUSATION: VIEWED IN THE LIGHT OF CHRISTIAN SCIENCE. By FREDERICK DIXON. Also printed in Swedish.

CHRISTIAN SCIENCE VS. MENTAL SUGGESTION. By FREDERICK DIXON. Reprinted from the *Weekly Budget*, London, England.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large sized book), single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $4.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 43 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of question and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

Secretary of the Interior Fisher submitted to the House committee on public lands last week a proposal to lease government coal lands to cities which will operate coal mines under regulations making it possible for consumers to enjoy the use of fuel at reasonable prices. The cities of Colorado, Wyoming, Utah, Idaho, and Montana, and other states west of the Missouri river, would be most vitally benefited by the measure. The secretary believes that any such patent should be safeguarded by the provision that the title of the land patented shall revert to the government if any city or town to which coal land shall be patented shall at any time fail to perform any of the conditions of the patent. Secretary Fisher maintains that the aim of the federal conservation policy with respect to government owned coal lands is to insure for the public an abundant supply at prices which will yield a fair return and no more upon the capital invested in mining and handling the coal. This is impossible when a fee simple patent is granted to private persons or corporations for the commercial exploitation of the coal deposits.

The American Geographical Society has perfected plans for a transcontinental tour of a quota of its members and of European geographers. The tour will be in celebration of the sixtieth anniversary of the society's founding, and of the completion of its new building at Broadway and 156th street, New York city. Fifty representatives of geographical societies of Europe have enrolled as delegates to take part in the tour, which starts on Aug. 22. The party will cover approximately ten thousand miles, and will be gone from New York two months. A complete itinerary of the route calls for visits in order to Chicago, St. Paul, Yellowstone national park, Seattle, San Francisco, Salt Lake City, Denver, Grand canyon, Phœnix, St. Louis, Birmingham, Chattanooga, and Washington.

The secretary of the Massachusetts Homestead Commission says: "It is startling to know that within the limits of the city of Boston there are seven thousand three hundred and sixty-eight acres of land classified as vacant. Allowing to each family five thousand feet, over fifty thousand families could be accommodated within the boundaries of Boston with a separate dwelling and land enough for each family to produce most of the vegetables, poultry, eggs, and much of the fruit which it could consume. Such use of the vacant areas would enormously reduce the cost of living and also the population of the slums. It would give work to thousands and opportunity for open-air play and pleasurable and profitable employment to tens of thousands of children who now are defrauded of a fair start in life. It would promote the general health, intelligence, happiness, and morality."

According to a report, P. A. B. Widener, the Philadelphia multi-millionaire, has increased his generous donation to Harvard, announced last spring, and is now having plans drawn for a library building for Harvard University, to cost one million dollars and be a memorial to his grandson, Harry Elkins Widener, who was one of the victims of the Titanic disaster. The present library has been overcrowded for years, and many valuable books are piled up on the floors for lack of room on the shelves. The building will be three stories high, two hundred and seventy-two feet long, and two hundred and ten feet wide. One room will be set apart to hold the Widener collection, which is now being catalogued by the Harvard librarian.

Buildings for the permanent administrative force of the Panama canal are a part of the plans that Colonel Goethals has made for the future of the canal. Austin W. Lord, a New York architect, is in Panama studying the sites for determining the plans. It is planned to consolidate the office buildings, which are now located at various places, into one building on the south slope of Ancon hill, overlooking the Pacific entrance to the canal.

To meet the problem of the high cost of living, bank clerks of Boston are forming an organization by which they plan to establish a cooperative grocery store and lunch room. It is estimated that the members will cut down their expenses one quarter. Already seven hundred of the twenty-two hundred bank clerks in the city have signified their intention of joining the movement.

United States District Attorney Wilkerson is expected to file suit soon for dissolution of the Elgin Butter Board of Trade. The charge will be violation of the Sherman antitrust law. The government alleges that the board is able to control prices, not only in the territory tributary to Elgin, but in a large outlying territory.

The Panama canal administration bill providing free passage to American ships, prohibiting railroad-owned vessels from using the waterway, and authorizing the establishment of a one-man government when the canal is completed, passed the Senate by a vote of forty-seven to fifteen.

International.

Overtures have been going on between President Yuan Shi Kai of China and W. W. Rockhill, the American minister to Turkey, looking to the appointment of the latter as adviser to the new Chinese republic. Mr. Rockhill is regarded as being thoroughly conversant with Chinese governmental methods and the Chinese temperament. He served three years as minister in Peking following the Boxer uprising, and as secretary to the American legation at Peking about a decade before, at which time he made extensive explorations of the interior of the country, even penetrating Tibet as a pioneer. This adventure formed the basis of what is regarded as a text-book on that little known corner of the world.

The annual meeting of the International Colonial Institute was opened at Brussels at the end of July under the presidency of Colonel Thys. M. Renkin in a speech stated that the Belgian administration in the Kongo consider that the lands the natives occupy, and the mines they work, must be regarded as their inalienable property. The administration, he said, considered that the period for concessions had come to an end.

That China is on the point of contracting a fifty-million-dollar loan, though through whom is not known, is the belief of the Peking correspondent of the *London Daily Telegraph*. The offers from rival syndicates, the correspondent declares, have caused the six-power group to offer money to China on almost any terms.

The review of the trade of India for the year 1911-12 has just been issued. On the whole the year was a good one, and the total trade expanded eight per cent over the previous year and amounted to two hundred and seventy-four million pounds, about two thirds being export trade.

Industrial and Commercial.

During the coming winter the White Star line steamship Olympic will undergo a renovation costing close to one million dollars. The principal alteration will be the provision of side bunkers, which practically make an inner or second hull. The decision of the White Star line to renovate the Olympic is in accordance with a recommendation contained in the judgment pronounced by the British Board of Trade inquiry into the Titanic disaster, that sea-going ships, in addition to their water-tight transverse bulkheads, be provided with a double skin, carried above the water line, or with a longitudinal vertical water-tight bulkhead on each side of the vessel, or both.

A hundred-acre farm in Clark county, Kansas, has produced 5,775 bushels of wheat, worth at present market prices approximately five thousand dollars. This one crop has more than paid for the land on which it was grown. Clark county is one of the famous twenty district wheat counties. In the seventy-district this year there will be about three million bushels of wheat harvested. Seven of the counties in the district produced more than two million bushels each and thirty-seven counties in the state produced more than one million bushels.

It is claimed by the vice-president of the National Asbestos Refining Company that a deposit of asbestos recently discovered near Llano, Texas, and which he and his associates have acquired, is the largest of that mineral substance yet discovered in any part of the world. He says that the outcrop of the fibrous mineral is known to cover about sixty acres. The deposit is five hundred feet wide and more than seventeen hundred feet long. Its depth is not known.

Corn-cobs will be used by the Chicago & Alton railroad hereafter for starting fires in locomotives at terminals without a fire-blower appliance. The scarcity and high prices of wood has caused the substitution of corn-cobs as fire kindlers, they first being soaked in crude oil. It is estimated that a carload of corn-cobs will provide for seven hundred locomotives.

Within a year the power plant being pushed to completion on the Mississippi at Keokuk, Iowa, will be in operation, and St. Louis will be receiving sixty thousand horse-power. This plant, when machinery is installed to full capacity, will generate three hundred thousand horse-power and will be one of the largest in the country.

Announcement is made by the president of the Southern States Cotton Corporation that following a conference of directors from Texas, Mississippi, Louisiana, Alabama, and Georgia, he will leave for Germany to close a deal for financing the entire cotton crop of the South up to three hundred million dollars.

The estimate of the International Apple Shippers' Association, showing the prospects and percentage estimates of the crop for the United States and Canada, shows that there are now in sight about thirty-five per cent more commercial apples this year than a year ago.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

DISPELLING EVIL.

BLANCHE HERSEY HOGUE.

METEOROLOGISTS were somewhat interested at one time, it is said, in a possible device for dispelling tornadoes—something to establish a counteraction and prevent or scatter the approaching storm. Could such a thing be accomplished, it would well illustrate the relation of Christian Science teaching and treatment to the mental storms of humanity; for this Science brings to light the need for intelligently employing prayer to dispel all manifestations of evil, and it establishes the sure method by which this may be done. In Science and Health (p. 332) we read of the Christ-idea "speaking to the human consciousness. . . . dispelling the illusions of the senses; . . . healing the sick and casting out evils, destroying sin, disease, and death."

The nature of Christian Science treatment makes it inevitably a destroyer of evil; for this treatment is prayer based upon the omnipotence and omnipresence of God, and it reckons with good only as the fact of creation. The thoughts embodied therein are divine in origin; whatever is human, personal, or material is properly no part of the treatment. Right prayer is inspired by the divine Mind, inasmuch as such prayer is the declaration of the almighty and invincible presence of God. It comes in answer to that outreaching right desire which opens the way to the intelligent and satisfying contemplation of God and His works as they really are.

Right desire leads to enlightened prayer. The longing for good may seem to have origin in our human thinking, even though it is really the result of divine penetration into the human heart. The actual realization of the supreme power of good, however, untainted by any fear or doubt or sin, cannot even seem to spring from anything less exalted than the divine Mind itself. True prayer is the light shining in darkness; it is the light, pure in source and nature, that performs its holy office in extinguishing darkness. Only thoughts wholly spiritual and entirely foreign to matter and to everything involved in matter, thoughts supplied by God Himself to man, can have any place in perfect prayer. So the Christian Science treatment that is equipped for the destruction of evil is no human invention. It is God's thought reflected in human thought-processes, and it unfolds to care for and provide for our present needs when pure revelation governs reason to the logical undoing of every statement of sin and disease.

The whole situation involving our happiness and success and health is in the mental realm; the entire area of experience one that can be covered by prayer. Any storms of trouble that arise gather in human thought. The "Peace, be still," to quiet them has its source outside and above the storm-center,—even in divine Mind. The human mind is at times a tornado-infested district swept by thoughts that have nothing in them to sustain health or happiness, but have everything in them to wreck our peace. The "dispeller" of such evil believing and fearing and fretting is the activity of spiritual understanding; and as the latter establishes a counteraction against false belief, the law of God operating through spiritual understanding meets the storm at the point of mental contact in each individual consciousness. Then false belief, checked, quietly disperses, and the symptoms of disturbance scatter with it.

He would be a foolish mortal who knew the *modus operandi* of a literal tornado dispeller, could there be such a thing, should he fail to operate it in time of need. Too mentally lazy, too busy with personal pursuits, or lulled by a false sense of secureness when danger was near, he would be left without protection. To be safe he should keep his dispeller in working order and keep it working. Equally foolish also is the Christian Scientist who neglects the spiritually right thinking which is ever ready to dispel the storms—temptations, burdens, perplexities, or pain which may assail him. The illuminated understanding of divine presence and power, reduced to human need according to Christian Science treatment,—this, set in the path of an approaching mental storm, disarms its fury and scatters its force. Whether attacks come from supposed conditions without, or from the responsive errors of what we call our own dispositions within, the dispelling truth operates for our relief in either case. The understood presence of God, brought to bear through godlike thinking upon any human situation, must at length, in the working out of divine law, disperse every evil thing attaching itself to the situation. Where divine Love is, storms cannot prevail.

For every student of Christian Science the law of God comes to be a dispeller of evil. So great is God's mercy that He renews the waste places for us even after a storm has spent itself and devastated the land. How much more worthy are we, however, if we apply His law to scatter the threats and seductions of evil before they can gather themselves into storms! The thoughts of our hearts,—the selfish, worldly, unholy points of view which are truly storm-centers,—these should be at each moment dispersing under the unbroken and unflagging action of right thoughts, right speech, and right deeds. Mrs. Eddy has said that "goodness involuntarily resists evil" (Pamphlet, What our Leader Says, p. 7), and the Christian who keeps God's goodness upspringing in his thoughts can certainly scatter to impotency all that evil may threaten.

The wise meteorologist would keep his storm dispeller, could he have one, always to its right adjustment, always in good trim, and always instantly available. A device out of order, neglected, or seldom tested, would serve him little or not at all. In like manner the wide-awake Christian who is learning to pray scientifically and according to God's laws, "with signs following," cannot neglect his great inheritance. He too must keep his right thoughts bright and shining, instant and active. Then storms from without must disperse before they reach him; and tempests from within will be unknown.

In the prophecy of Isaiah it is written: "When the enemy shall come in like a flood, the Spirit of the Lord shall lift up a standard against him." So he walks safely who trusts understandingly and obediently in his God.

THE KINGDOM OF HEAVEN.

EDWARD H. CARMAN.

THE Master once asked, "Whereunto shall I liken the kingdom of God?" and himself gave this answer: "It is like leaven, which a woman took and hid in three measures of meal, till the whole was leavened." When Christ Jesus gave utterance to this statement, there was voiced a potent prophecy and its fulfilment; in other words, the full development of the Science of Christianity.

Isaiah foresaw and forestated that God should in the course of time give His people a sign, namely, "A virgin shall conceive, and bear a son, and shall call his name Immanuel. Butter and honey shall he eat, that he may know to refuse the evil, and choose the good." Subsequent history, nearly eight hundred years after this prophecy was made, saw its actual fulfilment. Christ Jesus was born of a virgin, and he did know to refuse (deny or reject) evil, and to choose the good. The knowledge of man's true selfhood as the son of God gave him power to heal the sick, raise the dead, and open the way for others. He recognized the prophecy—accepted his divine possibilities and demonstrated over the universal belief in death and the grave. He said of the faithful follower, "The works that I do shall he do also; and greater works than these shall he do."

Jesus' realization that in him was the fulfilment of Isaiah's prophecy enabled him to see also that the divine Mind was the one source from which comes all revelation, and that the foreseeing and foretelling sense of the seers and prophets was derived from the one Mind; hence his vision was clear to foresee and foretell the coming of Christian Science through a woman, as intimated in the parable of the leaven. The coming of Christian Science was also included in Isaiah's prophecy, for its fundamental teaching shows that we must at every step of the way know enough to refuse evil and choose good. Christian Science overcomes evil by denying its reality and affirming the allness of God, good.

The truth and reality of this prophecy of the kingdom of God and its establishment must have been a part of Jesus' teaching to his immediate disciples. The beloved disciple, John (and he was beloved because of his spirituality), years after the Master's ascension, figuratively described in the twelfth chapter of Revelation a woman travailing to give expression to the child, the divine idea, and he also saw how the idea or child would be received. John's vision not only included the child but "a little book" which was given by the angel to the apostle. He saw that it was open,—this message from God, the one Mind,—to be read, studied, practised, demonstrated.

That these prophecies are real and true the uplifted thought sees and knows, for they are being fulfilled; and as predicted, the earth is helping the woman. Many recent changes in human consciousness go to prove and establish the fulfilling of the prophecy of the leaven. Reliable witnesses all over the world testify out of their own experience that the sick are healed, the sinful reformed, the sorrowing made happy, by refusing to know evil and by choosing the good. It is not surprising, therefore, to find pastors who will openly concede that healing work is being done in Christian Science, or physicians who, though they hold a mistaken sense of the *modus operandi* of Christian Science, nevertheless concede its favorable action in many cases. Likewise there are insurance companies which only a few years ago refused to sell insurance to Christian Scientists, that are today recognizing that Christian Scientists are good risks.

Yet other instances could be cited to show that Christian Science is reaching into all parts of the world, leavening all consciousness, teaching mortals how to have immortal thoughts, how the corrupt and corruptible must be put off in order to put on the perfect and incorruptible, all of which is the leaven of truth, revealed and working in God's appointed way, fulfilling the prophecy about knowing "to refuse the evil, and choose the good," and telling of the kingdom of heaven which is like leaven, the leaven of truth that is now leavening and changing the whole of human consciousness.

"AND YE SHALL KNOW."

MINNIE E. COOK.

SOMETIMES a little thing will arouse thought and bring home a deep lesson gained in the light of spiritual consciousness. Near the writer's home stands a large pine tree in which a flock of purple grackles make their home. One day in the early summer unusual noises were heard, and stepping outside it was found that a young bird, able to fly only a little, was upon the ground, and the parents seemed conscious of the little one's apparent danger. In trying to get it to fly, the parent birds would constantly perch above its head, earnestly calling all the while. After a few hours it had risen to the piazza rail, and later was seen on a pile of lumber, with the parent birds still calling from a height above. Not once did they descend to the level of the birdling, as if to say "Go up;" it was always "Come up."

So it must be in our lives. If we would help those about us to lift their thoughts from a material basis, from the dangers of belief in laws of matter, it must ever be from a higher standpoint of thinking. No effectual work can be done upon the ground where human fears would make realities of unrealities. We must rise above belief in matter and its power to the level of Spirit, the only reality. As our Leader says: "Rise in the strength of Spirit to resist all that is unlike good. God has made man capable of this, and nothing can vitiate the ability and power divinely bestowed on man" (Science and Health, p. 393).

God never requires of us things impossible for us to accomplish. There are no imaginary or theoretical spiritual heights, but every demonstration made, of whatever nature, is a step upward, and henceforth our work must ever be from this higher plane, for we can lift another's thought no higher than our own. Jesus said, "And I, if I be lifted up from the earth, will draw all men unto me;" and Christian Science is teaching the world today that these words of the Master were simply the statement of a great spiritual law, divinely natural and readily demonstrated.

We say the sun draws the drops of moisture from the earth, the vine from its hidden corner, the flower's face to meet its own; in fact, the whole vegetable kingdom seems to be drawn upward from the bosom of the earth. But what is the significance of it all; what lesson does it convey? Simply this: the beauty of what we call nature, its harmony, exactness, and grandeur, may help us to see the omnipresence and omnipotence of Truth and Love. God's thoughts are expressed in the wondrous beauty of His spiritual universe, in order that all mankind may learn of the deep things of God which are hidden from mortal belief. Through the understanding of God and all His creation as spiritual, we can see "sermons in stones, and good in everything." As Mrs. Eddy has said, "Nature voices natural, spiritual law and divine Love, but human belief misinterprets nature" (Science and Health, p. 240).

All that God made is good; everything is given to prove man's inheritance as a child of God. Mind's highest idea, man, is being constantly drawn toward the center of his being, Spirit. The signs of the times declare it, and when men have attained the spiritual heights of being which are attainable here and now, they will, like the young bird in its nest, know no fear or sense of limitation, for as they obey and call from above they rise above materiality and rest secure in the knowledge that because God is All, all is good.

CONCERNING OPTIMISM.

W. T. SELLECK.

ONE of the distinctive features of the Christian Science movement, and one which has perhaps done a great deal to attract the attention of the world, is the spirit of wholesome optimism which the adherents of this religion radiate. With students who are but just beginning the study of this Science, those who may have just been released from the bondage of some form of sickness or sin, the sense of freedom sometimes amounts to an enthusiasm which is not always well advised, but as the student progresses and is daily called upon to apply and prove the divine Principle of Christian Science, this excess of enthusiasm becomes tempered with consecration to the effort in hand; and it is at this point that true optimism begins.

Joy and gratitude for release from intolerable conditions are wholesome and proper attitudes of thought, but the proving for oneself of the divine Principle of harmony in the handling and right solution of the perplexities of human existence which daily confront us, is the real foundation of that quiet confidence noted in Christian Scientists. This confidence in turn begets confidence, and this is why genuine Christian Scientists are genuine optimists—they are able to prove the reason for the faith that is within them.

One of the definitions of the word "optimism" given in the Standard dictionary is: "The doctrine that the universe, being the work of an infinitely perfect being, is the best possible universe." From this premise of an "infinitely perfect" creator, the infinite Spirit whom the English-speaking races unite in calling God, we deduce an infinitely perfect creation. And as we understand that this creator is infinite Spirit, so we also deduce that His infinitely perfect creation, the universe including man, is spiritual; or, as it is most clearly stated by Mrs. Eddy in Science and Health, "There is but one creator and one creation. This creation consists of the unfolding of spiritual ideas and their identities, which are embraced in the infinite Mind and forever reflected" (p. 502). To those who from this premise are daily proving the allness of infinite good, God, there is sound basis in their reason for optimism, for to them "joy is no longer a trembler, nor is hope a cheat" (Science and Health, p. 298).

This true sense of optimism must not, however, be confused with some of the specious philosophy of these latter days, which asserts that the control of our destiny lies in the fiat of the human will. This is tantamount to a denial of the omnipotence of God and leads inevitably to confusion or a house divided against itself, which we are told cannot stand. Jesus expressed this reliance upon God when he said, "I can of mine own self do nothing:" "The Father that dwelleth in me, he doeth the works." The purified thought, the enlarged vision, and the deepening of human experience through an understanding of man's unity with God, infinite good, which are revealed through the unfolding of the beautiful truth of Christian Science, all make for an uplifted faith in good and a corresponding disbelief in evil.

"THY TEACHERS."

ERNEST C. MOSES.

THE reformative effects of Christian Science upon human character are far more thorough and comprehensive than appear to the casual observer. As the message of God it comes to the human heart, and speaks in a "still small voice," then waits until each individual is ready to accept its healing ministrations. When one is quite ready to open the door of his heart to Christian Science, the truth enters, and then the transformation of character begins whereby he slowly drops the ways and means of mortal mind, and takes up and utilizes thoughts of good proceeding from the divine Mind, which now becomes his teacher and guide.

It makes little difference whether the door of the heart be thrown open to truth by the man of letters, the farmer, the man of commerce, or the day-laborer. In one sense all who take up the study of Christian Science are in a state of ignorance. They may not be so accounted by human standards, but from the standpoint of divine Mind the newcomer is sorely ignorant of spiritual realities, the substance of Scripture truth, however well versed he may be in the letter of the Scriptures and the scholarship of the world.

Every mortal comes to Christian Science sadly in need of education, instruction from God in wisdom and spiritual understanding, but when the heart of one who has long fed on the husks of mere intellectualism is opened to the appeal of Christian Science, he begins to learn of "the deep things of God." Many come to Christian Science who not only lack knowledge of spiritual verities, but who are also sadly ignorant of the best ways and means of working for the good of humanity along practical lines; while others come well equipped for usefulness, and they are consequently enabled to give speedy proofs of their ability to cooperate in the work of supplying the diverse needs of mankind.

The acceptance of Science does not mean the abandonment of one's capital in the way of good judgment, the experience gained in any line of beneficial work prior to espousing this Science. It means rather that the student shall hold to all the real good the past has brought him and be willing to go forward and improve his ways and means of work, with a sincere willingness to be taught by the best authorities in the line of endeavor to which he is devoted. Many come to Science with gifts and abilities that are seemingly obscured by the accumulations of wrong thought. They come up out of great tribulations, from the swamps of failure, the valleys of sin, the mires of sloth, the storm-tossed sea of persecution, passion, injustice. They may be confused, disheartened, deficient in judgment, and ignorant of the best ways and means of doing things. They need not only spiritual education, but a knowledge of what the world terms the practical affairs of life. Much teaching is often required in the higher cultivation of the human faculties to make one not only a good Christian, but a good husband, citizen, and neighbor, an honest public servant, a good business man, public-spirited, tolerant, wise, and benevolent.

If one is being governed by divine Love, the Principle of all true intelligence, he is aided by the "wisdom that is from above," which is "first pure, then peaceable, gentle, and easy to be entreated, full of mercy and good fruits." Willing to learn, he is aptly teachable, and will be able to work out his problem in business life, where it is his duty to obey orders from those who, though they may know little of Christian Science, are yet able to teach him better and more practical ways of doing business.

The student's willingness to learn makes him a more alert, more enterprising, and more successful business man, and he thus fits into the economic structure of the industry about which he knows the most, and will be able to contribute to its success and progress while learning to act from the standpoint of Principle, doing his work "heartily, as to the Lord, and not unto men." In this way the Christian Scientist in the business world may grow in the favor of both God and man; because this is always the result of improved right doing. The student may have many difficulties to encounter, and many problems to solve, but the promise of divinely bestowed success is with him, and he will find in their overcoming and solution both help and stimulus. For what says the prophet to those who sincerely cry unto God for help: "He will be very gracious unto thee at the voice of thy cry; when he shall hear it, he will answer thee. And though the Lord give you the bread of adversity, and the water of affliction, yet shall not thy teachers be removed into a corner any more, but thine eyes shall see thy teachers."

