Again and again the "thus far . . . and no farther" of mortal sense has been swept aside by some pioneer thought, and we have been reminded thereby of the protest which the prophets and sages entered against the narrowness of the human concept of Truth's power to illumine and to overcome. They were ever calling men to come up into the mount of vision, to rejoice in the limitless possibilities of the rule of Life and Love here and now. Thus Isaiah appealed to Israel, saying: "Lift up thine eyes." "For, behold, . . . the Lord shall arise upon thee, and his glory shall be seen upon thee. And the Gentiles shall come to thy light, and kings to the brightness of thy rising. . . . A little one shall become a thousand, and a small one a strong nation: I the Lord will hasten it in his time." What a rebuke is this to the weakness of that self-depreciating concept of our authority and power as the exponents of Truth, which makes us yield to the temptation to droop and be discouraged, when we should be rejoicing as one who in the midst of a yet abounding darkness perceives the sure promise of approaching day.

In like manner Christ Jesus sought to save his disciples from a sense-measured estimate of the compass of their ministry as the heralds of divine Love, and he pointed out the modus of its triumph when he said: "Let your light" —the light divine within them—"so shine before men, that they may see your good works, and glorify your Father which is in heaven." Truth demonstrated in their lives was to be the abiding witness of the "all power" conferred upon them, the sufficient ground for their glorying.

How illy have we risen to this sense of the sufficiency, the unquestionable victory of Truth! Even the consecrated and aspiring beneficiaries of Christian Science are prone to forget that the divine idea which they declare thus leaps out unto everlasting life. The truth of God is not limited to any human range or organization; it is forever free, and yet we may find ourselves thinking of it ofttimes as circumscribed by mortal states and conditions, as restricted in its ministry to a temporal order, instead of identifying it ever with the divine appearing, that spiritual light which knows no darkness and no bounds.

Mrs. Eddy's larger confidence and expectation is revealed in that striking statement from her pen in which she says: "If the lives of Christian Scientists attest their fidelity to Truth, I predict that in the twentieth century every Christian church in our land, and a few in far-off lands, will approximate the understanding of Christian Science sufficiently to heal the sick in his name" (Pulpit and Press, p. 22).

This realization of the irresistible activities of Truth through the spoken word gives a courage and quiet of heart, in the midst of seeming struggles, which is not otherwise attained. It supplies a firm basis for that rejoicing in God our Saviour which, as St. Paul so frequently affirms, is not determined by the human condition, the apparent ebb and flow in our warfare with wrong, but which is grounded in this wonder of grace, that God worketh in and through us, to will and to do, beyond all that we can ask or even think.

JOHN B. WILLIS.

AMONG THE CHURCHES.

BOSTON, MASS.

The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the new church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading Rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite Post Office; open daily, except Sunday, from 9 a.m. to 5:30 p.m.

AN APPRECIATION.

As the oasis in the desert must be to the caravan, so to the thirsty American traveler are the Christian Science reading-rooms which are now dotted all over Europe. One may work by oneself ever so faithfully, but oh, the joy of finally reaching a reading-room, with perhaps a Sunday service, and the helpfulness of talking to some other worker, together with the spiritual uplift which comes when the thirsty one is given a good drink of truth. Those in charge of these reading-rooms must be indeed blessed, for many times have they proved to me "the Sun of righteousness" which arises "with healing in his wings;" and I have gone forth strengthened and full of thanksgiving.

Christian Science is fast encircling the globe—mankind all over is being benefited, and best of all the truth is spreading—the truth by which our dear Leader has taught us how to work, how to gain peace, health, and harmony—eternal Life, Truth, and Love, which are the demonstrations of Christian Science, "aflame with divine Love" (Science and Health, p. 367).—*Correspondence.*

MIDDLETOWN, N. Y.

The Christian Science Society of Middletown commemorated the new year by holding Sunday services Jan. 6 in its new room in the Dill building, 3 South street. The step is considered important to the growth of the society, as the rooms formerly occupied were on the second floor, small, obscure, and in a noisy locality. It was therefore a cause for rejoicing when the whole first floor of a building in the center of the town, but on a quiet street, was secured. The room has been newly decorated, and with the addition of a fine piano, handsome chandeliers, and other accessories, it presents a very cheerful and attractive appearance. The society now feels that in addition to its regular services it can maintain a daily reading-room.—*Correspondence.*

THE LECTURES.

MANCHESTER, ENGLAND.

A public lecture on Christian Science was delivered by William D. McCrackan, M.A., at Second Church of Christ, Scientist, the Liberal Club, Barlow, Moor-road, Didsbury, on Friday evening last [Nov. 17]. Will Melland, the chairman, said he regarded it as a privilege to have the opportunity of presiding over such a large company of ladies and gentlemen who had assembled to hear a lecture by one well qualified to speak on a subject that was occupying more and more attention by serious thinkers in all parts of the civilized world. He supposed that very much the same motive had prompted them as had prompted him to attend the meeting, which was to hear the truth about Christian Science. No doubt many people got their impression of Christian Science from the newspapers. That was so in his case. Until he began to read some of the literature issued by Christian Scientists, he was not at all favorably impressed with the subject, and he thought that lectures like the one they were about to hear would remove many false impressions that got about concerning it. There was a tendency nowadays to put religion, as it were, in water-tight compartments, instead of making it a dominant factor in our daily lives; and on going into the subject of Christian Science he began to feel there was something in it. Christian Science seemed to him to be practical, wholehearted, and honest. In Lancashire, where the people were of a practical turn of mind, Christian Science was getting very strong, particularly in the Manchester district, and he was not surprised at it, because it was essentially a practical religion and was bound to succeed for that reason.

Manchester and South District Advertiser.

FRESNO, CAL.

Before a large audience at the Barton Opera House last night [Nov. 20] Bliss Knapp gave an interesting exposition of the doctrine and claims of Christian Science, saying the resumption of the healing power conferred by Christ on his disciples had made of Christian Science a world religion. The lecturer was introduced by Joseph Beall, who said:—

To begin with, I am sure there is at least one proposition upon which we may all agree, and that is that the Bible is an inspired book; that it is the word of God. I am sure that we can also agree—at least we have been taught from time immemorial by Christian teachers and students of the Scriptures—that the Bible contains deeper, profounder spiritual truths than have hitherto been discovered by mankind. Now, if the Bible is the word of God, and if it does contain these truths, they are surely intended for the benefit of mankind, and it must be the divine plan that somewhere, at some time, some one would become sufficiently spiritually-minded as to be able to discern these truths and to interpret them to a waiting world.

When shall we look for such an interpretation? Is it reasonable to expect it in this day and age, or shall we wait for a few generations or centuries? To whom shall we look for such a discovery? Shall we look to the philosopher, the scientist, the investigator, who throughout the ages has been delving into matter and material things in his search for the truth? These truths are spiritual and, as Paul says, they are to be spiritually discerned. Shall we look to man, who in all history has been regarded not so much for his spiritual qualities as for his physical strength and the vigor of his intellect? Shall we look to woman, who from Mary of old to the thousands of women who fill the modern churches, almost to the exclusion of the sterner sex, has been noted for her gentleness, for her love, for her compassion, her immeasurable spiritual qualities?

Shall we look to man, or shall we look to woman, for a discernment of these truths? What could be more natural or appropriate, my friends, than that in this day and age a spiritually-minded woman should approach sufficiently near the divine Mind to be able to discern that of which the Master said: "Ye shall know the truth, and the truth shall make you free"? Christian Scientists believe and know that nothing less than this has occurred; that Mrs. Eddy has gone beyond the ordinary materialistic interpretation of the Scriptures and has discerned these truths and has given them to the world in the Christian Science text-book, "Science and Health with Key to the Scriptures."

Fresno Republican.

LANCASTER, OHIO.

An appreciative audience heard Virgil O. Strickler, Christian Science lecturer, at the City Auditorium last night [Nov. 27]. George F. Rabe introduced the speaker, and said in part,—

Christian Science, when rightly viewed, arouses the noblest thought and expectancy in man. It is not only beautiful in its simplicity, but it is scientific in its practice, and quite encouraging in its result. Naturally this Science must be approached at the right angle, it must be weighed carefully and by the standard of its truth. Truth has always existed, but when it comes in some newly discovered phase to overturn and set at naught long-established beliefs and hoary traditions, it is apt to be met by violent opposition. Jesus came preaching this truth, and he was crucified; Galileo offered the world a great truth, and he was cast into prison, and so it has been all through the ages. This opposition arises largely from the fact that the truth is misrepresented and misunderstood until its worth is proven and men are made to see that they have been striking the hand that would bless them.

We have here in our own city a great number of people who would gladly testify that Christian Science is giving them a truer, brighter sense of life, and is making them healthier, happier, and more useful. Personally I came into Christian Science for the physical healing, and I have been abundantly satisfied. I feel very grateful to God for giving us this great truth.—*Lancaster Gazette.*

PUTNEY, ENGLAND.

On Nov. 28 a lecture, under the auspices of the Putney Christian Science Society, was given at Wandsworth Town Hall by Bicknell Young, a member of the Christian Science board of lectureship of The Mother Church, Boston, U. S. A. A. H. Adamson presided.

The chairman said he was pleased to welcome so large an audience to the first lecture on Christian Science to be given in the large borough of Wandsworth. It had been hoped that the lecture would be given in Putney, but the long-felt want of a public hall in Putney made it necessary to invite the audience here. The lectures which were being given in this country and throughout the world were organized by the various local Christian Science churches and societies in order that the public generally might have the opportunity of hearing something about Christian Science from those qualified to speak on the subject. Christian Scientists realized that an effort to help others in this way was the best proof they could give of their gratitude for the many benefits that had come to them through the study of Christian Science. He had first heard of Christian Science at a lecture given in St. James' Hall about eight or nine years before, and it was because he did realize what a great help it had been to him that he had particular pleasure in introducing to them the speaker of the evening.

Wimbledon Park and South Fields News-Letter.

MACOMB, ILL.

Prof. Hermann S. Hering lectured for our society on the evening of Dec. 1. He was introduced by the Hon. J. Ross Mickey, who said in part,—

It is my privilege this evening, at the solicitation of some of my friends of the Christian Science faith, to preside at this meeting. I esteem it a pleasure and an honor for the reason that I am not an adherent of the faith and know very little of Christian Science. I have, however, been in close touch with neighbors and friends who are already allied with it, and have been impressed with their calm and gentle demeanor, and with their courage and equanimity in facing and solving the grave and serious problems of life with which they are daily confronted. In my travels also I have frequently come in contact with strong intellectual men who believe in it and practise it, as shown by their habits, culture, refinement in conversation, and all those traits which go to make up a well-grounded and well-rounded character. These things have impressed me, and no doubt they have likewise impressed many of you with the thought that there must be some great underlying truth which appeals to and develops the good that is in all men and women. But, like all other new doctrines, Christian Science has met with strong opposition and probably with much misrepresentation, and it has ever been thus in the world's history of the enthronement of great achievements.

Correspondence.

ST. JOSEPH, MO.

A lecture on Christian Science was delivered by William R. Rathvon for Second Church Dec. 7. He was introduced by Claude L. Hutchison, who said in part,—

For centuries man has been seeking knowledge of his true relation to God, and ever since the three wise men followed the star which symbolized, as it were, a new light to humanity, and came to the humble place where the human child Jesus lay, representing the divine idea of an omnipotent God, man has steadily advanced to a higher understanding of his real heritage. Less than fifty years ago Mary Baker Eddy, by interpretation and illumination of the Scriptures, gave to the world, or rather discovered that which has always existed, a spiritual law which is ever present and operative. According to her teachings, God is Principle, absolute and perfect, embodying only the qualities of good. That God is Mind, and Truth, demonstrable here and now. Is it surprising that thousands are coming into this new liberty of thought? All history teems with the sweet song of human freedom, but it also records the sweeter song of religious liberty.—*Correspondence.*

WASHINGTON, D. C.

An audience so large that many remained standing for more than an hour and a quarter, listened to a lecture on Christian Science yesterday afternoon [Dec. 10] at the National Theater. The lecturer, Clarence C. Eaton, was introduced by Senator Works of California, who said:—

These lectures are not intended to assail or question any other religion or any other mode or system of healing. We are not trying to build up our religion by tearing down any other religion. Our religion teaches us to be charitable and tolerant to all differing opinions or beliefs. We are endeavoring to build up a world-wide religion of brotherly love. We stand in our religion for absolute freedom and independence. We stand for liberty of conscience, liberty in religion, in politics, in medicine. We realize the fact that other churches and other representatives of religion that differ from ours are doing good. It is no purpose of ours to belittle the work that they are doing.

There is much sorrow and suffering and disease in this world, and there is work for all of us to do. While we are trying to teach the world that there is just one omnipotent power by which disease can be healed, we must recognize the fact that we have not yet convinced the world of that great fact, and therefore we recognize their rights, until they believe as we do, to resort to their own means of healing. These lectures are intended to bring home to the people the better understanding and realization of what Christian Science is and what it teaches.

Washington Herald.

LAKEWOOD, OHIO.

On Sunday afternoon and evening, Dec. 3, Frank H. Leonard lectured on the subject of Christian Science at McCaskey's Hall. He was introduced in the afternoon by the Hon. J. B. Coffinberry, mayor-elect, who said:—

We have gathered here today to listen to a lecture upon a subject that many seem pleased to refer to as a new religion. I have given, or tried to give, the writings of Mrs. Eddy some attention, and I am led to believe that instead of Christian Science being a new religion, it is the same simple, good religion that was given to the world by our Lord Jesus Christ; clothed, however, in garb that to many at least seems more attractive than that in which advocates of the old schools in their long and honest efforts have succeeded in clothing it. While I do not pretend to know enough of Christian Science to assume to speak of it with any degree of authority, I believe I am safe in saying that an effort upon the part of any of us to learn more of it can work no harm; and further, I believe that to those who make the effort there will come the hope that in a further trial they will learn to know what Jesus had in mind when he said, "Ye shall know the truth, and the truth shall make you free." I believe there will come to us, through this teaching, messages of substantial happiness, happiness that can be found this side of the grave.—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice it is assumed that the lecture will be given in the evening.

Ashland, Ohio.—Virgil O. Strickler, Opera House, March 8.

Canton, Ohio.—Virgil O. Strickler, Grand Opera House, 3:15 p.m., March 10.

Dorchester, Mass. (auspices Roxbury Church).—Rev. William P. McKenzie, Whiton Hall, March 11.

Elyria, Ohio.—Virgil O. Strickler, Church Edifice, March 11.

Evanston, Ill.—Virgil O. Strickler, Church Edifice, Chicago avenue and Grove street, March 14.

Hamilton, Ohio.—Bliss Knapp, Smith's Theater, 3 p.m., March 10.

Los Angeles, Cal. (Churches and Societies).—Willis F. Gross, Shrine Auditorium, Sunday afternoon, March 10; Third Church Edifice, 734 S. Hope street, March 11; Elks Hall, San Pedro, March 12.

Merced, Cal.—Prof. Hermann S. Hering, Barcroft Opera House, 3:30 p.m., March 10.

New Castle, Pa.—Frank H. Leonard, Sunday afternoon, March 10.

Pacific Grove, Cal.—William R. Rathvon, Work Company Hall, March 11.

Reno, Nev.—William R. Rathvon, Majestic Theater, March 14.

Sacramento, Cal.—William R. Rathvon, Clunie Theater, March 15.

San Rafael, Cal.—William R. Rathvon, Red Men Hall, 803 Fourth street, Sunday afternoon, March 10.

University of Illinois, Champaign, Ill.—Bliss Knapp, Chapel, University Hall, 3 p.m., March 3.

Watsonville, Cal.—William R. Rathvon, I. O. O. F. Hall, March 12.

TESTIMONIES OF HEALING.

Christian Science was first brought to my notice over ten years ago, by friends who had learned that I was to be operated upon. They came to our home and wanted my husband to try Christian Science first; at which he became very indignant, saying that Christian Science might be all right for some imaginary sickness, but that my trouble was serious and that our family doctor, in whom he had the utmost confidence, said nothing short of an operation would relieve me. Accordingly within a few days I was taken to a hospital, and operated upon. It was all of six months before I could say that I was even fairly well, and I still suffered terribly with bowel conditions. I suffered in this way at intervals for four years, using every known remedy, some of which relieved for a short time; but as I failed to gain anything but temporary relief, like many others I turned to Christian Science as a last resort.

I had been told many different things respecting my case, by different physicians, one declaring that it was a rupture on the side where I had been operated upon, for which I would have to wear a truss or risk another operation. I am thankful to say that I did neither, but instead called upon a Christian Science practitioner, one whom I had known for many years and loved dearly as a friend. My case was very slow to yield, but I now realize that it was my own fault, since the physical healing was all I then desired. I took several weeks' treatment at that time, and was much benefited, though I still suffered greatly at times.

About a year and a half later, I retired feeling as well as usual, but awakened toward morning with a numbness in my foot and leg. I arose as usual, but the numbness continued up the entire left side, and extended across the abdomen. I at once called up a practitioner (this was on the 4th of June), and it was September before I could walk even a distance of four blocks. I continued to improve slowly until the last of January, when I had a repetition of the trouble, though on the right side this time, affecting the right arm as well. I not only lost the use of it, but suffered agonies, with an inward sensation. Once more I asked for help, but as before the disease seemed slow to yield. Finally my husband said I should have a doctor.

At that time we lived in a small town where there were four doctors, and we had all of them; but none of them had ever heard of a case like it. We then came to Spokane, but met with no better success. Some advised a lower altitude, so I was sent to Seattle, but there conditions seemed to grow even worse. So I consulted the best doctors there, and was given a thorough examination, after which the doctor wished to make some study of the case, before giving me an opinion. I learned afterward that the state medical board was in session at the time, and that my case was there discussed. The next day I was asked by my doctor, "Do you want to know the truth?" to which I replied that I most certainly did. I was then told that I had a most serious spinal trouble, of which there was no known cure; that in over twenty years of practice, including many years of hospital work, he had never seen but two cases. I was also told that I could not even hope for any improvement, but that I would continue to grow worse, as new complications would set in; that I would in time become helpless, and would without doubt suffer agonies before death relieved me. I then wrote to my husband what had been told me. Had I not known something of Christian Science, I would have taken the doctor's verdict as the truth; but in my own mind I knew from previous experience that "man's extremity is God's opportunity," and all I needed was my husband's consent to go back to Christian Science. This he was only too glad to give, and he has never since asked me to have a doctor, even though I have gone through two very serious attacks with my head.

I wish to say to those whose healing seems slow, Do not be discouraged, for it will surely come if we but strive to follow in Jesus' footsteps, and (as directed by our Leader) give thanks daily and hourly for the blessings already received. We should also thank our heavenly Father for placing in our midst one good and pure enough to prove to us that the day of miracles is not past, as we have been taught to believe, but that the same truth which Jesus used to destroy sickness and sin can be used today if we but "ask believing." To most of us who know even a little of Christian Science it has been proved that "God is no respecter of persons." I now have perfect health, with not a trace of any of the former ills, and my daily prayer is *that I may* be guided so to live as to be worthy the name, a Christian Scientist.—MRS. GEORGE WHITCHER, Spokane, Wash.

I have always been a lover of the Bible, and as a result engaged actively in church work, and was a Sunday school superintendent for ten or twelve years. I had however such poor health that I finally got discontented and discouraged and gave up church and church work, but I asked God to help me. This was all my prayer until Christian Science found me. Through frequent visits to schoolmates of my former days, who are now Christian Scientists, I was induced to investigate this teaching. I bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, also the *Quarterly*, and began to study. My first impressions were that it was only one who was very near to God who could have written such a book. My health began to improve, my business began to improve, I was bettered in every way. Then one by one I procured Mrs. Eddy's other writings, until I have nearly all, including the Concordance to Science and Health. I also take the *Monitor*.

It is now about seven years since I began to study, and I have read little else. How to prove the allness of God, good, in the face of seeming evil was a difficult problem for about five years; then, as I began to understand God's spiritual creation and saw that man must be spiritual and perfect, thought was enlightened, and a higher consciousness reached. It was like opening the door to the spiritual universe, where "Love is impartial and universal in its adaptation and bestowals" (Science and Health, p. 13). I like to dwell on the thought of a spiritual universe pure, perfect, sinless, without limitation or monopoly, and desire most the companionship of those whose consciousness has ascended to the Father.

I have seen tribulations many, and poor comforters were all my former beliefs until Christian Science found me, but now by God's blessing, through the sublime teaching of Mrs. Eddy the crooked places are being made straight and the rough places plain. My father had passed away from what the doctors termed paralysis, and I was living in dread of the same fate. I am doing a traveling business with a team of horses, and one day, a few years ago, while driving along the road, I was suddenly seized with terrible distress in the head, and fearing that I might die in the wagon I got out and walked alongside until I was recovered sufficiently to resume my work. I knew little or nothing of Christian Science at that time, but since taking up the study of it these fears have all left me, and I can now do my work without fear or worry. I am far from any church, but I am studying Christian Science alone with God, whom I am learning to know as divine Principle.

I thank God daily for our dear Leader's life and labors. I am also thankful for all the Christian Science workers, the editors and contributors to our periodicals. God is blessing them, also all in whatever office they may labor in God's vineyard. The spiritual interpretation of the Scriptures by Mrs. Eddy is the joy of my life, and my earnest desire is that her people shall be my people, and her God

Digitized by Google

mine. These first lispings of gratitude, from a lone learner, are forwarded in the hope that God will cause them to grow and increase.

ALEXANDER BOWIE, Balsam Lake, Ont.

[Translated from the German.]

I am very happy to tell my fellow men and seekers after Truth of the good which I have received through Christian Science as given to the world by Mrs. Eddy. When evil manifests itself in its various forms in our experience, we seek help from our fellow men while praying to God to deliver us, or at least to relieve our suffering. Thus it was with me. At the age of fifteen, when learning a trade, I began to suffer from a disease of the bone of my left leg. In October last I reached the age of fifty-one, and until three and a half years ago I had always resorted to material means for relief until I found help through the reading of a copy of *Der Herold der Christian Science*.

The disease mentioned always seemed to me like a volcano; a seeming calmness would always be followed by an eruption, the outbreaks becoming more violent as time went on. The more advanced a disease and the older a man is, the more impotent will human help be found. This I experienced a few years ago. The physician then in attendance told me: "It is no use, your leg will have to be amputated. There are many people with artificial limbs who can walk better than you are able to do now." My leg was not amputated, however, as a homeopathic physician whom I consulted dissuaded me from having the operation performed. The disease, he said, could not be removed by amputating the affected limb, and I would regret it if I submitted to the operation.

I continued under his treatment for some time, without success; and in my extremity I turned to God. After I read the *Herold*, I immediately wrote to the Christian Science practitioner in the nearest locality, which is Basel, in order to consult with her. And behold the result! After the first treatment the pain ceased, and on the third day I wrote to the practitioner that she could rejoice with me over my improved condition. The spiritual seed had not fallen on barren soil. Where material means had failed, the spiritual had succeeded. The recognition of the truth and striving after it gradually expels all evil, for where good is, evil must withdraw, and it makes no difference what the work or profession of a man is, whether he is employer or employee—good results must follow. Without this help I would be a cripple, but through Christian Science I am able to work today and to go around like any normal and healthy person. What a blessing it is to discern God and one's true selfhood! If evil were a part of God's creation, we could not expel it through either material or mental means.

The recognition gained through Christian Science, that God is good only, the infinite, ever-present Mind in whom we "live, and move, and have our being," has enabled me to overcome disease in several instances in others, so that my wife and daughter, not understanding how the work was performed, marveled. I consider that I can best thank God for the blessings received in following the law of God as taught in Christian Science, and in trying to discern the nature of God as Spirit,—to love Him above all, and my neighbor as myself. Then will the seed bear fruit an hundredfold.—GEORG AENIS, Binzen (Baden), Germany.

As a result of exposure in a severe storm when about the age of twelve, I experienced a serious illness, which left me in delicate health, a condition that continued during the remainder of my schooldays and for several years after I entered upon the work of teaching. It seemed necessary for me to be very careful in regard to food, to avoid drafts and night air, and to refrain from unnecessary exertion. My vitality was said to be very limited, and occasionally during the year I was confined to bed under medical care for several days—sometimes weeks—together. A time came when discordant conditions gave rise in me to unkind, condemnatory thoughts, which so intensified my ill health (as I have since realized) that I felt I must have some help more effectual than that received through *materia medica*.

My attention was directed to Christian Science, and I decided to try it, unknown to my relatives. I was greatly opposed in my course by a friend to whom I confided my intentions, but I secured the help of a Christian Scientist, and faithfully read "Science and Health with Key to the Scriptures" by Mrs. Eddy. Gradually strength and health were restored, and in the years which have elapsed since I turned to Christian Science for help, no other remedy has ever been employed but that of truth—the truth demonstrated and taught by Christ Jesus, and again brought to the attention of needy mankind by our Leader, to whom the world owes much gratitude; for in proportion as this truth is understood and demonstrated it not only heals disease, but comforts, sustains, purifies, uplifts.

MISS L. I. MOULTON, Milwaukee, Wis.

For some time I have been wanting to tell others how thankful I am that Christian Science found me. The blessings received during four years have been so many that it would take too much space to enumerate them. One blessing, however, stands out prominently among all the rest; that is, I have been entirely healed of chronic throat trouble. I have had no special treatment in Science for this, but the ailment has disappeared, and for over two years past I have been absolutely free from it. I attribute this delivery from error to the understanding I have gained from the study of "Science and Health with Key to the Scriptures." When a small child I had swallowed very hot food, which resulted in an injury to my throat and extreme suffering. I was unable to take any solid food for some time, and was practically all my life after subject to a throat trouble, rarely being entirely free from it during the winter months. It is no wonder that I am grateful to God, also to our dear Leader, for this wonderful truth which frees from error of all kinds.—FLORENCE KEEN, Vista Grande, Cal.

The *Sentinel* is ever welcomed by me with joy, and as I am always anxious to pass it on to comfort another hungering heart, through it I would like to send a few words of cheer as a slight expression of my gratitude for this divine Science.

At the age of twenty-nine, I seemed to have lived my entire life, and felt that there was no suffering left, either mental or physical, for me to know. I prayed for death, that I might join my husband, babies, parents, and other loved ones gone before. I was also suffering from the after results of a severe form of the disease known as "milk-leg," a nervous affection, bowel trouble, and failing sight,—having worn strong glasses for fifteen years. Through the aid of a loving messenger of Truth I have been wonderfully helped and healed, and so has my sister, of nervous and stomach trouble, also of imperfect sight. We are Southerners, from Barbados, B. W. I., and are now "warmed by the sunshine of Truth and watered by the heavenly dews of Love" (Miscellaneous Writings, p. 343). We hope to prove worthy followers of our beloved Leader.

IDA W. INNISS, New York, N. Y.

When I read the testimonies in our periodicals, I think of the many blessings which I have received through Christian Science, since I first became interested in it, over four years ago. I have been benefited in many ways; I was healed of severe headaches through the reading of "Science

Digitized by Google

and Health with Key to the Scriptures" by Mrs. Eddy, and this truth has also helped me to overcome envy, discouragement, and many other discordant conditions. I had always read the Bible, but never could make its teachings practical until I began to study our text-book, which is indeed a "Key to the Scriptures," for it enables us to "prove all things," and to "hold fast that which is good."

I also wish to express my gratitude to our dear Leader, Mrs. Eddy, for the by-law which enables those under twenty to attend the Sunday school. This was the greatest privilege of my life, and I shall try to express my thankfulness not only in words but in deeds.

EMMA M. MUEHLENHARD, Cincinnati, Ohio.

I am deeply grateful for the marvelous healing which came to me through Christian Science. I had injured my left ankle, and applied a powerful drug which caused a smarting pain. This became so intense, the chemical having penetrated to the bone, that I sent for the family physician, the pain having increased so that I was obliged to go to bed. He did all he could, but I got no relief, the leg being swollen to the knee, and poisoning had apparently set in. Twice a day the wound was dressed, but I was growing steadily worse, the medicine giving no relief. For a week I suffered terribly, and the sight of the wound was so dreadful that while it was being dressed every one had to leave the room.

My sister was then just beginning to take Christian Science treatment, and I asked her if she thought I, too, could be healed. She replied affirmatively, and said that if I so desired she would speak to her practitioner about me the next morning at church. Directly after the service the lady treated me, and when my sister returned from church I told her I felt very much better in every way. That afternoon I got out of bed and dressed myself unaided. The next morning I came down to breakfast, the following day went out into the garden, and in ten days' time went to Boston on a shopping tour of several days. My healing was instantaneous, for the pain began to leave immediately when I was first treated and before I felt conscious that I was being treated. The wound healed quickly, but the pain vanished at once into its native nothingness.

My healing seemed to be a miracle, but I know now it was in accordance with divine law. I am, however, more grateful, if such can be possible, for the spiritual aid I have experienced and which has been the greatest help I have ever known over material difficulties, a never-failing source of help for comfort and peace. Fears of certain diseases have disappeared, and the assurance of divine protection, of God's care, I now in a measure realize. I have been in Science only a short time, but it has brought much happiness and harmony into my life.

NANNIE SAXTON WILLARD, South Portland, Me.

Christian Science has been a great help in our family for the past five years, in cases of rheumatism, tubercular disease, hay-fever, and curvature of the spine; other ills have also been overcome by the faithful application of the teachings of Christian Science. One case of healing which particularly pleased me was that of the overcoming of the effects of poisoning. While away from home I was attacked by that which in *materia medica* is termed ptomaine poisoning. The suffering at times was very intense, although by the application of my knowledge of Christian Science I was able to keep about my work and no one in the house knew that I was ill. A friend who lived in the same house, and who took her meals at the same hotel at which I did, but who was not a Scientist, was attacked in the same way and was very ill for about two weeks. A doctor traced the cause of the trouble to some fish of which we had both eaten one noon. My suffering lasted only about two days, and the contrast between the two cases caused me to appreciate more fully what Christian Science really means in cases of physical healing. This is only one of the many proofs of the power of divine Truth to overcome all discord for which I am very grateful.

The physical healing is but secondary to the spiritual uplifting which we have experienced in our family, and we are more grateful every day for the great blessings that have come to us since we have taken up the study of Christian Science. We know that our gratitude can best be expressed in our lives, in obeying the commandments of our Lord, and helping our fellow men.

EDITH M. BRADLEY, Wauwatosa, Wis.

I wish to express my gratitude to God, also to our beloved Leader, Mrs. Eddy, for the benefits I have received through Christian Science. I have been healed of headache, neuralgia, the tobacco habit, the social drink habit, and profanity. But with all this healing I am more grateful for the spiritual uplift, which has given me a desire to know more about God and to live an honest, pure, and upright life. It certainly has been proved to me that "Christian Science brings to the body the sunlight of Truth which invigorates and purifies" (Science and Health, p. 162).

I have passed through deep waters since I became interested in Christian Science, but divine Love has always sustained me. I wish also to express my gratitude for the encouragement which I have received from Scientist friends. While I have yet many errors to overcome, I know that if I keep my face continually turned to the light, I shall receive my reward.—ARTHUR D. HEALEY, Boston, Mass.

Over five years ago I came to Christian Science for healing from sorrow, having lost two little ones in eleven months' time. In losing them I also lost my God, whom I then believed to be a God of affliction. Now I am learning of a God who is Love, omnipotent, omniscient, omnipresent, a God who does not afflict any of His little ones. The Bible, and "Science and Health with Key to the Scriptures" by Mrs. Eddy, are now my daily companions. The Bible is a new book to me. It is indeed an open book, illumined by "the Spirit of truth."

I thank God for His love and tender care, and for giving us Mrs. Eddy to point out the living way. I am thankful for the Christian Science periodicals, and to those who have so lovingly helped me to find God. I write these lines, hoping they will lead some one to find comfort in Christian Science, as I have done.

MRS. ELLA WOESSNER, Corpus Christi, Texas.

After having had twelve physicians work on my case of severe stomach trouble, and after spending months in a sanitarium and weeks in a hospital, I decided to investigate Christian Science. I had been a church-member since I was a child, and had always heard Christian Science criticized and lightly spoken of, so I had but little faith in it until I called upon a practitioner, and after talking with her a short while was convinced that it was indeed the truth, and I would try the treatment. The physicians had told me that my stomach would never be well again, as it seemed to be greatly injured by the strong drugs which I had taken. I had not been able to eat any solid food for a year, but after receiving three treatments in Christian Science I was able to eat a hearty supper, and have been able to eat anything that I wished to ever since.

On another occasion a severe attack of toothache was relieved in one treatment. I also had a very large tooth extracted without pain under Christian Science treatment, although the dentist insisted it would hurt me unless he used an anesthetic. Later, I had an attack of acute lung

Digitized by Google

trouble, and at first I had great fear about my condition, but I called on a faithful practitioner who had helped me in the cases before mentioned. After spending two nights and two days in bed, on the third night, after eating my supper, I got up, dressed myself, and went to a Wednesday evening meeting, where I took an active part, knowing that our every need is supplied by divine Love.

I am very grateful for what Christian Science has done for me, and for the higher knowledge it has given me of the God who is Love, "the same yesterday, and to day, and for ever."—MRS. D. S. STONE, St. Augustine, Fla.

[Translated from the German.]

I wish to give thanks to God for the many blessings which I have received through Christian Science. A year ago, when I first heard of it, I had just undergone an operation, and everything seemed to be well, when, upon taking up my work I had a severe relapse, and the physician told me that I would never be able to do heavy work again. It seemed as if I could get no relief, and the pain was unbearable. A kind neighbor then went to a Christian Science practitioner, who came to see me immediately, spoke words of comfort, and gave me an absent treatment that same evening. I slept much better during the following night, and after a few days the pain disappeared entirely, so that I was able to take up my work again. I now enjoy better health than ever before in my life, and I am deeply grateful for all the good that I have experienced through Christian Science. I could tell of many more experiences of how God's love and presence has been revealed to me almost hourly, and I thank Him with all my heart. I am also grateful to our revered Leader, Mrs. Eddy.

WILHELMINE WERNER, Berlin, Germany.

It is with the deepest gratitude that I give my testimony to Truth's healing power. I was an invalid for more than twenty years, suffering intensely at times. One of my complaints was chronic bowel trouble for nine years, the pain being at times so great that I was unable to help myself. We then called in a physician, but he could only give me temporary relief. I was told by several of the best doctors of our town that the only sure cure would be an operation. I also suffered with dizziness and headaches, the pain being very severe.

When I decided to try Christian Science all my ills were overcome in two treatments. I have not taken any medicine for over two years, and can truthfully say that I am healed. I am indeed most thankful to God, divine Principle, to Christ Jesus the Wayshower, also to our Leader, Mrs. Eddy, for giving us "Science and Health with Key to the Scriptures."

MRS. LILLIAN J. BARBER, Allentown, Pa.

[Written for the *Sentinel*.]

LOVE OMNIPOTENT.

MARY BEECHER LONGYEAR.

LOVE'S eyelids never close,
All good God sees;
Love's ears can only hear
Life's harmonies;
Love's mouth uncloses only
The truth to speak,
Whose perfume spreads abroad
To charm the meek.
Love is the power divine
That conquers pain,
And man as Love's own child
With Him doth reign.

FROM OUR EXCHANGES.

[Rev. Charles R. Brown in *Congregationalist and Christian World*.]

"Then," the narrative says—in the hour of wondrous uplift and quickened spiritual consciousness—"was Jesus led up by the Spirit into the wilderness to be tempted of the devil." Right in the face of that open heaven, with the divine voice sounding in his ears and the mighty baptism of the Spirit possessing his soul, he was hurried away and for forty days he saw nothing but the desert and the devil and the wild beasts. "Forty days!" We are familiar with the use of that term "forty" in Scripture where the exact number was not known. We often say, "I have told you forty times"—meaning thereby an indefinite number of times.

"And he was there in the wilderness forty days tempted of Satan." How long did this temptation of Jesus continue? His time of trial, too, was for an indefinite period. I have a feeling that the testing of his strength reached all the way to Calvary and the cross. He was tempted in all points and from all sides, "like as we are." He learned obedience by the things which he suffered. His ability to say, "Thy will, not mine, be done," in that supreme hour was an achievement rather than an original endowment. He faced and fought the enemies of the divine purpose not in one single dramatic hour, as a hasty reading of the lesson might indicate, but throughout his whole career, as he went forth to bear witness to the truth and to accomplish the will of Him who sent him.

It is the common lot, and even the Son of man was not exempt. Hard upon the dramatic experience, the inspiration of some moment of high privilege lifting us to the very mountain top, comes the necessity for moral testing and the obligation for patient effort in the dusty plain below. But the real test of the final worth and validity of any high experience comes when we inquire as to whether it can be carried from the mount of inspiration out upon the plain of useful achievement and on into the deserts of difficulty. Will the sense of an open heaven, a descending spirit, and the feeling of divine approval endure for forty days, for forty years, for an indefinite period, enabling us in the strength of that meat to put down evil under our feet? The ultimate value of any high mood is revealed as it finds or fails to find expression in those terms of useful achievement which have to do with the coming of the kingdom of God.

If those who have eyes to see and ears to hear and hearts to understand had been present, they would have witnessed a struggle where the supreme soul in history was wrestling not against flesh and blood but against principalities and powers, against the rulers of dark suggestion, against spiritual wickedness in high places. And they would also have beheld a spiritual victory and ministering angels rejoicing with him who overcame.

[*Universalist Leader*.]

In a recent number of the *Churchman*, the Rev. Dr. S. D. McConnell has written an article in which he changes the usual formula, and instead of wondering why men do not go to church, he wonders why they do! He recognizes that a great many do still go, and finds some reasons in formed habits, a sense of obligation, but really because under these reasons there is the ethical and universal desire to acknowledge in some form the presence and pressure of the eternal mystery. "This," he says, "will no doubt draw men to church a long while after they confess to themselves that they obtain neither pleasure nor profit beyond this."

One of the most radical of statements made by Dr. McConnell is that his experience of the last half dozen years has led him to the conviction that "the provision for

Digitized by Google

public worship is almost totally unfit to satisfy the elemental human need which has all the ages led men to say, 'I will go up into the house of the Lord.' The sober fact is," declares Dr. McConnell, "the hungry sheep look up and are not fed. That men are giving up church-going in large numbers can no longer be denied. A hundred explanations have been assigned. One reason at least is plain—they do not believe that what they get is worth going for." Is it more than natural that men, having been fed on one sort of thing during the week, should want something different on Sunday? Have they not a right to ask for a new point of view? Will they not work at whatever is given them to do upon the earth all the better for a little glimpse of a real heaven?

Some time every man feels the longing for a bit of genuine soul-satisfaction, and if he knows where he can get it he is pretty sure to think it worth going for.

[*Christian Work and Evangelist.*]

Today's demand is for a religion that will fit life. Revision of dogma has brought rejuvenescence of ethics; and the result is that religion begins to assume a more cheerful and engaging appearance. On all sides is heard the cry for positive teaching and definite morality; an age grown weary of religious mechanicals is demanding assured reasons for faith and conduct; waiting for expositions of social duty that will come with the force of revelations, and for the enunciation of religious motives that will at once command the assent of the mind and stir the passions of the soul. Divorce between religion and life is at an end. As long as religion was confounded with theology it held a place apart from ethics and life.

Swift transformation is taking place. Religion is coming to be regarded as a spirit and temper, an attitude and direction of soul, an impulse and tendency toward righteousness; and with this change of conception the divorce between thought and ethics is beginning to disappear. Startling discrepancies between the act of worship and the conduct of daily life are being repaired. The ethical law is being defined more distinctly and applied more rigidly to the business and even the pleasure of life. A more searching and thoughtful attention is to be given to the significance of every action.

[*British Congregationalist.*]

Only in some form of spiritual idealism can man truly rationalize the best powers of his nature or the world be adequately interpreted and understood. And yet, while such is the trend of the best thought of the age, in actual life we find that the great social movement in the main is purely economic. It is treated as end, and not means; moreover, the vast masses of the people are mastered by the visibles, and seemingly unstirred by any great spiritual passion. Prudentialism is the dominant ethic, and the men who are staking life on the ideal are few and far between. Here lies our challenge and our judgment. Never did the church of Christ face at once a more significant and a more trying situation.

[Rev. W. E. Orchard, D.D., in *Christian Commonwealth.*]

It is, therefore, my confident belief that Jesus had no more to light his path than that which every man possesses in his own soul. His life and personality simply reveal how sufficient that is if we care to make all rest upon it. That is really his gospel, but we are always striving to find something else to take its place, or some other argument for its support. And that is where his gospel comes home so mightily to our own age. Back to this the discipline of our age is driving us. And this is no loss, but only infinite gain; for it is here that we discover ourselves, our dependence upon God alone, and our task to overcome the world.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume, "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The lecture entitled "Christian Science: Its Principle and Method," by Bicknell Young, has been translated into both Swedish and French and is now ready for sale in pamphlet form. Another French translation recently made is the lecture "Christian Science: The Comforter of Promise," by Frank H. Leonard, which is also printed in a new pamphlet in French only.

A new pamphlet has recently been issued entitled "Christian Science *vs.* Finite Sense," a lecture given by Francis J. Fluno, M.D. 32 pages.

A lecture by Willis F. Gross, entitled "The Gospel of Freedom," has been published in pamphlet form. 32 pages.

These pamphlets will be found listed on the opposite page, with prices for single copies and quantities.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy. Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large sized book), single copy, $8.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $1.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of *Divine* Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.25. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the current month unless otherwise specified, and include all issues for the month named as expiration date on the wrapper. XII indicates the year 1912; XIII, 1913. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $1.00; half calf or half morocco, $1.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25—40: 5 s.: 25.;	Mk. 5.30;	F. 6.45
2.25— 9: 9 : 3 :	9.50;	11.60
2.50— 0: 10 : 3 :	10.60;	12.85
4.00— 0: 16 : 5 :	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

The National Civic Federation, holding its annual convention in Washington on March 5, 6, and 7, considered, for the most part, industrial peace and progress, with special reference to the relation of the employer to the employee, not only in private corporations, but in public utility, government, state, and municipal service. Governors of more than twenty states attended. One of the officers of the federation said that it would have been quite out of the question ten years ago to have interested so many governors in questions intimately concerning human rights, and he gave it as his opinion that the presence of so many of them at the convention could be taken as a sign of the awakening of the public mind to matters which vitally affect the general welfare.

The House steel trust investigating committee has made public the result of the inquiry into the books and minutes of the United States Steel Corporation. The expert accountant reaches the conclusion that the steel corporation operates in restraint of trade and prevents competition through a manipulation of prices, through the influence of the so-called "Gary dinners," by control of raw materials, and through a system of interlocking directors in various companies. It is shown that J. P. Morgan & Co. received approximately seventy million dollars in cash profits for organizing the big steel combine, and that the net profits of the concern for the first nine years of its existence were more than a billion dollars.

President Taft has sent to Congress with his approval the report of the commission on second-class mail matter prepared by Associate Justice Hughes of the supreme court, A. Lawrence Lowell, president of Harvard, and Harry A. Wheeler. The report in general sustains the position of the post office department that there should be an increase in the rate for newspapers and magazines. It advocates doubling the present rate of one cent a pound, making the rate two cents a pound on the bulk of second-class matter. As regards the present cost of the service the commission finds that the expense, exclusive of general charges, is about five and one half cents a pound on paid-at-the-pound-rate matter.

The government's anti-trust suit against six railroads and three coal companies, charged with maintaining a monopoly in restraint of the bituminous coal industry, opened last week before three judges of the United States circuit court of appeals at Columbus, Ohio. District Attorney Harrison of Cincinnati, in his opening statement, accused the banking firm of J. P. Morgan & Co. of having evolved the plan by which the Hocking Valley railroad is alleged to have gained control of the other defendant railroad and coal companies and perpetuated the monopoly which the government claims exists to the present day.

Secretary of Commerce and Labor Nagel has decided to send an agent of the department to Lawrence, Mass., to investigate conditions attendant upon the textile strike in that city. The bureau of labor already in the course of its regular work has possessed itself of a large amount of information relative to wage conditions. This action of the department confirms the position that the government already possesses ample legal authority for making a proper investigation of the strike, and it will preclude the possibility of Congress making political capital out of an investigation of its own.

Colombia has virtually repudiated the action of her minister at Washington, General Ospina, by sending through American Minister Dubois at Bogota a cordial invitation to Secretary of State Knox to visit Colombian shores on his present trip to the republics on the Caribbean sea. The invitation was forwarded promptly to Secretary Knox, who was aboard the cruiser Washington on his way south, and with him rests the decision whether he will change his itinerary to include a call at the port of Cartagena.

The money trust resolution of inquiry, as finally agreed upon by the committee on rules after several weeks of discussion, provides for an inquiry by the banking and currency committee into financial affairs of the country as to what legislation may be necessary, and contains the further direction that allegations against the money power mentioned in Representative Henry's original resolution, turned down by the Democratic caucus, be investigated.

Representative Sulzer of New York, chairman of the House committee on foreign affairs, after a conference with President Taft and state department officials, introduced a resolution believed to be the forerunner of formal recognition of the new Chinese republic by this country. It expresses "the confident hope that in the adoption and maintenance of a republican form of government, the rights, liberties, and happiness of the Chinese people will be secure."

Senator Gardner of Maine has introduced a bill in Congress under which the government will take over properties of express companies and operate them as a part of the postal service, extending the service to the rural delivery. The measure indicates the probable cost of taking over the properties as practically forty million dollars.

An act creating a state commission to regulate public utilities has been introduced in the House of Representatives of Rhode Island.

International.

In the course of his paper on the "North-east Frontier of India," read before the Indian section of the Royal Society of Arts, Col. Sir Thomas Holdich put in a plea for the linking up by railway of India, Burma, and China. Isolated railways and railway systems in the east, he said, lost half their value and significance if they were not projected with the ultimate idea of creating and developing commerce over large and favorable areas, however useful they might be in satisfying the claims of strategy and administration in the immediate future.

Replying to the delegates' invitation to proceed to Nanking to take the oath as president, Yuan Shi Kai last week formally accepted the presidency and undertook to proceed to Nanking as soon as circumstances would permit for the ceremony of inauguration. He feared possible inconveniences if he left Pekin immediately. The delegates will now begin negotiations regarding the constitution, the personnel of the coalition government, and the location of the capital of the new republic. In the opinion of the delegates Pekin will remain the capital.

The estimates of expenditure for the British army for the financial year of 1912-1913, including both effective and non-effective services, aggregate one hundred and thirty-nine million three hundred thousand dollars, or an increase of eight hundred and fifty thousand dollars over those of 1911-1912. The entire increase in the estimates is due to the proposed expenditure by the government on the development of aviation in the British army.

The Italian Chamber of Deputies has passed a bill for the annexation of *Tripoli* by a vote of four hundred and *thirty-one* to thirty-eight. The large majority given the measure was greeted with enthusiastic cheering from the floor of the Chamber and the public in the gallery.

Industrial and Commercial.

According to the *Scientific American* the opening of the Panama canal will effect the following saving of distances for such ships as may choose the new and shorter route: Europe to San Francisco, 6,200 miles, and to Valparaiso, 2,100 miles; England to New Zealand, 1,600 miles, and to Australia, 800 miles. Between American and Oriental ports the saving will be as follows: New York to Shanghai, 1,400 miles; Montreal to Sydney, Australia, 2,750 miles; and between New York and Australasian ports the saving of distance will average about 2,400 miles.

It is announced that two million dollars will be spent this year on telephone construction in Alberta, Canada. The program includes construction of over three thousand miles of rural lines, five hundred miles of long distance lines over new routes, connecting towns along recently constructed railways, and about seven hundred miles additional circuits on existing long distance routes, also a number of new town exchanges as well as extensive additions to existing exchanges.

A recent report of the new conservation commission, which has just been submitted to the New York Legislature, finds that the waters of the state which are under public ownership and control, with the undeveloped water rights in the development of which private interests will have to be taken into consideration, furnish a total flow representing a capacity of one million two hundred and seventy-one thousand horse-power.

Speaking before the Lincolnshire (Eng.) Farmers Association, the president of the board of agriculture, Mr. Runciman, said that with the desire to attract into the agricultural industry intelligent young men, well trained in an agricultural atmosphere, the large sum of three hundred and twenty-five thousand pounds would be expended by the board of agriculture in forming schools and similar institutions.

The annual log cut in the Kennebec region of Maine, reported in part, indicates that it is in the vicinity of one hundred and fifty million feet, which is the heaviest for a long time. The winter, though cold, has been free from drifts and there has been plenty of snow, with only a very few storms, so that logging work has been done under advantageous conditions.

Immense interest is being taken among Cuban sugar planters in the experiment of shipping large quantities of desiccated sugar cane to the United States, to be reduced there instead of in Cuba. This is to be carried out during the sugar grinding season just beginning. Small trial shipments were made last year with success.

Nearly six million pounds of codfish is the annual output of the Pacific coast, despite the fact that Gloucester, Mass., is the center of the world's codfish industry.

The total fire loss of the year 1911 on buildings and their contents in Maine was $7,255,444

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE ONENESS OF PRINCIPLE.

JUDGE CLIFFORD P. SMITH.

THE study and practice of Christian Science unfolds to its students the reality of good and goodness and the consequent unreality of evil and its phenomena; that is to say, as the true sense of good increases, the belief in evil becomes more and more anomalous, unlawful, baseless, unreal. Somewhere along this way a certain question is apt to arise and for a time perplex the student. Its common form is, How did evil originate? It may be asked more at length in this form: Since the universe, including man, is created or caused by one Principle, which is absolute infinite good, how do you account for the occurrence of effects which are inconsistent with this cause or Principle?

Closely examined, these questions imply the existence and action of an evil principle, and they are therefore nothing more or less than a manner of asserting the ancient doctrine of dualism; namely, that the universe is under the dominion of two opposing principles. Hence these questions should be dealt with, not by attempting to answer them in accordance with their implication, but by standing for the one creator and one creation as did Jesus when he was similarly tempted. (See Matthew iv, 8-10.) In other words, such questions should be answered (or abolished) with the scientific realization that as divine Principle is the only cause or creator, evil is unreal.

It is quite true that Christian Science thus denies the testimony of the personal senses; but even human knowledge, as it approaches actual knowledge, is constantly doing this. Modern physical science, for example, resolves the densest matter into ethereal conceptions which are wholly impalpable to the five senses. When Christian Science resolves sin, disease, and death into illusion, humanity should not object, but rejoice. On page 9 of her published sermon, "Christian Healing," Mrs. Eddy says, "Life in matter is a dream: sin, sickness, and death are this dream." Awakening from a bad dream, we do not inquire its origin; we recognize it as illusion. Neither do we ask, How did darkness originate; for we understand that darkness is not an entity. It is equally unprofitable to ask, How did evil originate; our need is to throw off the dream.

The antiquity of this question, its deceptive nature, and the right method of dealing with it, are indicated by the following excerpt from St. Augustine's "Confessions" (written A.D. 397): "For other than this, that which really is I knew not; and was, as it were through sharpness of wit, persuaded to assent to foolish deceivers when they asked me, 'Whence is evil?' . . . At which I in my ignorance was much troubled, and departing from the truth, seemed to myself to be making toward it; because as yet I knew not that evil was nothing but a privation of good, until at last a thing ceases altogether to be."

We should never assent to this question, but should maintain the scientific position that the divine Mind and idea is the whole of reality; evil is a lie and the father of itself. As the proximate result of this process, evil disappears in the presence of Truth; it "ceases altogether to be." Other Christian seers, independent of scholastic traditions, have seen the unreality of evil. Thus Browning in his poem "Abt Vogler" says:

> There shall never be one lost good. What was, shall live as before;
> The evil is null, is naught, is silence implying sound.

The question, How did evil originate? is equivalent to the question, How did mortal man or mortality originate? The latter must therefore be disposed of in the same manner. Throughout the greater part of the Christian era the latter question has been answered by the dogma of the fall of man. Lately this doctrine has been modified, or to some extent supplanted, by the theory of evolution. Christian Science makes no choice between either of these views, for they are equally wide of the spiritual fact. In Science and Health (p. 554) we read: "Any statement of life, following from a misconception of life, is erroneous, because it is destitute of any knowledge of the so-called selfhood of life, destitute of any knowledge of its origin or existence." While disagreeing as to whether man was ever upright, these theories agree that he is fallen or down now, and both of them virtually deny the action, law, power, and presence of a deific Principle able to preserve its own idea; they virtually deny the existence of a creative Mind capable of eternal self-expression.

When Christ Jesus said, "The kingdom of God is within you," he showed that God's kingdom would fail if man should fall. When he said, "As the Father hath life in himself, so hath he given to the Son to have life in himself" (thus implying that God is the life of man), he showed that the Supreme Being would be marred the moment man failed to express completely the divine Life. When he said, "Be ye therefore perfect, even as your Father . . . is perfect," he declared the law which immutably governs man's relation to his Maker. Whoever is prepared to answer the question, What is God? can answer the question, What is man? and no one else can do so. When Christ Jesus overcame sin, disease, and death, thus proving their destructibility, he demonstrated their unreality and separated these negations of being from both God and man; he separated illusion from actual Life, whether as Principle or idea. What enabled him to do this was his "knowing that Soul and its attributes were forever manifested through man" (Science and Health, p. 210).

All problems involved in the seeming deflections of being apparent to the corporeal senses must therefore be solved by examining their claim to reality with the understanding of divine Principle. Evil and mortality are supported only by the testimony of material sense; that is, by the supposed self-consciousness of matter. Interpreting the Master's teaching, the Discoverer of Christian Science has said (Unity of Good, p. 11): "He demanded a change of consciousness and evidence, and effected this change through the higher laws of God. . . . Jesus required neither cycles of time nor thought in order to mature fitness for perfection and its possibilities. He said that the kingdom of heaven is here, and is included in Mind."

THE HUMANITY OF CHRIST JESUS.

ANNE DODGE.

In John's gospel, third chapter, we read: "God so loved the world, that he gave his only begotten Son, that whosoever believeth in him should not perish, but have everlasting life. For God sent not his Son into the world to condemn the world; but that the world through him might be saved." This is a declaration that humanity is saved by and through belief in divinity and the demonstration of this faith, which gives special significance to Mrs. Eddy's statement that "the divinity of the Christ was made manifest in the humanity of Jesus" (Science and Health, p. 25). A careful study of Jesus' life, words, and works emphasizes a humanity rising higher and higher until it disappears entirely in divinity and is replaced by spiritual being.

Jesus was born in a manger, and he submitted step by step to the customs of the age in which he lived, saying, when baptized by John, "Suffer it to be so now; for thus it becometh us to fulfil all righteousness." His ever-ready sympathy for those who were overburdened with the cares of this world, in need or in distress, is expressed in such words as, "He hath sent me to heal the broken-hearted;" "Come unto me, all ye that labor and are heavy laden, and I will give you rest,"—conveying a promise of deliverance to the captives of sense, and reward to those who value spiritual gifts more than worldly ones, seeking Principle rather than personality. Consider the comforting assurances and hope he brought the sorrowing, as when he said: "Blessed are they that mourn; for they shall be comforted;" and when he restored to the weeping widowed mother her only son; to Jairus, his cherished daughter; to Mary and Martha, their beloved brother.

His pitying tenderness was shown toward repentant sinners (those who had suffered for their sins), as in the case of Mary Magdalene, whose sins were completely obliterated by divine Love and the sinner reformed; his parables of the "lost sheep," the "lost piece of money," the "good Samaritan" whose mercy toward the unfortunate was symbolical of divine mercy, and the "prodigal son." The spirit of all this is seen in Jesus' words: "If a man have an hundred sheep, and one of them be gone astray, doth he not leave the ninety and nine, and goeth into the mountains, and seeketh that which is gone astray? And if so be that he find it, he rejoiceth more of that sheep, than of the ninety and nine which went not astray."

When Peter asked, "Lord, how oft shall my brother sin against me, and I forgive him? till seven times?" Jesus replied: "I say not unto thee, Until seven times: but, Until seventy times seven;" and he followed this declaration by his wonderful parable on the method of divine pardon, and how to obtain it by forgiving others as we would be forgiven! Even when nailed to the cross, Jesus interceded for his enemies, praying, "Father, forgive them; for they know not what they do." Divine Love blotting out the sins of the world! What infinite compassion he had for the helpless sick and suffering, a compassion that carried healing in its wings, as in the case of the man "sick of the palsy," who was brought to him on a bed. With what tenderness and helpful sweetness he spoke to him: "Son, be of good cheer; thy sins be forgiven thee," and healed him of his physical ailment! Again, where the woman who had suffered for so many years thought, "If I may but touch his garment, I shall be whole," he turned to her and said: "Daughter, be of good comfort; thy faith hath made thee whole." He did not repulse or judge her for her infirmities, but blessed and healed her because of her faith in the Christ,—his divine power.

Jesus did not break the bruised reed nor quench the smoking flax, but he demonstrated in all ways the power and victory of divine Life, Truth, and Love over every form of error,—sin, sickness, and death. His mission was to present the true concept of God and man as divinely reflected in the true humanity! What a lofty ideal, for us to reflect as in a mirror the divine Principle that blesses, heals, and saves! to redeem sinners and raise the fallen; to relieve the oppressed; to restore to life, hope, and freedom the spiritually dead; to give health to the sick and suffering; to love our enemies; to return blessing for cursing, and lift the world out of the mire of belief in evil into the glorious freedom of the sons of God!

Jesus never acknowledged any condition of sickness, sin or the sinner, as hopeless or beyond the reach of divine power, but steadfastly believed in the omnipotence and efficacy of the redemptive divine Principle, God, even though persecuted, reviled, crucified, for this faith! *In the instance* of the woman of Canaan, who so persistently pursued and cried after him to save her daughter, his disciples begged him to send her away. But he would not, and replied: "I am not sent but unto the lost sheep of the house of Israel." He did not answer the woman's importunities when she called upon him as the "son of David," but when she recognized and admitted his divine sonship in the words, "Lord, help me," his reply to her humble pleading was immediate, and her recognition of his divine power and of her own unworthiness won for her the healing of her child.

In every case where Jesus' divinity was acknowledged as the power that did the work, the healing followed instantaneously as a natural sequence; but where they were slower to perceive that God was the power, the healing was more gradual; and in some places the "mighty works" were not accomplished because they would not accept or believe in his divinity (or Christ nature), which was spiritual and inseparable from God. He referred to this when he said, "I and my Father are one;" and again, "The Father that dwelleth in me, he doeth the works." But when one would have confounded his human personality with his divinity, he said, "Why callest thou me good? there is none good but one, that is, God," showing how sharply he drew the line of distinction between flesh and Spirit, at the same time acknowledging no power for good apart from God.

In following the Master's demonstrations, as he rose higher in the scale of being, it is well to ponder the meaning of each step as mortality disappears and immortality appears: and as we approach Gethsemane (where the human will surrendered to the divine), let us tread with reverent unshod feet, for the ground is holy, wet with the dew of agony, revived with sweet submission to divine will, and the acceptance of martyrdom as the only way to prove the glorious power bestowed on man by his Maker.

He was indeed "a man of sorrows, and acquainted with grief." He prayed that the bitter cup of martyrdom might pass from him, but in meekness said, "Not my will, but thine, be done." Since in that way only could the victory over death be proved to blind and unbelieving mortals, then he must meekly submit to martyrdom that he might prove the truth of his teachings and words! Led "like a lamb to the slaughter," he made no murmur, but carried his demonstration to the summit of Calvary and beyond the grave, that all might know and believe in Life eternal.

We who chafe under daily demands and the fulfilment of human duties, let us not forget that at the supreme moment of his earthly career,—when nailed to the cross, bestowing upon mortals the greatest proof of divine Love and immortality the world has ever known,—he gave his mother into the tender care of his best beloved disciple, "Woman, behold thy son!" and to John, "Behold thy mother!" What a sublime climax to his humanity, what a surpassing proof of his divinity, thus to crown the humane lesson he came to teach mankind with tender solicitude and care for the human mother, although he realized better than any one of less spiritual origin could, the unreality of all human ties.

Digitized by Google

The inspired words, "It is finished," ended this human lesson accomplished for the redemption of humanity by divinity! Yielding to death for our sakes, that he might prove the redemptive power of divine Life over death and the grave, and reveal the great truth that Mind is not subject to death, and that being cannot see corruption or evil of any kind, he rose to a higher, more ethereal form which Mary Magdalene did not at first recognize upon his reappearance after the crucifixion. His personal appearance had changed somewhat, the human being "clothed upon" by the divine,—personal sense melting away, to be replaced by the impersonal, true sense of being; mortality disappearing, "swallowed up" in Life, and death vanquished, overcome in victory!

Let us, then, seek that higher humanity which, as Mrs. Eddy tells us, "will unite all interests in the one divinity" (Science and Health, p. 571), remembering always that the glory, honor, majesty, might, and power, all good, belong unto God, whom man reflects; and let no presumptuous mortal attempt to arrogate unto himself the divine power, or Christ, for this sin is the serpent's argument throughout all ages, "I will make you as gods." Let us meekly obey the Principle and rule laid down by the great Teacher who in his divinity served humanity in every instance, thus working out the ends of good.

WEEDS ROOTED UP.

ALIDA F. JENKINS.

RECENTLY I found in my flower bed, a weed whose staying qualities seemed very tenacious. Every day or two I would find a fresh shoot started, and, as always before, I would pull it up. I do not know the number of times that I pulled up the shoot, but one morning, as a fresh one had made its appearance, it came to me to go farther down. So I dug into the soft soil with thumb and finger, to get a firmer hold, but to my surprise the farther down I went the more firmly the root seemed to be lodged. With the aid of a knife I finally succeeded in dislodging the root, and found it nearly as large around as my thumb and about four inches long. As I looked at it I could but wonder what kind of success I would have had in getting rid of it had I continued simply to pull off the top.

As I held this growth in my hand, I remembered Jesus' words: "Every plant, which my heavenly Father hath not planted, shall be rooted up;" and Truth brought home to me a very searching question, Was I trying to get rid of the error and discordant conditions which seemed to be a part of my problem, as I did that weed? While I have had many beautiful demonstrations of divine Love, and of the efficacy of God's power to alleviate suffering and distress, yet I did not seem to progress as I ought; I seemed in bondage—I was not free. Had I been trying to dispose of these errors which seemed so real without searching deep into my own consciousness for the root-thought, the persistent belief in a life apart from God, which might produce them?

At once I began a searching process which revealed many things that were indeed roots of error and all offshoots of the one big root, the belief that life is material rather than spiritual. While the time thus spent was not pleasant perhaps, yet when I was willing to give up everything that was not of Truth's planting, willing to scrutinize honestly every motive in order to determine its source and to be obedient to God's way, the burdens began to lift, and I experienced a clearer vision of the allness of God, good. I also began to have more love for my fellow men, and one by one the discordant conditions are slipping away into their native nothingness. I trust I have learned well the lesson,—"Stand porter at the door of thought" (Science and Health, p. 392), and to keep my door so carefully guarded that only Truth and Love can find entrance.

SIMPLICITY.

WILLIAM E. BROWN.

ONE of the results of Christian Science manifested in the consciousness of the beginner is an appreciation of simplicity in all departments of life. The natural outcome of conformity to Principle is seen in the simplicity of mental operations, for adherence to Principle necessarily inculcates direct, positive, and accurate thinking, which of itself excludes useless psychologic paraphernalia hitherto considered necessary.

Before knowing of Christian Science, the average mortal does not think from the basis of fixed Principle, and consequently is compelled to do much floundering in his efforts to reach satisfactory conclusions. He is like a rudderless ship—at the mercy of every wind that blows. The student of Christian Science, however, soon begins to realize that his thinking processes are becoming more satisfactory and that successful results are more readily obtained. Following the simplification of thought methods, the student's attention is called to the fact that many of his material possessions are not as important or essential as he once considered them. Many of the books, for instance, which he deemed absolutely necessary in acquiring wisdom, are now recognized as valueless, as they are at variance in their teaching with that of the Bible, and especially the precepts of the only true Master, Christ Jesus. As illustrative of this point, Mrs. Eddy says, on page 18 of "No and Yes," "If the schoolmaster is not Christ, the school gets things wrong, and knows it not."

Christian Science so enhances one's mental faculties, so sharpens perception and perspicacity, so intensifies power of analysis, that he is enabled to pass correct judgment and properly classify all things that enter consciousness as useful or useless, necessary or unnecessary. This fine discrimination in matters pertaining to the material side of existence, such as food, clothing, and shelter, avoids much useless expenditure of time and money. Some one has wisely said that "our affluence is not determined by what we earn, but by what we spend." A philosopher who, after looking through an art and bric-a-brac shop, was asked how he liked the display, said, "I spent a very enjoyable hour, but my greatest pleasure in looking at so many beautiful and novel articles, lay in the realization that I did not need them."

The history of the human family shows mainly that its quest has been for happiness and contentment, and, not knowing wherein these conditions were to be found, it has sought them in materiality, at enormous expenditure of time and money, only to say with the wise man, "All is vanity and vexation of spirit." In Christian Science the student quickly learns what it is that constitutes true happiness, and he is shown a simple, direct method of obtaining it. From this point of awakening, the student's life and existence assume a much more hopeful outlook. He knows exactly what he desires; where it is and how to get it. In place of being overwhelmed with the herculean task of wading through vast arrays of books in his search for Truth, he realizes with gratitude that the grand old Bible contains the essential truth and that the Christian Science text-book points out how this truth may be utilized in all the affairs of life. With this realization comes an appreciation of Solomon's saying: "Of making many books there is no end; and much study is a weariness of the flesh."

With the simplicity that accompanies the growth in Christian Science, time is saved and one is enabled to devote more attention to spiritual study and advancement, and like Mary, to choose that "good part, which shall not be taken away." True simplicity lifts the burden of life in every direction. It simplifies the work of the patient housekeeper, who is no longer compelled to devote time and energy to the concocting of new dishes to tempt jaded appetites. It simplifies in the matter of dress and adornment,

Digitized by Google

thus lessening the burden of the wage-earner, and all begin to realize what it means to come "out of the house of bondage" and to say with the Master, "For my yoke is easy, and my burden is light."

The saving in time, money, and energy, due to simple living, which comes through an understanding of Christian Science enables one to give substantial aid to the upbuilding of Christ's Christianity, and its consequent—the saving of the sick and sinful. The generosity and unselfish labor of Christian Scientists have awakened wonder in the minds of those who are unfamiliar with what Christian Science really accomplishes for the individual. It is not so much that he has more to do with, but that in his new simplicity of life his wants are fewer. Doubtless in many homes, before the advent of Christian Science, the doctor and drug bill was the largest of the family account. Again, in other families, the amusement bill was considerable, and so in every department not only is the expense reduced, but greater satisfaction is enjoyed; true happiness and contentment are found to be within, and can be unfolded without money and without price. A Christian Scientist fully comprehends Jesus' saying as recorded in Luke: "Take heed, and beware of covetousness; for a man's life consisteth not in the abundance of the things which he possesseth."

Truly the Christian life is the simple life, free from anxiety, worry, and care, ever conscious of a loving Father's protection and provision. Christian Science extends to all the possibility of such a life, and says to him who is athirst in the desert of despair, "Prove me now . . . if I will not open you the windows of heaven, and pour you out a blessing, that there shall not be room enough to receive it."

MISSIONARY WORK.

BLYTHE KYSOR.

In reading the testimonies of healing which appear in our periodicals, one may note how many times the writers state that their interest in Christian Science was first aroused by reading copies of the *Sentinel*, *Monitor*, or *Journal*, which friends had sent them from time to time. Furthermore, all readers of our literature must have read articles showing the opportunity there is for activity in the line of right endeavor, through sending Christian Science literature to one's friends and acquaintances after one has read it.

The writer awakened to this opportunity over a year ago, but as many of the articles seemed to apply to a present personal need or some expected difficulty, most of the magazines were filed for future reference. It has since been learned that this method and these motives are unscientific. As each day brings the *Monitor*, with its wealth of good reading matter, and the Lesson-Sermon needs time and thought each day, and as it seems inevitable that an increased mental activity such as Christian Science produces will manifest itself in a more active and useful life, little time or need was found for the rereading of old articles and testimonies. They consequently accumulated during the year, and were finally given away *en masse*.

Current literature seems, as a rule, more readable and attractive when it is of recent date, though there may be just as interesting and instructive articles in old numbers. It is therefore probable that a quantity of old *Sentinels* and *Journals* would not be read with the interest which perhaps the gift of one or two of a current date would awaken. Upon the realization that it was a duty, as well as an opportunity for furthering the activity of Christian Science, the writer undertook to send to some friend each read copy of the various magazines while they were yet fresh and new, and selected numbers dealing with subjects of interest to the person to whom they were to be sent. In order to facilitate matters, a list was one day written out in a memorandum book of various acquaintances who were not subscribers for the Christian Science literature, and from time to time the list was added to. A list of only a dozen names seemed to be sufficient, as it was then possible to forward copies at short intervals to the same person.

It sometimes seemed difficult for various members of the family to read the literature when it first arrived, and so for a time it appeared as if, in order to remail copies within a reasonable time, part of the family to whom it was originally sent would be deprived of the privilege of reading it. It was found, however, that the members of the family thoroughly enjoyed having the articles read aloud at any time. Now they are being read aloud, and enjoyed by the family together, and are then promptly forwarded to some friend. It was found, also, that through an effort to manifest love and consideration, one's neighbors were friendly and seemed glad when occasional copies of the *Sentinel* or the *Monitor* were handed to them. Much interest is awakened in Christian Science through these methods all over the world, and it seems an opportunity not to be lost by any subscriber. The Scripture tells us that if we are faithful over a few things, we shall be made rulers over many.

On page 570 of Science and Health our Leader has given us these helpful words for our encouragement: "Millions of unprejudiced minds—simple seekers for Truth, weary wanderers, athirst in the desert—are waiting and watching for rest and drink. Give them a cup of cold water in Christ's name, and never fear the consequences."

[Written for the *Sentinel*.]

DEATH SLAIN.

BEN. HAWORTH-BOOTH.

Would you the truth decipher and discern
  About the lie of lies? Men call it "death"
  And speak thereof with hushed and fearful breath,
With hearts that faint and fevered eyes that burn.

Men call one dead, and deem his life is o'er
  When in the dust they lay the unconscious head,
  And know not they themselves are blind and dead,
And he they mourn still lives, though gone before.

Men talk of death, though ignorant they be
  That Truth is Life, and more unconscious still
  That Life is Mind: they fain would drink their fill
Of earth's untruth and insincerity.

The lie of lies, the horror of the ages,
  The dark fulfilment of the sensual dream,
  The whirlpool fall that 'whelms the silver stream,
Is fair discerned in Scripture's fateful pages.

To know thy God, to be in close accord
  With Him who lives forever, this is life—
  To live beyond material stress and strife,
To walk in Spirit, ever with the Lord.

And those who know Him not, though they appear
  To pass before thee, they are vain and dead,
  Their light is darkness and their hope is fled
Till they repentant turn to Truth, sincere.

And when thy foes are fought beyond the wall
  Before the sword of Truth, the Scripture saith,
  The last of all thine enemies is death,
And he, like Lucifer the false, shall fall.

There shall be no more tears, the apostle cries,
  Who saw the holy new Jerusalem,
  That lay four-square and glittering like a gem,
And no more pain, nor death—that lie of lies.

SELECTED ARTICLES.

[Editorial in *Victoria* (B. C.) *Colonist*.]

In taking leave of his disciples, Jesus said: "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." This is what is stated in the closing chapter of St. Mark's gospel. If the minister of any Protestant denomination should claim that he could do these things, his orthodoxy or his sanity, and perhaps both, would be called in question. Now and then one meets a minister who boldly says these words are an interpolation, and that St. Mark is not responsible for them. On the other hand, they are quite in keeping with the works attributed to Jesus and to the apostles. The custom has been to allege that "the age of miracles is past," but there are too many well-attested instances to the contrary to warrant any such assumption. There were no forces or influences available to humanity nineteen hundred years ago that are not available now. The failure of people to utilize them is the fault of the people themselves.

Let us for a moment consider the incidents which the church concedes were miraculous. Take for example that incident in Cana of Galilee, when the water was turned into wine. Presumably the marriage feast at which this took place was not a very conspicuous affair socially. If they had had newspapers in those days with society columns, it is doubtful if the event would have been mentioned as a social item. At this feast water was converted into wine. It is quite improbable that any one who was not present would have believed this story, and that many who were there would have thought there was some deception about it. One can easily imagine how others would have laughed at the story; that is, those who represented the ecclesiasticism and learning of the day, assuming of course that they heard of it, which is in the last degree improbable.

To get an appreciation of our own attitude toward the so-called miraculous, we must try to get in touch with the attitude of intelligent contemporaries toward the miracles of Jesus. Suppose that in this morning's *Colonist* you should read that water had been turned into wine somewhere in Canada. Would you believe it? The chances are that you would not; you would probably ask what the paper meant by printing such stuff. You would, if you are inclined to look at things from a religious point of view, be of the opinion that it was very wrong to print such an item. It is very improbable that sufficient evidence could be produced to make you believe the thing happened. It is not suggested that such a thing could happen; that would be to take for granted what remains to be proved. The suggestion is that you may be able to judge from this supposed incident how the great majority of those who heard of the Cana miracle would regard it, if they thought it worthy of attention at all.

A little thought along this line will show how absurd is the claim advanced by some people that a temporary ability to perform miracles was permitted in order that the world might be convinced of the divinity of Jesus. If there had been any such object in the mind of the Almighty, we may be very sure that the demonstrations of His miraculous power would have taken place under such conditions that the world would have been compelled to accept them as proof of what they were intended to prove. Assuming, therefore, that the record of the miracles of Jesus and the apostles is substantially correct,—and that is all which need be claimed for them even by the most orthodox,—it follows that they were performed by the employment of some agency exercisable through what is called faith.

Now the exercise of this power was by no means common then, as it has been by no means common since then. Hence the accounts of the miracles received little credence at the time they took place, and perhaps only served to confirm the impressions of those who, if they thought about Jesus at all, looked upon him as an impostor. The same thing was doubtless true of the attitude of the majority of people toward the apostles. Indeed, if one should say that the progress of Christianity rested more upon the saneness of its ethical teachings and of the promise it held out to people of a life of happiness in another world than upon the accounts of wonderful deeds done by its Founder, the opinion would be well established by facts. As it was then, so it is now. Things are alleged to have taken place which in some respects are identical with the miracles reported in the New Testament; but the rulers and the priests refuse to believe in them, just as they did nineteen centuries ago, and the rest of us fall in line and treat the whole thing as resulting either from unconscious self-deception or wilful deception of others. If some one should come to Victoria tomorrow claiming that he could work miracles, the chances are that we would put him in gaol forthwith. We would not even take the trouble, as the Jews did in the case of Jesus, to trump up semipolitical charges against him.

Of course a great deal depends upon the name you will call things. If any one should say that he cured himself of an illness by faith, we would be inclined to set him down as a self-deceived person of rather weak intellect. On the other hand, if he should say that he cured himself by autosuggestion, we would write an article to the magazines about it. If a man should say that he was acted upon for good by the faith of others, we would look upon him with compassion; whereas, if he should say that he was influenced by mental suggestion, we would believe it. We protest vehemently against the use of the "third degree" by police officers, and we go to the theater and are thrilled by the counterfeit presentment of what we admit is altogether probable. That is to say, we admit freely enough that there are undifferentiated forces which are available to humanity today and can be employed both for good and evil; that is, we admit their existence as long as they are called by high-sounding names and are claimed to be within the province of science, but we will not admit it when they are summed up under the single word faith and are claimed to be related to Christianity.

The conclusion to which this seems to point is that the Christian religion as generally understood does not contain the whole gospel. So far as its ethical teachings go, it perhaps never was more exalted than it is today. So far as its value as a means of personal salvation and social uplift goes, it never was better understood than now. So far as its teachers live in harmony with what they teach, its record never was anything like what it is in this twentieth century. But in respect to the power upon which so much stress is laid in the gospels and the Acts of the Apostles, it is slow in reaching its possibilities. There is apparent much evidence of a change in this respect. Less stress is being laid upon doctrines and more upon the development of a spiritual life. Christianity is progressing as everything else is progressing, but it is the same Christianity that Jesus preached. The world was not able to appreciate it then, and it is not fully able to appreciate it now; but it is coming to do so. A hundred years ago a few men were just beginning to realize the potency of electricity; now we use it for a thousand purposes. It is the same electricity, only we have learned how to use it. So it may be with Christianity. We are slowly beginning to learn what it means, but it is the same Christianity as was preached centuries ago on the hillsides of Judea.

[Frederick Dixon in *Staffordshire Sentinel*, Hanley, England.]

The statement of a clergyman on the subject of Christian Science, in your issue of the 2d inst., is one of those casual *obiter dicta* which, when examined, resolve themselves into

Digitized by Google

nothing at all. This critic explains that he has known certain mental conditions on which Christian Science has acted detrimentally. When this is reduced from a mere general statement to closer examination, what does it really amount to? That there are certain people of more or less deranged mentalities in the world who may have come across Christian Science without profiting by it. Such a statement applies to everything else known to man. You might as well propose to abolish the monarchy, because the asylums have numerous inmates who imagine themselves to be kings and queens. You might as well propose to suppress all religious teaching, because the asylums are crowded with religious maniacs. It would, in short, be probably impossible to name a single subject which has not affected some person of diseased mentality to a greater or less degree unfavorably.

It is quite possible that certain people in this diseased condition have been affected by Christian Science. It is absolutely certain that hundreds of them have been rescued from this diseased condition by Christian Science, and, curiously enough, the one admission which the medical profession and the critics of Christian Science are generally willing to make is, that it is just such cases of diseased mentality which may be most profitably entrusted to Christian Science treatment. The fact is that the critic is, as usual, muddling up Christian Science with hypnotic suggestion, and hypnotic suggestion is, unfortunately, becoming more and more a factor in ordinary medical practice. Now, hypnotic suggestion would really be one of the most dangerous things in the world, because of the belief that it can be used for the purpose of effecting positive evil as well as nominal good, were it not for the teaching of Christian Science that evil has no power, since God, good, is the only power.

What Christian Science is doing, among other things, is showing exactly what mental suggestion is and what it leads to, and because of this very thing it is meeting, as might be expected, with opposition, for it is teaching the world how to protect itself against and free itself from all the arts of mental suggestion. Mental suggestion is no new thing, it is exactly as old as the human mind. Its home is the east, on the banks of the Indus or the Nile. There, in the east, the monotheistic patriarchs, prophets, judges, and kings of Israel met it and fought it. There, in the east, the hierarchy of later Israel connived at its practice and endeavored, just as is the case among the opponents of Christian Science today, to confuse it with Christian healing. There, Jesus met, exposed, and crushed the attempt, in the famous saying, "Every kingdom divided against itself is brought to desolation; and every city or house divided against itself shall not stand: and if Satan cast out Satan, he is divided against himself; how shall then his kingdom stand? And if I by Beelzebub cast out devils, by whom do your children cast them out? therefore they shall be your judges. But if I cast out devils by the Spirit of God, then the kingdom of God is come unto you."

The "vagabond Jews," or exorcists, were the children who preferred to cast out devils by Beelzebub, but whose claim was a house divided against a house, since every one knew that the magicians pretended to work spells of good and evil. Healing, on the other hand, through the Spirit of God, is the acquirement of the Mind of Christ, through the understanding of the absolute unreality and powerlessness of evil. The simple fact is that mental suggestion, in any phase, is anti-Christian, and no matter how vigorous the denial of this may be, to assert the contrary is to remain kicking against the pricks. This exposure of the powerlessness of evil, and consequent assertion of the omnipotence and ever-presence of good, is one element in the teaching of Christian Science, one element in the teaching of the truth which is to free the world, and the world owes it to Mrs. Eddy.

[Ezra W. Palmer in *Durango* (Col.) *Herald.*]

In a recent issue a writer in commenting on health conditions on the Canal Zone, took occasion to say some harsh things about Christian Scientists. The animus of this writer seemed to be because Christian Scientists through Senator Works of California made representations to President Taft to secure a modification of his executive order made some weeks ago which excluded Christian Science practice from that territory.

A former Colorado woman writing from the Canal Zone, whose letters are in my possession, throws some light on this question. She states that the order of President Taft followed soon after the death of a patient from malignant malaria under Christian Science treatment. This was the first case the Christian Science practitioner had lost with malignant malaria, although she had handled from three to seventeen cases daily for the last six years. During the same period the hospitals under government control have lost many cases. During the same period Christian Science has cured every fever known to the tropics, including black water, yellow fever, also tuberculosis of the lungs and other diseases, all for the most part given up as hopeless by the doctors. In view of these facts, it is apparent that a great injustice would have been done had President Taft's order remained in force, and to the credit of his fair-mindedness, the order was quickly revoked, to the discomfiture of those who were prepared to make the most of it.

The attack on Christian Science in the Canal Zone is but another instance of attempts to outlaw Christian Science made in practically every legislative body in the Union. These attacks have not been demanded by public opinion, or by the press, or in behalf of the public health, but have been pushed by the adherents of *materia medica*, who hoped thereby to embarrass Christian Science practice for their own selfish interests. To the credit of our state legislatures, these class appeals have for the most part met the fate they deserved—defeat. The further efforts to discredit Christian Science in the United States by colored reports to the press, based on the President's order of exclusion, have likewise failed, as the revoking of the order has shown how false are the charges against Christian Scientists.

[E. M. Ramsay in *Edinburgh* (Scot.) *Dispatch.*]

The assertion that Christian Science leads to insanity, as quoted in the *Dispatch*, is only another instance of the profound ignorance which the critics of the Science display as to its fundamental basis and teachings. Now, as of old, men fail to distinguish between the activity of the so-called human mind and the action of Truth, of God Himself, and thus ascribe to the Christ-healing the methods and effects of evil. Christian Science is no new religion or revised Christianity; it is simply that further explanation of Christ's teaching which our Lord told his followers would come when the world had grown able to receive it; the proof that it is indeed the Christ-teaching lies in the healing of the body and the reformation of the heart; its success is attested by the ever increasing number of its adherents and by the bitterness of its opponents.

I can most confidently affirm from the personal experience of many years that Christian Science, rightly understood, could not possibly lead to insanity, as it teaches faith in the supreme power of good, and therefore destroys the attraction of evil and the fear of evil. It removes all belief in the supernatural, and therefore all dread of its power, heals men of self-love and self-pity by lifting their thought away from themselves and fixing it on the very source of life, purity, and intelligence. It thus enables them to gain some measure of that Mind which was in Christ Jesus, and proves the truth of the Bible promise, "Thou wilt keep him in perfect peace whose mind is stayed on thee."

Digitized by Google

[M. I. Whitcroft in *Cheltenham* (Glos. Eng.) *Examiner.*]

If Christian Science is "the very negation of reason and experience," then Christianity as taught and practised by Jesus must be described in like manner, for Christian Science is founded solely and entirely on the words and works of our Master, and is but a renewal or continuance of his practical demonstrations of the power of Truth to destroy every form of sickness and sin.

Christian Science is acknowledged as a great healing and regenerating power in the world today by broad-minded, thinking people, even though they may not be in accord with all its teachings. The publication of the facts of an occasional failure on the part of a Christian Scientist to heal a patient does not "assist in discrediting Christian Science," as the writer of the article in your issue of the 28th ult. fondly but ineffectually hopes it may, though the daily obituary column in the *Times*, or any other daily paper, certainly runs the risk of bringing discredit upon medical science, so called. Christian Scientists, however, have no desire to cast reflections upon those members of the medical profession who are devoting their lives to the endeavor to alleviate sickness and suffering, in accordance with the methods which appear to them to be the only right ones, although those same methods are of necessity purely experimental, because they do not rest upon a scientific basis and are constantly changing.

Again, if it "amounts to an act of self-destruction" to depend entirely upon the power of God, the understanding of Truth, to heal oneself or others, then the same argument would apply to all those who came to Jesus and his disciples for their healing, instead of going to the recognized physicians of their day, for Jesus and his students never used drugs nor advocated any other material remedy. Their healing work was based upon spiritual law, and their scientific knowledge of God as omnipotent, omniscient, omnipresent. Christian Science teaches its students to love God supremely, and their neighbor as themselves, and this alone calls for and should receive respect and not abuse from those who hold other opinions.

[L. C. L. in *Portland* (Ore.) *Telegram.*]

A press despatch that has been read this week by thousands of Portlanders gives information that New York city health officials assert that antitoxin "checks" diphtheria in ninety-nine cases out of a hundred. The impression sought to be conveyed is that antitoxin cures or mitigates in ninety-nine cases in one hundred. Official statistics not only do not bear out this assertion, but they tell a story totally different. In Chicago, three years ago this winter, antitoxin was made compulsory for all diphtheria cases and contacts by order of the board of health. Nevertheless, one of the midwinter weekly bulletins of the health department (which I have preserved) showed a diphtheria mortality thirty-three per cent greater than for the same period of the previous winter when the use of antitoxin was optional.

That antitoxin is not a harmless agent is evident from the numerous cases of death immediately following its use as an immunizer. I have a long list of such cases, as well as notes upon cases where illness followed the injection, one of these healthy persons being paralyzed for two of the three or four weeks of alleged immunity. This was the case of a Dalles woman. Another woman suffered with kidney trouble for a long time after being "immunized." In fact, many doctors recognize that serums injected into the blood are always followed by lasting morbid symptoms. A medical magazine published in St. Louis a few years ago contained a list of such symptoms and expressed the opinion that such patients never recovered their original normal condition. The failures of antitoxin are numerous. Dr. Louis D. Shipman of Minneapolis was a few years ago a locally distinguished throat specialist and member of the medical faculty of the state university. He had a case of diphtheria in his practice and contracted the disease himself. Antitoxin was used upon him daily for four successive days, at the end of which time he died—whether of diphtheria or antitoxin who can say?

The despatch in question related to a child who died of diphtheria under Christian Science. If we could have a list of the cases that recover under Christian Science and of those that recover under antitoxin we should have a basis for judgment. Now we can only positively assert that Christian Science never yet was known to kill the healthy, while antitoxin has done so in innumerable cases. The idea of giving a sick man something to make him well that would make a well man sick, is absurd on the face of it—or would be were we not accustomed to seeing the thing done by a class of men we agree to call scientific.

If one lesson more than another can be drawn from these disputes between different schools of medicine, it is that no free government has any business entering into a partnership with any one of them, or with all of them—for we may assume that new schools will continue to spring up as time passes. A fair field and no favor is all any should ask. The healthy rivalry that would result must assuredly make for the health of the people and the gradual and natural elimination of systems that cannot make good. It would seem that any school having confidence in its own methods would be willing to meet such competition, and that it is a confession of weakness on the part of any school or schools to demand a monopoly and government protection.

[Written for the *Sentinel.*]

COULD I FIND THE WORDS TO UTTER.

HON. CLARENCE A. BUSKIRK.

Could I find the words to utter,—
Words with wings that never tire,—
Into darkened hearts they'd flutter,
Bright with heavenly dew and fire,
And the earth would glow with gladness and the very heavens be nigher.

Sin and pain and fear would vanish,
Doubt and sorrow and despair;
Then the truth which frees would banish
All the phantoms everywhere,
And men know on earth a heaven of creations good and fair.

If my words for once could capture
The celestial strength to show
All the truth to men, the rapture
They would bring where now is woe,
Then the thoughts of men and women would with gladness overflow.

Then my words could bring to mortals
Such high raptures born of truth
That their thoughts would cross the portals
Of the realms of fadeless youth,
With their love-kiss'd flowers and verdure and forgetfulness of ruth.

If were granted the desire
That my speech were like the singing
Of a joy-song rising higher
Than the loftiest birds are winging,
All the earth and sky might gladden with the music through them ringing.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

THE TRUE SOLUTION.

IN these days of social and industrial unrest, when men are arrayed against each other and the problem of an equitable adjustment seems difficult of solution, here and there a great cry goes up for the multiplication of laws which will regulate the relations of all classes. It is right that there should be such wise changes in human laws as will keep in check the selfishness, greed, and brutality of mortal mind, so far as legal restriction can do this, but the true remedial agency must go deeper, must reach the inner man. It should not be forgotten that there is great truth in the saying, "The stream cannot rise above the spring;" and as human action is but the expression of human thought, so the reform of human conditions must necessarily be brought about by reform in human thinking.

The vital point, then, is what can be done toward the accomplishment of this desired and desirable reformation. Were it possible to obtain a consensus of opinion, it would be found that there are very few who doubt that the sermon on the mount, if universally practised, would bring in the millennium, but the root of the trouble seems to be that mortal mind in its inmost depths does not want the millennium, because this condition of love and good will to all men would make impossible of realization its own selfish purposes. Innately, mortal mind still clings to the old belief that might makes right, that there is more satisfaction, indeed the only satisfaction of which one is assured, in the acquisition of material than of spiritual things; that, provided one's earthly ambitions are realized, the question of future punishment or reward is altogether too problematical to call for much concern: and so long as this is the basis upon which men and women found their hopes for happiness, there is likely to be great delay in that realization of the brotherhood of man which is the ideal of all true reformers.

There was one, however, who by a few words struck the keynote of universal harmony, and in his own loving ministry to humanity's needs, his quick recognition of their right to health and happiness, initiated the brotherhood of man. What is more, he who declared himself "the way, the truth, and the life," laid down an infallible rule for the continuance of the work he had inaugurated, when he said, "Seek ye first the kingdom of God." It is beyond question that if the generation of men to whom these words were spoken had obeyed this divine command, injustice, greed, war, evil and crime of all sorts, would have been blotted out from human experience.

Jesus knew that the problem of righteousness was not collective except in a secondary sense. Primarily it was to him, as it should be to us, individual; that the kingdom of God must be established in the hearts of men before its outward manifestation,—"in earth, as it is in heaven,"—can be realized. No lure of temporal power, no bauble of wealth or position, should blind men to this desideratum, and slowly but surely the world is awakening to this truth of being, for a later prophet has pointed this age to the means whereby this kingdom may be and must be sought by every one who longs for and hopes to attain to eternal life,—to dwell in that kingdom of which there shall be no end, and where sorrow and suffering are unknown.

We find this way marked out plainly and unmistakably by Mrs. Eddy on page 1 of Science and Health, in a few words so simple that their meaning and importance are scarcely realized by many who have read them, and whose significance is utterly lost upon those who have had no purpose higher than unfriendly criticism. When that happy time shall come when all men realize that "no loss can occur from trusting God with our desires, that they may be molded and exalted before they take form in words and in deeds," prayer will become universal, and men will be enabled to put universal good before private gain.

ARCHIBALD MCLELLAN.

BELIEF, FALSE AND TRUE.

WRITING to the Romans of the significance of belief, and illustrating his point by reference to the prevailing notions of his countrymen respecting ceremonially *pure and impure* foods, St. Paul said, "To him that esteemeth anything to be unclean, to him it is unclean." He thus recognized the significant relation of belief to the phenomena of experience, and in keeping with the same philosophy he might have said, "If any one believes that a given drug has curative power, for him it will seem to have such power." In fact, his statement supports a metaphysical teaching, against the reaffirmation of which in Christian Science, Christian as well as non-Christian materialists have hurled their most caustic ridicule, quite ignorant or forgetful of the fact that in the teaching which has incited their critical levity, Mrs. Eddy is but following the clearly expressed thought of the great and wise apostle to the Gentiles.

In the extent, continuity, and assumed authority of its rule, unwarranted belief is absolutely beyond compare. Dynasties and potentates have their little day and are gone, but the deception of false belief has never ceased to wield a dominion which has proved a disability if not a curse to its every subject. The nature of its hold upon humanity changes somewhat, but the fact of its sway even in this enlightened age is witnessed to by every existing wrong. All the ignorance and degradation, the injustice and imposition, the selfishness and sin, of those to whom the word of Truth has come, is directly traceable to the conscious or unconscious disposition of mortal man to cling to the belief of a lie.

One of the first effects realized by the honest student of Christian Science is an awakening to the extent of his past subjection to groundless opinions, his acceptance of traditional ideas which are not sustained by any logical deduction or inference from the fundamental teaching of Christ Jesus respecting God and His universe and law. He sees that the content of these beliefs has been unverifiable and unsustained, hence his so-called faith has been unsatisfying and unfruitful. This disclosure reveals to him the inherent deception and superficiality of mortal sense in a way which makes it possible for him, as never before, to understand that far-echoing cry of old, "All is vanity and vexation of spirit." He perceives that false belief enters into every sphere and aspect of mortal experience, every phenomenon of the social order; that it explains the superstitions and fears which have constituted the warp of mortal history; that it lies behind and impels that haste to be rich, that feverish search for sense satisfaction, which characterizes our modern civilization; and when, in the realization of the truth of Science, he further awakens to the fact that the projection of this false belief constitutes the substance of all so-called material phenomena, he has reached the threshold of a new world, a point in experience beyond which he will be prompted to say with joy, "Old things are passed away; behold, all things are become new."

Nevertheless it is just here that he will come to understand the substantiality and power of that belief in Christ to which the gospel message exhorts us. Belief improves with spiritual enlightenment until it becomes demonstrable faith or understanding. A concept based on falsity thus gives place to a concept based on Truth. Transformation is effected by the renewing of the mind, and salvation is

Digitized by Google

no longer a hope,—it has become an experience. This is the wonder and worth of Christian Science, that it uncovers mortal falsity, strips away the enveloping tissues of deceptive sense, and thus unveils the realities of being. Its acceptance therefore dates life's true renaissance, it is the dawn of the day of Truth, when "the crooked shall be made straight, and the rough places plain: and the glory of the Lord shall be revealed, . . . for the mouth of the Lord hath spoken it."

JOHN B. WILLIS.

THE DENIAL OF CHRIST.

IN three of the gospels, as well as in the first epistle of John, are to be found solemn warnings against denying Christ. In the twelfth chapter of Luke we read that the Master said: "He that denieth me before men shall be denied before the angels of God." This is followed by the remarkable statement: "And whosoever shall speak a word against the Son of man [the human Jesus], it shall be forgiven him: but unto him that blasphemeth against the Holy Ghost it shall not be forgiven." It was by the Holy Ghost, the Comforter, that Jesus and his followers healed the sick, and a denial of this divine influence robs humanity of vital truth. In the second chapter of I John we read: "Whosoever denieth the Son, the same hath not the Father," to which the apostle adds, "Let that therefore abide in you, which ye have heard from the beginning."

There are few who would not admit that the present age is characterized to a large extent by doubt and uncertainty respecting much that at one time was unquestioningly believed. Men do not shrink as they once did from the appellation "agnostic"—even the word "atheist" is less offensive than it was at one time, for it is well known that a large majority of the doubters would be glad to know God could they but find Him through the bewildering maze of mortal belief. A story is told of a little girl who shocked her relatives by announcing herself an atheist, and on being asked the reason for this, said she did not believe in the devil. It was then explained to her that such a denial did not make one an atheist, but that a denial of God would, and the child was glad to believe in God.

Some years ago, students of Christian Science were quite often classed among unbelievers because their views respecting God and man differed from those of their critics. It was also charged that they did not believe in Christ, but this was far indeed from the truth, for while some of them had found it impossible to believe much that had been taught them in the past about Christ Jesus, they had in Christian Science gained a whole-hearted loyalty to him, and an unreserving acceptance of all his teachings. Many of those who are now Christian Scientists had grown up with a simple faith in Christ, but in an hour of dire need this faith was rudely shattered by some denial on the part of a religious teacher of their own denomination that they could be healed by the Christ-power. Much is said about the danger of reading the works of avowed atheists, but this can never have the slightest effect upon the one who has proved that Christ as "the power of God, and the wisdom of God" (I Cor. i. 24) is ever present to heal and to save. The one who has thus proved the divine power never doubts or denies any of the Scriptural statements concerning Christ Jesus, but declares boldly "before men" what Christ, as revealed anew in Christian Science, has done and is doing for him.

Our revered Leader reminds us that "Jesus loved little children" (Science and Health, p. 236) and little children all love Jesus until in so many cases their budding faith in the goodness and power of Christ is blighted by the denial that he can help them when they are sick or sorrowful. It is sad enough to tell this to an older person, but in the case of a child, we may well recall the Master's own words, "Whoso shall offend one of these little ones which believe in me, it were better for him that a millstone were hanged about his neck, and that he were drowned in the depth of the sea." Truly it is the millstone of mortal belief which drags so many down to the depths of despair, but even then divine Love rescues the perishing, and glad confession of the Christ takes the place of doubt and denial. How sweet it were for each one of us to hear at the close of day the word spoken long ago to the early church, "Thou . . . hast kept my word, and hast not denied my name." Hast not denied it today either in word or in deed!

ANNIE M. KNOTT.

AMONG THE CHURCHES.

ROCHDALE, ENGLAND.

A meeting in the interests of *The Christian Science Monitor* was held in Rochdale on Jan. 13. Frederick Dixon gave an address, and Bicknell Young also spoke. There were nearly three hundred present, representatives from Lancashire, Yorkshire, and Cheshire taking part in testimony to the good work that is being accomplished by the *Monitor*. Altogether it was a meeting long to be remembered, and will do a lot of good. The Rev. Richards Woolfenden, who introduced Mr. Dixon, said in closing:—

Before I ask Mr. Dixon to address us, let me give him a little further encouragement by telling him what we are doing in Rochdale. This church, besides distribution work, is offering to members and friends who care to take advantage of it, a year's subscription of the *Monitor* on the easy terms of paying for it week by week, so that any one can have the paper for twelve months at the rate of ninepence per week. We offered a six-months subscription free, to the editors of the local papers, who in each case accepted heartily. We have placed subscriptions in newsrooms, clubs, libraries, and other institutions, where our daily newspaper is now being read and appreciated. One of the members of our church has contributed articles and drawings which have appeared in the *Monitor* and earned favorable comments in the local press.

All this shows that the ideal of the *Monitor* as a pioneer in the glorious mission of clean journalism appeals to men of the wider thought, men who are always ready to welcome the missionary of a healthy and wholesome cause. Let us, then, be up and doing, and put forth all our efforts to support The Christian Science Publishing Society, and all their helpers, who are working every day to make *The Christian Science Monitor* a more perfect and ever more powerful organ of general enlightenment. I must own to the thrill of joy that passed through me when I opened the copy for Jan. 1, 1912, and saw the chronological index of events of 1911, telling the good that men do; and as I read the list of Christian Science articles, the words of the psalmist came to mind, "Their line is gone out into all the earth, and their words to the end of the world."—*Correspondence.*

SALIDA, COL.

The Christian Scientists of Salida have fitted up their building at 125 E. Third street, and are now [January] holding regular services at this place. The partitions have been removed, the walls colored a beautiful neutral tint, and with the white and gold reading-desk, combine to make a pleasing artistic effect and a harmonious and pretty setting for religious gatherings. The reading-room is open daily, a librarian is in charge, and the several members of the church alternate in the pleasant service of attending. The congregations are increasing, and deeper interest is being taken in the work so quietly, effectively, and well carried on by this truly religious sect.—*Salida Mail.*

THE LECTURES.

NEWCASTLE-ON-TYNE, ENGLAND.

A lecture on Christian Science by William D. McCrackan, M.A., was given Nov. 20 in the Grand Assembly Rooms. The lecture hall was packed, many having to listen through the open doors. The lecturer was introduced by the Rev. Charles M. Shaw of Manchester, who spoke in part as follows:—

For eighteen years I had been a minister in the denomination in which not only myself but my parents had been trained from childhood. I was, in a conventional way, happy in my work, and had much encouragement, but I became very unsettled in my thought. I was conscious of the fact that my hold upon the doctrines in which I had been brought up was being loosened as the result of the new light which criticism and research were throwing upon them. In addition to this, I experienced a growing concern at the apparent failure of orthodox Christianity to meet the demands of the age. I was dismayed at the great gap between the ideals of Christianity and the achievements of the churches as evidenced in our social, industrial, and political life. Something was wrong, and I knew not what beyond a vague sense that we needed a more spiritual faith.

Christian Science was brought to my notice in a rather singular way. As the result of a sermon I had preached one of my hearers said he was sure I would be interested in the teachings of Christian Science, and offered to send me some literature. I promised to read it, and became greatly interested. Eventually I got the text-book, but I read it with difficulty—it puzzled and irritated me in turn. About this time, quite unsought by me, I came across several cases of Christian Science healing, and into touch with Christian Scientists from whom I learned much. All this time I was reading everything I could obtain against Christian Science, with the object of refuting it, but I met with no serious answer. My interest grew, the day came when I realized that Christian Science gave to me what I had long been seeking, and then it was incumbent upon me to resign my church.

Christian Science has answered all my intellectual questionings and settled my doubts. It reveals a God who is knowable and who is a present help. By its spiritual interpretation of divine revelation it has saved to me the Bible and placed it beyond the reach of mere literary criticism. It has given me such a knowledge of man's true nature as makes me hopeful of every man.—*Correspondence.*

ELY, NEV.

A lecture on Christian Science was delivered Nov. 27 before a large audience at the Empire Theater by Bliss Knapp. The lecturer was introduced by the Hon. Samuel Belford, who said in part,—

We are living in an age of intellectual independence, in which superstition has lost its sway over the minds of men. We are a part of the best period of the world's history, whose activities are making for a still better future for those who are to follow us. The past half century has rigidly analyzed the pretensions of priest and potentate to spiritual and temporal dominion; it has rejected the one and curtailed the other. The spiritual unrest through which we have been passing was a simple struggle to emerge from doubt; to cast aside repressive dogmas founded upon the fallacy that men must be ruled by fear, and to attain the right to subject the claims of religion itself to the processes of reason. God endowed mankind with mental power, and mankind made use of that endowment to reach the domain of substantial truth and there to find Him.

We no longer believe in a hell that stirred the terrors of a gloomy past; we no longer believe in a heaven that is too far distant ever to be reached by the halting footsteps of His children, but we search for both in our own hearts and in our own consciences. I am unwilling to concede that death is but a gateway to everlasting punishment or the only portal to the joys of paradise. This life has been given us for a purpose,—a solemn, responsible, and ever-present purpose. Even the language we have inherited is full of significance. The only difference between "good" and "God" is the letter "o," the mathematical symbol of nothing. Take nothing from good, and we have God, for whosoever understands the one is certain to know the other. The very fact that we are here should teach us that He too is here, and, if He is in that other life, there shall we be also.

The world demanded a religion of hope, not one of despair. We felt we could see the first glimpses of a heaven in our daily lives, in our attitude toward our fellows, in the sweeping march of progressive ideas, in the conquests of science over ignorance, in the unprecedented dissemination of knowledge, in the catholicity of charity, in the unity of humanity itself, in a higher conception and performance of duty, and in a wider acceptance of even ethical responsibilities. If we establish here the substance of justice, the proper use of all the gifts with which we have been blessed, a better distribution of happiness, comfort, and well-being; if we banish fear and poverty, avarice, selfishness, and greed; lessen or destroy pain and misery, we shall, in its best sense, be doing God's best work. Christian Science is a message of hope and cheer to all mankind. Those of us who are not of it can at least see that it has brought a better life even within our reach.—*Correspondence.*

SHEFFIELD, ENGLAND.

A lecture on Christian Science was delivered Dec. 7 at Cutlers' Hall, by Bicknell Young. He was introduced by Dr. Helen Wilson, who said in part,—

It is a pleasure to welcome you here tonight in the name of First Church of Christ, Scientist, of Sheffield. Those who are met here represent widely different circles, and hold widely varying views on all subjects, especially on religion. But one thing we all have in common, or we should not be here at all—we are all truth-seekers. If there be some present who think they are opposed to Christian Science, we know that they oppose it only because they cherish some vision of truth which they think it imperils. There are a number of strange ideas in circulation as to what Christian Science is, whence it comes, and what it claims, and it was with a view to correcting these misapprehensions that these lectures were instituted.

Christian Science claims to be known by its works. I have seen something of its results, for as some of you know I practised as a doctor in this city for ten years. I know several life-long invalids whom both I and a good many other doctors had failed to help, and in the last few years I have seen those people rejoicing in health and happiness, thanks to Christian Science. I have seen ailments and injuries healed by Christian Science with a rapidity and completeness inexplicable by any medical theory with which I am acquainted. That is not all: I have seen characters transformed—the timid made brave, the discontented cheerful, the quarrelsome friendly. I know of homes that were formerly discordant and miserable which are now full of peace and joy. When any teaching can show results like these, we are surely justified in saying that no truth-seeker can afford to neglect it.—*Correspondence.*

CHICAGO, ILL.

Virgil O. Strickler lectured for Fourth Church Dec. 7 and 8. On the first evening he was introduced by Dr. A. V. Louderback, who said in part,—

In the deepest thought of all men, perhaps, there is a

Digitized by Google

faith that some time and in some unknown way mankind would come to a peace which passes present conception,—a state of harmony in which there should be no crushing, despairing, helpless abjection under disease and sin and death, no more hopeless struggle or evil, no baffling limitations,—a state in which man's existence would be of worth to him and to his Maker, when with energy and intelligence divine he should engage in working out the transcendent purposes of his omniscient creator, which now seem to lie infinitely beyond his ken. But how is it to be done? What has it to do with us personally? How can it be connected with our present state? Paul has charged us to work out our own salvation, but how are we to do it? Who can tell us?

The Bible, with its rich promises and sweet consolations, seemed to be of little avail, seemed to be a sealed book, until there came a woman with so great a love for God and man, with so great devotion to Truth, that she became the voice of revelation. She found a divine Principle underlying the works and teachings of Jesus and the promises and precepts of the Scriptures, and that this Principle is the basis of the Science of all sciences, the Science of divine Truth. This key to the great storehouse of revelation she placed within the reach of all men; and the time for this salvation and dominion is now and all the time, and the place is here, in whatever environment we are.

The second evening the introductory address by O. E. Flint was as follows:—

There is one lesson which every man and every woman who has shared the common lot of humanity has been obliged to learn, and this lesson is that man is not sufficient unto himself. No amount of learning, no degree of self-culture, no system of hygiene, no exercise of will-power has proven sufficient to meet all man's needs and overcome the ills to which flesh is heir. Sooner or later every human dependence has had to be abandoned; and when these have failed, men have been led to turn for help to that which is above human frailty. And when they have turned to the divine source for help, honestly and with their whole hearts, they have always found relief. The history of humanity has verified the wisdom of Solomon, when he wrote: "Trust in the Lord with all thine heart; and lean not unto thine own understanding. In all thy ways acknowledge him, and he shall direct thy paths."

Christian Science comes to emphasize this very thought. It not only points to the promises contained in the Scriptures, but it shows exactly how these promises are made available to you and to me here and now; and this knowledge is of inestimable value to every human being.

Correspondence.

BAKERSFIELD, CAL.

A lecture on Christian Science was delivered by Frank H. Leonard Jan. 7. He was introduced by Atty. C. E. Arnold, who said in part,—

Nearly two thousand years ago lived Jesus, who taught and wrought many wonderful healings to the children of men. He taught his disciples the healing truth, and they in turn taught others. After two or three centuries the knowledge of this truth appears to have been lost generally to men, and it was not rediscovered until the latter half of the past century. In the year 1875, after years of patient study of the Scriptures, Mary Baker Eddy wrote the book entitled "Science and Health with Key to the Scriptures," in which she set forth the Science of healing as wrought by Jesus. Like every true scientist, she made application of the theory, and proved its Principle to be true by the results obtained—she demonstrated the truth of the asserted Principle, and proved that the application of this Principle would heal today just the same as in the time of Jesus. By that Principle she healed many diseased minds and bodies; the sick were restored to health; the sorrowing were raised to peace and joy; vicious habits were forgotten; the lazy became industrious; the intemperate became temperate; the weary were refreshed; the ragged were clothed; the impure were cleansed.

She taught, and formed an organization for teaching, how to apply the Principle by which Jesus wrought such beneficence to men. These teachings have spread throughout the civilized world, and its adherents are thoughtful, sane people. Christian Science has spread thus rapidly because of its fruitage. Thousands offer themselves as living testimonies of the efficacy of the Principle. They testify that they have been raised from beds of pronounced incurable ills to health; that they have been cleansed of vitiating habits; that their sorrows have been healed; that they have become more kind and thoughtful of others; that it has brought them here and now into a health, a joy, and a prosperity before unknown to them.

If the theory and practice of Christian Science can bring such unfailing supply of good into our lives here and now, I am sure we would all like to know about the Science of how to be healthy and happy, as taught and wrought by Jesus.—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given in the evening.

Asbury Park, N. J.—Virgil O. Strickler, Library Hall, March 22.

Eugene, Ore.—William R. Rathvon, Eugene Theater, March 19.

Lansing, Mich.—Virgil O. Strickler, Church Edifice, Walnut and Allegan streets, March 12.

Louisville, Ky.—Virgil O. Strickler, Macauley's Theater, March 17.

Marshalltown, Iowa.—Virgil O. Strickler, New Odeon Theater, March 15.

Plainfield, N. J.—Bicknell Young, Hartridge Auditorium, March 22.

Port Arthur, Ont.—Frank H. Leonard, Lyceum Theater, 3:30 p.m.; Corona Theater, Fort William, 8:30 p.m.; March 17.

Portland, Ore. (First and Second Churches).—William R. Rathvon, March 17, Heilig Theater, 3 p.m.; First Church Edifice, Everett street between 18th and 19th streets, 8 p.m.

Ripon, Wis.—Frank H. Leonard, Congregational Church, March 22.

San Diego, Cal.—Willis F. Gross, Church Edifice, Second and Laurel streets, March 18.

Seattle, Wash. (Second Church).—William R. Rathvon, Junction Hall, Ballard Station, March 22.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 31, 1912. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 13, 1912.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 3, 1911, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

TESTIMONIES OF HEALING.

It was in the fall of 1904 that I first attended a Christian Science meeting, going as a guide to my mother, who is a Scientist and who was then visiting me. I became interested in the teaching at once, as I had for many years been an earnest worker in an orthodox church, and often had pondered the lack of logic in its teachings; but in Christian Science I found a reasonable explanation of the Bible, and many a clouded question was soon illumined by the light of Truth as revealed in Science and Health. I was at that time, and had been for sixteen years, a sufferer from hemorrhoids. I had used almost every known remedy, besides having been treated by a physician, finally going to a well-known hospital, where I was told that nothing but an operation could cure me. I was trying to arrange for this when Christian Science found me, and I think it was at the third meeting I attended that I was healed of the hemorrhoids, during the reading from the desk of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I felt the ailment pass away, and have not been troubled with it since.

I had been a sufferer from biliousness accompanied by severe headaches ever since my boyhood days, but during the study of our text-book, and the application of its teachings as I understood them, this discord, too, disappeared. Then the smoking habit, of twenty years' standing, went. The desire absolutely vanished, although I had not thought of giving up the habit. I was working in the tobacco business at the time, and I had been accustomed to smoking a great deal; but, although I continued at this business for a year, yet never once did I have the slightest desire to smoke. I had also been subject to a bowel disorder every summer, and two years ago was taken with a severe attack while at work, but in fifteen minutes the treatment which my understanding of God and man enabled me to give, cured this disease, and it has never returned.

Two years ago last March I was taken with a severe attack of rheumatism and was unable to move. I failed to meet this disease through my own understanding, and sought help from a practitioner. In ten days I was cured and at my work, and the most beautiful part of all is, there has not been the slightest return of the disease. I have not used a single drop of medicine of any sort since I first took up Science. I have a wife and three children, and although my wife does not seem to have lost all her faith in drugs, still we have Christian Science treatment for all the disorders of our children, which are indeed rare, for I find Christian Science a preventive as well as a curative.

While I am very grateful for all these physical benefits, and do not seem to be able to express in fitting terms my gratitude, yet, transcending them all is the moral and spiritual gain, the gain in the understanding of God and His Christ. I have been able through this gain to lay aside a bitter sense of jealousy, and in some measure to overcome fear, doubt, anger, and selfishness; in fact, the Christ is surely if slowly destroying in me all the works of the devil. For this liberation I rejoice daily, and my gratitude to God for His dear messenger, our Leader, I cannot express in words, but I am trying to express it in my daily life, praying that Love may find me a fitting channel to spread the good word.—ALBERT PARR, Baltimore, Md.

[Translated from the German.]

At the time when I turned to Christian Science I was in a pitiful condition. I had been born a cripple, and often wondered why God had not made me healthy like my brothers and sisters. When I grew older, however, and knew more of the world, the thought often came that my infirmity had kept me from many a sin, and for this I gave thanks to God. Since childhood not one day had passed without my suffering pain in my legs, and besides this my brain had to be operated upon. I had been under medical treatment for fifteen years, and the wound back of my ear did not heal; in fact, the physician told me that I must submit to another operation, as there was a carious bone which would have to be removed, otherwise I must expect death in the near future. Having endured little else but suffering all my life, I could not make up my mind to undergo another operation, and believing death to be preferable I went to my sister's home in the country, to implore God to take me away.

But man's extremity is God's opportunity. Wonderful circumstances led me to New York, where I became acquainted with Christian Science. I had never *heard of it* before, but to join another religious denomination seemed utterly impossible for me. I even thought of this as being a sin, a delusion of the devil, and prayed to God that He might not lead me into temptation, but deliver me from evil. Often in my life have I experienced God's wise guidance, but I never realized His nearness, although the Bible was my constant companion and I believe no day went by without my reading it, so that I know the Scriptures almost by heart. I used to attend church regularly, but did not find the inward peace which I was seeking.

I began to read the Christian Science pamphlets and *Der Herold*, but my doubts would not disappear. I longed to be given an explanation, and applied to a German Scientist, through whose faithful and patient help I soon saw that it was my thought which needed healing rather than my body. It is difficult for me to grasp the truth, and my healing goes on slowly, but I am able with my small understanding to prove in some measure the power of Truth. There is no more discharge from the wound back of my ear, and I am glad to say that I have long ago been able to lay off bandages which I had worn for the support of my legs. I am forty-eight years old and have a position again, and although there are yet many problems which need to be solved, I feel impelled to express my heartfelt gratitude for the healing influence of Christian Science which I have experienced. I am even more grateful for the inner peace which I have gained, as well as for the certainty that God has heard my prayer for deliverance from my unbearable condition.

I cannot be too grateful to God for giving us, through Mrs. Eddy, the "Key to the Scriptures," whereby the Bible has become "a lamp unto my feet, and a light unto my path." I now look joyfully into the future, for I know that God, good, is the only power.

CATHERINE EHLEN, New York, N. Y.

In Psalms we read, "Oh that men would praise the Lord for his goodness, and for his wonderful works to the children of men"! One of God's most wonderful gifts to me was a direct answer to prayer, which placed me beyond the possibility of a doubt that Christian Science is the truth. Was not that a precious gift? A new world opened up to me. It seemed almost as though I was living in Christ Jesus' time, and I realized that the understanding of God's healing power which Jesus knew had been revealed to Mrs. Eddy.

Many are the blessings I have received from Christian Science, for which I cannot be grateful enough. I would like to tell of a wonderful demonstration over the sense of fear and pain in having dental work done. I had been filled with fear from childhood of having teeth extracted, and some time ago, while in the city of Minneapolis, I needed to have some dental work done. But the same old fear began to steal over me, and I would have given much to have been spared what seemed to me a terrible ordeal. I was then led to a Christian Science practitioner, and with her help I was enabled to go calmly to a dentist's office and

Digitized by Google

to ask the dentist to extract my teeth. Five were removed without any sense of pain. There was still a root to be taken, which broke at the first attempt, and when it was out the dentist said, "I know that must have hurt you." I thought to myself that it did a trifle, but it was hardly worth mentioning, and I told him so. This demonstration to me was wonderful beyond the telling, and my heart is filled with gratitude to God for His goodness to me. I wish that every one who has to pass through the same ordeal might have the same kind of help. I sometimes wonder that our hearts are not always overflowing with gratitude to God.—Mrs. E. S. Wixon, Dowagiac, Mich.

I have been wonderfully healed through Christian Science, of one so-called incurable disease, and of mental trouble which was thought to be hereditary. My physical healing was very beautiful, because during the time of my treatment my husband's business took us from Chicago to San Francisco, where the climate is supposed to be trying, even to healthy people; but under the protection of God's loving care, as taught by dear Mrs. Eddy, I have steadily grown stronger, until now I am perfectly well. I have been healed also of my fear of the effects of climate. And I am beginning to know the sweet sense of peace through the realization that I inherit only health, goodness, joy, and freedom. This brings with it the restful thought that I live in God, and have a healing, saving consciousness of purity and spiritual power, as taught in Christian Science.

Mrs. Charles P. Smith, San Francisco, Cal.

The gratitude one feels for the countless blessings received in Christian Science can never be expressed in words, but it is with the hope of helping some sufferer who may be reached through the *Sentinel* that I give my testimony. Christian Science found me, about six years ago, a great sufferer from what the doctors called a chronic disease of the stomach and bowels. I had been unable to retain food for seven months, and was finally told that nothing would cure me. I then had one week's treatment in Christian Science and was healed. I also had a very large hernia, and had worn a truss for fifteen years, but I was healed of this while going through class, by an illustration which showed man's relation to God. I have done all my work since that time without any return of the trouble.

I am thankful for this healing, because it was the means of my studying Science and Health, and thus gaining an understanding of the Bible and of God as perfect Principle. This enables us to work out every problem that confronts us in our daily lives. Through the study of Christian Science I have learned to love my enemies, to think good thoughts and reject evil ones. I have found that in every walk of life Christian Science is all we need, and I am deeply grateful daily, hourly, to God, also to Mrs. Eddy for this truth. I have had many proofs of the power of Truth to heal, and the spiritual uplift I have had means more than all else. It has brought peace and harmony into my life and has enabled me to help others.

Mrs. Lottie Leverich, Bloomington, Ill.

[Translated from the German.]

A sense of deep gratitude to God, also to the Founder of Christian Science, impels me to give my mite for the truth. For four years I suffered severely with a nervous and mental trouble, and was treated by several physicians, but without success. The consolation they usually offered, when there seemed to be no improvement or only temporary relief, was that time healed all such diseases; but only they who have gone through similar suffering know how little consolation this brings to one who believes his life hardly worth living. While going through these gloomy experiences, my attention was called to Christian Science, whereupon I applied to a practitioner in Basel, who immediately began to minister to me. After treatment had been given me for about three months, I had sufficiently recovered to be able to start working out my salvation with my own small understanding, and I have now progressed so far that whenever troubles arise I am able to overcome them with the understanding that God is All, and that He is my strength. I get up every morning in the strength of Truth and take up my day's work; and I cannot be grateful enough for being able again to attend to my household duties.

It is not, however, for the physical healing alone that I wish to give thanks, but, with my dear relatives, also for the spiritual understanding which we have gained through Christian Science, for we have had many demonstrations of Truth's power which have made us very happy. At first we manifested astonishment, but now we know it is God's will that all men should be helped, that they should come to the recognition of the truth. Thus, through declaring the truth, a member of our family has been healed of an ear trouble of years' standing, as well as of severe rheumatism in the back, and minor ills also have been overcome through the power of Spirit. We have proofs daily and hourly of the all-Father's loving care for those who put their trust in Him. My earnest desire is that this testimony may help some sufferers to find the way to Christian Science, so that they, too, may experience the peace which the world cannot give.

Frau Marg. Heggendorn-Fintschin, Waldenburg, Switzerland.

I am very happy to say that I was cured of a stomach disorder which had troubled me for years, also of nervous exhaustion from which I had suffered at different times. I was always considered delicate and seemed to be specially troubled with weakness in the morning, but all of these troubles have disappeared. My eyesight is very much improved and I do not use glasses at all, whereas I formerly used them to do sewing. I was also healed of a depressing sense of grief.

I feel as though I had been made anew, and I am very thankful to the friend who interested me in Christian Science, which was able to do all these things for me through the understanding of God and His law.

Mrs. J. Kirkham, Mount Vernon, N. Y.

Christian Science has done so much for me that words are inadequate to express the gratitude I feel for all the blessings I have received through its teachings. I have been healed of stomach, bowel, and kidney disorders, headaches, chronic throat trouble, and, worst of all, fear.

I have experienced many demonstrations of Truth's power. One of the quickest and most complete happened three years ago. While at school I was taken very ill with fever and a throat trouble. A Christian Science practitioner was sent to, and within a very short time I was much better and rested well all night. The next morning I arose feeling perfectly well with the exception of an obstruction in my throat. As this condition caused much fear it was reported to the practitioner, and in a few hours the obstruction passed from my throat and I was troubled no more. Before coming into Science it had always taken at least two weeks before I fully recovered from one of these attacks.

For this wonderful teaching and the peace and harmony which have come into my life from the study of the Lesson-Sermon, I am indeed very thankful to God, also to Mrs. Eddy.—Miss Opal E. Lowrey, Neodesha, Kan.

Although I did not come into Christian Science for physical healing, I feel that I must tell how much I have been benefited, mentally, morally, and in my business life,

Digitized by Google

through the study of our text-book, "Science and Health with Key to the Scriptures." I came to New York city without a position and knew very few people here, but I had learned through Science and Health to know that God is the source of our supply and that each has his place in divine Mind, so that my part was to do calmly and confidently that which seemed best at the time, knowing that I would be led into my place. I advertised in *The Christian Science Monitor*, which at that time had just made its generous offer to help those in need of a position, and I received three answers. One of these positions was given me, and not only was it a high-class one, but it gave me work in the Christian Science field, which was above all things what I most desired. I deeply appreciate the privilege of serving our great cause in any capacity, and know that so long as my services are needed in that particular place, I shall remain, and when my work is finished, other avenues will open to me.

One of the things for which I am most grateful in Christian Science is the joy I have in my work. Instead of considering it a hardship that I have to work, as in the past, I now feel that my business is to do whatever comes to hand with joy and gladness and for the glory of God, and this feeling eliminates all sense of hardship in earning my daily bread. I have also had proof that infinite Mind is all powerful and can heal physical diseases. I had an attack of acute throat trouble in the spring of 1910, which was overcome for me within two days by a practitioner in Christian Science, without my losing any time from my work. This meant a good deal to me, as I had been subject to these attacks in my youth and they always kept me in bed for two weeks at least, I being unable to eat anything solid during that time. The fact that this attack was overcome in so short a time proved to me the power of divine Mind to heal.

While I am thankful for the knowledge that this power heals disease, I am much more grateful to Mrs. Eddy for having set forth this truth so clearly that all may understand it, and for the spiritual help which I get from the daily study of the text-book. Whereas four years ago life did not seem worth the living and an utter failure, now I am rejoiced to know that we have endless opportunity to make this truth manifest in our lives and for the knowledge that "we can, and ultimately shall, so rise as to avail ourselves in every direction of the supremacy of Truth over error, Life over death, and good over evil" (Science and Health, p. 406).

Miss Jessie M. Hosmer, New York, N. Y.

It is with a constantly recurring sense of thankfulness for all the blessings I have received through the teachings of Christian Science, that I send this brief account of an experience which in itself is sufficient to prove what can be accomplished by following the teachings of our revered Leader as given in that wonderful book, "Science and Health with Key to the Scriptures."

Through occasional conversations with a lady in Chicago, I attended service one Sunday morning in First Church of that city. I was so impressed with the simplicity of what I saw and heard, that it appealed to my inner consciousness, and although I had been until that time a communicant and regular attendant of another church, I have since become an adherent of the Christian Science faith and have no desire for any other teaching than is to be found in the Bible, and in Mrs. Eddy's writings. It was not physical sickness which took me to that church, but a mental hunger for something that I did not find in the church I had attended from my youth up. In Christian Science I found that for which I was seeking—a fortifying strength, a satisfying rest and happiness; a better knowledge of the Master, Christ Jesus, and his teaching and example.

It was two or three years after I began to learn of the beauties of Christian Science that I was taken seriously ill with an eruptive disease and rheumatism. I felt the first symptoms of the eruption on a Friday, and for three days the disease grew steadily worse. I was terribly disfigured, the face and ears discolored and swollen, and both eyes were closed. My appearance was so bad that no one was allowed to see me. A faithful practitioner worked steadily for five hours on the Sunday night following, and all signs of the disease were gone in about one week. My face became normal and there was no disfigurement of any kind. No drugs or lotions of any kind were used, and although my family entreated me to call on *materia medica*, I knew that what God could not do, could not be done. My recovery from this attack was wonderful and rapid, but, just as I was about healed, rheumatism set in. This seemed to require a great deal of attention and did not yield readily. The mental conditions surrounding me were not in accord with Christian Science, and this seemingly made the work all the harder.

As the anxious weeks went by, I seemed to make so little progress toward recovery, except perhaps at intervals, that my family urged and begged that I should call in a physician, but all their entreaties did not alter my determination to rest my faith on what I had learned of God and His power in Christian Science, so the doctor was not called. Many times my family had given up all hope of my recovery, but I placed my whole dependence on the "great Physician" and His goodness and love as taught and exemplified in Christian Science. Today I am hearty and strong and like my old self again. I am truly and deeply thankful, and living in the hope that countless thousands may come to know the healing power of Truth as stated in the Bible and as Mrs. Eddy has interpreted it.

I have had many other proofs of the efficacy of Christian Science in various every-day happenings, but greater and more priceless than all is the spiritual betterment which comes to all who faithfully and diligently strive to follow where the Master leads. With so many others, I have every reason to be and am deeply grateful and thankful.

Mrs. J. S. Smith, New York, N. Y.

[Translated from the German.]

It is with the sincerest gratitude that I acknowledge the help which I have experienced through the teachings of Christian Science at a time when I was altogether weary of life. A deep gulf yawned before me, as I was unable to reconcile religion with science or even with daily life. I lost more and more faith in God, in men, and in all good; I saw only evil everywhere, and for years never entered a church. Besides this I had a violent disposition, was addicted to evil habits, and swayed by passion. At last a lung trouble was added, and all I could look forward to was an early end, and I wished it would come soon.

Five years ago, however, the book "Science and Health with Key to the Scriptures" by Mrs. Eddy came into my hands, and I began to read and to study it. During that time the lung disease and the other ailments disappeared one after the other, as well as the mental and moral disorders. I also found God, and began to see that religion, science, and life really do accord. Mrs. Eddy's writings have become indispensable to me, so that I have a feeling of deep gratitude for our dear Leader, and I thank God for her work.—Meinrad Schnewlin, Bern, Switzerland.

In the winter of 1909-10, while in extreme pain prior to the birth of a child, a Christian Science practitioner was called in. After her arrival the severe pain ceased—as my husband expressed it, the effect of the truth declared was "like oil on the troubled waters." The birth was almost painless, and the child was a fine healthy girl. It was my first experience of this kind, and owing to my age

Digitized by Google

all my friends had predicted that I would not survive. I can never be grateful enough for the strength and comfort which Christian Science has brought me when so-called material law seemed to assert itself, but I have gained a confidence in Truth which can never be taken away.

MRS. GEORGE S. TOOLE, Macungie, Pa.

I HAVE long received freely the benefits of Christian Science without having voiced a word of gratitude, but I am indeed grateful, and grow more so as I understand better the meaning of the word. I hardly know where to begin to count my blessings, as Christian Science is a constant help to me. A year ago I was healed of severe eye trouble which at different times had caused me great suffering. One specialist said that my eyes were in a most serious condition; another, that in a short time I would become blind, and that he could do nothing for me.

After taking up the study of Christian Science, I asked help from a practitioner, and I very gladly testify that in three days' treatment I was perfectly healed, even laying aside the glasses which I had worn for ten years. I am truly grateful to God, also to Mrs. Eddy, who has given us this truth which not only heals from sickness but uplifts us spiritually.—KATHERINE HALE, Lexington, Ky.

[Written for the *Sentinel*.]

THE UPWARD PATH.

CHARLES C. SANDELIN.

COME, weary traveler, rest a moment here:
That which thou vainly seekest now is near;
Not by yon earthly path thy hope is found,
Nor in earth's gloomy vale shall peace abound.

'Tis fear hides Love's sweet treasures from thine eyes,—
Conceals the beaming sun and azure skies:
Unclose thy heart, and let Truth's winds today
Blow all this darkening mist of earth away.

Doubt not! Behold! Unnumbered hearts proclaim
Salvation won in Truth's almighty name!
Come to this refuge—Love's unfailing care:
Drop all thy burdens,—seek thy shelter there.

A fortress where thou mayst rest secure
From every danger and from thoughts impure:
From sorrow, pain, and death's destroying hand:
Come, dwell in peace within Love's peaceful land!

Without, to sense, is every earthly woe:
Thy thought, firm fixed in Truth, but peace shall know;
The tempest storms without—unharmed within
Love's sweet embrace, thou know'st no fear nor sin.

Thou needst not hunger: See, a feast prepared!
Thou needst not want: Behold, Life's bounties bared!
An honored guest, partake of Truth's repast:
All that the Father hath, thou also hast!

Thy weary way forsake: Hark, Love now calls,
And guideth thee to heaven's harmonious halls!
Far, far above the earth thy way should be,—
Thine eyes the pure and perfect only see!

So turn thy face to Truth, from error flee:
How warm a greeting shall Love's greeting be!
Cast off thy tattered garments—claim thy place,
In Truth's fair raiment, 'neath Love's beaming face!

FROM OUR EXCHANGES.

[Rev. A. S. Fiske in *Christian Work and Evangelist*.]

There is no secular as over against the sacred! All is one! Everything that touches God or man is sacred, and in full purview of the pure and simple gospel of Christ. "Mix your religion with business? Soil your white robes in the dirty pools of politics?" If you've got a religion that won't mix well with your business, you would best drop either your religion or your business and take up a new variety of both. If you have a religion that doesn't command your politics, fling it away and get one that signifies something! If you are fooling with a politics that doesn't march well with pure religion, your politics is damnable! If you have something that you call religion that doesn't command every section of your life's activity; if you have chipped off it something as "secular," your so-called religion is a fake, pure and simple. Your play ought to be as sacred as your prayer,—is so, or neither is sacred. Your week days are as sacred as your Sundays, your business as your worship, and your politics as holy as the new heart of your birth of the Spirit. In fine, the pure and simple gospel embraces your own and every man's every interest for time and eternity. The preaching of it, therefore, must be as wide as its universal scope. Pulpit and church must not emasculate it by a worldly-wise and cowardly setting off from it of that vast and vital area which we suffer men to degrade as "secular," but which really covers almost all of the common, conscious interests of this earthly life. All that concerns man or God is "sacred," and is the vital business of pulpit and church, week days and Sundays alike.

[Rev. George P. Mains in *Zion's Herald*.]

I would like finally to say that my ideal Christian must be a man of up-to-date intelligence and of broad intellectual sympathies. He must have ready hospitality for demonstrated truth, come from what source it may. Our age is scientific. Its mood is intensely one of truth-seeking. In all departments of thought, when knowledge may command the facts, the investigators of the day will stop at nothing short of the truth and the whole truth. All this is most normal and beneficent. All truth, truth from all sources, when put in proper coordination, cannot fail to be in harmony with itself. In the faith of this fact, I can, with utmost confidence and composure, welcome any new discovery of truth. If a demonstrated truth, new to me, is found to be in conflict with some of my preconceived convictions, I am either called upon bravely to surrender the conviction, or to adjust it to new conditions. Any possession of thought, any inheritance of conviction, is of real value only in just the measure in which it is found to be in harmony with truth, with reality. And there is nothing which the truth-loving soul so values as truth itself, let it cost the destruction of what prepossessions it may.

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth*.]

My recent visit to America has made plainer to me the nature and direction of some of the characteristic tendencies of our time which are more accentuated up to the present in the new world than in the old. In the mad race for money, the scramble to excel one's fellows, the cruel, merciless competition between man and man for the possession of worldly goods, the claims of the soul are ignored and trampled upon. Again and again in the course of my travels I was thrown into the company of men whose general quality could be summed up in one word—"soullessness." There was only that one word for it. It was plain to be seen that they lived for nothing, thought of nothing, wrought for nothing but dollars; they could imagine no good that could not be expressed in terms of dollars. Their higher faculties were atrophied; spiritual

Digitized by Google

susceptibility they had none; all their ideals and aims were utilitarian, materialistic, mundane. Do not imagine that I am describing the character of the American people as a whole; I am not; I am merely indicating a spirit which is so wide-spread among them, and exercises an influence so great as to be a menace to their national future. And, more or less, the same spirit or temper of mind is observable everywhere throughout Christendom, though in older countries it expresses itself in some other form than the tireless pursuit of money.

[Rev. Prin. W. B. Selbie, M.A., D.D., in *British Congregationalist.*]

It is a pitiful thing that generally, when folks want to get an opinion about Jesus Christ, they insist on using the old familiar language—the language, perhaps, of a creed of the fourth century—when we ought to express it in the terms of modern experience. If we do that, we shall believe in him in the only way that is worth talking about, and that is not an intellectual fashion, but a spiritual fashion. We shall not merely say to him, "My Lord and my God," but we shall act as though he was, which is a very different thing. If we could get the churches, if we could get some of those good Christian people who are so busy talking about Jesus Christ, to serve him a little more, to be more truly his, to give themselves body, soul, and spirit unto him, not to speculate about him, but to do his will, we should have a saner and sweeter spirit in our churches, and we should have some hope of a theology, of a Christology, which would be based not upon vain speculations, but upon living knowledge, upon the experience which alone can teach.

[*Universalist Leader.*]

Seen through the eyes of the world, it is beginning to appear that the chief need of the world today is religion. The church is to supply a need of the world, and according to the wisdom of the world, which has been experimenting with a great many things, the chief need is religion. In saying this it should not be necessary to affirm that we are not indifferent to the great agencies being employed for human betterment; but for the persistently and perniciously obtuse, we say again, that we plead only for a just balance in our estimate of religion as a vital force in the world. Regulation and restraint from without are good, but the kingdom of heaven will come only when there is a regulation and restraint from within which cannot be circumvented.

[*Advance.*]

If we cannot believe that Christ could save from sickness, pain, and death when he was here demonstrating his right to be believed on as a Saviour, how shall we believe that he ever can save from these enemies? But we believe that he was girded with such power that he is girded with it still, that whosoever believeth on him, though he were dead, yet shall he live. The last enemy that shall be conquered is death, but he will be conquered.

[Rev. W. H. Jordan in *Christian Intelligencer.*]

Converts rejoice in their new-found joy and peace, but too often make the fatal blunder of living on past experiences, forgetting that farther on are greater joys and blessings. The neglect of the Word blinds them to the possibilities of their own lives. But he who studies the Word early learns of the more abundant life, and seeks eagerly to go on from strength to strength.

[*Churchman.*]

The world has long regarded division and strife as at best an essential characteristic of Christianity, and it must be admitted that Christians have been responsible for this judgment. A change is taking place throughout Christendom and the impact of the teaching of the incarnation has wrought so mightily in the controlling forces of the world that there is a demand that Christianity should more adequately represent the Christ who is seen to be so steadily changing the ideals of the world.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume, "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herald,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The lecture entitled "Christian Science: Its Principle and Method," by Bicknell Young, has been translated into both Swedish and French and is now ready for sale in pamphlet form. Another French translation recently made is the lecture "Christian Science: The Comforter of Promise," by Frank H. Leonard, which is also printed in a new pamphlet in French only.

A new pamphlet has recently been issued entitled "Christian Science *vs.* Finite Sense," a lecture given by Francis J. Fluno, M.D. 32 pages.

A lecture by Willis F. Gross, entitled "The Gospel of Freedom," has been published in pamphlet form. 32 pages.

These pamphlets will be found listed on the opposite page, with prices for single copies and quantities.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy. Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

PAMPHLETS AND REPRINTS

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large sized book), single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE. June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 70 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.00. Single copy, five cents; 25 copies to one address, $4.00; 50 copies, $7.80; 100 copies, $15.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the current month unless otherwise specified, and include all issues for the month named as expiration date on the wrapper. XII indicates the year 1912; XIII, 1913. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $2.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25— £0: 5 s.: 24.;	Mk. 5.30;	F. 6.45	
2.25— 0: 9 : 3 ;	9.70;	11.60	
2.50— 0: 10 : 3 ;	10.60;	12.85	
4.00— 0: 16 : 5 ;	16.90;	20.60	

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

Governor Foss of Massachusetts has submitted to the Legislature in a special message his public utilities bill. It establishes a single commission to supplant the present railroad and gas commissions, assume the duties of the highway commission as far as they concern telephone matters, and some of the duties of the state board of health. It is to consist of five members holding office for terms of five years, at salaries of nine thousand dollars with one thousand dollars additional for the chairman.

The Standard Oil stock has been steadily increasing in value since its "dissolution" by order of the United States supreme court, until today it is worth one hundred and eighty-one million dollars more to its holders than at the time of the decision. In consequence, by direction of Attorney-General Wickersham, an investigation of the activities of the company in the manipulation of the affairs of its former subsidiary companies is in progress.

George F. Cotterill of Seattle, Wash., a single taxer, running on a municipal ownership platform, was elected over the "recalled" mayor by about fifteen hundred. The question of single tax, which required a three fifths vote, was defeated.

The House of Representatives will investigate the American Woolen Company and the conditions which brought about the strike at Lawrence, Mass. The investigation will be conducted by the committee on labor.

Efforts to enact the presidential primary bill in time for it to become operative this year are being made at the State House, Boston, Mass., by friends of the measure in both parties.

International.

The speech of the Governor of New Zealand, delivered at the recent opening of Parliament, outlined a legislative program of a wide and progressive nature. The program included a scheme of profit-sharing by employees in business, the state to guarantee the capital required by the workers, with an indemnity to workers and employers against loss; concessions in the matter of railway fares to children; a bureau of justice to give legal assistance at the expense of the state in defense of a man's rights and liberty when he has no means of his own; the nationalization of the iron industry; education to be free from primary school to university.

Some disorder accompanied by looting and burning has occurred in Pekin, China, through the action of mutinous soldiers. It may have been done as a protest on the part of the soldiers against the president, Yuan Shi Kai, going to Nanking to deliberate with the republicans there. The legation guards were strengthened and the disorder was well in hand after several days. It is thought that the attempt at the present time to remove the seat of government from Pekin to Nanking may cause trouble, and the attempt may be abandoned.

Charges of conspiracy, for which a penalty of seven years may be imposed, have been brought against militant suffragettes of England, recently arrested for disturbing the peace and destroying property. Prison terms with hard labor are being given to those found guilty. The government has decided to attach the funds of the suffragists, amounting to more than five hundred thousand dollars, to reimburse persons who suffered in the raids.

The dalai-lama, the spiritual head of the Buddhist religion, is reported to have reached Kalimpong on his way back to Tibet, the land of the lamas. There is reason to believe that recent events in China may have had some influence on his decision to return to his country.

There is an unconfirmed rumor that Capt. Robert F. Scott, the British Antarctic explorer, has reached the South Pole. It is announced that Captain Amundsen, the Norwegian explorer, reached the pole Dec. 14-17.

Industrial and Commercial.

It is announced that work is to be commenced immediately upon the section of the Australian transcontinental railway between Kalgoorlie, in western Australia, and Port Augusta, in southern Australia, and that a sum of £1,022,500 is to be spent on construction work during the present year. The question of the gage to be adopted has finally been settled, the four-foot eight and one half-inch gage being chosen. Existing five-foot three-inch gages are to be converted to this at a cost of two million pounds, and as soon as the new line is built and this conversion is completed it will be possible to travel without a break for a distance of some four thousand miles from Queensland to Perth in western Australia.

A representative of the British Cotton Growing Association, who recently made a tour of inspection through the Ft. Jameson district of northeast Rhodesia, has reported that the area of land in that country suitable for the production of cotton is practically unlimited, and the terms on which land can be obtained are most advantageous. The opening up of communications, moreover, has facilitated the profitable growing of cotton. The representative of the association is convinced that the country has a great future in store for it in the direction of cotton growing, and estimates that four thousand acres will be under cultivation during the present season.

New York city is by far and away the world's largest toy market. The annual volume of trade at wholesale prices is seventy-five million dollars and of this a large part is shipped out of the country, mainly to the great fairs of Europe and Asia. More recently the local toy interest has branched out in the building of wooden toy-making factories in the lumbering regions, where much of the refuse from sawmills makes fine stock for toymakers and can be obtained at such low prices that European makers of wooden toys cannot compete.

The commissioner of horticulture of the state of Washington says in a report that of 238,786 acres of land devoted to fruit growing, 201,854 are planted to apple, peach, plum, prune, apricot, and cherry trees. The acreage devoted to strawberries is 2,532, with 400 acres in cranberries and 2,500 acres in grapes and 3,500 acres in other berries. More than 10,000,000 of a total of 14,078,182 fruit trees in the state are in eighteen counties east of the Cascade mountains, where intensive methods are practised in the commercial orchards.

Baltimore, Md., may have a sugar refinery built and operated by outside interests within the next year or two. A number of New York capitalists representing the Sugar Factors Companies, Ltd., of Hawaii have closed for the purchase of twenty-five acres of land at Wagners Point in Anne Arundel county, as a site for the refinery. It is estimated that between one million five hundred thousand and two million dollars will be needed to build and equip a refinery capable of producing twelve to fifteen hundred barrels a day.

A macadam road long enough to encircle the globe at the equator seems a prodigious undertaking, yet enough was expended on the roads of the United States last year to accomplish such a feat, says a writer in *Collier's Weekly*. Our outlay for roads in 1911 exceeded one hundred and forty million dollars, or about one million dollars a day for the road-working season, a sum sufficient to girdle the globe with a fine macadam road at an average cost of about six thousand dollars per mile.

If all the motor cars in use in America were lined up they would stretch from New York city to Des Moines, Iowa, twelve hundred and eighty-two miles, allowing each car ten feet of space. The cars number over six hundred and seventy-seven thousand. In 1911 there was paid for registration tags the enormous sum of $3,485,848.55. New York collected $582,075, Massachusetts $460,000, Pennsylvania $418,031, Illinois $350,000.

The Pennsylvania department of agriculture reports that model orchards added three hundred thousand dollars to the incomes of their owners last year. From a total list of seventy-five orchards under the supervision of the department, the report shows that the orchard owners made expenditures on their trees of $3,071.24 and in turn received $32,192.35, with an added income throughout the state of three hundred thousand dollars.

The largest inland ship-lock in the world, called the Black Rock lock, has just been completed at Buffalo, N. Y. The construction work cost one million two hundred and fifty thousand dollars. The lock is six hundred feet long, seventy feet wide, and twenty-four feet deep. It is big enough to carry the largest freighter on the Great Lakes.

In response to a deputation of fruit growers and others interested in the fruit-growing industry, who called upon him, Mr. Runciman, president of the British board of agriculture, indicated the probability of further grants being made next year for the prosecution of scientific investigation of fruit growing.

Upward of a million striking miners are now idle in Great Britain as a result of the operators' refusal to grant increases in wages. Other industries are naturally affected and factory after factory is closing. That the government may take over the mines or establish a minimum wage is among the possibilities.

Eight million dollars will be required to pay the army of lumbermen at work in the forests of Maine, New Hampshire, and Vermont, and the provinces of New Brunswick and Nova Scotia this winter. In this army of loggers are fifty-five thousand men and eighteen thousand horses.

The 1911 salmon pack is the largest on record, exceeding by seven hundred and fifty thousand cases the output of any previous year. The total pack of canned salmon this year for Alaska, British Columbia, Puget Sound, Grays Harbor, and the Columbia river is estimated at 5,850,000 cases.

Possibilities are contained in the invention of James Hogan of West Haven, Conn., of a noiseless, smokeless, and valveless engine. The claim is made that the new engine can be built much cheaper than any type now on the market and will develop sixty per cent more power.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE WELCOME GUEST.

IRVING C. TOMLINSON, M.A.

THE basis of true religion is the intercommunion of God and man, the fact that the Father imparts Himself to the Son. Patriarch and prophet have sought to make known to humanity the truth that God need be no stranger outside the door, but that infinite Love, through faith and understanding, may become a welcome guest. The religion of the Hebrews contains vivid accounts of the communion between God and man, told in such picturesque language as to make it seem the confidential intercourse between two friends. The divine message to mankind, that God is ever ready to be received as a friend and helper, is portrayed by the author of the book of Revelation, who, it will be remembered, was so close to the great Master as to be known as "the beloved disciple." He presents this constant and loving appeal of the Father to men in these words: "Behold, I stand at the door, and knock; if any man hear my voice, and open the door, I will come in to him, and will sup with him, and he with me."

This passage from Revelation contains the fundamentals of all communion between God and man. On the part of the Father it portrays His abiding presence, ever at hand to be recognized and appropriated. It also declares that He makes Himself known through His word, for He not only stands outside, but manifests Himself by knocking at the door. These luminous words show, too, how we may truly welcome the Father. To receive God's help there must be the listening ear for His disclosures, and the ready hand to open the portal that He who knocks may enter in, and there abide, not only a welcome but a permanent guest.

Aside from the true teaching herein enshrined as to the immanence of God, and the revelation of Himself to men, there is revealed the other vital fact that mankind have a degree of spiritual understanding by which they may respond to infinite Love. They possess a spiritual faculty by which to demonstrate the truth of being imparted. This realistic portrayal of God as coming a guest to the door of human consciousness was illustrated in the life of the founder of the Hebrew people. Abraham, while yet in Ur of the Chaldees, heard God knocking at the door of his understanding. He longed to welcome the heavenly visitor, but the gross materialism about him seemed to forbid a close communion, so the patriarch turned from his native land and sought a new home in far-away Canaan. That God might become his guest, he himself became a stranger amid new peoples.

The attentive ear of Moses in the land of the Pharaohs was responsive to the call of infinite Love. He therefore forsook the glamour of the king's palace, and allied himself with the submerged tenth of Egypt that he might make for his people a new abiding place where God's voice could be heard. His sacrifice of material things opened the door to the coming of infinite Love, and through this communion with God he freed his brethren from bondage.

This willingness of our Father, God, to bestow His bounty upon all His children, found full expression in the life of the Master. He said of himself, "I am the door." "I am the bread of life." There are many accounts given in the gospels of Jesus dining with his followers or with other friends. He was waiting for his disciples to return with their noonday meal, when he gave the wonderful interview at the well with the woman of Samaria. He showed the universality of his thought by frequently eating with those whom the established church of his own nation regarded as heretics. There was no more vital or touching incident in his whole career than that last supper with his disciples, when God was so evidently manifest in the Master's thought and words. After his resurrection we have three accounts of his taking bread with his faithful followers, and his whole life is summarized in his words, "I am the living bread which came down from heaven: if any man eat of this bread, he shall live for ever."

The worldly multitude had neither the listening ear nor the open door for the ambassador of divine Love, yet the whole career of Jesus reflects the tender solicitude of the Father to reach all, even the dull ears and empty hearts of mortal men. Wherever there was lack of faith, there was a stranger waiting without. Wherever there was a response, there was a welcome guest. Thus it is said of Jesus that in his boyhood home of Nazareth he could do no mighty works because of their unbelief. When the blind man was cured, Jesus said, "Thy faith hath made thee whole." Realizing that his work was not for Palestine nor for the first century, but for all time, he said: "When the Son of man cometh, shall he find faith on the earth?"

In our own day God is seeking to impart Himself to mortals through the revelation of Truth voiced by our Leader, Mrs. Eddy, as found in the text-book of Christian Science, "Science and Health with Key to the Scriptures." On page 224 of this work she says, "A higher and more practical Christianity, demonstrating justice and meeting the needs of mortals in sickness and in health, stands at the door of this age knocking for admission. Will you open or close the door upon this angel visitant, who cometh in the quiet of meekness, as he came of old to the patriarch at noon day?" In hamlet, village, and city there is today a stranger at many doors knocking for admission. Often his voice is not heard. Again, though heard, there is no response, and the door remains closed to this "angel visitant;" but those who hear the voice and with the hand of faith open the door, receive a welcome guest.

It was at the breaking of bread that the Master made himself known to his disciples. We invite our friends to our tables that we may share with them our joys and blessings. It is when men sup together that they give the best they have. The Father seeks to commune with men, that He may impart to them His strength, His health, and His life. The blessing becomes theirs when the voice is heard, trusted, and the door thrown open.

Christian Science only awaits a welcome from the needy one to bestow health and harmony. It is an age-long message,—it is ever saying to mortals that through spiritual

understanding men may commune with God; that through this communion sin is destroyed and disease overcome. The lesson is not learned in a day, but all who have the attentive ear and the willing hand may open the door, admit the Christ-idea, and receive blessings from the honored guest. Christian Science has the gratitude of multitudes who have learned through its teachings ever to have the latch-string out for the coming of Truth.

How true indeed are these words of Science and Health (p. 31) which point us to Christ Jesus, to whom God was ever a welcome guest: "Obeying his precious precepts,—following his demonstration so far as we apprehend it,—we drink of his cup, partake of his bread, are baptized with his purity; and at last we shall rest, sit down with him, in a full understanding of the divine Principle which triumphs over death."

TRANSFORMATION.

LAURA BLANDFORD JENNINGS.

MRS. EDDY defines miracle as follows: "That which is divinely natural, but must be learned humanly; a phenomenon of Science" (Science and Health, p. 591). The other day I beheld what was to me a miracle. As we were seated under a tree near a country roadside, we saw what appeared to be a bug crawling toward us. I picked it up and discovered that it was a moth, evidently just out of the cocoon, for it had only the tiniest suggestion of wings. I put it on a fence-post, and in two or three minutes I looked at it again. Its wings were noticeably larger, while its body was much smaller. We watched it, then, as it surely and more and more rapidly developed not only wings much larger than the body had ever been, but double wings; and then, growing in size and beauty with the wings, beautiful spots of color.

To me this was indeed a parable and a prophecy, and there came a deep sense of gratitude that I had even a small degree of understanding of Christian Science, that Science "with which can be discerned the spiritual fact of whatever the material senses behold" (Science and Health, p. 585); for there were many lessons to be learned from this phenomenon as explained in Science. The awkward, homely bug typified that state of mortal mind which many of us bring to Science when we first seek its aid, and which is little more than a dissatisfaction with present conditions.

But the activity of thought which compels us to leave the cocoon of material belief,—slight and selfish though it may be, brings about the attitude of mind which exclaims, "Lord, I believe; help thou mine unbelief;" and our wings of spiritual sense straightway begin to unfold. They at first seem feeble, almost useless, but they at least teach us the reality of wings, and so we begin to do our first work in Science. This is usually a simple letting in of the sunshine of Truth, and the atmosphere of Spirit, of which we begin to be conscious, develops our latent abilities. Thus we learn the truth of the statement in Science and Health (p. 261): "Fixing your gaze on the realities supernal, you will rise to the spiritual consciousness of being, even as the bird which has burst from the egg and preens its wings for a skyward flight."

As we remain steadfast in Truth, we sooner or later find that in realizing the good and true we are dropping off the old cumbersome mortal sense, and the increase of the one brings about the decrease of the other as naturally and surely as the moth's wings grow larger while its body dwindles. This transformation is accompanied by growth in beauty, grandeur, and grace as well as power,—a true attaining "unto the measure of the stature of the fulness of Christ." Thus does the truth of being dispel all material belief and bring "life and immortality to light."

One more lesson the little moth taught me in return for my friendly interest. It was the simplicity of the process of putting off "the old man." As we grow in the understanding of Christian Science, little by little the old habits of thought and action are put off for the newer consciousness of good and good only—mortality puts on immortality. The moth devoted its every energy to the development of the wings which were to give it a new sense of existence. In accomplishing this it was getting rid of the encumbering sense of body as rapidly as it could be put off, yet I am sure the greater amount of thought was given to the wings. Mine certainly was! I could scarcely think of the unattractive body in the contemplation of these beautiful and useful appendages, and as they developed the body eventually slipped entirely out of my thought, so that I no longer gave it heed.

The splendid creature which the once helpless moth had now become did not need me any more. My friendly hand had placed it out of harm's way for a while, but the creature was not dependent upon another's effort for its true development. It did the work at hand as well as it might, wasting not a moment, and as a result rose out of its erstwhile entombment with its unfolding capabilities, as in our experience material belief yields to spiritual understanding and the miracle of transformation is wrought.

EVERY DAY.

ELI H. BOUTON.

IN her wonderful book, "Science and Health with Key to the Scriptures," Mrs. Eddy teaches that joy, strength, and success come to us largely as the result of service rendered in the spirit of truth and love; that there can be no fruitful service without love, neither can there be any love without service. The healing of a disease here, or the correcting of a habit there, is not the be-all and the end-all of the efficacy of Christian Science; rather, if we so elect, does its influence go with us every day of the week as our guide, defense, and friend. If in the morning we drink of this fountain of perpetual life, we begin the day with determination and end it with satisfaction, and all through the day we rejoice in the quiet sunshine of a faith which brings prosperity and happiness, and at night we abide under the star-sown heavens of rest and peace.

One brought up in the old puritanical doctrines may find it difficult to emancipate himself from belief in material knowledge previously gained, hard to set aside old doctrines and embrace new thoughts, and also to unlearn many things which have cost him no small amount of labor and anxiety to acquire. One does not realize the true relation of the creator and the created until he comes into a consciousness of the vital fact of man's oneness with the infinite Life, and fully understands the meaning of Mrs. Eddy's teaching that "the atonement of Christ reconciles man to God, not God to man" (Science and Health, p. 18). Furthermore she says: "'Be not weary in well doing.' If your endeavors are beset by fearful odds, and you receive no present reward, go not back to error, nor become a sluggard in the race" (p. 22).

Even in the midst of this whirlpool of modern commercial life, one can frequently halt in his race, step aside, reach down, and lift up one of the many who have fallen into the slough of error, and place him on the rock of Truth, always remembering those beautiful words of him whom our beloved Leader followed so reverently and served so faithfully, when he said: "Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me." Thus all through Science and Health we are taught that not dogmas and creeds, but love and good deeds form the true foundation on which to build a church

Lofty as the love of God,
Ample as the wants of man.

Digitized by Google

This wonderful book, left us as a rich legacy by our Leader, takes us back to the dawn of the Christian era, revives, illumines, and makes broad and simple the teachings of the Nazarene as he led his followers through ripening cornfields and by mountain paths, taking his texts from the flowers that grew by the wayside, the bearded grain in its golden perfection, and the birds that circled in the air. And while the proud Pharisee stood on the broad highway, and with eyes and hands lifted up to heaven thanked God that he was so much better than other men, the divine Teacher taught his humble followers concerning man's unity with God; and the great basic truths which he propounded were higher in thought, more potent in action, and have come down to us through all the centuries with more force than all the edicts of all the Cæsars. Mrs. Eddy teaches us how we may prove the ever-presence of God and His Christ, also our oneness with the Father and our nearness to Him, and thus we may realize

That the dear Christ dwells not afar,
The king of some remoter star,
But here amid the poor and blind,
The bound and suffering of our kind,
In works we do, in prayers we pray,—
Life of our life, he lives today.

PREJUDICE OVERCOME.

SADIE KIEKINTVELD.

WHEN the idea was given out of daily passing along our copies of the *Monitor*, the writer was at first puzzled to know where to dispose of hers. Then the thought came that this would be just the very best way of sending an occasional remembrance to distant friends, and far superior to the postal card plan; so a list was made out, and a bundle of wrappers addressed, that each copy might be sent promptly to the one whose need it would best meet. The plan worked beautifully, and the papers were usually received with interest and always with courtesy.

Then came a rather disconcerting experience. In a letter from an intimate friend mention was made of a former schoolmate, saying that she was in poor health. The latter's name was immediately added to the secondary circulation, but the wise counsel to let our friends know that the paper is coming and by whom it is sent, was entirely forgotten, the sender's address but no name being on the newspaper wrapper. One day came a very curt letter. Who was sending the paper, and what was her object in doing so? For a moment a hurt feeling and a sense of resentment threatened to take possession of the sender. Perhaps she had made a mistake, after all.

The same mail which had brought the curt letter brought also that day's copy of the *Monitor*. She opened it to find some thought which would help her to get rid of the depressed feeling, and her eyes fell on the familiar advice in the corner of the first page, "In asking your neighbor to share your paper with you, there need be no hesitancy or doubt as to the propriety of this act. You are doing him a favor." No, it had not been a mistake! The motive had been kindly and helpful and only good could come of it. That evening, when all trace of hurt and resentment was gone, a pleasant letter was written to the absent friend, telling something of the work of the *Monitor*, informing her that it was one of the best papers in the United States, and ending with the explanation that the writer had been healed in Christian Science and that she had sent the papers with the loving hope that the other might be attracted to this healing truth and also share in its benefits.

In a very few days back came a most affectionate letter, pages long. The friend said she felt as though she should apologize for the spirit in which she had previously written. She liked to read the *Monitor*. She noticed the cleanliness of its journalism. Would not the sender write again and tell her more about her healing? Indeed she would, and that with a heart full of gratitude for the privilege of telling another of God's children the story of His goodness and love as revealed to mankind in Christian Science, and with the full assurance that the seed sown would some day bring forth an abundant harvest of good.

THE VALUE OF CHRISTIAN SCIENCE.

JANE G. ROEBER.

THOSE working along the lines of Christian Science, especially those who devote their entire time to the treatment of disease, frequently meet with a reluctance, on the part of those receiving help, to make a just return for services rendered. This reluctance may not always appear on the surface, nevertheless it may be one of "the little foxes, that spoil the vines,"—the insidious suggestion which would prevent the full recognition of benefits received. Such half-hearted appreciation of work done may try to reason that the modest sum which may have been paid for Christian Science treatment is adequate compensation for services rendered, believing that in making this return one had fully discharged his duty, thus weighing the spiritual in the balance with the material. Such a one fails utterly to apprehend the meaning and significance of a genuine Christian Science treatment, its higher values to the one seeking help and to the whole world.

Take the case of one who comes asking for his first treatment, often in great doubt and trembling. He has but one desire, as a rule, namely, to be relieved of his physical distress. He thinks this may be a system of healing superior to *materia medica*, but his sole aim in coming to the practitioner is to have his mortal body healed. The treatment is given, a few minutes of absolute consecration to good and communion with God; but, marvelous to relate, it effects a great change,—peace of mind suddenly becomes his. He feels a strange new confidence that "underneath are the everlasting arms," and he freely admits the experience of a great uplift, a new desire to know and understand God.

Going home, he seeks his Bible (unused, perhaps, for years), and in his eager search for Truth it becomes his daily companion. The correlative statements of Truth in our text-book also appeal to him, and a feeling of great wonder and gratitude fills his heart, for he is confident that he has found the "pearl of great price," and his new-born desire is to share it with others.