Digitized by Google

It is as though Isaiah had written: Although your obedience to God may cause you to take a journey through the human life dream which involves trials and afflictions to material sense, yet God will provide those teachers on whom you can depend to instruct you aright in all your affairs, so that you can successfully meet every problem as it arises. Indeed, he straightway declares the result in these words: "Then shall he give the rain of thy seed, that thou shalt sow the ground withal; and bread of the increase of the earth, and it shall be fat and plenteous." The right-minded student of Christian Science soon comes to understand that in reality there is but one teacher, the one Mind, whose reflections of wisdom are infinite; and, whether these reflections come to him through persons or inspiring books, matters little. He clearly sees that every ray of practical wisdom in human affairs, from the simplest statement of business probity up to the most important declaration of social, economic, or political science, is an approximation of divine Mind. He recognizes that God is the source of every good idea, law, or rule of action, and with this fact well established in thought he knows that not only in religious matters, but in all his ways he can and will find the wisdom which will bring out true success and progress.

Said the greatest and most humble teacher who has ever appeared among mankind: "And they shall be all taught of God." This is one of the most important educational statements ever delivered by Christ Jesus, and wise and happy indeed is he who in rejoicing humility accepts the truth that the wisdom of God is always available to show him the right way to conduct all his affairs. With this understanding and impulsion the student who may have formerly divided his work into the sacred and the secular, sees the divine element manifested in all lines of good and honorable work. Putting behind him the thought of planning and working to "make money," to secure fame or personal power, he makes his avocation a constant opportunity to glorify God and to benefit mankind. He discovers that all beneficial work is sacred—whether it be classified as commercial, professional, agricultural, or religious.

The world is indeed being "taught of God," and being won to Christ wherever intrepid and consecrated Christian Scientists are proving by their bearing and works that the Master's command to "heal the sick" applies just as effectively to the correction of sickly or erroneous methods of work as to the ailments of mortal man.

WHAT IS SIN?

COUNTESS FANNY VON MOLTKE.

IT is very interesting and sometimes helpful to retrace words to their origin, for often those which are much used have a deeper significance than that which appears on the surface, a meaning which has been lost, weakened, or perverted in the course of time. According to some lexicographers the word "sin" is derived from an old Gothic word which came to mean "refusal, negation," and it is interesting to note that Mrs. Eddy's statements in Science and Health coincide with this old signification of the word "sin": "Evil," she says, "is a negation, because it is the absence of truth" (p. 186).

Evil and sin are one and the same, and through the understanding of this true concept sin loses its asserted power and authority. It is seen to be neither an act, a quality, nor the nature of man. It is nothing but a negation of Truth, which is annihilated by knowing the truth. This knowing or realization takes away all fear of sin and its results, disease and death; but at the same time it increases the responsibility of the individual, for to him who knows that sin is a negation of God, good, the one Truth that exists, the committal of sin becomes inexcusable. It would also be wrong not to oppose this negation of Truth constantly with the affirmation of Truth, until there is nothing left to deny. To heed this simple but radical remedy is to be saved from sin, for the truth of being is alone able to give health, happiness, and bliss. There can be no excuse for him who would cling to that which does not belong to him as the reflection of God, and which is therefore not his true nature; for he sinning and thereby denying Truth, he would separate himself from God, from Life and Love. Then he would indeed heap up "wrath against the day of wrath," because he "would make that real which is unreal" (Science and Health, p. 339), and affirm that which is a negation.

The Bible says, "I have blotted out, as a thick cloud, thy transgressions, and, as a cloud, thy sins: return unto me; for I have redeemed thee." So all evil will vanish like a cloud, as the nothingness of sin is recognized, and the radiance of Truth will illumine everything with its eternal light. If we turn away from darkness, from the negative, and turn to the light, the promise will be fulfilled: "I have redeemed thee."

SPIRITUAL VISION.

JEAN B. WOOD.

WHEN teaching a Sunday school class in the old days I loved to tell them the story of the vision which came to Paul on the road to Damascus, and the eager faces and intense interest of the children made this story doubly interesting to myself. Since Christian Science came into my life, and the spiritual interpretation of the Bible has lent a newer light, I have found that the stories of the "holy men of old" have a new significance.

When I first grasped the teachings of Christian Science I felt that much of my interest in the stories of the Bible was gone, that they had lost their former significance; but when through the experience of being called upon to teach in the Christian Science Sunday school I found that in bringing to my class the spiritual understanding which I had gained, I was able to teach even the letter of the Scriptures as never before, I realized that spiritual vision had invested the Bible with a new light and Truth had given me indeed a "Key to the Scriptures."

In studying the Bible I have been much impressed with the fact that spiritual vision has ever been a question of individual growth,—Moses, whose spiritual vision enabled him to commune repeatedly with God upon the mountain top; Christ Jesus, who in his sermon on the mount declared the newer law of loving our neighbor as ourself; and St. John upon the mount of revelation, perceiving, amid the every-day walks of life, the new Jerusalem with its final message of God as Love and Life. Then to this age came the voice of our Leader, Mrs. Eddy, declaring the spiritual vision to be a present possibility and a practical factor in human unfoldment, proving to the world that the declarations of Moses, Jesus, and St. John were the result of a divine Principle governing men, and that the operation of this Principle was as scientific as it was effective, and that it was and is the fulfilment of divine law.

[Written for the *Sentinel*.]

PROTECTION.

ROSE HENNIKER HEATON.

LET one thought guide you through the livelong day,
This thought be with you still at candle-time;
A starry thought of hope and peace sublime,
However dim the path or wild the way.

"LO, I am with you alway." Steadfast, bold—
Unfearing shall you cross the widest seas,
When in your heart you carry words like these:
"LO, I am with you alway" writ in gold!

SELECTED ARTICLES.

[Clinton B. Burgess in *Erie* (Pa.) *Dispatch*.]

In his list of "twenty greatest women" which appeared in this morning's *Dispatch*, Elbert Hubbard includes, as he should, the name of Mrs. Eddy, Discoverer and Founder of Christian Science, saying of her that "two million people believe in her implicitly. A hundred million are influenced in their daily thinking through her philosophy." Mr. Hubbard does not seem to have arranged his list in the order of greatness in his own estimation, but rather chronologically, and Mrs. Eddy's name is the seventeenth, but his tribute to the influence of her life and work upon the mind of this age shows what a high place she holds in the rank of greatness.

It is too soon for the public mind to form an accurate judgment of this wonderful life. It is impossible to get a fair perspective amid the turmoil which absolute spiritual idealism, scientifically tested and demonstrated, has produced in the realm of materialistic philosophy, theology, and medicine. As time goes on and prejudice subsides somewhat and enlightenment takes the place of misapprehension, Mrs. Eddy's true place in the history of modern thought will be more clearly seen. Two among the many qualities which will then be recognized with admiration are her humility and daring. These two qualities, though often considered opposites, must be dominant in every one who finds himself the messenger and mouthpiece of an epoch-making truth. Without humility he will look upon himself as a source rather than the channel of the message, will encourage a following of his own personality instead of the truth which he stands for, and consequently his work, instead of taking on the proportions of the infinite which belong to the idea or Principle, will dwindle to the limitations of a personality. Without daring, the would-be pioneer would shrink at the task of opposing the anchored and enmeshed conservatism of ages and quail at the sting of its ridicule and the offensiveness of its insults.

Mrs. Eddy's sense of the one and only source of all truth and good, and her knowledge of the danger of anything like a worship of her personality, demanded a humility that needed strenuous backing to keep the tide of love and gratitude of her followers within proper bounds; but so successful was she in learning and teaching this lesson that when her work here was done there was no shock or division or disintegration in the Christian Science ranks such as had been predicted. They had had their orders years before. The Bible had been opened, its truth made clear and practical to all the affairs of life, and it had been adopted by all Christian Scientists as their "sufficient guide to eternal Life" (Science and Health, p. 497).

Mrs. Eddy will be remembered as the one who dared. She was the first since the apostolic age to dare to accept and adopt Jesus' tests of belief in their fulness, as found in John xiv, 12, and Mark xvi, 17 and 18. She was the first since those days who dared to believe so fully in the power of God as to disbelieve in the reality of any opposing power. She was the first who dared to proclaim that science, being truth, is of God, Spirit, and therefore must be spiritually and not materially discerned. Mrs. Eddy has dared to question the basis of the accepted régime of hygiene; to demand that the inside as well as the outside of the cup and platter be purified, and to show that the effects of external methods are neutralized and reversed by the constant exposure of human thought to the contamination of thoughts of hatred, anger, lust, fear, greed, selfishness, etc., against which there is no quarantine nor even decent measures of cleanliness for the protection of the public.

Perhaps the greatest influence of Mrs. Eddy's teachings in the daily lives and daily thinking of the millions of people that Mr. Hubbard refers to is felt in the lightening of the burden of fear by a fuller trust in the loving presence and supremacy of God. There is an increased tendency to look above the earth, and a willingness to judge not according to the sight of the eyes nor the hearing of the ears, but righteous judgment, a growing conviction that a spiritual rock is being made available upon whose basis man is yet to establish his dominion over all the earth.

[Translation from *Eenheid*, Scheveningen, Hollard.]

The international edition of this paper [*The Christian Science Monitor*] has been offered to us for a while. Although we lack the time necessary for a detailed and attentive study of this paper, we have read it sufficiently to be able to declare that it is splendidly edited. All sensational news, which can only awake wrong emotions, is omitted. It gives the important political and scientific news, and good articles on art and sport. The last page is specially important because of short editorials on interesting topics. Next to the last page contains an article teaching the application of Christian Science.

This is a paper that we need not keep from our children, and that daily brings an upbuilding thought. What paper in our country dares to reform in this way? The influence of the press is enormous, and the responsibility to use this influence in an educative line is very heavy. Many papers try this, but fail to exclude from their columns the destructive and defiling.

[Frederick Dixon in *Sevenoaks Chronicle*, Sevenoaks, England.]

Christian Science healing consists in destroying, not symptoms, but the cause of disease. This cause is always a mental one, so that symptoms which seem dangerous may be rooted in causes far less difficult to destroy than those which produce symptoms which seem far less dangerous. Now, in order to destroy the cause, it is necessary to overcome in the human consciousness the belief which constitutes it. A belief of very long standing, especially when the results are not dangerous, may be more difficult to eradicate than a belief of comparatively short existence, even though the symptoms produced by the latter seem more threatening. Consequently, it is perfectly possible to be months, and even years, expelling a firmly fixed belief that one is clinging to oneself, while it may be comparatively easy to overcome a more recent belief to which another person is clinging. This is just an indication of the immense range of Christian Science healing, but in a way it explains what a recent writer in your paper is inquiring about.

A man, to give an example, might have been dropped as a child and had his spine injured. By the time he is forty or fifty, the belief of curvature of the spine has become an actual part of his human mentality. It might take him years to get rid of this belief, though there is no reason why it should take him five minutes; but, all the same, he might heal a drunkard or a man suffering from consumption or cancer during the process of healing himself. The healing of the drunkard and the man with consumption or cancer would, indeed, be an actual part of the destruction of the belief of inharmony in his own consciousness, which was necessary to the overcoming of his own belief in the reality and permanence of evil, either mental or physical.

It has been made quite plain in the recent correspondence in your columns, that even those who have doubted Christian Science healing admit the healing done by the apostles. Now, Paul raised the dead, yet Trophimus was left sick at Miletum. How was it that Paul, who raised the dead, did not succeed in healing Trophimus? More than this, it is an accepted belief of the church that Paul's "thorn in the flesh" was a physical disability. Dean Farrar, I think I am right in saying, described it as weak eyes. How was it that Paul raised the dead and yet failed to overcome his own "thorn in the flesh"? It was, I take it, for the precise reason

Digitized by Google

which I have tried, however shortly and indifferently, to explain in this letter.

Finally, may I point out that the critics of Christian Science find it a great deal easier to point out the deficiencies of Christian Scientists than to imitate the healing done by those Christian Scientists. Every week, the clergy of all denominations are entering the pulpit to preach against sin; every day they are going round their parishes, teaching people how to avoid sin. What would the writer of the letter, who signed himself "One who wants to know," think if a Christian Scientist were to say, How is it that the whole clergy of the world are teaching their congregations how to overcome sin, when they have not overcome it for themselves? The question is exactly on all fours with the one which has been asked in your columns, and may I invite the person who asked that question to answer my question? It is not pretended that any human being is without sin. How then can a person who is a sinner preach the gospel, which is to heal sin for sinners, if a Christian Scientist who is sick cannot pray for others, suffering from sickness, to be saved from sickness?

[Alfred Farlow in *Lancet Clinic*, Cincinnati, Ohio.]

In an issue of your periodical you published a contribution under the caption "Pseudo Science," which makes the charge that Christian Science is "neither science nor Christianity." The writer declares that it "contains not a single basic principle which will admit of a scientific demonstration." Evidently he assumes that nothing which is not based upon material observation or matter is entitled to the name "science." We insist that there is something to know about spiritual being; that it is true, and hence justly entitled to the name "science," and that there is no legitimate authority for restricting the term "science" to material things.

Since our critic has made the assertion that Christian Science is not Christianity, let him show wherein it differs from the fundamental teaching of Christianity; namely, that God is Spirit, that Spirit is the only cause, the "Alpha and Omega, the beginning and the ending." Again, many of the foremost scientists of this age approximate to the teaching of Christian Science regarding the constituency or nature of matter. For example, Lord Balfour declares that "matter has been not only explained, but explained away." In his "Evolution of Matter," Gustave Le Bon, the great French scientist, who is probably the most advanced thinker of the age along this particular line, makes still more sweeping declarations. He asserts that he has caused matter to vanish without return, and that he has found that it ceases to be matter altogether, and he also declares that "energy is not indestructible. It is unceasingly consumed, and tends to vanish like the matter which represents one of its forms." Will our critic insist that these men are not scientists?

Jesus Christ was not only the Founder of Christianity, but the greatest scientist of any age, and he established the truths upon which Mrs. Eddy has based her entire teaching. While it is important to consider the conclusions of the scientists of our age, it is of greater importance to consider the conclusions of the master scientist of all ages, since his scientific discoveries and practises have been more resultful than those of any other man of any age. He said, "It is the spirit that quickeneth; the flesh profiteth nothing," which means that Spirit alone gives life and existence; matter contributes nothing whatever to the existence of anything. When the woman afflicted probably with what is today called rheumatism, of eighteen years' standing, was brought to him, he did not say the woman had rheumatism and needed medical treatment. He declared, "Satan hath bound [her], lo, these eighteen years," and he defined Satan as a "liar." He said he "abode not in the truth, because there is no truth in him," which means he does not truly abide, because there is no "truth" or reality in him. Satan was the term which the "great Physician" applied to error which is opposed to truth, and which constitutes the basis of all lies, and he said, "Ye shall know the truth, and the truth shall make you free." Free from what? Free from everything that interferes with legitimate harmony, health, prosperity, and happiness.

Our critic declares that Christian Science "has gone from victory unto victory, until it numbers votaries in every civilized country of the globe," but he adds, "We deny that it advances because of its therapeutic merits, for the very good reason that it has none." May we ask if the fact that Christian Science cures does not prove that it has "therapeutic merits"? It may be true, as your friend hints, that the "key to the Scriptures" had been allowed to become "rusty" from want of usage, but it is becoming somewhat polished in these latter days.

[Frank Bell in *Greensburg* (Pa.) *Review*.]

It cannot be truthfully said of Christian Science that it does anything else but reform the sinner and heal the sick, nor can it be successfully denied that it accomplishes both these works in marked degree. Surely no one objects to the overcoming of sin and the healing of sickness, and yet we occasionally find some one raising his voice against that which works only good. And strangely enough these criticisms come almost wholly from those who themselves are committed to the task of saving mankind from sin and sickness, and who therefore can have no possible quarrel with the objects of Christian Science. What remains to be assumed, therefore, but that the objection is wholly to the method? Christian Science offends, apparently, because it overcomes sin without scholastic theology, and sickness without drugs. It were better, it seems, that men should not be good and well, rather than that they could acquire these blessings in any but a material way. Christian Science is so "irregular."

Fortunately, mankind is learning very rapidly to judge by results. Abstruse questions as to whether one's interpretation of Scripture agrees with another's are viewed with scant concern as compared with the question of what is the effect of one's religion on his life. It is the same in the healing of sickness. The public is demanding that every system which can show results shall have a right to live and carry on its good work.

[William J. Bonnin in *Chorley* (Eng.) *News*.]

Christian Science has healed, and does heal, every kind of disease there is, and without, of course, any "material applications" whatever. As to whether it heals "better than the surgeon's knife," it is to be remembered that surgery is not therapeutics, but rather its confession of failure. It is not scientific, in the true sense, for in the presence of true healing it has no place. It is, of course, possible to say this without seeking in any way to disparage the conscientious labors and unselfish motives of the members of the surgical profession. Christian Science healing is the best healing because it is true healing. It is true healing because it deals with actual causes; and, eradicating these fundamental causes instead of patching up their effects, its healing is permanent. It is true healing because it is Truth and Truth alone that heals.

As to the proof that Christian Science heals, permit me to say that such proof does not rest upon the bare assertion of any single individual, though to each individual his own experience is sufficiently convincing. It is also sufficiently convincing to make him, in most cases, desire to tell it to his fellow sufferers, and so to join that vast and ever-increasing company of people who have publicly declared themselves to have been healed. These hundreds of thousands have for the most part been without hope of healing before they sought it in Christian Science, and their evidence is the best possible; for they know. Every Wednes-

Digitized by Google

day evening in Christian Science churches in all parts of the world, they rise up by the thousand and give thanks. No, the proof of the healing is not a bare assertion. Moreover, it is rather strange that such proof should be required by any one at all acquainted with Christian Science teaching, in the face of the growth and progress of the movement; for the claim of Christian Science upon mankind is based upon the fact that it is a demonstrable religion. It affirms that the Founder of Christianity meant Christianity to be demonstrable as he demonstrated it, and if Christian Science were not demonstrable it would fail in its central and most conspicuous teaching. Under the circumstances its phenomenal success is its justification.

I would affirm, in conclusion, that, although to those who have learned to look upon matter as the only source and origin of power and life, the healing in Christian Science seems hard to understand and to stand in need of more proof than anything else, it is, nevertheless, impossible to comprehend in any measure the truth of the omnipotence of God without that difficulty disappearing, while there arises instead a recognition of the utter unseemliness of the argument that He "who healeth all our diseases" elects to withhold His compassionate love if, forsooth, there be not provided certain grains of matter as a channel for its operation. To the earnest Christians of today Christian Science would put the question that St. Paul put to King Agrippa: "Why should it be thought a thing incredible with you, that God should raise the dead?"

[Algernon Hervey-Bathurst in *Torquay* (Eng.) *Directory.*]

I have read in a recent issue a reference to the letter by Frederick Dixon on Christian Science published in a previous issue. May I be permitted to point out that the critic has taken a really extraordinary point of view. He commences by stating that he does not wish to "criticize the ground taken, the arguments used, the accuracy of the reasoning, etc." Nevertheless, he forthwith proceeds to point out what he considers to be the "striking" difference between Christian Science and the "simplicity and clearness of the teachings of Christ Jesus." Now, the fact is that the teachings of Christian Science are so simple that even the children are able to accept the clear statements of absolute truth, and not only accept them, but put them into practise, and this because the teachings of Christian Science are the teachings of the Master reiterated. The mere repetition of metaphysical statements would avail but little. When, however, one not only hears the children in the Christian Science Sunday schools explaining why man has dominion over sin, sickness, and discord, but also sees them proving what they say by healing themselves and others when necessary, it is clear that there can be nothing in the nature of complicated arguments or involved reasoning in Christian Science. With this unanswerable logic—the logic of practical demonstration—these children are proving that sickness and discord are not real; that is, do not exist in the perfect creation of God.

The critic also implies that Christian Science does not show that love for humanity expressed by Christ Jesus. Those, however, who know even a little of the practise of Christian Science realize that no statement could well be more inaccurate. I would ask for what other reason than out of love for humanity and a desire to free mankind from the bondage of sin and sickness are Christian Scientists willing, at any hour of the day or night, to go to the bedside of those anxious to have the help of Christian Science, and there calmly to realize the omnipotence, omnipresence, and love of Him "who forgiveth all thine iniquities; who healeth all thy diseases," until the sense of suffering is replaced by a grateful recognition of the great truth that a correct understanding of God, good, includes no necessity for suffering, and proves that neither sickness nor sin forms part of the divine economy, and the patient is healed.

The two greatest commandments Jesus the Christ declared to be, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind," and "Thou shalt love thy neighbor as thyself." It may be said that on these is based the practise of Christian Science. Christian Scientists realize that they are able to apply the teachings given to the world by Mrs. Eddy in "Science and Health with Key to the Scriptures" only in proportion to their understanding of and obedience to these two so comprehensive statements.

[W. C. Williams in *Hagerstown* (Md.) *Globe.*]

John's understanding of Jesus and his teachings did not come through the physical senses any more than did that of Peter when Jesus said to him: "Blessed art thou, Simon Bar-jona: for flesh and blood hath not revealed it unto thee, but my Father which is in heaven." Unless the Bible is taken spiritually (and it was inspired by God, who is Spirit), we know with our critic that many things, if mentioned from the material standpoint, will not agree with the spiritual and eternal standpoint. Christian Science does not contradict itself nor does it try to pervert other Christians from faith in the Bible, but shows them how to prove their faith in it. Jesus promised everlasting life to all those who believed on him, and told them that "whosoever liveth and believeth in me shall never die." To contend that Jesus died is to make him less than those to whom he gave the promise. He also said: "I lay down my life, that I might take it again. No man taketh it from me, but I lay it down of myself. I have power to lay it down, and I have power to take it again." The climax of his glorious mission was to prove to the world that there is no death.

This is what Jesus said of his flesh and blood: "Verily, verily, I say unto you, Except ye eat the flesh of the Son of man, and drink his blood, ye have no life in you." "He that eateth my flesh, and drinketh my blood, dwelleth in me, and I in him." But surely no one believes that Jesus meant this literally, though some of his disciples did until he explained: "The words that I speak unto you, they are spirit, and they are life." If we live forever we cannot die, though we shall continue to shuffle "off this mortal coil" until we have grown to the spiritual condition where mortality can be consigned to its native nothingness.

Christian Science does heal all diseases, and instead of endangering the health of the community, many of the cases have been healed after having been declared incurable by physicians. Christian Science does not deny that God is personal, except in the restricted sense; and it says with Jesus: "The kingdom of God is within you."

[Written for the *Sentinel.*]

CAUSE FOR COURAGE.

GRACE ROBERTA WASSON.

To do, to dare, to brave convention's scorn;
  Achieving, where the coward dare not tread;
Rising as fearless as the light each morn;
  Attempting that which recreant heart would dread.
Succeeding, where the fearful dare not go;
  Persisting, undiscouraged by defeat;
In seeming tumult calm, because to know
  That God made no provision for retreat
Means courage to the one who understands.
  This, then, is what our glorious faith imparts:
To know that God doth govern, and His plans
  Include no error, reassures our hearts.
Trusting, we know no evil will befall,
  Though seeming discords surge on every hand.
What cause is there for fear, when one can call
  On God, whom we now know and understand?

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

HEARERS AND DOERS.

When Jesus assembled his disciples before the feast of the passover, when he "knew that his hour was come that he should depart out of this world unto the Father," and after he had symbolized to them the humility of that love "which passeth all understanding" and had eaten his last supper with them, he preached a sermon second only in importance to the sermon on the mount. This one, however, was out of his practical experience in ministering to the sick and sinning, after he had spent three years in a sublime ministry which was the exemplification of his great commission to the twelve and to the seventy.

Jesus' ministry had been one of works, and he had offered these works as his answer to John's inquiry if he were indeed the promised Messiah. That similar works were to be the test of discipleship for all time, he now made clear in this sermon, delivered in the solemnity of an approaching experience, the tragedy and meaning of which he knew full well. He said, "He that believeth on me, the works that I do shall he do also;" that is, those who should believe in the power of Truth and Love, that "with God all things are possible," would heal the sick even as he had healed them. It was not until after the third century that the healing of the sick was lost sight of as an important and necessary part of Christianity, and from that time until the discovery of Christian Science by Mrs. Eddy in 1866, whatever healing was accomplished through prayer or faith was looked upon as supernatural.