And now we ask, What is the value to such a one of a Christian Science treatment? Can money pay for such an experience? The physical relief (which alone was sought, perchance) may or may not have been fully realized in this first treatment, but the joy of knowing the spiritual has so filled his consciousness that he is willing to wait patiently on God for the perfect manifestation. While most of the cases coming to Christian Science for healing seem to require more than one treatment to effect a cure, yet there are enough instances of instantaneous healing to convince every honest seeker for Truth that the Principle and rule of Christian Science are infallible. Impersonal Truth, expressed in unselfed love, brings about the desired result, and that there is no taint of personal, mesmeric influence in this Christ-healing, is evidenced by the fact that many find their freedom through reading the text-book of Christian Science. Is there anything of our material substance that we can offer in exchange for such a gift as this to mankind—this understanding which "will supplant error with Truth, replace mortality with immortality, and silence discord with harmony" (Science and Health, p. 495)? Could anything but Christ's teachings, made demonstrable today by our revered Leader, Mrs. Eddy, bring about such results, and can money valuation be placed on such experiences?

Digitized by Google

A practitioner was once called to treat what to sense testimony was a very sick patient. The case, judged from the standpoint of *materia medica*, would have given rise to great fear and alarm, the patient knowing full well that the medical verdict would have been relief only by the knife, with the most questionable results. Yet this is what Christian Science did for this patient. Wonderful as it may seem, that household was converted into a habitation of joy and thanksgiving! No sense of suffering or depression or fear lingered there, for each day brought a clearer realization of God's presence and protecting care, and the illusion of disease, with its many boasted claims, vanished into its native nothingness! What but divine Truth could bring about such results as this? And what, we ask, was the value of Christian Science treatment to the members of that family?

Personally, the writer feels there is no adequate return she can ever make for all the benefits she has received through Science. In several instances she has experienced instantaneous healing, but for the slower experiences she has been even more thankful, because of the greater spiritual gain and regeneration which have followed. When we think of the blessings we daily enjoy, the countless benefits heaped upon us, can we rise too quickly to each and every demand made upon us, remembering as we must that where gratitude fills the heart no sense of sacrifice remains, but instead a most sacred privilege in giving to the cause which has created within each one of us the new birth of Spirit. Surely the only adequate and fitting return for us to make to our heavenly Father for His great gifts, the wisdom and understanding revealed to us through Christian Science, is this, a holier and better life which is consecrated to the glory of God, the doing of good.

THE CONSCIOUSNESS OF LOVE.

EVA HARVEY.

THE beginner in Christian Science sometimes takes groping and uncertain footsteps in the direction of divine Love, and doubt may seem to envelop his consciousness. Where and what is Love? Bereft of the familiar conception of personal love, he drifts in an open sea where no coastline appears to his weary vision. What is it that he must love? Divine Love seems intangible, it makes no impression upon the consciousness; personal love is pronounced unreal, and he is instructed to turn to Principle. But Principle seems to bring no warmth, no love-light to his lately awakened faculties. Principle, as employed in mathematical problems and the calm working out of eternal justice upon the earth, seems a thing to be respected rather than loved.

Mrs. Eddy tells us that "Mind . . . must be understood through the idea which expresses it" (Science and Health, p. 467). This gives us at once a working basis. We know that the one Mind, the Principle which we are bidden to understand and to love, is divine Love, and since this Principle must be understood through the idea which expresses it, where is this idea? We are also told in Science and Health that "the highest ideas are the sons and daughters of God" (p. 503). Let us examine our thought in the light of eternal Truth, and ask ourselves what it is that we love in the man, woman, or child in whom we are interested? Is it his bodily appearance? Is it his face, his form? The answer is an emphatic "No;" and the clearest proof of its truth lies in the fact that were the material body to be absolutely destroyed, we would go on loving him just the same. No, in the last analysis it is the good in the individual that we love; it is the divine idea manifested through human sense.

Recognizing this great truth, one is at once released from bondage. He is moved, not by a personal, selfish affection, but by love for divine Principle, as it is manifested by the individual to his consciousness. Furthermore, it is the spiritual sense in one which recognizes and responds to that love. Now, if one can see and recognize good in one of God's ideas, he can in others. He can find another who manifests good, and can again identify this good as universal and divine, hence pertaining in no sense to the person from whom it appears to emanate. This is a distinct gain. Having seen and become acquainted with it in two instances, one will readily find a third and a fourth. Indeed, once started, he will discern and respond to divine Love in all mankind, and he will thus come into the knowledge and understanding of the Principle Mrs. Eddy declares to be the basis of all that is real. This higher affection will open out like a fair flower to the sun.

All of us have noticed how a little smiling baby on the train or trolley car will attract and hold the attention of every passenger. It may have held in its hand a biscuit which was by no means clean, but it offered us a bite with a trusting, confident smile, knowing that we would accept it. And did we disappoint its confidence? Not at all; touched by the trust, we unhesitatingly leaned forward and nibbled a bit of the uninviting morsel. What did the little incident signify? Why do we all become such willing slaves of such a little child? Because the baby regarded us as its friend, it acted as though it knew that we had love one for the other, that there was a bond of perfect understanding between us. There was no necessity for an introduction. We had always been friends and would always continue to be; and if the greatest criminal in the land had entered the car and sat down beside the baby, the same mutual understanding would at once have been recognized. The sense of fear would have been annihilated and love would have met love in blessed brotherhood.

This must have been what Christ Jesus meant when he said, "Whosoever shall not receive the kingdom of God as a little child shall in no wise enter therein." The kingdom of God means simply the reign of Love. Love reigns for us the moment we recognize it in its idea and respond to it with a trusting childlike spirit.

[Written for the *Sentinel*.]

THE AWAKENING.

L. ADELAIDE SHERMAN.

AFTER the storm had passed, I raised mine eyes
To view the wreck. Here, every hard-won prize
Lay shattered; there, my fallen idol lay,
Mud-trampled. All my love-lit blissful day
Had drooped to gloaming, under lowering skies.

Broken my rose-heaped altar, hope seemed dead,
And that dream-goddess,—now with uncrowned head,—
That I named love, lay dying; everywhere
Was ruin piled on ruin; grim despair
Above the scene its sable pinions spread.

From my crushed heart arose a prayer that I
There on the ashes of my hopes might die,
When thro' the gloom I heard a voice that said,
"Take thou my hand, and lift again thine head;"
While to my side a presence fair drew nigh.

"That wounded creature was not love, ah no;
'Twas but a phantom. In this world below
Ye sometimes pass thro' fire truly to be
Prepared to walk in all humility,
Guided by Love divine," she whispered low.

Brightened the skies and cleared the mists away
Even as she spoke. I knew it yet was day.
For all the flowers revived—this life of mine
Soared upward to a height serene, divine.
And now Love walks beside me all the way.

SELECTED ARTICLES.

[Frederick Dixon in *Dresden* (Germany) *Anzeiger*. Translated from the German.]

The article on Christian Science, printed in your issue of the 12th inst., is remarkable for the extraordinary ignorance of the subject shown by the writer, not less than the dogmatism with which he expresses it. That this is no haphazard statement, I am sure you will have the fairness to let me show. First, then, will you permit me to say that the statement that Christian Scientists are forbidden by the by-laws of the church to read any other metaphysical books than those of Mrs. Eddy, is as complete a piece of imagination as is the corollary that they are not allowed to read beautiful literature. I have a considerable library myself, as have many of my friends—some of them very large libraries. The by-laws do, however, safeguard Christian Scientists against the pernicious influence of literature which claims to teach Christian Science but which is incorrect in statement and ignores the moral requirements of the gospel. The information afforded, therefore, by the writer of the article, is more likely to make Christian Scientists laugh than anything else.

Then, again, the writer states that Christian Scientists regard Science and Health as more important than the Bible. This is a piece of information which will be equally news to them. "Science and Health with Key to the Scriptures" is, of course, the Christian Scientist's commentary on the Bible; and as Mrs. Eddy has stated, again and again, that the whole of Christian Science is taken from the Bible, the writer's contention is a little ridiculous.

Moreover, the writer declares that Mrs. Eddy was a hysterical person, with an unheard-of hunger for power and money. Now, I knew Mrs. Eddy personally, which I rather imagine your contributor did not. A less hysterical person I never met. She was the personification of calmness and quiet dignity, and, withal, one of the wisest guides and most inspiring leaders any movement ever possessed. Her hunger for power was exhibited in retiring for the last twenty-seven years of her leadership to her little house on the outskirts of Concord, and later to a somewhat larger one in the suburbs of Boston. Here, surrounded by a small household of devoted friends, she spent her days in the untiring effort to assist mankind.

Her generosity was such that when she left Concord for Boston, the city council unanimously expressed their sorrow at her departure, the following remarkable tribute coming from the one who offered the resolution: "It is quite unnecessary for me to prompt your memory of the countless deeds of charity and her endless gifts. Neither is it necessary for me to call your attention to her innumerable donations to the more unfortunate ones in our midst."

If the historical facts of the writer are so erratic as they have been shown to be, it may be imagined how valuable his critical examination of the teaching is likely to be. It consists of the usual threadbare attempt to confuse Christian Science with mental suggestion, though, in order to do this, it is necessary to prove that anybody knows more about Christian Science than a Christian Scientist. Now, the writer says, and says with undoubted truth, that if it is possible to suggest good to a person, it is possible to suggest evil, but it does not seem to have dawned upon him that, if this is so, his diatribes should have been directed rather against the medical profession, which is daily adopting suggestion as legitimate practice, and which outnumbers the practitioners of Christian Science, on his own showing, in Germany alone by hundreds of thousands.

Now the fact is that Christian Science is a direct contradiction of any process of mental suggestion. The critic, who has discovered that Christian Scientists are forbidden to read metaphysics or the classics of literature, which is ridiculous nonsense, has failed to discover what is true, that they really are forbidden to use formulæ. Again, one of the regular requirements of suggestion is that the subject should put himself *en rapport* with the practitioner, and that the mental manipulation should take place at a time mutually agreed upon. To the Christian Science practitioner, the whereabouts or occupation of the patient he has been asked to help, at the moment of treatment, is of no consequence. He is, strictly speaking, not treating a person, but destroying a false belief in that mortal mind which is the counterfeit, or lie, about divine Mind.

The writer sets out by stating the premises of Christian Science quite fairly. God being Spirit, and being infinite, the substance of matter can be only supposititious. Again, God being good and being infinite, evil can exist only as a false state of consciousness. This he describes as logical juggling, but if it is logic, why is it juggling? The only argument that will avail against it is that the premises are inaccurate. Unfortunately for the critic, the premises are the simple statements of the Bible. God, the Bible says, made all that was made, and made it good. Therefore, if the logical deductions from this result in juggling, the Bible, and not Christian Science, is condemned.

Next comes a damaging series of admissions. Numerous sick people have been helped, some whom doctors could not reach have been cured. And, finally, a very large number of neurotics, who outnumber all the other sick put together, have been healed. Seeing that the *malade imaginaire* is just as sick as the organically diseased man, and that orthodox doctoring has failed entirely to help him, Christian Science has surely been justified out of the mouth of the critic himself.

Then comes a statement from Dr. Cabot, but Dr. Cabot is not a very fortunate witness. First, because you do not ordinarily seek your evidence of the efficacy of one treatment from the exponents of a hostile school, and secondly, because Dr. Cabot has himself fundamentally modified his views. Writing in the *Twentieth Century Magazine* for January, 1912, he says: "Doctors are human—like the rest of us. Their faults sometimes drive us into forgetting that they have any uses. Then we become Christian Scientists or medical skeptics or osteopaths. That Christian Science has done and is doing a vast deal of good, not only as a religion, but as a health restorer and a protest against the short-sighted naturalism of the doctors, we are firmly convinced. Its affirmations are helpful to thousands. Its occasional and unofficial denials and denunciations of doctors, diseases, and health work outside its own denomination, are its weak side. That's true of all of us, isn't it? We are strong and helpful when we affirm; weak and misleading when we deny. I believe that there is plenty of room in this country for Christian Science and for scientific medicine; no room for impostors and fanatics of any kind. When doctors try to crush out the practice of Christian Science, we should protest. When Christian Scientists or any other body of people try to obstruct the progress of public health work, and especially of preventive medicine, we should protest. There need be no conflict. There is opportunity for all sincere, humble-minded effort. Let us have no persecutions and no interference with the spread of truth and light from any source. Indictments against movements as powerful and sincere as Christian Science and preventive medicine are anachronistic. Let us all get busy along our own lines. 'With malice toward none, with charity for all,' let us bind up the nation's wounds."

This is naturally only a cursory attempt to reply to a criticism of a movement which a well-known doctor has referred to as "the tremendous growth of Christian Science all over the world," but it will suffice, I think, to show that the critic is not quite so well informed on the subject as he might be.

[Alfred Farlow in *Republican-News*, Hamilton, Ohio.]

While Mrs. Eddy teaches that God is not person in a limited or anthropomorphic sense, she declares that God is Person in the infinite sense: that He is the all-wise heavenly Father. The term "Principle" as used in Christian Science has a higher meaning than in the ordinary use. It refers to the one infinite Mind, which is the Alpha and Omega, the beginning and the end, the author and finisher of all things.

Christian Science agrees with the Scriptural teaching that all that God made was "very good," and that the man of God's creation is in His own image and likeness; that Mind, Spirit, God, is the real substance and cause of the universe; that everything in creation is real, from the least to the greatest, but that, in accordance with the generally accepted truism that "like begets like," it is spiritual and hence not material. It is not the world which is to be destroyed, but the false human sense thereof: then the new heavens and the new earth will appear. When the false material sense is no longer in evidence, everything will be seen as it is, in all its beauty and spirituality.

The teaching of Christian Science does not recognize or consent to the deification of any mortal. It teaches that God's entire creation is pure and perfect, while all false evidence is unworthy and imperfect. Far from destroying the Scriptural statement of the vicarious atonement, Christian Science is in strict accord with the Bible teaching on this subject. It declares that our Saviour voluntarily entered into an experience which enabled him to demonstrate his infinite love for mankind and prove certain facts concerning the Science of being which mortals need to understand in order to work out their own salvation, according to Scriptural admonition. It is quite true that Christian Science discredits many theories of life which have been entertained during the past, but the same may be said of each successive improvement since the world began. Progress has always been sustained by a survival of the fittest, and when the fittest has not survived the world has retrograded.

[Howard C. Van Meter in *Portland* (Ore.) *Journal*.]

Christian Science goes to the root of human misery and gives a demonstrable solution for every problem that is opposed to health and happiness. It declares that the belief of mortals in material life and substance and the consequent limitations are responsible for the fear, the strife, and the hardships of the human race; but it lifts humanity out of these conditions by giving a better view-point of existence in which Spirit is recognized to be the only creator, in accord with Scriptural teaching. It is logically evident that Spirit cannot create its opposite, matter. In turning from matter to Spirit, Christian Science begins to loosen the fear of mortals and to establish a greater degree of hope and security by the presentation and demonstration of the fact that man (not a mortal) is the spiritual image and likeness of God. This understanding brings dominion over former beliefs of pleasure and pain attendant upon matter.

The fact that through the application of Christian Science lives have been regenerated and health restored, thus bringing a greater degree of usefulness and satisfaction into every-day experiences, proves the practical effects of the pure truths of Christian Science.

[Lucius W. Wright in *Los Angeles* (Cal.) *Record*.]

In the *Record* of the 6th I read an article about the sufferings of the morphine users in being unable to get the drug, and also the trials of one endeavoring to break the fetters of the habit. It was a testimony to the generosity of one doctor and the efficacy of his remedy. It seemed to me it was printed by the *Record* in a humane desire to help the poor "dope" fiends.

Allow me to testify that I have been healed of diseases and habits that had brought me to the verge of suicide and utter despair, and brought to where I can now work every night at my trade (linotype operator) without fatigue. This has been accomplished through Christian Science, which is every day healing the worst cases of drug and liquor habits, as well as other ailments.

There are scores of Christian Science practitioners in Los Angeles who will gladly treat these poor "dope" addicts, and will not ask if they have money or not. The reading-rooms, 704 Herman W. Hellman building, are open to visitors, with plenty of literature for free reading.

My prayer is that the *Record's* great heart will give this note publicity, and that many sufferers may find relief as a result.

[E. M. Ramsay in *Edinburgh* (Scot.) *Dispatch*.]

Every new invention, discovery, or reform meets with the opposition of the world, and therefore the students of Christian Science are neither disturbed nor surprised that this Science, which is transforming their lives, should likewise meet with the opposition of those who do not understand either its aim or its methods. And yet its aim is the aim of all who have the welfare of the race at heart—the amelioration of man's lot, deliverance from sin, sickness, and misery of every kind, and the forwarding of what the Bible calls the "kingdom of heaven."

The methods employed to this end are no doubt very different from those generally adopted, because Christian Science presents its students with a new view of the nature of man and of man's connection with God, and with a new view of the nature of sin and illness. From their personal experience Christian Scientists have become convinced that these views are only new to the thought of this age; that they are true, and entirely in accord with the gospel teaching. Christian Science teaches that, speaking absolutely, nothing can be real which is opposed to the nature of God, the infinite, ever-present, and all-powerful good. If a thing constitutes no part of God, the creator, it can form no integral part of His effect, man made in God's image and likeness. Hence the real nucleus of man, the permanent undying individuality of man, is "incapable of sin."

In order to be able to distinguish between the real individuality of man and all the sin, sorrow, and materiality which we see expressed in what we call persons, we must cease looking upon the outward shape; we must look a little deeper. We see that in every true friendship we have ever formed, we were primarily attracted by some quality of head or heart which our friend possessed. Thus our friend was in the first instance a combination of good qualities. Those traits and habits which did not command our respect were less than our friend. Thus it is the truth, the God-qualities which we manifest, that are really the man. If every good quality is the reflection, the expression of God's nature, what are we to say of the bad qualities? They are not qualities, realities, but false belief in the absence of good, minus quantities, beliefs that somewhere in ever-present, infinite good there is a spot where good is not. It is plain, therefore, that evil is not a thing to be fought, but a false sense to be banished by the knowledge of good. The belief in evil as a power, an attraction, a necessity, a part of man's nature, must be cast out by the profound conviction that good alone is powerful, normal, necessary, attractive.

By robbing evil of its seeming power, by recognizing it as a delusion, the outcome of false thinking, we find ourselves able to part company with it far more easily and completely than in the days when we regarded it as real, as part of our nature, and as an inexplicable mystery. It is no easy matter to part company with the old man and his deeds and to put on the new man, but Christian Science has shown us the possibility of this achievement, and the method by which it may be accomplished.

[Olcott Haskell in *Healdsburg* (Cal.) *Enterprise.*]

A misstatement in mathematics may seem to express reality so long as one believes it to be true, but as soon as its falsity is discovered it is at once seen to state what never had any existence and what is wholly unreal. The fact that an incorrect statement cannot destroy or even affect the absolute truth, does not prevent either the guilt or the suffering of the one who accepts it as true. This gives some idea of the Christian Science teaching as to sin, which is well summarized in the church tenet: "We acknowledge God's forgiveness of sin in the destruction of sin and the spiritual understanding that casts out evil as unreal. But the belief in sin is punished so long as the belief lasts" (Science and Health, p. 497).

Christian Scientists do not question that in our present human experience sin seems a terrible reality, but they recognize that all acceptance of and indulgence in evil is to be overcome. Moreover they hold to the absolute Scriptural teaching that God is the only creator, and that all He made was good. They are glad to apply to their own lives the test which Jesus gave for the correctness of a doctrine: "Ye shall know them by their fruits. . . . A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit."

Jesus defined the devil as "a liar, and the father of it," and said he "abode not in the truth, because there is no truth in him." This would indicate that Jesus did not regard Satan as a real being, or a creation of God, but as merely a false statement, a lie, which was to be overcome by refusing to obey it or to give it credence. He said, "Ye shall know the truth, and the truth shall make you free."

[H. L. Conger in *Racine* (Wis.) *Times.*]

Our critic openly admits Christian Science cures in some cases. Now if he knows just one case of sickness, sin, woe, or sorrow that Christian Science has healed, what object has he in reverting the thought of this one beneficiary who firmly believes that God heals now as in olden times? Can it be that our critic wants to blanket the sayings and promises of Jesus, and keep them from the sick and sinning by preaching only about the failures and not giving due credit for the cures?

Even if a person should die under Christian Science treatment, there could be no just cause for complaint, provided the person was amply cared for from a Christian Science point of view, since according to statistics fifty millions of people die on the globe every year, mostly under medical treatment. In view of such an appalling record there are no grounds upon which to assert that any given death without medical treatment might have been avoided under medical treatment. To the patient there would be quite a difference between demonstration (manifestation) and inference (that which is inferred).

Our critic's knowledge of Christian Science is shown to be limited when he comments on "mortal mind." To the mortal or human mind disease is very real, but to the divine Mind, God, it does not exist, and he who nearest approaches in reflection the spiritual image and likeness of God, to him disease is a mere phantasm. I am reminded of a sermon delivered recently by a New York clergyman on the subject, "The Church and Healing," in which he said: "Death and disease would not be present except for sin. All the evil in the world is the result of sin, and as we believe that sin can be destroyed, it follows that death will be destroyed also. Our fathers used to believe that we sinned by necessity, just as so many now believe that we are sick from necessity. I believe that men will assume dominion over disease, for all truth will come to its own, despite opposition. Men may be able to reject disease, accident, and death. We believe that God can cast out sin, but we don't believe that He can cast out disease. We have become bound slaves of drugs, and much of the money a working man brings home goes out to the druggist for medicines, a large part of which is alcohol."

The minister then went on to speak of the cures of Christ and the early church. There was as much need for them now as then, he continued. It seemed to him that the church of today had lost its healing powers, and it might be that the new era now coming on would see them restored. All truth, he said, is not possessed by any one generation or church. "When I hear men scoff at Christian Science"—the clergyman here mentioned Christian Science by name for the first time in his discourse—"I do not laugh. I wonder if God is not revealing something to them. Jesus said: 'Ye shall know them by their fruits.'"

Now for a moment let us compare the benefits received by the congregations in New York and Racine, listening to sermons on practically the same subject, "Religion and Health;" "The Church and Healing." Would not unprejudiced persons see in the New York sermon a ray of hope to the hopeless? Stronger faith in God? Less fear of the eminent specialists' verdicts, a brighter future for all, etc., *ad finem?* I will not try to picture my Wisconsin neighbors' thoughts as they wended their way homeward from the Racine church, but will venture to suggest that if our critic's remarks brought to their minds that portion of the sermon on the mount where Jesus said, "Judge not, that ye be not judged," and the following verses of the same chapter, they are still wondering if it was in good taste and Christlike to vilify and traduce from the pulpit the belief of some of the best citizens of Racine.

[William S. Campbell in *Washington* (D. C.) *Post.*]

The burden of the complaint of the speakers seems to have been that Christian Scientists are opposed to progress. In this they were as wide of the mark as in their other statements. Preeminently it is progress in things religious that marks the growth of the Christian Science movement. If one denomination is content to preach the gospel, it should not therefore deny to another denomination the right to comply with the full Scriptural command, and both preach the gospel and heal the sick.

The speakers were again unfortunate in taking the position that Christian Scientists are opposed to the prevention of disease by means of medical research. A Christian Scientist believes in medical freedom, just as he believes in religious freedom. He is willing that others shall seek health and spiritual progress in their own way, but he insists on the same right for himself. A more correct expression of the sentiment of the conference was probably contained in the statements of a later speaker. This speaker urged greater cooperation among the differing denominations, and stated that the Christian Science church should be included in this movement for united action.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 31, 1912. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 13, 1912.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 3, 1911, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
Falmouth, Norway, and St. Paul streets, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"SEEKETH NOT HER OWN."

If any warrant for the healing of sickness as a natural and inevitable part of Christianity were needed, it is easily found in the words and works of Christ Jesus,—in his reiterated instructions to his disciples to heal the sick, in his own demonstrations of the power of God to heal all manner of diseases which constituted his answer to John's inquiry if he was indeed the promised Messiah, and in his parting instructions to the disciples at Bethany. It was in these final words particularly that the Master made it clear that this healing work was for all mankind, and that it was to be carried on for all time, or so long as the need for it existed; and it is because Mrs. Eddy, through her discovery of the Principle and rule which governed the healing works wrought by the early Christians, was able to demonstrate the truth of this declaration of the omnipotence and ever-presence of the Father that "doeth the works," that Christian Science has taken its place in the religious life of today in every continent of the world. Conceding, therefore, not only the legitimacy, but the necessity for a continuance of this healing work, inasmuch as humanity is still struggling against the onslaughts of evil,—sorrow and suffering in its many phases,—it behooves the professed followers of the Master to be guided by his example in their relations with their fellow men. Writing on this subject, Mrs. Eddy says: "Great charity and humility is necessary in this work of healing. The loving patience of Jesus, we must strive to emulate. 'Thou shalt love thy neighbor as thyself' has daily to be exemplified" (Miscellaneous Writings, p. 7).

As we study the career of the master healer, so briefly and boldly outlined in the gospel narratives, no one characteristic is more clearly presented than the divine compassion, so all-embracing that there was none so lowly, none so vile, who, honestly seeking, ever failed to receive the desired blessing. The nobleman's son, the ruler's daughter, the blind beggars by the wayside, the repentant thief on the cross,—these are but isolated instances in the multitude of sick and suffering ones for whom his heart overflowed with love and compassion. How pitiful and patient he was with the shortcomings of his disciples,—checking the impetuous Peter, chiding the doubting Thomas, rebuking the self-seeking of the sons of Zebedee, yet loving them ever and always with that sympathetic tenderness which, penetrating the veil of human weaknesses and imperfections, revealed the perfect man of God's creating.

How clear, then, in the light of his example, is the lesson of the new commandment,—"that ye love one another,"—love the erring and unfortunate, the sick and suffering ones of earth, ministering to their necessities, binding up their wounds, soothing their griefs, in the spirit of him who declared, "Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me." Out of the many who have come into the joy and peace of Christian Science under the stress of mental or bodily suffering, there are few who do not remember with gratitude those who were instrumental in guiding them to this sure haven, but there is need to remember that this gratitude finds its truest expression in loving service to one's fellows, in sharing the blessings received.

Let it not be said, then, that Christian Scientists have so failed to profit by the teachings of their text-book, that any honestly seeking the light of Truth turn away repelled by the coldness or indifference of the professed followers of the meek and lowly Jesus. Rather should they, with that whole-hearted consecration which is blessed of the Father, pray to be imbued with the Master's patience, compassion, and love,—that love which "seeketh not her own," but finds it in ministry to others. This, Mrs. Eddy tells us (Science and Health, p. 367), "is what is meant by seeking Truth, Christ, not 'for the loaves and fishes,' nor, like the Pharisee, with the arrogance of rank and display of scholarship, but like Mary Magdalene, from the summit of devout consecration, with the oil of gladness and the perfume of *gratitude*, with tears of repentance and with those hairs all numbered by the Father."

ARCHIBALD MCLELLAN.

LOST OR FOUND.

The nature and potentialities of Soul are a matter of vital interest to students of Christian Science, as well may be the case when we recall the words of Christ Jesus, "What shall it profit a man, if he shall gain the whole world, and lose his own soul?" It was once believed that one might make a compact with Satan, and for some temporal consideration surrender his soul to the eternal custody of the devil. While few, perhaps, would now state the case in just this way, the same opinion is practically held by many, although they would probably hesitate if they were asked to describe that which would be lost by a concession to evil.

In other words, how many would dare affirm that they had ever found the soul, or that it in any essential way controlled their thoughts, words, or deeds. It is even questioned by many at the present time whether man has a soul, and a few years ago an eminent nerve specialist publicly announced his conviction that no such thing existed, his opinion being based upon the fact that neither scalpel nor microscope had ever disclosed any trace of soul in body. It may therefore be fairly asked how one could lose that which he never consciously possessed. In spite, however, of the denials of materialism, mortals cling to the idea of soul, and fear to lose that which they no more understand than does the babe a precious jewel which attracts its gaze. Too long have men believed that the soul was "a divine spark" which was put into a material body, there to sin and suffer and finally to be expelled by the decree of mortal mind. Many of our poets have echoed the popular belief respecting the soul. Longfellow in "The Slave's Dream" referring to the body as

> A worn-out fetter, that the soul
> Had broken and flung away.

But no one ever grasped the fact that soul could not be imprisoned in matter until Mrs. Eddy gave to the world the startling statement, "Spirit, Soul, is not confined in man, and is never in matter" (Science and Health, p. 467). On page 122 she says, "Our theories make the same mistake regarding Soul and body that Ptolemy made regarding the solar system;" to which she adds, "The Ptolemaic blunder could not affect the harmony of being as does the error relating to soul and body, which reverses the order of Science and assigns to matter the power and prerogative of Spirit."

If any one should question the teaching of Christian Science on this subject, it would be well for him to ask himself what evidence he has of the existence of a soul, according to his own hypothesis, and what power it exercises in the overcoming of evil and in preserving his life and health. Jesus said that his followers should have life "more abundantly;" indeed, he said they should enjoy deathless life, eternal life. If there is a "divine spark" in one's consciousness, it is surely a fair question to ask how much it is doing in the way of overcoming the mortal tendency to sin and sickness.

Christian Science teaches that Soul is God, the governing Principle of the universe and man; that man reflects Soul,

Digitized by Google

and that its light is truly the life of men. When Soul is thus found, it can never be lost or ignored, for the "whole world" of materiality would be estimated as dust in the balance compared with spiritual sense or the consciousness of Soul. Not only is Soul immortal, being God, but the understanding of Soul gives immortality. In the Bible we often find the word soul used to express a finite sense of existence, indeed there are several different words which are all translated soul, but the Science of Soul reveals God and man in accordance with the words and deeds of Christ Jesus, and accepts no standard but his, namely, spiritual reality, which we should seek and seek ever until we find it, not in mere theory but "beholding as in a glass the glory of the Lord." Then we are "changed into the same image," and thus do we find ourselves.

ANNIE M. KNOTT.

"MY PEACE."

THE frequent references of the Old Testament Scriptures to peace as a supreme possession and ordained of God, are imperfectly understood so long as we think of it as meaning simply rest and ease, however good and desirable these may seem. The common salutation of the East, "Salaam!" (Peace) is a modification, we are told, of the Hebrew word *Shalom*, having the root meaning of completeness, and this lineage of the word at once makes clear many familiar Bible declarations, such as the statement that "there is no peace . . . to the wicked." The contented indifference of the ill-deserving, those who because of continued sin seem to have lost all moral sense, is quite characteristic. They may be as entirely self-satisfied and comfortable in their ignorance and iniquity as were those to whom the Master said, "How can ye escape the damnation of hell?" and yet this very condition witnesses to the fact that they are subject to all the conflicting impulses of material sense and can have no true peace.

Jesus incidentally emphasized this discrimination when he said to his little company of followers, "My peace I give unto you." As he well knew, they were going out to experience the very opposite of what the world calls peace, for the struggle before them meant neither rest nor security; nevertheless, they did attain unto that realization of the richness and fulness of Life to which St. Paul refers in his words to the Colossians: "And ye are complete in him, which is the head of all principality and power." This exceeding great possession was further defined in the apostle's prayer for the church at Philippi: "The peace of God, which passeth all understanding, shall keep your hearts and minds through Christ Jesus."

That there can be no true peace apart from completeness is seen the moment we realize that peace is expressed in that balance and poise of mind, that calmness and quiet of spirit, which speaks for perfect adjustment to law. It is as impossible to conceive that there could be aught but peace and joy when the divine requirements are met, as that there could be aught but friction and unrest so long as the human will is in any degree at war with Truth's demands; hence he who seeks relief from turmoil and trial is called in Christian Science to center his thought upon the imperative conditions which make for such relief. To seek for health, and satisfaction of heart *per se*, is to forecast defeat, however much they may be merited. To seek for that completeness in Christ which is our true selfhood and spiritual birthright, is to find the peace of God. Christian Science lays great emphasis upon this thought. It is absolutely straightforward and scientific in declaring that we cannot gain the fruits of the Spirit until we have gained the Spirit; that any theory of the atonement which offers peace apart from righteousness is illogical and therefore impossible.

How often with tired hearts have we looked out upon the star-lit vastness of the evening and longed for its peace, and this we will surely find as we awaken and enter into that completeness which marks the rule of spiritual law and order. Whether wrestling for our own freedom or that of another, we do well to remember that while in the fulness of his understanding and love Christ Jesus relieved all who came to him, he healed those only who rose to his searching question, "Wilt thou be made whole?" He spoke truly who said that peace is

> the gift of gifts,
> The tender nurse who lifts
> The soul grown weary of the waking world,
> And lays it, with its thoughts unfurled,
> Its fears forgotten, and its passions still,
> On the deep bosom of the eternal will.

JOHN B. WILLIS.

LECTURE IN THE MOTHER CHURCH.

The First Church of Christ, Scientist, in Boston, Mass., announces a lecture on Christian Science by Bicknell Young of London, Eng., a member of the board of lectureship of The First Church of Christ, Scientist, in Boston, Mass., in the church edifice, Falmouth, Norway, and St. Paul streets, Thursday evening, March 21, at eight o'clock. The public is cordially invited.

AMONG THE CHURCHES.

HONGKONG, CHINA.

Sunday, Jan. 14, marked another forward step in the history of the Christian Science Society of Hongkong, the ornate new church erected in Macdonnell road being then used for the first time. It was on Oct. 22, 1905, that the Hongkong society was formed, and owing to the steady increase in the ranks of the adherents of this branch of Christianity the society soon outgrew the accommodation of the little meeting house in Zetland street and were compelled to provide for a more spacious building. The new edifice, which will, when completed, cost over eighteen thousand dollars, has been erected as a testimonial to the healing and redemptive power of Christian Science. It will not be dedicated until it is entirely paid for, this being an invariable rule with all Christian Science churches. As already indicated, the building is decidedly attractive in design and general structure. There is a magnificent polished marble floor, made from stone obtained from the marble quarries at Ipoh, Perak, F. M. S., from whence the stone for the marble rostrum, not yet arrived, is also being obtained. A striking feature is the subdued magnificence of the stained windows which were shipped out from Birmingham, England. They are composed of beautiful tints, exceedingly pleasing to the eye. The window immediately behind the readers' desk represents the raising of the daughter of Jairus, while two others bear the Christian emblems of the cross and the crown, the words "God is Love" being worked into one and "God is Life" into the other.—*China Mail.*

BRACKNELL, ENGLAND.

Christian Science services were first held at Bracknell by a few Christian Scientists. Later on a hall was hired for the purpose of holding the Sunday services, and testimony meetings were held there every quarter. Toward the close of the year 1907 a hall was rented in the London road, and this was used exclusively for Christian Science purposes and included a reading-room. In the early part of 1910 a plot of land was purchased, the building was completed, and the first service held in December of the same year. Being entirely free from debt, this hall is now (Dec. 27) dedicated to the service of God by the Christian Science Society of Bracknell.—*Correspondence.*

THE LECTURES.

DARLINGTON, ENGLAND.

William D. McCrackan, M.A., delivered an interesting lecture on Christian Science on Monday night [Nov. 21] in the Mechanics' Hall. Arthur E. Jennings of Darlington in introducing the lecturer said:—

St. Paul gained such a clear perception of spiritual things that he was able to declare with certainty that the Christ, Truth, would after that time appear only to those who were looking for Truth. Almost at the end of his marvelous career Paul said: "Unto them that look for him shall he appear the second time without sin unto salvation." And so today it was those who looked for the truth that found it, thereby emphasizing and maintaining the promise of the Master that the Comforter should come, and that it would lead them into all truth.

In order that humanity might hear a "true and just reply to public statements condemning Christian Science" (Church Manual, p. 93), The First Church of Christ, Scientist, in Boston, Massachusetts, had provided a board of lectureship, of which Mr. McCrackan was a member. This year he was completing a memorable missionary tour of the world. During the last few weeks he had come to this country from an extensive lecture tour among the Christian Science churches in South Africa. Prior to that he had lectured before large audiences in Canada, United States of America, Mexico, Hawaiian Islands, Australia, and China, so that he had practically encircled the globe and reached thousands with his new-old message of Truth. Mr. McCrackan brought this message to them, and he (the speaker) was sure that the people of Darlington, ever in the march of progress in industrial things, would give him a kindly welcome and receptive hearing in his presentation of Christian Science as a religion of progress in spiritual things.

Darlington and Stockton Times.

TORONTO, CAN.

Massey Music Hall, the largest seated auditorium in the city, contained a splendid gathering on Thursday evening, Dec. 7, at a lecture on Christian Science which was given by Bliss Knapp. The lecturer was introduced by G. W. Allan, first reader of First Church of Christ, Scientist, this city, under whose auspices the lecture was given. Mr. Allan said:—

We appreciate the manner in which you have responded to our invitation to attend this lecture. It is fitting that this city of churches, this educational center which has such an enviable reputation for the culture of its citizens, should be hospitable to news of this modern religious movement. It is natural that men should want to know what Christian Science is—what it promises and what it does—if for no other reason than that the man of ordinary intelligence desires to scrutinize any great educational or religious movement, whether it has his sanction or no. Time was when to be a doubter of the old or an honest investigator of the new meant ostracism; but that time has passed. The spirit of our era is ever increasingly a spirit of inquiry, of investigation, consequently one of toleration and respect for the views of others.

If Christian Science were a proofless theory, it might not be entitled to a hearing, but one reason we have for inviting your attention this evening is that this teaching is based on an absolutely exact and demonstrable Science, which depends upon proof for the evidence of its truth. Therefore we ask you not to accept or reject without investigation. Paul's admonition was, "Prove all things; hold fast that which is good." If this admonition were carried into practice, it would give ample scope for individual research, would wonderfully broaden our views and give us a greater spirit of charity for the views of others.—*Correspondence.*

LOS ANGELES, CAL.

Under the auspices of the churches and societies of Los Angeles Judge Clifford P. Smith on Dec. 10, 11, and 12 delivered three lectures on Christian Science. The first evening he was introduced by J. F. Jack of the Title Insurance and Trust Company, who said in part,—

Two thousand years ago, the lowly Nazarene taught, illustrated, and demonstrated the Science of Life. Only a few years since, Mary Baker Eddy, a woman full of righteousness and holy uplifted thought and stern resolve, after years of consecrated and earnest effort, discovered the rule governing the Master's demonstrations, a rule as exact, perfect, and scientific as the law which governs numbers. She named her discovery Christian Science, the subject on which the lecturer is to address you.

The introduction on the second evening, by J. F. Manning, first reader of Fourth Church, was in part as follows,—

Lord Bacon, in his essay on "Truth," said: "Certainly it is heaven upon earth to have a man's mind move in charity, rest in providence, turn upon the poles of truth." This seems to be a very simple and beautiful remedy and one that has been almost universally preached for ages past; but there must be some point lacking, to judge from the results! Our Leader, Mrs. Eddy, on page 241 of the Christian Science text-book, "Science and Health with Key to the Scriptures," points out the difficulty when she says, "The error of the ages has been preaching without practice."

No doubt Bacon derived his thought just quoted from the teachings of Jesus of Nazareth, but who ever heard of sinner or sufferer failing to receive both practical relief and loving counsel at the hands of the gentle compassionate Nazarene! Surely the kingdom of God was come upon earth to such as came directly to Him! So today Christian Science comes to all who will, with the same measure of peace and joy and power, and it offers the same proofs of its practice in the healing of suffering, sorrow, and sin! It explains and makes practical that great promise of the Master, "Lo, I am with you alway, even unto the end of the world." It does the works which the great Teacher said should be done by all who believe in him. It offers mankind the choice between a Christianity which heals in this present time, and a Christianity which used to heal.

At the third lecture, S. Manson Abbott, first reader of Second Church, in his introduction said in part,—

Nineteen centuries ago, on the hillsides of Judea and on the shores of the Galilean sea, there came together, on various occasions, great multitudes of people, bringing with them the blind, the deaf, the lame, the dumb, the palsied, and many others afflicted with divers diseases. And why these assemblages of people of every nation, and why were the unfortunate and afflicted of humanity with them? The answer is found in the record of those events, which tells us that one who had come among the people and taught them the way to Life, had healed all their diseases by the spoken word of Truth. All admit that this was truly a noble work; but had it ended there it would have appealed to us only as a humanitarian act produced by some mysterious power. Fortunately, however, for humanity, the healing power demonstrated by Jesus of Nazareth was not for that age alone, nor for a select people, for he himself said, "He that believeth on me, the works that I do shall he do also;" and, "These signs shall follow them that believe."

About forty-five years ago, when this land was rejoicing in the abolition of slavery, a gentle, loving, self-sacrificing New England woman, recognizing a universal slavery, a slavery far-reaching in its effects, set about to emancipate thought, and with the Bible as her only guide, pressed on, trusting, as she said, that "Truth, the strong deliverer,"

Digitized by Google

would guide her "into the land of Christian Science, where fetters fall and the rights of man are fully known and acknowledged" (Science and Health, p. 226). Her thought was liberated, and from a higher plane of action she discerned the spiritual import of the Bible teachings. Today, suffering humanity is seeking the same healing from sin and disease as it sought centuries ago, when under the palm and olive it listened to the immortal words of Truth; and it is finding that healing in Christian Science.

Correspondence.

NEW YORK, N. Y.

At the lecture on Christian Science given by Virgil O. Strickler, under the auspices of Sixth Church of Christ, Scientist, on Dec. 12, at Lexington Assembly Hall, the introductory remarks of Harvey M. Ferris were in part as follows:—

While humanity has for ages been earnestly endeavoring to understand God, and conscientiously striving so to interpret the Scriptures as to prove their premises to be a present help in the solution of daily problems, still holding to that condition of mind which claims only to believe what it can see, it has wofully failed. Christian Science comes to us as a message of love, revealing God as omnipotent, omnipresent, and omniscient good, an ever-operative Principle, the intelligent application of which has healed and is healing every form of disease, besides reforming the sinner. This gospel of emancipation is marching steadily on in its mission of mercy, and nothing can hinder or prevent the whole world from recognizing, accepting, and applying the great truths as taught in the text-book of Christian Science, "Science and Health with Key to the Scriptures."

Correspondence.

FAYETTEVILLE, ARK.

Prof. Hermann S. Hering lectured on the subject of Christian Science at the Ozark Opera House, Sunday, Dec. 17, to a fair-sized and very attentive audience. The lecturer was introduced by Prof. W. N. Gladson of the faculty of the University of Arkansas, who said:—

I cannot speak of this religion from my own personal knowledge, for I know nothing of its tenets or its teachings, but judging from its phenomenal growth and the intelligent, earnest people who have been attracted to its standard, it must be a creed worthy of respect and deserving of careful consideration. The human mind seems to be so constituted that some form of worship is necessary. No organized society has ever existed without it, and yet we are apt to think of the religious rites of savage tribes and some civilized nations as barbarous or crude. Will our present accepted religions seem equally barbarous or crude to the generations who are to follow us?

The nineteenth century was marked by wonderful strides in scientific and practical knowledge, but are we to progress along material lines only? The mind of the present generation is becoming scientific; that is, the people are no longer prone to accept every written statement as a fact, but are seeking the truth. Their minds are open to conviction, and it is not strange, therefore, that in this age new creeds are springing up. The quiet, dignified service of a Christian Science church, free from all excitement or spectacular features, must commend it to our respect.—*Correspondence.*

TWIN FALLS, IDAHO.

A large crowd filled the Orpheum Theater last Sunday afternoon [Dec. 17], when Clarence C. Eaton delivered an address on Christian Science. Mr. Eaton was introduced by Supt. T. W. Potter of the county schools, who said:—

It is a pleasure for me as a citizen of Twin Falls to introduce to this large and intelligent audience a man who is filling so prominent a position in the Christian Science organization of this country. We are all to be congratulated that the day of religious bigotry, jealousy, and narrow-mindedness is fast disappearing. The man calling himself a Christian who is so mentally unbalanced and spiritually barren as to criticize and defame other churches and creeds is to be pitied. Today more than ever before all Christian organizations are joining hands and are attacking their common foe as one united army. It would be absurd, unwise, and disloyal to Christianity for them to be otherwise than kindly and charitably disposed toward one another. I am not a Christian Scientist, but I have many friends and acquaintances in this state and elsewhere, whom I greatly respect for their intelligence and integrity, who are members of this society. I respect them, therefore I also respect their church. After all, it is not so much what we believe, or to what church we belong, as what we really are. I honor and respect every church and organization that has for its aim the upbuilding of Christ's kingdom and the betterment of mankind.

The meeting this afternoon will no doubt be of great educational value to all, as its object is, I understand, to correct false opinions and impressions and instruct the people in the fundamental truths of Christian Science.

Twin Falls Times.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice it is assumed that the lecture will be given in the evening.

Bangor, Me.—Frank H. Leonard, City Hall, March 28.
Basin, Wyo.—William R. Rathvon, Fraternity Hall, March 28.
Billings, Mont.—William R. Rathvon, Babcock Theater, March 29.
Cambridge, Mass.—Virgil O. Strickler, Scenic Temple, Temple street, near Central square, 3:30 p.m., March 24.
Chicago, Ill. (Seventh Church).—Bicknell Young, Church Edifice, 5318 Kenmore avenue, March 26, 28, and 29.
Chillicothe, Ohio.—Frank H. Leonard, Masonic Opera House, March 25.
Corvallis, Ore.—William R. Rathvon, First Presbyterian Church, March 18.
Denver, Col. (First and Second Churches).—Hon. Clarence A. Buskirk, Auditorium First Church, 14th avenue and Logan street, March 28 and 29.
Helena, Mont.—William R. Rathvon, Unitarian Church, March 26.
Indianapolis, Ind. (Second Church).—Frank H. Leonard, Shubert Murat Theater, 3 p.m., March 24.
Lexington, Mass.—Rev. William P. McKenzie, Town Hall, 3:30 p.m., March 17.

TESTIMONIES OF HEALING.

I desire to express my appreciation and gratitude for what Christian Science has done for me and is doing today. About four years ago I took up the study of Science and Health and followed its teachings for one year with varied experiences. I studied the Lesson-Sermons, and went to the services Wednesdays and Sundays. During that year I had many physical ailments, and in each and all cases when I asked for help I always received it; but soon some other ailment would appear.

I became discouraged and decided that while Christian Science was a good thing for some, it was not of any use to me, and that I would discontinue the reading and my attendance at church. I arrived at this conclusion at a Wednesday evening meeting. At that meeting two testimonies were given with which I disagreed. The first was to the effect that when a person conscientiously investigates Christian Science, he rarely if ever gives it up. The other testimony expressed thankfulness for the physical healing, but much more for the spiritual uplift. I disagreed with this for the reason that I was only looking for freedom from all my aches and pains and I did not realize what was meant when the term "spiritual uplift" was used; so I discontinued my reading and attending church, and put away all my Christian Science literature.

Soon after this I developed a case of bronchial asthma (I had had some bronchial trouble for many years). I was examined by three physicians, two of whom I had known for years, and the diagnosis of each was as above stated. I doctored with them for three months, working daytimes and sitting by an open window at night in order to get air enough to breathe. How I dreaded to see the long night come on. Yet there never was a time when I did not know that God would heal me, if I asked in the right way; but I had my own opinion as to how this healing was to be done, and I did not want to give in. I was willing to compromise on some few things, without acknowledging God as All-in-all or as a God who is Love.

I continued to take medicine for three months with no results. I had overheard some of my companions remark that I was going to die, and I was sure of it myself, yet I continued to take medicine until one Friday afternoon, when I realized it was no use to fight any longer. I knew where I could get help, and there was no argument about that now! I went to the doctor's office, paid my bill, went to my room and threw away all the medicine, etc., acknowledged God as All-in-all, and as a little child asked divine Love for the help that never fails. I telephoned a Christian Science practitioner, told her of my condition,—that I had not had a night's sleep for three months; that two hours was as long as I could stay in bed, generally from ten o'clock until midnight, and that I must have some help. The reply was an assurance that there was no reason why I should not rest; that there was no power to harm me, "for God is infinite, all-power, all Life, Truth, Love" (Science and Health, p. 17). I replied that I knew this, but that I had never been ready to acknowledge it before.

I went to bed as usual about ten; was up and read for a while at two, also at five, and at eight o'clock I got up feeling good, also satisfied with the results of the absent treatment. The next night I retired at the usual time, went to sleep immediately, and when I awoke and looked at my watch I found I had slept nearly twelve hours. Oh, the joy, the peace, the harmony of it all! For the first time I knew what was meant by "spiritual uplift," and with tears of humility and deep joy I was able to say the one word, "Master!" That was not much to say for all that Love had done, but it meant a great deal to me. I had tried so hard to get away from God and Christian Science, but the arms of omnipresent Love were ever round and about me, leading me gently, tenderly, lovingly all along the pathway and finally bringing me home to our Father-Mother God, and to the peace "that passeth all understanding."

It was a long hard road of my own choosing, and it seemed to me I tried all of the side-tracks ere I came into the straight and narrow path, so I had to go back and begin all over again to learn the lesson, "Except ye become as little children." For three years I have been absolutely well, have not taken medicine of any kind, and today I desire to testify to my entire agreement with the two testimonies which I rejected in my earlier experience in Christian Science.

WILLIAM G. CRABBE, Grand Rapids, Mich.

For many months I have longed to express to the field at large my heartfelt gratitude for the multifarious blessings that have come to me as evidence of the power and efficacy of divine Love, hoping that my experience in the destroying of various phases of error, by Truth,—as taught by our honored Leader, Mrs. Eddy,—might afford some inquiring though doubtful seekers after Truth encouragement and assist them to get a glimpse of the "light that never fails." For several years prior to taking up the study of Christian Science, I was a great sufferer, to sense, with hay-fever. I had tried many "sure cures" in *materia medica*, the last one being when I employed a famous specialist in Chicago. I gave myself up entirely to his treatments, believing implicitly in them, though I did object to cauterization; but as this seemed necessary, I consented.

This painful and nauseating operation brought on head and nasal conditions that were almost unbearable, and at times it seemed as though I would lose my mental balance. I was on the verge of nervous collapse, and finally could not eat anything without the greatest pain and distress. I was losing flesh, and was also struggling with fear relative to my heart, which seemed to be very weak. The intense suffering from this thought would be difficult to express in words, but thanks to many interested friends, who realized somewhat my condition and were desirous of seeing me well and happy again, Christian Science was recommended, thereby offering a means of absolute cure for all my ailments, mental and physical.

The emancipation from the effects of the many long years of illness was rather slow, and as I look back upon my progress now I realize that the unfailing work of Truth was rejuvenating, rebuilding, and purifying the mental realm, while I was looking for a physical demonstration; but there was enough of the latter to keep me encouraged and determined to go on with the treatment. I am free to confess that much of my determination, at first, was inspired by feelings of curiosity, which were interspersed with doubts and fears, but having fully decided to give this new agency a thorough trial, I never swerved from the course, and faithfully applied myself to the effort of grasping a little of the knowledge of the truth for my own application. I had not taken a week's treatment, however, before I was able to eat almost anything I wished. I also noticed about that time a lessening of the almost unbearable paroxysms in head and nose.

As the weeks passed by, I could see gradual improvement in many ways, and at the end of three months I was a changed woman. In three months more I was being constantly quizzed as to what I was doing to make me look so well, and when I replied to the various interlocutors that it was Christian Science, some smiled meaningly, others looked as though they pitied me, while others held out a friendly hand and said, "So you, too, have been led into the light and have learned something of the power of divine Love!" Many of the last named were a surprise to me, as I did not know they had ever given "Science and Health with Key to the Scriptures" a passing thought, much less become students of its truths far longer than I had been.

Digitized by Google

But I have since found out that, no matter where I go—and I have occasion to do a good deal of traveling—I meet friends and acquaintances who are interested in this grand work and have many blessings to share with others as a result of following the admonition of Christ Jesus, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you."

It is with a heart filled to overflowing with feelings of gratitude and appreciation that I have attempted to tell, in a feeble way, of the relief from the ills to which mortal mind subjected me for many years; but the half has not been told, for scarcely a day goes by that I am not conscious of increased blessings, with the assurance of omnipotent Love and all-abiding Truth. This has been clearly explained by our beloved Leader, Mrs. Eddy, whom we all love and revere because of the great good that her teachings have done each and every one of her followers and are doing for the entire world, though they have ears and hear not, and have eyes and see not; but "the arm of the Lord is not shortened, that it cannot save; neither his ear heavy, that it cannot hear."

MRS. NELLIE B. SHATTUCK, Minneapolis, Minn.

Truly God is an ever-present help in time of trouble. This has been proven to me many times through my slight knowledge of God as taught us in "Science and Health with Key to the Scriptures" by Mrs. Eddy. I would like to tell of the healing through Christian Science of a badly injured ankle.

While away in the country in the summer of 1910, one Saturday evening I had three quarters of a mile to walk over rough roads to catch the boat, and as it was dark my foot went into a hole and my ankle was wrenched, causing great pain for a little time; but I kept on the best I could, for I had to be at work in Boston on Monday morning. I had two hours on the boat before we reached the place where I was to take the train. A gentleman helped me from the boat to the train, which was only a few steps across a platform. When I got into the train I had to take off my shoe, and I was greatly filled with fear as to what I would do when I got to Boston, as I could not walk. I felt that if I could even telephone to a practitioner I would get help. Then the thought came to me of divine Love's ever-presence, and the pain grew less. The fear was gone, and I felt a great sense of peace and trust. I was no longer afraid, and I knew I could walk when I got to Boston.

As we were nearing Portland, where the train stopped for a little while, I put on my shoe, then stood up carefully, and by holding on to the seats walked up and down the aisle. When the train reached Boston I walked out with the other passengers, experiencing only a little numbness in the ankle. Monday morning I walked to work, my foot being perfectly well. Neither tongue nor pen can tell the good that comes to Christian Scientists by knowing even a little of the great power of divine Love, as taught in Christian Science.—M. J. HERON, Boston, Mass.

If I should be asked what was the greatest thing that had ever come into my life, I should gladly and unhesitatingly reply, Christian Science. It is with deepest gratitude, therefore, that I wish to tell what God has done and is doing for me through this healing truth. I was a nervous wreck, and suffering in various ways, till at last I gave up all hope of ever getting well, as I had been treated by the best doctors, with only temporary relief.

At last I decided to try Christian Science. I began to read "Science and Health with Key to the Scriptures" by Mrs. Eddy, which had been given me by friends, and with their help was so relieved that in a short time I was able to sit up a part of the day. I soon called on a practitioner, who gave me treatment for five weeks; but I began to get better from the very first. My healing came as I gradually awoke to the understanding of God's ever-present help. I shall never forget the words of the dear lady who treated me, when I questioned her as to the certainty of all pain and sickness being taken away. She said that "with God all things are possible."

Since the light of divine Science has come into my life, I can truly say, as did the blind man, "One thing I know, that, whereas I was blind, now I see." I hope this may help some sufferer to find the way to healing, for the Bible plainly teaches that "God is no respecter of persons." What He does for one He will do for all, and He is able to heal us both mentally and physically. I would say to any one who may be longing for help, to lose no time, but call upon God, who is willing and ready to bless us whenever we are willing to accept the promises, for God is Love.

My desire is for a full understanding of this truth that makes free. Our Father in heaven alone knows the boundless debt of gratitude and love I owe to the one whose words have so revealed God that all who pray aright may see Him face to face as infinite, ever-present Life, Truth, and Love.

MRS. EMERY S. HITE, Argos, Ind.

I have long wanted to express my gratitude for Christian Science and what it has done for me and mine. I have been trying to be a Christian Scientist for over eleven years, and in that time my husband has been cured of a very severe form of stomach trouble, and of a very unruly case of rupture of long standing. He has also experienced a complete change of heart. He was one who had almost come to believe that there is no God. Now he knows God and loves Him.

I was healed of a cough which had troubled me since I was six years of age. It would make its appearance three or four times every year, and last two or three weeks at a time. Day and night the cough would distress me, and it used to frighten every one about me. For twenty-five years I tried every kind of remedy, but to no avail. I at last quit trying, and bowed to what seemed the inevitable; but since I have been in Christian Science the cough has left me as suddenly as it came, and I am sound and well.

I have so many things to be thankful for that I cannot tell them all, but I enjoy others' testimonies and felt that it was time to give mine. How great a God is our God! I love Mrs. Eddy for showing us that God is ever at hand.

CARRIE BEAR PADDOCK, Kansas City, Mo.

Shortly after I became interested in Christian Science, some eight or nine years ago, our little son was obliged to remain out of school for a couple of weeks on account of a condition which caused him trouble in his stomach and head. It did not occur to me that it was so very serious, until a doctor informed me that he could only temporarily help the child; that it was but a question of a few days when he would be absolutely deaf for the remainder of his life; that the hearing had gone entirely from one ear, and that it would leave the other within a few days. Upon hearing this heartrending verdict pronounced upon our boy, I determined to see if Christian Science could not overcome what the doctor confessed was quite beyond medical skill to accomplish.

At the advice of a Christian Scientist in Eugene, I called up a Christian Science practitioner in Salem by telephone, and asked her to treat our boy for deafness. When I returned to our room, I found the boy asleep on the bed. In about half an hour he awoke, and at once sat up in bed, and declared, "Mamma, I am well," and asked for something to eat, saying he was hungry. I at once cooked him some food for which he had expressed a wish, and he ate a hearty meal. That was the end of the entire trouble; the boy was healed. There has never been the slightest return

Digitized by Google

of the disease, and today he is a big fellow, seventeen years old, perfectly robust and healthy.

No one but a mother can fully realize the joy and happiness which were mine at this abundant proof of God's healing power through the understanding of Christian Science.—MRS. JESSE W. BOUNDS, Eugene, Ore.

On the second day of May, 1906, my horses became frightened in turning on a newly graded road, and upset the buggy, with the result that my leg was very seriously injured. Upon reaching home after a drive of four miles, a number of my friends were there, and before I knew it they had summoned a physician. The doctor set the joint, bandaged it, and attached to my foot a weight which hung over the end of the bed. As soon as the doctor had gone my wife cut the weight loose and removed the bandage, replacing it in such a manner that it would not interfere with the circulation.

It was not until some five or six hours later, and during the night, that I called for a Christian Science practitioner, as at this time my ankle had begun to cause me some pain. Within a few minutes after I had called for help from the practitioner, the pain ceased, and from that time until now I have felt no return of even the least pain. The doctor called the next day and he informed me that I would be a cripple for life, on account of having loosened the bandage and removed the weight. We told him that he need not return again, as we were quite sure that under Christian Science treatment the limb would be restored to a perfectly normal condition. During the two weeks I remained in bed, I felt no ill effects whatever. The first time the bandage was removed to bathe the limb, the flesh was somewhat discolored. The practitioner was present, and the discoloration disappeared at once and did not return.

After the first two weeks, with the help of crutches I attended to business as usual; took trips on the train, and did whatever the demands of business required of me. In about six weeks from the date of the accident I discarded the crutches for a cane, which I used for several weeks. On the 8th day of July, 1906,—a little over two months from the date my leg was broken,—I went into the mountains as a witness on a timber claim, and felt no bad effects; in fact, I have not been caused the slightest inconvenience during all these years, despite the fact that my business has taken me for days together into rough mountainous country on foot. Instead of being a cripple as the doctor predicted, this ankle is just as supple as the other, and there is not the slightest difference in my legs.

This is written to show the perfect results one obtains through mental surgery as practised in Christian Science. We are most thankful for the little that we know of this wonderful healing truth, and that our Leader, Mrs. Eddy, has given us a text-book, "Science and Health with Key to the Scriptures," by the study of which we can learn ever more and more of the Principle that enables us to overcome physical ills as well as sinful habits; a book, moreover, which makes practical the teachings of Jesus the Christ.

J. W. BOUNDS, Eugene, Ore.

Four and a half years ago I turned to Christian Science and was healed of rheumatism, neuralgia, serious stomach trouble, fear, and a sense of sin. For this healing and all the blessings which come from the understanding of the truth gained from our dear Leader's writings, I am more than thankful. Words can never express my heartfelt gratitude to God for the great spiritual uplifting and glorious understanding that now are we the children of God, therefore brethren.—KATHERINE G. BULLYMORE, Buffalo, N. Y.

[Translated from the German.]

We are thankful to God for the good which has come to us through Christian Science. In March, 1910, our boy was taken ill with a disease of the leg, which returned every year—each time in an aggravated form—and we had to secure medical advice. Last year the disease manifested itself very severely, the leg being very much swollen and discolored. The abdomen too was swollen and discolored, and the child suffered terribly. None of the remedies applied brought relief, and we were at our wits' end.

I then went to see a Christian Science practitioner, and asked for treatment for the boy. After a week's treatment the swelling and pain abated and in a few weeks had disappeared entirely. A very severe internal trouble which the boy had had since childhood, and for which we tried various physicians and all kinds of remedies without success, disappeared after this treatment, and has not returned since. Through Christian Science we have also gained a better understanding of the Holy Scripture, and our gratitude goes out to that brave woman, Mrs. Eddy, who has rediscovered and taught again this glorious truth.

FRAU DAETWYLER, Basel, Switzerland.

Actuated by a sense of deep gratitude, I wish to testify to the wonderful power and love of God as revealed to me through Christian Science. In August, 1909, our family doctor and two of the best surgeons in New York informed my wife that she must go to a hospital for an operation, which would necessitate the removal of several organs; and that, if this were neglected, she might not live many months. Preparations were partly made and the time set for the operation, but before the day arrived we were persuaded to try Christian Science. We consulted a local practitioner, and from the very first treatment, on Sept. 1, 1909, my wife began to improve. In three months she was healed, and is now strong and well. She is also able to demonstrate the power of divine Truth not only for herself but also for others. Our daughter was healed of kidney trouble of long standing, which had baffled the efforts of several good physicians. In my own case, I have been cured of several chronic ailments and of the appetite for tobacco. I had worn glasses for twenty years, but discarded them six months ago without the least inconvenience.

For twenty-five years I was an active church-member, serving on the official board; was superintendent of the Sunday school, etc. During all these years, however, I failed to acquire a satisfying concept of Deity, and was as one groping in the dark. I was continually praying for light, and in our extremity God was revealed to us through Christian Science, and now all things are becoming clear and plain. Since my wife was healed, we have joined a local Christian Science church, also The Mother Church.

Naturally, we are deeply grateful to our heavenly Father, also to our revered Leader, Mrs. Eddy, for all these blessings; but they are not the only, nor even the highest benefits we have received, for we have all experienced a great spiritual uplift. Old and erroneous opinions are being corrected, and the Bible has become to us an open book; the allness of God is now a reality, and the stronger becomes the desire to have that Mind in us "which was also in Christ Jesus."—FRANK L. PELO, New York, N. Y.

Over a year ago a trouble which I had felt off and on for some time became so serious that I consulted a physician, who said it was an affection of the nerves in my right arm and shoulder. He also said that as it was of long standing it would take a long time to cure, but the remedies he gave did not relieve me. I could not sleep night or day, and besides being in an agony of pain my arm was helpless, the least movement causing terrible suffering.

I was in this condition for several weeks, until one day actual desperation rather than faith in the curative power of Christian Science led me to go to a practitioner, and during one treatment the pain and lameness nearly disappeared.

Digitized by Google

Inside of ten days I was entirely cured, and have never felt the ailment since. Before I was treated I had long been interested in Christian Science, but had not believed it would cure great physical pain. Now I know that Christian Science can cure every ill, whether of mind or body. It is the greatest blessing that has ever come into my life.

ELLA F. ENGLISH, Yonkers, N. Y.

My mother wishes me to send in her testimony of love and gratitude for the physical healing and spiritual uplifting she has received in Christian Science. It is over six years since she began to study the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and she has had many beautiful demonstrations of the power of Truth, for which she thanks God. She had suffered for years from stomach, liver, and bowel trouble, and had consulted and was treated by several prominent physicians, besides trying many different medicines recommended by friends; but nothing improved her condition, and she grew worse instead of better. Everything she ate distressed her very much, until finally she was afraid to take any nourishment at all.

A friend of ours then advised her to try Christian Science, and she did so. From the first treatment she lost all fear, and ate of anything for which she had an appetite. She was healed of the bowel trouble by reading Science and Health. Mother has been called a walking testimonial for Christian Science.—MRS. CORA GERBIC, Oakland, Cal.

I acknowledge that the above testimonial written by my daughter is the truth, and I am most grateful to God, also to Mrs. Eddy, for all the blessings I have received through Christian Science.

MRS. CHRISTIANE RUDOLPH, San Jose, Cal.

I wish to tell of the quick relief which I received in an attack of throat trouble. For twenty-four hours my throat had been quite painful and was continually growing worse. I then called on a Christian Science practitioner for help, for I was greatly alarmed, notwithstanding the Christian Science admonition against fear. The result of the treatment was that I dropped off to sleep in a few minutes, and upon arising I was not conscious of any ill feeling whatever. The cure must have been instantaneous, for I slept quietly for two hours. Upon a second examination my throat was found to be in a normal condition, and I am happy to say that it has not troubled me since. How wonderful this healing seemed! Words fail me in expressing my gratitude. Divine Love did it, and may others receive rich blessings from the same source.

MRS. MARGARET INGRAHAM, Los Angeles, Cal.

[Written for the *Sentinel*.]

LOVE'S HEALING.

CHARLES C. SANDELIN.

A WHISPER heard at eventide,
That bids the troubled thought awake,
And in Truth's sheltering courts abide,
Illusions dread of earth forsake:
Thus cometh Love at sorrow's eve,
And bringeth peace to them that grieve.

How wondrous that a tender word
Makes error's fetters fall away!
No more the frightening storm is heard,
Love changeth night to sunlit day.
While heavenly joy and hope renew,
Behold life's sweet, harmonious view!

FROM OUR EXCHANGES.

[Rev. Edwin Alfred Rumball in *Christian Register*.]

When the new vision is born, it nearly always comes in swaddling clothes. It is a question whether many Methodists today would have joined Methodism in John Wesley's day: they are a different type. It may even be a question whether many Unitarians of today would have joined the movement in those early days of social ostracism, when negations were more frequent in our gospel than they are today. And, had we been of those in Galilee, would we have guessed that this man of visionary nature, this uncompromising preacher who made such rash statements, who seemed to be continually talking such an impractical message,—would we have guessed that he was worthy of our giving up all for his cause? Some of us would, perhaps, but most of us would not. We would surely have been of those who said, Can anything good come out of Galilee? What can the son of a carpenter teach us? Then would it not have been asking a great deal of us to have invited us to join so lowly a group of men? They were nearly all working men. They were all so ignorant, and doubtless not as attractive to associate with as some other classes; it would have seemed very much easier to have "come to Jesus by night," and followed him from afar; we should not have felt the compulsion to join his ranks. Would we have guessed that this was the one we came to seek?

Then there is a sadder side to all this. Would we have dreamed what our indifference to his gospel was going to mean? Would we have guessed that our indifference to the position which he was asking us to take, our prudence over such unessential elements as some of his rash statements, our blindness to the vision of his soul,—would we have guessed that all this was a silent urging to the crowd which cried, "Crucify him"? Had we been of those in Galilee, we might have taken the side unconsciously of those who think that by killing they can do God service.

[*Churchman*.]

The literature of the age, the various evidences of dissatisfaction and discontent that range from passive wretchedness and protest to the most active struggle for emancipation and liberty, have but one overmastering story to tell, namely, the almost limitless awakening in humanity to a consciousness of its existing bondage and of its power, under God, to be made free from its shackles. The long view and the near view bring God and man's neighbor so immediately in touch that there is today a cry for Christ where his church is not known, and there is a demand for the church of Christ to be the reconciler where divided Christendom in all of its forms is rejected.

But, in the face of the sin of separation and its fruits, the mission of organized and organic Christendom, even in its divided fragments, is more paramount than ever to see that the sense of corporate, family, neighborly life it still holds be not lost in the aimless effort to deal directly as individuals with God, to the neglect of the brotherhood. The chaos of individualism supplies no binding force. The hope of unity rests on what has triumphed of corporate Christianity. Faithfulness to the body of Christ still involves loyalty to the divided members. The long view and the near view are holding humanity with an ever quickening and widening power and are compelling all divisions and sections of Christendom to take account of their sins and to fulfil their immediate mission and commission of reconciling the world to God and to itself. This message, it matters not whether it be learned haltingly or whether it still represents faultily the incarnate Christ, is the message of this age to the divided churches.

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth.*]

Show me a being, however limited in outlook and defective in character, in whom love has ever meant the willing acceptance of a cross, and I will show you something of Christ, therefore something of the love of God. There may be but little of it, but it is there. It is the one central hope for poor humanity. In all our filthiness, meanness, brutality, crooked ways, hatred, scheming distrust of one another, and all that exhibits the mark of the beast in human nature, we need never despair so long as we can discern that divine mystery, the love of God on the cross of human ministry to human need in the midst of anguish and pain. We may say, and say truly, that the tragedy of Calvary has been as long as history; it has never ceased; the scourgings, the mockings, and the crown of thorns are ever being inflicted upon the dying Christ, and from that agony humanity rises into newness of life. Do not speak of disbelieving it; it is not in your power to disbelieve it; this is no dogma; it is a process which is going on every day and hour before your very eyes.

[Rev. Frank N. Riale, Ph.D., D.D., in *Christian Work and Evangelist.*]

He who could raise up seed unto Abraham out of stones, can surely make a new church again, as he has done at least twice before, as He did at the birth of Jesus and the birth of the reformation hour. Perhaps He is getting ready for this third creation, when it will be the third child of His love, the third that is to charm and change all the world. It will be the church in which not the letter but the spirit of Christ must reign. It must be a church which is the fulfilment of all that has gone on before. It must be a church that will do the things to be done and bring forth the fruit that the world is hungry for. It must be a newness of life, which will make the universal brotherhood mean a reality, and not a profession. It must be a gathering of the clans of God, in which men really do love one another as Jesus loved the world; and that there is a divineness and not a selfish deviltry that shapes all our ends and aims. We are not to preach but practise the great commandment as Jesus preached and practised it. We are to have a love that is a real solvent for all our own sins and the sins of others.

[Rev. Charles R. Brown in *Congregationalist and Christian World.*]

It would be inaccurate to speak of a miracle of healing as "a violation of law" or as a piece of magic performed for the amazement of the people. A miracle according to New Testament usage is a result wrought for spiritual ends by divine power according to laws which at present lie outside the field of ordinary experience. In what we call "natural events," we find "a divine purpose moving steadily across the ages, keeping its appointments with foreseen human needs." In those events termed "miraculous" we find this same divine energy now manifesting itself according to methods not comprehended at present by ordinary knowledge and experience.

[Rev. G. W. Oliver, M.A., in *Pacific Christian Advocate.*]

The demand of the age is not for men who will simply reproduce the dogmas of past ages, but for men who are seeking to bring the fundamental principles of the teachings of Jesus to bear not only upon individual but on social life. The times demand prophets—men who can see with clear vision, men who can solve the great human problems of twentieth century living.

[John Richard Brown in *Watchman.*]

When any form of faith which has been commended to men as final and authoritative fails to meet a deeper hunger or a more poignant application, its insufficiency is advertised to the world by revolt and reaction. A certain smug complacency has made some narrow evangelicals describe this reaction and revolt as sin or pride or the motives of the natural heart.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume, "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. *Eddy* to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The lecture entitled "Christian Science: Its Principle and Method," by Bicknell Young, has been translated into both Swedish and French and is now ready for sale in pamphlet form. Another French translation recently made is the lecture "Christian Science: The Comforter of Promise," by Frank H. Leonard, which is also printed in a new pamphlet in French only.

A new pamphlet has recently been issued entitled "Christian Science *vs.* Finite Sense," a lecture given by Francis J. Fluno, M.D. 32 pages.

A lecture by Willis F. Gross, entitled "The Gospel of Freedom," has been published in pamphlet form. 32 pages.

These pamphlets will be found listed on the opposite page, with prices for single copies and quantities.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist.—The Mother Church.—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and Author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $2.09; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

A far-reaching decision upholding the right of patentees to dictate absolutely how their patented articles may be sold by retailers, and declaring legal the inventors' "monopoly" in his selling contracts, was made by the supreme court of the United States last week. The case involved alleged infringement in selling supplies for use on a patented rotary mimeograph. A notice on the machine set forth that it was sold on the restriction that it was to be used only with supplies made by the patenting company. In announcing the opinion Justice Lurton said this conclusion resulted from the proper construction of the patent statutes. The very object of this statute, he said, was to give a monopoly to the inventor, and the fact that he continues that monopoly in his contracts, disposing of his articles by charging such price as he pleases, was not illegal. If such conditions interfered with public policy, he said, Congress alone must change the patent law. Only seven justices sat in the case, Justice Day not being present and the seat of the late Justice Harlan being still unfilled. Chief Justice White and Justices Hughes and Lamar dissented. The chief justice said he did so because he hoped a dissenting opinion might serve as an antidote to a poison that might enter in the future into millions of transactions touching every phase of society, and he hoped to call attention to the fact that this was a question of construction, and that if untold evils were not to follow Congress must act. Congress is already taking action through a number of bills presented.

In considering the arbitration peace treaties between France and Great Britain the Senate eliminated bodily the third clause of article three, which made the decisions of the high commission final as to the arbitrability of differences. Government officials who followed the negotiations of the two pacts agree that participation by the United States in general arbitration of international difficulties is a dead issue so far as this session of Congress is concerned, and probably for some years to come. It is thought that President Taft will not submit the treaties in their changed form to either of the powers for possible approval.

The government's attempt to dissolve the merger of Union Pacific and Southern Pacific railway systems has begun in the supreme court of the United States. Attorney-General Wickersham and his special assistants, Frank B. Kellogg and Cordenio A. Severance, filed a comprehensive brief of their arguments to be made orally in court shortly after April 1, when the legality of the merger will be presented for decision. In addition to the brief of arguments a second brief of six hundred pages was required to set forth the "fact" in the case.

The United States Senate on March 1 adopted a resolution calling on President Taft to submit to it all the correspondence with Colombia dealing with the acquisition of the Panama Canal Zone by the United States. The resolution was offered by Senator Hitchcock of Nebraska, who urged its adoption in a speech in which he charged former President Roosevelt with participation in a conspiracy to foment the revolution by which Panama was lost to Colombia, and the Canal Zone became the property of this country.

The Massachusetts Institute of Technology has just become the recipient from an unnamed donor of two and a half million dollars. This will provide for the erection of the proposed group of buildings on the new site on the Charles river basin opposite Boston. Another half million will be raised by the alumni of the institute. Another half million has already been applied to the purchase of the site.

Officers of the sugar trust, who are alleged to have crushed out of existence the Pennsylvania Sugar Refinery Company, its strongest competitor, are on trial before a jury in the United States district court before Judge Hand. The trial is expected to last several weeks.

Chancellor Mahlon Pitney of New Jersey was confirmed by the Senate last week as an associate justice of the supreme court of the United States by a vote of fifty to twenty-six.

International.

The local government and statistical department of the London county council has issued a return showing the ratable value of properties in each metropolitan borough and parish of the county of London and in the city of London, in the occupation of railway, tramway, gas, electricity, water, canal, dock, hydraulic power, telephone and telegraph companies, corporations and authorities, together with the ratable value of land according to the quinquennial lists in force on April 6, 1911. The total value in 1910-11 was £5,072,096.

The stories of the leasing of the port of St. Thomas in the Danish West Indies to a syndicate operating in behalf of the Russian government have been exaggerated. The facts are that a bill agreeing to the leasing of the port to a private syndicate was brought before the Danish Parliament. In its committee stage a clause was added which will prevent the letting of St. Thomas to a foreign power without the deliberate consent of the Danish government.

Of late years the question of preserving French forests has been so neglected, and so much needless waste has been permitted, that the government has thought it necessary to intervene. The minister of agriculture ordered a thorough investigation of the subject.

Industrial and Commercial.

The bananas imported into the United States are derived chiefly from the Central American states and Jamaica, and smaller quantities from Cuba and Colombia. Greece supplies practically all the thirty-five million pounds of currants imported, and European Turkey the preponderating share of the approximately twenty million pounds of figs and dates, respectively. Spain is the sole important source of imported grapes, of which nearly two million cubic feet were imported last year. Italy holds a like position with reference to lemons, all but a quarter million pounds out of one hundred and thirty and a fourth million pounds imported being from that country. Spain, Greece, and Italy are, in the order named, the leading sources of imported olives. Considerable quantities of oranges are imported from Jamaica, Mexico, Central America, Japan, and Italy. Cuba supplies nearly all the imported pineapples; Spain, over half the imported raisins, with Asiatic Turkey and Russia also important sources of supply. Europe, chiefly Spain, Italy, and France, supplies most of our imported almonds; the British West Indies most of the cocoanuts; the Philippines, French Oceania, and the Straits Settlements most of the copra; Brazil, practically all the cream nuts; Japan, Spain, France, the Dutch East Indies, and China, most of the peanuts; and France and Italy most of the walnuts.

It is estimated that more than five thousand irrigation wells are being driven in western Kansas this winter. And every well means from forty to sixty acres of land under irrigation during the hot season next summer. The wells vary in depth from fifty to four hundred feet and are from twelve to thirty inches in diameter. The drills go down from fifteen to fifty feet after striking water and the water is drawn from the bottom of the well, so that there is always sufficient head to the water to guarantee steady pumping. For thirty miles on each side of the Arkansas river there is what is known as the "underflow," an inexhaustible sheet of water flowing through gravel and sand at the rate of eight hundred feet a day and from one hundred to three hundred feet thick. All of these wells tap this underflow and get water from it for the crops when the rains do not come. The wells cost from seven hundred and fifty to two thousand dollars each, fully equipped with pumps and gasoline engines.

The Industrial Workers of the World, according to a reported statement made at a labor meeting in Lawrence, Mass., have been planning for some time to bring about an eight-hour work-day in the United States on May 1 next. A letter from an English labor leader was also read inquiring if the eight-hour sentiment in the United States is strong enough to warrant a general movement on the part of organized labor this year. If the general sentiment favored such a movement on this side of the ocean, he wrote, a similar movement would be started in Great Britain, Australia, South Africa, and other British possessions simultaneously.

The beginning of the end of the great textile strike at Lawrence, Mass., which began Jan. 12, has been reached and the strike has been declared off relative to nearly all of the concerns. The general strike committee voted to recommend to the idle operatives of the American Woolen Company's four mills that the wage schedule offered by the corporation be accepted. This provides for advances in wages varying from five to twenty-five per cent. for the payment of one and a quarter times for overtime, and a readjustment of the premium system whereby payments shall be made every two weeks instead of monthly.

The crop of potatoes in Aroostook county, Maine, the past year is estimated at eighteen million bushels. The crop of 1911 was sound, and owing to the high price of market potatoes there was hardly any starch made. It is estimated that one hundred thousand acres will be planted the coming year, compared with ninety thousand last year. The making of starch in Aroostook county this year was the smallest for a great many years, about one thousand tons. For several years the average has been about eight to nine thousand tons.

Anthracite and semi-anthracite coal has been discovered at the head of White river, Yukon territory, Canada, a few miles from the summit of Skolai pass. The new fields are within fifty miles of the great Chitina-Kotsina-Nizina copper district of Alaska, where extensive mining operations are in progress.

Compulsory electrification of the railroads entering Boston has been practically decided upon by the legislative committee on railroads. A tentative bill has been drafted by the committee. It calls upon the railroads to electrify their lines into Boston on or before 1920.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

A PERPETUAL CHALLENGE.

SAMUEL GREENWOOD.

THE wisdom of safeguarding one's mentality, of excluding from it whatever would defile, is apparent from the fact that to the extent one is thinking good he is immune from evil. Watchfulness in having only good in one's thoughts is, therefore, a matter of downright common sense, of practical self-preservation, rather than of sentimental religious duty. It is a work in which all mankind are intimately and individually concerned, inasmuch as every human being has before him the goal of abiding satisfaction, happiness, peace, but which, as he knows in his heart, cannot in the very nature of things be found at the end of any evil course. Hence the Master's command, "Watch ye and pray, lest ye enter into temptation,"—lest we be tempted to believe that aught but good is worth while, even on earth.

Mrs. Eddy writes, in *The Christian Science Journal* of April, 1904, "Our thoughts beget our actions; they make us what we are." What we think, then, is the most important thing concerning us, and the one thing which calls for unceasing attention if we would be what we aspire to be. The mental state must be guarded as faithfully, and its approaches sentineled as carefully, as camp or fortress in time of war, if we would preserve consciousness from the besetments of an evil sense. Every moment, whether he is consciously thinking of it or not, each mortal is mentally agreeing or disagreeing with the belief in a power, cause, and intelligence besides God, and is aligning himself either with the infinity of good or with the suppositional existence and activities of evil; and he needs to be vigorously wakeful to the omnipresence and omnipotence of God to be the best he is capable of being.

It is evident, from his teaching, that Jesus attached equal importance to watchfulness as to prayer; hence, ceaseless prayer to be effective should be accompanied by ceaseless watching. The desire for good, which is the essence of prayer, should never be absent; but to be fruitful, this desire must be seconded by the vigilance which allows nothing unworthy to enter or control the thought. The Master said that if "the goodman of the house" had been aware of the danger "he would have watched, and not have suffered his house to be broken through;" and so would we. Christians not only need to pray, but to watch that their prayers are put into practice. If our supreme desire is to be good, we shall so strive for its fulfilment that no opportunity to bring it to pass will be disregarded. Without unceasing watchfulness against the insidious encroachments of evil, one's efforts were useless; since to be good always, under all circumstances, calls for constant realization of the supremacy of God, good, and the consequent powerlessness of evil.

But, it may be asked, how can one keep unbroken watch, and preserve thought from the entanglements of a belief in matter, while participating in the routine of human material affairs? To be sure, a constant verbal denial of evil and affirmation of the allness of God may not be practicable, nor is such a course necessary to ensure the practice of righteousness. It is however evident that Jesus, also Paul, saw the necessity for being on guard constantly, and that "the whole armor of God" is required in order "to stand against the wiles of the devil." The admission of the claim of evil by mortals is not couched in so many words, nor is it a distinct or intentional mental act, so much as it is the involuntary impulse of belief, which operates continuously while the belief in evil remains. In like manner, the settled assurance and conviction of the omnipotence of God, permeating the consciousness, registers instant protest against every suggestion of evil as it appears on the individual's horizon. We reach this mental preparedness as we approximate the Christ-mind, whose normal and natural state of thought is the knowledge of man's eternal unity with God.

In "Rudimental Divine Science" (p. 9), Mrs. Eddy writes: "The thoughts of the practitioner should be imbued with a clear conviction of the omnipotence and omnipresence of God; that He is All, and that there can be none beside Him;" also, in "Miscellaneous Writings" (p. 155), she admonishes us not to forget the divine allness "for a moment." It can be seen that this state of thought would preclude any admission of evil, for though we may not at present be fully conscious of God's omnipotence and omnipresence, we can always remember it, and this remembrance will be a perpetual challenge to the supposition of aught beside Him. We know by experience that wrong thoughts do not enter our mental precincts while we remember that good is the only intelligence, nor can hate or malice creep into consciousness while we remember that Love is infinite. And so on through all of evil's suppositional activities; they could not slip in unperceived and unchallenged if we remained awake to the spiritual reality of being wherein man is forever the likeness of God. Our thought-sentinels go to sleep only when we forget; hence to watch is to remember.

A sentinel who neglects his watch is not more fearless but more careless, and less appreciative of the subtlety of his foe, than one who is wider awake to the import of his work. A watchman asleep expresses a false sense of security, a baseless belief of harmony, and he may awake at any moment to find the enemy in possession of the field. A similar danger exists for the student of Christian Science who allows himself to be lulled into a sense of peace and safety on the strength of material evidence, and forgets the ceaseless animosity of the "carnal mind" toward the spiritual idea. To keep perpetually in thought that God is All-in-all is not incompatible with the fulfilment of one's daily duties, and is the only way by which one may learn to be in the world without partaking of its evil. Jesus proved for every Christian the possibility of holding fast to the omnipotence of God in the face of all that the so-called material senses may urge to the contrary, and his followers cannot protect their thought from the mesmerism of false belief by any less absolute way.

It is the law of divine reality, Christian Science, and not human philosophy, which draws the line between the material and the spiritual, between the suppositional existence of evil and the allness of God, and to work scientifically

and successfully one must keep on the right side of this line. This demands alertness, the keeping of one's thought so clear as to what is true as to be a perpetual challenge to all that knocks at our mental door. Wrong thoughts may be detected by their inability to give the password, the infinity of good. Whatever implies that life, intelligence, substance, joy, power, etc., exist apart from God is an evil, and the sentinels of an army could as safely admit the foe into its lines as can the Christian Scientist such erring beliefs, for the result in either case means conflict and possible defeat.

The argument that this constant vigilance is unnecessary springs from self-righteousness, a self-deceived sense of personal goodness, for the thought that recognizes its own nothingness without God recognizes also the danger of submitting to any other control than good. No one, however, need be disturbed over this demand, for it does not necessarily mean harder work, but better work. As has been pointed out, it is all a matter of thinking. What we think means everything to us, everything to our happiness and success: hence the need of careful and watchful discrimination between truth and error. A wrong concept of God bases human bondage to a sense of evil, and Christian Science is ushering in the era of emancipation through the true idea of God which it reveals: but it holds true in this struggle as in others, that "eternal vigilance is the price of liberty." As the student gains the understanding of God as All, he will discern the claim of evil for what it is, nothing, and will neither fear it nor go to sleep over its asserted activity.

Mrs. Eddy clearly defines the personal side of this question when she says, "One should watch to know what his errors are" (*Sentinel*, Sept. 23, 1905). We are not called upon to watch our neighbors. It is in our own consciousness only that we are working out our salvation, and it is always our own sense of evil that we need to guard against and overcome. Students who speak of protecting their thought or their work do not, or should not, mean that they are protecting it from some person, but from "the rulers of the darkness of this world,"—the entrenched beliefs of mind in matter,—and "against spiritual wickedness in high places;" hence the wisdom of remembering that a single enemy may betray an otherwise impregnable stronghold. It is our privilege to remain so awake to the truth of God's allness, the infinity of Life, Truth, Love, that, to quote our dear Leader's words, "our faith takes hold of the fact that evil cannot be made so real as to frighten us and so master us, or to make us love it and so hinder our way to holiness" (Messages to The Mother Church, p. 50).

CHURCH-MEMBERSHIP.

HARRIET REED WHITE.

In accordance with the democratic form of government of all Christian Science churches, it is the custom of the board of directors of a branch church to confer with the members on all matters of importance relative to the welfare of the cause, and to solicit their intelligent cooperation in many important matters. Apathy and indifference regarding membership in The Mother Church are certainly opposed to the welfare of the cause of Christian Science since, according to our Church Manual, such membership is necessary for the organization of churches and for the proper conduct of church services.

In several places recently visited by the writer while on an extended trip, a crying need was found for members of The Mother Church, there not being enough such members to conduct properly the church services. Inquiry into the situation disclosed the fact that branch church members thought their local membership sufficient, and could not see the reason for being members of The Mother Church also. As it is possible that some Christian Scientists are unmindful of the privilege and unaware of the significance of membership in The Mother Church, it may be well to present facts which will disclose its import and reveal the necessity and inevitability of such membership as being the only proper expression of full relationship to the cause and of complete affiliation therewith.

In the historical sketch given on page 17 of the Manual, our Leader says of The Mother Church: "The First Church of Christ, Scientist, in Boston, Mass., is designed to be built on the Rock, Christ; even the understanding and demonstration of divine Truth, Life, and Love, healing and saving the world from sin and death; thus to reflect in some degree the church universal and triumphant." Is it not a privilege to have part in the carrying out of this design? Is it not a privilege to be actively cooperating with the splendid body of Christian workers who stand before the world, representing, in a measure, the fulfilment of this purpose? Is it not a privilege to uphold, to support such a church, and to espouse the cause for which it stands?

The writer of an article referring to The Mother Church, entitled "By Way of Reminder," which appeared in the *Sentinel* of May 16, 1903, said in part: "This church stands for the worship of one God and for utter reliance on Him, obedience to His perfect and satisfying law of good. It stands for salvation from all evil, through the divine Christ,—his teachings and his deeds. It stands for one universal Deity, one universal Christ, one universal Christianity, one theology, one religion, and for the unity of mankind in one Christian brotherhood. It stands for the power of good over evil, for the extermination of sin and disease, devil and hell, and for the legal right of man to overcome temptation and escape damnation. . . . It stands for the highest education, for the effacement of mystery and superstition . . . It stands for the tranquillity of nations, the obliteration of war and conflict, and for an equitable social and governmental reform. It stands for a new hope which answers the deepest human need and is giving greater peace to a suffering world. It stands for your own welfare, prosperity, health, happiness, and an increased capacity for every righteous achievement." With The Mother Church standing for all this and much more, the question arises, Have we fully espoused the cause of Christian Science until, determined to further her tremendous design, we have joined ourselves to that parent church which represents the cause?

Membership in a branch church identifies us in a way with the cause, but in order that this branch church may give the fullest measure of loyalty, obedience, and support to the parent church, its entire membership should be vitally interested in the subject of membership in The Mother Church, and each member should at least be fitting himself for the high privilege thus offered to all students of our text-book. In the January, 1911, *Journal*, a writer says: "While The Mother Church thus conserves the interests of the branches, it is itself composed wholly of individuals. Individual Scientists are its components, and the local churches are represented through their members." He further says: "In our great warfare against sin, disease, and death we have in The Mother Church a mighty arsenal and storehouse of supplies. It furnishes us the munitions of war, the banners of peace, and the men to use them both. Through its metaphysical college it supplies us trained teachers; through its able board of lectureship it tells of the Christ Science to the multitudes; through its committees on publication it holds in check misjudgment and misrepresentation; through its periodicals it enlightens the world with the light of Truth.

"To illustrate: If for the moment we should lift out of the Christian Science movement The Mother Church, with its institutions and activities, what should we have left? We should have hundreds of virile, active, zealous church organizations, but they would be separated units, drifting

Digitized by Google

this way and that, without cohesion or tenacity. It might be profitable to ask ourselves if they could act concertedly or forcefully as they do today when a step forward is determined upon; or present to a common foe that solid front against which the enemies of Truth have so often plunged to their confusion and defeat. There is little probability of our giving too high a place in our esteem to The Mother Church as the agency of divine Love, which out of our many units makes a union, adamantine and invincible, even as cement binds the drifting sand and flowing water into a rock that will endure like the pyramids of Egypt."

The United States of America serves as a good illustration of our point in question, the central government at Washington binding the many units of states into a Union, so that, no matter in what state of this God-blest Union we may reside, we are each and all recognized, and justly so, as representative members of the one great body or nation. But just as the fulfilling of certain requirements indicates our interest in and relation to this central government, even so must certain requirements be complied with to indicate our interest in The Mother Church and our participation in her activities and accomplishments.

We think of The Mother Church as God's instrument for establishing the understanding of scientific Christianity by organized and unified activity. What does this organized, unified activity typify? The church as an institution must be the expression of a spiritual fact or idea. This idea we find stated in various ways by our Leader in the text-book, the most familiar one being in "the scientific statement of being": "All is infinite Mind and its infinite manifestation." And again in the statement and definition of man: "The compound idea of God, including all right ideas;" "the full representation of Mind." Also in the definition of church: "Whatever rests upon and proceeds from divine Principle" (Science and Health, pp. 468, 475, 591, 583). Mind manifests itself in ideas. What can proceed from divine Principle but ideas? All of these right ideas, proceeding from divine Principle, comprise the compound idea, man, and constitute the church. The logical conclusion then is that man and church are one—are identical in purpose and activity.

Discerning this fact, it will readily be seen that affiliation with The Mother Church is typical of the scientific relation of man to God—his at-one-ment with God, the parent-Mind. Becoming aware of what this membership typifies, no one will be satisfied until he demonstrates his place as a lively stone in this temple of God's building—as Paul says in his epistle to the Ephesians: "Till we all come in the unity of the faith, and of the knowledge of the Son of God, unto a perfect man, unto the measure of the stature of the fulness of Christ: that we henceforth be no more children, tossed to and fro, and carried about with every wind of doctrine, by the sleight of men, and cunning craftiness, whereby they lie in wait to deceive; but speaking the truth in love, may grow up into him in all things, which is the head, even Christ: from whom the whole body fitly joined together and compacted by that which every joint supplieth, according to the effectual working in the measure of every part, maketh increase of the body unto the edifying of itself in love."

FATHERHOOD.

EMMA V. RIDDLEBERGER.

WHEN the writer was searching in the old theology for a clearer and nearer sense of God, and the ability to realize more of the practical truth of Jesus' words as recorded in the gospels, she was greatly impressed one day by the behavior of a dear little girl of her acquaintance, the daughter of a minister of the town, who was known to many as cherishing a very strong affection for her father, almost to the exclusion of the other members of the family.

At one time the child's mother was obliged to go away for an indefinite length of time in order to care for a relative who needed her. On meeting this little girl during her mother's absence, the writer offered her sympathy, when the child lifted her eyes in wonder and quickly said, "But I have father!" The thought then came, How satisfying it would be if one could always know God as indeed our Father, and as the years passed, to grow more and more into the fulness of it.

This was realized in Christian Science, and in addition the thought that God is our Mother as well as our Father, waiting in tenderness and patience upon our slow steps toward Him. The fatherhood of God, as revealed by Christ Jesus, remained too long in the background of human consciousness, and we wonder how it could have been thus when humanity was all the while longing for the Father's house, the only safe shelter from the worries and woes of mortal sense. As we realize what it means to be the offspring of God, we should strive more and more to manifest this relationship in joyous obedience and in love for others.

In the statement of Christian Science, as found in "Science and Health with Key to the Scriptures," our wise Leader has led us to a fuller understanding of this new-old truth, that God is our Father, and that His everlasting arms are beneath all who lovingly put their trust in Him.

THE HARVEST OF LIGHT.

MARY VAN DER BURGH.

WHEN our desire for Truth is supreme and we turn steadfastly away from the material, a new heaven and a new earth is revealed to us as "in the beginning:" and to every such honest seeker God says, "Let there be light," and there is light. As with uncertain footsteps we follow the pale beam, we find that this first feeble effort is rewarded, and we face the next problem with increased courage because of the understanding gained from the former experience.

Thus we learn, as did the psalmist, that "light is sown for the righteous, and gladness for the upright in heart;" and according as we have obeyed the heavenly vision is our enlightenment and gladness of heart. The word of God takes on new meaning, the sayings which before seemed dark and incomprehensible are now illumined with the new understanding that God is Love, and we begin to be glad at heart as we enter into our inheritance as children of the light. This light shines through all the ordinary intercourse of daily life, our experiences and environment, through the word and works of God, the writings of our revered Leader, and the words written and spoken by those who like ourselves "follow the star." As the events of each day develop, and we follow the light (the highest thought that comes to us in regard to each circumstance), light is sown, and there is a harvest of radiance that shineth more and more unto the perfect day.

When doing our best in declaring the truth of being, if the results we look for do not appear immediately we have the joy of knowing that the effort has not been in vain, for we have the assurance of God that His word does not return void, and that somewhere it is bringing forth the fruit of harmony and love—somewhere a heart has been uplifted, a burden eased, a fetter broken, or some discouraging prospect brightened because of our faithful persistence in meeting discord with a clear understanding of its powerlessness.

We need to remember that it is for us to declare the truth, not to say whereunto the message shall be sent, and faithful adherence to this may do much more than clear our own atmosphere. Who of us has not had the joyful experience to find a flower in some unexpected place, shedding fragrance and beauty all about because of a seed sown in an almost forgotten time and intended perhaps for another

Digitized by Google

environment,—an arrow sent "into the air," and to our sense lost? What one of us, in working out his own problem along spiritual lines, has not helped some one else? Right endeavor is never lost, but pressed down and running over returns the blessing.

About a year ago the writer had an experience which resulted in an enlightenment that has often since proved encouraging. Awaking in the morning with a sense of intense pain and inflammation in the eyes, and discouraged by the remembrance of other visitations of the kind that had endured from three days to a week at a time, the question of how to perform the duties of the day, which required close application of the eyes, presented itself. It seemed that on this particular morning many household duties imperatively called for attention; but attention to these would have precluded the study of the Lesson-Sermon, and the argument that it would be better not to try to use the eyes for this purpose seemed reasonable. Remembering the Master's reply to Martha, however, the temptation was resisted, and in the course of the lesson this text occurred: "Heal me, O Lord, and I shall be healed;" and the thought of Love's healing power sustained until the time came to go out to the work of the day.

There seemed but one thing to do. Straight ahead lay the path of duty from which error had no power to turn aside one who, however imperfectly, understood the power of divine Love to heal all diseases. The glare of the sun and the heat reflected from the pavement seemed to increase the fear and the pain. Remembering that Mrs. Eddy says, "When Jesus declares that 'the light of the body is the eye,' he certainly means that light depends upon Mind" (Science and Health, p. 393), and trying to realize Mind as the only dependence, at the end of the third long block these words came forcefully to mind: "It came to pass that as they went they were healed," and in that instant the healing was accomplished. The usual tasks of the day were performed without any sense of inharmony or pain, and with thanksgiving and gladness of heart another victory for Truth was recorded.

Did we but look upon these experiences as opportunities, the ladders by which we climb to the heights of realization from which we can see that "the accuser is not there," instead of thinking of them as afflictions,—seeing only the cloud and not the bow of promise therein,—we would with more courage accomplish our warfare with the powers that seem to be. We are beginning to comprehend our inheritance as the sons of God, and to appropriate the bounty of our Father's house. It is now "the pale star," but it will yet light "the way to eternal harmony," and we shall see "the full radiance of a risen day" (Science and Health, Pref., p. vii).

"BE INSTANT IN SEASON, OUT OF SEASON."

GRACE SQUIRES.

In "No and Yes" by Mrs. Eddy (p. 1) we read, "Truth is as 'the still, small voice,' which comes to our recognition only as our natures are changed by its silent influence." And again Mrs. Eddy speaks of the "cultivation of the true idea and the quiet practice of its virtues." The opportunity for the Christian Scientist to apply his religion comes more frequently in the small issues of life than in the large, and if he is faithful in this discharge he will at crucial moments find himself ruler.

To follow his Leader's injunction, and avoid voicing error, is a precept that commends itself to him as indicative of his faith. But in life his precept often becomes broken in practice, and not infrequently with supreme unconsciousness. One reason for this is that mortal mind has an innate love of the dramatic. It expands under high lights,—only it prefers them at a distance. Hence the temptation to voice this or that misery or feeling, since our superior knowledge of its nothingness permits this freedom. But the life effort of the Christian Scientist to destroy the seeming reality of error is not accomplished by voicing it, however low the voice or apologetic the manner.

Not infrequently it happens that we voice inharmonies in the hearing of one to whom of all possible claims this is the most personal and distressing. Perhaps we have outlined an image and thrust into his unguarded thought that which will take him hours to efface. We know so little of each other's history. If we knew more we should so often be wise. We are not purposely hurtful. We sow our worst deeds in carelessness, hence the need of leaning on our faith and exemplifying it with every breath, being instant in season and out. Another error that seems more or less tempting is that of giving unwise information. We are like children whispering in a corner, impressed with the distinction of our knowledge. Later, this distinction so carelessly voiced and unconsciously outlined is not so pleasant a possession, for all error that our thought accepts it will later through suffering reject.

There are few Christian Scientists perhaps who upon occasion have not some practitioner to whom they would go, one far more intimately acquainted with their history and mental predisposition than the most intimate of friends can ever hope to be. And how much wiser to leave one's friends and acquaintances in such safe hands, and attend strictly to one's own unfoldment, than to risk sowing tares instead of wheat, for once they are sown it seems necessary that they be allowed to grow together until the harvest. Jesus condemned a too presumptuous hand that in uprooting one should uproot both. He also stated in definite terms the true modus when he said: "The Son of man shall send forth his angels, and they shall gather out of his kingdom all things that offend." This clearly points to the purifying activity of Truth, at work in human consciousness.

With the world at large and with slight acquaintances the Christian Scientist is reasonably safe. His faith is uppermost through opposition or pride, and his consciousness is on the defensive. But let the beloved friend of mutual faith step in, and he has need to gird on his whole armor if he would stand fast. "But I say unto you, That every idle word that men shall speak, they shall give account thereof." If at the conclusion of the interview one feels that he has blessed all and injured none, the friend included, if he has taken no moment's advantage to listen to or to report personal inharmonies or animosities, but has been bravely blind to every opportunity, even that which silence or a smile can give; if in no slightest word has he made either himself or the friend big because somebody else is little, but has been quick to enlarge the borders of good and make broad her phylacteries, so broad indeed that they "cover the whole world's evil, and sweet enough to neutralize what is bitter in it" (Miscellaneous Writings, p. 224), he has fought a good fight and kept his faith.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 31, 1912. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 13, 1912.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 3, 1911, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

SELECTED ARTICLES.

[Frederick Dixon in *Brixton Free Press*, Brixton, London, Eng.]

The ordinary argument against Christian Science is that it is contrary to the evidence of the senses, opposed to common sense, or, as it was put the other day, "a denial of facts which common sense is accustomed to regard as obviously real and self-existent." May I be permitted to say that common sense is not infrequently a polite way of saying uncommon ignorance. And if some of the people who talk so readily of common sense would read certain remarks by Huxley on the subject it would add considerably to their fund of information. "The fish of immortal memory," Huxley wrote, "who threw himself out of the frying-pan into the fire, was not more ill-advised than the man who seeks sanctuary from philosophical persecution within the walls of the observatory or the laboratory." This sanctuary seeker, according to Huxley's description, is the individual steeped in common sense.

How right Huxley was is sufficiently obvious. Common sense declares that the sun rises and sets. It declared for centuries that you could see it for yourself, and for centuries it burned men and women for denying the evidence of their God-given senses. When the metaphysical philosopher came by with his upsetting speculations, common sense shouted its version of "Great is Diana of the Ephesians." It ran to the observatory. And to its consternation the observatory answered, "The sun is stationary." Common sense again declares pain to be in the wound. It says it knows it is there because it can feel it there, and a certain common sense philosopher prescribes a furious hating attack on people who, like Christian Scientists, deny the evidence of their God-given materiality. When the metaphysical practitioner comes upon the scene, it gathers its microbes round its skirts and vigorously declares its version of Tertullus' declaration, "We have found this man a pestilent fellow and a mover of sedition among all the Jews throughout the world; and a ringleader of the sect of the Nazarenes." In support it turns to the Felix of the laboratory; and from the mouth of one of the greatest natural scientists who ever stepped inside a laboratory it is informed, "It is utterly impossible to conceive of pain except as a state of consciousness."

As a last resort it turns to the church; it asks that the ægis of orthodox theology should be cast over it. And again the scholar in the church grimly replies that the word *miraculum* was far from ever meaning anything supernatural, but was simply the term used by the pagan philosophers to describe their speculations—speculations which required quite as much faith to imbibe as the speculations of the scientists of today on atoms, electrons, and ether. The miracle, common sense is told, is simply the translation of two Greek words in the New Testament which never meant anything but an act of power and a sign; and so the miracle is reduced to its true meaning of a powerful proof of the truth of the theology of Jesus. The theology of Jesus was contained in the phrase, "Ye shall know the truth, and the truth shall make you free," because this knowledge of the truth is the knowledge of the absolute; it is the most scientific knowledge in the world. And because it is scientific knowledge it is knowledge capable of demonstration. The miracle was the demonstration of this knowledge, and in proportion as a man learns this truth he is able to demonstrate it scientifically. That is the claim of Christian Science: "He that believeth on me, the works that I do shall he do also."

[Willis D. McKinstry in *Chanute* (Kan.) *Tribune*.]

Our critic says: "Anybody who has made any study whatever of psychology knows something of the marvelous influence of the mind upon physical organism." Kindly grant me space to say that this statement alone is sufficient evidence to prove our critic's conception of Christian Science is a misapprehension of its teachings.

Christian Science is purely spiritual, as God, Spirit, is its basis. One can never understand Spirit and its manifestation through the study of matter or from a physical view-point. Jesus said: "God is a Spirit: and they that worship him must worship him in spirit and in truth." Psychology does not teach one of Spirit, it treats of the so-called human mind and its claim of activities; it was to this mind Paul referred when he said, "To be carnally minded is death; but to be spiritually minded is life and peace."

We agree with our critic that to eliminate worry and fear gives a surcease from human discord, but this is not sufficient. To have a full and perfect salvation one must be liberated from every sense testimony. The pleasures and pains of the material senses must be reckoned with as a claim of intelligence, substance, and power apart from God, who is omniscient and omnipotent. To think or believe that one with his own mind, so called, can free himself from the claim of sin and suffering of his own body, is a sin of itself, and as all sin brings suffering, this sin of believing that man is something of himself must be overcome.

Faith advanced to understanding is essential, but a blind faith or trust does not remove or destroy sin. Mankind must know, must understand that "in him we live, and move, and have our being." And the Master said, "I can of mine own self do nothing." One might have faith in numbers, but to be able to solve the problems in arithmetic he must understand the principle and rule of numbers sufficiently to apply them. Christian Science provides mankind with the way of salvation, it gives him a way of escape from material sense, because it imparts a Principle and rule with which to apply the demonstrations and teachings of Christ Jesus.

Mental suggestion is the claim that one human mind can take possession of and control another human mind. This belief, if true, would subject mankind to the mental influence of any one who might desire to control or influence him, whether for good or evil; therefore he would be at the mercy of friend and foe alike, and it is from this false and sinful condition or belief that mortals must be saved. If mankind would escape from the bondage of material sense, exodus must begin with an exalted faith and trust in the omnipotence of God; this conception leads into spiritual understanding and the human concept gives place to the divine idea. This process of healing is far from being the control of one human mind over another.

All Christendom acknowledges Christ Jesus as the way of salvation; he healed all human discord and suffering without the aid of material remedies. No one will dispute that his way was the true way, or way of Truth, for God is Truth; and as Truth is changeless, Jesus' way must be the true and only way, now. An understanding of the Science of being as taught in Christian Science heals the sick, reforms the sinner, comforts the sorrowing, gives joy for mourning, replaces want with contentment, and poverty with prosperity.

We are living in an age of progress, men and women are grasping the spiritual facts of being—they are learning the truth of things; therefore they are no longer satisfied with the doctrines which promise only a future reward for right doing. The church as defined by Christian Science is: "The structure of Truth and Love; whatever rests upon and proceeds from divine Principle. The church is that institution, which affords proof of its utility and is found elevating the race, rousing the dormant understanding from material beliefs to the apprehension of spiritual ideas and the demonstration of divine Science, thereby casting out devils, or error, and healing the sick" (Science and Health, p. 583).

[R. Stanhope Easterday in *Indianapolis* (Ind.) *Sun.*]

The so-called mystery of evil has seemingly baffled theologians and philosophers of all schools and in all ages, yet it is evident that the most mystifying phase of the whole gigantic problem has been, after all, the apparently incomprehensible simplicity of fundamental good. It is a significant fact that the world's greatest Teacher, who is humanity's Saviour, did not thunder the fiery edicts of Sinai nor dispense with vengeful hand the plagues in Egypt. Our Lord quietly but masterfully propounded the beatitudes, and spake in simple parables, inditing as the one commandment of all, "Thou shalt love the Lord thy God . . . and thy neighbor as thyself." In the further admonition, "The kingdom of heaven is at hand," he eliminated from the whole proposition and at one master stroke that most mystifying of all the factors of evil, time.

The Pentateuchal writer in the very first chapter of the Book of books, gives us the effectual key to the entire labyrinth of false mortal sense designated evil, in the verse, "And God saw every thing that he had made, and, behold, it was very good." The words of this sweepingly significant declaration practically conclude the briefest and yet withal the most correct and comprehensive account of the nature, process, and completeness of that fundamental fact of all being known as creation. Successive chapters of the book of Genesis, and indeed successive chapters and books of the entire Old Testament, are but an account of the human misapprehension of creation, a history, as it were, of evil, written on the plane of human comprehension. This second account in Genesis proves upon close scrutiny to be a mistaken rendering of the fundamental, perfect, spiritual creation outlined in the first chapter and the first three verses of the second chapter.

As evidence of this, witness the fact that in the first account the term "God," meaning the self-existent and forever "I AM," is used to designate the creator, and the term "create," meaning "to bring into being," expresses the divine activity; while the term used in the second account is "Lord God," *i.e.*, Jehovah, or the Jewish tribal tutelary sense of Deity as a sovereign, and the incident activity is expressed in the word "formed," meaning literally "to give form or shape to" the already existent. It should be noted just here, also, that it was the spiritual, perfect, and complete creation of the first chapter, containing no taint of materiality or evil and inculcating dominion as man's dominant characteristic, which was pronounced "very good" in the estimation of the divine creative intelligence, or God; while of the latter, the human, material formation, we have the record that it was cursed.

This latter and false sense of being, moreover, as well as its rendering in later chapters of the older Scriptures, had its origin in the Adam-dream and continues to this present time in a "mist," "the same veil untaken away." Inasmuch as any false sense is but the supposed absence of a true sense of actually existent fact, this false, material sense of being, with its consequent evils known as sin, sickness, and death, is no more the reality of being than darkness is the reality of light, a lie the reality of truth, or a dream the reality of waking consciousness.

Our Saviour's teachings and methods during his life-ministry on earth, were entirely compatible with this view of life's problem and its ultimate solution in the gradual substitution of fact for fiction, truth for error, life for death—in short, the substitution of good for evil, the real for the unreal. First and above all else it was characteristic of him of whom it was said, "Never man spake like this man," continually to voice the unexpected and the opposite of human opinion; but he always proved the truth of what he said by what he did, in the elimination of all forms of so-called evil, including disease and death as well as sin. He, indeed, healed the sick by forgiving sin, made morally whole those whom he healed, and in it all boldly declared: "My Father worketh hitherto, and I work," intimating that all his works, although directly contrary to so-called physical law, were in direct accord with the divine will and with divine law.

On one occasion he significantly declared of the woman who was "bowed together" that she was bound of Satan, whom he had defined as "a liar, and the father of it." Certainly in this the master Christian demonstrated the unreality and powerlessness of evil and the reality and potency of the woman's righteousness as a daughter of Abraham. Jesus antidoted the false with the true as naturally as one dispels darkness with light, error with truth, thus effectually fulfilling the prophecy, "He sent his word, and healed them." Neither fearing nor ignoring evil, Jesus showed practically how to overcome evil with good, and significantly commanded his followers in all ages in the words, "He that believeth on me, the works that I do shall he do also."

Such faith in good as power and entity, to the absolute exclusion of evil, antedates time and has been developed and utilized to a degree in all ages, as witness the beneficent activity of patriarchs, prophets, apostles, and reformers, the beacon-lights of Christian faith throughout human history, each in turn snatching the ever-illuminating torch of purity and goodness and bearing it aloft undimmed, as amid the stultifying mists of mortal belief and the deafening thunders of billowy error the "still small voice" of Truth has continued to command, "Peace, be still."

Our own age and our own time has been blessed with men and women inspired more by intelligent love of good than by a superstitious fear of evil, helping and healing in consequence. Since the discovery of Christian Science by Mrs. Eddy, less than fifty years ago, both religious thought and scientific research have received a manifest and wholesome impulse, tending more and more away from matter, and the influence of the sermon on the mount, the Decalogue, the golden rule, and the first chapter of Genesis has been more in evidence as a practical factor in human economy.

Universally is mankind now as never before sharing intelligently in the spirit of Paul's sturdy confidence that "neither death, nor life, nor angels, nor principalities, nor powers, nor things present, nor things to come, nor height, nor depth, nor any other creature, shall be able to separate us from the love of God, which is in Christ Jesus our Lord."

[Howard C. Van Meter in *Portland* (Ore.) *Oregonian.*]

There are two points raised by our clerical critic respecting Christian Science which need correction. First, that Christian Scientists claim to have the power of Christ yet do not heal every case, and, secondly, that the cases healed through Christian Science are of a mild type, mainly of a nervous nature.

As to the first objection: When the Christ-method is referred to and claimed by Christian Scientists, it means the application of exact and definite knowledge of God—the knowledge which Jesus possessed without measure and which he urged upon his followers, telling them, as related by John: "Ye shall know the truth, and the truth shall make you free." Christian Scientists are engaged in acquiring this knowledge through faithful study of the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. They humbly acknowledge that they have as yet acquired only a small degree of this truth, and can demonstrate only what they understand; yet Mrs. Eddy says, "Because you cannot walk on the water and raise the dead, you have no right to question the great might of divine Science in these directions. Be thankful that Jesus, who was the true demonstrator of Science, did these things, and left his example for us. In Science we can use only what we understand. We must prove our faith by demonstration" (Science and Health, p. 329).

Digitized by Google

Christian Scientists rejoice in the Master's statement, "He that believeth on me, the works that I do shall he do also," as a promise for all ages and all people. A learned writer has said that to believe "on me" means to have a more advanced reliance upon the truth of the Master's teachings than merely to believe on his name; that is, that Jesus was the Christ. This advanced reliance comes to Christian Scientists with an increased understanding of the spiritual law that was manifested in the Master's works. That they are not successful with every case may indicate a lack of understanding of this law, or an unwillingness on the part of the patient to abide by the Christ-demands. It is recorded of Jesus that in his own country "he did not many mighty works there because of their unbelief." Many patients, after a long and unsuccessful experience with the old school of healing turn to Christian Science in the last stages of disease. If *materia medica* failed to heal such cases in their incipiency, should the Christian Scientist be blamed if in his metaphysical study he should not have yet gained sufficient understanding to make it practical? Nevertheless, thousands of so-called hopeless cases have been restored; if not instantaneously, at least ultimately. Since no one is really healed in Christian Science until an awakened sense of God is established in their consciousness, it is not strange if its unfoldment be gradual.

The second criticism is that the majority of cases healed through Christian Science were of a minor, not serious nature. This denomination does not especially record the detail of cases healed, but the *Broadway Magazine* two years ago made an investigation of a large number of cases of healing, and published the following:

"These records (on file in office of Christian Science committee on publication, Metropolitan building, New York city) give specific and complete details of thirteen thousand eight hundred and seventy-six cases, treated by Christian Science in the state of New York. Of this number eleven thousand two hundred and forty-four patients acknowledged definitely that they were either completely cured or permanently benefited by Christian Science. Four thousand eight hundred and ninety-five of these patients were either given up by physicians or had despaired of receiving relief from medical treatment. The two thousand six hundred and thirty-two cases remaining were still under treatment, incomplete reports being made for statistical purposes. Of the total number fifty-eight died. The records cover practically every well-known human disease or ailment. Many of the cures date back over twenty years; the great majority go back more than five years. No testimony is given so closely following a cure that there could be any doubt of too hasty judgment on the part of the patient. The authenticity and validity of these records are above question."

[William J. Bonnin in *Rochdale* (Eng.) *Times.*]

The fundamental difficulty which many appear to labor under in reference to Christian Science, is the conviction that the evidence of the senses is evidence of actual truth. In other words, they appear to be unable or unwilling to grasp the Christian Science teaching that, while to the material consciousness material things are true and spiritual things untrue, so to the spiritual consciousness the things of the Spirit are true and material things untrue; and that, since these two witnesses are mutually exclusive and destructive, only one of them can be a witness to absolute Truth. One must be wholly true and the other wholly false. Christian Science affirms that the testimony of the spiritual senses is true and that of the material senses false, when judged by the standard of absolute Truth, seen, as it were, from the point of view of the divine Mind. And here it may be pointed out that if we change that standard for the standard which the material consciousness recognizes, we may speak of the relative truth and falsity of concepts without in any way interfering with the fact that the very employment of such false standard ensures its values being wrong when tested by the true one. And this difference in standards is what is lost sight of by those who endeavor to be humorous at the expense of the propositions of Christian Science.

And so it is that the question of consciousness has always been one of prime importance in Christian Science. For Christian Science has this message for the race—that it is possible to cultivate and develop a spiritual consciousness and to begin, as a consequence, here and now to enjoy the fruits of the Spirit; possible now to prove the evidence of the human, material senses to be temporal, unreal, false; possible now to begin as Christians to demonstrate that God, good, is omnipotent, and that the supposititious counterfeit power of evil may be destroyed by the knowledge of Truth.

It will be seen that it is only by a change of consciousness that the spiritual truths of Christian Science are unfolded. The manifestations of evil begin in that process to reveal their nothingness. Imagine a person with no acquaintance with music having to listen to a Beethoven symphony. It would probably be a jarring discord to him. After a musical education the same performance becomes a delightful harmony to him. Where has all the discord gone? Did it ever exist except as a false concept of a lying consciousness? The harmony was there all the time. And that is how evil may be overcome with good. We may know that evil is but the expression of ignorance of the truth, just as darkness is an expression of the absence of light; and as we may know that as not all the darkness in the world can extinguish a taper light, so too we may know that not all the false evil of the world can destroy a single ray of truth.

Christian Scientists are confident that they have something of which the world is badly in need. They know that no one can possibly understand Christian Science and still decry it. They know that all who have the welfare and progress of the race at heart, as opposed to that of any institution or organization, know that what is needed is a fuller knowledge of God. And so they are not concerned to wrangle over any verbal formula or creed, nor are they much concerned with the opinions of the thoughtless. What they are concerned with is to obtain a fuller knowledge of God themselves and to carry that knowledge to their neighbor for the alleviation of his suffering and the healing of his disease. The healing from sin is then begun.

[R. J. Todd in *Peterborough* (Ont.) *Examiner.*]

Jesus proved by a perfect life, in doing many wonderful works, man's at-one-ment with the Father. Seeing humanity clinging to his personality instead of receiving the divine ideal which he taught and represented, he said, speaking of the human, "I go to my Father, and ye see me no more; . . . Howbeit when he, the Spirit of truth, is come, he will guide you into all truth." Mrs. Eddy, in 1866, perceived this Spirit of truth, the idea of the fatherhood and motherhood of God, and named it Christian Science. This ideal Christ has come, as aforetime, "with healing in his wings," healing the sick and sorrowing as well as redeeming the sinner.

AN EXPLANATION.

In the *Sentinel* for Jan. 20 we published a letter from Alfred Farlow in the *Christian Standard* of Cincinnati, Ohio. That the attitude of the *Standard* in giving space in its columns to Mr. Farlow's letter may not be misunderstood, we are requested by the editor to explain that this letter did not have his approval, as his comment, which was published in connection with it in the *Standard*, made entirely clear.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"THAT GIVETH THE INCREASE."

IN the Preface of Science and Health (p. xi), Mrs. Eddy writes of herself, "When God called the author to proclaim His gospel to this age, there came also the charge to plant and water His vineyard." In fulfilment of this duty various means were taken by our Leader to cultivate and keep free from weeds the soil in which the seed of Truth had been planted. The first of these was, of course, the text-book, followed by the church of which Mrs. Eddy became pastor, and later pastor emeritus; then came the college, in which she herself taught students, in order that they in turn might each teach hundreds of others.

After the college came the *Journal* as the official organ of the church, and this was followed in turn by the *Quarterly*, the *Sentinel*, the *Herold*, and the *Monitor*, each filling a slightly different field of endeavor, but all equally important in their mission of uplifting the race. Of the *Journal* Mrs. Eddy wrote: "Further enlightenment is necessary for the age, and a periodical devoted to this work seems alone adequate to meet the requirement. Much interest is awakened and expressed on the subject of metaphysical healing, but in many minds it is confounded with isms, and even infidelity, so that its religious specialty and the vastness of its worth are not understood" (Miscellaneous Writings, p. 4). Of the *Monitor*, in its first issue, she stated that its mission was "to injure no man, but to bless all mankind." The fact that the committee on publication and the board of lectureship are yet engaged in answering and correcting misrepresentations and misconceptions of Christian Science, shows that we are still in the age of which Mrs. Eddy wrote in 1883. The high purpose which she announced for the *Monitor* may well command the energies and support of Christian Scientists for centuries to come.

With the April issue the *Journal* enters upon its thirtieth year, and the publishers have deemed this an opportune time to make some improvements in the mechanical make-up of the magazine, among which are better paper, better press-work, slightly larger pages with double columns, and more readable type. The improvement in the binding is that hereafter the wire staples which have been used will give place to the same style of stitching as is used in well-bound books. While making these mechanical improvements in the *Journal*, the publishers and editors have not lost sight of the fact that the true worth of this magazine must always be in the message it brings to mankind; therefore it will be their aim in the future as it has been in the past to maintain the high standard of Christian literature which was set by Mrs. Eddy when she established the *Journal*.

While on the subject of our periodicals, it is proper to say that the Publishing Society is deeply grateful for the assistance of the distribution committees in the branch churches in extending the circulation of the literature of Christian Science. The work of these committees has been of special value in that it has been the means whereby multitudes of the sick and suffering have become acquainted with this healing truth who would not have been reached through the ordinary avenues of circulation. A single copy of the periodicals has many times been as a cup of cold water to parched lips, in the comfort and blessing it has brought to some needy one, nor is it possible to measure the bounds of these messengers of peace.

In the article "Pond and Purpose" (Miscellaneous Writings, p. 207), Mrs. Eddy bids her students share with her "the living waters of the spirit of [her] life-purpose,—to impress humanity with the genuine recognition of practical, operative Christian Science,"—the planting and watering of the Master's vineyard. In this world-wide mission each and all we have our part, and with that faithfully done we are assured of its bountiful fulfilment, for we know it is God "that giveth the increase."

ARCHIBALD MCLELLAN.

WHO SHALL BE FIRST?

MUCH is being said today, in all the field of liberal thought, respecting the awakening to and assertion of *self*-hood. Descartes' fundamental proposition, "I *think*: therefore I am," is on many lips, and not only in religious writings, but in fiction and in the drama, a new emphasis is being laid upon the possibility and significance of a will to think and to be. This tendency of thought attaches great value to the study of psychology, an analysis of the human mentality which usually leads to the classification of a higher and a lower, an inner and an outer, a conscious and an unconscious self; and Stevenson simply gave striking embodiment to this trend in his familiar story of "Dr. Jekyll and Mr. Hyde."

So world-wide and so marked is this drift that human sense may be said to have undergone nothing less than a revolution. Many look upon the result as expressive of advance, and it has undoubtedly had to do with the present revolt against the dogmatism of scholastic theology. It may have thus brought to some a larger sense of freedom and thereby opened the way for an improved belief, an escape from listless conformity. Nevertheless, no thoughtful student of this mental movement can have failed to see that as a whole its exaltation of the power of the human mind, its exploitation of selfhood, has not conduced to an increase of reverence, of humility, or of spiritual aspiration. The new powers which are said to have been gained have not been identified as of God, either in their phrasing or their phenomena, but rather as of "gray matter." The dominating I is not divine, but distinctly human, hence not infrequently "puffed up."

In this same era Christian Science has come, and it too has had much to say about selfhood or individuality; likewise much of the power of Mind, but the Ego it has honored and advanced in human thought is not mortal-mindedness, but its antipode, spiritual perception. All men think of Christ Jesus as supremely efficient, and yet he said, "I can of mine own self do nothing." He knew but one Mind: and while recognizing with him the claim of a material personality and power, Christian Science lifts the thought of selfhood into at-one-ment with God, a fact which gives unmeasured dignity and value to it as a religious teaching. In Science and Health, Mrs. Eddy writes, "The belief that man has existence or mind separate from God is a dying error;" "Through discernment of the spiritual opposite of materiality, even the way through Christ, Truth, man will . . . find himself unfallen, upright, pure, and free" (pp. 42, 171). This is her impressive and inspiring reply to that exaltation of the human which forgets the divine.

The teaching of Christian Science, that all substance, intelligence, and power is of God, at once shuts the door not only upon every plea for the lawfulness and the legitimacy of hypnotism, mesmerism, etc., the means by which one mortal sense would dominate another, but upon that seductive paganism known as the worship of personality. It rebukes the self-assurance of the passing obsession respecting a dual ego, and fixes attention upon the allness and unity of Spirit, the eternal good. Furthermore, it defines a selfhood which in Christlike humility seeks to express the power of Truth and Love alone. This is the glory

Digitized by Google

and the greatness of Christian Science, this the explanation of its remarkable growth, and its healing helpfulness in all the world today, that in it God and His idea, spiritual man, are forever first.

JOHN B. WILLIS.

WHEN?

TOWARD the close of Matthew's gospel we find many trenchant utterances by Christ Jesus which point to the passing of materiality with all its miseries, and the establishment in human consciousness of God's eternal kingdom. After Jesus' triumphal entry into Jerusalem, he gave a series of marvelous discourses in the temple, and the healing work to which he had devoted himself throughout his entire earthly ministry was also carried into the temple whose sacrificial services had but faintly symbolized the work of the Messiah. In every one of these discourses the great Teacher assailed the false foundations of material belief. In harmony with this Mrs. Eddy tells us that when we become "conscious of the supremacy of Truth," then "the nothingness of error is seen; and we know that the nothingness of error is in proportion to its wickedness" (Science and Health, p. 569).

In the twenty-fourth chapter of this gospel we are told that the disciples anxiously questioned their teacher as to the fulfilment of his predictions. "When shall these things be?" they asked, "and what shall be the sign of thy coming, and of the end of the world?" His answer which follows is categorical, and presents scene after scene in the great drama of the world's redemption. Many readers of the Scriptures are however puzzled by the statement, "This generation shall not pass, till all these things be fulfilled." They fail to connect it with that which almost immediately follows: "But of that day and hour knoweth no man, no, not the angels of heaven, but my Father only." Some even say that if Jesus was mistaken in declaring for the final culmination of mortal existence within his own generation, his teachings on other questions as well might be unreliable. Before entering upon any discussion of this topic it is well for us to remember that to God there has never been any interruption of the divine order,—no sin, sickness, or death; hence the changes which come must be in human consciousness, for God says, "I change not"! That a great change was, however, needed in the world's concept of being is undeniable, and the same kind of a change is needed today. Ritualism must give place to "the weightier matters of the law, judgment, mercy, and faith;" and as the paramount importance of these is admitted, the new heaven and the new earth is seen to be at hand, "even at the doors."

There is no need to evade the question as to what Jesus taught respecting the end of materiality and the complete establishment of God's kingdom on earth. In reading the first chapter of Acts we find the disciples listening to the advanced teaching which they were doubtless better prepared to receive after their Master's glorious demonstration over death and the grave. This elicited from them an inquiry as to when the kingdom was to be restored to Israel. To this he replied, "It is not for you to know the times or the seasons, which the Father hath put in his own power." Then he told them that they must receive power from the Holy Ghost, and that this would make them worthy witnesses to the truth he had taught them; a promise which was soon fulfilled in the healing of the sick and even in the raising of the dead. The most definite statement as to when all error shall vanish is however found in the twenty-fourth chapter of Matthew, where we read: "And this gospel of the kingdom shall be preached in all the world for a witness unto all nations; and then shall the end come." This gospel! The whole gospel that Christ Jesus offered to humanity—not a man-made gospel of dry dogmas with the life-giving element left out! We are also told that "all the tribes of the earth shall mourn" when the sign of Christ's reappearing is seen, and this because Truth demands the entire surrender of the carnal mind; but in spite of all resistance the light of Truth grows brighter, and the Son of man is seen through the clouds of sense coming "with power and great glory." This coming is for the waiting human race, including its weary sufferers, and the time of deliverance is "today if ye will hear his voice."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

MOSCOW, IDAHO.

First Church of Christ, Scientist, of Moscow, has purchased property, and is now occupying its own church building at the corner of 3rd and Jackson streets. The church building was remodeled from a dwelling-house, and during the past few months has undergone repairs to render it suitable for its new purpose. The location is central and desirable.

First Church was organized in 1907, and previous to this time has occupied rented quarters in the city. The church welcomes this opportunity for increased activity and spiritual growth, and a greater interest is taken in the work than heretofore, prayerfully endeavoring to turn constantly from personality to Principle, from sense to Soul, in gratitude to God.—*Correspondence.*

CHICAGO, ILL.

The members of Second and Third Churches, at business meetings held March 15, voted unanimously to authorize the issuance of letters of dismissal to about one hundred and fifty persons, who are withdrawing from these churches to form Eleventh Church in Chicago. Second and Third churches have been overcrowded for some time, and a new organization to relieve both was deemed necessary. The new church, when organized, will hold services in the Logan Square district. Officers and members of Second and Third Churches have cooperated in the preliminary steps necessary to the formation of this new church, which is the result of growth and furnishes added proof of the ever increasing interest in Christian Science as taught and demonstrated by Mary Baker Eddy.—*Correspondence.*

MILWAUKEE, WIS.

Fourth Church of Christ, Scientist, has secured a site for a new edifice, purchasing during the present week [Jan. 21-27] the southeast corner of Kenwood boulevard and Stowell avenue, with one hundred and thirty feet on the boulevard and one hundred and twenty feet frontage on Stowell avenue.

It was said by a member of the board of trustees that the work of excavating for the new edifice would probably be begun as soon as the frost is out of the ground.

Wisconsin.

CORRECTION.

In a report in the *Sentinel* of Feb. 17, of the dedication of First Church of Christ, Scientist, Edinburgh, Scotland, mention is made, in the address by Charles W. J. Tennant, of the date when Christian Science was first introduced into that city. We have been requested by Mr. Tennant to state that the date given referred to the more public form of services, and that "it was early in 1895 that Christian Science services were first held in a private house in Edinburgh; three years later, when others interested in Christian Science joined these meetings, the work assumed a more public character."

THE LECTURES.

BLACKPOOL, ENGLAND.

The Grand Theater at Blackpool was crowded to its utmost capacity on Sunday afternoon last [Nov. 26], when a lecture on Christian Science was delivered by William D. McCrackan, M.A. Dr. Gilbert J. Fowler of Manchester occupied the chair, and in introducing the lecturer said he counted it a privilege to take even a small part in what was known as the Christian Science movement. When he first began to be seriously interested in Christian Science, his attitude was one of skepticism not unmixed with contempt. But, as he learned more and more of what Christian Science really meant, he found that the criticisms which he had read and heard from men whose opinions he respected were not criticisms of Christian Science at all, but what the critic thought Christian Science to be. In natural science —for example, in chemistry—if they wished to demonstrate the truth of a proposition, they put it to the test of experiment.

"I can honestly say," he proceeded, "that Christian Science will stand that test. I have found that it can help in every relation of life—in every detail, from the smallest to the greatest. I have found that it satisfies the highest claim of the intellectual and of the spiritual nature. It is so vast that the wisest man cannot get to the end of it, and yet it is so simple that the child can understand it. I count it, therefore, of the highest importance to every one of us that we should have opportunity to learn what Christian Science really is."—*Blackpool Times and Fylde Observer.*

GALESBURG, ILL.

Christian Scientists and friends enjoyed a rare treat Friday evening [Jan. 12] at the Universalist church in a lecture by William R. Rathvon, whose subject was "Christian Science: The New Light upon Old Truths." The speaker was given a pleasant introduction by Judge J. D. Welsh of this city, who said in part,—

The growth of Christian Science has been one of the marvels of very recent years. It is but a short time ago since to the minds of outsiders, or to those not giving thought or attention to the subject, Christian Science was a Boston fad. Many regarded it as a fake and the believers in this teaching as deluded fanatics; that the most prominent feature of the Christian Science faith was a denial of the material, a disbelief in anything actual or real except the spiritual, and that the followers of Christian Science were misguided creatures who left their sick to die without medical attendance or the care of a physician, for the doing of which each and all of them should be prosecuted and punished if sane, and if found to be insane to be confined in an asylum. Yet, notwithstanding the jeers and jibes and scoffs of those who had not and would not study or investigate its teachings, Christian Science believers have increased in number and the doctrine has spread with wonderful rapidity.

Christian Science makes its appeal to all, in every walk of life, but it seems to be particularly attractive to two classes of people—the well-to-do and intellectual, and the afflicted, those from whom hope has departed. It is unnecessary to inquire why the first of these two classes is reached, and the answer as to why the second—that is, the afflicted—is attracted and drawn to Christian Science, is apparent to every mind. When the last vestige of hope has departed, when all the approved methods have been tried and failed, when the afflicted one stands alone on the abyss of despair, wrapped in a night of pain, a voice reaches him, "Try Christian Science."

Christian Science teaches no fear, it leaves no heartaches. You have selected the only two things enduring in the experience of mankind—Truth and Love; and you proclaim with a boldness that challenges the attention of the world, that all evil is error, and those of us who are not yet ready to acknowledge your claim may well hope that Truth and Love will some day govern the world. When the skill of the physician has failed, when every remedial agency has been tried, when there seems to be no hope left for many of the suffering ones, they find relief, comfort, and health in teachings of your faith. Anything or any belief or any teaching that can replace tears with smiles, that can take the individual from the depth of despair and give him the radiance of hope, that can roll back the clouds of despondency and leave the sunshine of joy, is beyond the carping critic to injure.—*Galesburg Mail.*

LOWELL, MASS.

The Lowell Opera House was well filled yesterday afternoon [Dec. 17], when Virgil O. Strickler gave an address on Christian Science. Mr. Strickler was heard with the closest attention, and the lecture proved as instructive as it was interesting. The Rev. C. R. Skinner of Grace Universalist church introduced the speaker, and said in part,—

During the past few generations the world has witnessed a tremendous materialism in all our thinking and feeling and doing. Materialism has touched and tainted the most holy and sacred relations of life. It has crept into the family and substituted the money ideal for the ideal of love. Materialism has become rampant in our industries. Human lives have been ruthlessly destroyed in order to create material wealth. The pleasures of the mind have been engulfed by grosser pleasures of the senses. Even religion has lost most of its spiritual vision and has become blinded by materialism; but I believe that we stand at the parting of the ways, when a reaction is imminent. Idealism is again becoming a characteristic mode of thought, and is reinterpreting life for us in terms of Spirit. This reaction is easily traced in all of our thinking, feeling, and doing. In politics and industry we are again hearing voices of prophets appealing for the conservation of human life. In religion we are again hearing appeal from mere rationalism to a living religion which shall hold inviolate all sanctities.

Christian Science is one of the interpretations of that reaction against materialism which has become so rampant during the past years. Christian Science is an idealistic interpretation of life in terms of the Spirit as the fundamental fact. And again it is standing for the truth that religion is life if it is really lived. Christian Science has become life to its believers in every conceivable relation. It emphasizes the fact that religion when lived produces the highest type of life and results in the maximum of happiness.—*Lowell Courier Citizen.*

PASADENA, CAL.

Sunday, Dec. 17, Judge Clifford P. Smith lectured to a most attentive audience on "The Real Man and his relation to God." The church edifice, seating fourteen hundred people, was filled and the ushers were obliged to carry in chairs to seat all who came. The speaker was introduced by Judge Septimus J. Hanna, at present residing in Pasadena, who spoke as follows:—

When David, the sweet singer of Israel, rang out in swelling notes that grand pean of praise, "Bless the Lord, O my soul, and forget not all his benefits: who forgiveth all thine iniquities; who healeth all thy diseases; who redeemeth thy life from destruction," he was either giving vent to mere poetic rhapsody or else he was making a declaration of eternal truth. Christian Science teaches that all the sayings of the Scriptural prophets, whether couched

Digitized by Google

in musical verse or in majestic prose, were the substantial averments of divine Truth. It also teaches that the Bible writers meant what they said, and that their sayings, understood, can and should be practically applied in every-day life.

It is evident that Jesus of Nazareth attached to the psalms of David a concrete meaning, for he put their sentiments into practical use in destroying sin and healing all manner of sickness. Moreover, he instructed his disciples how to aid him in carrying on his great work, and declared that all who believed on him should be able to do the works he did and even greater. Mrs. Eddy, grasping the spiritual import of the sayings of David, and the words and works of Jesus, applied them on so broad a scale that through her labors, and the aid of her colaborers, sin is being destroyed and sickness healed throughout the world today. Verily has it been proved, and it is being daily proved, that the words of the great psalmist and the teachings and works of the great Teacher were of vital significance in their day and for all time, and this mighty fact will be emphasized and elaborated by our lecturer here today.—*Correspondence.*

ROCHDALE, ENGLAND.

Though the afternoon was wet and miserable, most parts of the Rochdale Hippodrome were crowded on Sunday afternoon [Jan. 14] when Bicknell Young, a member of the Christian Science board of lectureship, spoke on the fundamentals of Christian Science.

John W. Doorly of Leeds presided, and said that in face of its enormous work in healing the sick and overcoming sin, no thinking man or woman could afford to be ignorant of Christian Science and its claims. It had not come to strive or to fight against any other religious system or therapeutical system. It came as the Christ always had come, with compassion and tenderness and love. He himself first heard of Christian Science nearly nine years ago. At that time matters religious did not interest him in the slightest, but he had a wife who was very ill. She had had several surgical operations, and at the end of five years, after being under twelve physicians and surgeons, she was worse than at the beginning. Then Christian Science came along, and slowly but surely healed her, changing the whole of his home life. Christian Science performed all these works by teaching men the true nature of God.

Rochdale Observer.

BISHOP, CAL.

Frank H. Leonard delivered a lecture on Christian Science in the Opera House Jan. 2, to an attentive audience. He was introduced by Atty. Leicester C. Hall, who said in part,—

It is with a feeling of gratitude for the religious liberty we enjoy and for the spirit of toleration which characterizes the present age, that I stand here this evening to introduce to you a member of a sect which is comparatively recent, but which has been very active during the past quarter of a century. Whatever our individual faith may be, we must admit that the religion of Christian Science gives to its members a comfort and consolation and a spirit of contentment and peace with the whole world which compels our respect. The members in our community make up in enthusiasm what they lack in numbers, but throughout the country you will never find Christian Scientists lacking in enthusiasm or devotion. They are very much in earnest and they have the courage of their convictions. Not long ago the junior senator of this state, the Hon. John D. Works, had the courage and manhood to stand up in one of the greatest legislative assemblies in the world—the United States Senate—and testify to the mental and physical benefits he had received from Christian Science.

I am glad to see the large attendance here this evening. Perhaps a large proportion of this audience, like myself, are not familiar with the teachings of Christian Science. I believe this large attendance indicates a disposition on the part of this community to learn what benefits Christian Science has to offer that can help us on our journey through life.—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice it is assumed that the lecture will be given in the evening.

Bradford, Pa.—Rev. William P. McKenzie, Universalist Church, April 1.
Buffalo, N. Y.—Virgil O. Strickler, Convention Hall, April 5.
Chicago, Ill. (First Church).—Judge Clifford P. Smith, Church Edifice, 4017 Drexel boulevard, April 1 and 2.

TESTIMONIES OF HEALING.

Today, when the public press throughout the world is proclaiming the great achievements of our noble Leader, I wish to bring the simple tribute of two instances of healing that came within my own personal experience some years ago, and which to me illustrate what she has said of our Master's work in "Miscellaneous Writings" (p. 200): "It was the consummate naturalness of Truth in the mind of Jesus, that made his healing easy and instantaneous."

As a child I had a severe attack of lung trouble, which left a very distressing cough, and at the time when the difficulty was most alarming I accompanied my mother, who had been called East to attend a meeting of the association of our Leader's students. One day, while calling at Mrs. Eddy's home for mail, I was seized with a hard paroxysm of coughing. I had spoken with our Leader a moment before, as she passed through the hall to a conference with one of her students in an adjoining room, and this gentleman told me, a few days afterward, that when Mrs. Eddy heard the coughing she paused in the conversation and closed her eyes for a few moments in silence; then, with a quiet smile, continued. When he repeated this to us, we suddenly realized that the trouble had entirely disappeared.

The other experience was a year or so later, at the close of a class which my mother attended. I was stricken down suddenly with a very distressing hip trouble, and for days the suffering continued, apparently growing steadily worse until, becoming alarmed one morning, my mother arose before daylight and hurried to our Leader's home for counsel. She had a few moments' conversation with Mr. Frye in the hall, as Mrs. Eddy was still in her room; but later she told my mother that she had heard her conference with Mr. Frye, and seeing the great need had immediately realized the truth for me. The result was instantaneous healing, so complete that within a few days I was enabled to take a journey of fifteen hundred miles from Boston to my home.

These two experiences have been a source of great inspiration and help to me through the intervening years, and in recalling them I always couple the life of our beloved Leader with these beautiful lines,—

> As she trod her path aright,
> Power from her very garments stole;
> Such is the mysterious might
> God grants the upright soul.

ABIGAIL D. THOMPSON, Minneapolis, Minn.

I write to tell of a wonderful demonstration,—the healing of my nephew, a lad of seven years. It occurred in May, 1899. The child's father was superintendent of a boys' industrial school, their home being at Eldora, Ia. The child came home from school one evening, sick with an eruptive fever. He was immediately quarantined with a good nurse, and seemed to get along very well for the first few days, but one morning the nurse reported that he had taken cold and was very ill. A physician who was called pronounced the case very serious, and said that both lungs were implicated. The father and mother stayed with him all that day, and the doctor was there a number of times, but by evening it seemed that the little fellow could not live. I went in at that time to care for him, and never left him for three weeks. How we tortured the little lad by giving him medicines, applying poultices, etc., until we finally felt we would have to give him up. Early one Thursday morning the doctor said I had better call the parents—that the little one was passing away; but he rallied again, though the doctor said he had done all that could be done and that the child must die.

We then asked the father if he objected to our sending for a Christian Science practitioner. We had become somewhat interested in Science previous to this, but knew very little about it, and did not personally know of any practitioner. We, however, consulted *The Christian Science Journal*, and decided to send for a lady who was First Reader in the Des Moines church, and she came on Friday morning. In the mean time we again consulted with the doctor, but he said nothing more could be done. We then told him that we had sent for a Christian Scientist, and that she would now take the case. The practitioner began treatment at seven o'clock that morning, and by noon the child was better and took a little nourishment. The following Tuesday he was dressed and taken out driving. It was some weeks before he was strong, but from the time the practitioner came he began to improve, and continued to do so until he was entirely healed. This was more than six years ago, and two or three times within this period he has been threatened with a return of the same trouble, but each time it has been quickly met by Christian Science in a few hours. He knows what healed him, and has never taken any medicine since that time, and today he is a strong healthy boy.

I wish I might make every one understand the condition of this child when Christian Science was brought to him. Never have I seen any one so sick get well. The father had been a physician, so he understood the child's condition from a medical standpoint, and knows that no material means could have saved him. I am so thankful to have witnessed this demonstration of the power of Truth over error, and that I am learning to know that God is infinite Love—All-in-all—and that man is His image and likeness. My heart is full of gratitude to our dear Leader, Mrs. Eddy, for what has been done not only for me and mine, but for all humanity. God bless her!

ELIZABETH J. COOK, Des Moines, Ia.

Christian Science came into my life bringing the blessings it always will when correctly used, and proving that God is the source of all supply. It has been a help in all kinds of discord, and I have never called on it in vain, always receiving what was best for my advancement. It has helped me mentally, morally, and financially, and physically my health has been much improved. I was cured of a badly injured ankle in five days; in fact I was kept in the house only one day from it, and the next day was on my feet for fourteen hours. I have been cured of headache instantaneously, and of colds and other forms of disease in a great deal less time than when I depended upon *materia medica*.

Mentally the tendency to worry has been eliminated, and in its place is the assurance that God provides us daily with all we need. This knowledge has brought about a sense of relief that could not help but give comfort. I have found Christian Science a great help in getting the right employment and the understanding of how to do my work. The knowledge that God is the only Mind, and that we reflect wisdom and understanding from the divine source, gives one little to worry about and much to be thankful for. My habits also are much improved; the things I believed necessary in the way of amusement have steadily left with no sense of loss or longing. I have never felt that I gave up anything for Christian Science, but the many things that have been added to my life are a source of great comfort. I have been studying this truth for six years, and these years have brought more into my life for thanksgiving than any of the others. When we realize that this religion can be used every day and in every experience, we then begin to realize its importance to us all.

I hope that this effort of mine shows some of the gratitude I have for our dear Leader, Mrs. Eddy, and for those who have helped me along the pathway to peace and happiness. I came into this truth with doubt and fear, but

Digitized by Google

as I had tried every other avenue for help, I thought this could do no harm. I was without work, had no means of support, and was willing to try anything for relief, so that when I heard a practitioner say over the telephone these words, "Do not worry, for you know that God is the source of all supply, and that as His child you are an equal inheritor with Jesus;" also that "divine Love always has met and always will meet every human need" (Science and Health, p. 494), I wondered if this were true, and if so why I did not have a position and why was I not in my rightful place. These words kept ringing in my ears so much that finally I thought I would see if this was really true; and this was the reason for my first call on that ever-demonstrable truth.

It proved the truth of the saying that "man's extremity is God's opportunity;" for in less than a week I had a position, and was able to hold it and give better satisfaction than I had the year before in the same place. Recently I had occasion to change from a large town to a smaller one, and to go away from companions and friends that I believed I should miss, but with the application of the truth taught by Christian Science I can gratefully say there was no cause for my fear, as the move has in every way proved a great blessing and there is no sense of loss, but only more of a realization of what a blessing has been brought through this unfolding, to Mrs. Eddy, of the omnipotence and omnipresence of God. I have learned that only by obedience to the laws of God can we demonstrate this truth, and it is my prayer that I will always be led in the straight and narrow path of obedience.

DWIGHT D. CHASE, Astoria, Ore.

I am awed when I look back and see what divine Love has done for me, and for some time I have had the desire to tell the public my experience with Christian Science. It was not physical healing that brought me to the truth, but as far back as I can remember I experienced a great desire to be loved, and when at an early age I united with the church, I was not satisfied with the result of my Christian endeavors. I labored on for some time in blind belief, then grew weary and gave up all effort to live as I thought a Christian should. I wanted to live a good life, but did not know how, and when a great sorrow came to me which almost destroyed my mental faculties, I was as one alone on the shores of time, "having no hope, and without God in the world."

I went on in this miserable state for some months, and finally I decided to seek relief in pleasure and any other material means that promised to drown the sorrow with which my heart was breaking. But, alas, all material means failed, and it was at a time when I was very much discouraged that God led me among Christian Science people, and I was induced to look into its teachings for help. It was not, however, until I saw love expressed in the lives of two dear Scientists that I began to realize it was a reflection of the Love that is God, that for which I had so long been looking. Then I began in earnest to study "Science and Health with Key to the Scriptures" by Mrs. Eddy, and slowly but surely the light came to me.

This was more than three years ago, and I thank God that today I am a very happy woman. I also wish to thank those who helped me to see things in the light of Truth, and I am grateful to dear Mrs. Eddy for placing the book which contains this blessed truth within the reach of every seeker. I pray God that my life may express the gratitude which lips cannot utter.

LAURA G. S. HOBIN, Greenhill, Parrsboro, N. S.

Words are inadequate to express my gratitude for the blessings which my family and I have received through Christian Science. From the time I was married I began to fail in health, and after children were born, and the worry I had with them through sickness, I became a nervous wreck. When my oldest boy was four years old he began to fail. The doctor had said that the child had acute lung trouble, but he kept on being sick for two years, getting worse all the time. Then one morning the minister of our church came to see me. He stayed only a few minutes, but said that he had stopped to tell me that I must not think I would raise this boy; that he had often watched the child, and noticed that the ailment was with the lungs and that this was something which could not be cured. He also said I should not think wrong about it, and that it was his duty to prepare us for what would happen. After he left I was in despair. I cried the rest of the day and could not endure the thought of parting from the child. I wondered why God should punish us that way, for I did try to lead a Christian life. The child still kept on having a terrible cough and for two years he did not seem to get better or worse. We tried everything that we heard of in medicine, and I felt sorry many times that we had to force the medicine on the child, for he often cried and did not want to take it.

In the fall of 1907 I started to send the boy to school, as he was then eight years old, but he got so low he only went for one week, even his eyes being affected, and one morning he had a hemorrhage. After I told the doctor, he said that the child could never get well. In February, 1908, there was a notice of a lecture on Christian Science and my husband asked his brother to go and see what it was, as he himself could not leave. His brother went, and brought home a copy of the *Sentinel*, and while reading it I felt such an uplifting of faith. I believed every word that was in the *Sentinel*, and my desire was to know more about Christian Science. I sent to Boston for two copies of Science and Health, not knowing that I could get them right here, and after receiving the book I read it all the spare time I could find. I could hardly keep away from it, and while reading it I felt a great change come over me. I was like one new born. I was surprised at myself, and then I said I would never go to any other church than the Christian Science church. The next thing to do was to look for a practitioner, as I wanted help for my boy, also for my second child who had some skin disease. We had tried everything for it, but nothing seemed to help, so my husband found out where the Christian Science reading-room was, and he inquired for a practitioner. The lady in charge handed him a *Journal* and said that we could find the addresses there; so he looked, and then went to see the practitioner that lived the closest to us. In less than two weeks the child with the skin disease was healed! It had vanished, and has never returned since. The older boy also was helped wonderfully. It is a joy to see him now, and no one but myself and the child know what torture we were in those four years. I do not like to think of that time, but we can truly say that we were brought out of bondage into the land of freedom.

Since then we have had many beautiful demonstrations, too numerous indeed to mention, but one especially helpful was when my eighteen-months-old child was scalded. I sent for help, and in ten minutes the child was asleep. He slept all night, woke up the next morning laughing, and tried to sing our Leader's hymn, "Saw ye my Saviour?" He never seemed to suffer at all, although he was badly scalded. For all this healing I am very thankful to God, also to our beloved Leader, Mrs. Eddy, for all the benefits received through Christian Science.

MRS. WILLIAM BLOHM, Baltimore, Md.

In May, 1908, I had to take a week's vacation, as I was very nervous and felt that I needed a change. While I was away I noticed a swelling on the right side of my neck, and when I returned I went to a doctor, who gave me a remedy to use. It did no good, however, so I went

Digitized by Google

to a Christian Science practitioner, as I had been healed by this treatment of another trouble two years before; but I had only one treatment, as the practitioner was going away for three weeks. The swelling had moved from where it was as the result of that one treatment, but my faith was not what it should have been, so I turned again to *materia medica*.

A physician told me to use poultices, which I did for ten days; but the swelling was getting larger and of angry appearance, so the doctor said I had better take a complete rest and just wait and see what would follow. As I could not afford to take his advice, and my health was failing all the time, I went to the Christian Science practitioner again, this being the first of September. In two weeks the growth had burst, and it was very interesting to watch the changes as the Christian Science treatment began its work. The most remarkable thing to me was that I had no pain to speak of, and lost no sleep.

I am now in perfect health; my whole thought of life has been changed, for I realize that in God I live and move and have my being. Old things have passed away, every discordant condition I have had in the last two years has been quickly met, and I am glad to say I am now able to meet all my needs and help others. I know that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). Just so far as we are willing to be absent from the flesh and "present with the Lord," do we rise above the ills which are all around us. I am very grateful to God, also to Mrs. Eddy, who has made it possible for us all to know this wonderful truth.

LILA W. HILL, Boston, Mass.

[Translated from the German.]

I am filled with joy to be able to testify to my complete healing from a serious attack of lung trouble through the saving influence of the teachings of Christian Science, as given to the world by Mrs. Eddy. My attention having been called to Christian Science some time before, I had attended the meetings and services repeatedly without seeming to be able to grasp the subject; but I was to know more about it. In spite of medical treatment which I had for several weeks, there seemed to be no end to my suffering; but when I finally made up my mind to try Christian Science, I soon saw that I would find relief. I felt much better in a short while, and with three weeks' treatment recovered my health completely.

I hereby express my thanks for all the good which has come to me through Christian Science, and am happy for having been led into this way.

JOHANN AEPPLI, Zurich, Switzerland.

It is now about eight years that I have been enjoying the privileges and blessings of Christian Science as revealed through our beloved Leader, Mrs. Eddy. I came to Christian Science as a last resort for an eye trouble which an oculist had treated the greater part of the time for six years, and finally decided that an operation was necessary, the result of which would be very doubtful. As I was anxious to continue my school studies, I reluctantly turned to Christian Science for help, although at that time I had no faith in it, and was even antagonistic to what I thought it to be. The result was that the glasses I had worn for six years were taken off at the first treatment, and I have never needed them since. The abnormal condition was perfectly overcome in three months' treatment. After this healing I commenced to study the text-book of Christian Science, Science and Health by Mrs. Eddy, and have found its teachings sufficient for every need.

I wish to express my appreciation of the Christian Science periodicals, including the Lesson-Sermons, which are a constant help. I am indeed thankful to God, also to our Leader, for the healing. This is only one experience out of many, and I am striving to gain more of an understanding of this blessed truth and thus prove my gratitude.

AIMEE E. FRALEY, Chicago, Ill.

In July, 1905, I came into Christian Science for physical healing. At that time I was laboring under a disease which no drug could reach. As it seemed necessary, I took up my own case, and for a time I gained rapidly; then I seemingly dropped back. I then asked for help, which was given with good results. The old thought seemed to keep me in bondage, but I knew that the truth could make me well. There were times when I locked my door, so no one could enter, while I fought against a sense of illness from twenty-four to forty-eight hours. After the demonstration of Truth's power I was dressed and on the street in twenty minutes. It was nearly three years after this when the power of infinite Mind was revealed to me. Then I was on the rock! I saw that Love would do the work, as there is no sin, sickness, or death in the one Mind, for God is eternal Life. Neither was I an idler along the wayside. In helping myself I endeavored to help others, and was encouraged with good results.

I want to state that I am very happy. Not that I have plenty of this world's goods or friends. Those whom I loved and who loved me have passed on, before knowing the truth as given in the Christian Science text-book. Night after night I spent in weeping, longing for that change called death; but the understanding of Truth blots out the word death emphatically. Oh, what a friend we have in Truth! Never a scoff or a frown! Divine Love hovers over all. My heart is thrilled with love for the noble woman who, fearing nothing, stood at her post of duty facing the world's enmity.

The Bible was no stranger to me, my only copy being worn from constant use. It has bridged me over some of the darkest hours that mortal thought has ever crossed, but Christ's truth illumines all. May the students of Christian Science follow closely the Master's footsteps, in purity and holiness, and thus gain the more abundant life promised by him.—SADIE A. RITTER, Dubuque, Iowa.

I wish to express my gratitude for all that Christian Science has done for me. The understanding of this truth has enabled me to overcome many ailments, and I know that if the truth is practised at all times, all our problems will be worked out harmoniously. I have been healed of deafness, which specialists said could not be cured. Every ill that has come up since Christian Science was first presented to me has been met and mastered by Truth. About two years ago my mother was healed of a fever, and other members of the family have experienced this healing power. I am very grateful to God, also to Mrs. Eddy for Christian Science.

HILDA JOHNSTONE, Roxbury, Mass.

It is with a heart full of love and gratitude to God that I give this testimony telling what Christian Science has done for me. For fifteen years I had suffered from female trouble, nervousness, and a bowel disorder. With the birth of our only child, ten and a half years ago, came other troubles, and I was never well. I had treatment from several physicians, all to no avail, some of them saying that nothing but an operation would do me any good. For the past three years I suffered from my eyes and had almost constant headache. I wore glasses, but all the physicians failed to relieve me. Then came a distressing illness for which the medical fraternity has not discovered a cure. After consulting four local physicians, I applied to one of the leading specialists in the South, and all gave the same answer, "No cure, no hope." After weeks of intense suffer-

Digitized by Google

ing I came to the brink of the grave. It was then I heard through a friend of Christian Science and as a last resort and with a ray of hope I applied to a practitioner for help. Physicians said I could not live without medicine, but I felt God's guiding hand and turned a deaf ear to all they said.

I shall never forget the day when the practitioner came into my room like a great ray of sunshine. His visit was brief, but after he gave me treatment and left me, such a feeling of quiet, rest, and peace came over me as I had never known. From that moment I began to improve, and after eating a hearty supper I slept all night without once waking, something I had not done for months, and this, too, without quieting medicine. When I awoke next morning I felt like a new woman. Through the kind efforts of the practitioner I steadily improved; one by one my troubles disappeared, and I am now well and feel better than I have in years.

The healing is naturally a wonderful thing to me, but it sinks into insignificance when compared with the spiritual blessings which have come to me through Christian Science and its literature. My healing was not rapid, but I do not regret one step of the way, for I have gained a clearer understanding of God, which perhaps would not have come to me otherwise. I have no words to express my gratitude to God, also to Mrs. Eddy, but am striving to show this gratitude by my daily life.—Mrs. J. K. King, Auburn, Miss.

Over four years ago I was healed of weak eyesight, after having used glasses fifteen years. At the same time I was healed of a nervous disease of several years' standing. At this late date I wish to acknowledge my healing, as time has proved the cure permanent. I was healed through the reading of "Science and Health with Key to the Scriptures," and since then have tested my sight severely by close application to book work and several hours' daily reading. My sense of sight is so free that I use it the same as I breathe the air, and never find it wanting.

I am indeed grateful for the knowledge of God I have received through Christian Science, and it is by far the greatest boon I have ever been granted. To me the healing through Christian Science is the most wonderful evidence of God's presence and power that humanity could ask.

Theo. H. Lampe, Kansas City, Mo.

I wish to express my thanks for all the good I have derived from Christian Science, having been cured of a chronic stomach disorder from which I had suffered for eight years. I am now quite free from it. A severe injury to the leg also disappeared in three days with help from another Christian Scientist. For this I am very grateful.

Miss M. M. Birch, Sydney, Australia.

[Written for the *Sentinel*.]

THE MOUNTAIN FOLD.

ROBERT E. KEY.

The sunlight fades above the ocean bed,
And through the trees an amber glow burns red,
Tingeing the leaves with gold.
The gentle breath of even rustles by,
As from the height the faithful shepherd's cry
Calleth me to the fold.

And am I ever ready to obey
The call thus coming at the close of day,
When far I roam?
Though steep ascends the rugged path, I climb;
I hear Thy voice, and may Thy will be mine
To lead me home!

FROM OUR EXCHANGES.

[Rev. Frank N. Riale, Ph.D., D.D., in *Christian Work and Evangelist*.]

No one can read the New Testament without seeing, as clear as a beam of sunlight, that the threefold purpose of Jesus in his earth-coming was to forgive all sins, to heal all manner of diseases, and to grant unto his followers the gift of the Holy Ghost. His very name makes clear the first great purpose, they shall "call him Jesus: for he shall save his people from their sins." His whole life-work proclaimed the second. "He went about . . . healing all manner of sickness." The third was the sole theme of his last days, when he turned over and over again kaleidoscopically the wonderful message of the Comforter whom he would send unto them, who, when he should come, would lead them into all truth, and would bring Christ's joy into their hearts and make their joy forever full.