Mrs. Eddy discovered that this healing which had accompanied the preaching of the gospel in the early days was divinely natural, and that it was not only possible but necessary that this lost element of Christianity should be restored. She also found that the mere preaching of the gospel—the letter without the spirit—was not sufficient for the salvation of mankind, and that the lives of Christians must not be confined to a perfunctory keeping of the commandments, but should abound with good works. This point she emphasized in a message to The Mother Church which was received and read at the afternoon service of June 14, 1908, as follows:

"Mrs. Eddy says: Faith without works is the most subtle lie apparent. It satisfies the student with a lie, and it gives them peace in error, and they never can be Christian Scientists without that faith which is known and proved by works. Words are often impositions, and faith without works is dead and plucked up by the roots. It is not faith, but a deceiving lie lulling the conscience and preventing demonstration. A satisfied sinner is the most hardened sinner."

Plainly it is not enough for us to be enrolled as Christian Scientists, but we must be ready like the disciples of old to give a reason for our hope, to prove by our works of healing our kinship with the great Teacher who declared: "My mother and my brethren are these which hear the word of God, and do it."

Archibald McLellan.

UNFAILING TRUTH.

Few Christian people would deny that divine Truth must of necessity be unfailing, and yet not many of these are ready to avail themselves of its infinite power and limitless provision for human need in all the varied exigencies of human experience, although the psalmist assures us that divine Truth "endureth to all generations." Many professed Christians have limited the power of Truth to the righting of human wrongs, as expressed in Isaiah, where we find the sorrowful plaint, "None calleth for justice, nor any pleadeth for truth;" but in Christian Science we learn to trust in Truth at all times, whether the need be for the healing of some sore sickness, the dispelling of some deep sorrow, or the overcoming of a bitter and stubborn sense of sin,—all these, yes, every ill which besets humanity, can and will be overcome if we, on our part, hold to the eternal fact that divine Truth is changeless and can never fail to "save unto the uttermost."

This question therefore resolves itself into one of human receptivity to Truth, and Christian Scientists may well take counsel of their innermost thoughts in order to learn how often they pause to remind themselves that Truth fails never, and to ask themselves whether they are ready to risk their all upon this fact. At the last supper Jesus said to Peter, "Satan hath desired to have you, that he may sift you as wheat: but I have prayed for thee, that thy faith fail not." This is truly the vital consideration for each one who, like Peter, professes to be a follower of Christ Jesus. One test will follow another, but, as we learn in Christian Science, God will not fail us, and it rests with us to prove that our faith will not fail in what to the human sense may seem to be a fiery ordeal. The apostle Paul said the test would be "so as by fire."

In Isaiah we read, respecting the Christ-idea, the divine model: "He shall bring forth judgment unto truth. He shall not fail nor be discouraged, till he have set judgment in the earth." In Christian Science we are taught that judgment in accordance with truth extends to our physical condition, so called, as well as to our mental and moral status. For instance, it is not according to divine law that any one should suffer for disregarding an assertal material health law, and Truth understood brings quick deliverance from the bondage which this belief entails. A closer acquaintance with the truth of being is, however, needed to offset the tenacity with which error often seems to hold the mortal sense to physical suffering, and yet all the while Christian Science "shows Truth to be triumphant" (Science and Health, p. 493). Here it is well to bear in mind that "the two-edged sword of Truth must turn in every direction to guard 'the tree of life'" (p. 458). In other words, we must persistently turn away from the illusive material evidence of disease and mortality, denying it with the word of Truth, while we declare for the supremacy of Spirit and spiritual law at every turn of the way, if we would gain perfect freedom.

It rests with us to ally ourselves closely with Truth and Truth's reflection, and then we shall with new-born courage look up to the stars and recall the prophet's words, "He [God] calleth them all by names by the greatness of his might, . . . not one faileth." Thus does divine Truth call upon each one of us to awaken from the dream of mortality and claim man's divine heritage of health, purity, power, for having these we have indeed "all things."

Annie M. Knott.

LOVE AND LAW.

The first and most important thing for every little one to learn, is the unyielding nature of true love, and the future of the child whose parents are not wise enough or not strong enough to impart this lesson, is apt to bring him unhappiness if not defeat. To allow a child to grow up with the thought that love consents to his wilfulness and indulgence, is to do him a very great wrong, since he cannot even begin to live aright until he has come to understand that love means unflinching loyalty to the right, to wisdom.

Upon a more mature plane of experience this same lesson must be learned by us all respecting the love of our heavenly Father, that it cannot consent to the unideal; that the law

Digitized by Google

of Love is the law of Truth. Then we come in touch with the Science of being and are able rightly to interpret the Scripture which saith, "Whom the Lord loveth he chasteneth." The divine manifestation is scientific and saving, its human statement perfectly intelligible in the light of Science. The divine government is forever expressed in the maintenance of the immutability of Love, the integrity of Truth.

Our afflictions witness primarily to the presence of error in individual thought, or in that mortal mentality into which we were born and over the belief of which we have not yet fully demonstrated. Further, in so far as we are spiritually apprehensive and aspiring, afflictions should bear witness to the uncompromising stand of divine Truth, which will not let us alone, but punishes us in the sense that it cannot look upon error with the least degree of allowance. "If I make my bed in hell," says the psalmist, "behold, thou art there,"—there to assert and maintain the law of good, the law of Love; and realizing this we can say with Job, "Though he slay me [the mortal sense], yet will I trust in him."

All sorts of discomforts may attend the schoolboy's present inability to apply the law involved, so as to solve his problem. This speaks of course for his lack of knowledge, which is to be regretted. It also speaks for the fact that truth remains forever true, it will not yield its scepter of harmonious rule to any presentation of error, which fact is manifestly the student's greatest occasion for rejoicing. The sooner therefore he understands the significance of this immutability of truth, and begins to be glad for his failures when in the wrong, the sooner will he know and be able to exercise truth's sovereign authority over error.

Examined in the light of our Lord's teaching respecting the relation of truth to error in human consciousness, Mrs. Eddy's statement that "trials are proofs of God's care" (Science and Health p. 66), is seen to be blessedly true. Not that suffering is planned for and being utilized by our heavenly Father as a necessary factor in our spiritual development, but that in our struggle out of materiality our true selfhood is protected, preserved from every corroding touch by virtue of God's trueness to His inherent nature, to the law of Love, which law is forever expressed through man.

When thus seen, the immutability and persistence of the right, the good, become the sufferer's strength and support in all his struggle for the attainment of the Mind that was in Christ Jesus. If divine law could be compromised, the trials of the aspiring might, in a sense, seem to be greatly lessened. If conscience were to let wrong-doers alone, their comfort would for the present be greatly increased, but that the voice within cries out unceasingly to the prodigal, and will not give him peace, is, and must become to him, the abiding evidence of the tender, protecting presence of the law of Love.

JOHN B. WILLIS.

AMONG THE CHURCHES.

BLOOMINGTON, ILL.

Large crowds of people attended the two services held in connection with the formal dedication of First Church of Christ, Scientist, yesterday [July 14]. In the morning communion and reception to new members took place, and the special dedicatory exercises were held in the afternoon and evening. Guests were present from many surrounding cities and a large number of people from other churches were also in attendance. The full payment of fifty thousand dollars for the church property has been made, and the exercises yesterday were in honor of this event. The chief address was delivered by Mrs. Della H. Rigby, and was in part as follows:—

This day marks an important step in the progress of Christian Science in this city. We are grateful that we have reached the period in our church history when we are ready to dedicate our church edifice to God, for the purpose of meeting and accommodating the larger demands of the seeking multitudes for Christian Science preaching and healing. Christian Science was introduced in Bloomington the latter part of 1886. The few interested met in a private way, in their homes, to study the Bible, with such Christian Science literature as could be secured on the subject of healing the sick. These meetings grew in interest and power until it became necessary to move into more public places. The date at which the first members signed the membership roll of this church is March 22, 1891. Twenty-seven names appear on the record, nine men and eighteen women; three joined later in the year, making a membership of thirty the first year. This number has multiplied many times during the twenty-one years.

The contract for this church was let March 30, 1908. The corner-stone was laid in the presence of the board and workmen, July 11, 1908. The formal opening took place May 29 and 30, 1909.—*Bloomington Bulletin.*

WELLINGTON, KAN.

The Christian Scientists held services in their beautiful new church building for the first time Sunday morning [June 9]. While the outside of the building presents a very attractive appearance, the interior is a surprise to the visitor on account of its neat simplicity in design and decoration. The auditorium is seated with opera chairs, one hundred and five of them being used, and the size of the room makes it possible to place in eighty more when needed.

Announcement was made during the services that the new building would be kept open each afternoon from three to five o'clock as a free public reading-room. Christian Science literature is always on hand, and on account of the location it is a convenient place to drop in and spend a quiet half hour.—*Wellington News.*

ROCKY FORD, COL.

The annual meeting of the Christian Science society was held Tuesday evening [June 11]. It was decided at this meeting that immediate steps would be taken in the erection of the new church which is to be built on the lot recently purchased by the organization. This lot is across from the library building and will be a splendid location for the church.—*Rocky Ford Tribune.*

DOVER AND FOXCROFT, ME.

On communion Sunday, July 14, First Church of Christ, Scientist, Dover and Foxcroft, was dedicated. While the church home of local Christian Scientists was erected and completed in 1908, in conformity with the custom of all Christian Science churches, it was not dedicated until paid for.—*Piscataquis Observer.*

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be Nov. 1, 1912. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 16, 1912.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to May 31, 1912, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
Falmouth, Norway, and St. Paul Streets, Boston, Mass.

THE LECTURES.

LEYTONSTONE, ENGLAND.

An address on Christian Science was given in the town hall, Stratford, before a large audience, the lecturer, Bicknell Young, being introduced by Mrs. Ward, who said:—

On behalf of the Christian Science society of Leytonstone I extend to you a warm and sincere welcome. This society, and all who have labored in this neighborhood from the inception of Christian Science, are to be congratulated on the result of their activities. Paul planted, Apollos watered, and God is giving the increase. To those who have been lifted out of doubt, grief, and woe through its beneficent influence, to those who have been physically healed by it, Christian Science comes as no new message. But to those who, having light, are searching for more, in their churches and out of them, to the honest doubter seeking for truth, Christian Science brings a logical and rational explanation of life and its perplexities. The board of lectureship of The Mother Church, The First Church of Christ, Scientist, Boston, Massachusetts, has been formed to correct popular misconceptions voiced through a section of the press and otherwise, to do away with promiscuous and unauthorized teaching and addresses, which are erroneous and misleading, and to give the public an opportunity of gaining some idea of the vital nature and operation of Christian Science.

Kentish Independent.

LITTLE ROCK, ARK.

Bliss Knapp delivered a lecture on Christian Science, under the auspices of First Church of Christ, Scientist, of this city, at the Majestic theater. The lecturer was introduced by the mayor of the city, the Hon. Charles E. Taylor, who said:—

I have been asked by some of my friends who are Christian Scientists to introduce the speaker for today. It is a pleasure for me to do so, and because I am a member of another church I consider the request an honor. I wish to pay this tribute to the Christian Scientists whom I know: in meeting with the problems of life by which we are confronted daily, they do so with as much courage and simple faith, in their lives they seem to be as happy and contented, in the community they are as useful citizens; in short, they come as near to practising what they preach, as any other people with whom I am thrown.

I was impressed by a statement contained in the advertisements of this lecture, which have appeared in our daily papers for two or three days. It was: "Publicity in order to proselyte from other faiths is not the object of this lecture, but its purpose is to correct erroneous ideas that are prevalent pertaining to Christian Science." This is an age of enlightenment. We do not persecute any man on account of his creed. Rather we should permit him to enjoy unmolested, even by unkind criticism, the religious liberty which our fathers established. I am sure that those here today will be benefited by more information concerning Christian Science.—*Arkansas Gazette.*

WHITE PLAINS, N. Y.

The lecture on Christian Science delivered at the Newell theater by William D. McCrackan, M.A., was the first public lecture since the local church occupied its enlarged new quarters in the Moore house at 160 Railroad avenue. The lecturer was introduced by Paul A. Harsch of Scarsdale, who said in part,—

In his superb defense before Agrippa, Paul said, "Why should it be thought a thing incredible with you that God should raise the dead?" and I ask you tonight, Why should it be thought a thing incredible with you that God should heal the sick, comfort the broken-hearted, bring peace to the worn and weary ones, and destroy sin in these latter days, as well as in the time of Paul? In performing these things Christian Science has belted the earth. In every land and clime where English is spoken, and in some where it is not, the glad story of love, peace, and hope has been carried,—to the islands of the sea, to Japan, China, Australia, Africa, and Europe. The joyous message of "on earth peace, good will toward men," is, as a result, nearer of realization today than at any time since those glorious words were uttered by the heavenly messengers hovering over the Judean hills on the glad occasion of Jesus' birth.—*White Plains Record.*

EUREKA, CAL.

A large audience listened to a splendid address at the Ingomar theater by Virgil O. Strickler. The Rev. Nehemiah A. Baker, pastor of the local Unitarian church, introduced the speaker, saying:—

I am not here to say what I believe or what I do not believe, but I am here to welcome in your behalf a fellow seeker after truth. I believe that the measure of our life is enlarged by every courtesy we are able to show, and I am happy this evening in the occasion that brings us together. From whatever religious faith we come, or from whatever place in life we have set out, I am confident that in this meeting we come together as friends who ought to know each other better. The only restriction which is put upon our understanding of another religious faith is the restriction which we put upon ourselves. Therefore, in equal kindness it behooves us to stand with open heart and mind before every teacher, and let the works of God be witness to divine approval.

In the story of the early Hebrew people it is recorded that again and again the children of Israel did evil in the sight of God, and that He raised up judges who delivered them from their unrighteousness. In this our day as well the inordinate love of money and the things that money can buy has turned multitudes from the consciousness of the abiding realities of life, and Christian Science is one of the newer denominations that has risen up to call mankind back to the realization of the immediate presence of God's life in humanity. Jesus preached this truth with pure simplicity and power, but the Christian church in its emphasis upon his teaching ministry failed to emphasize that there was a healing ministry as well. Christian Science has been exceptionally blessed in its power to revive the God-faith in suffering humanity, and because it has done this we are ready to listen to the word of truth its teacher brings. And we feel that because it is, and is with power, it also is of God.

Eureka Herald.

PUNXSUTAWNEY, PA.

Probably the largest audience that has ever gathered together at this place to hear a lecture on Christian Science was that which attended Judge Clifford P. Smith's lecture in the Jefferson theater. In introducing the speaker, L. X. Mitchell, Esq., said in part,—

Jesus of Nazareth was the greatest teacher of all time. He not only taught the truth, but practised and proved what he taught. On one occasion Jesus said, "Ye shall know the truth, and the truth shall make you free." At another time he said, "I am the way, the truth, and the life: no man cometh unto the Father, but by me." And when Jesus was brought before Pilate for judgment and Pilate said, "Art thou a king?" he answered, "Thou sayest that I am a king. To this end was I born, and for this cause came I into the world, that I should bear witness unto the truth."

Because Jesus emphasized the necessity of an understanding of the truth as the way of salvation, men and women of every walk of life, down through the centuries, have been trying to understand the truth as taught by Jesus, and like Pilate have been asking the question, "What is truth?" The

Digitized by Google

persistent effort of man to solve this problem is both rational and intelligent, and highly consistent when we consider that, coupled with the declaration of the Master, "Ye shall know the truth," there is the promise that this knowing of the truth shall make us free.

You no doubt have asked yourselves, Does Christian Science correctly explain or interpret the teachings of Jesus concerning the truth? Does the understanding of the truth as explained by Christian Science heal sickness and cast out sin? Does Christian Science answer the question of Pilate, "What is truth?" Thousands are testifying today that they have been healed of sickness and cleansed of sin through the interpretation by Christian Science of the truth as taught by Jesus, and Christian Science can do for you just what it has done for them. It is a living fountain of waters whereat all may drink and be filled. It has no limitations and no boundaries.—*Punxsutawney News.*

KINGSTON, N. Y.

A small but attentive and appreciative audience met at Burgevin hall to listen to a lecture on Christian Science by William R. Rathvon. The speaker was introduced to the audience by Ernest Dayton, who said in part,—

It is not strange that in this century, which in achievements that tend to result in the advancement of civilization far surpasses any like period in history, should occur the conception of one of the most remarkable religious doctrines ever given to the world. The underlying teaching of this faith, however, is not new. It was expounded nineteen hundred years ago in that little country by the sea of Galilee. This truth was taught and demonstrated amid sneers, scorn, and ridicule, and men believed that it ended with the crucifixion of Jesus.

This is the Principle which Mrs. Eddy discovered in her study of the Bible and embodied in Science and Health. Today there are millions of people looking daily to this faith for comfort and happiness, and this fact alone marks it as worthy of consideration by every thinking person. We are privileged tonight to hear an elucidating exposition of the doctrine of Christian Science, and I have no doubt that every one here present, whatever may be his personal beliefs and preferences, will depart with a newer and clearer understanding of divine Love and its omnipotence.

Kingston Freeman.

COLORADO SPRINGS, COL.

Much interest was shown in the two lectures on Christian Science delivered in the Colorado Springs church by Francis J. Fluno, M.D. C. L. McKesson of this city introduced Dr. Fluno at the second lecture, as follows:—

The greatest human need is to know the truth. The great Teacher declared, "The truth shall make you free." In making this statement he showed that he perceived the most important, the most fundamental fact in the universe. Truth is the foundation upon which the universe is builded. To know the truth is to know God and His rule of action. If one could know the whole truth about everything in the universe, he would possess infinite wisdom, power, and goodness. Man becomes possessed of the attributes of Deity to the extent that he knows the truth. Then it follows, that if men would be godlike, perfect, free from all pain, sorrow, and disappointment, and possessed of every good thing and capable of the largest and most helpful service, they must know the truth, the whole truth, and nothing but the truth.

Then our greatest concern should be to find the truth. We should seek it more earnestly than men do gold, because it is more valuable than all the gold in the earth; we should search for it more diligently than men do for diamonds and precious stones, for it is precious beyond all jewels; we should sacrifice and labor to obtain it more than men do to get money, because truth is a coin current throughout the universe with which may be purchased the priceless treasures that satisfy the soul for time and eternity.

The greatest benefactors of the human race have been and always will be those persons who have aided men to find and know the truth. Two thousand years ago Jesus of Nazareth saw the truth concerning man's relation to God and to his fellow man. He gave this truth to the world, and men have been made free and happy and helpful to the extent that they have seen and known this truth. In this our day, a woman, cradled in adversity, communed with the infinite and made known to the world what she saw of the truth of life and existence. She invites us to test her teachings and prove whether they be true or not. She declares, as Christ did, that the truth will make men free. If what she teaches is true, it will make those who accept and practise it free. It must be admitted by every honest investigator, that thousands and tens of thousands of those who have tested the teaching of Christian Science by the above rule, have been freed from pain, suffering, disease, fear, and all the other ills with which humanity has been afflicted. Such salutary effects can flow only from truth. Another fact must be conceded, if we admit that the testimony of human beings can prove and establish any fact, and that is that Christian Science has brought peace, comfort, and joy to those who have accepted and practised it. These considerations force the logical mind to the conclusion that there is truth in what Mrs. Eddy declares. It should be the desire of every one to find and practise this truth.—*Colorado Springs Gazette.*

LA GRANGE, ILL.

The Hon. Clarence A. Buskirk, who lectured on Christian Science at First Church of Christ, Scientist, was introduced by Avery Coonley, who said:—

This gathering is in harmony with the desire of intelligent people to be informed upon the great religious and educational questions of the day. It is conceded in all discussion that the affirmative side should be presented first, and that this can properly be done only by one who has a sympathetic understanding of the subject and is convinced of the fundamental soundness of its basic truths. It is a fact, however, that in many of the discussions regarding Christian Science both the negative and affirmative are stated by an opponent, who easily erects a man of straw which he as easily demolishes. Such discussion, however, can carry no weight with the intelligent thinker.

In a subject of such vital importance to humanity as Christian Science, it is necessary to respond in some satisfactory way to thoughtful inquiry, and one of the methods provided for presenting the affirmative side of the question is through the offices of the board of lectureship of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., and we are to have the privilege tonight of listening to a member of that board.—*Correspondence.*

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship.

Camden, Me.—Church edifice, 8 p.m., Sept. 3.
Charlevoix, Mich.—Charlevoix theater, 3:30 p.m., Sept. 1.
Denver, Col. (First Church).—Church edifice, 14th avenue and Logan street, 8 p.m., Sept. 5 and 6.
Derry, N. H.—Adams Memorial hall, 3 p.m., Sept. 1.
Foxcroft, Me.—Church edifice, 8 p.m., Sept. 2.
Fremont, Mich.—Auditorium, 8 p.m., Sept. 3.
Lake Geneva, Wis.—Y. M. C. A. auditorium, 8 p.m., Sept. 5.
Milford, N. H.—Town Hall, 8 p.m., Sept. 6.
Milford, Utah.—Pat theater, 8 p.m., Sept. 5.
Ogden, Utah.—Orpheus theater, Sept. 2.
Park City, Utah.—Dewey theater, 8 p.m., Sept. 3.

TESTIMONIES OF HEALING.

I wish to express my gratitude, in part at least, for what Christian Science has brought into my otherwise miserable life. For years I was a semiinvalid, sometimes thinking that I was getting well through what the good doctors were trying to do for me and then again seemingly deeper in sickness and misery than ever. This condition extended over a period of at least twelve years, during which time I underwent three severe operations and three of a minor character, with the hope always held out that each operation would remove from my system the cause which had produced these distressing results. Mentally I was first in the depths, and then on the mountain-top, and subject to extreme attacks of despondency, worry, fretfulness, and many kindred states, from which I suffered severely. I longed for one thing only, and that was to be well and rid of the ever-present dread and fear of the future and what it was sure to bring me. I grew to look years older than I was, and friends remarked how changed I seemed from the happy girl they used to know.

In the summer of 1907 I went to Montana to visit a friend and to try that climate, and while there a casual acquaintance gave me a book to read which proved to be "Science and Health with Key to the Scriptures" by Mrs. Eddy. The very name of its author stirred up antagonism and assured for it a superficial reading. I read it through twice, however, and then parts of it several times, and although the opinion which I had formed of its author did not change in the least, I yet thought there must be something in it, and continued to read, though without much understanding. I was, however, always eager to investigate any new ideas along the religious line, and it was with this thought uppermost that I read Science and Health.

In the fall I returned home and not long afterward became ill. After going to our family physician and being put on a strict diet again, I was given three kinds of medicine, with the admonition to try them for a few days, and if they failed to give relief he would try something else. I took the medicine for two days, all the time growing worse, and then it was suggested by a member of the family that I try Christian Science and see what that would do. I objected, protesting that I already knew about it and that I was sure it would do me no good; but to please and not seem stubborn, I went to a practitioner.

Of the effects of that first treatment I can never tell, and none save those who had had similar experience can possibly understand. The next morning, after a peaceful night's rest, I awoke to find myself healed of systemic catarrh, a serious intestinal trouble, a bowel disorder of years' standing, kidney and liver trouble, a severe throat affection, and other ills of a more serious nature. I could eat what I had so long been denied, and gained in flesh rapidly. During nearly four years of the study of Christian Science I have had many beautiful proofs of God's healing power, both for myself and for others, and can truly say that the one desire of my whole heart is to learn more of Him whom to know aright is life eternal; and for our dear Leader, she who has by her consecrated, patient, persistent devotion to Truth shown us again this overflowing fountain, I have endless gratitude and love.

ANNA RUAH HIGLEY, Omaha, Neb.

I do not know if there are yet any others in this town of five thousand people who hold to the Christian Science faith besides the writer. I used to think all who believed in Christian Science were cranks, and when my children who were living in a distant city espoused its cause and told of its wonderful works I expressed myself very forcibly against such belief. When they attributed my ridicule to ignorance of the subject and asked me whether I would read Mrs. Eddy's book "Science and Health with Key to the Scriptures," I told them that of course I would read it, so they sent me a copy.