It is just as clearly stated in the New Testament that the very purpose of the Christ should ever be our purpose also. We are to forgive men their sins. "Whose soever sins ye forgive, they are forgiven unto them; whose soever sins ye retain, they are retained." He likewise tells, at his parting moments, that his followers are to heal all manner of diseases and the works that he did they shall also do, and greater than any that they had beheld in the moments of his miracles. They were to give unto the believer the baptism of the Holy Ghost. It was the common question asked of the disciples, as they journeyed from place to place in the founding of the new church, "Have ye received the Holy Ghost since ye believed?" If this new *charisma* was not possessed, they laid their hands on them and prayed, and they received the Holy Ghost. The power bestowed was no figment of the imagination; it was a mighty power of God unto salvation that fell on the believers like the marvelous manifestation of the Spirit at Pentecost.

[*Congregationalist and Christian World*.]

The child accepts the existence of God on the word of its mother, and not the existence of his mother on the word of God. We must come into the kingdom as a little child. We climb, then, through our venturing on human testimony, to the immense and daring experiment of fellowship with God. We put our hand in an unseen hand and trust its leading. We talk with an unseen Father and are first confident and finally assured that He will find a way to speak to our hearts. Having introduced us to a world-wide fellowship of men, our faith oversteps the narrow limits of the world and brings us into the companionship of God and all His children everywhere.

No less than this is the promise and occupation of our Christian faith. It finds a man in isolation, divided from all other men by gulfs that cannot be passed over, a grain of sand upon the shore blown by some wind of fate. It makes him one in a fellowship that includes both man and God, sharing God's life and purpose. It asks and aids us to set our own lives in order that we may be of use to God and to the brotherhood. It claims our help in the making of a universe of order and of joy. Is not this a prospect and a call lofty and practical enough to lay hold on the enthusiasm even of the busiest man on earth?

[John Richards Brown in *Watchman*.]

The most striking phenomenon in the contemporary history of the churches is the new social conscience which is found in all of them. The world is at last reckoning with the churches in its plans for social adjustment and betterment.

The new evangelicalism is at once an extension, a fulfilment, and a correction of the older faith. It may use a different vocabulary at times, but it has the same essence of faith: it believes in Jesus as the only redeemer, it finds in

Digitized by Google

personal truth the beginning and the end of religion, it finds its sufficiency in God alone, and it believes that the kingdoms of this world will become the kingdoms of our Lord and of his Christ. It builds on the older forms of faith, and rejoices in the fathers'. It does not consider its own points of view final or lasting: they are the message of God for the age in which we live.

The new evangelicalism thinks in terms of the universe, and the Christ it loves is cosmic. Its vocabulary is in terms of power, therefore its conception of faith is dynamic and not static. Its final test is spiritual, and anything short of the vital it must discard. Its final form is social, for Christ is the head of the family of God.

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth.*]

I repeat that I believe this to be the greatest thing that Jesus brought to earth, this revelation of what we are. By showing us what human life could become, he has shown us what it already is. "Become what you are," said one of the fathers of the church, and in so saying epitomized the whole mystery of redemption. We could not rise to God if we had not within us that which is of God to begin with. Looking upon Jesus we can say, From that we came and unto that we shall return. I believe Jesus knew this; there are indications in his recorded words that he knew it; his very use of the phrase "Your Father which is in heaven" implies it. Revealing in himself the eternal and uncreate, he has revealed it in all mankind.

[*Christian Register.*]

Although we cannot by searching find out God, yet He surely manifests Himself to us in the little things of life which we can comprehend, and in the near-at-hand loves which make our lives beautiful in spite of all our unworthiness and blundering. If the love which we know and understand is so precious, what must be the love of which this is but a sign? We would help the world if we could: shall not He help who can? Only let our faith be large enough to trust where we cannot see, to work on from day to day in a strength drawn from the mysterious, invisible sources we have tried in vain to comprehend, and the valley of humiliation shall prove to be only one of the stages of our progress.

[Rev. Harry Adams Hersey in *Universalist Leader.*]

The truths which are now commonplace truths, which every one accepts, were once, let us never forget it, denounced as error, and held only by a little flock. Look at any group of reformers, however large, and you will find that compared with the whole population it is indeed a little flock. But it is God's good pleasure to give them the kingdom. It makes but little difference how many or how few stand for a principle if that principle is right. If it is right, those who stand for it are sure victors. If it is wrong, no millions that may champion it can long be successful. This is history, written large and written everywhere: the right must win. With Paul we may ask, "If God be for us, who can be against us?"

[Rev. Charles R. Brown, D.D., in *British Congregationalist.*]

There was never in the history of the Israelites another time like those hours on Sinai. It was a time of spiritual crisis. Read it as prose or read it as poetry, it certainly represented something unique in the spiritual development of that race, and in the spiritual experience of their own competent leader. Then came the call to leave all that forever and to enter upon the age-long patient process of ushering in the kingdom of God by putting into practice those things they had seen and heard and felt in their time of spiritual uplift.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume, "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The lecture entitled "Christian Science: Its Principle and Method," by Bicknell Young, has been translated into both Swedish and French and is now ready for sale in pamphlet form. Another French translation recently made is the lecture "Christian Science: The Comforter of Promise," by Frank H. Leonard, which is also printed in a new pamphlet in French only.

A new pamphlet has recently been issued entitled "Christian Science *vs.* Finite Sense," a lecture given by Francis J. Fluno, M.D. 32 pages.

A lecture by Willis F. Gross, entitled "The Gospel of Freedom," has been published in pamphlet form. 32 pages.

These pamphlets will be found listed on the opposite page, with prices for single copies and quantities.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of *Divine Science, alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.00. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the current month unless otherwise specified, and include all issues for the month named as expiration date on the wrapper. XII indicates the year 1912; XIII, 1913. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25—£0: 5 s.:	2d.:	Mk. 5.30;	F. 6.45	
2.25— 0: 9 :	3 :	9.50;	11.90	
2.50— 0: 10 :	3 :	10.60;	12.85	
4.00— 0: 16 :	5 :	16.90;	20.60	

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

After months spent in investigating the United States Steel Corporation, the Stanley Congress committee has ended its hearings and will report about May 1, recommending far-reaching legislation. It will also recommend, it is stated, that laws be enacted prohibiting interlocking boards of corporate directors; separation of industrial corporations and interstate transportation facilities, by control of which the steel corporation is able to control rates on practically all shipments of ores; restriction of ownership of minerals, coal and other natural resources of industrial plants, and the overcapitalization of great industrial corporations.

The plan of a yard dormitory at Harvard University has been abandoned, at the prospect of a series of buildings to be located on the Charles river and which will house the entire freshman classes. The plans, it is understood, call for accommodations for at least five hundred students. In this manner it is expected that men of different financial standing will be thrown together early in their college careers, and democracy among the classes fostered to an extent hitherto unknown. It is hoped to have the buildings completed by next September.

About one thousand corporations have been or will be haled into court as delinquents in the payment of the corporation tax last year. There was a total of thirty thousand delinquent corporations at the close of the last fiscal year. Of these twenty-nine thousand have proposed compromises. The government has accepted twenty-seven thousand of the offers for settlement. The remaining two thousand have been rejected, but there are good prospects, it is said, of agreements without court procedure.

Much is said and written about the "six best sellers." It is interesting to note, says *Kansas Road Men*, that the combined sale of the six best sellers was only a little over five hundred thousand copies in the year 1911. In that same period, the Bible had a sale of one million six hundred and thirty thousand copies, or more than three times that of the six best sellers. There is really only one best seller in literature, and that is the Book of books, the eternal, imperishable Word of God.

The supreme court has decided that employees of a car repair department of a railroad were fellow servants of the employees in the operating department, thereby excusing the employing railroad from liability for negligent injuries to the former class by the latter. "The doctrine of fellow servant is established," said Justice Holmes, "whatever may be thought of it." He added that it was for Congress to change the law if bad.

The mayors of Red River valley cities in Minnesota, North Dakota, and Manitoba had a conference recently. The result was the organization of the Red River-to-the-Hudson Bay Navigation Association, the purpose being to promote the movement looking to the establishment of a through waterway from the plains of the Northwest to Liverpool. It was decided to hold a navigation congress in Winnipeg in June.

The executive committee of the National Education Association announces that the fiftieth annual convention will be held in Chicago, July 6 to 12. It had been intended to hold the meeting in St. Paul, but the railways of that district refused to make any concessions in the way of rates and the executive committee was really forced to choose Chicago.

Dr. A. S. Mitchell, chief of the St. Paul laboratory of the bureau of chemistry, has assumed office as a temporary member of the national pure food board, to fill the vacancy caused by the resignation of Dr. Harvey W. Wiley, who finally felt it necessary to take that step, owing to the many obstacles which he says were placed in his way.

The first step in the campaign for the abolition of the commerce court was taken last week when the House committee on interstate and foreign commerce, by a vote of eleven to eight, decided to report favorably to the House the bill of Representative Sims of Tennessee abolishing the tribunal.

A direct primary bill enabling voters to express their preference for presidential candidates has passed the Massachusetts Legislature.

International.

In a London county council report it is stated that building operations are declining in London because of the diminished area of its uncovered land. In 1907 houses and premises of all kinds, with a rateable value of four hundred and eighty-one thousand pounds, were added, but for the year 1910 the rateable value of premises added was only one hundred and ninety-nine thousand pounds. The builder is forced to go out of London to find land to develop. As regards working-class accommodation, it has not been necessary to provide much more in central London, but in outer London the increase goes on. There has been a considerable amount of conversion of better class houses into tenements.

The budget for 1912, which has just been voted by the French Parliament, provides for an expenditure of four and a half billion francs. The largest item of the budget is the public debt, which amounts to 1,785,200,000 francs. The upkeep of the Chamber of Deputies and the Senate for this year will cost eighteen million francs and the expenses of the general police force will come to thirty-eight million francs.

The gross expenditure on the British army for the year 1910-11 was £30,880,012.

Industrial and Commercial.

Funds for a high tension electrical laboratory, which is expected to be unsurpassed anywhere in the world, have been given to the Harvard Graduate School of Applied Science by a Boston donor whose name is withheld. It is the intention to construct for this laboratory a huge transformer which will deliver alternating current at one million volts, a far higher voltage than has heretofore been handled over metallic conductors. There will be provided also means for getting a direct current of one hundred thousand volts. It is believed that the new undertaking is of the highest commercial and engineering importance, since the present use for power and lighting purposes of electricity developed from natural water-powers is sharply limited by the cost of transmission lines and the loss of energy. The losses due to high-tension currents have been studied up to a voltage of about two hundred and fifty thousand volts.

Another problem of the highest importance is what may be accomplished with currents of high tension in making the nitrogen of the air available for fertilizing the land. It is already possible to get nitrogen from the air by the use of electricity, and combine it with other material in an artificial fertilizer, but it is possible that work with higher currents may put this process on an unexpectedly practical basis.

An immense deposit of highest grade iron ore, conservatively estimated at more than a billion tons, according to a dispatch to the New York *Sun*, has been found in the heart of Pennsylvania. The mother lode of red hematite ore which scientists for years have believed lay somewhere in southern Pennsylvania has been located almost at the door of the largest steel and iron industries in the world. It is said by geologists and engineers who have made investigation that it is the most startling discovery since the discovery of gold in 1849 and is destined to mark a new era in the steel and iron industry of this country. The ore is in Ayr township, Fulton county, in three spurs of the Blue Ridge mountains known as Meadow Ground mountains, Lowry's Knob, and Dickie mountain, one hundred miles from Baltimore, two hundred miles from Philadelphia, and two hundred and forty miles by rail from Pittsburgh. A remarkable thing about it is the fact that there are three kinds of ore: red hematite, estimated at more than two hundred and fifty million tons; brown hematite in about the same quantity, and carbonate of iron to the extent of more than half a billion tons. Near by are immense deposits of the best limestone and plenty of water, so that everything for the manufacture of iron is on the ground except coal, and that is only a few miles distant.

The committee on labor of the Massachusetts Legislature, after giving a public hearing, has voted to report favorably on a bill to establish a minimum wage. The bill creates a permanent commission of three persons, to be appointed by the Governor to hold office for three-year terms, to inquire into the wages paid to females or minors employed in any occupation in the commonwealth, if the commission has reason to believe that the wages paid to a substantial number of such employees are inadequate to supply the necessary cost of living and to maintain the worker in health.

The McNally pneumatic cotton gin has been completed at Norfolk, Va., and tested, with good results. Persons from various parts of the United States have visited the city to inquire into the merits of the machine, and the government has carried on tests of the severest sort to ascertain its worth. The machine purports to gin cotton, both long and short staple varieties, without the least injury to the fiber.

A valuable discovery of soluble potash salts has been made in the Mojave desert, Southern California, by field representatives of the bureau of soils and the geological survey. The potash was found in a partially dried-up lake. The United States government experts who found it declare there are indications of millions of tons of potash.

Ten per cent increase in pay with a shortening of hours equal to another ten per cent increase is demanded by the miners as the only basis upon which they will continue to work in the bituminous coal fields after April 1.

Twenty million dollars will be spent in port improvement work in Seattle in the next five years, according to an estimate made by the president of the Seattle port commission.

Increase of wages is announced affecting more than two hundred thousand mill operatives in New England, most of them being in Massachusetts.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

TRUTH IS ENTHRONED.

CLARENCE W. CHADWICK.

LATE one night, while waiting for his train in the crowded waiting-room of one of our large depots, a humble seeker of Truth was conversing with a Christian Science practitioner. The man was desirous of receiving present treatment in Christian Science, but there was not time to go to the practitioner's office. It was agreed that the treatment could be given immediately, right where they were. There was the usual confusion incident to such places,—conversation was going on, people were passing in and out, and some practitioners might not have thought it advisable to treat a patient under such conditions; but in this instance treatment was given, and no one save the two individuals mentioned knew what was taking place. When the treatment was concluded, the patient remarked, "My brother, I am healed." The man was well.

The lesson to be derived from this experience should prove helpful to all. Too often, "amid the jarring testimony of the material senses" (Science and Health, p. 306), one is prone to forget that Truth is enthroned, and almost unconsciously he begins to argue on the side of discord, and possibly to yearn for "a lodge in some vast wilderness" where no discordant note can reach him. The plea of false or negative environment is allowed to displace the conscious recognition of God's presence and power. Discord is admitted to be in the ascendency and the harmony that should prevail is barred out.

What was taking place in the consciousness of this practitioner? He was humbly acknowledging God's omnipresence and omnipotence, allowing thought to rise above sense testimony to the conscious recognition of the fact in metaphysical Science that "the Lord God omnipotent reigneth." The secret of his success lay in his refusal to take in the suggestion of confusion about him, or to argue for it. He was firm in the conviction that "God is not a God of confusion, but of peace" (Revised Version). The problem that confronted him was to "be still, and know that I am God." He agreed to disagree with the adversary of personal sense, and thus allied himself with the harmonious activity of divine Mind, which is unceasingly operative for peace and harmony, and in so doing his consciousness became a transparency through which Truth could shine. He remembered that God is "of purer eyes than to behold evil," and cannot be conscious of iniquity or discord of any kind whatsoever. He recognized the great spiritual fact for time and eternity, that Truth is and therefore error is not.

Here must be our mental departure for all spiritual growth. If God is, evil or error is not, and our daily lives must conform to this fact of being if we would succeed in the practical demonstration of Christian Science. If right is, wrong is a mere negation or counterfeit which can be corrected and destroyed in individual consciousness. If good is, evil in its myriad phases of supposititious belief is but the seeming absence of good and can be and must be obliterated from human consciousness. If health is an established fact in and of Mind, disease in all its forms is but the resultant of a mistaken sense which must and will yield to the touch of Truth. If Life is the divine Principle of man's being, what is termed death is a negation and will be swallowed up of Life. In other words, if "the Lord God omnipotent reigneth,"—and no one would dispute the truth of this assertion,—nothing else reigns or has power, or ever will have. To believe this statement and to know or understand it are two widely different things. Christian Science demands that we shall understand its meaning and be ready at all times, no matter what the physical senses may argue to the contrary, to prove through "signs following" the all-inclusive supremacy of good, God.

Since good reigns, evil does not and cannot reign. This gives the Scientist divine authority for refusing to think evil or to believe in it, and just to the extent that he exercises this authority will he be able to "overcome evil with good" and to enter the kingdom of mental harmony on earth. There is no other way to escape "from the bondage of corruption into the glorious liberty of the children of God." Blind faith may admit that Truth is enthroned, that God reigns in the realm of Spirit, but not understand in the least degree God's omnipresence and omnipotence. This admission of the human mind would deny God's actual presence on earth and give full sway to the belief in an evil power and presence, while Christian Science teaches that "immortal Mind, governing all, must be acknowledged as supreme in the physical realm, so called, as well as in the spiritual" (Science and Health, p. 427); and on page 445 we read: "You render the divine law of healing obscure and void, when you weigh the human in the scale with the divine, or limit in any direction of thought the omnipresence and omnipotence of God." These statements clearly express the radical but reasonable stand that Christian Science takes upon this subject, the only stand which makes it possible to bring out the practical demonstration of control over disease and sin and to prove the truth of the Scripture, "The Lord reigneth: . . . he shall judge the people righteously."

If Christian people, professing as they do to believe in an all-powerful God, would stop to consider the real meaning of omnipotence before accepting the dictum of the material senses, they would readily rid themselves of a multitude of worries and aches and pains to which they are now in bondage, for they would be compelled to acknowledge that Truth is enthroned, and that "where the Spirit of the Lord is, there is liberty." This is all that Christian Science is contending for,—that good is already enthroned; and the time is coming when all denominations will agree with Mrs. Eddy that "Truth is revealed. It needs only to be practised" (Science and Health, p. 174). Then will be fulfilled the prophecy of Isaiah: "Then the eyes of the blind shall be opened, and the ears of the deaf shall be unstopped. Then shall the lame man leap as an hart, and the tongue of the dumb sing. . . . And the ransomed of the Lord shall return, and come to Zion with songs and everlasting joy upon their heads: they shall obtain joy and gladness, and sorrow and sighing shall flee away."

"ALL THINGS COMMON."

MYRA EMMONS.

In no respect is the divine wisdom which is reflected in the work of Mrs. Eddy more manifest than in the absence of arbitrary rules based on human concepts. The sublime self abnegation which said to students of Christian Science, "Follow your Leader only so far as she follows Christ" (Messages, p. 78), reflected too clearly the infinite and eternal to be shackled by narrow human limitations. In the establishment of man made religions many a sect has been founded on some one sentence contained in the Scriptures or on some material interpretation of a single phase of truth, and such sects have benefited mankind only in proportion to their reflection of the Christ, Truth.

The founders of some of these sects have given much thought to the statement in the New Testament that the early Christians "had all things common." This statement has seemed to picture a desideratum. The picture has appealed to the yearnings of the human heart for the breaking down of cruel barriers which material sense imposes. Mankind has felt that there must be a great fundamental truth underlying this experience which the early Christians enjoyed, but mankind has itself put up the very barriers against which the ages have flung themselves in vain, and has at times hopelessly given up the struggle, saying, "Such conditions are not for our days;" or, "We must have competition," or some other makeshift of material sense, which ever seeks to evade its problems. Again the struggle has broken out in some new form, because the voice of our brother's blood must forever cry from the ground until all injustices and inequalities of material sense give place to the infinite divine justice, equality, and freedom which constitute the reality of man.

Noted thinkers have urged the claims of "all things common;" political economists have proclaimed many theories and offered many possible solutions; Count Tolstoi devoted his life to the effort of portraying his view of the demands of Christianity; rich men have surrendered vast fortunes in a supreme desire to show forth the Christlike brotherhood and bring about the millennium; great communities of earnest men and women have guided themselves in uniform, loyal communities, tried to divest themselves of their individuality and even of freedom in order to speed that glorious day when the brotherhood of man shall be firmly established. Not one of these activities can be in vain, but a clear understanding of the truth of being alone offers the perfect fundamental solution of every human problem. By the spiritual interpretation of the Bible, as taught by Mrs. Eddy in "Science and Health with Key to the Scriptures" and her other writings, we know that we already have "all things common," that is, all things which are real and eternal.

The desire for possessions, for individual property, seems to be fundamental and inseparable from material existence. The Scriptures speak of this desire. To the rich young man Jesus said, "Go and sell that thou hast, and give to the poor, and thou shalt have treasure in heaven: and come and follow me." Jesus evidently did not, by this, imply that the young man was to sell all things and give the proceeds to the poor, but rather that he was to sell the material sense of things, and thus be free to follow the Christ. In another place Jesus said, "Whosoever he be of you that forsaketh not all that he hath, he cannot be my disciple." Here the word "forsaketh" means to renounce the claim that material things can bring happiness. Only the understanding of Spirit, God, as all and in all, can bring the true sense of possession, which is spiritual and eternal, and which is not subject to the laws of matter, but is governed by the divine Principle, Love. Material sense and possession is a mist of evil imagining that we must understand and overcome through Christ.

In the time of the early Christians, when the disciples began the work of preaching the gospel, many people, The competition was taken up by other florists and private individuals throughout the country, and high prices were paid for new bulbs producing fancy varieties of blossoms. The mesmerism spread until all Holland turned to the growing of tulips, prices ran riot, men sold their homes and gave the money for a single bulb and the condition became known as "the tulip craze." Other business was damaged and vast sums were paid for the control of some wonderful new variety of the flower. Outsiders preyed on this weakness. They cultivated tulip bulbs and sold them to the Hollanders for extravagant prices. Looking in amazement, these people were too canny to become victims of this craze. They were willing to sell to Holland, but they did not buy her bulbs in return. Then one day the crazy awoke. Many of her people were bankrupt and their bulbs were decaying in the ground. They had no value in themselves to contribute to the welfare of mankind, and the error was wiped out only with years of toil, hardship, and deprivation. A true sense of intrinsic values would have prevented this calamity.

Even material sense discriminates carefully between that which seems to have some permanent value and that which is obviously ephemeral and fleeting. We have the term "real" estate, to indicate what mortals consider of permanent worth. It may be remarked in passing that many a man who has bought a piece of ground and then seen the town grow in the opposite direction has subsequently entertained grave doubts of the reality of even the solid ground, and has realized that all valuation rests in something invisible. What, then, determines true permanent value? Mankind is ever seeking to establish an investment of something that shall be safe and enduring. Thus arose the government bond, based on the government's power and its domains and its ability to pay in full. Based on the supposition that any government can ever arise which will make the government unable to pay. Bonds of this character, an invisible asset. In years in law, and as long as [illegible] Christian Science Journal has recently said, "Matter is visible. Only its results are real."

It seems, then, we must turn from things which are "real" [illegible] to the invisible. It is a comfort to every [illegible] that the "real estate" we are to be [illegible] Mrs. Eddy has defined [illegible] as "infinite and eternal [illegible] and Soul." Science and Health, p. [illegible]. This statement [illegible] the realm of mortal [illegible] and [illegible] Mrs. Eddy [illegible] Science and Health [illegible] Key to the Scriptures" [illegible] Science Journal [illegible] Only its results are real."

She states that with the disappearance of evil beliefs the moral qualities of "humanity, honesty, affection, compassion, hope, faith, meekness, temperance" will appear; and that the spiritual image of God appears reflected in the qualities of "wisdom, purity, spiritual understanding, spiritual power, love, health, holiness," which constitute the reality of man.

These spiritual qualities are our eternal possession. Are they not attainable by all? Is there any way whereby one individual can crowd another out of his heritage in God? Is there anything in these qualities which is capable of "discord and decay"? Can any of them, once understood, be taken away from us throughout all eternity? Do we not, in understanding, have "all things common"? Two essential points, kept clearly in thought, will aid in taking the forward human footsteps. One is that immortal man is already in full possession of this heritage, as reflection of God, and that the omnipotence of God sustains every effort to "put off the old man" so that the reflection may be clear. Another is that we are now living in eternity. Our possession of Godlike qualities is not relegated to some vague hereafter. It is present. God is not "a God afar off," but is as fully present now as He will ever be.

One thing is greatly needed to spur endeavor. It is the eternal fact that we have something to do. "Stretch out thine hand" should ring ever in our spiritual ears. The Red sea was not driven back until Moses stretched out his hand. God was present and the operation of Mind was His, but obedience was required of Moses. God's manifestation was made to all the people after the obedience of the man Moses. Each individual has work to do, for activity and progress are the law of God. This work is never the competition and contest which are manifested in the seeming field of matter and mortal mind, but is the individual overcoming of the false beliefs of the flesh. In this work the individual is blest and all mankind is blest. In this work we have "all things common." Christian Scientists are truly the owners of government bonds—the bonds of Truth and Love—the government which "shall be upon his shoulder." God Himself is the owner of His domain; He has full ability to pay, and no circumstances can invalidate His promises.

Our deepest gratitude is due Mrs. Eddy for her life-work of explaining to us the revelation that only the spiritual is real, and for her demonstrations of this truth in the marvelous spiritual activities which have overcome multitudinous false beliefs of sin, sickness, and death and which made her our beloved Leader in the path of Truth and Life.

PRECISION AND PATIENCE.

CAMPBELL MAC CULLOCH.

THE statement has been made that the measure of the understanding of a Christian Scientist is his ability to reflect God's thought and to put the truth thus realized into practice in the overcoming of evil. To some who are still groping in the tangled mazes of orthodoxy, such a test or requirement may seem calculated to restrict individual development and to be wholly subversive of spiritual growth, but comparatively little thought is needed to show that true individual spiritual progress can be obtained in but one way, and that by obediently following out the precept of Jesus, "Be ye therefore perfect, even as your Father which is in heaven is perfect," for it is obvious that only by patterning after the perfect can perfection be obtained. It must not be forgotten that this mandate carried with it the correlative requirements of exactitude and patience, for the Master thoroughly recognized the need for accuracy in speech, thought, and action, and this recognition is abundantly emphasized throughout his teachings. Thus it follows that only by carefully and painstakingly following the rules laid down by Jesus, and so thoroughly and clearly restated by Mrs. Eddy, can we hope to gain even a modicum of this perfection.

For the moment no better illustration of the result of such practice of precision comes to mind than the manner in which the needle of the talking machine so patiently and exactly follows the varying intricate track that has been graved for it upon the surface of the record. Here is a path outlined which must be traveled without departure by even a hairsbreadth if satisfactory results are to be obtained, and in the exact ratio in which this requirement is heeded is the original music reproduced with all its attendant harmony. Let the needle vary ever so slightly from the true course, however, and instant and even painful discord is the inevitable result; and this analogy may here be carried a step farther, for it is now seen that the resultant discord becomes the signal that issues a clamant call for immediate rectification of the error.

It becomes evident, as we progress in our understanding of Christian Science, that there is but one perfect mold in which all our thoughts must be cast if we are to approach the glory of spiritual reflection; that as there is but one Mind, all real thoughts must be the emanation of that Mind. Thus we are forced to the conclusion that in reality there are no thoughts but God's thoughts for us to reflect, just as there was but the one narrow way for the talking machine needle to follow, and but one series of accurate indentations over which it must travel.

Too much emphasis cannot be placed upon the need for absolute precision of thought and faithfulness in following the divine mandates. Not infrequently one may hear something like the following evasive reasoning: "I don't think hairs should be split in that way. I know what I mean, and I get close enough to the facts; anyway, even if I cannot always express just what I have in mind, it does not really matter. I know, and that ought to be enough." The fallacy of such statements, of course, lies in the obvious certainty that if a thought is clearly formulated there exists no valid reason why it cannot be clearly expressed; and it is equally obvious that if it cannot be so expressed, there is reasonable ground for believing that confusion and inaccuracy exist. Very little consideration is necessary to realize that the human consciousness stands greatly in need of clear understanding in order that the transition from mortal sense to clear spiritual discernment may be accomplished without wreck, and that this understanding can be obtained only through constant and painstaking effort.

It is well enough to say that God is Love, but wherein lies the benefit of such a statement if there is no clear comprehension of the attributes of God or the quality of divine Love? Such inexactitudes come perilously near the Master's classification of "vain repetitions," and persistence in such loose thinking will eventually rob the thinker of the spiritual animus with which the thought was originally clothed. Ambiguity in thought and expression has no place in metaphysics, and it should be borne constantly in mind that exact thinking in the way of God's appointing is the only certain method of approach to Him. In Science and Health we read that "the spiritual man's consciousness and individuality are reflections of God" (p. 336). Jesus said that he was "the way," and he bade mankind follow in his steps. He never faltered in his clear perception of the straight line of God's thinking, and in the numerous manifestations of that perception he made plain the results which would certainly accrue.

Coupled with the need for exactitude is patience, and patience is the expression of the calm, unhurried, enduring demonstration of the truth of being. There can be no speedy assimilation of the divine plan, for that plan only unfolds itself in the proportion in which God's thoughts are understood and mentally restated, and there need be no hurry in that labor, for all eternity awaits its accomplishment. To know God is a process and not a feat, and

Digitized by Google

here, perhaps, becomes apparent the gulf that, separating knowledge from belief, marks the advance of Christian Science beyond the wavering pales of scholasticism. Belief, in the majority of cases, is either an emotional product or an inheritance, while knowledge is the offspring of reason and research. It is these qualities that Christian Science demands of its adherents, for its first requirement is a desire to know God.

Accurate knowledge, then, enjoins unlimited patience and precision for its attainment and demonstration, and in so far as these are brought forward and made a part of the daily thought processes, so will the infinite unfold the majesty of the spiritual creation. The knowledge of God, as Mrs. Eddy has so beautifully expressed it, requires its seekers to "emerge gently from matter into Spirit" (Science and Health, p. 485), and in this gentle emergence it will be found that the handmaidens of Spirit are precision and patience.

THE ABSOLUTE.

L. WILL WELKER.

THE term "absolute" has found its real meaning in Christian Science. Outside of this teaching the true signification of absolute cannot positively be cognized, for all material theories must fall short of the absolute in some degree at least, since materiality means finity, imperfection, at some point. Absolute in Christian Science is not relative nor in any sense limited, for God is the Principle of the Science of Mind, or Christian Science, and He is omnipotent, infinite. One realizes the strength that is in and of Mind alone, when one attains to that spiritual consciousness, the Mind that was also in Christ Jesus, through the unity of understanding.

The Christian Science practitioner is daily meeting error in its numerous manifestations called sickness. Some mortal mind law transgressed, knowingly or unknowingly, has resulted in seeming physical inharmony. What is our refuge? How shall this evil belief be cast out? How joy-filled is the assurance that God is absolute good, therefore eternal in harmony; and since the divine mandate, "Let us make man in our image, after our likeness," means reflection of the infinite good, the fact stands, that what was made in God's image is still God's image, for infinity cannot be less than infinite. Knowing this truth, we base all on the one absolute Principle, which can be applied as definitely and as unfailingly as any mathematician applies his rules in mathematics.

One unlearned as to what man really is, may query, "Do Christian Scientists never get sick?" When we have reached the true consciousness of being we can no more experience sin, disease, or death than God can know these errors. But so-called mortal experiences will continue so long as belief in man as a creator exists, or so long as the belief of life in matter remains. Jesus said, "Call no man your father upon the earth: for one is your Father, which is in heaven;" and he thus taught us that man is "born of the Spirit," not of matter. It was because he saw through matter and realized its nothingness,—since God, the source of all being, is Spirit and one,—that he healed all manner of diseases instantly. Had he known matter as an entity at any point, to that degree he would have known limitation and consequent failure; but because he knew Principle as absolute, and man perfect as the Father is perfect, he became the master Metaphysician. To the degree that we also know this truth which Christ Jesus demonstrated, we can bring the sick to know that "divine Love gives them all power over every physical action and condition" (Science and Health, p. 420).

Knowing God as perfect Principle, we must know man—God's idea—as perfect and individual. A sick or sinning mortal never did express in any degree sonship with Christ, for the immutable cannot know imperfection or sin and therefore is not expressed by aught that is less than perfect. It remains, then, for us to come into a realization of our true selves by righteousness, by the right thinking which lifts us out of the physical seeming into the spiritual real; and thus we begin to find heaven within us here and now. The promise is "to him that overcometh."

"THE FARMER'S OPPORTUNITY."

DENNIS L. ROGERS.

SOME time ago there appeared in the *Sentinel* an article entitled "The Traveling Man's Opportunity," which prompted me to say that, while I agree entirely with the sentiments expressed in that article, I wish to testify also that in Christian Science the farmer finds his staunchest help. The fact that so many of Jesus' parables are taken from rural scenes and employments has raised in some minds the question whether his early training was not agricultural rather than mechanical; and that he was quite familiar with such matters is apparent from his reported discourse.

To the farmer, and especially the farmer's wife, separated as they are by distance from neighbors, Christian Science brings an ever-present sense of companionship, which takes away all sense of that loneliness or isolation which is so oppressive and which is responsible more than anything else for the migration of the young people from the farm to the city. Realizing his own capacity to reflect omnipotent power and intelligence, a consciousness which in itself is constructive and life-producing and sustaining, the Christian Science farmer is able to overcome and destroy the plagues, pests, and diseases which so often seem to infest the animals, poultry, and crops, in a manner that seems indeed miraculous to those who do not understand the Principle of Christian Science.

Its teaching also gives the farmer that patience and kindness which are greatly needed in the care of the young and tender of the flocks and herds; he loves them and they soon learn to love him and to reflect upon each other the love they receive, so that instead of kicking, biting, or otherwise hurting each other, they live in such harmony as makes the prophecy of Isaiah, "They shall not hurt nor destroy in all my holy mountain," a reality in every-day experience. In overcoming the sense of heat and dust as he goes about his labors in the fields, the farmer who accepts Christian Science demonstrates the truth of the "scientific statement of being" (Science and Health, p. 468), and thereby rejoices in a freedom from discomfort which only those can realize who know it through experience.

Again, he has the benefit of the quiet, restful, and satisfying Sunday service in the cool parlor, with the refreshing breezes blowing through; and he may have also the helpful presence of a good neighbor or two, the sweet familiar hymns, some of them by our Leader, the feeling of the actual presence of God that comes with the silent prayer, the impressive reading of the always helpful Lesson-Sermon, with its life-giving message,—surely Christian Science is the farmer's opportunity for health, happiness, and prosperity here and now.

O mighty sea, that mightily doth roar,
Against yon boulder all thy fury tossed
Can harm it not; thy waves now dash it o'er
Unheeded, and thy vaunted strength is lost!

So 'gainst Truth's stable rock the threatening sea
Of error's seeming power doth vainly break;
And there indeed our refuge sure shall be,
When loud the storms their frightening clamor make!

CHARLES C. SANFORD.

SELECTED ARTICLES.

[Algernon Hervey Bathurst in *Surrey Comet*, Kingston, Eng.]

Will you allow me to refer to the report to the effect that, at a meeting of the Kingston-on-Thames town council, it was decided that the question of the acceptance of the presentation copy of "The Life of Mary Baker Eddy" should be "sent back for further consideration," because the doctrines of Mrs. Eddy were "dangerous to health and life." It appears from the report that the book was originally accepted because "the committee felt that nobody would be likely to read it." This would surely imply that the library committee of the Free Public Library, an institution maintained I presume by the ratepayers, take it upon themselves to accept a book presented to the library on the ground that they believe the public will not read it. As soon, however, as there is a demand for the book, or it is considered that there may be a demand for it, the book in question is "sent back for further consideration," a form of procedure which will scarcely commend itself to the residents in Kingston.

The reason given for this action is also frankly surprising. The teachings of Christian Science are based on absolute Truth, the knowledge of which Jesus emphatically declared would make men free. The teachings of the Master were proved to be scientific, and therefore demonstrable, by the innumerable cases of the healing of sickness and the destruction of sin and discord accomplished by Christ Jesus himself and his disciples. Referring to these works, the Master said, in language which it is impossible to misunderstand, "He that believeth on me, the works that I do shall he do also." He, that is, who not only accepts the theory of the teachings of Jesus the Christ, but understands them, will be able to demonstrate the same, apply them to his every-day needs. This is the message Mrs. Eddy has given to humanity, and she has shown mankind in the Christian Science text-book, "Science and Health with Key to the Scriptures," that those same teachings which were proved to be so practical not only while the Master was explaining them to his disciples and the multitudes, but also for some three or four hundred years after the ascension, are in every way as practical and as much to be demonstrated today. Since, therefore, she is simply reiterating what Jesus himself declared, it is hardly credible that a body of men can be found who can say with all seriousness that such doctrines are "dangerous to health and life."

Mrs. Eddy's name is known throughout the world, and that she was loved equally as a personal friend and as a public benefactor is evident when we remember that, shortly after her passing away, Alderman Cressy of the Concord, N. H., city government, referred to her as "one of Concord's most distinguished citizens," and as "an honored, respected, and beloved benefactor." "Mrs. Eddy," he added, "was distinguished by public spirit, deep generosity, wide charity, and tender, thoughtful helpfulness." Her motto, he also pointed out, was "To injure no man, but to bless all mankind" (*Christian Science Sentinel*, Jan. 7, 1911). Again, one who knew Mrs. Eddy well has written, as the result of his own experience and conviction, that "no one ever entered Mrs. Eddy's study who did not leave it, not only a braver, but a better man."

The above gives but a faint idea of the character and life-purpose of this noble woman, the story of whose life is to be found in the great majority of public libraries, and, if I may venture to express an opinion, there is not a single library that can afford to be without an authentic biography of one who has made such a deep and indelible mark in the history of the world.

[Charles K. Skinner in *South Haven* (Mich.) *Daily Gazette*.]

After reading the Rev. ——'s uncalled-for attack upon other Christian workers and their religion, I am led to quote the speaker's words against Christian Science which have appeared in recent issues of your paper. The gentleman claims to be a devout student of the Scriptures and a follower of the great Teacher. He tells us that he has lived with the Bible in several languages all his life, and that he once read the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy, some sixteen years ago, and hence considers himself qualified to pass upon its value for the general public. We have met persons who had been through college (in what manner was not stated), and they even claimed to have studied mathematics, and yet were unable to compute a simple problem in compound interest; but there was no criticism on their part of the science of mathematics nor of the author of the text-book. It is not so many years back that the opponents of the telegraph scoffed at the practical uses of electricity, but they have lived to see their wise sayings brought to naught. What a man does not know proves nothing, and to deny the truth of what others are demonstrating daily to the world is worse than folly.

Our critic says that "the heart of Christianity is love." We are wondering if he has read the passages, "Judge not, that ye be not judged," and "Love one another, as I have loved you." The strange thing about it, and which must impress the thinking person, whether a church attendant or not, is this: When there is so much discord, strife, sorrow, and evil of every kind being expressed in our midst, should any one who has enlisted to lessen these unfortunate conditions waste valuable time in attacking other honest Christian workers because they do not look through the lens which he uses? Is it not a sad commentary on such so-called Christianity?

Christian Scientists are not found assailing other people in their efforts for humanity; they do not proselyte, for they believe every person has a right to his own individual opinion in every direction. They remember Jesus' words to John: "Forbid him not: for he that is not against us is for us." If "the heart of Christianity is love," of what value is love if it is not expressed in kindness and good deeds? St. James says very plainly: "What doth it profit, my brethren, though a man say he hath faith, and have not works? can faith save him?" There is no argument in the speaker's reference to hospitals and asylums, for while Christian Scientists do not build such institutions, they as individuals and societies are most liberal respecting the needs of humanity. It is a matter of record that in the various extraordinary disasters throughout the world, the contributions sent by Christian Scientists to the general treasurer of the fund in New York exceeded those of any other denomination. Mrs. Eddy herself was always a most generous supporter of worthy causes outside of Christian Science work, and this is also a matter of record in her home city.

This critic takes offense at Mrs. Eddy's position that all causation is in Mind. He evidently confuses her use of the word "Mind" with the mortal or carnal mind, although the statement is made very clearly in the text-book that the terms Mind, Spirit, Life, Love, Soul, and Principle when capitalized refer to God only. Mrs. Eddy uses the word "Mind" in the same sense as the apostle did when he said, "Let this mind be in you, which was also in Christ Jesus." She realized that "the carnal mind is enmity against God," as the Scriptures state, and could do nothing good of itself. It does not require a Christian Scientist to admit the correctness of Mrs. Eddy's statement: "Have no fear that matter can ache, swell, and be inflamed as the result of a law of any kind, when it is self-evident that matter can have no pain nor inflammation . . . were it not for mortal mind" (Science and Health, p. 393).

Digitized by Google

A moment's thought will convince the reader that matter of itself has no life, intelligence, no power of expression. The indisputable fact is that there must be a mentality to cause either good or bad action of the body. Mortals have been living all down the ages in the thoughts of fear, worry, hatred, sensuality, and sin of every sort, and these evils are constantly expressing themselves in the forms of mental, physical, and material disorders. Everything is thought before it is acted, be it good or bad, and Mrs. Eddy realized this in her injunction to "stand porter at the door of thought" (Science and Health, p. 392). Hence it is important to make sure that the right thought shall rule in us at all times.

If the priests of India taught, as the critic asserts, that God is all, they must have gotten the spirit of the teaching from inspiration, and to this extent such teaching honors God and is in advance of the materialism of the age that denies Him this honor. Mrs. Eddy says that for three years after her discovery of the divine Principle of healing she "searched the Scriptures and read little else," and she says further, "In following these leadings of scientific revelation, the Bible was my only textbook" (Science and Health, pp. 109, 110). It is very evident from the results of her teaching that she grasped "the spirit that quickeneth." Not a country on the globe but has the proofs of the truth of Christian Science in the life and health of those who have experienced its blessings.

The critic is fond of quoting the text from Ezekiel, "The soul that sinneth, it shall die," but he fails to quote the following, also from Ezekiel: "If the wicked will turn from all his sins that he hath committed, and keep all my statutes, . . . he shall surely live, he shall not die." He will tell you of John's words, "If we say that we have no sin, we deceive ourselves, and the truth is not in us," but he does not mention another verse in the same epistle: "Whosoever is born of God doth not commit sin; for his seed remaineth in him: and he cannot sin, because he is born of God." John recognized very clearly in the one instance that mankind, under control of the carnal mind, are incapable of doing good, and in the other that the perfect man cannot sin.

In conclusion let me say that if Christian Science did not prove the truth of its teachings by its daily deeds, it would long since have passed away. Christian Scientists claim no monopoly of the Christ-healing; it belongs to every one who will obey Jesus' words: "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you."

[Alfred Farlow in *Army and Navy Journal.*]

Commenting upon the President's recent modification of his order regarding the practice of medicine in the Canal Zone, you say that "the demand to practise medicine without the proper permit, our medical contemporary maintained, aimed at the 'surrender of the wonderful results obtained by the toil and sacrifice of devoted, clear-headed, scientific men.'"

It should be noted that the stipulations of the President's modified order, which provide that "such sanitary laws, orders, rules, or regulations as now or hereafter may be enforced in the Zone" shall be complied with, maintain and safeguard that which is generally conceded to be real achievement along the lines under consideration. Christian Scientists have never opposed the most extreme measures of reasonable sanitation. They believe in the absolute cleanliness of both body and mind. They believe that if the people were as clean as they should be, morally and physically, there would be little sickness in the world.

However, as to the question of administering drugs, that is quite another thing, and it is with this proposition that the President's modification deals. No class of practitioners has thus far even approximated to a sure cure or has demonstrated a sufficient degree of efficiency to claim the sole guardianship of the public health. The practice of medicine is still experimental. Even among medical practitioners there is no general agreement, but on the contrary wide divergency. While this Science has been demonstrated with a large measure of success in all climates and under a great variety of conditions and circumstances, the unswerving adherence to it in time of sickness is not only a matter of religion, on the part of those who believe in it, but a matter of scientific practice and satisfactory results. Their faithfulness to Christian Science is not a matter of fanaticism, not merely a matter of being loyal to specific religious faith, but a deliberate adherence to that which they have proved by experience to be the best known remedy for human ills. The most rigid scientific rules and regulations which deal with the matter of cleanliness will meet the hearty approval of Christian Scientists. Such practice constitutes an application of Christian Science teaching, since the purest and best in the material most nearly approaches the spiritual.

["B" in *New York* (N. Y.) *Globe.*]

It should be said that real Christian Scientists would never send children to school knowing they were suffering from a contagious disease, and that they are particular to obey the laws of the land in regard to quarantine, etc. Christian Science has proved its worth, and is here to stay. It certainly cannot be suppressed by persecution or prosecution while it is doing good work and obeying the laws of the land. Those who have been healed by Christian Science after death sentences had been pronounced upon them by medical doctors, cannot in fairness be compared with insane criminals for going to such a sure help for future ills. They are insured this right by common sense and by the constitution and American freedom. So long as these exist, the right of the individual to choose the particular method of healing he believes best suited to his needs cannot be abrogated.

[John H. Wheeler in *Hannibal* (Mo.) *Courier-Post.*]

The *Courier-Post* of recent date reported a discourse of an evangelist, in which he takes the Christian Science doctrine severely to task for its teachings concerning sin. We regret that the reverend gentleman is so entirely mistaken in his estimate of the mission of Christian Science and the moral and spiritual force of this teaching to reform the lives of those who are weary and heavy laden with a sinful sense of existence.

It is true their religious convictions may seem to differ materially from those of the critic, yet Christian Scientists view with great concern the problems of sin confronting humanity, seemingly a serious hindrance to their march toward spiritual manhood and womanhood. We know full well that all the law and gospel must be fulfilled to attain this blessed state. The following "daily prayer," as set forth in The Mother Church Manual (p. 41) for the guidance of its members, verifies this and stands forth as the polar star in the profession of our faith: "'Thy kingdom come:' let the reign of divine Truth, Life, and Love be established in me, and rule out of me all sin; and may Thy Word enrich the affections of all mankind, and govern them!"

The capacity to understand Truth aright, unerringly marks the true Christian, and no professor of Christianity who has not gained this spiritual understanding is safe in his or her warfare against evil, the sole enemy of Christ. The strong claim of Christian Science upon the affections and faith of humanity is its revelation of the nature and actual mental cause of all the ills which the flesh is heir to, together with the specific teaching concerning the mental resistance and warfare to be waged against sin's power to tempt one to indulge its falsehoods. The most forceful

Digitized by Google

statement of our Lord and Master in his sermon on the mount was: "Blessed are the pure in heart: for they shall see God." The pure in heart, then, are those who are mentally pure and above the temptation to sin. They understand the divine nature and spiritual law of cause and effect, and cannot be deceived by a false, sinful suggestion concerning any event in human experience. Christian Science unerringly proves that one and all may enjoy this freedom, just to the extent that they grasp this truth; even as the schoolboy understands that two times two does not make three, but always four; so he is never deceived by a false suggestion about this simple expression of a mathematical truth.

It is the possibility of learning a correct and exact method for the treatment of sin in any of its forms, afforded by the revelation and teachings of Christian Science, which insures its disciple eventual freedom from all sin. Through this attainment in human experience the fulfilling of the prophecy is realized that the Comforter does teach us all things, as promised by Jesus; even the fulfilling of his statement concerning salvation: "And I, if I be lifted up from the earth, will draw all men unto me."

For Christ to become supreme in the affections of mankind and enable them to resist successfully the tendencies to sin, requires unremitting toil, watchful care, and consecrated obedience to the rule of life prescribed by our Master. Christian Science has uncovered the subtlety of evil's activity in human thought, generally styled "the devil," which deceives mortals so continually, becoming, as they do, voluntary and involuntary sinners, and it has also given them the method of procedure by which they may eventually escape the deception of sin, through growth in grace and spiritual power. Mrs. Eddy says: "The right thinker abides under the shadow of the Almighty. His thoughts can only reflect peace, good will toward men, health, and holiness" (Pamphlet, What Our Leader Says).

Any alarms that may be felt over mistaken views concerning our teachings on this subject are not justified, for it is not borne out in the experience of those who have taken shelter in the Christian Science teachings from the storms of sin and woe in human life. Contrariwise, almost untold numbers today bear witness to a remarkable freedom from sin and suffering, together with a new-born love for God's holy Word which they have gained through a knowledge of Christian Science.

[From *La Porte* (Ind.) *Herald.*]

One of the features of Dr. ———'s sermon last night was an attack on Christian Science. The language used was .... wholly out of place in the Tabernacle. It was not an argument against the belief of the Scientists, it was simply a vile expletive against Mrs. Eddy and her followers. La Porte has a large and prosperous Christian Science congregation. Its members may be found in nearly every walk of life from the humblest to the highest, and they are among the city's best and most highly respected citizens. In this free land they are privileged to believe as they see fit, and even the people who in no measure share in the Christian Science doctrines will not for one instant approve such an attack. Intemperate language, without reason or argument, is not convincing and does more harm than good.

[Charles D. Reynolds in *Granite State News*, Wolfeboro, N. H.]

Jesus came to make men free from the material by instructing them in the spiritual. "My kingdom is not of this world," and "I speak to the world those things which I have heard of him [the Father]," were his words. Evidently "the people were astonished at his doctrine," and many opposed because his teachings contradicted the testimony of the mortal senses. When asked what his authority was for his teachings, he referred them to his works. His works established the truth of his teachings, proved his words, and there can be no other way of establishing the truth. We judge of the correctness of a teaching by its practical import, by what can be accomplished for mankind by it. Authority is established in no other way. It is the recognized scientific way.

The rapid growth of the Christian Science movement is entirely due to the fact that Christian Scientists are successfully doing the healing works which Jesus did, and assured his followers that, if they understood and obeyed his teachings, the same works would follow. For more than a thousand years the teaching of the Founder of the Christian religion, as given in the Bible, was without visible influence upon the lives of the greater number of his followers, but in these later centuries there has been a strong desire on the part of many sincere Christians to go back to primitive Christianity, to the pure teachings as recorded by those who heard them uttered and saw them applied to the solution of human problems.

Christian Scientists are not hoping for salvation through intellectual beliefs. Theories about the Christian religion have too often been substituted for Christianity itself. Even if one should accept the abstract doctrine that Christ Jesus was Jehovah Himself, that is to say God, instead of God's perfect manifestation, the spiritual image and likeness of Himself, as Christian Science teaches, it is valueless unless it can be proven to have some connection with freeing men from evil. That Mrs. Eddy's teachings have taught thousands of people to free themselves from temptations and sins, as well as sickness, from which they had previously striven in vain by other systems to free themselves, is too well established to need defense; organic diseases included, notwithstanding the critic's unbelief. Within Jesus' figurative language lies a spiritual meaning.

If so-called mortal existence were divine and real and good, the creation of God, these works could not be done and Jesus could not have performed them without abrogating the divine order. His instruction to his students to continue these works for all time, and the present proof of them ought to make his professed followers glad instead of stirring them up with hostile opposition and denial. Christian Science is teaching the world how to do these works on the basis of the unreality of evil. Humanity has too long believed in the reality of the things of the mortal senses, and this unbelief has weakened faith in spiritual power, the understanding of God's omnipotence.

[Written for the *Sentinel.*]

TRUTH.

MINNA MATHISON.

THE heart that knoweth Truth is free!
Then I will shrink no more at earth's alarms,
For over all is God's infinity,
And under all His arms.

Whate'er the guise assumed by fear,
Truth in its strength sublime the day shall win;
The touch of Love will banish every tear,
Will break the bonds of sin.

No pain can rend, no loss assail
The child of God, since God is Love and All;
By Love surrounded, how can blessings fail,
What evil can befall?

Look up, my heart, and fear no wrong,
No more with mortal weapons warfare wage!
Go forth, then, armed with Truth, lips set with song,—
Love is thy heritage!

Digitized by Google

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"UNCONTAMINATED AND UNFETTERED."

THERE are doubtless many of our readers who will recall that previous to 1895 the services in Christian Science churches included sermons composed and preached by the pastors of these churches. The new-old teaching was making its way even against great odds, but the splendid organization which was destined to do such great work for humanity was then being evolved under the guidance of Mrs. Eddy, and her innate keenness of judgment soon detected the parts of the structure which should be effectively strengthened. Loyal and devoted as were these shepherds of the various flocks, it was quite natural in those early days that the sermons should consist very largely of the personal views and opinions of the respective preachers, and that these views and opinions should sometimes differ widely. As this tended to bring confusion of thought to the seekers for Truth, there could but be rejoicing, when in 1895 Mrs. Eddy announced through the *Journal* that she had ordained "the Bible, and 'Science and Health with Key to the Scriptures,' to be hereafter the only pastor of The Church of Christ, Scientist, throughout our land, and in other lands" (Miscellaneous Writings, p. 313), for the resultant uniformity of service was most welcome.

It was about the same time, too, that Mrs. Eddy caused to be adopted a by-law which specified the qualifications and duties of the readers who henceforth were to conduct the services. In this by-law (Church Manual, Article III, Sect. 6) it is stated, among other regulations, that the readers "shall make no remarks explanatory of the Lesson-Sermon at any time," thus clearly indicating that personal opinion is to be kept out of the services. It is easily seen that without these safeguards it would be impossible to speak of the sermon as "uncontaminated and unfettered by human hypotheses," as is set forth in the "explanatory note" which is read at each Sunday service.

Probably no other of the wise provisions made by our Leader for the orderly conduct of the Christian Science movement has so greatly contributed to its unity and harmony as has this one; therefore the spirit as well as the letter of this rule should be closely followed not only by the readers but also by the members of the congregations. The reason for referring to this matter at this time is that we occasionally hear of some one who takes advantage of the Wednesday evening meeting to "explain" either the current Lesson-Sermon or some other portions of the Bible and Science and Health, thus contaminating the sermon with the forbidden "human hypotheses," and attempting to place dominant opinion above individual study and demonstration. Mrs. Eddy has warned Christian Scientists against the dangers of personal domination, and the fallacy of one human being trying to superimpose his own opinion as a guide for the thoughts and actions of another.

As in her own experience Mrs. Eddy proved that the wisdom which is "from above" is the only safe guide in "the straight and narrow way," so she was insistent upon the necessity for her followers likewise to seek divine guidance —the rule of infinite Mind. Throughout her writings is found the same yearning for a constant realization of the divine ever-presence and omnipotence which finds expression in the daily prayer on page 41 of the Manual: "'Thy kingdom come;' let the reign of divine Truth, Life, and Love be established in me." When we are able to offer this petition understandingly and to demonstrate its marvelous possibilities, we are entering upon that "kingdom within" which the Master declared to be the possession of his followers; we have become partakers of that wisdom which is "first pure, then peaceable, gentle, and easy to be intreated, full of mercy and good fruits, without partiality and without hypocrisy."

Endued with this wisdom "from above," each individual Christian Scientist is capable of understanding the Bible and Science and Health in proportion to his faithful study of these books and an equally faithful endeavor to demonstrate the teachings they contain. It may therefore be said frankly, though with no intent to offend, that it is presumptuous for any one to attempt to thrust his personal opinions upon others, especially when in so doing he takes time which should be devoted to the legitimate purpose of the Wednesday evening meeting.

ARCHIBALD MCLELLAN.

AWAKENING.

IN both the Old and the New Testament we find many calls to awake to the truth of being, a beautiful passage in Isaiah bidding those "that dwell in dust" to "awake and sing." Paul summons earth's sleepers to "awake to righteousness," and in his epistle to the Ephesians we read: "Awake thou that sleepest, and arise from the dead, and Christ shall give thee light." Now sleep is always more or less associated with dreams, and these shadows of the night are very apt to linger until dispelled by the light of day. Mrs. Eddy answers in the negative her own question, "Is there any more reality in the waking dream of mortal existence than in the sleeping dream," to which she adds the statement that "the spiritual, real man is immortal" (Science and Health, p. 250). In other words, he is not a dreamer; and the psalmist says, "I shall be satisfied, when I awake, with thy likeness."

In Luke's account of the transfiguration we are told that the disciples were "heavy with sleep," but when they were fully awake they saw the glory of immortal manhood, reflected by Christ Jesus. Even after this, however, a cloud overshadowed them, and Matthew tells us they were "sore afraid" until their Master aroused them, saying, "Arise, and be not afraid." Their experience prefigured that of many who come to Christian Science. At the call of Truth they go up into a high mountain, far above the mists of mortal belief, and there they have a vision of spiritual reality, a glimpse of the deathless man of God's creating. It is little wonder that they desire to remain in that same mental state forever. They would fain make tabernacles for their yet imperfect concepts of the divine ideas, and when they would thus limit the manifestation of Truth a cloud seems to separate them from the divine presence and they begin to be afraid, although one of the first lessons in Christian Science is that fear is needless, since God is All and governs all.

Those who accept Christian Science no longer admit that disease can be communicated to them by infection or contagion, but they are not always as scientific in holding to the eternal fact that there can be no mental contagion, since evil has neither principle nor reality. Our text-book tells us that "divine Science, rising above physical theories, excludes matter, resolves *things* into *thoughts*, and replaces the objects of material sense with spiritual ideas" (Science and Health, p. 123). This being admitted, the student of Christian Science must guard against stopping at the statement that things are thoughts; he must see to it that material thoughts—thoughts of fear, disease, and sin—are all replaced by spiritual ideas.

The process of awakening mortals from the dream of life in matter sometimes involves a shock to the mortal sense. Those who would cling to material theories of disease laws must be shown that there are no such laws, and that belief in them causes needless suffering. The next step is to know that mortal mind has no power to impose its delusions upon

Digitized by Google

the one who accepts the truth,—that mental contagion has no more power to produce suffering than has a physical condition. We must, however, be fully awake to the spiritual fact and alert to Truth's demands. Although we have risen above the fear of "germs," we value absolute cleanliness more and more, because it better expresses the spiritual idea. For the same reason we should strive after absolute purity in the mental realm. That which defileth "or maketh a lie" must be rigorously excluded, also all belief in disease. Our revered Leader says, "Neither sympathy nor society should ever tempt us to cherish error in any form" (Science and Health, p. 153). If we are faithful in this respect, we need never fear the assaults of malice or the shafts of ignorance, for Christ Jesus gave assurance of the complete defenses provided by divine Love and wisdom.

In Paul's second letter to Timothy he expresses the desire that those who are taken captive "may recover themselves out of the snare of the devil;" or, as another translation has it, "may awake themselves." His words in the epistle to the Romans may well be pondered by us today, "It is high time to awake out of sleep: for now is our salvation nearer than when we believed."

ANNIE M. KNOTT.

THE SIMPLICITY OF SCIENCE.

ONE not infrequently meets with those who say that they would really like to understand Christian Science, but have found it quite beyond them, and who thus explain their indifference to it, though they acknowledge their need of help. When this state of mind is analyzed, one is sure to come upon an abnormal sense of self-depreciation, a love of the material life which is inherently opposed to the spiritual demands of Science, or else an unfamiliarity with religious questions which, when found in professed Christians, offers a sad commentary upon the failure of their past religious teaching to awaken and stimulate vital individual thought respecting the deeper issues of life.

In considering this subject, it is well to remind ourselves that since all truth expresses the rule of unvarying law, the logical relation of cause and effect, it is apprehensible to intelligence; nevertheless, only that truth which is clearly understood can seem simple. Moreover, the comprehension of spiritual truths calls not only for their exact statement, but for that alert open-mindedness, that honest application of thought to which the many are not accustomed. Christian Science recognizes that Truth is infinite, and hence that its totality is beyond human embrace. Jesus taught, however, that if we have the spirit of a little child, we may savingly know that which we cannot fully explain; and it is therefore probable that in the instance of any sincere truth-seeker confusion has resulted not because of incapacity to grasp the truth, but because of a possibly unconscious prejudice which will not hear, or hearing will not understand. It may also result from the effort to make error true. When we try to coordinate opposites, such as light and darkness, truth and error, we enter upon a hopeless undertaking.

The simplicity of Christian Science teaching inheres first of all in the fact that it follows the Master's order of thought. Beginning with God, whose spiritual nature and perfection none can question, it neither declares nor consents to any statement of belief which is not in harmony therewith. The "leading tone" of the Old Testament is this, "The Lord he is God; and there is none else beside him." To this sublime truth Christ Jesus was ever referring, and this may be said to be the single theme of Christian Science. The declaration made by Mrs. Eddy, that "perfect God and perfect man" is "the basis of thought and demonstration" (Science and Health, p. 259), leaves nothing more to be said. The perfect realization of infinite being calls for an eternity of spiritual growth, but the simplest wayfarer cannot fail to see that the teaching of Christian Science is the logical and necessary outcome of the perfection of the divine nature. There is much in the opening of the tiniest flower that is beyond our present comprehension, and yet how sure we are of the fact of its bloom, and how perfectly simple it seems.

That Science is simple to all those who truly receive it is further accounted for by the fact that it brings into ever-increasing activity that divine faculty known as intuition. In speaking of the order of her own advance Mrs. Eddy refers to the place which revelation as well as reason had in the unfoldment of the demonstrable truth. Our embrace of truth may be enlarged by mining the logical content of the proposition that infinite Spirit, Life, Truth, Love is the source of all being. It may also be enlarged yet more immediately and more satisfyingly by the inner illumination of thought, the appearing of the divine ideas in consciousness. The truth that spiritual things must be spiritually discerned is convincingly clear, and when thus perceived the teaching of Christian Science is found to be not only simple, but to be practically related to life, and it is thus that every healing work of Science becomes an irrefutable proof that this teaching is comprehensible even to such commoners as were the Galilean fishermen, and more, that because it is the simple truth, and available to all, it is and ever shall be the power of God unto salvation.

JOHN B. WILLIS.

SCIENCE AND HEALTH TRANSLATED.

On March 31, 1910, Reverend Mary Baker Eddy wrote her publisher as follows:—

"Please take immediate steps to have Science and Health translated into the German language. This new edition shall be printed with alternate pages of English and German, one side to contain the divinely inspired English version which shall be the standard, the other to contain the German text, which shall be a translation.

"This work must be done by a committee of not less than three persons who are thorough English and German scholars and good Christian Scientists."

Pursuant to these instructions, "Science and Health with Key to the Scriptures" has been translated into the German language. The book is now in process of publication, but orders should not be sent to the publisher until after announcement is made in the May *Herold* of the date when they can be filled.

This edition of the text-book will be printed on fine Scotch paper and bound in cloth similar to the cover used on the English edition. Price, one to five copies, $3.50 each; six or more copies, to one address, $3.25 each. It will also be printed on Oxford India Bible paper and bound in leather, in the same style as the regular pocket edition of Science and Health. Price, one to five copies, $5.50 each; six or more copies to one address, $5.25 each. The quantity price will be made on six or more books of the German translation, including the two styles of binding.

SPECIAL ANNOUNCEMENT.

For some time the postage required for subscriptions outside of United States territory has exceeded the amount added to the regular subscription price for this purpose, and an increase in rates sufficient to cover this deficiency is now deemed necessary.

Beginning April 1, 1912, therefore, the rates on new subscriptions outside of United States territory will be as follows: For Canada, *Journal* $2.25, *Sentinel* $2.45; for all other countries, except those to which the domestic rate applies, *Journal* $2.65, *Sentinel* $2.95.

Renewals for all subscriptions terminating before April 1, 1913, and received by us prior to July 1, 1912, will however be accepted at the old rates.

THE LECTURES.

BOSTON, MASS.

Bicknell Young of London, England, a member of the Christian Science board of lectureship, delivered Thursday evening [March 21] a lecture on Christian Science, under the auspices of The Mother Church, The First Church of Christ, Scientist, Boston, Mass., in the church edifice, at Falmouth, Norway, and St. Paul streets. There was an audience of about five thousand persons present when the lecturer was introduced by the first reader of The Mother Church, John C. Lathrop. Mr. Lathrop said:—

The splendid audiences which frequently gather in this and hundreds of other Christian Science churches throughout the world to listen to authoritative statements of the teachings of Christian Science furnish unmistakable evidence of the growing interest in the subject on the part of the public. To understand the teachings of Christian Science, much depends upon the attitude of the seeker. A lecture on this subject is best comprehended by those who are most open-minded, most attentive, and most desirous of gaining an increased understanding of God and His laws, whereby the great problem of human salvation may be successfully solved. The one who is to address us this evening has for a score of years, by example and by practice, successfully demonstrated, step by step, the truth of the teachings of Christian Science.

The Christian Science Monitor.

BRIGHTON, ENGLAND.

That Christian Science has attracted an unusual amount of interest in Brighton and Hove recently, has been made manifest in several ways, and further testimony to the hold it has upon many people was afforded last evening [Nov. 30], when a very large audience at the Hove Town Hall listened to an exposition of its fundamental truths by William D. McCrackan, M.A., who spoke for over an hour. With one exception no voice of protest was raised during the evening, the address being followed closely and with evident interest.

Algernon Hervey Bathurst of London, who introduced the lecturer, said if they looked back nineteen centuries they found Christ and his disciples teaching and practising pure Christianity, and proving the truth of what they taught by healing the sick and reforming the sinner. Christian Science taught exactly the same. It was no mere theory; it was itself a tree known by its fruits, and he was able to say that by his own experience. It was as interesting as it was instructive to study the progress of human thought, and especially to notice the change which had taken place in that connection during recent years. He recalled to their mind how Christ Jesus was greeted with great contumely, and remarked that there was a time when Christian Science was quite misunderstood. Today, however, it was more generally recognized than ever as a great power for good in the world. He remarked upon Mr. McCrackan's qualifications to speak to them, and expressed the view that they would hear him with great interest as well as profit.

Sussex News.

RIVERSIDE, CAL.

Before an assemblage that practically filled the main and balcony portions of the Loring Theater, Frank H. Leonard delivered a lecture on the subject of Christian Science Friday evening [Jan. 5]. Mayor W. L. Peters made the opening remarks, saying:—

From time immemorial, the human race has instinctively yearned for two things, the healing of a sick body and the healing of a sick and sin-scarred soul. Our Saviour practised and taught the healing of both body and soul. Most latter-day Christians believe that our churches should administer to sick souls only and leave the medical profession to look after the sick bodies. Between thirty-five and forty years ago, a new religious belief, now called Christian Science, had its inception in the mind of Mrs. Eddy. It boldly claimed as its object the teaching of a religion that healed both soul and body, and its growth has been most marvelous.

One of the original fields of the Christian Science church is the publication of a daily paper, *The Christian Science Monitor*. Through the courtesy of some kind Riverside friend, I occasionally receive a copy through the mail. It is broad in its scope, clean in its news, clear and fair in its views, and it is classed by eminent authorities as one of the best newspapers in the United States. Another field of educational effort is the lecture field, thoroughly covered by a number of eminent and clear-headed men, one of whom we are to have the pleasure of hearing tonight.

These facts all point to the interest that the people of our country are taking in this movement. While many of us do not agree with all of the Christian Science beliefs and teachings, still we should not be so narrow as not to wish to listen or refuse to learn, and I am sure that is why you are here tonight. Many of my friends are ardent and sincere Christian Science believers, and they live up to their professions as well as or better than the average Christian believer.—*Riverside Press.*

KANSAS CITY, KAN.

Prof. Hermann S. Hering delivered a lecture on Christian Science Dec. 10. He was introduced by H. E. Dean, who said in part:—

It seems to me that as we observe the signs of the times there is something in the statement that men and women are getting away from the old ruts worn through the centuries, and are getting out where they think for themselves; that they are beginning to climb the heights on which truth is said to be enthroned and to discover for themselves its beneficent influence in the affairs of men; and in their struggle upward we can but have observed that the two things which have proven more than all else the stumbling-block of the people in these things that promise good to them, are prejudice and superstition.

I do not understand that there is anything more claimed by the organization in whose name we are gathered today than an opportunity to present the facts concerning this new faith. I remember when I was in law school, one of our lecturers on evidence was accustomed to say to us, and I think I remember his having repeated it a great many times: "Young men, there are three kinds of evidence, direct, circumstantial, and real." Real evidence was by him defined to be the production of the thing itself of which the controversy exists, so that the triers of fact might get first-handed that which would enable them to reach right conclusions in the determination of the issues submitted to them. That testimony which most impressed me concerning Christian Science has been of the kind above referred to as "real evidence," the power of this new faith to change a life and the practice of its tenets to adorn and embellish character.—*Gazette-Globe.*

WATERBURY, CONN.

A lecture was delivered in Buckingham Hall, Jan. 15, by Virgil O. Strickler. The speaker was introduced by Representative Seth D. Bingham of Naugatuck, who said:—

Realizing from experience and observation the doubt and uncertainty existent in human thought, concerning man's nature and destiny; conscious of the misapprehension and confusion so widely prevalent relative to the character, attri-

Digitized by Google

butes, and power of God; believing as I do in the general earnest desire of mankind for a better, more comprehensive understanding of this all-important problem, it gives me pleasure to welcome this audience tonight, who have come for the purpose, I hope, of learning something of the sublime teaching of Christian Science regarding this theme.

Born, reared, and educated in a theologic atmosphere which taught the dual nature of man; that "in Adam's fall, we sinned all;" that torment and flame awaited the sinner, and heaven, glory, and bliss awaited the righteous; taught rather to fear than love God, naturally and logically resulted in gravest doubt and distrust as to the wisdom, justice, or mercy of such a ruler. This message of Christian Science comes to you tonight in obedience to the Master's command "to preach the kingdom of God, and to heal the sick." It comes to obliterate the prejudice and misconception of erring human thought and conclusion regarding God and His Christ; to make plain the will and purpose of the one God toward His creation; to eradicate the fear and error in mortal thought; to inaugurate harmony, health, and happiness, and to declare the gospel of "the glorious liberty of the children of God."—*Correspondence.*

PASADENA, CAL.

Judge Septimus J. Hanna lectured in the Christian Science church last evening [Feb. 2] before an audience of fifteen hundred people. The lecturer was introduced by C. P. McAllaster, first reader of the church, who spoke in part as follows:—

Christian Science has come to the world with a simple message, pointing humanity back to the real Christ-teaching, "I can of mine own self do nothing,"—but with a message of mighty import, for it points insistently to the correlative of that statement: "He that believeth on me, the works that I do shall he do also." Christian Science declares that this is Immanuel, or "God with us," through the understanding of which is to be realized that dominion over the whole earth which was the original gift of God to man; and Christian Scientists are thankful that they are, in a small measure at least, proving their faith by their works.

Pasadena News.

FARGO, N. D.

A large and deeply interested audience filled the Orpheum Theater yesterday afternoon [Jan. 21] to hear the lecture on Christian Science delivered by Bliss Knapp. The Hon. George E. Perley of Moorhead introduced the speaker, and said in part,—

I believe that the great call of humanity today, the world over, a call more insistent and pervading than aught else, is the call for a religion at once simple, natural, reasonable, practical, workable, demonstrable, spiritual; a religion not deeply involved in mysticism, and which does not cling solely to blind faith; a religion the faith of which is founded on understanding and spiritual conception; a religion not so much concerned with getting men to heaven when they die, as in bringing heaven down to men while they live; a religion which teaches men to realize that the splendid vision of St. John in the Apocalypse, with the holy city descending from heaven to earth, is a continuing vision and a glorious reality, and that the tabernacle of God is indeed with men, and that He dwells with them; they are His people, and He is their God.

I know that the age is intensely materialistic, but materialism never has satisfied, never can satisfy, the ultimate longings of the human heart; and above the rattle and rush and roar of industrial activity, in the midst of the wild dash for wealth and fame and power, amid the crumbling creeds and the loosening hold of the church on the masses, I believe there are more people than ever before who are saying down deep in their hearts, "Oh, that I knew where I might find him," who are listening and waiting for the "still small voice" of God, and are prepared to answer when it comes to them, "Speak, Lord, for thy servant heareth."

To such an age as this and to such an attitude of mind, Christian Science comes with healing in its wings, proclaiming the allness of God, His all-power, all-presence, all-intelligence; that He made man in His own image, and endowed him with dominion over all the earth; that He is the Principle and source of all life; that He is Life, Truth, and Love, and that because God is all this, there is no other power, no other mind in the universe, and sickness, sin, and death have no real principle or law, but are merely beliefs of a mistaken consciousness; that our God is He who pardoneth all our iniquities and healeth all our diseases, and that He cares not only for our souls, but for our bodies.

Fargo Forum.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice it is assumed that the lecture will be given in the evening.

Albion, Mich.—Virgil O. Strickler, W. C. T. U. Hall, April 9.
Austin, Minn.—Judge Clifford P. Smith, Church Edifice, 133 Maple street, April 8.
Batavia, N. Y.—Frank H. Leonard, Opera House, April 9.
Burlington, Kan.—William R. Rathvon, Wolfe's Opera House, April 12.
Charles City, Iowa.—Judge Clifford P. Smith, April 7.
Charlotte, Mich.—Virgil O. Strickler, Church Edifice, Washington and Lovett streets, April 8.
Chicago, Ill. (Second Church).—Bliss Knapp, Church Edifice, Wrightwood and Pine Grove avenues, April 11 and 12.
Chicago, Ill. (Third Church).—Bicknell Young, Church Edifice, Washington boulevard and Leavitt street, 8 p.m., April 6; 3 p.m., April 7.
Davenport, Iowa.—Judge Clifford P. Smith, Grand Opera House, April 11.
Exeter, Neb.—Judge Clifford P. Smith, Auditorium, April 12.
Greeley, Col.—Hon. Clarence A. Buskirk, Greeley Opera House, April 2.
Hoboken, N. J.—Frank H. Leonard, Gayety Theater, 1013 Washington street, 3:30 p.m., March 31.
Lime Springs, Iowa.—Judge Clifford P. Smith, Opera House, April 9.
Mankato, Minn.—Virgil O. Strickler, Mankato Opera House, April 11.
McGregor, Iowa.—Willis F. Gross, Sullivan Opera House, April 9.
Moline, Ill.—Willis F. Gross, The Barrymore, April 8.
Mt. Clemens, Mich.—Prof. Hermann S. Hering, Presbyterian Church, April 1.
Newton, Kan.—William R. Rathvon, April 11.
New York, N. Y. (Society of the Bronx).—Judge Clifford P. Smith, Masonic Temple, 1931 Washington avenue, 3:30 p.m., March 31.

TESTIMONIES OF HEALING.

While living at a hotel in Chicago in July, 1910, my little girl, two years old, was taken with a high fever. As she became alarmingly ill, we called in a doctor, who said she had bronchitis. I was not satisfied, so another examined her, but said he could not tell. We were greatly worried and a friend recommended a third doctor, who said measles. We began to look about for more comfortable quarters and quiet, and found a suitable place in the suburbs, the good woman being a Christian Scientist, although that meant nothing to us, as we did not even know that it was a religion, having heard it ridiculed by those of different creeds, although these were opposed to each other. Now we were to live in the home of Christian Scientists when in trouble. We had made arrangements to go in a few days, but meanwhile the baby suffered and the fever rose. We called in the last doctor again, and an ambulance was sent which took the child to the contagious hospital and we could not see her for three weeks. When the time came to take her home, we were very thankful, but on undressing her we found a condition so serious that we returned with her. The doctor said it was just a cold and gave us several prescriptions to be filled; but we were not satisfied and called in the doctor who sent her to the hospital. He made a thorough examination and said that it was a most serious case and was due to neglect on the part of the nurses. She was under treatment with this physician for three months with no sign of help. We were told the disease would not go away under two years, and should we be in the least careless she might become blind.

In the mean time the Christian Science family whose house we were occupying came home, and I told the lady all the facts. Like the good Samaritan she was, she said we should stay on, and concerned herself with what appetizing things she could prepare for baby. How much suffering we would have been spared had we only trusted to God and Christian Science; but we would not—could not, even after this awful experience; on the contrary, we tried many material remedies—anything that any one would tell us. While at this Christian Scientist's home, however, I read parts of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and I tried hard to grasp it, but could not. I did not know how to begin to "declare the truth" as I was told.

Later we went to California, and there the wonderful healing was done. My little girl became ill again, and we called a doctor, who said she had fever symptoms. She became delirious, and while attending to her and my five-weeks-old baby, who had a cold on his lungs, I was taken ill myself. I thought this was more than I could stand and I scribbled a note to a Christian Science practitioner. From the time she came conditions improved, and by night there was a decided change for the better and we had the first sleep in a week. When I think of the awful bondage we were in, and that through this understanding of a God who is Love, who is all-powerful and always present, all the misery passed away, I cannot be too grateful for this healing truth. My little girl is now a picture of sturdiness—a real sunbeam. I had suffered with stomach trouble for four years, and when the doctor told me there was no cure for this ailment, only relief, I did not take the medicine he prescribed, although I grew steadily worse. When my little girl and the baby were healed, I, too, was healed in one treatment in Christian Science.

To say that I am grateful for all these blessings cannot express my feelings. I am grateful to God, and also to Mrs. Eddy for this wonderful book, Science and Health, which tells us that "it is essential to understand, instead of believe, what relates most nearly to the happiness of being" (Science and Health, p. 285). She tells us how to live and think right thoughts so that sin, sickness, and death cannot find entrance. I no longer cry out to God, "My punishment is more than I can bear," knowing that He does not send disease in order to discipline us, but that it is He who heals all our diseases. In the words of the psalmist, "O give thanks unto the Lord; call upon his name; make known his deeds among the people."

MRS. GRACE FORD, San Francisco, Cal.

The testimonies in the *Sentinel* and *Journal* have been such a great help and encouragement to me in my struggle out of material bondage into "the glorious liberty of the children of God," that I wish to express in this way my gratitude for Christian Science. It has brought to me many blessings, and I desire to attest to the healing power of Truth. In the fall of 1909 my little boy, while playing at the home of a friend, met with a serious accident. He dropped a lighted match into a can of powder, which caused an explosion. Not only was his face badly burned, but the eyelashes and eyebrows were completely burned away and he could not see at all, while the suffering was intense. I immediately took him to a Christian Science friend, and I cannot express the relief and thankfulness which I felt when in about an hour from the time of the accident the little fellow was sleeping peacefully, and never from then to the present time has he experienced any pain. His eyes are clear, bright, and perfect, while his face has no mark or scar as a result of the experience. In all kinds of weather the boy played indoors or out, and was so unconscious of pain or discomfort that he wished to go to school the next day.

This was proof to me that we must keep close to spiritual reality, no matter what may be the mortal evidence. While my heart was filled with gratitude and I thanked God that through Christian Science my boy's sight was restored, I did not then know the belief regarding the danger of inhaling the flame and that I owed to Christian Science a deep debt for the saving of the child's life. A few weeks after this experience I read in the *Journal* of September, 1898, a testimony of a case similar to that of my boy, but in this case because of the father's disbelief in Christian Science a physician was called. The testimony states that after four days of intense suffering the physician said that the boy might lose his sight and advised the parents to take him to a hospital. Instead of doing so word was sent to a Christian Scientist. The message reached her in the afternoon, and the next morning the boy opened his eyes, the first time since they were hurt. Upon reading this a deep sense of gratitude and thanksgiving came to me for the wonderful healing which had come to my little boy, and that I had been spared so much in "trusting Truth, the strong deliverer" (Science and Health, p. 226). It was also proven to me that God is a very present help in time of trouble, for there was no medical assistance to be obtained at that time, had I so desired, as there were only two physicians in our small town, one of whom was absent and the other physically unable to answer any call.

Words are inadequate to express my gratitude, and only in living the truth can I pay my debt to God for Christian Science. My one desire is to know more of this blessed truth which makes us free, and to rise each day in the service of Truth and Love.

EMMA L. CAMPBELL, Kalispell, Mont.

I feel impelled to write to the *Sentinel*, stating the great benefits I have received through the study of the Bible and Science and Health, as given in the *Quarterly* Lesson-Sermons. Christian Science found me, about twenty years ago, a semiinvalid, also very much of a sinner. I was greatly distressed by sleeplessness, and would go a week or more without sleep. My physician informed me that I had

Digitized by Google

malarial fever, an enlarged liver, a disease of the blood, etc. For these ills I tried *materia medica,* also electricity, etc., but without much benefit.

After receiving treatment in Christian Science I was entirely healed of the sleeplessness and very much helped in every other way. For about twenty years I have relied entirely on this truth for the healing of all the ills that flesh is heir to (with one exception, where surgery was applied), and have been in better health than before I knew of Christian Science. For more than ten years I have been a continuous student of the Lesson-Sermons, and am most grateful for the regenerating process which the study of the Bible and Science and Health has brought to my consciousness. I can truly say that nothing gives me such joy and satisfaction as to be able to follow the leadings of Truth, which tend to right living. For these and many other blessings which have come to me and mine through Christian Science, I am most grateful to God, the giver of all good; to His Son, Christ Jesus the Wayshower, and to our dear Leader, Mrs. Eddy.—H. H. MERRICK, St. Louis, Mo.

I gladly testify to my baby's healing in Christian Science with the hope that I may help some other despairing mother. At the time when I sought Christian Science treatment for my baby I knew not what it was nor how my child would be helped, but I had despaired of her life and had lost all hope that medicine or food could help her. I was willing to try anything, as she had been suffering from a stomach and bowel disorder for three months. I had tried almost every kind of prepared food, but not one agreed with her and she was slowly starving. Only a loving mother can know with what anxiety I prepared every spoonful of food according to the doctor's directions, as he had warned me time and again to be careful how I fed the child, as she was so ravenously hungry that if I fed her all she wanted it would kill her.

At last, when my baby was dreadfully wasted, at five months old weighing only an ounce more than she did at birth, kind friends told me of Christian Science. Treatment was given her, and the result was that she got well in less than a week, gaining in weight over a pound the first week, and at the same rate for four weeks afterward. She is now a picture of health and happiness. I followed the Christian Science practitioner's advice with the same precision that I had followed the doctor's rules, and as the light grew a little brighter each day we learned to trust God in sickness as well as in health. Since then we have had several beautiful demonstrations of Christian Science healing in our family.

ALICE ROSE WEAVER, Hereford, Tex.

I am glad to tell how grateful I am for the blessings which have come to our family through Christian Science. At the time I became interested in it, we were living in Los Angeles, and my husband being away on business I was alone with my children, but knew that God was with us and would protect us. It had been raining for two or three days, and early in the morning I felt myself impelled to move to the foot of the bed. I did so, and instantly a large piece of plaster fell on my pillow. I realized at once the protecting power of Truth, which makes our thought alert. I have also been healed of headaches and other ills of over twenty years' standing.

I will also tell of the healing of my mother. Six years ago she was given up by the physician, the case being diagnosed as appendicitis. The doctor said her age was against her or he would take her to the hospital, but he knew she could not stand the operation, so could do nothing more. I however had no fear, and knowing that man's extremity is God's opportunity, I sat down at her bedside and declared the allness of God. In a short time she was asleep, and the next morning she got up and sat in her chair. She then wanted something to eat, and two days later was about the house attending to her work. She is now eighty years old and in good health. I feel thankful to God, and grateful to our dear Leader, Mrs. Eddy, who has taught us this truth. MRS. AMERICA BENNETT, Dalton, Mass.

It is over six years since I became a student of Science and Health, and I can truly say that I have no language to express the love and gratitude of my heart for the understanding of God which I have thus gained, or the many, many blessings that have come to me through its study. I came to Christian Science for physical healing, not knowing that with it I would get the spiritual awakening and regeneration. Christian Science does bring to the body "the sunlight of Truth, which invigorates and purifies" (Science and Health, p. 162). My progress was slow but sure, and now I would not have had it otherwise. What I learned in those weeks of study and seeming struggle I never can forget. It has given me a truer knowledge of God, and I now know Him to be our Father-Mother, because of the many proofs of His loving, tender care. I know that in proportion to my purity, obedience, patience, and faithfulness I shall receive more of these blessings, and I am striving daily to show my gratitude to God by following in our Master's footsteps, so far as I understand the truth.

Words are inadequate to express my love and loyalty to our dear Leader, Mrs. Eddy, but I can say with the psalmist, "Bless the Lord, O my soul: and all that is within me, bless his holy name."

MRS. IRENE C. RATCLIFFE, Indianapolis, Ind.

[Translated from the German.]

I too wish to join the host of grateful people in testifying to my healing through Christian Science. I feel that all I am and all I have I owe to this truth as brought to us by our revered Leader, Mrs. Eddy. Several years ago I suffered with severe stomach trouble for a couple of years. I consulted several physicians, and they stated that it was a chronic disease and very difficult of cure. Finally the condition became such that it was impossible for me to do my work. I then applied to a Christian Science practitioner for treatment, the power of divine Truth was explained to me, and I was healed of the disease in a short time. I am grateful to God for having led me upon the way of truth.

OTTO HEINRICHS, Hannover, Germany.

Since I have realized that God "is All-in-all, and that there is no other might nor Mind" (Science and Health, p. 275), I have been able to overcome much discord, both mental and physical, and I thank God for His loving-kindness and tender mercy. I am also grateful to Mrs. Eddy for reminding us of Christ's commands. In the few years that I have known of Christian Science I have been healed of a severe nervous illness, throat and stomach trouble, appendicitis, and many minor ills. I was recently healed of a condition which a dentist pronounced very serious and insisted that I go to a surgeon and have an operation performed, as otherwise blood-poisoning might result, I would be disfigured for life, and other unpleasant consequences might ensue. I would not consider this proposition at all, but depended wholly on Christian Science, and with the help of a practitioner the unpleasant conditions were speedily overcome. I am free and, like Job, "I know that my redeemer liveth."

Christian Science has illuminated the pages of the Bible for me, so that daily I receive strength and comfort, and whereas I formerly suffered from a sense of grief and

Digitized by Google

loss, I have now learned to look up and not down. I am sincerely grateful to our dear Leader, Mrs. Eddy, for the great uplift which I have received since I have known of Christian Science, and I trust that as the days go on one and all will come to know this glorious truth and realize their God-given freedom from sickness, sin, and death.

MRS. ELLA J. DUNCAN, Indianapolis, Ind.

I wish to express my gratitude for the many blessings received through Christian Science, as it has removed many inharmonious conditions which have presented themselves. Two years ago, as I was passing a Christian Science church in a little town in New Jersey on a Wednesday evening, I saw a friend leaving the church, and she told me all the good that Christian Science had done for her. I had had a lame leg for about forty years, and doctors had told me I would always be lame. At times I suffered very much and had tried everything to get relief, so I made up my mind to try Christian Science. I went to a practitioner, and she told me to take the bandage off the knee. I did so, and after a few weeks' treatment the leg was all right. I am now without any trouble and I walk two hours almost every day. My life is different, since I know that God helps us in every trouble, and I am trying to get the right understanding of Christian Science. I am very thankful to God for my healing, also grateful to Mrs. Eddy for showing us the way to Him through Christ Jesus.

MRS. E. DATHE, Englewood, N. J.

[Translated from the German.]

Gratitude impels me to testify to my having been entirely healed in one treatment through the kind assistance of an adherent of Christian Science. In the latter part of last summer a poisonous fly bit me on the face. I took no notice of it at first, but soon my face was badly swollen and I suffered intense pain. Still I waited, until the pain became so severe that I hurried to a Christian Science practitioner with whom I am acquainted; and as soon as she began to treat me, the pain, which had been almost unbearable, ceased. The swelling soon abated, the abscess opened, and in a few weeks' time the condition was entirely removed. I never had pain, even for a moment, after the first treatment, and am happy and contented in knowing that I experienced God's help. I am also striving to familiarize myself with the teachings of Christian Science.

ALFRED VON KELLER, Atlantic City, N. J.

Christian Science came to me in the darkest hour of my life, and for eleven years its light has never failed. From early childhood I had suffered with a severe stomach trouble, rheumatism, sleeplessness, and extreme nervousness, which had reduced me to a hopeless wreck. I had tried numerous physicians, electric massage, dieting, and many other material remedies without avail; and was using a drug in large doses for the only sleep I had. At that time I lost my mother (which to me meant the loss of home as well), and when the members of my church told me that I "must not rebel, or God might do something worse," I decided I did not want a God who would do such cruel things. I could not love Him, so I ceased trying to pray or to read the Bible, though for thirteen years I had been an active member of a church.

I had been for three months in this dreadful state, without God or hope in the world, when one day a Christian Science friend who had been a great comfort to me during my grief, asked me if I would go with her to a practitioner and get well. I replied that my mother had prayed all her life for me to be well; that she was a good woman, and I did not see why the practitioner's prayers should be answered when my mother's were not. I, however, said that I would go, but did not think it would help me. My friend asked me if I would drop the medicine, and I was willing to do so, as I had about lost faith in the remedies. I shall never forget that first visit to the practitioner—the sense of peace and rest I experienced. I could sit quietly for the first time in years. From that time I knew I would be well, though I believed it ought to take a long time as I had been sick so long; but in less than two weeks the realization came that I was healed; I felt it all through my being; I ate a hearty meal, slept like a babe that night, and thus the long nightmare came to an end.

We have used Christian Science for the solution of every problem during the eleven years since my healing, and it has not been found wanting. The physical healing, however, is only the first round of the ladder from sense to Soul, for the illumination of the Bible—the understanding of our relation to God and of His character as Love only—mean far more to us than bodily health.

Since writing the above testimony I have passed through what to mortal sense seemed a heavier cloud of bereavement; but with the realization that God is the only Life, and that death is but a mortal experience, in no wise touching the individuality of our dear ones who pass from human sight, the sense of sorrow and separation was triumphantly overcome. This blessed truth is indeed the Comforter when it destroys the sting of death! I am fervently grateful for a religion that proves its teachings in the hour of deepest need. I love Christian Science, and shall continue to live it and thereby repay in some measure my debt of gratitude to our dear Leader, Mrs. Eddy.

MAE SEAY STAPLETON, Memphis, Tenn.

I have long felt that I must express my gratitude for Christian Science. I did not come to it for physical healing, although I have been healed of many complaints. About six years ago (at which time I was in school), my aunt, who had raised me, became interested in Christian Science, and while visiting her she told me of her interest in it. I knew nothing of its teachings, but I encouraged her to try it, for she needed help, as she had been sorrowful and sick for some time. She purchased a copy of Science and Health, began to read, and found in it the truth for which she had been longing. When I again returned from school there was such a change! My aunt's face was bright and happy, and the home also seemed full of peace and joy. My aunt told me about her healing and the spiritual uplift she had gained through the study of Christian Science. I knew then it was the truth that makes all men free.

One of the greatest blessings this great truth has brought to me is a clearer understanding of the Bible. The daily study of our Lesson-Sermons is such a pleasure, and I learn that "the Christian Science God is universal, eternal, divine Love, which changeth not and causeth no evil, disease, nor death" (Science and Health, p. 140). I have had many glorious proofs that divine Love destroys sin and disease. My daily prayer is to know God and serve Him in His way. I thank God that I was shown this truth, and I am truly grateful to Mrs. Eddy for making plain to us the way.

MRS. AGNES PIERPOINT SANDERS, Wichita Falls, Tex.

In reading the *Sentinel*, from which I receive so much help, I feel that I too must give thanks to God for the truth as taught in "Science and Health with Key to the Scriptures" by Mrs. Eddy. As my thought goes back to where I was when I first heard of Christian Science, I think I have much to be thankful for. We were living on a ranch in Oklahoma, and at that time houses were very scarce, so we were compelled to live in tents. We had been there only a short time when my brother-in-law was taken severely ill with acute lung trouble, and was confined to his bed for some five or six weeks. After he began to recover his wife was stricken down with the same disease, and as there seemed to be much fear in her thought she asked us to write

Digitized by Google

to her mother to come to her. At that time her mother resided in Kansas, and while en route to Oklahoma, she stopped over night at Arkansas City. At the hotel she met a lady to whom she related the story of her daughter's illness and expressed her fears regarding the case. The one to whom she related all these troubles was a Christian Scientist, and she talked to her about divine power, declaring the truth to her about her daughter, and also offering the loan of a copy of Science and Health and a Christian Science *Journal*, telling her she could return these books on her way home.

This mother gladly accepted the books, and after she arrived at our house I noticed that all the evening and the next day she seemed more interested in reading a book than she was in trying to take care of the sick ones. Some other members of the family also noticed this, and remarked about it, but on the third day while she was reading I caught the words on the outside of the book: "With Key to the Scriptures." This interested me, and I at once asked her about the book. She told me it was all new to her, and then gave me the *Journal* to read. The fourth day, late in the evening, she gave me Science and Health to read and said she intended to start home next morning, taking her daughter with her, as she was so much better it seemed as if she could make the trip safely. This she did, and later her husband joined her there.

I had time then to read only a few pages of Science and Health, just enough to cause a desire to know more about it; but four months later I came to Wichita, and here I have been led step by step to know more about that wonderful book. My experience has proven to me that it makes no difference where we are, if we are seeking the truth. God makes a way for us, and He has many ways to bring us to a knowledge of His truth. When we loan our literature with the thought of helping and giving the message of the Christ-healing to needy mortals, we cast our bread upon the waters, and it does not return unto us void. We do not know what kind of homes it may enter, or what weary ones may be "waiting and watching for rest and drink" (Science and Health, p. 570).

It was so in my own case. I was in deep darkness, without chart or compass by which to find my way out of gloom and despair. I could find no good in any person or thing, but Science and Health has been a lamp unto my feet, directing me and lighting my pathway. Now I know I have found the right way, for I have proven to myself many times and in many ways God's infinite, tender love and protecting care for His children. I am better satisfied and happier than I ever was before I knew of Christian Science. The Bible has become a new book to me, and I feel I have found just what I had always longed for—the truth that satisfies. I am in perfect health, and have relied on Christian Science for everything in the past nine years. I have been benefited in many ways through the understanding of God gained from "Science and Health with Key to the Scriptures."

MRS. SARAH M. DAVIS, Wichita, Kan.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 31, 1912. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 13, 1912.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 3, 1911, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM OUR EXCHANGES.

[Frederick Lynch in *Christian Work and Evangelist.*]

The minister for today must believe in his own times. He must have faith that our time is as holy as was olden time. He must believe that the great movements sweeping through the heart of society are as much the operations of the Spirit of God as the leading of Israel out of the oppression in Egypt. Our time is full of wonderful quickenings of the human conscience, deep stirrings of the human heart, passionate enthusiasms for humanity, growing determinations to rid the world of some of its age-long cruelties, highly organized warfares against lingering crimes. There has been a new birth of the social consciousness, which is manifesting itself in a sense of the oneness of humanity. A new society and a new world is rising upon the vision of select souls in every nation. The preacher of today must see in this the revelation of God's will and purpose as of old the prophets saw it in the operations of Israel's national life. He must be able to discern the secrets of the times and lead men in the building of the city of God. He must believe that the final purpose of God for this world is, as Christ declared, the founding of the kingdom of God in the earth, and he must see that these enthusiasms of our time are his methods, as well as revelations of the nature of the kingdom. And, above all, he must believe in the Messianic character of his own nation. He must believe that God has raised up and ordained his own country to teach the world some eternal truth just as he ordained Israel. The truth Israel taught was the righteous God demanding righteousness in His children. He has ordained the United States to teach the world the real brotherhood of man. This must be an article of faith with the preacher for our times, for it is the great truth of the twentieth century. God has sent to us fifty nationalities—millions of men of every race, language, temperament, ideal, and habit. He has jumbled them all up together in one great melting-pot. In Europe they have hated, fought, and slain each other. Here our nation must transform them into brothers of each other and servants of the Lord.

[*Observer.*]

"Japanese statesmen have called a conference of Shintoists, Buddhists, Mohammedans, Christians, and other creedists, with a view to formulating a new religion that will fit into the scheme of a nation moving from oriental passivity into occidental activity, from impersonality to individuality."—*News Item.*

Would it be cynical to hold a convention of the leaders of the warring Christian sects to formulate a religion in some degree responsive to the psychology of our own nation? We have ceased to be Christians in the old sense. The facts of our complex modern civilization call for a translation of the Christian spirit into the day's work. The church must emerge from the past and enter militantly into the life of the present. It must prevision the future. In the spirit of the Master it must be in the van of science, consecrated to the true service of humanity. Its monks should be those who renounce the material gifts of the world, that disease and poverty and the crime they breed may be abolished by self-sacrificing research, and the brotherhood of man revealed by the light of clearer understanding. The church has been too aloof from modern humanity; it needs revitalizing.

[Rev. W. C. Richardson as reported in *Philadelphia* (Pa.) *Ledger.*]

Theology does not stand a chance in the mind of any thinking man against the simple truth as preached by Jesus Christ. Theology is simply man's way of looking at God; and, as men always differ in their views, we have disagreements among the theologians. Men differ intellectually as

Digitized by Google

well as spiritually. They classify their thought, and that classification is their theology. But those thoughts about God do not have the authority of the simple faith as put forth in the apostles' creed.

We churchmen have the thirty-nine articles in our prayer-book. In revising the book they have been edged along until they are now next to the cover, and there are some churchmen who hope that at the next revision they will be edged outside of the cover. Once we brush aside these systems of thought, we will be startled to find how much alike are Presbyterians, Lutherans, Episcopalians, and the rest, in their religion.

[Rev. J. Bruce Gilman in *Watchman.*]

The soul cannot grasp any spiritual truth without being the nearer to him who is the fountain of all truth. "I am the way, the truth, and the life," are his words. He is more than the way to the Father. He is the Father revealed. He is eternal truth brought within the grasp of all men. The quest for truth is satisfied in him. He is man's only salvation. Consequently he says in another verse, "Every one that is of the truth heareth my voice." In him the earnest man recognizes that which his soul has so steadily craved.

As ministers we are preachers of truth. I have no patience with the man who insinuates that the minister of today dares not preach what he really believes. If he believes in Christ he will preach Christ. He will find that only the truth will permanently satisfy men and finally prevail. Neither the philosophy of Pilate's time, nor theory, nor speculation, however new and fascinating, will successfully take the place of truth.

[*Universalist Leader.*]

"Thou shalt give account for each word," said one of old. Today we are learning about "atmosphere," "mental seas," "thoughts are not mere inert things, they are forces," and so we are better appreciating the effectiveness and persistency of spoken words, and even of unspoken thoughts. Each man makes a contribution to the world's sum of good or evil. This contribution is not always consciously made. The poison is sometimes ignorantly dropped into the teacup. It kills just the same. So when a startling disclosure of iniquity—like the dynamite outrages—comes to light, one or two men are not the only perpetrators. They ride upon a sea of spoken or unuttered approval and sympathy. One mighty mountain never rises out of the plains of soft soil, it is but one peak of a world ridge. This is paralleled in the moral landscape. Let each man take heed what he thinks and says. The day of judgment may come in an hour that he thinketh not, and he shall receive his portion with the condemned.

[*Advance.*]

One reason why the times are out of joint and society is at war with itself, is that science has put the great forces of nature into the hands of men faster than the Christian religion has tempered human nature to their unselfish use. But in time Christianity will do its perfect work, for it addresses itself to the spirit in man. It applies its truth to this spirit, operates upon this spirit with its power of redemption, and lays upon this spirit the mighty motives of its own immortality. It is therefore the hope of human brotherhood on earth and of the redeemed brotherhood in heaven. Christ came into the world and made himself our elder brother, and by transforming us into his own likeness he makes us brothers to one another.

[*Christian Register.*]

The inertia of the mass, the passive way in which the indifferent good accept what is, is the despair of the reformer. If goodness without courage does not amount to much, certainly goodness without thoughtfulness is about as useless as no goodness at all.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume, "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herald,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The lecture entitled "Christian Science: Its Principle and Method," by Bicknell Young, has been translated into both Swedish and French and is now ready for sale in pamphlet form. Another French translation recently made is the lecture "Christian Science: The Comforter of Promise," by Frank H. Leonard, which is also printed in a new pamphlet in French only.

A new pamphlet has recently been issued entitled "Christian Science *vs.* Finite Sense," a lecture given by Francis J. Hume, M.D. 32 pages.

A lecture by Willis F. Gross, entitled "The Gospel of Freedom," has been published in pamphlet form. 32 pages.

These pamphlets will be found listed on the opposite page, with prices for single copies and quantities.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large sized book), single copy, $8.00; twelve or more to one address, each, $7.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $1.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.20. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the current month unless otherwise specified, and include all issues for the month named as expiration date on the wrapper. XII indicates the year 1912; XIII, 1913. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $1.00; half calf or half morocco, $1.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25 – £0: 5 s.: 2d.;	Mk. 5.30;	F. 6.47
2.25 – 0: 9 : 3 ;	9.50;	11.60
2.50 – 0: 10 : 3 ;	10.60;	12.85
4.00 – 0: 16 : 5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

The interstate commerce commission in an opinion just made public, establishes the far-reaching principle that a railroad must so adjust its rates that justice will be done between communities regardless of the state lines. If a railroad makes a low rate upon traffic wholly within a state, even when forced to do so by a state commission, it must grant the same rate to interstate traffic moving under substantially similar conditions. The principle was laid down by a vote of four to three. The minority held that the powers of Congress were usurped by the majority opinion and that the remedy for such a situation should be applied by additional legislation.

Enough potash to supply the United States probably for the next thirty years has been discovered by government scientists in Searles lake, San Bernardino county, Cal. The estimate of field men of the geological survey and the bureau of soils is that the deposit may amount to four million tons. The land on which the potash is located belongs to private individuals. President Taft has sent to Congress a message urging the immediate enactment of a law to protect from private entry and exploitation fields of potash such as these just discovered in southern California.

A notable body of Canadian legal talent, with a fair sprinkling of large business interests, harbor commissions, boards of trade, and mercantile marine organizations, spent two hours before Secretary Stimson last week in vigorous protest against the application of the sanitary district of Chicago for permission to more than double the amount of water now being drawn from Lake Michigan through the Chicago drainage canal.

Engineers on the Cape Cod canal say that their most difficult problems have been solved and present indications point to an opening in 1913. The tasks remaining are the construction of two bridges, the completion of the breakwater which will protect the northern entrance, the dredging of Buzzards bay below the southern entrance, and the cutting of the canal through the valley between the high hills of Bournedale and Sandwich.

During the last fifty years, through indiscriminate shooting in New England, many valuable birds, once very plentiful, have been exterminated. These include the great auk, Labrador duck, various species of plover, the wild pigeon, and practically the heath hen.

Recommendation for downward revision of cotton duties and a demand for further funds for the tariff board are contained in a message sent to Congress by President Taft, transmitting the board's report on cotton.

The ten men charged with criminal responsibility for the meat packing combine, after litigation covering ten years, were found not guilty by the jury in the United States district court in Chicago last week.

The International Harvester Company is considering a plan of dissolution to meet the government's contention that the company is violating the Sherman antitrust law.

Thousands of persons patronized the new twelve-million-dollar Cambridge-Boston subway when it was first opened to the public last week.

International.

After the coal strike in Great Britain had continued a fortnight the government interfered. Already two million men were out of work and new works were shutting down every day. A deadlock having been reached in the negotiations owing to the inability of the Scottish and South Wales owners to come to terms with the men, the prime minister declared the conference at an end and announced that a minimum wage bill would be introduced in the House of Commons with the object of not only ending the present dispute, but of making a permanent peace. As far as the great mass of the miners are concerned the legislation will make no difference, as the men already enjoy wages in excess of the minimum. In the poorer fields where the cause has been supported by the men in the richer districts, the fixing of the minimum wage will be regarded as a success.

The bill as introduced was intended merely as a stop-gap, its period being only for three years. It provides for a reasonable minimum wage and safeguards the operators against slackness on the part of the employees. The wages and safeguards are to be determined by district boards. The district boards are to be composed of operators and miners in equal number with an independent chairman. They will decide just what the minimum wage scale shall be in each individual district and will apply the law in each locality as the individual needs of the district may demand. A modified minimum wage bill was passed by Parliament and the question of discontinuing the strike under the terms of the bill was referred to the miners who seemed at the voting to accept its terms.

Germany's attitude toward the recent speech of Winston Spencer Churchill, first lord of the British admiralty, who said British naval increase would be proportionate to Germany's increase, is shown by the submission to the federal council of the new army and navy bills in an unaltered state. The naval bill calls for an extra battle squadron for which three additional battleships and two cruisers are to be constructed before 1920. The estimated additional annual cost is twenty-four million two hundred and fifty thousand dollars in 1912; thirty-one million seven hundred and fifty thousand dollars in 1913, and twenty-eight million five hundred thousand dollars yearly after that.

The Chinese National Assembly is strongly opposed to the granting of a monopoly of the Chinese loans to the financial groups representing the six Powers—the United States, Great Britain, Germany, France, Russia, and Japan. It insists that the recent agreement for the advance of a specified amount left China free to contract loans on any security other than that to which the "sextette" had agreed. The Kalgan railway did not form part of this security. The government had contracted on the security of the Kalgan railroad with the Anglo-Belgians only, because the "sextette" had failed to advance the promised instalments at a critical moment.

The American Board of Commissioners for Foreign Missions has just received assurances from President Yuan Shi Kai that under the new régime foreign missions might expect perfect freedom of worship. He intimated that so far as he understood the principles of Christianity they were what he was striving for in the new government. He requested them to pass on his word regarding religious liberty to the pastors and Christians in the country and to explain to them the principles of the republic.

A daily service each way between New York and Europe is being discussed in shipping circles as a possible outcome of the efforts of Albert Ballin, director general of the Hamburg-American line, to establish a community of interests between that line and the White Star, Cunard, North German Lloyd, and French lines.

The republican cabinet at Nanking, China, has decided to ask the consent of the National Assembly to establish the provisional capital of the Chinese republic at some point south of Pekin, leaving the question of the selection of a permanent capital to the National Assembly which is to be elected under the constitution.

It is stated that the municipality of Tokio has finally decided to hold a grand exhibition in 1917. The cost of the undertaking is estimated at two million five hundred thousand dollars and negotiations with the government on the question are to be opened shortly.

Industrial and Commercial.

The Columbia river has a drainage area of two hundred and ninety-five thousand square miles. Its source is in British Columbia, and its basin occupies enormous areas in that province and in Montana, Wyoming, Idaho, Washington, Oregon, and Nevada. The region is one of great interest and value. It contains some of the highest peaks in America and some of the most fertile valleys in the world. The navigable waters of the Columbia and its tributaries aggregate a length of two thousand one hundred and thirty-six miles. Within the area drained are the largest forests in the world. The values of the irrigated agricultural land range from about thirty dollars an acre for the poorest to three thousand dollars an acre for the intensively cultivated orchards. Within the Columbia river drainage basin are at least one third of the available water powers in the United States, but development of this resource has scarcely begun.

Twelve million dollars, according to plans, will be expended by the Northern Anthracite syndicate, recently organized, in developing twelve thousand eight hundred acres of coal lands in the Groundhog mountain district of British Columbia, one hundred and fifty miles north of Hazleton. This work, which will occupy three years, includes the building of a railroad from the forks of the Ekeena and Stikine rivers to the north of the Nass river and Nasoga gulf, also bunkers at points on the Pacific coast. The field is seventy miles in length and thirty miles in width, with seams from thirty to fifty feet in depth.

Taking the world as a whole it may be said that a fundamental point in patent policy is that patents are essentially for use and that failure to employ them constitutes therefore almost an inexcusable abuse. The laws of most of the nations of the world provide that the failure of the owner of a patent to put the invention to commercial use within a specified period is a sufficient cause for forfeiture of the patent. The United States is the only important exception.

Officials of the Pennsylvania, Baltimore & Ohio, and New York Central railroads are considering the matter, unofficially, of gradually reducing the number of "flyers" and "cannon-ball" trains, or cutting down the fast schedule from sixty miles an hour to not over forty-five miles per hour. This action may be taken as a result of the numerous accidents these fast trains have recently experienced.

It is estimated that the miners of Great Britain thus far have lost in wages $26,408,850 besides the depletion of the union funds which will make another strike in any trade practically impossible for the next eighteen months.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

CHURCH-MEMBERSHIP.

ERNEST C. MOSES.

THE student of Christian Science who has become sufficiently acquainted with its divine Principle to desire earnestly to cooperate with the cause, should regard the acts connected with taking membership in the Christian Science church as among the important footsteps of his religious career, and he should give prayerful consideration to the great privilege and happiness which this step of progress brings. He should also carefully consider the serious responsibilities which each individual assumes in seeking and obtaining membership in the Church of Christ, Scientist, whether it relates to The Mother Church in Boston or to any one of its branches, as it is a step which demands thoughtful self-examination and wisdom, with obedience to God and to every requirement laid down in the Manual of The Mother Church as to proper qualifications and measures. The student should be willing to take every step necessary to make his eligibility to membership in the Christian Science church clear and indisputable.

Plenty of time should be taken to become reasonably familiar with the teachings of our denominational text-book, "Science and Health with Key to the Scriptures"—particularly with the platform of Christian Science (pages 330 to 340), with the "religious tenets" on page 497, and with the definition of "Church" on page 583. If the student feels that he can sincerely subscribe to all the declarations of truth laid down in the text-book, with both faith and understanding, he should then carefully study the essentials of church-membership in the Church Manual, to become in some measure acquainted with the laws which govern The Mother Church, and the fundamental organic requirements of all its branch churches.

Although the student may not thereby secure a full understanding of the nature and operation of all the laws which govern the cause of Christian Science, he can obtain sufficient light to enable him to proceed intelligently, and in some degree to understand what is expected of a consecrated Christian Scientist in his relations with the church. By these means he soon perceives that a proper union with the work is not to be secured by a mere verbal profession of faith in Christ, but through spiritual understanding expressed in repentance, obedience, meekness, and by an earnest desire to serve God and man in the way taught and practised by Christ Jesus. This means, in the language of Christian Science, that the student is entirely willing to take an active part in the healing work of the Master—to enlist "to lessen evil, disease, and death" (Science and Health, p. 450), and not merely to join the church because he "believes in Christian Science."

A willingness to strive to be obedient to the by-laws of The Mother Church and of the branch church to which the student may apply for membership, constitutes one of the most important qualifications which an aspirant can possess. The applicant should accept without the slightest reservation the declarations laid down in Section 1 of Article IV of the Manual of The Mother Church. Then it follows that if he is a member of any other religious denomination, he must take the necessary steps to dissolve that relation, in consonance with Section 2 of the same article. No half-way work or compromise in this connection can possibly work for the good of the individual or the church. The Principle of Christian Science is imperative; it cannot be demonstrated by evasion of or indifference to its laws, any more than a careless use of mathematics can be expected to bring out a correct answer to a problem in arithmetic.

Under the government of God and under the constitutional rights vouchsafed to citizens of advanced human governments, each individual has the inalienable right to select for himself membership in any religious organization which appeals to his conscience and reason as best adapted to supply his spiritual needs. It also follows that each adult has the moral right, based on the same basic law of individual liberty, to sever his membership in any religious organization when his own judgment dictates that such a course is essential to his own "life, liberty, and the pursuit of happiness." But, if this right cannot be immediately established so that the requirements of Section 2 of Article IV can be obeyed, it is far better for the applicant to wait until this demonstration can be made in the right way.

It is a customary courtesy among the churches of various Christian denominations to give letters to their members recommending them to membership in other churches of the same or other denominations. Some of them, however, decline to extend this courtesy to the Christian Science church; but there are churches which do dismiss their members with a kindly recommendation to a Christian Science church, thereby manifesting a truly Christian spirit. But the matter of recommendation, while very desirable, is not essential to the applicant who comes from a church of another denomination asking for membership in the Church of Christ, Scientist. It is, however, essential that such an applicant should ask that his name be dropped from the roll of membership, and a written statement from the proper official of the former church to the effect that the applicant's name has been stricken from the church-roll, constitutes the best evidence of such action. Many churches of liberal and kindly spirit are willing to grant the petition of any member in good standing for such a severance, and to make out a statement that the action is taken at the applicant's own request.

In dissolving such membership in order to become a member of the Christian Science church, the applicant should realize constantly that he has his own individual work to do. What the officials of his former church may do is of no more importance than that he shall do his part aright. Every forward step taken by the student to become obedient to the requirement for membership in the Church of Christ, Scientist, should be the result of demonstration—an opportunity to prove the student's understanding of true Christianity.

The various Christian churches have done and are doing much good in the world; and each conscientious member of every Christian denomination has occasion for not a little

Copyright, 1912, by The Christian Science Publishing Society.

Digitized by Google

gratitude for many helps received. In the services of his former church he has heard the word of Truth read from the Bible, has listened to or joined in the sweet and sacred hymns, has received encouragement to hope, friendly advice, and in many cases sympathy in his afflictions—all of which has given him some taste of the bread of life, however much the spiritual understanding of God and His Christ which heals and satisfies may have been lacking. The individual who has enjoyed any measure of benefit from his former church associations can therefore make the parting of the ways (though not of the affections) an opportunity to express his gratitude and good will to all in the old church who have striven to uphold the gospel according to the light in which they stand. Criticism of the views and standpoints of former coworkers accomplishes nothing; consideration and true charity divinely directed will remove mountains of obstruction.

The reflection of Love expressed in kindly appreciation, patience, and wisdom is the only way whereby a Christian Scientist can solve the problem of dissolving relations with churches of other denominations, whatever may be their laws or attitudes. We can all be Christian in these negotiations, do our respective parts in humility of spirit, and leave the issue to God. He whose right it is to decide these footsteps of progress will always do right; the final result will be certain and gratifying to the student who is willing, as a little child, to be obedient to divine Principle, infinite Love.

This our revered Leader proved in her own human experience, and we can joyfully heed her loving exhortation in the message to The Mother Church (1898) on "Christian Science versus Pantheism" (p. 13): "Love all Christian churches for the gospel's sake; and be exceedingly glad that the churches are united in purpose, if not in method, to close the war between flesh and Spirit, and to fight the good fight till God's will be witnessed and done on earth as in heaven."

"DRINK THE SWEET."

VIOLET KER SEYMER.

THE writer remembers returning from the woods one spring morning carrying with her a slender bough of cherry-blossoms. The bees followed in twos and threes, freely sipping the honey and clinging tightly to the blossoms as they visited them one by one. "Just as impersonal," thought the bearer, "is a Christian Scientist's service in the world; he has but to hold Love's sweetness well in sight, and all the world will be attracted and fed by it." In sunshine as in storm, the flowers are ready to yield their honey to every thirsty traveler. Wafting their fragrance hither and thither, they seem to echo the words of the prophet Nehemiah, and invite every passing insect to "drink the sweet" they have to offer. This spirit of ministry in nature but symbolizes the beneficent activities of divine Love, which is ever calling to the human family: "Ho, every one that thirsteth, come ye to the waters."

Erroneous beliefs would, if they were allowed, cheat us of the joy both of sipping the honey ourselves and of carrying it to others. Regarding the first of these, let us remember that God never keeps us waiting: it is we who would keep God waiting. We should be both energetic and systematic in obeying the injunction to "come" and to "drink" unsparingly. In other words, our every need will be met when we realize, through prayer and study, the varied bounty of divine Mind which it is man's privilege to express. This bounty should be as freely sought and received into consciousness as it is being freely given. Jesus said, "Seek, and ye shall find." He never implied that we should find without seeking, nor that any need grow weary in seeking. The understanding of Christian Science is able to bring about immediate results, and we should expect them. In nature, the flowers might proffer their honey never so lavishly, yet the bee who sped past the open calyx would have no right to complain if it returned hungry to the hive, or if it sipped too hastily to gain the treasured nectar. Moreover, experience shows that each must gather his own store of honey and not expect others to collect it for him. Sometimes we may have glanced so cursorily at our literature that what we have read has left no definite impression likely to lead to practical results. A few weeks of careful study and assimilation of what we read will do more toward our emancipation from sickness and sin than years of reading without making personal application of what we read. Our agreement with the teachings of Christian Science must not be merely formal and intellectual, but inward and spiritual. We should take home to ourselves both what is said about error and also about Truth, honestly casting out the errors we may hitherto have overlooked, and grasping and applying each new aspect of Truth.

Again, there are times when the sincerest student of Christian Science drinks too sparingly of this fountain and allows indifference or some mood to cheat him of the joy and profitableness of study. Not until his accustomed harmony is invaded by some discord does he remember to turn more systematically to divine Mind for his deliverance, and seek the ounce of prevention which will always save him the pound of cure. Again, to the consecrated worker there comes the temptation to neglect to "drink the sweet" he so much needs, and to allow his work for others to encroach upon such time as he should by rights reserve for his own study and refreshment. Unless this error, masquerading as unselfishness, be seen and overcome, the worker will presently find that he has been defeating his own ends, in that "his own spiritual barrenness debars him from giving drink to the thirsty" (Science and Health, p. 366). We should draw from the wells of salvation unceasingly, for this lightens the labor and doubles the harvest.

Christian Science is in our midst, and every year greater multitudes are drawing new life, new strength, new inspiration, from its open pages. Yet there are others who so far have not paused in their zigzag flight to consider its teachings, ponder its revelation, and assimilate its blessings, exchanging them for their sufferings. Neither prejudice, worldliness, agnosticism, nor resignation to suffering should deter us from seeking out the love and wisdom that come to our waiting consciousness, like heavenly manna, replenishing, strengthening, and purifying it, in the measure in which we have opened our mental doorway for its admittance. The fact that the God-created man's being is wholly spiritual, sinless, and harmonious, is slowly dawning on the human race, and consequently the number of sick and sinful people on earth has already diminished and earth's bitterness is yielding, in individual lives, to the sweetness of divine reality. If one here and there can become aware of his freedom, why may not all?

Still another lesson to be learned from the cherry-blossom is that relating to the impersonality of Truth. Just as there was no sense of either burden or responsibility in carrying the honey-blossom for the bees, so there need be none in bearing the message of Christian Science to humanity. Those who are drawn to the teaching will take their sustenance from it, so no one should listen to the argument that the message will be deprived of its inherent vitality just because he happens to be the one to carry it. Humility shows us that the power is in the message, and the messenger who knows that much is himself unassailable. We should trust the efficacy of the Word of God, expect a full harvest, and thrust aside the question of personality altogether. Nor should we pause to weigh the problem, but outweigh it with that truth which is always so much greater than the problem. The less we brood over falsehoods and the more we turn in thought to spiritual facts, the less foothold will fear find in us and the quicker will the demonstra-

Digitized by Google

tion follow. The remedy for every argument of doubt, fear, or temptation is to pray more earnestly, to "drink the sweet" in deeper drafts and longer, thus following the Master's example, who was wiser than we and who "withdrew from the material senses to refresh his heart with brighter, with spiritual views" (Science and Health, p. 32). Because Jesus did this so faithfully and persistently, he reflected more of God, and the multitudes, drawn to that reflection, were spontaneously healed in mind and body. His clarified consciousness admitted the light and revealed the Love which "no man hath seen at any time," but which is omnipotent and available in every hour, and of which the proofs, obtained through the practice of Christian Science, abound on every side.

Despite the occasional blind rejection of his message, Jesus never allowed himself to feel separated from God, and through constant spiritual communion he always found the needed guidance and inspiration for each of his momentous days of ministry. Understanding that prayer is man's only link with an unseen God, he took care to strengthen that link every time some task confronted him. He did not allow difficulties to weaken the link, nor so far as we know did he ever abandon a task he had undertaken. We have an example of his fidelity in the matter of prayer when his greatest opportunity awaited him, namely, the crucifixion. On that occasion he was not content with praying once, nor twice, but continued until his human anguish had been exchanged for that spiritual fortitude and clear vision which brought the day's trial and his earthly mission to one triumphant climax, the victory over death.

Since every sufferer, sinner, and unbeliever on earth today is destined to awaken from his dream, he must be encouraged by seeing the divine nature so clearly and definitely reflected that he will be drawn to God as naturally as the bee was drawn to the honey on that spring morning. Then the winter of his discontent will pass out and the springtide of hope and purity enter his heart and transform it.

THE HOME AND THE SUNDAY SCHOOL.

REV. RICHARDS WOOLFENDEN.

THE relation between the home and the school is often pointed out, and many beautiful illustrations come to hand of the mutual service they render to each other. In the county where the writer resides this feature of our social life has become almost proverbial, and yet it has recently been pointed out by a leading Sunday school worker that the real value of the Sunday school to the community has never been fully recorded. "Leave the Sunday school alone," it was said, and "the loss of enterprise would ruin the church."

The Christian influence of the Sunday school has more to do with the social conscience than most people are aware of. The moral fiber and spiritual enthusiasm of the community is generated and quickened in the Sunday school. This is true to such an extent that one can easily point to leading citizens who not only were brought up, so to speak, in the Sunday school, but many of whom today in middle age and later life retain this connection, with honor to themselves and added dignity to their schools, in the offices of teacher, treasurer, secretary, and superintendent. Perhaps there is no other district where anything like the same conditions prevail in this respect as the neighborhood to which the present writer refers. The experiment connected with the working of a Christian Science Sunday school is, therefore, one that is fraught with far-reaching consequences, being eloquent with hope of that better day when every child trained under such auspices will become a citizen of whom we need never be ashamed. And this, coupled with the saving influence of a Christian Science home, becomes a possibility in the case of every scholar.

One of the writer's early experiences as a teacher in the Christian Science Sunday school has often proved a source of encouragement along these lines and may, as it is recorded here, prove an inspiration to others who are not so favorably situated in what one might call the right atmosphere for Sunday school work.

He had a class of boys averaging twelve years of age. They were typical, not only in average intelligence, but of the new race which is springing up from the Christian Science home. Each boy came from a home where the healing power of Truth had become a happy experience in the case of a parent or some other member of the family. It was natural, therefore, in bringing his contribution to the week's lesson that each boy should bring a reflection of the truth he had seen put to the test and proved in his own youthful experience. The instruction was based on the Lesson-Sermon for the week, the subject being Christ Jesus. The teacher had prepared his own thought, and his usual habit in teaching was to present his thought to the boys and proceed to illustrate the lesson with some appropriate story or Biblical incident. On this occasion it occurred to him to adopt the Socratic method and see how the thought of the boys might correspond with the thoughts given to him in preparation for the lesson. As this is held to be the true method of education, drawing out the thought which is innate and natural, instead of forcing the thought by pressure from without, the results obtained on this occasion were decidedly encouraging, so much so that the same method has often been followed since and sometimes with equal satisfaction.

Each boy was asked in turn what he knew about Christ Jesus and asked to express briefly what he thought was the most distinguishing feature of his life. There were five boys, and the five answers given were in the following order: The first said that Jesus was the Wayshower; the second spoke of him as the most spiritual man that ever lived; the third said that Jesus expressed the intelligence of God, while the fourth said he was a worker of miracles. This list seemed so exhaustive that we must confess to some little trepidation in approaching the fifth boy for his answer. But he was ready, and proved to be a typical Lancashire lad, fully sustaining in his reply the motto of the oldest banking institution in his native town, "*Semper paratus*," which, Mrs. Eddy tells us, "is Truth's motto" (Science and Health, p. 458). This boy said that Jesus was human, but with a divine character. The sequence of thought running through these answers and the coincidence between the thoughts of the boys and those of the Lesson-Sermon seemed so remarkable that there was only one possible explanation of it. And this lay in the simple fact that these boys were illustrating, all unconsciously, the close and intimate relation between the home and the school. They had all come from homes where the Christian Science Lesson-Sermon was being read day by day.

Thus they had been imbibing through the week the truth which they were able to express so well in their Sunday school class. When the teacher came to examine his notes afterward he found that each boy had taken up a point which he had extracted from the Lesson-Sermon. Thus the boys' answers were confirmed by the teaching of our text-book as follows:—

(1) "The Christ-element in the Messiah made him the Wayshower, Truth, and Life" (Science and Health, p. 288).

(2) "Jesus was the offspring of Mary's self-conscious communion with God. Hence he could give a more spiritual idea of life than other men, and could demonstrate the Science of Love—his Father or divine Principle" (p. 29).

(3) "The testimony of the material senses is neither absolute nor divine. I therefore plant myself unreservedly on the teachings of Jesus, of his apostles, of the prophets, and on the testimony of the Science of Mind" (p. 269).

(4) "The physical healing of Christian Science results now, as in Jesus' time, from the operation of divine Princi-

Digitized by Google

ple, before which sin and disease lose their reality in human consciousness" (Pref., p. xi).

(5) "Jesus is the human man, and Christ is the divine idea." "Jesus was the highest human concept of the perfect man. He was inseparable from Christ, the Messiah" (pp. 473, 482).

Here, then, in these answers of the boys and the spiritual ideas to which they correspond, one might easily find the materials for a true theology of "the man Christ Jesus," even that most practical of all theology which, according to Mrs. Eddy, includes the healing of the sick. Furthermore, one can here find the materials for that greater work which is going on in the midst of men today, changing the very conditions of human life and summed up in that modern phrase so expressive of the desire of the kingdom of heaven on earth, namely, "the reconstruction of society." Here, too, is the beginning of the fulfilment of that glorious prophecy of Isaiah, "All thy children shall be taught of the Lord; and great shall be the peace of thy children."

The Christian Science Sunday school is engaged in the work of no less a task than this; and in this great enterprise it finds its greatest asset in the sweet and gracious influence of the Christian Science home. These two forces are auxiliary to each other and will maintain a constant and unifying effect on the operations of the field of spiritual endeavor. These two institutions are linked inseparably together, "yoked in all exercise of noble ends;" and in their high emprise they are destined to contribute to the moral fiber and spiritual enthusiasm of the community a new factor of incalculable worth.

Who would not consider it his greatest privilege to have a share in such a work as this? Who could decline the call for men, which our Leader made? Surely, in this direction numbers of men, earnest and loyal students of our textbook, will find it easy to obey their Leader's call, while thus preparing themselves to acquire, through actual demonstration of the truth at every opportunity and at every hour of the day, that understanding of divine law which overcomes all error and reveals God's kingdom established on earth as in heaven.

THE SPIRITUAL OUTLOOK.

CARL HORTON PIERCE.

CHRISTIAN SCIENCE is of peculiar significance to those who to sense are approaching the so-called sunset of life. Upon the aged, scholastic theology imposes an enforced acquiescence in the legitimacy of weakness and limitation. Of the concomitants of this belief we have all had witness.

Christian Science has come with tidings of cheer and hope to drive out all these shadows, and to substitute therefor the brilliancy of an endless day. Instead of looking forward to possible poverty and consequent dependence, instead of fearing that his bank account is going to be taken away, or that panics and market depressions are going to cause a loss of substance, the Christian Scientist knows that since "substance is that which is eternal and incapable of discord and decay" (Science and Health, p. 468), the sense of loss is to be eliminated from both his vocabulary and his thought. Instead of feeling that there must needs come a time when decrepitude will place him in the position of being dependent possibly on strangers for care and comfort, he realizes that each day of his advance is revealing new friends and loved ones whose gratitude and kindliness to him is the logical expression of his reflection of loving-kindness to them.

Instead of feeling that an open grave is at the end of the road, the Christian Scientist knows that at the end as at the beginning is Life. Why? Because when one is facing the light he cannot see the shadow. When he is facing Life he can never see death. To the man who keeps the sayings of Jesus there is no death consciousness, but all is Life. Jesus said, "Whosoever liveth and believeth in me shall never die." Instead of facing incurable disease in old age, the Christian Scientist knows that since he is overcoming the fear of disease for himself and others each day, he is putting off daily the old man and is putting on the new. He is thus accomplishing two things: renewing himself with the healing Mind which was in Christ Jesus, and putting off all belief in a day of wrath.

While Christian Scientists do not "do the works" because of this incentive, but rather because they seek the kingdom of God "for righteousness' sake," yet they are gratified to observe that an accompaniment of their following after their Master in the way pointed out by our Leader, Mrs. Eddy, does cause all things to be added unto them, even longevity and freedom from those binding fears of senility which have cramped the efforts of the noblest of mankind and have sent many of them to untimely ends through worry and apprehension.

Had Mrs. Eddy accomplished nothing else for mankind than to rend this veil of matter and reveal the spiritual holy of holies to each human consciousness, she would have done much. But she has done more. Not only has she given us this glimpse of eternal life, but in so doing she has "hid" in human consciousness the leaven which is to replace ritualism and creed, and reveal the universal religion, universal health, universal peace. This peace is the fruit of doing; of being active in doing good; in doing unto others as you would have them do to you,—not in selfishly passing our time frittering it away in the pursuit of material pleasures, but in holy work; in healing the sick; in endeavoring to reform the sinner; in Christlike deeds. One said the other day: "I cannot understand why young men should be bent on healing the sick. My impression of them is that they are in search of a good time." The person addressed replied: "Seeking a 'good time' brings no enjoyment or peace. Seeking the good of others does bring this peace; does give joy—lasting joy." It is this peace that all mankind seeks; it is this peace that is promised those who seek the Lord in the "beauty of holiness;" it is this peace that robs so-called approaching age of its terrors, unmasks the hidden fears of senility, proclaims heaven here and now, and the consciousness of this kingdom as a present possibility.

[Written for the *Sentinel*.]

"WORK—WORK—WORK."*

KATHARINE T. PORTER.

SHOULD we a golden apple see
On topmost bough of highest tree,
Would we e'er heed the height, or strain
Involved, that golden fruit to gain?
If, fathoms deep, beneath the sea,
Men knew rare, precious gems to be,
Would they not dive, and dive again,
Despite the dangers of the main?
Did we but know—quite surely know—
That, tons of solid rock below,
The golden ore lay, hidden deep,
Would then our only thought be sleep?
Shall we then hear the children cry,
The world see in its misery,
And yet withhold Truth's golden key,
That which alone can make men free?
Oh, let us work, and work amain,
Till all this golden treasure gain;
Lay idle, selfish sense away—
'Tis work alone will gain the day!

SELECTED ARTICLES.

[Frederick Dixon in *Borough News*, Wandsworth, London, England.]

A letter on the subject of Christian Science recently published in the columns of the *News* is, I am afraid, conceived on lines which have long ago been discarded by students of every school. This process of cutting sentences and phrases out of their context, and hurling them in the shape of literary brickbats at the arguments of your opponent, is simply futile, and was alluded to not long ago, by one of the great church papers, as the absurd system of proof texts. By means of it you could prove the most ridiculous arguments you might like to set up, and disprove the sanest. The only indisputable fact that ever results from its employment is that, judged by it, there is not a book in the world which is not a jumble of unblushing contradictions.

To show the hopelessness of this critic's method, it is only necessary to apply it to himself. A couple of examples taken at random will suffice, but these might be continued almost indefinitely. Intent upon proving that God is conscious of evil, without apparently recognizing where this is going to lead him, the critic quotes from Amos, "Shall there be evil in a city, and the Lord hath not done it?" he unfortunately forgets the words of Habakkuk, "Thou art of purer eyes than to behold evil, and canst not look on iniquity." Again, determined to find something to contradict in the saying that "true Christianity declares life to be eternal," he quotes a long extract from Ecclesiastes, of all books, quite overlooking the fact that Jesus himself said, "And this is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou has sent." And yet after this the writer refers, with ill-conceived satisfaction, to the declaration in the epistle of Peter, that there are "some things hard to be understood, which they that are unlearned and unstable wrest, as they do also the other scriptures, unto their own destruction." Perhaps, as he says, "further comment is needless."

The simple fact is that this gentleman has misunderstood the Christian Science lecturer from his exordium to his peroration. He obviously thinks of God as a man, a phase of anthropomorphism by no means peculiar to him. Now, as Mrs. Eddy very truly says, on page 19 of "No and Yes," "what the person of the infinite is, we know not; but we are gratefully and lovingly conscious of the fatherliness of this Supreme Being." No doubt the Jews, who sacrificed doves and lambs to Jehovah, fully believed God to be a man, but there is nothing in the teaching of Jesus to support such an idea. Jesus himself, speaking to the woman of Samaria, confined himself to the use of the word Spirit, while the beloved disciple was satisfied with the word Love. One thing we can be quite sure of, that God is infinite, omniscient, omnipotent, and omnipresent Mind. And as man is the image and likeness of Spirit and Love, he is necessarily the image of Mind. This is the real man of whom Jesus spoke, when he said, "I and my Father are one," the man to whom he alluded when he declared to Nicodemus, "That which is born of the Spirit is spirit." He said, however, something more than this, namely, "That which is born of the flesh is flesh." The sinning human being, filling our cities with disease and misery, is this man of the flesh; and in order to complete Jesus' explanation, that he may be born again, he has to let that Mind be in him which was also in Christ Jesus. Just in proportion as he does this, does he put off the old man and put on the new.

Throughout the New Testament, the expression is commonly used of the knowledge of God. This knowledge of God, when first it comes, is the beginning of the new birth, for it is the knowledge of the truth which is to make the world free—free from what but all those beliefs of materiality which constitute the old man? To get rid of these beliefs is to enter into life, and to gain the sense of life eternal it is not necessary to die, it is only necessary to "let this mind be in you, which was also in Christ Jesus," for this was the very thing Jesus himself declared consituted life eternal, "that they might know thee the only true God, and Jesus Christ, whom thou hast sent."

This was Jesus' knowledge of the true man, the image and likeness of God, the Christ, which constituted him for all time Jesus the Christ. It was this knowledge, this Mind of Christ, which brought Lazarus from the tomb, raised the young man in the gateway at Nain, and the daughter of Jairus, and which eventually enabled him to prove life to be deathless on the cross. Not, of course, to prove that that which is born of the flesh is eternal, for this truly is like the grass which today is, and tomorrow is cast into the oven; but to prove that, as the material sense of life gives way to the spiritual, the sense of mortality vanishes in the understanding of life eternal. This was the lesson of the crucifixion, the resurrection, and the ascension.

[Alfred Farlow in *Los Angeles* (Cal.) *Graphic*.]

In a recent issue a paragraph from the New York *Times* is published, commenting upon the recent conduct of our President in the modification of an order regulating the practice of medicine in the Panama Canal Zone. The *Times* declares that this order "came from men who in a few years have changed Panama from a pesthole . . . to one with a death rate far below that of many of our own cities." It is well to call attention to the fact that this excellent result was accomplished while Christian Scientists were permitted to practise in the Zone, and it is therefore palpably evident that the practice of Christian Science there had not interfered with the health of the community; and having some knowledge of the good results of Christian Science practice in that locality, we do not hesitate to say that Christian Science has contributed largely toward the commendable condition which exists there. For these reasons, there was no necessity for the issuance of an order restricting individual privilege, and far from "overruling a good order" the President manifested his wisdom and fair-mindedness when he declined to assume the stupendous responsibility of establishing state medicine in the Zone.

You say, "The ills which Christian Scientists relieve are mostly mental, and in effecting cures of this kind they have often succeeded where the best licensed physicians have failed." Where shall we draw the line and say, Thus far and no farther? Who is able to say when we have crossed over from what is termed a "mental" disease to an "organic" disease? Christian Scientists of many years' experience testify that they have succeeded quite as well in the curing of so-called "organic" diseases as they have in the curing of those diseases which are recognized as "purely mental," and this gives evidence that "all disease is mental at bottom," as an eminent physician puts it. Every one will admit that fear is a large factor in malignant contagious diseases, and the influence of Christian Science in a community subject to such diseases cannot be overestimated, since the realization of the ever-presence and omnipotence of divine Love which it produces minimizes or destroys fear in all circumstances.

Sanitary methods are strictly in keeping with the belief and practice of Christian Scientists, though they differ from others in their understanding of the nature of disease and its proper remedy. That they understand the real nature of disease, notwithstanding that they make no pretensions at being able to diagnose from a physiological point of view, evidences this fact.

[W. C. Williams in *Baltimore* (Md.) *American*.]

A writer in the *American* voices his lack of faith in Christian Science. This is not extraordinary, as it is the unknown that is usually condemned and feared, and our critic does

Digitized by Google

not profess a knowledge of this science. But he does not believe that God makes man sick, because the Bible teaches that God is love. This is the claim of Christian Science, and as God is omnipotent and All-in-all, there can be no other power able to inflict disease in violation of His law if the children of God, fearless, full of understanding of their inheritance of health and happiness, manifest love and unselfishness and overcome sin and the false beliefs that hold them in bondage.

The above writer quotes another correspondent of the *American* as writing, "If God made man sick, then sickness is good for him, and what right has he to try to get well?" This was intended to emphasize, undoubtedly, that a loving creator could not give sickness, but for those who believed such to be possible they must also acknowledge that, as God did everything for our good, it would be going against His will to try to get well.

The prayer of understanding, showing reliance on God, could be made only by those who do not place a greater reliance on *materia medica*, and it would be foolishness to abandon drugs and ask God's "very present help" if the material aid was the most trusted. Christian Scientists do not advocate the doing away of drugs as long as they are wanted; the freedom of every one to choose his own treatment is unquestionable.

Mrs. Eddy's "prescription for health" is the Bible prescription, and as the number healed through Christian Science treatment compares very favorably with those otherwise treated, and as the majority of the cases are those that had been given up by physicians, the belief of "The *American* Reader" is untenable.

[Ezra W. Palmer in *Pueblo* (Col.) *Leader*.]

An anonymous writer in a recent issue of the *Leader* denounces Christian Scientists with considerable heat for their "vicious 'treatment' of innocent helpless children." Now, what is a Christian Science treatment at which this anonymous writer from his retreat hurls these adjectives? Prayer to God, nothing more, nothing less; prayer in which the goodness, the love, the tender care of God for all His creatures is declared and acknowledged; prayer in which man is seen as the unfallen sinless child of God; in which sin, disease, and death are known as unrealities.

That the prayer of the Christian Scientist heals the sick, no intelligent observer with a regard for facts would attempt to deny. And yet this anonymous contributor would have the public think there was something unchristian about it. Paul, who healed by prayer, it will be remembered was called "a pestilent fellow" by the opponents of Christ's teaching in his time; and the Pharisees sought to show that Jesus' healing was "vicious, heathenish," by imputing his healing power to be derived from Beelzebub instead of from God.

Christian Scientists pray for the healing of their children when sick, the same as for adults. Jesus said, "Suffer the little children to come unto me, and forbid them not." Christian Scientists believe their children should have the most effective treatment procurable, and they have proved to their own satisfaction that God heals all our diseases more effectually than any drug can.

[Charles D. Reynolds in *Concord* (N. H.) *Monitor*.]

The widest scope in personal freedom is the one most conducive to human progress. Freedom to try out in daily practice our ideals and theories indicates the line along which all progress has come and mankind has advanced. To the wide toleration that has obtained here in our America, which has given impetus and freedom to individual endeavor, is due much of the progress of this hour, and Christian Scientists are grateful beyond measure as a people for the freedom that has permitted them to prove the possibility of reinstating here in our modern world primitive Christianity—the whole of the teachings of the Founder of the Christian religion, which as practised by him included the healing of sickness, thus proving that sickness and death are the fruits of sin.

Christian Scientists are willing that their system and work should be judged by the same standard by which other systems are judged,—its fruits. By its practical results it stands or falls. This is the standard by which Jesus said his teachings should be judged and known. The critic of Christian Science who seizes upon the death of one or more Christian Scientists and then rushes into print with dogmatic assertions in reference to the whole subject, declaring that an effort should be made to make an example of *this* case, without regard to the facts in their broader aspect, is allowing himself to be swayed by the same unworthy motives, the same irrational personal feelings which have characterized periods of history less enlightened than our own.

Judged by its results, Christian Science has obtained some very decided victories over other systems, and its practice is still in its infancy. It has healed or alleviated many cases of sickness and disease pronounced incurable by the medical fraternity and given up to die. It has not been, up to this time, given an altogether fair chance, but an occasional failure under its treatment is no serious argument against it, and has not proven an obstacle to its growth and acceptance.

[Frank Bell in *Chambersburg* (Pa.) *Public Opinion*.]

The Bible of the Christian Scientists is the King James version of the Scriptures commonly used by Christian denominations. This Bible is studied daily by Christian Scientists, and it occupies a larger place in the public services in Christian Science churches than in those of any other denomination. The Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is not considered by any Christian Scientist as a Bible or a substitute for the Scriptures, but rather as a commentary or "key," as its title implies. Other religious bodies use Bible commentaries, and the sermons of their pastors are put forth as explanatory of the Scriptures in the light of their individual beliefs. Are Christian Scientists alone to be denied the privilege of interpretation?

That which has healed and is healing multitudes of victims of sin and disease through the application of spiritual law, may not easily be proved to be "neither Christian nor scientific." Certainly no man's mere opinion to that effect is proof against the great volume of evidence available. The Master defined a Christian thus: "He that believeth on me, the works that I do shall he do also;" and "These signs shall follow them that believe; . . . they shall lay hands on the sick, and they shall recover." He instructed the first Christians, his disciples, not merely to preach but to heal, and to teach all nations all things he had commanded them. Christian Scientists judge of the degree of their Christianity by this test. To say that the author of the Christian Science text-book did not measure up fully to the ideal of Christ adds nothing to the sum of human knowledge, for she said the same of herself many times. Like Paul, she counted not to have attained, but rejoiced in the opportunity and the ability to "press toward the mark for the prize of the high calling."

Christian Science does not undertake to employ any so-called "power of mind upon mind," nor any belief that the "mind affects the body and that the body can be made to resist dissolution or pain by the taking of thought and the exercise of will-power." No such theories are countenanced anywhere in the authorized writings or teachings of Christian Science. They belong wholly to various movements which have sprung up in attempted imitation of Christian Science either within or without other modern churches. Christian Science places final dependence not on human intelligence, human will, or human organisms. It attributes

Digitized by Google

all power to God, and offers to teach mortals how to apprehend and use this great fact to their infinite advantage. The spiritual personality of God is affirmed, not denied by Christian Science. It does deny that He is personal in anything like the ordinary human sense of personality, such as would be incompatible with omnipotence, omnipresence, and omniscience.

Persons who wish to be informed on the subject of Christian Science will consult those who understand it, rather than those who profess only a desire to retard its growth among thinking people. Authoritative literature on the subject is obtainable at the free reading-rooms maintained by every Christian Science church.

[E. M. Ramsay in *Dundee* (Scot.) *Courier.*]

Christian Science is manifested in a humble and earnest endeavor to utilize the teachings of the Saviour in the conduct of life, and to obey all his commandments. If the injunction to heal the sick by spiritual means has been neglected for centuries, this has arisen not so much from lack of desire to obey as from ignorance as to the method to be employed. In order to understand this method it is first necessary to gain a clear conception of the nature of God and man. Far from regarding God as a supernatural being, more or less incomprehensible to man, Christian Science insists on the Bible definitions of His nature as Life, Truth, Love, Spirit, and maintains that as man recognizes his own essential nature as made in the image and likeness of God, and endeavors to express more of truth, love, and spirituality in his every-day existence, will he reflect more of Life. Christian Science shows that sinful thoughts and inaccurate thoughts, resentment, passion, selfishness, pride, worry, and fear, militate against health, and that in order to improve our health we must first improve our thinking. All thoughtful men and women nowadays recognize these facts to some extent; Christian Science goes farther, and supplies its students with a scientific method of correcting inaccurate thought.

No system of medicine or hygiene pretends to cure all who apply to it for help; the death columns in our papers show that numbers daily succumb in spite of the ministrations of the doctors. Thus the mere assertion that recourse to one of the ordinary systems of medicine would have saved a man's life, carries but little weight. It is sufficient to point to the steadily increasing number of intelligent people who are joining the Christian Science ranks, to show that the system has solid advantages to offer. I myself know hundreds of men and women in all classes of the community who have been helped and healed, raised from sin, sickness, and poverty, by the sense of God's presence and power.

[C. R. Munro in *Kingston* (Ont.) *Standard.*]

The statement of our clerical critic, that the faith or philosophy of Christian Science is "a false philosophy," is based on an entirely erroneous concept of what Christian Science really teaches. He admits that there is much good in Christian Science, and as this good is the direct outcome of its teachings, the teachings cannot be false, as he seems to think. The important premises of Christian Science are that "God is All-in-all" and "God is Spirit" (Science and Health, pp. 113 and 117); and every statement contained in the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is consistent with these premises. It is quite possible that what may appear to a critic as inconsistent in Christian Science, will be found on a further study to be entirely consistent.

The abstract statement that matter, sin, sickness, and death are unreal, does not fully express the teaching of Christian Science on these subjects. Christian Scientists apply the word reality only to those things that are created by God, Spirit, and that are, therefore, indestructible and eternal. This use of the term is in line with Paul's statement that "the things which are seen are temporal; but the things which are not seen are eternal." That Jesus did not believe in the reality of sickness and sin is shown by the fact that he destroyed them whenever he came in contact with them. Had they been real and God-created, they would have been eternal, and Jesus could not have destroyed them. As everything that God made was pronounced to be "very good," and He made all that really exists, then if God created sin and sickness, they must be "very good," and Jesus would not have attempted their destruction, since we are told that he went about doing good, and healing all that were oppressed with the devil.

After all, the best evidence as to the truth or falsity of our faith or teaching is found in the results that follow it. Jesus said, "The tree is known by his fruit;" and James said, "Show me thy faith without thy works, and I will show thee my faith by my works." The critic who attempts to show that Christian Science teachings are false, should first show that he is in a position to judge or pass an intelligent opinion on the matter; and the only way in which he can prove he is competent to do so is by actual demonstration, by healing the sick according to its rules. Jesus said, "He that believeth on me, the works that I do shall he do also;" and he also said, "Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven; but he that doeth the will of my Father which is in heaven." Christian Scientists are endeavoring in their own quiet way to do God's will in the way our Master taught, and they have only the kindliest feelings for all who are working toward that end.

[Written for the *Sentinel.*]

A LIGHT AT SEA.

MARIE RUSSELL.

When shadows crept o'er sea and strand,
And somber lay the waters still,
With head down-dropped upon my hand
I mused beside my window-sill.

How sad my thoughts as thus I dreamed,
While deepened night's obscurity,
When sudden, in the distance gleamed
A ray of light far out at sea.

It came as would some glad surprise
We had not dared to reckon on,—
A problem solved,—a path that lies
In light, where erst no light had shone.

As gleamed that beam of light at sea,
When earthly ways lay dark, obscure,
Thus Love divine brought life to me,
And showed me glories that endure.

Before Truth's ray there disappeared
A host of doubts, the sense of doom;
Destroyed were evils I had feared,
Dispersed the mysteries of gloom.

How sweet, when shadows fall, and seems
To deepen life's complexity,
To know for all the world Truth gleams,
An ever-nearing light at sea!

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"LET YOUR LIGHT SO SHINE."

ONE dominant phase of Christian Science which greatly impresses the inquirer who comes to its study with an open mind, is its insistent demand upon its followers for righteous living; or, to put the same idea into different words, its demand for applied righteousness in the lives of its followers. Nowhere is this insistence more pronounced than in the teachings which apply more specifically to those who would consecrate their knowledge of God to the healing of the sick. There is no mistaking the import of Mrs. Eddy's words, "In order to heal by Science, you must not be ignorant of the moral and spiritual demands of Science nor disobey them. Moral ignorance or sin affects your demonstration, and hinders its approach to the standard in Christian Science" (Science and Health, p. 483). Similar precepts abound throughout Mrs. Eddy's writings, and it is to the extent that Christian Scientists are imbued with both the letter and the spirit of these teachings that they are doing the "mighty works" recorded in our periodicals and reported in the Wednesday evening meetings in our churches.

In that epitome of Christian living which has come down to us as the sermon on the mount, Jesus pointed out to his disciples that in exemplifying his teachings they were to become "the light of the world," the light which was to lead the children of men out of darkness, out of the bondage of sickness and sin into the glorious freedom of health and happiness. And they were not to hide from their fellows this wonderful light; rather were they bidden to let it so shine that all around them should share in its beneficence. But we must not forget why we are thus to shine—that it is not for our own glorification, but that praise may be accorded to the giver of all good, "our Father which art in heaven."

Sometimes Christian Scientists, though desirous of progress with the best of motives, namely, the advance of the cause, become impatient for a greater increase of numbers to their ranks than even that which is constantly going on and which is so impressive to the general public; but they would do well to curb such impatience and confine their efforts to living so righteously that the whole world may see their good works. Adding numbers to the ranks of Christian Scientists is not the great thing to be desired, but if it were, the surest means to accomplish this end would be for Christian Scientists to order their daily walk and conversation in such a way that they would be examples of Christianity and good citizenship to all their friends and to the community.

What is needed for the true advancement of the Christian Science cause, is not so much a great number of Christian Scientists, but rather that the followers of this religion should be the best possible Christians—Christlike in every word, act, and deed. It was said of the Master that "he went about doing good," and his professed followers can receive no higher meed of praise. It is the healing of the sick and the sinning in demonstration of the truth of its teachings that has placed Christian Science in the forefront of the battle against evil, and nothing can stay its advance toward the final overcoming of all that is unlike good, if only its adherents continue to be faithful to the ideal set before them in its teachings.

Again and again in her writings Mrs. Eddy emphasizes the need of demonstration as the strongest proof of the efficacy of Christian Science in the regeneration of mankind, and the standing of a Christian Science church in any community is to be measured not alone by the size of the congregation or the magnificence of its edifice, but by the "multitude of witnesses" who have been healed through its ministrations. This is the "faith illumined by works, the spiritual understanding which cannot choose but to labor and love" (Miscellaneous Writings, p. 338), which affords not only the best demonstration but the best definition of what Christian Science is and what it is doing toward the coming of the kingdom of God among men.

ARCHIBALD MCLELLAN.

THE LEADING OF LIGHT.

HE was looking into the heart of a March sunset whose radiant glories were latticed by a group of leafless trees after a fashion that would have delighted the eye of an artist. Thought had been quickened to an aspiring glow, and as he stood with uncovered head there came out of the vanishing pink above him those cheerily familiar notes which are known to every nature lover as the call of the red-winged blackbird. Looking up, he saw a whole bevy of these happy harbingers of spring, headed straight for the sun which they so unfailingly follow year after year in their migrations between the river banks of the North and the everglades of the South. These feathered folk are true to the leading of light, and it is thus that they escape untempered airs and find that which conduces to the completeness and joy of their simple lives.

In all this they become our teachers; they tell us of the gain of loyalty to Truth, and that we shall find in its effulgence the fulness of life's true satisfactions. Were the birds unsupplied with a safe-guiding instinct, or were they disobedient to it, their welfare would not be conserved despite the richness of the sun's outpour, and this illustrates the significance to our well-being both of the faculty of spiritual perception and of glad conformity to its behests. These compass the deepest issues of human life, and the practical value of Christian Science inheres in the fact that as its teaching is assimilated we become more sensitive to the light of Truth and Love, and correspondingly more disposed to follow it.

The instinct for Truth, the power to recognize reality, is rightly thought of as the gift of God, but in most human experience it is an acquired possession, and this marks a vital distinction between human beings and other creatures. Without either intuition or experience the bees fashion their comb and the birds their nests, in the exhibition of a marvelous cleverness, an inexplicable insight, but though so wonderful, their capacity seems to have no freedom. It is confined to a definite and limited round of activity from which there is no departure, while human beings in contrast are able to discern and master a law which is capable of the widest application, and it is here that we come upon the basis of desert.

While some may seem indisposed to follow the light, though it is clearly seen, the many are honestly saying in their hearts, "Where is the way where the light dwelleth?" This is especially true today of Christian believers, vast numbers of whom long for that practical, satisfying apprehension of Truth to which they have not attained because of the mists of an educated false sense. Their instincts are good, but they are wanting in that knowledge of divine Principle which Christian Science supplies and because of which the word of prophecy is again being fulfilled, "The people that walked in darkness have seen a great light."

Christ Jesus said, "And I, if I be lifted up, will draw all men unto me." It is the irresistible attractiveness of the truth which he said we should "know" that explains the causal relation between the gaining of a right perception and the activity of a right impulse. What can explain the devotion with which the early disciples followed the light of Life but that demonstrable apprehension which, as Mrs. Eddy has said, is "Truth's prism and praise," and which is indeed "a light above the sun" (Science and Health, p. 558). The

Digitized by Google

stubborn and the unbalanced may try to resist the authority of a proved proposition, but like the pole-star it quietly holds its place, and by it the one-time-wayward, when they have suffered sufficiently, are sure to find their way.

To link men to God by making His justice and beauty known, and thus to awaken a devotion and enlist a service which is marked by instinctive abandon and perennial joy—this is the end and achievement of Christian Science. It brings into human experience the fulfilment of the word of the Lord spoken by Isaiah, "The Lord shall be unto thee an everlasting light, and thy God thy glory."

JOHN B. WILLIS.

OBEDIENCE TO LAW.

IT is generally conceded that the Mosaic Decalogue contains the vital elements of moral law, and that its provisions underlie all civil and criminal codes. It would therefore be very interesting to learn the extent to which the moral requirements of the ten commandments are obeyed by nominal Christians the world over, even the four statutes which forbid murder, moral impurity, theft, and lying; that is, taking these statutes in their most obvious signification. No one could justly deny that if these requirements were heeded by all mankind, there would be no need of prisons or of the large army of those who are required under present human conditions to protect the lives, property, and reputations of their fellow men. The fact that these are so largely in evidence shows that law separated from obedience does little for the human race, and this should be impressed upon children at the earliest possible period.

Here it may be well to remember that mortal man is not, in the very nature of things, identified with law, yet mortals have learned by sad experience that law is necessary for their protection, and that its enforcement is demanded because of human ignorance of the blessings attendant upon obedience to all righteous law, and in the truest sense there is no other. In Paul's epistles we find several references to "the children of disobedience," and he does not hesitate to say, "We ourselves also were sometimes foolish, disobedient, deceived;" but he also tells us the true way to obedience when he speaks of the law which is written upon the heart, not upon tables of stone; written "not with ink, but with the Spirit of the living God." Respecting this our revered Leader says, "The law of God is the law of Spirit, a moral and spiritual force." She also says, "God is the fountain of light, and He illumines one's way when one is obedient" (Miscellaneous Writings, pp. 257, 117). This being admitted, we can have no uncertainty as to the right course to pursue or the results of following our highest sense of right at all times.

A great deal is said at this period respecting the advantages of military training, but perhaps few stop to think that its chief advantage is in the discipline, which demands ready and unquestioning obedience to properly constituted authority; and that the hardihood which all admire is a direct product of this obedience. Paul, who spent several years as a prisoner in the Roman fortress of Cæsarea, learned many lessons of the soldiers, and he counsels Timothy to "endure hardness, as a good soldier of Jesus Christ." We also have his splendid words regarding the Christian's armor and weapons and their use. But nowhere is there a finer example of the true significance of obedience than that found in the case of the centurion who came to Jesus to ask healing for his servant. The Master responded to his request by saying, "I will come and heal him;" but the centurion said this was not necessary, that the Master's word, spoken where he was, would be enough. With simple straightforwardness he argued that the soldiers under his authority obeyed unquestioningly, and that the one who represented divine law and authority need but "speak the word only," and the willing and obedient thought of the soldier would respond to the Christ-command. We read that Jesus marveled at the centurion's words, and said he had not found so great faith (or possibly such intelligent obedience), "no, not in Israel." We do not, therefore, wonder that the servant was, as we read, healed "in the selfsame hour."

It need hardly be argued that if we were to cultivate the habit of prompt and unquestioning obedience to God's law, especially in its higher requirements, the body would "endure hardness" without suffering, and the wounds received in the days when we were ignorant of the healing power of spiritual law would be speedily healed. Jesus' obedience to the divine will compelled for him the obedience of even the winds and waves; and if we have "the Spirit of Christ," this will so quicken us that even the body will respond and "the law of the Spirit of life" take entire control of all we think and say and do.

ANNIE M. KNOTT.

AMONG THE CHURCHES.

BOSTON, MASS.

The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the new church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading Rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite Post Office; open daily, except Sunday, from 9 a.m. to 5:30 p.m.

LOS ANGELES, CAL.

The following notice was read at the Wednesday evening service, Feb. 28, and at the Sunday services on March 4, of Sixth Church of Christ, Scientist, of Los Angeles, Cal. The building site referred to consists of three lots, one hundred and twenty by one hundred and twenty-nine feet, situated near the corner of East Forty-second and Wadsworth streets, the purchase price being thirty-five hundred dollars:

"The board of directors of this church take great pleasure in announcing that the entire amount has been raised for our church building site. We wish to thank our Sunday school children, who donated their entire fund of one hundred and ten dollars. We feel you will wish to join with us in thanking Second Church of this city, which sent us thirteen hundred dollars as a love offering to complete our demonstration. Surely, as our dear Leader says, 'Divine Love always has met and always will meet every human need' (Science and Health, p. 494)."

Correspondence.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 31, 1912. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 13, 1912.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 3, 1911, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

THE LECTURES.

LONDON, ENGLAND.

On Monday and Tuesday, Dec. 4 and 5, William D. McCrackan, M.A., delivered two very interesting and instructive lectures in Third Church of Christ, Scientist, Curzon street, London, which was filled to its utmost on each occasion. On Monday the lecturer was introduced by the Hon. Mrs. Cecil Howard, who spoke as follows:—

I have great pleasure in welcoming you all here tonight in the name of Third Church of Christ, Scientist, London, to hear something of a subject of such deep interest that it is world wide, the health and happiness brought by the understanding of Christian Science. Therefore, to those who have not before cared to investigate this subject, I would say that if they would study Christian Science, and it brought to them even a portion of the joy and peace it has brought to me among so many others, they will be amply rewarded. The short explanation that will now be given by an able lecturer will interest you and will open out the reasons of the healing of thousands of miserable and sick men and women who have been cured through the understanding brought to us by that most wonderful book, "Science and Health with Key to the Scriptures" by Mary Baker Eddy, which shows us that the promise in the Bible of a God "who healeth all thy diseases" is for us here and now.

On Tuesday evening the introduction by R. E. Heard was as follows:—

Studying Christian Science, we find that its teaching is based on divine Love, the Love that inspires the love for God and man which our Leader assures us in our text-book, "Science and Health with Key to the Scriptures" (p. 454) "is the true incentive in both healing and teaching." Mankind can perhaps catch only the faintest gleams of divine Love, but it is so potent and purifying that even these faint gleams are lifting men to a demonstrable understanding of their dominion over all that is unlike God, good. Of the simplicity of Christian Science we shall understand more after hearing what our visitor has to tell us; that is, if we listen with humility, obedience, love, and rejoicing, qualities which are most essential factors in the process of transforming the human consciousness, leading it up to a higher and purer mode of thought and action, and thus bringing into each individual's experience the truth uttered by Mrs. Eddy, "The divinity of the Christ was made manifest in the humanity of Jesus" (Science and Health, p. 25).

We welcome the signs of the times, signs of which these meetings are symbols, and which go to prove the wide-spread interest which Christian Science is creating, signs which we gratefully acknowledge are wholly due to the self-denying labor of love for humanity as manifested by Mrs. Eddy, for like that Mary who, stooping down from her high consecrated thought, looked into the sepulcher, and where the dull doubting senses of the disciples saw only grave-clothes, the grave-clothes of "the letter which killeth," saw an angel who told her that the Christ had never died, so she, through an influence all divine, realized that the divine command, "Let there be light," has stood and will stand forever, and through her faithful reflection of that light thousands of sepulchers in human consciousness have been illumined and the darkness of belief, in which sin, disease, and death were held to be realities, has been dispelled.

Correspondence.

LOS ANGELES, CAL.

The second of a series of three lectures on Christian Science was delivered Jan. 8 in Second Church edifice by Frank H. Leonard. He was introduced on this occasion by William H. Chandler, first reader of Fifth Church, who said in part,—

Throughout the life of Jesus, he taught the healing and saving power of Truth and Love, and proved what he taught by demonstration. When John sent his servants to ask if he were the Christ, he did not at once reply to their question, but continued in the healing work and then sent this reply, "Go and shew John again those things which ye do hear and see: the blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them;" showing that in works rather than in words are we to prove the coming of the Christ. The healing power became lost to the world through the gradual creeping in of the material for the spiritual, and for centuries the world has been looking for this light to lift mankind out of bondage to the material beliefs in sin, sickness, and death.

In Revelation we read, "And I will give him the morning star." A New England woman, Mary Baker Eddy, born and raised among the beautiful hills of New Hampshire, saw this star, and, unlike the shepherds of old, she beheld its full meaning, as can only that heart which has the true desire, preparation, and sympathy with spiritual things. The truth discovered by her is lifting mankind out of these material beliefs and above the idols of the carnal mind; it is lifting us out of sickness to health; out of want to plenty. It is leading us out of the darkness of the night and wilderness of despair to the threshold of peace and harmony. Hundreds of thousands of men, women, and children in all parts of the world are today living witnesses to the healing and saving power of this great truth.

At the third lecture, Jan. 9, at the same place, Mr. Leonard was introduced by the first reader of Sixth Church, T. N. Johnson, as follows:—

We are living today in an age of progress and investigation; in an age where religion is regarded in the same light as any other agency which promises advancement to mankind. That is why the subject of Christian Science is attracting world-wide attention. It has been fully investigated, and has not been found wanting; its fruits clearly reveal its divine origin. It is not strange, therefore, that humanity gladly welcomes intelligent information regarding a religion which promises so much of peace, comfort, and happiness, and it was with loving consideration for the welfare of mankind that our beloved Leader, Mrs. Eddy, provided these lecturers who can speak authoritatively in reference to Christian Science.—*Correspondence.*

TRENTON, N. J.

A large audience at Taylor Opera House yesterday afternoon [Jan. 14] listened to a highly interesting lecture on Christian Science by Bliss Knapp. Miss Saidee Vere Milne, first reader, introduced the speaker, saying in part,—

Mrs. Eddy says: "To understand God is the work of eternity, and demands absolute consecration of thought, energy, and desire" (Science and Health, p. 3). Strange to say, this is the one subject that most of us have been content to possess a present limited knowledge of, without desire for further research, and yet the Scriptures are full of such texts as these: "Get understanding," "Know the Lord;" and Jesus said, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent."

The art of healing seemed to be lost for centuries, but a message has come to the world through Christian Science, revealing and demonstrating the fact that the same healing Principle exists today as in the time of the prophets and Christ Jesus, through a clearer sense of God and man's relation to Him. It is the same God, the same dear old religion, but as its presentation is from a different standpoint, Chris-

tian Science is not always understood. After a conversation on Christian Science with a prominent clergyman of Trenton, he said to me: "I am glad to have talked with you. I see now that the Christian Scientists are our brethren. You have the same motive—to live the Christ-life, to deliver the Christ-message."—*State Gazette.*

KNOXVILLE, TENN.

Virgil O. Strickler was heard on the subject of Christian Science Thursday night [Feb. 15] by an audience which filled the auditorium of the Fifth Avenue Presbyterian church. Henry Hudson said, in introducing Mr. Strickler:—

This world in which we live is a world of progress. The old and out-of-date retire, and the new comes forth. As the world progresses, man, the thinking man, demands an improvement, a new thought and a new view of life. And yet, many times the turn of this old world of ours, while seeming to bring upward something new, merely shows forth the old and tried in a new garb, and proves the old adage that there is nothing new beneath the sun. This is true of philosophical and spiritual matters, as well as of matters material, and as a result we have today a new religion, a religion of love, the religion of Christian Science. But is it new? Let us examine more closely. Is it more than the almost forgotten religion of twenty centuries ago, brought again to the attention of men and newly preached? There can be but one answer to this.

Christian Science has an honorable and ancient history. It is indeed the historic religion of Christ. But Christian Science has a value and interest for us far in excess of its historic value or descent, a present-day and practical value. Interesting as it is as a philosophy, and it is a philosophy of a depth to challenge the brightest mind, Christian Science is not a mere abstract theory, a subject for mere speculation. For, as taught and exemplified by its great Leader and exponent, Mrs. Eddy, Christian Science first becomes the simple axiom of truth, so simple as to be understood by the most childish, trusting mind, and then, unlike any other religion of ancient or modern times, excepting alone its own prototype of twenty centuries ago, it demonstrates its theories and shows forth results accomplished in truth thereof. Of philosophies we have enough. This is the age of results. Without results, Christian Science has little or no warrant for existence. But its promises are fulfilled, and it deserves a full measure of success.

Journal and Tribune.

LEEDS, ENGLAND.

A lecture on Christian Science was delivered to a large audience in the Town Hall, Leeds, on Sunday afternoon, Feb. 4, by Bicknell Young. J. S. Braithwaite, M.A., in introducing the lecturer, said:—

There is not lacking today abundant evidence that current opinion is beginning to expect and to look for an ultimate and complete reconciliation of science and religion, two systems of thought which have hitherto been considered as far apart as the poles. This reconciliation will come, it is supposed, from some convocation of eminent scientists and learned theologians, even as some two thousand years ago it was supposed that the redeemer of a nation would be the lineal representative of a royal house and assert his claim to the title of Messiah with pomp and ceremony. That the reconciliation of science and religion has already come is suspected by few and perhaps known only to that comparatively small number of people who have studied and understood the Christian Science text-book, "Science and Health with Key to the Scriptures," and Mrs. Eddy's other writings. The general acceptance of an idea by the established thought of the day has not, as a superficial examination of the world's history will show, been in the past any proof of the correctness of its teachings, but perhaps rather the reverse. Christian Scientists do not seem to be expecting any such general acceptance to convince them of the truth of Mrs. Eddy's teaching, but they place their reliance on the daily practical proofs of its efficacy in the reforming of the sinner and the healing of the sick. Mrs. Eddy foresaw that her works would be maligned and misinterpreted, and established a board of lectureship to provide for a public correction of such misstatements. Our lecturer this afternoon is a member of that board.

Correspondence.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice it is assumed that the lecture will be given in the evening.

Aberdeen, S. D.—Bliss Knapp, Red Men's Hall, 422 South Main street, April 19.

Ashtabula, Ohio.—Willis F. Gross, Airdome Theater, 3 p.m., April 14.

Augusta, Ga.—Frank H. Leonard, Tubman High School Auditorium, 3:30 p.m., April 14.

Bloomington, Ill.—Clarence C. Eaton, Church Edifice, April 19.

Cairo, Ill.—Hon. Clarence A. Buskirk, Cairo Opera House, afternoon, April 14.

Cape Girardeau, Mo.—Hon. Clarence A. Buskirk, Opera House, April 16.

Champaign, Ill. (First Church).—William R. Rathvon, Elk Auditorium, April 18.

Fond du Lac, Wis.—Clarence C. Eaton, Armory E, April 16.

Galena, Kan.—William R. Rathvon, Christian Church, Tenth and Main streets, April 15.

Girard, Kan.—Judge Clifford P. Smith, County Court House, April 16.

Grand Rapids, Mich.—Clarence C. Eaton, Powers' Theater, April 19.

Hartford, Conn. (First Church).—Prof. Hermann S. Hering, Parsons Theater, 3 p.m., April 14.

Hutchinson, Kan.—Rev. William P. McKenzie, Home Theater, April 15.

Kalamazoo, Mich.—Bicknell Young, Academy of Music, April 8.

Kankakee, Ill.—William R. Rathvon, Huling Hall, Public Library Building, April 19.

Kenosha, Wis.—Willis F. Gross, Rhode Opera House, April 12.

Lake Mills, Iowa.—Rev. William P. McKenzie, Opera House, April 11.

Oak Park, Ill. (Second Church).—Clarence C. Eaton, Warrington Opera House, 3:30 p.m., April 14.

Oklahoma City, Okla.—William R. Rathvon, Overholser Theater, 3 p.m., April 14.

Oshkosh, Wis.—Bliss Knapp, Opera House, April 16.

Peshtigo, Wis.—Bliss Knapp, Peshtigo Opera House, April 15.

Rich Hill, Mo.—William R. Rathvon, Church Edifice, April 16.

San Francisco, Cal. (First, Second, and Third Churches).—Bicknell Young, Dreamland Rink, 3 p.m., April 14.

St. Joseph, Mo. (First Church).—Judge Clifford P. Smith, Church Edifice, 12th and Felix streets, April 15.

St. Paul, Minn.—Virgil O. Strickler, Auditorium, 3:30 p.m., April 14.

Topeka, Kan. (Second Church).—Rev. William P. McKenzie, Grand Opera House, 3 p.m., April 14.

University of Chicago, Chicago, Ill.—Prof. Hermann S. Hering, Mandel Hall, April 18.

University of Minnesota, Minneapolis, Minn.—Bliss Knapp, University Chapel, April 18.

Virginia, Minn.—Prof. Hermann S. Hering, Lyric Theater, April 19.

Wellesley, Mass.—Prof. Hermann S. Hering, Maugus Hall, Wellesley Hills, April 15.

TESTIMONIES OF HEALING.

It is with the profoundest gratitude to God, also to our dear Leader, Mrs. Eddy, that I attempt to enumerate a few of the many blessings which have come to me through the study and application of Christian Science. It is six years since I began the study of her teaching in "Science and Health with Key to the Scriptures," together with the Bible.

For nine years previous to this I had been confined to my bed nearly all of the time. The best medical skill that the state afforded had been employed for me; I went from one sanitarium to another, but each succeeding year found me a greater sufferer than the preceding one. My case was diagnosed as extreme nervous illness superinduced by serious internal conditions, and my weight was reduced to sixty-nine pounds. At two different times I underwent very critical operations with the hope that health and strength would follow, but after a further wait of four years, the last six months of which time my condition seemed most critical, I despaired of life itself, and for the first time in the nine years' experience I was ready to give up material means and to try Christian Science.

My husband secured the services of a faithful Christian Science practitioner from a distant city. She came to me at once and agreed to stay in the home three days. The first treatment was given about midday. The next day I arose at dawn and dressed myself, the first time in six months that I had sat up longer than five minutes at a time without heart failure followed by a few days of increased suffering. This morning was indeed the dawn of a new day to me, and I quietly walked downstairs and went about the rooms, taking delight in the inspection of our new home, into which I had been carried two months before but had never been able to be taken downstairs to enjoy it. I shall never forget the intense joy of that early morning hour; I had been a prisoner for nine years and was suddenly awakened to blissful freedom, for both literally and figuratively speaking all things had become new to me, and for the first time in my life I realized the real nature of God's children. No words can express the gratitude and the joy that filled the hearts of my dear husband and our two little girls, who as yet had never known the real companionship of a mother.

My healing was gradual, and at times seemed slow, but for this I was grateful even at first, for I realized that this gave me a better opportunity to study and to learn more of this wonderful truth which makes men free. I found the study of Christian Science so intensely interesting that I wished to prove every statement I read in Science and Health by some correlative statement in the Bible, and this I was always able to do to my entire satisfaction. As I grew in the understanding of what God is, of the real nature of His children, and of man's relation to God, I gained in health and strength. The first year that I studied Christian Science I gained fifty pounds.

I am still proving every day that in the exact proportion I turn from a material basis of thinking to the spiritual fact, do I demonstrate health, peace, love, joy, success, and harmony.—MARIETTA B. BROWN, Urbana, Ohio.

In the latter part of 1899, having been a sufferer for many years from throat and lung troubles, the liquor and tobacco habits having doubtless largely contributed to these ailments, my attention was called to Christian Science as a therapeutic agency. Despite the fact that I was wholly ignorant of the *modus operandi* by which the healing in Christian Science was accomplished, and, moreover, that I was partially under the influence of liquor when I had my first treatment, I was entirely cured of all desire for liquor during that treatment, and in less than six weeks I found myself well. During those weeks I had discarded glasses, which I had worn seven years to correct muscular defects; had given up tobacco, and had stopped using profanity and indulging in immoral story-telling. In other words, I found myself an earnest student of the Bible and Mrs. Eddy's text-book, "Science and Health with Key to the Scriptures," and was rejoicing in my wonderful healing.

Since my first treatment, Jan. 23, 1900, I have not taken a dose of medicine, but have relied wholly upon Christian Science to overcome all the discordant conditions that have come upon me. During this time I have suffered from what is known as typhoid-malaria, severe attacks of cold, and within the last two years I endured great distress from an infected condition of my left hand, which was caused, apparently, from a bruise. Under Christian Science treatment, however, the condition was entirely healed, and today I am writing this testimony on the typewriter with perfect freedom of my left hand. I have seen a number of instances where fingers were left quite rigid from a similar condition when treated in the usual way. The trouble was practically over in six weeks, so that I could chop wood and work in the garden.

Just before I took my first treatment in Christian Science, I had a severe attack of illness. During this time I was confined to my bed for ten days with a physician in daily attendance. I was so weak from the diesase and the heroic treatment which the disease was said to require, that I was obliged to use a cane, and could with difficulty walk a block for some weeks after being able to get out of doors. After my fifth treatment in Christian Science at this time, I was able to leave Fresno, Cal., go to San Francisco, and take a position at once in an office as stenographer and typewriter.

Later, I was again attacked in the same way, but apparently much more severely than before. Instead of having a doctor this time, I at once called on a Christian Science practitioner for help. For some hours I suffered severely, but suddenly I began to feel a change; I broke into a gentle perspiration, and was able to return to my hotel with the help of the practitioner, as I was quite weak after the intense pain I had undergone. The next day I remained in bed, and at about one o'clock the practitioner came and again treated me. That evening about nine o'clock a waiter brought me a hearty dinner, which I ate with great zest, and the following morning I ate my breakfast as usual and returned to work—well! This convinced me more than ever of the superiority of Christian Science over medical treatment. In the latter with not nearly so severe an attack I had been obliged to remain ten days in bed and was scarcely able to move around for several weeks; in fact, every one thought my days on this earth were numbered; whereas, under Christian Science treatment I had lost only one day from work, to which I had returned perfectly well, so far as that disease was concerned, and it was but a short time after when all my maladies, or physical ills, had been entirely overcome. Today, after nearly eleven years, I weigh more than I ever did and am enjoying perfect health.

If time and space would permit, I could fill pages with the benefits that have come to me through Christian Science. My testimony in behalf of Christian Science would not be complete unless I should tell of what it has also done for my wife and child. Several times my wife has been brought out of conditions which looked as though they would prove fatal, and our little girl had two attacks of the measles, which left no resultant effects, and was healed of a severe cold in a few treatments. We have truly found Christian Science an ever-present help in every time of need; it gives to us a certain knowledge of the ever-living and true God, who forgives all our iniquities and heals all our diseases. I sincerely trust that this testimony may be the means of causing some afflicted one to seek the truth as shown forth in the words and works of our Leader, Mrs. Eddy, the Discoverer and Founder of Christian Science.

WILLIAM AKIN COX, Vida, Ore

Digitized by Google

I first heard of Christian Science through the healing of my mother of diseases which no material means could cure. She had been ill for quite a long time, being partially paralyzed, and she was cured in three treatments. Naturally when I heard of it I wanted to know what Christian Science was, and I began to study "Science and Health with Key to the Scriptures" by Mrs. Eddy. I was healed of neuralgia eight years ago, after having received medical treatment twenty years for it, and I have never had it since. I was also healed of an internal malignant disease. I was in a very bad condition and knew that neither doctors nor medicine could cure me, so I went to Christian Science for help and was healed. After a few treatments I felt so much better that I thought I could help myself with what understanding I had gained; but I grew worse, so I wrote to the practitioner, who was over two hundred miles away, to continue the treatment. She treated me about six months and the healing resulted.

I had been studying other books, miscalled Christian Science, and took treatment from those who were not Christian Scientists, with no results but that I was growing worse all the time. True Christian Science, as taught by Mrs. Eddy, then came to me, and through it I found the needed relief. I feel very thankful to God, and am deeply grateful for the good I have received from our Leader's writings. I know that we cannot love her too much. Christian Science is a blessing to all mankind.

MRS. ELIZABETH E. HIXON, Wauneta, Neb.

[Translated from the German.]

In 1904 I heard of Christian Science through a relative who had been healed of a severe illness. I was not so much in need physically at that time, as I was mentally depressed on account of circumstances in my family which gave me sorrow and caused me to worry a great deal; but in reading the *Herold* attentively it soon became clear to me that through Christian Science my condition would surely improve.

In 1905 I had to move to Berlin, and there became a regular attendant of the services and meetings. Through these services, as well as through the patient help of a practitioner, this wonderful teaching became clearer to me, so that as a natural outcome I ceased to worry, dropped my cares, and patiently trusted to the guidance of God. Later on I also had various demonstrations in a physical way. Thus I was healed within a short time of severe rheumatism through Christian Science. A toe which had become crooked through this ailment straightened after one treatment, and one of the fingers which was bent regained its natural shape. On one occasion my right hand became very much swollen, so that I could not move it, but I had an absent and a present treatment, whereupon the hand became entirely normal. Finally a swelling at the roof of the mouth, which had inconvenienced me for several years, disappeared.

For all these blessings I give thanks unto God, and am also grateful to our faithful Leader, Mrs. Eddy, for showing us the way to divine Love and revealing to us the eternal One as the all-caring Father-Mother God.

FRAU ANNA MÜLLER, Berlin-Charlottenburg, Germany.

To say that I am deeply grateful for the knowledge which I possess of Christian Science, expresses in but a very feeble manner the love which I feel for our dear Leader, Mrs. Eddy, and for those true friends who first led me toward the light. For over three years divine Love revealed through our text-book has been my guide and protector. The first fruit of my study of Christian Science was the manifestation of improved health in my son, then aged two years, who, up to that time, was constantly being treated by a medical practitioner. Later, a so-called infectious disease was overcome instantaneously by the realization that nothing could harm "the spiritual thoughts and representatives of Life, Truth, and Love" (Science and Health, p. 582). After I had studied Christian Science for six months, the seeming pleasure derived from cigarette smoking was completely destroyed, inasmuch as the desire to indulge in this habit has never returned.

I am truly appreciative of the grand work which is being done in the Sunday school, and which is manifested in the lives of my two children, aged four and five years, who are able to demonstrate for themselves the power of divine Love, their Father-Mother God, to protect them. Our baby boy, nearly two years old, is another beautiful testimony to the efficacy of Christian Science, he never having been treated by *materia medica*.

It is my humble desire that I may express continually more and more of the Mind "which was also in Christ Jesus" and be able to follow our Leader as she has followed Christ.—IVOR A. HOPKINS, Swissvale, Pa.

I appreciate the coming of the *Sentinel* each week, and derive much help and encouragement from the articles and testimonies therein, especially as I have no one to talk with on the subject, for I know of no Christian Scientist living within twenty-five miles of my home; but I offer my experience for publication, hoping that it may be helpful to some one.

Fifteen years ago I was afflicted with severe stomach and bladder trouble; the muscles of my throat were also in such a condition that I could not swallow any solid food. Every material means which three skilful physicians could employ was of no avail, and the action of the heart became so weak that I experienced sinking spells. A friend then advised me to try Christian Science, of which I knew nothing; but as no hope for my recovery was held out to me from a medical standpoint, I decided to try it. Finally a Christian Scientist was consulted and took my case, and I rejoice to say that I realized benefit at once when the treatment commenced. I got up and attended to my household duties, ate anything I liked without any bad effect, and the following day I threw all my medicine away. Since that time I have relied wholly on Christian Science for my every need.

Occasionally I have had to call on a practitioner for help over rough places, but through her loving advice and the reading of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and our other Christian Science literature, I have gained an understanding which has enabled me to make many beautiful demonstrations. For these proofs of God's care, and also for an enlarged understanding of the Scriptures, made possible by the divine revelation through our Leader, I am most grateful.

MRS. MINNIE EAMES, Wardsboro, Vt.

I am very grateful for what Christian Science has done for me and thankful that I can use and prove its teachings. I am now a young woman, but I was only sixteen months old when I had my first treatment. I have received help many times, one of which I will mention. My hands were covered with warts, two of which were very large and made me very unhappy, as everybody talked about them, telling of remedies for them; but I knew that nothing would rid me of them but the truth. The school children were afraid to take hold of my hands, and even the teachers seemed to shrink from me, which mortified me very much, and to have any one speak of it made me feel worse.

I had been treated by several Christian Science practitioners and had worked for myself for about three years with no sign of improvement so far as my hands were concerned, but I held fast to the truth, which is more powerful than any material means, and continued to declare that God's child

Digitized by Google

is perfect, without spot or blemish. I also knew that the truth once spoken will do its work, even if mortals do not see it at first. In 1908 I went to a lecture on Christian Science which appealed to me very much, but I never once thought of the warts. The next morning the largest one was gone, and I did not know when the last one went. I am, however, very thankful to say that my hands are free of them, as is my consciousness of the hateful, hard thoughts which seemed to manifest themselves in this way.

People all knew I had this annoyance, but they did not know when it was gone, for mortals are more quick to see error than to recognize its disappearance. I wish to say again that I am very thankful to God for this truth which our dear Leader, Mrs. Eddy, has helped us to understand.

PEARL TYLER, Bellingham, Wash.

In gratitude to God for Christian Science, I wish to tell my experience at the birth of my youngest child, April 20, 1909. I had been treated by a Christian Scientist a short time prior to this, so I asked my husband to telephone the practitioner, and also a doctor. Just forty-five minutes after this the child was born. The birth was painless and there were no discordant after effects, except a slight tenderness. The doctor did not know that I had Christian Science help, so he left instructions as to what I should do; but, knowing what the medical law is concerning those things, and the doctor's fears, I was up the next morning and wrote to the practitioner. When the doctor returned he found me all right; he did not understand it, but I did. After I was up and dressed, I told my husband, and he too was astonished at this wonderful demonstration. I was willing to trust to the "great Physician," as this was not the only time God had helped me; and I know He always will if we trust Him fully.

MRS. ROSA E. COLLUP, Hereford, Texas.

Christian Science healed me, in three weeks' treatment, of asthma with a complication of stomach and heart trouble of fifteen years' standing. I had tried almost every remedy that was ever heard of, but each one would help me for a little while and then I would be as bad as ever. For years I never had a full night's sleep; night after night I would sit up in bed, till I would drop to sleep in the morning from sheer exhaustion. I tried a great many physicians, and every device, no matter how expensive, that was advertised to heal this disease; but nothing did me any good, and at times an opiate had to be resorted to. My life was an awful burden and there seemed no possible escape. This lasted for fifteen years, and during this time I was under constant medical attendance, and spent thousands of dollars for this and for drugs, etc.

When Christian Science was brought to my notice by a friend, I resented it at first; but after a very hard sick spell, which left me a complete wreck, I thought I would like to try Christian Science and see what it would do for me. My family wanted to send me South for a change, but I asked them instead to let me try this treatment, and see if it would help me. They decided to do so, and in just three weeks I was a well woman, all made over new by the power of divine Love as revealed in Christian Science, through "Science and Health with Key to the Scriptures" by Mrs. Eddy. That was seven years ago, and today I am perfectly well, as hundreds of people can testify to and vouch for the truth of this statement, for I have lived in this county most of my life. When healed through Christian Science, I threw away every material remedy I had, and rejoiced in my freedom. I might mention that previous to my taking Christian Science treatment I was unable to eat many things or to go where I pleased, but now I can eat anything I wish and travel with perfect comfort.—MRS. MARIA J. MORSE, Santa Clara, Cal.

After a month's struggle with a form of illness which to sense seemed incurable, I was thoroughly discouraged, but when I entered the Christian Science reading-room one afternoon, a practitioner was voicing the truth, and on leaving the room I realized that the sense of discouragement had left me. Two days later I called on the practitioner for help, and was healed in two weeks, for which I am most thankful.

MAGGIE MILLIGAN MOTTERSHEARD, Charleston, W. Va.

[Translated from the German.]

Sincere gratitude impels me to testify to the blessings which I have received through Christian Science. For years I suffered with organic heart difficulty and a nervous affection. I had been treated by many physicians, none of whom were able to relieve me; on the contrary, my ailments kept growing worse. Last year I lost weight alarmingly and grew steadily weaker, until it became almost impossible for me to work or even to walk, and the physicians then gave me up. Severe as the physical suffering was, my mental suffering was still greater, for I could believe in God no more; and yet God was very near, though I did not know it then.

I thus experienced the truth of the saying that "man's extremity is God's opportunity." A lady called my attention to Christian Science, and although I was rather skeptical at first, I felt a sense of trust after I had had a talk with a Christian Science practitioner, who lovingly explained the truth to me. A sense of infinite bliss came over me, and my troubles vanished as if they had never existed. I might say that my healing was instantaneous. I am now a happy and contented man, and have found in Christian Science a religion which meets my heart's desire. I will thank God all the days of my life, and be ever grateful to our revered Leader, Mrs. Eddy.

WILHELM DICKOW, Mariendorf, b. Berlin, Germany.

I am indeed grateful for all the benefits I have received through the understanding of Christian Science. I have come to know that God is indeed a merciful God, a "friend of the friendless" (Miscellaneous Writings, p. 399). I was without hope of ever being well in this world, having been miserable from the age of fifteen. For nearly twenty-five years I had depended upon *materia medica* to be able to perform my daily tasks, and when I first heard of Christian Science I felt as if a light had been shed on me, and this was proved true.

I am thankful for the health I now enjoy, and even more for the spiritual blessings. I have lived here over four years, and in that time have met only one person who had any interest in Christian Science, but I had the pleasure of attending a testimony meeting in Wallace, Idaho, and I have been to the services in Spokane, Wash., several times. I have, however, been blessed with many wonderful demonstrations of Truth's power. I have many of the publications, the *Sentinel* and *Quarterly*, and I thank God for Mrs. Eddy and her wonderful book, "Science and Health with Key to the Scriptures." I feel God's guiding hand in all I do, and I know the impersonal guidance of Truth is All-in-all.—MISS ELLEN M. KNAGGS, Harrison, Idaho.

I am truly grateful for what Christian Science has done for me. While at a friend's house I was jumping with some other girls, late in the afternoon, and all at once I was taken very sick and had to go to bed. I had severe pains and was constantly vomiting. My mother was sent for and she gave me treatment in Christian Science, and by her assistance I was able to walk home, which was about six blocks. The pain continued until next morning about three o'clock, after which I went to sleep. I slept until ten and felt no

Digitized by Google

more bad effects. The suffering was due to a serious injury to the knee and the pain was very severe. I am thankful for this blessed truth which had the power to make me free.

PAULINE VOIGHT, Denver, Col.

I gladly give my testimony to the healing power of God, ever-present divine Love. Some two years ago I was perfectly healed in five days of a severe injury, through absent treatment. It is now over ten years since I was healed by reading Mrs. Eddy's book, "Science and Health with Key to the Scriptures," of a chronic bladder trouble. I am indeed grateful for all the blessings which have come to me through Christian Science.

MRS. LYDIA A. STEPHENSON, Mount Vernon, N. Y.

I became interested in Christian Science over two years ago, and wish to express my gratitude for what it has done for me. Last winter I had a severe attack of illness, and to mortal sense the suffering was intense. I sent word to a Christian Science practitioner, and within eight hours the pain was all gone and I felt like a different person. I continued to improve, and within two days was able to return to my work.

M. E. MCGOVERN, Atlantic City, N. J.

[Written for the *Sentinel*.]

WHAT WOULD YOU GIVE?

CASSIUS M. LOOMIS.

WHAT seekest thou, my friend? You say
That you are ill, have lost your way
Across the thorny lea;
And that you crave your place again
Among the busy haunts of men
From pain and sorrows free.

The end you seek is just; but wait!
Suppose anon the pearly gate
Of Love should swing aside
And give you entrance to a wealth
Of conscious joy and supple health,
And more than these beside;

What would you give? Think twice. You say
Your hopes grow less from day to day
And ills have come in twain.
What would you give from out your store
If Love should open wide your door
To perfect health again?

To cast aside your burdens great,
To meet with love another's hate,
And thus a new life live;
To raise the dead, to heal disease,
To do still greater things than these;
What would you give?

Your all, you say? The pangs you feel
So long have mocked your heart's appeal
For oft implored release?
Lone child of earth, do you believe
That God is Love? Then cease to grieve,
And go your way in peace.

His perfect child is never ill;
Your own and not the Father's will
Has filled your night with fear.
Lift up your heart in prayer, and know
That heaven, with healing warmth aglow,
Is present now and here.

FROM OUR EXCHANGES.

[James L. Snowden, D.D., in *New York Observer*.]

The greatest dreamer this world ever saw was Jesus. He was no local prophet or parochial schoolmaster, much less was he a mere visionary or fanatic, but he was the prophet of humanity and Saviour of the world, who saw sanely into the heart of time and eternity. He had a vision of redeemed humanity compared with which all human dreams of conquest and empire, education and art, democracy and socialism, are petty programs and futile schemes. He had a vision of a kingdom wide as the horizon, long as the centuries, lofty as the stars, white as the holiness and strong as the omnipotence of God. This vision is now winning its victory over the world. It has come down through the ages, unhinging empires and throwing the stream of the centuries into new channels, uprooting slavery, undermining political despotism and putting the people into power, giving liberty of thought, and unshackling religion and giving freedom of worship. It is stopping war, breaking down international barriers of prejudice, and drawing and binding the nations into universal peace and brotherhood. It is ever penetrating more deeply our Christian civilization and healing its sores and solving its problems, and it is sending its light and life out over the world to dissipate its ignorance and superstition, cure its sins, answer its cry for the Father, and build all its kingdoms into the kingdom of our God and of His Christ. This ideal is the grandest and noblest vision that can touch our eyes with light and kindle our minds and hearts with aspiration and enthusiasm. Men may regard it as a fine fancy or foolish fanaticism, but it has in it the omnipotence of God, the stars in their courses are fighting for it; it is even now overcoming the world, and this vision will come to its final and glorious victory when the redeemed return to the heavenly city with songs and everlasting joy. Let us now share in the vision that we may also triumph in the victory.

[Rev. Roland D. Sawyer in *Christian Work and Evangelist*.]

"No man knoweth . . . the Father, save the Son, and he to whomsoever the Son will reveal him." Jesus felt he was the truer interpreter of God than had been any other. He is the one sent from God. He is the humblest and lowest of men, yet he calmly makes these stupendous claims. Because he stands closer to God than others, he can show that God to men; and they can never find Him, save as in the way he points out. And the testimony of nearly two thousand years confirms what Jesus said that day. God is to be found only as Jesus showed us; there is no other method of approach than that which the Nazarene revealed to the world. And it was on the basis of this that Jesus went on in another verse to say, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." "Take my yoke upon you, and learn of me; . . . and ye shall find rest." Jesus was right, and the seeking souls through the ages have found a safe resting place in him as their Master, Messiah, and Saviour.

[Harriet Russell Pease in *Christian Register*.]

The readiness to overlook and forget non-essentials of opinion and to cooperate with every one who is endeavoring in any way to improve the spiritual condition of the world, is the most hopeful, the most wide-spread aspect of our times. There are still left in our new world those who differ in creed and love to cherish their own, but more and more these and all lovers of righteousness are working in unison. In sectarian spheres, too, the emphasis is more and more being laid on doing the will of the Master rather than on naming his name or defining God's nature and man's estate. In this the church is surely following and working

Digitized by Google

out Jesus' own teaching. "By their fruits ye shall know them." In its philosophical and in its practical expression, then, the trend of religious thought today seems to be in accord with the progress of the ages, toward simplicity amid complex conditions, toward unity in the midst of diversity, toward harmony of the human and the divine.

[*Christian World.*]

The present conflict between faith and unbelief, so bitter, so distressing to many of us, is really following the same law and toward the same end as that social, economic fight which is now making so terrific a clamor. If we consider the religious history of the last fifty years, we find it—for the western world at least—a fifty years of such doubt, such adverse criticism, such determined and flat denial as in no fifty years before of the history of Christendom. The literature of this vast negation fills whole libraries. We have read a good deal of it, and we find it the most optimistic of studies. It has been such a guide, such a leader, such an inspirer of faith. It has made faith twice as valuable as it was before, because twice as wise, twice as sure of itself. It found the religious faith of Christendom largely a child, and it has made it a man. It found it ignorant, attaching itself to falsities, to credulities, to beliefs contrary to fact and opposed to progress. It was a faith that confused religion with ecclesiasticism, and man's infantile conceptions with God's eternal truth. There was so much that was true in the denial, and the true denial has now become part of the affirmation.

[*Watchman.*]

Today the only religion that can appeal to the good judgment of people and satisfy their aspirations is vital, spiritual, moral, and practical religion. Formal, established religion, however supported by kings or priests, cannot meet the needs of many individuals, and all over Europe and in Russia the worshipers of God in spirit and in truth are springing up and spreading abroad. It is the Biblical standard of true religion and the larger bestowment of the spirit of God upon this age which have made these changes and will continue to make them. It is true that freedom and individuality produce great divergencies and give opportunity for all kinds of fads in religion, yet there is more genuine, earnest, active, practical missionary religion in the world today than ever; and the rulers of the world, especially where enlightened public sentiment prevails, are molded and impressed with a sense of responsibility to be religious themselves.

[*Outlook.*]

The punishment of sin begins the moment it is committed, and no man or woman ever escapes the full penalty. For the punishment is within, not without; its certain and most appalling form is not arrest, trial, and legal penalty, but the disintegration of the moral nature of the man or woman who has sinned. . . . To see a man slowly but surely die at heart, losing one by one the great faculties and qualities of his nature—moral sense, spiritual vision, integrity, honor, peace—is one of the heartbreaking experiences of life. So visibly dies the man who gives himself to any appetite, passion, or unlawful desire; to selfish ambition, to greed, to dishonesty, to any kind of lie.

[*Universalist Leader.*]

What we need more than brotherhood writ large in our creed is brotherhood lived large in a world where it is our duty not only to enthrone justice but to temper justice with love. Martineau said of the gospel of Jesus: "If man had said it all before, man had not lived it until now." The world is looking for the church that can so inspire men that they will live the gospel of Jesus Christ.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

For some time the postage required for subscriptions outside of United States territory has exceeded the amount added to the regular subscription price for this purpose, and an increase in rates sufficient to cover this deficiency is now deemed necessary.

Beginning April 1, 1912, therefore, the rates on all subscriptions outside of United States territory will be as follows: For Canada, *Journal* $2.25, *Sentinel* $2.45; for all other countries, except those to which the domestic rate applies, *Journal* $2.65, *Sentinel* $2.95.

Renewals for all subscriptions terminating before April 1, 1913, and received by us prior to July 1, 1912, will however be accepted at the old rates.

The lecture entitled "Christian Science: Its Principle and Method," by Bicknell Young, has been translated into both Swedish and French and is now ready for sale in pamphlet form. Another French translation recently made is the lecture "Christian Science: The Comforter of Promise," by Frank H. Leonard, which is also printed in a new pamphlet in French only.

A new pamphlet has recently been issued entitled "Christian Science *vs.* Finite Sense," a lecture given by Francis J. Fluno, M.D. 32 pages.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large sized book), single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $1.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.13 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 43 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.20. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the current month unless otherwise specified, and include all issues for the month named as expiration date on the wrapper. XII indicates the year 1912; XIII, 1913. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $2.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25— 0: 5 s.;	24.;	Mk. 5.20;	F. 6.45
2.25— 0: 9 ;	3 ;	9.50;	11.60
2.50— 0: 10 ;	3 ;	10.80;	12.85
4.00— 0: 16 ;	5 ;	16.80;	20.60

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

In a special message sent to Congress by President Taft, advising more economy and better efficiency in conducting the affairs of the government, he says that ten million dollars is wasted every year by paying two persons for doing work which ought to be done by one. Mr. Taft finds that eighty million dollars is spent each year on first and second class postoffices and he proposes that four million five hundred thousand dollars be saved in salaries alone by abolishing the office of assistant postmaster and paying the postmaster twenty per cent more than the assistant received. He also proposes that the revenue cutters be no longer maintained as a separate organization, but that the vessels be distributed among the departments wherever required.

The governors of the states as a body have filed their solemn protest with the supreme court of the United States against the proposition to strike down state railroad rates as interfering with interstate commerce. They respectfully called upon the bench, having in especial charge the "covenant of the Union," to see that the boundaries of the states remain. The protest took the nature of a brief, filed as "friends of the court" by a committee of governors. The brief was submitted in connection with the "state rate cases," which had been set for oral argument. The brief was of interest, coming so soon after the recent decision of the interstate commerce commission that railroads submitting to low state rates must give similar rates on interstate business.

Three hundred and thirty-five thousand seedling pines were set out in the Blue Hill reservation near Boston last year by the metropolitan park commission. Next year the plans call for an even greater number. Year before last one hundred and ten thousand were set out, and the total up to the year 1911 was four hundred and sixty thousand. The total acreage of the reservation is, in round numbers, forty-seven thousand. The pines, two-year-old seedlings, are set six or eight feet apart in locations only which are especially favorable for their growth or where it is desirable, for landscape or forestry purposes, that they should replace inferior trees.

Broad changes in the law relative to the construction of tenement houses is called for in a bill on which the Massachusetts legislative committee on public health has filed a unanimous favorable report. The bill provides that no tenement house hereafter erected, intended to be occupied by two or more families, shall occupy more than sixty-five per cent of a corner lot, nor more than fifty per cent of any other lot. Every such house must have its side walls at least ten feet from any adjoining lot, and must be twenty feet from the wall of any other building, and back yards shall have a clear depth of at least twenty-five feet.

April 10 was the date for the hearing on the Underwood resolution, providing for the naming of a joint committee of Congress to consider federal participation in road building. The committee thus brought into existence would "be authorized and directed to report to Congress all information obtained from such investigation, together with recommendations as to the advisability of the Congress granting national aid to the maintenance and building of post roads and national highways in the United States, and to make recommendations as to the proper legislation to be enacted by the Congress."

By a sweeping opinion the supreme court upholds the constitutionality of the Missouri antitrust statutes and affirmed the decision of the supreme court of Missouri in ousting the Standard Oil of Indiana and its subsidiary corporations, the Republic Oil Company and the Waters-Pierce Company, from doing business within the state. The fifty-thousand-dollar fines imposed upon each company by the Missouri courts were affirmed. The suit was the biggest trust suit so far undertaken by Missouri. It began on March 29, 1905.

Power of the interstate commerce commission to force information from steamship lines as to their earnings has been affirmed by the supreme court. The proposed scope of the commission's inquiry into the lake steamship business to get information for adjusting rates was approved and the commerce court overruled. In the decision Justice Day declared that the commission could not use the figures to regulate intrastate traffic, but for information to use in regulating interstate commerce.

Application for a rehearing of the patent monopoly case has been made to the supreme court by the government through Attorney-General Wickersham. The government asks leave to intervene in the case, declaring the court's recent decision (participated in by only seven of the nine justices) sustaining the right of patentees to restrict the use and price of their products, thus creating a patent monopoly, is of "gravest import to the people of the United States."

The government has won the first step of its fight to invalidate twenty-five thousand deeds of Oklahoma lands executed by Choctaw, Cherokee, and Seminole Indian allottees by a decision of the supreme court which ordered the lower courts to take jurisdiction of the government's ouster suits against the persons who bought the Indians' lands.

In the interest of small cattle and sheep growers, President Taft has issued an order designed to break up the monopoly maintained by cattle and sheep kings on springs and small streams in the great Salt Lake desert in western Utah. The order sets aside these oases and streams as public watering places.

Appointment of a commission to investigate the possibility of developing the Connecticut river is provided for in a bill reported in the Massachusetts House by the committee on harbors and public lands. The bill carries with it an appropriation of ten thousand dollars for the use of the commission.

Action is to be taken by the government against steamship companies operating to the far east through the Suez canal. The companies are charged in the bill with pooling freight rates and rebating to the concerns who ship only by their lines, in violation of the Sherman antitrust law.

The Panama-Pacific international exposition at San Francisco, Cal., will open on Saturday, Feb. 20, 1915, and close on Saturday, Dec. 4, 1915, after a season of forty-one weeks.

International.

A Munich message to the New York *Herald* states that Count von Podewils-Duernitz, until recently president of the Bavarian cabinet, and Dr. von Borscht, over-burgomaster of Munich and privy councilor, left Hamburg with the study commission which will tour the United States in the interest of the German museum for natural science and technique at Munich. The museum is about to erect a library building, for which the commission will seek ideas in the United States. The commission is headed by Imperial Councilor Dr. Oskar von Miller and Prof. W. von Dyck, privy councilor, and includes an architect, a library expert, and three museum engineers.

The treasury have approved a scheme for utilizing the building of the London Institution in Finsbury Circus for a school for oriental languages in London. The site is one of the very finest in the city of London. The government has promised to ask Parliament to grant twenty-five thousand pounds for the reconstruction of the interior to suit the present purpose and for an annual income of four thousand pounds toward the maintenance of the school. The corporation and city companies will provide all the other necessary funds.

The figures of the miners' balloting in England amount roughly to one hundred and sixty-eight thousand for a return to work and one hundred and eighty-six thousand against. Under the clause which necessitates a two-thirds majority to create a strike, the federation directed a return to work.

China has but a single direct tax, and the fact of its being the main source of revenue of the government for internal improvement constitutes its principal resemblance to the single tax system which is advocated by some in the United States, according to Dudley Tyng, a missionary to China.

In England the women's suffrage bill was defeated in Parliament by a majority of fourteen. The debate was an interesting one in which all party bonds were set aside.

Industrial and Commercial.

Since the "blue-sky law" has been in force more than seven hundred applications have been made for permission to sell stock in Kansas, but only fifty companies have obtained permission. The others were rejected as fraudulent or doubtful. Bank Commissioner Dolley estimated that in the year the law has been in force it has saved Kansas investors upward of two million dollars. Before such stock companies can do business in Kansas they must submit their plans to a commissioner.

Professor Zowski, head of the department of hydraulics at the University of Michigan, has designed a turbine which, it is said, exceeds by nearly fifty per cent the power of any other turbine ever built. The new wheel, the last of four recently designed by Professor Zowski, was tested at the United States testing flume in Holyoke, Mass., and recorded an efficiency of 89.2 per cent.

The newspapers of the week of March 17 contained the announcement of the discovery of a billion tons of iron ore in Fulton county, Pennsylvania, specifying red, brown, and carbonate ores, ranging from fifty-seven to sixty-three per cent of iron, and found in Dickey's mountain, Lowrie's knob, and the Meadow ground. These reports are said to have been greatly exaggerated.

Exports of fruits and nuts from the United States aggregated more than two hundred million dollars in the last twelve years, reaching their highest record in the calendar year just ended, with a total of twenty-nine million dollars, or more than three times as much as a decade earlier.

On July 1 the New England Telephone and Telegraph Company will put into operation a pension system affecting all of its twelve thousand employees.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

CONSECRATION.

BLANCHE HERSEY HOGUE.

THE human mind has a way of scattering itself in many directions. It pays attention to the things most interesting for the moment or for the hour. God demands, however, that the desire for righteousness and the search for understanding be instant and constant. Here there can be no wandering. Eager and importunate is he who is consecrated; devoted and single of purpose if he would attain. God comes first in the affections of him who is truly a Christian, and no appeal of the world can dissuade or delay him whose intent is fixed on spiritual growth. The thing the Christian loves most keeps most in his thoughts, and gladly and thoroughly he serves it.

As students of Christian Science we are individually in varying stages of consecration. To a greater or less extent we are still serving the world, still in boudage to its time-consuming demands. Honest analysis brings us to admit, then, that we are yet somewhat given to worldly doings, even with our present measure of consecration to God. We all speak of "social dissipation," for instance, admitting by the term the nature of much that takes our time. Human affairs go on largely without the remembrance of God, yet as God is better understood His presence will come into our affairs; our ways will change and the manner in which we spend our time will change. Many of us lament that we find so little time to ponder the ways of God, yet at the moment we may be engrossed in something which a little more courage and purity of purpose would eliminate. When worldly distraction asks for valuable hours out of a precious day, we can always test the worth of it by deciding whether it will contribute to the spirituality of ourselves or of any one else. If it does, God speed it! But if it does not, we shall by renouncing it surely gain greater hold upon the things to which we are truly consecrated.

The least wise of us will admit that an hour spent with one of the old prophets, with Matthew or Luke or John, with the preaching of Paul, or with the words and works of the master Christian himself, in the light which Christian Science sheds upon it all, is of hundredfold more value than anything the human mind can devise through which to entertain itself. The honest labor necessary for many of us, in our homes or out of them, limits greatly the time we can spend as we choose; and the decision concerning the holiday hour—whether it shall contribute to our spiritual growth or to our personal pleasure—determines in great measure our progress heavenward. Christian Science is not here to keep us in good trim for material enjoyments or for intellectual excesses. It comes to spiritualize our thinking; and spirituality should cost us something. Spiritual knowing is not ours by accident or by good fortune. It never "happens." It comes through the thorough systematic work involved in cherishing Godlike thoughts and in casting out material thoughts; it appears only as self-seeking, with all it includes, disappears. And when we really desire spirituality above all else, we shall cease to pamper the intellect and the appetites, as fast as we discover the nature of these things in ourselves and set earnestly about seeking first the knowledge of God.

Worldliness, however, assumes so many forms and the situation of all mortals is so complex, upon the human side, that no individual can be a law to another in these matters, nor can one judge the mental state of another. Frivolity is by no means confined to any special group of people. Persons called society folk may be far less worldly at heart than onlookers who lack the same opportunities; those of us whose circumstances deny us power and position might not be beyond misusing or overvaluing position if we had it. Duties of station and relationships and consideration for the rights of others may make the same action unselfish for one that is wholly a matter of self-seeking in another. The worldling is he who loves the world, not necessarily he who has position in it; he who craves worldly favors, not just he who has them. So it is a question always of the intent of the heart rather than a matter of what the world may call a high or low station; from every point of view it is a thing which cannot be safely judged by appearances.

This remains, however, that the student and exponent of the law of God must know where he himself stands in this matter of consecration to God's work. The question resolves itself, perhaps, into this: whether we are still indulging an undestroyed appetite for what is called social and intellectual dissipation, or whether we are unselfishly conceding to situations not at once in our power to abandon. If the former, our thoughts need honest diagnosing to reveal which master we are serving. If the latter, we are in the way of progress and the outward worldliness will fall away as the pure purpose comes to possess the field. On page 138 of "Miscellaneous Writings" Mrs. Eddy says: "The detail of conformihg to society, in any way, costs you what it would to give time and attention to hygiene in your ministry and healing." Let any of us contemplate our possible mental condition if in our ministry we should give time and attention to hygiene, and we may easily detect the divided state of thought from which our Leader calls us, in the social life as in all matters.

It is not to be supposed, of course, that happy associations are to be given up as our thought of social life is purified. The dictionaries define society as "fellowship, companionship;" "any body of persons connected by acquaintance, friendship, or neighborhood, or associated for a common object." So good will in common interests will very likely always draw us together and our fellowship will happily continue, but the character and quality of our association will change as God enters. Just as children grow so interested in other things that the dolls and marbles once so absorbing no longer attract them, so he who is growing spiritually loses his appetite for selfish or frivolous pleasures. The understanding of Truth soon makes one so clean at heart that in social relations he is free from every disposition to speak or to do evil; so high-minded that gossip and criticism and petty feeling no longer seem "good form."

This education will continue, and as God-governed think-

Copyright, 1912, by The Christian Science Publishing Society.

Digitized by Google

ing displaces material desires and aims, many unworthy things which now attract us will fall away and our activities will bring us together for one purpose, namely, to establish "the beauty of holiness" in all our ways. Already the students of Christian Science as they assemble in their church services are proving that they can meet together in the right thinking which brings them in its measure into the presence of God. And when all our society, all our fellowship, shall be with this motive and of this character, when we come together because the law of God draws us one to another to glorify and exalt Him in human affairs, then frivolity and selfishness can no longer claim our time or mark our activities with waste and wickedness.

Surely this is the ideal for all Christians; and each must take his steps toward the ideal uncriticized and unmolested by his neighbor. All who desire peace must some time turn from every phase of material indulgence to a single and sincere search for the things of God. And as fast as the ideal is worked out, Christian healing for all our sins and follies will be found multiplying to us peace and health. This change of thought and attitude cannot make a hermit or a recluse of the Christian; he grows, in fact, more closely related to the affairs of men because he can help bring to human activities a right remedy for the folly and the pain. The world cannot be accepted as it now appears, neither can it be abandoned; it must be transformed, and great responsibilities rest upon him who already sees the coming of "a new heaven and a new earth."

On page 177 of "Miscellaneous Writings" Mrs. Eddy says: "Never was there a more solemn and imperious call than God makes to us all, right here, for fervent devotion and an absolute consecration to the greatest and holiest of all causes. The hour is come. . . . Will you give yourselves wholly and irrevocably to the great work of establishing the truth, the gospel, and the Science which are necessary to the salvation of the world from error, sin, disease, and death? Answer at once and practically, and answer aright!"

THE LOVE OF LIFE.

LUCY HAYS EASTMAN.

Most mortals believe they love life, while some wish they had never been born; but all, whether life appear lovely or hateful, cling to it most tenaciously. It is only when the love of God, good, supersedes this life-grip of self-preservation that human beings voluntarily surrender their false sense of life to lay hold upon "life eternal."

Yet, after all, do mortals really love or hate life as much as they sometimes believe they do? He who takes life for granted and, clapping his hands, exuberantly exclaims, "How joyous is life!" may at the same moment seek to destroy it as he treads upon the worm or slays the deer. On the other hand, he who regards life bitterly and yet feeds the starving dog and allows the serpent to wind his crooked way unharmed, is manifesting a genuine love of life despite his belief to the contrary. These conflicting and erroneous aspects of existence are produced from humanity's ignorance as to what and where life really is. Jesus declared that to know God is life eternal, while our revered Leader definitely teaches that God is the only Life, and "the only intelligence of the universe, including man" (Science and Health, p. 330). To love or to hate that about which one has a mistaken concept, is to love or to hate that which may not exist. In other words, elusive theories and mistaken suppositions that crystallize into tenacious beliefs about life, unless haply held in abeyance by faith until corrected by spiritual understanding, beget unreal love for or unreal hate toward—not life—but these self-same beliefs about life. What is material living but sin, sickness, and death? Can we, then, really love it? He who believes that he does is more deceived than he who still believes in mortality as real and hates his own false sense of life.

The only remedy for such a crude outlook upon existence is found in the Word of God, where we learn that God is Life, and that to understand God is to gain eternal life. To understand Love is to live, and *vice versa*. It is neither difficult to live for Love's sake nor to love for Life's sake when we realize that there is but one infinite, indivisible Life, which is wholly good because there is but one all-inclusive God. This being true, it follows that all manifestations of this Life are manifestations of good. Every one, from the most ignorant barbarian to the wisest man, loves good spontaneously (hence life), each in the degree that he perceives it. Even the criminal sheds tears before the gladsome purity of a little child's smile. Indisputably, a selfless, radiating love for noble living will be universally felt as Life is understood to be God and therefore wholly spiritual. Because God is invariable Principle, all that manifests Him is obedient to the government of divine law and is perpetually harmonious. The rhythm of immortality and love flows through the activities of every individual idea; hence to be conscious of Life is to be conscious of harmony.

This realization of the divine Life enables us to see that it is not the objects of material sense that are to be dealt with, but rather those materializations of thought which would pervert spiritual ideas into counterfeit forms. If we would but study and cling to spiritual realities as persistently as we study and cling to material existence, our tale of woe would speedily become an anthem of gratitude for the goodness of Life. So, too, would the beliefs of *ennui* and self-pity, which repiningly, unresistingly seek oblivion in the darkness of "the last enemy," give way to the inspirations and joys of the realization of Life eternal.

It is natural to love life as spiritually understood because its unfoldment is forever beautiful, good, and true, whereas the tenacious grasp upon mortality is unnatural and abnormal, since its outcome is in sin, sickness, and death. So long as life is supposed to be incased in matter, dependent upon it for manifestation and believed to be subject to its transitory nature, just so long will the idolatrous love and the killing hate of mortal sense deprive humanity of the blessings attendant upon the understanding and love of the spiritual life. It was this false, selfish sense of existence that was doomed to dust, even as the mistaken sense that two times two are five is doomed to be unsaid because of the fact that two times two are four. Is this not why we have been so plainly told that "whosoever shall seek to save his life [a material sense of life] shall lose it [lose the true idea of Life]; and whosoever shall lose his life [overcome materiality out of love for spirituality] shall preserve it [gain the true understanding of Life]"?

How surely did he who knew and loved the Life divine as none other, prove his love by voluntarily offering up the human concept of life, not because of fear or inability to preserve it, but in order that he might give life more abundantly through the presentation of the impersonal Christ-idea! The sustaining truth which enabled human thought to gain the consciousness of the great "I AM" by learning to love and understand life, was the bread which Christ Jesus gave to save humanity from spiritual hunger. When we trace the effects upon the world of the Master's giving of his life for men, we can understand in a higher degree the blessing of loving Life and of living Love's precepts.

Mortals must indeed awaken from the dream of material existence. They must depart from the wells out of which one drinks but to thirst again, in order to seek, by the light of Christian Science, that "well of water springing up into everlasting life." Then will the tumult of the battle of human life—the life that is called at once a burden and a joy, so valiantly fought for and so cruelly attacked—forever cease. Then will those who have set their love upon the One who knows no life divided from Himself, be shown the satisfaction of that spiritual sense of life which robs the grave of victory and reinstates immortality as a demonstrable fact.

CHRISTIAN SCIENTISTS AND THE MONITOR.

DAISY CYNTHIA WOOD.

MRS. EDDY says: "Are we really grateful for the good already received? Then we shall avail ourselves of the blessings we have, and thus be fitted to receive more" (Science and Health, p. 3). This may be applied to our attitude as Christian Scientists toward our daily newspaper, *The Christian Science Monitor*. As an impersonal missionary, the *Monitor* is silently proclaiming the gospel of Truth. It is reaching out to all nations and peoples, uniting them through mutual interests in the bonds of universal brotherhood.

If we are really grateful for the good we have received, we shall cease to speculate upon what to our sense might seem improved conditions, which may not yet have become practicable. We shall cease to admit the thoughtless argument of stale news by knowing that news which has for its foundation the statement of truth is constructive, redemptive, and that such news is constantly increasing in value. It can, therefore, never become stale. Is not the realization of this fact a fitting preparation that we may receive more? Let us rejoice, then, in the present attainment of the *Monitor*, in the good already accomplished. Then, through the spiritual unfoldment which results from gratitude and from availing ourselves of present blessings, we shall find new avenues opening before us. Haste to absorb sensational so-called "news" the minute it is off the press, regardless of its truthfulness, is far from being a normal view-point. The *Monitor* maintains a dignified standard as a universal compendium of clean information, of educational facts, and these do not change from hour to hour with every "extra" edition.

Surely the duty of financially supporting this splendid exponent of better things for all, cannot be lightly regarded, when we realize that by so doing we are becoming shareholders in the greatest reform movement the world has ever known. Our investment brings returns, not yearly or monthly, but continually. These dividends are spiritualized thoughts manifested in health, happiness, and harmony. Only ignorance of the blessings to be received, or the argument, entertained, of self-justification, claiming, "I have done all I can," could prevent us from becoming true supporters of the *Monitor*—a great factor in the world today for establishing the brotherhood of man.

More than this, we should not be forgetful of our duty in regard to the mental support of the *Monitor*. If we are reading each day's issue, and are grateful for the good therein received, we can prove our gratitude by passing along each copy, that others may avail themselves of the same blessing. If we are doing this, is it with the full realization that the *Monitor* is the result of Christian Science demonstration? Such grateful recognition, expressed, will speedily disarm and destroy any seeming sense of prejudice against the *Monitor*, and the potency of right thought will soon cause it to be sought by all the world.

There must never be a sense of waning enthusiasm regarding the *Monitor*, owing to the seeming lack of time to read it. If such be the case, are we really grateful? Are we responding in joyous obedience to the wisdom of our Leader, when she stated, through the columns of the *Sentinel* (Nov. 21, 1908): "My desire is that every Christian Scientist, and as many others as possible, subscribe for and read our daily newspaper"? It has been said that students of Christian Science need to develop a higher sense of the human in order to reach the divine. This is exactly what the *Monitor* is doing for us as Christian Scientists. It is unfolding the human by giving us a wholesome, practical, constructive concept of all the true activities of the world. It is making us intelligent, well-informed men and women. It is awakening us to the demands of sincere, progressive citizenship. It is causing us to know more of humanity's needs, and arousing in us a quickened sense of the necessity of putting on the divine, whereby we may prove that "the divine must overcome the human at every point" (Science and Health, p. 43).

Mrs. Eddy demonstrated this fact. She was thoroughly cognizant of the worthy activities of the day and times. She was ready to establish—when called upon to do so—the practical, impartial standard which is to be attained in regard to all questions when viewed through the lens of Christian Science. Her profound spiritual insight did not prevent her from applying her Christianly scientific knowledge to the needs of humanity. Rather did this knowledge serve, gloriously, to lead human thought out of its bondage of mere materialism, up to a higher, purer concept, in preparation to receive the spiritual import of each experience. As Christian Scientists, we should not attempt to live in mental seclusion, drawing about us a garment of self-righteousness. Let us beware of a mere negative sense of goodness which passively ignores or is indifferent to the activities of human experience. Let us clearly perceive that such mental isolation is but the bondage of cloistered hypocrisy, this narrow circle the limitation of superstition and fear.

The *Monitor* is our daily awakener, vibrant with the tones of good, sounding its pure, appealing notes to rouse us from the lethargy of pharisaical aloofness and teaching us practical Christianity. Let us show our appreciation in the only practical way, by making the *Monitor* known to others.

INDIVIDUAL OBLIGATION.

WILLIAM LLOYD.

Do any of us realize what we owe to our splendid church organization? Let us consider a little and think where the Christian Science movement would be if our Leader, Mrs. Eddy, had contented herself with writing Science and Health and her other publications and then stopped. We would be without our central organization, without our state publication committees, without our local churches, our reading-rooms, our *Sentinel*, *Journal*, *Herold*, and *Monitor*, without a list of practitioners, without cohesion or adhesion. Each Christian Scientist would be an isolated unit, without the benefit of the mutual helpfulness and support which he now enjoys. Think of what a contrast the present situation affords, just because of our Leader's tireless labors and wise provisions for our needs.

To illustrate: A young girl unaccustomed to travel, starts on a trip across the continent. A bridge is washed out, and she has a three-day enforced stopover. Is she frightened or embarrassed? Not at all; she takes her *Journal*, turns to the index, goes to the local reading-room and finds herself among friends who will give her every needed attention. Thus in almost every town and village the Scientist may find himself at home among friends, and when traveling how ready we are to avail ourselves of this privilege which is made possible by the local organization, for the reading-room is made possible by the church, the church by its membership, and the membership is made more generally effective through its business meetings. The average Christian Scientist thinks attendance upon the Sunday service not only a pleasure, but a duty. He thinks the same of the Wednesday evening meetings, and he should regard the business meeting in the same whole-souled, loyal manner; and for the reason that the business meeting is of equal importance with the Sunday or Wednesday service, for without it these others would not be provided for. Each branch church is an oasis in the wilderness, a city of refuge, into which the weary, sick, and discouraged can fly and find peace and safety. Then, as we accept in strange cities the benefits of others' work, we should certainly give our best support to our own.

Digitized by Google

Dear reader, do you attend your business meetings? Do a majority of the membership in your city attend, or is the work left to the "faithful few" while the many enjoy the Sunday and Wednesday meetings made possible by their work? I wish I had eloquence to bring this home to those who need to be awakened. To describe how the officers and boards of our churches can but feel when, having spent hours in the preparation of a careful review of the past year, and prayerfully thought out recommendations for future work from which great good may come, they go to the meeting expecting a full attendance, a free discussion, whole-souled support—and then find only the "faithful few" who are already doing all that in them lies. If all could but know how the sense of discouragement tries to find entrance—the thought of the year's faithful work for those who do not care enough to give a few hours each year to hear the result and help plan for future work,—if all could realize this, surely every one would make it a point to attend the business meeting.

It is the duty and privilege of every Christian Scientist to join his or her local church, and having joined it to attend each business meeting. Sooner or later we must take our stand and do what God requires of each of us; we cannot truly join the local church and neglect the duties thereby imposed, nor can we join the church and fulfil our duties without being blessed more than we can estimate and in ways quite unanticipated. Let us listen to our Lord's own words, "Whosoever therefore shall confess me before men, him will I confess also before my Father which is in heaven."

"CONSIDER THE LILIES."

AMY RUTH WENZEL.

ONE dull Monday afternoon in early spring a patient entered the office of a Christian Science practitioner. The patient's mood matched the day, and she poured a tale of dejection into the practitioner's long-suffering ears. The service had been very beautiful the day before, she said, the lesson being "Love," and she had enjoyed it all so much; but before she left the church some one had approached her about a matter which was no concern of hers, and had been exceedingly disagreeable. Then all the gladness gained from the service seemed fled, and she had not yet recovered it.

The practitioner made no comment, but with a gentle, quizzical smile turned to his desk, and pointing to a vase of jonquils which stood there said, with Love-given wisdom, "See those flowers." The winter-starved eyes of his patient rested with delight on the yellow blossoms, bright harbingers of the coming spring, which she had not before noticed, and she was ready to respond when he said, "Now, those flowers took from the sun just the rays of light they needed to make them that color. So we may take from those we meet that which will make us happy, or miserable. It is for us to choose."

Years have passed since that spring day, but the lesson of the jonquils remains, perennial in beauty and benefit. And no yellow flower ever smiles a sunny greeting to that one-time patient but the Love-illumined illustration returns to help and bless.

PROGRESS.

WILLIAM H. ECTON.

THE Standard Dictionary defines the verb progress as "to go on toward perfection; make improvement; rise; gain; grow; advance; improve." Each and every word given denotes action, and not merely action but specifically the kind of action which points to overcoming, rising, surmounting imperfection, thus the approaching of perfection.

The writer has recently been wondrously helped by taking a retrospective survey of his own progress, and of the many things that are required of each individual before he can take a permanent step up higher, which is only possible by a fuller conscious recognition of the allness of divine Love and its imperative demands. That Truth is constantly declaring to the carnal mind, "Thou shalt surely die," is a fact which comes to all those who are earnestly striving for the Mind "which was also in Christ Jesus;" and as they break away from their old moorings, which are finite, and gain a small realization that, as our Leader puts it, "the suppositional warfare between truth and error is only the mental conflict between the evidence of the spiritual senses and the testimony of the material senses" (Science and Health, p. 288), the meaning and importance of obedience to the apostle's exhortation to "pray without ceasing" is realized.

When willingness and desire is manifested to obey, in spirit as well as in the letter, the teachings of Christ Jesus, there await each loyal student many seeming defeats as well as victories. To fall victim to a passion of anger or hate is of course humiliating, to say the least, but it may be turned from and forgotten. Later, however, when such tempests assail the student he may try and even seem to succeed in forgetting the incident, but he does not go far before he realizes that he is chained to something which causes him to go around a circle instead of forward, and through much prayer and seeking he learns that the smallest sin is too big for the straight and narrow way of Truth, and that in order to advance he must see that evil is not person, place, or thing, but a condition of mortal consciousness which must be dispelled by the light of Truth, the truth about God and man; and thus the lesson of impersonalizing error is learned.

Having realized in part that his troubles are outgrowths of his own mortal belief of life in matter, the student is then face to face with the old tempter, and must ever keep strengthening his position with the invulnerable armor of Truth and Love. The writer recalls vividly a visit which some time ago was paid to an amusement called the crystal maze, wherein the visitor was seemingly confronted on all sides by his own reflection in plate-glass mirrors. There was of course a way by which to gain an entrance, but the same was not readily discernible. After, however, the visitor had become familiar with the first few courses and had gained confidence, the angles or settings were changed, and while in the act of accusing some one else of being impolite he would on closer inspection come face to face with himself.

So is it in our Christian warfare. When we have made some progress we come face to face with the mirror of Truth and hear the sentence, "Thou art the man." In time we learn that love "thinketh no evil," and we begin to realize the importance of Mrs. Eddy's statement, "Allow nothing but His likeness to abide in your thought" (Science and Health, p. 495), for this is the key to all true progress in the Christian life.

[Written for the *Sentinel*.]

SUNBEAMS.

GERTRUDE HARMAN CRANE.

WHEN lying in my little room,
My heart would fain be filled with gloom,
But for the sunbeams on the wall
Which through the crystal windows fall!

And so for others, in this life,
I can relieve much pain and strife
By thoughts of Truth, however small,
But bright, like sunbeams on the wall!

SELECTED ARTICLES.

[Lydia Avery Coonley Ward in *Wyoming (N. Y.) Reporter.*]

Yesterday we went to the Christian Science church,—The Mother Church, as it is called. It is an immense edifice, and though we were early, people were pouring in,—men and women ascending the stairs, children entering the Sunday school room. Kindly smiles and recognition greeted us everywhere. We were given excellent seats and had time to look about the impressive building. It is an immense auditorium, seating five thousand, and there must have been nearly that number present, for there were no vacant seats on the floor and few in the galleries. Entering, we faced the wide, generous pulpit with the organ's golden pipes rising in groups above. The seats form a semicircle with the pulpit as pivot; opposite the pulpit are three galleries, with two on each side—seven in all. The body of the house is a rotunda, its great dome lighted by many windows, through which the sunlight was streaming. The coloring is all soft warm gray, relieved by the deep red of the mahogany pews. The windows are of clear leaded glass, with borders of a rich design in yellows,—very beautiful. There is no sense of coldness, even though the interior is entirely of stone, with many pillars, square and round, each with a richly carved capital. The floor is of asbestolith, gray to match the stone. This is the best floor I have ever seen in a public building,—pleasant to walk on, not cold, and easily kept clean.

But it was not the edifice which touched my heart to its depths and blinded my eyes with tears. It was the congregation, the like of which I had never before seen. Think of the drawing together of such a multitude simply and solely to learn and to obey the laws of Jesus. Men and women, almost as many men as women, were there. "See all the young men," said Mary. "See all the gray-haired men," said I. An indescribable sense of happiness is in the atmosphere. As I looked about, I saw each face shining with the inner radiance that gives beauty to the plainest features. "Peace I leave with you, my peace I give unto you: not as the world giveth, give I unto you. Let not your heart be troubled, neither let it be afraid." It is certainly a religion of joy that rules in this house.

I remember that Professor Ward said he would like to show, as typical of American churches, a Christian Science congregation to his foreign friends, for he had never seen any other so impressive. Nor have I anywhere, either in size or in quality. The men are men of strength, come from the world of action and of power, and the women are not inferior. After all, the important thing is to achieve spiritually what these people have achieved,—joy, peace, contentment. There is no gainsaying this fact. Many are antagonized by the human personality of the Founder of the Christian Science church. But that is a narrow view. There is power unspeakable in a religion which draws together multitudes of men and women and holds them year after year. A window has been opened into heaven,—what matters it who opens it! Let us rejoice that it is opened and that hundreds of thousands see the glories it reveals. It is the window into heaven that you and I want to find—need to find—what difference does it make whether you lift the latch, or I, or some one else? Therein is the peace that passeth understanding, and the fulfilment of the heavenly promises. We came home with sunshine in our hearts to match the outer sunshine.

[Alfred Farlow in *New Orleans* (La.) *Times-Democrat.*]

In a recent issue is published a reprint from the *American Medical Association Journal*, which comments justly and generously upon the excellent sanitary work which has been done to safeguard the health of the people of Panama, all of which we can endorse. Then the article declares, "And yet the League for Medical Freedom . . . demands that the President revoke his order limiting the right to treat disease on the isthmus to properly educated persons, and that the wonderful results secured by the toil and sacrifice of devoted, clear-headed scientific men be surrendered." Evidently it has been forgotten that the excellent record which has just been recounted was made while Christian Science was being practised on the isthmus, and that the demand of the Medical League has been made in order to safeguard the present situation, not to "surrender" it. Christian Science has contributed its share toward maintaining the health of the people in the Canal Zone, and we dare say no small share. It is conceded by all that fear and anxiety have much to do with fostering the sort of disease which is found in the isthmus, and it is admitted even by non-believers that Christian Science contributes largely toward their minimization. It enlarges one's understanding of the ever-presence and omnipotence of God, who is a "very present help in trouble." It helps us to dwell "in the secret place of the most High," wherein it is promised "there shall no evil befall" us. The revision of the President's order does not in any way change affairs there. It does not affect that part of the work of "scientific men" which is considered by the general public to be of greatest importance, namely, the sanitary regulations. These are all heartily endorsed by Christian Scientists. They believe in pure air, pure water, and cleanliness in body and mind, for the purest and best in the material most nearly approach the spiritual.

[Frederick Dixon in *London Magazine*, London, England.]

Under the heading of "Auto-suggestion," Dr. Forbes Winslow alludes, in your January issue, to Christian Science. His reference is quite kind, and is honorably free from the virulent denunciation of Christian Science which is only too common among those who know nothing about it. He alludes to "the tremendous growth" of the movement "all over the world," and this is a reason why I would ask your permission to take exception to the basis of his arguments.

Christian Science is a world movement, a movement the adherents of which are to be found not only wherever the Anglo-Saxon sets his foot, but among all other nations and peoples. The mere fact that it is able to support a great daily paper of an ordinary type is alone sufficient proof of this. At the same time the gentleman is wrong in imagining that Christian Science treatment is a process of suggestion. The mere fact that it includes in its treatment every phase of material phenomena should be sufficient proof of this. It in no way draws the line at those subjects to whom suggestion is commonly supposed to be applicable, nor does it work indirectly, as he would seem to think, through auto-suggestion.

It is perfectly true, as he says, that suggestion has been practised for centuries, consciously or unconsciously, by the medical profession. It is the inheritance of the wonder-workers of the East, and it is coupled with the terrific penalty that if it is possible to suggest good, it is equally possible to suggest evil. It was just here that Jesus drew the distinction between the suggestion of the exorcists and his own spiritual healing, and this distinction will always separate the two.

Suggestion is employed in the attempt of one human mind to manipulate another, and is, no doubt, as the critic points out, largely dependent on the power to set up auto-suggestion in the consciousness of the patient or victim. Christian Science is based on the understanding of spiritual law, and that spiritual law is expressed in the Christian Science treatment of the absolute unreality of material phenomena, and the realization that all which truly exists is comprised in Spirit, God, and His manifestations. The absent treatment in Christian Science, which very often

Digitized by Google

rouses such anger on the part of those who oppose Christian Science, is one of the greatest proofs of this, and it is based on the most Scriptural teaching in the world, the teaching of Jesus. In the case of the centurion, to take a single example, Jesus healed the servant without visiting the Roman's house and without the knowledge of the patient. There was no possibility of auto-suggestion here, nor, unless we are prepared utterly to deny all that Jesus himself said about exorcists, is it possible to contend that there was any process of suggestion.

As a matter of fact, healing by suggestion is never radical. It does not for one moment affect the actual cause of sickness; it merely creates a temporary belief in the human mind, which is bound to relapse. Every Christian Scientist knows this perfectly well. Not long ago I was visited by a well-known "mental healer" who told me that his reason for coming to me was that he had not only taken part in but carefully watched the operation of suggestion on sick people for a period of four years. As a result of his experience he had learned that treatment by mental suggestion was wholly inseparable from relapse. He told me he had made a careful study of Christian Science treatment during the same period, and that what had struck him in this instance was the freedom of the patients from relapse. It was this discovery that brought him to me to attempt to discover the difference between the two methods. When I explained to him the difference, as I was able to do in the space of a conversation, he clearly realized there was no connection between them.

In the brief space of a letter this is all it is possible to say, but I hope it will illustrate, however inefficiently, the radical difference between the two methods.

[George Shaw Cook in *Mattoon* (Ill.) *Commercial-Star*.]

Let me ask a final word in reply to the recent communication from "Christian," who, though he fails to reveal his identity, nevertheless reveals his animus in attacking the teaching and practice of Christian Science. It seems evident, from the tenor of his last letter, that he is animated by fear of what he deems competition, but as a matter of fact Christian Scientists are not competing with their neighbors in the other churches. On the contrary, they are seeking, as well as they are able, to furnish their friends in and out of the churches with a practical example of what present-day Christianity should be. While conscious of some failures and many shortcomings, they are at the same time perfectly sure that they are making progress in the right direction, and are glad, as opportunity is offered, to share with others the good that has come to them by reason of gaining a better understanding of God, of His Christ, and of the words and works of Christ Jesus.

At the close of his ministry Jesus said: "He that believeth on me, the works that I do shall he do also; and greater." His works, as every student of the gospels is aware, include the healing of the sick by spiritual means, without the aid of drugs and medicines. These works Christian Scientists are striving with a considerable degree of success to emulate. They do not claim that they never fail, nor do they claim to be equal to the Master in goodness, spirituality, or works, but they do claim the ultimate possibility of this, not only for themselves, but for all Christians. Furthermore, they believe it to be the duty of all Christians to make an earnest effort to comply with the demand made by Jesus of his followers, namely, to "heal the sick" as well as to "preach the gospel." Is it not pertinent to ask why one signing himself "Christian" should decry such effort?

Because the critic does not understand the true nature of Christian Science, he attributes the healing which results therefrom to mental suggestion or hypnotic suggestion. There is nothing whatever in true Christian Science Mind-healing that is in the slightest degree related to hypnotism. If "Christian" has any knowledge of hypnotic suggestion, he knows, or should know, that its effects are never permanently good, but always ultimately, if not immediately, bad. The last state of the sick man who is treated by hypnotic suggestion, whether under the direction of a competent physician or otherwise, is worse than his former state, no matter how bad that may have seemed. The critic's expressed belief that Christian Science is akin to mental suggestion, naturally leads him to conclude that it can only heal certain diseases, such as those named by him; but this is not the case. I have on my desk the sworn statements of reliable persons who have been healed by Christian Science of malignant cancer, consumption, and other organic diseases, diagnosed as such by one or more reputable physicians. There is in this city one who was born blind, but who after reaching the age of nineteen years was given her sight through Christian Science. Many authentic cases of healing by Christian Science from accident and other so-called surgical cases are on record. I will gladly furnish all the testimonies of Christian Science healing, any and all of which can be verified, that the *Commercial-Star* will print.

Finally, "Christian" expresses the very unchristian wish that there was a law which would put all "healers" (meaning Christian Scientists, I suppose) in jail or in the penitentiary. Being a student of the Scriptures, he is of course familiar with the fact that Paul at one time assisted in doing this very thing to the followers of Jesus, simply, as he afterward confessed, because he conceived their teaching and practice to be something which it really was not. Yet Paul became an ardent follower of Christianity, and proved his faith by many wonderful works, which included healing the sick through divine power without drugs and without mental suggestion. May we not hope, therefore, that the self-constituted but anonymous defender of the Mattoon public is even now on the road to Damascus, and that he will soon see the light which will convince him that he is mistaken in speaking ill of his neighbors and will make him in spirit as well as in name a Christian.

[Charles K. Skinner in *Ludington* (Mich.) *Daily News*.]

We are not a little surprised to note in a recent issue of the *News* an argument by the pastor of one of your churches to prove by human "experts" that it is impossible for any person to receive spiritual inspiration in this age. Who are these "experts" who propose to restrict the power of God? In the memorable words of Sojourner Truth to Stephen A. Douglas, "Is God dead?" Has the infinite Mind so far lapsed as not to be able to control His own creation and inspire the spiritually receptive today with His message of truth and love? Our clergy are constantly declaring the omnipotence, omniscience, and omnipresence of God. Do they not believe their own preaching?

Job said, "There is a spirit in man: and the inspiration of the Almighty giveth them understanding." Have the times so changed since then that the earnest God-seeking man and woman of today may not receive in their inmost heart the clear understanding of truth? If this is so, the world must have drifted far down the stream of righteousness in the past ages. Does our critic think that the "still small voice" which came to Elijah may not express itself today?

Bronson Alcott writes: "Your Bible was life before it became letter, and you must live into that life which dictated the letter if you would find its true import. You cannot seek what you have not some notion of in yourself. Inspiration must find answering inspiration. It needs a man to perceive a man, and an inspired soul to translate the text of an inspired book and interpret the revelation after it is written." According to the dictionary authorities, the meaning of inspiration is "the infusion of influence or ideas into the mind by a superior person; influence exerted by God upon the human mind."

Digitized by Google

Jesus the great Teacher said, "It is the spirit that quickeneth; the flesh profiteth nothing." St. Paul understood this teaching, for he writes: "Our sufficiency is of God; who also hath made us able ministers of the new testament; not of the letter but of the spirit: for the letter killeth, but the spirit giveth life." Contrary to the critic's suggestion, Mrs. Eddy has never attempted or claimed to have "written scripture." What she has done is to give her followers a spiritually illumined commentary, which she has named "Science and Health with Key to the Scriptures." Why should any one with his specific commentaries, on the many creeds with their particular explanation of Scripture, criticize another who does not look through their "expert" lens?

The spiritual uplift, and the understanding of an ever-present God to heal and to save, came to Mrs. Eddy, who, after telling of her own healing, writes in "Retrospection and Introspection": "I then withdrew from society for about three years,—to ponder my mission. . . . The Bible was my text-book. It answered my questions as to how I was healed; but the Scriptures had to me a new meaning, a new tongue. Their spiritual signification appeared; and I apprehended for the first time . . . Jesus' teaching and demonstration, and the Principle and rule of spiritual Science" (pp. 24, 25).

Our critic tells us that "experts" claim rightly that a study of the present Bible reveals all we need to know for salvation and Christian living. We certainly agree with him on this point and without the aid of an expert. If our friends could only realize that Christian Scientists study and apply the teachings of the good old King James Bible as much, or more, than any other people, they might possibly lose some of their sense of responsibility over their future welfare. The Master was not half so much disturbed about the particular form in which the people worshiped God as are many of those claiming to be his followers today. His kindly rebuke, "Forbid him not," to John for his interference with another who was doing as well as he knew, although not of their number, is not encouraging to other self-appointed critics. To the woman at the well he said: "The hour cometh, when ye shall neither in this mountain, nor yet at Jerusalem, worship the Father. . . . God is a Spirit: and they that worship him must worship him in spirit and in truth."

The demand of Jesus upon his followers was positive; he made it a point of demonstration with them to prove that they understood his teaching by doing the works which he did, and he gave them no encouragement to think that they were his followers unless they gave this proof of understanding. His words were clear and to the point: "He that believeth on me, the works that I do shall he do also." Instead of "Mrs. Eddy claiming to be the infallible teacher of the Scriptures," as our critic asserts, she simply points to Jesus' words, "If ye love me, keep my commandments," and asks any one to produce Scriptural authority for divorcing any portion of his teaching. Were Jesus here today he might well repeat the words given to the people of his time, "But in vain do they worship me, teaching for doctrines the commandments of men."

Our reverend critic tells us that any student of philosophy and religious history knows that Christian Science is pantheism and Gnosticism. Let me assert that any one who does not know that Christian Science is not either of these has no more conception of the true teaching of Christian Science than the average Hottentot has of so-called orthodoxy. The teaching of pantheism is that the universe, conceived of as a whole, constitutes God, is the very substance of God. On the contrary, Christian Science teaches that God is not in His creations, nor are they matter creations; they are spiritual creations or ideas and the reflection of His thought. St. Paul understood this clearly, for he wrote: "The worlds were framed by the word of God, so that things which are seen were not made of things which do appear."

Christian Science takes the plain Scripture as its foundation,—that God is Spirit and man is His image and likeness, and that this man was given dominion over all his environment. We are told that the statement "God is all" is pantheism, and yet Paul states in Colossians, "But Christ [God] is all, and in all." Was Paul a pantheist? Christian Science teaches that there is but one infinite Mind, for there can be but one supreme intelligence, which is God. It further teaches that all of good which this so-called human mind has is but the reflection of the divine Mind, and this is borne out by Scripture. Are these "half truths"?

Of the atonement, Mrs. Eddy speaks thus on page 96 of her "Miscellaneous Writings": "Do I believe in the atonement of Christ? I do; and this atonement becomes more to me since it includes man's redemption from sickness as well as from sin. I reverence and adore Christ as never before."

[C. R. Munro in *Kingston* (Ont.) *British Whig*.]

The belief that Jesus' healing works were purely the result of his own unique personality, and that, therefore, it would be impossible for such works to be done again, will not stand investigation for a moment. It does not accord with what Jesus himself taught, for he repeatedly impressed upon his disciples that it was not through any virtue of his personality, but the truth which he manifested, which did the works. He said, "The Son can do nothing of himself," and he always taught that the spiritual understanding of the truth which heals and saves is always available, to all men at all times; in fact, to all who obeyed his precepts. When sending out his disciples, he always instructed them not only to preach the gospel, but to heal the sick and sinful as well. He was very explicit on this point, and that there might be no possible misunderstanding of what he meant, he said, "He that believeth on me, the works that I do shall he do also;" and almost his last words to his disciples before his ascension were: "These signs shall follow them that believe," the "signs" including the healing of the sick.

Other evidence that this view is correct is furnished by history, which tells us that not only his immediate disciples, but Paul and others, who were not his personal disciples, healed the sick and raised the dead. History further records that for three centuries after the resurrection the primitive Christians healed the sick by spiritual means only. Today the healing works of Christian Science, including the cure of both functional and organic disease after all material means had failed, also the overcoming of sin, including bondage to liquor and drug habits,—all these prove that the Christ-healing has lost none of its efficacy, and is as powerful to heal now as it was eighteen hundred years ago.

[Written for the *Sentinel*.]

FORWARD!

HON. CLARENCE A. BUSKIRK.

FORWARD! Whatever clouds are overhead,
However dim the stars above us shine,
We stumble when our steps by fear are led;
The only guide we need is Love divine!

Forward! However dimmed by grief or doubt,
Our roadway leads us into light and joy.
Forward! Whatever dangers seem without,
Faith and content may still our thoughts employ.

Forward! although at times our feet may bleed;
Forward! whatever anguish wrings our hearts!
Eternal Mind supplies each human need,
And the bright star of Love ne'er departs!

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

CHANNELS OF GOOD.

THE one fact which stands out beyond all others in the ministry of Christ Jesus is his selflessness. When he healed the sick, fed the hungry, opened the prison doors to them that were in bondage, he took no credit to himself for these wondrous works—he was but the channel through which the Father's love found expression. His work was for others, and he claimed no credit for himself—it was all to glorify the Father. He exacted no personal worship from his followers, in no way sought to exalt himself, though one of the charges brought against him by the Jews was that he made himself equal with God. But Jesus possessed no greater spiritual glory than that which he promised those who should know "the only true God," and himself as the Son sent by the Father to do His works; when they attained to the same spiritual understanding of which he was possessed, they, too, would be able to do these works.

The whole ground was covered in his words to the disciples after the mother of Zebedee's children had sought special preferment for them. But this spirit of self-seeking was sternly rebuked by the Master. Among the children of this world there might be striving for place and power, but not among the followers of him who came "not to be ministered unto, but to minister;" and in these words he set a limit to the legitimate ambition of all Christians. Mrs. Eddy in all her writings has emphasized the need of service to our fellow men, rather than that we should be dependent upon them. She has taught, as did Jesus, that the greatest spiritual growth is to be had only through ministry to the needs of others—the loving kindness which seeks not its own, yet finds it in another's good; that even so small a deed as the giving of a cup of cold water in the name of the Master, is not without its reward.

It is this spirit of consecrated service which has impelled Christian Scientists to give so freely of their time and money for the building of churches, the maintenance of reading-rooms, the giving of lectures, and such other work as would be of service to all who are afflicted and all who earnestly desire to learn of this healing truth; that by which they themselves have benefited, they fain would share with those in need of relief. This ministry goes hand in hand with obedience to Jesus' command to seek first the kingdom of God, because of which unselfish seeking he promised that all other things should be added. And it carries with it the idea expressed by Paul to the Romans when he said, "We know that all things work together for good to them that love God." If we truly love God, that love will find an outlet, we shall become channels of good from an unfailing source.

To the extent that Christian Scientists continue unselfishly in their work for their fellows, so long will they continue to be blessed. There is no lack of opportunity for service to those in need; we have only to look about us to find the fields white for the harvest—the multitudes waiting for the word of hope that shall lift them from the depths of despair into the heights of joy and freedom, into "the glorious liberty of the children of God." Given the desire for doing good, the opportunity will not be lacking. Mrs. Eddy has summed it up in a few words: "Work—work—work—watch and pray" (Message for 1900, p. 2). With this "song of Christian Science" in our hearts and on our lips, each day will bring its meed of service and blessing.

ARCHIBALD MCLELLAN.

"RISEN WITH CHRIST."

AT this season we find on every side reminders of the resurrection, and these may well lead us to inquire whether we have simply gone around a circle since last year, or whether our honest scrutiny can discover that we have really risen with Christ. St. Paul says that "if we would judge ourselves, we should not be judged." If we were always to exercise toward our own thoughts, words, and acts the same keen discernment of which we are capable in respect to others, and if we heeded as we should the monitor which constantly and unvaryingly points us to the Christ-demand for perfection, we would spend little time in vain regrets for wasted opportunities to rise above mere earthliness. In this way we can prove to ourselves, if not to others, the sincerity of our desire to be Christlike.

True Christianity is always intensely practical and is inseparable from real progress. It concerns itself but little with "the lifted eye, the bended knee," and exalts being far above mere seeming. It makes the best possible use of present opportunities, and this inevitably lifts one to a higher sphere of thought and action. Contrary to the opinion of many who have not studied the teachings of Christian Science, these tend ever to make us more and more practical in our efforts to follow Christ "daily," as the Master said we should. We learn what it means to carry the light of Truth into every condition of thought into which we enter, and poorly indeed do we "follow" if we do not expect to find everywhere the divine idea, and to make this the basis of all our relations with our fellow men. In our efforts to do this we may well recall ofttimes these cheering words of our inspired Leader: "Whatever holds human thought in line with unselfed love, receives directly the divine power" (Science and Health, p. 192).

We cannot too often analyze our own motives to discover how much we are swayed by unselfed love for God and humanity. Could we but see that unselfed love is the secret of every really great thing which has ever been done for the good of mankind, we would understand better the doers, and love them more. Besides this, we would begin to see how our own efforts at well-doing can be made a thousandfold more effective, for how can any effort fail if it "receives directly the divine power"? Too often do we forget that "with God nothing shall be impossible." This was what the angel declared to Mary in announcing the coming to humanity of Christ Jesus. It was not however a new truth, for we read in Genesis that when Sarah doubted the divine promise, the question was asked, "Is any thing too hard for the Lord?" The question for us then, is whether we are "with God" in all our deliberation and our doing.

Jesus said, "I do nothing of myself; . . . he that sent me is with me: the Father hath not left me alone; for I do always those things that please him." If we are risen with Christ, this should be true of us also, and while "with men," or from the material standpoint, many things may seem impossible, yet we have the assurance of the Master that "with God all things are possible." It is all a question of where we are mentally and spiritually. Professor Drummond draws a fine analogy between the progress of a mountain climber and the "ascent of man" from the low levels of materiality. He reminds his readers that at every thousand feet of the climber's ascent there is practically a revolution; all things are changed. The lower plane is disappearing, the sense of the climber grows more buoyant; "the energies of the upper world flow in upon him." This serves to illustrate the progress of the one who rises in the mental realm, who "attains the higher altitudes, and from the sense-world at the mountain foot ascends with ennobled and ennobling faculties till he greets the sun."

To the Christian Scientist this means daily progress toward dominion, and the watchfulness which will make us worthy "to stand before the Son of man."

ANNIE M. KNOTT.

PRACTICAL CHRISTIANITY.

AMONG the things which no intelligent person would question, is the fact of a serious lapse of present professional Christianity from the standard of simplicity and spiritual power reached and maintained in the early Christian church, and that this lapse is causally related to much of the poverty, wretchedness, and degradation which is no less heart-burdening to all who love their fellow men than discreditable to so-called Christian civilization. It is well for us to think of what would certainly have come about had Christ's Christianity been continuously preached and practised during the past nineteen hundred years,—of the peace and plenty, the health and happiness, the rule of right and of good will which must have become universal; and then place this picture over against the indescribable facts pertaining to a large proportion of the poor in all our centers of population, dotted though they be with Christian churches.

When one thus brings himself face to face with these facts, he acquires a new sense of what the loss of the true "faith" has meant for mankind, and of the imperative nature of the call for a return thereto. This sense is further intensified by the appeals which are being made today in all the Christian world for the better administration of economic justice. Surely love cannot reign apart from that right doing which ends the rule of selfishness and thus secures to every man the fair chance which in the presence of natural abundance would remove every vestige of involuntary degradation and need. The history of civilization has been marred on every page of its record by the association of poverty with progress. Gaunt want has walked side by side with superabundance for so many centuries that men have become accustomed to it, and the remembrance that the gospel came to solve every human problem, the vision of a life of comfort and joy for every honest, industrious man, every deserving mother and her little ones, has somehow faded from sight, and men have grown to be content without it.

That Christ's Christianity was redemptive of every ill condition, that it was equal to the task of eradicating both the fact and the outcome of every species of abnormality, sickness, selfishness, and sin, has always been theoretically accepted, and the blessing of Christian Science is found in this, its proof that what was true of Truth is forever true; that if we accept the light, and relive the Christ-life, we can do the Master's deeds, and thus solve as did he every human problem. Every wholesome endeavor for human betterment is worth while and to be encouraged, but the most unselfish and heroic devotion to these philanthropies will fail in the present, as it has failed in the past, if faith does not merge into that demonstrable understanding which Christ Jesus taught his every least disciple might attain to and exercise, and this must appeal to every Christian Scientist not only as an exalted privilege but as an imperative requirement.

The contrast between Christianity as it has been and as it should be is pressing upon the thought of the Christian world as never before, perhaps, and while the need of increased consecration and the living of a more practical everyday Christian life is emphasized by all, this to many means merely more earnest devotion to the doctrines and forms with which they have associated Christianity. One of the world's best known writers has recently been quoted as saying, "I seriously believe that these [economic] evils have come about through the church not being anything like dogmatic and doctrinal enough"!

"Behold, the Lord's hand is not shortened, that it cannot save," and the supreme vantage and joy of the Christian Scientist spring from the fact that he is proving day by day the present availability of Christ, Truth. He knows for himself that "the law of the Lord is perfect," and that as spiritually understood in Christian Science, "Truth is revealed. It needs only to be practised" (Science and Health, p. 174). Moreover, he has gained a sense of the nature of the human problem which enables him to labor intelligently and to rejoice evermore.

JOHN B. WILLIS.

LECTURE IN THE MOTHER CHURCH.

The First Church of Christ, Scientist, in Boston, Mass., announces a lecture on Christian Science by William R. Rathvon of Denver, Col., a member of the board of lectureship of The First Church of Christ, Scientist, in Boston, Mass., in the church edifice, Falmouth, Norway, and St. Paul streets, Friday evening, April 26, at eight o'clock. The public is cordially invited.

AMONG THE CHURCHES.

CHRISTIAN SCIENCE SERVICES IN PRISON.

One of the most remarkable religious congregations in Trenton is composed of ninety-eight inmates of the New Jersey state prison, who meet each Sunday afternoon. Members of the prison class seem to be greatly interested in this comparatively new prison service. They pay close attention to the reading of the Christian Science Lesson-Sermon, and many of them devote all their spare time to study of the subject. The members of the class are looked after personally, and the subject is discussed privately with any one interested. Books are provided for those desiring them, and Christian Science periodicals and other literature are sent to the prison, and in many other ways the welfare of the inmates is catered to.

When the class was first organized it had very few members, and some of them did not take it very seriously. Others among the convict population frequently joked at the expense of the new converts, working off the old joke that if the latter could make themselves believe that such was the case they would no longer be prisoners, but would in reality be walking about the world, free to come and go as they pleased. Of course, no one looked at the new religion class in that way, although even most of those attending were inclined to regard the services more in the light of a diversion than a means of spiritual and mental benefit. Later, however, the attitude of the men changed, and now all who attend seem to be deeply in earnest, while not a few of the others claim to be interested in the services.—*Trenton Times.*

MERIDIAN, MISS.

The building of the Church of the Mediator, whose congregation was last year consolidated with St. Paul's, was yesterday [Feb. 29] sold to the Christian Scientists, the consideration being something over five thousand dollars. It will be repainted, improved, and occupied as First Church of Christ, Scientist, of Meridian.—*Meridian Dispatch.*

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 31, 1912. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 13, 1912.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 3, 1911, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
Falmouth, Norway, and St. Paul streets, Boston, Mass.

THE LECTURES.

DUBLIN, IRELAND.

In the Leinster Lecture Hall, Molesworth street, yesterday afternoon [Dec. 10], a lecture on Christian Science was given by William D. McCrackan, M.A., a member of the board of lectureship of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., U. S. A. There was a large attendance. The meeting was presided over by J. H. O'Loughlin, second reader, who in introducing the lecturer extended a cordial welcome to those present. He said that Christian Science had now been before the world for over thirty years, and notwithstanding misrepresentations and opposition, had established itself on a firm foundation, and had attracted to its standard a large following in almost every civilized country. This following included people of every class and practically every shade of religious training, and the natural consequence had been that the public desired to learn from a reliable source the reason for this sturdy growth.—*Daily Express.*

HUNTINGTON PARK, CAL.

The lecture given by the Christian Science Society of Huntington Park Friday night [Jan. 12], filled Jones' Hall to overflowing. The lecturer, Frank H. Leonard, was introduced by Edward W. Dickey of Los Angeles, who said in part,—

The message of Christian Science is one long song of love. In Scriptural phrase it reads: "Come unto me, all ye that labor and are heavy laden, and I will give you rest." Christian Science has given rest, health, happiness, joy, peace, and a better understanding of God to countless thousands all over the world. The evidences of these beneficent results are to be seen in almost every community where some one has been touched and uplifted by this healing gospel. They are also to be seen in the thousands of testimonies of healing given every week in the Christian Science testimony meetings, and in the hundreds of authenticated testimonies published in the Christian Science periodicals. These testimonies all tell of moral, spiritual, and physical help. They in their very nature and effect proclaim again the words of the Master: "By their fruits ye shall know them."—*Huntington Park Signal.*

DALLAS, TEX.

The new Christian Science church recently completed at the corner of Cadiz and Browder streets, having a capacity of about one thousand, could not accommodate all those who went there last night [Jan. 30] to hear a lecture on Christian Science by Virgil O. Strickler of New York, although in addition to the seating facilities a hundred or so stood around the walls, besides many who were turned away. In introducing the lecturer, DeWitt McMurray said:—

A very great number of those who are identified with this movement were brought to it through suffering. They have been through the terrible experience of physical affliction and of having material science tell them that for relief from the ills from which they were suffering there was no hope. The verdict "No hope" is certainly a message of despair. Christian Science never sends forth a message of hopelessness, and those who appealed to the "great Physician" in the hour of their extremity received the assurance, "Fear thou not; for I am with thee: be not dismayed; for I am thy God: I will strengthen thee; yea, I will help thee; yea, I will uphold thee with the right hand of my righteousness;" and again, "The Lord's hand is not shortened that it cannot save, neither his ear heavy that it cannot hear." They can now say with the psalmist, "Though I walk through the valley of the shadow of death, I will fear no evil, for thou art with me."

Many physicians who formerly used material remedies, having seen it demonstrated that, as James says, "the prayer of faith shall save the sick," have followed the example of Luke, "the beloved physician" of apostolic times. They have abandoned their old methods and are now relying altogether on the power of the "great Physician," "who forgiveth all thine iniquities; who healeth all thy diseases." Every one naturally wants to know the truth about whatever may interest him most, and especially about subjects of such vital importance as the truth of being, with which Christian Science deals. In order that the public may have correct information about Christian Science, Mrs. Eddy, its Discoverer and Founder, among other means for the purpose, provided for the establishment of a board of lectureship, of which he who speaks to us this evening is a member.—*Dallas News.*

LONDON, N., ENGLAND.

On the occasion of the lecture on Christian Science by Bicknell Young, in King's Hall, Hackney Baths, N. E., Jan. 18, the introductory remarks of R. H. Wesencraft of the Abney Congregational church were as follows:—

Allow me to state the object, the principal object, in giving these lectures. It is to clear away the mists and misunderstanding existing in the thought of many as to the tenets and fundamentals of Christian Science. The present lecture is held under the auspices of Fourth Church of Christ, Scientist, Stamford Hill, and before calling upon the lecturer I would like to give an epitome of the progress of this movement which appeared in a recent edition of a weekly paper, and read as follows:

"The Christian Science movement is barely half a century old. It has spread during that time from one end of the American continent to the other. It has its churches in Europe, it has taken possession of the British empire. Twelve years ago not a Christian Science church had been formed in Europe: today Christian Science services are read throughout the length and breadth of England, and in the principal cities on the continent,—from Paris to Florence, and from Moscow to Christiania. In Australia it is a growing power; throughout the South African dominion its text-book is being read and its lessons studied."

That is certainly a record for so short a period.

Correspondence.

BEAUMONT, TEX.

William R. Rathvon delivered an address at the Woman's Reading Club yesterday afternoon [Feb. 11] on "Christian Science: The New Light upon Old Truths." Mr. Rathvon was introduced by the Hon. Leon Sonfield, who said in part,—

Happy is the man or woman broad enough of mind and deep enough of soul to be able to receive the rays of God's sunshine of truth, from whatever source it may come or wheresoever it may be found. So, this afternoon, in common with me, perhaps some of you have come here as seekers after truth. And we have one with us who comes bringing the message which he says bears the stamp of truth; and watching those who believe with him, I confess that I am free to believe that there is that in this message which he brings which must be truth because of the effect that it has upon the life, for the severest test of truth is its effect upon our daily living. So today we greet one who for long was the personal friend of her whose memory we revere, whom we recognize as a great teacher; one who comes as a member of the board of lectureship of The Mother Church.—*Beaumont Enterprise.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice it is assumed that the lecture will be given in the evening.

Austin, Tex.—Frank H. Leonard, Hancock Opera House, April 19.
Bath, Me.—Willis F. Gross, Universalist Church, April 25.
Boise, Idaho.—Francis J. Fluno, M.D., Pinney Theater, 3 p.m., April 21.
Boston, Mass. (The Mother Church).—William R. Rathvon, Church Edifice, Norway, Falmouth, and St. Paul streets, April 26.
Brandon, Man.—Prof. Hermann S. Hering, Opera House, April 22.
Cambridge Springs, Pa.—Clarence C. Eaton, Odd Fellows Hall, April 25.
Chicago, Ill. (Eighth Church).—William R. Rathvon, Church Edifice, Michigan avenue and Forty-fourth street, 3 p.m., April 21; 8 p.m., April 22 and 23.
East St. Louis, Ill.—Judge Clifford P. Smith, Church Edifice, Summit avenue and Washington place, 3 p.m., April 21.
Edmonton, Alta., Can.—Prof. Hermann S. Hering, April 25.
Grand Rapids, Mich.—Clarence C. Eaton, Powers Theater, April 18.
Greensburg, Pa.—Clarence C. Eaton, St. Clair Theater, 3 p.m., April 21.
Hoquiam, Wash.—Francis J. Fluno, M.D., Hoquiam Theater, April 16.
Houston, Tex.—Frank H. Leonard, Church Edifice, April 22.
Kansas City, Mo. (First, Second, and Third Churches).—Judge Clifford P. Smith, Second Church Edifice, April 18 and 20; First Church Edifice, April 19.
Lampasas, Tex.—Frank H. Leonard, Witcher Opera House, April 23.
Lewiston, Idaho.—Bliss Knapp, Normal Gymnasium, April 26.
Los Angeles, Cal. (Churches and Societies).—Virgil O. Strickler, Third Church Edifice, 734 South Hope street, April 18 and 19; Shrine Auditorium, 655 West Jefferson street, 3 p.m., April 21.
Neodesha, Kan.—Frank H. Leonard, Blakeslee Theater, April 25.
Newburyport, Mass.—Judge Clifford P. Smith, Griffin Hall, April 25.
Palestine, Tex.—Frank H. Leonard, Majestic Theater 3 p.m., April 21.
Pocatello, Idaho.—Francis J. Fluno, M.D., Auditorium, 3:30 p.m., April 14.
Pomona, Cal.—Virgil O. Strickler, Fraternal Aid Opera House, April 22.
April 21.
Santa Ana, Cal.—Virgil O. Strickler, Opera House, April 23.
Seattle, Wash. (All Churches).—Bicknell Young, Moore Theater, 2:30 p.m.; also First Church Edifice, 16th street and East Denny way, 8 p.m., April 21.
St. Louis, Mo. (First Church).—Judge Clifford P. Smith, Church Edifice, Kingshighway and Westminster place, April 22.
Temple, Tex.—Frank H. Leonard, April 18.
University of Kansas (Lawrence, Kan.).—Frank H. Leonard, Chapel, Fraser Hall, 4:30 p.m., April 26.
Walla Walla, Wash.—Francis J. Fluno, M.D., Keelor Grand Opera House, April 23.
Waupun, Wis.—Bliss Knapp, Congregational Church, 4 p.m., April 14.
Regina, Sask.—Bliss Knapp, Regina Theater, 3:30 p.m.,
Wellington, Kan.—Rev. William P. McKenzie, Third Ward Auditorium, 3 p.m., April 21.
Whittier, Cal.—Virgil O. Strickler, Woman's Clubhouse, Bailey street and Newton avenue, April 21.
Winnipeg, Man.—Prof. Hermann S. Hering, Walker Theater, April 21.

TESTIMONIES OF HEALING.

I have been impressed for some time with a desire to tell others of my experience in Christian Science. I became acquainted with this teaching while in search for spiritual truth. My parents had brought me up to believe in predestination, and I was taught that their church was "the straight and narrow way" which leads to heaven. From early boyhood I tried to find the truth which the Bible said would make us free, and I read the Bible a great deal. Most of my neighbors were of the same faith as my parents, and it seemed to me they were the best people on earth, and that if any were right in their understanding of the Bible, they must be the ones.

As years rolled on I, however, began to meet with financial misfortunes, and worst of all my wife and two babies were taken from me. This seemed more than I could bear, and the only comfort I could get by talking to my own people and the church-members was that this was God's will. This caused me to make a closer study of the Scriptures, and while I could not understand the Bible, I could not agree with my church friends. At the same time I knew that they were honest in their beliefs. A few years later another baby was taken from me, and right after I lost practically all I had in a financial way. This happened in Arkansas. I had married again, and I took my wife and moved to Arizona, trying to run away from my troubles, but I had been there scarcely one year when my wife was taken, and I was left with three small children, one only six weeks old. I then arranged to take my children back to my old home, which was four days' travel by rail, and it was on this memorable trip that I made up my mind to find out, if possible, why I was thus punished, and if there was a God who foreordained and sent such punishment upon His people.

On reaching my parental home I was given a warm welcome, and my parents did everything in their power to console me in my great trouble. I had been there only a few days when my parents' favorite minister came to the house, and I took the chance to ask him concerning the teachings of the Bible; but the more I talked to him the more I became convinced that he like myself did not understand the deep things of the Scriptures, so I was in as great a tangle as ever. I then returned to Arizona to attend to some matters which occupied my time for four months, and during this time I was constantly reading and praying for spiritual understanding. I visited all the churches there and talked with the pastors, but the more I read the Bible the less I could agree with the explanations of the Bible which they gave me. It seemed at times that there was no peace for me, and I was, as Paul said, "of all men most miserable."

Finally, while in this state of mind, one Sunday morning I found myself standing at the foot of a stairway on one side of the public square in Prescott, Arizona. The church bells began to ring, and while I was trying to decide which church I would go to, I saw several people were going up the stairway by my side. In looking to see where they went, I noticed a sign which read, "First Church of Christ, Scientist." I had heard this church mentioned only in a critical way, and out of curiosity, more than anything else, I followed the people up the stairs into their room. The service began immediately, and after listening to the reading of the Scriptural passages and their correlatives in "Science and Health with Key to the Scriptures," I felt that the words to which I listened were the sweetest I had ever heard, and as it happened, they explained the very subjects I had pondered so much.

On Monday I was at the church reading-room by the time it was opened. I was given Science and Health to read, and I had not read far when I learned the true way to pray. I could not go to my room without a copy of the book, so I bought one, took it with me, and read it almost day and

Digitized by Google

night. I have no words to tell of the peace, the happiness, that came to me in one week of constant reading. If ever a mortal had hungered and thirsted for spiritual truth, I was that one. I was lost in a wilderness of doubt, caused by ignorance of the truth, and until this time I had found no one who could explain it to me. After I had gained in spiritual sense by reading this wonderful book (for I read it through in a week), I was made to understand that God had not caused my troubles, but that they had come upon me through ignorance of Him and of His laws. The laws of Truth were being unfolded to me, and I found myself in a different state of mind and in a different world. I drank in that spiritual sense of being, and it seemed to me that I was the happiest man on earth. I was filled with spiritual food which satisfied my hungry soul. My questions were all answered and I was a free man. More than this, to my surprise I was healed of a malady of many years' standing.

I am a constant reader of Christian Science literature, and am trying to learn more of the truth that makes free. I have written this testimony in the hope that some one who may be searching for that spiritual understanding which satisfies the famishing heart may be led to find it, as I did, in Science and Health, in connection with the Scriptures.

G. R. BLASINGAME, Gooding, Idaho.

No one has more occasion for gratitude for Christian Science than myself. It is over three years since I first began to read our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I read it for a few days, but I did not seem to understand it, so laid it aside for a more convenient season. It was about four weeks after this that our little girl of four years was dreadfully burned, her face and even the inside of her mouth and nose being affected. I called in a lady who lived near and who was a Christian Scientist, and begged her to do something for the child. She said she would do the best she could, and in about five minutes the little one was quietly asleep. When the child awoke, two hours later, she was able to eat without any inconvenience. In two weeks her face was perfectly healed, although a doctor who saw her at the time said she would be disfigured for life; but no scars were left.

Since that time many ailments have been overcome, among them whooping-cough, which was met in three weeks; also acute lung trouble, from which our five-weeks-old baby suffered, was overcome in about three treatments. Our little daughter of two and a half years has been healed of a physical deformity which otherwise would have required an operation; but it has been overcome in Christian Science. I myself have been healed of female weakness, also of an exceedingly bad temper.

For all these physical benefits I am indeed grateful, but they are as nothing compared to the spiritual quickening and knowledge of God gained in Christian Science, and the peace of mind which is always with us, even if there is to material sense seeming discord. We know that behind the cloud the light of Truth is ever shining. My sincere prayer and desire is that I may be found worthy to bear the name Christian Scientist. I am indeed grateful to God, also to our dear Leader, Mrs. Eddy, for Christian Science.

MRS. MARY E. GENTRY, Los Angeles, Cal.

One of the things that interested me most in coming into the understanding of Christian Science was the testimonies of those who had been healed by reading our text-book, Science and Health. In order to prove for myself some of the statements I had heard, I decided that I would rely upon the written word of Truth when the need of help appeared. Not many days after this decision, I was taken with severe pains in my chest, attended with chills and fever, an old-time complaint which usually lasted two weeks. When the first symptoms were manifested one evening about eight o'clock, I began to read Science and Health, and continued reading until two in the morning. A great change of thought took place at this time, and every sign of the ailment passed into its native nothingness. This was my starting-point in Science.

The illumination of my consciousness by Truth from that time until the present, which is now over ten years, has been beautiful and inspiring. During this time I have not resorted to medicine or used any appliances for dispelling pain of any sort. The words of one of our hymns have been proved true to me, "Day by day the manna fell," and this increased my faith in God. Our beloved Leader, Mrs. Eddy, tells us on page 410 of Science and Health, "Every trial of our faith in God makes us stronger. The more difficult seems the material condition to be overcome by Spirit, the stronger should be our faith and the purer our love." For all the benefits I have received in Christian Science I am truly grateful to God, also to Mrs. Eddy and all who have given a helping hand and word.—ELIZABETH SMITH, Brooklyn, N. Y.

The healing of my mother occurred as above stated. No material remedies were used in accomplishing the cure. My mother's great love for knowledge of God and the perfect man has caused her to resort to the Christian Science text-book, "Science and Health with Key to the Scriptures," daily, both for the healing of all ills and as a preventive. The healing of my mother took place at a time when error had a free voice in our household, and all ills were discussed very minutely, but increased understanding of the truth has reduced such conversation to the extent that ills are only mentioned after they have been proved to be nothing and the healing effected.

ROBERT H. SMITH, Brooklyn, N. Y.

Some sixteen years ago I first heard of Christian Science, and soon after I procured the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Through the reading of this book I was healed of what doctors had called a kidney trouble, of about eighteen years' standing; also a throat and lung affection which the doctors considered hereditary. I have been able to meet and overcome, through the truth, many ailments for our family, such as measles, fevers, blood-poisoning, a gunshot wound, rheumatism, and dislocated joints. About three years ago I had the privilege of going through a class taught by one of Mrs. Eddy's students. And for the healing and many other blessings I am truly thankful to God, also to Mrs. Eddy. Christian Science is the greatest blessing that ever came into our home.

MRS. CATHARINE ROBESON, Greenville, Ohio.

I would like to add my testimony to that of my wife. I am indeed grateful for what Christian Science has done for me. It healed me entirely of a severe stomach trouble of several years' standing. Since this healing I eat anything I want without any ill effects. After my wife was healed I took up the study of Science and Health, by Mrs. Eddy, and in a short time the ailment from which I had suffered was completely overcome, also another trouble of which I would like to speak. For eight weeks I could not lie down, but was propped up in a chair and could sleep but a very little, although I was then under medical treatment. The doctors ordered me to take one tablet and if I did not sleep to take another, and so on until I could sleep. At this point I refused to take any medicine at all, and I have never taken any since that time. I have had perfect health ever since, and for all of the above I am truly thankful to God, also to our Leader, Mrs. Eddy.—JOHN ROBESON, Greenville, Ohio.

I wish to express my gratitude to God for Christian Science and what it has done for me. I had been in poor health for years, among other ills having heart trouble, and it was getting to be very bad when a friend recommended

Digitized by Google

Christian Science to me. She said it would cure the heart trouble and every other ailment. I wanted to know what Christian Science was, and she explained it as far as she could, also advised me to read Science and Health. I went to the public library (at that time I was in Athens, Ga.), borrowed a copy, and commenced to read it. I also began to take treatment, with the result that the heart trouble left me, also rheumatism and several other complaints. I felt like a new person—I could walk, and could also work without being sick.

This was in August, 1908, and these troubles have never returned. I am still in fine health, and am studying "Science and Health with Key to the Scriptures" by Mrs. Eddy, and striving to live up to its teachings. I thank God every day, yes, every hour, for this wonderful truth.

MRS. SARAH J. CORBY, Rochester, N. Y.

In the Psalms we read, "Call upon me in the day of trouble: I will deliver thee." While away on a visit last winter, I was taken with a severe illness, and there being no Christian Science practitioner in the city, one of my friends told me of a lady in another city. I sent for her, and soon experienced great relief. How thankful I am to know that God is All-in-all, and I hold it as a great blessing and special privilege to have received class instruction recently. I feel grateful to Mrs. Eddy, that through divine revelation she was enabled to show to humanity the way which leads to life.

MRS. CATHARINE LEWIS, Washington, D. C.

One among the many blessings which we have received through Christian Science is the healing of our little boy of a fever. We had just moved to this city, and on arrival here we immediately sought help from a practitioner, through whose understanding of the ever-presence of God as divine Life, Truth, and Love, our son was soon restored. The treatment also allayed the sense of fear in myself.

Although I had been healed of so-called organic trouble of years' standing, through the reading of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and had witnessed many proofs of the healing power of Christian Science in our home, yet in this instance of our son's sickness (disturbed over what others might say and knowing the general fear of the disease), I was brought to the realization of the meaning of these words, "Choose you this day whom ye will serve." Our son was healed in ten days, while at another time when one of our children had the same disease, and was under medical treatment, the disease was not overcome for over two months.

We are indeed grateful to God, the giver of all good, also to Mrs. Eddy for her ministry to the world.

MRS. LAURA T. PARKINSON, Guthrie, Okla.

I am indeed grateful for the understanding of Christian Science which I have. I was healed of an organic trouble of six years' standing, through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I had been doctoring for a number of years for this trouble, but received no permanent results, and at one time the doctors said that an operation was the only help for me.

Some time after this Christian Science was brought to my home by a dear sister. At first I was very bitter against what I thought Christian Science was, and would have nothing to do with it. All this time I was far from well, and while I had always been a church-member and a worker, I had come to the place where God seemed a great way off. As I was very anxious to know what there was in the text-book which caused Christian Scientists to read and study it so much, I decided to read it for myself and tell no one I was doing so, but before I had read the book half through I was entirely healed. This was over six years ago, and I have had no return of the trouble.

During these six years the truth has met every need when it has been rightly applied. I have been healed of many other ills, such as headache, which I was believed to have inherited, and acute throat trouble, also a fractured arm. These and other ailments have all been healed through the understanding of God as given to us by Mrs. Eddy, in Science and Health. For these physical healings I am grateful, but more grateful for the clearer understanding of God and of man's relation to Him.

MRS. GARLAND B. ROHR, Los Angeles, Cal.

It is over six years ago that I came into Christian Science, and I feel that I am indeed tardy in acknowledging the great blessings which have come to me and to my family during all that time. Today I am impelled to make a public acknowledgment of my first healing in Science. I was healed of stomach and bowel trouble, besides a complication of other ailments, in two weeks' treatment, after I had been under medical treatment four months and was steadily growing worse all the time. I had lost all faith in medicine and had become discouraged over my condition. At that time I was living in San Antonio, and thinking that a little change would benefit me, my husband suggested that I visit my sister in Houston, and while there try Christian Science. This I did with the result before mentioned.

My heart fills with happiness and gratitude at the remembrance of my healing! How sweet it was to me, and how quickly and beautifully I was healed, returning to my home a different person in every way, and with a love and reverence for this grand truth, which had brought to me and mine such a great spiritual quickening, such peace and harmony! I am thankful to God for guiding me into this truth, and grateful to the one whose light was always shining with a brightness never dim, and whose declaration of the truth set me free indeed.

Since that time my family and I have relied on Christian Science treatment for everything, and I have had many beautiful demonstrations for my two children, aged respectively six and two years. The longing fills my heart that I may practise faithfully what I know of the truth, thus showing my gratitude to God, also to our brave, loving, and loyal Leader in Christian Science, Mrs. Eddy.

MRS. L. R. BOND, Houston, Tex.

As I greatly enjoy the many testimonies of healing given in the *Sentinel* each week, the thought came to me that perhaps there were those who would like to read the story of my own healing, a healing through the power of divine Love, and which was quite remarkable. In April, 1905, I found myself in poor health and gradually losing ground, although prior to that time I had been considered a good specimen of physical manhood. Realizing that my health was giving way, I tried through *materia medica* various methods to improve it, consulting several doctors, until, in 1908, four of them, after deliberating for a long time, informed me that if I had any worldly affairs which required my attention, I had better attend to them without delay. Since then three of the four physicians who thus sentenced me have themselves passed beyond.

My physical ills were complicated,—a serious bowel disorder, catarrh of long standing, hemorrhoids of thirty-seven years' duration, and a stomach difficulty covering many years. During this time I had become very much reduced in weight. While I was sojourning in the country, my good wife called my attention to Christian Science and advised me to take up the study of the same. She also sent me some reading matter, but I did not at once become interested. On returning home in December, 1908, I however began in earnest, not only to read, but to study carefully Science and

Digitized by Google

Health, also to attend the services Sunday mornings and the Wednesday evening meetings, all of which proved of great benefit to me. I gained a concept of God that was satisfying, something for which I had longed for many years. An improved condition at once manifested itself, and has continued until I am now practically a well man.

At this time I awoke to the fact that I had become a different man, that I was living with a new sense of personality, old habits had disappeared unconsciously, and in many ways life seemed different, but brighter. Every one I met seemed so changed, every one cheerful, happy, and harmonious, until at last I awoke to the fact that a great change had gradually come to me, that I had just learned or was learning how to live. My neighbors have since told me that during the winter of 1908 they expected daily to hear I had passed on.

My gratitude to the loving Father is beyond my power to express. His wonderful promises are for me! The teachings of Christ Jesus are for me; and through the writings and teachings of that remarkable woman, Mrs. Eddy, I have come to understand, to comprehend to some extent, what the Bible means for me and for all mankind. The spiritual uplift is to me even more remarkable than the physical healing, and that was little short of miraculous. I love the services, and I enjoy reading the Christian Science literature, but best of all do I love the teachings of Jesus, especially the promise to each one who accepts the truth,—"The works that I do, shall he do also."

J. O. H. WOODMAN, Malden, Mass.

I was healed through Christian Science in the early part of 1892. Previous to this I had known of only one case of healing by this method of treatment, but was very much impressed with it, as the condition was a chronic one. So, when I needed help for what a doctor called a serious condition, caused by female trouble, I desired to have help from the same source. To please my husband, however, I had a medical doctor for several weeks, who told me that the symptoms indicated great weakness, and strongly advised against exertion of any kind. He said it would be better for me to go to bed and be quiet, but that if I would sit up, I must not walk across the floor for six months, possibly a year, as he feared serious results from exertion of any sort.

I tried to be faithful to the doctor's instructions for a number of weeks, and then, finding that the symptoms were worse than ever, I insisted on having Christian Science treatment. I wrote to a practitioner who was then at Muscatine, Iowa, and I was practically healed by one treatment, although treatment was kept up for about ten days longer. From the first day the alarming symptoms disappeared, never to return, and I began to do my housework and have continued to work and to walk all I wanted to since then without any bad results. This experience gave me a strong desire to know more about Christian Science, as I had a feeling that it was of God. About a year later I took up the study, and found that it was indeed from God, a revelation of God to mankind, and that we can apply it to inharmonious mental and moral conditions as well as to physical discords.

I also came to know that this remedy is at hand in every time of need, because I found that God is always present. Since then I have asked for help only for physical trouble, and that was in a severe attack of neuralgia, with inflammation, severe pain, and blindness in one eye. The blindness was overcome inside of forty-eight hours, and the swelling lessened at once but did not leave entirely for a couple of weeks. This time my help came from a practitioner in St. Louis. I have always felt very grateful for what Christian Science has done for me. The physical healing is a great blessing, but the spiritual interpretation of the Bible which it gives opened up to me a new era. Life has never seemed the same since I learned that God is man's Life and that consequently life really holds nothing but good. This does not always appear to the outward vision, but I have learned not to judge "after the sight of the eye" but to "judge righteous judgment."

The Christian Science text-book, "Science and Health with Key to the Scriptures," has been my daily study for nearly seventeen years, and it has always been a source of comfort and of spiritual enlightenment. It has made the Bible what it should be, the Book of books. The Bible unfolds more and more at every reading, and I feel sure that this will continue until the veil of mortal sense is entirely taken away. Words can never thank Mrs. Eddy for what she has done and is doing for the world through Science and Health and her other writings, and by her faithful work in establishing Christian Science, which is bringing to pass what John saw on the isle of Patmos, "a new heaven and a new earth."—MRS. MINA FRY, Kirksville, Mo.

For over seven years I have enjoyed the privileges and blessings of Christian Science, and I feel rather apologetic because this is my first written acknowledgment of all the good, the joy, and the happiness that have come to me through the study of the Bible and Science and Health. This study has indeed unlocked a treasure-house for my free use. I can well say with the psalmist, "How precious also are thy thoughts unto me, O God! how great is the sum of them! If I should count them, they are more in number than the sand." Yet we are slow to realize that the "kingdom of God is within," and to acknowledge the blessings which are not seen, forgetting that the "things which are seen are temporal."

I was not forced into Christian Science through physical suffering, although my first week in this beautiful study, with a practitioner's help, healed me of defective vision and restored my eyes, which were fast becoming useless; then a few weeks' reading of Science and Health banished a life-long bowel trouble and left me free, with the sense of one whose bonds had been loosed. But the great blessing to me has been the change of view-point; life has taken on a new aspect,—truly "the Lord openeth the eyes of the blind." With spiritual sight life is beautiful, full of work and joy and love. The love which comes to us in the light of Christian Science is a great revelator. With great force come the conviction that "that which is not love is hate;" there is no half-way measure with which we can meet our brother man. "Love is the liberator," and we know that "clad in the panoply of Love" (Science and Health, pp. 225, 571), we can meet all forms of error with assurance and find peace. Hatred, envy, selfishness, resentment, sensualism, vanish before the radiance of Love, as dew before the morning sun. With this protection about us, physical discords sink into the background, and finally vanish into their native nothingness.

I am indeed glad to express my gratitude to Mrs. Eddy for revealing God to me as the divine helpful friend, with no limitations; of infinite patience, "plenteous in mercy," who knows my needs and supplies them,—omnipotent, omnipresent good.

MRS. EMMA BEAVER BYRNE, Faulkton, S. Dak.

With a heart full of love and gratitude to God I send this testimony, hoping it may be a help to others. I did not take up the study of Christian Science for physical healing, but it was only another of the promises fulfilled, "Blessed are they that do hunger and thirst after righteousness: for they shall be filled." Since childhood I have wanted that truth of which Jesus spoke when he said it would make us free. It has freed me from mental depression, and I can say with the psalmist, "Bless the Lord, O my soul, and for-

Digitized by Google

get not all his benefits," for they are indeed many. At the birth of my little daughter I was wonderfully helped. She is now two years old and is a healthy child. Christian Science has been our only physician for four and a half years, and it has brought us through several trying experiences, one being an attack of small-pox. We were then in a small town, strangers there, and were the only Scientists so far as we knew; but with the help of a practitioner my little daughter was sick only one day, and there were no scars left.

For these and many other blessings I am truly thankful, but the understanding of God and our relation to Him is far more to me. My prayer is that my life may prove my gratitude to God, to Christ Jesus the Wayshower, also to dear Mrs. Eddy, who has brought anew the message of "on earth peace, good will toward men."

MRS. ORPHA HENDERSON, Walsenburg, Col.

I take pleasure in telling what Christian Science has done for me. I am truly grateful for the earnest work which has brought such quick results whenever I have been obliged to call for help. When I turned to Christian Science I had been ill for over a year. Besides extreme weakness, I had severe head, stomach, and bowel trouble; but all these ills were gradually overcome and in a short time I was completely healed, and am in better health now than for many years.

During the time of treatment I was taken with what seemed to be an acute attack of lung trouble, with the usual symptoms of fever, etc.; but this was met almost immediately, and in a few days I was able to be up and out. The healing of this very bad case of nervous exhaustion was remarkable, as the doctors had done all they could.

JANE B. ARNOLD, Chicago, Ill.

In the spring of 1910, while working at my trade, I ran a nail almost through my foot. Inflammation set in, and my foot was in such a condition that I could not wear a shoe. I tried to treat myself, but did not get any better. I then asked a Christian Science practitioner to give me a treatment, which he did, and I was greatly benefited. After the second or third treatment I was entirely well. I feel very grateful for the understanding which Christian Science gives, and which brings such convincing demonstrations of the power of Truth over error.

I am very grateful to God, also to Mrs. Eddy for Christian Science.—F. E. Ross, Los Gatos, Cal.

[Written for the *Sentinel*.]

A SPRING THOUGHT.

EDITH C. CARTER.

I stood alone with the sunlit peace
Of woods in springtime; the warm quiet air
Lay like a tender presence on the trees,
And leaned low down to greet the waking flowers;
And all the turmoil of unquiet hours,
The disappointed, feverish search for ease,
Dropped, like a garment one has ceased to wear,
Before the young year's promise of increase.

In that soft silence, where no sense of strife
Hindered the steadfast purpose to attain,
Each tiny leaf and petal did its share,
Curved or unbent, to form a perfect whole.
And as I looked, keen longing filled my soul
That, led by Love, I too my part might bear,
Might humbly serve, and fearless still maintain,
Through sun and shade, the peace of man's true life.

FROM OUR EXCHANGES.

[*Christian Register.*]

It is curious to note in how many ways God has been sought. Show us the Father and that sufficeth us, was a very rational appeal to the disciples. When you come to sift matters all down, that is about the sum total of rational religious desire—show us God; and it certainly is irrational to expect people to develop a warm religious emotion, involving affection for the Supreme Being, provided they have never seen Him, and so far as they can find out He is invisible. It is no escape from the difficulty when we are told that after this life we shall go into the presence of God, and both see and enjoy Him forever. This involves an anthropomorphic conception that a thinking man soon outgrows. Any such sort of future existence would make God a being somewhat like ourselves, whose presence could be measured by some kind of senses.

If such be God today, why is He not, in some degree at least, visible at the present time to us His children? That God is angry, and has hid Himself from us, because of our misdemeanors or of those of our ancestors, is a childish method of avoiding an honest difficulty, much like burying our heads in the sand. It not only does not solve the problem, but complicates it. It takes from us any possible conception of a desirable Father, and leaves us in possession of an invisible Maker, from whom is taken all lovable and honorable traits of character. We are still ordered to love this Being, by loving whom we are consciously degraded. In other words, we are ordered to be beings of a grade far nobler than the one that we worship. If we dare face the difficulty at all, we find that we have lost our God altogether, and have found a sulky creator, who will not show Himself to us, even when He orders us to love and obey Him. The theology that works itself out into this schedule of hatred, rewarded by compulsory love, has no other basis than the imagination of those who could find no other relief for the desire, in some way to see God.

[*Universalist Leader.*]

Ever the individual would choose to rest in things won, but the divine power in and behind life pushes him onward from the cradle to immortality. This fact is an occasion not for complaint but for thanksgiving. Not what comes to us but how we take it is a test of life. In human dealings the unexpected all too often happens; deserve well, and then the unexpected will carry blessings in its bosom. With daily faith that better days and more satisfying experiences are in store for each of us, let us move forward.

Man in his pilgrimage pitches a tent or builds a tabernacle or temple. He ever seeks to embody his life in institutions. What the race finds needful in its wanderings it keeps; what is useless impediment it casts off. These are days in which the church is being tested as never before. Some even predict the disappearance of the church from our communities. If the church does not deserve to live it will die; it ought to die. The church stands for the moral law as applied to all human concerns. It stands for the clean heart and the pure life. It stands for the value of man, for the worth of life's struggle. It proclaims that the march is worth while. It stands for faith in man's splendid future. It stands for loyalty to conviction, for following the pillar of cloud and fire, for the reality of a worthy "promised land" in the soul and in the universe. The church cannot live and do its work unless men and women are loyal to it—loyal to their convictions. In the march of life—the individual so transitory—there is inexorable need of a permanent institution which shall stand for all that is best in life and world and eternity. This is the church.

Digitized by Google

[Rev. H. C. Robbins in *Churchman.*]

The man who judges himself by his neighbors is the real pessimist. He has little faith in the capacities of human nature. He thinks that to be a man is not an exacting requirement. The man who judges himself by the righteousness of God is the real optimist. He has committed himself to the glorious doctrine of human perfectibility. He believes that there is nothing to keep man from being as good as God. Jesus believed that. One man has lived the life of God under the conditions of time and space and under all the limitations of human life. He came to convince the world of sin. We no longer dare measure ourselves by the standards set by our neighbors, by the standards set by our times. We must, whether we will or no, measure ourselves by the standard set by the perfect man, the standard set by Christ. The man of no imagination does not see the necessity. The man of imagination sees that to fall short of the highest is transgression. The pessimist will not face the responsibility. He tells himself that there is no use. The optimist advances to meet the test. It appals him. It terrifies and saddens him. It awakes in him a scathing sense of sin. He abhors himself like Job, and repents in dust and ashes. But out of that humiliation and repentance he will arise purified, and upon all his future living there will be the ineffaceable touch of the infinite, "the light that never was, on sea or land," the beauty of the Lord his God.

[*New York Observer.*]

A Christian man's success in life as a Christian largely depends upon his taking a right attitude toward the interests that lie on the yonder side of Jordan. He must think neither too much nor too little of that hinterland. There are those who are fairly morbid on the subject of heaven—lachrymose souls who, failing to take the best of here and now, sigh prematurely for release from care, when what they really mean is excuse from duty. There is a certain amount of aspiration for heaven which is nothing but a shirking of earthly service. Then, too, there is much mawkish sentimentality, having for a text some such nebulous and gaseous emanation as "beautiful isle of somewhere," which sighs for that which it knows not, and thinks itself dreamily religious when it is only drowsily romantic. Such generalized moonshine never gets anywhere; it is vapory, but not that kind of a vapor which supplies the steam to drive the work-away pistons of life.

[Prof. G. A. Johnston Ross in *Christian Work and Evangelist.*]

There is a wide-spread revolt, too, against the divisions of the church, not because, in place of our already unwieldy units of denominational government, more massive amalgamations still are desired; but because the divisive spirit fosters enormous overlapping and waste of energy in unholy competition, and tends to magnify little differences which in view of the needs of the great new world in which we live are of only the most trifling importance. Denominational loyalty has long been as unquestioned an obligation among many Protestants as clan loyalty was once in Scotland, or as national patriotism is still. But it will simply not do to call the alert layman of today to an undiscriminating denominational loyalty, and we should be thankful that it will not do.

[*Watchman.*]

The idea that preaching the gospel must be left to one man in a church, while all the rest of the people are simply hearers, is the greatest source of weakness in the Christian churches of today. The most rapid advance of Christianity was made the first three centuries, when every Christian was a preacher of the gospel; and if that idea and practice could be restored to the Christian churches of today, the question of the evangelization of the world in this generation, and of the establishment of the kingdom of God on earth, would be settled without missionary societies or missionary contributions.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by *Mrs. Eddy* to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

For some time the postage required for subscriptions outside of United States territory has exceeded the amount added to the regular subscription price for this purpose, and an increase in rates sufficient to cover this deficiency is now deemed necessary.

Beginning April 1, 1912, therefore, the rates on all subscriptions outside of United States territory will be as follows: For Canada, *Journal* $2.25, *Sentinel* $2.45; for all other countries, except those to which the domestic rate applies, *Journal* $2.65, *Sentinel* $2.95.

Renewals for all subscriptions terminating before April 1, 1913, and received by us prior to July 1, 1912, will however be accepted at the old rates.

The pamphlet "Causation" by Frederick Dixon has been translated into Swedish—"Kausal-lagen"—and is now on sale; 40 pages and cover at the prices of the regular pamphlets.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large sized book), single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE. June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

4.00 – 0: 16	:5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

It is announced that the conferences between Governor Foss of Massachusetts and the New Haven railroad officials will result in a bill in the Legislature providing: First, for the dissolution of the Boston Holding Company and a lease of the Boston & Maine to the New York, New Haven & Hartford. Second, for the electrification of the New Haven-Boston & Maine system within the metropolitan district. Third, for the construction and electrification of a tunnel between the North and South stations in Boston. Fourth, for the elimination of all switching charges as between the two terminals and a flat rate within the electric zone.

Harvard University benefits largely by the will of the late Prof. Abbott Lawrence Rotch of Milton. The meteorological observatory and other buildings, long maintained by Professor Rotch on the summit of Great Blue hill, Milton, and the equipment, are given to Harvard with fifty thousand dollars to be held as a trust fund for the purpose of maintaining the observatory in the future. The Blue hill meteorological observatory was established by Professor Rotch in 1885 and had since been maintained by him. The name of Professor Rotch and of the observatory have been made famous by the investigations made by means of instruments attached to kites.

Plans are on foot in the House of Representatives for rushing through under a special rule a section in the postoffice appropriation bill which establishes a general parcels post and an experimental parcels post on rural routes. The farmers are mainly in favor of the measure; the country merchants and the small business men have opposed it. The pending bill provides a flat pound rate of twelve cents a pound with an eleven-pound package limit, which is in effect the extension to packages handled in this country of the international postal convention rates applying to packages sent to and received from foreign countries.

By mid-June the government expects to complete the new wireless station it is erecting across the Potomac river from Washington. With one exception, this station will be the largest in the world, the largest being in southern Italy, and it is expected that after its completion the navy department will be able to keep in touch with vessels of the fleet in all parts of the Atlantic and Pacific oceans. The reach of this new station will be between twenty-five hundred and three thousand miles, depending on weather conditions.

By a gift of real estate in Chicago, valued at nearly one million five hundred thousand dollars, made by Francis Bartlett of Boston, the Boston Museum of Fine Arts is assured of an annual income of nearly sixty thousand dollars for almost two hundred years. Mr. Bartlett is a trustee of the museum and has previously been its benefactor. His latest gift is to be devoted to the enlargement of the collections of classical antiquities and paintings.

The "shipping trust" investigation has been begun by the House committee on merchant marine and fisheries. The state railway associations, traffic associations, and consular officers are being asked to cooperate and file information with the committee.

Postmaster-General Hitchcock has extended the postal savings bank by designating one thousand fourth-class postoffices to open savings bank branches on May 1.

A rehearing of the so-called "patent monopoly" mimeograph case has been refused by the supreme court of the United States.

Arthur Nikisch and the London Symphony orchestra are making a tour of the United States.

International.

The Irish home rule bill, the third effort made by Liberal governments of the United Kingdom in a quarter of a century to settle the quarrel between Great Britain and Ireland, was introduced in the House of Commons April 11 by Premier Asquith. The official title of the bill is "The Government of Ireland Bill." The bill provides for the establishment of an Irish Parliament consisting of a Senate and House of Commons with power to make laws for peace, order, and good government in Ireland. The matters to be excluded from the control of the Irish Parliament are: The crown, the army and the navy, imperial affairs, the Irish land purchase, the old-age pensions and national insurance acts, the Irish constabulary, the postoffice savings bank, and public loans.

The Academy of Moral and Political Sciences of France has just elected from nine candidates to fill a vacancy M. Louis Lepine, chief of the Paris police. The explanation of this selection was that M. Lepine was chosen because of a combination of romantic, philanthropic, sociological efforts which he had made. These efforts had been directed toward the rescue of "fallen women." Six hundred of these have been reclaimed, only thirty-seven of whom have relapsed. A city and a nation that value the rescue of fallen women among the most honorable achievements of statesmanship, remarks an exchange, are far from moral collapse.

While there is no positive news of any advance thus far toward the consent of Russia to the terms of the note of Secretary Knox of the United States, or that Russia has actually agreed to join the group as reported, United States Minister Calhoun's advices afford ground for the expectation that ultimately the six powers will agree to act in concert in the matter of the proposed loan of three hundred million dollars to China.

The French budget for 1913 provides for sixteen million dollars more than in 1912 for national defense. It is estimated that in 1913 the total expenditure of the French government will amount to $932,933,000, or an increase of $33,340,400 over that of 1912. Of the increase $5,200,000 goes to works of social reform, more especially for old-age pensions.

The Rt. Rev. J. W. Bashford, Methodist Episcopal bishop of China, who is on his way to the United States, declares that the establishment of a republic in China means the Christianizing of that empire within the next five years.

No date has yet been set for the assembly of the coalition cabinet at Peking, and forebodings are felt in regard to the continued disagreement among the different factions of the government. The real deterring factor in the situation is the distrust of the southerners, who do not wish to trust themselves in Peking.

The provisional contract recently signed with the Marconi Company for the establishment of wireless stations at Lisbon, Oporto, the Azores, Madeira, and Cape Verde has been presented to the Portuguese Parliament for sanction. The cost of the project is given as forty-nine thousand pounds.

An extra credit of five hundred and thirty thousand pounds has just been allocated by the Russian admiralty for the provision of a dock in the port of Nikolaieff capable of accommodating, with a considerable spare margin, the new dreadnoughts now under construction there.

Twelve hundred acres of land on the downs near Brighton, England, have been purchased for conversion into market gardens, the scheme having been launched by the Cooperative Society and Growers' Association.

Industrial and Commercial.

The first session of the forestry conference held in connection with the Nashville meeting of the Southern Commercial Congress was opened on the afternoon of April 8. The presiding officer was Henry S. Graves, chief forester of the United States department of agriculture. In opening the conference Mr. Graves said:—

"It is of vital importance to the South that the land suitable to agriculture be devoted to that purpose and just as rapidly as possible be actually used for the growing of crops. There is, however, a vast area of land, some of it in great blocks in the mountains and elsewhere, and some in small patches within the agricultural areas, which is suited only to the growth of trees. Many persons point to great floods like those we are now having and insist that forests have nothing whatever to do with the control of water. This is as absurd as would be a statement that forests absolutely prevent large floods. They are, however, only one factor and may be entirely overbalanced by other factors like long-continued rainfall or sudden thawing of snow in the mountains. The geological survey is developing some very important and interesting facts regarding the influence of forests on erosion in the South. Our problem touches the method of handling the forests in a way to benefit the South permanently. The bulk of what is put on the market is from timber one hundred and fifty years old and upward. The cutting takes place without reference to a new crop of trees and we still have that greatest enemy of the forest, fire, which prevents the establishment of new growth. Moreover, forest fires are primarily responsible for the damage resulting from erosion and disturbance of streamflow in the mountains. Unless there is a correction of the existing conditions, the supply of forest products will not be maintained, local industries will decline or vanish, land values will be permanently reduced, and the benefits arising from the mere existence of well managed forests will be lost, with unfortunate results."

The Baltimore & Ohio Railroad Company steel rail experts will determine by actual test which of the leading steel rail plants of the country manufactures the most durable rails. With this end in view the company placed orders for ninety-pound steel rails with the Carnegie Steel, Cambria Steel, Bethlehem Steel, Illinois Steel, and Maryland Steel companies, receiving comparatively small consignments of them. The rails were distributed between Sand Patch and Hyndman, Pa., where the usage of rails is particularly heavy.

The change of fashion in male attire which has accompanied the revolution in China, involving as it does the abandonment of the old-fashioned silken attire, is viewed in many parts of the country with alarm, because it is feared that this change of costume will spell ruination to China's principal industry, that of silk.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL—WATCH" JESUS

THE ALLNESS OF GOOD.

ROBERT NALL.

It was the early dawn of a bright beautiful day when, standing on the brow of a hill at one of the Himalayan summer resorts, the writer saw in the distance the white-capped peaks of earth's highest altitudes. Through the haze the snow was revealed as a mass of purity, a faint symbol of that which is spiritual and perfect. By and by the sun's rays cleared the atmosphere, unfolding to the sight the somberness of the valleys, intensifying to almost radiant brightness the heaven-kissing snowy heights and presenting a picture of splendor and chasteness without spot or blemish. It was a never-to-be-forgotten vision! Thought was lifted from nature to "nature's God," and entered upon a train of meditation which was at once instructive and inspiring.

But as heaven is not won by a single endeavor—only on the ascending scale of Christly striving to enter in—so it was necessary to learn that earthly visions at their best are imperfectly typical of divine purity and holiness. The peacefulness of the scene was marred by a contrast—a picture that also conveyed a lesson. From within a few yards' distance there came the sound of beating of drums, hissing noises, and other indications of violent agitation in a hovel of the most primitive and repulsive description. To the local resident this was a commonplace; to the visitor it impelled inquiry. The efforts thus signalized were designed to exorcise the devil, who as a constant source of trouble needed handling by a method which centuries of inherited belief had crystallized into a conviction, as the only effective means to achieve the desired end. All night the vigorous attack had continued; but the persistence of the satanic presence and power had shown no signs of weakening, and it was predicted that it would be necessary to fight on and on for hours until the victory was gained.

What a manifestation here of what Jesus called the "power of darkness," that dominion of sin under which mortal man is bowed down with woe! The mental atmosphere was murky and chilly. One was tempted to think that here was the most pronounced illustration of what the apostle described as "having the understanding darkened, being alienated from the life of God through the ignorance that is in them, because of the blindness of their heart." The contrast was at first incredible by its very extremeness. To drop in a moment from the contemplation of one of nature's wonders clothed in its beautiful garb, serene and majestic,—and spiritually interpreted as it was by the Christian Scientist who saw it as figurative of the eternal beauty which pertains to the heavenly kingdom,—down to the Cimmerian darkness of a mentality into which no spiritual concept of the creator could ever have entered, and to which the sense of evil was more potent and ubiquitous than the power of good,—this stirred the heart to a sense of pungent sorrow on the one hand and deep thankfulness on the other.

Philosophers and theologians alike have held that in the natural order where there is good there must be evil, just as where there is light there must be darkness—that the one is impossible without the other, and that while evil may be overcome with good, it is consistent to believe that "evil is good in the making." It is one of the glories of Christian Science that it shatters this spurious teaching, and does it by a more spiritual and more scientific interpretation of the Bible. Students of Christian Science need to be well grounded in the truth, and it is only in the light, the purity, the sacredness, the divinity of Christian Science that the ephemeral nature of evil can be cognized and that its destruction can be accomplished. The concept which sees in God's universe a dual nature is that of a darkened, unenlightened vision. One God, infinite Mind, and the universe spiritual and perfect, excluding—having indeed no knowledge of—anything and everything that bears the semblance of evil, is the only possible deduction from the Master's teaching.

It is this that Mrs. Eddy, from the depths of her profound spiritual insight, so clearly and triumphantly proclaimed to the world, and one can almost imagine that one of her heart's cries to mankind was, "Do not personalize evil. God, good, alone is the only power and the only Life." Blessedly true is it that, as thought is emancipated from the bondage of the material and the light of Truth shines with inherent gladness into the dark recesses of the human consciousness, the so-called "problem of evil" loses its puzzling character—it is solved. In a lesson to one of her early classes, Mrs. Eddy corrected an error which still prevails among mortals—the belief that Mind and matter can be weighed in the same scales, and that it is not well if, as is commonly thought, "we cast something into the scale of Mind." Why? Because "there are not two—Mind and matter." No; "God does all, and there is nothing in the opposite scale" (Miscellaneous Writings, p. 280).

So in reality contrasts are only human concepts; in the divine economy there are none. In other words, the popular conception that good and evil, light and darkness, truth and error, spirit and matter, each and all form part of the universe as God made it, that is, "very good," and are set one against the other, will not bear analysis. We are going forward in God's own way as we consciously know and can confidently declare the oneness, the unity, the allness of God and His creation, including man, spiritual and perfect. The smallest demonstration in Christian Science is proof of this. It is just the evidence, resulting from personal experience in the spiritual way, that every student needs. On the foundation that God is the only cause and creator the whole fabric of scientific Christianity is built.

Humanly speaking we may well be appalled at the seeming potency and persistence of evil; but it is a fact for which we must be eternally grateful, that Christian Science is daily proving its unreality. This stands for—it means in all its fulness—the redemption of mankind. Every student, therefore, who is taking part in the angelic work of overcoming evil in his own consciousness is testifying by his life that what he, through the power of Truth, is able to do can not only be done by him, but it is the blessed privilege of every

human being. He is therefore twice blessed. Overcoming is spiritual progress; with every step onward the light becomes clearer. Well may mankind, hungering and thirsting for spiritual certitude, for rest of heart, for relief from physical troubles, be encouraged by the "Be of good cheer" of Jesus, and the "Take heart, dear sufferer," of our Leader (Science and Health, p. 573).

MENTAL WORK.

GRACE SQUIRES.

THE mental work of the Christian Scientist, like all that he does, needs constant examination and analysis, because of the persistent tendency of mortal mind to drift into error. Unless we watch, the tendency to place weight on our own argument may develop in consciousness a mistaken sense of our own power which disproportions in equal ratio our dependence on God.

The mortal sense of separateness from God is so complete, one's thoughts and acts seem so surely his own, that he may be bewitched into a continued independence which in time brings forth disaster and dismay. The very encroachments of error, its bold insistence to occupy the foreground, to be the protagonist in every mental drama, may lead one to increase his arguments rather than his trust, until mortal mind seems to hold all the field, while mental work begins, and is apt to end, with his own futile effort.

Our Leader corrects this tendency throughout her writings, and most clearly in the Preface to Science and Health, wherein she points out that many imagine the healing in Christian Science to be the result of the action of mortal mind, and explains that it is not this, but the operation of divine Principle, in other words, God; that we therefore need clearly to disrobe the mortal thought of any supposed sufficiency in itself, and to lean with reverent dependence on the giver of every good and perfect gift.

Nothing is more apparent to the student of the gospels than Christ Jesus' selfless dependence on his Father. No situation obscured his vision. To quote passages illustrative of this is to quote practically the whole gospel. He neither spoke nor acted without acknowledging that both the thought and the act proceeded from the Father. Since he is "the way," shall we not do well to follow in his divine steps, pondering with patient analysis every word and deed? "Every human thought should turn instinctively to the divine Mind as its sole center and intelligence" (Miscellaneous Writings, p. 307). This gives the Christian Scientist a theme for his every prayer. Whatever his improvisation, he must not for an instant lose this tonality. It is related that when the gentle Emerson once stepped out from a hot, distempered antislavery meeting, the contrast from its fume and fury to the speaking stillness and beauty of a June day rebuked his petty turmoil with its own vastness, and seemed to say, "Why so hot, my little man? Why so hot?"

Perhaps it would be equally well for us to step out of our finite sense of self and things and get large, broad, convincing views, that outline the whole, that proportion and unify, rather than to magnify our pains and defeats through the microscope of too constant and too close analysis. To contemplate God's presence and power, to understand the whole of divine harmony from such symbolic appeals as even human sense cannot wholly blur, the glory of the sky, the fragrance of the flowers, the hush and wonder of that communicable presence which every sentient landscape gives,—to feel oneself inevitably drawn toward the beauty of Truth, its climax, not its disfigurement, will progress him farther along his mental march from sense to Soul, than peering into error, balancing the pros and cons of this and that suspicion, which grows Argus-eyed on inspection, or holding any denial in thought which unconsciously deepens rather than effaces its outlines.

Mrs. Eddy says, "You continue the mental argument in the practice of Christian healing until you can cure without it instantaneously, and through Spirit alone" (Miscellaneous Writings, p. 359). A child has to see a real apple cut in two, its portions held apart and then placed together, and this repeated many times before he knows that two halves make a whole. Later, when he has grasped this fact, he dispenses with his symbols.

With the ultimatum of instantaneous and spiritual healing before us, would it not be well to endeavor earnestly to approximate this state of consciousness? to discard little by little the divided apple of mortal mind's protestation and analysis, and more and more to leave the field to God? To know that the health, the peace, the love we feel, *He* has made possible, that in these higher moments the *Holy Ghost* has come upon us, and the power of the Highest has overshadowed us,—this brings a deep realization of our dependence upon divine Love, our inability of our own selves to do anything.

OVERCOMING FEAR.

EDWARD EVERETT NORWOOD.

THE psalmist said, "What time I am afraid, I will trust in thee." The more faith mortals have in materiality, the more fear they have of it, until a better understanding of Truth turns them away from both. A recent experience was useful in giving the writer a needed lesson and reminding him, as it did, of the presence and practical power of the infinite Mind whom we are endeavoring to understand and reflect.

A motor-car had been purchased, and after a few lessons he became fairly skilful in operating it, but every time the machine was taken out the conscious and unconscious argument of fear would appear in various forms,—fear that the car would run away, run over some one or into something,—and in addition it seemed to be very large and cumbrous. This went on for several days, with more or less denial and insufficient realization of the truth, until at last there came an awakening. He reasoned that this car was a manifestation of material belief, that it was a good belief, because its parts were well ordered, acting harmoniously according to law, and responding to intelligent operation by the one in charge. It was a useful belief, since it helped to overcome the limitation of other beliefs, such as time and space, thus assisting in a degree in the work of truth; but it was only a manifestation of belief. Now man, the true selfhood, stands as spiritual identity in Mind, as idea, God's image and likeness, and he has dominion over every belief in the so-called material universe; hence fear and mesmerism have neither place nor power. The instant this was clearly realized, the whole sense of difficulty vanished, and since then confidence in man's ability has reigned.

On page 189 of "Miscellaneous Writings" Mrs. Eddy says: "For man to know Life as it is, namely, God, the eternal good, gives him not merely a sense of existence, but an accompanying consciousness of spiritual power that subordinates matter and destroys sin, disease, and death." We must never at any time limit our mental activity, the capacity to think and act rightly. As this is done, the truth of being frees us from the bondage of fear, as unjust as it is untrue. Sinful sense would suggest weakness and discouragement; spiritual sense knows no cause for either, since the power, energy, and confidence with which divine Mind invests us are unlimited and ever operative. The prolonged activity of right thinking and acting on a basis of infinite Mind and His irresistible law,—holding to the truth in the face of sense testimony, rejoicing in the little that we do know, wisely using it, and thanking God for it all,—these are the steps which lead to the Father's house, the spiritual consciousness not constructed by human reason or material theories, eternally harmonious.

On page 403 of Science and Health we read: "You com-

Digitized by Google

mand the situation if you understand that mortal existence is a state of self-deception and not the truth of being." And how true it is that to know the truth alone frees us from the thraldom of error—from the mist that still seems to go up from the earth and water the whole face of the ground! But (*laus Deo*) this mist is not of God's creating, has no part in Him, no mind, body, energy, or law, and we need not fear it. "Fear hath torment," indeed fear is the torment. We need not accept mortal mind testimony, since our thought of God is based on something beyond that, and the truth satisfies and saves. Man, the idea of God, cannot be separated from Mind at any time, from that Truth which is ever conscious, and which can never be limited or obscured.

The truth of being is the one existent, consistent, and persistent thing, and continues throughout eternity for us all. Having the understanding of this Science, man has all there is, and need not walk in darkness, for he has the light of Life. His delight is in the law of good, and in this "law doth he meditate day and night," even until it becomes the prime activity of his being. Such a one abides in the tabernacle of the Lord and dwells in His holy hill. Seeking peace, he finds it where it alone can be found—in the honest and contrite heart, the consciousness made pure by being chastened of all material dross. He learns to live daily in the reflection of that Life which maketh all things new, the only life there is to live, which is neither in nor of matter, but in God, ever-present good.

As we dwell on these things, the verities of being, as we make them our own and manifest them in daily life, the errors of sense will gradually vanish, for they can have no abiding-place in man any more than in Mind. God is supreme, and man is at all times standing in His presence, sane, safe, and satisfied.

THE WIDER VISION.

MARTHA BURR BANKS.

AMONG the many blessings which have come to the world through the knowledge of a scientific Christianity, there is nothing perhaps that has given more peace, hope, joy, and courage to the human heart than the change in thought which is brought about by this knowledge in regard to what is called death. In spite of brave efforts to find comfort and cheer in the old views of a future life, everything connected with that life has seemed to most of us vague, unsubstantial, and unsatisfactory. As thus described, heaven was desirable only as the best thing that offered itself under the circumstances, and the friends who had been apparently separated from us by the dark valley of the shadow, seemed to our consciousness unfamiliar, unreal, and far away, even if we did not feel that they were lost to us altogether.

In the unfolding of spiritual facts in the light of Christian Science we are, however, gaining a clearer, truer concept of the hereafter, and are beginning to grasp somewhat the meaning of Mrs. Eddy's words in Science and Health, "When our friends pass from our sight and we lament, that lamentation is needless and causeless" (p. 386). We are learning that life goes on, and that individuality and identity are never affected by death. Mrs. Eddy tells us that "mortals waken from the dream of death with bodies unseen by those who think that they bury the body" (Science and Health, p. 429).

These thoughts were recently illustrated for me by a simple incident. One Sunday morning, after the church service, I stepped into a drug-store to wait for the trolley-car which was to take me to my home. At one side of the shop was hung a narrow mirror which reflected the activity of the street below the shop, so that any one who glanced into the glass might see when the special car for which he was looking was at hand. As I gazed at the reflected copy of the life behind me, I became interested in watching various figures which came toward me and at a certain point vanished from my sight. They had not faded away in the distance; they had not turned aside from their course; but to my sense of things they were all at once nothing and nowhere, although I knew that if my eyes should wander to the large window by my side, I would find them still going on their way, undisturbed and unchecked,—still in God's air and sunshine and under His care and guidance.

Then followed the thought that it is only because in our outlook upon life we have limited our vision to the narrow glass which at best shows but a semblance of the real, that we believe in disappearance and coming to an end; and we may well be grateful that the truth is leading us to look through the wider window of spiritual understanding and enabling us to realize that there is no death, no separation, no loss, but that "all live" unto God, as the Bible declares.

THE UNIVERSAL POEM.

CASSIUS M. LOOMIS.

To the lover of song all being is tremulous with rhythm, measure, harmony, and order—heaven's first law. However distorted the material vision, however discordant the babel of earthly tongues, behind the veil of sense is that perfect realm of harmony known to him alone whose life is attuned to the gospel of love, that love which enriched Christ's healing ministry among men, and which is enriching a like ministry among his followers today.

The study of history discloses an order even in the world's events. There are pulse-beats in the affairs of men, significant and divinely appointed periods of awakening. A prophet is born not out of time, but just at the time when he is most needed. We do not give ourselves over to speculations regarding fate and destiny when we say that the coming of Christian Science was truly God-given—the one needful nineteenth-century event, as perfectly timed as was the appearance of the star of Bethlehem. Could a teaching that was to meet the needs of so wonderful a period of human progress have been given us before? It would not have harmonized with the complete poem of song which had to mortal sense been unsung for so many centuries. All this having come about in behalf of progress upon our own small planet, what of the millions of other starry orbs which make up infinitude? Must there not be order and rhythmical harmony pervading all immensity?

When a song, born of quickened sense, catches the public ear, there is response from every listening heart. Its music, combined with words, rhythm, and rhyme, touches the sympathetic chord in a mysterious way. Mrs. Eddy tells us on page 213 of Science and Health that "music is the rhythm of head and heart;" and without this rhythm, outpicturing order, harmony, and, in its last analysis, love, the art of complete expression could not be found. It is the universal poem, the song of songs that thrills our very being and uplifts us from the mire of doubt and erroneous thinking. Our poets live a new day after each inspiration of song; the heavens take on new color and the breezes murmur sweeter tales of romance. Voicing this universal truth as regards God's perfect image, Dryden says:—

> From harmony to harmony
> Through all the compass of the notes it ran,
> The diapason closing full in man.

Not until the human race lost sight of man's spiritual birthright did a hint of his fall enter our theologies.

Should not the gratitude of those who have felt the healing ministrations of Christian Science be sung in one vast chorus of praise to God? The oratorio, because it is founded on Holy Writ, gives expression to the tense religious fervor of its composer, who is swept upward on a wave of unspeakable gratitude. Soon the world takes up the refrain, and the work becomes a classic. Why? Because

Digitized by Google

God has spoken, and the word of God is the eternal bulwark of life, the living, never-ceasing pulsation that knows no bounds. To explain this vision bordering upon the celestial, no mortal need try. The logic of spiritual truth attuned to the harmony of the spheres belongs not to mundane thought. Our Leader tells us that "the one great obstacle to the reception of that spirituality, through which the understanding of Mind-science comes, is the inadequacy of material terms for metaphysical statements" (Science and Health, p. 115). Then is it not a truth of great promise, that because there remains so much to be expressed beyond material terms, God's gifts to His children are limitless and beneficent?

The coming of the Master among us was God-ordained. Every prophet since then, advocating his meed of the true gospel, has appeared when human thought seemed most rampant with error, and can we estimate the boon to mankind of the rediscovery of the Christ-healing? Coleridge has given us two excellent definitions of thought expression. "Prose," he says, "is words in their best order; poetry,—the best words in their best order." On this premise poetry and song are the highest expressions of human thought, because they are the most orderly and exact. But even our ablest poets have apparently only touched the hem of the seamless robe, for words alone can never express the uttermost limit of Mind's activity.

The same rhythm of harmony runs through all avenues of expression. The scintillations of light and sound evince a perfect order and mathematical precision. Transmitting sound waves to a disk of graphite, and reproducing them by mechanical means, is done with marvelous fidelity. What of the disk made of the substance of things not seen, upon which the music of heaven shall fall from a shadowless infinity? We are indeed powerless to foretell even a fraction of what awaits us, though in very truth we would have it all now, were we sufficiently awake to our inheritance.

A breath of divine Love has indeed swept over the harp of quickened thought, and we are again lifting up our voices in an anthem of praise never before equaled. Truly did the Master say, "The kingdom of God is within you." It is the time-beats of celestial music, reassuring us today that all is well in God's vineyard of plenty, in the great ultimate of causation and omnipotent Love.

"BLESSED ARE THE MEEK."

KATHARINE T. PORTER.

IN preparing a Sunday school lesson on the subject of the third beatitude, I referred to the dictionary, and with this aid some beautiful explanations of its meaning were opened up to me. Among the synonyms given for the word "meek" I found "unassuming," and felt immediately what a world of meaning it held in the enlightened thought of Christian Science. But what was the exact meaning of "to assume"? Once more I turned over the pages, and found among other definitions the following wonderfully significant teaching: "To take upon oneself;" "take for granted, or without proof;" "claim more than is due." Among the synonyms given were "to arrogate," "to usurp."

Returning to the first definition, "To take upon oneself," —oh, the vast assumption of mortal mind, with its innumerable beliefs of mind in matter and evil; its "I" written so big, its beliefs in minds many, and consequent denial of the allness of God, Spirit, the one Mind! Then quickly thought traveled to the second meaning given, namely, "to take for granted." All the so-called facts of mortal mind are accepted wholesale on the evidence of the physical senses, the carnal mind, which St. Paul said is "enmity against God," and which Jesus called "a liar, and the father of it." What kind of "proof" can that be to which these senses testify, and how worthy of reliance?

The third meaning given, "to take more than is due," brought the question, Are sorrow, sickness, sin, death what is due to God's image and likeness, which He pronounced good? Do we not take these for granted, for our neighbor and for ourselves? do we not suppose them to be facts? Thus my eye wandered to the synonym "to usurp." Verily mortal thinking does seek to usurp the place, the power, the verity, the allness of the most High, God, and the mortal sense of man arrogates to itself the place which belongs to the perfect spiritual man whom God has created. To indulge in any of these beliefs, therefore, is to "assume," and this is the opposite of meekness.