I might say that for twenty-five years prior to this I had been taking medicine for internal troubles which several times brought me to a bed of sickness, and for a while it was a question of life or death; but when I had finished reading Science and Health for the first time, I awoke to a realization that my ailments were all gone, and since then I have had the best of health with the exception of a few slight attacks which were soon overcome. I have since then been a changed man. The old religious beliefs in which I had been brought up never did appeal to me, but the reading of the Bible with Mrs. Eddy's "key" has given me a clearer concept of things, and I am striving daily to advance in this knowledge.

Recently a stranger in our town was taken ill with a high fever while at one of the hotels. He asked if there were any Christian Scientists in the place. Some one had heard of me as such, and they sent for me. The young man who came after me told me there was a gentleman at the hotel who was very ill, and that he would not have a doctor nor take medicine, but wanted a Christian Scientist to visit him. He asked if I knew of any one in the city, and when I told him that I held to that faith he begged me to go with him, which I did at once. When I entered the room the patient began to tell me how ill he was. I said to him: "Brother, you are admitting error when you should deny it and cleave to that which is good." In the morning he called at my office well. He said that when he awoke in the morning all semblance of sickness was gone. I do not wish to take more valuable space or I could tell of numerous instances of healing.

We reverence Mrs. Eddy just as the Methodists do John Wesley or the Presbyterians do Calvin. We love her for the light she has shed, and worship our Maker, who gives us every good and perfect gift.

C. A. ARNOLD, Bluffton, Ind.

I have a deep sense of gratitude for what Christian Science has done for me, and I consider it a duty as well as a pleasure and a great privilege to give a testimony of my experience in Christian Science. I became interested in Christian Science by going to a Wednesday evening meeting with friends, who had asked me to go many times, but as I had always been most reluctant about going to any church, I naturally postponed it continually. However, to please them and satisfy my curiosity, I started to go the first time. I have often acknowledged in public what a wonderful impression that first Wednesday evening meeting made on me. It was impossible to listen to the testimonies that were given without being impressed by the earnestness and ring of conviction which they carried with them. It gave me food for thought and I began to realize that all these testimonies were outpourings of gratitude for priceless blessings which had come to every one of those testifying—blessings from the great storehouse of divine Love, and today I know that all these blessings may be possessed and realized to their fullest extent by all the children of God.

From that Wednesday evening meeting I became more and more interested in Christian Science; so much so, that I borrowed a copy of Science and Health from a friend, who was only too willing to loan it to me until such time, he said, when I felt a desire to possess one myself. After being in Science about three months, I was suddenly taken ill with a severe bilious attack, which previously had thrown me on a sick-bed many times and always meant a week or two at home, taking nauseous medicines. This sudden attack, combined with great fear on account of past experiences, put me in a state of nervousness and in a great quandary, not knowing which way to turn.

I had to decide for myself either to send for and rely upon a doctor, or depend upon the healing power of Truth

Digitized by Google

as revealed by the teachings of Christian Science; but "man's extremity is God's opportunity," and a thought came to me to decide in favor of Christian Science. A little light had come to me through the study of Science and Health, and I had memorized the "scientific statement of being" (Science and Health, p. 468), which after going to bed I had kept repeating continuously, but only in a perfunctory or mechanical half-hearted way, when suddenly it dawned upon me that I ought to pray; but I did not know how, as I had not prayed to God since my childhood days. Again Science and Health came to my rescue; I remembered the words of the chapter on Prayer where Mrs. Eddy says, "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God" (p. 1), and that every good thought and desire for good is a prayer. And so I prayed to God for more faith and understanding so that I could become conscious of His omnipotence and His omnipresence and His love. With that prayer I fell asleep, in spite of a high fever and great fear, and when I awoke the next morning every trace of fever and fear was gone; perfect harmony had been restored, and I have never had the slightest return of the trouble.

Since then I have had many convincing and beautiful demonstrations of the efficacy of Christian Science healing, and I realize, know, and understand in a degree the divine Principle which proves to us the power of Truth over error. All the discordant elements of resentment, irritability, and impatience, and a bad temper, also the habit of using profane language, have been overcome; furthermore, the liquor, gambling, and tobacco habits, to which I was addicted for years, have been met and absolutely eliminated. Best of all, this has been accomplished easily, simply through the understanding that "where the Spirit of the Lord is, there is liberty."

I also wish to state that my wife suffered for years from chronic neuralgia of the head, which was pronounced incurable by *materia medica*. She has been lifted up wonderfully, and while her healing is not as yet complete, we know that it will be, and we are happy in the thought that her bodily restoration is not comparable with the spiritual revelation which Christian Science has brought to her.

It is difficult to express in words my deep gratitude to God, the giver of all good, and my thankfulness to our beloved Leader, Mrs. Eddy. Through her teachings I have found that "divine Love always has met and always will meet every human need" (Science and Health, p. 494); through her teachings I have gained a better and more spiritual understanding of the Bible, which has awakened in me love for God and for our Master, Christ Jesus. This love has regenerated me and has made me a better man morally, mentally, physically, and spiritually. It is my fervent prayer that I may grow from day to day in a better understanding of divine Truth, and so be worthy of the name Christian Scientist.—HENRY M. MAROSE, Cleveland, Ohio.

About three years ago, while diligently pursuing the study of music, I was stricken with the malady known as "piano player's paralysis," and was compelled to discontinue my studies. After many weary months had been spent in the effort to regain the use of my arms, which were utterly helpless the greater part of the time, I became very despondent over my condition. In fact, when I first began to read the Christian Science literature my mental state was such that I did not care to live, believing that I would always be helpless. When assured by a friend that I could be healed through Christian Science, with renewed hope I earnestly began the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. For four months I continued the study, and was convinced that the healing was for me. I then commenced to take treatment, and with my faith, combined with the practitioner's understanding, I was wonderfully healed in two treatments. I have practised all I desired, with no symptoms of a relapse from that time, which is now over two years.

My gratitude for Christian Science cannot be expressed in words. One of my greatest desires is to live so that I may be worthy of the name Christian Scientist.

LOIS HUMPHRIES, Goldthwaite, Texas.

It is over eight years ago that I first had the opportunity to read a copy of Science and Health. At that time my mother brought the book from Chicago, where she had been visiting for two months and having help from a Christian Science practitioner. Instead of being an invalid, as she was before that visit, my mother was a well woman, looking ten years younger than when she left home. Seeing the great change in her and knowing that Christian Science was the cause, I was much interested and wanted to read Science and Health. I was, however, somewhat afraid of this teaching, though all I read and understood seemed very beautiful, so I prayed earnestly that if it was the truth I might be led to see it, and that God would keep me from being led astray. As I was an active worker in a church and also in the Christian Endeavor society, this verse from Mark, "For false Christs and false prophets shall rise, and shall show signs and wonders, to seduce, if it were possible, even the elect," made me fearful of Christian Science. I am glad to say those fears were proved groundless. I am truly grateful that I continued to study Science and Health, for gradually the light of a higher understanding of God and the peace which we get in Christian Science dawned in my consciousness, and my health was much improved in many ways.

The first application to physical conditions which I made of the knowledge I had gained in reading Science and Health was in the overcoming of a chronic bowel trouble for which I had been obliged always to wear flannel to keep me from catching cold. One day I was very uncomfortable and the thought came to me to take off the flannel, for I had read in Science and Health that it is only because one has faith in material things that they seem to have power to keep one well. I saw that if we have faith in God instead of matter to protect us, there is no need of using material means for that purpose. I took off the flannel with no ill effects and have never worn it since, except for warmth. This was to me a proof of the truth as taught in Christian Science, for from that day to this a change in weather has never caused me to take cold and suffer from that trouble. At about this same time I put away my glasses, proved the nothingness of a burn, and had some teeth filled without any discomfort.

Though I received many proofs of the reality of the truth taught in Science and Health, I was still far from receiving the largest blessings of Christian Science, for I kept questioning as to why matter seemed to be. I could see plainly that if we start with God, good, as all, there can be no evil or error; this was logical, still why did evil seem to be? For over two years I allowed this "why" to keep me from the greater blessings of Christian Science. I thought to work out the problem with the human reason instead of looking to God, the only source of understanding. One Wednesday evening in church Jesus' admonition to become as little children if we would enter the kingdom of heaven, came to me, and I saw that I had been far from childlike. Then I resolved to turn about and be grateful for the truth that I could see, and as a little child trust God to make plain to me what seemed contradictory. My growth in spiritual understanding from that point was marvelous; light was given me to read the Bible spiritually, and to see the sequence and harmony of the truth as given in Science and Health. I now see that in reality error does not even seem to be, and there is no "Why?"

Words are inadequate to express my thanks to God for the truth revealed to mankind through Mrs. Eddy, but I

Digitized by Google

wish to add my voice to the multitude who are praising God and realizing the spiritual as a present reality, through the understanding which has come to us in the teachings of Christian Science.

Miss Louise E. Smith, Worcester, Mass.

I am indeed grateful for Christian Science and can truly say that none of its teaching or work is ever lost. It was some fifteen years ago when I had my first treatment. I was then a little girl, but never could forget the great help which I received. The lady with whom I stayed at the time was a Christian Scientist, but I did not then know what Christian Science stands for. I had all my life been troubled more or less with earache, and this last attack (thanks to Christian Science it was the last) was seemingly worst of all and I was growing quite deaf. I had been going to doctors and had tried everything in the line of ear remedies that had been suggested, but to no avail, when one night this friend heard me crying. She came to me and asked if she might help me. I certainly needed help and was perfectly willing to give up my medicine if only I could have relief. Within a half hour after she came to me I was asleep and slept through the whole night. The next morning the pain was entirely gone, but I was still a little deaf. She, however, informed me the deafness would disappear just as the pain had done, and it truly did, for from that day to this I have had no more ear trouble.

At that time my people thought the healing very good, but they knew nothing of Christian Science and I drifted away from it, until a year and a half ago, when the little seed of truth planted fifteen years ago came up, and I am now only too pleased to watch, and work, and pray that I may gain more and more understanding of Truth.

I have had the power of divine Truth proven to me in many instances during the past year, and for it all I am indeed thankful.—Mrs. Marie Wachs, Winona, Minn.

It seems almost like ingratitude when we fail to express to the world our thankfulness for the many blessings which come to us through the study of Christian Science. It was over twenty years ago, while living in Florida, that I heard of the wonderful healing of my father in Christian Science, my mother, who was living in Illinois at the time, having written me about it. Father was said to have organic heart trouble, and had suffered from it for years. At last the doctors said they could do nothing more for him, and that unless he took care of himself he was likely to pass on at any time.

The change which this healing brought to him and to our home, was not, however, appreciated by the other members of the family, but to me it seemed the first step that led me out of the wilderness of unrest and dissatisfaction. The thought of the divine power which heals never left me during the next five years. When the Christian Science text-book, "Science and Health with Key to the Scriptures," was brought into my home by a visitor, what a blessing it proved to be to me and mine. I had at last found what I had hungered for all my life. Truth has been an ever-present power, and has helped to remove the great fear I had of death; also the greatest fear of all, the false sense of living. This study of Christian Science has changed the whole outlook of my life, and I feel very grateful that I am blessed with the helpful messengers which come to my home, namely, the *Sentinel*, *Journal*, and *Monitor*.

Mrs. Nellie M. Whiteside, San Jose, Cal.

I have had many experiences of healing in Christian Science, some of them seeming wonderful to me, and for which my gratitude is inexpressible. I would like to tell about one instance in which the healing meant very much to me. I was living in a mining-camp in the mountains, and had been in bed for several days with a very serious throat trouble. I had not been able to eat or drink without great pain, and my daughter went to a Christian Scientist for help. The lady came to my bedside, and as I opened my mouth to show her my throat, she shook her head and repeated the psalmist's words: "I will lift up mine eyes unto the hills, from whence cometh my help. My help cometh from the Lord, which made heaven and earth." She then closed her eyes, and in a few moments she told my daughter to give me something to eat. In less than fifteen minutes I was eating solid food without any pain, and the next day I was up and well!

Those words from the 121st Psalm meant that I must look to the things which God had made, and they have been of great help to me. A few years later we left the mountains, and I learned another lesson from my son. I had said that I did not like to leave the mountains, and in explanation repeated those verses to him. He then said, "But, mother, is not God everywhere?" I then saw that I had been thinking of the mountains in a material way, even while relating them to the spiritual uplifting of thought. Since then I have proven many times that God is an ever-present help in time of need, whether I am in the mountains or in the valley. I have learned that if I keep my thoughts on the most High, help always comes to me. I am very grateful to our dear Leader for giving us "Science and Health with Key to the Scriptures."

Mrs. Jennie Hering, Tacoma, Wash.

I was with my mother, Mrs. Jennie Hering, at the time of her healing, and know that it was complete.

Lotta E. Fasken, Seattle, Wash.

[Translated from the German.]

In the fall of 1910 I first heard of Christian Science, through my sister-in-law. Later on I was informed that two practitioners resided at about an hour's distance, and also that they were having weekly readings. I resolved to attend these, and felt that they were indeed serving a good purpose. I asked the practitioner to order *Der Herold der Christian Science* for me, and am reading the same diligently. Last September I was seized with violent attacks of headache and had to stay in bed without being able to sleep day or night. A physician was called, but even after the third visit he was not able to determine the nature of the trouble. He thought it was the beginning of a fever, and that the attack might develop into a nervous disease. As I felt no improvement, I wrote to a Christian Science practitioner and asked him to give me treatment, which he did. From that day on I felt better and noticed an improvement, and in about ten days I again was able to do my work. My wife had treatment shortly before and during childbirth, which accounts for her not having suffered much at the time.

For these blessings we are deeply grateful to God, and also to our Leader, Mrs. Eddy, for many proofs of the power of Love and Truth.

Otto Ritter, Holbach b. Clettenberg, Germany.

It is with the deepest sense of gratitude that I acknowledge the benefits received through Christian Science. Before knowing of this truth I had not been able to leave my bed for a whole year, there being a complete breakdown of the entire system, brought on by great loss of blood from several severe hemorrhages. There was also heart and stomach trouble; in fact, as our physicians expressed it, I had only one sound organ in my body, namely, the lungs. I could not eat any solid food during that time and suffered untold misery even from liquid food. I had to be carried and handled like a baby, and was greatly reduced in flesh. In

Digitized by Google

such a condition as this Christian Science came to me as a very present help in trouble. A kind practitioner from a city thirty-five miles distant came and stayed at our home two days, and before she left I was able to sit up a part of the time and could eat some solid food. Difficult breathing was relieved also. My greatest need was met at her first visit, but I continued to have absent treatment for some time.

My healing was slow, but for this I am thankful, as it has been the means of my gaining a better knowledge of this wonderful truth that makes free. I have received great help from the Christian Science periodicals and the Lesson-Sermons. I have also received help from other practitioners, for which I am grateful. We tried Christian Science as a last resort, after all other means had failed and there was no hope of my recovery.

MRS. KATHERINE B. CRAWFORD, Grand Junction, Iowa.

About five years ago, my mother, who was suffering from a complication of diseases, traveled from hospitals to sanitariums, and tried everything that *materia medica* offered for her complaints, with no help whatsoever. She had a dear friend who was a Christian Science practitioner, and after failing to receive help through material means she turned to this friend, unbeknown to any of the members of the family. The evening she returned home from a visit to this lady, who had given her a treatment, she seemed so happy and looked so different that the rest of the family remarked about the change. She then told us of her visit with her friend, and stated that she was healed. Inasmuch as there was a great change, and as none of the rest of our family knew anything about Christian Science, we, like a good many others, said everything to discourage her, but, undisturbed by our opposition, she brought forth the literature which this practitioner had given her.

My mother received all her education in Germany, but she speaks the English language very well, only that at times she becomes confused in the pronunciation of words, and when reading in English she occasionally mispronounces a word, and hence receives an incorrect sense of its meaning. After her visit to this practitioner, mother brought home a number of *Sentinels* and *Journals* which she was told to read, so she asked me to correct any mispronounced words, while she read aloud. At first I did not want to do so, as I then believed my poor mother was losing her mind, but finally I consented to listen and correct her, and the first thing I knew it sounded good to me. I began to see the light. I became acquainted with the real Father, God who is Love, the ever-present help.

I then presented my mother with a copy of Science and Health. Up to that time, about three months after my mother's healing, I had never attended a Wednesday night meeting or any of the Sunday services, but one Sunday my sister who had attended the services with mother persuaded me to go with her. I did so, and I am grateful to God for having been brought into an understanding of Christian Science.

After a few visits to Fourth church here in Chicago, I laid aside glasses which I had worn for five years, and which one of the best eye specialists in this city told me I would have to wear for life. He had also said that if I did not give the best care to my eyes I would eventually go blind. This is what Christian Science has done for me, and it will do as much for all who study this truth. I have had many other beautiful demonstrations, too numerous to mention.

My testimony would not be complete if I did not express my gratitude for the permanent healing of my mother, who for years had been suffering from what the different doctors pronounced a serious spinal disease, and who through the power of divine Truth has been restored to perfect health. This is one more case of man's extremity being God's opportunity.—JOSEPHINE E. FORSTER, Chicago, Ill.

FROM OUR EXCHANGES.

[*Universalist Leader.*]

At every step in thought and conduct the Master broke down the traditions of religious exclusiveness. He challenged every prejudice, he ignored every precedent, he outraged a very ancient tradition which had built up a barrier around religion. He spent his life with outsiders. He scandalized the pious people of his day by associating with publicans. His enemies charged him with moral looseness because he ate and drank with the unchurched. They could not understand his philosophy. What they thought was the result of irreligious carelessness, was really the outcome of a magnificent conception of how a great work was to be done.

Under all that Jesus said or did there is an absolute unity of program. He knew how the thing he wanted done must be done. He did not want done what the scribes and Pharisees wanted done. He wanted the kingdom of God to come on earth and among men, and he knew that this kingdom could never be imposed upon men. In spite of all blundering, there never has been and there never will be but one way of doing what Jesus wanted done. He wanted the world made just and righteous. He wanted humanity to become a great fellowship of love. He labored to establish the rule of the heart, of the affections, of the moral sense, as the supreme and binding principle of social life. When we understand what Jesus wanted done, what he lived for, what he died for, we shall discover that his way, the way of the leaven, the way of the inward light, is the only way.

[*Living Church.*]

Rustom Rustomjee, a Parsee from Bombay, speaking at an assembly in New York, said: "Why do you Americans run after strange gods, when you have such a good one of your own? I arrived here only a few months ago, and the first American to call upon me professed the faith of my forefathers. I spoke at a gathering, and a few days later a distinguished society lady came to me with the same profession. I have made a careful study of comparative religions. Yours is as good as any in the East, and I have been shocked to see some of your American women running after Swamis. Yours is a goodly, godly heritage; stick to it. What could be better than the sermon on the mount, what better than the Lord's Prayer?" Is it not strange that such a rebuke should be needed, and that an Oriental should utter it?

[Rev. A. P. Doyle in *Christian Work and Evangelist.*]

In order to secure a reunion of the churches the more quickly, it is necessary, as a first step, to come together more frequently, to unite oftener for some common purpose, to establish a community of interests in some way or other, for most of our animosities and misunderstandings come from not knowing each other's motives. It is necessary to build the bridge over the streams of prejudices, ignorance, and error that run between the various bodies of our common Christianity. These streams are the great barriers that keep us apart. The stream of prejudice is the broader and the more difficult to bridge because it is filled with the poisonous acids of hatred. It is this spirit of prejudice that makes the malicious charges,—that throws mud, hoping some will stick.

[*Advance.*]

There are times when human life needs strong winds, gusts which stir the waters and toss them aloft. Agitation is good when it is needed. When masses of men are profoundly moved they are usually made better by it. Depths of power, of sentiment, of thought and emotion are reached which would not discover themselves in the calm of humdrum every-day life. On the wave of a human storm com-

Digitized by Google

men men and women are lifted to heights of heroism and achievement which seemed impossible in time of quiet.

And the world needs the gusts to get on. It ought not to be so, but it has heretofore been so. Power of any kind seldom bends, it blindly waits until broken. It is a sad phase of history that so much of its progress has necessarily been by revolution. But even if there were no oppressions which clamp the race, the natural inertness of the great mass of men would require the stir of a passionate excitement to get them up to something higher. There are prophets in whose bones the fire burns so hot that they cannot rest, but they are few in number, and it is not until the mass is set on fire by a burning idea that they rise and go forward.

[*Christian Intelligencer*]

It is high time for Christian people to awake to a realization of this—to see the salutary and practical value of denying themselves privileges and indulgences for the sake of certain important principles and certain indispensable institutions. Indeed, it must be felt that one very definite distinguishing feature of a Christian's character should be the readiness to refuse to allow self-interest to determine conduct. The spirit of the Master, without which no one can be his, is surely not in the man who is not willing to let his own personal pleasure or advantage go if the general welfare require the sacrifice. And it is to be very clearly and convincingly perceived that no correctness of theological opinion, and no membership in an ecclesiastical organization, can be a substitute for this devotion to the spirit of Christ in the life of the individual and the church. This is the savor in the salt—this spirit of self-denial.

[*Contrast*]

It is wrong to cling to traditional peculiarities of a denomination, merely to avoid the humiliation of confessing them its errors. "Shall we admit that our fathers were all mistaken?" plaintively inquires a denominational organ, when urged to abandon so-called "distinctives." But if those fathers had not been manful enough to confess that their fathers were in the wrong, this very denomination would never have shared the impulses of the Reformation. Every step of progress in the history of Christendom has turned on the frank willingness of open-minded men to admit that their forerunners held to some things inadequate and misleading. There is just as much filial honor in renouncing the trivialities and sectarianisms of the fathers, as in upholding their great faiths and their worthy visions.

[*Divine Commonwealth*]

It is an evil source of pride and congratulation that any body of men should be content to think in the terms of a bygone day, and should resist every attempt to reinterpret its message in the light of modern knowledge. The new needs, new ideals, and new hopes which are everywhere insurgent demand readjustment from the church. It is the business of the church to interpret them and to satisfy them, and the measure in that fitness organic religion is whether that claim can be met. The reformative forces which are at work today in society can be immeasurably strengthened and reinforced by the church. But they cannot be arrested, and the instinct of self-preservation in the church should make it come out of its lazy and [illegible]

[*Religious Observance*]

It is our thoughts, our purposes, our ideals, all our inner [illegible] and [illegible] that determine our character and express it, words [illegible] and it is these [illegible] we are to [illegible] Secret [illegible] is not [illegible] it is the life [illegible] and the [illegible] that [illegible] it [illegible] and then [illegible] [illegible] [illegible] at least a large measure of success.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the inside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy her publisher on Sept. 13, 1910, an edition of "Rudiments Divine Science," printed in the New York point system type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The pamphlet "Seeking and Finding" has been published into Dutch ("Zoeken en Vinden") and is now ready, 32 pages and cover, at the prices of the regular pamphlets.

Catalogue No. 20, June, 1912, has recently been issued and will be supplied to reading-rooms upon request. The catalogue contains complete lists of all publications issued by the Society, and of the works of Mary Baker Eddy published by Allison V. Stewart.

A new pamphlet, "Christian Science Healing versus Mental Suggestion," by Frederick Dixon, reprinted from the *Weekly Budget*, London, England, is now in stock, 32 pages and cover, at the prices of the regular pamphlets.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church—[illegible] sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their pastors, can be had at seventy-five cents a hundred. Postage stamps will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to the Clerk, Mrs. [illegible] Clerk, The First Church of Christ, Scientist, Norumbega, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita taxes and [illegible] dues to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to the Treasurer, [illegible] Falmouth Street, Boston, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE: ITS RELIGIOUS PHILOSOPHY. By HON. CLARENCE A. BUSKIRK.

CAUSATION: VIEWED IN THE LIGHT OF CHRISTIAN SCIENCE. By FREDERICK DIXON. Also printed in Swedish.