"Blessed are the meek: for they shall inherit the earth." The next light on the subject was given through some of the dictionary meanings of the word "inherit": "to receive as a right," "to have by nature," these bringing with them a sweet and certain sense of the surety, the absolute, inevitable certainty, of the inheritance of those who are meek, those who do not assume. And what is this earth which they are to inherit? Here the glossary of Science and Health provided the definition of earth in its spiritual sense: "a sphere; a type of eternity and immortality, which are likewise without beginning or end" (p. 585).

Those, then, who are meek, unassuming, who acknowledge God, Spirit, as all-power, will inherit the earth of spiritual sense. This earth which the meek and the spiritually-minded are "to have by nature," can be nothing less than heaven, eternal harmony, the realization of perfect bliss in divine Mind. Blessed indeed are the meek, and as the completeness of this blessing with its infinite meanings unfolded itself to me, I prayed that all humanity might become meek and that I might be sufficiently unassuming to be able to give this wonderful truth to others in a simple way which would lift their thought to see that meekness consists in knowing and loving God.

CURRENT OPPORTUNITIES.

PETER B. BIGGINS.

ONE morning, while walking to the office, I met two little fellows who were trying a race on their way to school. One was well in advance of the other, and the boy who was behind called out, "Oh, it's all right for you; but look at the heavy boots I have on!" I did not stop to investigate the validity of his complaint, but imbibed the lesson in metaphysics which the little incident afforded.

We need to watch the human tendency to complain of the burdens which seem to retard our progress in the understanding of things spiritual. How much better it is, if instead of whining we realize that obstacles and difficulties give us countless opportunities to prove the nothingness of evil and man's God-given dominion over the belief in its reality. The apostle doubtless wrote from the depths of his own experience when he sent this exhortation to the Hebrews: "Let us lay aside every weight, and the sin which doth so easily beset us, and let us run with patience the race that is set before us."

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 31, 1912. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 13, 1912.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 3, 1911, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

SELECTED ARTICLES.

[Alfred Farlow in *Wichita* (Kan.) *Beacon.*]

A recent issue publishes a letter by one who criticizes my statement that "one is saved by understanding 'the image' of God and conforming his life thereto." He declares that he does not consider this a virtue; that in his "judgment no man can or does assume and awaken with God's likeness on this earth. He may, after the resurrection." The gentleman is exactly correct. When one is fully awakened with the likeness of God and has been entirely raised up from the false material sense of manhood, and his life has become entirely conformed to the highest spiritual advancement, he will find himself above the world and out of it. In the Scripture it is said that "Enoch walked with God: and he was not; for God took him." The eternal plans and conditions of divine Providence never change; what pleased God in the days of Enoch pleases God today. If mortals deport themselves in such a way as to please God, in the full sense of the term, they will thereby outgrow the world of matter and will attain the heavenly estate, thus conforming to the Scriptural admonition, "Work out your own salvation with fear and trembling. For it is God which worketh in you both to will and to do of his good pleasure." However, we do not hold that every Christian will in this life attain to the full stature of manhood in Christ and thus have won his spiritual or heavenly estate, but that the work begun here will be finished here or hereafter.

The gentleman is entirely incorrect in his surmise that our recommendation has any reference to the imitation of a human being. God is Spirit, Life, Truth, Love, good. An understanding of the nature of God places one in line to conform his life to that nature; thus he is on the road to salvation. He must continue along this line until he has reached the point of perfection where he is no longer in any degree influenced by the flesh. It is quite true that God, Spirit, is beyond the comprehension of our mortal vision, nevertheless God is not unknowable; it still remains true that we must comprehend God, "whom to know aright is Life eternal" (Science and Health, Pref., p. vii). As we advance spiritually, our understanding of Spirit will improve; and hence our ability to conform our lives to Spirit will be enhanced.

Christ Jesus was the only man whose life was one of continual triumphs. He measured up in the full degree to the requirements of that spiritual progress which is essential to salvation, hence he is accepted by Christian Scientists as the one and only Exemplar.

[Frederick Dixon in *Sevenoaks* (Eng.) *Chronicle.*]

In my recent letter, in reply to Mr. ——, I promised to explain, with your permission, some of the many things another clergyman wanted to know. At the same time I cannot possibly cover all this critic's ground, for I have preference, as I think I have shown, for making good my contentions as I go on, instead of filling columns with assertions and questions on every theological problem which has perplexed human intelligence,—from Gnosticism to Arianism, and from Christian healing to the atonement.

This clergyman, for instance, refers casually to the atonement, as if it was a doctrine on which orthodox theology was united. Of course it is nothing of the sort. A distinguished member of the critic's own church not long ago stated, in an orthodox journal, no less than four modern views, as he termed them, of this dogma, for the purpose of adding a fifth one of his own. It is a little unreasonable, I cannot help thinking, of Mr. —— to demand from me whether Christian Scientists agree with the orthodox teaching of the atonement, when I am perfectly certain he cannot tell me what that teaching is.

The critic's first point, he says, is that there were heresies, such as Gnosticism, in the early church, to which Christian Science is akin; that these heresies were condemned by the church from the time of the apostle John; and that my reference to the Covenanters has nothing to do with them. I have already had to show another critic that the trinity never was adopted by the church as a dogma until the fourth century, and that therefore he was a little premature in claiming it as primitive church teaching, especially as, in the interim, Arianism had received papal sanction. I must now impress upon Mr. —— that Gnosticism, which by the by is the antithesis of Christian Science, was a product of the second century, so that it can scarcely have been denounced by "the beloved disciple." Dates are dates after all. While what I said about the Covenanters was, that the persecution of them was one of the later examples of the intolerance of the human mind, always trying to prove every one a heretic or a schismatic who does not agree with it. The Covenanters were only one link in a chain of illustrations I used in support of this. I can assure him I never imagined there was any connection between Gnostics and Covenanters. The latter were quite as convinced of the inviolability of the evidence of their senses as the critic himself.

Next, he says that Christian Science describes pain as illusion, and consequently, as it also says pain is the result of want of faith, Jesus must have lacked faith. What Christian Science says is that pain, in the words of one of the greatest natural scientists, is a condition of consciousness; and next that, as Jesus pointed out, this consciousness is a false consciousness, and can be destroyed. If it is not a false consciousness, it is part of the divine consciousness, and therefore indestructible. If it is part of the divine consciousness, Christians should welcome it, and not go to a doctor, who may be an infidel or a heretic, to endeavor to get rid of a God-sent gift. What Jesus really did was to show the world, through the medium of his own faith, the only Christian way in which to destroy pain; and so to illustrate something to which James referred when he wrote, "Faith without works is dead." When any man can heal the sick, raise the dead, and walk on the water as Jesus did, he will be in little danger of being accused of lack of faith.

Next, the critic gives three instances of what he terms my "free and easy" methods of exegesis. The first of these is Jesus' saying to Nicodemus about the flesh and the spirit. I explained what I thought this meant, and why I thought it. I still think that is a much more scientific method of exegesis than this gentleman's method of a flat denial without giving any reason for it. Perhaps he remembered at this moment that Jesus once said "the flesh profiteth nothing," and therefore thought it better not to attempt to explain how God came to create something which profiteth nothing, and which Paul said could not please Him.

The critic's second example is a second negation; he says Jesus never demanded the power to heal as a proof of discipleship. Did Jesus not say, "These signs shall follow them that believe," and go on to enumerate acts of healing? Did he not tell the disciples to teach the world all he had commanded them, and was not physical healing part of his command to them? Did he not declare that those who believed in him should do his works? and if those works are not done, is it not a proof of want of belief, and can one who is not a believer be a disciple? What the "greater works" may have been, has exactly nothing to do with the matter.

The third example given by him is a third negation tempered by an explanation. He says that when Paul wrote "Let this mind be in you, which was also in Christ Jesus," he was not speaking of the knowledge of God, but of "loving sacrifice." Does he really believe that the mind of Christ is limited to "loving sacrifice"? What, for instance, does he think Paul meant when he wrote to the Corinthians, "But we have the mind of Christ"? He meant, as the con-

Digitized by Google

text shows, the reverse of "human wisdom," "the teaching of the Spirit of God." Is not this what he refers to elsewhere as the scientific or absolute knowledge of God?

The latter part of the gentleman's letter is devoted to a criticism of Christian Science itself. The danger of it, he says, is its ideal of "a comfortable, easy, painless existence." Does he seriously think that the denial of materiality brings about ease in the senses? The struggle to shake off materiality constitutes taking up the cross daily in its truest sense. Does he really believe that a Christian Scientist, sitting daily by the sick, has embarked on a life of ease? Does he really believe that the knowledge that the failure to heal a case means publicity in the coroner's court, with the abominable insinuations of all sorts attached to it, is the choice of a life with no cross in it? I differ entirely from the critic in many ways, but I believe he is too much of a gentleman ever to use such an argument again.

Then, the critic says that Christian Science, in minimizing evil, becomes a path to hell. That is stupidly virulent language. Christian Science shows that sin is not confined to the customs of geographical areas, but that everything not of God is sin. In this way its view of sin is much more comprehensive than that of orthodox theology. The world admits that to have a headache as the result of drunkenness is sin; but Christian Science insists that to have a headache as the result of anything is sin, since it is believing in some power apart from God. That is why Christ Jesus said, "For whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?"

This brings us back once more to the inevitable question of healing, healing which Christ Jesus made the test of belief, and so of discipleship. Go into all the world, he said, and preach the gospel and heal the sick. The only proof to humanity that the gospel preached is the gospel of Christ, is that among the "signs following" is Christian healing.

[C. L. Ramsay in *Montrose* (Scot.) *Standard*.]

In the course of remarks in a recent sermon Dean Welldon is reported to have expressed his regret that Christian Science should concern itself only with the healing of sickness, and not with the healing of sin. No criticism could really be much wider of the mark. As a matter of fact, the healing of sickness in Christian Science is only the result of the far greater work of mental and moral purification in which it is engaged, every form of sickness healed being the outward and visible sign of some ignorance or error removed from the mind. Nothing less than the complete regeneration of mankind, mentally, morally, and physically, is the aim of Christian Science, and it will continue its beneficent work till all are perfect, as the Father in heaven is perfect. That the world is apt to regard Christian Science as merely a system for treating disease is no doubt partly due to the fact that any striking case of healing generally attracts the attention of the public, while the corresponding change in the character and disposition of the patient may be known to only a few. But unless these fruits also appear, the patient is not truly healed.

[M. I. Whitcroft in *Stroud* (Gloucestershire, Eng.) *News*.]

What does "the higher tribunal of public opinion" have to say about the thousands of deaths from consumption which occur annually under medical treatment? Does it express the desire that "such cases cannot be given too much publicity," and does the writer think it "regrettable" that the doctors who attended such cases cannot, "under the circumstances, be made legally responsible for the 'foolish' people's death"?

The gentleman who so courageously hurls contumely at Christian Science, while hiding behind a pseudonym, might well be advised to keep more abreast of the widely discussed topics and great religious movements of the day. Were he to do so he would not be led into the mistake of describing such a world-wide movement as Christian Science is known to be by the inappropriate terms "pernicious and obscure." It certainly is not "pernicious," *i.e.*, destructive, but grandly constructive, for it has brought life, joy, and a deep spiritual awakening into the lives of millions of people who in numberless cases were sunk in despair, helpless invalids, slaves to drink and other degrading habits, and without hope or God, and has healed them of sickness and sin. The uplifting influence of Christian Science is making itself felt above all the clamor of ignorant and prejudiced opposition; and the gross injustice of the attacks made upon it only serve to rouse in the hearts of all true English men and women the desire to see a spirit of fairness and open-mindedness displayed to all who, while holding different opinions, are one in their desire to relieve sick and suffering humanity. This spirit is certainly lacking in the article to which this reply is addressed, though, from the pseudonym adopted, one would have expected to find quite the reverse.

[De Witt McMurray in *Dallas* (Texas) *News*.]

In a recent issue of the *News* it was stated that a clergyman addressed the Physicians' Lunch Club, "declaring that physicians and ministers must get together in a campaign to check the growth of Christian Science." It was further stated that the speaker, after being introduced, "immediately took up the subject of Christian Science, declaring that it had steadily gained adherents for the reasons,—because it has mystery and is hard to enter, like a secret society; in that four years of study are required; because there are many people who are looking for some means of cure and, knowing no other, embrace new theories; and because the Christian Scientists have conducted a steadily aggressive and intelligently appealing campaign. He said the physicians and ministers must use similar methods and give the people more general knowledge along the lines of taking care of themselves." It will be noted that nowhere is it stated that this gentleman gave a reason why "physicians and ministers must get together in a campaign to check the growth of Christian Science." We would direct the attention of this critic and the physicians to the reply of Gamaliel: "Refrain from these men, and let them alone; for if this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it." The Master said, "The tree is known by his fruit;" and Christian Scientists are perfectly willing that this standard be used in judging them and their works.

Christian Science is not simply a method of healing disease, but a religion. The healing of the sick is incidental, in that it is brought about by prayer and right living. If it be true, it cannot be destroyed; if it be not true, it will destroy itself. Religion is a personal matter between a man and his God. Certainly no one would want another who conscientiously believes a thing to stultify himself by hypocritically professing to believe another. We feel sure that the critic does not believe in the infallibility of human judgment, and this being true, is it not possible that he is wrong and the other man right,—just as possible as that he is right and the other man wrong?

The tenets of Christian Science are to be found only in the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy, which may be read of all men. This information is offered because in stating that "four years of study are required" before one can join a Christian Science church, the speaker made a very incorrect statement. The same is true of his statement that it "has mystery and is hard to enter, like a secret society." There is no mystery about Christian Science unless the statements contained in the Bible and in its text-book are mysterious, as all there is of the teachings of Christian Science is contained in these books. Certainly it cannot be

Digitized by Google

very mysterious, since children read, understand, and apply the teachings of Christian Science when occasion demands.

Another reason given for the growth of Christian Science is that "because there are many people who are looking for some means of cure and, knowing no other, embrace new theories." Surely no one could blame those in such condition for going to the only remedy they know for help. It was said also that "Christian Scientists have conducted a steadily aggressive and intelligently appealing campaign." We beg to protest that Christian Scientists are not at all aggressive in their work, except it be in the destruction of sickness and sin; certainly not in the matter of proselyting.

In all fairness we ask, Why should those who are working and praying to instil the love of God into the hearts of the people, to make His presence felt, to demonstrate that He is "a very present help in trouble," to persuade men and women to live better, purer, nobler, happier lives, have war made upon them by those who profess to be doing the same thing? And may we be allowed to suggest that if those who coincide with the views of the speaker feel that it is incumbent upon them to "fight Christian Science," the most effective way would be to offer to the sick, the sinning, the discouraged, and heart-broken something better.

[R. Stanhope Easterday in *Terre Haute* (Ind.) *Post.*]

Christian Science conceives of God as infinite personality, but it eschews the idea of applying to Deity the term "personal" in the commonly accepted or finite and corporeal sense. A leading religious tenet of Christian Science is in the significant words: "We acknowledge Jesus' atonement as the evidence of divine, efficacious Love, unfolding man's unity with God through Christ Jesus the Wayshower; and we acknowledge that man is saved through Christ, through Truth, Life, and Love as demonstrated by the Galilean Prophet in healing the sick and overcoming sin and death" (Science and Health, p. 497). It cannot be denied that such views of God, of the Christ, and of man's true relationship thereto, include all that is true or good in any dogma, and they effectually rebuke the unkind epithet "pagan" as used by our critic.

It can no more be inferred that "Christian Science puts body first," etc., because forsooth Christian Science heals physical disease by spiritual means, than it can be logically inferred that Jesus, who spent so much of his valuable time while upon earth in healing the sick, took special note of the body to the exclusion of the great essential of man's real being, even spiritual truth. Jesus did not heal the body by losing sight of Spirit, but healed the body by knowing and making manifest the allness of Spirit. The very key-note of Christian Science practice is the Lord's intelligent admonition, "Take no thought . . . for your body." Ability to heal disease as well as to eliminate sin through prayer was established by our Lord himself as the only evidence of true discipleship in all ages. Christian Scientists are but today reasonably trying to obey our Saviour's equal command "to heal" as well as "to preach," with what success is attested by an ever increasing volume of incontestable evidence on every hand.

[George A. Law in *New Haven* (Conn.) *Register.*]

Christian Science is no creed or religious belief; it is not human opinion, but deals with revealed truth, demonstrable truth, as found in Scripture, and this fact is proven by the results attained when Christian Science is put to the practical test of healing sickness and sin. "Science and Health with Key to the Scriptures" by Mrs. Eddy, the text-book of Christian Science, is not, never was intended to be, and cannot be used as a substitute for the Bible. However, it is an aid to the study of the Bible, and is used in the same manner as are the numerous Bible commentaries with which clergymen for the most part are familiar. It is the common experience of those who study the Bible with the aid of the Christian Science text-book, that its pages become illumined with a new light, and the understanding of much that heretofore seemed to be obscure is attained.

A sufficient denial of the claim that Mrs. Eddy is considered as Christ or a second Christ is found in the second tenet of the Christian Science church, which is as follows: "We acknowledge and adore one supreme and infinite God. We acknowledge His Son, one Christ; the Holy Ghost or divine Comforter; and man in God's image and likeness." Relative to this same subject, Mrs. Eddy had something to say which was originally published Feb. 1, 1895, in the *New York World*, from which is quoted the following: "There was, is, and never can be but one God, one Christ, one Jesus of Nazareth. . . . But to think or speak of me in any manner as a Christ is sacrilegious. Such a statement would not only be false, but the absolute antipode of Christian Science, and would savor more of heathenism than of my doctrines." Also the following from a statement by Mrs. Eddy, published April 11, 1899, in the *Boston Journal*: "All Christian Scientists deeply recognize the oneness of Jesus—that he stands alone in word and deed, the visible discoverer, founder, demonstrator, and great teacher of Christianity, whose sandals none may unloose."

It is recorded in Scripture that Jesus commanded his disciples to go into all the world and "preach the gospel" and "heal the sick." As a professed follower of the Master, is our critic striving to fulfil both demands of such a discipleship, or is he disregarding the second one? If he is not healing the sick, why not; and, moreover, why does he find fault with those who are endeavoring to comply, at least in some measure, with both of Jesus' injunctions? Another pertinent inquiry might be as to where in the life and teachings of Jesus does our critic find anything which licenses any attempt by misrepresentation to criticize those who are striving to emulate Jesus by both preaching the gospel and healing the sick? Jesus said, "By their fruits ye shall know them."

[Willis D. McKinstry in *Walnut Valley Times*, Eldorado, Kan.]

"What shall I do to inherit eternal life?" The answer to this question is clearly and unmistakably set forth in the declaration of the Master, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent;" thus the entering into a complete salvation is through a knowledge of God and His Christ.

Mortals are called upon, as was the rich young ruler, to "sell that thou hast, . . . and come and follow me." When Jesus declared, "The kingdom of God is within you," he referred to the divine state of being expressed in the consciousness of man; therefore for mankind "to inherit eternal life" they must sell—exchange—their human concept of existence for the divine.

"It is the spirit that quickeneth; the flesh profiteth nothing." The so-called human existence, manifesting itself according to physical law, was silenced by our Lord and Master through his understanding of spiritual cause and effect operating through divine law; therefore he spoke authoritatively when he said, "I am the way, the truth, and the life: no man cometh unto the Father, but by me;" thus the life of Christ demonstrated is the way of salvation.

The Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is a Bible commentary; it illumines the Scriptures and interprets them spiritually. On page 76 of Science and Health we read: "The sinless joy,—the perfect harmony and immortality of Life, possessing unlimited divine beauty and goodness without a single bodily pleasure or pain,—constitutes the only veritable, indestructible man, whose being is spiritual."

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

BUILDING ARIGHT.

SOME one has wisely said that to work for the good of all is indirectly to compass our own. While this is doubtless true, it is also to be remembered that the foundation of collective goodness is based upon that of the individual. When Jesus gave to humanity that great saying which has since been called the golden rule, "Whatsoever ye would that men should do to you, do ye even so to them," he was but restating the old Mosaic law, "Thou shalt love thy neighbor as thyself," a statement entirely consistent with his other great saying, "Seek ye first the kingdom of God," for this is likewise a foundational premise, in that with the attainment of this kingdom is coupled the promise that "all these things," all the good that is man's rightful heritage, shall be added.

The mistake of some reformers has been that they have endeavored to build from the superstructure down to the foundation, depending upon the enforcement of human law for the accomplishment of results, rather than upon the regeneration of the individual from within. Not so Christ Jesus. He was content to take a few fishermen and others of equally low degree, from the worldly point of view, and to inspire in them individually the love of God and man which destroys all sin and all selfishness. He knew that only by precept and example, which would show that the kingdom of God was more to be desired than all else, could he build up that kingdom on earth. He knew, as some are beginning to understand today, that men are not made pure, temperate, unselfish, holy, by statute law. Paul knew this when he wrote to the Philippians, "Let this mind be in you, which was also in Christ Jesus." Mrs. Eddy knew it when she wrote, "Keep your minds so filled with Truth and Love, that sin, disease, and death cannot enter them. . . . There is no door through which evil can enter, and no space for evil to fill in a mind filled with goodness" (Pamphlet, What Our Leader Says).

As consistent followers of Christ Jesus, Christian Scientists have before them the upbuilding of Christian character, not simply because it will profit them so to live, but because it is right that they and all men should so live that the glory of God is reflected in human affairs. When human living is so ordered that all men humbly seek first the kingdom of God as their paramount desire, this will be reflected in unselfishness; the divine Principle of man will be universally known, and humanity will realize and demonstrate the sublime truth of Mrs. Eddy's words on page 340 of Science and Health: "One infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scripture, 'Love thy neighbor as thyself;' annihilates pagan and Christian idolatry,—whatever is wrong in social, civil, criminal, political, and religious codes; equalizes the sexes; annuls the curse on man, and leaves nothing that can sin, suffer, be punished or destroyed."

No matter how fair and stately the superstructure, unless the foundation is Truth we are building on sand. The pharisaical conventionalism which thinks only of the outward presentment, making clean the outside of the cup and platter, while within they are tainted with corruption, was sternly rebuked by the Master. He who "knew their thoughts" could penetrate the thinly masked "ravening and wickedness," and those who delude their fellows and even themselves with the pretense of conformity to divine law, should remember that "God is not mocked,"—"there is nothing covered, that shall not be revealed." This need for being "every whit whole," clean within and without, is strongly emphasized in Christian Science. The healed body is but the outward semblance of a healed mind, a mentality freed from malice, envy, greed, and hatred,—all that is unlike good; and it is useless to expect either quick or permanent healing while either patient or practitioner is building on other than the sure foundation, the rock Christ Jesus.

ARCHIBALD MCLELLAN.

LIFE.

HUMAN expression is always shaped by the mentality which is responsible for it. The definiteness and amplitude of the individual grasp of the ideal, of the nature of that which is thought of as a model and inspiration, determines the quality and value of one's output. Thus the builder is limited in his building to the proportions of his architectural vision. He cannot exceed it any more than a mathematician can exceed in his deductions the content of his sense of numbers.

All this serves to explain the fact that the one thing which has most to do with our living, its freedom, satisfaction, improvement, and usefulness, is our concept of the nature and compass of Life. By the many life is thought of as animated matter, and that there are as many lives as there are creatures or growing things. In the nature of the case this immerses both the thought and the thinker in materiality, and with the result that, in so far, his life becomes subject to material modes and environment. No one can thus relate his life to matter without practically consenting to the rule over him of the so-called material law that life is legitimately subject to decay and death. Life thus comes to be regarded as a relatively inconsequential passing, a feeble flame which has beginning and end, which is measured by a brief space and is gone forever. This view would render truly pathetic the fact that we can hope and aspire, that we are capable of apprehending, and are persistently impelled to reach up for that to which we can never attain. This is the irony of materialism, that its highest sense has outgrown itself.

There are many also who think of life as dependent upon death. They cite the alleged facts that living things from the highest to the lowest order feed upon each other, and that no advance step is or can be taken by any form of life which does not involve the death of other forms. They therefore argue for the normality of death, even their own. This is logical and legitimate in the materialist, but manifestly such a view is entirely out of keeping in a professing Christian, since it directly opposes itself to the realization and demonstration of the saying of the Master, "If a man keep my saying, he shall never see death," and must necessarily render the most earnest efforts thereto ineffectual.

Over against this world-point of view in which so many Christians share, Christian Science has inscribed on its banner, "There is no life separate from God." The eternal, the ever-living One constantly gives life to His every idea and manifestation. All life is therefore of Him and harmonious. That is not life which is subject to decrepitude and death, and nothing worthy to live in God's sight can ever die. As apprehended in Christian Science, the word of Scripture which says, "Thou wilt not . . . suffer thine Holy One to see corruption," is spoken of every divine idea, and the "river of water of life" which St. John saw "proceeding out of the throne of God" pictures not only the source of healing love, but the totality of being as the continuous outflow of the activity of Spirit. In her teaching that "all is infinite Mind and its infinite manifestation" (Science and Health, p. 468), Mrs. Eddy entirely dissociates the thought of substance or life from materiality, and presents a concept of being which is no less revolutionary than redemptive.

To enter into the realization that all life, including one's own, is indissolubly linked to God and partakes of His nature, is to find that old things have indeed "passed away; behold, all things are become new." One instantly acquires

Digitized by Google

an uplifted consciousness of dignity, of power, of safety, and of peace. The understanding of man's divine relation to God dispels the confusing mist and seductive mirage of false sense, while the vision of the possibility of deeds genuinely worth while strengthens and encourages the believer's heart and hands. One enters at once into the spirit of the Hebrew poet who sang: "The Lord is my light and my salvation; whom shall I fear? the Lord is the strength of my life; of whom shall I be afraid?"

To identify the divine Life as active intelligence is to identify our true selfhood, our life, as spiritual consciousness; it is to understand these wonderful words of a good man, "There is one infinite Life, that Life is eternal Life, that Life is my Life."

JOHN B. WILLIS.

ECONOMY.

A GOOD many persons fail to distinguish between economy and parsimony, the former being admittedly a virtue which stands for the prudent and orderly management of a household or state, the regulation of expenditure in such a way as to avoid loss or waste. It has been observed that in the upbuilding of a nation economy has been much in evidence, along with other virtues, such as self-denial, temperance, moderation, etc., while the decadence of a state has been marked by self-indulgence, luxuriousness, and excess. It should however be noted that economy and extravagance both represent mental states; that a very poor person may be wasteful and a very rich person economical, and that each is in great measure due to early training or the lack of it. It is true that Christian Scientists have a broader and more spiritual sense of economy as they advance in understanding, but from the very start they should keep in mind their Leader's words in the Manual of The Mother Church (Art. XXIV, Sect. 5): "God requires wisdom, economy, and brotherly love to characterize all the proceedings of the members of The Mother Church." This evidently means that economy shall not be divorced from wisdom or brotherly love, else it were not true economy.

In Proverbs we read, "He becometh poor that dealeth with a slack hand: but the hand of the diligent maketh rich." In many passages, however, both in the Old and New Testament, the diligence inculcated and commended is that which seeks after truth and holds it as the only real treasure. The Scriptures also show that the true understanding of God, infinite Mind, illumines human consciousness and destroys the improvident tendencies which lead to poverty. Thus we read that "the drunkard and the glutton shall come to poverty: and drowsiness shall clothe a man with rags." On the other hand we read that the men who loved God and kept His law reflected the bounty of infinite Mind, as in the case of Abraham and that of Job, especially after Job gained a truer concept of God, which brought him healing and then the multiplication of all his possessions.

It is not always seen that economy is not confined to the use of money but includes the right use of one's time and energies, also of one's thinking powers. Respecting this our revered Leader says, in an article entitled "Improve Your Time," that "success in life depends upon persistent effort, upon the improvement of moments more than upon any other one thing" (Miscellaneous Writings, p. 230). The whole of this article should often be read and pondered by Christian Scientists, for in its clear analysis of the question discussed it shows unmistakably the secret of failure or success in human experience. Even on what is called the material plane, quality means much more than quantity in most cases. A great deal of work badly done is of no value, and this is at least equally true in the mental realm. If we were always reflecting the one perfect Mind, there could be no wasted moments and no slipshod work. In the Bible we read that "one day is with the Lord as a thousand years," and we should all be striving to reach the mental condition in which thought starts with the perfect idea and brings it quickly into manifestation, whatever be the human need to which we devote our energies.

Christ Jesus, who knew and did the Father's will perfectly, fed five thousand hungry persons with no delay and little outward effort, and he gave a tremendous lesson in economy when at the close of the bounteous repast he said, "Gather up the fragments that remain, that nothing be lost." It was not economy but utter selfishness which led the unfaithful servant to bury his one talent, and the demand rests upon each one of us to make the very utmost of whatever we have, that the infinite supply of good may not be wasted by us or misdirected in finding its way into human channels. We would fain be "rich toward God," and richer each day. Then we ought to remember that it is he who uses rightly what he hath that "shall have more abundance," even as the Master said.

ANNIE M. KNOTT.

AMONG THE CHURCHES.

WINSTED, CONN.

The handsome new edifice of the Christian Science Society, occupying a prominent location on High street, opposite Union, was declared completed, with the exception of the basement furnishings, and will be opened for public worship tomorrow [Jan. 28]. Although much smaller than the other modern church buildings of the borough, and of entirely different pattern and construction, the new edifice being patterned after the Greek style of architecture, it is stately in appearance and may well be regarded as a fitting addition to Winsted's already imposing array of churches. There will be no formal dedicatory exercises at this time, but beginning tomorrow the structure will be regularly used by the society.

The building is located at the corner of High street and Fairview avenue, in the center of what was known as the Lincoln property, a lot eighty by one hundred and twenty feet, and is plainly seen from Main street through Union. It is of terra cotta and stucco construction, forty-two by sixty-five feet, outside dimensions, and two stories high. The auditorium is forty-two feet square and has a seating capacity, exclusive of the gallery, of about two hundred and fifty. The basement contains the Sunday school room, twenty-six by forty-two feet.—*Winsted Citizen.*

INDIANAPOLIS, IND.

Second Church of Christ, Scientist, of Indianapolis has announced plans for the erection of a church on the North Side to cost at least fifty thousand dollars, the initial step in the project having been taken at a meeting of the church board held at the Hume-Mansur building yesterday noon [Feb. 26], when a site at the northeast corner of Delaware and Twelfth streets was purchased for thirty thousand dollars. The property has a frontage on Delaware street of one hundred feet and extends along Twelfth street one hundred and ninety-six feet. A two-story frame dwelling occupies the site.—*Indianapolis Star.*

CHICAGO, ILL.

At a business meeting of the members of Ninth Church of Christ, Scientist, Chicago, held Nov. 16, 1911, it was unanimously decided to buy the lot at the northwest corner of Woodlawn avenue and Sixty-second street, for the purpose of erecting a church edifice. The price of the property was seventeen thousand five hundred dollars.

THE LECTURES.

LONDON, ENGLAND.

The Queen's Hall was crowded last night [Jan. 4] to hear the lecture given by William D. McCrackan, M.A., on Christian Science, under the auspices of First Church of Christ, Scientist. Every seat was filled, and numbers of people had to be refused admission. The chair was taken by Capt. Geoffrey Wilkinson, R.E., who spoke in part as follows:—

These lectures have been instituted, not with any idea of obtaining adherents for the Christian Science church. Christian Science is in no need of numbers for its support, besides which people do not become Christian Scientists merely by listening with approval to the teachings of Christian Science; on the contrary, they have been instituted with a view to correcting the various mistaken notions of these teachings which are current. It is not possible, of course, to enter into much detail in the short space of time at the lecturer's disposal; the best way to find out what Christian Science does teach is to study the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker Eddy.

This book, which is the Christian Science commentary on the Bible, has been found by those who have assimilated its teaching to throw a most wonderful illumination on the Scriptures, especially on the words and works of Jesus the Christ, and to make of the Bible the most practical and helpful book in the whole world. Christian Scientists have found that their text-book has unfolded to them the spiritual law which always has existed and must always continue to exist, and which, when applied to their every-day experience, has brought them a freedom, hitherto unobtainable, from sorrow and fear; in fact, from the many conditions of evil and discord to which mortal man is subject. There must be hundreds in this hall who like myself have received countless benefits, both moral, physical, and spiritual, from the study of Christian Science; and because Christian Science is based on the absolute spiritual law, we know that it is universal in its application, and that what it has done for us it will do for all those who study and practise its teaching.—*Brixton and Lambeth Gazette.*

BERKELEY, CAL.

Every available seat in the new Christian Science church was taken last night [March 8] at the occasion of a lecture on Christian Science by Prof. Hermann S. Hering. It was the initial lecture given in the new church edifice, and in order to make room to accommodate the large audience, the doors of the lobby and the Sunday school room were thrown open. Edwin Swinford in introducing the distinguished lecturer said:—

In this practical age, when human endeavor is judged by achievement, alert minds are looking for a religion that does things. The religion that "knows how" is wanted, and one that mistakes belief for understanding and superstition for reverence will ultimately give place to it. Unanswered prayer is misdirected effort. It is the prayer of understanding that brings results, and results are what progressive mankind is looking for. The teachings of Jesus and the writings of Scriptural authors are now to be interpreted in their metaphysical sense. Advancing thought is growing into the conviction that all real progress is in and of mind, and that consciousness is the battle-field whereon are fought the actions for the liberation of self from slavery, from the slavery of sin and disease, of limitation in all its forms. A metaphysical age is dawning. The sayings of the Master are being applied with a new realization of their meaning and power to the betterment of earthly conditions.

The human mind is of an inquiring turn, and it is using the interrogation point to increasingly good effect. With question and answer the world is getting a better view of God; that they may be awakened to a clearer apprehension of the truth is the prayer of all mankind, and, I may add, is the promise of Christian Science. If heaven is within, as Jesus declared, then no denominational tag can ever serve as a ticket of admission to it. We are beginning to understand that it is not a place in the geography of the universe, but is a state of mental harmony wrought out in individual consciousness through spiritual understanding. I speak from experience when I say that a man as he pauses in his struggle with the world to find himself disfigured by disease, enslaved by temperamental ills, pessimistic and agnostic, may find help in Christian Science. He will find his health improved, his thoughts purer, his views of life brightened, and toward his neighbor his heart more pleasantly disposed—conditions worth all endeavor. The presence of this audience is in testimony of the general demand for more light on the truth.—*Berkeley Gazette.*

WAKEFIELD, ENGLAND.

Long before the time announced for the commencement of the lecture, the hall of the Music Saloon was filled [Feb. 27] to its utmost limits to hear Bicknell Young speak on the subject of Christian Science.

Fred R. Rhodes, Leeds, presided. He esteemed it a great privilege to be afforded the opportunity of associating himself with the teachings of a religion which had enabled him, among thousands of others, to enjoy health and a knowledge of God which he had never deemed possible to obtain. No doubt the presence of the public at these lectures was a proof that the world was seeking a satisfactory answer to the question propounded by Pilate, "What is truth?" They were so hedged in by dogmas, rites, and ceremonies that every one wished for practical evidence and tenets of these teachings. The world was seeking to know God, and infidelity was less than it ever was. Small wonder, therefore, that their gratitude went out to one who, in her earnest love of God, elected to serve truth rather than tradition. There was no doubt that the world was wanting religion, and that the world demanded something that was practical.

Wakefield Herald.

CHAMPAIGN, ILL.

Under the auspices of the Christian Science Society of Champaign, Virgil O. Strickler delivered a lecture on Christian Science Jan. 21 before an attentive audience at the Walker Opera House. He was introduced by the Rev. Albert R. Vail of the Unitarian church of Urbana, who said in part,—

This is called a materialistic age, and rightly. There are millions in America who believe that if they could win a pile of money, a big house, and an automobile, they would glide into perfect blessedness; but there are other millions who have discovered that this is a colossal mistake. Money in itself never brought any human being happiness, but rather a wild desire for more. Millionaires are not usually happy or at peace with themselves; and if they are, their houses and gold and treasure are not the cause. "A man's life consisteth not in the abundance of things that he possesseth." "What shall it profit a man, if he shall gain the whole world, and lose his own soul?"

There is only one way to life, peace, and happiness known, and that is through the development of the inward mind and soul. This truth has been known for ages. Jesus proclaimed it with a power unparalleled in history, but it is continually forgotten, and so there come periodic revivals of this spiritual knowledge every few centuries. Of all the newer sects called forth by this awakening to proclaim the eternal truth of the supremacy of the Spirit, none has been more successful in its appeal or gifted with a more phenomenal growth than Christian Science.—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice it is assumed that the lecture will be given in the evening.

Auburn, N. Y.—Clarence C. Eaton, New Jefferson Theater, 4 p.m., April 28.
Butte, Mont.—Francis J. Fluno, M.D., Auditorium, April 29.
Calgary, Alta.—Prof. Hermann S. Hering. Shriners Temple, 17th avenue and 4th street, west, April 26.
Carthage, Mo.—Bliss Knapp, Grand Opera House, May 3.
Cleveland, Ohio (First Church).—Rev. William P. McKenzie, Hippodrome, May 2.
Colfax, Wash.—Bliss Knapp, April 25.
Cranford, N. J.—Willis F. Gross, Church Edifice, Springfield avenue and Miln street, April 29.
Frankfort, Ind.—Judge Clifford P. Smith, Blinn Theater, South Jackson street, April 23.
Fresno, Cal.—Bicknell Young, Barton Opera House, May 3.
Gardiner, Me.—Willis F. Gross, Church Edifice, Lincoln avenue, April 26.
Goshen, Ind.—Hon. Clarence A. Buskirk, Jefferson Theater, May 3.
Haverhill, Mass.—Judge Clifford P. Smith, Unitarian Church, Main street and Crescent place, April 26.
Huntington, W. Va.—Rev. William P. McKenzie, Carnegie Hall, April 25.
Independence, Mo.—Rev. William P. McKenzie, April 22.
Lodi, Cal.—Virgil O. Strickler, Lodi Opera House, May 3.
Los Gatos, Cal.—Virgil O. Strickler, Ford Opera House, May 2.
Loveland, Col.—Frank H. Leonard, Majestic Theater, 3 p.m., April 28.
Manchester, N. H.—Clarence C. Eaton, Jolliet Club, 52 Concord street, April 29.
Milwaukee, Wis. (Fourth Church).—Judge Clifford P. Smith, Pabst Theater, April 29.
Minneapolis, Minn. Second Church).—Judge Clifford P. Smith, Auditorium, April 30.
Monrovia, Cal.—Judge Septimus J. Hanna, Woman's Club House, 3 p.m., April 28.
Moscow, Idaho.—Francis J. Fluno, M.D., Sayens Hall, April 26.
Napa, Cal.—Virgil O. Strickler, Hayes Theater, April 30.
Oakland (Fruitvale), Cal. (Third Church).—Bicknell Young, Patterson's Hall, East 14th street, between 54th and 55th avenues, May 2.
Philadelphia, Pa.—William R. Rathvon, Church Edifice, Walnut street, west of 40th, 3 p.m., April 28; 8 p.m., April 29.
Rawlins, Wyo.—Frank H. Leonard, Masonic Temple, May 2.
Roxbury, Mass.—William R. Rathvon, Fauntleroy Hall, Wenonah street, May 2.
San Francisco, Cal. (Third Church).—Virgil O. Strickler, Dreamland Rink, 3 p.m., April 28.
South Bend, Ind.—Judge Clifford P. Smith, Oliver Opera House, 3 p.m., April 28.
Spokane, Wash.—Francis J. Fluno, M.D., Auditorium Theater, 3 p.m., April 28.

Vancouver, Wash.—Bliss Knapp, Grand Theater, 3 p.m., April 28.
Washington, D. C.—William D. McCrackan, M.A., New National Theater, 3:30 p.m., April 28.
Washington, Iowa.—Hon. Clarence A. Buskirk, Church Building, South Iowa and Jefferson streets, April 30.
Wausau, Wis.—Judge Clifford P. Smith, Universalist Church, May 2.
West Chester, Pa.—William R. Rathvon, Church Edifice, April 30.

TESTIMONIES OF HEALING.

"Why, it is a practical religion!" These were the words which broke from my lips when a Christian Science practitioner explained to me for the first time this teaching. My words were not studied but spontaneous, and came with the realization of what I was glad to know, to wit, that the Christian religion is as demonstrable today as it was nineteen hundred years ago, when Jesus and his disciples went about Judea casting out evil and healing both sin and sickness. But, whatever blessing I might have received or whatever understanding I might have had of Christian Science at that time, I allowed twelve years of doubt, of uncertainty, of sickness and distress to intervene before I finally accepted it and demonstrated it to be the truth which Christ Jesus brought to mankind. Because my healing was slow, I allowed myself, upon becoming isolated from those of my friends who were Christian Scientists, to drift back to *materia medica*, but in all those twelve years I retained a warm spot in my heart for Christian Science, and would not allow any one to assail it without a rebuke from me. The "scientific statement of being" (Science and Health, p. 468) became a part of my life and I repeated it almost daily.

It was in July, 1909, that I again entered a Christian Science practitioner's office, seeking help. I had been subject to rheumatism for fifteen years or more, and had gone from bad to worse, struggling all the time against the dreaded disease, but at the end of this time, in November, 1906, the talons of my ancient enemy were sunk deep into my flesh, so to speak, and I was dragged from the practice of my chosen profession, the law, to a sick-bed, where I spent months of intense suffering. The following spring and summer I was able to go about the house on crutches. It is needless to say that I followed the course of all who suffer from rheumatism; I took the doctor's prescriptions willingly—and often; when these were exhausted I resorted to other medicines; one system of healing claimed me for a time, and mineral baths were tried to no avail. In October, in a weakened and emaciated condition, I went to Arizona, where it was said that because of the mild climate I would receive great benefit and recruit my strength. At the end of three months, however, a renewed and vigorous attack compelled me to enter a sanitarium, where I stayed for ten months, at the end of which time I returned to this city. I reached here in November, thirteen months after leaving, and went to work. I got along very well for about eight months, when I was again overtaken by my old enemy, to which was added sciatic rheumatism. The latter phase of the disease had troubled me only from about the time I went to Arizona, and it was the last to yield to the gentle touch of Truth.

It was at this time that I again sought aid from Christian Science, and then it was that I realized the worth, the truth of the words of our beloved Leader, wherein she says (Science and Health, p. 377): "Invalids flee to tropical climates in order to save their lives, but they come back no better than when they went away. Then is the time to cure them through Christian Science, and prove that they can be healthy in all climates, when their fear of climate is exterminated." I improved rapidly for three weeks; in fact the improvement was so marked that I was overjoyed. I felt that all I had to do was to furnish the malady and a willingness to be healed, and the practitioner would do the work. I read Science and Health and the other literature on Christian Science offered me, in a most perfunctory sort of way. I did not allow it to interfere with my current reading, especially the daily papers. I said my progress was rapid for three weeks; but at the end of that time I began to go down in health, and again suffered from the illness. A few days later I was down sick in bed and unable to move my legs except as I lifted them with my hands.

Digitized by Google

I was, however, steadfast in my purpose to be healed in Christian Science. I knew that I had to be, if ever, for this was my second effort. I knew, too, that God is no respecter of persons; that others had been and were being healed through Christian Science, and that I could be. The lady who treated me came out to my home daily for almost a week, and seeing no change in my condition, she one day informed me that she could no longer treat me; that I would have to be my own practitioner and do my own work. She did say, however, that she would give me treatment each day for mental clearness, and then she went away. I was hurt, chagrined, but I had no intention of giving up Christian Science, although I was left without a practitioner. Strong man that I was, I broke down and cried; but the practitioner's decision was my salvation. With a keener spiritual perception than I, she saw the lethargy into which I had fallen, and the effect was as she had planned. I did arouse myself. I did read Christian Science in preference to everything else, and I still do so. She did give me many more treatments and I was healed!

My return to health from that time on was sure though slow, and it was many months before I could stop the treatments; but in that time I proved true these words of Jesus: "Ye shall know the truth, and the truth shall make you free." I found that the truth does make free; that it frees from sin, from disease, from evil of every sort. My progress is continual, and I have not only regained my former strength, but have resumed my profession after an enforced idleness of many years. My body is not yet straight, and my walk is faulty, but I am free from rheumatism.

I am indeed grateful for my understanding of Christian Science, and my gratitude goes out to Mrs. Eddy and to those who so patiently sustained me in my efforts "to reach the Horeb height where God is revealed" (Science and Health, p. 241).—NEWTON C. GILLHAM, Kansas City, Mo.

[Translated from the German.]

I was brought up under the materialistic teachings of natural science, and had been drawn into a busy life thereby; yet in spite of the success which at times seemed to attend my endeavors, I seldom experienced that sense of satisfaction without which my life seemed, as it were, to be lacking in true value. But a significant change took place within my consciousness. While associating with people who claimed to master disease and to a large extent to govern life through the utilization of their chemical discoveries, I experienced a growing sense of voidness and sought refuge in the Bible. In reading it I saw that thousands of years ago the great heroes of the faith had gone through all the bitter experiences which life had brought me, and had overcome them, and I began to understand the meaning of the Scriptural saying which is read in our churches every Sunday: "The peace of God, which passeth all understanding," but which has become alien to the proud structure of modern natural science and to its representatives.

At that time my wife had found her way to Christian Science, the occasion being the severe illness of her parents. My attitude toward Christian Science was at first one of indifference, and I felt disinclined to leave the platform on which I had been reared. It was a very strong call which made me investigate Christian Science more closely. A brother of my wife urged me to take her to a sanitarium, in view of the fact that she favored the teachings of Christian Science. This was sufficient reason for me to give the subject a thorough investigation. Ample opportunity was afforded me for this purpose—a thing which I neither would have wished for nor been able to have done under ordinary circumstances on account of my profession. As it was, that part had been provided for by divine wisdom, in that I was led—no special professional duty calling—among a large body of Christian Science people in Berlin.

The study of the text-book, Science and Health, was laborious at first, until I was able to understand and sympathize with the high spiritual and moral standpoint of the author; and often while at work there came to my thought the words of a German hymn which bids us be still and rejoice inwardly, letting God decide according to His infinite mercy and wisdom. This act of rejoicing, this intense joy in comprehending the possibilities of divine grace and goodness, and the consciousness of their actuality by reason of the divine omnipotence, omnipresence, and love, was the precious reward during the hours which I devoted to the study of the enlightened author's wonderful book. With one accord my wife and children joined me on my way toward the recognition of these truths, in attending the services and meetings with me.

It was but natural—scientifically inevitable—that the assault of all the material untoward conditions and errors which had seemed overwhelming and threatening, should come to naught. It would lead too far into personal details were I to show how the recognition of scientific truth proved to be an ever-present help in the face of strong opposition on our relatives' side, regarding our new-found way, which even led to the withholding of the share of our inheritance and to the foolishness of entering a lawsuit; how only Christian Science was invoked in cases of sickness and of other errors in my family; how it alone always brought quick and effective help; and last but not least how a new profession was provided for and assigned to me through divine care, with mathematical certainty, in an unexpected way, but precisely at the right time.

I feel that God's angels, namely, good thoughts, follow under all circumstances the understanding of Christian Science, and these led me gradually into the harmony which is like unto a promise of heavenly things on earth. I thank God for having fitted me for the acceptance of Christian Science, for leading me out of material concepts and showing me, through a long period of error and struggling, how to understand and follow the behests of Christian Science. I do not hesitate to acknowledge gratefully that through the study of the writings of a woman, namely, Mrs. Eddy, I was enabled to attain to a comprehension of this Science.

DR. CURT GENTSCH, Berlin-Karlshorst, Germany.

I have long wished to express my gratitude for what Christian Science has done for me. In July, 1909, I felt as if I was more dead than alive. I was suffering from what was termed nervous collapse, and no one can know what that means unless he has had a similar experience. I had been ill for some years, but finally I collapsed. Through the influence of a cousin I had been led to investigate Christian Science, and when the crisis came I did not think of using any other means, although I had not grasped it enough to help myself. I applied to this cousin for help, and as soon as possible I went to see her. I began to improve from the first, and since then I have taken class instruction, and have been able to help myself as well as others.

This testimony would not be complete if I did not mention the help which my father received when the doctors had condemned him to die from "Bright's disease." He is now better than he has been for years, and it is all due to Christian Science, for he did not have any other treatment after the medical verdict was given. I feel deeply grateful for the help we have received, and thank God that I have been led to a realization of this great truth.

Words fail me to express the peace and happiness which have come into my life since I have gained some understanding of Christian Science. The physical healing has been great, but it cannot compare with the spiritual uplift, and I can say with the apostle that "old things are passed away; behold, all things are become new." I am trying to live my gratitude, for I know I cannot prove it in any more effective way.

MRS. MARY BOISSEAU PHILLIPS, Church Road, Va.

[Translated from the German.]

I have been an adherent of Christian Science for the past four years, and many have been the blessings which have come to me during that time. Our all-loving Father was my support and strength in gloomy days of mourning, when medical means failed to save my husband from death. Fear and anxiety drove me to a Christian Science practitioner, and I found rest and peace of mind. I could not read English, but having gained some understanding through reading *Der Herold der Christian Science*, I was very anxious to read "Science and Health with Key to the Scriptures" by Mrs. Eddy, although I had reached the age of sixty.

All things being possible with God, however, I began the study. I used the German Bible, the English Bible, and Science and Health, and a dear relative helped me to pronounce the words. I wish to state here that I was healed through the power of ever-present Love, and through the benign influence of the divine Mind which I experienced. I was healed of bowel trouble, hemorrhoids, and stagnation of the blood in the legs, of years' standing, through the work of a Christian Science practitioner. I am now able to read Science and Health understandingly, and also the *Monitor*. I have had beautiful instances of healing in my family. My niece, who is going to school, had worn glasses for four years on account of near-sightedness, but to my great joy she was healed with nine treatments, for which I am very grateful. The child's father had a severe cold with fever and could hardly speak, but he was healed with three treatments and able to go to work on the fifth day.

Words fail to express my deep gratitude to God for all the good that has come to me. I also wish to give thanks for our dear Leader, Mrs. Eddy, who showed us the way of divine Love.—FRAU A. MARIA BECKER, Poughkeepsie, N. Y.

I feel it a duty to express my gratitude for what Christian Science has done for me. Through this truth discovered by Mrs. Eddy I have learned to understand the Bible better, and I am a better man than I was before I studied Christian Science. I have had the privilege of becoming a member of The Mother Church, also of Second Church of Christ, Scientist, of St. Louis, Mo., and have also taken class instruction. I am most thankful for all these blessings, and for those who have helped me along the road that leads to a new life.—EDWARD B. FITZGEARL, Batchtown, Ill.

I wish to express my gratitude for the healing which has come to me through Christian Science. I was healed of rheumatism, also of a throat affection almost three years ago, and have had no return of these troubles. From girlhood I had suffered with an eruption on my face and neck, so that for years I dreaded to be seen by people; but now I rejoice in the wonderful fact that I am free, without spot or blemish on my face.

I have been benefited in every way by Christian Science, and I am grateful for our text-book, Science and Health, which I study daily.—ALENA A. MACKENZIE, Boston, Mass.

I wish to add my testimony for the many practical blessings that Christian Science has brought to me. It is now over three years since I was fully healed of the liquor and tobacco habits. All desire for liquor was taken entirely away by the first Christian Science treatment which I received, and the tobacco habit was also entirely destroyed a short time after. Besides this, I have been healed of painter's colic and of fistula. I have been helped in every way, and especially in my business. Before I came to Christian Science my work seemed hard, but now I enjoy it every day. I am indeed grateful for all that Christian Science has done and is doing for me all the time.

JAMES J. MACKENZIE, Boston, Mass.

Christian Science has done so much for me, I feel I must voice my gratitude through the *Sentinel*, though words are all too feeble to express my thanks. About eight years ago a little one came to our home. I had asked for Christian Science treatment, and the birth was painless and natural. Immediately after birth the nurse discovered a startling condition in the child, there being no skin over the abdomen, but only a thin covering of tissue. She at once notified the practitioner, emphasizing the fact that she had never known of such a case being healed through *materia medica*, and that unless something wonderful was done the child could not possibly live. During all this time there was a peculiar odor, but through Christian Science treatment it disappeared; the skin began to form over the tissue, growing until a perfectly normal condition was manifested and the child was completely healed. This proved to me that God is Love, as the Bible teaches.

One night I was suddenly awakened by a sense of impending danger. I at once began to apply my understanding of Christian Science, knowing that God could take care of us when asleep as well as when awake and that I was surrounded by divine Love. The fear all left me, and I was conscious of the all-power of God, good. I have had other manifestations of the healing efficacy of Christian Science, and I am indeed thankful for all these proofs that the truth does make us free.—MRS. ROSIE DICKEY, Guthrie, Okla.

I wish to express my gratitude for the blessing that has come to us through Christian Science. When three months old, our child weighed one pound less than at birth, and no kind of food seemed to agree with him. At last I sent word to a Christian Science practitioner, who came to our home the same day. From that time the child began to mend, and at sixteen months old is a picture of health and as large as any other child of his age.—OLIVE D. IRWIN, Basin, Wyo.

I am a believer in Christian Science, although I have never united with any church or society. Over four years ago I contracted a severe cold, which seemed to settle on my lungs and caused a most distressing cough. My vocal cords appeared to be affected, and this rendered speaking both painful and difficult. I was on a debating team in high school at the time, and our team was to debate with another one in a couple of weeks, but my throat was in such a bad condition that it was feared I could not take part.

A friend who is a Christian Science practitioner was visiting us, and my mother said that this was an opportunity to show what Christian Science could do, and that if her son was helped she would believe in Christian Science, as we had tried everything else. Our friend answered that it is God who does the healing, but she said she would take my case. In a week's time there was not a trace of the distressing cough left; in fact, I believe I was healed with the first treatment, but our friend continued the work for one week.

I have had help on other occasions, while in college, and feel that Christian Science is a sure and safe form of healing. I am very grateful to Mrs. Eddy for bringing to our consciousness this blessed truth.

REX S. ROUDEBUSH, Garfield, Wash.

I wish to acknowledge my gratitude to God for the perfect health which I now enjoy through Christian Science. For about four years I had a continuous uterine hemorrhage, though medical doctors both here and in the city of Buffalo, N. Y., tried in vain to give me some relief. Christian Science found me at a time when I was thin, pale, and unable to walk any distance, much less to do any housework. I was obliged to wear a support all the time, but after a few treatments in Christian Science I found that I could not only walk but could run and not suffer from it. I began to have

Digitized by Google

color in my face and finally every symptom of the disease disappeared. The practitioner not only treated me, but talked to me and helped me to realize that God is Life and that God is All-in-all.

This realization took place over two years ago, and it lifted me so far above all discord that I am able to do any kind of housework, as well as being able to get up at four or five o'clock in the morning and keep on the move until about nine at night, without experiencing any sense of weakness or feeling the need of support other than the understanding that God is infinite and the only source of our life, health, and strength. I am deeply grateful to Mrs. Eddy for having given to the world "Science and Health with Key to the Scriptures," also for the patience, love, and wisdom with which my thought was guided "into new and healthy channels,—toward the contemplation of things immortal and away from materiality to the Principle of the universe, including harmonious man" (Science and Health, p. 276).—Mrs. B. F. Pritchard, Memphis, Tenn.

It is with gratitude to God that I give the following testimony. In 1902 Christian Science was brought to my notice through a dear niece, at a time when I was in great need. I was sorely afflicted with chronic liver complaint and frequent attacks of pain in my stomach. The physicians gave me no encouragement that I could ever be well, but by reading Science and Health and with the aid of a practitioner I was healed.

Other members of my family have been healed of serious afflictions, and I am truly grateful to Mrs. Eddy for Christian Science, also for the many blessings that have come to us and the world through its teachings.

Mrs. S. A. Walsh, Lincoln, Neb.

I wish to say that I was a witness to the healing of my mother, Mrs. S. A. Walsh. About seven years ago she suffered severely from stomach and liver trouble, and was bedridden much of the time. She had suffered for years and had found no relief excepting through the use of an opiate. She was persuaded to try Christian Science, and from that time till now she has not had an attack of these pains or been confined to bed from any cause.

Paul Walsh, Lincoln, Neb.

I am profoundly grateful for Christian Science. For fourteen years Truth has been my only physician and comforter, and has never failed me. For years I was troubled with paroxysms of pain which lasted several hours, often being so violent that I would have to ask the help of a Christian Science practitioner. Usually I had an attack twice a year, and in the winter of 1910, while visiting my home in Virginia, about twelve miles from Washington, this terrible suffering attacked me. I immediately telephoned for help, but it was thirty-six hours, more or less, before I was relieved. A large gall-stone was passed, and there has been no return of the malady.

There is not a day in which I am not helped constantly by this wonderful truth. I am truly grateful for *The Christian Science Monitor*, which brings a message of truth every day.

Mrs. Cordelia A. Johnston, Washington, D. C.

I have often wanted to send my testimony, since benefits through Christian Science continue to multiply, and I must do so now. During a period of some fifteen years the publications of Christian Science have been my basis of experience. They have educated me gradually into an ability to perceive spiritual truths and to experience practical results from this perception. As the allness of God grows more evident, and as I gain more facility in turning to Him, I gladly make this statement to His praise. Every phase of my life, physical and moral, has been touched and benefited in some degree by Truth. The "Comforter" has come to fill the breach in human experience, and even the oneness and completeness of the truth of being is become so manifest to me as to be potent in ever greater and more abiding degree. The recognition of the perfection of God which I have gained through Christian Science has been the most important and satisfying experience of my life. I give credit where credit is due.

Gardner Manning Gale, Buffalo, N. Y.

I wish to tell of help which I received from Christian Science some two years ago. At the age of eighty-six years I was healed of a severe case of chronic bowel trouble. I called a Christian Science practitioner, who arrived about two o'clock and gave a treatment from which I received almost immediate healing. I arose from my bed, dressed myself, and at the evening meal ate heartily and felt no ill effects. I have had no return of the above trouble, for which I am truly thankful to God, also to our dear Leader, Mrs. Eddy.—Mrs. Mary A. Reed, Greenville, Ohio.

[Translated from the German.]

I sought the truth for a long time, and finally found it in Christian Science. If, after we have found the true way, we earnestly strive to walk in it, we shall not lose sight of it, but advance step by step. Although it seemed difficult for me at first, still I listened to the inner voice which told me that I was not alone, that our Father would help me; and He did help me.

Christian Science found me in a hopeless condition, the physicians having tried for years to cure me. I had been in sanitariums, but experienced only temporary relief, and new symptoms manifested themselves continually. My condition became most serious, as my life seemed to depend on the use of certain remedies, and I was involved more and more in despair. I was bedridden during the latter period, extending over several months, and an opiate had to be administered in order to relieve me of the awful pain. Existence seemed unbearable. The physicians then suggested an operation. As it was a very serious one, however,—the removal of the kidney and appendix being contemplated,—and my condition being too weak to admit of the strain, I was advised to go to the country for a couple of months in order to gain sufficient strength. But the very thought was awful to me, and having heard of Christian Science, I decided to seek refuge in it.

I asked a Christian Science practitioner to come to the hospital in St. Petersburg, and she came several times. Through her loving help I felt strengthened, and after the first treatment I knew this was the only way of recovery for me. A week later I had sufficiently improved to venture to return home by steamer, and the physicians were well pleased to be able to dismiss me from the hospital in a better condition than when I went there, although of course they attributed the favorable change to their own efforts. My condition thus improved steadily, although slowly at first. Yet, when I recall how sick I was a year and a half ago, it often seems to me like a bad dream, and that I am just drawing nearer reality now. The English language also offered considerable difficulties, as I did not know one word of English up to that time, and had to translate every single word. But now I get along well and make daily progress. As to my health, there has been such an improvement that I was able to accept a position as a governess last summer, and worked as I never did before in my life.

Happy those who walk through the strait gate and tread the narrow path which leadeth unto Life. I can give but inadequate expression to my feeling of gratitude to God, through whose guidance I was enabled to find a leader like Mrs. Eddy.

Magdalene Stavenhagen, Schlüsselburg, near Petersburg, Russia.

Digitized by Google

Unlike many others, I had had Christian Science talked to me a great deal, until it irritated me to have any one bring it to my attention. I was willing that any one else who wished, including my family, should study and practise it, as I have always held that we each and all must solve our own problems and fight our own battles; but as for me, I considered that I was too worldly, too self-sufficient, and too busy to trouble myself about any cult or ism. Being a traveling man, my mode of life left me little time for thought of this character, and hence I should probably have gone on for years in that narrow, moth-eaten groove, blindly groveling with the worms, had not a crisis and necessity compelled me to open my eyes and observe the truth.

For years I had regularly suffered each winter with severe throat trouble, until I came to look for it as a necessary evil to be suffered each succeeding year. This year proved no exception, with the single variation that the attack was worse than usual, and after using the approved remedies, I called a physician. After thirty-six hours of his treatment, to no avail, I had become so much worse that I was disgusted with the result, and upon the advice of my wife decided to call a Christian Science practitioner, feeling I might as well die under the ministrations of the latter as the former, if it should come to that, as at the time seemed at least possible. The practitioner called at ten o'clock the following day, and by three o'clock I was up and practically cured. By the following morning I was to all intents and purposes entirely well and have been going about my business as usual.

While from this experience I do not of course feel that I am at all a Christian Scientist, it has surely made me want to be one, or at least to understand somewhat the basis of this wonderful religion.—G. T. SPRINGER, Seattle, Wash.

[Written for the *Sentinel.*]

THE NEW YEAR.

JOHN STEEN.

I.

HARK to yon throbbing thrush outside,
Hailing the new year as his bride,
And caroling his joyous praise
To welcome ever-brightening days.
Before the liquid light of day
The dark, numb night soon fades away,
Until the daylight reigns supreme
With naught of darkness to be seen.
The sun, moved by one great desire,
Is daily mounting ever higher,
That he may bless the barren earth,
Give the imprisoned flowers new birth,
And garland wood, and bank, and brier
With blossoms of celestial fire.
(He needs must dwell in light above
To bless the objects of his love.)

II.

O Love divine! Dear, tender God,
Whose voice has called me from the sod!
Like yon sweet singer in the dell
My heart, O Lord, is fain to tell
How, bright and ever brighter, grows
(Like the unfolding of a rose)
The daily path wherein I tread,
Sustained by Thy life-giving bread.
And, like the sun, I would arise
Toward the ever-beckoning skies,
So that I may, as heavenward-borne,
Bring comfort to tired hearts that mourn:
That I may see the flowers of truth
Adorn old age like radiant youth,
And see the fruits of silent prayer
Be manifested everywhere.

FROM OUR EXCHANGES.

[Rollin A. Sawyer, D.D., in *Christian Work and Evangelist.*]

At this moment we are in the process of waking out of a slumberous state of the public conscience. Society is passing before a new mirror. Public men find new tests set up by the old paths. It is a time of readjustment, a period of reform, a turning of a new leaf in the book of life, a taking of new observations, fixing the place and progress of our age in the history of man. We are getting some new glimpses into that mystery of the ages, the ultimate significance of human life. Some people are content to call it a time of unrest, as if the world of man were simply turning over in its sleep. But the mighty fact is that the moral sense of the world is quickening into action, the whole world's conscience is waking up. We are told that the morals of men are falling below old standards or finding a frail footing on new ideals. There is hurry and scurry to prop up the ancient levels of conduct by new devices underneath and readjustments up above. There is haste in the new evangelism of old doctrines of living that savors not only of distress, but of despair. The missionaries are out with cry and placard of alarm. It would seem that society was in danger of collapse and the signs of last-day catastrophes would blaze out of our serenest sky. There is no sort of objection to activity and vigilance on the part of our conspicuous workers for religion and righteousness, but the peril of mistaking the meaning of all social and religious change is not only very great, but it is menacingly very nigh. What is needed at this moment most of all is a recognition of the roused spirit that is abroad, moving on the souls of men as the creative spirit marched on to kindle light and life out of the primitive "deep." These unwonted stirs are not a refluent, but an advancing, tide. The sea is coming in. Humanity swings in response to heaven, that call from its own deep answering to the deeps on high. All this restless, yearning struggle is a sign of health, a symptom of irrepressible growth. Why treat it as a signal of decline, decay, and death? The world is not waxing evil. The patient we are called to treat is alive and going on to higher life. The mistake in treatment may produce the very ill we fight and fear.

[Theodore G. Soares in *Standard.*]

In the midst of the pressure of our modern problems, social, educational, ethical, political, religious, it is vastly encouraging to realize the degree of unity of purpose to which we have come. Differences even of method scarcely divide us. We are coming rapidly to appreciate that he who is not against us is on our side. Everywhere we find a passionate longing to aid our youth toward strong, pure manhood and womanhood and a like determination to express our deepest religious life in the humanizing of all our social relations. The school, organized for efficiency, insists upon an ethical interpretation of its task. The church, concerned with religious interests, will not allow itself to interpret spirituality apart from vocational, recreational, and all social interests. Those concerned with physical philanthropies find themselves beset with moral problems. Those preaching salvation find that they must save men and not merely souls. We are all busy with the same aim, bringing life to its fulness. It is time that we realized our unity, felt the strength of it, organized our endeavors, economically and scientifically, and brought the whole great complex movement to its full significance in our federation for religious leadership.

[*Zion's Herald.*]

There can be no question of the need of a message from the living church to every varying generation of human life. In the words that living men and women understand, touching the spheres of thought and action in which they dwell,

Digitized by Google

the church must give a message to humanity in the twentieth century as she did in the first century. This is essential to her permanence; it lies at the heart of her mission. Whenever the church is uncertain about her message, when she is aimlessly seeking it instead of definitely declaring it, she comes into a sorry pass.

The new social accent must be strong and clear. There must be no wavering in the definition of the moral issues of the good news of a living Christ. Behind these as their warrant, however, lies the profounder message of the risen Lord. It is because of his present ministry that we declare the moral sanctions of the gospel and believe in the kingdom of God.

The world is waiting for this accent of authority. It is a spiritual and not an institutional certainty. The old message is the new message; salvation is by a living Christ. If this fact can be declared by the message and proved by the life of the Christian church, she will save the world.

[*Western Christian Advocate.*]

They who live close to Jesus are apt to have a certain childlikeness of spirit. It will probably cause them to be misunderstood by the world, and suspected by the vulgar. Fortunately it is possible to keep this simplicity of character, and yet understand the dark plots of worldly men. When the childlike spirit is safeguarded by knowledge it is a divinely beautiful thing. They have it who know the Lord. They see the truth clearly and calmly. They do not fret or grow anxious. The laws of life are very fair to them. All duties are made welcome, and the will of Christ is their supreme delight. Jesus loves these trustful hearts. They are his nearest kin. He loves them because they are like him, because it is in his companionship that they have grown to be what they are.

[*Outlook.*]

There is, indeed, no safety for man except in the path the Master trod, and no safety for society except in the daily practice of his principles. One by one, slowly and painfully and imperfectly, the truths which men once rejected have been accepted; slowly, painfully, imperfectly, love as the supreme principle of life gains way, and weary hearts and despairing minds turn to it more and more as the one power that can save society and make the world a place of justice and hope and peace; and every triumph of the truth he taught and every acceptance of the faith in the Father in which he lived and died adds new weight to the Christ's testimony to immortality. The rejected teacher of this sublime truth has become the commanding witness in history.

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth.*]

The ideal life, the unconditioned life of God, the life eternal, knows nothing of the conflict between right and wrong, for there is nothing to give rise to it. And oh, how glad it will be when you and I get home to that life! I long for it; I long for the day to come when there will no longer be in our experience any question of good and evil, right and wrong, but we shall simply live, and by being what we spontaneously are, and doing what our nature prompts us to do, we shall be fulfilling our divine destiny to the uttermost. That day is coming, but to a large extent its advent depends upon ourselves.

[*Universalist Leader.*]

It can be said that there is a vast deal of Christianity outside of the church, and it is the real thing; it is in the well-conducted business house, in the faithful labor, in the small or great movement for human betterment, in the example of patience and endurance obscured from public gaze, in the heroics of many a humble life. These things, wherever they are, are sacred, religious, Christian. Too long we have set sacred things apart by themselves, in a separate class.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. *Eddy* to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

For some time the postage required for subscriptions outside of United States territory has exceeded the amount added to the regular subscription price for this purpose, and an increase in rates sufficient to cover this deficiency is now deemed necessary.

Beginning April 1, 1912, therefore, the rates on all subscriptions outside of United States territory will be as follows: For Canada, *Journal* $2.25, *Sentinel* $2.45; for all other countries, except those to which the domestic rate applies, *Journal* $2.65, *Sentinel* $2.95.

Renewals for all subscriptions terminating before April 1, 1913, and received by us prior to July 1, 1912, will however be accepted at the old rates.

The pamphlet "Causation" by Frederick Dixon has been translated into Swedish—"Kausal-lagen"—and is now on sale; 40 pages and cover at the prices of the regular pamphlets.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large sized book), single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science: containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.20. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the current month unless otherwise specified, and include all issues for the month named as expiration date on the wrapper. XII indicates the year 1912; XIII, 1913. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25— £0:	5 s.;	24.;	Mk.	5.30;	F. 6.45
2.25— 0:	9 ;	3 ;		9.50;	11.60
2.50— 0:	10 ;	3 ;		10.60;	12.85
4.00— 0:	16 ;	5 ;		16.90;	20.60

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

The House committee on interstate and foreign commerce is expected to report favorably the Goeke bill providing for the government acquisition of the express companies and the establishment of a parcels express. The Goeke bill is the result of several years' work on the part of Representatives Goeke of Ohio and Lewis of Maryland. This measure as it will be reported from the committee provides that express contracts, operating equipment and property shall be condemned and appropriated "to and for the United States of America, to be used by it for such public purposes as may be proper in its various functions." Full compensation is given to the owners, the amount to be settled by the interstate commerce commission. The system thus come into possession of the government is to be run by the postmaster-general in connection with the postal service.

Secretary Knox and his party, after a diplomatic visit to the states bordering on the Caribbean sea, left Havana, Cuba, last week for Washington. Those who traveled with Secretary Knox say they have received the impression that he believes that in maintaining the Monroe doctrine the United States has assumed an obligation which it cannot evade. Having built a wall around these countries, making it impossible for European or other powers to step in for the purpose of restoring order or compelling these governments to fulfil their financial obligations, he believes that it is incumbent upon the United States to see that stable governments are maintained and that the governments live up to their international obligations.

Negotiations for a voluntary dissolution of the International Harvester Company have been abruptly broken off by the department of justice. Attorney-General Wickersham has definitely refused to consider a plan of the Harvester interests for a partition of the corporation into two parts, insisting that if competition is to be restored in the trade the company must agree to divide into six different concerns, each manufacturing only one of the patents now held by the trust.

A bill for the construction and equipment of one thousand miles of railroad in Alaska under the direction of the Alaska railway commission of five members, to be appointed by the President, has been introduced in the Senate. The bill would authorize the secretary of the treasury to issue bonds to build the railroad and would immediately appropriate one million dollars to be expended under the direction of the President, reimbursable from the bond sales.

Two indictments, one containing ten counts against the American Express Company, and one containing five counts against the Adams Express Company, have been returned by the federal grand jury. The indictment against the American charges that company with overcharging on certain shipments. The five counts against the Adams Express Company charge that a rebate was allowed shippers.

On protests of a number of members that the creation of a corporation of one hundred million dollars might compete with private interests and end in controlling the government, the House of Representatives last week refused to pass a bill incorporating the Rockefeller Foundation, and struck it from the calendar. The bill has been before Congress two years.

Exclusive of the program for naval increase, the naval appropriation bill when reported by the House naval committee at the end of this month will carry approximately one hundred million seven hundred thousand dollars. This will be about half a million dollars less than was appropriated last year for the maintenance of the naval establishment.

It has been held by the interstate commerce commission that post-office inspectors can lawfully use free transportation on interstate journeys only while actually on duty. Under the law commissions are issued to post-office inspectors, on showing which they are permitted to travel free over any post road or postal route.

International.

Following the announcement that the Sultan has signed the treaty regulating the French protectorate over Morocco the French government has published a copy of the text. The first article of the treaty proclaims the protectorate of France over Morocco and this and the following eight articles cover the whole situation, both interior and exterior. They recognize the full right of religious liberty and of all Mohammedan institutions, also the traditional religious prestige of the Sultan. They declare the right of France to have military occupation of such position as she shall deem necessary for the purpose of maintaining order after due notice thereof to the Sultan, and determine the support to be given by France to the Sultan for the maintenance of his authority and the protection of his person and that of the throne.

One of the most significant features associated with the inauguration of the provisional President of the Chinese republic, when the delegates went from Nanking to Peking to acquaint Yuan Shi Kai with his appointment, was the honor extended to the delegates in the opening of the Chienmen gate. This gate was formerly never opened except to allow the Emperor to pass through, and the opening of it for the passage of the delegates from Nanking was a remarkable illustration of the great change which has taken place in China during the last few months. Having once been opened for the delegates, the gate has remained open for the use of the general public.

The London county council are considering a scheme by which workmen will be able to become owners of their cottages, by the payment of five pounds cash, and the remainder of the sum by easy instalments spread over a period of twenty years. If the cottage is merely rented with no idea of buying, the rent would be twelve shillings and sixpence a week; but if the workman contemplates buying his cottage on the twenty-year period, the rent would amount to ten shillings and twopence a week besides the usual taxes. The scheme of the London county council has so far matured that a site has been decided upon in Hammersmith.

The protracted negotiations between the governments of South Australia, Victoria, and New South Wales in regard to the proper utilization of the waters of the river Murray for navigation and irrigation, have been advanced another stage, an agreement authorizing South Australia to construct storage works at Lake Victoria having been signed by the premiers of the three states concerned. It is estimated that the reservoir which will result from the improvement of the present Lake Victoria will have a storage capacity of one billion five hundred million cubic feet, and it will approximately cover an area of thirty thousand acres.

The representatives of the foreign powers took the first step last week to endeavor to bring about mediation between Turkey and Italy, when an identical note was presented to the Turkish foreign minister Assim Bey at his private residence. The substance of the communication is that, having ascertained the Italian conditions of peace, the powers desire to know Turkey's terms. Assim Bey asked for time to formulate his reply, which is practically certain to be that Turkey declines to enter into negotiations on the basis of Italian pretensions.

On Sunday, April 14, about midnight, the White Star liner Titanic, sister ship to the Olympic, and the newest and most luxuriously equipped of the line, on her maiden trip, was in collision with an iceberg off Cape Race and sustained such injuries that she sank about three hours later. She carried a total passenger list and crew of two thousand one hundred and eighty. Of these only about seven hundred and forty-five were saved, being rescued from lifeboats about daylight by the Carpathia of the Cunard line.

An interesting experiment in collective housekeeping is being carried on in Brent Garden village in England, where the dwelling-houses contain all improvements except a kitchen. Meals for all the residents of the village are cooked at a central hall, and may either be eaten there or sent home, a four-course dinner costing only one shilling and sixpence. Servants are supplied, when needed, from the central hall at a cost of about ten cents an hour.

The Ireland home rule bill passed its first reading in the House of Commons by a vote of three hundred and sixty to two hundred and sixty-six.

Industrial and Commercial.

Two brothers, Ernest and Julius Rheinberg of London, have invented a new method of color photography which is producing extraordinarily brilliant results. The peculiarity of this method they demonstrated before the Royal Photographic Society and proved that no introduction of artificial color plates, color screens, or colored particles are necessary. A plain negative is taken as in ordinary photography, and from it an ordinary positive or lantern slide is made. The method turns upon the use of a grating, which is divided into an immense number of tiny spectra, one hundred to an inch and each one perfect. This grating, or line screen, is used in making the negative, and later, being placed behind the positive, which is made from the negative, causes a black and white picture to appear in the exact colors of nature.

A new product, based on common seaweed, is announced as the result of many years of experiment in England. Many scientists, says *Scientific American*, have foreseen the enormous possibilities afforded by seaweed, and the material just discovered, called seagmmite, bids fair to exceed all expectations, as it is of special value in all electrical industries, being a non-inflammable insulation of high dielectric strength, proof against heat, cold, oils, and weather.

The committee on railroads in Massachusetts voted that a general bill be drawn on the petition of the Southern New England railroad, a Grand Trunk subsidiary, for authority to enter Boston.

There are thirty million acres of land in Minnesota that have never been touched by a plow.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

JUDAISM AND CHRISTIAN SCIENCE.

HENRY DEUTSCH.

It has been aptly said that in coming to Christian Science each arrives along the pathway which is indicated by his individual state of consciousness. Nowhere is this more emphasized perhaps than with those born and reared in the Jewish faith. To the Christian, whatever be his sect or creed, there is always an appeal in the very name of anything which suggests Christ or Christianity. It may require of him a considerable struggle to cast away the form of his particular sectarianism, but he at least retains the anchor of Christianity; time melts away very rapidly for him all mere creedal distinctions, and he can easily accept a religion which is based upon the teachings of the Master.

With the Jew, however, the situation is wholly different and practically antipodal. He comes to Christian Science, driven probably by dire extremity, for a promised or hoped-for surcease from physical ills, relief from which he has in vain sought in every other direction. What to him was a purely physical system of therapeutics very shortly becomes apparent as a religious system which contains the teachings and doctrines of one who not only was deemed an apostate to and enemy of his faith, but in whose name have been committed those persecutions which have flooded many so-called Christian lands with Jewish blood and thus associated the suffering and persecutions to which Jews have been subject with the name and teachings of Jesus the Christ. It is true that modern thought and teaching in liberal Judaism have in a degree tempered this feeling, but the fact remains that in the minds of a large proportion of the adherents of Judaism today there is still a sense of injury, injustice, and ofttimes resentment, which involuntarily produces antipathy toward anything that suggests Christianity.

Under the circumstances, therefore, it is quite natural that the Jew should approach the religious aspect of Christian Science with suspicion, and with all his mental forces and inherited tendencies arrayed against its acceptance. It is all the more wonderful that the teachings of Mrs. Eddy, so clear, convincing, and withal so demonstrable, have in hundreds if not thousands of instances obliterated unfavorable states of consciousness and demonstrated the possibility and rightness of a Jew becoming a Christian Scientist.

It is easy to depict from personal experiences the pathway followed by one who thus adopts this new-old truth for his life-guidance. The beauty of the Jewish home and its life is proverbial. The Jew is naturally religious. As a child he is closely affiliated with and is always impressed by the solemnity of the services and ritual. His emotions are stirred by the wonderful history of the race and its experiences as God's chosen people. There is, however, a weak link which still inheres in the modern Hebrew system, namely, the faith is largely hereditary, and based not upon an understanding of God or any practical apprehension of what God means, but rather on a sense of pride and distinction in the history of the race and its achievements, coupled with what might be called an intellectual apprehension of the historical Biblical narrative.

One can appreciate the great merits of the Jewish family life, the open-hearted benevolence, and many other natural characteristics of the Jewish people which have stamped them as *sui generis*, but when a child grows into manhood and has to face the questions which are sure to come and which he must settle for himself, he finds that his questions from a religious point of view are not being answered, nor is there any promise that they will be. There can be no question of the correctness of the fundamentals of Judaism; no fault can be found with its premises, but there seems to be lacking the spiritual apprehension and aspiration to carry the premises to a conclusion. The predominant characteristic of the teaching seems to be a tendency to cling to an anthropomorphic concept of God, the definition of whose nature is not consistent with any reasonable spiritual interpretation of the Hebrew Scriptures. In a word, it might be said that in Judaism as taught and exemplified today there seems to be lacking the spiritual idea, so defined or presented as to be of assistance in the uplift of the individual, and in giving him the practical ability to meet and solve the problems of daily experience.

The writer was an active member of the Jewish church until he reached the age of thirty and was apparently able to exercise sound judgment regarding any step he might take, but he had found nothing to change his views except the teachings of the Masonic lodge, which seemed to knock at the door of consciousness with at least a somewhat more definite idea of God as related to human activity. Christian Science was presented to him after years of suffering from stomach, bowel, and nervous ailments, and after all material forms of treatment had failed. The first experience resulted in physical healing in less than a week's time, but investigation immediately produced a collision with the inbred antipathy to anything which partook of Christianity, and more especially that had any relation to the name of Jesus or Christ. As a result, thought was but too ready to attribute the work of Christian Science to hypnotism and its allied psychological phenomena, which immediately became subjects of interest to the exclusion of further experiences in Christian Science. A long pursuit of this line of study produced no results but an aggravation of the original physical and mental troubles. In the mean time nothing had interfered with the attendance upon and interest in the synagogue and the other phases of an active Jewish life.

At length, however, dire necessity compelled a resort to Christian Science a second time as the only possible hope for relief, and for nine years it has been proven indeed a blessing. The healing of the various troubles, physical and mental, also of the smoking habit and the desire for alcoholic drinks, came slowly and was at times accompanied by most distressing discouragement, but the evidences of the blessing of Christian Science in a physical way both for self and family multiplied. The turning point was not reached, however, until with an understanding of divine Principle there was received the impulse to know something of the living God. With this came the necessity for working out the religious question, as it soon became apparent that the astonishing blessings conferred by Christian Science were

Copyright, 1912, by The Christian Science Publishing Society.

Digitized by Google

correlated and intertwined with and could not be separated from its religious philosophy.

It was at this point that the real struggle began, and it required continuous patience and the constant repetition of Truth's manifestations to keep thought clear and to solve the question. There was the opposition of parents and of Jewish friends who were not slow to criticize and make unkind comments, and there seemed to be a condition of mental and spiritual chaos. The writer knows what it means to be torn and tossed between a sense of loyalty to the old faith and the sense of gratitude for the new, and in this conflict, as in all other disturbances, Christian Science came with the sweet message of cheer and comfort and showed clearly, as our Leader has enunciated, that a Jew can consistently adhere to and become connected with the Christian Science faith and church without relinquishing any part of the fundamentals of his old faith. On the contrary he becomes satisfied that the study of Christian Science and the acceptance of its tenets will do more to bring out the pristine nature and real purity of Judaism than any course of study or practice. Christian Science is the living exemplification of Jesus' mission as expressed by him, "I am not come to destroy [the law], but to fulfil." Christian Science restores to the Jew a clear recognition of those vital factors which constitute Judaism and which made it what it was at the times when national prosperity attended the race—when the Israelites lived in strict adherence to the commandment, "Thou shalt have none other gods before me."

The underlying, overlying, all-embracing Principle of Christian Science is God, and man is His son, His image and likeness, created as described in the first chapter of Genesis. The epitome of all the teaching of Christian Science is the omnipotence, omnipresence, omniscience, and all-embracing, infinite love of God, the recognition of only the one Mind, the one Father, and man as His child. "Have we not all one father? hath not one God created us?"

When we realize that in the life of the Christian Scientist these thoughts are brought home and incorporated into his life practically every instant of the day; when we understand that the Christian Scientist is continually held up to the contemplation, the worship of and allegiance to the one God and the manifestation of His attributes, we clearly see why a good Jew can consistently be a Christian Scientist. To the Jewish mind there may at once be suggested certain doctrinal characteristics of the Jewish faith which seem opposed to the name or teachings of Jesus or Christ, but these considerations are not a vital part of a man's faith and it is not an impossible prophecy that if from the minds of all Jews today there could be erased those pictures and impressions imprinted by the crimes committed in the name of the lowly Nazarene,—but never sanctioned by his teachings and having no authority in them,—the Jewish nation today would be the first to claim the wonderful heritage of that son of the family of Jesse, who was probably as consistent a Jew as ever lived.

Christian Science acknowledges the wonderful words and works of Jesus the Christ. It sees Jesus not as God, but as divinity expressed in the ideal man, just as it may be expressed by every man and woman who lives a life which reflects the divine attributes and thus partakes of the nature of divinity. It sees in Jesus one of Hebrew birth, educated in the Hebrew faith, expounding the Hebrew Scriptures, and showing us by his life and words the heart and vitality of the Jewish religion, pure and undefiled, omitting from it nothing but the pomp, form, ceremony, and sham of the letter which, as many times before, had devitalized its spirit. Christian Science sees in him a godlike man, showing mankind the way to God by demonstration. It sees him not as a personal Messiah, but as pointing out and demonstrating the Messianic or Christ-Principle, divine Truth.

The only real test of a religion is the question of its attitude toward the one God our Father, and toward man our brother. The varying rules, doctrines, and dogmas represent merely the ways in which we move in the demonstration of our belief or faith, but so long as faith in the underlying Principle remains intact, we can trust God, infinite Mind, to take care of His manifestation, and know that we cannot go astray. Today there is agitating the minds of men, in the Jewish as well as in the Christian church, a question as to what shall be the attitude toward Christian Science, and the question is more strongly emphasized in the case of the Jew. What should be the Jew's attitude toward any religion that manifests itself in bringing the world to a clearer apprehension of God and of man's relation to Him; that emphasizes the necessity for absolute allegiance to the one God and inculcates the requirement of brotherly love? What is it that the Jew desires? Is it otherwise than the wish which is the basis of all religions, viz., the establishment of the kingdom of God on earth? In other words, that condition of earthly existence which is described in the prophecy of Isaiah: "The wolf also shall dwell with the lamb, and the leopard shall lie down with the kid; and the calf and the young lion and the fatling together; and a little child shall lead them."

Modern advanced thought is practically unanimous in the expression that the underlying purpose of religion is to bring men into a right apprehension of God, and to usher in that time when all nations and all people shall realize in its fulness the fatherhood of God and the brotherhood of man. The attitude of the Jew, or any other religionist, toward any form of religion should therefore be to examine it in order to ascertain whether or not its purpose and tendencies are in keeping with this end, and if so, to welcome its aid and assistance even though its means may be different. The Jew needs to cultivate toward Christian Science and other religions considerate toleration. Christian Science has come to the world as the leavening element of all religions. It enables Jew and Christian to meet on common ground and to dissolve the differences which have seemed to exist between them.

As Mrs. Eddy says in our text-book, "Of old, the Jews put to death the Galilean Prophet, the best Christian on earth, for the truth he spoke and demonstrated, while today, Jew and Christian can unite in doctrine and denomination on the very basis of Jesus' words and works. The Jew believes that the Messiah or Christ has not yet come; the Christian believes that Christ is God. Here Christian Science intervenes, explains these doctrinal points, cancels the disagreement, and settles the question. Christ, as the true spiritual idea, is the ideal of God now and forever, here and everywhere. The Jew who believes in the First Commandment is a monotheist; he has one omnipresent God. Thus the Jew unites with the Christian's doctrine that God is come and is present now and forever. The Christian who believes in the First Commandment is a monotheist. Thus he virtually unites with the Jew's belief in one God, and recognizes that Jesus Christ is not God, as Jesus himself declared, but is the Son of God" (Science and Health, p. 360).

The Jew should welcome Christian Science, not only because it will bring him peace, comfort, help in suffering and sickness, but because it will give him real insight into what constitutes actual Judaism and because it breaks down the bars that tradition and prejudice have interposed between him and his good Christian neighbor. The Jew should welcome Christian Science because it is the first movement in the Christian era which has stood for the primitive purity and glory of the Judaic religion, because it is doing more than any other present force to restore the spiritual teachings of Judaism to their original and rightful place, and above and beyond this, because it is bringing into the lives of men and women and into daily demonstration by them the conscious realization of an omnipotent, ever-present God, thus enabling them to grasp the full import and realization of the words of the psalmist, "He that dwelleth in the secret place of the most High shall abide under the shadow of the Almighty. I will say of the Lord, He is my refuge and my fortress; my God; in him will I trust."

LESSONS FROM SEA AND SHORE.

WARWICK JAMES PRICE.

IT was a profound even if obvious truth voiced by the youthful Bryant in the opening lines of "Thanatopsis," which he sent, unsigned, to the *North American Review* now nearly a century ago:—

> To him who in the love of nature holds
> Communion with her visible forms, she speaks
> A various language.

Lessons eloquent indeed ring us in on every hand, if but eyes and ears be open to the sights and sounds of "the vicar of the almightie Lord," as mother nature seemed to Chaucer. Truly are there "books in the running brooks;" "sermons in stones." Mrs. Eddy, in "Science and Health with Key to the Scriptures," shows her own keen appreciation of this where she writes: "The floral apostles are hieroglyphs of Deity. Suns and planets teach grand lessons" (p. 240). She hints closely, too, at instructions all about us in quiet perseverance and unselfish love, stanch strength and omnipresent charity, in another well-known passage which reads: "The grass beneath our feet silently exclaims, 'The meek shall inherit the earth.' The modest arbutus sends her sweet breath to heaven. The great rock gives shadow and shelter" (p. 516). The great Teacher tells us of faith which to the eyes of sense is like a mustard seed, but which has power to move mountains.

Nowhere do such teachings crowd closer the one after the other than along the gray stretches of the beaches which fringe so great a part of our coasts. What closer parallel for instance to the man of unstable mind than those same constantly shifting sands,—blown hither and thither of every wind, all things to all men, cheerily smiling if the sun show fair, but full as readily answering in dullest tones to a lowering sky? If, on such a day as this last phrase may picture, the very heavens seem dark and threatening to one contending with the temptations of discouragement and doubt, he yet knows that "behind the clouds is the sun still shining," a type of that changeless Truth which is never shrouded from our eyes save by the mists and fogs in which the erroneous doctrines of past generations have taught us to believe. Ultimately the sun burns away the false concepts—for divine Truth is indeed a consuming fire!—and, lo! we see they were compact of airy nothings. If, on the other hand, the great blue tent is stretched unbroken, how pure a promise does it seem of that eternal life which is born of spiritual understanding!

Remembering that, according to the teaching of our textbook (p. 507), water, in the Biblical metaphor, symbolizes the elements of Mind, the white-capped waves, tumbling shoreward in their torrent rapture, preach a sermon to all who hearken. What a "keep-at-iveness" is theirs; how they emphasize not only the doing of duty, but the persistent doing of it! Stout old Jeremy Collier once said that "perpetual pushing puts a difficulty out of countenance," and with a thought for the trait here referred to, who has failed to note how, now and again, this billow or that runs so much farther up the sand than those that broke before it: farther than those that follow for many minutes? The observant watcher sees that it made its record all because it came in just "at the nick o' time," when, as it were, the rebuff of the land had been overcome by its preceding fellows. Sometimes it even seems as though it fairly slid to easy victory over the smooth backs of those running in immediately ahead of it. Yet they had lost nothing, those earlier ones; they had done their tasks. It was merely that the other was ready to take instant advantage of its opportunity, setting a new high mark for the tide's emulation. It had only that one thing to do, just then, and did it "true to the tick of the clock of favoring occasion."

Why is the tide victorious twice in every twenty-five hours? No one doubts its certain coming, none questions its unfailing ebb and flow. In the answer lies again a lesson; it obeys a power above it, with "an obedience which surpasses sacrifice," and so faces its recurring tasks with neither doubt nor debate. Nor, when it has reached its goal, does it chatter of success: thankful it may be, but boastful never, retiring with quiet sense till a new call for action shall summon it forth once more.

In the shallow hollows at the back of many a beach, and invariably among any rocks which may fringe it, are pools left by the receding waters. The most of these are refreshed at each returning tide, drinking in purity and fresh vigor, and so continue to play well their little parts in the big economy of the beach life. But there are others (and it may be these hold a lesson most worth the heeding) which have been called into being by a moon-tide or some other flow greater than the daily average,—one might put it, "by some great experience." These, unreached by the merely usual tides that follow, their strength unrenewed, grow dull and stagnant, and eventually, if this same sad story be repeated many days, they disappear, dried up by the heat of persecution, swallowed by the sands of old habits—and yet, just across that narrow bar of sand, just beyond that little rocky barrier, beats and pulses the great sea itself, to mingle with whose waters is to become one with power. Mrs. Eddy writes, "As a drop of water is one with the ocean, a ray of light one with the sun, even so God and man, Father and son, are one in being" (Science and Health, p. 361).

RIGHT JUDGMENT.

REV. IRVING C. TOMLINSON.

EVERY alert Christian Scientist has a profound appreciation of the Master's words as found in the seventh chapter of John: "Judge not according to the appearance, but judge righteous judgment." Mrs. Eddy has emphasized this declaration, as when she says: "Your decisions will master you, whichever direction they take" (Science and Health, p. 392). Those who misunderstand Christian Science frequently rebel over its teaching concerning the real and the unreal, and they insist that the testimony of material sense must at all times be accepted as true. The Christian Scientist, however, accepts the teaching of Jesus, and gives heed to his words not to judge according to appearance, but to judge according to the right, as the original Greek puts it. Or, to use the translation of an eminent authority, "Do not decide at a glance, but think out the decision judiciously." This helpful reminder from the Master was recalled recently by the following incident.

In walking through one of the old streets of historic Boston, a visitor observed a brass door-plate which from its appearance had been many years in place. So faithfully had it been polished that the letters were almost entirely worn away, but on close scrutiny he traced out the original name upon the door-plate. Many years ago he had known this gentleman as a pastor of one of the leading churches in Boston. He was at that time a familiar character, but he has long since passed to his reward. Then the lesson forced itself home. Had the visitor passed judgment according to appearance, he would have believed that this was the abiding-place of him whose name was on the door-plate, and that the provisions brought by the grocer were for his support; that the coal which went into the cellar was to keep him warm; but the observer knew the facts, and passed right judgment upon them. The reverend gentleman's home was not in this brick dwelling, mortal conditions and human laws did not apply to him, and appearances did not tell the truth about him.

The moral is plain. Mortals, by reason of mistaken judgment, declare that what they see with the eye decides the entire question as to man. Right judgment declares that man does not live in the body, but in divine Mind; that

Digitized by Google

it is the Mind which is God that sustains man; that it is infinite Life which is his life, and that the laws of mortal mind do not apply to the real man. Right judgment declares that the only law governing man is the law of Spirit, the law of health, and the law of harmony. If we make our decisions relative to man upon the basis of matter, we do not judge right judgment; but if we decide upon the basis of divine Mind, then we are helping to establish health, peace, and joy. More and more will thoughtful people come to the standpoint of the Master, and no longer judge according to appearances, but in all cases judge right judgment, for, as quoted above from the text-book, their decisions will master them, whichever direction they take.

THE TRUE MOTIVE FOR STUDY.

HOWARD C. VAN METER.

THE majority of those who investigate the teachings of Christian Science are persons who are pressed to obtain relief from some condition, physical or otherwise, which is troublesome even if not a serious menace to their well-being and happiness. Being forced to find something to harmonize the situation, the investigator begins to read the literature of Christian Science with a more or less defined need in mind which he hopes will be met. As he continues, he is frequently tempted to pause and see to what extent the trouble is abating. If progress is not evident, he may be inclined to think he is not gaining any understanding of the teaching. It is necessary, therefore, to give consideration to the apparent association of these mental tendencies, in order that discouragement be avoided, and the writer has frequently found it helpful in such instances to call attention to the deep import of the text-book, "Science and Health with Key to the Scriptures," in its relation to the problem of salvation from all evil.

At the foundation of all Christian admonition we find the words of the Master, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." Again, he declared to Pilate, as a reason for his existence, that he came to "bear witness unto the truth." In the latter statement he voiced the object of all creation, to bear witness to the truth about the creative Principle or First Cause. It may be said that the recognition of this fact, including as it does the individual's part in the whole, will inspire the reader of Science and Health with a purpose which he had not formerly entertained, viz., that of obtaining a knowledge of God in order to understand himself in the capacity of a manifestation or effect of the creative Principle. This will change his attitude from that of a mere reader to that of a student, and he will likely experience in the increased area of satisfaction the freedom indicated by the removal of the infirmity which had impelled him to seek Christian Science. Until his reading is with a definite purpose, based upon a proper sense of the situation, the inquirer is liable to grope his way in a more or less blind fashion, although the general goodness contained in the book will not leave him where he was at the outset.

The writer read the Christian Science text-book five years before any appreciable growth was observed. He is not deserving of any commendation for his perseverance, because there was no evidence of the essentials which inspire that desirable quality of mind. His reading was due to a certain consideration for one who had been healed after many years of semiinvalidism and who had become very much interested. Because of no better incentive, he read carelessly and without grasping to any extent the underlying purpose. Suddenly, and to him startlingly, he found an inquiry urging itself, Why are we here? What does creation mean and what is the reason for it? Jesus' words to Pilate answered the question, and at once the whole trend of the writer's experience began to change. There was no longer a disposition to drift aimlessly along through life without a thought of responsibility, since a deep fact had been discerned which was henceforth to be the prime factor in his experience; and he set earnestly to work to study with a view of gaining a demonstrable knowledge of God and man's relation to Him. Whatever progress he has made dates from that point, which it had apparently taken five years to reach.

The reader of Mrs. Eddy's writings may well inquire of himself what is his object in reading, and establish at an early moment a reason which will satisfy the most searching demand. Then his investigation will prove to be a constant unfoldment of the truth, and in the application he will find increased satisfaction. No ideal in life can transcend that of fulfilling a holy purpose to the extent that every thought, word, and deed shall be indicative of obedience to God, and such a life will be an inspiration to all the associations of daily experience, whether of business or social affairs.

[Written for the *Sentinel*.]

SONGS OF JOY.

LILLIAN BARKER BEEDE.

WHEN swept death's sable pinions
Across my love-lit skies,
My harp was hushed to silence,
While tear mists veiled my eyes.

At last, with hopeless fingers
That groped among its strings,
I woke the tones that only
To weeping memory clings.

In sorrow songs it whispered
Of anguish and despair;
Its low, sad notes went wailing
Up music's mystic stair.

A touch of careless fingers,
And then—a broken string,
Its voice—a dismal discord,
My harp—a useless thing.

A night of gloom closed round me,
Whose shadows were more dread
Than sorrow's twilight brought me
When love with death had fled.

Then in the darkness blossomed
A pure white angel thought,
Whose petals slow unfolding
A wondrous lesson taught.

And o'er the rusting harp-strings
Came breath of Love divine,
That tuned to heavenly sweetness
Those silenced songs of mine.

As joyous, eager fingers
Swept o'er the strings once more,
They thrilled with living music,
To them unknown before.

Then angel thoughts grew brighter,
And darkness shrank away,
Till Truth's white-petaled blossom
Turned sorrow's night to day.

Oh, joy complete and perfect!
Sings now this harp of mine,
As human discords vanish
In harmony divine.

SELECTED ARTICLES.

[Frederick Dixon in *Brixton and Lambeth Gazette*, London.]

The human mind is trained to limitation. It approaches every question with a consciousness of its own deficiency. If it makes an exception at all, it is in favor of the power of evil; and it has crystallized its fears in the proverb that a thing is too good to be true. This is the philosophy, almost the religion of Christendom, but it is a species of infidelity of the worst description. If there is a fact which emerges with more conspicuous clearness than another from the teaching of Jesus, it is the omnipotence of good, and a Christian should recognize no reverse to the proverb that a thing is too bad to be true. "Ye shall know the truth," the great Teacher said, "and the truth shall make you free." The truth which is to free humanity from the seemingly ubiquitous forces of sin is not evil, but good. The Christian or Christian has one battle-cry, "*Veritas vincit!*"

Anybody who will take the trouble to analyze the practice which grew from Jesus' teaching, will realize how unlimited was his faith in the power of good. This practice may be found in his miracles, themselves the object-lessons in proof of the correctness of his premises; and those miracles cover the entire gamut of the superiority of divine Science to the limitations of human knowledge. Jesus himself said of these works or miracles, that those who understood his teaching would be able to repeat them, and this is of itself a necessity of an understanding of spiritual law. The power, the knowledge, the resource of Jesus, were shown from time to time to humanity through the medium of this practice, and on no one occasion did he even imply that the ability to demonstrate the truth of his teaching was confined to himself, his immediate disciples, or pupils, for that is all the word *discipulus* means, or to his own age. On the contrary, he made it abundantly clear that his teaching was scientific, and could be mastered and demonstrated by any one, in any age, who would follow his directions, in proportion as they were faithful, not merely to the letter, but to the spirit.

Anybody who realizes this must realize the vastness of Christian Science, for Christian Science accepts the responsibility for obeying the direct commands of the Founder of the Christian religion without any qualifications. The world often speaks of the Christian Science movement as if it were simply some new school of physical healing. Nothing could be farther from the truth. Physical healing is a phase, and perhaps the simplest and primary phase of Christian Science. The more Mrs. Eddy's teaching is studied and understood, the wider will be found its application, until the fact is grasped that it is as wide as the teaching of Jesus. It is only necessary to realize the infinity of Jesus' teaching to understand what this means. He not only healed the sick, but he raised the dead. He not only vanquished sin, but he overcame sorrow and misery of every description.

Jesus, however, did something far more than institute a new school of physical and ethical healing. He gave the world a new philosophy, a new Science, a new understanding of Principle. His philosophy was summed up in the demand that those who followed him should love the world as he loved the world, and his love for the world was expressed in teaching the world its absolute dominion over everything not comprised in absolute Truth. His Science was a repudiation of those physical conditions which the world, up to his time, and since his time, has regarded as actual. He fed the multitude by the understanding of spiritual substance, and he found the Roman taxes in the mouth of a fish. Staggered by what this implied, humanity has attempted to account for it by describing Jesus as God, but Jesus claimed the fatherhood of God for all those who believed in him, equally as for himself, and demanded that those who claimed to believe in him should prove this sonship by the effort to do the works which he had done. The feeding of the multitude, the finding of the tribute money, were as much the works the world was called upon to do as the healing of the lame, the deaf, and the dumb; and Jesus went a step farther than this when, in walking on the water, he indicated to the world the secret of the spiritual law he was demonstrating in its midst by proving gravity to be a human concept centuries before it was discovered by Newton to be a natural law.

No Christian Scientist claims to be able to do all that Jesus did, but he claims that what Jesus did was the expression of what Jesus taught, the demonstration, in a word, of the Science of Christianity. The aim, then, of the Christian Scientist is to strive to master the theory of Christian Science so as to be able to demonstrate it; in other words, to let that Mind be in him which was also in Christ Jesus. It was the Mind of Christ, and not obedience to any physical law which, in the first century, healed the sick and raised the dead, which enabled Jesus to feed the multitude, to find the tribute money, and to walk upon the waters. These demonstrations of the truth which he taught were the result of his absolute scientific understanding of divine Principle, which in the Greek Testament is described as a full, exact, and so scientific knowledge of God. The Christian Scientist, realizing this, realizes that the healing of physical disease is the simplest part, as it is necessarily the first phase of the struggle which lies before him.

The Christian Scientist, endeavoring to walk in the footsteps of Christ, sees, at first dimly but with ever-increasing clearness of vision, the magnificence of the opportunities and the vastness of the field which lies before him. He realizes that as he acquires the Mind which was in Christ Jesus he too will rise above the limitations of human knowledge, and will learn, little by little, to demonstrate the omnipotence of good.

[From "The Book Shelf" in *Age-Herald*, Birmingham, Ala.]

When Mary Baker Eddy, the Discoverer and Founder of Christian Science and author of the Christian Science text-book, "Science and Health with Key to the Scriptures," passed away, it was predicted by a few that the Christian Science church, which had reached its greatest influence, would by reason of her absence decline as rapidly as it had risen; yet with her passing appeared in the press throughout the entire world such genuine tributes of praise of her life and work, in special articles and in editorials, that the very reverse of this prediction was found to be the fact. So genuine were these expressions of appreciation of the life-work of Mrs. Eddy that excerpts from a large number of them were printed for some weeks in the current issues of the Christian Science publications, and requests were so numerous that these excerpts have now been issued in book form. One writer says, "There is a story of a certain old-world philosopher who, when it was asked of him, 'What constitutes achievement?' answered, 'To be able to reply Yes, every evening, to yourself, when you ask, "Have I done good to any one today?"' It would be difficult to find a more practical and efficacious test of the value of a man's life-work, and it would be impossible to find any one to whom it could more fearlessly be applied than Mrs. Eddy. Her whole life, even before she discovered Christian Science, constituted an expression of an intense tenderness for suffering humanity, and as the years added themselves to years, and she learned more and more of divine Life, Truth, and Love, she came to fulfil absolutely the exhortation of Paul to the church of Colosse: 'Walk worthy of the Lord unto all pleasing, being fruitful in every good work, and increasing in the knowledge of God.' Building in this way for God and not for herself, she built on sure foundations. The Christian Science church which, in the brief space of forty-four years, has literally folded itself around the globe, is in this way founded upon a rock, the rock of divine service."

While few of the editorial writers lay claim to a personal

Digitized by Google

knowledge of Mrs. Eddy, or indeed any personal knowledge of her teachings, they concede almost without exception that Mrs. Eddy was a wonderful woman and that she achieved a remarkable work.

[Editorial in *Pierceton* (Ind.) *Record*.]

At a local church Sunday evening [March 10] the subject of the sermon was "Healing." The text was taken from the fourth chapter of Luke, verse 40: "Now when the sun was setting, all they that had any sick with divers diseases brought them unto him; and he laid his hands on every one of them, and healed them."

This is a subject which nearly always appeals to a congregation. Throughout the history of the world people have been searching for health, happiness, and for ways of bettering their condition. If not themselves in need of healing, most persons have friends who have tried various remedies and who have failed to receive the relief sought. Most of us know of cases where years of search and trying various remedies have been followed by discouragement, hopelessness, and despair. Some of us have been told at such times that we must be resigned to our fate, and suffer because it is inevitable.

One point brought out in the sermon was that one of the duties of man to his brother when he is in need of healing, is to take him to the divine healer, the one perfect physician who never lost a case and never refused one, Christ Jesus; that he is our guide and example. The strange part about the sermon was that Christian Scientists should have been criticized for their efforts in trying to do this very thing. Without a doubt it is true that Jesus never lost a case. This is why Christian Scientists believe his method of healing to be the best and why they prefer it to any other. This is why they apply it in their own cases in so far as they understand it, and recommend it to others.

Christian Scientists believe that the same power by which Jesus did his wonderful works two thousand years ago is still as efficacious to heal as then. He said he came to do the will of the Father, and he spent much of his time healing the sick. If it was the Father's will then for people to be healed, it must be His will today. The key to the situation would seem to be to know the way by which Jesus healed, and follow that way. It certainly cannot be claimed that he healed by using drugs or material remedies.

Christian Science was denounced as a "lie" because it denies the existence of things which we can see about us. The writer does not speak as an authorized representative of Christian Science. His understanding of this teaching, in fact, is very limited. However, he has made some study of the subject and feels less inclined to criticize the teaching now than when he knew nothing about it.

It is true that Christian Science denies the reality of sin, sickness, and death. Reality in Christian Science, as it is understood, means God and His creation. If God did not create sin, and He made all that was made, it might well be asked who made it. If it has been created or brought into being by some other power, then is God omnipotent? If God did not make sin, which we can look about us and see on every hand, is it any more probable that He made sickness, which is not any more prevalent? Christian Science does not deny that we may look about us and see sin, suffering, impurity, selfishness, dishonesty, and all these kindred evils; but it does deny that they exist as any part of God's creation; hence they do not exist as realities. They are not upheld by any law; rather are they the jarring discords of existence which may be eradicated by the application of God's law, which is the law of life. This is why Jesus was successful. He had a better understanding of this law than any one else and knew how to apply it. He gathered about him his students and tried to instil into them its requirements, that, as he said, they might do the works which he did; but it is evident that they caught only a faint gleam of the truths which he labored to impart.

Christian Scientists do not claim to heal every case they undertake. When failure results they know that the law has not been properly applied, the same as a student in mathematics knows that the law of numbers has not been properly applied when he fails in the solution of a problem. He does not think of disputing the science of mathematics.

When the disciples failed to heal the boy who was brought to them by his father while Jesus was on the mount of transfiguration,—this did not prove that the teachings of Jesus were false; rather did it show the need of a better understanding; and that the works are not being more universally done today does not prove that the day of divine healing is past, but rather it shows how far we fall short of the standard set by our example and guide. It was also said that sickness and death are inevitable. It may seem so to us, but is this in accordance with the teachings of Jesus? If his application of the law was sufficient in all cases, would not the same results follow today if we had the same understanding?

Christian Science does not teach, as many believe, that disease exists only in the imagination. It does teach, however, that the cause of disease is mental and that healing comes by putting out the thoughts which bring the disease. It teaches that the healing of sickness and sin is brought about by one and the same process, and that the healing is in proportion to the regeneration.

Christian Science, as understood, is nothing new. It simply brings down to the present day the application of the Christ-method of healing sickness and sin. Its aim is for a better understanding of God and man's relation to Him, a fuller realization of man's immortality, and incidentally the healing of the sick, the alleviation of pain, and the bringing of the "oil of joy" for the "spirit of heaviness." With the evils that may be seen about us it would seem that there is work for all, each in the way which to him seems best. Christian Science is contributing its mite and asks only to be judged by its fruits.

[Howard C. Van Meter in *Medford* (Ore.) *Sun*.]

Your readers were asked in Thursday's issue to consider an attempt on the part of a clergyman to prove the teaching of the Christian Science text-book, "Science and Health with Key to the Scriptures," contradictory to that of the Bible. Without attempting to evade the comparisons, I would like to draw the attention of your readers to the fact that there are as many different interpretations of the Bible as there are teachings, to the extent that many who have endeavored to take the Word of God literally have thrown up their hands in despair, declaring the Bible itself to be illogical. This could easily appear to be true if one picked out certain of its passages and compared them with other Scriptural passages. For example, in one place the Scriptures read: "I am not come to destroy, but to fulfil" (Matt. v. 17); and again: "The Son of God was manifested, that he might destroy the works of the devil" (I John iii, 8). This seeming contradiction is made plain when through the teaching of Christian Science we learn that Jesus fulfilled the word of God by destroying death. Consequently death must be of the devil, and to be destroyed must be unreal, since that which is true or real is indestructible.

In John xi, 11, Jesus said to his disciples: "Our friend Lazarus sleepeth; but I go, that I may awake him out of sleep;" but later, seeing that they did not comprehend his meaning, he conformed to their material view-point, saying, plainly, "Lazarus is dead." In spite of this concession, he proved the truth of his later statement to Martha, "Whosoever liveth and believeth in me shall never die." Therefore, in the language of Science and Health (p. 75), we read, "Jesus restored Lazarus by the understanding that Lazarus had never died." Again, in the supposed contradictions, the comparison is made between Luke vii, 21, "In

Digitized by Google

that same hour he [Jesus] cured many of . . . evil spirits," and Science and Health (p. 70), "The supposition that . . . there are good and evil spirits, is a mistake." The statement of Luke as to what Jesus did plainly indicates that the belief in the power of evil spirits is "a mistake," since Jesus cured those who were believing in such power and so proved that there is one omnipotent Spirit, who is God.

Plainly, then, the Bible cannot be taken literally, and the proof whether or not one's interpretation is correct lies in the works, for the Master said, "By their fruits ye shall know them." When students and expounders of the Bible fulfil the equally important command to "heal the sick," as well as to "preach the gospel," they can then furnish proof of their correct knowledge of truth and will be in a position to baptize "in the name of the Father, and of the Son, and of the Holy Ghost."

[E. M. Ramsay in *Dundee* (Scot.) *Courier.*]

In reply to "Veritas," I should like to state that I have been a student of Christian Science for fifteen years, and have proved the truth of its teachings in innumerable instances. Before becoming interested in this subject I had been a zealous member of the Scottish Episcopal church; thus, when Christian Science was first presented to me I approached it with great caution, and examined its teachings on the fundamentals of Christianity from a strictly orthodox standpoint. That it healed was very shortly proved to me in two most striking cases, but it was only after a year's study that I understood its teachings sufficiently to be convinced that they were wholly Scriptural. Its position is neither Aryan nor Unitarian, though it differs as considerably from the usually accepted teaching on the trinity as do the simple statements of St. John's gospel from the doctrine set forth in the Athanasian creed.

The proof that the understanding we now have of the divinity of Christ, of the trinity, and of the atonement is nearer the right than those we held before, lies in the increased efficacy of our prayers and in the improvement we gratefully acknowledge in our own lives. *Solvitur ambulando.* He who wishes to know if Christian Science is the truth must study the subject for himself in the true scientific spirit of humility and patience, instead of accepting as correct the views of persons who neither understand the subject nor wish to understand it.

[George W. Farlow in *Boston Times.*]

It is often through many bitter experiences that mortals finally learn the meaning of the Scriptural statement: "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you"—that in proportion to their trust in God is their course divinely and prosperously directed. By fruitless struggle they are forced to a realization that "he that wavereth is like a wave of the sea driven with the wind and tossed," and are led to discover how to "ask in faith, nothing wavering." Thus mortals learn the justice of the Scriptural teaching, "Whatsoever a man soweth, that shall he also reap." Misguided human sense is likely to deem that a necessity which is not so, hence the advisability of holding silent communion with the unerring divine Mind, in order to be guided aright. Moreover, with such communion in the first instance, one may escape the suffering which is required to compel one to place a rightful reliance upon God.

The great Exemplar accomplished his mighty works by making himself subservient to the divine will. He prayed, "Not as I will, but as thou wilt;" with the result that he was intelligently—not blindly led. Christian Scientists are demonstrating in a degree that it is possible to follow Jesus' example. By close application and practice of his teaching, they are escaping from the bondage of materialism and are experiencing much added freedom. The sincere practitioner of Christian Science is proving day by day the power of Truth to heal sickness and sin, when spiritually understood and faithfully utilized. The Christian Science business man who applies his understanding of God to his business, is proving the power of Truth to overcome the fear of failure. He is learning that to seek "first the kingdom of God" is as necessary in business as it is in accomplishing the healing of sickness and sin. In the time of depression and adversity he sees the law of justice (God's will) in the experience, and gathers encouragement, rather than discouragement, therefrom.

The Christian Science text-book teaches that human will is a blind guide and can accomplish nothing in the right direction. Ignorance of this fact leads mortals into all sorts of confusion and discord. God, who is omniscient, fulfils all right desires in the ratio of their worthiness, while all erroneous cravings remain fruitless. No matter how great may be the struggle or how dark the way appears, our hope of peace and success lies in the practice of looking away from the material sense of things to the spiritual. "God is no respecter of persons." He deals out justly to each individual the portion he deserves, from the simple fact that He always regards a righteous thought or act and never responds to an evil thought or act. Mortals suffer only inasmuch as they are out of harmony with God and pay the penalty of a false sense of existence. They enjoy in proportion to their realization of His beneficent presence.

[Ezra W. Palmer in *Canon City* (Col.) *Record.*]

In a recent issue an evangelist holding services in your city is reported to have said that Christian Science is a heresy which keeps men from coming to Christ.

The gentleman evidently has no accurate knowledge of what Christian Science teaches, or he would not have made a statement so opposed to the truth. If heresy consists in following all the commands of the Master, including the healing of the sick as well as the saving of the sinner, then Christian Science is a heresy, and not otherwise. The great Teacher and healer, Jesus Christ, spent the greater part of his time during his ministry on earth in healing the sick of all manner of diseases. In fact, his ministry was one of healing in demonstration of the power of God. He preached only one sermon, while the Bible reports that he healed multitudes. He taught his disciples how to heal by prayer and he gave this sweeping command to all who should believe on him: "Go ye into all the world, and preach the gospel to every creature. . . . And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

Christian Scientists believe that these commands should be followed literally, and they have demonstrated to their own satisfaction that prayer to God heals the sick the same now as when Jesus uttered these words just prior to his ascension.

I read the sermon of this evangelist, as reported, with considerable care. There was much in the sermon of value; much that all Christians would endorse. But there was not one word to indicate that this evangelist either believed or taught that "the prayer of faith shall save the sick, and the Lord shall raise him up," as St. James declared.

Who have the best right to be called Christians,—they who follow all the commands of Jesus or they who accept a part and repudiate the balance? Christian Science, instead of turning men from Christ, has awakened a vast multitude to accept Christ as the Saviour of mankind. The intelligent study of Christian Science invariably arouses a hunger and thirst after righteousness and causes men to love the Bible, God, and their fellow man, better than ever before.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"IMPOSITIONS ON THE PUBLIC."

MANY persons who notice communications to the newspapers signed by a "committee on publication," wonder why it is necessary for the Christian Science church to maintain a committee of this kind, and some have jumped to the conclusion that the intention is to secure publicity in order to proselyte from other faiths. This, however, is not true, the real reason being readily explained by the following quotation from Article XXXIII, Sect. 2 of the Manual of The Mother Church:—

It shall be the duty of the committee on publication to correct in a Christian manner impositions on the public in regard to Christian Science, injustices done Mrs. Eddy or members of this church by the daily press, by periodicals or circulated literature of any sort.

Examples of "impositions on the public in regard to Christian Science" come to us every day, but for misapprehension of facts one that has come to us recently stands alone. A few weeks ago the *Trenton* (N. J.) *Times* published this item:—

One of the most remarkable religious congregations in Trenton is composed of ninety-eight inmates of the New Jersey state prison, who meet each Sunday afternoon. Members of the prison class seem to be greatly interested in this comparatively new prison service. They pay close attention to the reading of the Christian Science Lesson-Sermon, and many of them devote all their spare time to study of the subject. The members of the class are looked after personally, and the subject is discussed privately with any one interested. Books are provided for those desiring them, and Christian Science periodicals and other literature are sent to the prison, and in many other ways the welfare of the inmates is catered to.

When the class was first organized it had very few members, and some of them did not take it very seriously. Others among the convict population frequently joked at the expense of the new converts, working off the old joke that if the latter could make themselves believe that such was the case they would no longer be prisoners, but would in reality be walking about the world free to come and go as they pleased. Of course, no one looked at the new religion class in that way, although even most of those attending were inclined to regard the services more in the light of a diversion than a means of spiritual and mental benefit. Later, however, the attitude of the men changed, and now all who attend seem to be deeply in earnest, while not a few of the others claim to be interested in the services.

An English newspaper condensed it in this form:—

Ninety-eight convicts in the New Jersey state prison were formerly Christian Scientists.

Of course the committee on publication for that district will send in a correction of this misapprehension, and we assume the editor of the paper will publish it.

An instance of a misstatement corrected, is shown by the following communication from the publication committee for Colorado, which appeared in the *Denver* (Col.) *Republican* of April 19:—

In your issue of April 18 appeared an article entitled, "Force Scientist to have arm dressed," in which it was stated that Mrs. Rebecca Pirtle of 2523 Curtis street was suffering from a broken arm which for three days she had refused to have dressed because of her belief in Christian Science, and that after battling with the authorities, she was removed against her will to the county hospital.

I beg to say that Mrs. Rebecca Pirtle is not a Christian Scientist, and has no knowledge of the teachings of Christian Science. She stated at the county hospital that she had never read any Christian Science literature in her life, and had no knowledge whatsoever of it. Mrs. Pirtle did state, however, that she had once been healed by prayer and believed in its efficacy.

The attitude of Christian Scientists on the matter of broken bones is to have the adjustment of broken bones made by a surgeon, while the Christian Science practitioner by his prayers allays the inflammation and aids the reconstruction of the injured parts. No person who understands the teachings of Christian Science would neglect a broken bone for three days.

Scarcely a day passes that we do not receive a newspaper clipping in which some one has mistakenly alleged that Christian Science is mental suggestion, an erroneous statement so often corrected that any occasion for its continuance should have long since ceased. To the credit of the various committees on publication, it may be said that this and all other misstatements about Christian Science are being corrected "in a Christian manner," and while the work is one requiring inexhaustible patience, there is hope that it will not always be necessary.

ARCHIBALD MCLELLAN.

DOMINION.

AMONG other words, dominion is one which has come into prominence through the teaching of Christian Science. This word occurs many times in the Bible, from Genesis to Revelation. In the first chapter of Genesis we read, "And God said, Let us make man in our image, after our likeness: and let them have dominion." This divine declaration of man's birthright is at once repeated, with a blessing, and the spiritual account of creation draws to a close; but again and again we read that the spiritual or ideal man's dominion extends from sea to sea and from age to age.

The author of the epistle to the Hebrews refers to the statements of man's divinely bestowed dignity, and quotes this passage from the Psalms: "Thou hast put all things in subjection under his feet." He then adds, "But now we see not yet all things put under him." No, for as we read the history of mortal man, the one who believes man's origin to have been clay, and not Spirit, we find the belief of mankind ruled by men, rather than by God, infinite Mind. Following close upon the acceptance of a false belief as to man's origin and nature, we also find an almost hopeless subjection to fear.—fear of want, of sickness, of asserted material law, with an ever-brooding fear of death and of an unknown future, although the writer to the Hebrews says that the mission of Christ Jesus was to "deliver them who through fear of death were all their lifetime subject to bondage."

When the great Teacher announced that the knowing of the truth would end human bondage, his listeners were highly incensed, and said they had never been in bondage to any man. This was not, however, true in any sense, for at that very hour Rome was crushing out under its iron heel the autonomy of the nation. Worse still, the Jews, with all other mortals, were in bondage to the belief in the reality and necessity of sin, disease, and death. Like the men of today, they held to a fiction of dominion, but were unable to prove their right to it in the way shown by the Nazarene Prophet, who was "Lord and Master" because he understood spiritual law and refused to acknowledge as man that which is born of the flesh. There are many today who think that the material marvels of the present age are proofs of man's dominion, but we need only consider for a moment the crises of mortal experience to see how delusive is such a belief. Paul said of the one who lived unto God that "death hath no more dominion over him;" and to those who are alive to Truth he says, "Sin shall not have dominion over you." What an outlook for those who are no longer in bondage to sin and death!

Christian Science has brought to humanity a quickened sense of man's God-given dominion and the necessity for striving after it every hour. The erstwhile sufferer begins by exercising dominion over his own body, and this is attained by keeping his thought under the control of Truth. When one yields willing obedience to the demands of Principle, his nerves no longer presume to rule him, nor is he the slave of appetite and passion. The understanding that "man is not material; he is spiritual" (Science and Health, p. 468), does not point to gloom or asceticism; it points always to dominion, which can never be attained except by living up to the standard set for man as God's likeness.

When Jesus stood by the bier of the widow's son at Nain,

and when he stilled the raging of the sea, would the vaunted prowess of mortal man have been of any avail? Would the bravest and strongest have been able to do what we are told the Master did at a word? No, but the best and bravest of earth could do more, infinitely more than is deemed humanly possible, if only they would cast aside the fetters of mortal sense and live by the Christ-ideal, which puts to shame the folly of mere earthliness and points to the man who has dominion and of whom we read: "Thou crownedst him with glory and honor, and didst set him over the works of thy hands."

ANNIE M. KNOTT.

"GOD IS OUR REFUGE."

THE Scripture teaching that "God is our refuge and strength" is theoretically accepted by many who also think of Him as the creator of the physical universe and its laws. A sense of the divine immanence is frequently voiced which finds in "natural law" the expression of the unvarying activity of Him whose controlling presence is witnessed to as certainly in the circle of the dewdrop as in the circuit of the heavens; and not a few clerical critics condemn the Christian Science teaching that all real being is Spirit and its manifestations, and that matter and its laws are not modes of the divine manifestation, as heretical.

In considering this subject it is important for us to remember that He to whom we may go with full expectation of protection and safety must be just and compassionate in every aspect both of His nature and His activity. The law which expresses His effective will must be no less kind than is that will. The Scripture declares not only for the goodness of God, but that He is "righteous in all his ways;" He cannot do or be a party to anything which discredits His infinite perfection. The logic and necessity of this fact is the more manifest when in Christian Science we are led to think of God as infinite Truth and Love. We know that all of Truth's activities are true, and that Love is always loving. Speaking of this at-one-ment between God and His works, Mrs. Eddy has said that the divine attributes are "the eternal manifestations of the infinite divine Principle, Love" (Science and Health, p. 275); and this is altogether in keeping with the metaphysical proposition that there is and can be no unlikeness between the creator and the thing created, between the doer and his doing.

Now if this be true, those who say that so-called physical laws express the activity of an infinitely good being are called on to explain why these laws are not always our refuge. In the late dreadful tragedy of the sea, physical law contributed to the event from the falling of the snow at the head of the polar fjord, until, solidified into a mighty ice mass, it finally reached the coast, plunged into the sea, and floated directly athwart the course of the doomed vessel. So too physical forces impelled the monster ship to an impact which resulted, humanly speaking, in an unspeakable catastrophe. Were the material forces which thus had to do with scenes from which human sense turns away in shuddering faintness, the expression of the activity of Him who is "righteous in all his ways"? Many ministers are thus averring today, while others resent the suggestion as a disgrace to Deity, and yet others can only cry out in Job-like agony and weariness of thought.

In the midst of this confusion of aspiring but misdirected sense, Christian Science honors God in maintaining that in every circumstance, and in the whole realm and range of His activities, He is indeed "our refuge;" that all that He is and does, His every law and order, is just and wholly good, and that all which destroys or can be destroyed, all that sins or suffers, is a part of the falsity of material sense. God's kingdom and rule are thus seen to be perfect. Neither the innocent nor the sinful are afflicted at His hands. He is the eternal refuge to which men may escape from the ills and injustice which evil, falsity alone, brings upon them. Christian Science teaches that "the headlong cataract, the devouring flame, the tempest's breath. . . . lightning and hurricane, all that is selfish, wicked, dishonest, and impure," is but "a material belief, a blind miscalled force, the offspring of will and not of wisdom, of the mortal mind and not of the immortal" (Science and Health, p. 192).

No one of God's ways, no divine law, force, or decree is harmful, but only healing; hence no specious casuistry is required to explain the doings of the Almighty. Thus it is that a right understanding of the philosophy of Christianity, the essential teaching of the Master, relates itself to human experience and makes possible, in the measure of our faith, that triumph over physical force which marked the demonstration of him who walked upon the sea, and who said to his disciples that they should not fear, and that the works which he did they should do also.

JOHN B. WILLIS.

AMONG THE CHURCHES.

LONG BEACH, CAL.

The Christian Science church of Long Beach has purchased a site on Elm avenue and will erect a handsome church edifice which, it is said by members of the church, will cost one hundred thousand dollars. The plans for the building have not been agreed upon in all details, but the church will compare favorably with the large and striking-looking edifices which the Christian Science church has built in many cities throughout the United States. It is said that the Long Beach church will resemble the big Second Church of Christ, Scientist, in Los Angeles.

The location purchased for the church is on Elm avenue, between Fourth and Fifth streets, and consists of two lots, giving a total area of one hundred and ten feet on Elm avenue, by one hundred and fifty feet deep. The site is on the east side of Elm avenue and there is one lot, fifty feet wide, between the church site and the new building of the Pacific Telephone Company. The lots are valued at about ten thousand dollars.—*Daily Telegram.*

ST. LOUIS, MO.

An opening service for the new Second Church of Christ, Scientist, at 4234 Washington boulevard, was held yesterday afternoon [March 3]. This building cost seventy thousand dollars, exclusive of the lot. Its auditorium will seat seven hundred and fifty. Virgil O. Strickler of the Christian Science board of lectureship of Boston gave the opening lecture.—*St. Louis Globe.*

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 31, 1912. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 13, 1912.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 3, 1911, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
Falmouth, Norway, and St. Paul streets, Boston, Mass.

THE LECTURES.

THE HAGUE, HOLLAND.

Under the auspices of First Church of Christ, Scientist, The Hague, William D. McCrackan lectured on Saturday, Jan. 6, to a very attentive and large audience in Diligentia Zaal, on Christian Science. In introducing the speaker, F. van Hasselt, retired artillery colonel of the Dutch army, made the following remarks:—

Your presence here is a proof either of your interest in Christian Science or of your desire to discover what are the doctrines of this new-old religion of Jesus Christ, as taught, practised, lived, and established by him. I call Christian Science a new-old religion, for it makes no pretension to being aught but the restoration of that simple but rich Christianity which the great Master taught nineteen centuries ago, and which had lost much of its simplicity and much of its richness.

A non-Scientist has spoken of Scientists as "that rapidly growing army of earnest men and women who by their daily demeanor appear to have made happiness a business and trouble a lost art." A religion whose adherents are so spoken of is worth while to be investigated. Among you there are many who would gladly bear witness of their spiritual uplifting and physical healing through Christian Science, and I am sure they wish with all their hearts to get more of it. For those who have not yet had experiences of the blessings of this religion, I hope that the message we are to hear this night will make them desirous to know more of this truth which heals and saves.

Christian Science has found and finds still much opposition and disbelief. The reason for much of it is the lack of knowledge of what it really teaches, and misconception, a result of information from unauthorized sources and hearsay.—*Correspondence.*

ROCKY FORD, COL.

An exposition on the subject of Christian Science was given last Sunday afternoon [Feb. 1] by Virgil O. Strickler to an audience of fully five hundred people. He was introduced by Mrs. Stella G. North, first reader of the local church, who spoke in part as follows:—

Christian Science has brought to the world a religion of joy, peace, and health, by teaching its adherents to think right,—to think joy instead of sorrow, love instead of hate, health instead of sickness, and thus by correcting our false mode of thinking bring more harmony into our lives. Christian Science means much to me, for it healed me of a very distressing trouble over seven years ago. I had tried many physicians, change of climate, osteopathy, etc., without permanent benefit. After turning to Christian Science I was healed within five weeks, and since that time it has been the only treatment used in my family. It has brought more of health, happiness, peace, and spiritual understanding to me than I ever thought possible. In order to understand how these things are brought about, it is absolutely necessary to have a thorough knowledge of the divine Principle on which Christian Science rests.—*Rocky Ford Tribune.*

EL PASO, TEX.

Bliss Knapp lectured Feb. 9 at the edifice of First Church of Christ, Scientist. The introductory remarks by Attorney Atlas Jones were in part as follows:—

Thousands of years ago Isaiah with prophetic vision lifted the veil of the future and spoke of the time when all men would dwell together in harmony and the earth would be filled with the knowledge of the Lord as the waters cover the sea. We have come to that time slowly; we are ever coming to the light, but it would seem that we have never fully comprehended it. Considering these differences of opinion, it would seem that all we could ask of any man is that he seek earnestly to know the truth and live up to the highest light that is given him. Considering these differences of religious opinion, it would seem that salvation is not so much dependent upon correctness of theory as it is upon humble and intentional obedience to God. It does not so much concern us what religious truth and duty were to those who have preceded us, as it concerns us what is religious truth and duty under our present light and under the obligations that rest upon us. Religious opinion has had in the past and now has its mark of progress.

The Christian Scientists of El Paso have erected the beautiful little church upon their property with a liberality that would astonish all who knew the facts, and they have dedicated this edifice to the teaching of Christian Science with a faith as strong and beautiful as that of a little child. It is peculiarly appropriate that tonight in this place there should be expounded the fundamentals of Christian Science, and it gives me pleasure to introduce to you one who is making his life-work the study of the truth of our common Christian religion and delivering it to his people as it is given unto him.—*Correspondence.*

GLASGOW, SCOTLAND.

A lecture on Christian Science was delivered in the Queen's Rooms on Feb. 26 by Bicknell Young. Duncan Sinclair, B.Sc., presided over a large audience, and in introducing the lecturer said in part,—

It gives me pleasure to preside over the meeting tonight, as it gives me happiness to be present anywhere at any time when I know that the simple truth is to be told about Christian Science. I am persuaded that its teachings are doing an immense amount of good in the world at the present day. I know that through them thousands of people have been healed from sickness of all kinds, that thousands have been raised from the depths of moral depravity into pure and useful living, and that a vast army has been spiritually regenerated, so that whereas their lives were formerly sad and restless, they are now full of joy and at peace. I do not need to speak from hearsay, because I have been able, at least in part, to prove in my own experience the truths of Christian Science.

When I took up the study of Christian Science some years ago,—and I am glad to say I did so with an entirely unbiased mind, because I knew too well what both philosophical and religious doubt meant,—I was suffering from a bodily condition which, to say the least of it, gave cause for considerable anxiety. After a few weeks' study of the Christian Science text-book, "Science and Health with Key to the Scriptures," the conditions which had caused the worry vanished entirely; and during this study the Bible, the ordinary English Bible, became an open book,—it became intelligible from the first chapter of Genesis to the last chapter of Revelation. Not only that, but the entire life, the marvelous works, and the wonderful sayings of Jesus Christ, were explained in a manner at once reasonable and simple. It is because I have been so helped by my study of Christian Science that I am desirous every one should know the truth concerning it.—*Correspondence.*

PASADENA, CAL.

An audience of about thirteen hundred attentive listeners gathered March 3 in the auditorium of First Church of Christ, Scientist, to hear a lecture on Christian Science by William R. Rathvon. That such an audience could be gathered on a rainy winter afternoon to hear the old, old story of the cross indicates the fulfilment of Jesus' words,

Digitized by Google

"And I, if I be lifted up . . . will draw all men unto me." The speaker was introduced by Mrs. M. S. Chamberlain, second reader, who said:—

Your very presence here this afternoon bespeaks your desire to know more about God. And Christian Science does help us spiritually to understand Him, so that we indeed feel that He is our help and comfort. I think that we are all agreed that the mission of Jesus to this earth was to do the will of his Father; and if his works proved what that will is, then he gave ample proof that sickness is no more a part of the divine will than is sin, and he proved, too, that the same power destroys both. Jesus the Christ is the Wayshower for all time. By precept and example he pointed the way and said, "These signs shall follow them that believe." By signs following, then, we too must give proof that we believe.

The Discoverer and Founder of Christian Science, Mary Baker Eddy, has not pointed a new way, but has only turned us back to the way already pointed out by Jesus, which we seem to have lost. Not only was the way lost, but we had become so blinded that we did not even know that we had lost it; and her loving admonition to her followers is, "Follow your Leader, only so far as she follows Christ" (Message, 1902, p. 4).—*Correspondence.*

DORCHESTER, MASS.

On Monday evening [March 11] in Whiton Hall, Dorchester Woman's Clubhouse, Center street, a lecture on Christian Science was given under the auspices of First Church of Christ, Scientist, in Roxbury, by the Rev. William P. McKenzie. The speaker was introduced by Elisha B. Seeley, first reader of First Church, who spoke in part as follows:—

Whoever accepts the Bible as the inspired Word of God, does so upon the assumption that God imparts Himself to man through man, and that He has always done so. We who look back upon the centuries wonder at the blind eyes and dull ears which heard not the message of prophet, Messiah, and apostle, nor discerned in the healing work of Christ Jesus and his followers the spiritual truth to which those results bore abundant testimony. Each advancing epoch in Scriptural history has brought to humanity a clearer perception of spiritual reality than any which has preceded it, and today, in this golden era of the world's progress, we are experiencing the fulfilment of the prophecy contained in the Master's words, "And I will pray the Father, and he shall give you another Comforter, that he may abide with you for ever; even the Spirit of truth."

In order that the teaching of Christian Science may be authentically presented and prevalent misconceptions corrected, our Leader, Mrs. Eddy, established a board of lectureship composed of those who have proved for themselves and others the spiritual truth of her teaching, and we have with us tonight a member of this board.

Dorchester Beacon.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice it is assumed that the lecture will be given in the evening.

Alameda, Cal.—Virgil O. Strickler, Unitarian Church, Grand street, near Santa Clara avenue, May 7.

Anderson, Ind.—Judge Clifford P. Smith, Grand Opera House, 3 p.m., May 12.

Appleton, Wis.—Judge Clifford P. Smith, Appleton Theater, May 3.

Auburn, Me.—William R. Rathvon, Universalist Church, Sabattis street, Lewiston, May 3.

Chickasha, Okla.—Bliss Knapp, Convention Hall, Kansas avenue, May 6.

Coffeyville, Kan.—Bliss Knapp, Jefferson Theater, 2:30 p.m., May 5.

Columbus, Ohio.—Francis J. Flûno, M.D., Memorial Hall, East Broad street, 3 p.m., May 5.

Cornell University, Ithaca, N. Y.—Prof. Hermann S. Hering, Goldwin Smith Hall, May 7.

Dallas, Tex.—Bliss Knapp, Church Edifice, Browder and Cadiz streets, May 9 and 10.

Danville, Ill.—Judge Clifford P. Smith, Lyric Theater, 3 p.m., May 5.

El Reno, Okla.—Bliss Knapp, El Reno Theater, May 7.

Erie, Pa.—Clarence C. Eaton, Masonic Temple, 3 p.m., May 5.

Green Bay, Wis.—William R. Rathvon, Church Edifice, Monroe and Cherry streets, May 9.

Herkimer, N. Y.—William D. McCrackan, M.A., Grand Opera House, 4 p.m., May 5.

Janesville, Wis.—Judge Clifford P. Smith, Myers Opera House, May 10.

Keokuk, Iowa.—Judge Clifford P. Smith, Grand Opera House, May 6.

La Grange, Ill.—Hon. Clarence A. Buskirk, Church Edifice, Catherine avenue and Cossitt boulevard, May 6.

Littleton, Col.—Frank H. Leonard, Town Hall, April 29.

Los Angeles, Cal. (Churches and Societies).—Bicknell Young, Shrine Auditorium, Sunday afternoon, May 5; Wilcox Hall, Hollywood, May 6; Third Church Edifice, 734 South Hope street, May 7.

Madison, Minn.—Prof. Hermann S. Hering, Opera House, April 29.

Marinette, Wis.—William R. Rathvon, Church Edifice, Stephenson and Liberty streets, May 10.

Mill Valley, Cal.—Virgil O. Strickler, Out Door Art Club Building, May 5.

Montclair, N. J.—Willis F. Gross, Montclair Club Hall, 3:30 p.m., May 5.

Mt. Pleasant, Iowa.—Judge Clifford P. Smith, Auditorium, May 7.

New York, N. Y. (First Church).—William R. Rathvon, Church Edifice, 1 West 96th street, May 7.

New York, N. Y. (Second Church).—William D. McCrackan, M. A., Church Edifice, Central Park West at 68th street, May 2.

Oakland, Cal. (First Church).—Virgil O. Strickler, Macdonough Theater, May 9.

Pasadena, Cal.—Bicknell Young, Church Edifice, Oakland avenue, May 10.

Petoskey, Mich.—Clarence C. Eaton, Church Edifice, Waukazoo avenue and Michigan street, May 10.

Pittsburg, Kan.—Willis F. Gross, City Hall Auditorium, May 9.

Quincy, Mass.—William R. Rathvon, Long's Hall, P. O. Block, Braintree, 3:30 p.m., May 5

Richmond Hill, N. Y.—Rev. William P. McKenzie, Columbia Hall, May 7.

Salt Lake City, Utah (First and Second Churches).—Frank H. Leonard, Salt Lake Theater, May 5.

Scranton, Pa.—Prof. Hermann S. Hering, Lyceum Theater, May 9.

Sheboygan, Wis.—Willis F. Gross, Church Edifice, 607 Niagara avenue, May 7.

St. George, Staten Island, N. Y.—Prof. Hermann S. Hering, Curtis Lyceum, Stuyvesant place and Wall street, 3:45 p.m., May 5.

Summit, N. J.—Willis F. Gross, Beechwood Hall, 3:30 p.m., April 28.

Vallejo, Cal.—Virgil O. Strickler, Samoset Hall, April 29.

Waterloo, Iowa.—Judge Clifford P. Smith, Waterloo Theater, May 9.

Wilmette, Ill.—Prof. Hermann S. Hering, Church Edifice, Central avenue and 10th street, May 3.

Youngstown, Ohio.—Prof. Hermann S. Hering, Masonic Hall, May 10.

TESTIMONIES OF HEALING.

I am deeply grateful that I ever heard of Christian Science. I saw at once that it was the truth for which I had been longing and blindly searching all my life. My first thought while having Christian Science explained to me was one of deepest gratitude to God that Mrs. Eddy had been so inspired with good as to discern the law of God and the Principle of Jesus' teaching so clearly that she had been able to make herself understood by so many thousands of people who like myself were waiting and longing for "they know not what."

The day before I was told of Christian Science my mother seemed to be dying from internal hemorrhage, from which she had suffered for more than twenty years, but after a conversation with a Christian Scientist she was healed while reading the text, "For with God nothing shall be impossible." The day after hearing of Christian Science I went to the Sunday service, where everything was even more beautiful than I expected, and on Tuesday I went to hear a lecture on this subject. I commenced to read Science and Health, and for a while I almost lived in it. I had given no attention to the physical healing, but while reading the text-book I was completely healed of a severe form of stomach disorder from which I had suffered for about fourteen years. I had tried many remedies, but could get no permanent relief, and only by the strictest attention to diet could I keep well enough to attend to my business as a teacher. I was also healed of a throat trouble that I had had for a year, which was accompanied by loss of voice if I attempted to sing. After a few weeks' study of Christian Science I was, however, able to sing solos in public without any inconvenience. Some time ago I had an attack of illness which began on Saturday morning, and in the evening I was in a high fever and delirious, unable to read or to help myself. This continued all night. The next morning my mother asked a practitioner for help. Within a few minutes I was quite rational; was able to sit up in bed and read the Lesson-Sermon. In an hour and a half I was down-stairs, and in the afternoon was out in the fields, quite well. I had absent treatment.

Christian Science has helped me in every detail of my life. It has lifted from me a load of fear and anxiety. I am never tired. It is helping me to overcome everything unlike the truth. There was before a seeming hopelessness about ever attaining to my highest ideals, but Christian Science has raised those ideals higher and yet made them possible of attainment. I am trying to show my gratitude by my daily life and to show my faith by my works.

JANE E. HUDDART, Blackpool, Eng.

When I was about ten years old, I was accidentally struck with a croquet mallet just above the knee. It made a bruise and caused a little annoyance at the time, but nothing was done for it, and several months after the bruise terminated in a running sore. A doctor was then called, who examined the knee, diagnosed the trouble, and prescribed various remedies. These were applied, but with no effect whatever. During the next five years, at intervals of about six months the sore would heal up, then break out again for the next six months, at which times I would be compelled to use a crutch. At the end of five years I went to another physician to be examined, and as his diagnosis was a fractured bone, he advised that I be taken to a hospital. This my mother refused; but a third physician was called in, whose diagnosis was the same, and he said that an operation would be necessary. He began his treatments at once, making two visits a day for about two weeks, then once a day for about two months. The bone was scraped, and pieces of it were removed. In due time the sore was practically healed, but in two years it broke out again and was worse than before. This time a Christian Scientist was called in, and I began to take treatment at once. At this time the limb was swollen and inflamed and the indications were that it would have to be lanced. The fifth day, however, the sore opened of its own accord, with no sense of suffering or any pain, and in about four days I was going to school again, which was just nine days after the first treatment. It has now been over eight years, and I have had no manifestation of the disease. The time and cost of healing in Christian Science was nothing to compare with that under medical treatment, though the doctors did all they could to cure me.

Another point of which I wish to speak, and for which I feel very grateful, is this: up to the time when I took Christian Science treatment I was very small for a boy of my age, almost what would be called a dwarf; but after taking a few treatments I began to grow, and in six months was almost a full-grown man. I feel very grateful for what Christian Science has done for me.

DAVID CHEATHAM, Guthrie, Okla.

In respect to the testimony of David Cheatham of Guthrie, Okla., I wish to say that it was a positive case of healing, he being changed from an abnormal condition to one of perfect manhood. Since his healing he has become an athlete, and an expert on roller-skates. Christian Science healed him of lameness and lengthened the leg that was short, and from a stunted condition of growth caused by an injury in childhood, he is now a perfectly robust and healthy man.—DANIEL M. MYERS, Guthrie, Okla.

[Translated from the German.]

As far back as I can think, I was a sickly child, and after I grew up I continued ailing. Physicians made examinations, and prescribed remedies which I took in large doses, but without experiencing any benefit. My condition grew worse up to the age of nineteen, when I had a bad fall. As I was unconscious, I was taken to a hospital, where I stayed eight weeks, after which time I was dismissed as cured, although I felt very weak. I had, however, to take a position again, but my condition grew so much worse that I was able to do but little work. Magnetic treatment was then recommended and tried, but without any benefit; and another to whom I applied, gave me up.

Through the leading of divine Providence I then heard of Christian Science. I had treatment from a practitioner, and since that time I have been well, and weakness is a thing unknown to me. I have been an adherent of Christian Science for over a year, and I am deeply grateful to God; also to our Leader, Mrs. Eddy, for showing us the way of Truth.—GERTRUD BOMMEL, Schweidnitz, Germany.

My heart is so full of love and gratitude to God, because I have been healed in Christian Science, both in body and mind, and so long as I keep this before me I know that nothing can separate me from my faith in God and Christian Science. I was a sufferer from stomach trouble periodically for about ten years. I had the advice and skill of seven different doctors, besides trying many medicines, but all to no purpose. I had almost begun to believe that I had a malignant disease of the stomach, when as a last resort (I am ashamed to say) I took up Christian Science, and two treatments, with the study of Mrs. Eddy's inspired works, cured me.

I had been a professed Christian and church-member for twenty-eight years, and during that time I had many enjoyable days, but since I have been permitted to see the light of Truth as explained by one who took up the Master's teachings where the churches had left off, my heart is continually full to overflowing with love and gratitude to God. Such peace I did not think possible for any one to experience here; it certainly passes all understanding. My

Digitized by Google

case was like that of the drowning man. I caught at what I thought was a straw, but found it to be a life-line, and it brought me to the ship loaded with passengers and going where I wanted to go. I thank God, and rejoice always.

H. L. HOWARD, San Francisco, Cal.

I thank God for Christian Science and wish to tell others of the many blessings which my family and I have received in the last nine years. I was healed of stomach and kidney trouble after the doctors had given me up. This was over nine years ago. I have worked very hard most of the time since and have been in good health almost always. I find Christian Science far in advance of medicine, which never makes one a Christian or changes a man's morals, while Christian Science makes one a better neighbor and a better man in every sense of the word, and, best of all, a Christian.

A. C. JUDD, Inman, Neb.

I wish to state that I resided on the isthmus of Panama from December, 1905, until July 28, 1910, with the exception of a few months, when I was in the States on vacations. During this time I depended entirely on Christian Science for help in case of physical ailments. I had been troubled at times for years with a bronchial affection, and a short time after reaching Panama had a severe attack which was cured by Christian Science, and I have never had the slightest return of the ailment. In March, 1907, I had a fever with all the symptoms of a most malignant kind known in the tropics. I wish to say that my native servant (although offered double pay) would not remain in the house, as she declared that she sensed death. My condition was most critical when Christian Science help came, but I was healed in a very short time. The evidence of this healing was such that a neighbor much against her will was convinced that Christian Science could and did heal. Her father and mother both were physicians, so it was not to be wondered at that she was skeptical; but today she relies on the one great Physician.—MRS. LULU S. DAWSON, Los Angeles, Cal.

With a sense of the deepest gratitude to our heavenly Father for the way in which He has led me, I am making this statement of what Christian Science has done for me. I also wish to express my gratitude to Mrs. Eddy for finding the way to the Christ-healing in this age.

In June, 1910, I went to Chicago to see my sister before submitting to a severe operation that my physician said was necessary to relieve severe headaches which had become so frequent and intense that I was beginning to fear for my reason. My sister tried to persuade me to try Christian Science, but I could not understand how it could help me. Finally another sister, also a Christian Scientist, added her entreaties, and to please them I consented. The next morning I called upon a practitioner and received my first treatment and a very helpful talk, and I know that I was healed then and there. What is most wonderful to me is the complete loss of the fear of hereditary disease and the knowledge that I can guard against this thought. Although I had always thought I was a child of God, the attitude of Christian Scientists toward God is so different that I feel as if I had just received my freedom. I know now that I was led by divine Love to Chicago that day, and to the practitioner who won my respect by the high ideals she holds. I have since then felt better than I have for ten years.

JENNY LARKING, Joliet, Ill.

Many years ago I was healed through Christian Science. This healing has been permanent, and since then Truth has been my only physician, and with God's help I have been able to ward off all sickness that presented itself to my thought. Through the study of the Bible with Science and Health I have found the peace of God, the "still waters" and "the glorious liberty of the sons of God." Mrs. Eddy has shown us the Christ-way again, and my heart is filled with ineffable gratitude for this truth which has rescued thousands from darkness and despair and given them a living faith and a demonstrable knowledge of God. What a rich legacy is ours! In proportion to our realization of Love's ever-presence our tears are all wiped away.

How majestic and beautiful has been our dear Leader's life,—her achievements and her great love for humanity have no parallel in this age. In thinking upon it I have felt such joy and hope and courage, for I have caught the sweet refrain of that "old, old story," which has for us a newer, truer meaning than ever before, calling us onward to higher, holier things.—MRS. JULIA LEE WILSON, Atlanta, Ga.

I give the following testimony with a heart full of gratitude to God, and also to Mrs. Eddy, who has made the Christ-teaching clear enough for all mankind to understand and follow. For seven years Christian Science has been the only help in our family, consisting of my mother, husband, and myself, and it has never failed, bringing us out of such ills as acute lung trouble for my mother, shingles on body in the case of my husband, and healing my husband and myself of a serious bowel disorder. My husband was enabled to give up glasses which he had worn many years for defective vision. Besides these, many minor ailments were overcome.

The strongest proof of the never-failing help of divine Love was, however, brought home to us in the spring of 1910. Early one Sunday morning my mother was taken very ill, and requested us to telephone for a Christian Science practitioner, who came and remained by her bedside all day. Part of the time mother was unconscious, and suffered greatly all day and night. The next day she was better, but on Tuesday morning the suffering returned. The practitioner was again called early in the morning, and a short time after she came she called me to help her declare the allness of Life, as there was evidence of approaching death. My mother was beyond seeing, hearing, or speaking, and surely this was a test of faith for both the practitioner and myself. But never for a moment did we cease declaring that man as God's image and likeness could not die. Even when the evidence seemed overwhelming we worked on, till finally mother could hear us, and obeyed the practitioner when told to declare the truth for herself. We then knew the worst was over and that she would live. About an hour after I was first called into the room, mother was able to eat an orange, and that night a faithful nurse came to our aid. She was with us two weeks, and was a great help with her clear strengthening Truth and words of truth. It was two months before mother could go out again, but she is now in the full consciousness of health and strength, being very active for a person of advanced age.

Is it any wonder I feel sure that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). Nor am I unmindful of how wonderfully I was sustained during the ordeal, how all mental suggestion of fear was overcome by the understanding that God is man's Life.

I trust that this tribute of gratitude to God for Christian Science may be a help to some of the dear ones toiling along life's way, and that it may enable them to see what a practical religion Christian Science is.

MRS. ROBERT B. HOTCHKIN, Berkeley, Cal.

To the above testimony of my daughter I wish to add that during the two months before I was strong enough to go down-stairs I did little else than read the Bible, Science and Health, and our other Science literature. During this time a great deal of error was uncovered and cast out by Truth, so that when I was restored to normal health I was a much more spiritually-minded woman than before I had

Digitized by Google

gone through this deep experience. I realized as never before the unreality of all asserted material health laws and the ever-presence of God, good. I also realized the calm trust that is born of overcoming error with Truth. I know that there is no end to this growing understanding of what Life is, and I can find no words to express what it all means to me save the one word, eternity. For seven years I have been studying Science and Health, and trying to live up to its teachings, and I am gladder and gladder with the dawn of each day. My desire is to help others even as I have been helped through the purification of thought.

MRS. JANE E. WRIGHT, Berkeley, Cal.

It gives me great pleasure to write what Christian Science has done for me. In the spring of 1910 I was suffering from a fever when a Christian Scientist offered to help me. At that time I was not eating anything, but she treated me and gave me some helpful Christian Science books to read. She also told me that I should eat in the usual way. I started right in to enjoy my meals. I am thankful to say that I never felt better than I do now. It always did me so much good when I talked with the kind neighbor who helped me, for she had such wonderful faith in God. I wish all the Christian Science workers success in their grand work and trust that many others may be helped as I was.—MARY NEWLANDS, Philadelphia, Pa.

Over three years ago, when supposedly incurable sickness and consequent distress were the most prominent factors of our daily life, Christian Science was brought to our notice by a caller. We were interested and some of the literature was given us. In a few days we called on a practitioner and began treatment. In ten days my husband was back at his work after an illness of nearly three months, and was entirely healed in six or eight weeks.

On my husband's return from his first visit to the Christian Science practitioner I inquired what had been done. He replied that the practitioner spoke of man's dominion; said that God had given man dominion over all things, and not all things dominion over man. This seemed so very rational and sensible that I wondered it had not occurred to the world before. What an upsetting it would cause, for one could see that it was right and that everything would have to meet the test of this truth sometime.

I began to apply it to myself. Food had apparently been having dominion over me for some time, causing me trouble whether I ate little or much, even though I observed the strictest dietary rules; but in the face of this new teaching that tyranny was at an end, and the stomach trouble departed from my consciousness at once. I also saw that many other things were no more real than the "bogey-man" of our childhood years.

I came of a family with a history of tubercular disease, and I labored under a great fear of this disease appearing in me sometime, so I was a devotee of all the known hygienic rules for health. I made it my business to know and apply them thoroughly to our manner of living, dressing, etc., and made almost every one around me uncomfortable by these observances, but I never told any one of my underlying fear. I knew no other way of protecting myself, and often wished that I was back in my childhood when I knew nothing of hygiene. Christian Science at once relieved me of this nightmare, and with it a host of other ills fled. All this came to me in the first few hours after I heard of man's dominion over all things. This gave me hope that in time I could come out of the dominion of money, for it seemingly caused many troubles in my life, as we at present see its effect in our national troubles. Its sway, too, has been broken for me, but not at once, like the others.

Two months after our introduction to Christian Science my husband realized that his occupation was not consistent with this teaching, so he left his work, knowing that he would find something else. We went right on as we had intended before he left his employment and assumed obligations in connection with the payment of a home. These obligations had to be met regularly, yet neither of us was worried, as we realized that our supply comes from God always. In the old way of thinking this state of affairs would have given us anxiety, even when we had a regular income. This was a few months previous to the depression of 1907, and regular employment was not had; yet with our awakened thought and trust in the presence of God, good, opportunities came to us whereby we could make enough to meet all our needs, sometimes just the day before some of our payments had to be made, showing us that we had only to "take the manna of today." Ten months later employment of a regular nature was had and advancement has also come twice in this.

The demonstrations over fatigue have been easy since one evening when, lying on the couch after a day of great physical labor, I seemed too weary even for speech. When I was asked, "What is this truth they are always talking about at the Wednesday evening meetings?" I began to try to tell of it, but I had half a mind to ask the questioner to wait until next day as it was such an effort for me to speak; but I began explaining, and after I had finished, in about twenty minutes, when I thought of myself again I found I was entirely refreshed.

The demonstrations of Truth's power have been numerous, by our own slight understanding, and again with the aid of a practitioner. The slower ones have yielded when we have been willing to do our part in digging out the weeds and have stopped coddling some of our faults. The wider, grander view, the all-around improvement, the uncovering of faults of character and disposition of which one was unaware, the spiritual uplift, the joy and peace and happiness one gets by the study of our text-book, is very noticeable in all lines.

Christian Science was a great "find" to us, as we were steeped in medical theories, as the result of several years of work in connection with various kinds of hospitals. Three years before we found this truth we came West with the firm intention of changing our environment completely by keeping away from work in connection with hospitals of any kind, and so maybe in time to shake off the depressing view-point we had acquired by that work. We have at last succeeded, but found that the journey must be mental, not physical, and we intend to show by our lives how thankful we really are for this great truth that makes free.

MRS. T. R. WILBER, Seattle, Wash.

I am writing this to acknowledge the healing of my little girl's eyes through Christian Science. She had suffered a long time, had been treated by doctors at home also at three different hospitals, and the doctors feared the loss of her sight. We then called on a Christian Science practitioner, who said the child could be healed. She took the case and in a short time the child was well, and has testified to her healing in the Philadelphia and Atlantic City churches. I know little of Christian Science, but it healed my daughter, and I am thankful to God for it.

MRS. SCHILLING, Philadelphia, Pa.

It is with gratitude that I write to tell of the blessings I have received since I have known of Christian Science. It is over four years since my little daughter was cured of rheumatic trouble, and she is now ten years old. No matter what form of error manifests itself, we always have our remedy at hand, the truth which is taught in the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy. When I first heard of Christian Science I did not take to it very kindly, in fact I thought it absurd; but when

Digitized by Google

my little girl was healed, almost instantaneously, my views were entirely changed. At the time I turned to Christian Science my little daughter could not walk, and her condition was believed to be hereditary. Previous to the time when I gained some understanding of the truth I dreaded the cold weather, always fearing the terrible pain to mortal sense which came on during the winter months. When, however, we know the truth we have nothing to fear, for "perfect love casteth out fear."

Christian Science not only helps us physically but mentally. I was very unhappy, and it did seem as though life was nothing but a disappointment. I am therefore so glad to know that we are all God's children, and the truth sets us free from mental darkness as well as from disease. I must tell of one more blessing. Some time ago my little daughter was exposed to a contagious disease, and a few days afterward the same symptoms appeared,—a high temperature, a very bad throat, etc. The healing was rapid; in fact, after two absent treatments and with the application of what knowledge of Truth there was in our own household, the illness was overcome. I am indeed grateful to God, also to Mrs. Eddy for showing us the way to apply this glorious Science.—MRS. S. ALICE MILLER, Buffalo, N. Y.

It is with a deep feeling of gratitude and a hope that this testimony may help other mothers that I now write. My baby girl, who was delicate from birth, was wonderfully healed in Christian Science. From the first her stomach seemed to be very weak. We tried all of the artificial foods and everything we could hear of upon which young babies were fed. She was constantly under a physician's care until we had tried seven, but none of them gave us hope that she would ever be better. At the time I heard of Christian Science she was greatly wasted in flesh and too weak to move. A kind neighbor loaned me a copy of "Science and Health with Key to the Scriptures," and then in despair, after all else had failed, we turned to Christian Science for help.

After the first treatment the bowel disorder ceased, and she continued to improve and take her food with no disagreeable effects whatever. She has never been troubled with her stomach or bowels since then and is now a strong, healthy child. For this and many other blessings I am truly grateful.—MRS. S. J. OSTEN, Chicago, Ill.

I gratefully acknowledge the benefit I have received from Christian Science. I was quite lame, but after being treated by a Christian Science practitioner for one month I was able to walk as well as ever. I feel sure that any one who has faith in God and receives this treatment will be benefited as I was.—ELIZABETH WILDMAN, Philadelphia, Pa.

After suffering many years from a bowel disorder I was healed by Christian Science in one treatment. My husband was troubled with hay-fever for twenty years, and he was also healed in one treatment by the same practitioner. We cannot state with too much appreciation our gratefulness to Christian Science for these demonstrations of divine Love.—MRS. HARRY HOBY, Chicago, Ill.

My window lets the sun's bright ray
Flood all my room with light;
No specter grim, nor shadow gray,
Lurks there, for all is bright.

My thought's a window,—just how clean
My daily actions show.
God's light through it should e'er be seen
In wisdom's gleam and Love's warm glow.

A. GERTRUDE HULLEY.

FROM OUR EXCHANGES.

[*Christian Work and Evangelist.*]

It is most significant that all the New Testament writers, but especially Paul, immediately seize upon the immortality which Christ has promised by his words and resurrection and make it a present earthly power and sweet possession. Already they have been saved from death unto life. Already they have been made alive forever. Already the touch of heaven is upon them. Already they are sons of God. Already they have risen from the sinful life to the world of new creatures. Already have they been buried with Christ and risen with him from the dead. Consequently they begin the practice of the immortal life at once in Jerusalem and Galilee. They begin to live on earth as they expect to live in heaven. The resurrection becomes a prime factor in all their writing and speaking and living. As immortal souls they address men who have potentiality of immediate immortality. The power of an endless life is immediately upon them. Their citizenship is already in heaven. Death has already been met and conquered, and hath no more dominion over them. They have become sons of God in Christ Jesus. All over their dim earth there shines heavenly light. They hear the angels sing above the din of toil and strife. The confines of heaven touch earth all about them. They live now as those who are immortal.

And this is just the lesson Paul is always trying to teach us: that immortality is not simply a promise of another transcendent world to come after death, but is a present fact to be realized and practised by the Christian. A Christian, he teaches, will begin to live here and now the life he expects to live in heaven. The promise of immortality awakens this desire in him because it reveals his true nature, and the impartation of God's new life through Christ gives him power to live it. The message of Easter, then, is not only does heaven await us, but since we are made for heaven we should begin the heavenly life here and at once.

How, then, will an immortal soul live, one who is a citizen of heaven? One of the things which he most confidently expects to achieve in heaven is oneness with God, at least perfect harmony with His will, as well as cooperation with all His plans and purposes. Real life lies in the mind of God. There can be no satisfaction until the soul finds rest in Him and the will is conformed to His. Jesus taught this, and all our own experience has taught us to look forward to oneness with the eternal goodness, the dear Father, the kind shepherd of all our ways. But if that is the end of life, now that God has already sealed man with his adoption, he will try to realize that oneness here, just as Jesus realized it on the earth, because he was immortal. He will try to bring all his life and thought and deeds and human relationship into perfect oneness with God's will today. He will seek by prayer and service to apprehend God's presence now as vividly as possible. He will cast his whole present and future by a supreme act of faith into the keeping of God. He will seek such sweet companionship with Him as St. Francis knew, so that God becomes now the great companion, the unfailing friend.

[Rev. F. C. Aldinger in *Universalist Leader.*]

There is something in every normal man that is aspiring for the unattainable. A higher voice is ever calling to his soul and refuses to give him respite until it is obeyed. Man is endowed with a spirit that is never satisfied with things as they are but is always reconstructing society and building new worlds. It constructs out of the dull gray pigments of life the splendid visions of the soul that inspire man with a divine discontent, and with a determined will to translate those visions into reality. Man could live the stagnant satisfied life of the swine if there were nothing in his nature to spur him out of his inertia and animalism. He is sus-

Digitized by Google

ceptible of moral convictions that will not let him doze in ease and idleness; principle that, like Banquo's ghost, will not down. Conscience goads him to activity and to moral struggle, love persuades him to sacrifice and service. It is ever calling him from the lower to the higher; from the selfish to the unselfish.

Every man has his vision moments when life appears a splendid and beautiful reality and he is thrilled with its possibilities and with the joy of living. In such high moments life loses its mean, sordid aspect and rises up in response to the divine call. To some these visions have been more vivid and overmastering than to others.

[*Christian Register.*]

Social service is a new creed that demands a different interpretation than justification by faith or total depravity. The unfortunate, the overworked and underpaid, the incompetent and handicapped, are all lying at our door, as Lazarus lay at the threshold of Dives. We long for those who will strengthen our hands, who will teach us the practical lessons of earthly salvation. Therefore the brother of whatever name or creed is dear to us. We look into his eyes for love and sympathy, we feel his heart beating for humanity, and we do not question his beliefs. Religious asperities melt away when we begin to work together, and all the ice that has gathered through misunderstanding or ignorance melts and disappears.

Perhaps this vision of spiritual unity among those of differing faith and creed may seem to some a phantom of the air; but if the churches would save themselves alive, would put forth on their dry trunks new green branches and fresh blossoms, it must come to pass.

[Claude G. Montefiore in *Christian Commonwealth.*]

The point for us to notice is that the guarantee of the goodness of man lies in the existence of a goodness that is beyond man. We only learn to believe in the divine goodness by the experience of human goodness in others, and by the attempted manifestation of goodness in ourselves. Yet, though we come to the divine from the human, and can only know of God through man, the divine love is prior to, and the guarantee of, human love; divine righteousness is the source and the pledge of human righteousness.

[*Churchman.*]

The question why people do not go to church is often recurrent, and as often inadequately answered. Possibly it would be more effectively handled if it were put in the more irritating form, "Why should people go to church?" If this change were adopted there would be much searching [illegible] to justify the various organized religions offered today, and the watered-down expedients that seek to replace of hearts to [illegible] a more robust and more convinced form of Christianity.

[*British Congregationalist.*]

The Lord is nearer his church than ever. He shows it even by the way he is turning it upside down. Our disquiet is his fire in our bones. If it is true that we need a ministry of comfort, it is equally true that we need a spirit that makes us uneasy in our comfort, that makes much of our comfort intolerable. The conscience of the church is being roused as it has not been since the Reformation.

[*Watchman.*]

The attitude of Christ toward sinners was based upon his possession of power to help men. He came clothed with the grace of the Spirit of God, which expressed itself in loving interest, in renewal of hope in human hearts, in kindling a new purpose, and altogether in giving men assurance that they could be saved and were already on the ground of salvation.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Retrieval Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

For some time the postage required for subscriptions outside of United States territory has exceeded the amount added to the regular subscription price for this purpose, and an increase in rates sufficient to cover this deficiency is now deemed necessary.

Beginning April 1, 1912, therefore, the rates on all subscriptions outside of United States territory will be as follows: For Canada, *Journal* $2.25, *Sentinel* $2.45; for all other countries, except those to which the domestic rate applies, *Journal* $2.65, *Sentinel* $2.95.

Renewals for all subscriptions terminating before April 1, 1913, and received by us prior to July 1, 1912, will however be accepted at the old rates.

The pamphlet "Causation" by Frederick Dixon has been translated into Swedish—"Kausal-lagen"—and is now on sale; 40 pages and cover at the prices of the regular pamphlets.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large sized book), single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $3.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.20. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.40.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the current month unless otherwise specified, and include all issues for the month named as expiration date on the wrapper. XII indicates the year 1912; XIII, 1913. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $1.00; half calf or half morocco, $1.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25 – 50: 5 s.;	20.;	Mk. 5.30;	F. 6.45
2.25 – 0: 9 ;	3 ;	9.50;	11.60
2.50 – 0: 10 ;	3 ;	10.60;	12.85
4.00 – 0: 16 ;	5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

The Terminal Railroad Association of St. Louis and fourteen railroads entering that city and owning the Terminal Company, were last week held by the supreme court of the United States to be a combination operated in violation of the Sherman antitrust law to control transportation across the Mississippi river at St. Louis. Justice Lurton announced the decision. Topographical conditions at St. Louis, he said, made it impracticable for any railroad to reach St. Louis without using the Terminal Company across the Mississippi. The combination of the three crossings owned by the Terminal Company gave control over competition. In addition the Terminal Company had power to exclude all railroads from the city. The justice said the court had based its decision on these facts and that the combination must be struck down unless it acted as the "impartial agent" of all. The company was given a fixed time in which to reorganize in accordance with express conditions set forth by the court. The first condition was that future railroads be admitted to equal control of the Terminal Company.

Directors of the United States Steel Corporation, through stock ownership and places on the directorates of the great railway systems of the United States, have a controlling voice in nearly fifty-five per cent of the railroads of the country, according to a statistical study prepared for the Stanley steel trust investigating committee of the House. The aggregated value of the railroads is fixed at approximately eighteen billion dollars and of that the Steel Corporation affiliations are said to control more than ten billion dollars. The twenty-three directors of the Steel Corporation also sit on boards of directors of banks, insurance companies, express companies, and various other industrial corporations with an aggregate capitalization of $7,388,099,416. Figures collected for the committee's record by one of the special investigators show that Steel Corporation officers and directors sit as officers or directors in banks, trust and insurance companies having aggregate capital, surplus, deposits, and undivided profits of $3,314,811,178.

The department of agriculture is facing prospects of another investigation by a committee of the House. Representative Nelson has introduced a resolution in the House, calling for an inquiry into the United States meat inspection service. He charges that the meat inspection laws are being openly and notoriously violated by the packers and that the solicitor of the department and the chief of the bureau of animal industry are cognizant of these violations and are doing nothing to stop them. He says the federal guarantee of the purity of meat products is worthless.

Under the present scheme of classifying government coal land 56,083,214 acres of withdrawn land had been, on Aug. 1, examined in geologic detail and classified by the United States geological survey. The lands found to contain workable coal beds aggregated 16,873,370 acres. These lands, in forty-acre tracts, have been appraised at a total valuation of $711,932,537. At the minimum prices which were in effect before the government withdrawals of coal lands, the 16,873,370 acres referred to would have been priced at only $266,652,431.

Investigations of possible sites for developing water-power on the public domain are being pushed by the United States geological survey, with resulting withdrawals of land from entry where it is found that valuable sites exist. In July 31,725 acres of such land were withdrawn, including a great number of power sites. No estimate has been made of the horse-power involved, but owing to the character of the power sites withdrawn it is believed to be very large.

Hope of dissolving the one hundred and forty-million-dollar International Harvester Company without a fight in the courts has been practically abandoned. A suit against the corporation under the Sherman antitrust law will be filed at Minneapolis. There remains a bare possibility, however, that an agreement may be reached, and that the government and the corporation will bridge the difficulties as to a plan of disintegration.

Samuel Untermyer of New York and Edward H. Farrar of Chicago, former president of the American Bar Association, have been employed by the House committee on banking and currency to conduct the investigation of the so-called money trust. They will direct an inquiry into the private affairs of the leading financial institutions of the country before the committee begins any cross-examination of witnesses at public hearings.

Governor Foss of Massachusetts has signed the bill authorizing the use of short and simplified forms of deeds, mortgages, and other conveyances. The act will revolutionize the system of conveyancing that has been in effect in Massachusetts since 1640. In the new forms the customary covenants are omitted and are simply referred to, the covenants themselves being set out at length in the statute which has just been enacted.

International.

The government of Sao Paulo, Brazil, has entered into a preliminary agreement with a Tokio syndicate, represented by Ikularo Toyagi, for the colonization of the entire tract lying between the Ribeira river and Pariguera, Assu, and Cananea. The state will give the syndicate 123,550 acres. The government will also build a road to the nearest railroad station and to the port of Iguape. It is understood that the state will grant a bonus of about fifty-five hundred dollars for each group of fifty families settled in the colonies, and furthermore will refund passage money to all immigrants definitely established within four years, as soon as one hundred families are settled. Another important clause reads that the government of Sao Paulo state will maintain an agricultural demonstration camp and a zootechnic post in the Japanese settlement and will found schools to teach the immigrants the Portuguese language. The Tokio syndicate agrees to divide the land in lots of twenty-five hectares (about sixty-two acres), provide it with water supply and sewage system, and build roads within the settlement and between it and the state roads. The syndicate has definitely engaged itself to settle two thousand Japanese families within the next two years.

Premier Tang Shao-yi has practically agreed to the demands of the ministers of the United States, Great Britain, Germany, and France for the cancelation of the arrangement with the Belgian syndicate for a loan. On March 14 he signed a contract with the Banque Sino-Belge for an immediate advance of five million dollars, which was understood to be the first instalment of a loan of seventeen million five hundred thousand dollars to be raised at the end of the year. The Belgian bank is acting as the agent of a European syndicate in which the Eastern Bank of London, the Russo-Asiatic Bank, and certain French banks were reported to be concerned. A protest was duly filed by the syndicate of the four nations, through their embassies and legations. In reply Tang Shao-yi contended that the arrangement with the Anglo-Belgian syndicate was necessary owing to the delays incident to the payment of the instalments of the four nations' loan, and that it is not to the interest of the new republic that it should be delivered into the hands of a financial monopoly. On April 15 of the present year the "four-power" group, in answer to the premier, stopped all payments, and the Chinese government became pressed for cash to meet its obligations.

The Paris municipal council, after considering many schemes for providing cheap dwellings for workmen, have finally decided to apply to the government for the necessary authority to enable the municipality to raise a loan of two hundred millions of francs for the purpose of constructing suitable workmen's dwellings or for acquiring by purchase the dwellings already constructed which are suitable for that purpose. The loan is to be repayable in seventy-five years by an annual sinking fund. The rents are to be fixed at as low a rate as possible and the workmen are to have the dwellings at cost price. A special feature of the scheme is that preference is to be given to large families which are at present excluded from practically all the best workmen's dwellings. Restriction is made that no family will be accepted as tenant which has not actually resided in Paris for at least five years.

Satisfactory proof of the prosperity which South Australia has enjoyed during the past few years is afforded by the large number of workmen who have been enabled to secure homes of their own. An act was passed in 1910 to enable workers to erect, enlarge, or purchase homes for themselves and families. Under the act the trustees of the State bank are empowered to make advances up to four fifths of the value of the property to persons in receipt of not more than three hundred pounds a year. During the last session of Parliament the act was amended to enable the amount of advance in any one year to be increased from one hundred thousand to three hundred thousand pounds, and there is every likelihood of the trustees advancing the full amount now at their disposal during this financial year, which closes on June 30.

Industrial and Commercial.

Dredging the completion of the Everglades drainage project of Florida, the gulf-to-the-Atlantic canal was officially opened last week. The canal is one of the system of five great channels begun two years ago, which will reclaim four million acres of very fertile soil. This vast territory is being drained at the expense of the state and at a cost of approximately one dollar per acre. The Everglades have an elevation of twenty-five feet as a maximum and about eighteen feet average above sea level, which gives ample fall for successful drainage.

Copper mines of the United States have produced more than fifteen billion two hundred and fifty million pounds of copper, and of this total twelve mining districts have produced in excess of one hundred million pounds each, according to the United States geological survey. These twelve districts, located in eight states, have yielded 94.69 per cent of the total output of the country since 1845, when the total product of the United States was but little more than two hundred thousand pounds.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"NOT ACCORDING TO THE APPEARANCE."

SAMUEL GREENWOOD.

No matter what may be our work or our position, we each need the other's help and encouragement and good will at all times. No human being is perfect, but so far as he is striving to be, he finds the current of the erring, finite senses pushing hard against him, and our sympathy should prompt us not to add to the force of this current. The thought or word that is not helpful to another must detract from one's own success, since it is the law of divine justice that whatever we bestow upon others comes back to us in the same measure. Therefore our own welfare, if nothing more, should lead us to do good unto all men, and to think good unto them also. Commenting unfavorably upon our coworkers for the common good, passing along an unkind and perhaps untrue judgment for another to overcome or to pass on in turn, does not express the love that "thinketh no evil, . . . but rejoiceth in the truth;" that is, rejoices to know the true man. While we lend ourselves to such things, it is evident we are not thinking of man as the son of God but as the child of error, as something which man is not; and we must lift thought above these human concepts before we can discern what God's idea is.

It may appear to us that certain persons are too self-assertive or domineering; or, on the other hand, that they are shy and diffident; that they talk too much or too little; that they are not this or that which we think they ought to be, or that they do thus or so which we think they ought not, and so on. But what right have we to judge them by the outward appearance only? Are things or men what they seem? Do we believe man to be no better than he appears to human sense? Are we not rather striving to learn that the perfect God makes all things perfect, and that the imperfect and the unpleasing are the untruths of existence? If one of these people upon whom we pass judgment should apply to us for help, would we affirm or deny the unfavorable things we have been thinking and talking about him? If we would not bear false witness against our neighbor, we should not think or voice concerning him what we would be ashamed to affirm in a treatment, knowing them to be false. Had Jesus thought in this manner about the woman known as Mary Magdalene, had he shared others' opinions about her, or based his judgment upon human sense testimony, would he ever have healed and redeemed her?

If we are going to deny the physical evidence when one comes for treatment, but accept it when he does not, it is difficult to see where we are going to draw the line between what is and is not true, or whereon we can found the claim that we are Christian Scientists. We know that only as we discern in Science the truth of man's perfection as the idea of God are we enabled to heal the errors of mortals; hence we should know that the healing thought is inseparable from the thought of perfection. How, then, can we hope to send out this healing thought, so sorely needed by mankind, while we dwell upon or call attention to or accept the evidence of human frailty and imperfection? Every one upon whom our thought rests, or who claims our mental attention, is our patient to the extent of our duty to think rightly about him, just as much as if he came into our office or home and asked for help. We shall find it more than uphill work getting into the kingdom of heaven if we are going to "judge righteous judgment" only when this coincides with our own views, or when we know we cannot accomplish the result in any other way, and judge unrighteous judgment at other times.

It may be true that much of this unrighteous judging is done thoughtlessly, but then so are many of the things we deprecate in others. Not all the errors we criticize are deliberate or intentional; not all the defects and failings we deplore exist in consequence of the person's own initiative. Birth, training, environment, and many other influences and associations conspire to make the peculiarities and idiosyncrasies of mortals, and who is there that wholly escapes? The people we single out for our disapproval may be already too conscious of their drawbacks and limitations, and suffer in the thought of them much more than we do. Seeing that we are all more or less in the same plight, as things are humanly reckoned, we can surely afford to be lenient and charitable toward the weaknesses of others, if we would not be found in the position of the oft-quoted Quaker,—"All the world's queer except thee and me, and sometimes I think thee is a little queer."

No doubt many of our neighbors manifest qualities which to our sense are detrimental to themselves and to their success, but these same people may be working fully as hard and as conscientiously as are we to bring the reign of good into the human consciousness, and they need our encouragement and sympathy rather than our condemnation. It is their need, but it is more our own, that we shall see and believe only the good in them, while we keep our eye single to the glory of God. No human being is prepared to step immediately into perfection, and we cannot expect it of others more than of ourselves. Indeed, the whole progress of the race is growth out of imperfection of some sort, and it behooves us to be gentle and patient, knowing that Truth will overturn and destroy all error as fast as the opportunity presents itself.

Christian Scientists, if true to their profession, should ever be seeking to know the truth and not the error of things. They of all people should not be judging according to the appearance, since the foundation of their faith and practice is the perfection of God and His creation. "The things which are seen" (to physical sense) hold the errors that enslave mankind, but we must look to "the things which are not seen" to find the liberating truth. If we would not be of the world, we should not think after the manner of the world; that is, we must not be guided by what we hear and see in our estimate of what is true, but by the spiritual Christ-idea to which the Master bore witness and which Mrs. Eddy has taught so clearly in Christian Science. Man is the child of God, not only in some cases but in every case, not part of the time but all the time, and there is no other right way to think in connection with any one, whether that

one be ourself or another. It is each individual's privilege to be so faithful to his conviction that man is the image and likeness of God, good, that nothing could tempt him to expose a brother's or a sister's imperfections, but he will rather hide them with "a charity broad enough to cover the whole world's evil" (Miscellaneous Writings, p. 224).

"He that is not with me," said Jesus, "is against me." We are either helpers or hinderers in bringing in the kingdom of heaven. Our idle thoughts and our idle words, those which are false to God and man, are drags upon the wheels of human progress Godward; and that they may be thoughtlessly entertained or carelessly spoken does not lessen their mischief-making tendencies nor our responsibility therefor. We cannot work out our salvation regardless of our relation to others; divine Principle demands the same correctness of thought toward every one, since what is scientifically true of one is true of all. "Universal Love is the divine way in Christian Science" (Science and Health, p. 266).

BEARING FALSE WITNESS.

E. HOWARD GILKEY.

BEFORE he closed the writing of the law of God upon the tables of stone, Moses, reminded of the mutual obligation of honesty which rests alike upon all men, and of the care with which one individual should in righteousness handle the character of his fellows if led to speak of them, wrote, "Thou shalt not bear false witness against thy neighbor." It was the mental amplification of the command that had just been uttered, "Thou shalt not steal." The aged lawgiver knew that weak humanity would be tempted to traduce character, even when a sense of decency would remain sufficient to prevent the hands from "picking and stealing" the material possessions of the party assailed.

It would be less harmful, many times, if the despoiler would content himself with such worldly pelf as lay exposed to his hand, rather than that he should by bearing false witness put upon his victim a burden unsuspected but grievous in its effects. One phrase in the writings of the great Shakespeare quaintly and forcefully emphasizes the enormity of the crime of false witness; it occurs in Iago's answer to Othello:—

> Good name in man and woman, dear my lord,
> Is the immediate jewel of their souls:
> Who steals my purse steals trash: . . .
> But he that filches from me my good name
> Robs me of that which not enriches him
> And makes me poor indeed.

The heedlessness, if not the malice, which occasionally characterizes the mention of Christian Science in the public press, and which would if undisputed rob Christian Scientists of the fair fame to which they as an organization are entitled, is illustrated in a newspaper report which was given wide circulation in Ohio recently. Under the heading, "Gives Churches Hard Rap," the article proceeds: "Branding the churches of faiths other than Christian Science as 'places where people wearing the same kind of clothes gather for social purposes' and institutions that offer 'nothing tangible in the way of comfort to those who mourn their dead,' a clergyman of this city severely arraigned all non-Christian Science churches as social centers.'"

The appearance of this wholly unexpected contribution to the news of the day, containing as it did statements which were entirely at variance with the teachings of Christian Science, caused an immediate investigation at Columbus, which brought to light information showing that the article complained of was without even one fact to stand upon. The gentleman mentioned had made an address at the laying of the corner-stone of a new Spiritualist church in the western part of the city of Columbus, being one of several speakers on that occasion. He took for his subject the question of the need of more churches, taking the ground that unless a new church had something to give the religiously inclined which they could not get in churches already existing, there would be small excuse for the erection of new buildings when so many already built were not filled at their services nor well supported. His only reference to the Christian Science church was to illustrate his point, speaking of it as a church which had justified its existence by offering to the religiously inclined a teaching that no other Christian organization attempted to give them. For this reason its services were well attended and generously supported. He suggested that, similarly, the organization which was laying the corner-stone of its church that day might hope to find its services well attended and its building justified if in its teaching it held out to men some hope of the future life which was neglected by other organizations. If the church should ever become merely a social center, or its existence merely a matter of difference in church polity, it would fail as other churches had failed and from lack of vitality in its religious life.

The speaker has no connection with Christian Science, although his words indicate some appreciation of the work it is doing in the religious world. His church affiliations are unknown to the writer, but he is not a Scientist; he is a well-known figure in the capital city of Ohio, where he is esteemed as a free thinker in religious matters. To distort his address as was done, and to characterize him as a speaker of the Christian Science church, condemning other churches in the name of the Christian Science church, when he was appearing as an assistant at the laying of the corner-stone of a church of quite another denomination, by invitation of that denomination and without the knowledge of the church to which he was accredited by the reporter, is a most unusual abuse of the reportorial privilege, and an uncalled-for misrepresentation of the fair name of Christian Science and its real teaching toward the membership of other Christian churches. It is claimed by the gentleman who made the address at the laying of the corner-stone, that to the best of his knowledge no reporter was present at the time, but that a young man afterward appeared and solicited information as to the purport of his remarks from members of the audience. This hearsay information was then sent out to the world as an attack of Christian Science on all churches except that of the supposedly Christian Science speaker.

How different this is from the real teaching of the revered Discoverer and Founder of Christian Science in this age, and how such baseless rumors traduce the fair name of the stately truth as it was given to the world by Mrs. Eddy! Writing to her students as far back as 1898, she said: "Love all Christian churches for the gospel's sake; and be exceedingly glad that the churches are united in purpose, if not in method, to close the war between flesh and Spirit, and to fight the good fight till God's will be witnessed and done on earth as in heaven" (Message to The Mother Church, 1898, p. 13). Could one make a clearer statement of Christian good will and fellowship in Truth than this? And no Christian Scientist anywhere in the world today entertains any other sentiments than those which our dear Leader voiced as she directed her flock toward divine Love and light.

AN IMPRESSION FROM TRUTH.

ANNA R. HIGLEY.

THE earnest student of Christian Science is apt to find many helpful lessons in the ordinary business life, and among those which have come to me is the following: Quite recently I had a long, difficult piece of stenographic work given me to do, with the understanding that it must be finished at a certain time, though the hour set seemed altogether too soon to hope for its being completed. The day was very warm and uncomfortable and the office close and hot, the thermometers in offices adjacent to mine standing at one hundred and twelve degrees. Although the work was

Digitized by Google

begun and most diligently kept up, it seemed quite evident that I would not be able to finish it in the given time.

About the same time came the thought of the heat, which seemed almost unbearable, and getting up from the desk I walked around the office, thinking that I could not stand it and expressing like thoughts of discomfort. Suddenly the realization came that I could do whatever I had to do, and that, too, without fatigue; that there is no limit to one's ability as God's child, and that I was conscious of it. Peacefully I returned to the desk and finished the copy upon which I was working, but as I took paper and prepared to begin another, a mental impression so vivid as to seem like a word of command bade me count the copies. Twice it was repeated, and going to the pile of completed work, I counted them and discovered that there were just thirty copies—the complete number I had undertaken to do. Glancing at my watch, I found that I still had half an hour before the time stated for the work to be finished, and later, when it was called for and delivered, there were no mistakes to be corrected.

In Science and Health (p. 213) Mrs. Eddy says, "Before human knowledge dipped to its depths into a false sense of things,—into belief in material origins which discard the one Mind and true source of being,—it is possible that the impressions from Truth were as distinct as sound, and that they came as sound to the primitive prophets. If the medium of hearing is wholly spiritual, it is normal and indestructible." There can be no question that the impressions from Truth—the "still small voice"—are ever with us for our guidance and protection. This is proven many times by each one of us in our daily walk and work, if we are watchfully obedient.

OBEDIENCE.

RUTH INGRAHAM.

THE thought is often expressed among parents and teachers that children at the high-school age are more difficult to manage than at any other period. Those who have not been well disciplined up to this time often follow wild or extravagant impulses which lead to distressing consequences, while even those who have hitherto been amenable, frequently become restive under authority, yielding themselves temporarily to some undesirable influence. There is an explanation for this. Mortal mind would lay a great burden upon young people of this age. During the years immediately preceding maturity they are blindly conscious of developments and desires wholly new to them, and unless the right kind of self-control has been taught from early childhood, they are thrown off their mental balance by the strangeness of the experience.

We have all been through what is called "the awkward age" of rapid physical growth. This is explained by physicists as due to the fact that the center of gravity is changing daily, so that the child must constantly "find himself" anew. Repeated tumbles result, calling forth less sympathy than criticism, since mortal mind is notoriously short of patience with its own manifestations. In the same way it might be said that the center of mental equilibrium is constantly changing, in those approaching maturity. The false laws of mortal mind, delegating supposed powers, privileges, pleasures, and penalties, all press fast and with seeming authority upon the boy or girl.

Much indeed is required of both parent and teacher at this time. A wise, steadfast, and patient discernment of the real, on the part of Christian Scientists, and a quiet insistence upon its recognition by the one who is going through the ordeal, is most necessary. To say "young people must have their day," and to disown responsibility, is to take a most unscientific attitude. The need of young people to be understood and helped to understand themselves is so great that it makes a piteous appeal to the truly loving heart.

It is just here that a serious mistake is often made, that of doing too much of their mental work for them. To point out the exceeding necessity of their applying the truth for themselves is vital. It is a cruelly mistaken kindness, surely, to have carried the children's problems for them to this point, instead of preparing them to meet these very conditions earlier in life; while to continue so doing through this tempestuous period is to defer their entrance into the kingdom indefinitely. "Mama," says a young girl on her way from one pleasure to another, "I have a headache; will you treat me?" And away she goes, unwilling to take the time to meet this disagreeable interruption of her gaiety for herself. "George always asks me to help him if there's anything the matter," says a doting mother. "I've done it ever since he was a little fellow, and he wouldn't think of having any other treatment." George makes his request and goes off to school serenely unconcerned—mother is working for him. Untaught to work out these lesser trials, untaught to distinguish between the Love which meets our every need and the foolish human misrepresentations of it, what can keep these ignorant children from coming to grief at the time when mortal mind would thrust the whole of its unlawful code upon them, and demand that, as adult beings, they recognize and fulfil its behests?

The story of Eli and his sons, found in I Samuel, is instructive. While his sons suffered for their evil-doing, their father was not exempt from his share of stern reprimand and punishment for not enforcing obedience. The fact that he had soothed his own conscience by feeble remonstrance in no wise exonerated him. With burning words the prophet Jeremiah denounces the equivocal, inefficient handling of a problem: "They have healed also the hurt of the daughter of my people slightly, saying, Peace, peace; when there is no peace."

Turning to our text-book, we find strong statements which, if properly heeded, would practically eliminate the problems peculiar to the adolescent period. Our revered Leader says: "The entire education of children should be such as to form habits of obedience to the moral and spiritual law, with which the child can meet and master the belief in so-called physical ills." "Children should obey their parents; insubordination is an evil, blighting the buddings of self-government. Parents should teach their children at the earliest possible period the truths of health and holiness" (Science and Health, pp. 62, 236).

MY MONITOR BOARD.

KATE D. GRANT POHL.

SOME time ago I asked my husband to make me a soft-wood board about twenty-six inches long and six inches wide and to put hooks and wire on it so that it could be hung on the wall. Naturally he asked what it was for, so I explained that I wanted something on which to tack newspaper clippings, memoranda, messages from friends, poems, or any good ideas that I happened to find in reading or studying. A day or so afterward he brought me a pretty green-stained board which now hangs by my desk, and it has proven a comfort and real pleasure.

Have not others often found something so good in the morning paper that it was laid by with the intention of reading it again, only days afterward to find the paper and realize that there was not time to reread what had been so much enjoyed? When I find such a thing now it can be clipped out and with a little glass thumb tack placed on my *Monitor* board, where not only I may read it at a glance, but bring it to the attention of my whole family.

At the top of my own board is a New Year greeting from a friend, and just beneath is a much loved bit of advice from a teacher who thus counseled his pupils, "Take the sting out of everything that you do." This I wrote on a little card with a purple thistle and added, "It is not so

Digitized by Google

much what you do as the way you do it." The next card is a New Year greeting from the Hon. E. H. Gillette, a former congressman from Iowa and a brother of the well-known actor; one sentence is especially fine: "Churches were full of sectarianism, superstition, and close communion, with frequent shots at each other. Now they are uniting and wondering what they had quarreled about." Then comes a newspaper clipping in which Henry Van Dyke asks whether we are willing to stoop down and consider the needs and desires of little children; to stop asking how much our friends love us, but rather ask how much we love them.

As occasion arises I can change these as I like, and the memorandum which comes last must be altered to meet the day's requirements; so my *Monitor* board is like a board of directors, pointing out the better way and quietly instructing me in the midst of my busy day so to fill each passing hour that in memory it may remain ever dear.

UNTO CÆSAR.

MARIETTA HOOVER DUNN.

MANY persons who do not understand Christian Science are bitter in their denunciation of a price set on Christian Science healing. "Jesus Christ," they say, "sent his disciples out with the injunction to carry neither purse nor scrip; and if the healing is a divine force, what right has a practitioner to charge for the administration of a power free to all?"

There never seems to come to any of these people the remembrance that Jesus most explicitly stipulated that men should render unto Cæsar "the things that are Cæsar's." Now, as then, Cæsar stands for government and the social law and order. Jesus, throughout his life, showed sympathy with the human needs and social conventions of the people. His earliest recorded miracle was that of turning water into wine at the wedding feast; his last was his healing of the servant of the high priest. The servant was doing only his duty, according to the law, as interpreted by his superiors, in arresting Jesus.

If the Saviour were on earth today, would he any the less adjure men to render unto Cæsar his due? in other words, to be anything short of good citizens and helpful, uplifting parts of the body politic? Civilization today demands self-supporting citizens and condemns parasites. Under the present law of order, convention, and good government, the traveling doctor and the itinerant preacher are no longer regarded with favor. The world throws the rolling-stone proverb at the vagrant and turns its back on his hurt. The Christian minister is paid for efforts supposed to be purely spiritual, and no one demurs. The poorest devout church-member does not cavil at his quota toward the support of his minister. He would not wish the dignity of the man or the honor of his position abased by making him a dependent on the impulsive and uncertain bounty of his people. The minister must live and must have leisure to devote to the duties of his charge. He has no time in which to go out to earn money otherwise for his support; therefore the means of living must be provided for him by the people he serves. Cæsar demands of the minister the same deference to the social conventions and laws of order that is demanded of the lay member. Even the railroads have ceased to interfere with the exactions of Cæsar's dues in regard to ministers of the gospel. The poor parishioner likewise pays his doctor's bills, and never questions the justice of them, especially if the physician has saved the life, as he believes, of some member of his family.

Why should a Christian Science practitioner who has raised a man out of the mesmeric belief in both sickness and sin, through the understanding of God's power, deserve to be abased to a mendicant's place? Many persons who seek help in Christian Science are not themselves Scientists, and have not yet learned the gratitude which comes with a fuller sense of God and His goodness. The patient has come only for the healing; perhaps he is one who thinks the healing should be free, and for this very reason he might be the last to offer a gratuitous sum to enable the practitioner to meet Cæsar's exactions. God's grace and healing are undoubtedly free to all, but unfortunately most of us are so girt about by false beliefs and fears that the thing we seek eludes our grasp, and we need the help of some one with a clearer understanding of God's love to light the way to the priceless boon.

If we were blind, and were told of a wonderful fountain which would restore our sight, surely we would lose no time in seeking it. But suppose this fountain was down a devious, winding way and that we could reach it only through the faithful service of guides, who gave their service as a labor of love, and that we came again and again only to find them elsewhere laboring for the price of their shelter and food: would we not willingly pay them for their services to enable them to be ever at hand? Would we not take pleasure in showing our gratitude through the payment of fees which would assure their guidance to others? Christian Science is like this healing fountain, free to all, but hidden through the blindness of centuries of false thinking. The practitioners are the guides, and to give effective service they must have settled abiding-places, accessible to those in need. They should be able to abide in dignity with their time at their disposal; and to do this, the law of the land—our modern Cæsar—exacts money. Jesus declared that "the laborer is worthy of his hire," and whatever a man's honorable vocation in life, it cannot result in good for himself without resulting in good also for his fellow man, and he may in justice demand a reasonable recompense.

A Christian Science practitioner could never be paid in money for the knowledge of the healing truth. It is not for the spiritual work done that a price is set. The fee means only that the service given to the world through him is too sacred to allow the channel through which this good work flows to be reduced to any position of need or limitation or dependence. His fee is necessary to sustain his good citizenship and his deference to the social requirements and refinements of civilization, but the true reward for his work is spiritual growth and increased capacity for his Father's business.

[Written for the *Sentinel*]

TIME'S TYRANNY.

HARRY J. DUNHAM.

IMPELLED by youth's impatience
And dreams of joys to be,
I urged old Time to hasten,—
But never hastened he.

By palsied age o'ertaken,
Infirmities to flee,
I begged old Time to slacken,—
Yet not a whit paused he.

Old Time, thou art a tyrant,
To happiness a blight,
That neither plea could touch thee,
Or swerve thy destined flight!

And yet thy measured falsehood
I know must conquered be,
As dawns the heavenly vision
Of Life apart from thee.

So no more I'll implore thee
Thy flight to haste or stay,
Since being is immortal,
And Life is mine alway.

SELECTED ARTICLES.

[Frederick Dixon in *Cambridge Chronicle*, Cambridge, England.]

The criticism of a lecture on Christian Science, contained in your issue of the 15th inst. [Dec., 1911], is surely one of the most amazing pieces of reasoning that any one has ever read. The critic declares that humanity is asking for bread, and Christian Science gives it a stone. Now the first part of the sentence, if it means anything, means that the teaching which was in the world before Christian Science has itself been a stone, otherwise people would not be asking for bread; and the second half omits the obvious fact that whatever Christian Science may seem to the critic, it is the "peace of God which passeth all understanding" to the innumerable thousands of men and women whom it has rescued from the grave, lifted out of sin, and given joy for ashes. Again, is it not a little invidious to make comparisons between Christian Scientists and the good Samaritan? The suggestion, as a matter of fact, is by no means a happy one. The Samaritan was the heretic of his time, just as the Christian Scientist is constantly assumed to be today. The orthodox Jews walked past on the other side. What the orthodox do in our own time, I will not pretend to say; what the Christian Scientist does, the world is always being told. He is to be found, day and night, by the bedside of the sick, striving to save humanity from the bonds of evil which he is all the time accused of ignoring.

Then again, the writer explains that "the faith of Christian Scientists is worth while objecting to, because they believe that truth is of value, whatever it may happen to offer or take away, and because if disease, anguish, and sin are unreal from God's point of view, they are real enough from the suffering mortal's point of view." The first part of this remarkable sentence is, to me, frankly incomprehensible. Most people have imagined that Christianity was the pursuit of the truth which is to make the world free. Not so, apparently, our critic; while the second part makes it perfectly clear that she has omitted to read the text-book of Christian Science, or to begin to grasp what the lecturer said. On page 460 of Science and Health, Mrs. Eddy writes, "Sickness is neither imaginary nor unreal—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being." This seems to be a bit unfortunate for the critic.

Finally, the lady takes exception to the lecturer's explanation of the Christian Science teaching of the unreality of evil. If evil is not unreal, it is real; that is manifest. If it is real, it is God-created, for God made everything that was made. Nor is this all. God declared everything He made good; consequently, if the critic is correct, God made evil and made evil good. It is perhaps not much to be wondered at that she should wish to dismiss Christian Science as monstrous logic, but even that would be better than reducing to an absurdity the truth which is to free the world.

[Ida Hodnett in *Centreville* (Ala.) *Press*.]

Christian Science does not teach that one may "just believe that there is nothing the matter with you and you will get well." The Discoverer and Founder of Christian Science, Mrs. Eddy, says plainly in her book "No and Yes": "Disease is more than *imagination*" (p. 4), and in Science and Health (p. 460) she rebukes those who start "a petty crossfire" over invalids with the cold assertion, "'Nothing ails you.'" Christian Science teaches that disease is a human error, and all will agree that it should be corrected. The abnormal condition should disappear. On this subject Alfred Farlow of Boston, Mass., says in the New York *Sun* of Jan. 27: "It goes without saying that Christian Scientists do not ignore disease, but give it a most careful and painstaking consideration. They recognize its existence in human life, call it by the same name which others employ, and deal with it intelligently, recognizing that it does not depart because of mere neglect, but that it must be grappled with and handled scientifically."

It is a mistake to think that nothing is being done when the metaphysical or spiritual treatment of disease is employed. This was the method employed by Jesus in his healing work, and this great Teacher declared by word and deed that "the flesh profiteth nothing;" and, "The words that I speak unto you, they are spirit, and they are life." Christian Scientists are proving to themselves and others that the "word" of Truth destroys human ills when it is declared with a correct apprehension of God and man's relation to God. In the present immature understanding of Christian Science, failures sometimes occur. Its students meekly admit that they have not yet attained that full knowledge of God which Jesus had, and failures may appear either from their lack of preparation, or from lack of receptivity in the place where "the sower soweth the word." The gospels tell us that in some places our great Master, Jesus, "did not many mighty works there," but his success in healing other cases proved the Principle and rule by which he worked to be availing. He proved that God, who is Spirit, can and does heal our diseases. Christian Scientists are endeavoring to follow in this line of work to the best of their understanding, and their understanding of Spirit and spiritual law is growing. This is proved by marked success in numerous cases, many of which present very serious aspects.

[Jno. M. Dean in *Baptist Builder*, Martin, Tenn.]

That Christian Scientists are "deaf to the world's cry of pain and poverty" is an anomalous charge in view of the fact that the whole trend of their teaching is toward the alleviation and ultimate abolition of these very things, and its adherents are constantly going about doing good, in accordance with the command of the Master to "heal" as well as to "preach." Indeed, the principal objection to Christian Science from the orthodox point of view lies in its insistence on the power of God to heal the very things which some of its critics accuse it of ignoring. It is true that Christian Scientists administer no medicines in the ordinary sense of the word, relying solely upon the power of the "great Physician," who should not even be spoken of in the same breath with pills and potions. They build no hospitals and neither did Jesus, yet he healed the sick everywhere he went; and in this connection it should be remembered that every Christian Science church is a house of healing and every Christian Scientist is in some degree a representative of this healing. Yet let it be fully understood that they are not opposed to hospitals and other charitable institutions, and cheerfully pay taxes for the support of such of these as are under the care of the state or municipality. They fully realize that these things will and should exist just as long as there is a demand for them, and that this demand will last until humanity has learned the lesson of implicit trust in an all-wise, all-powerful, and ever-present God who is Love. To deprive mankind of that form of healing in which it believes, before it is ready to take a more advanced step, would be sheer folly, and no Christian Scientist would sanction such an attempt. In the mean time, however, let none of our friends reach the rash conclusion that Christian Scientists are indifferent to human suffering merely because they do not accept the popular notion that the administration of material potions within four walls called a "hospital" is the best way to reach humanity's need. In John, Jesus speaks of the devil as "a liar, and the father of it," thus virtually characterizing disease as a lying claim of human belief when he spoke of the sick woman "whom Satan hath bound." This recognition of the nothingness of evil, instead of rendering him callous to the

Digitized by Google

woman's condition, actually brought about her healing, and this is the Christian Science method.

A philosopher has said in substance that the noblest charity is to show a man that he does not need charity; and this Christian Science has done in thousands of cases. This work is not accomplished, however, by superficially ignoring the human demand for food, clothing, and shelter, and while Christian Scientists hesitate to advertise either their individual or collective works of charity, it may be stated that this work is far beyond computation both in time and money, and certainly no honest inquirer has ever been refused the ministrations of any true practitioner of Christian Science healing because of the poverty of the patient, while it is no exaggeration to say that thousands of such cases are treated daily "without money and without price." That these practitioners accept payment for their work from such as are able to make payment, is merely in accordance with the customary recognition of the Master's truism, "The laborer is worthy of his hire." This declaration applies to every walk of life, and no reasonable person will, in this day and time, criticize ministers of the gospel for instance, for accepting compensation for preaching, even when not accompanied by healing. Under the circumstances it should also be permissible to state that Mrs. Eddy was a liberal contributor to a vast number of calls for help, not only in a local and individual way, but in times of great public calamities.

[Lloyd B. Coate in *Dayton (Ohio) Journal.*]

In a recent issue of a religious paper published in Dayton, Ohio, the editor writes on the subject of "Final Authority," and after referring to Catholics and Mormons, says: "The Christian Science people say it [the final authority] is Mrs. Eddy and her interpretation of the Bible."

Believing that such a statement sent broadcast leaves a wrong impression with many, the writer desires to state what he knows of Mrs. Eddy's attitude toward the Bible. On page 109 of her text-book, "Science and Health with Key to the Scriptures," the author states in substance that after her healing in 1866, through the power of God, from an injury pronounced incurable by the physician attending her, she spent three years searching the Scriptures, reading little else, and was rewarded with the discovery which she named "Christian Science." The same Principle, or law of God, which enabled Jesus to do his mighty works, had restored her to health after being given up to die, and has been the means of restoring unnumbered people to health after other means had failed.

On page 126 of Science and Health she says: "I have found nothing in ancient or in modern systems on which to found my own, except the teachings and demonstrations of our great Master and the lives of prophets and apostles. The Bible has been my only authority. I have had no other guide in 'the straight and narrow way' of Truth." On page 437 she writes: "The attorney, Christian Science, then read from the supreme statute-book, the Bible, certain extracts on the Rights of Man, remarking that the Bible was better authority than Blackstone." On page 547 she says, "The Scriptures are very sacred." The first tenet of the Christian Science church reads: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life" (Science and Health, p. 497). In April, 1895, Mrs. Eddy ordained the Bible and "Science and Health with Key to the Scriptures" to be the only pastor of the Church of Christ, Scientist, throughout this and other lands. In the public services of Christian Scientists, Bible selections comprise one half of the Lesson-Sermon, while the other half consists of correlative passages from the Christian Science text-book.

The writings of Mrs. Eddy have brought about an increased interest in the study of the Bible. It is a very common occurrence to hear the beneficiaries of Christian Science (and the number is quite large in this city) testify that the one thing beyond the physical healing most prized, and gained through a demonstrable understanding of the Christian Science text-book, is a better understanding of God, with increased faith in Him; a better understanding of the mission of Christ Jesus, with a greater desire to follow in his footsteps; a better understanding of the Bible, with a greater love for God's Word. Mrs. Eddy repeated to her students the command, "Follow your Leader, only so far as she follows Christ" (Message, 1902, p. 4).

Loyal Christian Scientists everywhere were glad to have the counsel of one so spiritually-minded as Mrs. Eddy. Less than three years ago the writer was at her home, and her message to those gathered on that occasion was a reiteration of what she has always taught, namely, the Christian admonition to look away from personality to God. All her teachings point to God as the All-in-all—the final authority. She has always advised her students to obey Jesus' injunction, "Search the scriptures."

So long as the various denominations maintain their identity, their founders will no doubt be remembered. It would be ungrateful not to do so. Thus the Methodists will ever cherish the memory of Wesley, the Lutherans will not forget Martin Luther, the United Brethren will ever remember Otterbein. In doing so they do not worship their personalities, but revere their memory. Likewise the memory of Mrs. Eddy will be revered by all who are blessed by her teachings.

[Charles K. Skinner in *Leader-Kalkaskian*, Kalkaska, Mich.]

One of the most forceful proverbs of Scripture reads on this wise, "Wisdom is the principal thing; therefore get wisdom: and with all thy getting get understanding." The citizens of Kalkaska have had the spectacle of an individual under the guise of an evangelist and claiming to be a Christian, standing in an orthodox pulpit and berating other Christian workers. He did not learn this from the Master whom he professes to follow, for his words were, "Judge not, that ye be not judged." Had the evangelist heeded the injunction to "get understanding," he would not have made the statements concerning Christian Scientists and their religion with which he is credited. It is related that Jesus at one time warned his people concerning those who thought that they should "be heard for their much speaking," but it seems that this class is still much in evidence.

Jesus designated but a single proof of any one as being his follower, and that was that he should do the works which he did. His words were, "He that believeth on me, the works that I do shall he do also." "If ye love me, keep my commandments." Is this critic of other Christians doing these works? There is a saying in the Scriptures which reads thus: "Cast out first the beam out of thine own eye, and then shalt thou see clearly to pull out the mote that is in thy brother's eye."

We were told that "Christian Scientists claim to heal but cannot; that their work is not of God." It is related of Jesus that certain Jews charged him with casting out devils by Beelzebub, but the reply of the Master brought confusion to his traducers and he drove his rebuke home with these words: "If I with the finger of God cast out devils, no doubt the kingdom of God is come upon you." And so it is to this day.

Jesus at no time claimed any personal power to heal the sick or to do any of his wondrous works. He said, "My Father worketh hitherto, and I work. . . . The Son can do nothing of himself, but what he seeth the Father do." "The Father that dwelleth in me, he doeth the works." Thus it is with Christian Scientists today; no one claims any special power or that he can or does heal the sick. There is no healer, nor ever was but God. Jesus had the clearest apprehension of God as the Principle, the creator or

Digitized by Google

the source of all life, of any one being who has ever lived. He made the distinction between man created in the image and likeness of God, and the mortal that the world calls man. He saw that if the Scripture was true and man was the likeness of God and was given dominion over all, that man could not be sick, suffer, or die unless his divine Principle, God, could express these discords.

The pitfall into which the materialist drops in criticizing Christian Science is that he makes no distinction between the mortal commonly called man and the image and likeness of God, or spiritual man. They are fond of quoting St. John's words, "If we say that we have no sin, we deceive ourselves, and the truth is not in us." The apostle, however, also says, "He that committeth sin is of the devil;" but straightway he adds, "Whosoever is born of God doth not commit sin; for his seed remaineth in him: and he cannot sin, because he is born of God."

Mrs. Eddy in our text-book, "Science and Health with Key to the Scriptures," coincides with this teaching. She says: "A sinner is not reformed merely by assuring him that he cannot be a sinner because there is no sin." "The way to escape the misery of sin is to cease sinning. There is no other way." "Christians . . . must grapple with sin in themselves and in others, and continue this warfare until they have finished their course" (Science and Health, pp. 447, 327, 29). The pages of the text-book contain many such statements. Did the evangelist quote any of them to his hearers?

The speaker said Christian Science teaches "there is no reality in sickness and in pain." On page 460 of Science and Health, Mrs. Eddy writes, "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction." What is meant by its unreality in the scientific sense is that God did not create it nor can the true man be conscious of it as real.

To the small child who has been deceived by silly stories, the ghost in the closet is a fixed fact, and no persuasion can destroy this fear until the truth has been shown him. Likewise to the materialist who sees no farther than the testimony of the mortal senses, the reality of any form of pain or sickness is very apparent, and having no understanding of the spiritual man with his God-given birthright of perfect life and health, he succumbs to the material laws of the world. Let this be borne in mind, that Christian Scientists are never found attacking other forms of religion or healing systems. They know that each person has a right to worship God in his own way; to have his own choice of remedies in times of sickness, and his own choice of political adherence. They only ask the same rights for themselves. They believe in living the golden rule.

[Olcott Haskell in *Mill Valley* (Cal.) *Record-Enterprise*.]

To state that "prayer is unnecessary" is not only to misquote Mrs. Eddy but to misinterpret the entire practice of Christian Science, which is founded upon the efficacy of prayer. Mrs. Eddy explains that repeating words of petition does not necessarily constitute true prayer. In the chapter on this subject in Science and Health, Mrs. Eddy describes that spiritual understanding of God which "reforms the sinner and heals the sick;" that "prayer, watching, and working, combined with self-immolation, are God's gracious means for accomplishing whatever has been successfully done for the Christianization and health of mankind" (p. 1).

Christian Scientists acknowledge Christ, the Son of God; they acknowledge that Christ Jesus came to teach men the truth of God to save them from sin; and that he left this command with promise for his followers in all ages: "Go ye into all the world, and preach the gospel to every creature. . . . And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues: . . . they shall lay hands on the sick, and they shall recover."

Christian Scientists accept "the doctrines or moral principles the Saviour taught," and they put these into practice. It should not be held as something against them that their prayers heal those at a distance, when we remember that Jesus himself healed those who were absent as readily as those present, and that he said: "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do." Christian Science does indeed appeal to the suffering multitude. Jesus himself said, "They that be whole need not a physician," and it is recorded that "the common people heard him gladly."

Christian Science practice is based upon spiritual understanding. It is the prayer of the righteous which availeth much, and is the direct opposite of mental suggestion or the hypnotic methods of the human will. God is the only power, and it should not seem a strange or exceptional thing that He should save His children from sickness, as Jesus showed, without the intervention of medicines or a doctor's skill. Indeed there is today abundant evidence that cases of organic disease have been permanently healed through the prayers of Christian Scientists.

Some time ago B. O. Flower, a well-known magazine editor, undertook an investigation of Christian Science healing, and as a result he published a book entitled "Christian Science as a Religious Belief and a Therapeutic Agent," in which he gives numerous cases where the diseases diagnosed by prominent physicians and pronounced organic and incurable, were healed by Christian Science. Cancer, tuberculosis, deafness, blindness, leprosy, and practically all known diseases have been healed—and why not, since God is as powerful now as He was two thousand years ago, and the promises in the Bible are as true today as at the time they were written?

[*New York* (N. Y.) *Herald*.]

Eugene R. Cox of the Christian Science committee on publication for the state of New York, with offices at No. 1 Madison avenue, yesterday [April 5] forwarded to Jacob H. Schiff, treasurer of the China famine relief fund, a check for two thousand ninety-three dollars and forty-three cents, the proceeds of a collection taken up in the twelve Christian Science churches and societies in Greater New York. The largest contribution to the fund was made by First Church of Christ, Scientist, of Brooklyn, which is constructing a new church edifice at New York avenue and Dean street. Previous to the taking of the collection the following notice had been read in all the churches:

"In time of wide-spread disaster the great heart of humanity instinctively turns to thoughts of succor and relief. We to whom the true brotherhood of man is revealed should be among the first to manifest our recognition of such brotherhood, and because of the amplitude of our spiritual blessings give generously of material means in time of need. In a large district of China three million human beings are on the verge of starvation because of the failure of crops. Prompt action is necessary by the world in order to alleviate the trying conditions of this famine. No country should more freely respond than this, because of the new admission of China to the sisterhood of republics; no city should be more generous than this, the great mart of the western world; no people should respond more promptly than Christian Scientists, whose wealth of love can flash to the antipodes as quickly as to our next-door neighbor."

God is perfectly simple and true, both in deed and word; He changes not; He deceives not, either by dream or waking vision, by sign or word.—SOCRATES (in Plato's "Republic").

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

EVANGELICAL RELIGION.

ALTHOUGH we do not nowadays hear so frequently as formerly the assertion that "Christian Science is neither Christian nor scientific," the belief expressed in these words still prevails in many quarters; namely, that the followers of this faith are outside the pale of evangelical Christianity. Because this belief prevails and because the word "evangelical," like many other words of doctrinal significance, has been appropriated by some sect or sects, it may be worth while to inquire into its meaning, in order that its use and significance may be properly understood. According to Webster, evangelical means first, "contained in, or relating to, the four gospels; as, the evangelical history;" and second, "belonging to, agreeable to, or contained in, the gospel, or the truth taught in the New Testament; as, evangelical religion."

From these definitions it will be readily seen that the term evangelical applies to Christian Science in the most direct way, and that so far as being evangelical is concerned, the Church of Christ, Scientist, is not only evangelical, but it might properly question the standing of some of its critics, who, in their practice at least, nullify the mighty works which Christ Jesus wrought in connection with his ministry and in logical fulfilment of his doctrines. When he sent forth the twelve disciples, he commanded them, "As ye go, preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give." When he commissioned the seventy they, too, were commanded to heal the sick.

Webster's definitions of evangelical naturally bring us to a consideration of what the four gospels do contain or of what they consist. The search is not difficult, and we find that they are filled with the record of the performance by the Master of the healing works which he commanded his disciples to do. Then it must be that the record of these works is "evangelical history" and the doing of them is "evangelical religion."

The "brief exposition of the important points, or religious tenets, of Christian Science," which Mrs. Eddy gives on page 497 of "Science and Health with Key to the Scriptures," commencing, "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life," and ending, "We solemnly promise to watch, and pray for that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us; and to be merciful, just, and pure," plants Christian Scientists squarely upon the evangelical teachings of Jesus, and the works for which they are criticized show that as his followers in works as well as in words they are practising evangelical religion.

So far, therefore, as an endeavor to conform themselves to the commands of the Master is concerned, Christian Scientists have long since justified their right to be classed among orthodox Christians; and though this consideration be denied them by some evangelical bodies, there is yet compensation when we recall Jesus' rebuke to John, who would fain have put outside the pale the one healing in the name of the Master yet not of their company: "Forbid him not: for he that is not against us is for us." The Science discovered by Mrs. Eddy is productive of results, for by it the sick are healed and the sinning reformed. "Ye shall know them by their fruits," said the Master.

ARCHIBALD MCLELLAN.

"OUR SUFFICIENCY IS OF GOD."

IN his first letter to the Corinthians St. Paul expressed himself upon the question of personal relationship and influence, in terms which are exceedingly pertinent to church-members today. The mortal tendency to become obsessed of personality had strongly asserted itself in Corinth, so that there was not a little contentious championship of this one and that, and the apostle speaks of his great thankfulness that he had been guarded against giving any occasion for a weakening absorption in himself, by refraining even from baptizing any of them, lest they might be tempted to think and possibly boast of themselves as his adherents. His aim was to win men, not to himself nor to his ideas as such, but to Christ, to awaken in them love for and loyalty to the one thing of value, namely, the saving truth. He cared nothing for their praise of the singer if they would but remember the song, and this wondrously wise course is worthy of the most thoughtful consideration upon the part of all who covet or are called to any place or work which is likely to render them an object of public interest and attention.

The willingness of many to attach themselves to any one who will relieve them of the necessity of doing their own thinking always provides a following for the dominating disposition which chances to be clever. To wield an influence over others may prove an excellent thing, provided that Pauline attitude is maintained which Mrs. Eddy so well defined and illustrated when she counseled all Christian Scientists to "trust in Truth, and have no other trusts" (*Sentinel*, July 4, 1903). This is the test of the real value of any man's influence, namely, its significance to the attitude of those affected, toward Truth. If they are becoming enamored of our personality, and grow more ready to shape their course according to our dictum, our influence can but become a source of weakness. If, however, they are being impelled to rely upon impersonal truth, if they are being educated into an assertive determination to work out their own problem, looking to God alone for the wisdom to live an ideal life, then our influence is mightily for good. The friendship or association, whether intellectual or religious, which does not beget a spirit of reliance upon the leadership of Truth manifest in consciousness, registers its condemnation of the attitude of one or both of those who share it.

Paul's criticism of the Corinthians makes it apparent, however, that the facts of the situation were the result not of a spirit of domination but of that competitive type of obsequiousness which gloried in its mental subjection to personality, and his rebuke smites the human habit of forgetting the possibility and privilege of being a man in Christ on one's own account. This weakness is born of the union of self-depreciation and personal mesmerism. Pride of intellect is the mark of the self-satisfied worldly-wise, who are in fact fools before God. Its no less ignoble antithesis is that spirit of mental servility which, ignoring the call to be a king and priest unto God, is forever yielding itself to the shaping of those who are more than willing to give advice, and the golden mean which avoids both offenses is maintained by those who understand that to honor God is to maintain the dignity pertaining to every divine idea by a studious self-respect, while humbly and gratefully profiting by every well-meant counsel which others may bring them.

Every would-be teacher, if worthy of the responsibility assumed, hopes for and seeks to bring about that self-sufficiency which knows no dependence save upon divine Truth. He thus duplicates his own adequacy and worth, and is led to rejoice even in the comparative obscuration of his own light, perchance, by the more brilliant demonstration of his pupil. On the other hand, every worthy student, while cherishing a loving appreciation of the light and stimulus which others have brought him, will ever be mindful that the truest return for benefits received is made when we prove ourselves "unaw'd by influence" and show ourselves able to

Digitized by Google

stand upon our own feet with the aid of that divine wisdom and strength which is accessible to all who are aspiring, and who are faithful to the light they have already received.

JOHN B. WILLIS.

THE REAL *VERSUS* THE UNREAL.

THE children in a Christian Science Sunday school class were once asked by their teacher why it was necessary to have a lesson on "Unreality" after studying one on "Reality." To this a little girl, eight or nine years of age, replied that it would not be necessary except that so many people supposed unreal things to be real, and also thought that real things were unreal. The child evidently had a clear sense that a perfect distinction must be made between the real and the unreal, and this fact is soon learned by all who accept Christian Science. The outsider, however, seldom understands what the Scientist means when he declares any manifestation of evil to be unreal, and the distinctions which have been made by philosophy are of little service to the inquirer after the truth of being. To the one who accepts the material sense of existence, the objects cognized by the physical senses seem real, but every new discovery in what is called natural science shows to some extent the fallacy of such a belief, and points to a fixed principle as the only true basis for right reasoning.

In Christian Science even a child would know that nothing is real which God did not make, and child and adult alike know that God did not make sin, disease, or death. This is the starting-point of the healing work of Christian Science, but we do not stop there. As the writer of the epistle to the Hebrews counsels, we "go on unto perfection;" but this can only be done by grasping the spiritual fact and bringing it into demonstration in all we say and do, and in this we have the words and works of Christ Jesus for our support. It is scarcely possible for us to measure our gratitude to Mrs. Eddy for this one thing alone, namely, the clearness with which she has taught us to know reality and hold to it, which implies the unknowing of evil, and an utter renunciation of the same on the ground of its unreality. Here it should be remembered that the real is not only created by God, but is like Him in nature and quality; that it is good, harmonious, and eternal. In Science and Health (p. 289) we read: "God's universe is spiritual and immortal. . . . Spirit and all things spiritual are the real and eternal." We also read: "Without perfection, nothing is wholly real. All things will continue to disappear, until perfection appears and reality is reached" (p. 353). It is clear, therefore, that while what we call material may seem good to us, it lacks permanence and at best only symbolizes the real.

Christian Science makes an absolute and final distinction between the real and the unreal, and as we come to understand better the real, we shall be less and less subject to physical discords. Even the attacks of illness which would once have seemed alarming lose their power to frighten us, because we know that there is nothing real about them, that they have no support in God's law. Besides this, a growing spiritual discernment will speedily penetrate the thin disguises of deceit and falsehood, so that we shall be protected from dishonesty and ignorance. Every man wants to be thought honest, and many would keenly resent the implication of dishonesty even if their conduct was far below the ordinary standards; but this would only be self-deception, for honesty and every other spiritual quality is tremendously real, and rests upon the rock of ages, upon the divine Principle of being.

To be forever secure we must keep close to this Principle, abide "under the shadow of the Almighty," where all is real, and then we can neither fear evil nor do it. How sweet is the promise given in our text-book (p. 298): "When the real is attained, which is announced by Science, joy is no longer a trembler, nor is hope a cheat." Daily let us seek to prove this.

ANNIE M. KNOTT.

AMONG THE CHURCHES.

BOSTON, MASS.

The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the new church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading Rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite Post Office; open daily, except Sunday, from 9 a.m. to 5:30 p.m.

LEEDS, ENGLAND.

The Christian Scientists are making rapid progress in Yorkshire, where during the past six years they have established a dozen churches or societies. Their latest project is the erection of a large new church in Leeds, at a cost of ten thousand pounds. For this purpose they have made arrangements to acquire twenty-four hundred and sixty square yards of the Buckingham House estate, at the corner of Richmond road and Headingley lane, as a site. The property will be taken over in August, and building operations will be commenced without delay. The new structure is intended to accommodate seven hundred people.

Yorkshire Post.

LOS ANGELES, CAL.

With the acquisition of a large lot on Hill street just south of the receiving hospital between First and Second streets, Fourth Church of Christ, Scientist, is to erect a large building and will become the strictly down-town church for the Christian Scientists of Los Angeles. The final arrangements were completed yesterday [March 21] whereby Fourth church has acquired ninety-seven and one half feet on Hill street with a depth of one hundred and fifty feet, on which a church to cost not less than one hundred thousand dollars will be erected in the immediate future.

Fourth church, through the districting of the city for the various Christian Science churches, has a number of the outlying districts, and as the Hollywood cars pass the new site and many other cars come to First and Broadway, this is an ideal site, as well as being convenient to the down-town hotels and apartment houses. Plans will be drawn immediately for the new church building, and the houses now on the property will be torn down to make way for the edifice.

Fourth church was organized in 1909 and has held its meetings in the Friday Morning clubhouse.

Los Angeles Tribune.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 31, 1912. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 13, 1912.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 3, 1911, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

THE LECTURES.

BOSTON, MASS.

William R. Rathvon of Denver, Col., a member of the Christian Science board of lectureship, delivered a lecture Friday evening [April 26] on Christian Science, under the auspices of The Mother Church, The First Church of Christ, Scientist, Boston, Mass., in the church edifice, at Falmouth, Norway, and St. Paul streets. There were about five thousand persons present. The lecturer was introduced by the first reader of The Mother Church, John C. Lathrop, who said:—

Most of those who have witnessed the Christian Science cause grow from the work of one brave woman, and expand into a great world-wide religious, scientific, and therapeutical movement, well understand that it is because Christian Science has revealed and supplied to mankind the link in the chain of life never before fully uncovered or developed. This missing connection is the understanding of the Principle of man's being, which is the understanding of God and His laws, a correct apprehension of which discloses the way to immediate salvation from sin, reveals the power which destroys disease and death, and makes plain the path to eternal harmony and peace.

The discernment of this divine Principle of life demands an earnest, open, and receptive thought—the good ground of an honest heart, to which Mrs. Eddy refers in Science and Health when she says that in such soil "the seed [of Truth] must be sown; else it beareth not much fruit, for the swinish element in human nature uproots it" (p. 272). In listening to the instructive exposition of Christian Science which our lecturer is by experience and by practice so well qualified to give, it is hoped that this splendid audience one and all will realize the significance of this opportunity and be abundantly enlightened.—*The Christian Science Monitor.*

FLORENCE, ITALY.

In introducing William D. McCrackan, M.A., who lectured Jan. 14 on Christian Science in the hall of the Circolo Filologico, the American consul for Florence, Leo J. Keena, said:—

I think that we, who are mostly foreigners sojourning in this city of Florence, are particularly alive to the spirit of history. That being the case, we cannot but be conscious of the many dark pages of history which have been written in all countries of the world as a result of differences in religious beliefs. In Germany, in England, in France, in Spain, in Italy, and in the American colonies, the religion of our remote ancestors was a religion of intolerance; but so far have we advanced, in that broad sense of civilization which concedes to each man the free right to worship his idea of God in his own way, that within the lifetime of many of us a new church has been founded and has grown until it counts its followers in millions without giving rise to a single armed conflict. The fundamental truths upon which the phenomenal growth of this church is founded will be explained to us by the lecturer.

Since we have come to realize that religion is so essentially a personal affair, so entirely an individual understanding of the relationship existing between man and his creator, I believe that I will be pardoned if I frankly state my own attitude in regard to this lecture. Prior to October last I have been aware in a general way of the progress made by the Christian Science church. I had also known rather intimately a number of very good Christian Scientists, who lived up to their convictions so cleanly and so thoroughly that they bore some unmistakable mark of their religion in their faces as well as showing its governing power in their lives. So conscious was I of this, that for some years I have felt that I could identify a Christian Scientist, as such, practically on sight.

The lecture delivered in this hall by Bicknell Young, on Oct. 26 last, was almost the first word I had heard spoken in favor of or in explanation of Christian Science. I listened to Mr. Young's lecture with an open mind and was deeply interested by what he said. That interest has been increased by a rather wide reading of Christian Science literature, so that tonight a feeling of self-congratulation is mingled with the sincere pleasure I have in introducing to you the lecturer.—*Correspondence.*

KEY WEST, FLA.

Virgil O. Strickler lectured in the church edifice, Feb 6, on the subject of Christian Science. He was introduced by Capt. Percy Willis, C.A.C., U.S.A., who said in part,—

We learn in Christian Science that truth is spiritual and must be spiritually discerned. Jesus said, "I am the way, the truth, and the life." He also said, "Ye shall know the truth, and the truth shall make you free." You will have the pleasure tonight of listening to one who will speak to you concerning this beautiful gospel of truth which when understood makes free from all error. From my limited understanding of this truth I feel free to say to you that Christian Science is no new or strange religion. It is the religion of the Bible, the same Bible we have always known and reverenced. It brings a message of peace and joy and good will to men. If it does this, it must be a good thing. It asks to be judged by what it does for men. Jesus said, "By their fruits ye shall know them." The thousands of healthy and happy men and women who have been saved from sickness and sin after all other means had been tried in vain, bear eloquent tribute to its blessed ministrations. I humbly and gratefully testify that Christian Science has greatly benefited me, physically, mentally, and morally.

This is a practical age, and mankind are looking for a religion that does practical things for good. They are tired of doctrines and beliefs. They demand results. That is why so many people are turning to Christian Science, and that is also the reason for its rapid and great growth.

Correspondence.

UNIVERSITY OF ILLINOIS, CHAMPAIGN, ILL.

Bliss Knapp lectured on Christian Science in the University chapel, Sunday afternoon [March 3]. The lecture was given under the auspices of the Christian Science Society of the University of Illinois. Mr. Knapp was introduced by Prof. A. H. Daniels of the university, who said:—

It is frequently said that this is an age of irreligion, that the old faiths are losing their hold upon people, and that the number of church people is on the decrease. On the other hand, we are constantly reminded of the renewed vitality of religious faith. Of this it seems to me there is no more marked expression, in this country at least, than the movement known as Christian Science, and certainly it is very fitting that here at the University of Illinois, which is hospitable to all faiths, we should welcome from time to time representatives of this faith.—*Daily Illini.*

NEW YORK, N. Y.

A lecture on Christian Science was given by Willis F. Gross in the auditorium of First Church of Christ, Scientist, on Friday evening, March 1. The attendance was over twenty-one hundred. Mr. Gross was introduced by Judge Clifford P. Smith, who said in part,—

An intelligent judgment of the value of Christian Science must be based upon correct and adequate information of what it teaches and of what it does. What is the basis and import of its message? What are its effects upon the

Digitized by Google

health and character of its adherents? What are the fruits of its consistent practice? These are the questions of intelligent inquiry, and while I cannot say that these questions can be fully answered in the course of a single lecture, I can say that many a man has been convinced by one of these lectures that Christian Science is something of which he cannot afford to be ignorant and is the one thing needful for him.—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice it is assumed that the lecture will be given in the evening.

Albuquerque, N. M.—Bicknell Young, Elks Opera House, May 16.
Arcata, Cal.—Virgil O. Strickler, Pastime Theater, May 13.
Charleston, W. Va.—Francis J. Fluno, M.D., Burley Opera House, May 7.

Warsaw, Ind.—Prof. Hermann S. Hering, New Eagles' Hall, May 13.
Watertown, N. Y.—Francis J. Fluno, M.D., City Opera House, May 12.

TESTIMONIES OF HEALING.

I feel that I should make a public expression of the benefits I have received in Christian Science. During the year 1906 my vision became impaired on account of cataracts. After four operations and treatment by the best oculists in the state I became totally blind in both eyes. I had known of Christian Science for some years, and it had appealed to me from an intellectual standpoint, but I had not the courage to take a firm stand until forced by this, the most terrible misfortune that can befall a man. I sought the aid of a practitioner and after a month's treatment was enabled to resume my occupation, which was extremely hazardous (wire drawing), although my sight was far from perfect. I however continued to read and study Science and Health as best I could, but at the end of four months I was again facing the same condition. I sought the same practitioner, and at the end of two months a different one took the case, but after one month's treatment I was still blind. After leaving the last practitioner my first intention was to end it all. I left the home of the practitioner with this intention, and finding my way home, a copy of Science and Health lay upon the table. I picked it up, and opening it curiously I held the book in the sunlight. I was enabled, though painfully, to make out letter by letter the following passage: "If Christian Scientists ever fail to receive aid from other Scientists,—their brethren upon whom they may call,—God will still guide them into the right use of temporary and eternal means. Step by step will those who trust Him find that 'God is our refuge and strength, a very present help in trouble'" (p. 444). After finishing this, I turned to page 67, began at line 4, and read to the end of the paragraph. It consumed nearly the entire day to complete the quotations cited, and by the time I had finished, twilight had fallen. I persuaded my wife, who was greatly opposed to Christian Science, to read, but I did not improve rapidly. After a month and a half of painful, persistent effort, reading days when the sunlight was strong, I decided to resume my work at the mill. All the employees, my fellow workmen, had concluded that I would never work there any more. How I managed those first few weeks to hold my own, being observed by a hundred or more workmen, is simply another proof of God's protecting power. Gradually my sight improved, but there were days when I thought it would be impossible for me to get through them.

It has now been over three years and I have never lost a day on account of sickness of any kind. My financial condition has also improved and my hopes are far brighter than ever before. I have a firm trust that God is able to lead me into that freedom and liberty accorded to those who love and obey Him.—CHARLES H. HOLMES, Portland, Col.

I wish to express my love and gratitude to God, and in the hope that it may help some one I give this testimony. When Christian Science found me, four years ago, I was in an almost hopeless condition, having tried some of the best doctors for eight years. I was told I could never expect to get well, but that I might be benefited by two operations, or I would become still worse. My youngest child being only four months old at that time, I would not give my consent to an operation. I was then told by a friend that I could be healed in Christian Science. It seemed impossible to me, but I was told that with God all things are possible, and that many were healed through the understanding they gained by reading Science and Health with the Bible. I then read the testimonies in a *Sentinel*, and felt sure if Christian Science healed others it would heal me.

Science and Health was loaned to me and I began reading it. I soon found that God is Love and "a very present help" in our need; and that God does not send suffering to His

Digitized by Google

children. I had been taught that God sent sickness, and that I should be patient until He took it from me; but, thanks to the teaching of Christian Science, I found God to be Love, and that the promises in the Bible were true for us today. With the little understanding I gained and put into practice each day, I was healed in a few weeks of a complication of heart, stomach, liver, and kidney disease, and in six weeks I had overcome a severe bowel trouble of many years' standing. I had dieted for many years, but now I was able to eat everything without suffering. After eight months of studying Science and Health I could say that the truth had set me free, a female disorder being overcome, also catarrh of eighteen years' standing. I was also able to lay aside glasses which I had worn for five years.

I should also like to tell of the healing of a severe attack of croup in three treatments with the help of a practitioner. In the four years of honest striving I have had many proofs of the overcoming of evil with the power of Truth. My gratitude for what Christian Science has done for me cannot be expressed in words. My great desire is to show by my life how thankful I am to God, also to our dear Leader, Mrs. Eddy, for this beautiful truth which sets the captive free. I am indeed thankful for my physical healing, but it is not to be compared with the spiritual quickening I have gained and that peace "which passeth all understanding."—Mrs. Robert Malzahn, West Bend, Wis.

Some one has said that Christian Science is the unfolding of good in individual consciousness, and my experience is that the statement is true. About six years ago I was in the hands of doctors, trying in their way to regain my health. They were good, conscientious men, and most anxious to bring relief from suffering, but their efforts proved most discouraging and their statements very depressing. The constant changing of remedies was disheartening, but it had the effect of showing me the lack in all their endeavors. I, no doubt like many others, looked at the rows of bottles at the druggist's, and wondered if there was not some one who was wise enough to select the remedy which would bring relief to me—a relief that would so gladly be paid for in gratitude as well as money. I made several changes of doctors, vainly trying to find the one who knew enough to go direct to the remedy and prescribe it, and absolutely certain as to its healing results.

Then in that darkest hour, when clouds were lowest and human frailty was most in evidence, there came through a dear friend just a very small gleam of that light "which lighteth every man that cometh into the world;" and it came to me through the promises in Christian Science, promises proved true in untold instances since then. I have proved that discord of every kind and nature is overcome by the application of the Christ-way, the only way,—the way of health and peace, as can be demonstrated every day and every hour in shop, store, or counting-room. I rejoice in the knowledge that divine Principle governs man and the universe, not partially but wholly, not sometimes but all times, not somewhere but everywhere,—that we can be free indeed and know and demonstrate that "divine Love always has met and always will meet every human need" (Science and Health, p. 494).

I am deeply grateful to the giver of all good, to the master Christian, our Saviour, also to our beloved Leader, Mrs. Eddy, whose obedience to God's law is so well worthy of our emulation.—Lewis S. Iliff, Indianapolis, Ind.

Christian Science came to my notice many years ago through the healing (after many months of invalidism) of a very dear member of my family. At the time of this healing I looked upon the works wrought by Christian Science as I looked upon a physician's work; it had nothing to offer me because I then needed nothing. I was physically well and satisfied with the pleasures which my family and the world gave. But as time went on my children came and had the diseases which the world believes children must have, and I occasionally turned to Science for relief.

About ten years after Christian Science came under my observation I heard rumors of something which if it were true would mean the destruction of my dearest idol. Upon hearing this rumor, I turned my face to Christian Science, for I began to desire a knowledge of God, divine Love, and that love which "suffereth long and is kind." The understanding which I obtained from turning to the light I used in endeavoring to make it a part of my life, to become one with wisdom. After many months of working in this way I heard other reports, which this time took a more tangible form. Again I looked to Science for more understanding, and the search if possible was carried on with more earnestness. This experience was repeated many times the following months, the reports of evil always being met by such an earnest looking to God as never failed to bring wisdom. Finally I saw my idol broken, shattered at my feet, but with its destruction came the sweet assurance and realization that God is Love, an ever-satisfying Love, and that God is omnipotent. With this realization I proved that "divine Love always has met and always will meet every human need" (Science and Health, p. 494).

As I now take a retrospective view of this demonstration of God's goodness, I recognize the fact that I was never called upon during the whole experience—which occupied several years—to hear more evil than I could bear. Had I at first been asked to listen to the report which came to me last, I should have been overcome; but because I was trusting Love, evil was not uncovered until I had gained sufficient wisdom to prove that evil unreal,—unreal because it had no part in God's kingdom. I also see that while there were times when my trouble seemed more than I could bear, yet out of this experience has come the greatest blessing which a mortal can have, namely, a knowledge of Christian Science.

I am very grateful to God for the redeeming truth which has made it possible for this blessing to come to me. I am also grateful to Mrs. Eddy because she has shown me how to accept the blessings which God has prepared for His own.

Mrs. Grace T. Davidson, Chicago, Ill.

It is with thankfulness in my heart to God and love for my fellow men that I humbly give this testimony to what Christian Science has done for me. It has brought me light and peace where for years before all was darkness and chaos. I was sick in body and mind, having had three severe spells, the last one leaving me a wreck mentally as well as physically. It was then that I decided to take up Christian Science in earnest. My first desire was to be free from a nervous trouble which was most distressing. I had several severe ailments, one of which, a bowel disorder, disappeared after the first treatment. An acute kidney trouble disappeared after a few months' earnest study of the Bible and Science and Health, with treatment occasionally from faithful practitioners. The nervousness commenced to disappear when I was willing to recognize and destroy some of the errors which had bound me all my life, namely, sensitiveness, selfishness, temper, also talking and listening to gossip and scandal. These are a few of the evils which I have learned to detect and in some measure have succeeded in destroying through my study and application of Christian Science. Other diseases than those I have mentioned have also been overcome, and for all this I am sincerely thankful to God; also to our Leader, who was so spiritual that she could discern this truth and give it to mankind.

The physical healing is, however, nothing in comparison to the spiritual quickening which is mine when I apply myself earnestly and conscientiously to the study of the Bible and Science and Health. It is destroying fear and worry and

Digitized by Google

uncertainty and replacing them with the real,—with love, understanding, faith, and hope. My daily prayer is that this truth may come to every sick and sinful mortal, that they may awaken out of their delusion and see themselves and the whole creation as God's perfect, indestructible, spiritual manifestation.

I am grateful to those who have so lovingly helped me over the rough places when the way at times seemed dark. I am thankful to God for every good thing. I know He sends us only good and everything good comes from Him. I hope this testimony may be the means of turning some sick and sorrowing ones to the truth, that they may be healed and regenerated.—Mrs. E. E. Forstall, Phœnix, Ariz.

About eleven years ago I was advised by my mother to try Christian Science. I was ill in many ways, the worst trouble being a goiter. I had tried everything within reach for this disease; I had three physicians, went to New York to consult a specialist and was given no encouragement at all, so when I went to a Christian Science practitioner I had no faith that it could cure me and went only to please my mother. For months I had not had a good night's rest, but the night following my visit to the practitioner I slept well and was surprised on waking to find it broad daylight. The night had seemed so short and my sleep so refreshing that new hope sprang up in me. I continued to improve, and the growth that had been three years in developing left in three weeks.

I was indeed grateful and shall always be, but the dawn of this truth is greater than the physical healing, and each day it brings an understanding and courage I never before knew. Everything is seen and understood with a new and different meaning after studying our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. This has made our home pleasanter as well as healthier. I can call to mind about a dozen people who have taken up the study of Christian Science through my healing and by the passing along of the *Sentinels* and *Journals*. I hope I may always be a faithful follower of our dear Leader and her text-book.

Mrs. Emma L. Tripp, West Somerville, Mass.

I wish to express my heartfelt gratitude for all the good that has come to me through Christian Science, also for the healing of my daughter, fifteen months old, of a skin disease and bowel trouble from which she had suffered since birth. A physician had treated her for almost a year, but had not been able to overcome it. So we called a Christian Science practitioner, and with one week's treatment the child was entirely healed. I thank God with all my heart for this truth, also our Leader, whose faithfulness as God's messenger to this age has made this healing possible.

Ralph R. Sale, Elgin, Ill.

I wish every one knew this wonderful healing truth which has come to bless us and all mankind. I have been in Christian Science over two years, and during that time have been greatly helped, both physically and spiritually. I am very grateful for the recovery of my hearing and my healing from paralysis of the bowels, also other physical ailments. I am, however, most grateful for the spiritual uplifting, and not only myself but all the members of my family have been helped through Christian Science.

My husband has been helped in his business, and after two weeks in Science my little girl was able to remove glasses which the specialist had told us she would have to wear for a number of years. Our little boy has been quickly healed of so-called contagious disease. I am deeply thankful to God, also to our Leader, Mrs. Eddy, for this truth.

Mrs. Lyda F. Meyer, San Francisco, Cal.

I wish to express my gratitude for what Christian Science has done for me, the more so that I have no opportunity to attend a testimony meeting, as there are no other Scientists here. I had no thought of the physical healing when I began to study "Science and Health with Key to the Scriptures" by Mrs. Eddy four years ago, but I have had no other help since. I then believed I had not long to live, and I had determined not to submit to another operation; still I did not think Christian Science could heal such a severe case as mine. When my symptoms became worse my daughter advised my having treatment, as she knew from her own experience as a trained nurse that there is little hope of a successful operation for a malignant growth such as mine was believed to be, so she telephoned a Christian Science practitioner and I was healed with only two treatments.

Later I was instantaneously healed of the most severe cold I had ever had. Soon after, I was healed of mumps as suddenly. Two or three years ago I was staying for a time in a locality where mosquitoes were very bad, the family that I was visiting being very much annoyed by them. I however realized the fact of man's dominion, and was never bitten by them or even disturbed by their buzzing. Recently, through the help of a Christian Scientist to whom I mentioned the trouble, I have been relieved of a plague of flies from which I suffered in common with all in this valley.

Christian Science is a present help every moment. The knowledge of God which we have through its teaching keeps us moment by moment. For this I thank God, and I am also grateful to Mrs. Eddy for bringing us this knowledge.

Mrs. Ida A. Morse, Winchester, Cal.

I wish to add my testimony to the benefits received through Christian Science. As a child I suffered from weak nerves, and a few years ago a fever left me a complete physical wreck. After trying all that *materia medica* had to offer, I became hopeless, when through the instrumentality of kind friends I was led to try Christian Science, with the most remarkable results.

From being pessimistic I have become optimistic, and my life has again become happy. Not only myself but my entire family have received benefits. For all the peace and harmony I am truly thankful to God, and also grateful to Mrs. Eddy not only for the physical healing but for the spiritual discovery.—Leona M. Basse, Milwaukee, Wis.

From childhood I suffered from a weak heart, and as I grew older I continued to manifest weakness of the nerves. I was carefully guarded by my mother from anything that might disturb me, and grew up taking much thought about my body. I was morbid and melancholy and as a result very selfish. I did not improve in spite of all the watchful care given me, but instead the ailments developed into a stomach trouble. Any undue excitement or overexertion brought on an attack which would last several days, and during this time I could not retain any food.

At last (about five years ago) I had an attack which was not overcome for several months, not until God led me to Christian Science, as revealed through Mrs. Eddy. During this long attack I was able to retain food, but could not digest it, and even my throat seemed to be affected. I slept very little and my mental condition was even worse than the physical. I had the aid of physicians, also the tender care of loving parents, and took a great amount of medicine. My brother, a minister, would hold regular seasons of prayer for me, both at home and in his mission. Those seemed hard days, and when I saw that medicine was not meeting this trouble, I went to God and prayed as well as I knew how for Him to help me.

I had promised to be married in the summer (this was March), and I could not believe it to be a very wise action in view of my condition; but I continued to pray day and night

Digitized by Google

that God would not let me leave my home unless a way could be opened up in which I might be a helpmate and not a burden. In June I was married, although still in that wretched condition of mind and body, and came to Cleveland. The morning that I arrived I met a Christian Scientist, and it did not take me long to see that God had led me and that He had opened up the way whereby I could be healed. I accepted Christian Science joyfully and without a regret for *materia medica* or even an inclination to return to it in all the months of waiting upon God which followed. In our text-book, "Science and Health with Key to the Scriptures," our Leader has told us to "wait patiently for divine Love to move upon the waters of mortal mind, and form the perfect concept. Patience must 'have her perfect work'" (p. 454). It was fully two years before I could say I was absolutely healed. I had a great deal of earnest, faithful work done for me, and through it all I was led to depend upon God in the working out of problems and not upon person. I was taught not only to seek but to strive, and through this individual effort I gained more patience, fidelity, and moral courage.

I was healed of my unhappy condition and uplifted by the truth better to comprehend God, man, and the universe. Later I received class instruction, and this made clearer to me the wonderful truth given us in Christian Science. I write this in deep gratitude to God (who always hears us when we seek Him "with all the heart and soul and mind"), also to His faithful follower, Mrs. Eddy, whose interpretation of the Scriptures healed me and is healing thousands of others. I am also grateful to God for each channel through which He sent me help and encouragement. My desire is to be obedient to our Leader's teachings, to heed that message in which she says, "Trust in Truth, and have no other trusts" (*Sentinel*, July 4, 1903).

MRS. PEARL G. ANDREWS, Lakewood, Ohio.

[Translated from the German.]

For years I suffered with stomach trouble, which, as several physicians assured me, had become chronic. I had always resorted to medical treatment, and consulted the best specialists, but none of them were able to help me. In the fall of 1910 my attention was drawn to Christian Science by a dear relative, and through the reading of *Der Herold der Christian Science*, and other literature, and attending the services and meetings, as well as through having treatment from a practitioner, I was led again into the right way—led to God—and entirely freed of my troubles. I am deeply grateful to God, also to our beloved Leader for the blessings which have come to me through Christian Science.

C. ACKERMANN, Berlin, Germany.

In the prophecy of Isaiah we have this promise: "Fear thou not; for I am with thee;" and in Science and Health Mrs. Eddy says: "If Christ, Truth, has come to us in demonstration, no other commemoration is requisite, for demonstration is Immanuel, or 'God with us'" (p. 34).

Christian Science came to me in an hour of great need, when discouragement seemed to be an ever-present companion, when I felt hemmed in on all sides by fear, sickness, worry, and pain. I had passed through several years of bondage to numerous physical disorders, some of which were of a chronic nature. Material remedies and methods were given a thorough trial, but I grew worse rather than better. Finally, after suffering for several days with a painful attack of neuralgia, I went to the home of a Christian Science practitioner who lived near me and asked for treatment. The healing was almost instantaneous, and as soon as I reached my home I went to the table and ate dinner, which was the first food I had taken for several days.

A short time before this the word "Immanuel" was vividly impressed upon me in a dream, but I did not know or realize that the word meant anything. In reading a Christian Science *Journal* which the practitioner handed me when I was leaving her home, I found an article entitled, "Immanuel," and there learned that it was not a meaningless word, but that it meant "God with us;" it showed me that God is really with men, for He is infinite, ever-present Love. This, with the healing I had experienced, awakened such a desire to know more about God that I began at once to seek and to find more of this wonderful truth.

I found that "Science and Health with Key to the Scriptures" explains how God, Mind, Life is with us, and while reading the book the third time I discovered that I was free from rheumatism which had crippled my arm for about three years. This proved that the knowledge or consciousness of divine Love's ever-presence is applicable here and now, in every hour of need, when we awaken to know and understand and demonstrate this truth which makes free. Then and then only do we find the way out of all fear, sickness, and suffering.

In the eight years which have followed the above experience, many trials have come to me, but with every one was a more convincing proof of God's care and protection, and there have been wonderful cases of healing in God's way. I feel that deep gratitude is due our revered Leader, who has given to all mankind the wonderful text-book, Science and Health, which shows the way out of the bondage of wrong thinking with its attendant suffering, into "the glorious liberty of the children of God."

MRS. CAROLINE W. EVANS, Ottumwa, Iowa.

When Christian Science was recommended to me as a remedial agent, I was a very sick woman, neuralgia, heart trouble, and weaknesses peculiar to women being the predominant troubles. The doctors (and I had many) were able to give me but temporary relief, and that by hypodermic injections. My healing in Christian Science seemed very slow, as I had accepted it only for physical results, and I clung very tenaciously to the "old man with his deeds;" but as soon as I was willing to become as a little child and to believe that "it is the spirit that quickeneth; the flesh profiteth nothing," the healing came with joy in its wings.

I continually give God the glory that I am not only a well, strong woman, but that I can also help others to know that man in God's image cannot be sick or discordant. "Science and Health with Key to the Scriptures" has opened up the Bible to me in a most glorious manner. All my life I had listened to sermons which touched very lightly on God's love, but gave most startling accounts of His wrath and vengeance and how He sent all sorts of disaster and sickness to His chosen ones in order to prove them. I had also been taught to believe in a powerful devil that was ever ready to seize us if we succumbed to temptations. Often after hearing such a sermon I was afraid to go out; but, thanks be to God, Christian Science has taken away those false concepts and has given me a God so full of love that He cannot behold evil. It has also proven to me that if, as Mrs. Eddy bids us, we keep our consciousness "filled with Truth and Love" (Pamphlet, What our Leader Says), we shall not know the devil, evil. Every day new beauties unfold in my consciousness of God's love, omnipotence, and omnipresence. Our dear Leader has made it very plain to all who wish to study her works that Jesus' teachings are ever to remain operative and that he meant all he said when he told his followers that the works he did they should do also. But in order to follow Jesus' teachings we must live the truth and not merely preach it.

I cannot begin to enumerate all the blessings that are mine, but the greatest is the mental regeneration. In clinging to the thought that "the earth is the Lord's, and the fulness thereof," I have been helped greatly when a sense of lack presented itself to me, and the supply has been bountiful since I realize that it is in Mind. My love and gratitude go

Digitized by Google

out to Mrs. Eddy, who proved herself such a willing channel for the spreading of this grand new-old truth which heals all our diseases. I am also grateful to the Christian Science Publishing Society for the beautiful messages they send through the literature each week. Before the *Monitor* was sent forth it seemed impossible for me to keep abreast of the times, as the daily papers were so depressing that I did not care to read them; but now the dear *Monitor* gives me all the information I care for. Its pages are fraught with instructive journalism. The "Home Forum" page is most interesting as well as educational. I also wish to pledge my fealty to and cooperation with the Board of Directors of The Mother Church.

MRS. MARIE A. ROBERTS, Bronx, New York, N. Y.

It is difficult for me to enumerate the many times when Christian Science has benefited me, for it has been a continual help since I was twelve years old. At that time this truth was brought into our home through the healing of my father after he had been given up by the best doctors in Kansas City, Memphis, and other places. I am indeed very grateful that I had the privilege of becoming a Christian Scientist while yet a child. I could mention the overcoming of a severe attack of mumps, and spells of very severe headache. In looking back over these years, I can, however, see that Christian Science has been to me a daily preventive of disease.

But that for which I am most grateful is the understanding I have gained from the study of the Bible and Science and Health. The fact that God is omnipresent intelligence has been my daily help. In a ward school, then during four years of high school study, and later four years of work in a well-known eastern college, this understanding has helped me over every rugged place. A year and a half ago, when I was asked to teach a subject which had never been my favorite one, it seemed as if I could not do it; but immediately the thought of the supreme intelligence constantly guiding me asserted itself, and I accepted. I have been successful in this work and have learned to love it. The credit for this I give to God, the infinite Mind. In my class-room it is such a beautiful privilege to manifest this ever-operative intelligence in my work and to help my pupils to reflect it also.

Another thought which has helped me is that God is Love. It is indeed easy to find Love reflected when we first manifest it ourselves. I hope I may express my gratitude to God, also to Mrs. Eddy for this truth, by daily striving to gain more of this spiritual understanding which leads into all truth.—ANNIE SHUCK, Fort Worth, Tex.

[Written for the *Sentinel.*]

MESSENGERS.

MADGE ELDER.

JUST because a little snowdrop raised her head above the snow,
Just because a dancing sunbeam touched a pale cheek into glow,
Just because one bird is singing in the woodland sweet and clear,
We have caught the whispered message, "Lift your heads, for spring is here!"

Just because one hope has blossomed in the snows of chill despair,
Just because a smile like sunshine made one moment all things fair,
Just because a voice is singing where was silence cold and drear,
We have caught the whispered tidings, "Wake, O hearts, for Love is here!"

FROM OUR EXCHANGES.

[*Universalist Leader.*]

In one of his fine moments Amiel wrote that the center of life is not in thought, nor in feeling, nor in will, nor even in consciousness. For he says that moral truth may have penetrated all these and yet it may escape us. "Deeper than consciousness," he tells us, "there is our being itself, our very substance, our nature. Only those truths which have entered into this last region, which have become ourselves, become spontaneous and involuntary, instinctive and unconscious, are really life; that is to say, something more than prosperity. So long as we are able to distinguish any space whatever between the truth and us, we remain outside it. The thought, the feeling, the desire, the consciousness of life are not yet quite life." We have here a series of advances in truth, through which we gradually pass from a purely mental process of appreciating an idea or truth, to a state of experience where that idea or truth has perfectly blended in our constitution. We do not think of ourselves any longer as holding the opinion or believing the truth. It has lost its identity, to find expression in life and character.

All truth which takes great hold on us and masters us must travel this road from the mind to the very center of being where things are not believed but are lived. In the last analysis truth is inseparable from life. It is because so much of truth never gets beyond the first or second step in this advance that it is so impotent and ineffective. Here is the exposure of all of that form of religious experience which is expressed in the idea of belief, or in the realm of emotion.

[Rev. Frederick K. Howard in *Living Church.*]

It goes without saying that this is the age of the social epoch in the evolution of society. It will be recognized by impartial students that there are two factors in the working out of the equation, which is nothing less than the coming of the kingdom of God. 'Tis needless to state that these factors are the church and the social movement. What is their relation to each other? That belated type of Christian, the individualist, maintains that they have no relation. To him the social movement is secular and worldly, while the church is sacred and other worldly, its chief concern being not to save society, but to save individuals out of society.

The so-called regular or scientific socialist asserts that the social movement is due to and concerned with purely material, industrial, and economical forces and results. To him, religion is either a buttress of capitalism to be destroyed or a relic of superstition to be treated with contemptuous indifference. To those thinkers and workers whose minds are free from the tyranny of the "closed question," it is patent that the church and the social movement are both factors and that each implies the other and needs its cooperation.

[*Independent.*]

The man whose worldly prosperity makes him think he must have an elaborate home, elaborate food, and elaborate entertainments in order to be comfortable, is feeding the body and starving the soul. True culture is not found in fashions, but in a sympathetic appreciation of beautiful things; and if a man finds delight in the view of a daisy-white meadow, a violet-tinged glen, in poetry and art and music, and in the play and prattle of children, or a stimulating conversation, he has riches which a millionaire cannot buy with all his money. In other words, if a man will only pause for a little space every day upon the breeze-swept hilltop of the present and look about him at the view and find it pleasant, breathing in the sweetness and sunshine of life, he will then find that the path to contentment, flower-bordered and inviting, lies close at his feet, luring him to follow it.

[*Cincinnati (Ohio) Enquirer.*]

Brighter and brighter the light of Love is shining as man becomes more and more at one with God. As the "resurrection" of man goes on, the truth of Paul's statement that "in him we live, and move, and have our being" becomes clearer. Men soar in aeroplanes to reach the sky and build skyscrapers hundreds of feet above the street, but they do not now attempt thus to reach heaven or to see the mysteries of God. The old materiality of Babylon is fast disappearing and we are knowing more and more that we must reach God, the Supreme Being, spiritually and not with towers that pierce the sky. Paul, who saw the great light and knew the meaning of His love, said that "unto them that look for him shall he appear the second time without sin unto salvation."

[*Outlook.*]

No change in theological thought has been more radical than the change from the conception of God which characterized the church in the eighteenth century and made deism possible—an absentee God who put in occasional appearances in the world's history, a great First Cause who set in operation a number of secondary causes with which He from time to time interfered—to the conception of God as the universal presence, the one universal underlying cause, from whom all phenomena proceed; the great companion, as truly present in the life of the twentieth century as in the life of the first, and in the experience of the farmer, the merchant, the engineer, the mother, as in the experience of the prophet or the preacher.

[*Congregationalist and Christian World.*]

If quality is a factor of increasing importance in trade, it ought also to be the distinguishing mark of a religion which seeks world-wide acceptance. We must cultivate and expect a better brand of Christian discipleship before we can expect the world to own allegiance to the perfect Christ. When the millions who bear his name carry his spirit into all the details of their life, when the average Christian exhibits the strength and fineness of character that plainly have their source in relationship to an unseen friend, a demonstration of the reality and power of the Christian religion will be given daily in countless places the earth around.

[Rev. J. Harvey Murphy in *Christian Intelligencer.*]

Jesus stands out a grand, solitary exception of beneficence in the midst of a world of selfishness. His life is a beautiful embodiment of that charity which "seeketh not her own." There is not an instance on record in which he appears to have proposed his own private good as the end either of his actions or his sufferings. He came to live and to die for others, and those enemies and sinners. His miracles were not merely ostentations of power, but always expressions of goodness, love, and sympathy. So great and so unparalleled was the beneficence of Christ that its virtue and power operate now and will do so throughout the ages.

[Rev. Joseph H. Bradley, D.D., in *Christian Work and Evangelist.*]

No man is giving God an acceptable service when his spiritual or religious doing is not spontaneous and with joyful alacrity, for God is not a slave driver, but a most loving Father, whose whole desire is that His children shall serve Him in gladness, and without any sense of a burdensome necessity and oppressive obligation, but only with ceaseless delight. Multitudes, multitudes of professed children of God, are laboring in chains of "duty," of "Christian obligation," of mere formal observance, and the coercion of fear lest they should come short of a sufficient work of obedience. Such are only in bondage.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

For some time the postage required for subscriptions outside of United States territory has exceeded the amount added to the regular subscription price for this purpose, and an increase in rates sufficient to cover this deficiency is now deemed necessary.

Beginning April 1, 1912, therefore, the rates on all subscriptions outside of United States territory will be as follows: For Canada, *Journal* $2.25, *Sentinel* $2.45; for all other countries, except those to which the domestic rate applies, *Journal* $2.65, *Sentinel* $2.95.

Renewals for all subscriptions terminating before April 1, 1913, and received by us prior to July 1, 1912, will however be accepted at the old rates.

The pamphlet "Causation" by Frederick Dixon has been translated into Swedish—"Kausal-lagen"—and is now on sale; 40 pages and cover at the prices of the regular pamphlets.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.25. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large sized book), single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 53 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.20. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the current month unless otherwise specified, and include all issues for the month named as expiration date on the wrapper. XII indicates the year 1912; XIII, 1913. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25— 6: 5 s.: 25.;	Mk. 5.30;	F. 6.45
2.25— 0: 9 : 3 ;	9.50;	11.60
2.50— 0: 10 : 3 ;	10.60;	12.85
4.00— 0: 16 : 5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

The United States representatives to the international radio-telegraphic conference in London, next June, have been announced at the state department. The United States delegates will advance a proposition to lengthen the radio wave in distress communications. This is to be urged as a means of avoiding the confusion that marked the wireless work during the last hours of the Titanic disaster. Austria some months ago urged that it was indispensable in the interests of the public use of telegraphy at sea that every ship should be bound by the treaty stipulations to communicate with every other ship without distinction as to the system employed and to accept communications originating from any other ship or transmitted by it from other ships. Austria also urged that each ship, in addition to its dynamo equipment, shall also possess an installation, for cases of distress, of small storage batteries with a capacity sufficient to assure communication at full power for six hours, so that communication may be maintained independently of the power of the ship.

The "tap line" question which has been under consideration by the interstate commerce commission for more than a year, has been disposed of in a report handed down by Commissioner Harlan, in which all members of the commission concurred. The commission for the last four years has been making an investigation of the relations between the railroad companies and small industrial lines that are owned by manufacturing or other plants and which receive allowances or divisions from the carriers sufficient in many cases not only to pay their operating expenses but to return handsome dividends on the investment. In the course of the investigation more than two thousand industrial railroads were looked into upon complaint of industries in the Southwest that were not receiving such allowance.

Authorizing the appointment of a joint committee of the two houses, which shall report a general parcels post bill at the beginning of the next session of Congress, the House, after a long debate last week, agreed upon an experimental parcels post for strictly rural routes, and a general parcels post, which extends to domestic shipments of fourth-class mail matter at the International Postal Union rate of twelve cents a pound for packages weighing not more than eleven pounds. The rural route parcels post will handle packages of the same weight limit at a rate of five cents for the first pound and one cent for each additional pound. The action of the House is a compromise between the different advocates of various schemes of parcels post legislation.

Harvard's class of 1912 will be the last to hold its commencement festivities under the elms. After class day every elm in the quadrangle will be cut down, in order to make room for the sixty-four small red oaks which are now being transplanted. The aged elms have not improved during the past few years, and this spring only one or two show any signs of life. The authorities have decided that the elms are hopeless and that they must be removed. The young oaks average about twenty feet in height and three inches in diameter. This group of trees should afford considerable shade within five years, but a generation will pass before the new trees attain to the size of the elms.

Dissolution of the International Harvester Company and its seven subsidiaries is sought by the government in a bill just filed in the United States district court. Eighteen directors are named as individual defendants. The petition charges that the combination "in and of itself, as well as each and all the elements composing it, whether corporate or individual," has violated both the criminal and civil provisions of the Sherman antitrust law. As a remedy the court is asked to restrain the movement of the products of the combinations in interstate commerce or appoint receivers to wind up the business and readjust affairs in accordance with the law.

The deficit of the federal treasury for the current fiscal year is $12,580,000. A month ago it was $1,032,000, while at the close of April last year the government had a surplus of $1,570,000. The receipts for the month of April were $53,100,000. In March, receipts exceeded expenditures by $10,638,000.

Both houses of the Arizona Legislature have passed an amendment to the constitution providing for the recall of the judiciary, and Governor Hunt has signed the bill. The vote in the House was unanimous. In the Senate there were two dissenting votes.

By passage of the bill granting the Boston & Providence Railroad Corporation authority to issue eight million dollars in bonds, electrification of all the roads entering Boston may be started immediately.

By failing to report an appropriation for the recently created commerce court, the House committee on appropriations seeks to abolish that tribunal.

International.

As evidence of the forward movement to build up rural New Brunswick, the Legislature has enacted a bill providing for ready-made farms to be sold at cost to new settlers, twenty-five per cent down and the balance in ten annual instalments. The plan will be carried out by a farm settlement board of three persons, who are authorized to borrow one hundred thousand dollars to begin operations, the province to pay out of its revenues both interest and principal. It is announced that sixty thousand apple trees will be set out in the province this year, compared with forty thousand last year.

Ever since M. Dupuy's appointment as minister of public works he has been actively occupying himself with the question of the scheme for the electrification of the suburban railway services of Paris. In the month of March, 1910, the state railway officials submitted a scheme for carrying out this work. Since then it has been considered by a technical committee. The formal reports have just been filed and the minister of public works has forwarded a scheme to the "Conseil d'Etat," where it is to be declared to be a necessary work of public utility.

The fate of the proposed Canton-Macao railway is now in the hands of a group of local Chinese promoters, who are advertising for capital in the native papers, according to the report of Consul General Leo Bergholz, stationed at Canton. A survey of the route has been completed and in all probability the actual work of construction will be started in the near future. The line will start at Tai, which is across the river from Canton, and will take a course almost due south, passing through the districts of Shuntak and Hungshan. It will be about seventy miles in length and will open up one of the richest districts of south China. A thirty-mile branch will connect the main line at Chentsun with the Sunsing railway at Kongmoon, via Kankong.

Coincident with the prosperity now being generally experienced in South Australia, a number of important and costly public works are in progress. For the most part these consist of improvements to the various harbors and ports and water conservation and reclamation works. The estimated cost of the undertakings in hand to be paid for out of loan funds is £571,173, of which £119,88 has already been spent.

The inauguration of the new Campanile of St. Mark's at Venice, to replace that which fell ten years ago, took place April 25 in brilliant weather and assumed a character of international importance. Italians and foreigners arrived by thousands on special trains and in boats from both sides of the Adriatic. The whole city was gay with flags and hung with and decorations of ancient damask and tapestries.

There is a report in Russian circles in London that the Russian government is not giving a very sympathetic reception to the invitation to participate in the Panama-Pacific exposition, and that American action with regard to the Jewish passport question has something to do with this attitude.

Industrial and Commercial.

An overproduction of potatoes in Germany in recent years has led the industrial community of that country, says *Scientific American*, to make great efforts to devise means of utilizing the surplus of the crop. This problem is being solved successfully in two ways: first by stimulating the use of potato spirits as a fuel and illuminant, and second by a great extension of the various processes of drying potatoes, for use both as a food and in the arts. According to a recent consular report, there are now four hundred and thirty-six plants established in Germany for drying potatoes, with an estimated annual production of 110,230 to 165,345 short tons. Of these plants three hundred and fifty are for the production of potato flakes, while in eighty-six the potatoes are dried by the hot-air process. Potato flakes can be used for feeding stock, for distilling alcohol, and making starch, and for the other purposes for which natural potatoes are used; or they can be ground and bolted to make potato flour. This flour is a yellowish-white product, rich in carbohydrates, and is used principally by bakers for adding to rye and wheat flour in making bread. It is claimed that the addition of potato flour gives the bread a good flavor and keeps it fresh for a comparatively long time.

Work begins this month by the Chicago, Milwaukee & Puget Sound railroad on the construction of a three-mile tunnel through the Cascade mountains. The work will cost almost five million dollars. The tunnel will shorten the line seven miles and eliminate the heavy grade at the summit.

The trials of sugar beet growing in Shropshire, England, which were undertaken by the Harper Adams Agricultural college at the request of the board of agriculture, have proved very satisfactory, an enormous crop having been obtained in an unfavorable season.

Rothschild oil interests have obtained a lease on Southern Pacific land facing the outer harbor, and purpose making Los Angeles the seat of competition against the Standard Oil Company.

The estimated annual loss to farmers through insects is now about eight hundred million dollars a year.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"THE PROBLEM OF POVERTY."

MABEL S. THOMSON.

It is being daily borne in upon Christian Scientists, very largely no doubt through the instrumentality of the *Monitor*, that the Christian Science movement is inevitably destined to take a leading place among the forces which are shaping the development of human thought in its emergence, socially and economically, from the restraints of the past into a better conception of liberty and freedom. On page 97 of Science and Health, Mrs. Eddy draws a vivid picture of the conflicts which must arise during this transitional period, and states that Christian Scientists "will maintain law and order" among these chaotic conditions. This being so, it is essential that Christian Scientists should be prepared to undertake this work, and the first step in this preparation seems to be to gain some knowledge of the nature of the problems which are being brought forward.

It appears, to the writer at least, that, roughly speaking, Christian Scientists may be divided into three classes,—those who give themselves wholly to the work of healing, and who see no direct relationship between Christian Science and the problems of "the world without;" those who are inclined to allow their interest in these problems to become of the first importance, Christian Science being relegated to the second place, and those who recognize that the demonstration of Christian Science is the only method by which the increasing difficulties of the social, economic, and industrial world can be settled.

In a recent issue of a well-known weekly newspaper there appeared an article headed "The Problem of Poverty," which suggested very pointedly the fact that a man makes his own conditions far more than the conditions make the man, and that the moral solution of the question is of infinitely greater value and importance than the merely economic one. The writer of the article makes it quite clear, however, from his point of view, that the moral remedy is quite apart from the economic remedy, and in this view agrees with most other writers on this subject, who are generally, if not entirely, far more concerned with discussions on various methods of state aid than with any moral aspect of the case, and it is here that the Christian Scientists, whom the present writer has placed in the second of three divisions, become confused in their conception of the attitude of Christian Science toward all methods of reform, for unconsciously they accept the statement that there are two distinct fields of operation; or, to get at once to the root of the matter, that the mental and physical factors are separate and should so remain.

It is well just here to acquire some definite idea of the nature of the evils which cry aloud on every hand for reform, and the general consensus of opinion is, that while no doubt moral qualities are ingredients in the whole, the principal and prevailing trouble is external to the individual, and therefore that the remedy must also be external. Indeed many will go farther and say that the moral defects are also due to an external cause, the lack of education, and that better education will eradicate them. Thus we have at once a multiplicity of suppositional causes and an interminable procession of proposed cures.

For the purpose of this article it is legitimate to explain that the underlying cause of much of the unrest and trouble affecting every civilized country today is the fact that the world is divided into two classes, Dives and Lazarus, rich and poor; and many of the efforts at reform are impelled by the desire to "level up," or to "divide up." A glance at this point into the methods hitherto pursued in the effort to right wrongs, will bring us to the crux of the whole matter. The history of civilization is the history of the gradual uprising of Demos, of the conviction that a man has no right to tyrannize over his fellows, religiously, socially, or economically; but, although the general tendency has been toward greater freedom, one form of tyranny has only been broken to give place to another. The French revolution affords the most dramatic illustration of this truism, for the tragedy was carried through in so short a space of time,—from the taking of the Bastile to the close of "the last phase" on St. Helena; but it does not need the eye of a prophet to foresee that rabid assaults upon the existing order of things, in spite of much sincere desire to advance the good of humanity, would, if carried to their logical conclusion, follow the same course. Now for the student of Christian Science the reason for the failure of all these efforts in the direction of the elimination of class and property distinctions, lies in the fact that the world has believed in the reality of evil and has fought it on that ground, and so long as evil is fought as a reality it will never be destroyed, it will only change its forms.

Here, then, we come to the parting of the ways. The Christian Scientist who has gained through practical demonstration at least some small understanding of metaphysics, realizes that no real headway can be made at all in the emancipation of the human race, unless it is fully recognized that the conditions against which he is contending are entirely mental,—that poverty and riches, slums and palaces, luxury, inequality, oppression, greed, license, lawlessness, one and all, are only different phases of that state of mind which insists that there is more than one Mind, more than one power, and that the name of this mental state is fear. Once this fundamental truth becomes a conviction, the Christian Scientist understands that, however much may be done toward the improvement of external conditions in the question of wages, housing, extending the franchise, and so on, these efforts can in the very nature of things only be dealing with effects; and that, if he can bring genuine Christian Science healing to one individual who is bound by any of these forms of evil, and the sickness resulting therefrom, he has done more to advance the cause of reform than all the combined attacks upon evil as a reality have ever done, and this for the reason that he has opened a way in individual consciousness for the activity of the Christ, which alone uncovers and destroys the root of all evil, through what St. Paul called the "renewing" of the mind.

Some little time ago a man out of work applied for help to a Christian Scientist, and the latter, knowing that the appli-

Copyright, 1912, by The Christian Science Publishing Society.

Digitized by Google

cant professed some knowledge of Christian Science, asked him some questions as to his method of setting about finding work. He soon found that, whatever the man's intentions may have been, actually his whole attention had been concentrated for weeks on finding employment, with no result. So the Christian Scientist reminded him that one who knew more about life than any other man, said that the first thing to be done was to seek the kingdom of God; and he added, "Now, I understand that you have not been looking for the kingdom of God at all; you have only been looking for work." He then advised the man to go forth and, instead of thinking about himself and his own needs, to try to supply some one else's need. This advice was followed, with the result that work was soon found. The present writer was lately discussing these questions with an employer of labor on a large scale, and asked his opinion on the subject of women's wages. The reply was, that if women were paid at the same rate as men, he should cease to employ them, as their health was so uncertain as to make them unreliable workers; a state of things which instantly shows the Christian Scientist where the reform needs to begin, and that when through a more general understanding of Christian Science a better standard of health prevails, the settlement of the question of the wage of women will have begun.

The scope of an article of this kind does not of course permit of more than a brief attempt to indicate some of the most obvious points which occur to one in thinking about these matters, nor is it offered as anything more than the result of some individual conclusions drawn from observation and the study of the Christian Science text-book, and with the hope that others, better qualified to do so, may be induced to add to the general knowledge of the field on this most important subject. Whatever may be accomplished by legislation and general education for the improvement of human conditions and the administration of justice (in all of which every one should be interested), the healing of the individual, whether in health, in morals, or in business, and the consequent regeneration of character, alone can reform the community. The objection is of course raised that such a method must be slow. But is it so? Compared with the spread of other systems of religion or reform, the active influence of Christian Science is increasing at a phenomenally high rate, and will, if Christian Scientists are faithful, not only "test all mankind on all questions," as Mrs. Eddy says in "Miscellaneous Writings" (p. 114), but will speedily regenerate them. And from Matthew Arnold comes this reassuring word:—

> Nor will that day dawn at a human nod,
> When, bursting thro' the network superposed
> By selfish occupation—plot and plan,
> Lust, avarice, envy—liberated man,
> All difference with his fellow-mortal closed,
> Shall be left standing face to face with God.

AN APPRECIATION.

W. STUART BOOTH.

ONE of the most common complaints heard from students of Christian Science is that of lack of time. All too often is this argument of error used as a cloak to cover our negligence in reading and studying, not only our text-book, Science and Health, but the regular publications of the Publishing Society. Christian Scientists are awakening more and more to the fact that a knowledge of God and His unchanging laws is the one "pearl of great price," to obtain which our Master advised us to sell all that we have and purchase it.

In reply to the question as to how to progress most rapidly in Christian Science, our revered Leader tells us on page 495 of Science and Health, to "study thoroughly the letter and imbibe the spirit." As aids to our study of the letter, as set forth in the Bible and Science and Health, our wise spiritual guide has given us the *Journal*, with its German sister, *Der Herold*, published monthly, the weekly *Sentinel*, and the daily *Monitor*. These publications, each filling different spheres and answering different needs, cover the field most completely. The comprehensiveness of our literature is an added proof of the divine guidance of the Discoverer and Founder of Christian Science in her God-appointed labor. It seems almost a necessity that we be supplied with the news of the day, and this is given us in the carefully edited columns of the *Monitor*. The *Sentinel* comes to us filled with bright and helpful thoughts for our daily work, while the stately *Journal*, the official publication of The Mother Church, is laden with the fruits of its contributors' lives and study. It is probably the well-nigh universal custom among students of Christian Science, upon receiving the various publications, to turn first to the editorial columns. As the editorials in the *Monitor* deal in an intelligent, impersonal, and therefore instructive manner with matters pertaining to the world's social, civil, and business relations and affairs, so do the editorials in the *Sentinel* and *Journal* meet the same needs in regard to problems in connection with our church and all other duties and activities. There is encouragement for us likewise in the extracts "From Our Exchanges," since these indicate clearly the change which is going on in the theological thought of the world, a transition from the old-time narrowness of creed to the more liberal ideas with which Christian Science has leavened the thought of men.

Again, even though we ourselves are fully convinced that we have found the way to God and His heaven,—yea, though we are daily proving this in the healing of sickness and the destroying of sin,—still we often find inspiration for this healing work in the perusal of the pages devoted to "Testimonies of Healing." Gratitude is the open gate to God, and the overflowing of gratitude in these columns is meant for and will bless the older student of Christian Science as well as the one yet to be persuaded. The "Selected Articles" are well named, for they are select, indeed, and contain much of real practical value to the working Scientist—and there is no other kind.

Our literature is complete in its work and expression, and we can ill afford to miss any part of its message.

FINDING REST.

R. M. STROTHER.

WHEN the Master said, "Come unto me, all ye that labor and are heavy laden, and I will give you rest," he spoke for Christ, Truth, as he declared, "I can of mine own self [the corporeal Jesus] do nothing." Christ Jesus gave to mankind the right idea of God, man, and the universe, the truth about substance, law, power, and action, the right idea about everything. To gain the true idea is to find our true selfhood, which Paul says, in his epistle to the Colossians, is "Christ in you, the hope of glory." To come into the understanding which reveals the fact that God and His thoughts, Mind and its ideas, constitute the sum total of being, enables us to see that it is good, wholly spiritual, perfect, complete, imperishable, and harmonious. It is this spiritual understanding, or right knowledge of God and of His universe, which lifts the burden and destroys the belief of being heavy laden, by establishing in our consciousness a sense of harmony and of the ever-presence and all-power of God, good. God does not impose burdens upon His offspring, for man's God-given inheritance is liberty, peace, joy, and other fruits of the Spirit.

"Mind is God" (Science and Health, p. 469); and the one infinite, all-inclusive Mind which is the source and primal cause of all that is actual and real and good, includes and animates nothing unlike itself, nothing that is not eternally good, eternally perfect, eternally harmonious and indestructible. It then follows, that whatever presents itself as something which is not good, or which is not included in the one Mind, is necessarily unreal, and through this spiritual

Digitized by Google

or right understanding of God we find escape from false belief, and rest.

Through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, we learn that all being is consciousness, not matter; therefore man is consciousness, not matter. Consciousness includes the activity of right ideas, of right thoughts, and these thoughts are always externalized in right conditions, socially, physically, and otherwise. Everything of which we can conceive existed first as thought or in thought; all that we see is simply thought externalized, and thought being the fruit-bearer, every thought bearing fruit after its kind, it is optional with us whether we shall "toil along the climbing way with painful step and slow," heavily laden with the product of erroneous thoughts, or seek the Christ and find rest here and now. In our Hymnal we read,—

Look now, for glad and golden hours
Come swiftly on the wing;
O rest beside the weary road,
And hear the angels sing.

SOUL NOT IN BODY.

EDITH FULLERTON SCOTT.

THE current theological conception that death sets free a man's soul from his body, and that this soul then awaits the judgment day to determine whether it is to partake of the joys of heaven or be banished to the tortures of hell, often haunts those who are beginning to study Christian Science, for we cannot at once rid ourselves of our old, hampering beliefs. Even when we have apprehended that heaven and hell are states of consciousness, not definite localities, we still have some uncertainty as to just what does happen at death. We may say, glibly enough, that death is an illusion, that it neither gives us anything, nor robs us of anything; we are very ready to admit this, yet we have a lurking suspicion that it does at least strip us of our bodies of flesh and blood and that our souls are thus set free of earthly trammels and are in a clearer spiritual atmosphere which is better adapted to our aim, namely, the purification of the soul.

But then, in our reading, we come across this statement: "Soul is sinless, not to be found in the body" (Science and Health, p. 288), and we begin to feel hopelessly at sea. What is the body without a soul? Then we read on until it dawns on us that man has not a soul imprisoned in matter, neither has he a material body in which it can be confined for a term of years, and from which it is liberated by death. If this were the case, death would be a friend, not an enemy to be destroyed. No! man reflects the infinite Soul, God. Man is the idea of Mind, and it is this, and not a material sense of personality, which confers upon him true individuality. Man has not a material body. If he had, and it was to be separated from him by death, what would be gained by the demonstration that Truth can heal the body? Why trouble to perfect that which is not eternal? We might just as well patch it up with drugs and ointments to keep it together until we are ready to discard it.

Man's being is spiritual and of God's creating. What it is like we do not know, for, since "no man hath seen God at any time," it follows that no one has seen the divine image and likeness, man. But we do know that that which is laid in the grave and returns to dust is only the false human concept termed matter, and not something which at some remote period "is raised a spiritual body." As well might one expect to sow tares and raise wheat! That wonderful fifteenth chapter of first Corinthians loses its force if materially interpreted. It is quoted at funeral services to bring comfort to the mourners—to show in what a blessed state are the dead, for the resurrection awaiteth them. But is this what Paul meant to convey? Let us see. To the question, "How are the dead raised up? and with what body do they come?" his reply, commencing with the epithet, "Thou fool," betokens scorn. He goes on to say, "That which thou sowest is not quickened, except it die;" that is, until sin dies, the consciousness remains material, and death, being "the wages of sin," cannot give place to the resurrection. It is only when sin is overcome that the perfect man appears, and as one is not advanced spiritually by yielding to sin, so is the consciousness not quickened (made alive) by submitting to death. Mrs. Eddy says, "Death is not the result of Truth but of error, and one error will not correct another" (Science and Health, p. 486).

There is but one Spirit and there is but one body. This we have on the authority of Paul: "By one Spirit are we all baptized into one body," and this one is revealed only as mortal man grows in understanding. In Christian Science we are taught that mortal mind and mortal body are synonymous, and Paul bears this out when he bids us "put off . . . the old man, which is corrupt according to the deceitful lusts; and be renewed in the spirit of your mind; and . . . put on the new man, which after God is created in righteousness and true holiness." Paul knew that this is the way that this corruptible puts on incorruption and that this mortal puts on immortality, for "now is the day of salvation," and thus it is that "death is swallowed up in victory." Again Mrs. Eddy says, "Not death, but the understanding of Life, makes man immortal" (Science and Health, p. 485).

The real man is one with the Father. Material belief cannot separate him from God, and death cannot reunite him with the Mind that made him, for he always has his being in that Mind. Let any one try to imprison a sunbeam under a flower-pot. Let the sun represent God, the sunbeam represent man, the flower-pot, mortal mind. When the flower-pot is inverted the ray is not imprisoned under it, it is not separated from the sun; it continues its course, irrespective of the flower-pot. Likewise, mortal mind cannot affect God or His reflection, man. It can only for a time thrust its material beliefs of a mind in matter in the place of the spiritual and eternal fact that Mind and its idea are inseparable and that they are to be found only in infinity. Mortal mind cannot confine spiritual sense in a mortal body, it has no effect upon the real man, it merely is itself without light or understanding. Raise the pot a little, and the sunbeam dispels some of the empty darkness. In like manner, do away in a measure with false beliefs—sin, disease—and the body is proportionably less material. Shatter the flower-pot, and the sunbeam dances over the spot that was hidden. Overcome the belief in death, and man, unclouded by this material belief, is seen never to have lost his perfection. But until the belief in materiality and death is overcome—the ultimate reached—man on the other side of the grave as on this will continue to be shackled by a belief in a dying material body. It is only when the Mind that was in Christ Jesus reigns in us that we are numbered among those upon whom "the second death" hath no power. Surely, it behooves us to begin to know Truth now, so that we may the sooner fully grasp man's divine possibilities and, being set free from every limitation, enter upon "the glorious liberty of the children of God."

THE TRUTH ABOUT ERROR.

HARRIETTE HILTON FISH.

WE read in the first chapter of Genesis that God created the earth and everything upon it, and that it was "very good." It stands to reason that a perfect God could have none but perfect ideas, and could make no mistakes in His work which would need rectifying. There is no record of any other creative power, hence everything must still be what it was originally—that is, good, perfect, like its divine creator.

What, then, is all the evil and discord which, according to our senses, surrounds us on every side? Logically, from

Digitized by Google

the Bible record, everything that is, is good. Then if evil is real, it must be good. What a paradox, to think of good as evil! Since this is impossible, the only alternative is forced upon us, namely, that evil is unreal and that our senses bear false evidence. In Christian Science we prove this to be a fact. We thus see that throughout eternity the good is the only real. We cannot alter this fact, and there is no other power which can do so, for God, good, is the only power. All the evil which seems to exist in this world is merely the result of forgetfulness of God, good, or lack of realization of His allness, and when we each let the light of Truth into our individual consciousness, the darkness of error must and will vanish into its native nothingness. The sooner we learn this fact, the better for us, for it is the only way in which lasting health, happiness, and holiness can be attained.

I have been much encouraged, at times when error seemed especially stubborn and slow in yielding to the truth, by acknowledging that it was myself who was at fault, and not the divine Principle of all harmony. I have invariably found, upon analysis, that, consciously or unconsciously (usually the latter), I have been making a reality of error and trying to bring Principle down to my erring thought. That, however, would be impossible, since infinite Spirit is unchangeable in its sphere of action. Spirit recognizes no error to agree with. Mrs. Eddy says, "Even Christ cannot reconcile Truth to error, for Truth and error are irreconcilable" (Science and Health, p. 19). To be in accord with divine Love and receive its endless benefits, we must raise our thought above the clouds of error into the radiant sunlight of Truth, and when we have done this we shall find that the error has disappeared.

LEST WE FORGET.

THOMAS B. GARST.

To attempt to embody in words the beneficial effect of Christian Science on mankind today, seems futile; it needs the inspired thought to grasp even in a slight degree the works accomplished by those loyal students whose lives have been and are consecrated to the healing and to the uplifting of humanity. The burdened sufferer from some secret sin finds strength to overcome the temptation and is freed from his enslaved condition. The person who despairs of ever mastering an ungovernable temper which is driving him to destruction, gains dominion over it. The doubter is taught the truth about God, and his fear is destroyed. The materialist has the spiritual creation unfolded to his thought, and his belief of life in matter is corrected. The revelation of God as omnipotent Mind rectifies the viewpoint of the atheist, and a loving desire to affirm the omnipresence of God, good, replaces his denial.

Christian Scientists have witnessed these reformations in different individuals, and such results of prayer, as taught in Christian Science, do fulfil the promises. The command of Jesus, that heaven-born utterance, "Heal the sick," which has been silenced for centuries, is again proclaimed, and has become a clarion call which is reverberating throughout the world, assembling the sons and daughters of God; in witness whereof stand their mighty works. The reading of the Word alone, imbued with the spiritual understanding given in "Science and Health with Key to the Scriptures" by Mrs. Eddy, is healing thousands; and in obeying this command of Christ Jesus the entire universe has been unspeakably blessed by the Christian Science churches and reading-rooms, and enriched beyond compare by the literature.

This religion is philanthropic in that it embraces within its all-inclusive love the means whereby the wretchedness of poverty and the poverty of pride are alike led to exclaim with the psalmist: "The meek shall inherit the earth; and shall delight themselves in the abundance of peace." Considering the frailty of mortal man and the vanity of all human effort, it is with an overpowering sense of the goodness of God, the compassion of the Christ, the sustaining presence of His grace, and the revealed rule given us by our divinely directed Leader, whereby we may become partakers of the triumphs of Christ Jesus, that impels the writer to express his gratitude to the workers who have done so much for humanity, and for the spiritual regeneration which has come into his own life, enabling him to add his efforts to the ultimate healing of men.

THE EVER-PRESENCE OF GOOD

FRANCES M. GORRELL.

In the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy, we find this statement, "God is everywhere, and nothing apart from Him is present or has power" (p. 473). Many times since my first healing in Christian Science these words have come to me, bringing health, harmony, and contentment in place of sickness, discord, and discontent. I recall one instance, when teaching, that these words were particularly helpful. Things were not going on well in the schoolroom: the children were restless, consequently mischievous, some even to the point of being disagreeable. I had done everything of which I could think—employed all my pet devices for restoring harmony, but all had miserably failed. Then this message came, "God is everywhere, and nothing apart from Him is present or has power." In an instant, as these words flashed through my thought, I knew that because God is everywhere, nothing but love, nothing but obedience, nothing but right action could be expressed, and almost instantly the room was in perfect order.

At another time this understanding of God as ever-present Love cleared the atmosphere of the classroom. A class of young children was given a certain task to perform in a specified time. One little fellow made no move to begin his work, and soon, as nothing was said to him, he became sulky, and after a while book, paper, and pencil all were thrown to the floor with an angry exclamation. My first thought was to treat his conduct sternly, but Truth whispered, "God is everywhere and God is Love." Once again he spoke, refusing to do the work, but over and over again the thought of Love as ever-present was given out silently, and without a spoken word from me the little fellow gathered together his materials and went to work. His task was accomplished on time and his paper was the neatest he ever submitted to me.

I can only echo the words of Mrs. Eddy in "Miscellaneous Writings": "What a glorious inheritance is given to us through the understanding of omnipresent Love! More we cannot ask; more we do not want; more we cannot have. This sweet assurance is the 'Peace, be still' to all human fears, to suffering of every sort" (p. 307).

[Written for the *Sentinel*]

THE FATHER'S LOVE.

STELLA E. SAXTON.

DEAR little bird, lie still, lie still,
O fear-hushed, wounded, broken thing,
That beat against the tempest's rage
And fell to earth, all quivering.

'Tis Love that holds thee in His hand,
To soothe, to heal, to bid thee sing
A sweeter song—for splendid flight
Above the clouds, to guide thy wing.

Digitized by Google

SELECTED ARTICLES.

[Alfred Farlow in *State Journal*, Madison, Wis.]

In a recent issue you reported a discussion before the Saturday Lunch Club which contains the complaint that state legislatures refuse "to enact laws guarding the health of the people, because the Christian Scientists and League for Medical Freedom object to them." The writer is thoroughly familiar with the history of the Christian Science movement up to the present time and is therefore prepared to assure your readers that Christian Scientists never have opposed legislative enactments which could properly be construed as in the interest of public health. Their opposition has been confined exclusively to efforts which have been made by the political portion of the medical fraternity to monopolize the treatment of the sick. We use the term "political portion" advisedly and for the reason that we are aware that the broad-minded and philanthropic portion of the medical fraternity does not favor any such monopolistic methods. In some states attempts have been made to weave into the state laws a definition of medical practice that is sufficiently broad to include all sorts of non-medical practice, and then to exact from those who they insist are not regular practitioners the qualifications of a regular medical practitioner. This amounts to an indirect method of insisting that no one shall have the privilege of treating the sick except the drug practitioners.

Many business institutions have sought legal sanction and protection, but it seems to have been left to the political faction of the medical fraternity to undertake the monopoly of treating the sick by asking the government to give them the entire field by legislating out of the field those whom they believe to be their competitors. If the medical fraternity will confine itself to efforts in behalf of those particular interests upon which the general public agrees, it will find the Christian Scientists ready to cooperate with it. That is to say, Christian Scientists are in favor of sensible sanitation, they are in favor of any measure which will tend to remove the fundamental causes of disease. It cannot be denied that cleanliness of mind and body are the essentials of health, that the morality of the community must be uplifted, that dissipation of every sort must be eliminated in order that health may be assured. But when it comes to the question of how the sick shall be treated, there is no universal agreement, nor at the present time even an approximation thereto, and it would be decidedly unfair to hamper the right of experimentation by legislative enforcement. It has been said by statisticians who have made a special study of the subject, that from one fourth to one fifth of the entire population of this country does not believe in the use of drugs at all but belongs to what has been termed the "non-drugging" classes, and that this number is rapidly increasing, while the numbers of those who rely upon drugs as a means of curing the sick are rapidly decreasing. If we may judge from their action, no doubt some of our doctor friends also are aware of this fact, hence their haste to regulate the public faith in medicine by legal enactment.

Your report declares in substance that the chief executive of our country "has recently opened the isthmus of Panama to Christian Scientists for the supposed cure of disease." As a matter of fact, the Christian Scientists have always had the privilege of treating the sick in the Canal Zone. It was not necessary that the President should create such a privilege, since it already existed. What he did was to refuse to uncreate it. He refused endorsement of an order which was so framed as to prohibit the practice of Christian Science, and we are sure that an overwhelming majority of the public commended his broad-mindedness when he refused to assume the stupendous responsibility of establishing state medicine.

In conclusion I desire to say that Christian Scientists do not oppose quarantine. The isolation of the sick is in strict accord with their practice. As to this practice, Christian Scientists have not needed to receive orders from the government or the municipality. It is a rule of the Christian Science church that all contagious cases shall be reported to the proper authorities and that they shall not be allowed to mingle with others.

[Frederick Dixon in *South London Press.*]

Spiritual healing is healing through the power of the divine Mind; therefore to limit this healing to functional disease is itself undertaking to limit the power of God. As a matter of fact, the medical profession is being driven to recognize more and more every day that all disease is organic, and that all disease originates in the human mind. Whether this is so or not, to argue that functional disease could be healed by an appeal to prayer, and that organic disease could not, would be to take up the position of Stephen Paget, who calmly declares, as a Christian doctrine, that prayer cannot reach the cells of the liver.

The claim of Christian healing is made by Christian Scientists solely in obedience to the demand of the Founder of the Christian religion; and any one will search the gospels, from first to last, without finding any limitations to that command. Jesus himself made no distinction between organic, functional, or nervous disease, and he stated his commands to his followers in the distinct order to preach the gospel and to heal the sick, declaring that those who believed in him, obviously who understood his preaching, would be able to do the works he did, obviously to demonstrate their understanding of that preaching.

The clergyman may begin by working with doctors, but he will very soon find that his patients are relying quite as much upon the doctor as upon prayer, and gradually he will begin to perceive what this means. If prayer can heal the sick, if an understanding of Jesus' teaching can do the work Jesus did in the first century, there is no necessity for the intervention of a doctor today.

Finally, the gentleman explained that while Christian Science patients had to place themselves in the hands of paid practitioners, he would help his patients for nothing. Again I think that he will discover, as he goes on, that there is a metaphysical reason he has not yet begun to suspect for causing patients to pay for treatment. Anyway, there is a very good Christian one, and that is obedience to the directions of Jesus. Again and again, Jesus himself dwelt on the fact that those who preached the gospel and healed the sick should receive recompense on the basis that the laborer was worthy of his hire. He bade the disciples, in the first century, to enter into the houses of those to whom they preached and dwell with them, and shake the dust off their feet on the thresholds of those who refused this hospitality. Paul makes the same claim in asking why he should not reap the material things of those to whom he had ministered spiritually, and it is recorded of Jesus himself that certain women ministered unto him of their substance.

The case, therefore, for payment of Christian healing is irrefragable, and if the gentleman will permit me to say so, he is himself in receipt of payment as a minister of the church, which pays him a regular stipend. If Christian Science practitioners were in receipt of endowments, it would perhaps be fair to expect that they should give their services freely to the sick; but even if it were fair, it would not be wise. Little by little the gentleman will learn that the sacrifice on the part of the patient is a part of the healing which has to come to him, and it is always better that the patient should pay for his healing than that somebody should pay for him. This does not prevent the poorest man from receiving the same attention as the richest. The richest man is only permitted to pay a fee which to him is really

Digitized by Google

nothing at all, while the poorest can get all the attention he wants for an infinitesimal fee, or, if necessary, for nothing at all. Curious as it may seem to the gentleman, the fact that the rich man is not allowed to pay more than a certain amount has the same effect as the requirement that the poor man should, if it is possible, pay an infinitesimal fee.

Our clerical friend is setting out on a much greater work than he has begun to suspect. The good wishes of all Christian Scientists are with him in his effort, for Christian Scientists have learned long ago that every effort for good is an effort toward the attainment of the Mind which was in Christ Jesus, and Jesus himself said: "He that is not against us is on our part."

[William J. Bonnin in *Rochdale* (Eng.) *Times.*]

If drugs are sent by God, why did not Jesus use them? Or did he not heal in the way God intends disease to be healed? Dr. Mason Good has declared that the effects of medicine on the human system are in the highest degree uncertain, except, indeed, that it has already destroyed more lives than war, pestilence, and famine all combined. The fact that the use of drugs by the medical profession is so steadily decreasing is evidence that the belief of there being any actual inherent virtue in the drug itself is evaporating, and that there is an increasing recognition that the only curative influence lies in the common belief in its power to heal. Christian Science shows that just as the human, mortal mind may delude itself into a belief of sickness, so it may delude itself into a belief that salvation from sickness is to be found in matter; but this will not lead any one to a better knowledge of God. The study of Christian Science, on the other hand, reveals sickness as a falsity of sense, negative in nature, and that the only scientific healing is a casting out of such a false belief by a knowledge of the truth about our being, the truth that Christ Jesus came to reveal.

A negation of existence is perhaps the best or nearest way to describe evil. It is positive in appearance, but negative in reality. Like darkness, it is nothing seeming to be something. The way in Christian Science to heal or destroy it is to introduce the corrective at the operative point, as it were, at the point where this "seeming" occurs. "If any man think that he knoweth any thing, he knoweth nothing yet as he ought to know," wrote Paul; and just as we are able to know as we "ought to know," so are we able to comprehend the truth that shall make us free. Now it will be obvious that such an understanding of the truth and reality of things spiritual, and the consequent unreality of things material, must come by a gradual transformation, a gradual putting on of "the new man, which is renewed in knowledge after the image of him that created him." The material beliefs that present themselves as most readily disbelieved in and seen as falsities, are those that are seen to be to the human sense abnormal, useless, and evil. And so Christian Science has begun at the point of least resistance, as it were, and Christian Scientists do not waste time in endeavoring to go without food, or trying conclusions with brick walls, but direct their energies to attacking and destroying evil wherever they can see that good will ensue from such a destruction.

To any one with vision beyond the mere "letter that killeth," the question whether any one believes or not in the Christology of the apostles' creed involves the question, What is that Christology? What, for instance, is sonship of omnipresent Mind, Spirit, which we call God? And what is "coming down from heaven" if the kingdom of heaven is at hand and within us? These and the many kindred questions that are involved are the real points that have to be decided. And so the demand for a plain yes or no to a set of words is a mere rattling of the dry bones of dogma. I will not commit the impertinence of asking the gentleman to which of the innumerable Christologies he subscribes, but it would have been rather more reasonable for him to have indicated which particular one he conceives the apostles' creed to be the expression of. Of course Christian Scientists believe that Christ is the Son of God. They do not believe the human Jesus to have been divine, but they do know that the Mind that was in him was divine and constituted his divinity, and they do know that it is the reflection of the one divine Mind which constitutes sonship of God.

The other critic's second letter seems to reach no higher level than his former attempt. One can forgive him a good deal on his confession to have read only a few pages about the subject he elects to hold forth on, even his failure to recognize the fact that Christian Science is chiefly occupied in healing cases of sickness that have been pronounced to be hopeless by the medical profession. Perhaps it will suffice to quote one sentence. "It is a bad form of tempting God, to expect Him to heal without using every medical aid," says this critic. It would be difficult to compose a sentence conveying a fainter expression than this does of the meaning of omnipotence.

I would like, in conclusion, to remark that Christian Scientists know that attacks upon and misrepresentations of Christian Science are invariably the outcome of misinformation on the subject, and so they are not very much disturbed by them. They are, however, impelled by their own experience of the blessings that this new light on the Bible has brought to their lives, to do what they can by every legitimate means in their power to carry to their neighbor, in bondage to misery or sickness or sin, the means to prove the truth of Paul's declaration, "Where the Spirit of the Lord is, there is liberty."

[W. D. Gordon in *Beaumont* (Tex.) *Journal.*]

Every well-informed physician knows that the drug system is not a science. It has been in vogue for thousands of years and it is today nothing more or less than a system of experimentation. A cure which is heralded as a scientific discovery today finds its way to the scrap-heap tomorrow. This alone should condemn it as a system seeking to be entrenched with all the power and force of law in authority in this country.

A sneer is made in the remarks of the learned doctor whose address I quote from, as to those "who do not believe in anything, especially drugs." Many people do not believe in drugs. As I have stated, I do not believe in drugs for myself. I used them for more than twenty years for chronic stomach trouble, sometimes obtaining temporary relief, but the trouble was never overcome. During this time, in full accord with the system in which the doctor believes, I thought that it was foolish to suppose there was any other cure except through this system. I was finally led to try Christian Science treatment, and was completely healed. Since that time I have never taken drugs for any physical ailment, and I am sure that I do not want to be forced to do so. I do not believe in them and I do not want any system of medicine established in the legislation of this country that will make criminal every other system of healing but drugs, any more than I would want to outlaw that system of healing by legislation. It is a matter of individual liberty and freedom. The other fellow has a right to take all the drugs he wants in trying to get rid of his diseases. He should also have the right to refrain therefrom and to try any other system which can relieve him, and that privilege should be as inviolable as his right to serve one God or a hundred. He can worship his ancestors if he wants to, and no law can lay its hand upon him, under the pretext of conserving his spiritual welfare, and say that he shall worship one God or three.

This program of the "medical trust" is doomed to failure. It is un-American. That is why denunciation is

Digitized by Google

taking the place of argument. It is already defeated. When this measure was before Congress last year, a great many of the best citizens of this city sent telegrams to their representatives in Congress, protesting against this bill. They are not "criminals," "renegades," "charlatans," "humbugs," nor "cranks." They are healthy, normal, and respectable citizens, and are intelligently opposing a scheme hatched by a coterie of political doctors who got control of the American Medical Association, and are using it as an instrument of political, rather than of scientific, agency.

Now, in conclusion, let me say: I am the friend of every good and faithful physician who is seeking to alleviate human suffering. We have here in Beaumont a grand and noble body of doctors, members of the medical society whose president has allowed his zeal and enthusiasm to lead him too far; they are devoting themselves honestly to the work of relieving humanity's ills. Some of them are among my warmest friends. They are doing a good work, and I would not deprive the people of their services nor would I take from those that believe that way the drug-stores or the legal protection which guards the purity of the drugs. They all have my respect and I wish them Godspeed in all their good works. But when a political proposition like that of compulsory medicine begins to shape itself into a menace to individual liberty, we part company. I would not impose on them by mandate of law any system in which I believe, and I claim the same consideration from them.

This matter did not originate with the honest, conscientious physician working for the health and welfare of his patients, but from the political doctor seeking monopoly and special privilege and seeking to exterminate all competitive systems. It is avarice and greed cloaking itself in the guise of conservation of the public health. To establish a state religion would be to plunge the world into spiritual degeneration and darkness, and it is equally true that state medicine would lead to thraldom of science and arrest the progress of the race.

[Robert Love in *New Orleans* (La.) *Picayune.*]

In a late issue of your paper I find that the president of the state board of health, in commenting on some opposition which his force has experienced in trying to get certain people to clean their premises, takes the opportunity to say that "the situation is not one to be met with absent treatment or Christian Science." There is nothing in the teachings of Christian Science to warrant the assumption that its followers are in sympathy with or encourage any violation of the law, but on the contrary, they lend every effort to assist in carrying out any requirement which is of benefit to mankind, and especially are they in favor of anything which tends to uplift and promote better and cleaner living. Christian Scientists take a reasonable, rational view of all things, and realize that it is as essential to have clean surroundings, fresh air, pure water and food as any other requisite of right living—for in the degree that we are mindful of those things pertaining to our physical welfare can we hope to enjoy that which affects our spiritual well-being, knowing that "cleanliness is next to godliness."

[H. Farmer Hall in *Hastings and St. Leonards* (Eng.) *Observer.*]

In a recent issue a sermon on the subject of "Divine Healing" is reported. In the course of the clergyman's remarks he refers to Christian Science as being neither Christian nor scientific, and follows up this statement with a plea for the use of drugs as divine agents in the healing of the sick.

I would not desire to commence a discussion on Christian healing, but seeing that our critic has satisfied himself that healing by drugs is undoubtedly the divine method, and in coming to that conclusion found it necessary to condemn Christian Science, it would be interesting to hear from him which of the present schools of medicine the teachings of Jesus the Christ point to as being the correct one for us to employ. There is certainly endless disagreement among those who prescribe drugs as to their effect and efficacy.

If the clergyman is correct and Jesus would have recommended drugs as a means of health, it is unfortunate, to say the least, and bewildering to his followers, that he never used drugs himself, and left no indication as to the school in which men should pursue their studies in order best to carry out his definite commands to "heal the sick." Jesus and his disciples healed the sick and the sinning on the basis of spiritual law, and in a manner apart from all material methods, and Christian Scientists have found this Christian and scientific method of healing able "to save them to the uttermost" when all other means have failed. Christian Scientists, while recognizing and honoring the noble efforts of the medical fraternity to relieve sickness and pain, have reason to believe they have found a better way, which they are daily demonstrating.

[Ernest Stewart in *Portland* (Ore.) *Oregonian.*]

The recent controversy over the merits and demerits of healing, engendered by sermons from a local pulpit, would perhaps not justify any further comment, as it has been profitably considered in communications and editorials from many angles.

One phase of it might be capable of a little elucidation, however. In an endeavor to fulfil Christ's undisputed commands, one church heals the sick with noticeable success, notwithstanding many other churches denounce the practice and emphatically aver it is not of Christ. If healing is not of Christ, could it not with equal propriety be asserted that the characteristic present-day sermons are likewise not of Christ? People used to go hungry for a couple of days or so and walk miles and miles to hear Christ's sermons. What proportion of the modern church-goers would "pass up" a single meal, or walk a single mile, to hear their modern pastors decry the alleged unchristian methods of a sister church? The average reader will draw his own inferences as to how this kind of question would be answered. With an equally forceful trend of reasoning, then, should we not place in the same category with those who "do not heal as Christ did," sermons such as are incapable of attracting under conditions parallel to those delivered by Christ Jesus; in other words, sermons not preached as Christ preached them?

[W. H. Penfield in *Oklahoman*, Oklahoma City, Okla.]

I am not a Christian Scientist, but a reader of everything that claims to be instructive, and some years ago I read Mrs. Eddy's book called "Science and Health with Key to the Scriptures." I do not know about the science and health, but as to the key to the Scriptures I wish to say that it is to me a key indeed. I had for many years given up Bible reading as to me not understandable, which now appears clear and profitable reading, and it appears to me that the orthodox world is in the same condition I was. This is evidenced by the acknowledged ignorance of Bible instruction through the formation of innumerable sects and creeds, together with the weekly Bible classes, and yet all acknowledge that they have hardly commenced to fathom its mysteries.

Mrs. Eddy has shown that the mysteries in the Bible are not in the Bible itself, but in the student; that a false conception of God lies at the bottom, and when one finds God and His kingdom, which is plainly within us, the door has been opened and we may enter. I wish to say that I have found this true. I now enjoy reading the Bible. What was to me bewildering now is clear, and I can say that I can think of Mrs. Eddy as one of the greatest benefactors to the world.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

UPHELD BY SUPREME COURT.

THE question of the validity of Mrs. Eddy's will has been decided by the New Hampshire supreme court, and that the decision sustains the will should come as no surprise to the public, which must have understood the fallacious and unfounded nature of the sensational charges upon which the suit was based. The purport of this decision is, that in making her will as she did, Mrs. Eddy acted entirely within the law, and that the court finds no reason for interfering in the slightest with the great humanitarian purpose which she endowed. Further comment on the decision at this time is withheld, because similar litigation is pending in other courts, and under such circumstances a discussion of the case might be looked upon as an impropriety.

The following brief report of the decision of the New Hampshire court is taken from *The Christian Science Monitor* of May 7, the full text of the decision being printed in the editions for May 8:—

The New Hampshire supreme court in a unanimous decision today [May 7] upheld the will of the Rev. Mary Baker Eddy, Discoverer and Founder of Christian Science, giving to the Christian Science Board of Directors for the cause the bulk of her property; declared that Christian Science was not against public policy, which was one of the contentions of counsel for those seeking to break the will; that the New Hampshire statute regarding bequests churches may receive does not limit testamentary capacity, and applies, if at all, to churches in that state, and that the residuary bequest is not indefinite. The decision was in the suit of George W. Glover and others against Gen. Henry M. Baker, the executor of Mrs. Eddy's will, and others. The object of the suit was to have the will set aside in favor of Mr. Glover and E. J. Foster Eddy, who had made binding agreements, because of settlements, not to contest any bequest that might be made by Mrs. Eddy.

The court in the decision, occupying forty-five pages, holds that the plaintiff, not occupying any position of trust, cannot maintain the bill for advice as to his rights, but that, since all parties have concurred in arguing the questions of the validity of the trust, the court will treat the matter as if the executor were petitioning for advice, and decide the question. The opinion then takes up the various questions regarding the validity of the trust.

The court first holds that the questions of fraud and undue influence are not open in this proceeding, but only in a probate appeal. It says, "The decree of the probate court allowing the will is a judgment establishing the document to be the will of Mrs. Eddy. That judgment is not open to collateral attack."

Taking up the church income statute, the court then says: "It is unnecessary to determine whether the Massachusetts statute prevents this church from taking, because, even if it does, other trustees in sympathy with Mrs. Eddy's purpose would have to be appointed if this church could not act, and the trust is otherwise valid." The court holds that the New Hampshire statute does not limit testamentary capacity, but is merely a regulation of corporate holding power, and that if it incidentally affects the testator's capacity to give to the church, it only affects the capacity to give to New Hampshire churches, and therefore does not apply to this case.

Relative to the charge that Christian Science is a private business, they say that the fact that some profit may be made by the denomination is immaterial, because many public trusts, for instance Dartmouth College, require some compensation for what they do. "It is not alleged that any persons as stockholders or private owners of The First Church of Christ, Scientist, are entitled to personal profit from its alleged business. The allegations all point in the opposite direction: that as a voluntary religious organization its property is all held for the charitable purpose of the association." The court declares, however, that if this claim of the plaintiff means that Christian Science is owned by certain private individuals like the stockholders of an ordinary business corporation, the plaintiffs can amend their bill so as to state this fact.

In deciding the question of public policy and the residuary clause the court said:

"Whether the extension and promotion intended is of a religion or a system of therapeutics or a combination of the two, whether it aims to benefit mankind by insuring their happiness in a future state or by rendering their existence more tolerable in this world, it is equally a gift for a general public use. . . . What is the law of the state as shown by specific enactments or the general course of legislation, as to the prohibition or regulation of the practice of Christian Science? March 16, 1897, the Legislature passed an act to regulate the licensing and registration of physicians and surgeons, with stringent provisions providing for the examination and regulation of persons proposing to practise medicine or surgery. By the eleventh section of the act persons practising 'Christian Science,' so called, were expressly excluded from its restrictions. It thus appears that the practice of Christian Science was brought to the attention of the Legislature fifteen years ago and that neither at that time nor at any time since has the Legislature considered the public good required its practice should be prohibited or regulated. No inference can be drawn except that in the opinion of the Legislature restrictive legislation is not required. This conclusion of the Legislature binds the court. . . . The plaintiff has not called attention to any statute which the practice of Christian Science contravenes.

"The truth of Mrs. Eddy's Science or religion is not to be determined by the court. As a religion she had the right to believe and teach it. If the scientific principles she believed in ran counter to the general belief of the time, she had equal right to believe and teach them. In the absence of legislative reprobation found in express enactment in the legislation of the state, action in accordance with her teaching is not illegal. As neither her beliefs nor the acts under them are necessarily illegal, the trust to promote the principles she attempted to inculcate is not illegal.

"Upon the facts before the court, the residuary clause creates a valid trust. Unless the plaintiff amends his bill as hereinbefore suggested, the executor should be advised to pay over the balance of the estate to trustees found duly qualified and appointed by the probate court. With this decree the plaintiff's petition should be dismissed. Case discharged."

The opinion of the court was written by Chief Justice Parsons.

ARCHIBALD MCLELLAN.

DENIAL AND AFFIRMATION.

STUDENTS of Christian Science are sometimes asked by others who are interested in the subject, whether they place greater emphasis upon denial or upon affirmation in their Science work. This question is hardly a proper one, as it seems to indicate a belief that a certain method may be followed in all cases, irrespective of the conditions to be dealt with. Some even argue that the denial might be dispensed with altogether, on the ground that affirmation or declaration of the all-inclusiveness of divine Truth covers every question which may present itself. This is of course true in the final sense, but its full import is not reached without

Digitized by Google

many earnest strivings to rise above the human belief in the reality and inevitableness of material conditions. It is therefore unwise to expect that the same method can be followed in every case in the working out of our human problems, as this would lead to dependence upon a formula, and give the letter of Science precedence over the spirit. This should not, however, be taken to mean that the letter is unimportant; indeed a better acquaintance with the letter of Science and Health would in most cases prevent the mistake of substituting one's partial and immature views for the comprehensive statements of our text-book, which are carefully drawn from the teachings of Christ Jesus.

It is true that at certain stages of the student's own unfoldment, the denial of error may seem more effective than the affirmation of the truth, and it is equally true that in the treatment of some cases, even by an advanced worker, the denial will to a large extent be the best weapon, but one individual's practice should not be made the basis of another's work. Each worker should go direct to Principle, and then study carefully the broad and impersonal teachings of Science and Health in conjunction with the Scriptures. It should never be forgotten that a denial of error, if rightly understood by the one making it, is in substance a declaration of God's allness, of the supremacy of good, while an affirmation of the allness of God, made with spiritual understanding, is a two-edged sword to every phase of error.

The mental and moral state of the one addressed must, however, be taken into account, as well as that of the demonstrator of the truths of Christian Science. We should "examine" ourselves, as St. Paul counsels, and see whether there is not in our mortal consciousness a large element of belief in materiality. If this is so, it must be denied and cast out. We read that Peter once took offense at the uncovering of error by the Master, and that he received a merited rebuke, which was followed by the general statement, "If any man will come after me, let him deny himself, and take up his cross, and follow me."

In line with this Mrs. Eddy says, "The denial of material selfhood aids the discernment of man's spiritual and eternal individuality, and destroys the erroneous knowledge gained from matter or through what are termed the material senses" (Science and Health, p. 91). Many similar statements are to be found in our Leader's writings, and we have the warrant of our Master's example for the denial of error in whatever guise it may present itself. In the presence of death itself he said, "The maid is not dead," and then he bade her arise, in proof of the allness of Life; while his question to the disciples who dreaded shipwreck, "Why are ye so fearful?" was a virtual denial of the seeming power of wind and wave.

The form which our declarations of the truth should take ought to be determined by the human need, and we have the promise of divine guidance at all times. Though we do not always know how to pray "as we ought," yet if we truly seek to be "led by the Spirit of God," we shall learn to make our declarations "according to the will of God," and this cannot fail to bring the best results.

ANNIE M. KNOTT.

THE BETTER WAY.

THE history of human suffering has been a continuous narration of hope and disappointment, of struggle and defeat. The instinct for freedom from pain has always been insistent; even those who have been taught to believe that suffering is a divine agency for good have never been able to resist the urgency of the illogic of their longing to escape its toils. Meanwhile, impelled by the desire to help poor humanity, many earnest men have labored heroically to discover some panacea for human ills, with the result that, as freely conceded by them, no unfailing drug remedies have ever been found.

The recognition of the inability of medical research and practice to bring surcease of suffering has recently been expressed by a physician of international reputation, a member of the Royal Academy of Medicine of Naples, Italy, in a published protest that patients should not be harassed by "the doubts that beset the minds of their physicians," to whom, he says, "the empirical nature of treatment is only too obvious;" and a sufficient reason for this plea may be found in his statement that "in these days of the impersonality of force, men know that there is no power which can resist that fiat of omnipotence, natural law."

It is not surprising that one who manifestly regards disease and death as the phenomena of laws which express the "fiat of omnipotence" should be unable to offer pain-stricken men anything more encouraging than the suggestion that "when the organic chemistry of the body is understood, and missing ingredients can be supplied and noxious ones expelled; when dangerous germs are filtered from the air, etc., etc., . . . then medicine will become exact, and cease to be uncertain"! It is surprising, however, that professed Christians should accept what upon its face is a practically hopeless point of view, and limit their expectations of good, their hopes of freedom, to the fruitage of a philosophy which thus entirely ignores the saving Christ. To the Christian Scientist a most significant feature of this mental status is its reaction on Christian faith, its enforced thought of God as having causally to do with the multiplication of disease through the asserted laws of heredity, contagion, etc., and then hiding His ordained specifics for mortal ills so effectively that after centuries of seeking they still remain undiscovered, while the cry of suffering innocency awakens an undying echo in the heart of every philanthropist.

Noting the number of dust particles disclosed when a ray of light enters the most sanitary darkened room, and remembering that according to prevailing belief each particle may be the seed-bearer of some insidious disease, he who accepts the dictum of the doctors is surely brought face to face with despair, if there has not come to him through Christian Science a gladding sense of the present significance of these words of the Master, "And nothing shall by any means hurt you"! Those who think that the freedom of the sons of God which the gospel declares does not mean exemption from the forebodings of material sense must be tempted to conclude that the psalmist was mistaken when he wrote: "He that is our God is the God of salvation; and unto God the Lord belong the issues from death."

To their great and abiding joy Christian Scientists know that these fateful mandates of mortal belief are without divine authority, and hence without power; that "the law of the Spirit of life in Christ Jesus" does make free today; that the Christ-minded man is sovereign and therefore safe. This is "the better way," the way of Christ Jesus and his disciples, which unnumbered thousands are again proving to be practical in time of need, and which they therefore lovingly commend to the victims of suffering and fear.

JOHN B. WILLIS.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 31, 1912. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 13, 1912.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 3, 1911, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

THE LECTURES.

NYACK, N. Y.

On the 25th of February a lecture on Christian Science was delivered by Virgil O. Strickler. He was introduced by C. L. Plunkett, whose remarks were in part as follows:—

Christian Science teaches a demonstrable knowledge of God. All knowledge, all truth is demonstrable, but we can believe that which is not true, and the great need of the world is to do away with our beliefs about God and supplant them with understanding. We cannot worship or love God unless we understand God. We cannot work out our own salvation unless we understand God. We cannot "prove all things" and "hold fast that which is good" unless we understand God. We cannot accept that loving invitation of the great Wayshower, "Come unto me, all ye that labor and are heavy laden," unless we understand God, because we must come in understanding.

The kingdom of God or the understanding of God can be gained here and now, but let us become as a little child, laying aside for the moment at least whatever beliefs we may have entertained or cherished but which we have never been able to prove. And let us remember that we are dealing with divine Principle. While we do not need to know higher mathematics to prove addition, we must know addition to prove higher mathematics.—*Correspondence.*

GUERNSEY, CHANNEL ISLANDS.

A lecture on Christian Science was delivered on Friday, March 1, by W. D. McCrackan, M.A., in the New Market Hall before a most attentive audience. The chairman, Charles W. Bennett of Bristol, opened the proceedings by saying that it was his privilege and pleasure, on behalf of the local Science church, to welcome the audience to the lecture. These lectures were no inconsiderable part of the Christian Science work, inasmuch as they were intended, not only to bring before the public some of the more salient points of this teaching, but also to correct extravagant and erroneous ideas which from time to time gained currency regarding it. Mr. McCrackan was a member of The First Church of Christ, Scientist, Boston, U. S. A., therefore anything he would have to say should be reliable. Mr. Bennett then proceeded to relate briefly that Christian Science had found him, some eight years ago, at a very distressing period of his life, with darkness closing in on every side. Broken in health, his wife very sickly, they had both come into touch with this teaching, with the result that their outlook on life immediately improved, health steadily returned, and happiness had since reigned in their home in a way they had formerly thought impossible.—*Guernsey Advertiser.*

NEW YORK, N. Y.

Judge Clifford P. Smith lectured on Christian Science for the Society of the Bronx, March 31. He was introduced by James B. Turner of Second Church, who said:—

It can safely be said that the most important question before the world during the last nineteen hundred years has been Christianity. Its advent was of so great importance indeed that the term Christian era has ever since been used in designating time. During the first four centuries of this era there was nothing that so convulsed the world as the gospel of Jesus Christ. This gospel during the first three centuries had so thoroughly impregnated the life of the Roman empire that it overthrew paganism and became the ruling power of one of the greatest governments the world has ever seen. The wonderful change thus wrought in the affairs of the world of that date was due to the marvelous growth of the Christian religion among the common people.