CHRISTIAN SCIENCE VS. MENTAL SUGGESTION. By FREDERICK DIXON. Reprinted from the *Weekly Budget*, London, England.

CHRISTIAN SCIENCE: A RELIGION OF DOING. By JUDGE WILLIAM G. EWING.

CHRISTIAN SCIENCE VS. FINITE SENSE. By FRANCIS J. FLEUNO, M.D.

CHRISTIAN SCIENCE: THE GOSPEL OF FREEDOM. By WILLIS F. GROSS.

ITEMS OF INTEREST.

National.

Postmaster-General Hitchcock has submitted to the House and Senate conferees on the post-office appropriation bill a recommendation that the House parcels post proposition be substituted for that of the Senate. "I believe," Mr. Hitchcock wrote, "that the broader powers given the department by the House measure will enable it to establish a parcels post system more effective and business-like than would be possible under the Senate bill. It provides for lower postage rates and increases the limit of parcels from eleven to fifteen pounds. It carries also an exceedingly important provision relative to railway compensation that will assure to the government as advantageous charges for transportation as the railways grant to express companies. The department is also authorized to grant fair indemnity in case of loss or damage of parcels."

A dozen bills on the House calendar to permit water-power development by private concerns have been defeated. Opponents of the "water-power trust," led by Representatives Rainey and Foster of Illinois, had the bills stricken from the calendar. Among the measures defeated, temporarily at least, was the omnibus bill reported by the House interstate commerce committee, which included wholesale grants of power and dam sites.

San Francisco has made legal seizure of the San Miguel valley south of the Twin Peaks, and thus obtained the site for a magnificent storage reservoir for the new city water system—a reservoir great enough to contain five hundred million gallons of water. It was the lack of a great storage basin within or near the limits of San Francisco that has hampered the city in carrying out its plan for the Hetch-Hetchy system.

A sixteen hundred and fifty thousand-dollar syndicate is said to be forming in Chicago and in New York to reorganize the Protestant religious press of the country. Working quietly, the founders of the syndicate, according to their latest announcement, have entered into contracts for the purchase of many of the oldest denominational papers in Boston, New York, Pittsburgh, Detroit, Chicago, and San Francisco.

A closed season of five years for fur seals on the Pribiloi islands has been agreed on by the Senate and House conferees on the bill, carrying into effect a fur seal treaty with Russia, Japan, and England. The House provided for one year, and the Senate raised it to ten. The five-year agreement was a compromise. The treaty prohibits pelagic sealing.

Representative Jones of Virginia has introduced a resolution paving the way for an investigation of the "American hemp trust," in connection with alleged manipulations of the business in the Philippines. Mr. Jones is chairman of the House committee on insular affairs, which has charge of legislation relating to the Philippines.

President Taft has appointed a committee of government officials to investigate the board of United States general appraisers to ascertain if there has been neglect of duty, malfeasance in office, or inefficiency on the part of any of the board's members. The board has headquarters in New York.

Rate Clerk Darwin, chairman of the committee of the railroad commission to investigate the subject, has prepared a tentative report on the electric power rates of the constantly increasing number of companies operating in the state of Michigan. It is the initial step, and is regarded as important.

International.

It is said that Prince Arthur of Connaught will be present at the ceremony of the inauguration of the work of the great Assouan dam, which has been fixed for September 28. The Duchess of Connaught laid the final stone in the original dam. The work, which is now nearly completed, started in May, 1907. The enterprise has been a gigantic one, for in order to carry the extra five meters, the entire walls of the dam have had to be strengthened. New openings have been made for the lock gates and new gates constructed and fitted. The dam, as it now stands, contains twice the quantity of water that it held before its enlargement. From henceforth an extra million acres of arid and barren land will be irrigated. Even during the summer months the supply of water will not fail. Something over fifteen hundred thousand pounds, which includes payments for land compensation, has been expended on the heightening. Adding this to the cost of the original dam and the Assuit and Esneh barrages the total for the whole is six million pounds. The country irrigated by means of the dam yields, however, over thirty million pounds a year in cotton.

A meeting of the public ownership parliamentary council was held at the English House of Commons, and a manifesto advocating the gradual establishment of the public ownership of land by purchase on the lines of the national land valuation was agreed to. The manifesto states its belief in a national land commission which should be given large general powers to acquire and hold land, and that such powers should also be vested in local authorities. As an overwhelming proportion of the nation's industry is carried on by tenants, it is supremely important that the tenure of land should be as secure as it is possible to make it. Full security is only obtainable now by the acquisition of freehold, but comparatively few have the opportunity or means of becoming freeholders. Under the public ownership of land the administrative authorities will be able to grant to all state tenants the security and encouragement which only freeholders now possess.

Extensive projects are being undertaken by Peru in anticipation of the opening of the Panama canal, projects more ambitious than any other South American nation has announced in the general preparation for 1915. The projected railroads, the construction of which is assured, will open up vast areas for development. The riches of Peru have scarcely been touched, it is stated, owing to lack of means of transportation across the Andes. Peru also plans a system of wireless stations which shall facilitate communication between all parts of the republic. The government is building steel wharves at Iquitos.

The National Assembly of China considered the explanation of the government in regard to the execution of Gen. Chang Chen Wu and Gen. Feng Wei, members of Dr. Sun Yat Sen's party, who were summarily executed a few days ago, and decided that it was unsatisfactory. The members of the Assembly demanded the attendance of the premier and war minister to give further explanations. This they refused to do, but they were later waited upon by members of the Assembly to whom apparently satisfactory representations were made.

Russia is contemplating the repudiation of the Brussels sugar convention. This was entered into at the international sugar conference in 1907, Russia being admitted on condition that her export of beet sugar westward should be limited to a maximum of two hundred thousand tons annually until 1913. Great Britain recently announced that she would withdraw from the convention unless the powers concerned in it agreed to let her have more sugar.

Since the arrival of Consul-General Kitchener in Egypt, the following four undertakings, among others, have been inaugurated: Improvement of the drainage of the lands in the north of the delta; the commencement of a system of trunk roads; the establishment of "cantonal courts" or village tribunals; and the setting up of cotton markets in the provinces.

The Broken Hill Proprietary Company of South Australia has under consideration the establishment in Australia of iron and steel works. The company is interested in the immense deposits—estimated at twenty-one million tons—of high-grade iron ore at Iron Knob, which is situated about forty miles from the head of Spencer gulf in South Australia.

King George has made Louis Botha a general in the British army. In this way the prime minister of South Africa becomes an officer of the army of which ten years ago he was the principal opponent.

Industrial and Commercial.

The Carolina, Clinchfield & Ohio is building a forty-mile extension line from Dante, Va., to Elkhorn City, Ky., where connection will be made with the Chesapeake & Ohio. About four hundred men are at work. There will be thirty-eight tunnels in the forty miles, one of which will be four miles long. When the extension is put into operation, the Clinchfield will form the shortest line from Cincinnati and other Ohio valley points and the Middle West into the Carolinas, Georgia, and Florida.

It is reported that the Illinois Central road will build two additional tracks from Chicago to New Orleans, giving that road four tracks between the two points. By this they hope to cope with the increased volume of traffic which will result from the opening of the Panama canal.

According to the best information available at present the world's cotton crop this year will be twenty million eight hundred thousand bales of five hundred pounds each. Egypt, British India, and "all other countries" promise more than last year, while Russia will fall short.

The Scioto marsh, which extends from the southern end of Hancock county in Hardin, Ohio, will this year harvest approximately fifteen hundred thousand bushels of onions. It is the greatest onion producing section in the country, containing more than four thousand acres.

Twenty million cans of tomatoes will be packed in local canneries in Utah during the present season, according to an estimate made by the president of the Salt Lake Valley Canning Company. The crop, he says, will be the largest ever raised in the state.

A cement rendered waterproof by the mixture of ten per cent of petroleum residuum oil has been discovered. Experiments show no impairment in its tensile strength.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

ONE WAY TO HARMONY.

WILLIS F. GROSS.

THE desire of all men is to gain that which satisfies. It is a question whether any mortal has ever reached the place where life and its environment were all that could be desired. There is always something lacking or some disturbing element which he would have removed. Many times he has felt that if he could accomplish a certain purpose or attain a desired end, his happiness would be complete; but when success rewarded his efforts, he has too often found that the joy of satisfaction seemed to be as far removed as ever. Again he reaches out for that which he believes will bring into his life a sense of harmony, and again he learns from experience that the things of earth do not satisfy. Thus mortal man continues to strive for the things which he believes will satisfy, only to learn at last that his labors have been in vain.

He often marvels at the apparent contradictions and inconsistencies of life. He wonders why others who are no better than he should gain with such little effort that which he so greatly desires and seems unable to attain. At times he is inclined to murmur and complain because of the hardness of his lot, though fully aware that by so doing he invites defeat and makes possible the very thing he fears. He does not always do as well as he knows, neither does he at all times pursue the course which his better judgment tells him is the right one. He works more or less in the dark, because he does not have a definite idea as to what constitutes harmony or how it is to be attained.

Even then his labors have not been altogether in vain, for his failures teach him that he has not worked in the right way. He gains something when he learns that what he thought was the way is not the way. Some are slow to learn this lesson, and continue to pursue the course which has brought them nothing but disappointment, but sooner or later the great majority learn from experience and gladly turn from that which has failed them. The next effort may be no more successful than those which have resulted in failure, and so the progress which has been made, if it can be called progress, consists in learning to avoid that which is not the way to success and harmony.

As the result of varied experiences, there comes a time when mortal man is willing to accept the declaration that "there is but one way to heaven, harmony" (Science and Health, p. 242). Notwithstanding the Master taught that the kingdom of God is within man, mortals have thought of heaven as far removed from human experience, and they have hoped for harmony without gaining heaven; so they have come to believe that the way to heaven is not the way to harmony in this life. Therefore they have sought to justify themselves in pursuing the course which they realized did not lead to heaven but which they believed would result in harmony, and they hoped the concessions they felt compelled to make to present conditions would not prevent them from reaching heaven at some future time.

The belief that harmony can be found outside the kingdom of heaven has resulted in many conflicting theories and contradictory practises. It is admitted that materiality, material means and methods, is not the way to heaven, but it is believed that harmony is to be gained through its means. Christian Science, nevertheless, declares that the way to heaven is the way to harmony, in fact the only way which leads to lasting peace. It teaches that to strive for the kingdom of heaven is to gain the greatest degree of harmony now. This teaching not only agrees with but illustrates the present practical worth of the Master's teaching, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." He had been talking about the things which are considered the necessities of life, and it was of these that he spoke.

The command is, "Seek ye first the kingdom of God." When this is done in the right way, man has the assurance that whatever is necessary to his present harmony and success will be provided; not everything which he thinks is necessary, but that which will prove of real worth to him in gaining the kingdom will be supplied him. At all times, under all circumstances, there is one way to harmony. Mrs. Eddy tells us that "Christ in divine Science shows us this way." How clearly the way is pointed out in the sentence which follows: "It is to know no other reality—to have no other consciousness of life—than good, God and His reflection, and to rise superior to the so-called pain and pleasure of the senses" (Science and Health, p. 242).

The law of divine Mind is the law of eternal harmony, and real harmony can never be attained except through obedience to this law. The kingdom of God is within us to the extent that we are obedient to divine law. When the Master told his hearers to seek this kingdom "first," he was urging obedience to God's law. There is no discord in heaven, because God's law is supreme and there is no belief of a power or presence to interfere with the harmonious operation of that law. The way to heaven is through obedience to the law of infinite, eternal, unchanging good. Obedience to this law insures our present well-being, mentally, morally, and physically. There is one effectual remedy for all the discords of earth, and that remedy is to know and obey the law of God.

The question here arises, How is one to know what is the law of God, since there are so many different opinions concerning God and what constitutes obedience to His law? Paul tells us to "prove all things; hold fast that which is good," and the Master declared that a tree is known by its fruit. If one is thoroughly convinced that God is; that He is infinite, unchanging good; no respecter of persons; and that the harmonious operation of His law can never be interfered with, he is prepared to deal with life's problems in an intelligent manner; he gains a clearer sense of good, and the consciousness of ever-present good delivers him from evil. Discord is always the work of evil, and that which saves from evil leaves man free to enjoy the harmony which is his rightful inheritance.

All will admit that obedience to God's law is always in accordance with the divine decree; in other words, God

Copyright, 1912, by The Christian Science Publishing Society.

Digitized by Google

never intended that any man should disobey His law, either intentionally or ignorantly. Since obedience to law always results in harmony, it follows that no discord is ever in accord with God's will. Then a man should feel it is his divine right to be saved from discord, whether mental, moral, or physical. When one is awakened to see that he can reasonably expect to be saved now and is willing to seek harmony in the only way in which it can be gained, who can say how much can be accomplished or to what extent it is our privilege to find the kingdom of heaven within?

Christian Science teaches that the way to harmony is through faith in God. This faith is based on the right concept of the Supreme Being and obedience to divine law. Wherein one fails, it is because he does not understand and obey. The Master both understood and obeyed, and this enabled him to feed the multitudes, still the tempest, heal the sick, cast out devils, raise the dead. We have no record that he ever encountered any discord which he was not able to overcome. His understanding of God was equal to all the demands which could be made upon it, and he proved that God is man's present help in every time of need. It is the privilege of all mankind to follow in his footsteps and escape the discords of mortal existence—its sin, sorrow, want, and suffering—through obedience to the unchanging law of eternal harmony.

A STEADY HOLD ON TRUTH.

IDA N. LOCKWOOD.

NOT infrequently we hear it said, "I have experienced some healing in Christian Science; I really believe in it and enjoy studying it, but I do not seem to get from it the complete satisfaction that some people do. One day I am on the mountain-top, but perhaps the very next day finds me struggling in the valley." For those who are honest and earnest in their desire for good, there is much to be gained from a careful study of the golden text of a recent Lesson-Sermon, "Happy is the man that findeth wisdom, and the man that getteth understanding. . . . She is a tree of life to them that lay hold upon her: and happy is every one that retaineth her." Solomon, who chose wisdom as the greatest gift of God, certainly did not refer to the "wisdom of this world" which St. Paul declares to be "foolishness with God." His assurance of happiness is to the man who, having sought for it, finds divine wisdom and acquires the spiritual understanding which naturally accompanies it. There are many ready to bear witness that the understanding of God as revealed in Christian Science has indeed been to them "a tree of life," the tree being "typical of man's divine Principle, which is equal to every emergency, offering full salvation from sin, sickness, and death" (Science and Health, p. 406).

If the truth is not to us this constant, steady glow, lighting the way through each and every experience, the fault must be in ourselves, for clearly the promise is to "every one." Perhaps we shall find the key-note of the situation in another verse of the chapter already quoted: "And happy is every one that retaineth her." Here light is thrown upon the practical meaning of the verse by a consideration of the derivation of the verb "retain," from the Latin words, *re*, back, and *teneo*, hold. From the same original source we have the noun "tenacity," and so we see that retain is a word which expresses in the strongest sense the act of keeping or holding on, clinging to with an effort. After finding and laying hold on the truth, there still remains for each one the work of retaining it, holding on when the suggestions of error seek to wrest it from us. On page 248 of Science and Health we read: "Do you not hear from all mankind of the imperfect model? The world is holding it before your gaze continually. The result is that you are liable to follow those lower patterns, limit your life-work, and adopt into your experience the angular outline and deformity of matter models. To remedy this, we must [illegible] turn our gaze in the right direction, and then walk [illegible] way."

To "walk that way" requires absolute consecration [illegible] purpose and desire. Our dear Leader has made this [illegible] plain. She says, "The bird whose right wing flutters [illegible] soar, while the left beats its way downward, falls to earth. Both wings must be plumed for rarefied atmospheres and upward flight" (Miscellaneous Writings, p. 267). There [illegible] no promise attached to any half-hearted laying hold [illegible] truth. When the suggestion of discouragement comes, [illegible] need to remember this and grasp truth with renewed [illegible] As the light dawned in Jacob's consciousness, he was [illegible] of the blessing, and he held on "until the breaking of [illegible] day." If we are not bringing to the study of Christian Science this consecration of purpose and concentration of effort, we are among those who know the value of truth but are not willing to pay the price for it.

We do not willingly remain in an unmusical atmosphere expecting to retain our taste for good music. Neither is it reasonable to expect to retain our spiritual understanding except by most carefully safeguarding our mental atmosphere against the intrusion of material beliefs, self-seeking, false ambition, malice, envy, curiosity, or mere idle thinking. Do we always bear this in mind in choosing our close companions, our reading, our pleasures? Are we as earnest as the student of music in improving every opportunity for using our understanding? There is no danger of losing by an instant the talent that is in constant use.

Worldly policy will constantly suggest the wisdom of not being too radical, and perhaps subjecting ourselves to ridicule by our so-called peculiar beliefs. Sometimes we are tempted under such conditions to give audible assent, or perhaps just silent consent, to what is false, hoping by our mental denial to undo the effects of the error in our own consciousness. When we find ourselves in such a position we need to examine ourselves closely, to see whether we have not loosened our grasp on the truth just a little and so given discord an opportunity to take hold on us: we have failed to obey the injunction, "Hold fast that which is good." To hold on may sometimes seem to mortal sense well-nigh impossible, and we may even be tempted to wonder if it is worth while; but when we stop to consider what God has done for us, we know at once that there is no limit to His willingness and power to help us, and we willingly put forth every effort to retain our understanding, "for we are made partakers of Christ, if we hold the beginning of our confidence steadfast unto the end."

FROM PERSONALITY TO PRINCIPLE.

LUCY HAYS EASTMAN.

AMID the silence of a starless night fear would voice the ignorance of darkness, and tremblingly seek to hide its godless self among the shaken reeds of personal sense, or else cry out to an unknown God for rescue from its own intimidating delusions. Anon, and as the mist begins to clear, a star is seen that glimmers ever brighter between the moving clouds. "At last!" exclaims the fearful heart, "I see the light," and loosening a little its rigid grasp upon personal self, it peers upward, to fasten its gaze with hungry intensity upon the dawning light of revealed Truth. Thus the darkness of fear and doubt gives way before the dawn in Christian Science of the Principle that lends its light to every aspiring heart. Too long have men looked for a personal savior; too heavily have they leaned upon the broken reed, too often have they sought to quench their thirst from an empty cup! Moses, David, and all the God-knowing prophets shone as stars with spiritual brightness upon the gloom of material sense, giving forth gleams of that dawn whereafter there shall be no more night. Brighter still burned the Bethlehem star as it reflected the beauty of that

Digitized by Google

light which dispels the somber shadows of the last enemy. Confidently we know that, even as the stellar universe glimmers unchanged behind the clouds, so do these stars of reflected goodness continue to dissipate the idolatry of worldliness with the worship of Spirit and of Truth.

Giving thanks for every character of worth, made great through goodness, we need but lift our eyes to behold the "quickening spirit" which was the source of all their strength, and which waits to heal the blind, the deaf, and the halt today. It is ours to know blessedly for ourselves this omnipotent and ever-present good, for He hovers tenderly around us all. Clinging disobediently to the man of clay, we still starve for Love. He who is looking for one "clothed in soft raiment" is still a dweller in the unyielding wilderness of personality. Though such a one may behold the greatest among men, he still has not seen the least in the kingdom of heaven. Because personality is blinded by material sense, it can never know the "only begotten Son" who dwells in the bosom of the Father.

Today the voice in the wilderness is again crying, "Make straight the way of the Lord,"—make ready for the Christ-idea which, coming after the highest human concept of good, is preferred before personality; and it is ours to reach out for the grace which sunders the chain of personal dependence, absorption, obsession, adoration, and which leads us to behold the Lamb of God outside of all material selfhood! The darkness of personal contagion must vanish before the light of divine Principle, and the truth of these words of our Leader will then be understood and demonstrated: "If God is one and God is Person, then Person is infinite; and there is no personal worship, for God is divine Principle, Love" (Pamphlet, Personal Contagion, p. 3).

"AS A LITTLE CHILD."

BRIGMAN C. ODOM.

THE question, Who shall be the greatest? that is, who shall occupy the important official positions in civil and religious societies, is in the minds of worldly, ambitious mortals today as much as in the years of long ago. A selfish desire to hold the reins of government or to fill some exalted official station was effectively rebuked when Jesus called a little child to him and said, "Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven." In other words, unless one turn from his belief in the controlling power of evil to holiness, enter unselfishly upon the duties to which he is called, and render service void of ostentation and vainglory, his efforts will not meet the demands of Love nor can he claim the reward which comes as a result of obedience to the law of righteousness.

To realize the kingdom of heaven consciously is a mental state to which all devoutly hope at some time to attain, and the growth and development tending thereto are made possible on the condition named by the Master. Mortal man, untutored and undisciplined by moral and spiritual influences, finds human will, selfish ambition, pride, etc., controlling factors in consciousness, but when heavenly ways are contemplated and the things of Spirit sought after, he is reminded that in order to bring himself into harmony with God and His creation, and thereby realize physical, moral, and mental freedom, he must turn the current of his thought from the material to the spiritual. He must not be conformed to this world, to human opinions and theories, but through the understanding of the infinitude of good and the nothingness of material sense, his mind must be renewed, spiritualized, and egotism, self-will, self-righteousness must be rebuked with meekness and the other graces of Love. His thought must be changed from the pursuit of evil to the contemplation of good—he must become as a little child.

In Science and Health we read: "Jesus loved little children because of their freedom from wrong and their receptiveness of right" (p. 236), and we find that the lessons learned from children are impressive and inspiring. Their declarations, though simple, are so powerful and convincing that one dare not question them. A little girl of five years, who always listened with delight to the reading of Bible stories, heard from her little non-Scientist friends terrifying stories about dogs, and soon thereafter, when alone in the dark, fear came upon her. She told her father of her fear, and then said that God had talked to her and that she was no longer afraid. In view of the many incidents of this kind which may be recalled, it is not a question of wonderment that Jesus said of little children, "Of such is the kingdom of heaven;" also, "In heaven their angels do always behold the face of my Father which is in heaven."

Innocence and purity are leading characteristics of many little children. They know God and dwell in His presence because of their purity. They are drawn to and love the pure and the good because they reflect Love. Their troubles, under right treatment, are of short duration and they are again in their native atmosphere of joy and activity. In order to bring himself into harmony with childlike simplicity and activity, thereby to reflect the Christ-idea, the egotist must know that there is but one Mind; the self-righteous must acknowledge that "there is none good but one, that is, God," and the hypocrite must learn to be and not merely to seem.

To accomplish these results, to accept the simple teachings of Jesus, to give one's whole affection to the one Mind, God, and to regard his neighbor lovingly and unselfishly, thereby getting into the heavenly kingdom,—to do this the worldly-minded must become "poor in spirit," willing to receive wholesome instruction, and to be obedient to every call leading to spiritual growth and development. Moreover, to be Christian or Christlike, to reflect the child thought, heal the sick and reform the sinner, more than purity and innocence is necessary,—understanding and activity are required. Jesus said, "By their fruits ye shall know them," and James declared that "faith without works is dead." The condition of Christian activity and exaltation is humility, and it is divinely natural that the Father should hide these things (the simplicity of godliness) from the worldly-wise and prudent and reveal them unto babes.

NO LACK IN TRUTH.

NINA C. FRANKLIN.

THE human sense of limitation is so universal that it behooves the students of Christian Science to demonstrate the falsity of the sense of lack, in all its varied phases. Some time since the writer began to catch a faint gleam of the spiritual fact that there is nothing to fear, since God made all that was made, and pronounced it all "very good."

The reason that mortal man is continually limiting himself is because he was limited from the beginning. Of him it was said, "Dust thou art, and unto dust shalt thou return." The most common form of fear is that of lack of material supply, and in Christian Science we strive to realize that man, being spiritual and not material, is dependent upon divine Principle alone, and not upon any material personality or material condition; that his life is in God, and that his every need is already met. We may be tempted to think we are dependent upon personality, and thus led to wonder if this person will pay his bill today, or if that one will send us a check; or we may limit ourselves by thinking we cannot afford to have or to do certain things which we would like, or that we cannot afford to give to the cause of Christian Science or to subscribe for our literature, because God has not given us as much as He has some one else, thus making a reality of a seeming condition which can be overcome by holding steadfastly to the truth that there is no lack in divine Mind.