It is a fact established by secular history that this growth was founded upon the healing and regenerating power of Christianity; this healing and regenerating power was the vital factor, and when it was lost the world passed into what is known as the dark ages. So soon as the spiritual import and purport of the Scriptures disappeared from the activities of the church, nothing remained but the lifeless conventionalities of materialism. It seems incredible that the vitalizing truth of Christianity could have so long been lost to the world, in view of the important relation it sustained to the growth of the primitive church; nevertheless, such is the case. We can rejoice, however, that in Christian Science we find a return of the true gospel, and we are met here today to listen to a lecture on this important subject.

Correspondence.

INDIANAPOLIS, IND.

A lecture on Christian Science was delivered for Second Church of Christ, Scientist, by Frank H. Leonard March 24. He was introduced by Clark E. Mallery, first reader, who said:—

Nineteen hundred years ago Jesus commanded his disciples to go into all the world,—"to preach the gospel, and to heal the sick;" and in pursuance of this divine command they healed both the sick and the sinning by the correct knowledge and application of God's word. This manner of healing was followed and practised, in a degree, for nearly three centuries after the beginning of the Christian era, until the material thought succeeded the spiritual in the hearts of men and material means for healing were sought in place of spiritual. All down the ages there have been cures wrought by prayer,—by "an absolute faith that all things are possible to God" (Science and Health, p. 1), but the Principle of these cures was never understood until late in the last century, when the divine Principle of God's healing word was discovered by Mrs. Eddy, and by her given to the world in the Christian Science text-book, "Science and Health with Key to the Scriptures," that all who would might receive the benefit of her discovery.

Gamaliel said, as we read in the fifth chapter of Acts, "If this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it;" and surely this religion of Christian Science must be of God, for from a church of twenty-six members established in 1879 it has grown until now there are churches and societies in all quarters of the globe and its adherents are numbered by the thousands.—*Correspondence.*

SWANSEA, WALES.

If Bicknell Young, member of the Christian Science board of lectureship of The Mother Church, First Church of Christ, Scientist, Boston, U. S. A., be a fair example, the board is fortunate in its lecturers. Mr. Young has a quiet, businesslike, and at the same time insinuating manner, which goes far.

S. A. Henry of London presided over the fairly large meeting last evening (March 4) in the Central Hall, Swansea. On behalf of the meeting, he welcomed Mr. Young. Christian Science, he said, was now arousing attention throughout the world. The rapid and phenomenal growth in this country was due to the fact that it met the needs of humanity in sickness as well as in health. He knew several who had been healed of diseases which were ordinarily considered incurable. The purpose of those lectures was not to proselyte, nor did Christian Science people desire to take away from people anything they felt was of value to them in their lives. But, realizing how much it had helped them, they desired that others should have the opportunity of receiving similar benefits. Probably there were some who had heard or read in the papers criticisms of Christian Science, and might have been prevented from look-

Digitized by Google

ing into the subject because they did not realize that such criticisms were based on misconception, and were generally written by those who had not studied the subject. They were there to remove erroneous impressions.

Cambria Leader.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice it is assumed that the lecture will be given in the evening.

Benton Harbor, Mich.—Judge Clifford P. Smith, Bell Opera House, May 21.

Cincinnati, Ohio (Second Church).—Judge Clifford P. Smith, Emery Auditorium, 3 p.m., May 19.

Columbus, Ind.—William R. Rathvon, Crump's Theater, May 21.

Dayton, Ohio (First and Second Churches).—Francis J. Fluno, M.D., National Theater, 3 p.m., May 19.

Delavan, Wis.—Willis F. Gross, Church Edifice, May 21.

Des Moines, Iowa.—Bicknell Young, Princess Theater, May 19.

Escanaba, Mich.—Frank H. Leonard, Peterson's Opera House, May 24.

Fort Smith, Ark.—Clarence C. Eaton, Church Edifice, May 16.

Fort Wayne, Ind.—Judge Clifford P. Smith, Minuet Hall, 121 E. Washington street, May 20.

Highland Park, Ill.—Bicknell Young, Church Edifice, Hazel avenue near St. Johns, May 20.

La Fayette, Ind. (First Church).—William R. Rathvon, Dryfus Theater, May 23.

Lawton, Okla.—Bliss Knapp, High School Auditorium, May 17.

TESTIMONIES OF HEALING.

"Joy to the world, the Lord is come!" We rejoice with exceeding joy and gladness at the coming to us of a nearer and dearer sense of God and His Christ, through the divine word as brought to us by our beloved Leader, Mrs. Eddy. Fear, like a great serpent, is ever biting at the heel and gnawing at the heart of mortals, but as we rise to the true consciousness of being we can overthrow and destroy even the "great red dragon" and be free, for Jesus said, "Ye shall know the truth, and the truth shall make you free." When I look back over the past year and realize the manifold blessings which we have received through the manifestation of the healing power of Truth by myself and family, words fail to express my gratitude to God.

One case of healing I wish to speak of especially. My son while playing ball had his leg badly injured. The ankle and foot were thrown entirely out of place, and this kind of fracture was considered one of the most severe known in surgery. A gentleman at the park called a surgeon at once, to whom my son announced that he was a Christian Scientist. The surgeon said, "That is all right, but the bone must be set before you can be moved," which was done. A Christian Science practitioner was at the house when the boy was brought home, and after consulting with the surgeon it was decided to take him to the Chicago hospital. For one hour he was on the operating table with three surgeons working over him, undergoing this ordeal without taking an anesthetic and without the slightest pain. The Christian Science practitioner was at his side working for him during this time. There were also four nurses and myself in the room at the time. According to medical opinion the bone would not begin to knit for nine days, and the surgeon said he would not be able to be out for three months, and that it would probably be six months before he could walk without crutches. In about twelve hours he spoke to the nurse of some pains which he had, and she said, "Nonsense, those are knitting pains, and not due for nine days yet." However, these pains were "salutary" (Science and Health, p. 265), for in nine days they stopped and the work was finished. In three weeks he walked with crutches four squares to a park concert and back. In four weeks he walked to Sunday school and back, without using crutch or cane, a distance of half a mile each way. He had been absent only three Sundays. In eight weeks he was playing tennis. Almost every known law in *materia medica* was annulled in this case and results were watched with great interest by all who were connected in any way with it.

I rejoice daily in Christian Science, for what it has done and is doing for myself and family. My prayer is that I may so live as to show forth my gratitude to God in working for and helping my fellow man, ever growing in wisdom and knowledge and having that Mind in me which was also in Christ Jesus.—JOHN EDWARD HARPER, Chicago, Ill.

Christian Science has done so much for me that I cannot find words to express my gratitude. It healed me of locomotor ataxia after I had exhausted every material means known and available. Christian Science was then given a trial and in a short time it was proved to me that God is all powerful.

The practitioner who treated me said to me that it was only fear and doubt of God's power to keep me from falling that prevented me from walking. While thinking of what she had said I happened to read in Science and Health these words: "The illusion of material sense, not divine law, has bound you, entangled your free limbs, crippled your capacities, enfeebled your body" (p. 227). I there and then made up my mind to trust God, so I asked my husband to help me to go to a tree in front of the house. He said I was insane to propose such a thing. (He did not believe in

Digitized by Google

Christian Science then, but, thank God, he does now.) I finally persuaded him to do as I had requested, and after he had placed me against the tree I requested him to go into the house and not watch me. I stood there for a few moments and repeated some words spoken by my practitioner to the effect that the arms of divine Love were underneath and around me. I then started for the next tree, which was about ten feet away, and just before reaching it I thought I was going to fall, but I reached the tree safely. I started for the next one, and a neighbor who saw me seemed frightened at seeing me there alone, having been used to seeing me in a wheeled chair, but I begged her not to look at me as I was trying to learn to walk again.

I started for another tree, feeling stronger, and convinced that I could lean "on the sustaining infinite" (Science and Health, Pref., p. vii). This brought me to the corner, and the tree was about twenty feet distant, but I reached it all right. This brought me to the practitioner's home. When she saw me she said, "Oh, thank God!" We passed an hour thanking God, and remembering to be grateful to our dear Leader, for it was the realization of the truth of her words in "Science and Health with Key to the Scriptures" which had enabled me to assert my dominion over physical law. I walked home and I never used a wheeled chair again.

This healing took place in 1896, and I have continued to enjoy good health ever since. I was living in Elmira, N. Y., at that time. Christian Science not only healed my physical ills, but raised my thought to higher and purer things, thereby bringing me peace and happiness.

MRS. E. DELLA WOOD, New York, N. Y.

I have received so many benefits from Christian Science that I feel it a duty as well as a pleasure to send my testimony to our periodicals, and by this to make a little of my gratitude known to the world, that some one who sees it and who may be suffering as I was, can still have hope and help. I feel that I am in a new world, for I am in a new consciousness. My physical healing seemed from the standpoint of material sense nothing short of a miracle, it was so speedy and perfect, but the spiritual was even greater than this; it filled me with the most sincere and profound gratitude to God; also to our beloved Leader, Mrs. Eddy, for bringing to mankind the Science which enables us to understand God and man and the Bible better as we read the precious text-book, "Science and Health with Key to the Scriptures."

Seven months previous to November, 1910, I had measles for the second time, followed by lung trouble and a severe cough, but with the help of Christian Science, or at least some understanding of it, I was able to be up though not well. I seemed to be in a weakened state for some time, especially after a fit of coughing. The trouble apparently extended all over my body and I suffered greatly. I was then influenced by some to have our old family physician come and diagnose my case, thinking this would help the practitioner to meet the trouble. The doctor came and was very kind, but said I would have to be operated on, and he gave me little hope. This so increased my fear that I was unable to help myself at all, and I found I would have to call for help. In accordance with Science and Health (p. 420), I called "an experienced Christian Scientist," to whom I explained all that the doctor had said, that she might better understand how to destroy the error which seemed to be eating away my strength. Within five days after she had received my first message I was well! All pain, inflammation, swelling, fever, was gone, and I was normal. I was overjoyed and happy, and my gratitude again went out to the author of our text-book for giving us this redemptive apprehension of the Christ, Truth, which delivers us from sickness as well as sin.

I also wish to tell of my little boy, four years old, who fell and injured his leg very seriously at the same time that I was having so severe a trial. I called the same practitioner, and in one week he was able to move his leg when he turned over on his bed. The bone had united, although it was never bandaged, neither was it necessary to restrict him. Divine Love wrought a "perfect work," as in my own case.

I want to thank the workers at headquarters, and would say as did the Master, "I thank thee, O Father, Lord of heaven and earth, that thou hast hid these things from the wise and prudent, and hast revealed them unto babes: even so, Father; for so it seemed good in thy sight."

MRS. HATTIE SHAFER, Amarillo, Tex.

I have received so many benefits from Christian Science that I feel impelled to tell others, that they too may come to this fountain of "living waters" and drink. I have only one regret, namely, that I did not know of it sooner. I was very antagonistic to what I believed it to be when I first heard of it, but "man's extremity is God's opportunity," and when the physicians could do no more for me I called in one of my neighbors, knowing she was a Christian Scientist, and asked for help. She helped as well as she could with her understanding, but advised me to call an experienced practitioner, which I did. I was a great sufferer from neuralgia and a bowel difficulty for many years. I also had an abnormal growth and a skin disease, while one eye was very abnormal and difficult to close. I went to New Mexico because I was told I could not live long in the climate of Texas. I was also told by the most reputable physicians that my stomach was in the worst condition of any they had ever treated. They were very kind and did all they could for me, but I was not helped.

My neighbor then wrote to a Christian Science practitioner and I began to improve at once. I am now a well woman and rejoicing daily in Christian Science. I am more thankful for the spiritual uplifting and a knowledge of God, good, than for anything else. I have become acquainted with divine Love, and the Bible is a new book to me and is my daily companion. I am so grateful that I can now "preach the gospel" of Love to others and am able to help others, as I have been helped and made perfectly whole. I want to show my appreciation by doing the works of Christ and living the truth as near as I am able. I feel that there is no security in being a Christian only as we bring forth the signs which Jesus said should follow them that believe. My heart is full of gratitude to God, also to Mrs. Eddy, the author of "Science and Health with Key to the Scriptures," for the blessings I have received.

MRS. SARAH A. WAGONER, Hagerman, N. M.

I wish to express my gratitude so that others may know what Christian Science has done for me. For eighteen years I suffered with my throat, and the last eight years I was a physical wreck, being very wasted and weak. My throat was in such a condition that it was with difficulty I could breathe, eat, or drink. I was continually catching cold, until my lungs became affected. For three years I was under the treatment of the best physicians; the remaining fifteen I went to them only at intervals, but there was no time when I was not taking medicine for my trouble. Some of the doctors said part of the vocal cords was gone, and the last five years I could scarcely speak above a whisper. I had about given up, and told my wife that I would take no more medicine. About this time Christian Science was recommended, and to please my wife I consented to try it. With the help of a practitioner and the study of the Christian Science text-book I was, in a few months, a well man. There is no soreness in my throat, my voice is as strong as it ever was, and I have regained flesh and strength.

I am truly grateful for the physical healing, but it fades into insignificance when compared with the spiritual blessings and enlightenment that have come with it. The Bible is a new book to me. I have learned what is meant by Jesus'

Digitized by Google

words, "Ye shall know the truth, and the truth shall make you free." All the beautiful promises of the Bible have taken on a new meaning. I now know how to strive, why to strive, and what to strive for, and I know that each day will bring me one step nearer the perfect man of God's creating. My heart rejoices to know that I have found this truth and that by constant seeking I can gain more and more of divine light and Love.

Not only have I been benefited, but each member of my family has received untold blessings through this spiritual interpretation of God's word. I would like to tell of the healing of my son, thirteen years old, of defective vision. He wore glasses three years, and was told by an oculist that he must "make them part of his face," but after the first treatment by a Christian Science practitioner, his glasses were discarded and he has not worn them since. This was five months ago and his eyes are clearer and stronger today than they ever were. Since coming into Christian Science it has been our only medicine, it has met our every need, and we are all better, happier, and healthier than before; for all of which I am sincerely grateful to God, also to Mrs. Eddy.—T. R. Moody, New Orleans, La.

God has been so good to me in unnumbered ways that I feel I must tell the glad tidings so that other seekers for the truth may know its healing power. A little over two years ago I took my first treatment in Christian Science for an illness from which I had been under medical care for two or three years. Divine Truth, however, healed me in a short time, and the joy, peace, and comfort which accompanied my healing cannot be expressed in words. Since then I have had innumerable demonstrations for myself and others in cases of colds, throat trouble, headaches, etc. Never, when I have done my work honestly and in accord with the teachings of our text-book, have I failed to prove that "whatsoever ye shall ask in prayer, believing [knowing], ye shall receive."

I am very grateful for this understanding of the truth which makes us free, and I trust my life may prove the gratitude which words cannot express.

Mrs. Ina P. Moser, Blue Rapids, Kan.

I wish to express my gratitude for Christian Science. I have received help physically, but the mental freedom to me has been far greater than the physical. No one but those who have been under such bondage can begin to know what it means to be bowed down by timidity. Lack of confidence and fear so hampered me that it seemed impossible for me to progress or to take up any line of work, although I desired to do so very much. I could not put this aside, but through Christian Science it has been overcome to a great extent, and this truth is certainly a source of joy to me.

My mother and other members of the family have also received help through this teaching. I am very grateful to God, and also to Mrs. Eddy for Christian Science.

Miss Martha Walsh, Lincoln, Neb.

I am truly glad of the opportunity given us in bearing testimony to the wonderful benefits of Christian Science. In October, 1909, I was loaned a copy of Science and Health by a lady whom I met in the mountains, where I had gone in hope of bettering my health. For about fifteen years I had suffered from many ailments, until my life seemed to be a heavy burden. Female trouble, nervousness, a serious heart affection, catarrh, etc., were some of my daily trials, besides defective vision, which was said to be responsible for severe headaches. I had heard of Christian Science very little (mostly by way of ridicule) until I met the lady above mentioned. When she loaned me her copy of Science and Health I disliked to take it, but I decided to read it anyway and see what it was like, for I really wanted help if it contained any, though I had no faith in it.

Well, this was the outcome. My husband was working nights at the time, so after he had gone I took up the book and before I laid it down, to go to sleep, it was nearly twelve o'clock. So enwrapped had I been in the wonderful truths it contained, that I had taken no notice of the time. It seemed to supply a long-felt want, something for which I had been hungering all my life, although I had been a faithful church-member and strove with all my might to live up to its requirements. Many of my ailments, in fact all of them excepting catarrh and a bowel disorder, disappeared after a few days of study. These ills, however, seemed to stick persistently to me, but there is much improvement and I know that I have but to continue in the path that I have entered and I shall be free in good time. I wish also to state that I have never used my glasses since the first night I began to study, nor have I needed them.

To me the physical healing has been a source of endless gratitude, but the spiritual uplift means much more. The Bible has been opened to me and I can see so much in it, while before I took up the study of Christian Science I could get comparatively nothing from it. I used to read it faithfully, and then had to reread it to see what I had read, so I was still in darkness; but I kept on in the church and worked all that my ill health would allow, because I feared eternal punishment if I did not do my best. I never can be grateful enough to Christian Science for relieving me from the awful fear, which I had carried with me all my life, of death and the grave and the awful consequence if we were unfaithful. I can now see that this fear had much to do with my ill health, for I had always had the evil side held up to me instead of God and His love. Through Christian Science has also come a much more contented feeling; my disposition has much improved and it is such a comfort to laugh and be happy and to know that God is not frowning at me.

Especially do I wish to express my gratitude for this healing truth. A sense of prejudice against Mrs. Eddy has gone, and with its disappearance has come increased understanding. I love her now as I think she wanted us to, simply as a spiritual guide. My hope is to gain little by little, until I can be worthy to be called a Christian Scientist.

Mrs. Etta Helfer, Lemoore, Cal.

I did not take up the study of Christian Science for physical help, but was attracted to it through the healing of my wife. Some three and one half years before beginning the study I had joined a church and endeavored to the best of my ability to live a Christian life. I made no pretense of trying to understand the step I was taking. I simply wanted to lead a better life and had been led to think this was an all-important step to take. I could not understand the Bible and could not interest myself in it, but I always believed in doing unto others as I would be done by, and that was about all I could see in it.

Since taking up the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and reading the Bible under the increased light which it throws on the Scriptures, I am beginning to think as did the blind man of old whom Jesus had healed, "Whereas I was blind, now I see." Christian Science has made a great change in my life. It has changed it from a mere existence to a life worth living. Discord has been exchanged for harmony in many ways, and I can see as I advance and gain a more correct understanding of God, brighter prospects than would have been my lot otherwise.

I have been greatly benefited physically, but the spiritual help has meant much more to me. I thank God for His ever-present help, and for His messenger Mrs. Eddy, who has so plainly shown us how to follow Jesus' teachings and to know the allness of God, good, and the nothingness of evil.—W. H. Helfer, Lemoore, Cal.

Digitized by Google

I was suffering from what the physicians termed a severe form of rheumatism, together with kidney trouble of long standing, but was healed of both by Christian Science and able to go to work in a week. Also my son, a lad of fourteen, had a bad attack of throat trouble besides an abscess in the head causing great suffering, but he too was healed in about a week.—CARMIA A. CHANDLER, Brattleboro, Vt.

[Translated from the German.]

Deep gratitude impels me to tell of the wonderful healing which my son experienced in 1908. While playing on the street, his right hand was caught between two carriages and very badly injured. The child, however, declared the truth for himself at once, and I immediately treated him in Science. He had no pain, neither was there any swelling or inflammation; but on the fourth day the teacher at school looked at the finger and said it would have to be sewed, as otherwise the hand might have to be amputated.

I then asked a Christian Science practitioner to give the boy treatment, which she did, and after a very short while the wound healed. One of the sinews appeared to have been injured, for he was unable to stretch the finger; but I had no fear, for I knew that God's work is perfect. With two treatments this trouble was overcome, and the finger is perfectly normal and as straight as before. We are deeply grateful to God for this new proof of His omnipotence and love, also to our beloved Leader, Mrs. Eddy.

FRAU ANNA MOGWITZ, Berlin, Germany.

I came into Christian Science about a year ago, and am very thankful for all that it has done for me. Not long ago, when I was threatened with an attack of fever, a practitioner was called, and after one treatment I was very much better. The next day I was entirely healed. I hope to learn more of the truth, and cannot say enough in gratitude for even the little that I do know of Christian Science.

JAMES VAN LOGAN, Folsom, Cal.

With a deep sense of gratitude for the teachings of Christian Science and for its publications which come to us daily, weekly, and monthly, laden with instruction from those who are laboring diligently for the good of humanity, and with messages of love and gratitude from those who have been awakened to the facts of spiritual existence and are thereby being liberated from the bondage of material sense, I am impelled to send the following testimony. During the year 1898 I was healed through Christian Science treatment of what is known as milk-leg. I had been unable to walk for some time previous to the healing, but have never known any inconvenience in that way since. I have also been healed of severe throat troubles in various forms.

For over fourteen years Christian Science has been my only physician. Through the application of its teachings I have been able not only to destroy sickness for myself but to help others out of suffering; and I rejoice that the teachings of the Bible, through the light thrown upon them by the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, have been found practicable in every-day living.

MRS. EDITH B. ROCKWELL, Portland, Ore.

On reviewing my last eight years in Christian Science, I wish to tell others through the *Sentinel* of an experience which stands out as the one for which I am most grateful, trusting it may help some one to "stand still and see the salvation of the Lord." I was busy one day dressing my little ones when the door-bell rang. Being alone in the house I answered it, leaving the baby, under a year old, sitting up in the tub and the older one watching her. I had done this before, and had no fear. The messenger delayed me, and on hurrying back to the bathroom I found the little one lying at the bottom of the water and apparently lifeless. I wrapped a towel around her and paced the floor, declaring the truth and reaching out to God as her life for help. Turning away, as our Leader tells us, from the sense testimony, I felt alone with God and the child safe "under the shadow of the Almighty." After a while I laid her down and attended to the older child, who said, "I am helping you know God is baby's life, mother." Returning to my room after a glance at the still form of the child, I sat down and read aloud from "Science and Health with Key to the Scriptures" by Mrs. Eddy, for what seemed a long time; then turning again to divine Love I realized that the little one was God's child, that life never was dependent upon the body, and I knew that God was caring for her right now and knew her only as spiritual and perfect. On again looking at the little one I saw a tremor pass over her, and the dark color was fading somewhat. I rejoiced and thanked God. As I stood looking at her I saw a little flutter, and low breathing started. I took her up, and going to the telephone I called for a Christian Science practitioner, who arrived in about half an hour to find the baby dressed, in my arms and conscious, with nothing to show her recent experience beyond being quiet and pale.

For days it seemed I could hardly tell what it had meant to me, all alone,—the lack of fear and suggestion of any material aid, just waiting on divine Love to do the work. Daily I rejoice for the help Christian Science is in my life; and the children, now respectively eight and five years old, are growing up to know no remedy but Truth. I send this with heartfelt gratitude to our beloved Leader, who has shown us how we can rely on God at all times and under all circumstances.

MRS. LORINA J. NILSON, Fort Wadsworth, Staten Island, N. Y.

It is now over three years since I was healed by Christian Science, and during that time my family and myself have had many proofs of Truth's healing power. Several years ago a missile was violently thrown at my head, and the constant pain which resulted from the blow made me nervous and depressed. A friend told me of her healing by Christian Science, and offered to take me to a practitioner for help. I went with her and was perfectly healed and have never had a return of the old trouble. Besides this, a toe which had been doubled over by the drawing of a cord was straightened.

In addition to my own cure, a son has been healed of an ear trouble which had lasted through a period of sixteen years, and a daughter has been healed of acute lung trouble, help coming within ten minutes after the practitioner received the telephone call. I have also seen, in our home, hemorrhages, nervousness, toothache, headache, and other ills disappear, for which I am very grateful; but I am more grateful for the healing to a great extent of a severe temper, jealousy, pride, and hatred, through Christian Science. A sense of much sorrow has been overcome, and I am now filled with joy and happiness, which is an entirely different condition than before I had Christian Science treatment. Our home has within it less discord and more harmony, and for the past three years Christian Science has met every need in our family of eight. Financially we have been greatly helped through Christian Science.

For all the peace, happiness, and health that has been restored in our home, I am truly thankful to God. I am also grateful to Mrs. Eddy, and to the many friends who have lovingly and patiently helped me during many dark hours.—MRS. AMANDA H. WALLIS, Medford, Mass.

With a heart full of gratitude I wish to express through the columns of the *Sentinel* my love and appreciation of this glorious truth revealed to us through our beloved Leader,

Digitized by Google

Mrs. Eddy. My heart goes out in love and gratitude for the Board of Directors of The Mother Church, for the *Monitor*, the *Sentinel*, and the *Journal*, which bring us so much good. My earnest desire is to prove my loyalty by works instead of words.

I have had many proofs of the power of Truth over error of every sort, and have not used material remedies for fifteen years. My daughter, who is seventeen, has never had any medicine in that time and is a specimen of perfect physical womanhood. She also is striving to be a good Christian Scientist. We have found that God is indeed a "present help in time of trouble," and even with our small understanding of Christian Science have overcome sickness for ourselves and others. Truly, as our dear Leader tells us in the Preface of Science and Health, "to those leaning on the sustaining infinite, today is big with blessings." The Bible becomes more luminous each day as we study it with our text-book.—MRS. GRACE H. CRAWLEY, Clarksdale, Miss.

With a grateful heart I wish to thank God for my healing. I was healed of the whisky and tobacco habits and everything that goes with these evils. I have been able to overcome, through the teachings of Christian Science, headache, toothache, deafness, and many other ills with the aid of practitioners. A short time ago I felt very sick, but I called in a practitioner and was healed in a few minutes. I went to sleep and was all right the next morning.

Words cannot express my gratitude to God for Christian Science, also to our dear Leader, Mrs. Eddy. I am striving each day to gain a better understanding of the truth.

L. D. WILLIAMS, Atlanta, Ga.

I feel it a duty to add my testimony to those of many others who have been benefited by Christian Science. I began the study in July, 1910, and at that time was in a very bad way, both mentally and physically. I had several different ailments, but worst of all was my suffering mentally. I was always wishing for death, as I thought that the only way of obtaining relief. I had suffered so much that I had almost lost my faith in God. I had become very thin and weak, and could not have lived long had not a friend told me of Christian Science. I became interested, attended services when I could, and took up the study. In October I began treatment and continued it about a month, and although I was not healed physically in that time I was very much relieved in different ways, and mentally I was like a different person. I gained in weight and can eat and sleep better than I have in years. The spiritual quickening is, however, best of all, and I now feel as though I want to live and praise God every day for His goodness and mercy. I am very thankful, and know that God will give me strength and understanding to overcome all that is not like infinite good. I would not be back where I was two years ago for all the world. I am able to overcome many ailments and do not have to call a practitioner so often. I expect to keep up the study of Christian Science the rest of my life, and I thank God for it.—MRS. JESSIE ABER, Norwood, Ohio.

[Translated from the German.]

It seems almost impossible for me to express in words my deep sense of gratitude to God for the treasure which He has led me to find in Mrs. Eddy's teaching. Christian Science has not only healed me of a stomach trouble, but my spiritual healing is going on steadily, although slowly. I am profoundly grateful to God, and next to Mrs. Eddy I feel greatly indebted to my aunt, who helped me to walk in the way of Truth.

VERENA BOSS, Meiningen, Ct. Bern, Switzerland.

FROM OUR EXCHANGES.

[Rev. W. H. Fitchett, LL.D., in *The Southern Cross*, Melbourne, Aus.]

God stands not only at the end of prayer, to answer it, but at the beginning of prayer, to inspire it. This is why every true prayer has in it a prophetic element. It is a revelation of divine purpose. And it is the worst sort of atheism to imagine that God would inspire prayer only to mock it by leaving it unanswered. Moreover, the end of prayer is not to bring the pure eternal law of God down to the level of our ignorant human will; it is to lift up our will to His. The wedlock of our will with God's will, so that we love what He loves, hate what He hates, choose what He chooses, so that every pulse of our human will beats in a golden rhythm with His will—this is the end of all prayer. Its office, it might be said, is not to change God's will, but to change ours. But what casts a shadow on prayer for many good people is their uncertainty as to what is God's will. Now, as to one set of facts, we know absolutely what is the purpose of the divine Mind. God, by the very law of His character, is pledged, through the whole range of His resources, to help us in the attainment of all spiritual good.

[*New York Observer.*]

The shortest and surest way of knowing the goodness of the Lord is personal experience. How do we know that God is intelligent? Because we are intelligent and can see and interpret the marks of intelligence in His world. In the same way we know that God has a sense of beauty because we have an esthetic sense which finds beauty in His world. We see things as we are. Turner showed a visitor his painting of a sunset, and the visitor, looking at it, said that he had never seen such a sunset. "Don't you wish you could?" replied the painter. He had the sunset in his soul, and so he could see it in the sky. So if we are good we can see the goodness of the Lord reflected from every aspect of the world. Nature will be saturated with it, our human world will glow with it, and we shall be sure it is concealed in the darkest facts and deepest mysteries. Where we cannot see it we can say with Jesus, "Even so, Father, for so it seemed good in thy sight." Let us get God's goodness in us, and then we shall see it or be sure of it in all the experiences of life.

[*Universalist Leader.*]

We all believe in God in a misty sort of way, and we wonder why we are not sustained and strengthened and inspired by the belief. The reason is that it is all so indefinite, it lacks reality; we have no genuine sense of the presence of God in our own hearts, even while we are telling others that that is what they should have. Some of us are afraid in no small measure of sensing this very reality of which we have such need. The greatest thing in this universe is God; we all know that, but there is something better to know, and that is, the best thing in this universe is God; the best thing for you and me individually. As Dean Hodges says: "If God is a vital reality to us so that our life is in His life and our will is His will, and with our hand we will hold His hand, then we know that God will lead us, and help us, and bless us, and bring us at last through whatever sorrows into His light and joy perpetual. And that faith will interpret all the days of the year, begun, continued, and ended in the name of God."

[*Zion's Herald.*]

The larger creed means more freedom to think and more power to work. The soul that has found a roomier house is able to range more widely and welcome more guests. The way into freedom of thinking is to think more freely; the way to gain more strength is to use what we have today.

Digitized by Google

No creed is true that does not open the way into the discovery of more truth. No creed carries any warrant with it unless it inspires to conduct and gets greater deeds done. The creed-builder is under the common law that he shall justify his creed by his deed. He who has the best creed must live the best life. It is out of the materials furnished by the better life that he will draw the materials for his growing creed. So the reaction goes constantly on; the creed inspires to conduct, and the conduct warrants the creed. This is only another way of saying that creed-building is a part of life and the task of every one who would live truly.

[*Christian Register.*]

There is another kind of house-cleaning which is applicable at any season. The houses do not fill up with dust and litter so badly or so easily as people's minds become confused with all sorts of prejudices and stray dislikes and bits of ill-will. These are the worst of invisible microbes. We all need repeatedly, and perhaps every morning, however chilly the air seems, to open our doors and windows and to let sunlit oxygen drive through our dwellings and clear out every vestige of a thought or judgment or emotion that is unworthy of kindly men and women. We need to test ourselves by the free air and make sure that we are not harboring any kind of conceit or egotism or arrogance or enmity against any one. We ought to stand at the open window and be satisfied that our minds are totally open to take any kind of truth.

[*British Congregationalist.*]

The eternal life of the Christian revelation is the completion and perfection of the individual self in the open fellowship of God. The type is set for us in the risen Christ. The promise is set up for us in the words, "Because I live, ye shall live also." The reality of it all is guaranteed in his eternal reality, and the joy of it flames forth for all who know his love and rest in his power. "We know that, when he shall appear, we shall be like him; for we shall see him as he is."

The religion which so reveals God, as He deals with human nature, belongs to mankind. There is no mode of human thought, no form of historical criticism, nor even any wildness of the human will which can finally prevent it from becoming the one religion of the world.

[Frederick Lynch in *Christian Work and Evangelist.*]

The great day of the church is before it. It is soon going to forget its ancient quarrels, and, allowing full liberty of thought and belief concerning the lesser things, is going to unite on the simple basis of the acceptance of Jesus Christ as the Lord of life, and his teaching as guide for conduct and his mind toward man and nature as the true philosophy of life, and is then going forward with an undivided front and an irresistible appeal and an unconquerable majesty to sweep the old evils from the world and build here the new city of God. Happy that young man who leads in this divine and not far off consummation.

[*Watchman.*]

It is not the bare literal and blind following of the words of Christ which reveals their blessing, but a comprehension of their hidden wisdom and a fulfilment of their spirit. First of all it is necessary to dispel the notion that they are absurd and to accept them as containing divine wisdom, though not seen at first. This will lead to a search after their meaning and an effort to realize their value in practical experience. They open a door of unique and new life.

[*Independent.*]

It may be that this generation may add something to and take something from the creeds of the past; and those who hold back may be no truer disciples than those who move forward.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

For some time the postage required for subscriptions outside of United States territory has exceeded the amount added to the regular subscription price for this purpose, and an increase in rates sufficient to cover this deficiency is now deemed necessary.

Beginning April 1, 1912, therefore, the rates on all subscriptions outside of United States territory will be as follows: For Canada, *Journal* $2.25, *Sentinel* $2.45; for all other countries, except those to which the domestic rate applies, *Journal* $2.65, *Sentinel* $2.95.

Renewals for all subscriptions terminating before April 1, 1913, and received by us prior to July 1, 1912, will however be accepted at the old rates.

The pamphlet "Causation" by Frederick Dixon has been translated into Swedish—"Kausal-lagen"—and is now on sale; 40 pages and cover at the prices of the regular pamphlets.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy. Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

ITEMS OF INTEREST.

National.

One hundred million wall-eyed pike and four million brook trout will be distributed throughout the lakes and streams of Minnesota this year. Planting approximately four hundred million fish fry, propagating them and caring for big game, has cost Minnesota $755,-232.04 during the last ten years.

Over thirty six million pike perch have been sent out from three of the Pennsylvania hatcheries in the last few days. The fish are distributed throughout the state, the Susquehanna and Delaware getting large shares in the east, and the Allegheny, Monongahela, and Kiskiminetas rivers and French creek in the west. The first shad eggs were taken at Torresdale hatchery a few days ago, and the cultivation will be carried on by joint work between Pennsylvania and New Jersey with a view to increasing the famous food fish in the Delaware.

The Governor and council of New Hampshire have won their case in the supreme court for the acquisition by the state of Crawford Notch and other scenic property in Hart's Location. In a petition entitled State vs. Morey and others the Governor and council complained that the principal owners of the tracts in Hart's Location refused to sell, and the officials requested the appointment of a commission to assess the damages to owners due to the taking of the property by the state under the rights of eminent domain. The court approves a law passed by the Legislature at the last session, by which the state comes into possession of a ten-thousand-acre park. Its acquirement will preserve one of the most attractive parts of the White mountains.

The House last week voted, one hundred and twenty to forty-nine, to abolish the United States court of commerce, many Republicans voting with the Democrats. Cases now pending before the court under the abolition provision contained in the legislative-executive-judiciary appropriation bill would be transferred to the various federal district courts having competent jurisdiction. The commerce court has been under fire since its first session revoking the interstate commerce commission. The opposition to the new federal tribunal has been based on the claim that its existence has enabled to a large extent the power of the commission over the railways and that it has consistently favored the latter in all litigation.

The American government has been requested to intervene in the presidential election in Panama to the extent of seeing that it is fairly conducted. This fact was admitted by President Arosemena in an interview. He said that the directorate of the Union Patriotica, the name given a party composed of friends of President Arosemena and Pedro A. Diaz, the official candidate for the presidency, has asked for American intervention such as was granted in the elections of 1908, when Secretary of War Taft informed the Panama government that the election must be conducted fairly. President Arosemena added that his government would welcome such intervention.

Wireless operators on ocean-going steamships throughout the world will be compelled to stop all commercial business and listen at stated intervals, perhaps every thirty or sixty minutes, for calls of distress from other craft, if the recommendations of the American delegates to the international radio-communication congress in London in June are favorably acted upon by that body. They have determined to urge that a stated wave length be employed by wireless operators at sea for commercial purposes, and that an entirely different wave length be used for distress signals and in disseminating reports of meteorological conditions, storm warnings, and weather forecasts.

Negotiations between the packers and representatives of Attorney-General Wickersham have begun with a view to dissolving amicably the National Packing Company, the fifteen-million-dollar corporation which is jointly owned by the Armour, Swift & Morris interest. Not only have the packers been threatened with a suit for dissolution, but with prosecution for alleged perjury against many witnesses who appeared at the recent criminal trial. It is claimed that the dissolution of the National, if honestly effected, would restore competition between thirty powerful factors that make up the "combine."

A three-million-dollar claim of the Mille Lac Chippewa Indians of Minnesota on account of losses sustained by them through the opening of their reservation to public settlement, has been approved by the United States court of claims. Chief Justice Peelle and Judge Howry dissented from the majority of the court and indorsed the contention of the federal department of justice that the law did not intend to give the Indians a valid claim against the United States. It is expected that the attorney-general will appeal the case to the United States supreme court.

The taking of testimony on the federal suit to dissolve the United States Steel Corporation was begun in New York last week and probably will continue for two months. Hearings also will be held in other cities and probably it will be as much as a year before the United States circuit court at Trenton, where the suit was filed, will take up the evidence for judicial consideration.

The comptroller of the 1915 exposition at San Francisco, Cal., has submitted a statement of receipts and disbursements from the commencement of business in November, 1909, to March 30, 1912. This statement shows that the total amount of signed subscriptions to date is $6,005,700, and that the total cash received from subscriptions and other sources amounts to $1,725,341.05.

The interstate commerce commission has decided that freight charges must be based upon actual weights of shipments and not upon arbitrary estimated weights. The railways were ordered to refund the difference between the charges on the arbitrary weights and those on the actual weights.

In his annual statement to the stockholders, containing the yearly report of the International Harvester Company, the president of that corporation intimates the possibility that some form of compromise may be reached before the Sherman lawsuit comes to trial.

Investigation of charges against Judge Archbald of the commerce court has been taken up by the House committee on judiciary. It is charged that he was interested in a coal deal while a party in interest was before the court.

The Senate has passed the resolution introduced by Senator Poindexter of Washington for an investigation of the Lawrence strike by the department of commerce and labor.

Three-cent and half-cent coins are provided for in a bill passed by the House.

International.

The exploring party which recently explored a portion of the extreme north of Western Australia that had not hitherto been investigated, discovered several million acres of what the leader described as fine pastoral country. They made very extensive collections of scientific exhibits, especially new species of animals, plants, and birds, and it is anticipated that the results of their work when published will prove of great value.

British motorists are showing some interest in a project which is being revived of reopening and putting in condition the old Roman roads that led out from London to the surrounding cities and that connected the outlying places. The ancient highways, built by the Roman generals for military purposes, were well constructed and their routes were exceedingly straight, but they have apparently in many instances been practically abandoned.

A circular telegram from General Li Yuen-Heng, vice-president of the Chinese republic, concerning the suppression of opium in China, is given great prominence in the native press. It points out that the suppression of opium includes three main undertakings: First, the prohibition of its importation and transportation; second, the suppression of its cultivation; third, the suppression of opium smoking.

Only one of the bells of the new Campanile at Venice is old, the principal bell, the Marangona, not having been destroyed in its fall. The others were founded, at the Santa Elena establishment, from the fragments of the old bells found in the debris. For the first time in such a record they are inscribed with the names both of the sovereign pontiff and of a king of Italy.

In the presence of hundreds of delegates representing practically all sections of the German empire, together with many from other countries and overseas, the second international congress of house owners convened for its initial business and deliberative session in Berlin last week.

A commission has been appointed by the Italian government to examine the leaning tower of Pisa and to report. The tower, it seems, is not in immediate danger, but preventive measures must be hastened if another catastrophe such as that of the Campanile at Venice is to be averted.

Industrial and Commercial.

Since Jan. 1, this year, 1,645,111 bushels of potatoes have been received at Boston from England. From Jan. 1 to May 1 the receipts at Portland, Me., totaled 06,140 bushels, and one hundred thousand bushels were landed there in bond for Canada. During one week recently the receipts at New York totaled 442,-576 bushels.

The Duquesne furnaces of the Carnegie Steel Company of Pittsburg, Pa., broke a world's record in March when 106,031 tons of iron were produced. This was at the rate of three thousand four hundred and twenty tons a day or an average of five hundred and seventy tons for each of the six furnaces.

The National Rice Milling Company, the five-million-dollar New Jersey corporation, commonly known as the "rice trust," has filed papers of dissolution in the office of the secretary of state at Trenton.

It is understood that wheat grown in Bihar, India, from seed supplied by the agricultural college at Pusa, has given extraordinarily favorable results.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE OPEN DOOR.

CLARENCE W. CHADWICK.

THE door that opens to receive the Christ-idea, the spiritual "King of glory," swings not upon material hinges. It is not the golden-hinged portal to any earthly temple. It is the door of consciousness, and how to keep this door open should be a problem of serious moment to every seeker after Truth.

In Revelation we read, "Behold, I have set before thee an open door, and no man can shut it." The door here referred to is the door of opportunity that is open to every honest heart seeking to be "taught of God." God is not willing that any should perish, but that all should know, understand, Him, from the least to the greatest. God could no more withhold His presence from His child than could the sun refuse to radiate light. God does reveal Himself to humanity, but only through the door of consciousness. While this door from the divine view-point is ever open, from that of benighted mortals it seems closed. The Scripture further says, "Behold, I stand at the door, and knock: if any man hear my voice, and open the door, I will come in to him, and will sup with him, and he with me." This clearly indicates that the first condition precedent to communion with God is the ability or capacity to hear the voice of Truth. The student of divine metaphysics has learned that the "still small voice" of Truth is not carried upon the waves of sense perception, and that it can be heard only when the din and confusion of material sense is hushed. The next step leading to spiritual communion is to open the door of consciousness, otherwise the divine evangel will not come in. How shall this be accomplished?

The great Teacher of humanity answers this question in these words: "Whosoever will come after me, let him deny himself, and take up his cross, and follow me." Without a proper sense of self-abnegation as taught in Christian Science, the mental approach to the kingdom of heaven is closed, the voice of Soul is unheard, and the dream of mortal existence continues. Upon this one point, so little understood by professing Christians in general, hinges all the peace, joy, and happiness which can be experienced by human beings. The unhappy admission of a mortal selfhood living in constant disobedience to God's laws, and doomed to the supposed consciousness of an evil presence and power, would keep one in constant ignorance of Christ, Truth; while the understanding in Science of how to correct this unchristian admission and to know oneself as a child of God, reflecting only divine attributes, opens the doorway to that spiritual consciousness wherein dwell purity, health, holiness, and happiness. The spiritual apprehension of man's godlikeness will come slowly to one who thinks only of the loaves and fishes. He must set his affection on spiritual things, "not on things on the earth," and be found living consistently with his desires if he would be conscious of the potency of divine power to extirpate the belief in evil. If self-abnegation, *alias* the denial or correction of sense testimony, is cherished as the key-note of all Christian activity, the sweet assurance voiced through the revelator will be realized, "I will come in to him, and will sup with him, and he with me."

If the belief of a material selfhood is cherished as a part of the natural order of things, and the theory maintained that the world could not get along without this so-called flesh and blood man, one's moral and spiritual progress will be slow indeed. Any argument which encourages the cultivation rather than the putting off of the old man, *alias* the belief that man is mortal, will not open the door to the kingdom of heaven, here or hereafter. There is but one way to cease "from man, whose breath is in his nostrils," and no other religious teaching than Christian Science explains its *modus operandi*. Other systems may refer to self-denial as a means of grace, but they fail to explain the dream nature of the so-called Adam man and the divine rules by which humanity can and must put off this mistaken concept of man and thus be enabled to put on the real man of God's creating.

When one stops to ponder seriously the terse statement of Scripture that "no man can serve two masters," he is confronted with this fact, that spiritual sense and so-called material or physical sense do not mingle or cooperate in cause or effect, and that he must therefore choose which he should or will serve. While the centers of intellectual and scholastic training may encourage the cultivation and upbuilding of material sense, when one is forced to admit that without this so-called sense there would be no channel through which evil or sin could find its way into the consciousness of mankind, he turns at once to the contemplation of things spiritual and eternal. In so doing he becomes the willing servant of that spiritual sense which our Leader tells us "is a conscious, constant capacity to understand God" (Science and Health, p. 209). Material sense keeps the door closed on progress, while spiritual sense alone ushers in the law of spiritual perfection and reveals the harmonious government of Soul. The highest possible achievement of material sense would necessarily be a fleeting human concept of God, man, and the universe. It never has arrived and never will arrive at any spiritually accurate conclusions concerning anything that really exists.

Spiritual sense, on the contrary, opens the door to that higher order of thinking which reveals the harmonious facts of true existence, wherein there is neither a changeable God nor a fallen man. It is this spiritual sense which Jesus enjoined his followers to serve, and Christian Science has no other mission on earth than to magnify and to demonstrate the power and presence of the omnipotent good to which this spiritual sense is the only open door. Until one gains a spiritual sense of the Scriptures he is quite sure to misunderstand and pervert the inspired teachings of Christian Science as they are expressed by Mrs. Eddy; but let him begin to look at Christian Science through the lens of unselfishness and purity, and the scene changes. He will then understand and uphold its teachings, and because of his own God-given ability to prove the healing power of Truth he will know that Christian healing as demonstrated by the Master is a present possibility, and rejoice in the new freedom he has found.

The Master said: "I am the door: by me if any man enter in, he shall be saved, and shall go in and out, and find pasture." This certainly describes the open door of spiritual sense which is closed to thieves and robbers, in other words to the erroneous theories and opinions of men, but which swings freely and noiselessly upon its hinges of truth and love to all who can repeat the password of purity and sincerity, "Blessed are the pure in heart: for they shall see God."

ILLUSTRATION AND EXEMPLIFICATION.

ANNE ELIZABETH JENKINS.

ONE of the difficulties which confront the beginner in Christian Science is that of understanding the relation between God and man. As a rule we are given illustrations to make this relationship clear, just as Jesus through parables taught his followers, and one of the simplest examples that may be cited is that of parent and child.

The practitioner begins to remove from the frightened sense of his patient the concept of a God of wrath who is always punishing His children, and to substitute for this dreadful concept the idea of a God who is Love, who tenderly guards His children from all harm, guides them through green pastures, and sustains them with living waters. The patient is told that God is unconscious of evil in any form, that suffering and punishment go on in human experience only because of human ignorance of God's law, and that suffering ceases as soon as we are willing to obey that law. This is a comforting illustration, for most of us are only big children who love to cling close to our father's hand. But the illustration is by no means perfect, because it is impossible for us to conceive of a child as the perfect reflection of the father. To the mortal sense a child has a mind of its own, a will of its own, a personality distinct and often totally different from that of its parent; therefore the illustration, though helpful to us because it gives us a sense of protection and safety, is only a step toward the perfect understanding of God and man.

The Scientist may speak of the sculptor and his work. The ideal exists in the thought of the sculptor and is expressed in the clay. But this too is faulty as an illustration, because man must express all that God is, and the work of art does not express the intelligence, action, or life of its creator, because it does not think or live.

To speak of the relationship of God to man as that of the sun to the ray of the sun, gives us a new thought on the subject. In Science and Health Mrs. Eddy says: "As a drop of water is one with the ocean, a ray of light one with the sun, even so God and man, Father and son, are one in being" (p. 361). This illustration brings out the fact that man is inseparable from God, that he absolutely cannot exist without God, nor can God exist without His expression, man. This idea is not brought out in the previous illustrations, for a work of art goes on existing after its creator has ceased to exist, and children live after their parents have passed away.

The illustration of a person looking at himself in a mirror brings out the fact that the real man is absolutely, completely an expression of God and acts as God acts, but it sometimes suggests a material or corporeal personality so strongly that it is likely to misrepresent the idea. We might easily begin to speculate as to the form of Deity, and to get into difficulty with the illustration. If we were to think of God as an old man, we would have man, His reflection, as an old man; whereas, if we were to conceive of man as young, we would have God as a youth, both of which concepts are unthinkable. Then, if we begin to think of man and woman, we would find ourselves greatly confused, showing that this illustration must be spiritually understood. In explaining this vital truth to the beginner in Christian Science, the practitioner may take something from each illustration, but he will find all illustrations inadequate if they are materially regarded.

After it has been made clear to the beginner, through these simple examples, that the relationship between God and man is so close that man can be sure it is God's business to take care of man, His child; that God expresses Himself through man as the sculptor expresses himself through his work; that man cannot possibly exist without God, or be separated from Him, and that man is the complete expression of God, then the beginner is ready for more radical definitions. He can be told that God is Mind and man is Mind expressed, that he is therefore intelligent; that God is Life and man is Life expressed, therefore he lives and cannot die; that God is the source of all right action and man is action expressed, therefore he is perpetually active; that God is good and man is good expressed, therefore he cannot do evil; that as God is Spirit man is spiritual, not material; and that all this is true because of divine law, law which operates continuously. In this way the beginner must work in terms of Mind only, and his sense of God as a corporeal being disappears, since in place of this concept he has a grand, limitless, unbounded concept of Life, Principle, Mind, Spirit, Truth, Love—all manifested through man as God's idea, inseparable from God, the glory of God. As our text-book says, "He reflects the beatific presence, illuming the universe with light" (p. 266).

These statements are absolutely practical and can be applied to every-day experience. If one has a knotty problem to solve, the declaration that man reflects intelligence, because God is Mind, helps one to solve it; if one has a sense of sickness, the declaration that Life is made manifest through man heals him; if hatred has been made a guest in one's consciousness and he begins to know that the real man is Love expressed, because God is Love, the sense of hatred begins at once to disappear.

In keeping close to the teachings of Science and Health we learn by illustration and example, and finally through explanation in terms of Mind only, the glorious, satisfying truth of the relation between God and man, a process which will go on until all shall know God even as they are known of Him.

HEALING BY PRECEPT.

CASSIUS M. LOOMIS.

EVERY worker in the field of Christian Science has doubtless found it difficult to impress upon others the important teaching that it is spiritual being and not the material body with which we are to reckon. A smile of tolerant unbelief often overspreads the face of him who is new in metaphysical studies, as he listens to your words upon this subject with a sort of Pickwickian indifference. Trained to think of himself and others as material, living as he has been in a sphere filled with seeming limitations, and wedded to the concept of form and outline so that he tests all questions of existence by the five physical senses, his consideration of spiritual things must of needs wait for a time. But the untiring practitioner—the apostle of Christianly endeavor—does not give up. Growth in the consciousness of his patient will overcome even this seeming lack. His unfoldment may be slow, but it is interesting. One by one the earth clods drop out of his thought, and the five senses seem less and less to be depended upon. In time his habits of seeking sensuous pleasures are given up, for he finds them to be only fleeting and oftentimes degrading. Then, and not until then, will the spiritual concept of man's being begin to pervade his understanding, and his rebirth into a broader and holier field of action be assured.

In the work of healing there is perhaps nothing more necessary to be clearly understood than the fact that the spiritual is the real and eternally harmonious, and that the material is but a fading shadow in the dream which we

Digitized by Google

attempt to measure by years. The little child pauses in her romping for a moment when you speak to her, then bounds away to continue her play. Supple in limb is she, but she has no consciousness of body. As for health, her thoughts are as far from the subject as may be. She has no theories to exploit, no fears to suppress; she simply lives the child-life without stress or disturbances, then lies down to sleep care-free as to what the morrow has in store for her. Heaven without a thought of body is a child's inheritance, and what says our Master? "Whosoever shall not receive the kingdom of God as a little child, he shall not enter therein." This kingdom of God is to be received today—now; it is to be received by the Christian Scientist as if a legion of learned men had never theorized about it. How interesting, that a little child should have been our Saviour's favorite illustration of the faith absolute!

St. Paul's declaration, "We are confident, I say, and willing rather to be absent from the body, and to be present with the Lord," is singularly corroborative of our Leader's words in Science and Health (p. 324): "The body will reflect what governs it, whether it be Truth or error, understanding or belief, Spirit or matter;" and in the presence of these two statements the student of Christian Science must in time look away from the physical or mortal mind concept to such an extent that the body, if recognized at all, shall be that which is clothed in the white raiment of love and purity, and subject only to heaven's legacy of harmonious action and existence.

"PRIMEVAL EXISTENCE."

KATE WARDWELL BUCK.

A CLEAR conception of "primeval existence," the realization that it is, as Mrs. Eddy tells us, "the radiant reality of God's creation" (Science and Health, p. 110) in which "God saw every thing that he had made, and, behold, it was very good," awakens to the fact that there is never anything to fear; for here is a universe—the universe—in which all is absolute harmony, eternal life, understanding, unimpeded activity, love. Let us picture a world governed by one supreme Mind, as revealed in divine Science, for only so could it be harmonious, since from many minds, each seeking to rule, would come inevitable confusion; this Mind an all-wise, ever-present Father-Mother, knowing the needs of every child in His universe and supplying them even before they are expressed, since the creator must know the needs of His creatures better than they do themselves.

Darkness is unknown in this abiding-place, for "God is light, and in him is no darkness at all;" so, naturally, His children, living in Him and therefore inseparable from Him, must stand in the light too, there being nothing else to stand in; neither is there "one life which the Life-giver ever loses out of His sight." Then that peace which all hearts desire is here; a peace which nothing can disturb or overthrow, because it is the only genuine peace, the peace of God, a consciousness of which enables one to stand like a rock unmoved amid the waves.

There is no tumult or strife, because all identities, though perfectly distinct, are merged in and subservient to the one infinite intelligence. This brings the comforting assurance that for each idea of God there is a place already prepared; that place is his place, he is in it now, always was, always will be, and cannot, by any possible happening, be thrown out of it. He was placed there by the one and only power, the origin and ultimate of all that is, the one cause from which all real effects proceed. If even a blade of grass or a "weed by the wall" has its place to fill, will not the Father then care much more for those whom He has so loved and honored as to call them "sons of God"?

In the picture is abundance, plenty, no lack of anything good, for the governing Principle is an overshadowing Love that knows and therefore can give nothing but good; hence there is no pain, sickness, weariness, or sorrow (for these contain no element of good). The only law is harmony—a word in which is contained the sum and substance of all that mortals hope for, the "pearl of great price"—the "peace of God, which passeth all understanding." This is, in truth, a city that hath foundations, that "lieth four-square;" even, equable, impartial; the only "city" worth striving for, filled as it is with the "unseen force of His love that never forgets or exhausts itself." To obtain even a glimpse of this place no sacrifice can be too costly, no effort too great, no struggle too severe. It is the only place of refuge from "false witnesses," this "secret place of the most High;" it is the realm of divine Truth and there is no other. As the vision becomes clearer we, in His name, renew our courage, however long and rough has seemed the "hill of difficulty," remembering that we are not bidden to think of ourselves, but simply to go forward in faith.

However eager one may be to enter in, he must needs follow the gleam that shines for him alone, though narrow the way by which it leads him; and if others seem to find the "open door" more quickly and by smoother paths, he may remember Jesus' question, "What is that to thee?" There must ever be differing paths as there are differing individualities, and each path has its lesson. Carlyle says that "there is always a spot in our sunshine: it is the shadow of ourselves," and as we come to realize this and try with honest earnestness and all-absorbing desire to remove the "spot," so shall we surely learn that it is our right to "enter in through the gates into the city."

When we are ready, without reservation, to lay aside every weight,—human plans, ideals, and beliefs,—then the gates which are never shut, whatever the seeming, will be found close at hand. Entering, at last, each shall share in those real, true, eternal gifts prepared for him from the very beginning. The mortal dream of living, when we come to recognize it as such, is so pitifully small compared to the "glories to be revealed," that we can surely give it up without regret for the glories to which each one of us has a perfect right as the offspring of the King of a realm in which the "highest ideas are the sons and daughters of God" (Science and Health, p. 503), ever joyously, divinely welcomed to their "Father's house."

WATCHFULNESS.

M. ELIZABETH FLANNIGAN.

IN one of Jesus' parables we read: "This know, that if the goodman of the house had known what hour the thief would come, he would have watched, and not have suffered his house to be broken through." A recent experience in overcoming mental and physical inharmony brought to the writer the practical significance of this verse and showed plainly that the inharmonious condition had been brought about through apathy, mental laziness, and a false sense of patience, which mental state had permitted "the thief" to enter and the mental home "to be broken through." The thought, "if the goodman of the house had known what hour the thief would come," suggested to me that since I did not know at what hour or what instant the thief would come,—the temptation to believe a lie, the lie that there is life or intelligence in matter; the temptation to fear; the temptation to think or say or do something unloving or uncharitable; the temptation to give power to aught but God,—and, since I did not know at what hour or what instant I might be called upon to stand firm in the truth, how necessary it was for me to be always on guard, "instant in season, out of season." It showed me that we must know the truth all of the time, not merely some of the time; that we must, every minute, every hour, refuse "to be influenced by any but the divine Mind" (Miscellaneous Writings, p. 113). Thus doing, we are protected by the impenetrable armor of Truth and are shielded from every

Digitized by Google

attack of error. Here it is well to recall our Leader's further admonition to be "never absent from your post, never off guard, never ill-humored, never unready to work for God" (p. 116).

The verse quoted states that had the goodman known "he would have watched." This first part of the verse had taught me when I was to watch. Not spasmodically, but all the time. But what was I to watch? Surely not matter or personality. No, I was to watch first of all my own thoughts; not the mistakes and wrongs about me, but only that which is right; not the ways and methods of evil, but the ways and methods of him who said, "I am the way, the truth, and the life;" not to be guided by my own self-will or human opinion, but to watch for divine direction, which "illumines, designates, and leads the way" (Science and Health, p. 454); not to study and watch the counterfeit man and universe, but to watch and study constantly the man and universe of God's creating. And if thus watching, every hour, every instant, surely one will not suffer his house "to be broken through." In other words, he will not allow his consciousness to become a channel through which thievish thoughts may enter and plunder. The cheering promise to the faithful is this: "The Son of man cometh at an hour when ye think not" to reward the faithful watcher.

GRATITUDE.

JAMES H. DAVIS.

In frequent trips across the continent, both in the United States and Canada, during which it has been my privilege to visit many Christian Science churches, ranging in size from the stately temple of The Mother Church in Boston to the small newly-formed society where only a handful was gathered together "in his name," I have been deeply impressed with the steady growth of Christian Science and of all the evident blessings that are at hand for the field throughout the entire world. I cannot help but feel a deep sense of gratitude coming with the knowledge that wherever we are, in any part of the civilized world, there we can find Christian Science churches using the same Bible, the same Science and Health, the same Lesson-Sermons, and governed by the same Church Manual. We may also feel sure of a welcome in any Christian Science church, wherever it may be found.

Remembering the growth and seeming prosperity of our beloved cause, I wonder if we are showing our gratitude in every possible way for all these blessings. Mrs. Eddy constantly reminds us that gratitude means more than lip service. On page 3 of Science and Health she says: "Are we really grateful for the good already received: . . . we cannot conceal the ingratitude of barren lives."

This should lead us to ask ourselves what we are doing to express our gratitude for all our blessings. In the satisfaction of seeing the church or society in which we are interested seemingly grow, expand, and perhaps acquire its own church edifice, do we always remember that our church or society is a branch of The Mother Church? Are we being thoughtful of "the vine"? Do we realize that unless the vine is nurtured and cared for, unless it is strong, sturdy, and healthy, the branches cannot grow, neither can they "bear much fruit"? The cause of Christian Science is bound up with The Mother Church, woven into it, and must stand or fall with The Mother Church. Its mental, moral, and spiritual condition is reflected in the branches throughout the entire field, and in proportion to our fidelity and loyalty to The Mother Church do we grow into a higher and better understanding of this truth.

There is no doubt but that we all love the cause and earnestly desire to do our part in forwarding this great emancipating movement; but we must not forget that the enemy of divine Truth is ever at hand, trying to blind us to privilege and duty. Let us therefore examine ourselves and see if we are not being deprived of something that belongs to us. Have we accepted the great privilege of being members of The Mother Church, of having our names enrolled with the advance guard of Christian Science? We who are members of this church, have we paid the minimum per capita tax, or have we multiplied it in some proportion to the benefits we are receiving from Christian Science? Are we showing our gratitude to Mrs. Eddy and Christian Science by subscribing to all the Christian Science publications, as she asked us to do, and which she founded for all mankind? Let us think what Christian Science means to us and to the world. Let us show gratitude by supporting this great cause, not only with our earthly means, but with helpful, reliant, rightly directed thought, and with obedience to the Master's injunction, "Go ye into all the world, and preach the gospel;" "Heal the sick."

In our gratitude let us not forget those who under divine guidance are managing and directing the affairs of The Mother Church and the Publishing Society. Surely they are doing a great work, and they are entitled to our gratitude. Let us as Christian Scientists remember that "giving does not impoverish us in the service of our Maker, neither does withholding enrich us" (Science and Health, p. 791); and let us ever remember the admonition given in Malachi, "Bring ye all the tithes into the storehouse, that there may be meat in mine house, and prove me now herewith, saith the Lord of hosts, if I will not open you the windows of heaven, and pour you out a blessing, that there shall not be room enough to receive it."

TRANSFORMATION.

LAURA B. DOORLY.

Gray skies, a sullen pool of water—colorless stretches of grass and shivering trees. A cheerless scene indeed, I thought, as I wended my way up the old, familiar path. Suddenly the sun shone, and the scene was changed. The skies were no longer gray—they were pearl-tinted, and surely the silver lining gleamed through every cloud. The pool of water sparkled and danced beneath the blue sky, and all the trees of the field distinctly clapped their hands, perhaps because at that moment a thousand birds burst into a delicious rendering of what I think must have been a "rhapsodie," and all because the sun had given one of his sunniest smiles! I marveled at the change; the world had seemed so old, so weary, just a moment before, and now the sunshine had revealed its beauty and its youth; life, color, and joy appeared wherever the sunbeams glanced, and that was everywhere.

The thought then flashed upon me that here was symbolized life as it seemed before Christian Science came, and also after the light of Truth and Love had burst forth. Just as for me the "Sun of righteousness" had risen, with "healing in his wings," so the sun shone forth and transformed the whole world,—as one of our hymns expresses it,—

> Lighting up each somber shadow,
> With a radiance soft and clear.

The dry bones of human experience, cold and lifeless as the sunless day, had been breathed upon by the "Spirit of life in Christ Jesus," and this gave "beauty for ashes, the oil of joy for mourning." Thankfulness welled up afresh as I realized that Christian Science reveals the city that "had no need of the sun, neither of the moon, to shine in it: for the glory of God did lighten it, and the Lamb is the light thereof."

That God, being good, is the author of evil to any one, that is strenuously to be denied and not allowed to be sung or said in any well-ordered commonwealth by old or young. Such a fiction is suicidal, ruinous, impious. God is not the author of evil, but of good only.—SOCRATES (in Plato's "Republic").

[Editorial in *Brooklyn* (N. Y.) *Eagle*.]

The decision of the New Hampshire supreme court, declining to interfere with the trust created by the will of the late Mrs. Mary Baker Eddy, will be generally regarded as just. Mrs. Eddy, because of the faith of her followers, was able to pile up a property of something like two million dollars in her own name. She left it nearly all in trust for The First Church of Christ, Scientist, in Boston. Her son by a former marriage contested the will. The court says:—

"Mrs. Eddy had the constitutional right to entertain such opinions as she chose, and to make a religion of them, and to teach them to all others, and their rights of belief are as extensive as hers. Her legal right to teach was not ended with her death."

It was the belief that Mrs. Eddy was above sordidness that led her supporters to buy her publications, to help her, and to help the Christian Science movement. In her testament she could have proven their belief unfounded by treating her fortune as personal, to be passed on as any other fortune might be, to her heirs or to persons she might name for personal reasons. We presume that a court could not have given any redress to Christian Science or Christian Scientists if she had thus betrayed their trust. She did not betray it. She vindicated their wisdom in trusting her. It would have been essentially immoral, considering the source of the fortune, to have permitted legal technicalities to interfere with a wholly proper purpose.

Whether Mrs. Eddy deceived herself as to her mission or not, whether Christian Science is right or wrong, had, as the court intimated, nothing to do with this case. The money came from devotees. It is to go to the exposition and the exploitation of the creed which the original givers accepted. The propriety of such use of such an estate cannot well be questioned.

[William S. Campbell in *Washington* (D. C.) *Post*.]

The belief that divine power is sufficient to destroy sin but is not sufficient to destroy sickness is not borne out by the Scriptures. When the man sick of the palsy was brought to Jesus he received these words of encouragement: "Son, be of good cheer; thy sins be forgiven thee." Then followed the complete restoration to health, so that when he was told, "Arise, take up thy bed, and go unto thine house," he immediately did so. On another occasion, after healing a woman of what would probably today be called rheumatism, Jesus defended his action by saying to his critics that Satan had bound her, which was another way of saying that sin was the cause of her trouble, and the result proved that he had destroyed both the cause and the effect.

That sin was recognized as the cause of disease in New Testament times is apparent from the question of the disciples, "Master, who did sin, this man, or his parents, that he was born blind?" The reply, "Neither hath this man sinned, nor his parents," indicates that disease is not necessarily due to the sins of the individual, but it does not invalidate the statement that in a general way sin is the cause of disease. The relationship between holiness, wholeness, and health is illustrated in the account given by John of the healing of the impotent man. "Wilt thou be made whole?" was the question. "And immediately the man was made whole," is the statement that follows. Then the record states, "Afterward Jesus findeth him in the temple, and said unto him, Behold, thou art made whole: sin no more, lest a worse thing come unto thee."

Paul, in his letter to the church at Rome, used the word holy in this sense. He advised those to whom his letter was written to present their bodies "holy"—that is, whole, or healthy. He followed this advice with the admonition, "Be ye transformed by the renewing of your mind, that ye may prove what is that good, and acceptable, and perfect, will of God." The members of the church to which this letter was sent no doubt understood that by mental means it was a practical thing to have their bodies transformed into whole or healthy ones, and thus to prove that health is a part of the good and acceptable and perfect will of God. It is a fact, substantiated by history, that healing was a part of the work of the early church.

Christian Science has restored this practice of the early church. It presents again the dual duty of preaching the gospel and healing the sick. The healing part was lost in the dark ages. It was discovered and reduced to practice by Mrs. Eddy. Her experience in regaining health by spiritual means was not without a parallel. At rare intervals other persons had been healed in similar manner, but there is nothing to show that any of them made any attempt to discover the method by which the healing occurred. Certain it is that if any attempts were made they were unsuccessful; but to Mrs. Eddy the conviction came strong that here was a manifestation of divine power which would heal others as it had healed her, if its Principle could be discovered and the method of its activity defined.

Referring to this period of her experience, she has written on page 109 of Science and Health: "For three years after my discovery, I sought the solution of this problem of Mind-healing, searched the Scriptures and read little else, kept aloof from society, and devoted time and energies to discovering a positive rule. The search was sweet, calm, and buoyant with hope, not selfish nor depressing. I knew the Principle of all harmonious Mind-action to be God, and that cures were produced in primitive Christian healing by holy, uplifting faith; but I must know the Science of this healing, and I won my way to absolute conclusions through divine revelation, reason, and demonstration."

It was in this way that the Discoverer of Christian Science established this new system of healing, a tribute to the value of which was paid by a speaker at the Protestant Episcopal convention held in Cincinnati in October, 1910, in these words: "The power of restoring the sick by prayer was thrown away by our church, and a woman picked up that jewel."

[John L. Rendall in *Manchester* (Ia.) *Press*.]

The teachings of Christian Science relative to Jesus the Christ, and with respect to his relationship to God, are more satisfactory, reasonable, logical, and practical from the view-point of Christian Scientists, than are those of what is called orthodox theology. "Science and Health with Key to the Scriptures" by Mrs. Eddy throws a light upon the Scriptures which reveals their true, spiritual meaning and which makes them practical to the needs of humanity. I have not attempted to state that these teachings do not conflict with so-called orthodox ideas, but on the contrary I have stated, and I reassert the statement, that they are Scriptural and Christian, entirely consistent with the teachings of Jesus Christ and with the practical example given us in the lives of the apostles and the early Christians.

Christian Scientists do not reject a "personal God," our critic's statement to the contrary notwithstanding. Mrs. Eddy has consistently taught that God is infinite, and in Science and Health (p. 336), she states, "God is individual and personal in a scientific sense, but not in any anthropomorphic sense." and on page 587 the following definition of God is given: "The great I AM; the all-knowing, all-seeing, all-acting, all-wise, all-loving, and eternal; Principle; Mind; Soul; Spirit; Life; Truth; Love; all substance; intelligence." This is the God of Christian Science; and, to use St. Paul's words, "in him we live, and move, and have our being." For the critic to state that this God is an "abstract principle" is simply to substantiate our opinion that he does not in the least understand Christian Science. The Bible states that "God is love." Does the Christian Science reiteration of

Digitized by Google

this declaration take anything from the nature and character of God? It must be evident to all thinking people that God is Truth, and we are plainly informed in the Bible that God is Spirit and that God is Life. Thus it is evident that a play upon these words for the purpose of discrediting Christian Science must fail of its purpose, when it is understood that Christian Scientists intelligently recognize the one infinite Life, Truth, Love, Spirit, Mind Principle to be synonymous with God, whom they love and endeavor to serve.

The question, "And who is Mrs. Eddy's Christ?" is best answered by her definition of Christ, as given in Science and Health, namely, "The divine manifestation of God, which comes to the flesh to destroy incarnate error;" "Christ is the ideal Truth, that comes to heal sickness and sin through Christian Science, and attributes all power to God. Jesus is the name of the man who, more than all other men, has presented Christ, the true idea of God, healing the sick and the sinning and destroying the power of death. Jesus is the human man, and Christ is the divine idea; hence the duality of Jesus the Christ" (pp. 583, 473).

There is not one fundamental or essential requirement of Scripture that is not emphasized and practised by Christian Scientists. It is true that we may have a somewhat different understanding of what "repentance" includes, of what "atonement" means, than is held by our critic, but that does not warrant the arbitrary asumption that our thought of it is necessarily wrong and his idea necessarily right. Everywhere in the Christian Science teaching it is made plain that men are individually responsible for their own thoughts and the consequences, and the constant injunction is to think those thoughts which are conducive to health and holiness and which insure peace and harmony.

Now, as to what constitutes "Christian healing" there can be no controversy. Christian means Christlike. Christian healing therefore means Christlike healing. If our critic can present a single instance where Jesus taught that it was necessary to resort to hospitals or medicines in order to heal; if he can present any evidence that Jesus' disciples did this or taught others to do it, then there will be some justification for his statement that the giving of medicines and the use of material means is Christian healing.

Again, he makes the assertion that my statement to the effect that medicine originated in superstition and idolatry is not true. Perhaps our critic has been betrayed into stronger language than he intended to use, for there is abundant proof that my statement is true. I have before me the "Universal Cyclopedia and Atlas," which states concerning medicine: "Its origin is obscure, but dates back to the early existence of the human race, coincident with the liability to injuries, sickness, and processes of decay. Medicine in its primitive state comprised a recognition of the relative virtues of different articles of food, an empirical use of medicinal herbs and roots, and superstitious rites. For ages it was merely traditional usages in families and communities. Hence it was practised, as it is today in barbarous tribes, by their local chiefs. Superstition ascribed disease to evil spirits or to the displeasure of divinities, and reverenced the gifted physicians as superhuman. Temples were erected to their worship, whose priests were guided in their treatment by invocation of the oracle. The profession thus became a sacerdotal order, within which acquired knowledge of medicine was preserved and secretly transmitted." There is plenty of additional proof to substantiate my statement, if our critic desires it.

Our critic attempts to state exactly what "God's idea" is of healing, but we are sorry not to be able to accept his statement as being either logical or Scriptural. We note his statement, "The Bible nowhere requires us to deny or reverse the testimony of the only senses God has given us." Very well, we have not said it did. At the same time, our brother will recognize the fact that in many of the affairs of life we have occasion to reverse what the material senses seem to affirm. If we follow the sense testimony, the sun rises in the east and sets in the west. Astronomical science teaches this to be incorrect, just as Christian Science teaches that many other fallacies of what is called "human sense" are incorrect. When our critic learns more of Christian Science he will have a more definite understanding as to just what these fallacies are. If he considers it conducive to his bodily comfort to preserve carefully his belief in the reality of a boil, we have no objection. The Christian Scientist, however, has a definite, scientific method by which the boil, which to the human sense seems so real, may be made to disappear.

This is true not only concerning boils, but there is abundant proof that every phase of disease known to *materia medica* and believed in by humanity has been healed by this same beneficent teaching, and why not? for St. Paul asks, "Why should it be thought a thing incredible to you that God should raise the dead," and Jesus said, "And all things, whatsoever ye shall ask in prayer, believing, ye shall receive." At what time in the history of real Christianity were these promises abrogated? Do they not, as a matter of fact, continue just as effective today as in Jesus' time, to "them that believe"? The main difference and distinction, as I understand it, between Christian Scientists and others is, that Christian Scientists choose to trust God rather than to trust in material remedies. This, however, was not their first choice, because in a large majority of cases they had run the gamut of medical experience and only in their last extremity, and because there seemed to be no other avenue of help, were they constrained to accept the ministry of Christian Science, with the result that in hundreds of thousands of cases they were healed, thus proving the promise in Psalms, "He sent his word, and healed them, and delivered them from their destructions."

[Edward W. Dickey in *Los Angeles* (Cal.) *Examiner*.]

While Christian Science is a healing system, it cannot be considered a "school of medicine," but only a religious belief. It is defined by the Century dictionary as a "system of religious teaching, based on the Scriptures, which originated with the Rev. Mary Baker Eddy about 1866. Its most notable application is in the professed cure of disease by mental and spiritual means."

For present purposes it may be stated that Christian Science purports to be the reestablishment of the practices of primitive Christianity. It does its healing by virtue of a divine law. Its "treatment" is but a mode of prayer, by which this ever-operative divine law is sought to be applied to the sick and sinful; and this is all a Christian Scientist does, whether for himself or for others. It will readily be seen that the practice of Christian Science is of a distinctly religious character. This being true, statutes passed with a view to the regulation of the practice of "medicine and surgery" cannot be said to apply to Christian Science. (See State *vs.* Mylod, 20 R. I., 632, 40 Atl., 753.)

A "practitioner" is "one who practises," and all Christian Scientists are in a degree Christian Science practitioners. The practice of all Christian Scientists falls within the ample federal and state constitutional provisions guaranteeing religious liberty, because they practise the precepts of a religious belief. The fact that they call their prayer a "treatment" in no wise alters the legal significance of the situation. The gist of the matter lies in the fact that they make no profession to heal by their own power, but rely solely upon divine power for aid. The Scientist is not a practitioner of medicine in any sense of the word, and those who turn to Christian Science for aid know that no material agencies are employed.

It cannot be too well emphasized that religious liberty does not mean the doing of any act that may be sanctioned

Digitized by Google

by a religious conviction. This is not and never was the legal import of the phrase, "the free exercise of religion." Society as well as individuals has rights that should be protected, and the law does not grant to an individual that degree of liberty which would be likely to prove injurious to others. Religious as well as civil liberty is something to be enjoyed equally by all, but this enjoyment must be in deference to the rights of all. Religious liberty has the sanction of the law only in so far as it does not violate the peace of society or infringe upon the rights of others. "Liberty," says Justice Brewer of the United States supreme court, "is simply the right to do that which one deems best, subject to the limitation that it does not interfere with the equal rights of other members of the community" (American Citizenship, p. 87).

The United States supreme court, in the case of Reynolds *vs.* United States (98 U. S. 145), announced, in an extract from 12 Hening's Stat. 84, "that it is time enough for the rightful purpose of civil government for its officers to interfere when principles break out into acts against peace and good order." I submit that the above extract, approved by the highest court in the land, affords a fair test as to whether or not the practice of a religious belief should be prohibited. The practice of Christian Science heals the sick, destroys the appetite for strong drink, releases those in bondage to drug habits, reforms the sinner, shows that "honesty is the best policy" in every walk of life, and that one cannot be a good Christian without being a good citizen. Would any one say that these results constitute "overt acts against peace and good order," or that they are "practices inconsistent with the peace or safety of the state"?

The rights herein briefly discussed are vital to the preservation of life. They are also fundamentals of civil government, to which, it has been said, "a frequent recurrence . . . is absolutely necessary to preserve the blessings of liberty."

[William J. Bonnin in *Bury* (Eng.) *News.*]

According to a report in a late issue, the chairman of the Congregational Union Assembly at Pendleton allowed himself, in the course of an address dealing with the ability of Christianity to fulfil the requirements of a world's religion, to express his not very complimentary estimate of the intellectual capacities of Christian Scientists. Surely there can be no more ineffectual, as there is no less expensive, method of seeking to clothe words with a resemblance to wisdom, than by declaring rather loudly that those who may think differently are necessarily fools and gullible. Nor can a public indulgence in such an expedient by its advocate be expected with any confidence to promote the claim of Christianity to be regarded as the final universal religion, or to foster that spirit of unity from which any such religion must spring.

Will you kindly allow me space to refer to this greatly misunderstood subject in the hope that your readers may not too readily accept this critic's estimate? No one who follows at all closely the religious thought of the day can be unaware of the consensus of opinion that Christianity has reached, or at least is approaching, a crisis in its history. Hitherto, as one writer has put it, Christianity has, as it were, been divided vertically by sectarianism, but today modernist thought is cutting all sections horizontally. At the same time the churches are with one voice lamenting their diminishing membership and deploring their inability to solve the distracting social problems of the day. "It appears to me regrettable," to use the critic's own words, "that the organized forces of Christianity have so little guidance to offer the nation in the present unrest in the world of labor." Is it not just possible that these manifestations are in origin not unconnected, that they spring from a common root? Is it not possible humanity is beginning to revolt against a Christianity which exhorts to a patient submission to evil as God-sent and inevitable, and to the postponement of happiness till after death? May it not be that mankind is failing to recognize in a religion which does not save, the religion of the Saviour of mankind? Ought it to be surprising if people, calling to mind that the Saviour went about healing those sick in body or mind and freeing those in bondage to sin, misery, and disease; that he preached that he came to fulfil the law and that those who believed on him should be able to prove its truth by doing the works he did, are beginning to think that, as a substitute for the salvation they are seeking for their present grievous ills, the prospect of a hypothetical salvation from a hypothetical torment beyond the grave is unsatisfying?

Now Christian Science has come to teach that there is a Science of Truth as expounded by Christ Jesus and the apostles, a Science of Christianity, and that students of this Science may practise it and prove it for themselves. Based on the fundamental fact of the omnipotence of God, Christian Science derives its power from that very fact, and equips its student to overcome evil of every kind. It reveals to him as a comprehensible reality the omnipresence of a loving and protecting God, to whom he can turn in all hours of need, and it throws a light on the Scriptures that makes them more than ever precious to him. And since in its ultimate effect nearly every form of evil results in bodily disease or affliction, Christian Science finds itself to no small extent occupied with the healing of the sick. Christianity, to be worthy of the name of him who came that we might have life and have it more abundantly, must necessarily be intimately concerned with the healing of disease. It is the duty of the Christian to heal the sick, and it is useless to imagine that this obligation may be handed over to a body of people who need not possess one particle of Christian faith, and that their therapeutic achievements may be quietly placed to the credit of that faith. With all respect to the critic, the eternal command laid on the Christian to heal the sick can be obeyed in no such vicarious manner. Moreover, if God, Spirit, is the healer of all our diseases, then He must be able and willing to heal them without any reinforcement from an unintelligent drug. To speak of "God's willingness to cooperate with every wise device of the medical profession," sounds like a rather cautious concession to the omnipotent, not of course to interfere with the drug's paramount right to the credit.

Christian Science enables one to prove that the eternal, changeless God is today available to heal all who approach Him by the way Jesus pointed out, and also that such healing is alone truly scientific. If the critic but knew his facts, he would rejoice that unnumbered thousands of people in practically all parts of the world are able to say today that, when every human aid and resource seemed spent, Christian Science revealed to them a God who could and did save them. And not a week passes but this army gains a very considerable increment. It may suit some to brand them airily as "lacking in intellectual stamina," but they are really above rather than below the ordinary intellectual level, and they come from every profession, calling, and walk in life. At any rate they themselves are satisfied, and as each experiences his healing, whether it be from sin or sickness or misery that he is freed, he ceases to attach weight to ridicule or detraction, so infinitely more concerned is he with the new significance with which he is able to say, "I know that my redeemer liveth."

"Any law on the statute-books of a state making it a crime to heal the sick, is a disgrace to any state. It is taking away the individual right of the people to choose their own physician when they are sick, whether it be osteopathy, mental science, Christian Science, or any form of healing. . . . When will the doctors learn wisdom, and let these drugless healers alone?"—*Exchange.*

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"LEST WE FORGET."

PROBLEMS come to us all, and sometimes it seems the only way to turn to some one else for advice. It is then we need to remember that to each of us is given a task which no other can do for us; that, one and all, we must work out our own salvation. Again and again are we reminded, however, that while we can do nothing of ourselves,—in our own wisdom and strength,—we are not left "comfortless," there is an unfailing source from which we may ever draw an abundant supply—even "our Father," in whom is infinite wisdom and intelligence. Requests for advice on personal and local church problems still come to headquarters, but we can only repeat what it was our purpose to make clear in an editorial which appeared in the *Sentinel* some three years ago, and it is reprinted as a reminder of the blessings which have come to humanity through the truth that has opened to them the Scriptures. The editorial is as follows:—

Occasionally there come to us appeals for advice in regard to the proper course to be pursued by members of churches in which the utmost harmony does not prevail. Our Leader sagely says, "Great mischief comes from attempts to steady other people's altars, venturing on valor without discretion" (Miscellaneous Writings, p. 287); therefore to all such appeals we have answered, in effect, that we cannot undertake to be the arbiter of differences which have arisen between members, nor to advise any course of action other than for those interested to "search the Scriptures diligently," and demonstrate the teachings of Science and Health.

There is no problem in branch church government which will not yield to the demonstration of Christian Science, and there is no Christian Scientist who cannot, if he will put away all thought of self and self-interest, do his share toward bringing out harmony and loving good fellowship in church affairs as well as in every other walk of life. If divine Mind is All, then divine Mind must control in every department of our work.

A mistake often made by members of branch churches is that, instead of using every possible effort to be guided by the one Mind, they talk over their church affairs with casual visitors, and thereby secure the opinions of minds many. It is not every visitor who is wise enough or experienced enough to advise in such matters, and there are fewer still who can resist the temptation to give advice, especially when it is invited. Then, too, advice given under such circumstances is rarely worth considering, because it is almost certain either to be based upon the statement made by the person asking for the advice, in which case it is usually nothing more than a corroboration of that person's views, which may or may not be correct, or else it is given quickly, without opportunity for due consideration, and therefore is equivalent in value to what lawyers sometimes derisively call "a curbstone opinion."

Another means of injecting personal opinion into the affairs of a church is for the members to write to their teachers for advice concerning problems which are entirely individual to that particular church, and of which the teacher is likely to have no knowledge except the information supplied by the student. Three or four students presenting three or four different versions of the trouble to the same number of teachers can result in nothing but an increase of the discord, unless the teachers are wiser than most human beings and decline to give other advice than to direct their students to the Bible, Science and Health, and the Church Manual, for a solution of their problem.

When two persons differ in their opinions in regard to any matter, it is certain that one is wrong, and both may be. When that Mind which was in Christ Jesus is sought and demonstrated by both persons, the wrong concept or concepts of the situation will disappear; therefore the way to settle any disagreement is not by turning to human opinion, but by looking for guidance to infinite Mind, "that giveth to all men liberally."

ARCHIBALD MCLELLAN.

KINSHIP AND COMPASSION.

COMMON experience supplies us with many exhibitions of a great and abiding love for that which to human sense is distinctly unlovable. How frequently one meets with the case of an abnormal child, in body or disposition, who commands the tenderest, most untiring service of its parents! No gentleness of patience is lacking in the ministry rendered, and yet the object of devotion may seem not only unattractive, but altogether repulsive to those not linked to it by that love which "never faileth," that inexplicable and inexhaustible compassion of kinship which ofttimes proves itself to be as constant and unvarying as the night watch of the stars. Indeed it ever was and ever will be true that there can be no genuine compassion which is not born of a deep recognition of kinship; and this explains the teaching of the Master that world redemption must be preceded by a universal sense of brotherhood.

Every now and then a great crisis or disaster brings this otherwise apparently dormant sense into assertive action, and then we have the heroisms of the Titanic,—a display of the unflinching readiness of men of every station to hazard their own lives in the effort to save the life of an unfortunate fellow man; their capacity and disposition to do for a little time what Christ Jesus taught we should do all the time, and this reappearance of the Christ-spirit gives one a new sense of the divine nearness, a new faith in the nobler possibilities of humanity. The fact that earthly kinship, the paternal or fraternal affection, prompts to such splendid self-sacrifice, and that in supreme moments the average man is found capable of rising to what men call "godlike deeds," gives some hint of the resistless power and transforming uplift resident in that apprehension of brotherhood which the Nazarene came to awaken and illustrate, and which he emphasized as the natural and requisite mental mood of the truly saving life.

Christian Science brings this thought immediately to the fore, and thus gives basis and intelligent direction to that compassion which is the vital breath of brotherhood, and which alone supplies an open door to the solution of the world's social problems. Christian preachers and teachers have always had much to say about the duty of loving one's fellows, but for the most part they have left thought in a state of confusion which is forever projecting the question as to whether it is possible or even legitimate to love those who are unclean, impure, selfish, or mean, and this questioning is very likely to end in an uncertainty which, in effect, accepts the conclusion that while the teaching of the Master is right and splendidly ideal, it is impractical under present human conditions, and can become mandatory only when men have become more worthy, *i.e.*, when compassion is no longer called for!

In Christian Science one apprehends as he has not before that if his thought of men is to be Christian it must perceive and act upon the truth respecting them. He sees, moreover, that he is not called to love the unlovable, and he is thus relieved of all grounds of reserve or hesitation. In counseling the Philippians to think upon "whatsoever things are lovely," St. Paul certainly counseled, by intimation, that the unlovely should not even come into mind, much less be

Digitized by Google

loved. Christian Science teaches us to recognize the unideal for what it is, a seeming, a handicap of false sense, and every intelligent and worthy Christian Scientist centers his attention and realization upon that spiritual individuality which is free from fault, thus finding that permanent ground of all-inclusive affection which the veil of material abnormity can never disturb. On the contrary, these mortal disabilities, when recognized as phases of the common sickness of human sense, serve to increase that spirit of kindly ministry which would otherwise be awakened only by some unusual affliction or distress.

There are few greater crimes than that criticism of our fellow men which is indifferent to the handicap under which they are placed, and nothing so surely saves us from this offense as the perception of the unmarred man of God whose "impartial skies," as Edwin Arnold has said, "roof one race in."

JOHN B. WILLIS.

"PROMPTNESS."

IN Science and Health we read: "In the figurative transmission from the divine thought to the human, diligence, promptness, and perseverance are likened to the 'cattle upon a thousand hills'" (p. 514). These mental qualities represent great riches, and yet there are few who recognize this fact to the extent of striving to attain them or of knowing what they stand for. A dictionary definition of promptness is, "Quickness of decision or action; cheerful willingness; alacrity." The student of Christian Science would never deny that all true activity originates in the divine Mind, and the question for each is, To what extent am I expressing this Mind in all I think and say and do? If we think rightly, there need be no delay in carrying out our plans, for "with God nothing shall be impossible," and with God one day is "as a thousand years." We also read that God speaks and it is done. On the divine side, there is no delay in the carrying out of the divine purpose. Says St. Paul, "Now is the accepted time; behold, now is the day of salvation."

The progress of mankind is unfortunately characterized by many delays, even in the working out of that which is admitted to be good. It is not seen that every true impulse should be promptly transmitted from the divine Mind, that we must not allow the channels of thought to become obstructed by indolence, selfishness, or fear. If "now is the accepted time," we must act now. We must "decide quickly as to the proper treatment of error" (Science and Health, p. 463); and this means that we must decide that it can never hinder us from knowing and doing the will of God, and doing it promptly and perseveringly. The "native hue of resolution" should never become "sicklied o'er with the pale cast of thought," the kind of thought which, like that of Lot's wife, leads the one who entertains it to look back when he should go steadily forward. It is because of needless delays in providing for the transmission of the divine activity that so many write failure where they should inscribe success, and this recalls Longfellow's words,—

> Act,—act in the living present!
> Heart within, and God o'erhead!

Of old the word was, "Choose you this day." We must choose quickly whom we will serve, also when our service shall begin; and always it should be now, for the real service of God and humanity is within consciousness, though it may be outwardly expressed to the physical senses.

One explanation of retarded healing is that so few have cultivated promptness in any department of their activity, and so the "transmission" of the divine healing thought to the human consciousness is characterized by the same delayed activity which has hindered the individual's success in the affairs of daily experience. To acquire the habit of deciding quickly, and of course deciding rightly, means that one shall always take the first step promptly, under divine guidance, and to those who receive spiritual enlightenment in Christian Science this is of the greatest possible significance. If error makes its appeal at the suggestion of hatred, selfishness, sickness, or impurity, "now" is the time to decide the question and to take a forward step in the consciousness of a victory gained. There should be no parleying with any sense of evil, but always a prompt acquiescence with the demands of Principle. Then progress is sure and growth in character is beautiful and symmetrical, for the promise reads, "We are made partakers of Christ, if we hold the beginning of our confidence stedfast unto the end."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

INDIANAPOLIS, IND.

The new building of First Church of Christ, Scientist, at Meridian and Twentieth streets, will be formally opened on Easter Sunday [April 7]. The interior will have been completed by that time and all will be in readiness for continuous occupancy by the congregation.

The new building, which is of vitrified brick and Bedford stone, was built at a cost of seventy-five thousand dollars, which sum includes the furnishings and sanitary and heating equipment. There are two auditoriums, the Sunday school occupying the lower floor, the general congregation the upper. The congregational auditorium is finished in mahogany and amber and will seat seven hundred persons.

First Church of Christ, Scientist, was founded in this city twenty years ago, meeting first in a private home, and later in a small hall; for several years the congregation met in the old Spiritualist church at Alabama and New York streets. In recent years it has held its services in the Propylæum. The new church building was begun on Aug. 11, 1910, and on Sept. 22 of the same year the corner-stone was laid.—*Indianapolis News.*

LEXINGTON, KY.

With simple ceremonies the members of Second Church of Christ, Scientist, laid the corner-stone of their new church edifice on North Broadway at five o'clock Thursday afternoon [March 28]. A copper box was placed in the stone, containing its charter, a Bible, the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mary Baker Eddy, and the current issue of each of the Christian Science periodicals. Second church was organized last August and began holding services the first of October in the Woman's Club rooms. Plans were soon completed for building a church on the lot previously purchased on North Broadway, the contract calling for its completion by June 1. The auditorium will have a seating capacity of two hundred.—*Lexington Leader.*

NEW YORK, N. Y.

A new reading-room for First Church of Christ, Scientist, has just been opened at 2364 Broadway, New York, near 86th street. The reading-rooms heretofore maintained in the church building have been closed and will now be used exclusively for Sunday school purposes.

The new reading-room is situated on the street level and has a store front with a conspicuous sign in the window. The location is a most desirable one as it is in the center of one of the most thickly populated residence districts of the city, and many thousands of people pass the door every day. The rooms will be open until half past nine every evening, except Wednesday and Sunday, and on Sunday afternoon from two to half past five.—*Correspondence.*

THE LECTURES.

ST. PETERSBURG, FLA.

A lecture on Christian Science was delivered Feb. 12 at the Auditorium by Virgil O. Strickler. He was introduced by Judge A. K. Cook, who said:—

There was a time, and that not long ago, when each of the old religious denominations claimed a monopoly of all knowledge as to God's plans and purposes toward the human race, and as to the teachings of Jesus of Nazareth; and when he who dared to advance any views that were antagonistic to the time-honored beliefs and traditions of these denominations was promptly denounced as a blasphemer, or something worse. But that time has passed away. Religious bigotry and intolerance are no longer the blight and curse of our land. Very few of these older religious denominations are as sure of their ground as they once were. Many of them now concede, impliedly if not expressly, that there is a possibility at least of their having overlooked or misunderstood some of the vital truths of divine revelation. The spirit of intolerance has been supplanted by the spirit of investigation. We are seeking more light. We realize that the last word may not yet have been spoken. We are not only willing but anxious to hear what more can be said in answer to that momentous question propounded more than eighteen centuries ago to the meek and lowly Nazarene, "What is truth?"

While I am not a member of the Christian Science church, I have devoted some study to its doctrines and have been deeply impressed thereby; impressed, above all else, by the fact that the religion for which Mrs. Eddy contends is a religion whose chief corner-stone is not fear, but love, and love only. A religion founded on fear, in whole or in part, has ever been and ever will be productive of fanaticism on the one hand and agnosticism on the other. Some of the best minds in every age have rebelled against all religions promulgating the gospel of fear, all religions that picture the creator of the universe as a God of anger and wrath, as a God possessed of human attributes,—of passions and prejudices such as we invariably condemn when manifested by an earthly judge or ruler.

But I have found no fanaticism in the ranks of Christian Scientists; and their lives, so far as I have observed, are a standing refutation of the theory that fear is a necessary factor in any religion; and if the contentions of Mrs. Eddy shall by demonstration become firmly established, fanaticism and agnosticism, along with blind faith and unreasoning fear, will disappear from the earth. I have been impressed not only by the teachings of Mrs. Eddy, but by the lives of her followers. As a class they are the most sunny-hearted, optimistic, and fearless religionists I have ever known. Some one has said that "some day the business of the church will be, not so much to put men into heaven, as to put some heaven into men;" and certainly Mrs. Eddy's teachings have done this for her followers.

Whatever we may think of the doctrines of this church, we must admit that it represents one of the most remarkable religious movements of any age since "the man of Galilee" was here among men. A religion that has, within less than forty years, encircled the globe, enlisting under its banner unnumbered thousands of devoted followers, planting in their hearts perpetual sunshine and making life for them one continual summer's song, is entitled to our most sincere consideration.—*Correspondence.*

SAN DIEGO, CAL.

Willis F. Gross delivered a lecture here on Christian Science March 18. He was introduced by H. H. Hurley, who said in part:—

Jesus promised that the prayer of understanding should be with "signs following." Christian Science is declaring to the world one omnipotent God, and is proving the power of the prayer of understanding by healing the sick and sinning and lessening in a marked degree the misery and want and woe of the human race. The mission of Christian Science is to wake humanity to a better understanding of the God "who forgiveth all thine iniquities; who healeth all thy diseases;" whom to know aright is eternal life. It is waking humanity to the perception of spiritual reality, purifying the thought of mortals, and bringing into individual experience an ever-broadening conception of that heavenly estate portrayed in the Revelation of St. John, wherein he declares that "God shall wipe away all tears from their eyes; and there shall be no more death, . . . neither shall there be any more pain: for the former things are passed away."

Correspondence.

SPRINGFIELD, ILL.

Prof. Hermann S. Hering delivered a lecture on Christian Science here March 25. He was introduced by Burnett F. Bliss, first reader, who said:—

A little over forty years ago there was but one Christian Scientist in the world; today students of this wondrous truth are to be found in every city and in nearly every village in this and other countries, and their churches and societies encircle the globe. Surely, then, in Christian Science there is a firm foundation upon which to build, or such growth would be impossible. Jesus said, speaking to those who believed on him, "Ye shall know the truth, and the truth shall make you free;" and Paul in his epistle to the Philippians writes: "Let this mind be in you, which was also in Christ Jesus,"—that Mind which could know nothing unlike God, knowledge which healed both sickness and sin. Christian Science teaches that mortals must reflect this Mind, and it is this Mind which Christian Scientists are endeavoring to reflect in their daily life and in working out their problem of salvation.—*Correspondence.*

SPRINGFIELD, MASS.

Frank H. Leonard of Chicago delivered a lecture on Christian Science in Court Square Theater last evening [April 5] before a large audience. The speaker was introduced by H. C. Ellis, first reader, who said in part.—

Jesus said to his disciples, "Ye shall know the truth, and the truth shall make you free,"—free from the self-imposed bondage of sin, sickness, and self; free from the cares and annoyances of domestic life; free from the worries and uncertainties of business and professional life; free from the fear which is inherent in the human mind of the known and the unknown. To give you an understanding of this truth as taught in Christian Science, is the purpose of this lecture.

Springfield [illegible]

EVANSTON, ILL.

Frank H. Leonard delivered a lecture on Christian Science at the church edifice Dec. 1. He was introduced by C. D. Macpherson, who said:—

In behalf of the members and congregation of this church I bid you all a most cordial welcome. Especially welcome are those of you who are with us for the first time, those to whom Christian Science is as yet a new gospel; those who may be looking for something more than the old systems of theology and medicine are able to offer for the relief of sinning, sick, and suffering humanity, and who would be glad to find that something here. No matter how enthusiastic or zealous we of this faith may be when first we awaken to a realization of its wonderful possibilities and achievements, we soon learn to be tolerant and charitable toward the beliefs and opinions of others, though they may differ ever so widely from our own. For it comes to us with such clearness that not so long ago we ourselves were in the

Digitized by Google

ignorance of its teachings, and under subjection to prejudice, the handmaiden of ignorance.

The result is beneficial because it deepens our understanding and appreciation of a cardinal point, namely, that it is through demonstration and not mere assertion that Christian Science is finding its way into the consciousness, the hearts, and the lives of thousands of those who are seeking health, peace, and happiness. It was through demonstration that it reached me over six years ago, when I was lifted out of bondage and healed in Christian Science through the ministration of a friend who had himself been healed in the same way. What St. Paul says of putting off the old and of putting on the new man, was literally exemplified in my case. In these six years I have seen evidences in large number of the preventive, curative, and elevating influence of Christian Science. I am firmly convinced that the application of its divine Principle will solve every problem in human experience.

I have tried to think of some adequate way to direct the attention of those who are looking for the relief which came to me so promptly and effectively in Christian Science. After all, what more can I do than to say, as one testifying to the healing power of the Christ said, nearly twenty centuries ago, "One thing I know, that, whereas I was blind, now I see." We have with us tonight a gentleman who is both authorized and qualified to tell you how and why this old-new religion heals the sorrowing, the afflicted, and the sinning.—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice it is assumed that the lecture will be given in the evening.

Batavia, Ill.—Frank H. Leonard, May 31.
Cairo, Ill.—Hon. Clarence A. Buskirk, Cairo Opera House, Sunday afternoon, May 26.
Cape Girardeau, Mo.—Hon. Clarence A. Buskirk, Opera House, May 24.
Chicago, Ill. (Ninth Church).—Bicknell Young, Masonic Temple, 64th street and Lexington avenue, 8 p.m., May 25 and 27; Lincoln Hall, South Chicago, 91st street and Commercial avenue, 3 p.m., May 26.
Duluth, Minn.—Virgil O. Strickler, Lyceum Theater, 3:30 p.m., May 26.
Flint, Mich.—Virgil O. Strickler, Stone's Opera House, May 27.
Grand Island, Neb.—Frank H. Leonard, May 21.
Jamestown, N. Y.—William R. Rathvon, Unitarian Church, East Second and Chandler streets, May 28.
Kingston, N. Y.—William R. Rathvon, Burgevin Hall, Fair and Main streets, May 27.
Kirkwood, Mo.—Francis J. Fluno, M.D., Church Edifice, Washington and Clay avenues, 3 p.m., May 26.
La Porte, Ind.—Bicknell Young, Hall's Theater, May 31.
Malone, N. Y.—William R. Rathvon, Malone Opera House, May 31.
Monmouth, Ill.—Willis F. Gross, May 23.
Oil City, Pa.—Judge Clifford P. Smith, Carnegie Library Hall, May 27.
Oxford, Mich.—Bliss Knapp, Opera House, May 27.
Painesville, Ohio.—Virgil O. Strickler, High School Auditorium, May 28.
Potsdam, N. Y.—William R. Rathvon, Town Hall, May 30.
Punxsutawney, Pa.—Judge Clifford P. Smith, Jefferson Theater, May 30.
Rantoul, Ill.—Frank H. Leonard, Neal's Opera House, May 27.
Syracuse, N. Y.—William R. Rathvon, Wieting Opera House, 4 p.m., May 26.
Traverse City, Mich.—Bliss Knapp, City Opera House, May 28.
Warren, Ohio.—Judge Clifford P. Smith, Opera House, High street, 3 p.m., May 26.

TESTIMONIES OF HEALING.

I am employed in the press department of a publication concern as head pressman, and one morning while preparing for the day's work, after the machinery had been started, I unthinkingly placed my fingers on the composition form rollers of the cylinder press to test the condition of the ink. Instantly my hand and arm were drawn in between the rollers and steel vibrators almost to the elbow. The pressure was so great that the set-screws were forced, raising the vibrators upward. I had presence of mind, however, to throw the controller on the reverse, thereby releasing my arm. There was evidence of serious injury and the pain was intense, but my first thought was to repeat "the scientific statement of being" (Science and Health, p. 468). I continued to declare the truth constantly until able to reach the telephone. I then asked for help, and the practitioner responded immediately. Within possibly half an hour I was almost entirely free from pain and the swelling was reduced one half. This happened on a Wednesday morning, and the following Sunday morning I was in my place at the morning service. The arm showed scarcely any hurt, although the hand had a few spots here and there. I lost possibly one hour, all told, as I kept right on with my work after this happened. My fellow workmen were astonished at my quick restoration, as well they might be, for it was remarkable, but in Christian Science we come to see that these things are divinely natural. Christian Science teaches that there are no accidents in the divine Mind, and that "divine Love always has met and always will meet every human need" (Science and Health, p. 494).

Since coming into Christian Science I have been healed of the tobacco habit of thirty years' standing; the use of medicine and drugs is a thing of the past, fear has been almost entirely overcome. My family consists of nine members, all hale and hearty; rheumatism, infantile paralysis, the effects of poison, and many minor ills have been entirely overcome. All this was because of the understanding gained in Christian Science that God is the only power governing man; that He is our ever-present help. The physical healing is, however, the very least. It is the uplifted thought, the true light of understanding in our consciousness, the consciousness of our relationship to God, that we are His children, the objects of His care, the recipients of His love; it is this that helps us to do our work each day, and this also heals.

I thank God for the revelation of the Christ-healing to one who by her untiring and unselfish efforts has made it possible for every man, woman, and child to receive this wonderful truth through which humanity is daily coming into the rightful heritage provided by the loving Father, into peace, joy, happiness, and health. I am truly thankful to God for Christian Science. Words cannot express how grateful I am to our dear Leader, Mrs. Eddy, for all the gems which she has given us in her writings, especially in our text-book, "Science and Health with Key to the Scriptures;" also to the Publishing Society for the literature which comes every day to help those who are striving to live this blessed truth.—JOHN HEIMPEL, Bethlehem, Pa.

I hereby certify that I was an eye-witness to the accident which befell Mr. Heimpel, when he had his arm caught between the rollers of a cylinder press up to the elbow. To me it seemed remarkable that he could continue at his work after the accident. I did not understand as fully as I now do the Principle of his religion, Christian Science. To the best of my knowledge and belief his arm is in as good condition as before the accident.

E. A. EBERMAN, Bethlehem, Pa.

It seems to me that no one could have received more blessings from Christian Science than I have. My mother became a Scientist when I was but ten years of age, yet

Digitized by Google

I would not see the good in it and said many bitter things regarding it, until at the age of twenty I was led to the study of Science and Health through a deadly fear of lung disease for myself and the hopeless clutch that an opiate seemed to have on a very dear friend.

All who had passed on in our family had suffered from lung trouble, and the doctors told me that I could not live six months. I then read Science and Health, and understood it well enough to demonstrate its teachings for myself, with the result that almost immediately my cough disappeared and all the darkness turned to sunshine. So I thought I could see immediate help for my friend, who was the son of a drinking father and himself a slave to the tobacco and drug habits, drink, gambling, and a bad temper. Yet he was a good-hearted lad who really wanted to overcome his bad habits, and with good promises from him we were married. When, however, I asked him to try Christian Science he would have none of it, but with will-power tried to overcome his habits, until he became so discouraged that he went from bad to worse, and thinking I would be better off without him he left me alone to support myself.

I then went to live with my parents, and I worked, suffered, and tried to know the truth until my parents went to Los Angeles, Cal., to live, and there was nothing for me to do but go with them. We lived there for three years, and in all that time I worked and supported myself and my baby boy. I did not get one line from my husband for two and one half years, did not even know where he was, yet I knew that God was watching over him, and that God's child would be made manifest sometime. At last I received a letter from him, saying he had been in New York the past year. He was at the time of writing in our home town and was studying Science and Health. He said that he no longer drank, used the opiate or cigarettes; that he was truly sorry for his past life and wanted his wife and child, and would do all in his power to repay me for the suffering he had caused.

It seemed almost too good to be true, for I had waited so long I had begun to lose hope, but I raised my heart in thanks to God and knew that my prayer was being answered. I determined to do my part, so with my little boy I took the train and traveled over two thousand miles back to our home town, and found that my husband had gained the confidence of all our friends and was a changed man. That was between three and four years ago, and we have lived together, a peaceful, happy little family ever since, and no one could have a better husband than I, for never does he even have a desire for the drug or drink, only a loathing. This experience makes me want to reach out and help to heal the many aching and breaking hearts, to tell them that no trouble or misfortune is so great but that God can and will heal them of it, if they but work and wait patiently, for God's ways are not our ways.

I also wish to thank any Los Angeles friends who may read this, for the help they gave me when I seemed so alone in the world. At many a Wednesday evening meeting in Simpson's Auditorium did I gain fresh hope from the loving testimonies which fell from the lips of God's dear children, and there are no words to express my thanks to God, also to Mrs. Eddy for the peace and happiness which Christian Science brings, and for the overcoming of sin, sickness, sorrow, and poverty by its means. My constant prayer is that I may so live as to bear witness to this wonderful truth.

MRS. MABELLE VIZZARD, Genoa, Neb.

I wish to add that all my wife says is true, and that I also am very thankful for the peace and happiness which Christian Science has brought into our little family.

THOMAS VIZZARD, Genoa, Neb.

In justice to a great cause and in gratitude for the lasting benefits derived by us through Christian Science, we wish to add our testimony to those of the many who have likewise, through the darkness of mortality, caught glorious glimpses of God's eternal sunlight. Our little daughter is now over three years of age. During her first two years we exhausted the means of *materia medica* for her relief. In October, 1910, she was under an attack of fever, and the case had reached the stage where "man's extremity is God's opportunity." Through the influence of relatives, we were then persuaded to give Christian Science a trial, which we did by calling a practitioner in this place. The results proved that God's power demonstrated through Christian Science is the only real and infallible aid for mankind. Improvement was marked from the very hour the child's case was transferred to Christian Science, and within a few months she became a happy, healthful child with thankful parents, who now have no thought of fear but that all is well with her, for they have learned to think of her as God's child and in God's hands.—R. BEVIER, Brookfield, Mo.

I wish to express my gratitude for the blessing that Christian Science has been to myself and all my family, and especially for my wonderful cure. For twenty years I had suffered from stomach, liver, and lung troubles, and at times with female ailments. My husband sent me to specialists, health resorts, hospitals, sanitariums, but I steadily grew worse. In March, 1910, my husband came home and found me in bed, unable even to sit up, and it was thought that I would not last long. None of our family were Scientists. We had talked to friends about it, but could not believe in it. At last, when all human means had failed, my husband called in a Christian Science practitioner, and within an hour I was sitting up and feeling happy. I was soon doing my housework and going out, and have been gaining ever since. I had not been out in town in two years, but I was soon as if I had never been sick.

I thank God for Christian Science; I thank him for our Leader, Mrs. Eddy. I have been made well by the truth, but I am only a beginner and know that this testimony is poorly expressed, though it comes from one who has been down in the valley of the shadow. I feel, however, that I must in some way express my gratitude to God for opening my eyes to the truth and for pointing me to the Christ-way.

MARY E. MCELROY, Brookfield, Mo.

I have received benefit from the testimonies of healing in our periodicals, and if there are any who are discouraged over a seeming lack of healing, I hope that my experience may be of benefit to them. I did not come to Christian Science through the healing, but when my need for help came it was a great need, and in spite of the loving efforts of several Scientists I was seemingly not healed.

Mrs. Eddy tells us: "If Christian Scientists ever fail to receive aid from other Scientists,—their brethren upon whom they may call,— . . . step by step will those who trust Him find that 'God is our refuge and strength, a very present help in trouble'" (Science and Health, p. 444). I knew little as to how I should work, but I tried to declare the truth, and gradually improved. It was, however, more than a year before I was well.

Since then, as I have gained in the understanding of Christian Science, many so-called severe ailments have yielded to the power of Truth, and I cannot express all the gratitude that is in my heart for Mrs. Eddy's devoted life, through which we have the blessing of Christian Science.

MISS FRANCES E. CADY, Rome, N. Y.

I gladly take this opportunity to testify to the help which I have obtained through Christian Science. Reared in a church-going family, I was always taught the necessity for looking after my spiritual needs, and the influence of the church on my life was always for good. When, however, I became old enough to think for myself, I found that I was beginning to doubt, and this doubt grew until I became

Digitized by Google

indifferent. Finally Christian Science was brought to my notice through friends. It appealed to me, though not strongly at first. I bought a copy of Science and Health, and have been studying it for the past five years. Through this study I have been led to read the Bible, and I have been lifted out of a condition of doubt and indifference by learning to read the Scriptures understandingly. I have also learned to trust God. I have learned something of the meaning of the "grain of mustard seed" kind of faith.

Through Christian Science I have dared to undertake in my work what I should have been afraid to try before. I have learned somewhat of its wonderful power, and it has never failed me. The comforting consciousness of the reality of an ever-present help in time of need is of more value to me than I can express. Numerous physical ills have been overcome in my experience under Christian Science treatment. I gave up the use of tobacco three and a half years ago, after having smoked excessively for twenty-five years. I had given it up through will-power, but the desire for it never for a moment left me and I would inevitably drift back to smoking. After a few treatments in Christian Science, however, the desire left me and I have learned absolutely that there was no real pleasure in it.

I have much for which to be thankful and am sincerely grateful for the light and help which have come to me through Christian Science.

CLAIRE S. DURAND, Bay City, Mich.

Christian Science has been a blessing in our home, to our four children who have been healed of many ailments, as well as to some of the older ones who have been restored to health. One of the little girls, aged eight, woke up one night and seemed quite ill. She treated herself mostly, then went to sleep, and she was the first child up in the morning. I asked her about it, and she said she was all right and was going to school. She said, "I knew that God is Love and that He never made any one sick." She often treats herself and others in the family. About two years ago this child was healed of serious lung trouble. We tried to help her ourselves, but as she grew no better we asked for treatment of a dear Christian Scientist, and in less than two weeks the child was well. There has been no return of the trouble. She is in good health and attends school every day. She says herself that God healed her, and she is a very happy girl.

The other little girl was healed of a serious illness when she was a little child. She is now a picture of health, and she clearly sees the difference between truth and error, as all children do when taught in this way. Even in reading their story books or playing games they apply the truth as they understand it.

One of the little boys woke up one morning and was not able to go to school. He ate nothing, and seemed to feel very badly. We tried to overcome it, but he did not seem to recover. In the afternoon a friend who is a Scientist called me up on the telephone, and I told her about it. She talked to me and sent him some loving messages. In a very short time he arose, dressed, and ate a hearty dinner, then romped and played the rest of the day. When he was getting up he said to me, "Why, mama, I am all well, and this is not the first time that Christian Science has healed me either." He was healed in one night of a boil, by the treatment of his brother two years older. This older boy was healed of a bowel trouble when he was small. He was also helped another time so that he could return to school after having been dismissed as sick.

MRS. FAITH DOCKSTADER, Minneapolis, Minn.

I was brought into Christian Science by the healing of my mother, and I am truly grateful for the benefits I have received since that time. I have been helped in overcoming a nervous condition by knowing that God made everything which was made and pronounced it good, and that therefore evil is nothing and can hold no power over us.

I am indeed grateful to our dear Leader, Mrs. Eddy, who has shown us the way whereby each one can work out his salvation.

MISS MARGUERITE RICHARDS, New London, Conn.

I am indeed thankful that it was possible for the truth as revealed in Christian Science to reach my case. For more than fifteen years I was a helpless, despairing invalid, with a supposedly incurable organic disease which made it impossible for me to enjoy life or to go about like other people. I used to wonder how it would seem to be well and be happy. I consulted the best physicians and sought the aid of higher altitudes and warmer climates, but without benefit. Each year I was becoming weaker and more wasted, until it seemed as if I had only a short while to live. This was over two years ago.

In May, 1910, I went to a Christian Science practitioner for treatment, and have been restored to perfect health. How can I be thankful enough to God for Christian Science, and to Mrs. Eddy for imparting the revelation of divine Life, Truth, and Love to suffering humanity through "Science and Health with Key to the Scriptures." This manifestation of divine Mind is indeed able to deliver us from the untold bondage of material sense and to lift us up into the realization of everlasting sunshine, a satisfying knowledge of the Principle of all being. Before this, earthly joy fades in the distance. To know, no matter what the material conditions may be, and amid all possible changes of human life, that our anchor is sure and steadfast, is indeed a blessing. Divine Love "never faileth." In this consciousness is safe abiding "from every thought that giveth fear," as we read in our Hymnal.

MRS. HELEN E. DUNFEE, Chicago, Ill.

The testimonies in the *Sentinel* have been such a help to me that I wish to add my own, hoping it will help some one who is searching for the truth. In August, 1908, I was wonderfully healed by Christian Science of a distressing form of rheumatism after trying *materia medica* and other means. I had continued to get worse till I was confined to my bed, when a sister who was visiting me and who was studying Christian Science asked me to let her call a practitioner. I at first refused, but after some time in which I suffered intensely I consented, and now I count it as the wisest step I ever took.

The practitioner was called in the forenoon and treatment given me at once. The next day I went to Denver to see the practitioner (we were then living twenty miles north of Denver, Col.), and I can never forget the feeling which came over me as the practitioner talked to me. I felt that at last I had found something tangible, something which could be proven, if not wholly, at least in part. To me it seemed too good to be true that the Science of Soul could ever be attained. I stayed for lunch and partook of the first real meal I had eaten for weeks, having been on a strict diet. At first I thought I would not dare to eat anything which was on the table, as everything there had been strictly forbidden by my doctor; but the practitioner assured me that man was made to have dominion, so I ate heartily, and needless to say I suffered no ill consequences.

On my way home I bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and could scarcely wait till I got home, I was so anxious to begin reading it. That night and many nights thereafter I read until eleven o'clock, and it was not till I had nearly finished the reading of the book that I noticed I had not used my glasses, which I had worn for six years, and I had been unable to read or sew at night even with the glasses. I had no treatment for my eyes, in fact the practitioner did not

Digitized by Google

know till some time later that I had ever used glasses. In a few days after the first treatment I was able to walk with very little pain and in two weeks was entirely well. I was also healed of a bowel difficulty and of severe headaches from which I had suffered for years.

I am very thankful for the physical healing received through Christian Science, but much more thankful for the spiritual quickening which I have received. The joy of knowing "in whom I have believed," instead of the doubts and fears that had been present in the old thought, is indeed much to be thankful for. We have had many beautiful demonstrations of the power of Truth over error in our family of six, and one especially I should like to mention.

One very hot day in the summer of 1910 my husband came home and seemed to be completely overcome with heat. He sat down a few minutes and then fell to the floor unconscious. I immediately called on a Christian Science practitioner for help, and in a few minutes consciousness returned; in less than thirty minutes he was sitting up perfectly well. He said that when he felt consciousness leaving him he thought he was dying, but the help he had through Christian Science saved him. The next morning he went to work at half past six o'clock and there was no more complaint of heat.

My gratitude goes out to God for this healing, and to our beloved Leader for our text-book. My greatest desire is to learn more and more of this great truth which makes us free.—Mrs. Maggie Roberts, Keokuk, Iowa.

I am very happy to tell what Christian Science has done for me. I had almost complete inaction of the bowels, and the best doctors here and in the East told me it would be impossible to relieve this dreadful condition. I had had seven operations, but instead of getting better I grew worse after each one. Another one was absolutely necessary, the doctors said, but this would be only a venture and no hope was given me for the results. I would not listen to this at all, as I knew from former experiences, even when I had had encouragement from my doctors, how fruitless this operation would be.

For three years and a half I had been in a most serious condition, but a Christian Science practitioner began to work for me, and for fifteen days I adhered strictly to the truth, although no outward result appeared in that time. I must say that fears and doubts overtook me many times, and it was only due to the assurances given me of the wondrous workings of divine Love that the mortal fear which seemed to hold me in its grasp was allayed. I cannot express my gratitude when on the sixteenth day the results of the treatment were demonstrated. Since then I have never had cause to complain, as I have been perfectly normal.

I could enumerate many other demonstrations of the power of Truth which have taken place in our home, such as the remarkable cure of a fever which attacked my young son and which was dispelled in three days, but I consider the benefit which I have received personally one of the most beautiful demonstrations I have ever heard of, as from a material point of view my case was hopeless.

Mrs. Bessie R. Howison, Chicago, Ill.

I am writing this in the hope that some poor sufferer may read it, take courage, and find health and happiness. For more than thirty-five years I was a sufferer from stomach trouble with all its attendant ills, but during all these years I had the care and advice of as good doctors as our country afforded. I remember when I was only twelve or fourteen years old I had to drink mineral waters, and from that time on my condition grew worse and worse, until about seventeen years ago rheumatic gout set in. For three or four months I took the usual medicines given for such cases, but at the end of that time my stomach was in such a condition I could no longer take the strong medicines. It was then decided that I should try another remedy, and after doing so for six weeks I was able to walk without my crutches. For several years after this I would go each summer to these springs, but after a while they failed me. I also went to a sanitarium, where they gave me hot baths and bakes. At first they seemed to help me very much, but later on they too failed. All these years I was living on the strictest kind of a diet; still the attacks became more and more frequent and more and more severe, until, in July, 1907, I had a complete breakdown. Former methods were repeated, but without the desired results.

In the fall of 1907 I learned of a doctor, in a northern city, who was said to be a fine specialist on stomach troubles, gout, etc., so I went to see him. After making a very thorough examination he said that my condition was very bad, and to add to all my other troubles, he found that I had Bright's disease. When I got back home I was still suffering with nervous exhaustion, on crutches from the gout, suffering with my stomach, with the kidney trouble added. Soon after this I experimented with electricity. The treatment seemed to help me, but at the end of forty-five days the doctor said it would not do to continue this treatment; so it seemed as if there was nothing left but to wait for the end.

During the last week of May, 1908, I met with an old friend, who told me that I could be cured in Christian Science. He did not say very much, but seemed very sure about what he did say, and he gave me the address of a practitioner who lived in a city about two hundred miles from my home. I hardly know why I went—I had no faith in Christian Science; but I did go. When I reached the city where the practitioner lived, on Thursday, May 28, I at once telephoned to her and was told to come up to see her the next morning. During the night I gave the matter a good deal of thought, and the next morning I told my wife I would not go to see the practitioner; that I could not afford to do it, as I had been raised in the church where I had held important offices for more than twenty years, and that it would not do for me to take up Christian Science. She had no faith in it, so she said we would go home that day. I said no, that we were there in the city, which was my old home, and would stay a few days, as I felt that it would be my last visit there. Sunday I seemed to get very much worse, and on Monday morning I said to my wife that I was going to see the Christian Science practitioner, as there was nothing she could do that would make my condition worse. So, after having been in the city from Thursday until Monday, I did go to see the lady. She gave me treatment, and told me I could go home any time I wanted to, as she could treat me at my home. At the time I went to see the practitioner I could eat hardly anything at all and was living almost entirely on liquids; but the next morning after I received the first treatment I ate a hearty breakfast and did not suffer from it. I left the city that day and came home, having obtained a copy of "Science and Health with Key to the Scriptures," and this I read and studied as best I could.

I am a traveling salesman, and one week from the day I had the first treatment, I took my samples and went to work, a well and happy man. And now, three years from that time, I can eat anything I wish, am in a healthful condition, and am able to work all the time. I am trying to show my gratitude to God by trying to lead a better life, and I thank God that He gave Mrs. Eddy the understanding needed to teach Christian Science to us. I have had some ailments since then, but I thank God that through Christian Science they have all been overcome; and I am trying to live each day so that I may have a better understanding of God, and to have that same Mind "which was also in Christ Jesus."—P. C. Pope, Greensboro, N. C.

I rejoice that I can give to others my experience, which proves absolutely that no medicine or outside application is necessary to heal the sick. Some time ago I was attacked by chills, fever, and pain. This condition began in the afternoon and increased rapidly until I retired. I then called for Christian Science treatment. For about two hours the fever continued with considerable disturbance of the heart, then perspiration appeared, and by twelve o'clock I was greatly relieved. After midnight I had a most comfortable feeling and was soon asleep. I slept soundly all night, and in the morning I knew I was healed. I got up, dressed, and with the exception of a slight sense of weakness felt as well as ever. On the following day I went out of town, and from then until now I have had no sense of illness whatever.

MRS. W. T. SOULEE, Medford, Mass.

I am truly grateful for Christian Science and what it has done for me. It has helped me in school as well as in many other ways. I came into Christian Science when I was a little girl, and I do not remember of ever taking any medicine. At one time I was kept awake several nights by earache, but by knowing the truth that God is ever present and that evil is unreal, the pain disappeared.

MARION G. WASHBURN, New London, Conn.

It is now over two years since I took up Christian Science. At that time I was what people call a nervous wreck. I had a great fear of death and also of losing my mind. I was troubled with hay-fever and heart disease, and my father having passed on as a result of the latter diesase, I naturally had a great fear of it. At the time I took up Christian Science our little boy, now three years old, had a bowel disorder for which medicine was given him almost daily. At this time I had taken a position as shoe clerk in a department store, but was ready to give it up on account of my illness. When, however, the truth was presented to me I accepted it gladly, as I had tried medical treatment under three of the best physicians in the town in which I live, besides special electrical treatment and a trip South where I drank mineral water recommended for the nerves, but from all this treatment I received little or no benefit.

After giving up all material remedies and taking Christian Science treatment from a practitioner, while at the same time reading our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, these ills were overcome. I also sought help in Christian Science for the little boy, and he was healed with a very few treatments and has taken no medicine since. I was able to retain my place at the store and with an increase in salary. I feel that I can never thank God enough for all the good that has come to me through Christian Science. I am truly grateful to Mrs. Eddy for expressing this truth to the world in a way which all may understand, and I hope that I may so live the truth as to bring others into Christian Science.

A. B. RHODES, Neodesha, Kan.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 31, 1912. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 20, 1912.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 3, 1911, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,

Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM OUR EXCHANGES.

[Rev. Charles R. Brown in *Congregationalist and Christian World.*]

The wise men came from the east with this fundamental inquiry, "Where is he that is born King of the Jews?" The Jews were the spiritual leaders of the race, and "the King of the Jews" might well be king of the whole moral realm. It was a fundamental inquiry which they brought. Where in this visible universe, where in recorded history has the Almighty given that tangible expression of Himself before which wise men may bow in final allegiance?

This fundamental question, was first asked by men of insight and judgment—wise men they were. It was asked by men of moral earnestness—it was in no spirit of idle curiosity that they made this tedious journey across the sands in search of the coming one. It was asked by resolute men willing to give of their best when they found the object of their quest. When they saw the one whom they sought they opened their treasures and laid at his feet gold, frankincense, and myrrh, the value, the beauty, and the fragrance of their love. They asked their question as wise, earnest, generous men, and we believe they found an answer in the child born in Bethlehem of Judea.

The wise men undertook their quest in dim uncertain starlight. They had some intimation that a Messiah would come. Then they learned the name of his country—he was to be born "King of the Jews." They followed up this clue until by diligent, persistent search they knew the name of the town—it was Bethlehem in Judea. As last they knelt before the one they sought and rose up ennobled and enriched. The man who takes his own uncertain vision of the eternal goodness, of the divine purpose for him, of the privileges he might enjoy at the hands of spiritual reality, and follows on, will find at last that which satisfies the utmost demand of reason and aspiration.

[Dr. Orchard in *Christian Commonwealth.*]

Advanced criticism holds that Jesus neither founded the church nor intended to do so; and it takes only common sense to see that he could hardly have desired the institution which today is called the church. The church is a necessary institution which came into existence by natural evolution, which of course does not preclude belief in its divine origin; for surely all that is necessary is divine. . . . The true church is that organism which continues the ministry of Jesus Christ, is bringing in his kingdom, and is the "body" of God's increasing incarnation. At present no organization can be identified with that organism. The church as constituted today is not true to the Christian faith, and therefore is hopelessly divided; it is not giving the gospel to the people, partly because it has lost the gospel and partly because it does not wholly believe the gospel; it is not making saints, men and women who know the will of God, who can read the signs of the times, and who have no need of any one to teach them. The general policy of the church in all its branches is first and foremost to perpetuate its own existence. Such an institution, so far from being essential to the spread of the gospel, is at present a very great hindrance, but it does not follow that the present institution can never become the church of God. It will probably grow worse before it grows better. It will have to face reform or extinction. The reform will have to be drastic indeed, but the pressure of circumstances without and the rise of new ideas within will accomplish even that. The desire for unity, the invasion of modernism, the wide-spread discontent among clergy and ministry,—these are the factors of the present situation, and they witness to some impending change.

[Rev. Sydney Herbert Cox in *Christian Work and Evangelist.*]

For the first time in human history, so far as the present race of men at least is concerned, we have reached the borders of an international family life, regardless of race,

Digitized by Google

creed, color, or any other qualification save that of humanity. Modern science has reconstructed not the universe, but our old conceptions of it, and the twentieth century man has seen the first intimations of a cosmic religion—a religion that embraces all theologies, insists on freedom in every one of them, but discards steadily the elements that oppose the growth of real human service: *i.e.*, religion! In other words, we have got to get together, not with mental reservations and mutual suspicions, but with deep individual convictions plus equally deep social alliances based on a fundamental religious goal. We may reach that goal by a thousand paths; but until we recognize the trend of each other's paths we cannot see clearly the common goal! Hitherto men have confused the goal with the path, and naturally have supposed theirs to be the only true path!

[*Christian Register.*]

Every noble action is the expression of a noble feeling. Back of the deed is the sentiment from which it proceeded. It matters little how persistently a man may talk of his sympathy with the oppressed or of his enjoyment in the higher things of life, if his daily conduct continually gives the lie to his words; and, on the other hand, a man need say little about his religion or his theory of ethics, when day after day he is evincing the genuineness of his convictions by kindness to others and repression of selfish impulses. If any proof is needed of the existence of good in natures that seem sometimes most given over to evil impulses, the frequent occurrence of deeds of flawless self-sacrifice even there shows that, so long as men cannot gather grapes of thorns or figs from thistles, so long must actions of tenderness and unselfishness proceed from something akin to their own nature.

[Lyman Abbott in *Outlook.*]

I only know that Christianity is progressive, not stationary; not the history of a life long passed away, but the history of a life now present and never so powerful as today; that in every day walks a better tomorrow; that Christ is a living and present personality, not merely a sacred memory; that the prayer, "Nearer, my God, to Thee," will have its answer in the history of the race, as it has its answer in the experience of the individual; that "eye hath not seen, nor ear heard, neither hath entered into the heart of man" to conceive what God has prepared for His family of children, when they shall have grown to the stature of manhood in Christ Jesus.

[*Christian Advocate.*]

These times require preachers of deep spiritual experience. This is an age of materialistic philosophy, of scientific skepticism, of insane greed, of social unrest, of industrial strife, and political corruption. The church of God faces a thoroughly equipped and stubborn foe. Satan cannot be cast out in this age of ecclesiastical machinery and strong religious committees with high-sounding programs. Preachers with a clear vision, with a perfect knowledge of the things of the Spirit, and with a vigorous, robust, and healthy spiritual life are needed to lead the disciples of Christ against the powers of darkness.

[*Watchman.*]

There can be no question of the value of the simple life of poverty in the formation and development of character. The qualities of character that are commended in the sermon on the mount are fundamental to moral excellence and superior attainment. Moral qualities are at the bottom of all success. A man may indeed fix his mind upon riches and position and power, and attain to a high degree of success, but his success is apt to have a curse attached to it because of his boundless ambition, his hard extortion, his inability to use or enjoy his wealth or power properly.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herald,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

For some time the postage required for subscriptions outside of United States territory has exceeded the amount added to the regular subscription price for this purpose, and an increase in rates sufficient to cover this deficiency is now deemed necessary.

Beginning April 1, 1912, therefore, the rates on all subscriptions outside of United States territory will be as follows: For Canada, *Journal* $2.25, *Sentinel* $2.45; for all other countries, except those to which the domestic rate applies, *Journal* $2.65, *Sentinel* $2.95.

Renewals for all subscriptions terminating before April 1, 1913, and received by us prior to July 1, 1912, will however be accepted at the old rates.

The pamphlet "Causation" by Frederick Dixon has been translated into Swedish—"Kausal-lagen"—and is now on sale; 40 pages and cover at the prices of the regular pamphlets.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy. Discoverer and Founder of Christian Science, and Author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 30 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

ITEMS OF INTEREST.

National.

The federal government has filed a civil anti-trust suit against the Aluminum Company of America which will be the basis for an agreed decree designed to restrain the so-called aluminum trust from monopolizing the manufacture of aluminum and its products, including cooking utensils. In a petition in equity to the United States court for the western district of Pennsylvania, the company is charged with being a monopoly restraining interstate and foreign commerce in violation of the Sherman law. It is declared to have acquired a substantial control of the aluminum industry in the United States and to have charged unreasonably high prices and profits on its products. The dissolution of the corporation is not sought, but the court is asked to issue nine broad injunctions against alleged unlawful contracts, combinations, conspiracies, and practices. The government concedes that the company's ownership of more than ninety per cent of the known deposits of bauxite (base of aluminum) in the United States and Canada suitable for the manufacture of the metal, is not "within itself" unlawful. The extent of other bauxite deposits in the United States is not known at this time, but it is pointed out that there are inexhaustible quantities abroad which could be placed at the disposal of competitors for aluminum manufacture if the restraints upon the trade were removed. The history of the aluminum cooking utensil industry in the United States, says the petition, is a history of shipwrecks "caused chiefly or contributed to by the arbitrary, discriminatory, and unfair dealings of the defendants." The Aluminum Company of America, incorporated in Pennsylvania originally as the Pittsburgh Reduction Company, has grown, it is pointed out, from a twenty-thousand-dollar capitalization in 1888 until its assets now are estimated at twenty-seven million dollars. A stock dividend of five hundred per cent, or sixteen million dollars, was declared in 1909.

Plans have been completed by the Boston & Maine railroad for a unique summer hotel to be erected on the summit of Mt. Washington, and to be reached by a scenic electric railway almost twenty miles long, which, in its course traversing the slopes of Mt. Jefferson and Mt. Clay, will reach most of the points of interest in the approach to the summit and encircle the summit itself two and one half times, giving in this way extended views in all directions from the cone of the mountain. The total cost of the improvements is estimated at one million five hundred thousand dollars. The old cog railway which carries passengers in summer to the top of Mt. Washington climbs thirty-eight hundred feet in a distance of less than three miles. The new electric railway climbs some forty-seven hundred and fifty feet in traveling a distance of 10.95 miles. The grade of the new road will be uniformly six per cent.

The three great record floods which have swept down the Mississippi and its tributaries this spring, causing countless damage, have impressed upon the country the need of stopping this destructive element. It has drawn attention, too, to the work that is being pushed forward for storage on the headwaters of many streams, and to the need of the immediate passage of the Newlands bill pending in Congress which provides a national commission to undertake the work of the Weeks bill over the whole of the United States and to add to this storage of water in huge reservoirs. The usual floods on the lower Mississippi are three in number of the larger sort, and an occasional wave in the later season. The first is always out of the Ohio, and is generally contemporaneous with floods on the Cumberland and Tennessee. The second comes from the upper Mississippi, and the third is the traditional June rise of the Missouri.

It will be unlawful to send an interstate message offering to enter into a contract for the purchase or sale for future delivery of wheat, oats, or corn without intending that such grain shall be actually delivered or received, if the Lever antioption bill, which has been favorably reported to the House, is accepted by Congress. The bill vitally affects business in grain aggregating $2,512,008,142 in values, and is identical with the Beall cotton antioption bill which the same House committee on agriculture reported favorably to the House. These bills are the result of an agitation conducted in Congress for a decade to prohibit dealing in futures. Thirty such bills were before the House committee. Out of these the committee prepared the Beall and Lever bills. Both are identical, except that one relates to cotton transactions and the other to grain.

Whether the Bell and other telephone companies may be compelled to make connection with private telephone systems is an interesting and important question which bids fair to reach some kind of solution through the application to the public service commission for an order compelling the New York Telephone Company to make connections between Scottsville central office and the private telephone system of the State Agricultural and Industrial School at Industry, Monroe county, New York.

Special examiners have been appointed to take testimony in the government's equity suit for the dissolution of the American Sugar Refining Company. The hearings began last week. The prosecution has been allowed sixty days to submit its evidence and the defense will have one hundred and five days. Each will be allowed thirty days to present rebuttal testimony.

President Taft has sent a special message to Congress asking for legislation to authorize him to appoint a commission to investigate the patent laws and report what changes are necessary to make them fit modern conditions. There has been no material change since 1870.

An act relative to untrue and misleading advertisements, which passed both branches of the Massachusetts Legislature, was signed by Governor Foss April 13, and has become a law.

The trial of a number of men charged with having conspired in restraint of trade in the conduct of their wall paper business began in the United States court at Cincinnati last week.

International.

Speaking recently at a public gathering, the minister for works in Western Australia, the Hon. W. D. Johnson, remarked that the whole of the sleepers made from Western Australian timber would shortly be "Powellized" karri. Practically the whole of the karri forests of Western Australia were in the hands of the government, and instructions had recently been given that they should be thoroughly surveyed in order that they might be opened up systematically. The system of "Powellizing" consists of a process whereby the pores of the timber are permeated by a preparation which it is claimed renders the wood proof against the attacks of ants and beetles, added to which the timber once treated is very much more durable than timber which has not been through the "Powell" process.

The maritime conference, called on Emperor William's initiative, in consequence of the Titanic disaster, opened in the department of the interior, under the presidency of the secretary of state. A large gathering of department officials, representatives of transatlantic shipping companies, shipbuilders, marine associations, etc., were present, and questions as to life-saving equipments, wireless telegraphy, bulkheads, and speed are to be considered. The conference is expected to last a considerable time.

All the members of the Chinese republican cabinet at present in Peking appeared recently before the provisional council and promised the introduction of reforms in the administration and extensive modern developments. These include trials by jury, the reorganization of the army and navy, a general system of education, sound methods of taxation including the introduction of an income tax, and the establishment of a national bank.

The German Reichstag has discussed the question of revising the rules of procedure so as to permit its members to put questions to the government, as is done in the British Parliament, and also to allow the Reichstag to adopt a resolution declaring an agreement or a disagreement with the government's answer to interpellations.

The adhesion of Belgium to the Franco-German treaty has been announced. The delay in the Belgian communication with regard to the treaty has caused comment, as it was thought possible that Belgium might raise difficulties in connection with the Kongo.

Industrial and Commercial.

Statistics of coal production in Maryland show that the total production in 1911 amounted to 4,685,795 short tons, valued at $5,197,066. The coal fields of Maryland are not of wide extent and the production during the ninety years of their exploitation has been derived chiefly from the "Maryland big vein," which is an outlier of the famous Pittsburgh bed of Pennsylvania. This vein had a thickness of ten to thirteen feet in the western part of Allegany county, Maryland, extending southward into Mineral county, West Virginia. Mining operations covering nearly a century have exhausted a large part of this great coal bed in Maryland, and during the three or four years preceding 1910 the production of the state had shown a declining tendency, as some of the mines were being worked out. The production will probably continue to decline until the thinner beds, both above and below the Pittsburgh, are more extensively developed. As these beds in the aggregate contain many times more coal than that originally contained in the "big vein," Maryland still possesses an important supply from which to draw.

Since May 1 every shop in the kingdom of Great Britain, with certain specified exceptions, is compelled to close one day every week not later than one o'clock, and every employee must be released from business not later than half past one.

Nearly three million dollars is to be spent by the Boston & Albany Railroad Company on its lines this year in improvements.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE USE OF A TEXT-BOOK.

E. HOWARD GILKEY.

THE dictionary defines a text-book as "a standard work in any branch or course of study." It is well to bear in mind, therefore, that when one takes up a text-book on any given subject, he is not taking up a book which was written for purposes of entertainment, or of easy assimilation by indifferent perusal, or of uncertain purpose, or of indirect aim, but one which drives straight to a given point by the shortest route and in the most vigorous scientific terms, like a well-constructed tunnel through huge mountains of loose language, that the reader may be undeviatingly led to the clear and open country. A novel may lead one to some pleasant, temporary mental experience, and, if the writer is moved by a high purpose, it may leave in the thought of the reader some helpful suggestion, but one must wade through a hundred or more pages to learn a general proposition concerning a state of facts which have no immediate bearing on the problem of the hour. A text-book, on the other hand, is full of explanation and rules of instruction, is written with no thought of being entertaining, and is not in sympathy with the thought that seeks mere entertainment. A text-book is not merely a dandy's cane with which to flick the tops off the daisies and clover as one walks the country lanes, but rather a stout staff on which we may lean in moments of mental discord; and it must be so used to get the good of it.

When one is in doubt concerning a mathematical proposition, he does not pick up a novel hoping to find somewhere in its pages a thought that will clear the mental atmosphere, nor does he pick up a mathematical text-book and open it at random expecting to find haphazardly the solution of his problem. He takes up his text-book with a definite inquiry in mind, and perhaps by the aid of a table of contents or an index he turns to that part of his book which deals with the subject in hand, and seeks such instruction on that particular point as will enable him by proper mental activity to solve his problem and arrive at the proper conclusion. When one has a mathematical problem to solve, one does not read indiscriminately in a text-book on mathematics trusting that somehow, somewhere, in the course of an hour's reading, he will find himself generally better informed in the science and better equipped therefore to meet the specific problem on which he is engaged; rather, if he is wise, he seeks to find specific instruction on his specific problem, a rule which he can instantly apply. Having found it, he applies it to the matter in hand, intelligently securing for his immediate use the axioms of his text-book as they were intended to be applied.

For the student of Christian Science, Mrs. Eddy has provided a standard book of instruction in "Science and Health with Key to the Scriptures," which must be intelligently used as a book of instruction, together with a concordance, and should be frequently consulted if it is to yield its riches for the mental and spiritual and physical uplift of the individual. One must know what he wants to find, why he wants to find it, and the benefit he expects to get from the discovery. Students of our text-book have all had moments in which they needed specific instruction upon a specific point, and yet how frequently have they failed to read the text-book with the definite purpose of securing help upon that one point, searching as the woman of whom Jesus spoke searched for the lost coin, lighting a candle and sweeping the house and seeking diligently till she found it. How often does the student go over the Lesson with the pointless thought that by so doing he will secure the help he needs, without first analyzing his specific trouble, digging out the error which has caused it, and then (and only then) going to the Lesson or to the text-book for specific help in a direct and undeviating line? The Bible and our text-book are intended for wide-spread individual good. Of five hundred persons in a congregation on Sunday, listening to the reading of the Lesson-Sermon for the day, there are presented five hundred different human problems to which that Lesson will apply, provided the five hundred individuals are awake and seeking the truth as it applies to their individual problems. In the six days intervening between the reading of the Lesson on one Sunday morning and the reading of the next Lesson on the succeeding Sunday, these five hundred individuals have been confronted perhaps with a different problem for each day, and a proper appreciation of the office of our text-book as a book of instruction will have led to its specific application by those five hundred individuals to three thousand human problems during that week, the harvest from those varied demonstrations being brought to the following Sunday morning service as proof and uplift, forming a cloud of witnesses to the efficacy of Christian Science. Thus should our text-book be used, and for this use it was written by our revered Leader. Upon such definite use as this rests its power to do good and contribute to the uplift of the individual student, and thus to the betterment of all humanity, for in the uplift of humanity divine Mind must be expressed by individuals. Until it is so expressed, it cannot be expressed by collections of individuals, either as a church, society, or community.

On page 109 of Science and Health Mrs. Eddy writes of her own progress by solitary research: "I won my way to absolute conclusions through divine revelation, reason, and demonstration. The revelation of Truth in the understanding came to me gradually and apparently through divine power." Seeking with definite purpose, as did the woman in Scripture who sought the lost coin, Mrs. Eddy turned her thought away from all material belief, and searched diligently the only text-book she had, namely, the Bible, until she found that which she sought; *i.e.*, "absolute conclusions." No student of Christian Science can reach absolute conclusions unless he uses the Bible and our text-book as Mrs. Eddy used her Bible, namely, to answer the point in which error seems to attack us at the time of our search for Truth, and to secure spiritual weapons with which to win a victory for Truth. The student must seek instruction "as pants the hart for cooling springs," to quench a known thirst

Copyright, 1912, by The Christian Science Publishing Society.

Digitized by Google

and to relieve a known distress of mind or body. "The Bible and the Christian Science text-book are our only preachers," well says the explanatory note with which the Sermon opens at each Sunday service, and students of Christian Science who would benefit by this preacher must intelligently submit life's problems to the rules therein provided, by the application in each hour of the rule that fits the specific need of that hour, and thus perpetuate within themselves the reign of universal harmony, the influence of divine Love, endless Life, immortal Truth.

The woman did not sweep the house with the thought that a chance find would replace the coin which she had lost; she searched diligently for that identical coin, and was not satisfied until she found it; another coin would not have answered her purpose so long as the first one remained lost. So should we search the Scriptures in the use of our text-book; remaining unsatisfied until that search reveals the cure for the problem of the hour, and alert to know it when discovered, and to apply it with understanding.

UNDERSTANDING CHRISTIAN SCIENCE.

CALEB H. CUSHING.

IN commencing the study of Christian Science, and sometimes after one has spent considerable time in the endeavor to grasp its teachings, the suggestion may come to the student that this Science is either hard to understand or that he is not one of the favored few who can understand it and be benefited by it. History shows that it has seemingly been no easy task for mortals to grasp, assimilate, and make practical Christ's teachings, and the understanding of Christian Science has been something of a problem to many. Our great Exemplar, Christ Jesus, however, upon whose teachings Mrs. Eddy founded Christian Science, plainly taught that the Science of Christianity was really so simple in itself that it was readily understood by the child thought. This child thought, with its natural expectancy of good, its enthusiasm, purity, and activity, typified to the Master those mental qualities desirable and necessary in order to understand and demonstrate the truth.

The basic difficulty in getting the real practical understanding of any study is the failure to apply the teachings according to rule without deviation therefrom through personal bias or prejudice. In Christian Science many fail at the very outset to apply and make practical the fundamentals of Christianity which were summed up by Jesus in the two commandments: first, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind;" second, "Thou shalt love thy neighbor as thyself." It may be easier first to consider and put into practice the latter, as by so doing we shall be obeying the first and preparing the way for a full obedience to both.

Most of us can recall, as we look back upon experiences of the past, many of the opportunities we have let slip to exercise that same love toward our brother man that we would desire to have extended toward us. How many times daily do we fail to observe that kindness toward our fellows in the round of business and social life and within the home circle which we ought! How many times have we failed to keep from criticizing and condemning and from allowing the sense of self-righteousness to choke the springs of brotherly helpfulness when some little kindness and the suspension of judgment would have meant so much to some relative, friend, or acquaintance! The boy or girl who does the little helpful things for father and mother with that love and thoughtfulness taught in Christian Science, and the parents who remember to restrain impatience and harshness and show that kindly interest in the problems of their little ones, not only do much toward happifying existence, but make the pathway of life smoother and clearer for both present and future. The child who willingly and smilingly offers to do some errand or service for the parent, and the parent who cheerfully and patiently ministers to the needs of the child, are thereby demonstrating more practical Christianity and Christian Science than they would if they were able to memorize and repeat the contents of the Bible and of Science and Health from cover to cover, without demonstrating their teachings, although a thorough knowledge of the letter is most requisite.

The whole secret of Christian Science, if there is any secret about it, therefore, is to make practical application of this second commandment, "Thou shalt love thy neighbor as thyself." If this is faithfully done, the wellsprings of understanding will be opened and the way will be so illuminated that health, harmony, and joy unspeakable will come as naturally as light comes when the windows are opened and there are no clouds in the sky to hinder the sunlight from reaching every nook and corner of our dwelling. Christian Science is not a mysterious and occult study to be mastered by the favored few, nor is it by reason of being divinely metaphysical above and beyond the comprehension of any man, woman, and child who will honestly and earnestly endeavor to clear their mentality of that which is ungodlike. It is an old and generally accepted truism that "we all know better than we do," and if we will therefore make a more systematic and regular effort to do better today than we did yesterday, we can pave the way for ultimate perfection and a clearer realization of God's allness and of man as His image and likeness.

"SEEK YE FIRST THE KINGDOM OF GOD."

ANNIE L. BAKER.

ONE of the greatest blessings which the understanding of Christian Science unfolds to the earnest and faithful student is the positive knowledge that all right endeavor is rewarded, no matter how much opposition there may seem to be. Several months ago it seemed necessary for the writer to find employment in an office as a stenographer, and all the usual means, such as advertising, making personal applications, etc., were tried without success. As time went on and there seemed no prospect of getting anything to do in this line of work, it required great effort not to yield to discouragement and stop trying to find employment; but, as the need seemed urgent, I sought aid of a Christian Science practitioner. The help was very lovingly given, and after a helpful talk with her I went home, convinced more than ever that Christian Science is true, and that when rightly and persistently applied it would solve this as well as all other problems that might come to me.

Opening the Bible, my eyes fell on these words: "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." Then came the thought, I have taken all the material steps, but have I been doing sufficient metaphysical work? Realizing that I had been working more materially than spiritually, I earnestly searched my thought to see what might be there to hinder the accomplishment of that which it seemed right for me to do. What was my motive for wanting a position? Was it selfishness, pride, ambition, and a desire for material things, or was it to learn more of the truth and how better to reflect God? If the latter, surely I had that opportunity now and did not need to outline where or what my temporal work should be, for our Leader tells us that "when we wait patiently on God and seek Truth righteously, He directs our path" (Science and Health, p. 254).

Soon after this a position was offered me which, while it met my immediate need, seemed very humiliating. Pride rebelled, but after a severe struggle with self the position was accepted. Our text-book tells us that "Love is not hasty to deliver us from temptation, for Love means that we shall be tried and purified" (p. 22). Not feeling at all in harmony with my surroundings, the work seemed hard

Digitized by Google

and at times unbearable. Again I realized the need of more metaphysical work, and a further search revealed much lack of gratitude, since every need had been met. After several days of sincere prayer and effort, one morning I was able to go to my work willingly and gratefully, and that very day I was offered a position where I not only had the opportunity to do stenographic work, but also to gain a greater understanding of Christian Science.

The memory of this experience has been an inspiration to me many times since it occurred; and it goes to show that our real need is always spiritual rather than material.

THE WIDOW'S MITE.

NELLIE B. MACE.

WHEN Jesus pronounced his commendation of the widow's mite he uttered words destined to be of perennial comfort to those whose offerings seem necessarily diminutive. Yet one is occasionally found who is inclined to read into the narrative a condemnation of the rich. The story, however, as related by Mark and Luke contains no condemnation of the rich men who of "their abundance" cast in "much," although it does pointedly declare that "this poor widow hath cast more in." This story recalls vividly our Leader's words, "Giving does not impoverish us in the service of our Maker, neither does withholding enrich us" (Science and Health, p. 79).

From the many instances in which Jesus, with startling clearness, read the thoughts of those about him, blessing and encouraging the receptive conditions while unsparingly unveiling mental violations of the law even when no outward crime had been committed, it is evident that he regarded as of main importance the mental processes and conditions to which outward acts were merely incidental. In this story of the gifts, the record implies that Jesus, with his usual insight, "beheld how the people cast money into the treasury." He knew that their act in giving was preceded by thought, and that their thought consciously or unconsciously involved a recognition of some source of supply, and that the quality of the giving was largely determined by the more or less spiritual perception of the real source of all good.

It is said of the rich men that they of "their abundance" gave much. The expression "their abundance" does not lift thought toward the abundant goodness of God, but suggests rather the belief in material treasure with the usual accompaniment of this belief, that it would be neither sane nor safe nor agreeable to part with it all. It is remembered that the rich young man who sought instruction of Jesus concerning eternal life, stumbled over the requirement, "Sell all that thou hast,"—not yet having discerned that the whole belief in materiality must be displaced by the understanding and love of pure spirituality.

Of the widow Christ Jesus said that she "of her penury hath cast in all the living that she had." Christian Science classes poverty as one of the inharmonious mortal conditions to be overcome. And here it is apparent that the woman's penury was not the object of praise, nor even the mite, but her act of casting all that she had "unto the offerings of God." This woman had doubtless perceived something of the real substance, of faith and trust in the providence of God, in comparison with which material treasures are penury indeed. It may be that her simple reliance upon Love's provision had found an answer in the kindness of affectionate relatives upon whom the custom of those days left widows partly dependent. In all likelihood she was of the type mentioned later in Paul's letter to Timothy, who, "desolate, trusteth in God, and continueth in supplications and prayers night and day. . . . Well reported of for good works."

This whole-hearted compliance with the spiritual demand regardless of the testimony of the senses was a larger rendering unto God, a more perfect mental condition than was manifested by those who through "their abundance" virtually expressed the belief, "I am rich, and increased with goods, and have need of nothing;" and knew not that they were "wretched, and miserable, and poor, and blind, and naked." Christian Science emphasizes the contrast between the mental attitude which recognizes and acknowledges God, Spirit, as all-pervading substance which can neither be impoverished nor enriched by mortals' volition, and the mesmerizing belief that matter is substance and that its accumulation is essential as a provision against lack.

Each student of Christian Science makes the discovery that what he has been pleased or displeased to call himself is not his true self, but is more properly seen to be an arena where the so-called human forces seem to meet divine truths in irresistible conflict, ever duplicating the types portrayed in Biblical allegory, prophecy, history, and parable. He finds within his own unveiled mentality the ancient untrustworthy trust in matter with its vague and fruitless attempt to worship spiritually through materiality, which type finds no favor with God, nor in the end with men. But he finds also another condition, typed by the "widow," which he may contemplate with thanksgiving; even the contrite thought bereft of the husbanding of material trusts and turning with pure devotion to dwell upon spiritual realities; and he is reassured to press forward in the "mental conflict between the evidence of the spiritual senses and the testimony of the material senses" (Science and Health, p. 288), sustained by the promise, "The Lord will destroy the house of the proud: but he will establish the border of the widow."

SPIRITUAL VISION.

HENRIETTA PHELPS ELNOR.

MRS. EDDY tells us that "as mortals gain more correct views of God and man, multitudinous objects of creation, which before were invisible, will become visible" (Science and Health, p. 264). A clearer understanding of this teaching enhances the value of everything about us that is beautiful and harmless in its significance to our spiritual life.

Some time since, while visiting a country house where a large party had assembled for the summer holidays, I was seeking a quiet retreat for my daily study of the lesson, and hit upon a sheltered nook at the end of the garden. Here was peace and rest, a veritable "holy place." I was suffering at the time from great mental stress because of my inability to overcome certain errors which had presented themselves to my thought as insurmountable, but a passing swarm of butterflies, all activity and happiness, and a bird singing overhead, directed my thought to the reality of God's ever-presence, and as I sought for a clearer realization of "the beauty of holiness" I was further attracted to a spider's web above me. It was a marvel of beauty. It was illumined by a shaft of sunlight so that the colors reflected on each tiny strand of it, perfect in symmetry, were beautiful beyond description. It was a perfect vista of gold, blue, yellow, crimson, sapphire, which lifted thought to the source of all that is good and beautiful. Having completed his work, the spider rested contentedly in the center of the web, apparently oblivious of all about him. But his lethargy was only in the seeming, for when he caught sight of an oncoming danger in the form of a huge leaf which, drifting with the wind, struck and became fastened to his web, instantly he darted along his slender pathway, and though the leaf was fifty times his size and to mortal eye practically immovable, the little fellow undauntedly commenced to detach it bit by bit and cast it to the ground. I noticed other leaves and particles which he as carefully and methodically removed. Nothing seemed impossible to him; whatever the danger that seemed to threaten him, he acted promptly, and "as one having authority."

The lesson was indeed valuable. Surely these were the "invisible things of creation" revealed from the altitude of

Digitized by Google

spiritual vision; and in passing through so-called "dark days" of mental or physical trouble, could we but always realize the omnipotence and omnipresence of good, the creative Mind, and know that nothing is impossible to Spirit, God, therefore nothing is impossible to His idea, man; nothing so large but "Love can remove,"—then indeed should we as God's sons and daughters act as those who reflect the authority of Truth. Beholding and understanding God's creation, we see "all the glories of earth and heaven and man" (Science and Health, p. 264).

UNLABORED MENTAL WORK

MARTHA SUTTON THOMPSON.

THE truths of divine Science are exact and unchangeable, and this fact kept in view is a very present help in time of trouble. Furthermore, the statements of Truth are natural and, to the spiritually inclined, easily comprehended. To their sense it is error that is complicated, obscure, and baffling. It is the sense of error which causes our struggles in all mental work. But we must watch the deceiver that it does not make us believe that we are struggling with something real and that the truth which Jesus declared would set us free is eluding us.

To illustrate: to comprehend that infinite Mind governs all and governs harmoniously is no task; in fact it is as self-evident as that one and one are two, and we never find ourselves repeating this over and over and thinking of it very hard in order to realize it. We understand that it is so and we know that the fact can never change and that any benefit we can derive, or any benefit we expect to derive, from the fact that one and one are two is as surely ours as though we had already experienced it. For instance, if we owe A two dollars and B and C each owes us one dollar, we positively know that we have owing to us just enough money from these sources to pay A. We do not iterate and reiterate this fact, but rest assured in the truth of our understanding of the facts, the unchangeableness of mathematics. We never have spasms of fear that we shall not realize the truth of the matter and tell A that we have not sufficient "in sight" to pay him and so get into trouble with him. No, no; this never happens. We know the truth of mathematics can never be reversed, that it can never relapse.

In working out the problems of life, however, where error becomes malicious because we strike at its very so-called existence, we find ourselves thinking and rethinking, very determinedly, that infinite Mind does govern all; that the law of God does govern His child absolutely, and so on. Why do we do this? Is it because we have any doubt of the infinitude, omnipotence, and omnipresence of good and its laws? No; but it is always because we are wrestling with the seeming realism of the opposite error. We are striving to obliterate the erroneous sense with the realization of the truth declared. But what is realization? It is knowing; and the trouble sometimes is that we are striving to make carnal sense realize or know, while the fact remains that spiritual perception alone knows and realizes spiritual truth.

At such a time it stills the tempest to recognize that it is this carnal sense waging its "enmity against God" which fills us with dismay, and that our spiritual perception knows forever, and never loses sight of the fact, that all we are declaring is true now, and moreover will be manifest to mortal sense in normal and harmonious conditions if the trusting human longing for good will cling fast to spiritual perception and let the baser stratum of mortal mind, the "first degree" (Science and Health, p. 115), gnash upon itself and die of its own fury. Drawing the line of demarcation between the sense of error and the sense of Truth, we can work out our problems even in the midst of the "fear and trembling." Erroneous work upon a blackboard does not prevent us from working the same problem correctly beside of, and in sight of, the errors. The correct sense never mingles with the incorrect, so there is no possibility of any interference.

We do understand the truth we are declaring, and we also know that it is this truth declared in the supposed presence of error which destroys error's seeming presence and power. Said Jesus, "The truth shall make you free." This is all that is needed,—the understanding and declaration of Truth. It is actually understood in the degree that we love and live it; and inasmuch as we have this understanding we are able to destroy error and bring harmony into human experience. Thus he who may feel himself to be least in understanding has the joy of knowing that he may work continuously and in a straight line until he overcomes all that is evil.

To bear these things in mind will bring assurance, reliance upon mental work, and it will result in our holding to the right sense continuously. This may be said to be the ceaseless prayer whose unlabored action will finally destroy "all material sensuousness and sin," and "reach the heaven-born aspiration and spiritual consciousness, which is indicated in the Lord's Prayer and which instantaneously heals the sick" (Science and Health, p. 16). Therefore, even while the argumentative auxiliary is necessary to remind mortal sense, let us seek to rest in (though not to struggle with) those declarations of Truth which will surely bring us all things and conditions desirable, although these may be delayed because of our false sense of error.

The second and third degrees of mortal mind (Science and Health, pp. 115, 116) need this restful condition in which to yield to divine Mind and let man's spiritual nature appear; for, as Mrs. Eddy has said, "we must learn how mankind govern the body,—whether through faith in hygiene, in drugs, or in will-power. We should learn whether they govern the body through a belief in the necessity of sickness and death, sin and pardon, or govern it from the higher understanding that the divine Mind makes perfect, acts upon the so-called human mind through truth, leads the human mind to relinquish all error, to find the divine Mind to be the only Mind, and the healer of sin, disease, death" (Science and Health, p. 251).

[Written for the *Sentinel*]

IN TUNE WITH GOD.

JENNIE WALBRIDGE BRIGGS.

In tune with God
His angels with us fare,
No fear of sin or sickness can alarm;
Safe folded in His loving care
There's naught can harm:
Welcome the chastening rod.

In tune with God
All nature blends in harmony,
The morning stars together sing;
With sweetest melody
The hills and valleys ring,
Life is not in the sod.

In tune with God
We love our brother man,
We see the Christ-ideal,
And know that only Truth and beauty can
Forever be the real.
Man is above the clod!

In tune with God!
'Tis heaven begun below,
A foretaste of the love and joy,
Which we shall surely know,
Sometime without alloy.
Our feet with gospel peace are shod.

SELECTED ARTICLES.

[Frederick Dixon in *Chelsea Mail*, London, England.]

It is a pity that the two correspondents who write anonymously in the columns of your issue of recent date do not give their names. One of these critics signs himself "Ecclesia," which is the Latin for church. He settles the problem of evil, and some other things, in just eighteen lines. It has, however, to be remembered that the world has known far more than one, even Christian, *ecclesia*, and that these churches have differed so violently from each other as to the true Christian faith that they have persecuted one another, and even burned men and women's bodies, all in the name of God, who is Love, by way of inducing this God to save these people's souls from eternal punishment. Is it any wonder then that a recent Christian writer has spoken of the Jehovah of the Old Testament "in one of his worst moods"? At any rate, it is ample reason for a Christian Scientist to insist that the only proof which can be given that the gospel preached is the gospel of Christ, is that demanded by Jesus the Christ, when he declared, "He that believeth on me, the works that I do shall he do also." To call yourself a Christian, and insist that your neighbor is not, is simply *vox et præterea nihil*, nothing more or less than that. The command of the Founder of the Christian religion was that his followers should preach the gospel and heal the sick with signs following. Preaching has always been easy enough, but it is the healing that counts, for it is the healing which is the test of the preaching,—"these signs shall follow them that believe."

It is a little dangerous for a writer, and one who signs himself "Ecclesia," of all things, to argue that the power to heal was confined to those who formed the first church at Jerusalem. First, because the majority of theologians deny this completely, and assert the exact contrary. Second, because healing has continued throughout all the centuries, from St. Paul to St. Sebald, from St. Sebald to Fox, from Fox to Wesley, and so to our own time. As a matter of fact, healing was a recognized factor in Christian service down to the time of Constantine, and the works of the Fathers are filled with records of it. Thirdly, because the statement is in absolute contradiction to the plain declaration of the gospels. Again and again, without reference to time or place, Jesus the Christ declared that healing must be considered the proof of faith. He told the disciples to teach the world, not the founders of the church at Jerusalem, everything he had commanded them. He told the disciples, at one time, that not only the healing of sickness, but many other signs of miracles, should follow them that believed; then, at another time, that not only the works he had done, but greater works should be done by those who believed in him. These greater works were certainly not accomplished by the founders of the church in Jerusalem. They remain to be accomplished; but they will not be accomplished by limiting healing to material methods. Jesus healed the sick without drugs and without operations. No doctor or surgeon of today has ever done his works; they have been and can only be done in his way. Lord Lister was a great man, but he knew less than Paul, who settled the question of blood-poisoning without antiseptics at Miletus; while Jesus himself said that neither scorpions nor poisons could prevail against Christian faith.

"Spectator" is quite right in saying that I maintained that healing was never material, but always mental. This is indisputably the teaching of Jesus. He never used material means, and he insisted that the healing accomplished by his followers must be done in his way. The early Christians did heal in his way, and not by recourse to the medical methods of their days. Does "Spectator" seriously mean to argue that Jesus meant that healing was to come about by the gradual education of the medical schools? For nearly two thousand years humanity has suffered, century after century, from medical practice which the medical man of today dismisses with scorn. Serpent-gazing gave place to crystal-gazing; tabloids of viper's liver to pills of mummies' dust; the blood of he goats to calf lymph; red bed-hangings to quinine. What is the result? Men get sick, as they always did, and die, as they always did, only of new diseases, and this will continue until humanity recognizes that what is known as matter is the subjective condition of the human mind, and that the very exertions of the medical schools are implanting in the human mind faith in disease instead of in God, and educating it into a belief in the power of germs and microbes, instead of into a knowledge of the truth which is to make it free.

Christian Scientists are in the position, in the twentieth century, that Luke and the earlier Christians were in the first. The difference is this: that in the first centuries it was with the organized power of the pagan priesthood the earlier Christians had to deal; today it is the organized power of the medical profession the Christian Scientist has to face. The difference is not a very great one after all. The pagan priests, and for that matter the Christian priests, settled the question of theology out of hand in their own favor. The Christian convert was burned in the garden of Nero, the Protestant reformer in the market-place. Any one can see the ludicrousness of permitting the *pontifex maximus* or the college of cardinals to decide whether the teaching of Paul or Luther was correct or not. By no means everybody sees that it is the same thing as asking the college of physicians to pronounce on the teaching of Mrs. Eddy. Yet this is what takes place in the twentieth century, as the other took place in the first and sixteenth centuries.

Thousands of people die every day of the week under ordinary medical practitioners. These practitioners give their own certificates, and there is an end of it. Thousands of people are being treated every day under Christian Science, and occasionally one dies, but the Christian Scientist may not give a certificate, and this is practically always withheld by the coroner who has to be applied to. Various instances are those of patients whose cases have been pronounced hopeless by doctors, who have given the sufferers a week or a month to live; but this hardly ever prevents doctors from giving evidence to the effect that the patient's life could have been saved or prolonged by consulting them. In spite of this, nothing stops or can stop the spread of Christian Science. The Romans who threw the Christians to the lions, the inquisitors who stretched others on the rack, destroyed men's bodies, but were powerless to destroy mind. "Be of good comfort, Master Ridley," Latimer said at the stake at Oxford, "we shall this day light such a candle by God's grace in England as, I trust, shall never be put out."

The truth is, of course, that matter is unreal, a phenomenon which, in the words of one of the leading natural scientists of the day, "we have constructed for ourselves." This being so, it assumes different phases according as the human mind of which it is the subjective condition is governed by good or evil, God or the devil. God, however, is not the "Ancient of Days" conceived by Blake, a patriarchal figure with a long beard, any more than the devil is the cloven-hoofed, spike-tailed figure of Fra Angelico's pictures. The easterner, in the words of one of the most learned of living churchmen, never opened his mouth without emitting a metaphor. The serpent of Genesis was simply the symbol of evil throughout the east, and as the Greek for serpent is also the Greek for dragon, that old serpent the devil became also the dragon. The Hebrew took the substantive satan or adversary as he took the adjective belial or worthless, and used them both as the personification of evil, but nothing would have astonished him more than to have been told that a matter-of-fact western people would one day convert his apocryphal dragon, Tiamat, into a real personal devil, wielding almost as much power as he gave to Merodach, his personification of good.

God, the Bible tells us, is Spirit, and He is Love. "What

Digitized by Google

the person of the infinite is," Mrs. Eddy writes, on page 19 of "No and Yes," "we know not; but we are gratefully and lovingly conscious of the fatherliness of this Supreme Being." Man in the image and likeness of Spirit is spiritual, and in the image and likeness of Love is harmonious. Omniscient, omnipresent, omnipotent Love never made or created evil in any shape, and all that really exists was made by God and was made good. Evil can in no circumstances be considered good. It is this problem of evil which has been the nightmare of the ages. Its origin has been sought as assiduously and as futilely as the philosopher's stone. It has never been found, because it is simply a negation; you might as reasonably look for the origin of any other lie, and a lie is what Jesus described it as. To expose a lie, however, it is necessary to learn the truth, and so Jesus said, "Ye shall know the truth, and the truth shall make you free."

This knowledge of the absolute truth of spiritual existence, as opposed to mere relative knowledge of material facts, is that scientific knowledge of God, spoken of repeatedly in the Greek Testament, though never translated so, and is contained in the Mind that was in Christ Jesus. It was the Mind of Christ which healed the sick in the first century, and just in the proportion a man lives today so as to acquire this Mind, will he be able to accomplish, as Jesus promised, the works he did, and the works greater than these.

["Fairplay" in *North Yakima* (Wash.) *Republic*.]

The caustic attack made on Christian Science by an evangelist during his meetings, and the subsequent comments *pro* and *con*, led me to make a first-hand investigation into the real tenets of Christian Science to see whether their doctrines were as damnable and unchristian as they have been painted, and as I, too, not long ago believed them to be. In the interests of fair play and the progress of real Christianity, I want now to say that I am amazed to find that the fundamental teachings of Christian Science—as to the nature of God, man's relation to God as His offspring, the work of Jesus Christ as a revelator of "the way, the truth, and the life;" man's privilege here and now of realizing his oneness with the Son and Father—God, and man's consequent obligation to do the works of Christ—are all in harmony with the Scriptures and the doctrines of our orthodox churches.

There has, therefore, been raised in my mind the serious question of how we can make amends for our misrepresentation of our fellow Christians, whose teachings and practice, in the main, are but the restoration of primitive Christianity. While I do not profess fully to understand or agree with Christian Science, and do not pose as its defender, I do think it behooves us as members of orthodox churches to be looking more closely to our "doxy," instead of making ignorant attacks on others' "doxy," lest haply we should be found fighting against God.

The first I read of Mrs. Eddy's works was her article on "Prayer." It is the most sensible and most illuminating treatise on the subject I have ever read, and as such I commend it to the attention of all seekers after truth. The Christian Scientist's concept of God, I think, too, is most uplifting and quickening, furnishing, as it does, such a ground for intelligent faith and a necessary realization of the promise of the Master. In fact, in these fundamental facts and methods is the spiritual food which the masses, both in and out of the church, are hungering for instead of the husks of dogma.

The Christian Scientist in his demonstration of God's desire and power to heal all our diseases gives a merited rebuke to our orthodoxy and stamps us as the real heretic. Christ commanded his disciples to do the works that he did, and said they should do even "greater works" than these. This command to preach the gospel is coupled with that of healing the sick, and he said: "These signs shall follow them that believe." We might as well admit that the church has cut this out of its Bible, and I cannot see how she can expect to impress the world with the importance of the things of the kingdom of God till she return to her high ideals and with an understanding faith prove to the world the reality of the things professed.

The world is not indifferent to the claims of God. It is hungry for the complete gospel of physical as well as spiritual salvation—and here is the reason why so many are turning to Christian Science as a better exposition of Christianity, where they find that which satisfies their deepest longings and enables them to overcome their limitations. Christian Science has claim to no privilege, power, or blessing that does not rightfully belong to all Christians everywhere. Let us learn the lessons in real Christianity that Christian Science has taught, and so build up our church in the practice of our holy faith. All these observations I make as a member of an orthodox church and as a seeker after truth.

[C. L. Ramsay in *Scotsman*, Edinburgh, Scotland.]

If your contributor had been true to his scholarly instincts, he would have taken care to verify his facts, and so would have avoided making the three serious mistakes which occur in his brief reference to Christian Science, as recorded in your columns recently. Even a cursory glance through the pages of the Christian Science text-book, "Science and Health with Key to the Scriptures," will reveal the fact that Mrs. Eddy devotes a whole chapter to the subject of spiritualism, and that she carefully explains how widely the systems differ from each other. To pass on to the next point, Christian Science could not depart from its original basis without ceasing to be science; and, finally, if it failed to provide a remedy for sin, it would be equally powerless before disease, since it heals them both in the same way. As a matter of fact, the healing of sickness is but an incident in the great work of mental and moral regeneration in which it is engaged.

St. John tells us that "the Son of God was manifested, that he might destroy the works of the devil." The mission of Christianity today is the same as it was two thousand years ago, and Christian Science is daily proving its right to the name by the truly Christian work of exterminating in human consciousness the sinful habits, desires, and thoughts, the ignorance, fear, and errors of every kind, which are the producers of disease and death. "Be ye therefore perfect, even as your Father which is in heaven is perfect," was the great Master's injunction to his disciples; and the beneficial work of Christian Science will not cease until that goal is reached, and God's will is "done in earth, as it is in heaven."

[From *Similkeen Star*, Princeton, B. C.]

The reverend principal of Westminster Hall, lecturing at Penticton recently, is reported as follows in the *Press* of March 23: "Christian Science came in for severe criticism by the lecturer, and was described as nothing less than a recrudescence of the great central thought of Buddhism." What the "great central thought of Buddhism" is, the lecturer did not say. Christian Science stands for the worship of one God and for utter reliance upon Him, obedience to His perfect and satisfying law of good. It stands for salvation from all evil, through the divine Christ—his teachings and his deeds. It stands for one universal Deity, one universal Christ, one universal Christianity, one theology, one religion, and for the unity of mankind in one Christian brotherhood. It stands for the power of good over evil, for the extermination of sin and disease, devil and hell, and for the legal right of man to overcome temptation and damnation. It stands for the highest education, for the obliteration of war and conflict, and for an equitable social and governmental reform. It stands for a new hope which answers the deepest human need and is giving greater peace to a suffering world. It stands for one's own welfare, pros-

Digitized by Google

perity, health, happiness, and an increased capacity for every righteous achievement. It stands for purity of life, it trusts not in tobacco, strong drink, or any material pleasure or remedy, knows that disease or ill health is the concomitant of sin, and literally believes the Scripture teaching that divine power will enable one now, as in primitive Christianity, to heal the sick and do the works of Jesus the Christ, who said, "He that believeth on me, the works that I do shall he do also; and greater." The central thought of Christian Science is God, omnipotent, omnipresent, omniscient Life, Truth, and Love. Can the foregoing be said of Buddhism? Can the learned principal truthfully show any similarity of worship between Buddhism and Christian Science? If not, he owes Christian Science an apology.

[Alfred Farlow in *Hamilton* (Ohio) *Republican-News*.]

In a recent issue a clerical critic offers as evidence that he is qualified to inform the public on the teachings of Christian Science, the fact that he has personally met a "'healer' fresh from Mrs. Eddy's own hands," and that he has a relative whose husband has been a "healer," and that he has had a personal acquaintance with "eminent Christian Scientists." Be this as it may, it still remains true that the gentleman has not been a practising Christian Scientist, and it still remains true that the only proof that one understands Christian Science is his ability to heal the sick by its means. The Christian Science church in compliance with this fact does not authorize its members to enter upon the sacred task of teaching classes in Christian Science until they have successfully practised healing for at least three years. Of one thing else I am certain, namely, that the gentleman's understanding of Christian Science does not agree with mine.

The gentleman declares that he has visited "dying patients" who had been "weeks and months" under Christian Science treatment "and yet had been left to die by inches." He evidently forgot to mention that seventy-five per cent of those who have applied to Christian Science for treatment have done so after having "died by inches" during a long period of time and had turned to Christian Science only as a last resort, and that a considerable percentage of these so-called "incurables" have been healed or permanently benefited by Christian Science. He might have said that the entire human race of the past, apart from the very few who have died under Christian Science treatment, had gradually gone down, even unto death, under reputable medical practice.

Having placed himself on the witness stand, he should have complied with the just rule of the court, not only to speak the truth, but the whole truth. He should have mentioned in connection with his story the many who have been saved by Christian Science after having failed to recover otherwise. What the public desires on this subject is an understanding of the comparative results of Christian Science treatment. Inasmuch as Christian Science has healed many cases after they had exhausted their hope in other remedies, it is reasonable to assume that these many persons whose deaths have been witnessed by the clerical gentleman might have died even sooner if they had not had Christian Science during the "weeks and months," but had been left entirely to material remedies.

The gentleman urges his hearers to "keep a serene peace in all the emergencies of life." Can he think of anything that is better calculated to create and maintain a serene peace than an enlarged understanding of God as infinite Spirit, as an ever-present help; that in God "we live, and move, and have our being"? Christian Science contributes to this desirable "serene peace" by amplifying one's understanding of the author of all peace.

While Mrs. Eddy teaches that God is not person in a limited or anthropomorphic sense, she declares that God is Person in the infinite sense; that He is the all-wise heavenly Father. The term Principle as used in Christian Science has a higher meaning than in the ordinary use. It refers to the one infinite Mind which according to Scripture is the Alpha and Omega, the beginning and the end, the author and finisher of all things.

Christian Science agrees with the Scriptural teaching that all that God made was "very good," and that the man of God's creation is in His own image and likeness; that Mind, Spirit, God, is the real substance and cause of the universe; that everything in creation is real from the least to the greatest, but, in accordance with the generally accepted truism that "like begets like," is spiritual, and hence not material. It is not the world which is to be destroyed, but the false human sense thereof, then "new heavens and a new earth" will appear. When the false material sense is no longer in evidence, everything will be seen as it is; that is, in all its beauty and spirituality. The legitimate teaching of Christian Science does not permit the deification of any mortal. It teaches that God's entire creation is like Himself, pure and perfect, while all false evidence is unworthy and imperfect.

Far from destroying the Scriptural teaching of the vicarious atonement, Christian Science is in strict accord with the Bible teaching on this subject. It teaches that our Saviour voluntarily entered into an experience which enabled him to demonstrate his boundless love for mankind and prove certain facts concerning the Science of being which mortals need to understand in order to work out their own salvation, according to Scriptural admonition. It is quite true that Christian Science discredits many theories of life which have been entertained during the past. The same may be said of each successive improvement since the world began. Progress has always been sustained by a survival of the fittest, and when the fittest has not survived the world has retrograded.

As to vaccination, eminent physicians disagree. Many of the best in our country are opposed to this practice, advocating that vaccination has killed more people than has smallpox, and it is generally known that much of the loathsome disease existent in the world today is directly traceable to vaccination. The question as to whether or not vaccination prevents smallpox or is a benefit to the world as regards this disease, is still in course of debate. Be that as it may, we cannot deny the fact that the Master of Christianity was the best physician that ever practised. He never lost a case, and he said, "He that believeth on me, the works that I do shall he do also." This point, it should be remembered, is the teaching of Christianity for all times and peoples, which our critic advocates. Thus he may note that Christian Science, far from disagreeing with Christianity, is in strict accord therewith.

[Written for the *Sentinel*.]

"LAZARUS, COME FORTH."

JEANIE F. GIBB.

So spake the Master, standing by the grave
  Of one bound hand and foot by error's chain.
  He spake with power, he knew 'twas not in vain:
Truth voiced in faith mankind from death could save.

At the command the dead straightway arose,
  And came to where the Master waiting stood
  To loose his bonds. And at the sight the rude
And questioning crowd fell back. Truth quelled his foes.

Now, lowly listening, we, too, can hear
  The Christ repeat the same command today,—
  "Come forth!" from thoughts of sin and death. Oh, may
We ever gladly to the healing Christ draw near!

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"IS NOT THE WHOLE LAND BEFORE THEE?"

SOME misunderstanding seems to have followed the reports of the recent Central Conference of American rabbis, held at Baltimore last month, to the effect that Jews were being received into membership in the Christian Science church while retaining their membership in the synagogue. It is true that many former followers of Judaism have become members of our church, but in order to have done so it was necessary for each one to sign an application containing the statement, "I am not a member of any church. I was formerly a member of the Jewish denomination, but have definitely severed my connection therewith." This action is in accordance with a by-law of The Mother Church, which reads as follows: "This church will receive a member of another Church of Christ, Scientist, but not a church-member from a different denomination until that membership is dissolved" (Church Manual, p. 34).

The facts, as we understand them, are that the conference merely adopted a resolution declaring "that it is impossible for Jews to accept Christian Science without thereby denying Judaism." We are informed that the paper on this subject, which was read by Rabbi Lefkowitz, was dignified and tolerant, but definite in making clear the difference which he saw between Christian Science and Judaism; also that another rabbi, who attempted to ridicule Christian Science, was compelled by the audience to desist and to leave the platform, an example in propriety which might well be followed in all religious discussion. The tone of the Jewish press in commenting on this incident has been uniformly dignified, self-respecting, and kindly, as, for instance, the *American Hebrew*, which said:—

> When, as rumor has it, Jews formally enroll themselves as members of Christian Science churches and presumably subscribe to the tenets of Christian Science, some of which are opposed to the fundamental principles of Judaism, and when even officers of Jewish congregations find no inconsistency between membership in the synagogue and formal membership in the Christian Science church, such persons should be told that such double allegiance is impossible; that membership in the synagogue is incompatible with formal membership in a Christian Science church, even as such membership would be incompatible with membership in any other Christian denomination. Such mixtures, or *shatnez*, we cannot break with impunity. They make for internal disintegration. We respect the sincere manifestation of the religious sentiment in man. We revere any sincerely held faith. We believe that all men are children of God and in some way are doing God's work. But if we are to maintain distinctions because of sacred convictions, we must have the courage to maintain them and guard the sacred heritage of the religion of Israel.

Christian Scientists respect such utterances as these, and the sentiments which prompt them, but so far as they are concerned they believe that the discussion at Baltimore was based upon a misunderstanding of the facts in regard to membership in the Christian Science church. The fact that this church has been in existence but thirty-three years naturally conveys the information that its membership is largely composed of those who were members of other faiths, but it in no wise justifies the inference that its members have not completely and definitely parted from their former affiliations. In this parting, however, they have been careful to observe the spirit of Abram's words to Lot, "Let there be no strife, I pray thee, between me and thee, and between my herdmen and thy herdmen; for we be brethren." It may be safely said that whoever espouses the cause of Christian Science does so of his own free will, and chiefly because he finds therein something which meets a pressing need in his experience.

ARCHIBALD MCLELLAN.

"SEEING HIM WHO IS INVISIBLE."

READERS of the "Voices of Spring" in Mrs. Eddy's "Miscellaneous Writings" (p. 329) cannot fail to be impressed with two facts,—the writer's poetic sensitiveness, that interest in beauty of form, color, and arrangement which she defines as her "obstinate *penchant* for nature," and her freedom from the mesmerism of materiality, her ability to look within and beyond appearances and grasp the realities of being in a way which brought her, as it will bring all who are thus minded, spiritual betterment as well as pleasure, daily growth as well as daily delight.

It has been said that the natural world makes an enduring impression upon him who is at his best. This is peculiarly true of those who through spiritual alertness are able to interpret it, as did the Master, in terms of spiritual reality, who have schooled their thought to rest, not upon the seeming, but upon the actualities of being. To be moved sentimentally or emotionally by the appeals of material sense is a common experience, but to gain spiritual stimulus through one's touch with nature's "sweet simplicities," the impulse to live ideally and heal the sick,—this is the guerdon of those only who maintain a Christianly scientific thought. By such, the "things invisible" of Truth are clearly seen; for them "the heavens" are spiritual realities which ever "declare the glory of God," and unnumbered events and experiences which to the many remain soddenly sensuous, though thought of perchance as good and beautiful, are invested with a new and inspiring significance. They have become suggestive of eternal verities.

To the true Christian Scientist "nature voices natural, spiritual law and divine Love. . . . The floral apostles are hieroglyphs of Deity" (Science and Health, p. 240). For such the threshold of the "new earth" has been crossed. On the other hand, while those for whom thought is still centered on the unspiritual may find esthetic exhilaration in the study of natural phenomena, this means no abiding enrichment, no substantial gain in spiritual aspiration, but only the passing pleasure of emotional excitation, the gratification of an "artistic sense."

Spring has come to many of us of late, and whatever else it may signify, it cannot fail to test the delicacy of our sensitiveness to the touch of Truth. If as we note with what marvelous skill and silent swiftness the leaves and petals are being fashioned and tinted these prophetic days, the atmosphere of sweetness and song in which the wondrous transformations are being accomplished—if before fragrant altars and under the open sky there comes to us an ever-expanding, ever-deepening thought of the richness and beauty of the Life divine—if, in addition to the delightful sense of intimacy with woodsy flowers and woodsy folk, we acquire a keener consciousness that "nature is informed by a vast Life,"—if, as Jesus enjoined, the wheaten cake of human provision speaks to us ever of "that true bread" which cometh down from heaven, then indeed we shall have gathered the spring's richest fruitage. Symbols will have given place to substance, to the manifestations of the greatness and glory of the one infinite creator, divine Love. Then we shall realize the verity of Mrs. Eddy's teaching when she says: "In sacred solitude divine Science evolved nature as thought, and thought as things. This supreme potential Principle reigns in the realm of the real and is 'God with us,' the I AM. As mortals awake from their dream of material sensation, this adorable, all-inclusive God, and all earth's hieroglyphics of Love, are understood" (Miscellaneous Writings, p. 331).

To lift thought from appearance to reality, from all that is subject to disease, decay, and death to the eternally beautiful and good, thus gathering from nature's prodigal unfoldments constant reminders of the wisdom and beauty and joyous activities of Spirit, of the nearness and loving kindness of God,—this is to learn for oneself that "all nature widens upward," it is to escape one of the most glamourous

Digitized by Google

snares of material sense and establish one's goings in the path of those who "rejoice in secret beauty and bounty, hidden from the world, but known to God" (Science and Health, p. 15).

JOHN B. WILLIS.

HEALTH.

IT would be interesting to note the answers given by people who are not Christian Scientists if they were asked what health meant to each of them. It is thus defined in a dictionary: "The state of being hale, sound, or whole, in body, mind, or soul; especially the state of being free from physical disease or pain." The concluding part of this definition would probably express the thought of health as entertained by many, but it should be noted that it is purely negative, as if health were merely the absence of disease. The first part is better, but it gives undue prominence to the body, and yet most people seem to believe that health is dependent upon bodily conditions and so-called material law. Respecting this Mrs. Eddy says, "Health is not a condition of matter, but of Mind; nor can the material senses bear reliable testimony on the subject of health" (Science and Health, p. 120). Surely nothing can be of greater importance than to know what health is, and how it is to be realized and maintained.

It is very likely that all Christian people would admit health to be a gift of God, and yet there are few indeed who can claim to possess it, even in the rather limited sense in which it is held in general. Most people have certain health laws in which they believe, but it cannot be denied that those who observe these laws most rigorously have usually the least freedom and in the end are little more than prisoners in the mortal body over which man ought to be ruler. The old Latin proverb about a sound mind in a sound body means to most people that the mental condition is dependent upon the bodily state, but in Christian Science it is held that a truly sound mind, one which in adequate degree reflects the activities of the divine Mind, must always govern the body perfectly and bring out health and harmony; but this can never be the case where the body is placed before the mind, or where the human thought is dominated by ignorance and fear, or poisoned by hatred, lust, or selfishness.

The true concept of health appears throughout the entire Scriptures, the psalmist referring to God as "the health of my countenance," and he prays "that thy way may be known upon earth, thy saving health among all nations." In response to this deep human longing Christ Jesus came, offering health of mind and body to all who would accept the gracious provision of divine Love, all who were willing to drink from the life-giving stream which flows from the throne of infinite Mind. It can never be said that Christ Jesus failed to provide for the perpetuation of his healing ministry, and for some centuries the "saving health" for which the psalmist prayed was made known to all the nations where Jesus' followers sojourned, the word being accompanied by "demonstration of the Spirit and of power," as says St. Paul. Then came the obscuring clouds of mortal and material belief, with sin, sickness, war, and poverty; but anon came the light of Truth in Christian Science, and today the work of its students is to "establish the scientific sense of health" (Science and Health, p. 373), which means wholeness or holiness; in other words, the consciousness of the divine government of man's entire being by the Mind that knows and embraces all reality, and that neither slumbers nor sleeps. It also means that understanding of spiritual law and obedience thereto, which brings entire freedom from the limiting exactions of belief in material law.

The "scientific sense of health" places health upon a permanent basis, and is accompanied by the unfoldment of man's divinely bestowed capabilities and energies, or to use the Master's own words, it is "a well of water springing up unto everlasting life."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

INDIANAPOLIS, IND.

Second Church of Christ, Scientist, which some time ago bought the property at the northeast corner of Delaware and Twelfth streets, announces plans to construct on this ground a church building with a seating capacity of twelve hundred. The total cost of the site, the church building, interior fixtures and organ, is placed at approximately one hundred and ten thousand dollars. Thirty thousand dollars was paid for the site. Plans have been prepared for the new structure.

Second church was organized in 1903 by a small body of Christian Scientists, and began with services in the chapel of the old high school building. This room was soon outgrown, and Jan. 1, 1905, the church began holding services in a new building which the organization, then numbering fifty, had erected on ground it had bought at the corner of Meridian and Walnut streets, with a capacity of four hundred and fifty. Continued growth, however, soon compelled the abandonment of this building, and a removal to Caleb Mills hall, in the new high school building, after which, on the completion of the new Masonic temple, Illinois and North streets, removal was made to the Grand Lodge hall of that building, where the services are now being held.

Feeling the need of a permanent home, the congregation having grown to a regular attendance of about one thousand, the church decided to build. The Delaware street property is one hundred by one hundred and ninety-five feet. The building of this church so soon after the completion of the new building for First Church, in North Meridian street, emphasizes the rapid growth of Christian Science in this community.—*Indianapolis News.*

CHICAGO, ILL.

The new edifice of Sixth Church of Christ, Scientist, Chicago, which will be dedicated on Sunday, April 21, is at 11321 Prairie avenue, one half block south of Palmer park. The building is of brick with cement front, and has a seating capacity of about four hundred. It is of classic style, and cost, including the lot on which it stands, about twenty-seven thousand dollars. The building fund was more than completed by a joint collection taken in all the Christian Science churches in Chicago on April 7. The residue of this fund will be turned over by Sixth Church to the building fund of Eighth Church.—*Correspondence.*

BUFFALO, N. Y.

The corner-stone of the edifice being erected by First Church of Christ, Scientist, at the corner of North street and Elmwood avenue, was laid this morning [May 7]. The building, which is to cost one hundred and fifty thousand dollars exclusive of the lot, is to be of Bedford stone, brick, and buff terra cotta. The design follows the adaptation of the Greek temple. As is customary upon such occasions in Christian Science churches, extreme simplicity marked the services. None but the officers of the church and the building committee were present.—*Buffalo Commercial.*

HUNTINGTON BEACH, CAL.

The Christian Science society of this city closed [April 4] a deal for the purchase of the property at the corner of Eighth street and Olive avenue, consisting of two lots, upon which they contemplate building a small chapel in the near future. The lots are centrally located for church purposes, and a building fund has already been started to purchase the property, free from debt. There is at present a small wooden building upon it.—*Huntington Beach News.*

THE LECTURES.

OMAHA, NEB.

On April 1 and 2 Bicknell Young delivered two lectures on Christian Science under the auspices of First Church of Christ, Scientist. At each of these lectures the church was filled to overflowing and parties were turned away for want of seating capacity. On the first occasion Mr. Young was introduced by Clarence W. Chadwick, and on the following evening by Judge Irvin F. Baxter, formerly judge of the district court at Omaha. Mr. Chadwick in his introduction said:—

Thousands of people have read and reread a well-known and interesting little book entitled "The Greatest Thing in the World," which the author summarizes as love. But in so doing, the question arises, Why have these people not experienced healing? Because, in the author's scholarly exposition of this all-important theme, there is one thing lacking,—the spiritual understanding and demonstration of the power of divine Love to heal. The revered Discoverer and Founder of Christian Science, Mrs. Eddy, has written a text-book, entitled "Science and Health with Key to the Scriptures," a prayerful reading of which has healed thousands. And why? Because in this book, based upon the omnipotence and omnipresence of divine Love, is revealed the missing link of Christian demonstration, the healing Christ-idea, which shows humanity how to work out their own salvation, how to find the kingdom of heaven on earth.

All who have become intimately acquainted with Mrs. Eddy's truly wonderful book are finding out that Love lived and demonstrated is "the greatest thing in the world." Personally, I can testify that for over twenty years I have proven her teachings an ever-available source of health, strength and happiness.

Judge Baxter in his introduction of the lecturer said:—

Over forty-five years ago, from a humble home in a factory town in Massachusetts, Mary Baker Eddy gave to the world her discovery of a new-old truth: "God is Love." Her message has brought healing and comfort to countless thousands, her fame has spread throughout the earth, and her name is revered by the people of all nations; her message has been told and retold in every tongue and in every land. Tonight we come to greet and listen to one who brings this message of love to a people among whom he dwelt for many years. Since he left us years ago, he has traveled "full many a league in the line of light." On rare occasions during recent years he has visited us and told us wonderful yet simple truths, and we deem it a great privilege to have him again with us.—*Omaha Bee*.

ENGLEWOOD, N. J.

On Tuesday evening [Feb. 27] a most interesting and instructive lecture was given at Englewood armory, on the subject of Christian Science, by Virgil O. Strickler. There was a large attendance. The lecturer was introduced by De Forest A. Drake, first reader, who said:—

Over nineteen hundred years ago, on the shores of Galilee, there was a man who lived and practised the Science of being. Jesus of Nazareth healed the sick, turned water into wine, fed the multitude, and raised the dead in accordance with the law of God. At the age of twelve he was about his Father's business, teaching the doctors and lawyers the reality of God's law only, and overthrowing the testimony of the material senses. Later he proved the truth of his teaching by his works and said, "My Father worketh hitherto, and I work." When he had shown the power of God to meet and master every problem of material living, even rising above "the last enemy," he gave this promise: "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." Christian Science is occupying the attention of thinking people today because this promise is being fulfilled, and men and women are healthier, happier, and holier because of an enlarged understanding of God.

It is our privilege tonight to hear an authoritative statement of the laws which govern Christian Science practice from one who has left the practice of material law to teach spiritual law.—*Englewood Press*.

MISSOULA, MONT.

The Harmon Theater was well filled last evening [March 25] by a crowd which enjoyed an excellent lecture on Christian Science by William R. Rathvon. B. R. Cole of the university introduced the speaker and said in part:—

A little less than nineteen centuries ago there appeared in the vicinity of the ancient city of Jerusalem a young man of humble parentage, a native of an obscure village of that obscure country which for some time had been a victim of the Roman conquest of western Asia. This young man went about the small country which had given him birth, doing such things as no man had ever seen before. Without resorting to material means, he healed the sick, gave renewed sight to the blind, cleansed lepers, restored those under the ban of insanity, and even brought back to life those who had passed the threshold of mortal existence. Withal, this man was so pure of life and character that the keenest scrutiny on the part of his critics and enemies was not able to reveal a flaw. This person soon surrounded himself with a following of pupils to whom he imparted his remarkable power. These pupils in turn passed on to their successors the understanding which they had acquired from their Master, and thus his beneficent power was transmitted from generation to generation for some three centuries after the Master had been crucified at the instance of the Jewish church, whose power he displaced in jeopardy, and after he had demonstrated by his resurrection the unreality of death and the powerlessness of the grave. During these three hundred years the people among whom these wonders were wrought supposed that they were done in direct opposition to natural law and that those who practised them were possessed of supernatural power.

About fifty years ago a woman of our own land, born and reared in the Puritan atmosphere and amid the sturdy traditions of New England, while in a critical condition during a supposedly fatal illness, made a mental discovery which has restored to humanity the Christ-healing which apparently had been lost sight of for nearly sixteen hundred years, and which has given us an understanding of the principle upon which it rested. Her discovery was, in the first place, that the deeds of the Nazarene were not accomplished in opposition to natural law, but that they were in perfect harmony with the law of God; and in the second place, that these deeds can be reproduced in our age by any one who is dominated by the law of Love, and who is willing to demonstrate the truth of being as personified in Jesus of Nazareth. Her discovery was, in effect, that life, health, and happiness are the natural order of things, and that death, disease, and discord are the abnormal. This discovery was fully demonstrated, and as a result of it the same demonstrations are being made today by hundreds of thousands of men and women, scattered over gradually every civilized country in every state of our own nation, in all of its large cities, and in thousands of villages and hamlets. The name of the woman is Mary Baker Eddy, and her discovery she named Christian Science. The term Christian Science simply means exact, scientific, or demonstrable knowledge of the underlying of Christianity.—*Missoulian*.

BATH, ME.

In the Universalist church last evening [April 25] a good-sized audience listened to a lecture on Christian Science delivered by Willis F. Gross. The speaker was introduced by the Hon. E. C. Plummer, who said in part,—

The experience of all has amply proven that the lack of information is the explanation of a vast amount of criticism to which both men and creeds have been subjected. The prudent men of all times have realized the propriety of suspending judgment until they have come to an understanding of the matter upon which they are tempted to express an opinion,—the same wisdom which is taught in the Scriptures by the words, "Refrain from these men, and let them alone: for if this counsel or this work be of men, it will come to nought: but if it be of God, ye cannot overthrow it."

Spiritual research, whatever the lines of inquiry, must necessarily be of benefit to the searcher, for it forces the mind to the contemplation of higher things and leads to those direct rewards indicated in the promise, "Blessed are the pure in heart." The fact that Christian Science has had such a marvelous growth, has in fifty years encircled the globe and won the approval of so many thinking men and women, is proof positive of merit, and it is good for all to become informed as to its real character.—*Bath Times.*

DENVER, COL.

The Hon. Clarence A. Buskirk of St. Louis, Mo., delivered two lectures on Christian Science at First Church edifice Thursday and Friday evenings, March 28 and 29. On both occasions the church was packed to the doors. About forty-five hundred people heard the two lectures, and it is estimated that from five hundred to one thousand people were unable to gain admittance at each lecture. The lecturer was introduced on Thursday evening by Charles Henry Phillips, first reader of Second Church of Christ, Scientist, as follows:—

When John was in prison, questioning the signs of the Christ-healing, he sent messengers to Jesus with the query, "Art thou he that should come, or do we look for another?" and the Master sent back the ringing words, "Go and show John again those things which ye do hear and see: the blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them." He came in his Father's name, he knew no power but God, good. "The words that I speak unto you," he said, "I speak not of myself: but the Father that dwelleth in me, he doeth the works." He recognized no law but "the law of the Spirit of life," and he was obedient to none other.

But when the lowly Nazarene so humbly, calmly, and courageously walked the earth, and did those mighty works of redeeming love, he was misunderstood, maligned, and even stoned; and just so Christian Science, which today in our very midst is not only healing all the diseases known to the medical profession, but is alleviating worry, anxiety, and fear, and destroying all the appetites of the carnal mind, is sometimes misunderstood and misinterpreted. To correct false impressions and erroneous conceptions, as well as to acquaint the earnest seeker with the Science of its healing gospel, is the office of the board of lectureship.

The second evening the lecturer was introduced by Ezra W. Palmer, the Christian Science state committee on publication. Mr. Palmer spoke as follows:—

Mankind has never to any marked degree utilized the power of prayer. When his disciples asked Jesus on a certain occasion why they could not heal the lunatic boy, Jesus replied, "Because of your unbelief," and then he added the significant words, "This kind goeth not out but by prayer and fasting."

The whole Christian Science movement is a demonstration of the power of prayer made manifest in devout, earnest lives. Christian Science teaches men to approach God even as Jesus approached Him, and with like results. Today the works that Jesus wrought and which he promised that his followers should do, are again shown in the lives of men and women. And again, as in the time of the Galilean Prophet, do men with joy know that their prayers like chains of gold reach to the throne of God.

Mrs. Eddy, through whose clear perception of Truth a weary world is learning to pray aright, made wise provision that her message to humanity should be clearly and rightly presented, and one of the means employed for this purpose is the Christian Science board of lectureship. The gentleman who is to address you tonight is a member of that board. He therefore comes to you as an authorized exponent of Christian Science. He has proved himself by the record of his services in public life, and as a Christian Scientist, that he loves God and his fellow men, and that he strives as a strong man in a race to do his part to bring the kingdom of heaven to men.—*Denver Express.*

A WORD OF THANKS.

Indicative of the general helpfulness of the list of "Lectures to be Delivered" published each week is the following extract from a letter recently received at this office:—

I want to express my thankfulness for the lectures being published in the *Sentinel*. It not only enables my husband to plan his trips so he can attend many of the lectures, but I wrote to a friend as a favor to me to attend a lecture recently given in Lowell, Mass., that I saw in the *Sentinel* was to be given on a certain date; and I know she would not have gone if I had not asked her to. She went and took three others with her, one of whom said after the lecture, "I thought I was a good Christian, but I have come to the conclusion that I don't know what being a good Christian means. I shall go to the Christian Science church and try to learn more about it and get the book Science and Health;" the others expressing themselves likewise. And this is only one of many cases.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice it is assumed that the lecture will be given in the evening.

Barre, Vt.—Prof. Hermann S. Hering, Howland Hall, May 28.
Bethlehem, Pa.—Judge Clifford P. Smith, June 2.
Bucyrus, Ohio.—Virgil O. Strickler, Opera House, June 7.
Calais, Me.—Bliss Knapp, Union Vestry, May 31.
Cleburne, Tex.—Francis J. Fluno, M.D., Carnegie Library, 3 p.m., June 2.
Exeter, N. H.—Virgil O. Strickler, Town Hall, Exeter square, June 3.
Hoopeston, Ill.—Frank H. Leonard, Church Edifice, Washington and Third streets, May 28.
Lexington, Ky. (First Church).—Virgil O. Strickler, Woodland Auditorium, May 30.
Lorain, Ohio.—Virgil O. Strickler, Majestic Theater, June 6.
Lynn, Mass.—Virgil O. Strickler, Auditorium Theater, June 4.
Malden, Mass.—Bliss Knapp, Malden Auditorium, June 2.
Muscatine, Iowa.—Clarence C. Eaton, Church Edifice, Walnut and Sixth streets, May 24.
Owensboro, Ky.—Willis F. Gross, Grand Theater, 3 p.m., May 26.
Toronto, Ont. (First Church).—William R. Rathvon, Massey Hall, 3 p.m., June 2.
Ypsilanti, Mich.—Frank H. Leonard, Opera House, 3 p.m., June 2.

TESTIMONIES OF HEALING.

Heretofore I have given my testimony of healing through Christian Science verbally in our local church and such other churches as I have visited throughout the country, during my several trips from home in recent years, but it has occurred to me that others might be benefited or encouraged should there be given an account of my experience in one of our periodicals.

About seven years ago I was in a state physically which gave myself and family much anxiety. At that time I was suffering from a chronic affection in one hip and in my back, and it was with great difficulty that I attended to business, it being necessary for me to walk quite a distance each day to and from the train. I had tried *materia medica* and other material methods for years without receiving any benefit, and finally discontinued all treatment, on the advice of our family physician. He stated that there was nothing to be accomplished in that way as the disease had entered the bone and medicine could not reach the seat of the trouble. I was also afflicted with a chronic bowel difficulty, had frequent attacks of headache, weak eyes supposed to be caused by too much close book work, and heartburn, the result of excessive smoking.

During one of the attacks of headache I called on a friend and neighbor whom I had known for years and who, I understood, had been healed in Christian Science, and was assured by him that there was healing for me also. I accepted his kind offer to try Christian Science treatment and received immediate benefit, the headache disappearing almost instantaneously. Shortly after this I had a severe attack of throat trouble and was in that condition where I had not eaten food for forty-eight hours. I turned again to Christian Science for help and was healed in one day, perfectly and absolutely. This encouraged me to continue treatment for the other ailments, and I am happy to say that I received much benefit, not only in the overcoming of most of these physical difficulties, but I received a great spiritual uplift. The neuralgia did not, however, yield to the efforts of the practitioner, and was not overcome for more than a year afterward, when the healing came through my own reading of Science and Health. The tobacco habit, to which I had been a slave for over fifteen years, was also overcome at this same time, and I have not used tobacco in any way for about five years and have no desire to. In the past few years we have experienced healings in our immediate family from such conditions as acute lung trouble, measles, jaundice, poisoning, fevers, etc., and invariably the healing was immediate and without the fear which we formerly had in such times of trouble.

I cannot find words strong enough to express my thanks and appreciation for all that this blessed truth has done for me and mine in the past seven years. Our beloved Leader, Mrs. Eddy, tells us in Science and Health that "spiritual sense is a conscious, constant capacity to understand God;" that "understanding is the line of demarcation between the real and unreal;" that "God is good. Good is Mind;" that "Spirit is the only substance and consciousness," and that "man is the image and likeness of God" (pp. 209, 505, 113, 278, 414). Therefore as we become conscious of these spiritual facts we manifest in that degree the understanding of God, and become more spiritually minded, better able to find the line of demarcation, with the net result that the tree sends forth a more perfect leaf and fruit, the plant a more beautiful blossom, the bird a sweeter song, and one begins to see himself as the image of God, reflecting more health, harmony, happiness, and holiness, and finds that he has power, plenty, and peace, and is not subject to any law of matter, decay, or deterioration, but that he can demonstrate over these supposed laws by gaining the understanding of God and man's relation to Him.

I have been able, through my slight understanding of God, to demonstrate more success in business, additional peace and happiness in our home, a better condition physically, mentally, and morally, and I know that if I apply the truth as taught in Christian Science I will find good to be supreme in consciousness. By living as near to God as my understanding permits, I hope to show my appreciation and love for the benefits received through the untiring efforts of our Leader and others who have helped me on the way.

MARK W. SHAW, Evanston, Ill.

With heartfelt gratitude for many blessings received in Christian Science, I commit the following lines to those who may be burdened by sin, disease, poverty, hatred, sensitiveness, or anything outside of harmony, and who are honestly striving to rid themselves of these seeming realities.

A little over a year ago I was sitting in a small room, seriously thinking over my situation, which was indeed very depressing, for I had no one who cared for me or to whom I could have told my troubles, which were very many. My bodily ailments were many, including stomach and bowel disorder, kidney disease, severe headaches, and a very bad case of heart trouble. That which made my life most miserable, however, was sensitiveness or fear, which barred me absolutely from the kind of people that I wished to be associated with. Many efforts had been made to overcome this, but always in vain. To drown this trouble I would indulge in strong drink, cigars, or drugs. I was reminded of my previous life, which had been spent in sensual pleasures; and what had it brought me?

As thought traveled back to my childhood days the story of the prodigal son came before my eyes and a strong desire took hold of me to know something better than the life I had lived, if it was attainable, whatsoever the sacrifice needed to do this. This desire was carried with me the next day, and I nourished it for about two weeks, when the thought came to me to advertise for a room in a private family. Self-condemnation whispered that I did not belong in such a place; but on the other side was the desire to be better. An advertisement was inserted and from the answers I received I chose one which seemed the cleanest place and the people kind. After being there about one week I accidentally picked up a copy of the *Sentinel*, for it happened to be the home of a Christian Scientist. After reading one of the articles in it a veil fell from my eyes, for it answered all the questions which were hourly occupying my mind, and only one who has had a similar experience can picture the joy and peace which came to my longing and hungry heart. Never having heard of Christian Science before, I at once inquired about it. It was lovingly explained to me and Science and Health and other writings of our dear Leader were put at my disposal. The next Sunday I was taken to Second Church of Christ, Scientist, and there the heart received its right nourishment. Never will I forget this occasion, for loving kindness was shown me on all sides and every one seemed so happy because others were so. This clearly shows that every sincere desire is helped, sustained, and directed by divine Love. My thought had connected itself with the current which flows from our Father-Mother God, although I had never before thought of this divine Being as of any help to me; but my desire was honest, and here was its reward.

After a few days, when some chapters in Science and Health had been read, I ceased to take medicine and ate those things which I had been afraid of previously, but the stomach and bowel troubles left me at once and have never troubled me since. The temptation to sin, however, seemed to be even stronger than before, and it took many months of hard struggle to rise above the habits of many years. Here again it was the desire for good which proved the nothingness of evil, and I relied upon our dear Leader's words that sin's necessity is "to destroy itself" (Science and Health, p. 405). It also took a long time to overcome the

Digitized by Google

kidney disease, which had been with me for over twelve years. The heart trouble also took many months of honest work, but only a few times was it necessary to call on a practitioner for help. Once when my heart was giving me great distress I went to the office of a practitioner and was obliged to wait about one hour. While seated in the next room I began to read in "Rudimental Divine Science," by Mrs. Eddy, and its teaching was so beautiful that it carried me far away in spirit, and when called to the inner office the trouble had vanished.

The fear or sensitiveness has also gone to its native nothingness. I have had to go through some hard trials, but divine Love, and nothing less than divine Love, drives out fear of this sort. On a Friday afternoon one of my eyes began to swell very rapidly, and by Sunday morning it was in a bad condition. I telephoned the practitioner about nine o'clock and by Monday evening the discord was gone. Very often when reading Science and Health for a length of time my eyes would pain me very much, but I would declare the truth till the pain disappeared, and I kept this up till it went altogether, and now I can read for as many hours as I like. A feeling of fatigue would also come over me when reading, but this also has proved itself to be nothing, and toothache has disappeared before the search-light of Truth.

In business Christian Science has helped me indeed very much. While waking to Christ's demand, it has sometimes seemed as if error would deprive me of my daily bread and rightful inheritance, but it has always proved itself to be a coward before Truth. For ten months I strove to get a good paying position with no Sunday or evening work, and many times this has seemed impossible, but through faith in divine Love and by trusting in God, good, I have always won the fight. I now hold a good position with no Sunday or evening work, whereas, before, I would be employed till twelve or one o'clock at night, including Sundays. I now have money in abundance for my needs, and I know how to use it wisely. This Christian Science educates us into. It also helps me to do my work better, and it makes work a pleasure. The work is not any more done because of the money, but of pleasure in doing my duty, and thus I receive more money than ever before. To feel that there is one to whom you are more dear than to any human being is to find the mainspring of action. For that one you will work and plan; for that one you will seek to be noble and true in your motives and conduct. It may not be possible at once to love your neighbor as yourself and to love your enemies, but all can have the desire to do so, and so will have started aright, and divine Love will reveal the way to overcome everything which is unlike God. I now find it much easier to keep this divine goal always before my eyes. The first sentence in Science and Health, in the Preface, runs thus: "To those leaning on the sustaining infinite, today is big with blessings." In trying to realize what this means we receive the blessings according to our desire. If beset by a fear of disease or anything else outside of harmony, the truth in this sentence sets one free. As it is taken with one into the world every morning, the clouds drift away and showers of blessing fall from heaven.

For the healing of many ailments, the overcoming of fear, business trouble, etc., I am indeed very grateful, but much more thankful am I for the spiritual uplifting which gives me a full interest in life and enables me to love my neighbor as the Master taught. I am truly grateful for the many writings our dear Leader has given us. I do not believe that any earnest Scientist could or would do without that wonderful book called "Miscellaneous Writings." The daily *Monitor* is food for me, also the *Sentinel* and the *Journal*. All these have been my constant guides out of error into the mental realm where freedom reigns. The Wednesday meetings have also been a very great help to me. Indeed, we cannot be too grateful for all the blessings which have come to us in this age through the opening up of the Bible by our dear Leader, Mrs. Eddy. We can say with the prophet Isaiah: "They that wait upon the Lord shall renew their strength; they shall mount up with wings as eagles; they shall run, and not be weary; and they shall walk, and not faint." My heart daily goes out to God in gratitude and it is my desire that I may be found worthy to be called a Christian Scientist.

MATTHEW H. OLTHAUSE, New York, N. Y.

The efficacy of Christian Science healing was proven to me in February, 1911, when the gas from the furnace escaped in such force that I was overcome by it and fainted. My husband carried me up-stairs and laid me on my bed, but after I regained consciousness my head ached intensely and the least movement caused nausea. A practitioner was called and she gave me absent treatment for one hour, and then she was asked to come to the house, which she did and stayed an hour or more. From that time the vomiting ceased and I slept four hours, when I awakened healed. I got up, drank some orange juice, and walked down-stairs and back again without any discomfort. The dreadful pains in my head had vanished. The next morning I kept an appointment, and went to church that night feeling as well as ever, in less than twenty-four hours. The wonderful part to me was that I felt no ill effects afterward. For this healing I am grateful to God and to Christian Science.

MRS. HENRY T. CHILD, Medford, Mass.

I am glad to tell what Christian Science has done for me, and it is with a heart full of love and gratitude that I give my testimony, trusting that it may help some one else. Some time ago I got up one morning with a headache, which grew worse until I went to bed, and the next morning I still suffered from it, and I also had a fever. I was in this condition for about four days; and on Thursday a physician was called, and he pronounced my trouble inflammation of the bowels and stomach. He said I was in a critical condition, and left some medicine for me to take. I took the medicine and followed his directions from Thursday until the next Monday, but I did not improve. On Monday afternoon my condition became so bad that I could not retain the medicine. Tuesday morning I tried to sit up, but I got dizzy and fainted.

That day my parents sent word to a Christian Science practitioner to treat me, and they also sent for my aunt, who was a Christian Scientist. About a half hour after my aunt commenced treatment I began to feel better, and when she got to my home, about eight o'clock, I was perfectly well, except for a little weakness. On Wednesday I ate heartily, and on Thursday I did my usual work. I am indeed thankful to God, and also to our beloved Leader, Mrs. Eddy, for this truth.—AGNES CLINE, Havensville, Kan.

I wish to express my gratitude for Christian Science and what it has done for me. I suffered for at least twelve years with a terrible pain in my face which extended to the base of the brain. I tried several doctors, but could get no relief. One said I could be cured by electricity, and I tried it for months, but got no help. A specialist in Chicago said that the only help would be from an operation, but it would be a very dangerous and severe one, and possibly it would not cure me. Words cannot express what I suffered. Some days I could not open my mouth to take any food or even to talk without suffering terribly. The pain would come on every two or three months and last for several weeks at a time, and I often wondered if I would always have to suffer so.

I at last thought to try Christian Science, but the doctors had made me think this such a terrible disease and so hard to cure that I had much fear lest I should not be helped,

Digitized by Google

but after taking treatment at different times for about a year I was completely healed. My healing was slow, but I realized that I was gradually being healed, and I cannot find words to express how thankful I am to God, also to Mrs. Eddy for the truth which healed me. The reading of the Bible in connection with Science and Health has been a source of strength and has helped me in many other ways. I now see that by studying to know God better I shall be healed of everything fleshly. I feel more thankful each day for Christian Science, and what it has done for me. I hope this testimonial may help others who are suffering as I did. God always hears and helps us if we put our trust in Him, and I daily pray for more light and a better understanding of His word. I now have an abiding faith in God and His promises. His grace is "sufficient."

MRS. S. M. THOMPSON, Bloomington, Ill.

When material remedies failed to cure me I sought the aid of Christian Science, and was healed by reading the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. This was not, however, by a mere perusal of the book, but by studying it as I would a treatise on mathematics in order to learn the rule by which I might work out the problems it involved. Physical relief is not the only benefit which I derived from Christian Science. I have proved that the correct and faithful application of its teachings brings harmony into the daily life, gives a true idea of God and man's relation to Him, and answers all questions pertaining to the real or spiritual man, thus proving it to be the Comforter, the "Spirit of truth" which the Master promised would lead into all truth.

MRS. F. H. DAVIS, De Funiak Springs, Fla.

From my childhood one severe illness had followed another, although my parents employed the best physicians of various schools and for many years made every effort in a medical way to bring me back to health. Covering a period of twelve years, and before I was thirty years of age, I had undergone five serious operations, each one said to be a last resort to save my life.

When Christian Science was brought to my attention I was in a serious condition and about to undergo another operation in a few days. My husband, who had been ill for seven years, was also told by his physicians that only an operation could restore him to health. We however both decided to try Christian Science and prove for ourselves what it would do for us. My husband commenced treatment about a week before I did and was so greatly benefited that I also began to take treatment. We were both restored to health and strength and are very grateful that we were saved from the operations said to be necessary.

I was cured in Christian Science of a severe chronic form of stomach and bowel trouble, painful and lasting headaches, trouble with my back and some minor ailments, besides an incapacitating and extreme nervousness. I had been under heroic medical treatment continually for over two years to bring relief; had taken medicine nearly every day of my life for bowel trouble; but since my first treatment I have never taken any (now over four years), and have eaten whatever I wished without the slightest trouble; in fact all my troubles have left me and I am free.

To express my gratitude for this wonderful truth which has made me a well woman is impossible, but with all this, that for which I am most grateful is the understanding I have gained and am gaining of God and His idea, as revealed through our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I pray so to live each day that I may be able to express something of my gratitude to our beloved Leader for her loving, unselfish works, and for what Christian Science has done and is doing for me and mine.—MRS. ELMINA A. POTTER, Los Gatos, Cal.

I regret that I should have waited so long to give out part of the abundance of good made possible to me through our dear Leader's efforts. Each passing year will, I am sure, reveal more of the depth of tender love and gratitude in many hearts for this saintly woman and all that she has brought to our lives.

I came to Christian Science suffering from the effects of a surgical operation, and after I had exhausted all material remedies at my disposal in an effort to regain my health. Prominent physicians of this city said I would never be well again, one of the medical school declaring that I had suffered serious injury by a mistake in the operation, and recommending that I sue for damages. Fear seemed to haunt me by day and night, but Christian Science has taught me how to know the futility of man-made laws and that suffering which results from even the worst malpractice in surgery is powerless when we recognize and cling to God as the only cause and creative power, and refuse to be perturbed by the transitory clamor of the material senses, and know that there is nothing taken away which cannot be restored, as my practitioner in Christian Science told me. And now the proof, the certainty that all things are possible with God, is surely my own, for there is not the slightest evidence left to remind me that I ever had a surgical operation.

A short time after the operation and before the serious condition which resulted from it was manifested, my sister brought home from the library a book, a story into which the Christian Science thought was woven. This we read, and made much fun over together. After consulting the last specialist (who was said to be the best in Cincinnati), the verdict was, There is absolutely nothing that can be done for you; go home to your mother and rest." I was heartbroken, and my mental suffering by far exceeded the physical; I wanted to be well or to die quickly. I then remembered this little book which my sister and I had read in merriment, and I recalled it to her. I told her I was going to find out where these "healers" were. We had been in Cincinnati only a very short time, and I knew nothing of the church. I said to my sister that Christian Science would be something to try, and she encouraged me to find out what there was in it, thinking, as she has told me since, that if it only gave me something new to think of and hope in, it would lessen my mental anguish. We were down-town at the time, and she told me to wait for her at a hotel, that she would return and then go with me to take an inquiry advertisement to a paper, asking where we could find out something concerning Christian Science.

In looking about the hotel parlor for something to read while waiting, I found a *Christian Science Journal*. I shall never forget what the discovery meant to me there and then, never having seen any of the periodicals before. From it I learned where the reading-rooms were, and visited them next morning. I then called on a practitioner near my home in Walnut Hills, whose words concerning God, my Father, in whose care I might rest unafraid, affected me then not so much as the mere personal assurance of my getting well. I was eager to grasp the hope she offered me. I thought I knew all that was necessary about God, and I told her that I had grown up in the Sunday school and church, my father having been a devout worker in a church all of his life. I thought it just as well that she knew this, that she might talk to me less of God and more of getting well. I now rejoice that her wisdom and patience were equal to the tests, some of which were unreasonable and trying.

I am thankful to friends who had preceded me on this journey for their expressions of love and their advice to press on, not let go, when I was worn with the sense of discord, until the climbing seemed at times a cruel effort and I felt my grasp on Truth slipping; but it was only a seeming indeed, for I was each day growing and conquering

Digitized by Google

and was more swiftly covering the stony ground than I knew. "The sunset flame on Salem's sacred towers" became a nearer glow, until through its light the discernment of health was sure.

MRS. PEARL SPAULDING CLARK, Cincinnati, Ohio.

I have a deep sense of love and gratitude to God for the many benefits and blessings and the glorious spiritual healing that have come to my understanding through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, also the Lesson-Sermon. Christian Science was presented to me over seven years ago, when I was so in need of help that the world and all in it seemed dark to me. All through my earlier years I wanted to be a good Christian, but it seemed as if nothing good was for me. Troubles and misfortunes came after each other until I often wondered why God had so forsaken me, why He had taken my dear mother away in my childhood and left me to strive alone with the world. I at last decided that God did not know me, and I turned a deaf ear to everything that had the name of God or religion. Deafness also befell me, and it was through this affliction that a dear Scientist presented Christian Science to me, but I did not accept it at first. At the second talk I had with this friend, however, I knew she had something which I did not have, and something which many other so-called Christians did not have. She told me that God is Love,—Life, Truth, and Love,—unchangeable. I told her that He did not treat everybody alike, as He had never answered any of my prayers. She then asked me if I had prayed without fear or doubt. Soon after this I obtained a copy of Science and Health, with the intention of learning how to pray without fear and doubt; and I am so glad and thankful that divine Love directed me in so doing. My sense of deafness is almost overcome, and our home is much happier, so much more peace and harmony in it through Christian Science.

I was healed of a severe attack of rheumatism in the fall of 1910 in three treatments. Our little boy was also quickly healed of relapse in a case of mumps; indeed it would take many pages for me to tell all the blessings I have received through Christian Science, and I am learning new lessons each day from the study of Mrs. Eddy's writings. Words fail when I try to express my gratitude to God for all He has done for me. Through the small understanding I have of Christian Science I am each day learning better how to pray without fear or doubt, and to be honest, truthful, kind, loving, merciful, and meek, and to show my love and gratitude to dear Mrs. Eddy, who passed through deep waters to show us the true way to worship God. I write this in the hope that it may help some other wanderer to reach spiritual light, peace, and harmony.

MRS. MARTHA E. THOMAS, New Castle, Ind.

[Written for the *Sentinel*.]

TRUTH, LOVE, AND LIFE.

JUANITA WITLICH PORTER.

O TRUTH! Thy potent touch dissolves
The densest structure wrong may rear,
Gives man his birthright—freedom, might,
And brings him heaven now and here.

O Love! all-present, at thy voice
The hosts of evil, vanquished, flee;
Where mercy, justice, goodness, dwell,
There error finds no place to be.

O Life! with Truth and Love to bless
And lead the way from sense to Soul,
Thou off'rest gifts beyond compare,
With bliss supernal as the goal.

FROM OUR EXCHANGES.

[*New York Observer.*]

The doubts which at one time or another sift, more or less, the faith of all of us, do not in the case of the vast majority penetrate beneath externals. Painful as they may be, nothing really vital is threatened. When a man's faith has settled itself on what is vital, it is probable that out of a period of doubt he emerges with an appreciable gain to his religious life and experience. But there are forms of doubt, or rather of denial, abroad, respecting which it is right to speak more seriously. It is impossible, for instance, to witness without a pang the havoc which is made in the religion of many good people just now by the materialism which has grown so outspoken and so apparently confident. That [natural] science cannot discover God is true enough. No wise man would expect that it should do so. The heart of the eternal is not reached along that way. But when men in the name of science aver that they find no place for God in the universe, and that consequently He does not exist at all, or if He does, is undiscoverable and unknowable, they are not only scientifically dogmatic and illogical, but they attempt the perpetuation of a cruel robbery, against which it is needful to protest in the name of reason as well as of religion.

The number of minds that actively embrace atheism is probably small. But the number of studious and candid persons among us who, while not convinced that there is no God, are yet so far shaken in their practical belief in Him and in the revelation of Himself in Christ as to draw from that belief little support or comfort, is probably pretty large. Undoubtedly doubt has many degrees short of sheer denial. But in every degree it acts as an enfeebling poison on the religious. A man may not venture to fling openly away the cherished beliefs of his youth, while yet these beliefs have ceased to be nutritive and retain no longer their old-time sustaining power. When a man has been reduced by the philosophy of materialism to this point, that the God of his fathers and of his own children has lost all effective certainty, vitality, influence, preciousness, or helpfulness in his eyes, so that he no longer dares cling to or worship or live with the God of revelation as his God—then, say what you please, that man has suffered an incalculable loss and is spiritually beggared.

[*Watchman.*]

It is hard for people who have an old-time religion to see how truth can be preserved and upheld if the old props are taken away. We also are apprehensive as to changes in religious standards and customs. We have been accustomed to the old order and it is difficult to feel the force of new motives or influences. We cannot understand the power of anything else than our standards and influences to bind hearts and minds to truth and righteousness. It is painful for elderly people to witness the changes that come with the new generation. The age of Christ was not the only one of change, for although he introduced the new era of grace and truth, yet every age has witnessed change, and change is in progress every moment. There are times when changes are very rapid and marked in their character.

The author of Hebrews had to deal with reaction of mind on the part of those who missed features of the old order, and he had to point out the superior features and the better hopes and covenant and blessings of the new order which seemed less real and effective. The tendency to rely on the old order is due to the fact that it is tested and tried and one can walk by sight. But the great leaders of religious progress have been men of faith, and it requires faith to look forward with assurance that all is well with the kingdom of God. The battle is always on between those who walk by sight and those who step out in faith. The heroic

Digitized by Google

figures of religious history are not the conservative men who have clung to the old, but the believing men who dared to act on their faith.

To some minds God seems to be on the side of things as they are and have been, but the Scripture and Christian history show that God is in the forward movements of His people. Changes are painful to men because they themselves are settled, and are viewed with apprehension because there is lack of faith in God. God must be clearly recognized as the master of this world and the protector of all the movements of human life. In times of great peril to what is good, men have to plant themselves firmly on the ground that God reigns. "Have faith in God."

[*British Congregationalist.*]

Any religion which claims to touch human life at every point, and to assist men and women in every experience through which they may pass, must, of course, take into account the fact of sorrow and pain. No one walks very far along life's road without meeting those dread forms; no one but finds them, in greater or less degree, thrusting their company upon him; and one of the first requisites in any religion which is really going to be life's staff and stay is a dealing with and an overcoming of the darker experiences which seem too strong for human nature to conquer. How are these things—which we would banish from the program of human life if we could—how are they to be disarmed, and robbed of their power to sting and harm?

Here sounds the calm triumph of the Christian reply. And it goes far. These things from which we shrink are not only to be disarmed and robbed of their power to sting and harm and wound, but are to be turned from foes to friends. "All things work together for good to them that love God."

To begin with, the Christian spirit, if it dwell in us, unites all things in the ministry of one common purpose. It makes all things work together, reduces life to a unity, and whether the things that happen to us be in themselves sweet or sad, compels them to serve one supreme end.

[*Universalist Leader.*]

Theories of abruptness, and promises of instant spiritual reconstruction, have broken down in religion. There has already taken place a complete reversal of opinion as to the value of revolutionary methods in the development of spiritual life. Like the Arabs, most of the old-time advocates of explosive methods in moral regeneration have folded their tents and silently fled. In circles where once the main reliance was upon promises of a new heart, offhand, we often hear today the most earnest protests against such false hopes. Man comes to his own in spiritual things along paths which parallel all other approaches to complete experience. The real difficulty in the way of spiritual progress at present is our lack of any satisfactory plan for spiritual culture. The aim of all culture is to develop the power of expression. The artist spends years perfecting his sense of color, or touch, or form, or perspective.

[*Youth's Companion.*]

We are too ready to assume that we must think whatever thoughts come into our minds. It is not necessary. You can grapple an evil thought on the very threshold of the mind, and strangle it there. Whether it be a thought of hatred, revenge, or impurity, you need not admit it unless you choose to do so. Brooding is not wholesome. You can do more than shut out the evil thought, you can strangle it. And when you have done so, you will walk on with a joyful feeling of triumph. The habit of conquering will grow. You will be able to shut out the things you do not want to think about. Your physical health will gow with your health of soul. You will go far toward conquering insomnia. Your sound mind will tend to fit to itself a sound body.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

For some time the postage required for subscriptions outside of United States territory has exceeded the amount added to the regular subscription price for this purpose, and an increase in rates sufficient to cover this deficiency is now deemed necessary.

Beginning April 1, 1912, therefore, the rates on all subscriptions outside of United States territory will be as follows: For Canada, *Journal* $2.25, *Sentinel* $2.45; for all other countries, except those to which the domestic rate applies, *Journal* $2.65, *Sentinel* $2.95.

Renewals for all subscriptions terminating before April 1, 1913, and received by us prior to July 1, 1912, will however be accepted at the old rates.

The pamphlet "Causation" by Frederick Dixon has been translated into Swedish—"Kausal-lagen"—and is now on sale; 40 pages and cover at the prices of the regular pamphlets.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every day, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $2.50 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large sized book), single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883–1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $2.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $1.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 43 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 43 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

By a vote of one hundred and forty-seven to one hundred and twenty-six the House of Representatives reaffirmed its decision that no toll should be charged American vessels engaged in coastwise trade for passage through the Panama canal. The provision was stoutly contested and the result was received with cheers. As passed the bill contains the following essentials respecting tolls and railroad control of vessels using the canal: First, no tolls shall be levied upon vessels engaged in the coastwise trade of the United States; second, for foreign vessels using the canal, as well as for American vessels using the canal, not in the coastwise, but in the foreign trade, the toll is not to exceed one dollar and twenty-five cents per net registered ton, nor to be less than the estimated proportionate cost of the actual maintenance and the operation of the canal; third, after July 1, 1914, it will be unlawful for any railroad company or other common carrier subject to the interstate commerce laws, to own, lease, operate, control, or have any interest whatever, by stock ownership or otherwise, through holding company, or by stockholders or directors in common, or in any other manner, in any common carrier by water with which that railroad competes for traffic.

St. Paul, Minn., in its election of May 7 voted to adopt the commission plan of government. The new form of government, which was submitted in the form of an amendment to the present charter, was adopted by a vote of five to one. In June, 1914, the city will be ruled by seven men elected by the city. Among the hundred or more cities of the West and Central West which have adopted this plan, St. Paul, with a population of 214,744, is the largest by far. Oakland with one hundred and fifty thousand is next, with Memphis and Omaha following. The favorable vote was preceded by aggressive publicity by all the daily newspapers. The clubwomen came to the help of the Current Topic Club, which had small financial backing. Much of the credit of the adoption of the charter is placed by the framers with the women.

By an overwhelming vote the House of Representatives recently passed the legislative, executive, and judicial appropriation bill, which abolishes the United States commerce court, retains the United States mints at San Francisco, New Orleans, and Carson City, with six assay offices, and consolidates several government bureaus. The consolidated bureaus are to be known in the future as the bureau of foreign and domestic commerce. In addition to its other duties it will collect tariff statistics and at the request of the President or Congress it will furnish reports of such statistics. The vote was one hundred and seventy-six to one hundred and twenty. The new bureau, in effect, will be a tariff board to replace the existing board.

The United States has made strong representations to the government of Ecuador that it must settle with the American-owned railroad running between Quito, the capital, and Guayaquil for services rendered, as well as the subvention the government allows. The bill against the government has been piling up for some time and includes the cost of the transportation of the troops during the recent revolution, but the requests for payment from all sources have been ignored by the government. State department officials refuse to discuss the steps which might be taken in the event Ecuador pays no attention to the American note.

The high cost of living will be investigated on an international scale if a bill reported favorably by the House committee on foreign affairs should pass the House. It appropriates twenty thousand dollars, so that the President of the United States may invite foreign governments "to participate in an international conference for the purpose of considering plans to be submitted to the various governments for an international inquiry into the high cost of living, its extent, causes, effects, and possible remedies."

The department of justice probably will soon begin an investigation to find whether there is a leather trust. If inquiry indicates that complaints have basis in fact, an extensive investigation will be undertaken. Such an investigation, it is said, would also reach out to the packing business to determine whether there is any undue relation between the packing and leather interests in connection with the supply of hides for leather.

The full bench of the supreme judicial court of Massachusetts, in a decision recently handed down, said: "Nor is it contended that even the loud blowing of the horn would give to the motor-vehicle any exclusive right of way or relieve the driver from the duty of proceeding at a reasonable rate of speed and of keeping his car in control when approaching a busy thoroughfare."

Taking of evidence has begun in the prosecution of the Northwestern Association of Retail Lumber Dealers, the alleged "lumber trust." Suit was filed by the government several months ago to enjoin the organization from alleged restraint of trade.

International.

The world's largest ship, the Hamburg-American liner Imperator, was launched May 23 by Emperor William in the presence of a great assemblage. The Imperator is eight hundred and ninety-three feet long, ninety-five feet wide, and one hundred and three feet high. From the captain's bridge to the water-line the distance is eighty-one feet. The topmost of her eleven decks is as high as a five-story house. She will have a tonnage of fifty thousand and accommodations for five thousand passengers. A complete system of electrical communication extends throughout the ship. The wireless apparatus will be the most powerful of any ship in the world and will be in constant service. The Imperator will be driven by Parsons quadruple turbine engines, which will develop seventy thousand horse-power and insure an average speed of twenty-two and one half knots an hour. She will also be equipped with the Frahm antirolling tank.

After a conference at Hamburg, Germany, between Emperor William and Herr Delbrueck, minister of the interior, the president of the National Mariners Association and other experts in navigation, on the question of safety appliances for German ships, it was stated that the Emperor favored added precautions in the construction of ships to keep them afloat after accidents, the extension of the wireless service, and the carrying by vessels of lifeboats sufficient for everybody on board. His majesty also told those at the conference that it was his desire that steerage passengers should have an equal chance with first and second class passengers in leaving a ship in distress.

The Paris municipal loan of forty-one million dollars of three per cent sixty-dollar lottery bonds offered last week for subscription at fifty-seven dollars, was over-subscribed eighty-two times. Investors, mostly working people, waited hours in the rain to deposit applications.

Sydney Buxton, president of the English Board of Trade, has appointed a committee consisting of nine prominent naval architects to advise him as to the best methods to secure safety at sea by means of water-tight bulkheads or other internal subdivisions of vessels.

Christian X, successor to King Frederick VIII, was proclaimed King of Denmark from the balcony of the palace at three o'clock May 15 in the presence of a huge concourse of people who had gathered in the square in front of the royal residence.

The German Reichstag has adopted the anti-dueling resolution introduced on May 9, with an amendment drawn up by the Socialist members providing that officers who refuse to accept a challenge to a duel shall not be dismissed from the army.

Industrial and Commercial.

The total number of operatives employed in Russia's cotton-spinning and weaving mills in 1910 was 332,018, as compared with 276,776 in 1900. Women form 53.6 per cent of the total while children under fifteen years (half-timers) constitute only ten per cent. The abundant supply of labor in Russia has led the cotton mills to adopt the two-shift system of work. They alternate, so that the shift which works during the first and last periods on the first day works during only one period on the day following. Thus the working hours are alternately twelve and six hours or an average of nine. For the central district the average annual wages was $104.22, for the Baltic $143.94, and for the western $150.38.

The third meeting of the Employment Managers Conference, held last week in Boston, discussed "Experience with Boy and Girl Applicants, Types and Difficulties." Superintendent Walter L. Sears of the state free employment office, said there is a vast difference between the boy and girl of today and twenty-five years ago. The main difference is in a want of respect for their seniors, obedience to authority, perseverance, application, and proper home training, resulting in an unwillingness to do the things which were cheerfully performed by their ancestors. Broadly speaking, the foreign born are ambitious, studious, not over-proud, nor afraid of work; are obedient and usually make faithful employees.

The output of the Canadian Steel Foundries Company, Ltd., will be double the present capacity by the middle of June, as on June 15 it new million-dollar plant at Longue Pointe, Montreal, will commence turning out steel castings. The new plant covers nearly twenty-five acres and will be capable of turning out two thousand tons of finished steel castings a month, or twenty-five thousand tons a year. The joint capacity of its two plants at present is only two thousand tons a month.

Luxuries imported into the United States during the fiscal year which ends with next month will exceed two hundred million dollars in value.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"AGREE WITH THINE ADVERSARY QUICKLY."

REV. JAMES J. ROME.

In order to follow the injunction of Jesus, "Agree with thine adversary quickly, whiles thou art in the way with him," a somewhat clear comprehension of its meaning is requisite, otherwise there may result much error and confusion. In order to grasp the import of these words it is well, first, to notice the context. Jesus had been talking about the action that should be taken with regard to a brother with whom there might have been some altercation. Then, in bringing our "gift to the altar," in other words, turning the thought toward spiritual things, and remembering our heat of temper as well as speech, we should hasten to correct our mistake and seek to be reconciled to the offended one, thus showing our true love for our brother before professing love for God. Then follows the passage referred to, and in considering it there are two questions which naturally present themselves: Who is the adversary? and, How shall I agree with him?

Our adversary is one who opposes us or to whom we are opposed. As stated in Science and Health (p. 580), an adversary is "one who opposes, denies, disputes." Whoever or whatever is inimical to my best interests, or obstructs and hinders my progress, or interferes with my well-being, is an adversary. It may be worthy of notice here that my adversary is not necessarily my enemy, although my enemy must always be my adversary. I may not be at enmity with the one who is opposing me, but it is evident that my estimate of any person as an adversary is what makes him such to me. Hence, my adversary is that which I conceive of as opposing, hindering, or injuring. It is because I remember that my brother has something against me, that the step toward a reconciliation is required. I must have thought of him as an adversary, or I could not have the sense of his holding aught against me. If he is still ignorant of the ill I have done him, or of the reason I have for regarding him as an adversary, then it is in my consciousness alone. His ignorance does not change the fact, however, nor does it relieve me of the responsibility of being reconciled. This does not preclude the possibility of my adversary being at fault. That is, he may be acting under a wrong thought, and the question arises, How am I to agree with him without excusing the error or yielding apparent consent thereto?

Just here a misapprehension of the meaning of the term translated "agree" may cause some confusion. The word used does not mean, as might be supposed from the translation, to coincide with, or to submit, consent, or concede to, or countenance in any way that which I consider wrong or questionable. It is a noticeable fact that, according to Young's Bible Concordance, this is the only instance where the term used in the Greek is thus translated. This Greek word *eunoio* is a derivation from two other Greek words, *eu*, well, and *nous*, mind, and means well minded; hence the passage might read, "Be well minded toward thine adversary."

The language of the Master would seem to imply, therefore, that we should examine our thought and see whether or not we are in the proper mental attitude toward our opponent. If I have the sense of his being an adversary, or entertain unkind or unfriendly feelings toward him, then it is clear that there is a sense of enmity in my thought, and my adversary will develop into an enemy. Such thought entertained will itself prove an adversary which will deliver me to the judge, to be cast into prison till I have paid to the uttermost farthing. If, on the other hand, I correct my selfish, resentful thought and hold only thoughts of kindness, am "well-minded" toward or "agree" with my adversary, I will endeavor to work to his advantage, and so far as I am concerned, there will be friendship instead of enmity between us.

The same rule holds whether it is a person, a thing, or a condition I am dealing with. It is the concept thereof which constitutes it a benefit or an injury, a help or a hindrance. Paul evidently understood this, and by reversing his adversities made of them a means of advancement. "I take pleasure in infirmities," he said; and by so doing he made them a means of strength; weakness was converted into a proof of power by his declaring, "When I am weak, then am I strong." So can we all rise to a sense of superiority and, as Mrs. Eddy says, "meet every adverse circumstance as its master" (Science and Health, p. 419). If we hesitate or allow fear to have control, then we have an adversary that will deliver us to the judge, mortal belief and opinion, and we will be delivered to the consequences which mortal belief attaches to the condition.

If we regard God as the source or creator of all reality, and all His creation good, as it is declared to be in Genesis, then to regard anything which He created as bad is to misinterpret or misrepresent God's ideas and clothe them with our distorted conception. Then we have wronged them, so to speak, and thereby made them our adversaries. By correcting our misconception and being right or well minded toward them, agreeing with them, we save ourselves from the evil consequences of our mistaken concept. This does not mean that we shall call evil good. On the contrary, to be right-minded toward evil is to deprive it of its very being, for it can have no existence as reality if good is all. The mistake in a boy's problem may be said to be his adversary; it hinders and obstructs his solution of the problem. How shall he agree with it? Not by calling it correct, or by overlooking, or by neglecting it. He must find out where the error is and what the truth is about it; deal with it honestly and sincerely, yes, and perseveringly, until the correct understanding is established and it no longer appears to him as something which can interfere with his work.

Thus is it in dealing with the discords and difficulties in our experiences. We cannot merely dismiss them by calling them errors and unreal. We must deal with them intelligently, see why they are unreal, know the truth about them, and thus correct and destroy the sense of their being real and injurious, for, as Science and Health (p. 478) says, "that only is real which reflects God."

THE SOWER.

MIRIAM ORMONDE SMALLWOOD.

IT will appear to the thoughtful Christian Scientist that the parable of the sower has a specific bearing upon his own condition; and the degree of understanding with which he receives the seeds of Truth determines in great measure his capacity for growth. That understanding, whether it be much or little, is the soil in which the seed fructifies or fails, will be readily seen when we consider the parable in its many phases as presented in the first three gospels. In Luke we read: "A sower went out to sow his seed: and as he sowed, some fell by the way side; and it was trodden down, and the fowls of the air devoured it."

This first instance appears to indicate that one is in the state of spiritual darkness wherein the light shineth and "the darkness comprehended it not." The words, "and it was trodden down," are especially significant, in that they convey the idea of the pearls of Truth being stamped under foot by such as despise its message. Thought long turned to error in every form of belief, calloused and irreceptive, becomes the beaten track of materiality. Like the seed that fell by the wayside and which the fowls of the air devoured, the truths of divine Science under the assault of mortal sense find no lodgment in fruitful soil, and hence there is no harvest. Literally, the truth cannot be devoured, but, as it is more discriminatingly expressed farther on in the parable, it can be seemingly caught away. The figure, however, is significant, in that fowls devour anything they see, regardless of value or consequence; and mortal sense may be fitly likened to such in its ruthless and unintelligent attack upon the evidences of Spirit.

In the next instance, Matthew tells us that "some fell upon stony places, where they had not much earth: and forthwith they sprung up, because they had no deepness of earth: and when the sun was up, they were scorched; and because they had no root, they withered away." To the thought not deeply aroused to the compelling power of Truth, but which receives it as one receives anything which pleases or interests for a time, the light of divine Science comes to no lasting purpose. The plowshare of understanding necessary to break up the fallow ground, the divine perception which alone can enrich and fertilize its soil, have either not yet been expressed or are so faintly manifested that when the great spiritual facts of Science appear, temptations overwhelm, as the scorching sun tries to its undoing the seed sprung up in stony places. Not ready to approach the crown by way of the cross, men fail to perceive that the path to the mount of transfiguration leads past Calvary. Not "girt about with truth," they give up the battle. Having "no root in themselves," they fall away.

The instance which Mark relates, where the seed "fell among thorns, and the thorns grew up, and choked it, and it yielded no fruit," is a feature in the parable which has a more vital bearing upon the practice of Christian Science than any of the others, in that it presupposes cultivation of the soil, or necessary steps in regeneration for receiving the seed. In the other two stages the ground was fallow, or so nearly so as to prove barren. The seed in the first instance was devoured or caught away. In the second, it withered away. In the third there is nothing to indicate that the soil would not have yielded had the thorns not sprung up and choked it so that it bore no fruit. We may find here implied the truths of Christian Science falling upon thought which, deeply and truly desiring the grace and holiness of Spirit, is shut away from its activities by the insidious creeping in of error. These are they in whom, as the parable puts it, the cares of the world and the deceitfulness of riches crowd out the better part. The two striving together come to naught. "No man can serve two masters."

"Other," Matthew continues, "fell into good ground, and brought forth fruit, some an hundredfold, some sixtyfold, some thirtyfold." And these, Luke writes, "are they, which in an honest and good heart, having heard the word, keep it, and bring forth fruit with patience." According as man is faithful to the light he has, is he tilling the soil for the reception of Truth. Only as the soil is fitted by spiritual living, can the seed of Truth take deep root. These last are also figured as torch-bearers of Truth—they who hide not the candle under a bushel, but place it in a candlestick that every one in the house may see the light thereof. "Take heed how ye hear," saith the Master. "To them that hath shall be given." To them who apply themselves daily and hourly to the gain of understanding, to the getting of wisdom, they who, deeply cherishing the treasures of Spirit, put steadfastly behind them the temptations of sense,—to them it shall be given to bring forth fruit in abundance.

REAL TREASURE.

LUTHER P. CUDWORTH.

WHEN one looks about in these days of world-wide prosperity and sees the immense amount of material treasure, the wealth which an ever-increasing proportion of the earth's inhabitants has succeeded in accumulating, the gorgeous display of luxury at private as well as state functions, he is apt to look upon his own little belongings or his apparent lack of them from an entirely new view-point. How little we know, however, of the lack of the real substance, of joy, peace, and spiritual understanding, which may characterize the experience of those who are thus displaying their material wealth! Are not the lives of most rich men filled with cares and anxieties with which none of us would desire to be burdened? Can we judge from the material evidence of what a man really possesses?

Considering material wealth in this perspective, we perceive its real value, or rather lack of value, and withhold all judgment of personality or individual weakness. The Master said, "Lay up for yourselves treasures in heaven, where neither moth nor rust doth corrupt, and where thieves do not break through nor steal: for where your treasure is, there will your heart be also;" and from this it is manifest that there is a rightful treasure which it is our privilege to have. In Proverbs we read, "There is treasure to be desired and oil in the dwelling of the wise: but a foolish man spendeth it up." This is the true wealth which will satisfy all our desires. It is the real substance which sustains and supports. If this rightful treasure is a thing from God, it is ours by inheritance, for we are "heirs of God, and joint-heirs with Christ;" so too if from God, its supply is infinite, for we cannot conceive of God's supply being limited.

Thus we come logically to the point where we perceive that the Christian's supply is unlimited, a condition aptly illustrated to the writer by a man who is said to be "out of breath" from some strenuous physical exertion. There is plenty of air for him to breathe, and his only lack is the ability either through a belief of exhaustion or fear to inhale all that the system demands. Thus too is God's infinite supply of life, truth, and love, the real substance, always at hand, and our only possible lack is an ability to grasp the truth of being and assimilate it, thereby finding all we need or can rightly desire. This better understanding of Life will surely eventuate in better living, an understanding of Love, a right perception of Truth, the necessary wisdom to solve aright all our problems; hence a more harmonious existence.

It is true wisdom therefore to concentrate our whole activity in the effort to know more of God and His creations, and in the measure of our success we certainly cannot suffer from the want of any of the necessities and comforts of life, and more than this we should not desire. Surely our gratitude should be unbounded, and we should heed the words of Moses, "When thou hast eaten and art full, then thou shalt bless the Lord thy God for the good land which he hath given thee."

A LITTLE SERMON.

NANCY E. WHITE.

SHAKESPEARE has said that there are "sermons in stones and good in everything;" and the writer recently found such a sermon while witnessing an amateur baseball game in a vacant lot. The game was between seemingly ill matched teams, and the smaller boys lost from the start. They were evidently the better players, but the size of their opponents overshadowed their own conscious ability, and right here the sermon began. Does not any problem we have, mental or physical, seem, at least at first glance, to be bigger than we are? Would it be a problem otherwise? And is not our confusion and fear liable to be in proportion to the seeming size of our opponent?

After a while, a man from a neighboring clubhouse came out and began to take an interest in the game. He was good at heart, for he chose to support the little fellows. As each one came to the bat, the man would tell him not to be afraid; to brace up and play his best, and he could win. The effect on the boys was remarkable. Their faces lost the anxious look; their bodies the tenseness of fear, and their eyes began to look for success instead of defeat. In seeking an explanation of this change, there came these words of Mrs. Eddy: "Always begin your treatment by allaying the fear of patients;" also these: "The moral and spiritual facts of health, whispered into thought, produce very direct and marked effects on the body" (Science and Health, pp. 411, 370).

As the game progressed, our friend coached the boys to be in obedience to the rules of the game, as we must be to the rules of right thinking. When the little fellows would get too anxious, and strike at balls, he would say, "Steady! Steady! Just wait and watch him. He'll come to you. He'll come to you." The prophecy came true much oftener than it failed. The "Steady! Steady!" recalled the Master's admonition, "Lo, I am with you alway." The "He'll come to you" was, "He shall thrust out the enemy from before thee; and shall say, Destroy them." This recalled the words of our Leader, in "Miscellaneous Writings": "To strike out right and left against the mist, never clears the vision; but to lift your head above it, is a sovereign panacea" (p. 355). After a while the little boys began to win steadily; and, in spite of the noise and bluffing of their opponents, won the hotly contested game. There were two good reasons for this. One was the good coach they had. The other was that they had paid the price (good, honest practice in the effort to play a winning game) before they came to this test.

In our seemingly continuous struggle with ignorance (error) in our daily lives, there is a marked similarity to this ball game. Suppose for the boys there had been no beginning to play catch, when there was more muffing and explaining than catching; suppose they had never ventured on "one old cat," or dared "scrub," until they could begin to play in some real game. No need to say that they would never have been able to bear even a modest part in this game. They could have watched games, and heard experts explain how and why until doomsday, without there being any manifestation of actual knowledge in them.

How about us? Are we sitting in the grand-stand, watching and admiring the beauty and science of the game as some one else plays it? If so, are we not asleep to one of the strongest points brought out in this little ball game: that each boy, however humble his special part, was obliged, at certain stages of the game, to come to the bat—to stand there alone and prove what he could do? The Bible says, "And they shall all know me." Our Leader explains, "Every mortal must learn that there is neither power nor reality in evil" (Science and Health, p. 186). We may postpone the time; but we are only temporizing, and sometime will find ourselves alone with the foe, with only what we have proven to sustain us.

Why not begin now, in our own private grounds, our own consciousness, where none but the All-loving can see, to try to catch and send back some of error's balls, though we do muff most of them at first? We have perfect rules in the Bible; a skilled teacher and coach in our text-book, Science and Health, and our periodicals are full of supplementary help. There is no excuse for the humblest to hesitate. We need not be dismayed by the brilliant player. He can never practise for us; and he will tell us that he once began in his private grounds, and that the game was quite one-sided at first. He will probably add, as extra encouragement, that he still practises in that same place. "Today is the day of salvation."

CHARACTER.

ROBERT S. ROSS.

MOST of us know of some one in our immediate circle of friends and acquaintances who, though he may not be classed as among the intellectually brilliant or socially prominent, or as possessed of a superabundance of the world's riches, commands the sincere respect of all. Why? Because he is probably a man whose prime object in life is to be right in his every dealing with his fellow men,—to think calmly, speak gently, and act kindly; to make honesty not a matter of mere policy, but of Principle; so-called "white lies" and the oft-excused "extenuating circumstances" finding no sympathy from him.

Such an individual is possessed of what is termed a good character. He is striving daily to perfect it. He does not have to tell anybody what he is trying to do. Probably he is too busy trying to do right to care about playing the rôle of the self-righteous Pharisee. His life tells the story much more vividly than could words. He has recognized to some extent the demands of Principle, and what to others seems to be an unusual virtue or an uncommon gift of self-control is but the constant operation of this basic law and order in his consciousness, guiding and governing every thought and action according to the pattern which has been shown him. No man has a monopoly of this fundamental truth, but all can make use of it if they will.

Every right-minded person has the desire to arrive some day at the perfect stature of manhood. Few succeed in reaching this point, however, because the vast majority look upon human shortcomings and weaknesses as a necessary part of man's existence and therefore powerful; hence, if mortals do not go down under their defects, they endeavor to shape the course of their lives in the straight and narrow way by fighting these weaknesses with the human will. It is plain that that which is real cannot be destroyed or overcome. Therefore, so long as people believe that evil is real and powerful, their efforts to overcome it will be rewarded, at best, with only temporary success. Sheer force of human will may, for a time, suppress the conditions, but this method is neither more nor less than error pitted against error, constituting a house divided against itself, which cannot stand. It is plain that if human will is the cause of mental and moral defects, it cannot heal those defects. The remedy must be sought in another direction.

It is here that Christian Science comes to the rescue and breaks the spell of blind endeavor. Like the Master of old, it commands mortals to cast their nets on the right side, on the side of divine Mind instead of on the side of human will. It does this by showing that God is good, that He never made evil, never made erring mind, and that it is possible for men to prove today the words of Jesus, "Ye shall know the truth, and the truth shall make you free." Christian Science teaches that God is not a corporeal being, but that He is divine Mind, Life, Truth, Love, "the same yesterday, and to day, and for ever." It follows, therefore, that man in the image and likeness of God must be like Him. Man's consciousness must be a reflection of God's thought; and since God's thoughts are perfect and immutable, man's

Digitized by Google

must be perfect and immutable also. Thus the real man can entertain no thoughts and have no characteristics unlike God, good.

It therefore follows that weaknesses and shortcomings, when examined in the light of Christian Science, are found to be illusions, part of the erroneous belief that man in the image and likeness of God is material, human—the very antipode in quality of God. God's man is spiritual—he cannot be unlike God. This belief about man as material ultimates in another belief; namely, that man has a mind apart from God, which is as variable and as unreliable as the winds. In the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, we read that "through discernment of the spiritual opposite of materiality, even the way through Christ, Truth, man will reopen with the key of divine Science the gates of Paradise which human beliefs have closed, and will find himself unfallen, upright, pure, and free, not needing to consult almanacs for the probabilities either of his life or of the weather, not needing to study brainology to learn how much of a man he is" (p. 171).

When this realization dawns upon the consciousness, the discords which before seemed to be a part of existence, grow weaker and weaker until they finally disappear; the dishonesty, selfishness, envy, rivalry, and any desire to take unfair advantage of our fellow beings is "put off." Life becomes a constant endeavor to do right,—"to do unto others as we would have them do unto us; and to be merciful, just, and pure" (Science and Health, p. 497). No matter how far down one may be, no matter how utterly hopeless one may be in the eyes of the world, no matter how burdened with evil habits, eccentricities, or peculiarities, Christian Science can make one over anew. For what say the Scriptures on this point? Even this: "If any man be in Christ, he is a new creature: old things are passed away; behold, all things are become new." Christian Science enables us to mold character so closely after the divine ideal that the command, "Be ye therefore perfect, even as your Father which is in heaven is perfect," ceases to be a mere visionary saying,—it is a demonstrable possibility.

FORECASTING.

A. B. FICHTER.

WITHOUT any modifying clause Christ Jesus said, "Judge not,"—but by way of explanation we have many another of the Master's statements, including that spoken in the worst case of proven sin, "Neither do I condemn thee: go, and sin no more." Condemnation is negative, it has no help to offer; but the gentle encouragement to do better is the greatest help, as it holds out to the sinner the possibility of a life unsoiled by sin, and thereby opens the door of hope. Yet condemnation, the habit of criticizing, seems to be mankind's favorite occupation. Nor is this true only of those who are generally called the worldly-minded; even professed Christians sometimes act and speak as if they had merited the special privilege of sitting in judgment, and believed themselves particularly justified in passing unfavorable comment on another's opinions, words, achievements, or deeds.

But to criticize that which is past and to condemn it in ourselves or in others is not the only form of judgment indulged by mankind. We are apt to go farther. Out of the evidence of the past we believe ourselves competent to form opinions concerning the future; we approach persons and events with prognostications and prejudices, wise prophecies and foregone conclusions, and often we are proud of what we consider our astute perception.

In ordinary experiences this attitude of a prejudiced mind brings unsatisfactory results; even a well-trained dog when approached with a stick is apt to turn ferocious, and when we meet people of whom we have by hearsay or on short and superficial observation formed unfavorable estimates, it is very rarely that these unfortunate impressions are corrected. What is true in superficial, every-day affairs must be an indication of the operation of a tendency equally active in cases of the gravest aspect.

In Science and Health (p. 86) Mrs. Eddy says: "Mortal mind sees what it believes as certainly as it believes what it sees." Then why should we at any time allow the cloud of apprehension and prejudice to overshadow our intercourse with persons, or our anticipation of the future? What is it that keeps us from liberating our thought from this pernicious influence, which warps judgment, obscures perception, and thwarts discernment? Is it *not usually the* satisfaction which mortals feel in *considering themselves* clever, alert, and judicious,—the cherished habit of relying on the sense testimony of a material self, of preferring the self-satisfying mortal mind inductions to the liberating testimony of spiritual deductions; in other words, self-righteousness, self-esteem, and self-assertion? When these are recognized as disturbers of the peace, and excluded from thought activity, we are better able to keep the gaze fixed on the eternal realities, as we expectantly face the advancing experiences of life's real manifestations.

No one who has earnestly applied the rules of Christian Science, and has honestly endeavored to keep himself from being influenced erroneously by his own preconceived estimates of others or of impending events, or by his own habitual modes of thought-taking, has failed to receive the blessing. We can learn to silence prejudice, to reverse apprehension of evil, to disarm dangers forecasted, to calm trepidation, and so to heal not only ourselves but to clear the path ahead and to lighten the burden for others.

[Written for the *Sentinel*.]

THE ARMOR OF GOD.

MADGE M. ELDER.

LONG have I battled, Lord,
Long in Thy cause have striven,
Wounded and faint am I—
See where the shafts were driven!

Wore ye My armor there,—
There in the battle's din?
He who is armed by Me
Feels not the shafts of sin.

Yea, I had armor, Lord,—
Canst Thou forgive the fault?
But it was made of men—
Useless in the assault.

If Thou wilt clothe me yet—
Yet in Thine armor bright—
Gladly again I'll go
Back to the conflict's height.

. . . . . .

Wear the armor of Love,
And, though the fight be fierce,
Then shall the enemy's blade,
Hate, have no power to pierce.

Wear the armor of Truth,
And, though the shafts of sin
Fly from the liar's bow,
No wrong shall enter in.

Wear the armor of Life,
Harmless shall fall each blow,
Even the stroke of death,—
Shall mean the last of the foe.

SELECTED ARTICLES.

[R. Stanhope Easterday in *Gary* (Ind.) *Post.*]

Our critic's manifest ignorance as to what Christian Science really teaches, practically disqualified him to speak on this subject. For instance, the attempt to state the Christian Science syllogistic basis of reasoning, in the words, "God is good; I am a part of God, therefore I am good," is far from correct. The minor premise is erroneous. It is unscriptural and indeed blasphemous. The following is the Christian Science syllogism: "Spirit is God, and man is His image and likeness. Therefore man is not material; he is spiritual" (Science and Health, p. 468). Wherever, moreover, the critic has approximated a correct statement of Christian Science teaching, he has ludicrously crippled his own argument and supported ours. As, for instance, his declaration, "Since God is good, He can know no evil, and as we cannot know more than God, there is (in reality) no sin." Our readers can test the logic of this argument.

Far from refuting the argument after thus stating it, our critic seems to cast reflection upon himself in the further declaration, "If these things are so, I must learn to read English and Greek over again." The logic is deduced from the King James English rendering of the original Scriptures, and Christendom generally feels confident that a correct reading in the originals will substantiate reasonably this standard English translation. The Scriptures indeed declare of God that He is good and imply clearly divine hatred of evil, but they further declare of the divine nature: "Thou art of purer eyes than to behold evil, and canst not look on iniquity." Our critic overlooked, in the light of this Scripture, the significant statement of the divine *résumé* of creation in Genesis, "Behold, it was very good." In the light of such Scriptural reasoning the Christian Scientist can but deduce that evil, sin, and suffering do not really exist in this "very good" creation, and consequently account for all forms of evil as but human, fabulous misconceptions of the actually existent good in God's perfect creation. The Christian Scientist does not argue that the claim or belief of sin does not cling to human consciousness, or that erring mortal misnamed man is "without sin." The Christian Scientist does, however, in the light of this perfect creation, appreciate the significance and reasonableness of our Lord's specific demand: "Be ye therefore perfect, even as your Father which is in heaven is perfect;" and he logically and modestly strives for an approximation to this high ideal. Seeking, moreover, just as earnestly and modestly the unfolding and guidance of divine Truth, he very willingly perceives and acknowledges these numerous errors or sins of misjudgment or misapprehension of the good and beautiful and true in God's perfect creation, and in this process of regeneration he finds his God indeed "faithful and just to forgive us our sins, and to cleanse us from all unrighteousness," from all unright views of God and the spiritual universe.

Our critic is utterly wrong in his conjecture as to the real nature of Christian Science treatment. Christian Science healing does not result from the "constant assertion that we are not sick," but from a conscious realization that man as the image and likeness of God cannot manifest anything that is unlike God. Such realization cannot come as a result of so-called human mind activity on the basis of mesmeric influence, which activity but confuses, depletes, and stultifies thought; it comes as a result of constant and conscious communion with God in true prayer. In such prayerful communion the human will is lost sight of, in compliance with our Master's key-note to success, "Not my will, but thine, be done." The so-called human mind fades from view, and in place thereof there comes into evidence in the individual's consciousness that Mind "which was also in Christ Jesus," as evidenced in the Master's declaration: "The Son can do nothing of himself, but what he seeth the Father do." In other words, in Christian Science the divine Mind, whence emanates all truth, and on the basis of which alone absolutely true and unerring deductions can be made, is seen to be operative. Thus does Truth destroy error ("Ye shall know the truth, and the truth shall make you free"), and bring out the divine idea of perfection, in the image and likeness of God.

Such mental activity is no mere play on the imagination, neither does it confuse or deplete the individual; it makes him stronger and better, physically, mentally, and morally. Thus indeed did Jesus heal by forgiving sin and forgave sin by healing, and thus Christian Science, following his example, "heals by teaching and teaches by healing" (Miscellaneous Writings, p. 358). Such effectual promulgation of Christian fundamentals is, furthermore, in direct accord with our critic's own text, had he but cited the whole instead of just the first part of the statement in James. It will be noted that the part of the text quoted by the minister makes no statement as to results, but if the fifteenth verse be taken to complete the text, our critic's point of material anointing or of material treatment for disease is completely eliminated, for the next verse clearly states: "The prayer of faith shall save the sick, and the Lord [not the elders, nor the oil] shall raise him up; and if he have committed sins, they shall be forgiven him." God is herein shown to be the only healer, in direct accord with the above outlined Christian Science treatment, and the work of "healing" becomes inseparably a part of the regenerative work of "preaching," and this is in direct accord with our Lord's dual command to his followers in all ages to preach the gospel and heal the sick.

Our critic urges that "temptation of evil was a definite thing to Jesus. Sin is a definite quantity in the New Testament," all of which we are willing to concede. It is, indeed, this same definite nature of evil, according to the best English use of the term "definite," and evidenced throughout the Scriptures, which bases the Christian Science conception of evil as finite and destructible. It will be recalled that, in the experience of the forty days' temptation of our Lord in the wilderness, each successive suggestion of evil was so clearly "determinate in extent or greatness" (Webster) that the Master found it easy to eliminate completely with a single declaration of forceful potent truth each sally of the enemy. And it was this same definite or determinate nature of so-called evil that enabled the world's Saviour in the brief space of thirty-three years to run the entire gamut of human misunderstanding, of human sin with all its attendant miseries, successively but effectually throttling all,—"in all points tempted like as we are, yet without sin;" concluding it all, prior to the triumphal ascension, with the significant promise which is a command to his followers in all ages, "The works that I do shall he do." This latter command, it will be recalled, was given to humanity in the light of his further triumphal declaration, "I have overcome the world." Thus we find in the life example of the great Teacher, and throughout God's Word, ample justification for the Christian Science contention that the sum total of so-called evil, "the world, the flesh, and the devil," are but finite, mortal misconceptions, which are to be eventually eliminated in the light of truth and thus proven literally unreal.

The critic argues for cooperation on the part of physician and priest, seems solicitous for the doctor's fee, and with extreme modesty urges that the fundamentals of Christian faith be conceded only a chance to help. The fact that Jesus, the world's greatest physician and theologian, never used or recommended the use of drugs, hygienic laws, or material means in any slightest sense, but rather declared boldly, "This kind goeth not out but by prayer and fasting," does not seem to bear out the contention for cooperation between Spirit and matter in the healing of human ills. We are reminded further in this connection of the experi-

Digitized by Google

ence of Asa, who "sought not to the Lord, but to the physicians. And Asa slept with his fathers." As to the matter of solicitude for the fee or the legitimate place of the reputable physician, we believe that there is no indication that such are in danger of immediate elimination or undue infringement. While we recognize that to those who believe in *materia medica* the physician is an essential factor in the sick-room, and we would not if we could deprive the world of honest physicians, we do believe that the world is rapidly growing up to a point where the whole system of treating the sick will be radically changed and will approximate the practice of Christian Scientists.

[Henry Levy in *Baltimore* (Md.) *American.*]

Several writers of late in the *American* have given expression to quite a few erroneous conceptions regarding the teachings of Christian Science. The writer, who considers it a great privilege to be a Christian Scientist, being born under Judaism, can only say to those who condemn Christian Science, with opinions far from being Christian, in the Master's words, "Father, forgive them; for they know not what they do." If the world at that period had in the least comprehended the mission of Jesus, they would never have crucified him; and if all our critics knew that the things they are criticizing regarding Christian Science are only their opinion as to what they think Christian Science is, they also would stop condemning and become Christians in the light of the Bible: "Judge not, that ye be not judged."

We are living in an age where proof is needed more than profession, since "universal salvation rests on progression and probation" (Science and Health, p. 291). Material laws, in which mankind has enslaved itself to every sense of fear, worry, limitation, sickness, no matter under whatever name sin may make its appearance, have indeed found their master in the teachings of Jesus the Christ or Messiah.

"Ye shall know the truth, and the truth shall make you free," and "The kingdom of heaven is at hand," were his declarations to a people sunk in mortality and ritualism. He proved in this one sermon that all laws of carnal creation, such as the Adam theory, laws for health and happiness, service and worship, had their beginning in matter, and not in the law of Spirit, which he came to demonstrate. He proved the truth of his teaching by raising the dead, healing the sick, giving sight to the blind, by the spiritual laws of the universe. We have records that his teaching was made practical in the early Christian era. He spoke to the whole world when he said: "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father," calling upon all mankind to repent and seek happiness through the understanding of the spiritual law of love, which he demonstrated and left as our legacy to do likewise.

Jesus laid down the rule when he said: "These signs shall follow them that believe [understand]; In my name shall they cast out devils [evils]; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them." Christian Scientists today, in taking up the work which Jesus outlined, are likewise availing themselves of the gospel of healing with signs following. Should not then our so-called organized Christianity become more Christlike in its judging, since, as the Bible teaches, "by their fruits ye shall know them"?

[William J. Bonnin in *Southport* (Eng.) *Visiter.*]

The second letter from "Contender for the Faith" divides itself into two parts. In the first place he objects to the Christian Science teaching that God neither authorizes nor permits evil; in the second he permits himself, on the authority of certain gentlemen, to make charges against Christian Science of a very uncomplimentary nature. To deal with these latter first, one of these "authorities" in his pamphlet quotes from a tract published in America some time ago to attack Christian Science, the author of which narrates that a certain Indian lady asked somebody one day what the Christian Science teaching was, and, as soon as she was told, recognized it as a pagan philosophy, etc., etc. The author of the tract was not, of course, concerned to find out what was told the lady or who told it her. It was enough that she said what she did for him to publish it. And it was enough that he should publish it for Mr. —— to repeat it. And it has been enough that Mr. —— should repeat it in his little tract for your correspondent to utter it again. Of course nothing but a complete travesty of Christian Science could have been presented to the lady. In no teaching could the central fundamental teaching of the pantheism of India be more directly controverted than it is in Christian Science. And so what the Indian lady said is of no interest beyond affording an excellent illustration of the nature of the evidence produced against Christian Science and the methods of those who deal in it. As to the other "authority," it would be impossible to read his production and (so violent is the prejudice and the language on every page) feel that a single word of it is reliable. I could indeed wish that your correspondent would seek enlightenment from some who could speak with authority—the authority of actual experience.

The teaching of Christian Science does not conflict in any way with your correspondent's contention that it is not contrary to God and His revealed truth that sickness and punishment should fall upon the disobedient. This is not, however, to say that God is the author of evil, or utilizes it or permits it in any way. God is unchanging good, the Principle of all true being. His law can operate only for good. In working out a mathematical problem, if we do not apply the proper rule, and arrive accordingly at a wrong result, at discord or disaster, can such disaster be laid to the charge of the basic law of mathematics? Assuredly not. And just as surely does Christian Science impart to the student an understanding of God and His law that discloses all evil to be but the expression of ignorance of, or the negation of, that law. But there can be no disobedience, in absolute truth, to the omnipotence of the divine law. And so, though sin and its concomitants, sickness and suffering, are very real things to us in our human experience and to our human consciousness, Christian Science shows that in the realm of the real, in the sight of God, they are without presence, power, or being. Christian Science reveals the message of Christianity to teach the possibility and duty of correcting that human consciousness with the understanding of God's allness, and with such correction of consciousness there is a corresponding correction of experience. Thus the Christian Scientist sees the healing works of Jesus not as transgressions of any law, but as the destruction of false laws, or a false human sense of law, but the knowledge of the eternal omnipotence of the law of God, good. This is the faith for which he contends, and which he has proved to be capable of being shown forth by its works.

[Frank Bell in *Simpson's Leader*, Kittanning, Pa.]

The clergyman who undertook recently from his pulpit to say why he is not a Christian Scientist, is quoted as having set forth at the outstart what he professed to believe to be the fundamentals of Christian Science; deducing therefrom that Christian Science is all wrong. Fortunately Christian Science has no such fundamentals as the gentleman described. That "everything in this world is God," that "everything in this world is Spirit," etc., instead of being the teaching of Christian Science, is its direct opposite. Christian Science utterly repudiates pantheism, which identifies God with the material universe. It attempts

Digitized by Google

neither to materialize Spirit nor to spiritualize matter, but accepts and acts upon the Scriptural assurance that Spirit and matter are contrary, one to the other, having nothing in common and being incapable of amalgamation in theory or practice. Christian Science accepts without reservation the inspired statement that God is Spirit and that they who would worship Him must worship Him in spirit. This of course is only another way of saying that God is not in matter, which is wholly unlike Spirit.

Being altogether mistaken in his premises as to the fundamentals of Christian Science, it follows that our critic's conclusions are unreliable. No one who understood Christian Science could infer that it dispenses with the cross. More than twenty references to the subject in "Science and Health with Key to the Scriptures," which is the text-book of Christian Science, bear unquestioning acknowledgment of the cross as essential in the working out of the salvation of mankind. With particular applicability to occasions such as this, Mrs. Eddy says on page 224: "Of old the cross was truth's central sign, and it is today. The modern lash is less material than the Roman scourge, but it is equally as cutting. Cold disdain, stubborn resistance, opposition from church, state laws, and the press, are still the harbingers of truth's full-orbed appearing." Happily since this was written the press has largely resolved to be fair to Christian Science, but with regard to the church it is still too frequently the case that, as Mrs. Eddy says on page 230, "the sects, which endured the lash of their predecessors, in their turn lay it upon those who are in advance of creeds."

In certain alleged historical facts set forth in the sermon as quoted, much misinformation appears. It is not contended by Christian Scientists that anything was "revealed" to Mrs. Eddy in a supernatural way. She makes it plain that all truth is from God and in that sense it is a revelation, but a revelation possible to all men, and in fact shared by all men in proportion to the degree of spiritual perception reached by each. Mrs. Eddy never was a clairvoyant nor a spiritualist, though she tells of having investigated such beliefs in her search for something tangible. The absolute dissimilarity between Christian Science and the teachings with which the slightly informed have sometimes compared it, is evidence that it has not been adapted from any of the systems named. Even better evidence is the fact that none of these systems reforms the sinner and heals the sick as does Christian Science.

And this brings us to the point most important to all who would be satisfied on the subject. It is that Christian Science depends not upon what any person or set of persons may think of it, but upon the works it performs. Christ Jesus instructed his followers to preach the gospel and heal the sick as he had done, and that they should teach all men all things he had commanded them. In defining what would be the evidence that one is a Christian, he said: "These signs shall follow them that believe; . . . they shall lay hands on the sick, and they shall recover." History shows that for three centuries the Christian church lived up to that standard.

Christian Science holds that the essentials of Christianity are the same today as nineteen hundred years ago, and Christian Scientists are daily proving that theirs is a practical reestablishment of the primitive Christianity which traced both sin and sickness to a common source and healed both by a common remedy. This remedy was not and is not blind faith, mind over body, mental suggestion, or anything of the sort. It is intelligent prayer to the God "who forgiveth all thine iniquities; who healeth all thy diseases." To those who in the pulpit or out of it are not aware that such prayer is possible today, Christian Science says in effect: "Take no man's word for it; but try for yourself and see."

Throughout the civilized world men and women in great and increasing numbers are bearing testimony to the blessed ministry of Christian Science. Their undisputed statements tell of having been lifted from states of sin and suffering and restored to useful and honorable activity, of having come out of atheism, agnosticism, infidelity, blind beliefs, or fearful superstition into a demonstrable knowledge of God; of how hatred and strife have given place to love and peace, how vicious and even criminal tendencies and habits have been supplanted by wholesome rectitude, how joy has come instead of sorrow, health instead of sickness, life instead of death. It were idle to say all this might have been accomplished through the systems of theology and medicine in which our critic believes. The fact is that it was not so accomplished, but through Christian Science, which is justified of its good works and needs no other credential.

Our friend does not mean, of course, that it were better for his brothers and sisters to go on in sin and suffering unless they be willing to subscribe to his creed and swallow the inanimate pills to which he looks for health. Yet such is the cruel logic of his position. When certain disciples complained that others were healing the sick and saving sinners in his name, the gentle Wayshower lovingly but firmly rebuked them for assuming a monoply of truth.

[Charles F. Kraft in *Western Woman's Outlook*, Seattle, Wash.]

The practice of Christian Science does not include either so-called mental suggestion or blind belief. The Principle of Christian Science is the everlasting "I AM;" the infinite God, or good; the Word, or law, without which, according to John, "was not any thing made that was made." All her life a devout student of the Bible, Mrs. Eddy, through her own healing from a severe accident, discovered the activity of this law in human affairs; and through further study of the Scriptures and experiment she afterward demonstrated, step by step, its truth. As proof followed proof, she formulated the results and her ideas into what afterward became the text-book of Christian Science, namely, "Science and Health with Key to the Scriptures," which together with her other writings, is making the Bible the "chart of life" (Science and Health, p. 24) to multiplied thousands who are experiencing a degree of that present salvation taught by the master Christian nineteen centuries ago. While it is true that the Principle, God, who is Life, Truth, Love, has always been, the discovery in this age of the present saving power of this Principle, and the restoration of primitive Christianity, belong alone to Mrs. Eddy.

[Written for the *Sentinel*.]

THY PEACE.

ALICE CORNELIA BARTOW.

TRUTH's morning light has dawned for me!
All night I labored in the dark,
While wild and tempest-tossed the sea,
And waves engulfed my fragile bark.

My pilot seemed to be asleep,
While I alone the conflict bore;
And wilder, rougher lashed the deep,
And drove us farther from the shore.

In agony I cried, O wake!
Lord, help! we perish! save, O save!
In majesty Christ rose, and spake;
His "Peace, be still," rebuked the wave.

The winds were hushed, and o'er the sea
A great calm fell. And on my heart
A peace serene, a joy that Love would be
My pilot, helmsman, Truth my sailing chart.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"LET BROTHERLY LOVE CONTINUE."

CHRISTIAN SCIENTISTS have long recognized that harmony and unity are essentials in the progress of the cause to which they have given their allegiance, and from day to day they are proving that works, and not words alone, are the true index to the extent to which these qualities control their action; and it will not be amiss, perhaps, to call attention to one or two concrete instances of this kind.

A few weeks ago there was dedicated in Chicago the edifice of Sixth Church of Christ, Scientist, of that city, and the occasion was made significant by the fact that this sturdy little church was enabled to open its building entirely free from debt, through the generous action of all the other Christian Science churches in Chicago, they having taken collections for this purpose a week or so before. This generosity and brotherly kindness proved again the availability of the divine Principle upon which all harmonious action must be based, but in addition to this it proved the truth of the saying of the preacher, "Cast thy bread upon the waters: for thou shalt find it after many days." Twice in its history this church had given the entire amount of its building fund to the need of other churches, only in its own time of need to have the gift returned many fold.

Another instance of the helpful harmony which exists between Christian Science churches is disclosed in a telegram received by the Board of Directors of The Mother Church from representatives of the Christian Science organizations of Greater New York. This telegram was as follows:—

"New York, May 23, 1912.

"To the Board of Directors of The First Church of Christ, Scientist, Boston, Massachusetts:—

"We, readers and members of boards of trustees of all Christian Science churches and societies of Greater New York, assembled this day at First Church of Christ, Scientist, New York city, to consider ways and means for mutual assistance between said churches in the construction of Christian Science churches throughout the city, unanimously agreed that this can best be accomplished by submitting this matter, and the rendering of prompt assistance to First Church of Christ, Scientist, of Brooklyn, whose church edifice is nearing completion, to the congregations of the churches and societies concerned at the earliest practicable date, for such action as may seem best to each of said churches and societies. And we take this opportunity to express our gratitude for the love that now inspires all said churches and societies, in mutual recognition of one another as loyal branches of The Mother Church, The First Church of Christ, Scientist, of Boston, Massachusetts.

"BY THE COMMITTEE."

We have reason to believe that similar conditions prevail, and that similar acts of helpfulness and loving-kindness are being performed in other cities, and it is to this spirit of emulation in good works that the growth of the Christian Science movement so largely is due. Jesus told his followers to heal the sick, but he also told them to love one another, —"that ye love one another, as I have loved you." That Christian Scientists are following the first of these commands is made known through the columns of this periodical from week to week, and it seems altogether fitting that there should be some recognition through this same periodical of the fact that they are obeying the other commandment as well.

ARCHIBALD MCLELLAN.

PROSPERITY.

To most people prosperity means chiefly worldly success, and few there are who do not greatly desire it, even if they are not willing to labor for its attainment. Prosperity is undoubtedly a right condition in which all should share, but this cannot be realized until its true foundation is seen to be righteousness. When this is understood and demonstrated we shall no longer be fearful of missing it ourselves, or confused as to the prosperity of others. In other words, we shall discriminate between the spiritual sense of prosperity, which is permanent, and the material, which is delusive and fleeting. A famous theologian of the seventeenth century says that "prosperities can be enjoyed only by those who fear not at all to lose them;" which would mean those who know that what God gives can never be lost.

A deep lesson on this subject may be gained from the experience of the psalmist, who says that his feet had well-nigh slipped because he was envious "at the foolish," when he "saw the prosperity of the wicked." In this darkened mental state he not only assumed the divine prerogative of judgment, but he decided that according to sense evidence God was unjust in supporting or at least permitting such conditions. At this point he failed to see that ill-gotten riches are a curse, not a blessing, and that another's problem does not concern us, for here and always applies the Master's word, "What is that to thee? follow thou me." The student of Christian Science who keeps close to Principle turns away from material sense evidence and declares with conviction that because God is just, justice must and will prevail, and in this assurance he rests his case. Our revered Leader reminds us that "trials teach mortals not to lean on a material staff,—a broken reed, which pierces the heart;" and she adds, "We do not half remember this in the sunshine of joy and prosperity" (Science and Health, p. 66). Nothing indeed is permanent until its spiritual sense is reached, then we have "joys substantial and sincere," to quote an old hymn.

The 118th Psalm gives the experience of one who had passed through great trials and who was at length saved by divine power alone. He then saw that this deliverance by Truth was "the stone which the builders refused," but which is really "the head stone of the corner," and with this recognition of the divine allness he prayed, "O Lord, I beseech thee, send now prosperity." The one who is spiritually healed is ready for true prosperity! The beloved disciple knew this when he wrote to Gaius: "I wish above all things that thou mayest prosper and be in health, even as thy soul prospereth," and Christ Jesus insisted that if we seek "first the kingdom of God, and his righteousness," all that we need will be added unto us.

If there is one thing more clearly brought out than another in the Bible, and explained by Christian Science, it is the fact that unrighteousness can never establish nor perpetuate prosperity. Acumen and industry alone cannot support a cause or an individual, and the psalmist tells us in the first Psalm what is needed when he says that the ideal man delights in the law of God and meditates upon it day and night, and that "whatsoever he doeth shall prosper." It is added that God "knoweth the way of the righteous," and by fair logic the righteous must also know in some measure God's way for him, and walk in it with security, following ever in the steps of the Christ-man of whom it is written: "In thy majesty ride prosperously because of truth and meekness and righteousness."

ANNIE M. KNOTT.

THE GOVERNING PRINCIPLE.

IN wrestling with his picture puzzle, the youngster may readily recognize the specific thing portrayed on each of the many queer-shaped blocks, but he will certainly have difficulty in properly arranging them if he does not have a definite idea of the complete picture. With a clear grasp of

Digitized by Google

the figure or grouping to be filled out, the arrangement of the parts so that each shall be rightly related, and thus speak effectively in the interest of a perfect whole, is easily accomplished. The illustration suggests three things which merit our emphasis in thought, and this first, that the exceedingly limited horizon of authoritative consciousness, and the consequent fragmentariness of our knowledge, renders altogether fitting that spirit of humility which is always teachable, and which is not given to the condemnation of other views than one's own.

When his disciples manifested a disposition to criticize and class down those who were not at one with them in belief and method, Christ Jesus promptly rebuked their presumption, and gave them to understand that no genuine truth-possessor would ever undertake to monopolize his possessions. He taught that the truth is altogether too large for human compass; and that St. Paul had acquired in large measure the mental attitude which he commended, was clearly evidenced in the modest self-estimate expressed when he reminded the self-assured and disputatious Corinthians that we all know only "in part," or fragmentarily, as Luther translates it. No man can afford to beget the impression that "he thinks he knows it all," and Christian Scientists are duly instructed in this regard in so far as they remember the testimony of their Leader that, "though rejoicing in some progress, she still finds herself a willing disciple at the heavenly gate, waiting for the Mind of Christ" (Science and Health, Pref., p. ix).

We are further reminded of the imperative demand for a knowledge of divine Principle as a basis for the right interpretation and utilization of our imperfect human apprehension of Truth. In all the ages many people have had approximately correct concepts of many things. Glimpses of "the true Light, which lighteth every man that cometh into the world," have been caught and reflected by representatives of every religious faith. Socrates apprehended some spiritual truths not less clearly perhaps than did St. Paul, as, for instance, the call for every man to be loyal to his highest sense of right regardless of wl... it may cost him; and yet how great was the apostle's advantage in the knowledge of Spirit and spiritual things which had come to him, as he says, "by the revelation of Jesus Christ."

Today unnumbered Christian people are sadly confused and incapacitated either to lead or to inspire because of their inability to relate much of the religious thought which has come to them, which they are sure has some truth in it and which they hesitate to condemn, with that nobler concept of God and man which Christian Science is pressing upon the world's attention. They have acquired fragments of truth, but they lack a clear sense of the basic facts of being, a knowledge of divine Principle, of God, His nature and kingdom, and hence their picture remains a puzzle. The bits of human right sense need to be subjected to the tests of conformity to the divine law and manifestation. This is a distinctive feature of the teaching of Christian Science, which insistently counsels its every student to "hold thought steadfastly to the enduring, the good, and the true. . . . Fixing your gaze on the realities supernal, you will rise to the spiritual consciousness of being" (Science and Health, p. 261).

Yet another fact is made clear, namely, that conformity to Principle involves conformity to its every idea. It is impossible to get any part of the picture puzzle into right relation with the picture as a whole, without at the same time getting it into right relation with every other part. Thus to know God, and man in His image, and to be loyal thereto in all our thinking, is to solve the human problem, and to do away with those distracting divisions of faith which have proved such a handicap in all the centuries to the advance of the cause of Christ. In this endeavor the determination of the correctness of our concepts is imperative, and this is accomplished in Christian Science as it was accomplished in the day of the disciples, by the demonstration of Christian healing. The right idea honors the divine nature in its every unfoldment, and proves its verity in its efficiency.

JOHN B. WILLIS.

AMONG THE CHURCHES.

BOSTON, MASS.

The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the new church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading Rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite Post Office; open daily, except Sunday, from 9 a.m. to 5:30 p.m.

ELKHART, IND.

The trustees of the Christian Science church of Elkhart today [April 5] closed a deal for the purchase of the C. S. Burhans property on Franklin street, on the northeast corner of the alley between Third and Fourth streets. The lot is eighty-two and one half feet wide and one hundred and sixty-five feet deep, and is considered one of the most beautiful church sites in the city, it being centrally located and yet away from the traffic center. The Burhans residence will be temporarily used as a place for services, and work will begin immediately on remodeling the building for this purpose. The exact amount of the consideration is not made public, but it is believed to have been about eight thousand dollars. The church has between sixty-five and seventy active members, though the congregation is greatly in excess of that number and has grown so rapidly that it is found necessary to provide for larger quarters.

Elkhart Truth.

WHITE PLAINS, N. Y.

First Church of Christ, Scientist, has taken action looking toward a permanent church home, having closed a lease of the property at 160 Railroad avenue. In point of location this property will be extremely desirable and the surroundings will be more in keeping with their desires. This house was built some time ago, and the object of the builder at that time was to provide in its construction one large auditorium which might be used as a music room for the enjoyment of himself and his friends. The house is divided by a large hallway and the rooms on either side have separate entrances. This will permit of the large room being used as an auditorium and the opposite rooms for reading-rooms. The local Christian Science church has been enjoying a continuous growth since its formation at White Plains, and is now in a thoroughly prosperous condition.—*White Plains Record.*

BROOKINGS, S. D.

The new Christian Science chapel, erected on the corner of Sixth street and Fifth avenue, was formally opened to public worship Tuesday evening [Sept. 26, 1911] with a lecture by William R. Rathvon. When completed the building will have cost about two thousand dollars. It is modeled after the Christian Science chapel at Ontario, Cal., and its dimensions are twenty-eight by forty, the auditorium being twenty-eight by thirty and the reading-room eighteen by ten, leaving ample lobby space. A basement runs under the whole building, and it is as modern as a place of its kind could be.—*Brookings County Press.*

THE LECTURES.

ST. LOUIS, MO.

Virgil O. Strickler lectured for Second Church of Christ, Scientist, March 3. He was introduced by J. B. Christian, who said in part,—

Throughout the civilized world there is a growing interest in Christian Science, an earnest, honest desire on the part of many to know and understand something of the truth which makes for health and happiness. Nine out of ten of those who have taken up the study of Christian Science, and are trying as best they can to live its teachings, have been healed of some malady, and were members of other churches.

Since the time of Christ Jesus no person has lived whose influence has been so felt in every civilized country in the world, and has done more to purify the moral and spiritual atmosphere, than Mary Baker Eddy, the author of the Christian Science text-book, "Science and Health with Key to the Scriptures." She has opened the eyes of the people to the fact that health, like the kingdom of God, is within us, and hundreds of thousands of people are living more sanely and more beautifully because of her teaching.

Correspondence.

SPOKANE, WASH.

William R. Rathvon lectured to an audience of more than eighteen hundred on Christian Science at the Auditorium, April 1. He was introduced by E. M. Woydt, who said in part,—

Some five years ago, a young man of twenty, living in a Southern city, passed through the following experience. While attending school he was stricken with appendicitis, and was operated on for this condition. After weeks had passed and every effort to heal the wound had failed, he again went under the knife. Again weeks passed into months, during which time the best medical aid was employed, without success, to heal the wound. The young man was fast becoming a skeleton of his former self. As a final resort a third operation was suggested. At this time he turned to Christian Science, with the result that in a short time he was healed. I frequently met the young man, and heard this bit of history from both his practitioner and himself. After the healing, at the request of his family physician he submitted to an examination, and was pronounced well. The physician did not at the time of the examination know that the healing was through Christian Science. This is one instance in hundreds that could be enumerated. Everywhere, in almost every hamlet, one can hear of these things.

Christian Science asks the medical fraternity, having in mind such cases as this: Is it a crime for an individual, after having exhausted every resource medicine and surgery have to offer, to turn to Christian Science for relief and healing? Is it right, is it just, is it humane, because a healing takes place outside of generally accepted methods, that the healing and the healer should be condemned? It asks the ministry: Is it a crime, after you have worked and prayed with the inebriate without success, that he should be healed in Christian Science? Should he be left in his cups, with no hope for himself and possibly for others dependent upon him, unless the healing can come through "regular" channels? It asks the courts: Is it a crime to heal in Christian Science one who has developed criminal propensities, and make a better citizen of him? Can it possibly be more advisable that all such cases be sent over the penitentiary route? Christian Science knows no isms; it knows no creeds. It knows one God only. It goes to Him, and trusts in Him for everything. Higher man cannot go.—*Correspondence.*

OLYMPIA, WASH.

Clarence C. Eaton lectured in the Olympia theater March 24 to an audience estimated at nearly nine hundred. The lecturer was introduced by the Hon. Stephen A. Chadwick, judge of the state supreme court, in the following remarks:—

I know but little of the sect or society popularly known as the Christian Science church, therefore I am going to say nothing in criticism of it. Although it may entertain ideas that do not in all things conform to my own, it does not follow that I am right and those who follow it are wrong, and I have learned, or rather hope that I have learned, a lesson which all men and women should, and that is, not to condemn or criticize that which we know nothing about. We may grant as true all that is said against Christian Science, and yet we must admit that it has earned a place in the world. It may have its shortcomings—what institution directed by the fallible hand and mind of mere man has not? But if it has, its faults are thrice overcome by its virtues. In the first place, I like Christian Science because, so far as I have observed, it attends to its own business. It lets the business of others alone. It is indeed refreshing, in these times when so many of us are out to direct the religious and political thought of our neighbors, to find people who individually and collectively act upon the theory that if we look to our own purification we will have a man's work to do.

Another thing I like about Christian Science, and it is but the first proposition restated; that is, it goes contrary to the former notion of all religious denominations, and to notions entertained by many of them in the present day, and teaches that our first duty lies not so much in making others good as in making ourselves better. Some have said this is a selfish view, but I do not believe it, for if a man makes of himself all that he should be, his example will do more to point humanity to a higher sphere than all the sacrifices of the saints and all the promises of a future reward.

Lastly, for I am not here to discourse, I like Christian Science because it does not ask us to join the church. It recognizes a truth fundamentally sound and impregnable, sustained by the history of all men and of all countries, and that is, that the divine impulse, or religion, as you may call it, must come from within and not from without; that if it indeed manifests itself, it is the voice of the soul speaking boldly, defiantly, and not the voice of the mind speaking in fear of present penalties or of future punishments. I am here today not because I was invited to introduce the speaker,—I would have been here anyway,—but I am here because I have an interest in this and all other societies which undertake to spread gladness where gloom has reigned, hope where despair has held sway, and faith where doubt has ruled; because my observation has taught me that the Scientist preaches the gospel of smiles instead of sadness, of sympathy instead of sorrow.—*Correspondence.*

MINNEAPOLIS, MINN.

The Rev. William P. McKenzie delivered a lecture on Christian Science for Sixth Church of Christ, Scientist, before a large and interested audience in the Auditorium, Friday evening, April 5. The speaker was introduced by Seymour S. Cook, who said in part,—

This large body of people has met here tonight to learn of Christian Science. Broadly speaking, the audience is divided into two elements, one composed of those who have little acquaintance with Christian Science but who desire to know more; the other composed of those who have already a more or less intimate knowledge of this Science, and who seek the opportunity of extending their knowledge.

Digitized by Google

The first element has undoubtedly been led to investigate Christian Science through its influence upon the characters and lives of the second. They desire to know what it is that has brought health to the diseased, strength to the weak, courage to the timid, poise to the ill-balanced, self-respect and the respect of their fellows to the depraved.

To the observer it is noticeable that those who have partaken in greater or less degree of these benefits seem as eager to obtain more knowledge as do comparative strangers to obtain their first glimpse of the truths which have made these blessings possible. The student of this Science knows that every advance in knowledge brings with it benefits which amply reward his efforts. This leads to the conviction that Christian Science is truly the Science of Christianity, and that it embraces all knowledge of those truths which, when demonstrated, make for righteousness and happiness.—*Correspondence.*

CHICAGO, ILL.

Bicknell Young of London lectured on Christian Science at Third Church of Christ, Scientist, in Chicago, yesterday afternoon [April 7]. The speaker was introduced by George Shaw Cook, who said:—

Mrs. Eddy in the Preface to her "Miscellaneous Writings" quotes a Talmudical philosopher as follows: "The noblest charity is to prevent a man from accepting charity; and the best alms are to show and to enable a man to dispense with alms." If this can be accepted as a good definition of charity—and I think all will agree that it is a good definition—then it seems to me it may be truly said of the Christian Science church that it is the greatest and most efficient charitable institution in existence. For the Christian Science church, with its thirteen hundred or more branches, now found in every part of the civilized world, with its Publishing Society sending out an uninterrupted flow of purifying, uplifting publications, with its board of lectureship constantly preaching the gospel of present salvation to those who have "ears to hear," with its army of faithful practitioners working day and night for the healing and regeneration of mankind, constitutes in my estimation the most forceful agency extant for saving humanity from sin, sickness, poverty, limitation, incapacity, and distress.

Christian Science is literally preventing untold thousands from accepting charity and enabling them to dispense with alms. Therefore I say the Christian Science church, or movement, the establishment and continuance of which is due to the inspiration, the courage, the fidelity, the far-seeing wisdom of one consecrated woman, is entitled to the respect and consideration which are now so generally accorded it. I believe no department of Christian Science activity is doing more for mankind than the board of lectureship of The Mother Church, The First Church of Christ, Scientist, in Boston. It gives me great pleasure to present a member of that board who has wrought long and valiantly in the Christian warfare.—*Chicago Post.*

LIME SPRINGS, IOWA.

Judge Clifford P. Smith lectured on Christian Science April 9. He was introduced by A. J. Cray, president of the Exchange State Bank, who said in part,—

I believe it to be every man's duty to lend his influence to those things which stand for good in the world. I am told that the Christian Science belief in regard to God is that He is good, that all which He does is good, that all which He made was good, including man; and that the prevailing influence in the universe is Love. We must admit that Christian Science makes men and women better citizens, better fathers and mothers, better husbands and wives, better sons and daughters, and creates a more perfect brotherhood between man and man. If this be true, should we not be glad that we have such an organization in our midst?

We are gathered here tonight, under the auspices of the Christian Science church, to hear a lecture by one who is eminently fitted for his work and who has accomplished more than the ordinary in life. There are but few of us who understand the teachings of this church, and I am sure that we will be glad to hear the lecture, which may correct the false ideas which prevail with some people, and to overcome the misrepresentations which are made through ignorance or jealousy.—*Sun-Herald.*

HERKIMER, N. Y.

A large number turned out yesterday [May 5] to listen to the address on Christian Science by William D. McCrackan, M.A., at the Grand Opera House. The speaker was introduced by John G. Terry, who said in part,—

I have been very deeply interested in Christian Science for a number of years. During this time I have been a careful observer of its very rapid and substantial growth, as well as its many demonstrations for good throughout the world, and it therefore gives me great pleasure to see before me this large and representative gathering. It shows me very clearly that there is in this beautiful valley of the Mohawk, and in the hill country south and in the valley north, an earnest desire on the part of the people to know more of the truth, the same old truth of which Jesus of Nazareth taught us, as he trod the sands of the old world nineteen centuries ago.

Christian Science is not a new thing. It is the same old story, brought to light some fifty years ago by our revered Leader, Mrs. Eddy; and having followed carefully the life of Mrs. Eddy, it is not at all strange to me that she should give the better part of it to the preparation of her many writings along this line, the most important of which is the Christian Science text-book, "Science and Health with Key to the Scriptures."—*Telegram.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice it is assumed that the lecture will be given in the evening.

Aspen, Col.—Francis J. Fluno, M.D., Christian Science Church, 100 W. Main street, June 6.

Atlantic City, N. J.—William R. Rathvon, City Square Theater, 1318 Atlantic avenue, 3 p.m., June 9.

Charleston, S. C.—Judge Clifford P. Smith, German Artillery Hall, Wentworth street, between Meeting and King streets, June 11.

Chicago, Ill. (Fourth Church).—Rev. William P. McKenzie, Church Edifice, Harvard avenue and 67th street, 8 p.m., June 8; 3:30 p.m., June 9.

Chicago, Ill. (Tenth Church).—Rev. William P. McKenzie, June 10 and 11.

Clinton, Ill.—Frank H. Leonard, Court House, June 14.

Colorado Springs, Col.—Francis J. Fluno, M.D., Church Edifice, June 6 and 7.

Eau Claire, Wis.—Virgil O. Strickler, Church Edifice, Gray and Farwell streets, June 13.

Elkhart, Ind.—Virgil O. Strickler, New Bucklen Theater, June 10.

Joliet, Ill.—Frank H. Leonard, Auditorium, June 13.

Kinston, N. C.—Judge Clifford P. Smith, Court House, June 13.

London, Eng. (Second Church).—Bicknell Young, Queen's Hall, Langham place, June 20.

Marion, Ohio.—Virgil O. Strickler, Court House, 3 p.m., June 9.

New Philadelphia, Ohio.—Frank H. Leonard, Union Opera House, June 11.

Rushville, Ind.—Frank H. Leonard, Court House Assembly Room, 3 p.m., June 9.

Salamanca, N. Y.—Frank H. Leonard, Methodist Church, June 7.

Xenia, Ohio.—Frank H. Leonard, Xenia Opera House, June 10.

TESTIMONIES OF HEALING.

With a deep sense of gratitude to God, to the Discoverer and Founder of Christian Science, and to the Christian Scientists who brought the light to my notice, I wish to add my testimony to those of many others who have been helped as I have been. After twenty years of indescribable suffering, for which I never found even temporary relief, I landed in Colorado Springs, a physical and mental wreck and unable to earn a living. In this condition I turned to the Union Printers Home, an institution maintained by the Typographical Union, of which I was a member. The physician in charge of the hospital examined me, and after leaving his office I read the report he had made of my condition, which report would permit me to enter the institution. The report read: "Pulmonary tuberculosis, consumption of the bowels, and kidney trouble." The doctor also told me that the lung trouble was well advanced in the second stage. Besides the other troubles mentioned, I was suffering terribly from nervous exhaustion, stomach and liver trouble.

In this institution I was given everything that material methods and means can provide for one in my condition. Every month I was examined by the physician in charge, but he never gave me one ray of hope. When I had been in the institution a year I remarked to the doctor that I was getting worse. He replied, "Yes, you are." When I had been in the hospital two years, I one day put a question to the chief nurse, the answer to which implied more than an answer to my question. I told her that I desired to do some writing which in my condition would require all winter. "Do you think," I asked her, "that I can live through the winter?" She smiled and said, "I hope so."

I had long ceased to be a factor in the world, and looked on people who were busy in mart and trade as children look on ships that go out to sea to distant lands which they cannot comprehend. My condition was such that no human hand could help me and no human voice could comfort me. The magnificent panorama of the Rocky mountains which can be seen from the home had become to me a hazy outline. The beautiful Colorado sky seemed nothing more than a soiled blue rag stretched over my head. The world had become so small that I felt I could leave it with little regret. What education I possessed being along the line of philosophy, necessarily no God or creed had promised me immortality, and as a result no disappointment awaited me. To me death was the end of what I wished had never begun. It was in this state of mind that I uttered my first unconscious prayer. I wrote some verses which I called "The Consumptive's Prayer," and published them in the *Typographical Journal* for November, 1907. My object in publishing them was to tell the many friends that I had made in the printing world good-bye. Then a remarkable thing happened!

A lady in Salt Lake City, Utah, read and answered my plaint. She wrote me that in Christian Science I would find my way out. I had often heard of Christian Science, but only as a religion, and of religions I had heard enough. No one had ever called my attention to it as a scientific discovery. I answered her letter with proper respect, but at the same time maintaining the dignity of my own opinions. In her next letter she wrote me that I had some of the usual "misconceptions" of Christian Science, which she endeavored to correct, and also sent me a copy of Science and Health. I had read but a small part of that wonderful book when I saw clearly something of which I had often before caught glimpses in my life. I wrote to the lady, telling her that I had seen the light, and implored her help. She wrote me to continue to read and that God would help me. The word God was still a little offensive to me, but I had seen by this time a new heaven and a new earth. The haze fell from the Rocky mountains, the beautiful Colorado sky came back, and I began to go down-town and talk with men who were factors in mart and trade.

When I was again examined by the doctor, he remarked that I had made a gain. The chief nurse, a very noble woman of unusual understanding, asked me what I was doing. I told her that I was studying "Science and Health with Key to the Scriptures" by Mrs. Eddy. She replied: "I thought it was something like that. Stick to it. It is the only thing that will ever help you." Every month the doctor reported improvement and the nurse watched over me with a tenderness and solicitude that I will never forget. My improvement was marked and rapid, but an unfortunate incident occurred. There was much dissatisfaction in the place, and in my endeavor to be just to both the residents and the management I found myself in a very awkward position. I permitted myself to believe that my feelings had been hurt, lost my self-control, and became very angry. The chemicalization was so terrible that I could not hold the book in my hand without a sense of great disturbance. I even hated the sight of the book, but I pressed on through the Red sea and the waters parted. In this mental condition I sought the aid of a practitioner, whose patience and spiritual understanding soon quieted my fears and led me out of darkness into the light of divine Love.

Suddenly, without my being consulted, I was told by the doctor to leave the institution. I had not worked for years and did not know whether I could work or not. Moreover, this country is always full of people looking for something light to do, and as a result it is well-nigh impossible to get employment of this kind; but I concluded that as Truth had done such marvelous things for me it would continue to sustain me, and I secured work in a machine shop. I had learned the trade of machinist, but had not worked at it for about seventeen years. To my own astonishment and that of my friends I did a good day's work at manual labor and sustained it for six months. While in the machine shop I had many things to overcome, one being an indescribable attack of bowel trouble which my practitioner met alone and unaided on my part. I left the machine shop and sought work at my trade as a linotype machinist. At first I could not get work with the newspapers, as few men had ever left the hospital, after being in my condition, and made good in the printing business. However, after working extra for some months, I eventually secured a position as linotype machinist with a paper and remained in the leaded atmosphere for more than a year. I desired to prove that I could go back into the composing room and work; which I did. Tobacco, which had been my only comfort, I lost the taste for. After proving that I could take my place in the world again, I began to study and grow in the demonstration of the power that had done so much for me. My healing has been the means of bringing the peace and rest which come with the consciousness of the healing power of Truth and Love to many weary pilgrims.

HENRY JAMES DERBYSHIRE, Colorado Springs, Col.

I have known Henry James Derbyshire since September, 1907. On my coming to the home here at that time I found him an inmate of the hospital section, and to all appearances suffering from tuberculosis in the most severe form. He left this institution in June, 1908, and under most distressing circumstances. It gives me sincere pleasure to testify to the fact that he is today a healthy and prosperous man.—JOHN H. WARD, Colorado Springs, Col.

Hoping that some one who is similarly afflicted may take courage and seek the remedy which has proved so efficacious in my case, I send this testimony of healing in Christian Science of a malignant growth in the mouth, this demonstration having been made during the latter part of July, 1910.

I was taken with what seemed to be toothache and the

Digitized by Google

swelling of one of the glands under my tongue. I did not pay much attention to it at the time, but as it continued to grow worse, I consulted a physician. He treated me for several days and then frankly admitted that he did not know what was the matter and sent me to a specialist, who gave the disease some big name. I used the remedies he prescribed for a few days, but the condition was growing worse rapidly, so that I could scarcely eat or talk. I was now so thoroughly alarmed that I called in another physician, and after a few days' treatment there seemed to be a slight improvement, which was quickly followed by a worse condition than before. I then concluded to see a dentist and have the tooth extracted, but the dentist was afraid to do so and called in yet another physician to examine my mouth. He said he did not know what the trouble was, that I had probably burned it and that any simple wash ought to heal it. The dentist loosened the gum around the tooth and put some medicine around the root, but by the next day the condition was alarming. This was on Friday.

About two o'clock the same day I took my first treatment in Christian Science, a practitioner having been called for another member of the family. I had taken a powerful drug the evening before and had just poured out a large dose of some other medicine, when my mother came in the room and wanted me to go in and have a talk with the practitioner. I consented, and after a short talk with him decided to take treatment, and accordingly one was given. I did not take the medicine, but threw it out, and half an hour later, when a man came along the street selling "frozen dainties," I bought some, which I ate without any trouble and with a relish. By Sunday the ulcers at the back of my mouth had all gone, but the swelling under the tongue had increased and there was one large spot on this enlargement which protruded and was very hard. About one o'clock that night this protuberance (afterward pronounced a malignant growth) dropped out. I took my knife and tried to cut it, but it was like trying to cut a piece of wood. By Monday morning the swelling was all gone and my mouth was perfectly healed. A slight return of symptoms a few weeks later was soon met and overcome and I have had no further trouble.

I am deeply grateful to God, also to Mrs. Eddy, for this healing. I am not a Christian Scientist, but I know what healed me, and I am willing to give God all the glory due unto His holy name.—HARRY E. TURLEY, St. Joseph, Mo.

I know this testimony of my son to be true in every detail, and this healing is only one of many blessings that have come to us as a family through Christian Science. About four years ago my younger son was healed in Christian Science of a severe attack of throat trouble in four days; while former attacks under *materia medica* had lasted from one to two weeks. He had always been subject to these attacks when he took cold, but since the above-mentioned healing he has been perfectly free from them.

While my own healing was so slow as to be discouraging at times, it has been continuous, and as I look back to the conditions, both mental and physical, in which Christian Science found me, my heart goes out in loving gratitude to God, the giver of all perfect gifts, for this truth which makes free, not only from sickness but from everything that is unlike good. My diseases were many and complicated, and some of them had been pronounced incurable. My condition was indeed hopeless until Christian Science came to my rescue, and only those who have been lifted as I have been, out of the deep darkness of utter despair, can conceive of the gratitude which fills my entire being as I write these words. While I am not entirely free from physical ills, I am so much better that I press on with assurance, for I know that what God has commenced He is able also to finish.

I am grateful to God for this physical healing, but vastly more so for the spiritual regeneration; and grateful to Mrs. Eddy for bringing me to this God who is infinitely good and not the personal tyrant I had formerly tried to serve. I am thankful to have been so patiently and lovingly helped to find the straight and narrow road that leads to eternal harmony—heaven.—MRS. S. A. TURLEY, St. Joseph, Mo.

It is with sincere gratitude that I testify to the benefits received in Christian Science. I never had any faith in medicine, so gave it up entirely long before I began to investigate this teaching. I had occasion to require the services of a practitioner in an attack of measles in June, 1910. The disease was very pronounced when the Scientist arrived to give me treatment, but I was strong enough to walk about the room when she left an hour after. I can conscientiously say that the illness was overcome by the next day. Regardless of the opposition I had to meet and the warnings about reading or taking cold, I read every day and had no fear, as I knew I was in God's care. Several days after no one would have known that I had been ill.

We read in Isaiah: "They that wait upon the Lord shall renew their strength: . . . they shall run, and not be weary; and they shall walk, and not faint." These words were certainly illumined to me. I never realized so clearly before God's loving care over those who are willing to trust Him. I have been very much benefited in other things. For all this I am very grateful to God, and also to Mrs. Eddy who has shown us the way.

JENNIE SCHENK, Colorado Springs, Col.

In August, 1909, a friend invited me to attend the Christian Science church, which I did with skepticism and without any thought of becoming interested. I had, until five years previous, been a member of an orthodox church, but through lack of interest had fallen away never to return. Christianity did not appeal to me as taught in the churches; it seemed a matter of form without any "staying power," a religion for Sunday only. I tried to understand that God gave me life, but the Bible as explained from the pulpit seemed so contradictory that I utterly failed to comprehend it. Mortal existence seemed an incomprehensible enigma, and I was left like a ship on a reef, with the storms of error beating upon it.

I was a partial wreck physically and morally, and it was in this condition that I accompanied my friend and his family to the Sunday morning service in a beautiful little church which seemed to say to me, "Stranger, come in." My hungering heart responded with gratitude, and there I found the peace "which passeth all understanding," a peace I never knew before; but in "Science and Health with Key to the Scriptures" by Mrs. Eddy we read the testimony of Spirit, which saith, "Man, whose senses are spiritual, is my likeness. . . . I give life, without beginning and without end, for I am Life" (p. 252). Here I was being led into the understanding of man's divine rights, and to settle the question for all time I attended the evening service, which gave me such spiritual uplift that I decided to see a practitioner. I did so, and the practitioner explained the teaching of Christian Science so eloquently that I decided to have help, and after the first treatment my desire for liquor had completely gone, and after one month's treatment I was healed of the tobacco habit and other habits, besides some minor ailments. I was loaned a copy of Science and Health, but I soon procured one of my own, and after a diligent study I proved to myself beyond any doubt that Christian Science is a true religion, one which healeth all our diseases. We have had many demonstrations in our home,—fever has been cured; my daughter, seven years of age, had her face scalded so badly that a neighbor said she would be disfigured for life, but because we knew the truth the child was out playing in fifteen minutes, and in two days no scar could be seen.

Apart from the physical healing, I am very grateful to

Digitized by Google

Christian Science for the spirituality which has lifted me above "the false testimony of the material senses" (Science and Health, p. 268). I turn to God with gratitude for giving us Christian Science through our revered Leader, who expounded her knowledge in the precious volume which is truly a "Key to the Scriptures." I pray for that Mind to be in me "which was also in Christ Jesus," so that I may be a help to others.

GEORGE E. HAWKINS, Rivers, Manitoba, Can.

In the year 1886 I was a great sufferer from a complication of troubles, from which the best medical skill, both in our own and eastern cities, was unable to relieve me. For nearly three years I had been unable to sleep without drugs, owing to the constant pain which made life a burden. Physicians and a surgeon, after careful examination, agreed that the primary trouble was beyond the reach of surgery; that local treatment might alleviate the distress, but nothing could cure it. This treatment was strictly adhered to for some time, but conditions grew steadily worse. I had been reared from childhood in an orthodox church, and tried to believe that God was afflicting me for some wise purpose; yet I longed and prayed for health and strength to care for my loved family. Divine Love answered our prayer in a way that we knew not. By seeming chance, we heard of a case of disease cured without medicine. Not knowing what the method was, and only to please my husband, after being assured it could do no harm, I consented to take treatment. The uplifting thought of an early student of our beloved Leader soon broke the spell. After seven weeks' treatment my body was in a normal condition, and, far better still, an absorbing study of our text-book, "Science and Health with Key to the Scriptures," then in its sixteenth edition, was revealing the wonderful fact that the truth which was promised by Christ Jesus, and which he said should make us free, is right here now and always, ready to heal and bless, as the Master and his followers did in the days of old. Only those who have been thus divinely healed can appreciate the joy and peace which enfolded me. In this "atmosphere of Love divine," many almost spontaneous demonstrations of Love's healing power took place.

This seems like a good place to stop; but there is another chapter to add, which I hope may help any who have come down from the mountain-top into the valley, and may be still lingering in its shadows. To such a one I want to say, There is no shadow so deep that all-powerful, ever-present Love will not penetrate and wholly dispel.

Following my healing, for several busy happy years I lived in "Love's atmosphere." Though sometimes there seemed much to meet, the truth of Paul's words never failed, "I can do all things through Christ which strengtheneth me," but a time came when material cares and duties seemed to multiply, and little time was left for spiritual food and growth; then an accident occurred, a fall, injuring the hip. This was not regarded as serious at the time, but gradually a sense of weakness and pain began to develop, then there was a limp, slight at first, but increasing as time passed on. I tried spasmodically to overcome it with the declarations of Truth, but the childlike faith seemed to have vanished. Other practitioners were then called upon, but little if any improvement resulted. I felt that the fault was mine, and a sense of discouragement took possession of me, also the thought that it was my "thorn in the flesh," which must be borne with the best grace possible.

About this time, in the fall of 1904, business changes made it necessary for us to leave the city, and for the next few years we were isolated most of the time from Christian Science surroundings. The lameness had grown steadily worse, and after our return to Denver it was thought best to have an X-ray examination. This resulted in my being put in the hands of a bone specialist, the best that could be obtained, from whom, to satisfy anxious relatives, a month's vigorous treatment was taken. I think it was the saddest month of my life. I was suffering greatly; and going on crutches, the limb being much shortened and growing rapidly worse. At the end of the month, mortal mind was satisfied that nothing but God's power could heal me, and with a heart full of gratitude for this I turned to divine Love with renewed faith and hope. The physical healing was very slow, and I realized as never before how far I had been wandering in the wilderness of doubt and discouragement and fear. One and then another faithful, loving practitioner helped me when the way seemed dark, and as God's true likeness gradually took its rightful place in my consciousness, the crutches and lastly the cane were laid aside forever; and now, in the words of Isaiah, I can "walk, and not faint," for divine Love has renewed my strength.

I feel that this experience has taught me more compassion and tenderness for those who have strayed from the light, or who may seem slow to respond to the arguments of Truth; and with the earnest hope that this chapter in my experience may help to cheer and encourage any such, I gratefully and lovingly send this testimony.

MRS. MARTHA E. KILLIE, Denver, Col.

I feel that I should tell others of the great blessings which have come to me through Christian Science. In 1906 it was first brought to my attention, but I was not prepared for it at that time. In 1907, when I was brought to Christian Science, I had worn a truss for four years and had reached the point where it failed to do me any good. I was facing an operation when I was led to a Christian Science practitioner, and when I went for the second treatment I had left the truss at home and I have never worn it since. This wonderful cure led me to accept Christian Science. The benefit to be derived from this truth in the way of healing was still more forcibly impressed upon me some time later. I had an attack of extreme nervousness and again I went to a practitioner. My healing was not so quick this time, and I can now see that this was much better for me, as I very likely should have just drifted along as before. Some time before this a dear friend had given me a copy of "Science and Health with Key to the Scriptures," but I paid very little attention to it at that time. I never cared to go to church, and had read very little of the Bible; in fact I did not think there was a true religion.

I had been a constant user of tobacco for twenty years, but soon after I commenced treatment this left me, and I have had no desire for it since. I know that I was perfectly healed through the practice and understanding of Christian Science, and that divine Love does meet all our needs. It seems to be the desire of all Christian Scientists to help one another, and it is my most earnest wish to learn more of this great truth so that I may be able to help others as I have been helped. My mental outlook has been entirely changed morally. I get the *Sentinel* every week, and the testimonies therein are very helpful to me. I pray that this testimony may help some poor wanderer to reach and understand this great truth, Christian Science. My gratitude to God, also to our dear Leader Mrs. Eddy, is profound. I am likewise grateful for the kindness shown me on my way to Christian Science.—W. A. BIRD, San Francisco, Cal.

During the month of August, 1910, I was taken very ill with what the doctors called typhoid malaria, and after five weeks of suffering a friend advised me to call in a Christian Science practitioner. I did so, and began to improve right away, soon being able to eat and leave my bed to attend to my household duties, and in two weeks attended Christian Science services.

I had been a great sufferer for eighteen years, having had several operations which cost me much money. One of my main complaints was a severe bladder trouble which kept

Digitized by Google

me in pain both night and day, but I am thankful to say I was healed of it in one treatment. Later I was troubled with neuralgia and toothache, and had to go in town when it was cold and windy. I was afraid it would make matters worse, but my daughter on her way home from work met the practitioner and told her of my fear. She gave me absent treatment, of which I knew nothing at the time, but while walking in the street, all of a sudden I felt a wonderful sense of freedom and happiness. When I got home my daughter told me that she had met the practitioner and had asked her to give me absent treatment. I then understood why I was so suddenly relieved from the suffering, and have had no return of it.

My husband also has been helped through Christian Science, and now has a good position with one who is a Christian Scientist. He is interested in the study of this teaching and goes to church. Many other blessings have been given me, for which I am very thankful to God, also to our beloved Leader, Mrs. Eddy.

MRS. JOSEPHINE MCGEE, Floral Park, L. I.

Too long have I neglected to acknowledge the manifold blessings which have come to our family through the understanding of God as taught us in Christian Science. All forms of error have been overcome by the application of this truth, which to understand does indeed make us free. I will mention a few ailments which have been overcome. A very bad case of an eruptive disease was perfectly healed in a few days. On a previous occasion, when I was under *materia medica*, I was in bed for nearly a month and could not wait on myself. Finally I had to endure the application of caustic. Besides this, rheumatism, throat trouble, etc., were cured; and last, but not least, our daughter, who has had a complication of illnesses, has been perfectly healed. Only God can know our gratitude for this wonderful proof of divine Love. It was a case that took years of patient waiting and knowing that God is the only power.

Words fail me when I try to express our gratitude to our beloved Leader for making it possible for the world to understand what the Scriptures really mean. Only as we live this truth, and strive to have the Mind which was in Christ, are we worthy to be called Christian Scientists.

MRS. E. W. CANNON, Lost Springs, Wyo.

[Written for the *Sentinel*]

HUMILITY.

ELLA SUMNER HANLEY.

I TROD the darkened road of sorrow. For my guide,
Walked one whose silent form I failed to see
For tear-blind eyes. With face averted, low I sighed,
"Who art thou?" and the answer came, "Humility."

"Dear God," I cried, "I love her not. Oh, give release!
I know that face, so still—those eyes brim-filled with pain.
Take from me sad humility—send joy or peace."
Truth touched my eyes and whispered, "Look again."

And lo, beside me, one with willing childlike mien!
Yet, tho' she humbly walked the thorny path along,
In her clear eyes, star-lifted, radiant, serene,
Dwelt all of courage, trust, joy, confidence, and song.

"Ah, welcome one," I breathed, "draw closer to my side.
Who art thou? Joy or peace? perchance serenity?"
"Nay; they are kin—one Father ours," she soft replied.
"I'm one thou, blinded, loved not. I'm humility."

So now, hand clasping hand, we two walk up the way,
Eyes dawn-directed, and a song triumphant sing,
Sweet, eager, joyous, that its reaching music may
To some sad comrade, down the road, Love's message bring.

FROM OUR EXCHANGES.

[*Universalist Leader.*]

Christendom is face to face today with the problems of the practicality or the workability of the teachings of Jesus. Can his ideas be applied? Can society put his gospel into practice? Are the morality and ethics of Jesus human, earthly, or are they the "counsels of perfection," fit only for a heavenly state? This is the impending crisis of Christendom. The east is reminding the west that it is Christian only in name. A keen-minded Japanese has said that during years of travel in the United States he found only one man who seemed to him to be a Christian after the manner of Jesus. This one man was a carpenter in San Francisco. Multitudes of critics at home are urging that the teachings of Jesus are too fine and spiritual for every-day life.

In the old days the church held aloof from society. It emphasized the chasm between the church and the world. It went away by itself. It encouraged men and women to flee from society to the solitude of desert or monastery. It never undertook to incorporate humanity in its philosophy or theology. Today no such attitude is possible; or if possible, it is at the expense and discredit of the church. The philosophy of Lincoln and Jesus is knocking at the door. A kingdom divided is no kingdom. A world half sinners and half saints cannot be accepted as final. It is all or nothing. It is the kingdoms of this world against the kingdom of God. It is a magnificent challenge. It awakens great thoughts. It brings the open vision of humanity redeemed from sin. It reintroduces and reiterates the ideal of Israel, of Jesus, and of the Bible. It proclaims the true and fundamental philosophy of the gospel. It sets up that idea of redemption which includes all else in the consciousness of Jesus. It fixes our faith where it belongs,—on the salvation of the world.

[*Christian Intelligencer.*]

The "social uplift" is no doubt a part of Christianity; it is a most valuable and even essential "side product" of it, but it is only a side product, not the chief thing nor the main purpose of Christ's teachings. Jesus Christ came into the world "to save sinners," not primarily to feed or clothe or house or heal or educate them, but to save their true selves—that is, their souls—from their evil nature, their vicious dispositions, their innate and self-perpetuated unrighteousness. And he came to do this because it was the first and most essential thing to do, the most needed though perhaps not the most conspicuous service that he could render to them. Therefore he taught spiritual righteousness, soul reconciliation with God, as the first and most important thing, because he knew, with a knowledge as far surpassing that of the wisest philanthropist as the God nature surpasses human nature, that through this way of spiritual regeneration is the only perfect or permanent escape from the mental or physical miseries which it is the kindly purpose of the well-meaning "social worker" to mitigate or relieve.

[*Watchman.*]