During a period of lack of supply for every-day needs,

Digitized by Google

the writer went to talk with a more experienced Scientist, who said, "Stop thinking you are limited." There was the whole trouble; she had been thinking that there was lack, while all the time the spiritual fact was that there was no lack, but her every need was already supplied, since God's work was done. Her work was to know that under the divine government she was not limited in any way. The child thought has been very helpful along this line. Jesus said: "Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven." The little child sits contentedly down and eats his meal, with no thought that possibly his father may not be able to supply the next one, and can we not as confidently trust our Father-Mother God to supply our needs, since He is infinitely able to do so?

Supposing one were to come and ask to be treated for rheumatism. Would we, after realizing that man is a perfect spiritual idea, and that he lives and moves and has his being in God, allow ourselves to think of this man as having swollen and inflamed joints, or as being crippled and suffering pain? Why should we not hold just as steadfastly to the truth, and deny the subtle suggestions of error just as faithfully, in our financial demonstrations, as in those over physical suffering? There is also the thought of a lack of love. Mrs. Eddy says: "Love for God and man is the true incentive in both healing and teaching" (Science and Health, p. 454). Sometimes there seems to come to us a sense that we do not love this or that personality, or that we do not enjoy our study or our work. The truth is that man is made in the image and likeness of God, who is Love, and there is but one Love, just as there is but one Life and one Mind. Man is a perfect expression of Love, just as the little sunbeam is a perfect expression of the sun, and man can no more be separated from divine Love than the sunbeam can be separated from the sun; hence man can no more know hate than the sunbeam can know darkness.

Another of the beliefs of limitation is that of lack of spiritual understanding, the seeming inability to apprehend the Bible and Science and Health, or the argument that we do not know enough to demonstrate the truth for ourselves or others. St. Paul writes to the Corinthians: "There hath no temptation taken you but such as is common to man: but God is faithful, who will not suffer you to be tempted above that ye are able; but will with the temptation also make a way to escape, that ye may be able to bear it." God's image and likeness reflects all intelligence, just as he reflects perfect Love.

Man is not limited in his capabilities or possibilities, however much error may seem to argue to the contrary. The Master said, "With God all things are possible;" and he also said, "I can of mine own self do nothing." It is only as we realize the allness of God, and the helplessness and unreality of mortal man, that we can know and say as did Paul, "I can do all things through Christ which strengtheneth me." Mortal man is continually limiting himself as to time, and rushes through his so-called life at a mad pace. The spiritual fact is that there is time in the abundant present for all good things. When we seem to be limiting man, we are limiting God in our false sense, for man is God's likeness.

Mankind is also universally limiting itself in respect to age. This is the mortal belief of matter experiencing birth, growth, maturity, and decay. God's image and likeness is never born, does not grow, does not change from youth to old age, nor does he die. He coexists with God, who is "the same yesterday, and today, and forever." The Scriptures declare that "one day is with the Lord as a thousand years, and a thousand years as one day," and in Science and Health (p. 246) we read that "life and goodness are immortal. Let us then shape our views of existence into loveliness, freshness, and continuity, rather than into age and blight."

If the thought of lack of spiritual work, or opportunities to demonstrate the truth, comes to us, we may be sure we have been cherishing some, if not all, of the thoughts of lack above mentioned. We may also be sure that we have been disobedient to the Master's command, "Watch," to our Leader's injunction, "Stand porter at the door of thought" (Science and Health, p. 392). None of these so-called thoughts of limitation are thoughts at all. There is but one Mind; all real thought is in that Mind, therefore there is no thought of lack. Such are simply false beliefs of mortal mind,—the arguments and suggestions of a lack of life and intelligence in matter. But we cannot leave them there, for we must prove their nothingness. God's man knows; he does not believe. God's image and likeness has not a single need unsupplied, nor is he limited in any way, for his every need is already supplied. The wise man says, "That which hath been is now; and that which is to be hath already been."

LIGHT.

CHRISTIAN ANDERSEN.

If we arrange to have a ray of sunlight pass through a prism, and then place a screen so as to intercept the ray, we will notice among other phenomena that the prism has divided the white sunlight into a spectrum of beautiful colors, the colors of the rainbow. The explanation is simple, so far as it goes. Sunlight is made up of light of different colors, and these different elements have the peculiarity of being bent or refracted in different degrees, thus separating after leaving the prism and forming the band of colors on the screen. However often we repeat the experiment, in the main the result is the same. By changing the direction of the ray, the position and angle of the prism, etc., an infinite variety may be obtained, but there are no haphazard results; the laws of light are unchangeable, and they symbolize the immutable laws of God, good. Through Christian Science, "Truth's prism and praise" (Science and Health, p. 558), the pure white light of Spirit is revealed in all its beauty and color as expressed in man and the universe.

The beautiful colors are always present in the sunlight, but it requires the prism to bring them out; in like manner does man express the glory of God only through the understanding of divine Truth. In the proportion that we gain this understanding, is it seen that man's real existence is a continuous manifestation of God's qualities, a showing forth of the beauty and harmony of Truth, before which the so-called powers of darkness are dispelled. Through this enlightening process of Christian Science we are gradually being liberated from the various forms of selfishness, greed, envy, hate, and fear, as well as from discords of the body.

In speaking of the city of our God, Mrs. Eddy says: "Love is the light of it" (Science and Health, p. 577). Now suppose we pass a ray of darkness through some prism which will bring out the characteristics of darkness. Absurd! you say? Quite true, and for several reasons. In the first place, darkness has no substance and has no laws governing it; if it had, these laws could be studied, and there would be a science of darkness. In the nature of the case, darkness cannot be studied, nor, strictly speaking, can it be cognized; even if it could have laws, they could never be known. Such laws, could they exist, would always conflict with the laws of light. An instance of this would occur if a door between a light and a dark room were opened. Either the light would stream into the dark room and make it light, or the darkness would stream into the light room and make it dark. Is there any question as to what would occur?

Is it very much more absurd to make these suppositions about the nature, laws, and manifestations of darkness, than to make similar suppositions about evil? Has evil substance? If so, what is it? Has evil laws? If so, can they be known? If evil has entity and operates according to given laws, which is the stronger, omnipotent God, good, or evil? The answer to these questions is simple: "The Lord he is God; there is none else beside him."

SELECTED ARTICLES.

[Alfred Farlov in *New Haven* (Conn.) *Union.*]

In an article by Prof. Irving Fisher, entitled "Preventable Disease Kills 600,000 Yearly," we find some statements which in the judgment of Christian Scientists certainly call for review.

Professor Fisher declares that "if the Christian Scientists were logical in their views they would agitate for the abolition of water filtration, of garbage removal, of quarantine, of drainage, of meat inspection, of pure food laws, etc." In reply to this, permit me to say that it is not only in keeping with Christian Science to favor all reasonable sanitary measures, but these are demanded by Christian Science, and Christian Scientists can heartily and consistently endorse any methods of cleanliness which can possibly be introduced, so long as they are practicable. The teaching of Christian Science has this advantage, however, that it gives the spiritual, eternal, and immutable Principle upon which the proper idea of sanitation should be based, and thus renders the appeal for it the more reasonable to all thinking people. The adage, "Cleanliness is indeed next to godliness," is a truism of Christian Science. It is utterly impossible for one to have his ideals improved without at the same time having inculcated a sincere disposition and desire to improve his material surroundings. The writer has known of many instances where whole families have been lifted out of the filth of the slums in our large cities, either by improving their surroundings or by leaving them for better conditions, as a result of the improved mental conditon which Christian Science has brought them. Pure water, pure food, pure air, cleanliness in every detail, are inculcated by Christian Science, and this for the reason that the purest and best in the material approach most nearly to the spiritual.

While demanding absolute cleanliness both in body and in mind, Christian Science appeals to us where it finds us, namely, in a more or less imperfect state. It not only points to spiritual perfection as a state to be attained, but it impels its adherents to improve the material environment in which they find themselves. It is thus considerate of the fact that perfection must be attained by the gradual unfoldment of spiritual truth in consciousness, and the consequent "putting off" of material conditions. It teaches that while it is unreasonable to expect all it promises by way of spiritual efficiency and betterment to be demonstrated at this particular stage in our social progress, that we can and must improve steadily along all lines.

What Professor Fisher has said regarding the logical outcome of Christian Science beliefs he might have said concerning any other form of Christianity. The Master commanded: "Be ye therefore perfect, even as your Father which is in heaven is perfect," yet he must have known that perfection could not be reached at a single bound, but must come by way of gradual advancement. He said: "Take no thought for your life, what ye shall eat, or what ye shall drink; nor yet for your body, what ye shall put on." Mr. Fisher might have applied his criticism to these sayings, and charged the Master with having advocated utter disregard for sanitation. The Master evidently referred to the absolute standard of purity, namely, that the individual consciousness should be spiritual and should be purged of all materiality, and yet he knew that all must take some thought for the body until the day of perfection is reached. To comply with his injunction means that we shall take less thought today than yesterday, still less tomorrow, and so on, until we shall finally enter fully into the kingdom of God, shall have reached that state wherein we are sustained by infinite Spirit, in which the necessity of material thought-taking shall have passed away.

Our critic declares that Christian Scientists object "to having the public informed as to disease." What Christian Scientists desire is that the public shall be correctly informed as to disease. They insist that material observation alone does not give full information as to the nature of disease and that experimentation which deals with the material and disregards the mental side of the question is but partial, and that the expenditure of money in behalf of such research means the taxation of all the people for the purpose of disseminating theories which represent the convictions of only a portion of the community. So long as the present situation exists each school of therapeutics should investigate in keeping with its own peculiar views, pay its own bills, and leave the question of making the dissemination of such knowledge a federal matter until the people have at least approximated a general agreement. In a matter of agriculture, for example, all men are quite nearly agreed as to proper methods, hence a department of agriculture is feasible and timely, but the situation with regard to therapeutical beliefs is entirely different. There are differing schools of medicine, and also differing schools of therapeutics which belong to the non-drugging systems, and this great diversity of convictions would make it seem entirely unfair that a federal department should be established which would give power to some particular school or schools of medicine. Does Professor Fisher believe that the federal department should disseminate Christian Science literature? Does he believe that millions of the general public's money should be thus expended? Certainly not, and yet is it not clear that the Christian Scientists have quite as legitimate a right to demand that their theory as to the healing of sickness shall be disseminated, as Professor Fisher has to demand that other theories be thus brought to the attention of the general public?

It seems worth while here to deny that the "opposition of Christian Science has an aspect of revenge against the regular practitioners." Christian Scientists have no desire whatever to interfere with the individual choice of medicine, nor to interfere with any sort of medical practise. What they contend for is the uniform, constitutional privilege of living according to their own faith in God, without any molestation whatever, and they are quite as willing to grant this privilege to others. While they would avoid all strife and contention, they claim the privilege of entering into all governmental questions. They have a right to their views and a right to advocate them in the public press and elsewhere, and, moreover, they have the right to insist that whatever is given to the public press about Christian Science shall be correctly stated.

Professor Fisher declares that "Christian Scientists believe all disease to be wholly mental, and they do not wish to see any agency established which will teach another doctrine and familiarize people with the obvious physical details of sickness." This is one of the much-mooted questions. Christian Scientists have proved satisfactorily that disease is a mental condition manifested in the body; and that this particular diagnosis (if that term can be properly used here) is correct, is evidenced by the good results of Christian Science practise; and since a very large percentage of the people of this country believe this theory, they are entitled to consideration. The majority of the people may be entitled to rule as regards public affairs, but it is not entitled to govern the private opinions and practises of individuals so long as they do not interfere with the rights of others.

It must be apparent to Professor Fisher that what he advocates is the dissemination of his peculiar views as to the nature, the cause, and the cure of disease. We will not accuse him of advocating this practise because of his spirit of "revenge" toward Christian Science, but he cannot deny that such practise would work a hardship upon the Christian Science cause and would constitute a means of bolstering up and safeguarding the interests of what he calls the "regular practise."

In passing it is well to note that the number of persons who believe in the non-drugging systems is rapidly increas-

Digitized by Google

ing, while the number of those who believe in material theories is rapidly decreasing. For this reason alone it would be well for the advocates of federal medical legislation to wait at least a year or two on the logic of events. We daresay that Professor Fisher is not behind the times in a knowledge which is quite generally accepted, namely, that fear is a large factor in the cause of disease, and that the minute description of disease is likely to have a very injurious effect upon the minds of the people, especially of the young. We believe that if it ever becomes necessary for the individual to know anything of the material history of disease, that knowledge should be given him in the mature years, that the horrors of human weakness will be kept out of the minds of the young and tender as far as possible. There is really no advantage in having in a state prison a list of maladies which must eventually be eliminated in order to bring peace and harmony and health. Besides, to use the words of Josh Billings, "What's the use of knowing so much when so much you know isn't true?"

[Judge Levi N. Fyler, Lexington Avenue, Chevy Chase, Near Washington, D. C.]

The Christian Scientist recognizes that Truth is ever knocking at the door of human consciousness, waiting to be let in. He realized that the saying of Jesus, "Ye shall know the truth, and the truth shall make you free," may be demonstrated. This means freedom from sin, disease, pain, worry, and all that curses, believes and fears. It means the overthrowing of the belief in two powers, and the casting out of the belief that evil has power. Christian Science repudiates the claim of conflict between science and religion; it affirms that religion, to be true, must be scientific, and that Science, to be true, must be religious only in harmony with God as good.

The first use in which the Father in belief of the Christian Scientist finds is set forth by Mrs. Eddy in the "Scientific statement of being," as follows: "There is no life, truth, intelligence, nor substance in matter. All is infinite Mind and its infinite manifestation, for God is All-in-all. Spirit is immortal Truth; matter is mortal error. Spirit is the real and eternal; matter is the unreal and temporal. Spirit is God, and man is His image and likeness. Therefore man is not material; he is spiritual." Science and Health, p. 468. This statement of the Founder of Christian Science is in harmony with that of Jesus in John's gospel: "It is the spirit that quickeneth; the flesh profiteth nothing: the words that I speak unto you, they are spirit, and they are life." Also with that in I Corinthians, wherein Paul says: "Now this I say, brethren, that flesh and blood cannot inherit the kingdom of God; neither doth corruption inherit incorruption. Behold, I show you a mystery; We shall not all sleep, but we shall all be changed." The Christian Scientist understands that the kingdom of heaven within is a condition of righteousness, a state of mind with which mortal, sinful matter has no connection or participation. The kingdom of God, as defined in Christian Science, is the kingdom of Mind, Spirit.

As God is Mind, and as Mind is the divine Principle of infinite good, we, as an idea and reflection of that Mind, exist as its perfect creation; we exist therefore, as spiritual and immaterial as His image and likeness. The concept of life in matter is a false mortal belief, based entirely upon the testimony of the mind sense, which would make life mortal and finite instead of immortal and infinite. God is Life, and wherever life is truly expressed, there God is expressed. God is Truth, and wherever the truth of life is expressed, God is expressed. God is Love, and where pure love is expressed, God is expressed. Mind eternally expresses good, and is the creator of all that is real; therefore its creation must be good, and that in which Mind is not present. As the basic law of mathematics does not recognize the mistake of an improper answer to a problem, so it has no place in divine Principle, and is not created by or known to God.

Is the body which seems to act and move before the invisible force, the man that exists as an idea of God? Surely, no! According to natural science the body consists in eleven or more elements, what is it that represents the individuality of the man? The body has gone, and according to the mortal sense new accumulations of matter is passing in its place continually, and it cannot answer. It is an imperfect sense and false mortal concept of life—the dream of life in matter. It is the shadow, and not the substance of man as God is creating.

In the second paragraph of the Preface to Science and Health, Mrs. Eddy says: "The time for the understanding of Truth, in the elements of doctrine and simplicity of proof, knocks at the portal of humanity." The tendency of the age—of human race protests the inefficiency of the attempted remedial agencies for the ills that flesh is heir to, as in the days of old are seeking a sign. The Scientists do not censure or condemn the honest endeavor of the physician. In prayerful humility, seeking to be guided by the Mind of Christ, and remembering the words: "Lo, I am with you always, even unto the end of the world," they have defined their purpose as follows: "And we are to watch and pray for that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us; and to be merciful just as God is merciful." Science and Health, p. 497.

Obediently they have taken up the work which the early Christian Church has not seriously attempted for the last three hundred years after the crucifixion of Jesus, namely, preaching the gospel of love, but are bent on the obedience to the Master. The result has been that the sick are healing the healing truth, and testifying to the eternal all over the world, not to an unknown God, but to a realized and ever-present God. Grateful hearts are overflowing with testimonies and songs of praise, and it can truly be said that "the prayer of a righteous man availeth much." Christian Science is aggressive in its methods and effects, and that is in living the healing truth as taught by Jesus, and as realized, taught and practiced by the apostles. To those who seek God, Christian Science is the only way out, and is patient under misrepresentation. It is ever ready to advance of the time in its science of salvation, and teaches that all must be clean and pure to enter the kingdom.

To those who would hinder or attempt to pervert Christian Science, it may be well to call to mind the words of Solomon, when those in authority among the Jews sought to slay the apostles of Jesus. It was Gamaliel the Pharisee who stood up and said: "Ye men of Israel, take heed to yourselves what ye intend to do as touching these men. . . . And now I say unto you, Refrain from these men, and let them alone: for if this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God." To the question, "How would you define Christian Science?" Mrs. Eddy answers: "As the law of God, the law interpreting and demonstrating the divine Principle of universal harmony." Supplemental to the Science.

It is a subject for congratulation that in this age of skepticism and materialistic belief, [illegible] from the basic fact of an immortal [illegible] are realizing [illegible] are growing [illegible] to the growth and progress of Christian Science. It is [illegible] that the "mighty [illegible] and [illegible] the miscellaneous publications as well as the periodical, Science and Health and [illegible] the regulations of all a [illegible] literature of the world, and [illegible] thought of the present time. When [illegible] well as the fact that the churches and [illegible] tian Scientists, in the number of [illegible]

Digitized by Google

hundred, are scattered all over the world, that The Mother Church in Boston, erected at a cost of some two million dollars, has a regular attendance of four to five thousand people, and that many of the branch churches are costly structures displaying the best artistic skill of those high in the architectural world, we are forced to the conclusion that Principle and idea and not personality is the power which gives this most astonishing progress.

Mrs. Eddy, whose untiring devotion to the organization she founded kept her at the helm of the movement, wrote in the Preface of Science and Health, "A book introduces new thoughts, but it cannot make them speedily understood. It is the task of the sturdy pioneer to hew the tall oak and to cut the rough granite. Future ages must declare what the pioneer has accomplished." In truth we do not have to wait for posterity; the present has already recorded the "Well done, good and faithful," in the world's opinion of her.

Today, instead of seventy, the number recorded as being sent on a mission of healing by Jesus, over five thousand Christian Scientists are devoting their life-work to the healing of sickness and sin, and teaching their understanding of the Science of being. On each Wednesday evening all over the world, thanks are given to God by those who have been healed through the power of Truth and Love. Today in a thousand ways the healing work is making its appeal. If good is in it and is accomplished by it, God is with it, and nothing can overcome it. Like Pilate, many are asking today, "What is truth?"

[E. M. Ramsay in *Haddingtonshire* (Scot.) *Advertiser.*]

I have read with interest in your paper a review on the Rev. T. H. Wright's book, "Christian Science: Its Teachings and Practice in the Light of Christianity." If we go no farther than the title of the book, it will be plain to any one who gives the matter a moment's thought that Mr. Wright has set himself an impossible task. There is no general consensus of opinion among the various Christian churches with which the teachings of Christian Science can be compared. The most divergent views are entertained on such important matters as the virgin birth, the atonement, baptism, the Lord's supper, and the after-life. A chasm, declared to be unbridgeable, divides different sections of the Presbyterians of our native land, and within the communion of the Church of England are found men holding views foundationally opposed. It is self-evident that while all these differing interpretations of Scripture may be incorrect, only one can in any case be correct. Like all the other Protestant churches, the Christian Science church claims to be founded wholly on the teachings of the Bible. It accepts unreservedly, and as historically accurate, the gospel story, and going beyond mere beliefs, understands why Jesus Christ was the Saviour of the world, and why no man can come to the Father but by him. The interpretation which Mrs. Eddy places on our Lord's words and on other passages of Scripture may differ widely from the interpretations accepted by other bodies of Christians; the proof she has to offer that hers is the correct interpretation lies in these very works of bodily healing and moral reform which our critic admits do take place. "These signs [of healing] shall follow them that believe," our Lord said. Is it then unreasonable to suppose that a failure to find these signs must indicate a lack of belief, in the sense in which the word is here used? Is it a matter for regret that Christian Science explains the teaching of the Saviour in such a way that we can grasp its inner meaning as never before, and find a new world of light and happiness opening out before us, new opportunities of usefulness presenting themselves as we ourselves become new? "Be ye transformed by the renewing of your mind," St. Paul writes. The increase in health, intelligence, and well-being which we gratefully and humbly acknowledge in ourselves and in others is the outward and visible sign of improved thought, of a purer, kinder, truer, and more active condition of mind than that we manifested before we studied this subject. The benefits we have received are open to all, and we feel sure that in a few years' time the good Christian Science is doing will be yet more widely recognized.

[Algernon Hervey-Bathurst in *Richmond* (Eng.) *Herald.*]

I have read in a recent issue a report of an address delivered at the Richmond Free church, in which the speaker referred to Christian Science. It is perfectly true that Christian Scientists are "determined to look at the bright side of things," and I will venture to add that there are few people who would not agree that it is the very best policy to adopt. I believe also that there is no one who would not adopt it if he only knew how. Christian Scientists are able to adopt this attitude, not so much because they are "comfortable enough" to do so as because they have proved that the bright side is really the only side to look upon.

During many centuries humanity has been battling with evil, to which as much, and frequently more, power has been given than to good. Now the very fact that this battle is being waged with as much vigor as ever affords abundant proof that this house "divided against itself," namely, the belief in the absolute reality of both good and evil, is built on no sure foundation. Christian Scientists are, however, learning to prove with greater certainty day by day that there is but one real power, the power of omnipotent good, and therefore but one real side to look upon.

That this is not mere theory is proved by the fact that to the extent that Christian Scientists faithfully apply the teaching set forth in their text-book, in conjunction with the Bible, are they able to prove that sin, sickness, and discord can be relegated today to the realm of unreality, as was the case two thousand years ago when the teaching of Jesus the Christ was understood and practised by his disciples, those pioneers of Christianity. It would therefore be more correct to say, not that it is necessary to be "comfortable enough" to take this view, but that it necessitates a sufficiently clear and spiritual understanding of the teaching of Christ Jesus in order to accomplish the results which he declared must inevitably follow the faithful application of what he taught.

LIVING WATER.

MINNA MATHISON.

I KNOW a wood, dim, quiet, cool,
Where many a pleasant hour was spent;
Where happy children, free from school,
On holiday excursions went.

Deep in the green wood's leafy shade,
A bubbling spring disturbed the calm,
Where of our hands a cup we made
And drank from out the curled-up palm.

And none who sought that pleasant bourne
E'er missed his way, far wandering,
For long ago our feet had worn
A narrow pathway to the spring.

. . . . . .

How sweet to know that Truth doth give
Its healing stream in ceaseless flow,
And we who, finding, drink and live,
To those who thirst the way can show.

Thus we can voice, in word and deed,
The truth our own lives quickening.
And thus we make, for others' need,
A pathway to th' eternal spring.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"IF IT BE OF GOD."

THANKS to the wide-spread publicity which is today accorded to Christian Science, both by its friends and quite unintentionally by its opponents, it is only occasionally that this practical and demonstrable religion is mistakenly denominated as "neither Christian nor scientific." But he who has proved for himself the power of Truth to heal from every discordant condition, whether of body or mind, is undisturbed by these fallacious assertions. Like the erstwhile blind man, there is one thing he knows for a certainty, that whereas he was sick, now through Christ, Truth, he is well. Such evidence is not easily refuted, and it links the truth discovered by Mrs. Eddy irrevocably with the primitive Christianity taught by Jesus and the apostles.

"Christianity," Mrs. Eddy writes on page 134 of Science and Health, "as Jesus taught it was not a creed, nor a system of ceremonies, nor a special gift from a ritualistic Jehovah; but it was the demonstration of divine Love casting out error and healing the sick." Jesus taught a practical gospel, and he demonstrated its truth, proved his propositions, by such marvelous works as could only be wrought by the power of God. That Christian Science is a revival of the Christianity taught by the Master, its followers are proving in daily increasing measure, for they are learning that in proportion as they attain the Mind "which was also in Christ Jesus," in that degree do they approach the perfection which is of the Father and become "every whit whole."

One cannot but be impressed, therefore, in reading the testimonies of healing through Christian Science which appear in our periodicals,—an open book in which he who will may read,—with the earnestness of the writers in giving credit to this teaching for the moral and spiritual awakening that has come to them along with the physical healing. Yet in doing this they do not claim to have reached perfection, but only to have caught a glimpse of the possibilities of that oneness with the Father which is not only man's birthright, but also the only reality of existence. They find that this new-old faith demands a daily and hourly exemplification of that acme of ethics, the sermon on the mount; that it is not a religion to be donned with their Sunday apparel and as carefully laid aside when the day is over, but a vital, energizing truth which governs and directs in all the affairs of life.

The man touched by the divine fire, for instance, he who but yesterday, perhaps, had no guide in business other than the custom of the trade or the selfishness which found expression in

> the simple plan,
> That they should take who have the power,
> And they should keep who can,

today is striving to revise his code of business ethics and to place himself under the government of divine Principle in his dealings with his fellow men. And he does this because he has learned that "God is incorporeal, divine, supreme, infinite Mind, Spirit, Soul, Principle, Life, Truth, Love" (Science and Health, p. 465), and that there is no other God. For the same reason the impure, the besotted, the vicious, and the shiftless have turned from their ways, the cruel and haughty have become loving and gentle.

This is the testimony of Christian Scientists, just as it was the testimony of the primitive Christians, and it is corroborated by those who are brought into neighborly contact with them. Christian Scientists, in claiming that their religion has made them healthier and better men and women, do not vaunt themselves; they simply give God the glory therefor, and in gratitude for the blessings they have received, would share with the whole world the good things of the Christ-way which came to them in their need. They have only pity for those who, blinded by ignorance or prejudice, would bar the way to this healing truth, neither entering in themselves nor permitting others to do so. Despite this the leaven is working, for each day brings accessions to the ranks of those who in renewed minds and bodies learn of a truth that this teaching is of God and therefore cannot be overthrown.

ARCHIBALD MCLELLAN.

THE UNFAILING STREAM.

FEW subjects are more frequently mentioned today by those interested in the welfare of mankind, than that of irrigation, since for many and vast regions of the earth it means the possible change of uninhabitable stretches of soil into luxuriant farms and gardens. Even the great Sahara of the world, which have remained the impenetrable home of drouth and desolation, are now embraced in this redemptive thought, and this because of the discovery that beneath the surface of these parched plateaus there are water-streams of inexhaustible flow, and when the superincumbent strata are pierced the life-giving flood is poured out, to make the desert bud and blossom as the rose. Christian Science has come to prove that in a kindred way the redemption of the inhospitable wastes of material sense is at hand; that the rivers of God, of good, though apparently hidden beneath the sands of mortal belief, are available to vivify and redeem every area and manifestation of human consciousness and activity; that God is yet able "to do exceeding abundantly above all that we ask or think," and that His kingdom is to be established in all the earth of human belief. This has always been accepted by the church as a possibility, but it remained for Christian Science to awaken men to the transforming significance of a declaration which embodies the substance and inspiration of the Christ-consciousness, namely, God is my life.

To come upon an oasis of richest fruitfulness and beauty in the midst of the forbidding barrenness of an unbroken horizon of sand, is to acquire a new sense of the relation of water to every growing thing, and it is to understand as one never has before, the meaning of the Scripture which saith, "There is none other name under heaven given among men, whereby we must be saved." The effort to reclaim a desert by projecting a city upon its shifting surface, by the opening of streets, the laying out of parks, the erection of palaces, would not be more foolish and futile than the endeavor to redeem humanity without the water of that stream which St. John has described as flowing forth from the throne of God. History has witnessed to no fact more frequently and more definitely than this, that neither culture nor creed can awaken or sustain life. There can be no real vitality, no growth, either within the church or without it, apart from an individual knowledge of God. The eminence of Athens in letters and in art was, and has remained, the wonder of the world, and yet St. Paul found its people grossly idolatrous and wholly barren of spiritual life. To them he brought this basic and initial thought of the great Nazarene teacher, that to know God is to live; that all wisdom, all capacity, all strength, all inspiration, all effectiveness, all satisfaction, and all true joy is to be found in Him. This is the atonement which the coming of the Christ effects. It was the great Wayshower's constant theme, and the demonstration of its truth and power is the grace and the glory of Christian Science.

The everlasting Father is not far from any one of us. Underneath every desert of human need is the abundant stream of Life divine, and our salvation is begun the moment we banish the depressing and defeating thought that man is or can be separated from his source. In so far as we approach

Digitized by Google

hend and accept the truth that real selfhood is the immediate expression of the divine activity, by which it is ever nourished and sustained, in so far we attain to and may demonstrate the Master's wondrous wisdom and power. The philosophy of our salvation is then grasped, and it becomes a fact as we drink day by day from this unfailing stream.

JOHN B. WILLIS.

TODAY'S BLESSINGS.

IN the Lamentations of Jeremiah, we find in the midst of his sorrowful musings a declaration that the divine mercy and compassion are "new every morning," a statement which recalls the oft-quoted words of our revered Leader that open the Preface to Science and Health: "To those leaning on the sustaining infinite, today is big with blessings." Christian Science makes it very clear that every day, as well as every year, is crowned with the divine goodness, if only we are ready to avail ourselves of its bounty. Again and again are we assured in the Scriptures that those who wait upon God shall lack no good thing. It is, however, important to remember the spiritual law as stated by the psalmist: "With the merciful thou wilt show thyself merciful; with an upright man thou wilt show thyself upright; with the pure thou wilt show thyself pure."

It of course goes without saying that divine justice and mercy are not dependent upon mortal man for their manifestation, but without a quickened sense of ever-present good the blessings are too often missed and are even denied, while mankind accepts the sorrowful dictum of the poet:

Some days must be dark and dreary.

Christian Science brings to those who mourn the glad tidings uttered so long ago in the synagogue at Nazareth by Christ Jesus, who told his listeners that the glorious promises from the prophecy of Isaiah, which he had read in their hearing, were demonstrable truths; and he added: "This day is this scripture fulfilled in your ears." Many of his auditors, blinded by material sense, refused to believe him, but this did not hinder him from proving the might of Truth in other places, until multitudes were compelled to admit that "his word was with power;" and Christian Science repeats his declarations and insists that "this day," every day, the Scripture may be fulfilled in its fullest sense, even as our Lord and Master fulfilled it, if we have enough of his spirit and the understanding of spiritual law which Christian Science gives.

As we glance over the pages of prophecy, we find many stirring appeals for greater efforts in laying hold upon the divine aid. Jeremiah saying to the slumbering daughter of Zion: "Give thyself no rest; . . . Arise, cry out in the night: . . . pour out thine heart like water before the face of the Lord: lift up thy hands toward him." Thus should we lift up our hearts to the infinite Father, Spirit, God, who has promised to make all things new, a process which inevitably begins with ourselves. As we are renewed within, even the physical sense takes on new conditions, and the health which is never dominated by the flesh comes more and more into evidence. This great change extends, indeed, to the whole environment, and each morning dawns with new and holier hopes and aspirations which should bear fruit in deeds that bless the whole world.

Too long has human thought tended toward "looking backward," when the vital need is to look forward to the new things of Spirit, of which St. John had such a glorious vision that he could only express it by the symbols of pure gold and rare gems; but even these paled before the fact that sin, disease, and death had been forever vanquished, consumed in the fire of divine Love. It only remains for each one to prove his right to man's divine heritage, and Truth will daily unfold to him new blessings and new joys, untainted by mortality, until the vision of the Apocalypse becomes our assured experience.

ANNIE M. KNOTT.

AMONG THE CHURCHES.

WASHINGTON, IOWA.

The dedication of First Church of Christ, Scientist, of Washington, Iowa, was held May 19. Christian Science was first introduced into Washington about twenty-six years ago. Two or three years later services were started, and held in private homes until July, 1897, when First Church of Christ, Scientist, was organized by seven students. Seven other Christian Scientists joined the church soon after its organization, making a total of fourteen members, eleven of whom were members of The Mother Church in Boston, Mass. A public place was selected in which to hold services, and a Sunday school was organized. The weekly testimonial meeting on Friday evenings was also started at this time, and the first lecture on Christian Science was given in Graham opera house June 22, 1899. In July, 1899, the lot upon which the church stands was presented to the church as a tribute of love from one of the members. In May, 1900, the reading-room work was begun and continued for a while, then discontinued until a few years later, when it was taken up as a permanent part of the church work. In September of 1903 the corner-stone of the church building was laid, and the following spring, when the building was approaching completion, services were held in it.

While the work of completing the payments on the church has been slow, the sacrifices made to do so have brought us all blessings, and now we are glad to announce that not one dollar of indebtedness remains.—*Correspondence.*

WICHITA, KAN.

The Christian Science congregation has bought six lots of one hundred and fifty-five feet frontage, in the eighth block on Lawrence avenue on the east side of the street, one hundred and fifty feet north of the corner. The consideration was eleven thousand dollars. It is intended to erect a church building costing from forty to fifty thousand dollars. Nothing has been decided definitely in regard to the plans or specifications of the building, but a committee is at work drawing up plans. The building when completed will be one of the finest Scientist churches in the state.

Wichita Beacon.

SANTA MONICA, CAL.

The new Christian Science church at Brooks and Second avenues was opened yesterday [May 26] for services for the first time. Three services were held, one at eleven o'clock, the second at three o'clock, and another at eight o'clock in the evening. The auditorium seats about three hundred and seventy-five persons, and the opening gatherings taxed its capacity. A simple Roman Doric design in the exterior conveys the impression of dignity, strength, and peace. The property is valued at about fifteen thousand dollars.—*Santa Monica Outlook.*

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be Nov. 1, 1912. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 16, 1912.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to May 31, 1912, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
Falmouth, Norway, and St. Paul Streets, Boston, Mass.

THE LECTURES.

WASHINGTON, IOWA.

Judge Clarence A. Buskirk, who delivered a lecture on Christian Science in the local church before a good-sized audience of interested listeners, was introduced by Dr. E. J. Perry in the following words:—

My introduction of the distinguished lecturer will be in the nature of a testimony. I know you will bear with me while I say that there is no place in my life untouched by Christian Science; that there is no place in my life where I cannot best use it. Christian Science comes to me with the first blush of the morning, in the heat of the noontide, and in the twilight of the evening, with joy and peace and healing in its wings. It is my refuge in the night of error, my comforter in trouble, and my strong deliverer. It whispers in my ear, speaking to my consciousness, telling me that there is no pleasure aside from God; that sin, sickness, and death are mortal, while goodness, health, and life are immortal.

Christian Science found me rolling down the hill of speculation, into the ocean of doubt. It illuminated the pages of the Bible, and made it the chart of my life. It made real to me the life-work and promises of Jesus Christ, and reconciled me to God. It filled my life with hope, and took away my fears. I now know the Bible is inspired, because the Bible inspires me. Christian Science taught me that man was made in the image and likeness of God, and what my spiritual birthright really is. It gave me a new concept of God. Christian Science is demonstrable truth. When John the Baptist sent to Jesus to know if he was the Messiah, his reply was significant; they were to tell John that the blind see, the deaf hear, the lame walk, and the sick are healed.

While Jesus was "a man of sorrows, and acquainted with grief," yet he was the happiest man that ever trod the earth, and he plainly said, "He that believeth on me, the works that I do shall he do also;" adding later to this injunction those ever memorable words, "These signs shall follow them that believe." Christian Science asks you to leave all and follow Jesus. It does not ask you to leave any good thing. It asks you to look away from materiality to materiality's opposite. It asks you to believe in the omnipotence, the omnipresence, and the omniscience of God. It teaches the all-sufficiency of God and where can be found the "pearl of great price," for which Jesus said a man should be willing to sell all that he hath to possess it. Christian Science makes no compromise with sin. Salvation this side of the grave is what Jesus taught and what Christian Science offers.—*Evening Journal.*

RIVERSIDE, CAL.

Speaking before an audience that practically filled the main and balcony portions of the Loring theater, Bicknell Young delivered a lecture upon the subject of Christian Science. S. A. White, introducing Mr. Young, said in part,—

The slogan of the Leader of the movement whose tenets will be expounded here this evening, as far as the brief time allotted will allow, was: "The time for thinkers has come" (Science and Health, Pref., p. vii). Certainly that is a modest position to assume, to appeal to humanity to think, to reason. Perhaps no fairer stand was ever taken by any man, concerning a belief that was not his own, than that assumed by that profound student of Jewish law, Gamaliel, who, when a mob was clamoring before the high priest for the condign punishment of Peter and the other apostles, could stand forth and say: "If this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God." From those of us to whom the message of the evening will in some respects present the aspect of novelty,—and permit me to say that it is largely intended for them,—I bespeak for the lecturer a fairness equal to that of the great Gamaliel, who evidently believed that if he listened to and weighed the words of Peter, he might be embracing an opportunity.—*Riverside Press.*

OIL CITY, PA.

Judge Clifford P. Smith, who lectured on Christian Science for First Church of Christ, Scientist, in Carnegie library, was introduced by the first reader, Max Kurth, M.E., who said:—

The purpose of this lecture is to present to the people of Oil City authentic information concerning the Science of Christianity as discovered and taught by Mrs. Eddy and adhered to by many thousands of her followers. This Science, or demonstrable knowledge, finds its expression in the restoration of health, happiness, and harmony to those who bring themselves in tune with the basic Principle of Christian Science, divine Mind, or God. Through it Love is again calling to the tempest-tossed heart, "Peace, be still," and primitive Christianity as taught by Jesus and his immediate disciples is once more established.—*Correspondence.*

SEATTLE, WASH.

Virgil O. Strickler delivered two lectures for First Church of Christ, Scientist, Seattle, to large and appreciative audiences. The afternoon lecture was delivered in Moore theater and the evening lecture in First Church edifice, Sixteenth avenue and East Denny way. At the afternoon lecture John E. Playter, in introducing the lecturer, said in part,—

Today Christian Science has won its way to recognition as a mighty force for good in helping to ameliorate those conditions which harass and afflict the human race, by restoring health and prosperity. There is an apothegm taken from a Talmudical philosopher which states that "the noblest charity is to prevent a man from accepting charity, and the best alms are to show and enable a man to dispense with alms." [See Miscellaneous Writings, Pref., p. vii.] If this be accepted as a proper and correct definition of what charity consists, and I believe that it is, then the Christian Science church comes well within the definition as a most remarkable charitable organization. Business men with the aid of Christian Science have been able to exceed their ordinary business capacity. Those who have applied it in times of adversity have risen above their circumstances. Why Christian Science has become most favorably known is because it has healed untold numbers from disease. Many of them had been reduced to dependence through sickness; many others would have eventually accepted charity had not Christian Science rescued them.

In the evening Mr. Strickler was introduced by Lewis M. Drake, who said in part,—

In the first epistle of Peter we read: "Be ready always to give an answer to every man that asketh you a reason of the hope that is in you." I am often asked, "Why, are you a Christian Scientist? Is there anything tangible to it, a something that one can know and cling to?" My answer to this question is: "I am a Christian Scientist because thirteen years ago it restored me to health after all remedies known to *materia medica* had been exhausted, and physicians said I must go. It has given me a God that I can know, and thus understand man's relation to Him. It has unfolded the spiritual import of the Bible, and thus revealed to me a demonstrable truth. It has revealed to me that God is infinite Mind; therefore He is the source of all intelligence, and man is the idea or channel through which this Mind

Digitized by Google

is expressed. It has revealed to me that the kingdom of God, the reign of harmony, heaven, is not a locality or place to go to, but is, as Jesus said, 'within you;' not within this body, but within your consciousness. Then it is a mental condition, and can be attained by all, right here and now. It has revealed to me that the truth of every problem always has existed, always does exist, and always will exist in Mind. Then the solution of these problems is mental, and man, as the idea or reflection of Mind, knows the truth. Thus it has given me something tangible, something to know, something to cling to,—a demonstrable truth."

Correspondence.

QUINCY, ILL.

Nearly every seat in the Empire theater, except the gallery, was filled by an audience which listened most intently and with appreciation to a lecture on Christian Science by Bliss Knapp of Boston. The lecturer was introduced by E. M. Botsford, first reader of the Quincy Christian Science church, who said:—

When Jesus Christ was on earth, wherever he went he left a trail of healing and happiness, where there had been misery and suffering. This healing work was accomplished by his spiritual understanding of Truth, by his knowledge that God is all good and does not inflict pain and anguish and sin upon man, who is His perfect reflection, made, as the Scriptures declare, in His image and likeness. And Jesus left like power to heal by such spiritual understanding, to all his followers, in no uncertain language when he declared: "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." It is simply to carry out these divine orders as voiced by the Saviour, that Christian Science has come, and it has proved the Wayshower's words to be true in thousands upon thousands of cases of healing of diseases of every conceivable form and nature.—*Quincy Herald.*

POTSDAM, N. Y.

William R. Rathvon delivered a lecture on Christian Science in the opera house, being introduced by Mrs. Helen B. Mann, first reader, who said:—

There is in my home a little boy not four years old, who is constantly questioning, "Why—what is that for?" Have larger children never asked a similar question? Is it not a universal query? At some point in our experience we are forced to face the great question of the mystery of Life, and we wonder "Why." Why are we here? Why do we see so much sorrow, sickness, and sin? Why must we pass through such hard experiences?

For a time, we accept the prevailing answer that God sends it or permits it, and we must be resigned to His will. But when our suffering becomes unendurable, and we and our praying friends beseech a God of love in mercy to restore us to health,—to make us workers instead of hinderers in this fair world,—and we receive no answer, we know that something is wrong in our conception of God or in our asking, and we do a bit of thinking. For the first time we question the traditions of a lifetime. Is there a God who is Love? Must we give up faith in the Bible which we have loved and studied?

In our despair and as a last resort, we turn to a so-called new doctrine, derided indeed, but known to have relieved such misery as ours. To our joy we find not a new religion, but the Christianity of the New Testament, the words and works of Jesus, brought to us as a demonstrable Science, a method that works. A weak body is made strong, a sick mind well, and a sore heart is healed. We find a God who forgiveth all our iniquities, who healeth all our diseases. We also find in Christian Science answers to all our "whys."

Correspondence.

CHICAGO, ILL.

The Rev. William P. McKenzie lectured twice on Christian Science for Fourth Church of Christ, Scientist. He was introduced at the first lecture by J. Edward Riley, first reader, who said in part,—

Christian Science is, briefly stated, the religion of Jesus; and if this is accepted as a correct statement, there can be no place in the thought of any true seeker of light here this evening, for controversy or for prejudice, as those who read the gospels ever so casually cannot help being impressed with the fact that it is eminently desirable that the great truth the Master taught and practised nineteen centuries ago should set the standards of today and for all time. It will be readily conceded that if mankind would experience the salvation from sin and from sickness which Jesus' teaching promised, it must know more of the divine nature which he revealed as his Father, and Christian Scientists, many of whom have come out of the depths of sin and of suffering, are fully persuaded that Christian Science is this new-old truth in which is seen and felt the saving hand of God.

At the second lecture Mr. McKenzie was introduced by O. E. Flint, who said:—

It is recorded in the gospels that multitudes followed Jesus during his public ministry; that the people were astonished at his doctrine, and that they greatly marveled at his wonderful power in healing the sick and casting out devils. Christian Science is again teaching the same doctrine and performing the same wonderful works; and because the doctrine is still just as astonishing to the popular thought, and the works seem just as marvelous and unaccountable to those who do not understand the availability of God's power, multitudes are today interested in the doctrine and works of Christian Science.

If we are thus interested, we desire not only to hear but to understand what the lecturer has to present; and in this connection it is well for us to remember that our own mental attitude toward this subject and toward the lecturer will determine in large measure our ability to comprehend the ideas and arguments advanced. Everybody knows how difficult it is to present a different point of view to the man who is satisfied with his own views and who sees no need for further enlightenment; but on the other hand it is comparatively easy to present a new phase of the subject to the man who really desires to look from the other fellow's standpoint and who recognizes that his present knowledge may be imperfect. It is especially desirable, in approaching the subject of Christian Science, that we come with an open mind, for it is a subject which to be rightly apprehended needs the most thoughtful, conscientious, and unbiased consideration.

LECTURES TO BE DELIVERED.

The following form of announcement of lectures to be delivered has been adopted by request of the board of lectureship.

Amesbury, Mass.—Church chapel, Main and Carpenter streets, 8 p.m., Sept. 5.
Bangor, Mich.—Miller's opera house, 8 p.m., Sept. 10.
Berkeley, Cal.—High school auditorium, 3 p.m., Sept. 8.
Cranford, N. J.—Church edifice, Springfield avenue and Miln street, 8:30 p.m., Sept. 10.
Evansville, Ind.—Evans hall, 8 p.m., Sept. 12.
Mahanoy City, Pa.—English Baptist church, 8 p.m., Sept. 9.
Maryville, Mo.—Empire theater, 8 p.m., Sept. 13.
Minneapolis, Minn. (Churches Minneapolis and St. Paul).—Auditorium, 8 p.m., Sept. 10.
Needham, Mass.—Town hall, 3 p.m., Sept. 8.
Oconomowoc, Wis.—City auditorium, 8 p.m., Sept. 12.
Rapid City, So. Dak.—Elks opera house, 3 p.m., Sept. 8.
Trinidad, Col.—Elks' hall, East Main street, 8 p.m., Sept. 8.

TESTIMONIES OF HEALING.

I am grateful for the revelation of the presence and power and goodness of God which has come to us in this age through Christian Science. About four years ago, when I was seemingly buried "in trespasses and sins," and when I was miserable beyond words to tell, sick and sore in mind, body, and estate, a good woman gave me some Christian Science literature. I accepted the little sheets with a sense of condescension, but with a feeling that I must be polite to a lady, and that complaisance would probably end the annoyance sooner than argument. These little sheets were glanced at, then read with care. Other literature was given to me, and from this beginning I went on, reluctantly, and with a determination not to go too far, and certainly not to identify myself openly with a people that were "peculiar." I, however, read on and on, then went to the church and visited the reading-room. I studied that wonderful book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and realized that I had at last found what all my life I had desired, namely, truth, the truth that could be tested and scrutinized and not found wanting. What I have found in Christian Science so fills me with amazement that I have at times almost feared it was "too good to be true." The only satisfying way by which its reality can be known is to take it and test it and prove it by "signs following;" in other words, by demonstration. This I have done in many ways, and I know that if I continue in God's way, He will abundantly bless my efforts.

I had worn glasses about fifteen years, but these were discarded over three years ago. I suffered from a nervous and stomach disorder, but this ailment entirely left me. I was thin, had narrow shoulders, and was anemic in appearance, but now I am broad-shouldered and have flesh and color. I feared to eat many things; now, I eat anything I wish, at any time, and as much as I care to eat. The past winter, because of very trying conditions and also because I did not apply the truth as I should have done, I had an acute attack of illness, and though I had intense pain and difficulty in breathing, I never for a moment thought of any help but the help that comes from God and that we are taught in Christian Science how to realize. The work of a faithful practitioner soon enabled me to leave my bed; in fact, I was confined to it less than a week.

The Bible, too, has become a book of interest to me. Formerly I tried to read it, but could not understand it. I wanted to be conventional and belong to a church, in short to do as other people do, but I could not see how people could believe the things they said they believed. Nine years ago, at the birth of a little son, my wife passed on. A few days after the baby was born, it was to be christened at its mother's bedside, and I offered to be christened at the same time. I thought I would shut my eyes and go into the church, but this I could not do. I went to different churches. I investigated "isms" and "ologies," and I said I would accept any of them that seemed consistent and logical and that brought peace and health and happiness, but nowhere did I find surcease from sorrow and the deliverance I so much needed and longed for. It seemed to me there was but one thing to do, and that was to indulge the senses and then go to oblivion or to a life outside the material, if there were such a life, which seemed to me inconceivable.

In this mental state, and with sins that would not give me peace, the sweet healing influence of Christ, Truth, came into my life and the door was opened before me that no man can enter and not find rest and refreshment. Thank God, I went in, and the blessings that I have received are beyond words to tell. The physical transformation, great though it was, is as nothing compared to the spiritual uplift and the peace that passeth all understanding. I am now a member of The Mother Church and of the church in Washington, and I am daily endeavoring to know the truth better, to be made free from all that is unlike Truth, and come into the glorious liberty of the sons of God. Thank God, I have learned that good is more potent than evil, harmony more real than discord; that health can overcome and blot out sickness, and that happiness can eliminate unhappiness. Thank God, we know the hiding-place of all wretchedness to be the mortal mind, and we know that all error can be uncovered and destroyed by the divine Mind—the one, only, real presence and power. Thank God for all the blessed channels through which this light has come to mankind, dissolving and dispelling the darkness.

FREDERIC P. GIBSON, Washington, D.C.

It has been my desire for a long time to express my gratitude for the blessings which I have received in my experience in Christian Science. I therefore send my testimony for publication. It is one of the most positive cases of complete healing which has occurred in this town, and I trust it may be of interest to the readers of the *Sentinel*.

Three years ago I was in the depths of despair. I had much to make me happy, but I was bitterly unhappy, for I had been sick for so long that it seemed a part of my very existence to suffer, and I began to think I would never be strong and well again. I was only nineteen years old when, after several months of confinement to my bed, I was taken to a hospital, where I submitted to a most serious surgical operation. The suffering I endured after this was dreadful, and I never fully recovered from the effects of this operation, so two years later I was again confined to my bed with similar abdominal trouble and the doctor said nothing but a second operation would help me, and that I was apt to have abnormal growths appear again. At this time, when my life seemed so dark and unhappy, Christian Science was brought to my notice, and rather than undergo another operation, I turned to it for physical help only.

The services of a practitioner in another city were sought, but he was so busy that he could not take my case for another week. He, however, agreed to treat me absently, if he should have any spare time. "Science and Health with Key to the Scriptures" by Mrs. Eddy was brought to me, and having had trouble with my eyes, I feared I could not read, but I did! I read the book with the greatest sense of hope and encouragement that I had ever known, and in four days I was enabled to get up and walk a distance of four or five blocks. This was all a mystery to me, for I understood very little of what I read, but I shall never forget the joy and peace that came to me when I discovered that I did not have to be sick any longer. I learned afterward that the practitioner had given me two absent treatments, and these, together with my few days' reading of the text-book, healed me. I, however, seemed to be so filled with fear, for it was all so new and wonderful, that in a few days I traveled sixty-five miles alone to where I could see the practitioner daily. I remained in that city for a month and I continued to grow in faith. When I returned to my home, I was filled with timidity, yet joy, for every one I met seemed to want to know all about my healing.

I look back over my long experience, and I can see that I had been reaching out for God all along the way, but I did not know it. While the physical healing meant a great deal to me, it cannot compare with the spiritual uplift that came with it. Christian Science has given me the only knowledge of God and the Bible that I have ever known. I feel that it has touched every part of my life, and that it helps me in everything I have to do. To say that I am grateful is not enough. I cannot express my gratitude for these wonderful blessings! I thank God for Mrs. Eddy, that through her pure thought and exemplary life she was able to give to this needy world the truth that Jesus lived and taught nineteen hundred years ago. It surely is a wonderful thing to be called a Christian Scientist, and my daily prayer

Digitized by Google

is that I may be able to give to others, at least in part, of what I have received.

MRS. MABEL JAMISON CHADBOURNE, South Bend, Ind.

I wish to certify to the truth of all my wife states in her testimony referred to in her letter enclosed herewith, and to add that her condition was far worse than she has made it appear. Her healing aroused my interest in Christian Science and since that time we have relied on Truth alone to meet our every need.

DEAN KIMBALL CHADBOURNE, South Bend, Ind.

It was during a stay in Los Angeles, March, 1910, that I was led to investigate Christian Science. At that time discouragement through ill health and uncertain business conditions had made life seem hardly worth living. I had been told several times how very happy Christian Scientists were and wanted to know what made them so, and to say that I have been richly rewarded in my search expresses it mildly. I have been healed of stomach trouble, of a year's standing, in one absent treatment, and a diseased condition of the teeth was overcome in five treatments, the pain leaving after the first day. I had absent treatment while having a tooth extracted, and that experience removed forever all fear of a dentist.

Through the study of Science and Health I have been able to overcome fatigue, nervousness, headaches, irritability, and an incessant condition of worry and fear. To realize that through the loving care of our Father-Mother God I have been spared the necessity of resorting to *materia medica* or other material means, and have been able to accomplish more the past year than in three years previous, is to me a convincing demonstration of the power of Truth.

Being a professional woman I should also like to add that through knowing God to be the one intelligence I have been greatly helped in memorizing and interpreting various parts, and that Truth has been the means of averting accidents while traveling, and in overcoming many would-be unpleasant circumstances. I am very grateful for Christian Science, because I can live it wherever I go and because it is practical and demonstrable. I have found God to be an ever-present help, and I hope to show my gratitude by living consistently with the truth which has been restored to us through our dear Leader.

MRS. PEARL SNYDER SPOFFORD, Salt Lake City, Utah.

For more than twelve years I was an active member of a church and always tried to follow its teachings to the best of my ability, but conditions in my home became such that an earnest effort was made to find a truer concept of God, one which would deliver me from the bondage of sickness, limitation, and physical death. My mother had been an invalid for years, with no hope or assurance of help from *materia medica*. She was in such a deplorable condition that her desire was to die rather than to endure such agony. She was placed in the care of a Christian Science practitioner in the fall of 1905, and the spring of 1906 found her in good health of mind and body. Her healing has been permanent; she has never had a sick day since.

My own conditions were such that a solution of my problems, according to physical sense testimony, seemed impossible. I, however, began a careful study of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, in connection with the Bible. This was during the summer of 1905, and so convinced was I of the truth taught in Christian Science, that I almost immediately gave up my former religious views and studied this subject exclusively. I have practised it continually ever since, and its study gave me the true sense of education,—that man in the image and likeness of God must of necessity possess in its completeness the ability and might to understand all things. Having reached this point, it was clear to me that there was a sufficient amount of the right education at hand to enable me to proceed with my work. Following this light, it led me into the possession of an education far above and beyond the mortal and finite concept, an education that heals one of the sense of limitations, moral and physical.

My son has never had any other treatment than Christian Science, nor has he had the many ailments to which children are supposed to be subject. Christian Science has been a continuous blessing in our home ever since we took it up. Not to be grateful for this, or to fail to express gratitude for a religion which meets one's every need, would certainly be unjust. My gratitude to God for Christian Science is unceasing.—JOHN T. NEU, Dubuque, Iowa.

I am very grateful for Christian Science. Having exhausted the resources of *materia medica* and hearing of Christian Science, I turned to it and was healed of many ailments, including severe headaches and catarrh in its worst form, indigestion, rheumatism, stomach trouble, and "broken arches." My husband was wonderfully healed of a malignant growth, St. Vitus' dance, and insanity, after having been given up by doctors who said there was no help for him. He was helpless, had to be fed, and his mind seemed to be entirely gone, but in three weeks he was able to get up and dress himself, to sit at the table with us and feed himself, also to walk out alone. It is over three years since he was healed and he has had no return of these ailments.

For all the help that Christian Science has been to me and mine words are insufficient to express my thankfulness to God, also my gratitude to our dear Leader for showing us the way.—MRS. FLORENCE A. THOMPSON, Malden, Mass.

I wish to express my gratitude for what Christian Science has done and is doing for me daily. I came to it for healing after many years' suffering from lung and heart trouble, also severe headaches and catarrh. I had worn glasses for a number of years, and had experienced loss of voice for three years and a half. This was my condition when a friend asked me to try Christian Science. I thought she did not know how serious my condition was; but, thank God, when I investigated this teaching, I found it was the truth.

The doctors could not heal me; they would say that if I were very careful they might help me, so I went to a Christian Science practitioner and she explained the Scriptures to me. It was so beautiful that I asked her if she could help me. She said no, that it was God who did the healing, but she gave me a treatment; then I told her how I was loaded with lung protectors, plasters, etc. She advised me to go home and take off all those things and be myself. I did as she told me, and at my second visit to her I could talk, and see, and I felt fine. She gave me one week's treatment and told me that I must study in order to know the truth for myself. I began, and in fifteen days the light of Truth and Love came to me.

I now lean entirely on Christian Science for everything. I know for myself that it is indeed the truth of being. It matters not what I have to meet, I never depend upon material means, but go at once to God, who is the infinite source of all good, and it is beautiful to let Truth guide us. I used to worry about expenses, but now I do rejoice that through our beloved Leader, Mrs. Eddy, we know how to overcome all anxious thought if we but practise the truth daily. My salary is small, and that is why I am so grateful to know that "the Lord is my shepherd; I shall not want." I am a yearly subscriber to the *Sentinel*, *Journal*, and *Monitor*. The thought given daily in the *Monitor* is more valuable to me than the money it costs. I am also able to keep up all that is asked of me in our church. For all this, and much more, I am deeply thankful to God, and I am also grateful to Mrs. Eddy.—LIZZIE NORRIS, Chicago, Ill.

In the prophecy of Isaiah we read, "A little child shall lead them." Early in the summer of 1910, our little son, seven years old, was taken very ill with a severe pain in the back of his neck and shoulders. He seemed to suffer intensely and had a very high fever. As he appeared to be very ill, we were going to call our family physician, when he cried and said he did not want us to send for a doctor, that he wanted a Christian Science practitioner whom he knew. We were not Christian Scientists, but our son had been attending the Christian Science Sunday school, and as he wanted that treatment so much, my husband telephoned to the practitioner for whom he had asked. At two o'clock Saturday morning she gave him an absent treatment; the next day he was much better, and was able to leave his bed and play around the house; but that evening he was taken ill again, and had a burning fever. We again sought the practitioner's help, but this time the disease was more stubborn and did not yield so quickly as it had in that first treatment.

Sunday morning found him apparently a very sick boy, and our fears were fast getting the better of us. Sunday noon we called and asked the practitioner to come to our home; which she did on her way from church. She gave him present treatment, and soon after he rose from his bed and asked for something to eat. The next afternoon he walked five blocks to see the practitioner. A feeling of deep gratitude to God impels us to testify for this healing through Christian Science.

MRS. MATTIE E. LISHEAR, Kansas City, Mo.

I have felt for some time that I must express through the *Sentinel* my gratitude for Christian Science. It found me, about three years ago, a miserable invalid, supposedly going into a rapid decline; in fact, people who saw me on the first day of 1909 said I could not live a month; but before the month was up, a dear cousin sent me some copies of the *Sentinel* and some pamphlets, all of which I eagerly read. The testimonies appealed to me, and I thought that if others could be healed by reading Science and Health, surely I could; so I immediately sent for a copy of the book, and through its study a truly wonderful change has been wrought in our home. My mother took up the study with me, and I could write pages of the blessing it has brought to us, in the healing of both sin and sickness. I have had the great privilege of class instruction, and never can I find words with which to express my gratitude for it, also for our Leader's wise and loving provision for students' associations.

I count it a wonderful opportunity to express publicly my appreciation of Christian Science and the healing power of divine Truth and Love. I am indeed thankful for the many things I have been able to meet through the right understanding of God, but when I think of all the pain and sorrow and sin from which it saves me, I am more grateful still.

MISS GRACE W. CHAMBERLIN, Lebanon, Ohio.

I feel that it is time I made public acknowledgment of the good I have found in Christian Science. In the summer of 1908, while under stress of great mental suffering and longing for a satisfying solution to the seeming problems and inconsistencies of life, I drifted into a Sunday service at Second Church of Christ, Scientist, Waco, Texas. I was impressed with the peaceful simplicity of the service, the utter lack of ostentation and putting forth of personality. The service was so entirely different from that to which I was accustomed, the people seemed so happy and healthy looking, and welcomed me so cordially, inviting me to come again, that I soon found myself among them quite regularly. I had long since fallen out with the popular concept of God and creation, and had gone through the category of the various "isms" without finding anything to which I felt I could anchor my faith absolutely.

Before a great while I felt impelled to get a copy of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and I took up the study of the Lesson-Sermons. Although at first I had no thought of physical help, I have improved in health from that day on. Very soon life's seemingly tangled snarls began to straighten, not always just as I wished or expected, but it was, as I begin to see now, in the right way. I found that I had idols many; but I am happy to see them crumbling into dust one by one. I had been an ardent believer in osteopathy, and in fact a practitioner, but I saw erelong where to place the cures it seems to effect.

I feel that I cannot be grateful enough for liberation from the errors which were enslaving me, for the assurance that just in the proportion that I cast out false belief and give up my matter idols, will I come into man's eternal heritage of harmony, and for the spiritual enlightenment which reveals the wonderful perfection of God and His universe. I am glad and proud to march on in the steadily increasing ranks of Christian Science, and to help bear aloft its banner, white and shining with the emblazonment of purity, Truth, and Love.—D. F. GARTON, San Antonio, Tex.

Through the healing of my sister, over six years ago, I took up the study of Christian Science. I had known of it some time before, but had never looked into it till her healing. She was cured within two weeks of a physical trouble of five years' standing, for which she had had medical treatment from three physicians of excellent repute in New York city, besides trying other material means.

Personally I have had only occasional need of help to overcome physical discords since coming into Christian Science, notwithstanding that my strength has been tested more severely than at any previous time in my life; and whenever the need has arisen, I have been helped very quickly. I cannot overestimate the help Christian Science has been in meeting some very serious problems and trials which have come to me, and which would have taxed me beyond endurance were it not for the help and strength and peace of mind which the teachings of Christian Science have given to me. I can truly say that it is the greatest help and blessing which has ever come into my life.

RUTH W. HALL, New York, N. Y.

[Translated from the German.]

In August, 1910, I was seized with severe pain in the abdomen and lost my appetite. A physician was summoned, and after an examination told me that he was led to believe there was an intestinal abscess. He prescribed hot poultices, which were applied during a period of four weeks without any resulting improvement. When I asked him for his opinion, he said that in all probability I would have to submit to an operation. On Oct. 6 I went to the cantonal hospital in Zurich, but when after a three-weeks stay the operation was performed, nothing was found which would have necessitated such a course. On Nov. 11 I was dismissed while still in a poor condition, so that I could hardly stand the exertion connected with my trip home. After my return I had to seek medical aid at once, but before Christmas the wound opened again, giving me greater pain than before the operation. I lay in this condition for four months, then our clergyman advised me to apply once more to a specialist for an examination. I did so, and stayed three weeks at the city hospital in Chur without experiencing an improvement. When I asked the physician what he thought, whether I could not do light housework, he said: "You are beyond cure."

It then became clear to me that medicine was powerless in my case, and while in this hopeless condition a dear friend who is an adherent of Christian Science came to see me, loaned me a book, and asked me if I would permit her

Digitized by Google

to treat me. I made up my mind to try this as a last resort, though with almost no hope. My thought was that although it might bring no relief, it probably would not harm me. But after a few weeks I felt an improvement, the pain gradually disappeared, and I was enabled to do light work. As there was daily improvement, my practitioner told me to go home, eat whatever I pleased, and again attend to my duties; and this I did. This was in June, 1911, and now, thanks be to God, I am well, able to perform strenuous work, as formerly, without inconvenience. One day I met the head nurse at the hospital, and she inquired as to my health. When I told her that I was in good health and able to work as formerly, she said: "It is almost unbelievable; I must tell the doctor about this." I enjoy a good appetite, and my wound is almost healed. I have now regained my former weight. I use neither medicines nor salves, but rely entirely upon divine Love, and commit myself to God's care, willing to take whatever comes from His hand. He is my physician. I also wish to express my gratitude for having had my footsteps directed into the way which leads to God.

FRAU ELISE WETTSTEIN, Chur, Switzerland.

Five years ago I was ill and unable to enjoy my pleasant surroundings. My husband and son were more than kind to me, everything was done that could be for my welfare, and still all seemed dark and cheerless. One day, while down to the city, I met a dear friend whom I had not seen for several years. She was a Christian Scientist, and told me of some of the benefits which she had received. Seeing that I was in need of help, physically and mentally, she said she would visit me at my earliest convenience. The following week she came to my home and spoke again of Christian Science, asking why, as I had tried all other remedies, I did not try this treatment. I told her I was willing, and we went at once to see a practitioner. After talking with the practitioner, I felt happier than I had for many months. I had a desire to know more of the things about which she told me, so I took her advice and went to the reading-rooms and bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, also subscribed for the *Sentinel* and *Journal;* the result being that with one week's treatment and the constant study of Science and Health, I was a well and happy woman once more.

I have longed to tell others of my healing, and of the spiritual uplifting which I received by turning to Christian Science and thereby gaining a clearer sense of the teachings of Christ Jesus. I am indeed grateful for this truth, and it has made me a better woman, also a better wife and mother. I have found God to be an ever-present help, one whom I can trust, and I know that "divine Love always has met and always will meet every human need" (Science and Health, p. 494).—MRS. C. M. SPECK, Spokane, Wash.

[Written for the *Sentinel.*]

DAWN.

LILLIAN CHASE.

O THOU whose splendors die not, Thou whose beam
  Quickens the pulse of worship, and whose grace
  O'erflows when human sense descries the face
Of evening sunlit clouds, or the first gleam
Breaks a new dawn which pales the sullied dream
  Of night,—speak Thou to us, that we may trace,
  When emblematic senses interlace
Our thoughts, immortal meanings. All that seems
Earthly in our conception, let it fade!
  Thus brighter hues become the flowers we love,
And sweeter odors all their cups pervade.
  Celestial be the sun that shines above,
Passion and pride of flesh in us subdued.
By Christ's own spirit evermore imbued!

FROM OUR EXCHANGES.

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth.*]

The one great reason why so many people shrink from identifying Jesus with humanity in any form is because they know only too well that humanity taken on the whole is anything but worshipful, and they want to worship him. They like to feel that he is somehow essentially and eternally different from our poor sinful, struggling, burdened race; they seek not merely an example, a leader, a sympathizer, a frail fellow mortal, though stronger and wiser than the rest of us, but a savior, a mediator, a redeemer. And this is a right feeling, worthy of all respect; it arises not so much from any wish to belittle man as to exalt the Christ-idea; but in their anxiety to do the latter they generally succeed in doing the former, too, which is a great mistake; Christ's greatness does not need to be contrasted with our littleness in order to show itself divine. To say that he is eternally what we never shall be, *is* an unwarrantable assumption, ascribing to him an unearned privilege, a kind of superiority which is no more to his credit than the want of it is blameworthy in us. The fact is, we have here an example of the way in which theology has been colored by the political and social strata through which it has passed; in the traditional doctrine of the person of Christ, with its sharp line of distinction between humanity and divinity, we have a survival of ancient ideas of aristocratic birth and royal blood, ideas alien to the spirit of the age in which we live. This is the age of democracy, with its ideas of equality of opportunity and of the solidarity of the individual with the whole stock from which he springs; and it cannot be long before all our thinking about the relations of human and divine will have to partake of these irresistible conceptions.

[Rev. F. F. Buckner in *Universalist Leader.*]

Fear is leaving the realm of religion, not only because man believes in a better God, but because he has also become a braver and more self-reliant being. The progress of religious thought is as necessary and inevitable as the direction of the planets in their orbits. The ethical life is moving toward the kingdom of God with a force so great, and a determination so sublime, that no material force can be compared to it. The old religious teachings are doomed, because the ethical forces of the world have outgrown all those old teachings. He who can teach the cruelty of God in this age, when all civilization is pulsating with kindness, must be either very superstitious or a person of an exceedingly low ethical understanding. The church is weak in that its theology is behind the times, measured by the ethical feeling in the modern community. There is plenty of the ethical consciousness in the church, but it is not yet made the basis of religious teaching. Philosophy has outrun religion by nearly a century, and we have had to find the prophet in the poet's and student's cloister and not in the pulpit. The pulpit has been both self-distrustful and timid of new pronouncements, which means a conservative pulpit, dragging fearfully behind.

[*Living Church.*]

Materialism as a philosophical system is a spent force. As a practical influence upon daily life it is perhaps almost the dominant factor of this age. We wish to know the utility of everything. If a child in school studies German, we expect him to be able to converse fluently with any chance subject of the Kaiser whom he may meet. If he studies Italian, we expect him to be able to boss a gang of laborers from that sunny land. If he can do neither, we say that he has wasted his time. We base our judgment upon the materialistic ground of utility. But the mind of the child may have seen something of the vision that Goethe's eyes beheld. His soul may have taken huge delight in the mysteries of the "Divina Commedia" of the poet-seer of

Digitized by Google

Florence. It is a common theory that unless a boy is going to be a minister or a college professor, he has wasted his time in poring with Sophocles the clash of family and civic duties in Antigone, the nemesis of blood-guiltiness with Æschylus in the Oresteia, the woes of ancient people with Homer on the dusty plains of windy Troy in the dawn of European history.

[*Universalist Leader.*]

Outside of Calvinism and Arminianism, outside of formal Christian logic, there has grown up a vast explanation of life which is accepted by most thinking men. This modern philosophy has crowded the ancient philosophies into a corner. In one form or another, even in the mental and moral processes of those who deny it, we find its masterful influence at work. In its deeper moods and nobler interpretations, we find this modern philosophy furnishing a groundwork for our faith which is so wide and deep and solid that it only requires a steady purpose and noble effort on our part to build on it a confidence in the universe, in God, and in eternity, more magnificent than anything that has gone before. If with these later and larger ideas of life our faith does not flourish in the earth, it will be because we who formulate it are inadequate. Life and philosophy today challenge us to harness them to our chariot of truth and faith, that they may draw it on for us up to the feet of everlasting Love.

[*Christian World.*]

We are badly in want of a religion of cheerfulness. Faith needs to be relieved of its ancient background of gloom and of terror. We have to be assured that the universe means well by us, that the powers above are friendly and not hostile toward us. The spiritual education of the future will devote itself, as one of its chief tasks, to the elimination from the mind of the glooms and suspicions with which the ignorant superstitions of earlier ages have enwrapped it. Humanity has to be taught to step out from fear into love; to learn that it has nothing to be afraid of, in this or any other world, but its own folly. The mysteries which surround us, in proportion as we solve them, disclose ever a secret of beneficence, never one of malice. As the ancient Father Methodius puts it, "Man was made not for destruction but for salvation." The whisper of the universe frames itself into that sentence of Goethe in "Faust," "I invite you to hope."

[David Starr Jordan, LL.D., in *Independent*.]

No man is a good citizen until he can take care of himself and has something left over for the common welfare. If economically and morally alike he is a non-producer, he is no fit member of a democracy. He is a public nuisance. If he earns no more than his keep, rich or poor, he is an economic nonentity. If he exerts no influence for good, he is a moral nonentity. To have nothing and to rail at those who have, is not in the line of social progress. The last ten years in America have been marked by a great swell of moral uplift. The source of this movement has been in better education. It is not broken and dissipated on the reefs of politics. It is not the result of the appeal of any popular leader, though popular leaders have been credited by it. It is not affected by the results of any elections. The tides of the sea do not depend on securing a majority.

[*Advance.*]

It will be a happy day for the world when all Christian churches range themselves on the line drawn by the Master, and when the confidence Jesus had in man will be justified everywhere by a church without a bishop and states without a king. The Christian citizen is the only safe foundation of any state, and the Christlike disciple the only hope of any church which professes to have been founded by the Author of Christianity.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and [illegible] editions. Description and prices will be found on the inside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is [illegible] bound; 79 pages.

In accordance with instructions given by Mrs. Eddy her publisher on Sept. 13, 1910, an edition of "Rudiments Divine Science," printed in the New York point system type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works of Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.
